PROMISED LAND OF THE HINDUS

THE old religious spirit of Hinduism is reflected in Orissa more than anywhere else in the Province. It is still known as the Promised Land of the Hindus. What rich endowments were created by the ancestors of the petty chiefs or landholders of the Orissa Tributary Mahals, none can form an adequate idea who has not been among the temples there. Sir William Hunter says in his book on Orissa: "Hundreds of monasteries dot the province, and enjoy an aggregate rent-roll of £50,000 a year. Every town is filled with temples and every hamlet has its shrine. This lavish devotion extends into the hill country. Up the Mahanuddy, each rocky islet, or wooden crag that rises from its banks, is crowned by a temple to some gods Even foreigners feel that they are treading on hallowed ground; and villagers still tell how the image-breaking Mussulmans retired abashed before the sanctity of Orissa. These temples give shelter and food to thousands of Brahmin priests and menials and serve to stave off to some extent the poverty and pauperism which prevail in the Province." Hardly any organised temporal charity exists in Orissa. The Maharajah of Mourbhunj is the only exception. He has endowed the Cuttack Revenshaw College with a gift of Rs. 20,000 for providing scholarships to students. He has established schools and charitable dispensaries and maintains a poor house.

Without Prejudice

Conditions in Insurance Contract

(FROM OUR LEGAL CORRESPONDENT)

HERE are four principles of the law of life assurance, the first three of which read like self-evident platitudes. Nevertheless, they are all of prime importance. They are (1) "good" health means "reasonably good health".[1] (2) A warranty of good health can never mean that a man has not in him the seeds of some disorder. We are all born with the seeds of mortality in us.[2] (3) Life insurance is peculiar in that the assured is often ignorant as to the fact most material in assessing the premium—the state of his own health. Although he may have a general idea as to his own physical well-being, he may well be unaware of an incipient, but deadly, disease within his system that a doctor may have diagnosed. The rule is, warranties apart, that the insurer may only avoid the policy if the assured knowingly misrepresents the state of his health. Since the duty to disclose is limited to facts within the knowledge of the assured, a mistaken statement about a material fact, made honestly, that is, with belief in its truth will not affect the validity of the contract unless there is an express condition that it shall do so.[3]

Well, there you have some sound and incontestably, accurately stated principles. The difficulty, human nature being what it is, is to apply them. What would your first reaction be—you being a life assurance executive, and having just issued a policy to a man on his representation that he suffered from no organic disease—if within a couple of weeks after the risk had been accepted and the policy issued, the man dies of organic disease? Would it not be to resist the claim by the man's executors on the ground that he must have known or at least suspected that there was something wrong with him? Or take the following two cases, each of them within the writer's knowledge within the past few years. The first is from Ireland and concerns a farmer and his wife. Both of them are getting on in years but robust and apparently healthy. The farmer is in one of his fields attending to his cattle. The wife comes down the farmhouse steps and looks across at him. He waves a greeting to her and she sees him attacked from behind by one of his own bulls and gored to death. She falls down dead at the sight.

The second case happened from the station in which this note is being written and concerns a doctor retired I.M.S., a personal friend of the writer. He goes into a military hospital for an ordinary everyday operation for hernia. He quite unexpectedly collapses under the anaesthetic and dies. His wife—they were an exceptionally devoted couple, wrapped up completely in one another—is in an adjoining room, and the news is broken to her. The poor woman straightaway fell down dead. Now, assume that you, as an assurance executive, have issued a life policy in both these cases on the wife. In the latter case, the husband (a medical man remember) has certified that his wife's health, including her heart, is perfectly sound. Your company's doctor's report agrees with this view except as for the heart which he describes as "tired" and points this out to the husband before he (the husband) warrants otherwise. The latter sticks to his own opinion and thus innocently misrepresents the facts. Would this misrepresentation, assuming it can be proved such, by other medical opinion, avoid the policy?

Leaving suppositious cases, it is well settled law in the field of insurance that contracts of insurance, including contracts of life assurance, are contracts *uberrimae fidei*, that is, contracts of the utmost good faith and every fact of materiality must be disclosed, otherwise there is good ground for rescission. And this duty to disclose continues up to the conclusion of the contract and covers any material alteration in the character of the risk which may take place between proposal and acceptance.

Bearing all this in mind, we will now consider the instructive case of one Mr. Pyare Lal of Siwan, Bihar, and his life policy with the Metropolitan Insurance Company. You will note the dates. On 23rd January, 1946, Mr. Lal filled up an application form supplied to him by an agent of the company to insure his life for Rs. 10,000 and handed over the form duly signed by him to the agent with a cheque for Rs. 549-1 that being the first annual premium payable for 1946. On medical examination by the company's doctor, his life was found to be a first-class life. A *kutcha* receipt was granted to Mr. Lal for the above sum "against a new proposal" on 31st January, 1946. A letter from the company headed "acceptance letter of proposal granted by the Metropolitan Insurance Co. Ltd. to Pyare Lal" was sent to him on 27th March, 1946. It stated that the proposal had been accepted. A regular receipt was issued on 28th March, 1946. This was the date upon which it was later held by the court "that the policy (*sic*) was finally accepted, and then became a binding contract between the two parties."

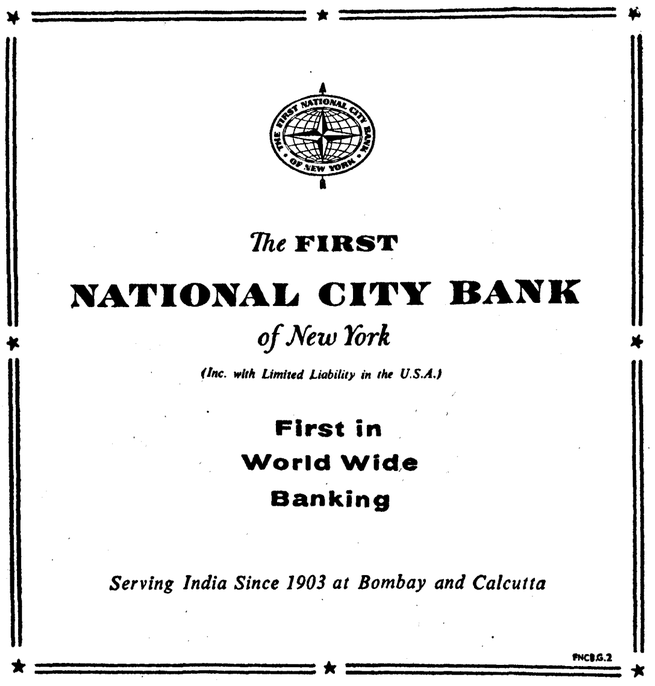
Mr. Pyare Lal died on 19th April, 1946, that is, less than one month after the risk had been accepted, and before the acceptance could be supplemented by the issue of a regular policy. Mr. Pyare Lal's representatives (his sons) claimed payment of the policy monies as if a policy had been actually issued; and the company having repudiated liability, filed a suit for recovery. The company's defence was twofold. It claimed that apart from the common law liability, which calls upon every candidate for insurance to make a full and faithful disclosure of all the facts materia to the risk, there was in this case also a contractual liability on the part of the assured to inform the company about the illness which, the company claimed, had already set in long before the acceptance of the risk.

The contractual liability was comprised in Condition 2 of the policy, the company's contention being that although "between the aforesaid date of illness and death, the policy had already been accepted, it was specifically stated therein that it was subject to certain conditions" of which No 2 was: "That if you fall ill or if there occurs any change whatsoever in connection with your health or that of your family members or in your family history or if a proposal on your life with this company or with any other insurance company is pending decision or declined or not accepted on the terms proposed by you on or before the date of your proposal and the completion thereof by acceptance by the company of the first instalment of premium, this acceptance letter and the policy which may be issued under this acceptance letter shall become invalid and shall not have any effect unless intimation of such event shall have been made to this office in writing and the proposal re-approved by the directors". These conditions were noted overleaf on the acceptance letter.

The trial court accepted the company's plea and found "(1) that Pyare Lal fell ill on 23rd March, 1946, a date which was prior to acceptance and (2) by not informing the company of illness which took place prior to acceptance, the insured committed a breach of warranty entitling the defendant company to revoke the contract". Accordingly, the trial court dismissed the suit. Mr. Pyare Lal's sons appealed.

True it is that there was a condition imposed on the deceased gentleman and accepted by him that in case he fell ill or there was any change in his health for the worse between the date of the proposal and the date of its acceptance by the company, he would send an intimation of the event to the company. "But", said the High Court, "it has to be remembered that a statement which is expressed to depend upon the assured's state of mind will not be untrue simply because he was unaware of the true facts. Therefore, if in his honest judgment there was no illness but only an ordinary disorder, the mere non-communication of that event to the company cannot be a ground for the insurer to avoid the policy... There is no escape from the conclusion that the contract became a binding obligation between the parties on 26th March, 1946.....then the only important question for consideration is whether at any time before that date any fact had come to the knowledge of the assured that the life assured was likely to fall short of the average duration. (Stopping there for a moment, please consider these dates. Binding contract 26th March, 1946. Insured sends for his doctor on 27th March, 1946. Illness or "simple disorder" on the latter date. Exhaustion. Assured dies on 19th April, 1946.)

Answering the question as to "whether the complaint, even if any, amounted to any illness or only to a simple ordinary disorder which human life in ordinary course of business is always susceptible to," their lordships held that the company had "failed to prove that Pyare Lal had fallen ill at any time before the evening of 28th March, 1946. It is true that he had already sent for the doctor on the previous evening namely, on 27th March, 1946, but on that day the complaint, if any.....was nothing more than exhaustion or what we may call ordinary simple disorder.....the complaint which he had on 27th March, 1946, was of an ordinary disorder character and not what is known as illness". The appeal was allowed.



One feels that the life assurance reader will read this decision with disquiet, as the writer does too.

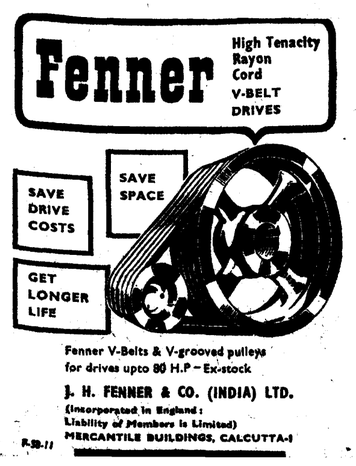
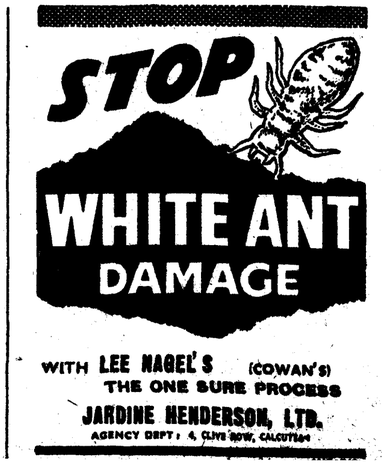
A Ditcher's Diary

AT THIS TIME OF YEAR, *Capital* HAS TWO IMPORTANT things to remember. The first is that our birthday falls this week, and as we enter our 72nd year of publication, dedicated selflessly to the services of trade, industry and commerce, we modestly request that compliments and congratulations be once again restricted to manageable proportions. However, expressions of appreciation which take the form of monetary contributions, I need hardly assure my readers, will not be an embarrassment to us. They will, of course, be immediately placed to the credit of *Capital's* Christmas Toy Fund, which, incidentally, is the second important thing we have to remember. The collection for the Fund last year proved that Calcutta has not yet completely lost its sympathy with charities in this tax-ridden age. The accounts for 1958 are published at the end of this week's Current News and Comment, and they show a collection of Rs. 4,511.50 compared with Rs. 3,215.63 during the previous year, or, in other words, an increase of about 40 percent. I hope my readers will show the same indulgence towards a worthy cause again this year. And let me remind them that in distributing toys to poor children, we make no distinction of race, creed or colour, and that we always try to satisfy as many claims as we can to make the largest number happy at Christmas who would otherwise have a very bleak time indeed. It is true the sharp rise in the cost of living and the steady increase in taxation leave little for charity these days. But there must be some amongst us who are still able to spare something for a deserving charity. Please give generously. The address is *Capital* Christmas Toy Fund, 5 Mission Row, Calcutta, and there is no limit to the size of the donation that can be used to advantage.

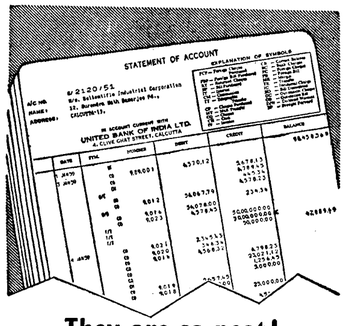


I CONSIDER IT ENTIRELY POSSIBLE THAT, FOLLOWING Chinese actions on the Indian frontier (which do not look like "bluff", *pace* Mr. Krishna Iyer), there is a split in the Communist Party of India and that again there isn't. If this seems contradictory, "double-speak" need not be the only explanation. When in violation of every Marxist dogma a communist country behaves like any old imperialist power and turns on one's own yet uncommunised country, the more ingenuous among one's communists are bound to develop an acute split-mind. This has happened before; and, all dialectics notwithstanding, it will happen again. It does not necessarily follow that there will be a serious and early split in the Party, which goes on unchanged with its faithfuls while shedding the weak-willed on the wayside and thus further hardening the hard core. A few individuals may leave it, to be called the routine names such as "renegades" and "petty-bourgeois nationalists," but the Party seems to me in no danger of immediate disintegration. Some Indian communists will continue to think that the Chinese are making "mistakes", as though in a fit of absent-mindedness, and the specious thesis is already being passed round that China's chief targets are the alleged missile bases in Pakistan and that India simply happens to be in the way. Anyone who has read Mr. Chou's September letter to Mr. Nehru can see that there is great deliberation in everything the Chinese have done or said. The dispatch with which events in remote and inaccessible places are "explained" by Peking bespeaks a high degree of planning. It is still obscure just what benefit China hopes to reap from conflicts with friendly India; but there is no obscurity at all about her determination to have them. In this context, the loyalty or otherwise of Indian communists is of little material significance, for they matter not at all diplomatically or militarily—the only two courses by which arguments between nations are settled. I think India would be well advised to prepare for a protracted and straggling series of exchanges of various sorts, rather than for anything quick and decisive. Long frontiers are agonisingly difficult to hold when a neighbour decides to be difficult.



I AM AFRAID I HAVE READ NONE OF THE BEST-SELLERS Mr. Caryl Chessman is said to have written in his San Quentin prison cell where for the past 11 years he has been under sentence of death. There is a long list of authors who have composed significant works of literature while in gaol; Defoe, O. Henry, Bunyan, Wilde, Nehru and many others; but waiting for the gas chamber seems to me a rather different proposition not obviously conducive to the composure of mind believed necessary for the creation of classics. It is, however, the death sentence which has attracted world notice; and it may or may not be an indication of reported changes in the Vatican since John XII took over that its official newspaper has pleaded for mercy for Chessman. It does seem hard on the man that he should be executed 11 years after being sentenced. On the other hand, the proven charges against him are revolting in the extreme. And, if the Governor of California is to be believed, he shows not the slightest sign of contrition. It would be unusual if the 11 years in jail had changed the man not at all. But why can't he say so? It is possible that literary success, a heady wine, will now induce Mr. Chessman to seek immortality in this less violent department of human activity. But this too could surely be stated in his appeal to the Supreme Court, which has, I see, granted another stay of execution? This stubborn refusal to admit that murder, rape and such like, are not to be recommended for a man who lives in a community, is a consideration that the unforgiving Governor could not, in my view, help taking into account. Chessman's offences are sordid, and the administration is under an obligation to see that they do not go unpunished simply because the fellow has produced a couple of popular books.

ON MY DESK IS A PLAN SOMEBODY HAS SENT ME— I suspect the Union Ministry of Works and Housing —of what is inelegantly called a "skeletal" house. The idea seems a fairly good one; there are four rooms on a single storey and the combined floor area is 204 square feet. I have no doubt if I were a villager faced with rebuilding my own single-roomed *kutcha* hut after the fifth monsoon flood in ten years, I could be interested in it without too much difficulty. An added attraction would be the fact that, so I see, the Government is to provide the bare structure while the occupant's responsibility is limited to the partitions, walls, doors and windows; the loss of the accompanying literature prevents me from going into further detail. But for all the obvious advantages, this house reminds me rather depressingly of a row of new dwellings I inspected down in south India last May. From the outside, each house appeared to answer perfectly the house agent's standard description of "highly desirable residence". The only trouble with them was that they were all empty, obviously abandoned by their former owners who had equally obviously returned to their traditional *kutcha* homes on the other side of the road. At first, I found this phenomenon somewhat puzzling. But when I stepped inside one of the deserted houses the mystery was solved—it was just like entering an oven. Now whatever can be said against the damp, insanitary and incommodious *kutcha* hut, it is at least reasonably cool in summer, and after all India is a hot country. But these houses had clearly been built without any regard for the fact that thin brick walls, narrow windows, concrete floors and corrugated asbestos roofs—or worse still corrugated iron ones—are just not the thing for "India's sunny plains". Such structures may be more permanent than mud and thatch—though no more aesthetic—but if I had to make an invidious choice between the two, I know what mine would be. It is just no use at all substituting permanence and hygiene for exhaustion and debility. Living in the open in all but the wettest weather might help. But what is the use of a house one has to live outside of for nine months of the year? Short of air-conditioning brick and concrete structures, I do not know what can be done. Larger windows, verandahs and other shade devices should help where there is room for them and the expense is not prohibitive. But otherwise the only long-term, practicable alternative to the traditional *kutcha* hut would seem to be a house built of cheap, clean, heat-resisting materials such as science, for all its recent spectacular accomplishments, has not yet, so far as I am aware, devised.



IT CAME AS SOMETHING OF A SHOCK TO ME THE other day to learn that Mr. J. A. Duncan, chairman of the well-known Calcutta managing agency firm of Duncan Brothers & Co. Ltd.—of whose founder he is a direct descendant—was leaving India for good. At the time of writing this, he has already gone, and I have since been pondering the reason why. For a man so young, a few more years in India, one would have thought, could have been looked forward to as a satisfying and profitable experience. Yet from what I gathered in a few minutes' discussion with him the other evening, this was not so—to such an extent have circumstances changed for senior British business men in this country today. Atholl Duncan's was the classical example of the "Indian career". He arrived in Calcutta in 1936 and joined the board of the company which bears his family name in 1949, after an interruption caused by six years of war service—he won an M.C. in the Arakan campaign. Mainly concerned with the jute side of the firm's activities, he played an important part in the post-war re-organisation of the Anglo-India Jute Mills. He became chairman of Duncan Brothers in 1958—a position his father held before him—and occupied this office during the company's centenary year. In his leisure time he was a keen horseman and polo player. He is to join the board in London of Walter Duncan & Goodricke Ltd some time in 1960. Calcutta will miss his cheerful company, but let us hope it has not altogether seen the last of him. His place here is, I see, to be taken by Mr. K. P. Goenka, who now deserves our congratulations as being the first Indian chairman this renowned company has had in its whole 100 years of useful history.

STOCK MARKET EASES AFTER STRONG START

BIG DEMAND FOR GILT-EDGED

London, 28th October.

VERY active and generally strong condition continued to prevail in the stock market fo most of the past week. But a good deal of profit taking developed in industrials towards the en of the account, and the fresh gains in the leadin issues were often reduced or replaced by smal losses. Widespread and appreciable rises wer scored in other industrials, however, as th demand spilled over from the leaders to embrac many of the less well-known shares. The rest o the market recorded widespread gains, with th exception of gold and oil shares which were ou of favour. Activity remained at a very high leve indeed, although not quite reaching the level touched in the week following the general elec tion. The election result was, of course, the mai driving force in the market, but further good com pany and business news stimulated the buying Adverse influences, which however had only a limi ted effect, were provided by the unexpected cu in the interim dividend of Babcock and Wilcox and the persistent uncertainty on Wall Street The outstanding feature was provided by the re newed strength of gilt-edged securities. Furthe heavy buying developed on yield considerations and the growing belief that inflationary tenden cies will be kept under control. A sharp advanc was scored and gains extend to over a point Foreign bonds and rails attracted little attention Dollar stocks fell back but then recovered witl Wall Street. Banking, insurance and hire-pur chase finance shares scored fresh gains. Motor and breweries were among the best sections bu shipping and steel shares were mainly lower. Gold lost ground but base metals moved up sharply again. Oils were out of favour and eased ir places. A very firm trend was maintained in rub bers and gains were extensive.

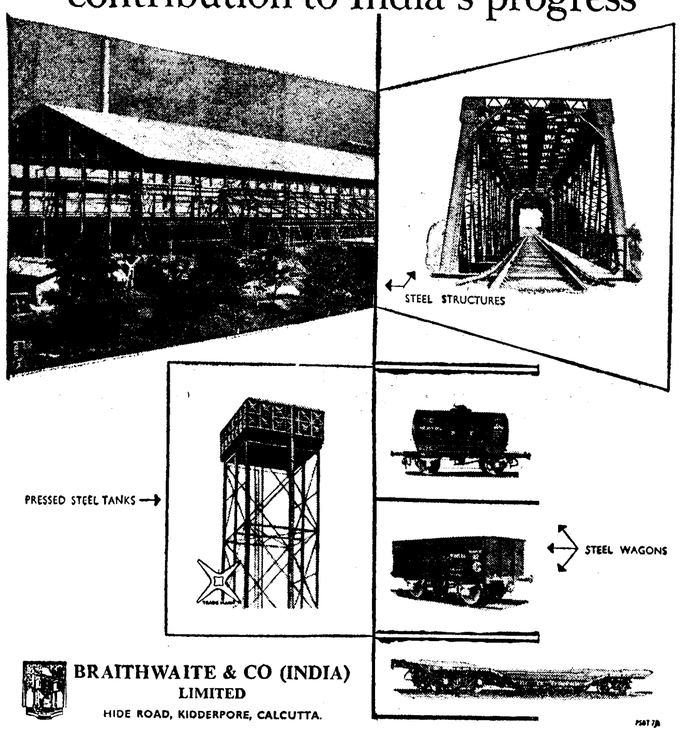
The Money Market

Money was kept on a tight rein in the money market during the past week, with the shortag usually made good by the authorities. On one day, however, they forced the market to enter the Bank of England and pay the penal rate for a very small amount. This was thought to have been done as a reminder to the market and especially to those quarters which had been talk ing of easier money rates after the election. The general rate for overnight loans ranged between 3 percent and 3¼ percent, with 3⅜ percent paid during the most difficult phases. There was no a great demand for bills in view of the cash posi tion. Business in January maturities and "hot" Treasury bills was done at 3⅜ percent. No change was made by the market syndicate in its effective bid for Treasury bills at the weekly tender, but with outsiders making some alteration in their bids, the Treasury bill average came out at £3 8s 6.74d percent, against £3 8s 4.91d percent in the previous week.

Activity on Wall Street

Foreign dollar bonds were quiet. German bonds were soft with several off a couple of points while Italians were firm with the Republic 3 per cents two points higher. Denmark 5½ percents eased nearly a point at the outset, but eventually recovered. Amsterdam 5¼ percents gave up a fraction. Greek 6 percents, Norway 5½ percents and Serb 7 percents were a point or so higher Japanese issues showed fractional changes either way. Chile 3 percents fluctuated to finish unchanged at $44½. United States Government obligations moved ahead all along the line. The forward movement reflected buying by banks and corporations under the influence of business uncertainties resulting from the prolonged steel strike. Investment quality corporates turned firm following a spell of easiness, while speculative rail lines were inactive with convertibles mixed.

Vegetable Oils Dull



Offers of linseed were reservedly made, and trading was mostly light, this following a demand from East Germany at the outset. Groundnuts were difficult to move, although a potential demand was still indicated from France for early shipments. The demand for castorseed continued on the quiet side, but prices remained steady. Demand for linseed oil was less pronounced and price fluctuations were mostly within a narrow range. After a steady U.K. business demand, Bombay castor oil became easier and prices sagged. A moderate demand was encountered for groundnut oil, mainly in Indian qualities, and prices were inclined to be easy.

Rubber Closes Steadier

Prices of rubber in London were marked up sharply at the outset in sympathy with the strength of overseas markets. Later, the market moved irregularly, with short-covering and profit-taking on a large scale. Lower sheets were largely neglected. Short-coverng later brought a further upward movement, but heavy profit-taking developed and caused buyers to withdraw. The market moved irregularly with sellers predominating. Towards the close, some new buying caused sellers to become more reserved. The market finished on a steadier note.

Stocks and Shares

POLITICAL DEVELOPMENTS AFFECT MARKET SENTIMENT

JUTE SHARES ENQUIRED FOR: TEAS ACTIVE

Wednesday Evening.

THE Chinese action in Ladakh on 21st October caused a wave of nervous selling on the Calcutta share market, and Indian Irons fell from Rs. 24.40 to Rs. 23.90. Most of the shares on the forward list were marked down in sympathy, but prices of selected "blue chips" were comparatively steady. When the market opened yesterday, there were signs of recovery and Indian Irons improved to Rs. 24.22 but after hours rumours that the ex-Finance Minister, Mr. T. T. Krishnamachari, might be invited by the Government to take up an important appointment in the Planning Commission introduced a feeling of caution and heavy selling from Bombay brought the price of the shares down to Rs. 23.88. Operators are now anxiously awaiting the announcement of steel retention prices as this is holding up the publication of the company's report and accounts for the year ended 31st March, 1959.

The Mandya National Paper Mills Ltd issue was over-subscribed on 24th October; the response for the equities was reported to be greater than that for the preference shares.

Tea was the outstanding section during the week under review and a number of scrip registered gains. Sugar shares were moderately active following the Government's announcement of the proposed incentives to the industry. Selected jute shares were enquired for while coal shares suffered from lack of enquiry. Paper shares were quietly steady and Rallis India featured in the miscellaneous section, improving further to Rs. 82.50 on reports of good working. Guest, Keen, Williams were prominent in the engineering section. Gilt-edged securities continued firm under the influence of easy money conditions.

Bank shares were dull and neglected.

In the coal section, Bengal were marked at Rs. 290 ex-dividend while East Indian were marked down from Rs. 22.50 to Rs. 21.75. Katras Jherriah were easier at Rs. 68 as were Raneegunge at Rs. 16.25. Pench Valley were offered at Rs. 22.

In cotton, Bowreah and Dunbar were steady at around Rs. 151 and Rs. 227 respectively and Kesoram were taken at the higher rate of Rs. 19.19.

In electrics, Calcutta were better at Rs. 15.94.

Among engineering issues, Guest, Keen, Williams hardened to Rs. 40.75 while Kumardhubi met with selling pressure and were marked down to Rs. 6.66. Textile Machinery were quietly steady at around Rs. 24.50 as were Jessops at Rs. 32.75. Indian Iron & Steel closed today at Rs. 23.97.

Selected jute shares met with enquiry and the principal features are given in the following table:

	Opening 22nd October, 1959	Closing 28th October, 1959
	Rs.	Rs.
Howrah	24.87	25.37
Alliance	129	136
Kinnison	197	213
Lawrence	140	148
Northbrook	21.62	22
Union	235	241
	Rs.	Rs.

In paper, Orient were steady at Rs. 38.20 and Bengal were taken at the higher rate of Rs. 108. Sirpur were subdued at Rs. 14.19.

In sugar, Belsund spurted from Rs. 14 to Rs. 15.31 and S.K.G. from Rs. 12.94 to Rs. 13.62. Ramnugger rose from Rs. 19.25 to Rs. 19.75 and Dyer Meakin Breweries from Rs. 18 to Rs. 18.75.

Among miscellaneous industrials, Rallis provided the outstanding feature, improving from Rs. 80.50 to Rs. 83. Britannia Biscuits were wanted at Rs. 26.25 while Dunlops were slightly easier at Rs. 35.50. Imperial Tobacco met with some enquiry at around Rs. 11 while Indian Cables were softer at Rs. 30.94. Indo-Burma Petroleum were marked down sharply from Rs. 28.25 to Rs. 26.12 and India Steamship were quiet at Rs. 13.75. National Carbon changed hands at Rs. 40 ex-dividend and National Tobacco were steady at Rs. 17.87.

Tea shares were steady and widespread gains were recorded as will be seen from the following table:

	Opening 22nd October, 1959	Closing 28th October, 1959
	Rs.	Rs.
Basmatia	25.50	25.75
Betjan	21.75	22
Brooke Bond	18.25	18.75
Hattikhira	11.50	11.75
Huldibari	19.75	20.62
New Dooars	265	270

Mining issues were quiet and prices tended to lower levels with the exception of Indian Copper which were well maintained at around Rs. 3.95.

Cambodia Mills

The Cambodia Mills Ltd has incurred a loss of Rs. 14.64 lakhs for the year ended December 1958. Bringing in a debit balance of Rs. 3,62,065 and making other adjustments, a debit balance of Rs. 18,60,483 is carried forward. The dividends have been passed over.

Katras Jherriah Coal

The profit of the Katras Jherriah Coal Company has declined by Rs. 2.29 lakhs to Rs. 9.82 lakhs for the year ended January 1959. Taxation provision absorbs Rs. 7 lakhs, against Rs. 7.55 lakhs. Bringing in Rs. 1,68,572 and other miscellaneous receipts, there is a balance of Rs. 4,52,146. A dividend of Rs. 6.50 a share has been paid, including an interim of Rs. 3 a share, leaving a carry-forward of Rs. 1,27,146. Raisings declined from 349,055 tons to 344,864 tons and despatches from 368,730 tons to 354,154 tons. In January 1959, permission was received from the Controller of Capital Issues to capitalise Rs. 7,50,000 out of reserves. In view of the tax implications, however, the directors have decided not to recommended any further action being taken at present. The consent of the Controller of Capital Issues is in any case valid until January 1961, so the position will be reviewed by the directors from time to time. The capacity of the sand-getting and stowing arrangements at the Laikdih Deep colliery has recently been improved, and a small increase in raisings of the Selected A

A panoramic view of the Burnpur works of The Indian Iron & Steel Company Limited

This is the town that never sleeps—the town of steel. Night and day, the vast works throb with activity as men and machines labour to feed the iron and steel-hungry industries of the nation. Using the most modern production technique the Company manufacture, under a system of rigid quality control, a wide range of products including rails, structurals, blooms, sheets, billets, slabs, pig iron, spun iron pipes, vertically-cast iron pipes and iron, steel and non-ferrous castings.

grade coking coal from this colliery will now be possible. The reserves of coal at the Sodepore colliery are, however, decreasing rapidly and will be exhausted within a few years.

Ruby General Insurance

The Ruby General Insurance Company has declared a dividend of 62nP a share to absorb Rs. 2.48 lakhs, leaving a carry-forward of Rs. 8,214. The net premium of the fire department amounted to Rs. 56,39,906, compared with Rs. 52,01,121. The net premium of the miscellaneous department was Rs. 59,73,368, against Rs. 63,22,389. The net premium of the marine department totalled Rs. 15,71,549, compared with Rs. 17,57,600.

Enfield India

There is a profit of Rs. 2.24 lakhs for the Fnfi 11 India Ltd for the year ended December 1958, after providing Rs. 2.68 lakhs for depreciation. The preference dividends have been paid, but the ordinary dividend has been passed over, leaving Rs. 3,930 to be carried forward. The company has made substantial additions to plant and machinery, and there has been steady progress in increasing the indigenous content of its products. The issued capital has been raised to Rs. 25 lakhs.

Bombay Market

EARLY BULLISH PHASE DISPELLED

POLITICAL NEWS CAUSES ANXIETY

Wednesday Evening.

THE Bombay stock market closed in an uncertain mood last week. Earlier bullishness was not maintained because of anxiety relating to Sino-Indian political relations. Reports of a fresh Chinese incursion into Indian territory caused nervous selling and prices declined on a broad front. This apart, settlement considerations also induced caution.

Tata Steels declined to Rs. 155.50 and Indian Irons were quoted at Rs. 23.92. Premier Construction reacted to Rs. 369 on profit-taking as it was thought that the capital reconstruction programme might take some time to be finalised. Alcock Ashdown were freely offered at Rs. 253. Tata Locomotives were steady at Rs. 202 on prospects of increased activity because of the Government's decision to permit the manufacture of diesel locomotives. Mahindra & Mahindra were taken at Rs. 23.04 on a report that the company would manufacture tractors with foreign collaboration. Motor shares were steady and Hindustan Motors were quoted at Rs. 13.44. Premier Automobiles changed hands at Rs. 132.50.

The closing prices of cotton mill shares showed losses on balance. Bombay Dyeing were transacted at Rs. 63.10 and Century backed to Rs. 606 due to the belief that the rights share issue may take some time to be finalised. Meanwhile, it has been authoritatively stated that the company wishes to issue rights ordinary shares at a premium of Rs. 20 a share. Kohinoors were bought at Rs. 314.50 and Simplex were taken at Rs. 161. Swadeshi were steady at Rs. 257 and Tata Mills were placed at Rs. 46. India United Ordinary slumped to Rs. 11.28 on the publication of disappointing results. Apollo were available at Rs. 1.26.

Although the recent decline in prices of Indian raw cotton might help mills to obtain their requirements more easily, there is a considerable shortage of finer cotton. It is thought that increased imports are necessary if working is not to be interrupted.

In the miscellaneous group, sugar shares improved on the publication of production incentive measures. The trade thinks that production during the next season might improve if increased cane supplies are available to the mills. Belapur moved up to Rs. 336 and Phalton were quoted higher at Rs. 185 on the expectation of an increased dividend. Maharashtra Sugar were steady at Rs. 250 on knowledgeable buying. Steamship company shares were quiet and Scindia were shaded at Rs. 17.04. Great Eastern Shipping were sold at Rs. 19.32. There was little interest in mining shares and Shivrajpur Syndicate were indicated at Rs. 89. Cement shares were steady and Associated Cements were bought at Rs. 153.50. Digvijay were held at Rs. 145. National Rayons reacted to Rs. 380.50 on realising and Bom Burmah were transacted at Rs. 541. Voltas w bought at Rs. 181 on investment account. Hardboards were done at Rs. 420 on reports improved working. Turnover in banking insurance shares was restricted and fluctuati were narrow. Central Bank were dealt in Rs. 49.25 and Bank of Baroda were taken Rs. 103.50. New India Assurance were steady Rs. 66.

Electricity supply company shares moved b ways. Bombay Suburban were taken at Rs. but Ahmedabad Electric lost at Rs. 95.20. T Hydro were placed at Rs. 1,125.

The Stock Exchange will remain closed 29th and 30th October for Diwali holidays and reopen on 31st October at 6 p.m. for an hour the Moorat trading.

a time of joy...

When swords of lightning no longer flash,
the roll of thunder loses its echo, the
pitch laden sky clears and the sun breaks
through wisps of cloud cotton-like
in the sudden blue—that is the time
of the harvest, and the year's work is done.

For this end; the effort, the toil. For a
world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for... Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products...

Today and Tomorrow... Hindustan Lever serves the home.

COMMONWEALTH COMMERCIAL TRENDS

BRITISH INVESTMENT IN CANADIAN REAL ESTATE

(FROM A CORRESPONDENT)

CONFIDENCE in British business circles that Canadian real estate has a prosperous future ahead of it is exemplified by the decision of the Berkeley Property and Investment Company to invest a further £500,000 (1.34 million dollars) in Canada. The company already operates there through its subsidiary, North of Scotland Investment Corporation. The funds are coming from the recent rights issue to shareholders which raised £1.2 million. The balance of the new money will be spent on expanding interests in Britain. Berkeley Property has about a third of its interests in Canada and it is the company's policy that, as its interests grow, so will its investments in Canadian real estate. According to the chairman, Mr. J. H. Hambro: "The expansion potential of Canada is still enormous. As the prosperity of the nation builds up, the value of the right kind of properties in the big cities is bound to grow with it."

Economic Progress of Jamaica

The Bank of Montreal, in its latest *Business Review*, referring to the notable progress being made in the development of Jamaica's economy, thinks that Canadian business might consider enlarging its investment stake in the island. The *Review* says that, under its ten-year development plan, "Jamaica's attractions as a field for investment and a market for goods, together with its status as an exporter, should continue to increase. And as the political union of the West Indies now in effect is in due course followed by closer integration of the Federated islands, a broader sphere of business opportunities will open up in the Caribbean."

Although agriculture remains the most important single source of wealth, Jamaica's mining, manufacturing and tourist industries, together with large-scale construction and the growth of service industries, have all contributed substantially to her overall expansion. This widespread growth and diversification, and the attraction of foreign investment which has given it impetus, has to a large extent been the result of active and carefully planned Government encouragement. The Jamaican Government has provided for income tax and import-duty concessions as well as for accelerated depreciation allowances.

Bowaters Extend Interest

Arrangements have been completed for Britain's Bowater Paper Corporation to participate in the future management and development of Tasman Pulp and Paper of New Zealand. These arrangements provide for Bowater to contribute £1 million to the Tasman capital, to be associated with Albert E. Reed and Company of London, in management and to be responsible for sales of the Tasman company's products. Bowater will also provide the Tasman company with a team of experts to be employed in New Zealand for several years, until New Zealand workers have been adequately trained.

New Irrigation and Power Project in Tanganyika

A giant irrigation and power project for Tanganyika, estimated to cost between £80 million and £100 million, is to be undertaken in the near future. A five-year survey of the irrigation possibilities of the 68,500 square miles of the Rufiji river basin, undertaken by officials of the Food and Agriculture Organisation of the United Nations, is nearing its end and, although their report is not due until September next year, sufficient information has been collected to show the potential of the region, which has hitherto suffered extremes of drought and flooding. The surveyors believe that what they call "a second Kariba" could be established to provide large-scale irrigation and hydro-electric power and make the Rufiji river navigable for 120 miles from the Indian Ocean. The "second Kariba" is one of 15 dam sites chosen by engineers and hydrologists of F.A.O. who have been working in conjunction with the Tanganyika Agricultural Corporation. The main dam would be at a point called Stiegler's Gorge, where the Rufiji passes between 400 feet cliffs about 120 miles from the sea.

The survey has cost about £800,000, of which £500,000 was contributed by the Colonial Development and Welfare Funds and £300,000 by F.A.O. Virtually no hydrological data existed in the basin before the field work began. According to Dr. R. Schickele, Director of the Lands and Water Development Divisions of F.A.O., until communal services, such as communications, roads, telephones, hospitals and schools, were developed, even in a rudimentary way, faster economic development could not be expected. It is, he said, the responsibility of, as well as an opportunity for, the industrialised western countries to make long-term capital available.

Washable Non-Iron Wool Fabric

A washable non-iron wool fabric, the discovery of which is described as the most exciting event since the first wool was woven, has been developed at the Commonwealth Scientific and Industrial Research Organisation's laboratories in Geelong, Victoria, Australia. Introducing the new fabric in Melbourne, the chairman of the Australian Wool Bureau, Mr. W. A. Guhn, said the bureau would back it immediately it was put on the market early next year. He said the fabric headed the way for easy care and easy wear for wool and that it was another triumph for C.S.I.R.O. scientists, who had already produced permanent creasing and pleating. The chairman of the Australian Wool Growers Council said that the discovery marked a very significant development in the new competition between wool and man-made fibres, and would be particularly gratifying to Australia's wool growers.

Ocean Terminal for Durban Docks

An ocean terminal is to be built at Durban Docks for the South African Railways Administration at a cost of about £2 million. The construction work will provide employment for 120 artisans and 700 labourers. Passenger halls will be on the upper floor and there will be a helicopter landing area and an office block.

Iron Ore Mines in Quebec

Plans have been finalised for the mining of iron ore in the Lac Jeannine area in Quebec, and Quebec Cartier Mining Company, a subsidiary of U.S. Steel Corporation, has arranged with a group of American and Canadian banks to borrow up to $(U.S.)200 million between now and 30th December, 1960. The project includes construction of a new harbour and loading facilities at Port Cartier, a 193-mile railway from Port Cartier to Lac Jeannine, a 60,000 h.p. hydro-electric plant on the Hart Jaune river, and preparation of a large open-pit mine and concentrator for the production of 8 million tons of high grade iron ore concentrates a year.

Meanwhile, a new move to strengthen and expand trade links between Canada and Britain is seen in an invitation from the Liverpool Chamber of Commerce to five leading Toronto business men to visit Merseyside for a week early in November. It is hoped that the visit will also strengthen trade links between the two ports. The party will be taken on an extensive tour of Merseyside shipping, industrial, commercial and civic undertakings.

According to Brigadier C. C. Parkman, chairman of the Liverpool Chamber of Commerce, the present structure of overseas trade, once arrangements had been arrived at between the Governments concerned, consisted largely of each industry making its own plans for taking advantage of these arrangements. He adds: "To a considerable extent this structure is adequate, but it does not include an idea which has been found to be of the greatest value in the past—the idea of one major area being well known in another. No two better areas exist for such a purpose than Toronto and Liverpool, together with the surrounding district that each services."

Tasmanian Aluminium Works to Expand Capacity

Tasmania's Bell Bay aluminium works will soon be able to supply about half the Australian demand for aluminium, as the result of an agreement between the Australian Prime Minister, Mr. R. G. Menzies, and the Premier of Tasmania, Mr. E. E. Reece, on a plan to increase the capacity of the Bell Bay works from 12,000 tons to 16,000 tons of aluminium ingots a year. This plan for expansion, which is expected to cost approximately £A3 million, was recommended by the Australian Aluminium Production Commission. Until now the Commonwealth has found £A9,700,000 and the Tasmanian Government £A1,500,000 for the establishment of the Commission's undertaking.

The Commonwealth contribution to the expansion programme is that it will continue for the time being to guarantee the existing bank overdraft of the Commission of £A300,000. It has further agreed, as has the Tasmanian Government, temporarily to waive any claim on the Commission for payments on account of profits, interest or capital. It is thought that this will enable the Commission to provide up to £A650,000 from its own resources towards the cost of the expansion programme. In addition, the Commission may be able to provide the further working capital necessary. The Tasmanian contribution will be to underwrite the total cost of the expansion programme. It is estimated that this may involve the provision of £A2 million. The two Governments have agreed to continue negotiations to attract private capital to Bell Bay so that its manufacturing capacity can be increased still further.

New Giant Power Station

A giant power station is to be built in Hazelwood, New Morwell, on the vast brown coalfield of the Latrobe Valley, 98 miles from Melbourne. The power station is to be three times as big as the largest electricity plant at present in use in Australia. It will have an ultimate generating capacity of 1,200,000 kilowatts and would cost more than £A122 million. The station will be fuelled with brown coal.

Tooma-Tumut Power Generation Scheme

High in the Australian Alps, in southern New South Wales, has just been completed the first stage of the Tooma-Tumut pond diversion in the Snowy Mountains hydro-electric and irrigation scheme. It marked the break-through of the first 4½ mile "leg" of the nine-mile tunnel which will take water from the Tooma river to the power station and headwaters of the Tumut. The second section is expected to be completed early next year. When the diversion is in operation fully in 1961, about 230,000 feet of water will be diverted each year from an eath-and-rock-fill dam on the Tooma river to Tumut pond, where it will run through the power station. This electricity will be fed into the grid systems for New South Wales and Victoria. The water will then be used for irrigation purposes of farmland along the Murray river valley.

Citrus in South African Exports

Citrus is now one of South Africa's major earners of foreign currency, taking second place only to wool among the country's agricultu exports. This year's citrus exports are expec to exceed last year's figure of 6,874,000 ca valued at £15.1 million. Last year, the Un exported citrus to 37 countries; 56 percent w to the United Kingdom, 27 percent to west Europe, and 11 percent to Scandinavia. T balance was sold in other markets and as shi stores.

Oil from Oil

This year, Sasol (South Africa's oil-from-project) will show its first profit—and the fig will be almost twice as high as expected only few months ago. In the first quarter of the ye the Minister of Economic Affairs, Dr. Diederichs, said in the House of Assembly that profit for 1959 was expected to be about £500,(Present indications are that it will be just 1 than £1 million. In 1959, Sasol showed a loss £3.9 million, but the deficit gradually decrea and last year stood at £500,000. During 1961, plant will reach its full production capacity 39 million gallons of fuel a year; and then pr pects of establishing more "sasols" might be c sidered. It is thought that the Union has suffici raw materials for five such undertakings.

U.K. Investment in Australia

The U.K. is maintaining its rôle as the princi source of foreign private capital for Austra although its share is not as high as in the ea postwar years, when it contributed about fo fifths of total private overseas investment Australia. This fact emerges from figures wh have recently been issued by the Commonwea Statistician in Australia. Since the immedi postwar period, the shares of other countries private overseas investment in Australia ha grown, in particular those of the United Stat New Zeland and West Germany. But the Brit contribution has recovered from the level of percent, to which it fell in 1953-54, to that of percent in 1957-58, the latest period for wh information is available.

The United States portion has increased fr an average of 14 percent of the total in the th years preceding 1950 to 26 percent in the lat year, and has been achieved, according to Commonwealth Statistician, at a negligible c in terms of new money. In recent years, fu have increasingly come from profits plough back as a result of high earnings on Austral investments. In the latest year, these represen about four-fifths of total United States investme Britain supplied £A41.3 million or about 70 p cent of the new money inflow; this is the high percentage for years.

The cost to Australia of servicing overs investment has grown fairly steadily over past nine or ten years; in 1957-58, it reached £2 million or about 4½ percent of the total overs outgoings. And the high rate of payment dollar investment has attracted special attenti In the latest year, it amounted to nearly th times the inflow of new money, and over 11 ye it totalled £A82.6 million or about £A2 mill more than the supply of new funds. By contr the U.K. in the latest year invested £A41.3 mill in new money, and drew £A23.5 million; o the 11 years, its contribution was £A38.6 milli compared with £A172 million taken out. M of the overseas investment has found its w into manufacturing activity, although the prop tion has fallen from more than three quarters 1956-57 to under two-thirds, while the outlay commerce has risen from under £A8 million more than £A19 million. Over the whole peri foreign investment in Australia totalled £A million and the annual input grew from average of £A49.2 million in the first three ye to £A103.8 million over the final three years the period.

Wool Output Rises

Production of wool in 1958-59 in Australia v 1,577 million lbs, greasy basis, which was 143 n lion lbs (or 10 percent) above that produced 1957-58 and nearly 13 million lbs more than previous highest output of 1,564 million lbs 1956-57. The estimated number of sheep a lambs in March 1959 at 152.7 million was million higher than a year earlier and 2.9 mill above the previous record level of 149.8 mill in March 1957.

The New Zealand Wool Commission's pr minary estimate of wool production in the 1959 season gives an output of 565 million lbs, gre basis, or 5 percent higher than the 1958-59 to During 1958-59, total production showed an vance of 9 percent on the 1957-58 total of 496 n lion lbs. The output of fleece and slipe wool r by 8 percent and 11 percent, respectively, to million lbs and 73 million lbs, while that of w on sheepskins remained unchanged at 4 mill lbs.

Marsh Reclamation in Nyasaland

A large swamp area called Elephant Marsh the Shire River Valley of Nyasaland has be surveyed by Dutch polder experts, who have forward a £5-million scheme for turning it i fertile land capable of producing £2 million wo of crops annually. The proposed crops would clude sugarcane, cotton, rice and maize. scheme, it is thought, could, if brought to fruiti supply all Nyasaland's sugar needs. The surv team does not think there will be any great te nical obstacles in the way of constructing polder, which would be surrounded by dykes. the first instance, a 5,000-acre pilot polder wo be built within the potential 60,000 acres whi the term considers, could be reclaimed.

London

F.B.I. SURVEY SHOWS RISE IN U.K. INDUSTRIAL OUTPUT

STOCKS OF FINISHED GOODS FALL

(FROM OUR LONDON CORRESPONDENT)

INDUSTRIAL trends in Britain have changed during the last two years from "slightly downward" to "markedly upward." This, says the Federation of British Industries, is shown in its sixth survey, made among more than 700 firms in many industries. The Federation, which conducted its enquiry at four-monthly intervals in the last two years, points out that in general, the October replies, received before the polling day, indicate continuing expansion over a wide front. It is expected to continue, but has not yet led to a corresponding expansion in the plans for capital investment. For every question, it is stated, the reported increases are offset by some decreases. But when the balance between "up" and "down" is examined, there are strong continuing trends and important changes of direction.

In the fifth enquiry last June, the outstanding feature was the indicated increase in output. This has continued in the present enquiry: 53 percent report increases; only a scattered 8 percent report decreases. Increases are widespread but not universal. Both numbers employed and hours worked an operative have increased more markedly than in June. For the first time since the enquiry began, more firms find it harder to get the labour required than find it easier. But the trend is not strong and the predominant reply is "no change." The cause of increased output has been the further rise in orders received. The indication in June of lengthening order-books is more marked this time. It is consistent with this that the earlier rises in stocks of finished goods (which was checked in June) have now changed to a significant fall.

Another reflection of the increased output is the fact that 50 percent of the firms are now working to capacity. This compares with 20 percent as recently as February this year. The trend in raw material stocks, steadily declining in the earlier enquiries, now shows signs of changing direction to an increase. The replies indicate an optimism for future activity which is justified by the continuing increase in orders and the lengthening order-books. The point has not yet been reached at which there is widespread planning of new capacity. The trends differ between buildings on the one hand and plant and machinery on the other. For the latter, the downward trend was checked last June (when higher and lower expectations were balanced) and the present enquiry shows another of the changes to an upward trend, which is its most interesting feature. This is not the case for new building. The downward trend, which was lessening in intensity up to June, shows no significant improvement this time. Firms report their experience over the past four months as follows (in percentages):

	Up	Same	Down
Operatives' average hours ..	31	62	6
Numbers employed ..	36	53	11
Rate of new orders ..	48	36	11
Length of order-books ..	40	35	14
Level of output ..	53	38	8
Selling prices ..	12	67	20
Profit margins ..	13	53	33

(Not all the firms answered all the questions.)

More Freedom for Sterling

A long anticipated move in the granting of further freedom to the pound was taken recently. From 1st November, the British tourist will be free, for the first time since 1939, to spend as much as he likes in any country in the world. Banks and travel agents will automatically allow up to £250 a year in foreign currency to anyone travelling abroad. The authority of the Bank of England will still be needed for the issue of larger amounts of foreign currency, but permission for this will always be given if the Bank is satisfied that the money is wanted for the ordinary purposes of travel. This arrangement is necessary, the U.K. Treasury explained, not to limit the amount granted for travel, but as a protection against the unauthorised export of capital.

Wages and Production

With the election over, the British Employers Confederation puts the question in its current bulletin: "How can we now do better?" As it sees it, the answer is to have no increases in wages without matching increases in productivity; to get rid of restrictive practices which hamper output; and to encourage union leaders to think hard on their duties. On this last point, it says: "They (the leaders) can continue to claim to represent organised labour only if they can show that they and not the promoters of wildcat strikes are the men who can really carry their members with them. It is in the interest of everyone that responsible leadership should be maintained in the trade unions, for it is only in that way that the unions can make their full contribution towards increasing prosperity." At a time when unions are demanding a shorter working week more vigorously than ever before, the Confederation has this to say on hours: "Actual hours worked may shorten but, to the extent that they do, the increase in real wages will be reduced." It goes on to claim that the people of Britain are "fed up" with restrictive practices and it backs this point by warning employees that the future will not be easy, even without such practices.

Exports still Rising

The trade figures for September confirm that last month's fall in exports was no more than normal for the time of year. The slight increase in imports, compared with the previous two months' average, was, however, against the normal seasonal trend. It emphasises the rising trend which has now been obvious for about a year. So far this year total exports are about 3 percent higher (in terms of both volume and value) than in the corresponding period of 1958. But the rise has been concentrated in the last six months, over which exports have run about 6 percent higher. Exports to the sterling area, which were 12 percent lower in the first quarter of the year, are now nearly back to last year's level. Meanwhile, the fall in this direction has been more than offset by shipments to North America and western Europe which, since April, have been on an average 11 percent higher than last year.

The slump in commodity prices is still helping to keep Britain's imports bill down: although the volume of imports so far this year has been 7 percent up on 1958, their cost has been only 5 percent higher. Three-fifths of this increased cost is accounted for by manufactured goods. But the import price index is now back to the level of a year ago and although the terms of trade (at 90) moved slightly in Britain's favour last month, the long-term trend is likely to be the other way.

Retail Sales Up

The provisional estimate of the value of retail sales in September is about 5 percent above a year earlier, the U.K. Board of Trade has announced. In August, the increase was 4 percent. In both July and the second quarter, the increase on a year earlier was 5 percent. Prices in September showed little change, compared with September 1958, so the substantial increase in value is likely to have been wholly due to a greater volume of sales.

Dearer Basic Materials

Prices of the basic materials used in British manufacturing industry continued to follow a gently rising trend in September. The U.K. Board of Trade's index number (1954 equals 100) moved up by 0.2 to 102.1. This was due mainly to a 4-percent rise in the price of raw rubber and to higher prices for tungsten and palm kernels. Prices of raw sugar and of refined vegetable oils, which had fallen in July and August, were also dearer in September. The main fall was in the price of wool.

Rubber Stockpile Sales

Discussions have now taken place with principal rubber-growing countries about the release of rubber from the U.K. Board of Trade's stockpile, and disposals began on Monday last. The plan provides that the maximum tonnage to be sold in any calendar month will follow a graduated scale according to the price realisable for the rubber. This scale begins at 25½d a lb. and no rubber will be sold at prices below this cut-off level. From 25½d up to 27d a lb, the maximum monthly rate of sales will be 800 tons; from 27d to 28⅝d, 1,600 tons; from 28⅝d to 30½d, 2,400 tons, and at prices from 30½d upwards, there will be no quantitative limit.

The sales are starting when an acute shortage of supplies for early delivery has pushed the spot price of natural rubber to its highest level for well over three years. The current quotation is more than 5d above the level at which quantitative limits cease to operate. The U.K. Board of Trade will be prepared to sell, in each month, rubber for delivery during that month or in the three following months, although the maximum tonnages that can be sold below 30½d a lb in the period to the end of October will be half those set down for a full month. The stockpile totals about 100,000 tons.

Position in Lancashire

From the comprehensive and penetrating survey of the U.K. cotton industry's present position, which Lord Rochdale gave in his opening address at the Cotton Board conference in Harrogate, two points stand out clearly. He discussed the limitation of imports of cotton goods from the Commonwealth countries in Asia, admitting that the restrictions adopted left much to be desired from Lancashire's point of view, but emphasising that almost any limit was better than none at all. He expressed no opinion whether the policy of dealing with these imports within the Commonwealth by way of inter-industry negotiations was the correct one, but he suggested that the question deserved the most serious consideration by the authorities as it was not one merely for the cotton industry or merely of imports from the Commonwealth. The import difficulties which have proved so damaging to the cotton industry in Britain, he said, are no more than a cloud the size of a man's hand in relation to the far larger problem, embracing a wide range of industries, with which the growing economic strength of Far Eastern countries, including China, will confront the United Kingdom and other western countries in the future.

In his account of the Government's re-organisation plan for the industry, he referred to the need for speed in taking action to eliminate redundancy and to increase efficiency. He pointed out how the methods decided upon had the advantage of speed over other procedures which might have been adopted. The trade, as a whole, will agree that all those who have been concerned in drafting and administration of the redundancy schemes for spinning, doubling and weaving have acted quickly and well.

JUST OUT

INVESTORS ENCYCLOPAEDIA

1959 EDITION

(TWO PARTS)

CONTAINS:

1. Details about a large number of Joint Stock Companies in India with full particulars about their working for the past few years.
2. Details about various Central and State Government Securities and Loans and Debentures issued by various Quasi-Government institutions like Port Trust, Improvement Trust, Municipal Corporations, Land Mortgage Banks and other public institutions.
3. Details about Income and Supertax, Capital Gains Tax, Wealth Tax, Death Duty, etc.
4. Details of companies functioning in public sector—Names and Addresses of foreign Diplomats in India and our Diplomats abroad and many other useful information.
5. A survey of almost all industries in India with coloured maps showing the location of various industries.

A political map of India (36" × 32") showing the latest political divisions, railways and important towns.

Provided with Thumb Index for easy reference purpose.

About 3000 companies — About 3000 pages.

A BOOK MOST INDISPENSABLE FOR ALL CONNECTED WITH TRADE, COMMERCE & INDUSTRY.

Price Rs. 30/- (Postage Rs. 7/- Extra)

for copies apply to:

KOTHARI & SONS,

Brokers, Merchants & Agents, P.B. No. 267, 'Oriental Buildings' Armenian Street, MADRAS-1.

PAKISTANI GOVERNMENT AID FOR PRIVATE INDUSTRY

(FROM A SPECIAL CORRESPONDENT)

THE Pakistan Industrial Development Corporation, that country's seven-year-old State-run pioneering organisation, and the Pakistan Industrial Credit and Investment Corporation, the two-year-old (also State-run) financing organisation, will play an increasingly important rôle under the present régime's current industrial policy. The former has decided to sell at a profit those units of its $400-million empire which are not only complete units but also going concerns, to the private sector of the economy since free enterprise is being increasingly called upon to play its part in the developing economy of Pakistan. As part of the same policy, the P.I.C.I.C., mainly sustained in its operation by the U.S.A.'s economic support, will provide increasing support to private industry.

Out of its total of 47 completed projects costing approximately $200 million, about 21 (costing approximately $75 million), have already been transferred to the private sector, and the Corporation, it is learnt, is expected to sign away its twenty-second project—the $8.62-million Zeal-Pak cement factory in Hyderabad in West Pakistan, in the near future. Out of the P.I.D.C.'s 21 projects already transferred to the private sector, 16 (14 jute mills in East Pakistan and two paper-strawboard mills in West Pakistan), built at a total cost of $53.30 million, still have some of their shares owned by the Corporation, although the controlling interest in the case of most of them belongs to the private sector almost from the time they were completed.

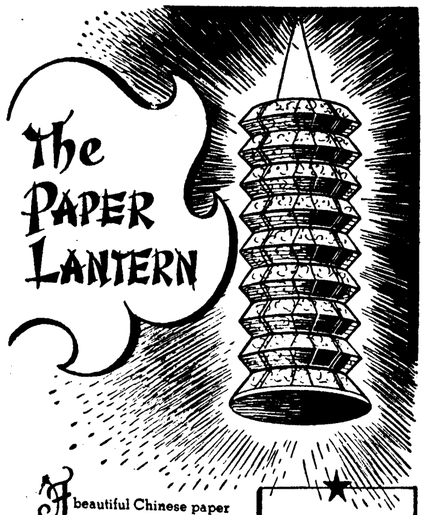
After Pioneering Work

It will be erroneous to suppose that the P.I.D.C.'s empire is going into liquidation. All that is happening is that it is helping private enterprise to step into the fields which it is vacating after doing the pioneering work. The same process is taking the P.I.D.C. into new fields of industrial pioneering. Currently it is giving shape to a $20-million scheme to step up, by more modernised and efficient means, the country's power and fuel resources, of coal deposits (at a cost of $14 million) in West Pakistan and of peat deposits (at a cost of $6 million) in East Pakistan. Out of the undertakings, in hand, 15 are in the process of being built or expanded, besides the steel mill scheme which is about to take a definite shape. The P.I.D.C., therefore, will remain a potent factor in the shaping and execution of development projects in specific fields under Pakistan's second five year plan (1960-65). In the recent past, however, private companies as well as provincial Government water and power development authorities have ventured into the fields which were hitherto considered the preserves of the corporation.

There is yet another field of industrial activity in which the P.I.D.C. is likely to continue to play its pioneering rôle for a considerable time to come. This is where attracting foreign capital to Pakistan's home industries is concerned. Foreign private capital, except in the field of oil concessions, has been no less shy than local capital. And the shyness of the former has been due, besides the persistent political instability of the country and the nearness of bigger and more inviting markets like India, to a dearth of suitable local companies and entrepreneurs with adequate background, temperament and technical know-how, or resources of big business for the purpose of tie-up with foreign capital. The P.I.D.C., with its Government-backed resources and its pool of the best available in the country in the way of proved talent and experience, has been trying in its own way to provide this local base to the foreign investor. Its success in this field has varied with different countries, the maximum response coming from West Germany and the United Kingdom and almost none from other countries. The American investor, on the whole, on account of his traditional dislike of any form of degree of Government control in the direct running of business has shown no interest in participating in any P.I.D.C. enterprise. The corporation's success with the U.K. and West Germany is mostly to be found in the fields of manufactures of dyes and chemicals, drugs and medicines and general pharmaceuticals. Bayers of Germany tied up with the P.I.D.C. as early as 1955, and currently the British company of May and Baker is finalising an agreement with the Pakistani corporation to set up as a joint venture a pharmaceutical plant to make a wide range of products.

Encouraging Joint Ventures

The P.I.C.I.C., too, is playing its part in encouraging joint ventures between local and foreign private capital. Only recently it has guaranteed financial support in the form of loan to local investors participating in a joint enterprise with the American Belton Bagging Company to set up a bagging plant in East Pakistan to use home-grown jute-cuttings as raw material. Other ventures of this nature will be similarly guaranteed by the P.I.C.I.C. concerning local investment; at least two more are in the offing.



The P.I.C.I.C., however, for some time to come will generally work within the framework of a short-term plan (not very rigid) to help balance and modernise, through monetary support in the form of loans, certain existing medium-sized industrial units in approved fields with a view to making them economic units. The approved industries are those which use indigenous raw materials which have been going waste in the past as well as those which have the maximum potential of building up Pakistan's export trade. The old industries are to be helped in their modernisation and the new industries are to be guaranteed in the matter of local investment. At present, the P.I.C.I.C.'s short-term plan for helping in the modernisation of industries is under review, as a result of which more industries, it is expected, will be added to the approved category.

The P.I.C.I.C.'s approved list of heavy industries, as a part of its long-term plan, includes cement, sugar, caustic soda and soda ash, which have been reserved for its pioneering work since inception. It is in these fields that the P.I.C.I.C. will particularly encourage and help any form of feasible co-operation between foreign private and local private capital.

Supporting Loans

Altogether 50 or more enterprises have so far benefited from the P.I.C.I.C.'s supporting loans, all belonging to the private sector of the country's economy. Its commitments had already reached the $10-million mark ($7 million in foreign exchange and the balance in local currency) by the end of August this year, although the actual disbursements were only to the tune of $1 million. Out of the total aid committed or disbursed by the P.I.C.I.C. by the same date, unbalanced or out of date units of the textile industry received a total of $2.45 million in foreign exchange and the equivalent of $1.30 million in local currency.

The P.I.C.I.C.'s supporting loans are coming in for increasing demand and it expects to exhaust the $10 million it received from the World Bank recently by the middle of next year. Its resources are, however, keeping pace with its increasing commitments. The U.S. Development Loan Fund, which had advanced only $8.2 million up to December last year, has come out with a lumpsum grant of $10 million. The P.I.C.I.C., therefore, for some time to come, will have adequate resources to meet the increasing demand for support by Pakistan's growing free enterprise economy. Its resources may further be supplemented by the growing West German interest in Pakistan's investment market.

Jute

JUTE QUALITY EXPECTED TO DETERIORATE DUE TO FLOODS

MILLS COMPLAIN OF EXCESSIVE MOISTURE IN FIBRE ARRIVALS

PEOPLE who have visited the jute districts during the past few weeks have brought back varying reports about the condition of the peasants and the crops. Many of the reports make distressing reading, but on the whole the jute areas have not suffered to the extent indicated in some earlier despatches. It is true that a number of areas even normally are partly under water for a large part of the season, but the recent one was no normal inundation. In most places, water levels have now receded and it is expected that the only loss will be a deterioration in the quality of the jute that had not been harvested and was partially submerged. The main complaint against recent arrivals at mills is, not unnaturally, moisture. Parcels containing over 5 percent moisture are common. Mill buyers have said that, rather than accept jute in this condition, they will give free extensions to allow the sellers to dry the jute. Sellers have indicated that this will involve them in huge losses, as they have to accept wet jute from the farmers, whether they like it or not. According to many, there is no dry jute coming forward from the interior. The quality of most parcels is good, much better than in previous seasons, as there is no shortage of steeping water this year.

The size of the jute crop and its availability is a subject on which no two people agree at present. The two main schools of thought—the mills and the sellers—are diametrically opposed, each holding the view best serving its own purposes. Most balers are implementing the Government's export programme, which, in the opinion of many, may be the decisive factor in the final reckoning. Stories of shortages, however, are circulated each year whatever the size of the crop. With a few notable exceptions, there has always been enough jute to keep the mills running.

Raw Jute Arrivals

Arrivals of raw jute in Calcutta and mill stations during September 1959 amounted to 354,050 bales. This was 43,000 bales more than the revised figure for the previous month, but 53,700 bales less than in September 1958. The drop might well be accounted for by the disruption of transport during the floods. A feature was the new low level of the arrivals from Pakistan. These amounted to 10,300 bales, or 6,850 bales less than in the corresponding month of last year, and brought the total arrivals from Pakistan for the period July-September 1959 to 46,300 bales, as against 110,500 bales during the same period last season. In September 1957, total arrivals from Pakistan in the one month were nearly half as large again as those during the first three months of this season combined. Arrivals from Indian agencies last month showed an increase of 50,200 bales over August 1959, but at 343,750 bales were 36,850 bales less than in September last year. Total arrivals for the current season now amount to 1,000,800 bales, which is 87,300 bales less than in the corresponding period of the last season. About 46,300 bales have come from Pakistan, and 954,500 bales from India. The latter figure is 23,100 bales less than for the same period last year.

During the first three months of this season, Calcutta mills consumed 1,490,800 bales of jute, against arrivals of 1,000,800 bales—a difference of 490,000 bales. In spite of the fact that during part of the recent period, the industry's productive capacity was greater than last year, the estimated consumption last year was slightly larger, and exceeded arrivals by 404,400 bales.

In general, upcountry raw jute markets eased during the past week as imports improved and prices came more in line with Calcutta indications. Consequently, sellers became more active and were keen to do business, but they met with little response from the mills. With the easing of the transport position, most mills are receiving more jute than their import sections can handle or their reduced storage space hold. As large deliveries are scheduled during November, they are unlikely meantime to increase their holdings. They might be interested in, say, December-January shipment, but sellers are not keen to sell so far forward at this stage of the season.

Booking of Jute

For many years, the jute industry has had cause for complaint about the booking of jute from certain agencies by rail. Many good agencies are not at railheads, nor are they served by river transport. Therefore, the jute has to be transported to the nearest rail booking centre by lorry. Many unscrupulous sellers take advantage of this deficiency by sending jute from an inferior agency to booking centres with marks of a better agency. The railways have no way of verifying the initial point of despatch for these goods and accept them at their face value, thus allowing the seller to receive a higher price than the jute warrants. To eradicate these malpractices the railways have devised a new system for the current season, and will now issue through rail receipts at many agencies covering the long journey to the railhead and subsequent despatch. Thus, jute from, say, Karimpore, which is always despatched from Krishnagar city, about 35 miles away, will now be booked initially at "Karimpore Out-agency". Krishnagar will still accept jute marked Karimpore for booking at the railhead, but this will be moved under the normal "Krishnagar city" rail receipt. In previous years, purchases and deliveries of jute from certain agencies were often more than double the crop for that agency. The new system is a step in the right direction. It is hoped that the railways will eventually extend this facility to more parts of the country and issue a list enumerating the districts covered.

U.S. Steel Strike Restricts Business

The continuation of the steel strike in the U.S.A. restricted business with that buyer, so prices showed a general tendency to decline. Local speculative activity caused some fluctuations, and mills did business, but most of the goods went to the bazaar. Reports of a fairly large order from Russia for hessian bags towards the close helped maintain hessian prices against a falling sacking section. This was followed by pronounced bear-covering, and the sentiment in hessians improved. Many mills did no business meantime, as with the approach of Diwali a fair amount of "lucky day" business will be distributed.

THE JUTE MARKETS

There was limited activity in the futures market during the past week, and prices fluctuated within narrow limits. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 20th October to 27th October, were as follows:

	Hessians 40in 10oz. November		Sacking B Twills November		Raw Jute December	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos	
Opening	41.00	44.90	101.50	24.00	64.30	
Highest	41.08	44.92	102.15	24.42	65.43	
Lowest	40.44	44.22	100.65	23.76	63.66	
Closing	40.72	44.53	101.25	23.76	63.66	

Manufactured Goods: There was very little interest in the market at the opening last Thursday and prices showed little variation. B Twills opened at Rs. 102.10 for October shipment and Rs. 99 for April-June, while 40in. 10oz. hessians stood at Rs. 40.50 and Rs. 40.50 for those deliveries. During the day, there was some improvement on reports of small sacking business for near deliveries. On Wednesday morning, near B Twills advanced by 50nP and forward shipment by 25nP. Hessians remained unchanged. Speculative activity during the day cancelled the previous gains, and Saturday's market was quiet, with mills taking no interest. After the week-end, prices advanced, on rumours about fresh business and about a shortage of goods for ships loading in port. Ready B Twills jumped to Rs. 102.90 and hessians to Rs. 40.75, but on reports that the shipping period had been extended, prices again fell back. Dull conditions prevailed thereafter and price movements were mainly influenced by speculative activity. On Tuesday, reports of business with Russia in hessian bags steadied that section, but the lack of interest in sacking caused B Twills to fall back to Rs. 102.10. Speculative covering helped maintain hessian rates, but there was little genuine interest.

Opening quotations on Wednesday morning were as follows:

	Oct.		Nov.		Dec.		Jan.-March	
40in. 8oz.	32.60	(36.62)	33.35	(36 35)	32.95	(35.43)	32.50	(35.43)
40in. 10oz.	40.70	(44.36)	40.80	(44.47)	40.70	(44.26)	40.45	(44.09)

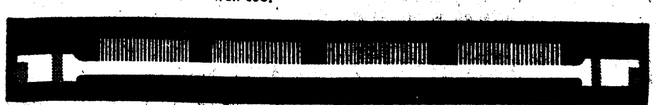
Cornsacks	102.10		102.10		101.40		101.75	



Raw Jute: Calcutta mills showed less interest in raw jute during the past week, and the market in general was quiet. Imports, both upcountry and in Calcutta, showed a distinct improvement,

BROKEN—BUT CERTAINLY NOT USELESS

Do you throw away a broken SCREWGRILL FALLER BAR as useless and buy a new one? Well now you need'nt! Because we at LAGAN, have installed a new FALLER BAR repair plant which does a marvellous job of repairing—MACKIE FALLERS—so good in fact, that your once broken FALLER BAR, can be made to look like new and serve as well too.

THE LAGAN JUTE MACHINERY CO. PRIVATE LIMITED
24, Chittaranjan Avenue, Calcutta-12.

M.L. 14

and mill jetties had more work than they could handle. With the increase in arrivals, prices upcountry declined to near parity with Calcutta quotations. Sellers became eager for business but were not prepared to discount rates to any great extent. Mill purchases were restricted to specialities, as buyers visualised a lack of storing facilities before the end of the year. At the opening last Thursday, Assam was quoted at Rs. 23.50 basis Bottoms, but this was reduced by 50nP before the end of the period. Arrivals in Cossipore amounted to 850 wagons, which was slightly below the average for peak periods. All arrivals found ready buyers, the balers being prominent in their search for better jute.

Business concluded consisted of Assam Tossa at Rs. 24 basis Bottoms, and Murshidabad and Daissee Tossa at Rs. 23.50. Desal Tossa passed at Rs. 23. A fair amount of mesta was purchased and buyers paid Rs. 22.50 for Daissee mesta and Rs. 21.25 for jungli mesta.

On Wednesday, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
New Crop:

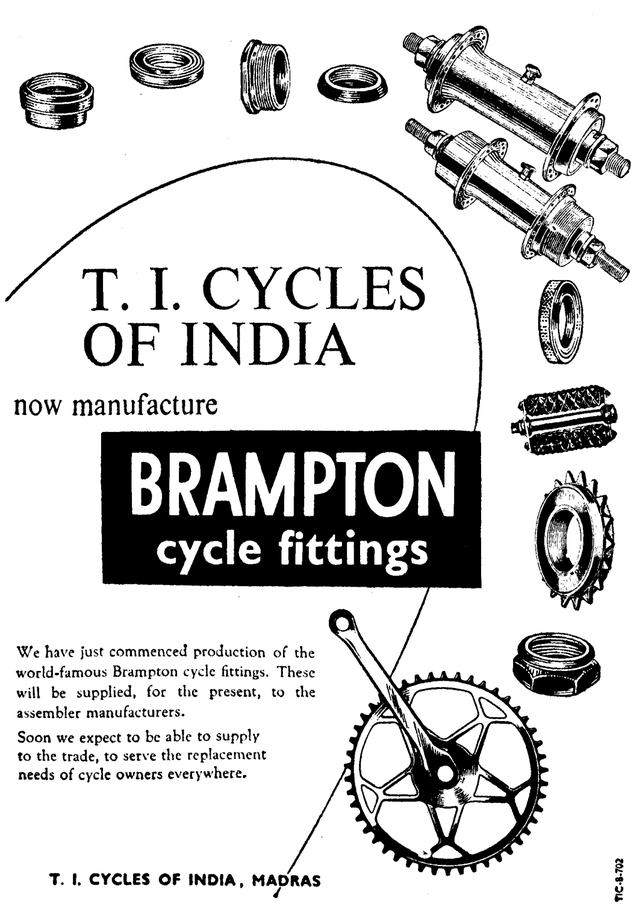
THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES FIRM



(FROM OUR DUNDEE CORRESPONDENT)

THE Dundee jute markets have shown some signs of improvement, principally as the result of the steadier trend in raw jute prices in Pakistan. Sellers have raised their prices variously by, say, £1 to £2 a ton, some of the bigger shippers demanding more than the smaller ones. It is understood that the rise is due to the possibility of some difficulty looming ahead in securing decent quality fibre. There is no question of any shortage of jute to satisfy the requirements of the industry, as Pakistan is expecting a crop of 5.8 million bales, of which at least 4½ million bales will be exported.

Prices for raw jute are lowest now at £107 for Mill Firsts, £90 for Mill Lightnings, £79 10s to £81 for Mill Hearts and £85 for Grade Hearts, with good marks of Daissee-2/3 cheaper at £91 10s and Grade Daissee-2/3 at £84, Grade Tossa-2/3 at £104 and Grade Tossa-4 at £84, all c.i.f., U.K., October-November shipment. Spinners showed more interest during the past week, but the market was mainly sustained by a good demand from Continental spinners. Local spinners have at present cleared out some of the secured parcels which continue to be offered at something less than the shipment rates.

Calcutta goods are irregular these days. Rates showed little change during the past week but were on the easy side, if anything, for hessians at 61s 6d for 40in. 10oz. and 47s 6d for 7½oz. October, 61s 9d and 47s 3d November, 61s 6d and 46s 6d December and 61s 3d and 46s January-March, with B Twills at 155s 6d, 154s 6d, 152s 3d and 152s for the respective months of shipment, all f.o.b., Calcutta.

Mr. Zulfikar Ali Khan Bhutto, Pakistani Minister of Commerce, was recently in Dundee for two days. He met many people connected with the various associations in the jute industry, and took notes of the problems affecting the trade between Pakistan and the Dundee jute industry.

T. I. CYCLES OF INDIA

now manufacture

BRAMPTON cycle fittings

We have just commenced production of the world-famous Brampton cycle fittings. These will be supplied, for the present, to the assembler manufacturers.

Soon we expect to be able to supply to the trade, to serve the replacement needs of cycle owners everywhere.

DEVELOPMENT BANK

Development Savings Bank. By C. Loganathan. (Published by the Ceylonese National Council, International Chamber of Commerce. Pages 147.)

Postwar literature on economic development has emphasised the need for adequate public investment to raise living standards in underdeveloped economies. But a limit to this process of development is that adequate funds are not available from voluntary savings. There is also a limit beyond which any increase in deficit financing will generate inflationary pressures. Governments in backward economies cannot raise all their resources through taxation either, for high taxation, apart from raising the cost of collection and creating opportunities for large-scale evasion, may generate what is called "taxation inflation." Mr. Loganathan suggests an ingenious scheme for accelerating economic growth in backward countries which aim to achieve democratic socialism. His proposal for a Development Savings Bank is an institutional device which combines within itself various features of social security schemes, savings banks and unit trusts. It will enable low-income groups, particularly workers, to acquire equities in different enterprises through deductions from wages and salaries, contributions of employers from net profits and foreign gifts and loans. The scheme has received tributes from some leading economists, and contains interesting ideas on mobilising resources in an underdeveloped economy.

PUBLIC SECTOR

Commerce and Industry. Public Sector Supplement. (Edited and published by Lanka Sundaram, Prabhudayal Building, Connaught Circus, New Delhi. Price Rs 10, pages 100.)

As a bulging State encroaches into the preserves of the private sector, there has been growing criticism of the official policy on State trading in foodgrains, co-operative farming and nationalisation. Because of red-tapism, bureaucracy and the extravagant use of public money, it is doubted whether the public sector can deliver the goods. The special number of *Commerce and Industry* discusses the operations of many public sector projects, and the subjects chosen have much topical value in view of the current controversy.

INVESTMENT GUIDE

Investors' Encyclopaedia. Edited by P. H. Parekh. (Published by Kothari and Sons, Oriental Buildings, Armenian Street, G. T., Madras. Price Rs. 30+Rs. 7 for packing and postage; pages 2,688.)

The latest edition of *Investors' Encyclopaedia* shows many improvements. Apart from containing details of about 2,000 companies with their working results for the past seven years, it has useful information about various industries. With such a wide coverage, it will be regarded as a dependable reference book by those interested in shares and securities.

CENTENARY VOLUME

Bold Century. 1859-1959. (Compiled and published by the New Zealand Insurance Company Ltd, Queen Street, Auckland. Pages 112.)

This volume, published by the New Zealand Insurance Company to mark its centenary year, highlights the story of its progress from a small colonial underwriting enterprise to an international institution. Profusely illustrated with photographs, the publication is notable for its high standard of production.

STOCK EXCHANGES

The Stock Exchange in Modern Democracy. By C. L. Jhunjhunwala. (Published by the author. Pages 11.)

Mr. Jhunjhunwala discusses the importance of a stock exchange in a free market economy. The elaboration would not have been necessary if there had not been occasional invectives against the stock exchanges as a speculators' paradise. Although the discussion on the Calcutta stock market is adequate, the Bombay and Madras Stock Exchanges have receive only cursory attention.

INDIAN MARKET

The Indian Market, 1959. (Compiled and published by J. Walter Thompson Company, Lakshmi Building, Sir Phirozeshah Mehta Road, Bombay 1. Pages 41.)

There has been a remarkable change in the expenditure patterns of Indian households during the past decade. Durable consumer goods have become more popular, although consumption levels are still rather low. By adapting the well-tested techniques of market analysis, the compilers of the publication have made an interesting analysis of the prospects and potentialities of the Indian market.

Commodity Markets

COTTON INDUSTRY REPORTS GREATER ACTIVITY

WORLD YARN OUTPUT INCREASES

THE cotton industry throughout the world is now well out of the recession, according to the U.K. Cotton Board's latest *Quarterly Statistical Review*. Reports from many countries mention better levels of activity, lengthening order-books and in some but not all cases improved profit margins. The cotton yarn output in those non-communist countries for which regular figures are available, including all the major exporting countries, showed an increase of about 8 percent in the second quarter of this year, compared with the corresponding quarter of 1958, whereas in the first quarter the output had been much the same as a year earlier. The improvement in activity in the United States preceded that in the rest of the world, and the cotton yarn output (as measured by cotton consumption) in that country in the second quarter was as much as 16 percent greater than a year earlier. Substantial increases, compared with a year ago, were also recorded by Japan, India, West Germany, Italy, Belgium, Canada, Egypt, South Korea and probably Pakistan. The cotton yarn output in the United Kingdom was also slightly greater than a year previously, while France was the principal exception to the general rule.

Exports of cotton piecegoods from non-communist countries were 10 percent less than in the corresponding period of 1958 in the first quarter of this year, but about 2 percent greater in the second quarter. Exports from France, West Germany, Belgium, Switzerland and the Netherlands in the first six months of this year were greater than in the corresponding period of last year, whereas the reverse is true of shipments from the U.K., the U.S.A., Japan, India and Italy. Reports from several countries speak of expectations that exports in the second half of the year will show a marked improvement over the figures for the first half. Exports of man-made fibre fabrics from non-communist countries showed only a slight increase in the second quarter, shipments from Japan continuing to be comparatively depressed. Total world trade in these fabrics in the first six months of this year was about 14 percent less than in the first half of 1958. Besides Japan, both the United Kingdom and the United States exported less than in the first six months of last year, while West Germany, Italy, Belgium and the Netherlands increased their shipments.

A feature of recent months has been the renewed attempts on the part of affected interests in several "western" countries to limit imports of cotton and other textiles from "western" countries. Apart from the developments mentioned in the sections on the United Kingdom, the United States and western Europe, Canada has been the scene of similar efforts, principally directed at Japan.

Improvement in the U.K.

The position of firms in the U. K. cotton industry improved still further in the last few months. The rate of yarn output a working day (that is, allowing for official holidays) has been consistently greater than a year ago ever since May. It reached a peak in June, since when there has been a slight falling off, but in August it was still showing an increase of about 9 percent, compared with the January figure. This increase has been virtually confined to cotton and cotton waste yarns, where it has amounted to as much as 11 percent. In the weaving section, the output a working day did not exceed that in the corresponding month of 1958 until July. In that month, the rate of output was 13 percent greater than in January, the increase in the case of cotton cloth being as much as 15 percent. It is of some interest that this considerable expansion in the rate of production should have occurred in spite of a decline of some 8,000 in the number of workers on mills' books since the beginning of the year.

The improved tone of business dates back to April and was occasioned in the first place by a combination of the low level of pipeline stocks and the upward movement in raw cotton prices. The excellent summer weather has of course helped, but in order to keep things in perspective it is worth noting that consumers' expenditure in the second quarter, corrected for price changes, showed an increase of no more than 6 percent, compared with the second quarter of last year, and retail sales in July seem to have been no more than about 4 percent greater than in July 1958. More recently buyers have been trying to secure their supplies in the face of the prospective withdrawal from the industry of many producers as a result of the Government's re-organisation scheme; in consequence, order-books have lengthened still further and prices have tended to rise. The final published figures indicate that about 12 million mule-equivalent spinning spindles, 570,000 doubling spindles and 105,000 looms will be scrapped under the schemes. Some fears have been expressed that insufficient machinery will be left to maintain the requisite level of production, but in view of the large amount of machinery that has been idle recently, it is clear that a relatively modest extension of shift working would be sufficient to maintain production at its present level.

Piecegoods Exports

Exports of cotton piecegoods from the U.K. totalled 86 million square yards in the second quarter, compared with 82 million square yards in the first quarter and 91 million square yards in the second quarter of last year. Compared with a year earlier, the main decreases were in shipments to Australia, New Zealand, South Africa, French Africa and Ceylon. On the credit side, there was a sizeable increase in exports to Burma as a result of the triangular arrangements, and larger shipments to British West and East Africa, Rhodesia and Nyasaland and the Irish Republic. The second quarter level of exports was maintained in July and August, when 57 million square yards were shipped. There is some reason to hope that there will be a further modest increase in the level of exports during the remainder of this year. Exports of piecegoods of man-made fibres in the first six months of this year were well below the level reached in the corresponding period of last year, with big reductions in shipments to Australia, New Zealand, South Africa, Rhodesia and Nyasaland and the Irish Republic. As in the case of cotton piecegoods, however, the decline seems now to have been halted, at least temporarily. Exports of cotton yarn have also been much lower so far this year than last year.

Imports of cotton piecegoods in the second quarter at 116 million square yards were only slightly less than the very high first quarter figure. Imports from India, Hongkong and communist China were rather smaller, but there were increases in receipts from Japan and Pakistan. Imports of cotton piecegoods continued at this extremely high level in July and August. Imports of cotton yarn declined from a peak of 6.2 million lbs in the first quarter to 4.9 million lbs in the second, and in July and August were running at a still lower level. The long-awaited agreement with the cotton industries of India and Pakistan has at last been arrived at. It provides for annual ceilings of 175 million and 38 million square yards, respectively, on imports of cotton goods for retention in the home market, and is intended to last for three years from the beginning of 1960. The figures are rather higher than the current rate of imports from the two countries. The contention of the Hongkong manufacturers that there should be a suspension of the restrictions on exports from Hongkong to the U.K. has been turned down by the colony's Government.

Cotton Consumption Rises

The textile situation in the United States is reported to be the most favourable for several years. One indicator is the average margin between raw cotton and loomstate cloth prices; this has been widening steadily since last October, and amounted in July to 28.75 cents a lb. This is the highest figure since 1956 and compares with 21.65 cents in July 1958. Mill consumption of raw cotton in the second quarter was 16 percent greater than in the second quarter of last year, while the expansion in mill consumption of man-made staple over the same period was as much as 25 percent. The high rate of cotton consumption was maintained in July and August. The latest figures of cloth production relate to the first quarter, when there were increases in comparison with a year previously of 2 percent in the output of cotton cloth, 7 percent in that of rayon cloth and 5 percent in that of synthetic fibre fabrics.

Exports of cotton piecegoods totalled about 118 million square yards in the second quarter, compared with 119 million square yards in the first quarter and 143 million square yards in the second quarter of last year. Exports to Canada appear to have been well maintained so far this year, but there have been sharp drops in shipments to Venezuela, the Philippines and South Africa. Exports of man-made fibre piecegoods from the U.S.A. in the second quarter were rather larger than in both the preceding quarter and the corresponding quarter of last year.

The campaign to restrict imports of made-up goods from Hongkong has been supplemented by a broad attack on imports of cotton goods from all sources. This latest campaign has been launched by the National Cotton Council, which is demanding action under the Agricultural Adjustment Act. This provides for relief against imports if they interfere with Government agricultural policies, the Council's contention being that these imports are restricting the market for American cotton. The U.S. Secretary for Agriculture has promised to review the problem.

Output Increases in Japan

Output in all the main branches of the Japanese cotton and allied textile industries was greater in the second quarter of this year than in the corresponding period of last year. The increase was greater in spinning than in weaving, and was particularly marked in the case of the synthetic fibres. It is of interest that the integrated spinner-weavers' share of the total cloth production has been declining. The prolonged and drastic curtailment of production has taken effect this year, and burdensome stocks have been largely eliminated. The situation of the industry has been further improved by an upsurge in domestic demand and, more recently, in export orders. As a result, it has been possible to release stocks of cloth which have been "frozen" since August 1958, and to relax the curtailment of production, first in July and then again from October. Production in the third quarter must have been reduced, however, by the 12 days' strike in August in the big spinning firms. This ended with a sizeable wage increase. As a longer-term measure to prevent overproduction, about 1¼ million spindles were "mothballed" in May; measures to reduce the number of looms have been in force since 1957.

Japanese exports of cotton piecegoods totalled 295 million square yards in the second quarter of 1959, compared with 291 million square yards in the first quarter and 306 million square yards in the second quarter of last year. Comparing the first six months of 1958 and 1959, Japan has lost a lot of trade with Ceylon, Hongkong, West Germany, the Netherlands, Indo-China, Syria, the Sudan and the Philippines. In contrast, exports to British West Africa, Australia, Iran, Burma and Siam have expanded. On the basis of orders received, it is expected that exports will increase in the second half of the year. Exports of man-made fibre piecegoods from Japan amounted to 257 million square yards in the second quarter of this year, compared with 256 million square yards in the first quarter and 331 million square yards in the second quarter of 1958. The biggest reductions so far this year have been in shipments to Singapore, British West Africa, West Germany and Indo-China, but it is of interest to note that exports of rayon piecegoods to the U.S.A. have been expanding fairly rapidly.

Indian Mills in Better Shape

The Indian mill industry appears to be in much better shape now than for some time. The cotton yarn production has been running above the level of a year ago since the beginning of the year and mill production of cotton cloth has been doing so since May. Unsold stocks of cloth at the mills had been reduced to about 311 million yards at the end of July, compared with 491 million yards at the end of 1958 and 677 million yards at the end of 1957. This reduction in stocks

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September 1959. As compared with August, the September Indices for Food and Clothing show rises of 11 points and 2 points, while those for Fuel and Lighting and Miscellaneous remain unchanged at 282 and 292 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 6 points during September 1959.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

Compiled and constructed by the Statistical Department of "Capital"

has been brought about by the improved offtake for internal consumption.

Final figures for exports of cotton piecegoods in the second quarter are not yet available, but it is believed that they will show that shipments were slightly less than in the first quarter but above the level attained in the corresponding period of 1958. Exports remained relatively depressed in the first half of the year in spite of the incentive schemes, particularly for fine and superfine varieties. These are manufactured from imported cotton, and their relative shortage, due to foreign exchange restrictions, had led to high internal prices and a consequent lack of incentive to export. However, it is reported that export demand has broadened more recently and shipments are expected to increase in the second half of the year. It is understood that arrangements have finally been settled for the installation of 3,000 automatic looms to weave cloth for export. It is also of some interest to note that India has been exporting sizeable quantities of rayon piecegoods since the middle of last year.

Most of the Continental cotton textile industries have recovered strongly from the recession in the last few months—levels of activity have been improving, stocks have been reduced and order-books have lengthened. In several cases, the improvement seems to have started about April, at the same time as the recovery in the U.K. cotton industry. The cotton yarn production in these countries, as a whole, in the second quarter was about the same as a year ago, whereas in the first quarter the output had been 12 percent less than a year earlier. Belgium, in particular, and also West Germany, Italy, and the Netherlands produced more cotton yarn in the second quarter of this year than in the corresponding period of last year; in contrast, the output in France, where the recession affected activity later than in the rest of Europe, was still well below what it was a year ago, although the trend is definitely upward.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953 100) rose by 1.0 percent to 119.8 during the week ended 10th October, 1959, against 118.6 (revised) for the earlier week. The index was higher by 2.5 percent and 3.0 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles advanced further by 2.0 percent to 125.2, compared with 122.3 (revised) for the previous week due to a rise in the prices of onions (+10%), milk (+6%), fish (+5%), jowar and bajra (+4% each), groundnut oil, meat and gur (+3% each), rice, wheat, barley, masur, bananas and chillies (+2% each) and mung, potatoes, ghee, gingelly oil, coconut oil and black pepper (+1% each), although the prices of maize and eggs (−7% each), gram (−2%) and arhar (−1%) showed declines. The index for Tobacco remained stationary at its earlier week's level of 98.7. The index for the Fuel, Power, Light and Lubricants group worked out to 116.3, against 116.2 for the previous week; the prices of castor oil rose by 1 percent during the week. The prices of tanning materials (+8%), raw silk and copra (+2% each) and raw jute, linseed, castorseed and cottonseed (+1% each) moved up while raw cotton (−2%) and raw wool, rapeseed and lac (−1% each) showed declines, and the index for Industrial Raw Materials stood unchanged at its earlier week's level of 123.0. Higher prices of rayon yarn (+2%) and cotton yarn and coir yarn (+1% each) raised the index for Intermediate Products by 0.4 percent to 112.9. The prices of zinc and brass (−1% each), however, moved down. The index for Finished Products went up by 0.2 percent to 110.2 as a result of an increase in the prices of jute manufactures and oilcakes (+1% each). The prices of general chemicals and soap (−1% each), however, showed a fall.

From mining to metal—
out of integration
comes strength

Indian Aluminium Company—pioneer and leader of the aluminium industry in India—has a completely integrated unit with its own bauxite mines, alumina plant, aluminium smelters, rolling mills and extrusion plant.

During the 20 years of its existence in India, Indian Aluminium Company has ceaselessly sought to harness India's magnificent natural resources in the course of expanding its production facilities. And so today Indian Aluminium has plants spread all over the country—each of them playing a vital role in producing aluminium economically and efficiently.

India's vast bauxite and water power resources can support an aluminium industry many times its present size. Indian Aluminium Company has the know-how and the resources—strengthened by close collaboration with its Canadian associates, Aluminium Limited, the world's largest group of aluminium companies—to help translate into reality India's dream of self-sufficiency in aluminium.

COFFEE PRICE CONTROVERSY CONTINUES

TRADE ATTEMPT TO RIG UP VALUES FOILED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE coffee price controversy still continues, and the Coffee Board has recently complained that some dealers are rigging up prices. At the pool sale, which was held recently in Coimbatore, a group of dealers tendered joint bids at Rs. 270 a 50 kilos for almost all lots of Plantation A coffee, although the offers of the majority of dealers were between Rs. 220 and Rs. 255 a 50 kilos. The object of the joint bidding, the Board says, was to ensure that all Plantation coffee was withdrawn by the Board from the sale. The result would have been a scarcity in the market which would have enabled dealers to liquidate their earlier purchases at high prices. The Board has claimed that their attempt has been foiled, although the quantity covered by the high bids was only about 150 tons, out of a total of 570 tons of Plantation coffee put up in the sale. Another charge against the trade is that it is sitting on the stocks. The Coffee Board has said that the returns received from dealers showed carry-over stocks of Plantation coffee for each month during June to September this year. There were instances during this period when some purchasers had paid for the lots declared to them but did not promptly remove the coffee from pool agents. The Board, therefore, says that it is such practices which create artificial scarcity conditions leading to a steep rise in prices.

Prices Decline

Prices of Plantation coffee, which were ruling high in the market up to last month, are now on the decline. At the pool sale, held on 6th October in Coimbatore, the average price realised by Plantation A was only Rs. 239.83 a 50 kilos, against the average of Rs. 296.33 a 50 kilos in the corresponding sale of September. The lowest price at which Plantation A was sold was Rs. 15.70 above the minimum release price fixed by the Coffee Board.

Abolition of the Kangany System

The total abolition of the *kangany* system in Kerala plantations has recently been recommended by the committee appointed by the State Government to enquire into it. Its main recommendations are: 1. As from 1st April, 1959, all workmen employed in the estates in the *kanganies*, sub-*kanganies* or *maistries* gangs will stand transferred to the estate gangs. 2. All the existing *kanganies*, sub-*kanganies* or *maistries* (including *kole maistries*) normally doing supervisory work, either in the field or in the factory, will be designated as supervisors and will be appointed as such without any break in their service. 3. The wages of the *kanganies*, sub-*kanganies*, *kolemaistries* or *maistries*, absorbed as supervisors, will be fixed in a manner that they are not less than the daily average of their earnings (wage plus head money) taking the monthly average during 1955 to 1957 as the basis.

Compensation for those who retire or resign from service is fixed as follows: for every year of service, compensation will be paid at the rate of one month's commission, subject to a minimum of Rs. 150 and a maximum of 24 months' commission. The basis of calculation will be the average monthly commission earned by the *kangany*, sub-*kangany* or *maistry* as the case may be, during 1955 to 1957. But no compensation will be paid to those who are appointed as supervisors.

Minute of Dissent

The employers' representatives on the committee have not agreed with its recommendations and have appended a minute of dissent. Mr. M. M. Verghese, the former chairman of the United Planters Association of Southern India, says in his minute of dissent that the question of abolition of the *kangany* system was forced on the plantation industry. Planters were prepared to tolerate the system until it wasted out naturally, although, at the same time, they took suitable and effective measures for the removal of any evils found in it. But the Government insisted on its abolition.

As far as Madras and Kerala are concerned, the problem is identical. In fact, companies having interests in both the States adopt uniform policies concerning the conditions for engagement of *kanganies*. An agreement incorporating the conditions for the abolition of the system was signed in Madras in November 1958. But those recommended by the Kerala committee are "much in excess" of the terms of the Madras settlement. The Kerala plantation industry cannot be expected to do anything more than what is provided for in the Madras agreement, employers' representatives on the Kerala committee have pointed out.

Kanganies are head workmen on estates who supply workers for a commission. They also supervise the work of workers recruited by them. The Kangany Federation claims that there are about 15,000 *kanganies* in Kerala plantations.

Pepper Prices Steady

Pepper values recently remained more or less steady at over Rs. 800 a candy of 6 cwts. (ready) on the Indian terminal markets. Dealers say that encouraging buying support from abroad had kept the prices steady. Values are not expected to fall until new crop pepper reaches the market in substantial quantities. Present arrivals of old crop pepper are not sufficient for meeting the demand from exporters who have made forward deals for October and November shipments, so there is scramble in the market for available supplies. Those who made forward sales at lower prices are now in difficulties, and are at present trying to push down prices. But they do not seem to have succeeded so far.

Rise in Lemongrass Oil

Lemongrass oil is now selling at Rs. 105 a dozen bottles on the Cochin market, compared with Rs. 55 a dozen bottles at the beginning of the season in May. Supplies are not picking up according to the earlier expectation of exporters. They say that the abandonment of lemongrass cultivation by a section of growers in Kerala on account of the unremunerative prices for the oil has started showing its impact on the supply position. The climate, too, has affected production, they say.

COCHIN TEA SALES

At Dust Sale D, 500,000 lbs of tea were on offer. There was a good general demand, and prices were steady for everything except C.T.C.s which were neglected.

At Sale No. 41, 1,250,000 lbs of tea were on offer. There was a good general demand. Low medium brokens were irregularly 5nP easier while fannings, mediums and good mediums were fully firm. High-grown brokens were considerably easier but similar fannings were dearer. Whole leaf grades were irregular

ORIENT EXPRESS
TRAVEL SERVICE

Through its 3 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Engineering and Transport

MACHINE TOOL CONTROL BY AUTOMATIC PROCESS

NEW AND CHEAPER SYSTEMS DEVISED

AFTER months of development and field research, Ferranti Ltd has developed two new economically priced machine tool control systems acceptable to the small as well as the large engineering company. It is claimed that these new systems represent a major break-through in automatic control equipment for machine tools. Their simplicity of designs, ease of maintenance and reliability will contribute to higher productivity in the engineering industry generally, while their capital cost will place them within the reach of even the smallest engineering company.

Both systems were shown for the first time at the sixth European machine tool exhibition held in Paris from 12th to 21st September.

The systems are: (1) transister hydraulic continuous machine tool control equipment; (2) numerical positional machine tool control equipment. The continuous control system operates from normal electricity mains which eliminates the use of frequency converters used in the former Ferranti system. It is fully transisterised, incorporates hydraulic servo mechanisms and a simplified electro-optical measuring system. Maximum machining time of the new system, compared with the old, has been increased from 40 minutes to 160 minutes because four times as much information can now be stored on magnetic tapes.

The electrical servo motors on the original Ferranti system are now replaced by hydraulic piston motors, controlled by electro-hydraulic valves, resulting in an increase in the overall structure stiffness of the machine transmission, and peak output of the servo motors has been increased from .7 b.h.p. to 3 b.h.p. Simplified transistor circuitry for each axis of the machine tool is contained in the control console in three easily replaceable or interchangeable trays, thereby simplifying maintenance in the field. Modifications have also been made to the electro-optical measuring system which has resulted in a cheaper yet equally accurate system. The price of the new system ranges from £7,000 to £12,000 depending on the size and complexity of the machine tool being controlled, which represents a capital cost reduction of at least 25 percent, on any range or application of the previous Ferranti system, and in some instances, up to a 50 percent reduction.

The numerical positional machine tool control system is an entirely new equipment designed for rapid point-to-point positioning of machine tools and allied equipment in Cartesian or polar coordinates. This system does not require the use of a computer, as information is presented to the control console in the form of punched paper tape which can be prepared by the machine tool operator or, alternatively, incremental movement can be accomplished by direct dial setting without using tape. The measurement of position is by means of the Ferranti diffraction grating measuring system fitted to the machine tool slides or tables. The electronic control equipment is designed around semi-conductors, and as with all Ferranti machine tool control equipment, is completely error-checked and fail-safe. A new tape reader has been developed for the information input. Standard 1in. wide punched tape is used, but instead of the usual system of sequential reading of single characters, a whole block of information is read at a single position. This minimises the time taken to transfer the co-ordinates into the control system and obviates the need for additional information storage. Ferranti claims that this co-ordinates positioning control system, with feedback checking and monitoring from electro-optical measuring scales, will be applied to a wide range of machine tools because it can be offered at a price of between £2,000 and £3,000, which is normally associated with positioning controls without the feedback or self-checking facilities.

FULLY AUTOMATIC SHEET SORTING AND STACKING PLANT

The capacities of rolling mills and tinning plants for thin flat products are nowadays generally so large that the conventional finishing line equipment is no longer able to cope with either the amount or the variety of the output. A German firm, Messrs Schloemann Aktiengesellschaft of Düsseldorf therefore, developed a high-speed fully-automatic plant for sorting and stacking sheets. On entering the plant the gauge strip is first cut into sheets which are transferred by the conveyer belt to the sorting belt. Faulty sheets are thrown off at either of the two sorting stations, depending on the type of defect; perfect sheets proceed to the end of the sorting belt. The plant is designed to operate dependably, even at maximum speed, without damaging the surface of the material handled. A fully-automatic sorting and stacking plant of this kind for dealing with electrolytic tinned sheet in lengths of 14in. to 59in. was recently supplied to a foreign mill. This plant operates at a maximum speed of 1,300 feet a minute.

I.A.T.A. REJECTS B.O.A.C. MOVE FOR LOWER FARES ON EASTERN ROUTES

B.O.A.C.'s plans to introduce economy-class fares on Eastern routes have received a setback. The Traffic Conference of I.A.T.A., held recently in Tokyo, has not found it possible to agree to these fare reductions. Economy-class fares—some 20 percent cheaper than the current tourist rates—are already in force on the transatlantic route. Sir Gerard d'Erlanger, chairman of B.O.A.C., has reiterated that as a policy, B.O.A.C. wishes to see the introduction of Atlantic-type economy-class travel as an additional facility to the public in other areas of the world served by B.O.A.C. Speaking to newsmen in Tokyo while he was there to attend the I.A.T.A. Conference, Sir Gerard said: "B.O.A.C. is extremely disappointed that the Traffic Conference of I.A.T.A. has not found it possible to reach agreement on this principle. It will now be necessary for B.O.A.C.—and for that matter, presumably, other carriers as well—to take stock of the situation thus created. It will also be necessary for B.O.A.C. to consult with the British Government as to the likely future pattern of fares on British cabotage routes". Mr. Basil Smallpeice, Managnig Director of B.O.A.C., said in London: "We had certainly hoped for a decision that would have enabled us to offer on our routes to south and east of the U.K. a fare which would have been some 20 percent lower than the curent tourist rates on most of our routes throughout the world. B.O.A.C. has for long been in the forefront of the movement for cheaper air fares and we shall not relax our efforts to convince other airlines belonging to I.A.T.A. that it is sound policy to introduce cheaper fares on routes where they are not at present applicable."

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUSTS WELL BOUGHT

AT Sale No. 18, held on 26th and 28th October 1959, 68,999 packages were on offer at the Export auction. There was a good general demand. Plain brokens and Fannings met with a keen enquiry, but prices were sometimes from 4nP to 6nP below last rates. Coloury clean black Fannings however, continued to be a very strong feature of the sale. A few good liquoring medium broken and P.Fgs. were fully firm, but the more ordinary descriptions were generally easier. Medium B.O.P. were irregular and a weak feature of the sale, but O.Fgs. received good support at sometimes easier rates except for clean black types and the better liquoring kinds which were firm. There was a fair demand for the best C.T.C. teas, but prices were irregular and sometimes 10nP to 20nP easier, buyers showing more interest in the broken grades than Fannings. Coloury secondary C.T.C. teas were strong and generally dearer while Legg-cut descriptions sold well. The poorer whole leaf grades were well supported and appreciated in price while higher priced sorts were sometimes dearer. Darjeeling teas met with a better enquiry although prices tended to be easier.

Quotations

	Rs.
Clean Black Pekoe	2.0 to 2.74
Plain B.P.	1.88 to 1.90
Plain Fannings	2.04 to 2.12
Medium B.P.	1.92 to 2.08
Medium Fannings	2.14 to 2.24
Best Assam C.T.C. B.P.	2.60 to 2.80
Best Assam C.T.C. Fgs.	2.80 to 3.00

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings totalled 21,600 chests. There was a good general demand. Orthodox Dusts suitable for export were a strong feature and were fully firm and sometimes dearer. Legg-cut descriptions were well supported and often advanced in price. Medium C.T.C. Dusts were irregular, but the exportable types and the smaller stronger liquoring sorts were firm and sometimes dearer; the remainder, however, were from 10nP to 15nP easier. The very best C.T.C. teas received good support.

Quotations

	Rs.
Medium Dooars Dust	... 1.16 to 2.00
Medium Assam Dust	... 1.90 to 1.94
Medium Assam C.T.C. Dust	... 2.00 to 2.15
Best Assam C.T.C. Dust	... 2.50 to 2.70

(Quotations are exclusive of excise duty.)

There was a good general demand for the 6[illegible] chests of Leaf on offer.

LINSEED EASIER

There was a fall in the linseed market during the past week. Prices declined gradually with small losses recorded in all sections. Enquiries from crushers continued, but interest was confined mainly at lower levels and the weekly turnover although regular, was small. There was a decline of Re. 1 in oilcake prices with sellers quoting Rs. 16. Shippers were not interested due to a decline in the U.K. price to £38. Activity in the oil market was limited. Overseas prices were nominally quoted at £115 and little fresh business was reported. Local shippers also showed little interest. Latest quotations are as follows: Ready October Rs. 25.62 a maund, November-December Rs. 25.75 a maund and May futures Rs. 23.84 maund.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 20th October and 26th October, 1959)

Cowhides: Wet salted (Slaughtered) 32,900 pcs on the basis of Rs. 10 to Rs. 17 and Rs. 19 to Rs. 3[illegible]

Goatskins: Wet salted (Patna, Daissee, Kustia) 80,900 pcs. on the basis of Rs. 430 to Rs. 450, Rs. 46 to Rs. 495 and Rs. 500 to Rs. 530; Wet salted (he killed) on the basis of Rs. 6, and (she-killed) on the basis of Rs. 5.75 a piece; Patna-Pakur 3,600 pcs on the basis of Rs. 440 to Rs. 465.

Bazaar Stocks

(26th October, 1959)

Cowhides: Wet salted 140,300 pcs.

Goatskins: Wet salted (Daissee, Kustia, Killee Patna) 47,700 pcs.; Assam-Dinajpur 32,000 pcs. Muzafferpore - Patna - Pakur - Purneah-Kisengan 72,000 pcs.

SUGAR FIRM

During the week ended 28th October, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 5,500 bags and stock totalled 50,000 bags. Rates for medium grain were Rs. 43 and for big grain Rs. 44. The market was firm.

COMPANY AND PUBLIC NOTICES

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that the Thirteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday the 26th November, 1959 at 11 a.m. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1959, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.
3. To appoint Directors in place of those retiring and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company, viz.:—

   "That pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Asoka Kumar Roy, who has attained the age of 73 years and who retires from the Board by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for directors prescribed by Section 280 of the said Act shall not apply to him."
4. To appoint Auditors and to fix their remuneration.
5. To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution, viz.:—

   "That pursuant to the provisions of Section 314 of the Companies Act, 1956, consent be and the same is hereby accorded to Mr. Surendralal Girdharilal Mehta, a relative of Mr. Girdharilal Mehta, a Managing Director of the Company, holding an office or place of profit as an Assistant to the Company on such terms as to remuneration or otherwise as have been or may be agreed from time to time between such Assistant and the Company."

Notice is also given that the Transfer Books of the Ordinary Shares of the Company will be closed from the 12th November to the 26th November, 1959, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
D. FORDWOOD,
Secretary.

1, Clive Row, Calcutta-1.
26th October, 1959.

Note:—An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED.
(Incorporated in England)
LIABILITY OF MEMBERS LIMITED.

DIVIDENDS.

THE following Final Dividends have been recommended in respect of the year ended 31st March, 1959, payable on the 27th November, 1959:—

On the Preference Shares 5% (Five Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

On the Ordinary Shares 10% (Ten Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

Payment of any Dividend declared will be made only to those Members whose names are registered in the Books of the Company on the 7th November, 1959 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from the 4th November, 1959 to 17th November, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Agents.

4, Clive Row,
Calcutta, 27th October, 1959.

THE TINGAMIRA TEA SEED CO., LTD.

NOTICE is hereby given that the Annual General Meeting of the Members of THE TINGAMIRA TEA SEED COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 25th November, 1959, at 3-00 P.M., for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st March, 1959, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. Max. H. Burton, who retires by rotation at the Meeting and who seeks re-election and, in this connection to consider, and if thought fit, to pass the following resolution in conformity with the provisions of Section 281 of the Companies Act, 1956:—

   "Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Mr. Max. H. Burton, who has attained the age of 68 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed in Section 280 of the said Act shall not apply to him."

   Special Notice of intention to propose the foregoing resolution has been received by the Company.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 18th November, 1959 to 25th November, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 19th October, 1959.

NOTE:—Payment of the proposed Dividend, if declared, will be made on or after 7th December, 1959, only to those members whose names are registered in the Books of the Company on 25th November, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE INDIAN CABLE COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Fortieth Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Saturday the 28th November, 1959 at 10 O'clock in the forenoon, for the following purposes:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1959.
2. To declare Dividends.
3. To re-appoint a Director who retires by rotation.
4. To re-appoint the firm of Messrs. Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

As Special Business.

5. To consider resolutions in relation to the following matters and things—
   (a) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the Accounts of the Factory at Tatanagar and the Branch offices of the Company at Bombay, Ahmedabad, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad, and to fix their remuneration.
   (b) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch offices of the Company at Madras, Bangalore and Coimbatore, and to fix their remuneration.
   (c) To determine that the accounts of the Branch office of the Company at Karachi be not audited under the provisions of Section 228(1) of the Companies Act, 1956.

The Share Transfer Books of the Company will be closed from the 14th November, 1959 to the 28th November, 1959, both days inclusive.

Dividends, if any, declared at this meeting will be payable to Shareholders registered on the Company's Books on the 28th November, 1959 or their mandatees.

By Order of the Board,
B. J. WOODLEY,
Chairman.

9, Hare Street,
Calcutta, 5th October, 1959.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

The Company Meetings and Dividends Table appears on page 587.

JARDINE HENDERSON, LIMITED.

NOTICE is hereby given that a general meeting of the members of the abovenamed Company will be held at the registered office, No. 4, Clive Row, Calcutta, on Thursday, the 19th day of November, 1959, at 11 a.m. to consider and if thought fit to pass with or without modifications the following Resolutions, which will be proposed as Ordinary Resolutions, namely:—

1. That with effect from the 1st April, 1957, Mr. John Douglas Keith Brown, a Managing Director of the Company, be and is hereby authorised to receive remuneration for his services as such Managing Director in accordance with the terms specified in the Agreement dated the twenty-fourth day of September, 1959 made between the Company of the one part and Mr. Brown of the other part.
2. That with effect from the 1st April, 1957, Mr. Girdharilal Mehta, a Managing Director of the Company, be and is hereby authorised to receive remuneration for his services as such Managing Director in accordance with the terms specified in the Agreement dated the twenty-fourth day of September, 1959 made between the Company of the one part and Mr. Mehta of the other part.
3. That with effect from the 1st April, 1957 Mr. John Valentine Jardine Paterson, a Managing Director of the Company, be and is hereby authorised to receive remuneration for his services as such Managing Director in accordance with the terms specified in the Agreement dated the twenty-fourth day of September, 1959 made between the Company of the one part and Mr. Jardine Paterson of the other part.

A Member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
I. F. MORRISS,
Acting Secretary.

4, Clive Row,
Calcutta-1,
24th September, 1959.

Note: The explanatory statement together with memorandum of interest and the abstract of each of the agreements in accordance with the provisions of Sections 173(2) and 302(2) and (7) of the Companies Act, 1956, have been annexed to notices despatched to Members.

THE INDO-BURMA PETROLEUM COMPANY LTD.

NOTICE is hereby given that the Board of Directors have declared an Interim Dividend of Re. 1/- (Rupee one) per share less tax to be deducted in accordance with provisions of the Finance Act 1959, on the Ordinary Share Capital of the Company for the year ending 31st December, 1959, payable on the 30th November, 1959 to those members whose names appear on the Register of Members on the 9th November, 1959.

The Ordinary Register of Members will be closed from the 9th November, 1959 to 28th November, 1959, both days inclusive.

By Order of the Board,

COAL COMPANIES

O., Po. F and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A POLITICAL MOVE AGAINST MANAGING AGENTS

THE move once again to clamp down on managing agency remuneration cannot be lightly treated if it means—as it certainly appears to—nothing more than a further concession to the doctrinaire opponents of the system. As the political vendetta against the private sector in general and the managing agency system in particular is steadily increasing, it is no use simply trying to appease the opponents in this way. Instead, it is time that some hard thinking was done on the subject. If the system cannot be dispensed with altogether, except at a great loss to industrial development, then periodical tinkering with managing agency can only do more harm than good. Evidence indicates that the system does not need to rest on its past laurels. It is today playing a dynamic rôle in the corporate sector. The supply of finance, technical knowledge and efficient management, by managing agents, is not yet within sight of being matched by any alternative system. It is admitted that the trend towards director control in company management is growing, but directorial talent is still so meagre that it will take a long time before the managing agency system can be replaced. If managing agents are to be hampered in their activities, there will be a vacuum in management which will certainly retard industrial development.

As there is an acknowledged need for managing agents in the Indian economy, it would surely be wise to let the system work with reasonable freedom, so that its present efficiency does not deteriorate. Nobody can question the necessity for curbing abuses where managing agents behave improperly. But director-controlled companies are not necessarily free from vices either. In fact, many unscrupulous directors are at present behaving in a much more objectionable manner than are the few undesirable managing agents. The important point to bear in mind is that unscrupulous management, wherever it is found, must certainly be dealt with. The question is whether the Companies Act, 1956, does not already contain enough provisions by means of which irregularities in corporate management can be controlled. If New Delhi is not impressed by the extensive powers which the Companies Act gives to the Government, further extensions of the restrictions on management are likely to be of little use. What needs to be mentioned is that good management cannot be enforced only by legislation. If company managers are to act conscientiously and with morality, it is essential to encourage the growth of an intelligent and informed shareholding public. Unless shareholders are themselves competent to protect their interests, no amount of spoon-feeding can really help them. Greater good might be done if attention were concentrated on producing active shareholders rather than extending the present paraphernalia of legislation.

The 1956 Companies Act fixes the maximum managing agency remuneration at 10 percent of the net profit of a managed company, although it is open to the company or the Government to insist on a lower rate of remuneration, if necessary. In fact, many reputable managing agents do take their remuneration at a much lower rate. The Indian Iron and Steel Company, for instance, pays only 5 percent of its profits to its managing agents, and the Tata Iron and Steel Company only 7½ percent. The share of managing agency remuneration in total corporate income has declined during recent years. It fell from Rs. 14.65 crores in 1955 to Rs. 11.83 crores in 1956 and Rs. 8.39 crores in 1957, while the total of corporate income itself increased from Rs. 1,609 crores, to Rs. 1,828 crores and Rs. 1,993 crores, respectively. So there appears to be little statistical justification for regulating managing agency remuneration on a sliding scale.

Theoretically speaking, the loss in managing agents' remuneration could be a gain for the shareholders of a managed company, provided there is no deterioration in the efficiency of the managing agents. It is nevertheless almost certain that such a small gain will be very difficult to pass on to the shareholders in the form of increased dividends. Investors' confidence in the present system is proved by the avid interest taken in new capital issues which are backed by reputable managing agents.

So far as the shareholders in the managing agency companies are concerned, there is little cause for alarm. In the case of managed companies making a profit of Rs. 1 crore or over, the managing agency remuneration, according to the sliding scale, works out at 6.6 percent of the profit. Most reputable managing agencies do not at present take their remuneration at a much higher figure. In the case of managed companies earning smaller profits, the cut in managing agency remuneration may not be substantial. This apart, the Government will give special considerations in deserving cases, where the risks of investment are considerable. More important, perhaps, is that many managing agency companies have begun to diversify their activities on their own account, so it is thought that earnings from their own business may in some cases compensate for the loss of remuneration.

There are other features of the new proposals which give rise to considerable concern. The decision to fix the term of managing agents at ten years in the first instance and at five years on re-appointment, is also difficult to defend on any logical grounds. There are many industries in which investment is not expected to give any worthwhile return until after five or seven years have elapsed. The official planned programme appears to stress the importance of precisely those industries. But investment cannot be attracted to them at economic rates if the tenure of the managing agents is as short as ten years. Investors may not like to take risks in such cases. The tenure should be made long enough to encourage business risk-taking. A great deal of uncertainty has been caused by rumours that the Government may name industries in which managing agents are not to be permitted. Judging from a cross-section of industries, it does not look as if managing agents can be removed at the present stage from any of them without interrupting their progress. In almost all industries, there is urgent need for expansion, modernisation and rationalisation. Experience indicates that managing agents are still about the best institutions available for facing up to the problems which confront Indian industries at present. It is also difficult to see how discrimination between industries can fairly be made in this matter of removing the managing agents. The managed companies which have diversified their activity to a considerable extent will pose difficult problems for such a proposition. Meanwhile, expansion and improvement are being held up by the threat. It is, therefore, necessary to restore confidence by a clear enunciation of the future policy.

There is yet another strong reason why the managing agency system should not be further disturbed—because confidence abroad may be shaken. Recent trends indicate that official and institutional foreign financial assistance will become increasingly tied in future to the buying of the lender's goods. For instance, the U.S.—which is India's biggest international lender—is now obliged, for balance of payments reasons, to grant credit mostly for use in its own markets. If, in future, American money is to be spent only in the U.S., the amount of the foreign assistance given will be quantitatively reduced because prices there are nearly 30 percent higher than in the rest of the world. So it appears that India may have to rely on private foreign capital to a greater extent in future. But private lenders will not give her money for the mere asking; the investment climate here must be made attractive enough for them, considering that India is only one among many countries seeking foreign money.

STOCK EXCHANGE MANNERS

THE Calcutta Stock Exchange authorities decided last Thursday to promote another four shares to the forward list—Dunlop Rubber, Rohtas Industries, Shree Gopal Paper and Hindustan Motors. The decision has thus increased the number of shares on that list now to 13, the previous nine being Indian Iron, Orient Paper, Burrakur Coal, National Jute, Howrah Jute, Indian Copper, Texmaco, Indian Aluminium and Indian Cable. Unmindful of the ups and downs of the rest of the market, the new entrants had already been firm for some weeks in anticipation of the promotion. They have greeted the formal announcement of the news by firming up in varying proportions.

There are a number of points in the decision which have given rise to controversy. The first is whether there was any need to extend the forward list at all. Those against say that a list of the present size, under the present circumstances, does not serve its main purpose—which is to widen interest in the stock exchange and thus promote genuine investment. On the contrary, they argue, the main result of the additions will be to give a new impetus to speculation, which is already more predominant a feature of the Calcutta and Bombay stock markets than is healthy for them. Those who favour the extension of the list feel that the move will not necessarily increase the sum total of speculation; bull-bear attention will only be more thinly spread, since there is now a larger number of counters to spread it over. This might well be a distinct gain; when there were many fewer shares on the forward list, they experienced wild and exaggerated fluctuations because the gamblers concentrated their attention on a narrow base. On the whole, the decision to extend the forward list is welcomed in principle, provided the Stock Exchange authorities can see to it that their scrutiny of over-trading in the aggregate is not diluted because of the larger number of counters over which they will now have to keep a watch.

The thoroughly deplorable feature of the decision is this: the four shares now put on the forward list started to move up well before the formal announcement was made. The accompanying table shows their prices (1) in the middle of September, (2) on Wednesday last week, which was the day before the official announcement, and (3) at the close on Tuesday this week.

	15th September Rs.	28th October Rs.	3rd November Rs.
Dunlop Rubber	33.94	35.62	37.37
Rohtas Industries	23.84	25.44	26.87
Shree Gopal Paper	18.50	19	24.12
Hindustan Motors	12.37	13	13

The remarkable thing about the figures is that a large part of the rises took place before it was announced that the shares would be promoted to the forward list. This could, of course, show that operators displayed an abnormal degree of intelligent anticipation, knowing that when a share is moved on to the forward list, its price usually rises because its marketability is improved. But the more general inference is that the decision to promote the four shares in question leaked out long before it was formally made. A number of prominent operators have testified to the fact privately, and the likelihood of promotion was mentioned in some prominent newspapers too. It is a

in shares like these; a closer acquaintance with reality should persuade them that that is not quite the case.

It is believed that the ordinary and preference rights issue is being made in order to finance a paper mill project. A brief indication to this effect was given in the directors' report for the year ended December 1958. It was stated there that the order for the plant and machinery required for the paper mill, which is to be set up near Rayagada in Orissa, has already been placed with a West German firm. Shareholders will now anxiously await fuller details concerning the project. At present, the dominating fear is that paper mills, like Rome, are not built in a day; so for a considerable while the returns which shareholders have been accustomed to expect from Straw Products will suffer appreciably. During the year ended December 1958, the company earned a net profit of Rs. 2.79 lakhs, out of which Rs. 1.9 lakhs went as provision for taxation. The ordinary dividend of 12½ percent, absorbing Rs. 1,87,500, could be paid only after transferring back Rs. 1 lakh from general reserve. The annual dividend liability on the new preference shares alone would be Rs. 5.25 lakhs—to which would have to be added the tax deductible at source under the new system of company taxation, since the preference shares are tax-free. Members are entitled to make their own calculations about what sort of return, if any, they are likely to get on their ordinary shares. An explanation is due from the management of the company as to why the paper mill project could not have been implemented under different auspices, without draining so heavily the pockets of the existing Straw Products shareholders.

Proposals for capital issues, whether rights or new, are supposed to be scrutinised by the Government of India's Controller of Capital Issues. The case of the Straw Products proposal shows how incompetent the scrutiny is. The Capital Issues Control has hitherto wasted much of its time fiddling around with the premiums it thinks various companies ought to charge when issuing shares. When the basic soundness of the proposals coming before it is considered, the department is frequently found in deep slumber. The case for scrapping the Capital Issues Control gains in strength if it cannot be persuaded to take a more informed interest in company affairs.

Hilla Tea Share Offer

The Hilla Tea Estates Ltd is offering 125,000 ordinary shares of Rs. 10 each for public subscription at par (details of the offer are published elsewhere in this issue of *Capital*). The money will be used for buying the tea garden known as Hilla Tea Estate situated in the Dooars. It formerly belonged to the Dooars Tea Company Ltd. The estate has a total area of 1,640.29 acres of which 763 areas are licensed for tea. The planting area consists of an upper division of 400 acres and a lower division of 360 acres. The average yield is 12.52 maunds an acre. It is reported that the factory of the garden is well equipped for the manufacture of tea. During 1958, the output amounted to 596,242 lbs, and this year the crop has amounted to 517,776 lbs up to 14th October. The directors hope that the output will increase to 640,000 lbs this year. As the replanting and improvement programme have made progress, it is hoped that the crop might increase further in future as the young tea comes into full bearing. Of the total issue now being offered, 40,000 ordinary shares will be taken by the promoters, directors and their friends. The total financial requirements of the company are estimated at Rs. 22 lakhs, of which Rs. 10 lakhs will be paid for the purchase of the estate. The directors think that reasonable profits will be made if the present trend of tea prices is maintained, so the company may pay a dividend in the first year of its working. The subscription list will open on 9th November, 1959.

Aluminium Corporation Does Better

Reflecting the promising outlook for the aluminium industry as a whole, the Aluminium Corporation of India has reported better results for its past working year. According to the figures given by the chairman, Mr. Lakshmipat Singhania, in his address at the latest annual general meeting held last week (a fuller version appears on another page of this week's *Capital*), sales amounted to Rs. 1.29 crores, compared with Rs. 98.61 lakhs in the previous year. The profit was Rs. 35,89,894, against Rs. 27,20,461. The chairman also reported an improvement in the company's liquid assets position. Another Rs. 15 lakhs has been paid back in advance in relation to the debenture liability. The Corporation's expansion programme for trebling the production of the existing plant has made considerable headway. It has entered into a technical collaboration agreement for a period of 15 years with Messrs Aluminium-Industrie-Aktien-Gesellschaft, Zürich. The latter has sent a team of experts on each department to review the working and to advise the company on improvements. The team has also undertaken the designing of the complete expansion scheme with a view to making the plant up-to-date and modern. The whole scheme, said Mr. Singhania, is well advanced; arrangements are made for foreign exchange and the approval of the Government is being sought.

Discussing the prospects for the industry, Mr. Singhania pointed out that the steadily increasing volume of imports, in addition to the rising domestic production, shows that the demand for the metal has been going up. It is estimated that the annual consumption of primary metal alone will reach about 64,000 tons to 70,000 tons by the end of the third plan period. "In other words, consumption will go on increasing approximately by 12 percent every year, and if the engineering industry's growth is more rapid, the consumption may also increase at a higher rate." A noticeable change which has taken place in the pattern of consumption indicates that such products as A.C.S.R. cables (rods, wire rods, etcetera), and engineering, building and construction are now claiming a progressively greater percentage of the total supply. Such traditional uses as utensil manufacture are on the decline. Considering that aluminium is a substitute for steel in many lines of consumption, in addition to the many newer uses which are being found for the metal, and considering that the engineering industries will grow with the industrialisation of the country, the future of the aluminium industry seems encouraging. A good deal, however, will depend on the supply of cheap power, since electricity is an important requirement for this power-intensive industry. A number of hydro-electric and thermal schemes have been framed, but unfortunately, the cost of installation is very high, so the cost of power is also high, Mr. Singhania said. The development of the industry will require the domestic production of raw materials like petroleum coke for electrodes and cryolite for the electrolytic process. The first is being produced in insufficient quantities at the Digboi oil refinery; the proposed Government refineries should consider the need to manufacture this by-product while planning their production. Cryolite is now being imported mostly from Greenland, so the manufacture of synthetic cryolite in India should be considered.

Outlook for B.I.C.C.

The chairman of British Insulated Callender's Cables Ltd, Mr. W. H. McFadzean, in his review of the group's worldwide activities during 1958, has said that the trading surplus has increased by almost £1 million to £8,808,610 in spite of competition becoming more intense. (A fuller version of the review appears elsewhere in this issue). Among the many factors which have contributed to the result are the more favourable trend of copper prices, and a reduction of the dislocation which had been caused by the group's replanning and re-equipping schemes. By far the greatest contribution has been made by increased output and greater overall efficiency. The monetary value of sales fell slightly, but that was more than offset by a rise in the physical volume of sales.

The group, the chairman says, is now trading in 180 countries. In 11 of these, it has important manufacturing interests. A large investment programme has been carried out in recent years for the re-equipment of the factories in the U.K. and the acquisition and development of overseas interests. But Mr. McFadzean adds that the immediate outlook should be viewed with caution because of the adjustments that must take place between the present demand and supply of certain products in the industry. But in the medium and long-term future, "I have every confidence in our ability not only to hold but also to develop our position in an industry which, whatever its present problems may be, is essentially of an expanding nature."

Raymond Woollen Share Offer

J. K. Investors of Bombay has announced an offer of 25,000 ordinary shares in the Raymond Woollen Mills at Rs. 100 a share, payable in full on application. The purpose of the issue is to broaden public investment in the shares of the Raymond Woollen Mills, the managing agents of which are J. K. (Bombay) Private Ltd, and to arrange that they can be dealt in on the Bombay Stock Exchange. Lists opened on 2nd November and will close on 9th November or earlier, but not before 5th November. Applications must be for five shares or multiples thereof. Raymond Woollen is well known as a manufacturer of woollen goods, including woollen yarn, socks and knitted wear. The mills have 2,880 woollen spindles, 12,200 worsted spindles and 196 looms. The company, it is said, has modernised its equipment partially by replacing 3,672 worsted spindles, or about 35 percent of its worsted spinning capacity, before expansion. In the weaving department, 14 automatic looms have been installed and it is reported that a scheme is on hand for putting in another 64 automatic looms. Besides, the company has also carried out the automatisation of another 28 of its existing looms. The expansion of its steel files factory in Thana, near Bombay, has been progressing. The present capacity is for making 25,000 dozen files on a single-shift basis, and a licence has been obtained to raise it to 50,000 dozen a year. The expansion scheme is to be completed in about a year's time. The balance-sheets of the company show that sales have moved up from Rs. 1.38 crores in 1954 to Rs. 2.01 crores in 1958. There was a loss of Rs. 3.73 lakhs in 1954, but a profit of Rs. 14.83 lakhs last year. An ordinary dividend of 8 percent was paid last year.

Ceiling Prices for Chemicals

The Government of India's decisions on the Tariff Commission's recommendations concerning the fair selling prices of caustic soda, chlorine, hydrochloric acid and bleaching powder produced by domestic manufacturers have been announced at last. It was on 16th October, 1958, that the Commission submitted its report, after having taken about eight months to complete its detailed enquiry into the industry's cost structure. But it has taken the Government more than 12 months to make up its mind on the Commission's recommendations. The delay reflects poorly on the efficiency of the Central Commerce and Industry Ministry. By an official resolution dated 27th October, 1959, the Government has now fixed the following ceiling prices for the indigenous products on the basis of the recommendations of the Tariff Commission: (1) The fair selling price of fused solid caustic soda will be Rs. 35 a cwt. (2) The fair selling price of caustic lye on the basis of 100 percent NaOH content will be Rs. 29 a cwt. The price includes filling charges, but not the cost of rental of containers. (3) The fair selling price of caustic soda flakes will be Rs. 40 a cwt. (4) The fair ex-works price of dry gas chlorine, naked, supplied for the manufacture of chlorinated products within the factory or in adjacent units will be Rs. 13 a cwt. (5) The fair selling price of liquid chlorine in returnable containers, inclusive of filling charges, will be Rs. 22.20 a cwt. (6) The fair selling price of commercial grade hydrochloric acid, naked, inclusive of filling charges, will be Rs. 10.80 a cwt.

These ceiling prices are lower than the prevailing ex-factory prices. Considering that some of the products are fetching substantially higher prices in the open market, one wonders who will benefit from the reduction. It cannot be the consumer. The cut in prices, however, has not caused much surprise because it was widely expected. The industry can hardly be pleased about a reduction in selling prices which affects its earnings. But the Tariff Commission apparently feels that the manufacturers cannot complain of unfair treatment. The Commission has arrived at the fair ex-works prices after conceding a 12 percent return on the capital employed, taking into consideration the large volume of capital investment required and the need to maintain plant and machinery at the optimum production level. The Commission is convinced that this return will enable producers to meet all their expenses, in-

rovision for reserves, and leave a balance for ring "reasonable" dividends to shareholders. is meant by "reasonable," perhaps only the nission can tell. The Commission's estimates ir ex-works prices of solid caustic soda are on the weighted average of the fair ex-works of four units—D.C.M. Chemical Works, Tata icals, the Mettur Chemical and Industrial oration and Travancore-Cochin Chemicals. Alkali and Chemical Corporation's price is lered unreliable since it is based on a pron of a mere 102 tons. The Commission says he revised ceiling price for solid caustic soda greatly benefit D.C.M. and Mettur as their selling prices are well below the weighted ge. Tata Chemicals might be adversely affectsome extent, but there is considerable scope onomies in its case; T.C.C. will suffer a slight vantage.

me in the industry feel that this attempt to l-India fair selling prices for caustic soda hlorine products is unrealistic because of a er of factors. Salt is an important raw mateor the caustic soda industry (1.9 tons of salt equired for every ton of caustic soda pro-). The delivered-works cost of salt to the nt units varies considerably, depending on they are located. For example, the ex- cost to caustic soda units in eastern India re than four times that of those situated in ombay area. Moreover, the caustic soda pro- units in this country are of various sizes, g from a capacity of 2,000 tons to 30,000 tons . Consequently, there is considerable varia- the cost of production of the various units. r charges also vary considerably in different of India and the more progressive units proextensive facilities for their staff by way of als, schools, overseas training, etcetera. The eads of such units are naturally higher than se which do not provide extensive amen- In arriving at a fair ex-works cost, the Comn has applied depreciation on plant and nent at the income tax rates, whereas this ds on whether the unit is operating on single, , or triple shifts. Thus, while the view by the Commission is that these fair exprices will give a return of 12 percent on pital, in actual fact it will work out to an one-third of this figure in the case of f the units. Another factor which does not to have been given sufficient weight by mmission is the pattern of use of chlorine. number of the units, chlorine is merely a duct which they consume in their own plants, as others sell the bulk of their output and therefore, expect a reasonable return. A f the industry thinks that, in fixing an allprice, the Tariff Commission has not fully ered all these factors. A zonal price would een fairer, and more encouraging to manurs. The expansion of the caustic soda y has not kept up with the increase in d, with the result that every year larger and tonnages have to be imported, leading to a drain on the Exchequer. It is in the y's interest to see that the rate of increase genous production is speeded up either by pansion of the existing units or by the tion of new ones. The Government of resolution of 27th October is likely to act sincentive in this respect.

hing Powder Prices

rly 20 months elapsed between the time riff Commission took up the enquiry into r selling prices of caustic soda, bleaching and other chemicals and the announcement Government's decisions on the recommendade. Yet the Government has deferred the t on bleaching powder until a future date. ason is not known. It is possible that the due to the nature of the tariff body's sug-; it is also possible that the Government o think twice before involving the manu-—the only one in this country—who has a pansion programme on hand.

Tariff Commission's main recommendation the fair ex-works selling price of bleach- der should be Rs. 24.20 a cwt for both the nd the non-stable varieties. It feels that in the improvement in the quality of the indiproduct and the fact that the only local cturer of stabilised bleaching powder is to capacity, it is no longer necessary to indigenous production against imports by barrier. It has, therefore, recommended import duty of 15 percent *ad valorem* e abolished. The Commission thinks that g self-sufficiency in bleaching powder ke about two years. It wants the between the prices of the domestic and product to be reduced for the sake of r price stability. It has worked out the ls. 14 a cwt, and says that this gap can be if bleaching powder imports are allowed e. The Commission thinks that the duty has served its purpose with the establishment of an indigenous industry at a low-cost level.

If the suggestion about duty-free imports is not accepted by the Government for fiscal or other reasons, the Tariff Commission has made the alternative suggestion that the State Trading Corporation should take over distribution of both indigenous and imported bleaching powder and pool the prices. The industry hopes that this alternative suggestion will not need to be implemented. Bleaching powder, on the Tariff Commission's own admission, is only one of the products employed for bleaching and sanitation purposes, and forms only a small portion of the bleaching agents employed today. There is a much greater use of hydrogen peroxide and chlorine. The use of liquid chlorine in place of bleaching powder for the chlorination of water is also expanding. There is little to be gained, therefore, by entrusting the distribution of bleaching powder to the S.T.C. The problem hardly seems important enough to warrant a further extension of S.T.C. activity into a field effectively covered by private enterprise. The ultimate consumer is unlikely to benefit by such a move as, in fixing average prices, the S.T.C. will have to provide for administrative charges, which may result in an increase in the price of the imported material.

Cloth Exports Rise

Reliable reports say that cloth exports from Bombay in the July-September quarter were 195.5 million yards, compared with 131.8 million yards in the second quarter and 122.16 million yards in the corresponding period of last year. As shipments in the half-year ended June 1959 totalled 270.14 million yards, the total for the first nine months of the year comes to 465.84 million yards. If the third-quarter performance can be repeated during October-December, shipments from Bombay for the year should reach 660 million yards. The all-India figure may be 10 percent higher at around 720 million yards. This would be a fairly good showing, and would compare with the record figure of 796.39 million yards in 1957. Exports last year totalled no more than 543.7 million yards. The marked improvement in cloth exports in recent months is due to the export promotion scheme and to better foreign demand. Moreover, as Chinese activity in south-east Asian countries has slackened, they have taken more cloth from India. A break-up of the figures is not available, but reliable reports suggest that the increase in the offtake of the United Kingdom, the Sudan and the U.S.A. has been impressive. Not only has business been large; prices have also risen. The demand continues and buyers, it is said, are eager to book orders even for deliveries beyond March 1960. But exporters—both the trade and the mills—are reluctant to make large forward commitments in view of the uncertainty about the incentive scheme after March and the active demand at home for some of the exportable varieties.

A feature of the remarkable improvement in cotton textiles is that production has not responded to the increase in domestic and overseas demand. Output during the first nine months of the year totalled 3,687 million yards, against 3,689 million yards in the corresponding period of last year. As offtake has risen, and production has not, unsold stocks of cloth with mills at the end of September declined to a record low of 181,000 bales of 1,500 yards each.

Rayon cloth exports too have improved remarkably. Shipments during September totalled Rs. 27.2 lakhs, against a mere Rs. 7.61 lakhs in August. Most of the business, however, was in nylon textiles; exports of viscose cloth were as small as 10 percent to 15 percent of the total shipments.

More Engineering Goods Exported

Exports of engineering goods during September 1959 amounted to Rs. 61.76 lakhs, against Rs. 34.39 lakhs during the corresponding month of the previous year. Thus, exports during the first nine months of the current year have exceeded total exports for the whole of last year by Rs. 77 lakhs. The cumulative exports during January-September 1959 are valued at Rs. 4.86 crores. A note issued by the Engineering Export Promotion Council says that these figures are based on the daily lists of exports published by the Customs, which are confined to exports by sea only. Exports are also taking place over land frontiers, and the figures relating to them are being compiled.

Exports of non-ferrous items have increased from Rs. 38.48 lakhs to Rs. 46.97 lakhs, light engineering goods from Rs. 1.39 crores to Rs. 1.91 crores and heavy engineering goods from Rs. 80.63 lakhs to Rs. 1.10 crores. Exports to south-east Asia have risen from Rs. 85.69 lakhs to Rs. 1.72 crores, west Asia from Rs. 94.95 lakhs to Rs. 1.17 crores, Africa from Rs. 43.98 lakhs to Rs. 57.35 lakhs, north and central America from Rs. 51.73 lakhs to Rs. 1.07 crores and Europe from Rs. 13.54 lakhs to Rs. 21.79 lakhs. The individual countries to which exports have registered an appreciable increase are Ceylon with a rise from Rs. 25.48 lakhs to Rs. 40 lakhs, Japan from Rs. 25 lakhs to Rs. 59.84 lakhs, Malaya from Rs. 6.61 lakhs to Rs. 11.10 lakhs, Pakistan from Rs. 8.24 lakhs to Rs. 12.27 lakhs, the Philippines from Rs. 1.31 lakhs to Rs. 4.22 lakhs and Singapore from Rs. 9.91 lakhs to Rs. 14.73 lakhs. Exports to the United States have increased from Rs. 50 lakhs to Rs. 1.06 crores and to the United Kingdom from Rs. 3.42 lakhs to Rs. 9.78 lakhs. The council adds that as licences under the barter agreement with Burma have now been issued and the stalemate in the Indo-Egyptian agreement resolved, exports to these countries might well be expected to rise.

Fertiliser Plant in Neyveli

Although fertilisers are produced in Madras by Parry and Company, Shaw Wallace and Company and the Mettur Chemical and Industrial Corporation, the proposal to set up a large new plant in the Neyveli area is considered essential by the Madras Government for the development of the State's agriculture. The agreement reached lately with a West German firm and Italian interests for opening a urea plant consuming 800,000 tons of lignite marks a welcome step towards extending the production and supply of nitrogenous fertilisers. Their use will restore soil fertility, and an increase in their production will reduce imports. There is already a good market for synthetic manures, which will expand with a fall in their prices in the future. The integrated lignite project is important not so much for power generation as for the supply of 152,000 tons of fertilisers a year. India is a long way behind many countries in the production and application of fertilisers. The Indo-German agreement, therefore, inspires optimism about the State's plans to step up food production through intensive cultivation. The fluctuations in average yields in the State can also be limited by the regular use of fertilisers, so the emphasis on increasing the production of the latter before the third plan starts is welcome.

Rent Control in Madras

The Rent Control Bill which has recently been prepared by the Madras Government to improve the wartime measure has been criticised by many. Landlords especially feel that the "fair" rents fixed by an official may put them at a disadvantage. They have reminded the State Legislature that the measure hits the owners' right to charge for improvements or to receive an advance from the tenant. The provision compelling private landlords to make the premises available for those described as belonging to essential services has also been criticised. It is pointed out that the Government's policy for requisitioning and allotting private buildings has caused much hardship over the past 15 years. The right to evict has virtually been taken away under the new Bill and the repair of old houses is now hedged in with conditions. Furthermore, landlords cannot choose the building they will use for their own occupation. They argue that although property values have risen in recent years, there has been no proper return by way of rent. The point has also been made that tenants are often better off than property owners, and that the recovery of premises for personal occupation has been rendered difficult by the dilatory processes of litigation and appeals.

Rickshaw Ban Unconstitutional

A recent judgment of the Allahabad High Court to the effect that the State has no power to reduce the number of rickshaws on sentimental grounds should provoke some fresh thinking on future Government policy towards rickshaw pulling. The case arose out of a decision of the Kanpur Municipal Board to restrict the number of rickshaws in that city. The court held that to refuse a licence on the ground that the number of rickshaws must be limited to 3,480 was an infringement of the petitioners' right of trade, which was guaranteed by Article 19 (1) (g) of the Constitution. Commenting on the argument that the rickshaw is an undesirable mode of travel involving the use of human beings for the transport of human beings, Mr. Justice Dhawan observed: "In my opinion, the prohibition of any form of human labour must be within the permissible limits of the Constitution and not according to the sentiments of any particular section, whether a majority or minority of the nation. Sentiment is a poor alternative to a scientific and rational approach to social problems, and becomes a public menace if allowed to interfere with the rights of a large class of citizens to earn their livelihood. Sentiment which differs from class to class and even from person to person

cannot be made the basis of legislative policy, which must be universal in outlook and aim at the greatest good of the greatest number"

The rickshaw certainly involves the use of human labour which in more advanced countries is done by machines, but many think that the displacement of men by machines in such trades must be left to the operation of economic forces, even if they assert themselves slowly. Mr. Justice Dhawan went on to say: "The principle that the State has the power to forbid a citizen from following a profession because it may affect his health must be treated with great caution and suspicion. If accepted, it can open the gates wide for paternal despotism. In the modern age, there is hardly any profession which does not cause strain on the health of the person following it and the differences are largely those of degree. Occupational disease is a well-known term, and some occupations have a tendency to cause cancer and others tuberculosis, but none are prohibited in the State for this reason. Miners, engine-drivers, workers in atomic plants and others pursue their calling with varying degrees of harm to their health." In his lordship's view, the only ground on which a trade or a profession can be banned is if it is illegal or immoral.

Food Policy Criticised

In a lecture delivered recently in Madras, Professor D. R. Gadgil discussed the increase in food consumption following the rise in national income. To check the effects of deficit financing, there should be a careful review of food policy. Professor Gadgil complained that it is difficult to say what the Governent of India's policy is, although the first plan had called attention to the persistent food deficit, the need to hold the price line and a change in the food habits of the people. Faulty distribution is a factor responsible for the rise in prices, and Professor Gadgil insisted that a much higher average yield an acre is required for ensuring larger supplies. He also urged that cultivators be given more incentives, and the Government must buy and sell foodgrains from its own stocks in order to stabilise prices. This may not mean the acceptance of State trading in foodgrains in principle.

Gandak Project

Nepal has driven a hard bargain with India over the Gandak project, which involves the construction of a barrage across the river on the Indo-Nepalese border, the digging of canals to irrigate nearly 40 acres of land in Nepal, Bihar and Uttar Pradesh, and the construction of a power house. Under the agreement which has been reached, India will build the 10,000-kilowatt power house in Nepalese territory and the Nepalese people will get power at cost price. Further, as a token of friendship and goodwill, the power house will be handed over to the Government of Nepal at a later stage. The Government of India, it is reported, has also agreed to the demand that India should finance the construction of village channels in Nepal having a discharge of between 5 cusecs and 20 cusecs. It is expected that a sum of Rs. 5 crores will be involved in providing these benefits to Nepal, and the estimated cost of the project will accordingly go up from Rs. 47 crores to Rs. 52 crores. Uttar Pradesh and Bihar will share this Rs. 52 crores according to the ratio of the benefits they receive. The cost of the benefits to Nepal will also be borne by the two States in that proportion. The Central Government will give loans to both the States for the project. Under the present scheme, two main canals, the eastern and the western, will start from the river. Together with the existing Tribeni canals, they will irrigate nearly 3.6 million acres in Bihar. In U.P., the western canal will irrigate nearly 600,000 acres. The whole scheme is expected to take six or seven years to complete.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity showed a drop of 6 points during February 1959. There were declines in sugar, tea, jute, yarn, cloth, coal, paper, tyres, motor-cars, electricity and railway ton-miles. Cement, pig iron, finished steel and bicycles showed increases.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations to the 1959 Fu :

Rs. 100
P. C. Vink.
Rs. 51
Anonymous.
Rs. 39
Staff of Carritt Moran & Co. Private Ltd.
Rs. 25 each
C. P. Francis, W. G. M.
Rs. 20
R. H. Wright.
Rs. 10 each
R. Nice, Anonymous.
Rs. 5
P.W.P.

The fund now totals Rs. 732.93, including a carry-forward of Rs. 447.93.

SHIPBUILDING IN U.K.

LLOYD's Register shipbuilding returns of mercantile vessels under construction in the United Kingdom, at the close of the quarter ended 30th September, 1899, prove that there is still remarkable activity in all the shipbuilding and marine engineering centres, though, as might reasonably be expected, they do not equal the unprecedented high total which was reached in December last. From the returns, it appears that for the period under review there were, excluding warships, 558 vessels of 1,347,549 tons gross under construction. These figures are 16,701 tons less than those for the corresponding quarter of last year. The 558 vessels comprise 471 steel and 61 iron steamers of 1,331,215 and 11,060 tons gross, respectively, and one composite steamer of 110 tons, also 25 sailing ships made up of 9 steel and 16 wood and composite representing 3,620 and 1,544 tons gross, respectively. Of the mercantile vessels building in the United Kingdom at the end of September, 470 of 1,063,871 tons are under the supervision of the Surveyors of Lloyd's Register, with a view to classification by this Society. In addition, 52 vessels of 157,050 tons are building abroad with a view to classification. The total building at the present time under the supervision of Lloyd's Register is, thus, 522 vessels of 1,220,921 tons.

	No.	Gross Tonnage
Building in United Kingdom for home account, for sale, etc.	400	903,464
Building in United Kingdom for foreign and colonial account	70	160,407
Building abroad ...	52	157,050
Total Building on 30th September for classification in Lloyd's Register Book ...	522	1,220,921

AEI to build Britain's most powerful generators

An order worth nearly £5 million is being placed with AEI for two 300,000 kw. turbine generator units which will be installed at West Thurrock power station, near Tilbury. Each of these generators will have the greatest single-shaft output at 3,000 r.p.m. in the world; each will, in fact, be capable of generating 2,628 million units in a year.

These generators represent important advances in design. Though no larger than those built a decade ago, they are several times more powerful. And their increased efficiency means that they will use less fuel for the electricity they produce.

FACTS FOR THE TECHNICAL. Each unit, which will have the greatest single-line output in the world at 3,000 r.p.m., will consist of a four-cylinder turbine directly coupled to the two-pole a.c. generator: the exciters are gear-driven from the generator shaft. The equipment provides seven stages of feed-water heating, giving a final feed temperature of 485°F. Inlet steam conditions are 2,300 psig, 1,050°F at the turbine stop valve. After expansion through the high-pressure stages, the steam is reheated to 1,050°F before entering the intermediate-pressure cylinder, from which the steam is conducted through four overhead pipes to the two double-flow low-pressure cylinders.

The generator will produce 50-cycle, 3-phase alternating current at 16,500 volts and operate at 0.85 power factor. The stator windings will be water-cooled, a system first introduced by AEI engineers, and the rotor windings will be direct-cooled by hydrogen at a gas pressure of 30 psig. To keep the overall dimensions and weight within the limits dictated by transport, the end-bells containing the coolers will be shipped separately from the core, and assembled on site.

Other AEI contributions to electrical progress

Did you know that:

* AEI made Britain's first electron microscope,
* the world's first gas turbines for ships,
* the world's first water-cooled generator,
* the world's first water-cooled cable,
* AEI operate Britain's first privately owned reactor,
* AEI-John Thompson are building the Berkeley Nuclear Power Station,
* AEI built ZETA,
* And they make the electrical power system for the Comet.

SISTA'S-B-141

This is only an announcement and not a prospectus.

This announcement is not an invitation to subscribe for shares but is issued for the purpose of giving information concerning the Company. The formal Pro-spectus dated 26th October, 1959, has been delivered to the Registrar of Companies, West Bengal, for registration as required under Section 60 of the Companies Act, 1956. Copies thereof can be had from the Registered Office of the Company or from the Bankers and Brokers named below.

THE HILLA TEA ESTATES LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956)

ISSUE OF 1,25,000 EQUITY (ORDINARY) SHARES OF RS. 10/- EACH AT PAR. PAYABLE IN FULL ON APPLICATION.

The Subscription List will open at the commencement of banking hours on 9th November, 1959, and will close at the close of the banking hours on 14th November, 1959, or sooner or later as the Directors may decide.

SHARE CAPITAL

Authorised :	**Rs. 5,00,000/-**	**divided into 5,000—7½% Tax-free Cumulative Preference Shares of Rs. 100/- each, redeemable at a Premium of 5% on or after the 1st April, 1968 at the option of the Company, either in whole or in part.**
	Rs. 20,00,000/-	**divided into 2,00,000/- Equity (Ordinary) Shares of Rs. 10/- each.**
	Rs. 25,00,000/-	
Issued :	**Rs. 12,50,000/-**	**divided into 1,25,000 Equity (Ordinary) Shares of Rs. 10/- each.**
	Rs. 12,50,000/-	

No Shares will be issued for consideration other than Cash.

Of the above Issue 40,000 Equity Shares of Rs. 10/- each are reserved for issue to the Promoters, Directors and their friends and associates at par, out of which 20,000 fully Paid-up Equity Shares at par have already been subscribed and paid for by the Directors and their friends being more than 15% (Fifteen per cent) of the present issue of 1,25,000 Equity Shares. The balance 20,000 Equity Shares of Rs. 10/- each are agreed to be taken up at par by the Promoters, Directors and their friends and associates following the issue.

LOAN CAPITAL

The Company has created no Mortgages, Debentures or other Loan Capital.

FINANCIAL REQUIREMENTS

The Financial Requirements of the Company are comprised of :

(1) Purchase price of the Lands, Plantations, Buildings, Machinery, Motor Vehicles, etc. of Hilla Tea Estate ...	**Rs. 10,00,000/-**
(2) Preliminary expenses including Commission, Brokerage and expenses of the Issue	**Rs. 75,000/-**
(3) Working Capital	**Rs. 11,25,000/-**
	Rs. 22,00,000/-

MINIMUM SUBSCRIPTION

The minimum amount which, in the opinion of the Directors, must be raised by the issue of Shares in order to provide the sums required to be provided as per paragraph 5 of Schedule II to the Companies Act, 1956, upon which the Directors will proceed to allot shares presently offered is 80,000 Equity Shares of the nominal value of Rs. 8,00,000/- being only a part amount of the present Issue, out of which Rs. 7,25,000/- shall be the part purchase price of the Lands, Buildings, Plantations, Machinery, Motor Vehicles, etc., of the Hilla Tea Estate including the earnest money of Rs. 1 Lakh (Rupees One Lakh) paid in cash by Shri B. N. Sen Gupta, Director, and adjusted against subscription of 10,000 fully paid up Equity Shares of Rs. 10/- each in the Capital of the Company in favour of the said Shri B. N. Sen Gupta as hereinafter mentioned, and Rs. 75,000/- shall be for preliminary expenses including commission and brokerage and expenses of this Issue.

CHAIRMAN

Sir Dhirendra Nath Mitra,

DIRECTORS

1. **Mr. Ranadeb Chaudhuri**, Barrister-at-Law, of 34, Ballygunge Circular Road, Calcutta-19.
2. **Mr. C. P. Wallis**, Tea Broker, 3, Clive Row, Calcutta-1.
3. **Mr. Birendra Nath Sen Gupta**, Merchant, of 17, Lake Road, Calcutta-29.
4. **Mr. Santi Sen Gupta**, Merchant, of 20, Aswini Dutta Road, Calcutta-29.
5. **Mr. Gerald Robert Squire Stapleton,** Consulting Engineer & Tea Planter, of 9/A, Short Street, Calcutta-16.

PROPOSED MANAGING AGENTS

Messrs. Planters (India) Private Limited, a company incorporated under the Companies Act, 1956, Merchants of 5/1, Lower Circular Road, Calcutta-20.

OBJECTS

The main objects of the Company are set forth in detail in its Memorandum of Association.

The Company proposes to acquire lands, buildings, plantations, machinery, motor vehicles and other assets mentioned below of the tea garden known as "Hilla Tea Estate" situate in Dooars in West Bengal, belonging to **Messrs. Dooars Tea Company Limited, a Company incorporated in England and having its registered office at King William House, 2A, Eastcheap in London, Merchant.**

(a) Leasehold lands, Police Station Nagrakata, and Mouza Hilla, in Dooars comprising a total area of 1,640.29 acres more or less exclusive of 4.72 acres reserved for public roads and all tea gardens, nurseries, tea bushes, seedlings, plants and trees standing and growing thereon.

(b) The buildings and other structures with fixtures and fittings therein erected thereon as on 1st January, 1959.

(c) The right to use the private road-way leading to the said Hilla Tea Estate through the Nagrakata Tea Estate and to lay pipes, cables, etc.

(d) Plant, machinery, appliances, electric and other equipments, motor lorries and other transport vehicles, tractors, tools, utensils, implements, furnitures, articles and things in the said Tea Estate.

(e) The export quota rights and internal quota rights in relation to sale or production of tea which have been or may be allotted or granted to or in respect of the said Tea Estate.

The crop manufactured from Hilla Garden leaf during the years are as follows :

1954	... ...	6,50,326 Lbs.
1955	... ...	6,67,850 Lbs.
1956	... ...	7,05,402 Lbs.
1957	... ...	6,49,553 Lbs.
1958	... ...	5,96,242 Lbs.
1959	(upto 14th October as per report submitted by Mr. Crowley, Manager of the Garden)	5,17,776 Lbs.
	Expected yield at the end of this year	6,40,000 Lbs. (approx.)

REPORT ON THE GARDEN

The Garden has a total area of 1,640.29 acres of which 763 acres are licensed for tea and the balance acreage utilised for grazing, khets, thatch, bamboos, fuel and buildings. Rainfall averages about 160" annually.

Some 550 houses accommodate the settled labour force and there are 14 Staff Quarters as well as Manager's and Assistant's Bungalows, also a Dispensary and nine creches. All buildings are in good repair.

The Factory is a pucca structure of adequate capacity with ample withering accommodation and is run by water power with a stand-by steam plant.

Six 36 inch Rolling Tables and three Legg Cutters together with necessary sifters are sufficient to deal with the leaf plucked on the peak days and two 6' and one 4' oil-fired dryers can easily cope with the output. The sorting arrangements were reorganised this year and teas are now graded by Myddleton Sorters fed by Conveyors from the Cutters, which gives a very high percentage of Pekoe Fannings and a minimum of Broken tea. The factory is generally well found for machinery which has been maintained in very good condition.

The planted area consists of an Upper Division of about 400 acres and a Lower Division of about 360 acres. The tea is well drained, fairly well shaded, green cropped as necessary and annually manured. Average out-turn over the past three years was 15.18 maunds per acre on the Upper Division and 10.15 maunds per acre on the Lower Division, giving an overall 12.52 maunds per acre. The replanting and improvement programme is now coming into effect and a crop exceeding 6,40,000 lbs. is anticipated this year, and it will increase to an optimum of about 8,00,000 lbs. when the young tea is in full bearing.

The Garden produces legg cut teas of a good standard which are classified by the Brokers as above average for the District, and the Directors feel that at the present price level, the Company should earn substantial profits and can expect to pay dividends from the very first year if there be no unforeseen circumstances and the present yield of this garden can be increased further in the early future.

AUDITORS

Messrs. Price, Waterhouse, Peat & Co.,

PROSPECTUS & APPLICATION FORMS

Copies of the Prospectus on the terms of which alone Applications will be considered, and Application Forms may be obtained from the Registered Office of the Company or from the Company's Bankers at their Calcutta, Bombay, Madras, Delhi Kanpur and Patna offices or the offices of the Brokers and also from the Branch Offices of the State Bank of India at Darjeeling, Siliguri, Jalpaiguri, Dibrugarh, Jorhat and Gauhati.

THE ALUMINIUM CORPORATION OF INDIA LIMITED

CHAIRMAN, MR. LAKSHMIPAT SINGHANIA'S REVIEW

The following is the address delivered by Mr. Lakshmipat Singhania at the Twenty-first Annual General Meeting of The Aluminium Corporation of India Ltd. held on Tuesday, the 27th October, 1959.

Gentlemen,

I have great pleasure in welcoming you to the Twenty-first Annual General Meeting of the Corporation. Nearly quarter of a century ago your promoters started this industry and the Managing Agents of the Corporation have struggled through this long period to establish this highly technical basic industry in this country without any foreign collaboration or help. Your Corporation had to pass through lot of uneasy times but the fulfilment of the objective is a matter of great achievement for all our people. I have the additional pleasure of assuring you that today we possess sufficient technical knowledge and personnel to develop and to serve the country for the betterment of this basic industry. It may be old history, but I would like to repeat that your Corporation were the first producers of Aluminium metal in this country from Indian Bauxite. The actual fact of Indian production and its psychological effect immediately brought down the price of the metal to half its earlier price. Your Corporation has thus served the country continuously for over 15 years by supplying this important metal at a reasonably low price.

Working Results

This year your Corporation has achieved the best results in its history : the sales being Rs. 1,28,75,543 against Rs. 98,60,772 last year and the profit being Rs. 35,89,864 against Rs. 27,20,461 last year. Another feature of the year is the declaration of a dividend of 10% on Ordinary Shares for the first time. A new feature is the reorganisation of the capital structure of the Corporation by extinguishing the deferred shares thus bringing the new capital structure in conformity with the Companies Act, 1956. After 21 years the Deferred Shareholders after conversion have been able to participate in a dividend for the first time. You will notice from the Directors' Report and Accounts that due to the impact of taxation, the appropriation towards the reserve had to be reduced. The liquid assets position has further improved and the Corporation has paid back voluntarily in advance another Rs. 15 lacs towards the debenture liability and the Balance Sheet as it is presented shows a very healthy and sound position and the Corporation's scrips today can be truly termed as "blue-chips". For all these achievements the credit goes right through from the humblest worker in the factory to the team of technicians and Directors and Managing Agents and to the co-operation and patronage of our customers, who approved many of our products as the best in the country. The Corporation is proud of the team of skilled labour and technical personnel whom it has trained. In these basic industries such trained old workers play an important role and are in my opinion, as valuable as the technique or machinery and plant.

Expansion Programme

As indicated to you last year, the Corporation has gone much ahead with its expansion programme for trebling the production of the existing plant. For the first time we have entered into a technical collaboration agreement for a period of 15 years with Messrs. Aluminium-Industrie-Aktien-Gesellschaft, Zurich. They have already sent a team of experts on each department to review the working and to advise us on improvements. Further they have undertaken the designing of the complete expansion scheme so that the plant would be most up-to-date and modern. The whole scheme is well advanced and arrangements are being made for foreign exchange and approval of the Government is being sought. I hope in a very short time the scheme will come in active operation and that the completely integrated plant at Jaykaynagar will be the most economic unit in the country.

It is necessary for me to give you a picture of the plants established in different parts of the world, their production as well as indigenous production.

Country	No. of plants	Production capacities	1958 production
		Long tons	Long tons
U. S. A.	22	23,25,670	13,97,818
Canada	6	7,73,214	5,36,099
Brazil	2	20,964	11,698
Austria	2	62,005	55,996
Czechoslovakia	1	49,210	16,429
France	11	1,69,283	1,66,277
Federal Republic of Germany	4	1,60,425	1,34,604
Germany (East Zone)	1	29,526	33,482
Hungary	3	59,052	37,500
Italy	4	78,244	63,037
Norway	6	1,30,801	1,19,651
Spain	3	31,062	15,752
Sweden	2	14,763	13,484
Switzerland	2	32,479	31,002
Russia	13	8,41,495	5,45,535
U.K.	2	31,495	26,354
Yugoslavia	3	36,908	21,338
French Cameroons (Africa)	1	44,289	31,356
Tasmania	1	12,398	10,925
Japan	5	96,452	83,241
Formosa	1	7,874	8,441
Manchuria	2	29,526	29,465
India	97	50,37,275	33,89,484
	3	17,500	8,180
Grand Total	100	50,54,775	33,97,664

You will notice that the sizes of the plants are largest and in most of the countries the sizes are on the smaller side but the plants in bigger producing countries like Canada and America are much larger. The world growth of Aluminium metal which is still young in comparison to steel and others, has been governed by a combination of many factors, i.e., availability of power and of raw material, technique available for such production and consumption of metal. The most important factor is the availability of power at suitable rate. Although bauxite is the physical raw material, yet because aluminium is a highly power intensive industry, the most important *raw material is power. The establishment and growth* of this industry is dependent on availability of power at suitable rate. In India, a number of hydro-electric and thermal schemes have been put up, but unfortunately the cost of installation being very high the cost of power is also high and it is therefore difficult to compare the cost of power available to this industry here with the cost of power in other parts of the world.

Deciding Factor

There is a talk of establishment of aluminium plants in the country in practically every State and everyone is anxious to have an aluminium industry in his own State. The deciding factor however should be the competitive value of the metal produced at different stages and at different places as immediately the metal becomes costlier, the consumption pattern will change. It must be remembered that this metal has to compete with many other non-ferrous metals as well as steel and, here the cost is the most governing factor and if the cost of production is affected either due to heavy capital expenditure or due to higher power cost the consumption of the metal will also be affected accordingly. It is a well-known fact that consumption of aluminium is increasing because it has become a universal metal put into probably more numerous uses than any other metal and this has been possible only because of *its being more competitive. The typical pre-war and* post-war pattern of world consumption of this metal is as under :—

	Pre-war %	Post-war %
1. Transport—marine, land & air	29	37
2. Cooking utensils	14	3
3. Electric conductors	10	10
4. Machinery & electrical appliances	15	20
5. Architecture	8	8
6. Packing and food industry	11	11
7. Metallurgy—ferrous, non-ferrous and foundry	9	8
8. Sports goods, jewellery, personal goods, etc.	—	3
9. Unclassified	4	—
Total	100	100

The total metal available for consumption in India from 1948 onwards is tabulated below :—

	Indigenous production	Import in all forms	Estimated secondary metal in the country	Total
	T.	T.	T.	T.
1948	3,372	9,327	2,539	15,238
1949	3,516	8,300	2,363	14,179
1950	3,590	5,767	1,871	11,228
1951	3,876	8,677	2,510	15,063
1952	3,566	5,833	1,879	11,278
1953	3,759	5,360	1,823	10,942
1954	4,882	10,614	3,099	18,595
1955	7,225	11,746	3,794	22,765
1956	6,469	14,887	4,271	25,627
1957	7,728	23,146	6,175	37,049
1958	8,180	17,288	5,093	30,561

About 10 per cent of the total metal in use comes back as secondary metal every year. As it is very difficult to estimate this quantity on the basis of total metal, I have assumed in the table that about 20 per cent of the total metal put into use during any one year will represent the total secondary metal returning to process that year.

The trend of consumption of primary metal has been as under :—

	1946	1951	1955	1958
Utensils	10,000	12,000	8,000	8,000
ACSR cables (rods, wire rods, etc.)	...	...	5,000	11,000
Foils & linings	...	1,700	2,000	2,500
Transport	...	...	3,000	4,000
Engineering, building & construction	...	300	500	2,500
Others	1,000	1,000	1,500	2,000
	11,000	15,000	20,000	30,000

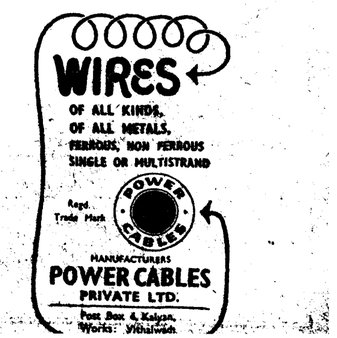
Consumption in India

The pattern of the Indian consumption is gradually changing as the country is becoming more industrially developed and engineering industries are taking more important place. As in other countries, the consumption of this metal in India also will increase only in the direction of industrial and transport uses rather than domestic uses as it is evident that the domestic use of this metal is not keeping the pace with the increases in other uses. It is estimated that the annual consumption of primary metal alone will reach about 64,000 to 70,000 tons by the end of the Third Plan period. In other words consumption will go on increasing approximately by 12% every year and if the engineering industry's growth is more rapid, the consumption may also increase at a higher rate.

There is one very important feature of this industry which must be kept in mind, i.e. aluminium is a basic industry which every country desires to develop in the national interests. For this reason, the production in countries which had previously no aluminium plants, is increasing. In the big aluminium producing countries, though production is increasing, portions of plants are also idle. Again because of the national interests the industry is protected in almost every country whether it be a large producer or small producer. Even in America there is tariff protection. It is felt that in India also this industry may have to seek continuous tariff protection for a long period to come.

Raw Materials

For future development of this industry in India some raw materials like Petroleum Coke for electrodes and Cryolite for electrolytic process are required. Petroleum Coke is only available from the oil refinery at Digboi but the quantity is not sufficient and the inland carrying cost is high. The new refineries are not using this process and it is necessary that the Government should pay attention to the necessity of production of petroleum coke in the new refineries as a bye-product. As far as Cryolite is concerned, at the moment it is mostly imported from Greenland. It is necessary to pay attention for manufacture of *synthetic cryolite in India.* Commercial production of aluminium depends on cryolite, and dependence of the industry on such imports is not always desirable.



Due to the expanding economy of the country the price indexes have risen and thereby wages have also been necessarily increased. But there is real danger of these wages getting out of proportion to the income of majority of people in India who are either unemployed or underemployed. *It is* well to remember that the number of industrial workers total only about 7 million out of the total labour force of 154 million in our country. The majority therefore are dependent on agricultural income which is much lower as compared to that of the industrial workers. Such disparity is leading to a vast influx of persons from villages to the cities creating tremendous problems of housing and amenities, apart from unbalanced increased employment load on industries. The solution lies on the betterment of agricultural income and this can be achieved when crop yield per acre goes high. For such high crop yield more irrigation, more fertilisers and more insecticides have to be provided. This means developing more balancing industries and thus the problem assumes a vicious circle.

Quicker Industrialisation

Therefore, rapid industrialisation also assumes great importance. To facilitate quicker industrialisation in the country and to achieve better and balanced economical conditions and employment entrepreneurs should be accorded better facilities and the procedure for disposal by Govt. should be more flexible. At present industrialisation is dependent on the import of necessary equipments from foreign countries. Due to foreign exchange shortage the import of equipments has to be arranged either against loan in foreign countries or against deferred terms of payment from suppliers of equipment. The agencies from whom such loans can be secured are either in the United States of America like the Export-Import Bank, etc. or in different Continental Countries who have accorded to India foreign exchange credit, or the different suppliers direct. Whenever help is taken from the Export-Import Bank of America, the plants have to be purchased in the U.S.A. Looking to the smaller size of the requirement of the plants in India in comparison with the U.S.A. in most of the cases the plants purchased in the U.S.A. cost more than the plants purchased from the Continent, and India has to pay this higher price along with high technical collaboration fee for developing such industries or in case of foreign collaboration profits have to be remitted for all time to come. In the Continent and other places outside U.S.A. where plant requirements are similar to our requirements the price of such equipments are lower but the equipment has to be imported on deferred terms of payment which requires guarantee from suitable institution in India for the credit extended. Therefore, the whole process of piloting the scheme, viz. obtaining essentiality certificate from Govt. fulfilling and negotiating formalities for obtaining bank guarantee and final acceptance are subject to too much delay, thus rendering implementation of the scheme impracticable specially by new entrepreneurs. I wish to make a suggestion that suitable procedure be worked out for approving without much delay the scheme for expansion or for setting up a new plant after examination of its soundness financial as well as technical so that the necessary guarantee is available as early as possible.

Especially in a transitory period as the one through which we are passing, the problems have to be handled in a very balanced way so that while there is an all-round economic equilibrium there is also a rising economy for the progress of nation.

Note : This does not purport to be a record of the proceedings of the above Annual General Meeting.

BICC meets greater competition with greater efficiency

In reviewing the world-wide activities of the British Insulated Callender's Cables Group for the year to 31st December, 1958, the Chairman, Mr. W. H. McFadzean, stated:

"In a year during which competition has been more intense than ever it is gratifying to report that our Surplus on Trading has increased by almost £1,000,000 to £8,808,610.

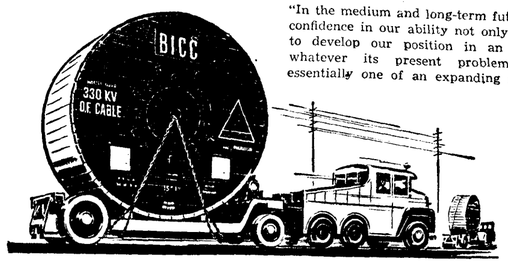
"Many factors have contributed such as the more favourable trend of copper prices and the reduced dislocation caused by our Replanning and Re-equipment Schemes, but the greatest contribution has come from even more important sources, namely,the still further improvement in our overall efficiency assisted, of course, by our increased output.

"The improvement shown for 1958 as a whole was largely achieved in the latter part of the year and resulted, I am glad to say, from a general improvement in the results of several companies in the Group both at Home and Overseas.

"The overall strength of our Balance Sheet is emphasised by the disclosed Reserves of over £32,000,000.

"Although the monetary value of our Sales fell slightly from £111,000,000 for 1957 to £110,000,000 for 1958, this was much more than accounted for by the lower prices ruling, particularly for copper, the average price per ton of which was some £198 in 1958 against some £220 in 1957. It is clear that the physical volume of our Sales for 1958 was appreciably in excess of that for 1957.

"It has again been my privilege and that of several of my colleagues to travel extensively overseas, thereby renewing old and making new contacts, and seeing things for ourselves. The area we have to try and cover is a big one, for the Group is now trading in 180 different countries and in 11 of these we have important manufacturing interests.



"We are particularly pleased that in a year when overseas business has been generally extremely difficult, one-third or some £37,000,000 of our Sales represented direct exports from this country and sales effected by our Subsidiary Companies overseas.

"We have no doubt of our ability to surmount our difficulties. We have over recent years carried out a large investment programme in the re-equipment of our factories at home and the acquisition and development of overseas interests. We have spent fearlessly on research and development and have a widespread range of products and above all we have a highly competent team of people.

"Our aim can be simply expressed. It is to lead technically, produce quality products at the right prices, give a service second to none, and earn the reasonable return on our capital and effort which is our due reward.

"As regards immediate prospects, I would be very optimistic were it not for the adjustments that must take place in our industry between present supply and demand in certain products at least. If such adjustments are made in an orderly fashion we have nothing to fear. If not, then short-term results must be affected and the immediate future viewed with caution. We have, however, a great fundamental strength and a wide range of activities in many countries.

"In the medium and long-term future I have every confidence in our ability not only to hold but also to develop our position in an industry which, whatever its present problems may be, is essentially one of an expanding nature".

THE CALCUTTA MONEY MARKET

INTER-BANK FUNDS TIGHTER

Wednesday, 4th November.

THERE has been some rise in the quantity of advances outstanding in the Calcutta money market during the past week. Most of the increase was accounted for by the jute mills and against commodity storage. Demand from the sugar industry is slightly reduced and requirements against foodgrains storage are about the same. The inter-bank market has become tighter, and the call rate is now between 2¼ and 2¾ percent.

Bills have been scarce in the exchange market. A few tea documents have come to hand, but there has been considerable reduction in the volume of gunny bills. Remittance has been very poor. The pound sterling has been quoted fractionally lower on the London market against the twin dollars and most Continental currencies.

BULLION WAS QUIET ON PROFIT-TAKING. BUYING during the Diwali festival was below expectations. Silver declined from the previous week's level of Rs. 209 to Rs. 208.75, quoted today for ready delivery. The rate for forward delivery was Rs. 208.25. The London and New York prices stood at 79¾d and 91.375 cents, respectively.

Gold was easier in sympathy with silver and the price fell from Rs. 125.87 to Rs. 125.50. The sovereign, however, rose from Rs. 80.75 to Rs. 81.25 due to a shortage of supplies.

DURING THE WEEK ENDED 30TH OCTOBER, Government of India Treasury bills for Rs. 147,21,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 3rd November. The total amount offered was Rs. 2,00,00,000. Tenders at Rs. 99.395 were accepted in full, the average rate of acceptance being Rs. 2.420 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 9th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 4th November to 7th November at Rs. 99.411 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 28th October to 30th October.

A RISE OF Rs. 17.96 CRORES TO Rs. 1,686.20 CRORES in active notes marked the return of the Reserve Bank of India for the week ended 30th October, 1959, but the total note issue declined by Rs. 2 crores to Rs. 1,696.89 crores. Notes held in the Banking Department consequently fell by Rs. 19.96 crores to Rs. 10.69 crores. Deposits of the Government of India were Rs. 12.38 crores lower at Rs. 55.01 crores and other Government accounts rose by Rs. 12.07 crores to Rs. 30.26 crores due to a transfer from the Central Government. Balances of commercial banks at Rs. 73.44 crores showed a decline of Rs. 17.47 crores. Balances held abroad improved by further Rs. 10.33 crores to Rs. 35.19 crores. Investments declined by Rs. 5.89 crores to Rs. 240.64 crores. Other loans and advances increased from Rs. 80.62 crores to Rs. 92.47 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.70 crores (nil). Ways and means advances were shown at Rs. 20.25 crores, against Rs. 18.55 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 23rd October, 1959, shows a rise of Rs. 7.10 crores to Rs. 577.46 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 9.72 crores and Rs. 5 lakhs to Rs. 387.27 crores and Rs. 10.17 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 1.62 crores to Rs. 157.64 crores. Cash and balances are, in consequence, shown at Rs. 30.67 crores or Rs. 17 lakhs less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 23rd October, 1959, shows Demand and Time liabilities at Rs. 749.35 crores (Rs. 27.78 crores on account of borrowings from banks) and Rs. 1,125.51 crores (Rs. 28.07 crores), compared with Rs. 741.94 crores (Rs. 22.47 crores) and Rs. 1,117.05 crores (Rs. 28.67 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.32 crores and Rs. 5.06 crores to Rs. 43.24 crores and Rs. 74.73 crores, respectively. There is a rise of Rs. 14.99 crores to Rs. 795.13 crores in investments. Advances, and bills discounted and purchased at Rs. 930.04 crores show a drop of Rs. 26 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.7 percent and 50.1 percent, against 6.3 percent and 49.7 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 6-11-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
6-11-59	7-2-60	2,00,00	Rs. 2.420%

LONDON INSURANCE LETTER

MORE RESTRICTIONS ADVISED IN EMERGENCY

THE report of the Radcliffe Committee contain some important recommendations concernin insurance, or insurance companies' affairs. A majo theme of the whole report is the need for mo information on financial matters, and life assu ance and pension funds are among the matte mentioned as being inadequately served by stati tics. The committee is not convinced that th credit squeeze of recent years had been eith equitable or effective, and it has advised that a future emergency, restrictions should be in posed not only on banks but also on insuran companies and other institutions providin finance. Its recommendations on export-cred insurance are particularly opportune, for this sp cialised insurance—the responsibility of a Gover ment department—had recently been a subject keen controversy. The critics' arguments, du noted by the committee, is that the time limit the Export Credits Guarantee Department shou be more flexible and that facilities for pre-shi ment finance of exports should be improved. Th committee, while warning against long credits promote trade (in effect, the credit war), is i clined to concede the former point, but in discu sing the mechanism of financing trade it reco nises the distinction between credit and insuran of credit—a distinction which the critics of th Department sometimes overlook.

Salient Features

The salient features of British insurance present are the economic advance at home ar the improvement in claims experience in Americ partly offset by fire claims at home which promi to be larger in the aggregate this year than in ar other year on record. On the whole, 1959, as approaches its final quarter, seems a good year f British insurance. Lloyd's underwriters' accoun are made up on a three-year basis; so there is le up-to-date information in a complete Lloyc account than is available from the companies from the associations. Yet one can confident state that Lloyd's is not participating in th general prosperity of insurance. The stateme published at the end of August, covering th three-year period 1956-58, was on profits the mc depressing yet issued by this body, and the conc tions that produced the unsatisfactory resul have not, apparently, materially changed.

A big difference between the underwriters ar the companies is that the life business written l the underwriters is relatively insignificant. Th are deeply committed to marine insurance, whi has notoriously been unprofitable in recent yea while life business has generally shown very sat factory results. Lloyd's American business is al important, and a three-year account will not sho the full benefit of the improvement in that bu ness which began last year. The result of t 1956 account was a credit balance of only £ million, comparing with £12.8 million on the 19 account and £15.9 million on the 1954 accou The sharp decline in the latest account result from unfavourable experience in the marir aviation and transit section and also in "all oth business"—presumably reflecting the difficult co ditions in America. On the other hand, prof from motor-vehicle insurance showed a remar able increase, from about £100,000 to more th £1 million, a much better result than the avera of the companies (which transact, of course, mu more motor insurance than Lloyd's). In terms percentage, Lloyd's profits ranged from 15 perce on motor insurance to virtually nil on aviati insurance. On the whole account, the ratio profits to income was 2¼ percent (the lowest eve against nearly 5½ percent on the 1955 accou Partial returns for the 1957 and 1958 accour show no appreciable improvement in over results.

Some underwriters believe that the deterior tion may be permanent, because of the increase the number of members and syndicates comp ing for business. In marine and aviation insu ance, there are now about 4,000 members and 1 syndicates, in "all other business" rather mo than 4,000 members and rather less than 100 sy dicates. The numbers have grown persistently recent years, evidently as a result of the substa tial profits earned earlier in the decade; and, the same time, competition abroad, some of Government-aided, has taken much of the mc profitable business.

Rapid Consolidation

Among the companies, consolidation is pr ceeding rapidly. Plans for another big merg were announced last month, and when this merg and the other three are put into effect, the offices will have combined since the moveme began a few months ago: Commercial Uni with North British and Mercantile, Norwi Union with Scottish Union, Eagle Star with Mi land Employers' Mutual and—last month's move Royal Exchange with Atlas. The combined asse are, respectively, £300 million, £235 million, £1 million and £155 million. A pattern is already d cernible in these developments. In most cases, t primary motive for amalgamating is apparently strengthen the organisations against competiti abroad, particularly in North America. (Roy Exchange and Atlas, together with Sun, had ready since last year operated their U.S. business under common management although the arrang ment has not been fully effective until recentl

Stocks and Shares

POLITICAL NEWS CONTINUES TO DOMINATE MARKET SENTIMENT

DULL DEWALI TRADING: FOUR MORE SHARES ON THE CLEARING

Wednesday Evening.

THE Hindu New Year was ushered in on a sombre note in the Stock Exchanges throughout the country. Those who made purchases for sentimental reasons during the special *Moorat* session last Saturday night found their accounts in the red when the market reopened on Monday. The steady deterioration in political relations between India and China has cast its shadow over the investment scene and is the main reason for the dull conditions which have characterised trading during the past week. Today, however, prices recovered towards the close on replacement buying.

At a meeting of the full Committee of the Calcutta Stock Exchange last Thursday, it was decided to place an additional four shares on the forward list, namely, Dunlop Rubber, Rohtas Industries, Shree Gopal Paper and Hindustan Motors. (See comment in this week's second leading article.) All four scrip advanced substantially when the news became public. There are now 13 shares on the forward list in Calcutta, compared with 66 in Bombay.

The subscription list for the Baroda Rayon issue opened on 2nd November and reports received so far indicate that the issue is likely to be heavily over-subscribed. Details of a public issue of 125,000 ordinary shares—of which 40,000 have been taken up by the promoters and directors and their friends and associates—by the Hilla Tea Estates Limited, appear elsewhere in this issue of *Capital*. The shares will be Rs. 10 fully paid-up and are being issued at par. The subscription list will open on 9th November, 1959.

With the onset of the busy season in the money market, there was less enquiry for Government securities and 3% Conversion Loan 1946 was shaded at Rs. 74.75.

The higher output figures for the month of October, as compared with the previous month, covering both steel ingots and finished steel, assisted a small recovery in the price of Indian Iron shares. After being sold down to Rs. 23.72, the quotation at today's settlement was slightly better at Rs. 24.

Preference shares continued to meet with strong enquiry, particularly tax-free issues, but sellers were reluctant to part with their holdings.

Coal shares were slightly better although the volume of business was small. Shares particularly enquired for included Bengal, which improved from Rs. 290 to Rs. 304, Burrakur from Rs. 16.62 to Rs. 17.31 and Raneegunge from Rs. 16.25 to Rs. 17.

In cotton textiles, Bowreah were marked down from Rs. 153 to Rs. 150, while Dunbar improved from Rs. 225 to Rs. 227. Jay Shree were steady at Rs. 10.44 as were Kesoram at Rs. 19.56.

In electrics, Calcutta were marked at Rs. 15.37 ex-dividend while Agra rose sharply from Rs. 133 to Rs. 137.

In the engineering group, Braithwaites were better at Rs. 27 as were Britannia Engineering at Rs. 12.81. Jessops were firm at Rs. 34, while Textile Machinery hardened to Rs. 24.80.

There was less enquiry for jute shares and prices tended to lower levels, as will be seen from the following table:

	Opening 29th October, 1959.	Closing 4th November, 1959.
	Rs.	Rs.
Anglo-India	258	253
Caledonian	184	180
Megna	14.50	14.25

Contrary to the general trend, the Bird group of jute companies' shares were better, and Barnagore advanced from Rs. 170 to Rs. 182 on the publication of a satisfactory report.

Paper shares were steady, although prices showed little variation, except in the case of Shree Gopal Paper which moved up smartly from Rs. 18.75 to Rs. 24.12 following their inclusion on the forward list.

In sugar, Belsund were steady at Rs. 15.50 as were Dyer Meakin Breweries at Rs. 18.94. The outstanding features were Darbhanga, which spurted from Rs. 17.75 to Rs. 19.75 and Cawnpore, from Rs. 13.87 to Rs. 15.12.

Among miscellaneous industrials, Dunlop Rubber rose from Rs. 35.75 to Rs. 37.50 and Rohtas Industries from Rs. 26.19 to Rs. 27.31. Hindustan Motors were subdued at Rs. 13.12 and British India Corporation fluctuated narrowly around Rs. 5. Indian Aluminium were unchanged at Rs. 22.94 while India Steamship were neglected at Rs. 13.69. Metal Box were firm at Rs. 43.87 as were Rallis India at Rs. 87. National Pipes and Tubes were taken at the higher rate of Rs. 18.62 while National Carbon were easier at Rs. 39.75.

In the mining group, Indian Copper were a dull market at around Rs. 3.92 and Metal Corporation were offered at Rs. 12.69.

Owing to the satisfactory prices being realised at the auctions, tea shares continued their upward movement and prices advanced on a broad front, as will be seen from the following table:

	Opening 29th October, 1959	Closing 4th November, 1959.
	Rs.	Rs.
Banarhat	272	275
Bishnauth	18.81	19.62
Brooke Bond	19.62	20.06
Gungaram	127	138
Hantapara	120	129
Hasimara	20.75	23
Hattikhira	12.25	13
Tezpore	17.37	18.62

Tata Hydro-Electric

The results of the Tata hydro-electric companies for the year ended March 1959 are published below. The net profit of the Tata Power Company has declined from Rs. 84.91 lakhs to Rs. 78.32 lakhs. An ordinary dividend of Rs. 80 a share has been paid, including a bonus of Rs. 5 a share. Notable allocations include contingencies reserve Rs. 8.33 lakhs, development reserve Rs. 7.24 lakhs and special repairs reserve Rs. 8 lakhs. The carry-forward is Rs. 28,997, against Rs. 29,701 brought in. Revenue earnings were higher as more units of energy were sold at the revised tariffs introduced in October 1957. Expenses were bigger on items such as fuel consumed at the thermal station, depreciation, interest charges on World Bank loans and other charges. The clear profit, when calculated in accordance with the provisions of the Electricity (Supply) Act, exceeded by Rs. 6.07 lakhs, the reasonable return to which the company was entitled at the standard rate of 6 percent on its capital base. The excess has to be apportioned between general reserve, tariffs and dividends control reserve, and for refund to consumers in the manner in which the State Government may direct.

The Andhra Valley Power Company has earned a profit of Rs. 41.57 lakhs, against Rs. 48.78 lakhs. An ordinary dividend of Rs. 80 a share has been paid, including a bonus of Rs. 5 a share. Important allocations include contingencies reserve Rs. 4.71 lakhs, development reserve Rs. 7.18 lakhs and tariffs and dividends control reserve Rs. 1.22 lakhs. There is a carry-forward of Rs. 21,073, compared with Rs. 32,105 brought in. The clear profit, when calculated in accordance with the provisions of the Electricity (Supply) Act, exceeded by Rs. 3.66 lakhs, the reasonable return to which the company was entitled at the standard rate of 6 percent on its capital base. The excess has to be apportioned between general reserve, tariffs and dividends control reserve, and for refund to consumers in the manner in which the State Government may direct.

There is a profit of Rs. 46.06 lakhs for the Tata Hydro-Electric Power Supply Company, against Rs. 35.97 lakhs. Allocations include contingencies reserve Rs. 3.40 lakhs, development reserve Rs. 8.59 lakhs and general reserve Rs. 8 lakhs. An ordinary dividend of Rs. 8 a share has been paid, including a bonus of 50nP a share. The carry-forward amounts to Rs. 25,085, against Rs. 28.951 brought in. The clear profit, when calculated in accordance with the provisions of the Electricity (Supply) Act, exceeded by Rs. 2.51 lakhs, the reasonable return to which the company was entitled at the standard rate of 6 percent on its capital base. The excess has to be apportioned between general reserve, tariffs and dividends control reserve, and for refund to consumers in the manner in which the State Government may direct. The directors of the three companies mention that their policy is to keep continuously under examination the capacity of their equipment to serve adequately the need of their consumers. Programmes for modernisation and expansion have, therefore, been undertaken, particularly in places where industrial expansion can be foreseen.

Northbrook Jute

The Northbrook Jute Company has made a trading profit of Rs. 15.04 lakhs for the year ended March 1959. Depreciation absorbs Rs. 5.68 lakhs, and wealth tax provision Rs. 39,000. A debit balance of Rs. 2,43,817 is brought in. Allocations include statutory development reserve Rs. 25,018 and machinery replacement reserve Rs. 3 lakhs. An ordinary dividend of Rs. 1.25 a

INDIA'S FINEST BELTING

Lantee

Solid Woven *HAIR BELTING*, the Successful Successor to *GRIPOLY BELTING*

Supplies always available from

LEWIS & TYLOR (PRIVATE) LTD.,

P.O. BOX 131 CALCUTTA — P.O. BOX 949 BOMBAY

For a nominal charge, "Capital's" Statistical Department can provide you with a certificate of share prices.

share is paid, leaving a carry-forward of Rs. 35,452. The re-organisation scheme for the working of the mill has proved beneficial, as a considerable reduction in costs has been achieved. There was a marked improvement in the demand for carpet backing, and in order to meet this demand the wide looms operated on triple shift. The four circular looms at present in operation continue to work at a very disappointing level of efficiency due to innumerable stoppages on account of mechanical defects.

Concord of India Insurance

There is a credit balance of Rs. 2,73,907 for the Concord of India Insurance Company for the year ended December 1958, after providing Rs. 2.40 lakhs for taxation. Bringing in Rs. 1,13,250, there is a balance of Rs. 3,87,157. A dividend of Re. 1 a share has been paid, leaving a carry-forward of Rs. 1,17,157.

General Industrial Society

Providing Rs. 5 lakhs (against Rs. 1.59 lakhs) for taxation and Rs. 2.64 lakhs (Rs. 1.32 lakhs) for depreciation, the profit of the General Industrial Society Ltd (formerly known as the Gondalpara Jute Mills) has fallen from Rs. 5.85 lakhs to Rs. 4.78 lakhs for the year ended December 1958. A dividend of Rs. 2 a share has been paid, leaving a carry-forward of Rs. 1,51,070, against Rs. 39,411 brought in. The directors point out that the scheme for the modernisation of mill machinery up to the spinning section is almost complete, and the mill has already started production with the new machinery.

Dalhousie Jute

There is a gross profit of Rs. 13.29 lakhs for the Dalhousie Jute Company for the year ended March 1959. Providing Rs. 5.38 lakhs for depreciation, Rs. 40,500 for wealth tax, Rs. 1 lakh for debenture redemption reserve and bringing in a loss of Rs. 12,92,367, there is a debit balance of Rs 6,42,070. Transferring Rs. 52,500 from general reserve and paying the usual preference dividends, a debit balance of Rs. 6,42,070 is carried forward. The ordinary dividends have been passed over. The decision taken in May 1958 to purchase loom hours and to operate the mill as a 100 percent hessian unit has proved a satisfactory arrangement and a considerable reduction in costs has been achieved.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for October 1959 are published below, the figures for September being given in brackets.

Production	(In tons)	
Pig iron	79,539 (79,615)	
Steel ingots	67,901 (60,701)	
Saleable steel		
(a) Semis	11,503 (15,507)	18,968 (49,429)
(b) Finished	37,365 (33,921)	
Despatches		
Saleable steel	53,009 (47,490)	

Martin Burn Ltd, the managing agents, state that "the production is low on account of one blast furnace being solidified with some iron and slag due to an illegal lightning strike by the workers on 21st and 22nd September, 1959."

Bombay Market

MIXED TRENDS CONTINUE ON POLITICAL NEWS

TEXTILE MARKET REPORTS HELP SENTIMENT

Wednesday Evening.

THE Bombay stock market closed in a quiet mood last week and share prices fluctuated widely. In the *Moorat* trading on Saturday there was scattered support, but bullishness was not maintained as operators became nervous because of recent developments in Sino-Indian political relations. Towards the close, confidence returned to a small extent due to encouraging reports from the piecegoods market. Tata Steels were lowered to Rs. 154.25 because of selling pressure in the rights shares. Indian Irons declined to Rs. 23.88 on pressure from Lyons Range following settlement considerations. Premier Construction declined to Rs. 360.50 on profit-taking and Tata Locomotives were transacted at Rs. 200.50. Larsen and Toubro were quiet at Rs. 24.08 and Mahindra and Mahindra were bought at Rs. 22.96. In Motor shares Premier Automobiles recovered to Rs. 138 on dividend hopes and Hindustan Motors improved to Rs. 13 on promotion to the forward list of the Calcutta Stock Exchange.

Cotton mill shares showed widespread losses, although closing prices were occasionally higher because of short-covering. Century were taken at Rs. 603 as the rights share issue proposal has been finalised. Bombay Dyeing were placed at Rs. 68.30 and Kohinoor were available at Rs. 320. Swadeshi came to hand at Rs. 258.50 and Simplex were freely offered at Rs. 159.25. Sellers predominated in India United ordinary at Rs. 10.56 and Apollo were indicated at Rs. 1.22.

Miscellaneous shares moved in line with the general trend. In chemical shares, Tata Chemical were shaded at Rs. 17.76 and Dhrangadhra Chemical were done at Rs. 156. Alembic Chemicals were steady at Rs. 193. Among sugar shares, Belapur were easier at Rs. 339 but Maharashtra Sugar improved to Rs. 257. Cement shares were quietly steady and Associated Cement declined to Rs. 153.50. Digvijay Cement changed hands at Rs. 144. Steamship company shares showed little variation. Scindia Steam were dealt in at Rs. 16.88 and Great Eastern Shipping were called at Rs. 19.44. Mining shares were quiet and Shivrajpur Syndicate were sold at Rs. 89.50. Bombay Burmah reacted to Rs. 538 and National Rayon dipped to Rs. 374. Ceat Tyres were marked at Rs. 177 and Indian Dyestuff declined to Rs. 327.50. West Coast Paper were steady at Rs. 164 and Voltas were available at Rs. 179.25.

Banking and insurance shares were quiet. Bank of India fell to Rs. 107.50 and Bank of Baroda were quoted at Rs. 101.25. New India Assurance lost at Rs. 67.30 and Vulcan changed hands at Rs. 21.52.

Interest in electric supply company shares was limited and Ahmedabad Electric were shaded at Rs. 95.20. Tata Hydro were quiet at Rs. 113 and Bombay Suburban Electricity were marked at Rs. 104.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

BOOM CONTINUES IN STOCK MARKET

INDUSTRIAL EQUITIES RISE

London, 4th November.

THE boom continued in the stock market during the past week, and although a good deal of profit-taking developed from time to time, further extensive gains were recorded, particularly in industrial equities. Business continued at a very high level, with the profit-taking usually well absorbed by renewed speculative and investment buying. Most sections participated in the fresh advance, although the buying of gold shares was selective and centred mainly on finance house issues. The chief exception to the general buoyancy, however, was provided by gilt-edged securities where profit-taking after the recent good advance was barely absorbed by fresh buying and prices showed very little change on the week. A number of factors combined to encourage buyers generally, although little actual encouragement appeared to be needed. Sentiment was assisted by some good company news, the rather better trend of Wall Street, the President of the Board of Trade's optimistic view of the economic outlook, the rise in industrial production and the decision to repay the $250-million loan from the U.S. Export-Import Bank. There was very little interest in foreign bonds or rails and dollar stocks fluctuated within narrow limits. Further gains were recorded by banking, hire-purchase finance and insurance shares. The industrial market showed an appreciable advance on the week in response to renewed speculative and investment buying. Diamond shares were strong on a good demand in a market short of shares. Platinum shares also improved and tin shares went sharply ahead. Coppers advanced before reacting to lose some of their gains. Rubbers were strong and active. Gains extended to several shillings with United Sua Betong Prominent. Tea shares were generally irregular.

The Money Market

Stringent conditions were experienced in the money market during the past week. End-month influences left their mark on the banks' cash resources and on two occasions, the market was forced to borrow small amounts from the Bank of England. The cost of day-to-day money remained very firm with loans ranging between 3½ percent and 3¾ percent. Business in bills was restricted by the cash position. Before last Friday's tender, January and "hots" changed hands at 3¾ percent, but currently, the rate is 3⅞ percent. The Treasury bill rate at the weekly tender dropped by approximately 10d to £3 7s 8.53d percent. This was due to the money market tendering more in order to secure as many bills as possible in view of the need for maturities in the main tax gathering season in the New Year. The reintroduced 63 days bill went at an average rate of £3 9s 5.95d percent.

Activity on Wall Street

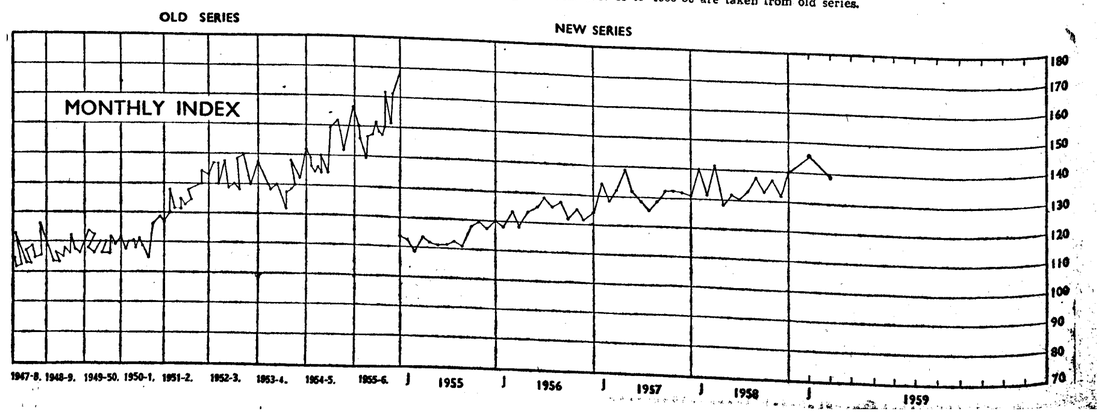
The recent rising trend in U.S. Government obligations came to a halt during the past week. The market drifted lower on small volume under profit-taking, following the sharp upturn in the past several weeks. Dealers expect the new Treasury offerings to have relatively little impact on the market. Investment quality corporates also fell early under profit cashing, but eventually recovered part of the loss in quiet dealings. Speculative rail lines remained inactive. Convertibles followed the stock market into higher ground early, but backed away when securities faltered. In a slow market for foreign dollar bonds, German nationals were mostly higher while among the Italians, the Republic 3 percents backed and filled over a range of a point. Amsterdam 5¼ percents were higher by a fraction with Denmark 5½ percents unchanged on the week. Greek 6 percents were a shade higher and Serbs were neglected. Japanese issues were mixed with the latter showing plus and minus signs of a point. The Union of South Africans were unchanged. Chile 3 percents held steady at or slightly above the $44½ level, while several Brazilian 3⅜ percents were lower by 3 points on a sale of one or two bonds.

Big Rise in Linseed

The rise in linseed in the past week was spectacular. This rendered buying of the seed a difficult task and has led to a world search for alternative supplies. Groundnuts have been the main concern of France which has now completed a good part of the authorised import quota. Business in castorseed has been only of a limited volume. Linseed oil has struggled up to a more than 10s a ton advance on the period. The trend of groundnut oil continues to provide disappointment to holders with offers emanating from an increasing number of sources. Indian castor oil was a quiet market and prices were easier.

Hongkong Gold Barely Steady

The Hongkong bullion market was barely steady during the past week and trading was slow. Prices were unchanged after fluctuating fractionally either way early in the week. Carry-over charges and deliveries were nil. Arrivals in Macao totalled 12,000 ounces. Forward contracts



"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

he *Capital* Index of Indian Industrial Activity e : 1953) has now been brought up to February Compared with the preceding month, there decreases in sugar 31.05 points, tea 2.77 ts, jute 11.74 points, yarn 11.00 points, cloth 9.42 points, coal 4.92 points, paper 10.26 points, tyres 19.99 points, motor-cars 56.29 points, electricity 8.12 points and railway ton-miles 8.79 points, while increases occurred in cement 0.35 points, pig iron 12.10 points, finished steel 2.00 points and bicycles 19.09 points.

Correlating all the factors, the *Capital* Index of Indian Industrial Activity declined by 6.0 points during February 1959.

BIG WAGE INCREASES RECOMMENDED IN CEMENT INDUSTRY

CASE FOR RAISING RETENTION PRICES SUPPORTED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Wage Board for the cement industry has submitted its report to the Government. The board, it is learnt, has fixed the total "need-based minimum wage" at Rs. 94 a month and Rs. 101 a month for Gujrat and Saurashtra, respectively. It is split up into a basic wage of Rs. 52 a month, dearness allowance of Rs. 31.50, house rent allowance of Rs. 7.50 and Rs. 3 for amenities provided in kind. For Saurashtra, the dearness allowance is fixed at Rs. 38.50 a month. The existing basic wage in the majority of cement centres is Rs. 26 a month.

The board's recommendations cover all categories of workers, including the clerical staff. For the same unit and type of work, wages for women will be equal to those for men. As far as contract labour is concerned, it will get the same wages, dearness allowance, leave, medical facilities, hours of work and overtime as departmental labour. It may also get the same rate of bonus. The recommendations, according to the board, should come into operation with effect from January 1960.

The board is satisfied that the cement industry has the capacity to pay the wages recommended, provided the retention price of cement is suitably increased." The industry has made out a case that it does not have the capacity to pay the increased wage bill from the existing retention prices.

The following are the three ways by which the board's recommendations can be financed :

(1) by increasing the price to the consumer ;

(2) by reducing the profits of the State Trading Corporation which at present are Rs. 5.01 a ton for A.C.C. or Rs. 3.31 a ton for the whole industry.

(3) by reducing the excise duty, which is Rs. 24 a ton.

The board says that in the ultimate analysis, it is a matter for the Government to decide from which source the funds are to be found. Although the increase in the retention price will have to be determined by the Tariff Commission, the board holds that its recommendations should involve an increase of about Re. 1 a ton. In the case of companies where labour costs a ton are higher and where the existing wages are lower, the increase will have to be higher.

Concession for New Units

The board has recommended that the three new companies, namely, Mancherial belonging to Associated Cement Companies, the cement factory at Satna belonging to Birlas and the factory in Panyam belonging to Panyam Cement and Mineral Products, should be allowed to settle down before its recommendations are made applicable to them. Its general recommendation is that the wage structure should not be made applicable to new units or to a new factory of an existing unit for 18 months, during which period the units concerned should pay 75 percent of the minimum wage, dearness allowance, house rent, etcetera, fixed for the old units.

The board makes a significant admission concerning productivity. It says that "while the gradual improvement in the living standards of the working classes is an aim, we have unfortunately to bear in mind that labour in India, generally speaking, is conscious of its rights but not equally of its responsibilities. There is an unwillingness on the part of labour to do different kinds of jobs, an insufficient realisation of the responsibility of putting a fair day's effort in return for a fair day's wage and absence of a spirit of love of work."

The following are the other important recommendations :

The recommendation of the Tripartite Industrial Committee on cement in Hyderabad that contract labour should be abolished in all operations connected with the manufacturing process (including quarrying operations), except loading and unloading" operations, should be implemented within six months of the publication of this report in those cement companies where it has not already been done.

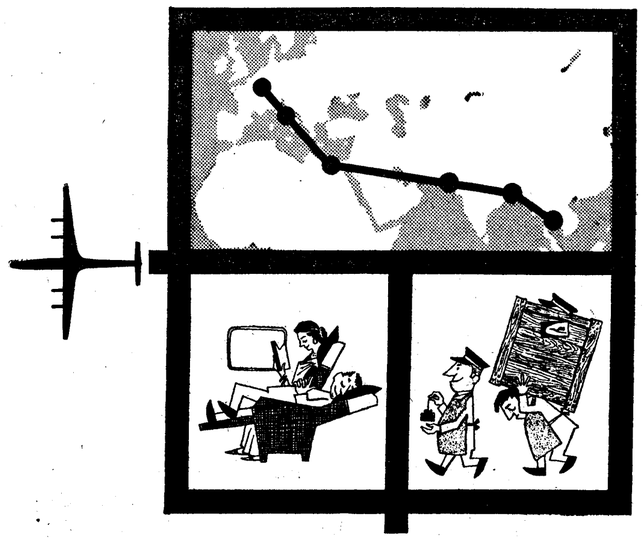
Piece-rate System of Payment

"Companies which have not introduced the piece-rate system for work in quarries, and in the departments of factories where measurement of work is feasible, should endeavour to do so. But when the piece-rate system is introduced, the rate should be so fixed that the piece-rate workers working at normal speed should earn not less than the time-rate workers and the other factors making for successful working of the piece-rate system given in the I.L.O. publication *Payment by Results* should be borne in mind. The unions should also ... structure and other provisions which have been recommended for piece-rate workers, would apply.

"Existing gratuity schemes for operatives in the A, B, C, D and E grades recommended by us should be modified. Wherever gratuity is payable in terms of average basic wages earned during the last year or month of service, it should be computed as follows :

"The service period of the employee should, for the purpose of gratuity, be broken into two periods, the first period beginning from the date of appointment until the date immediately prior to the date from which the recommendations come into operation. For the first period, gratuity should be calculated in terms of the average basic wage earned in the last month or year of the first period, as required under the gratuity rules. For the second period, gratuity should be calculated in terms of the average basic wage earned in the last month or year of service.

"Existing gratuity schemes for workers of the A, B, C, D and E grades recommended by us which are on the basis of consolidated wages should be suitably modified so as to lessen the burde view of the large increases in wages recomme If there is no agreement between the com and the union, the machinery provided by Industrial Disputes Act would be available.



"The existing differentials, which have determined by custom and usage, local cir stances, experience in working over a numb years, awards and agreements, should be distu as little as possible. They may be presume represent a rough job evaluation.

"The wage structure prescribed should be plied also to the workmen in the limestone qua of the Parshva Properties Ltd and the limes quarries of the Agricultural Farms Ltd, who supplying the bulk of their output to the cer factories in Dalmianagar and Talaiyuthu, res tively.

"The recommendations also apply to the ployees engaged by the Travancore Cements in the work of taking over and transporting careous material from the sea to the factory also the employees engaged in the island Sikka from which calcareous material is taken and to the employees engaged in transporting material by barges to the Sikka factory.

"The recommendations also apply to the ployees of the United Shippers Ltd, whe her gaged in their own barges or barges lent to then Shree Digvijay Cement Company Ltd for the pose of transporting such material to the fac in Sikka.

"The recommendations should not be applie employees engaged in other industries at the s place or elsewhere owned by any of the cen companies, namely, the vanaspati, paper and o factories of Rohtas Industries Ltd in Dalmiana the refractories and pottery works of Dal

Twice Weekly—
Wednesdays & Saturdays at 6 p.m.
Fly by LUFTHANSA German Airlines
DIRECT TO GERMANY!

Connecting India with the very heart of Europe, Lufthansa, German Airlines, forges yet another link in its world-wide net-work of routes.
Twice weekly, Lufthansa flies from Calcutta to the main cities of Germany—Frankfurt, Dusseldorf, Hamburg.
Whether you're an industrialist, a businessman, a student, a government official or an educationist—you'll appreciate the traditional, generous German hospitality of Lufthansa, aboard the swift Super-G constellations.
Lufthansa, German Airlines, directly connects Germany with Bangkok, Calcutta, Karachi, Cairo and Rome.
Coordinated flight schedules provide convenient connections with Air France and Alitalia.

MOVE TO AMEND KERALA AGRARIAN BILL

COMMUNISTS OPPOSE CHANGES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE united front of non-communist parties in Kerala will amend the former communist ministry's controversial Agrarian Relations Bill if it is elected to power in the coming mid-term elections in the State. The amendment will be made to make income the basis for fixing a ceiling on land holdings and the market value of agricultural lands will be the basis for paying compensation for surplus lands surrendered to the government. Provisions affecting plantation holdings will also be amended to remove all difficulties for the expansion of the plantation industry. A promise to this effect is contained in the election manifesto of the Congress Party. The draft of the Party's manifesto has just been published, although other parties of the alliance, namely, the Praja Socialist Party and the Muslim League, will have manifestos of their own. It is already been made clear that important items in the manifestos of all the Parties of the united front will be identical. Communists are opposed to any change in the Agrarian Relations Bill which is presently awaits Presidential assent. The Communist Party, through its manifesto, has assured the people that if it is voted to power, it will implement the Bill and carry out other administrative measures initiated by the former communist Ministry. The Bill, in its present form, is capable of playing havoc with the present system of agricultural ownership and might lead to the disintegration of the organised sector in agriculture.

Marketing of Coffee

The Indian coffee industry, which has enhanced its production from 15,000 tons in 1949 to 45,000 tons in 1959, is facing a difficult problem in marketing its produce. Ten years ago, the indigenous production was barely sufficient to meet the internal demand. The home demand has risen from 15,000 tons to 30,000 tons during the past decade, and the industry is left with a large surplus, which should be exported abroad. The world is now faced with a surplus output of the order that if there is no production in the whole of 1960 throughout the world, there will still be enough coffee to meet one year's world demand and to have some surplus for the following year. The world producers have, therefore, agreed to regulate exports.

The chairman of the Mysore State Planters Association, Mr. U. K. Lakshman Gowda, has recently said in his address at the annual general meeting that it is not known how long the trend would continue. Nor can one say how far a fall in the coffee prices can be checked through the regulation of exports. If prices fall, producers in India will suffer as much as their counterparts elsewhere. Since 1952, the internal prices are controlled and held at below the minimum return guaranteed to producers. But this has been made possible by the high price realised on the exported coffee. When there is a tendency for export prices to fall below internal prices—as is now happening in the case of Robusta coffee—there will not be any surplus to cover the shortfall in internal sales prices. The result, as Mr. Gowda has pointed out, will be that the internal prices will have to be raised to make them conform to prices paid to growers.

Internal Consumption

Mr. Lakshman Gowda thinks that the Indian coffee industry is capable of increasing its production enormously. Some experienced planters think that the output of coffee in India may exceed 100 tons within the next ten years. The internal consumption, at present, is confined to certain traditional areas. Therefore, an earnest effort should be made to popularise the consumption of coffee in Indian homes. During the past 20 years, the internal consumption has risen at a rate of 7½ per cent a year. Mr. Lakshman Gowda thinks that in the next ten years, the domestic consumption has to be raised at a rate of 10 percent a year if the country has to absorb a part of the increased output. Furthermore, exports have also to be increased; from about 3,000 tons exported in 1950, the Coffee Board has offered 16,000 tons for export this year. Producers hope that by 1965, 30,000 tons will be available for export, leaving 40,000 tons for the internal market.

Rise in Plantation Coffee Prices

The chairman, in a recent statement, has expressed concern over the adverse comments on the rise in prices of Plantation coffee. He has attributed the rise to an unexpected fall in production of Plantation varieties. The pool receipts of Plantation coffee this season was nearly 4,000 tons less than in 1957-58, and most of the home demand has been for this grade of coffee. Out of the total Plantation coffee available, India's export commitments left a small stock of this particular grade but the realease up to the end of August amounted to 7,556 tons or only 203 tons less than in 1958 for the eight months covered. There was, however, a stock of over 3,700 tons of Arabica Cherry and about 13,400 tons of Robusta up to the middle of September. The Government, which is anxious to promote exports, is understandably interested in selling the maximum quantity of the most popular grade of coffee to foreign buyers. Mr. Lakshman Gowda feels that if the need for this is appreciated by the public, the insistence for Plantation coffee will decline and its prices will fall. Meanwhile, there is ample supplies of other varieties to meet India's domestic requirements.

Complimenting the Coffee Board on its marketing policy, the chairman said that the average sale price of Plantation coffee moved from Rs. 219.25 a cwt. in 1953 to only Rs. 229.51 a cwt. to the end of August this year. In the case of Arabica Cherry, there was a fall from Rs. 188.87 a cwt. to Rs. 157.71 a cwt. Robusta prices moved from Rs. 150.06 a cwt. to Rs. 151.34 a cwt. in the last seven years. This indicates a remarkably narrow movement of prices, the chairman said.

Report of the Coir Delegation

The three-man delegation, sent by the Coir Board to foreign countries to investigate the possibilities of expanding India's coir export trade, has stressed in its report the urgency of modernising the production methods in India. Price, it says, is not as important a factor as quality in foreign markets. In the U.K., the U.S.A. and Canada, for instance, the preference is for quality, irrespective of price. In all countries of the West, sisal is being used more and more and floor coverings, made of synthetic fibres and plastics, are also offering competition to both coir and sisal mattings. The delegation was not able to draw conclusions concerning the extent of replacement of coir by sisal. The manufacturers abroad are generally of the opinion that if coir yarn of better quality is supplied, it could still hold the market.

The Continental countries are themselves large manufacturers of coir mattings, rugs and carpets. These they produce for their own consumption. Belgium, Holland, France, West Germany and Switzerland use almost the entire quantity of coir yarn imported by them for the manufacture of floor coverings, while in Italy 60 percent of the imported coir yarn is used in the manufacture of oil filters. The United Kingdom and the United States use most of the imported coir yarn for hop-growing. Importers abroad have complained that there is a gradual deterioration in the quality of coir yarn supplied by Indian exporters and that they are bewildered by the number of grades for which prices are quoted by a large number of new exporters.

Extraction of Fibre

The delegation recommends that the extraction of coir fibre by simple mechanical means and the fabrication of such fibre into a variety of products, such as fibre matting and rubberised coir mattress, should be organised. There is scope for increasing the consumption of coir fibre in Italy. Several industries in the Continent and the U.K. consume mattress fibre and bristle fibre imported from Ceylon and other countries. Opportunities exisit in several States in India, according to the delegation, for the production of coir fibre and the development of similar fibre industries.

Unorganised Export Trade

The delegation draws attention to the unorganised nature of the export trade in coir goods in India. It is essential, therefore, that exporters should organise themselves to supply quality goods at reasonable prices. The coir manufacturing industry in Holland has a powerful organisation in the *Netherlandesche Cocos Conventie*. Its functions include the launching of joint advertisement campaigns and the marketing of the products of its members under a common quality mark and the fixing of buying and selling prices, etcetera. The delegation has recommended the creation of an association on this model for Indian coir exporters.

Budget of the Coir Board

The Coir Board's 22nd meeting, which was held on 26th October, passed a Rs. 22-lakh budget for the next financial year with the revised estimates for the current financial year amounting to Rs. 11.95 lakhs. In the revised estimates for the current year, provision has been made for the opening of a show-room and a sales depôt in Jullunder. The Board has already established show-rooms in Delhi, Calcutta, Bombay, Bangalore and Madras. An economic and statistical survey of the coir industry is proposed to be taken up during the current year.

COCHIN TEA SALES

At Dust Sale E, 390,000 lbs of tea were on offer. There was a strong general demand, and prices were fully firm to dearer.

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) stood at 120.0 during the week ended 17th October, 1959, against 119.9 (revised) for the earlier week. The index was higher by 2.2 percent and 3.1 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles worked out to 125.0, compared with 125.1 (revised) for the previous week. Items which showed noticeable variations were: wheat in Dhanduka (+15%) and in Bombay (+7%), jowar in Jholawar (+13%), rice in Calcutta (+8%) and in Hailakandi (+5%), urad in Delhi and chillies (+6% each), potatoes (+5%), bajra, eggs and gur (+4% each), arhar (+3%), gingelly oil and fish (+2% each), oranges in Madras (−20%), jowar in Rohtak (−17%) and in Hyderabad (−5%), rice in Nagpur (−7%) and in Imphal (−5%), wheat in Hapur and Bahraich and urad in Bombay (−6% each), coffee (−5%), maize (−4%), barley, meat and black pepper (−3% each). The index for Tobacco remained stationary at the previous week's level of 98.7. The Fuel, Power, Light and Lubricants group index also stood unchanged at the previous week's level of 116.3. The index for Industrial Raw Materials rose by 0.7 percent to 123.7, compared with 122.9 (revised) for the earlier week due to an increase in the prices of linseed (+4%), groundnuts and rapeseed (+2% each), raw silk and gingellyseed (+1% each), although the prices of green bamboos (−4%), lac (−3%) and tanning materials (−1%) showed declines. The prices of linseed oil (+3%), cotton and rayon yarn (+1% each) moved up, while copper (−2%) and brass (−1%) showed a fall, and the index for Intermediate Products advanced by 0.6 percent to 115.2, compared with 114.5 (revised) for the previous week. An increase of 1 percent in the prices of cotton mill cloth raised the index for Finished Products by 0.3 percent to 110.7, against 110.4 (revised) for the previous week. The prices of general chemicals (−2%), however, moved down.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, the total sugar production for the season 1958-59, as on 30th September, 1959, was 1,914,000 tons, against 1,974,000 tons by the same date of the last season. The offtake of sugar from factories during September 1959, was 179,000 tons, against 190,000 tons during the corresponding period of the last season. This brings the total despatches from factories up to 30th September, 1959, to 1,922,000 tons, against 1,895,000 tons during the same period of the last season. The total closing stock of sugar with factories on 30th September, 1959, was 337,000 tons, against 522,000 tons on the same date of the last season.

OPERATORS ASSESSING EFFECTS OF U.S. STEEL STRIKE ON HESSIAN OUTLOOK

MOISTURE REMAINS EXCESSIVE IN NEW JUTE ARRIVALS

THE past few weeks have been full of holidays in the local jute and gunny markets. Overseas enquiries have been few—the continuation of the American steel strike having restricted U.S. orders. Small enquiries from other overseas buyers have been absorbed with little effect on the markets. Now that the holidays are over, it is hoped that conditions will return to normal.

The U.S. scene is dominated these days by the steel strike, and one wonders what effect it will have on the statistical outlook for hessian. It is gratifying to see the remarkable manner in which the increased output of the Indian mills has been absorbed by consumers all over the world. For instance, in September, in spite of an increase in production of 5,700 tons, actual stocks held by mills dropped by 2,600 tons. The statistics for October will show whether this sound position has been maintained. Some say that it will be nothing short of phenomenal if U.S. consumption is maintained at September's high figure in spite of the steel strike. Normally the last three months of the year are considered to be the best from the point of view of world consumption, but in considering consumption, notice must be taken of its relationship to stocks. It is natural that when consumption is large, manufacturers and others will carry large stocks, so one should expect stocks to increase as consumption increases. In considering U.S. stocks, it is difficult to determine their exact significance, as there must be frequent occasions when some portion of these stocks is known twice, that is, in the returns for two consecutive months on the afloat stocks. For the purposes of the table given below, therefore, afloat stocks have been deliberately omitted and only actual physical stocks on hand considered. As the October statistics are not yet available, those for September have been used, which emphasise the point that current stocks are larger than has been usual in recent years.

RATIO OF STOCKS TO CONSUMPTION

September	Consumption (in million yards)	Spot stocks (in million yards)	Months
1956	86	124	1.4
1957	75	129	1.7
1958	79	130	1.6
1959	80	154	1.9

It will be noted that spot stocks in September 1959 were 30 million yards more than in September 1956, in spite of consumption in the latter month being considerably higher. Thus, the U.S. statistical position is sound, and that country can, if the necessity arises, effectively delay further purchases without jeopardising her economic position.

Calcutta mills bought raw jute and sold manufactured goods freely last week-end on the occasion of Diwali, in the form of "lucky day" business. A fair quantity of both commodities was involved in these transactions, but they had little effect on prices as the business was evenly distributed over a very large number of operators.

Raw jute arrivals at mills remain large, and excessive moisture still persists. Last week, it was pointed out that very little dry jute is coming forward from the interior, and farmers have had little opportunity to dry the fibre. The position should now have been improving, but this is far from being the case. Much of the jute arriving is of the type that mills would like to put to stock while using up their old crop supplies. This is impossible, however, as a large percentage of the jute is not in a storable condition and has to be issued immediately. Recourse to arbitration does not help the mills very much under the new contract, as the jute can contain up to 4 percent excess moisture now before rejection takes place. Even with 3 percent moisture, the jute is not considered to be in a storable condition, and thus mills are now put in a very bad position. Furthermore, it is understood that the jute which has been presented by balers to the State Trading Corporation for export, and which is liable to inspection before shipment, has in most cases been in a dry condition. It may be argued that the balers are getting a higher price for their jute, but the difference in price, which is very small, does not justify such a large difference in the moisture content. If the pucca balers can do it, there is no reason why the kutcha balers cannot.

The steadiness of the jute goods market reported towards the end of the period appears to be due to events across the border in Pakistan. It is understood that the Government of Pakistan has placed an order on Pakistani mills for November-December shipment, but the mills are already fully sold for these months on shipper business. They have, therefore, requested the shippers to grant them extensions of delivery. The whole matter hinges on whether the shippers will grant these extensions. If no extension is forthcoming, the mills will more than likely have to cover from the Indian market. Speculative activity in heavy goods has anticipated this move with a price increase. Although very little activity is reported in hessians, prices in this section have responded to the promptings of the speculative B Twill counter and recorded nominal gains.

THE JUTE MARKETS

There was little activity in the futures markets. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 28th October to 3rd November, were as follows:

	Hessians 40in. 10oz November		Sacking B Twills November	Raw Jute December	
	Rs. a 100 yds	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos
Opening	40 08	44 48	101.55	23.73	63.71
Highest	40.68	44.48	102.50	23.98	64.25
Lowest	40.34	44 11	100.85	23.70	63.50
Closing	40.50	44.29	102.30	23.90	64.03

Manufactured Goods: At the opening of the market last Thursday, prices in the heavy goods section showed small gains as a result of speculative covering. This did not appear to be inspired by anything in particular, as overseas buyers continued to sit out, showing very little interest at the prevailing levels. B Twills in the near position improved by 40nP to Rs. 102.50 for ready shipment. April-June shipment advanced by 25nP to Rs. 99.25. In hessians, 40in. 10oz. eased to Rs. 40.65 in the near positions and Rs. 39.90 for forward shipment. The downward trend continued on Friday, but operators in general expected that mills would distribute some "lucky day" business over the approaching holiday and the week-end. In spite of the fact that this actually took place in both sacking and hessian, prices continued to decline. On Monday, B Twills dropped to Rs. 101.60 in the near position, with hessian at Rs. 40.40. The losses were recovered on Tuesday, however, when speculative activity was renewed on a large scale in anticipation of business. Operations were mainly confined to heavy goods, and by Wednesday morning, B Twills showed a rise of about Rs. 1.25. There was little change in hessians, prices showing minor gains.

On Wednesday morning, opening quotations were as follows:

	Ready.		Nov.		Dec.		Jan.-March	
40in. 8oz.	39.45	(36.66)	37.30	(26 30)	33.30	(36.20)	37.90	(35.85)
40in. 10oz.	40.00	(43.60)	40.70	(44.32)	40.65	(44.25)	40.75	(44.09)
B Twills	103.45		103.15		101.75		101.00	
Heavy Cees (Plain)	104.00		104.00		101.50		100.50	
A Twills	121.25		122.00		121.50		120.25	
Liverpools	116.50		115.25		113.75		112.50	
Cornsacks	103.40		103.40		101.50		101.00	

Raw Jute: In the early part of the week, mills showed little interest, and sellers were holding back any offers they had, to put up as "lucky day" business over the week-end. A fair amount of business passed in this way with Indian mills. A wide variety of districts, assortments and prices were covered. Imports upcountry showed an improvement, and the quality was good, but the moisture content was high. Arrivals in Cossipore were below average for the time of year, only 786 wagons arriving. Transport facilities improved in most areas, but there was a big back-log to move, and the time-lag between registration and allocation, whether it be by rail or steamer, was considerable. The week opened with Assam Bottoms at Rs. 23.25 a maund, but after the week-end they advanced to Rs. 23.50 on the strength of "lucky day" business—which was reported to be around 200,000 maunds—and also in sympathy with the improved goods market. These conditions continued on Tuesday, and although quoted rates did not rise, sellers' ideas were bullish and many withdrew their offers at current rates.

Business reported during the week consisted of Assam jute at Rs. 23.25 to Rs. 23.50, and Northern at Rs. 22.75 to Rs. 23. Assam Tossa was done from Rs. 24.05 to Rs. 24.25, and Daissee at Rs. 24.50. Murshidabad Tossa fetched Rs. 23.50, Desal white was reported from Rs. 21.50 to Rs. 22, and Jungli white at Rs. 21.25 to Rs. 21.50. Small lots of mesta changed hands, and prices paid were Rs. 22.50 for desal, Rs. 22.81 for Northern, Rs. 22.50 for Daissee and Rs. 21.50 for Jungli.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a maund	Rs. a 100 kilos	Shipment
Assam	23.50	62.98	Nov.-Dec.
Northern	23.25	62.31	"
Purnea Desal	22.00	58.96	"
Daissee (Selected)	24.50	65.66	"
Assam Tossa	24.75	66.33	"
Northern (ex-Calcutta)	23.00	61.64	"

Mesta:

Assam-Northern	22.75	60.97	"
Desal	22.75	60.97	"
Daissee	22.75	60.97	"
Jungli	21.75	53.29	"
Indian Cuttings	97.00 a bale		

GUNNY SHIPMENT STATISTICS

The following figures including coastal shipmen relate to manufactured jute goods for shipmen from the port of Calcutta. These are gross figure based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons
1st to 25th October, 1959	2,324.0	14,956.6	17,280.
1st to 25th September, 1959	1,385.5	22,788.1	24,173.
1st to 25th August, 1959	1,921.8	18,515.6	20,437.
	Sacking		
1st to 25th October, 1959	27,799.5	262.8	28,062.
1st to 25th September, 1959	35,919.1	352.7	36.271.
1st to 25th August, 1959	24,895.8	301.2	25,197.

THE FOREIGN JUTE MARKETS

FIRM TREND IN FIBRE

(FROM OUR DUNDEE CORRESFONDENT)

A CHANGE has come over the Dundee jut markets, and a large volume of business wa done in both yarns and cloth during the pas week. Both spinners and manufacturers are no much better placed with orders, which will en able them to continue to work full time for th remainder of the current year. With a rise i raw jute prices, dealers' expectations have bee that those for productions will also advance, bu so far there has been no change. It is felt through out the industry that it would be unwelcome fo prices to advance and the fervent hope of pr ducers as well as consumers is that prices will nc be fluctuating in a state of uncertainty, such a had happened for many years past until about year ago. There has been very little change ove the past 12 months and even in Calcutta good which are usually subject to wild fluctuation there have been only minor changes. Calcutt 40in. 10oz. hessians a year ago stood at 63s 3d an 7½oz. at 47s November, and 62s 3d and 46s Decen ber, with B Twills at 147s and 147s 3d, respectiv ly, f.o.b. Calcutta. Rates are 61s 9d and 47 November, and 61s 6d and 46s 9d December, an B Twills at 153s 6d and 151s 6d, respectively.

Raw jute prices have maintained their firme trend, especially for the best qualities. Ther appears to be a scarcity of these in Pakistan, an even Mill Lightnings are not plentiful in decer quality. Mill Firsts are quoted now lowest £108 and up to £112 is wanted, with Mill Ligh nings from £91 to £95, Mill Hearts from £80 £82 and Grade Hearts £66, while good marks Daissee-2/3 are from £92 and Grade £86, Grac Tossa-2/3 £104 and fours £94, c.i.f. U.K., Noven ber-December. Crack Lightnings are sparing offered at £145. Crack Hearts £132, Crack Tossa-2 £124 and fours £107, with Dacca-Tossa-2/3 at £14 November-December, c.i.f.

Jute yarn prices remain unchanged for a descriptions, although they are firm, and it wi not take mch of a rise in jute to see an advan in yarns and also in cloth, which are still th same at 12.88d a yard for 40in. 10oz. hessians ar 11.03d for 8oz. The spot price in Dundee for 40i 10oz. is 92s for a 100 yards and for 36in. 87s 6d.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES FIRM

AT Sale No. 19, held on 2nd and 4th November, offerings at the Export auction amounted to 74,567 packages. There was again a good general demand. Plain teas were about steady, although some "teas for price" and those with inferior leaf appearance were slightly easier. Medium brokens and Fannings were generally steady, but any brighter liquoring teas met with a strong demand and were dearer. Black clean B.O.P.s and O.Fgs., both from Dooars and Assam were well supported, and those with bright liquors appreciated in price, but the plainer liquoring sorts and those with inferior leaf tended easier. There was a good demand for C.T.C teas with buyers showing preference for B.P.s, and some of the cheaper sorts were considerably dearer, while the best were about steady. Fannings, however, and the plainer liquoring medium B.P.s were often easier. Legg-cut Dooars sold well and the brighter liquoring sorts often showed an advance, but the plainer or more fibrous teas were slightly easier. Whole leaf grades sold well, while Darjeelings received more demand and sold at about last rates.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.01 to 2.08	2.04 to 2.12
Plain B.P.	1.88 to 1.90	1.70 to 1.76
Plain Fannings	2.01 to 2.12	1.81 to 1.93
Medium B.P.	1.90 to 2.08	1.90 to 1.95
Medium Fannings	2.14 to 2.24	1.95 to 2.05
Best Assam C.T.C. B.P.	2.30 to 2.89	2.30 to 2.43
Best Assam C.T.C. Fgs.	2.60 to 2.90	2.50 to 2.70

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings amounted to 21,798 packages. The market opened with a good general demand which strengthened as the sale progressed. Orthodox Dusts were firm and the exportable types were the strongest feature of the sale and sold readily at fully firm to dearer rates. Legg-cut teas also received good support. Medium C.T.C.s were again irregular and generally sold up to 10nP and sometimes 15nP below last rates. The few lines of the very best C.T.C.s on offer were well supported. Darjeelings, although irregular, were occasionally dearer.

Quotations

	1959 Rs.
Medium Dooars Dust	1.98 to 2.02
Medium Assam Dust	1.91 to 1.98
Medium Assam C.T.C. Dust	2.00 to 2.10
Best Assam C.T.C. Dust	2.50 to 2.80

(Quotations are exclusive of excise duty.)

The 894 chests of Leaf on offer met with a good general demand at irregular rates.

FREIGHT RATES SOAR FOR U.S.-U.K. GRAIN BOOKINGS

THE second fortnight of October was one of the heaviest periods of chartering for many months in the freight markets, and U.S. grain bookings to the U.K. were arranged at rates unattained for more than two years. As a result, many tanкers were brought out of lay-up to lift grain cargoes. In view of the postponement of the American dock strike till early in the New Year, charterers are trying to cover as much cargo as possible which should benefit shipowners. It is reported that the Ceylon Government is intending to establish a national shipping line and will look for suitable tonnage from Yugoslavia. Fixture of coals from Poland to Karachi has been reported at 9s, option Chittagong 61s f.i.o. This indicates that Polish coal shippers must have quoted a very cheap f.o.b. price as the Indian coal shippers have lost their tenders which included freight rates not exceeding 27s to East Pakistan. A motor vessel has been fixed Mormugao-Rotterdam—Emden Range with 13,000 tons of ore at 48s and Mormugao-Holland paid 46s 6d gross terms, Mormugao-Japan at 42s 6d.

LINSEED FIRM

Firm conditions have prevailed during the past week. There has been little upward movement. Trading has been rather limited, with crushers showing moderate interest. There has been no change in the oilcake section, and little fresh business has been reported. A small local demand has continued at Rs. 16. The oil market has been inactive, with shippers pausing and little demand from local consumers. Sellers, however, have been reserved. Latest quotations are as follows: Ready Rs. 26 a maund, November-December Rs. 26.12 a maund, and May futures Rs. 24.12 a maund.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were less than in the previous week.

Bazaar Stocks

Between 27th October and 2nd November, 1959

Cowhides: Wet salted (Ord.) 4,900 pcs. on the basis of Rs. 13 to Rs. 14; Wet salted (Slaughtered) 24,800 pcs. on the basis of Rs. 9.50 to Rs. 15 and Rs. 17.50 to Rs. 28.

Goatskins: Wet salted (Patna, Daissee, Kustia) 85,400 pcs. on the basis of Rs. 430 to Rs. 445, Rs. 470 to Rs. 500 and Rs. 520 to Rs. 530; Wet salted (he-killed) on the basis of Rs. 6 and (she-killed) on the basis of Rs. 5.75 a piece; Assam-Dinajpur 16,500 pcs. on the basis of Rs. 410 to Rs. 462.50; Purneah-Kissenganj 4,000 pcs. on the basis of Rs. 500 to Rs. 525 and Rs. 545 to Rs. 565; Patna-Pakur (Ord.) 2,200 pcs. on the basis of Rs. 440 to Rs. 465; Muzafferpore-Patna 7,500 pcs. on the basis of Rs. 525.

Bazaar Stocks

(2nd November, 1959)

Cowhides: Wet salted 125,000 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 71,000 pcs.; Assam-Dinajpur 26,000 pcs.; Muzafferpore - Patna-Pakur - Purneah-Kissenganj 66,000 pcs.

SUGAR FIRM

During the week ended 4th November, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 3,000 bags and stocks totalled 45,000 bags. Rates for ordinary grains were Rs. 43.25 to Rs. 43.50 and for big grain Rs. 44 to Rs. 44.50. The market was firm.

SHELLAC FIRM

During the week ended 3rd November, the market was quiet at the beginning and firm at the close. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 87 done, 88 buyers; 90 sellers.
Lemon No. 1 shellac	Rs. 87 done; 88, 87; 88 buy buyers; 90, 89, 90 sellers.
Lemon No. 2 shellac	Rs. 84 done; 84, 83, 84 buyers; 84, 85 sellers.
F.O. Superfine shellac	Rs. 76, 78, 81 buyers; 78, 80, 82 sellers.
Standard One shellac	Rs. 74 to 77 buyers; 76, 78 sellers.
TN Pure shellac	Rs. 68 nominal, 68 buyers; 70 sellers.
Golden Kusmi seedlac	Rs. 90, 95 buyers; 95, 100 sellers.
No. 1 Kusmi seedlac	Rs. 80 buyers; 80, 83 sellers.
No. 2 Kusmi seedlac	Rs. 72, 74 sellers.
Golden Bysacky seedlac	Rs. 78, 83 buyers; 80, 84 sellers.
One B seedlac	Rs. 74, 76, 77 buyers; 81.50 done; 76 to 82 sellers.
Two B seedlac	Rs. 66 to 68 buyers; 69 done and buyers; 67.50 to 70 sellers.
Manbhum Fine seedlac	Rs. 72 to 74 buyers; 75, 74, 76 sellers.
Fine Bysacky seedlac	Rs. 68, 67, 68 buyers; 70, 68, 70 sellers.
Genuine Bysacky seedlac	Rs. 62 buyers; 64, 63, 64 sellers.

Shipments during October until the 29th were 23,294 packages.

BHARTIA ELECTRIC STEEL CO. LTD.

CIRCULAR

To

The Shareholders.

Pursuant to the Scheme approved by you in the Extraordinary General Meeting of the Company held on the 23rd July, 1959 and sanctioned by the Hon'ble High Court at Calcutta on the 11th August, 1959, a new company called "CALCUTTA STEEL CO. LTD." has since promoted with an authorised Capital of Rupees One crore divided into ten lacs Equity Shares of Rs. 10/- each. As envisaged in the scheme, 5 lacs Equity Shares of Rs. 10/- each will be issued at present. The sanction of the Controller of Capital Issues for issue of the above capital has also been received by the new company.

In terms of the scheme, each holder of one Equity Share of Rs. 10/- each, fully paid up, in this company as on the date of issue of capital by the new company shall be offered one Equity Share of Rs. 10/- each in the new company at par with a right to renounce the offer in favour of his or her nominees, the offer to remain valid for acceptance for a period of 30 days from the date of offer.

The Directors of the new company have informed this company that they propose to make an offer of the said issue on the 16th November, 1959. Prospectus will be published by Messrs. Calcutta Steel Co. Ltd. in due course. The holders of shares in this company, particularly those holding shares on blank transfer deeds, are, therefore, hereby advised and requested, in their own interest, to get their holdings in this company registered in the books of the company, before the 15th November, 1959.

By Order of the Board,
R. L. BHARTIA,
Director.

4, Old Court House Street,
Calcutta-1.
30th October, 1959.

Note: The Share Transfer Register of the Company will be closed from 16th November to 18th November, 1959, both days inclusive.

THE KARANPURA COLLIERIES, LIMITED.

NOTICE is hereby given that the Forty-first Annual General Meeting of The Karanpura Collieries, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday, the 30th November, 1959, at 10-30 A.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1959, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 16th to the 30th November, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

Calcutta, 29th October, 1959.

NOTE:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 6th December, 1959, to those shareholders so entitled whose names appear in the Company's books on the 30th November, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE LILLIPUTIAN SEARCH FOR SMALL SAVINGS

OFFICIAL conferences called to discuss the small savings movement nowadays have ome to acquire a familiar pattern. They begin y weaving rigmaroles round the fact that the ovement has been a huge flop. Thereafter, omilies and exhortations issue by the score from he various people present. Finally, these nuerous dignitaries disperse to their respective oudoirs for a renewed spell of uninterrupted lumber. The two-day meeting of the Central dvisory Board for National Savings held in New elhi recently proved no exception. It heard an augural sermon from Mr. Morarji Desai, entral Finance Minister, who began by quite istakenly urging the Board to concentrate on eaching people their responsibilities under the ve year plans. The Board's aim, he declared, hould be to pursue its activities "with vigour and ffectiveness", so that all the difficulties which e in the way of the plans are overcome. "What essential is to educate the masses in such a ay that they recognise the need for more and ore savings, even at the cost of stinting themelves for a few years to come. Until they are so ducated and are so convinced, whatever the oard might do will not be effective." One ould have thought that All India Radio and the overnment's Films Division alone had already ecoming repetitive enough in publicising the lans, without the Board joining them in doing e same. It might have been more appropriate Mr. Desai had recommended instead that the oard, rather than blow a hot blast of vague eneralities concerning the financial requirements of the five year plans, confined itself strictly to the problems and prospects of the small avings movement.

These problems facing the movement are uge. The main one is that it is not a movement t all; it is practically stationary. Net collecons from small savings, which amounted to early Rs. 70 crores in 1957-58, rose to Rs. 79.70 rores in 1958-59. The latter was described, preumably amidst much self-congratulation, as a record figure" at the Board's meeting; but the ct is that both the increase and the total are lliputian in comparison with the potential which kists for the movement to exploit. The big ouble in recent years has been that, along with e new savings which have been mobilised, traordinarily large sums have been disinvested. hus, the statistics quoted in the *Reserve Bank f India Bulletin* show that total receipts in 56-57 were Rs. 225.88 crores, but total outstandgs at the end of the year were only Rs. 60 crores so higher. In 1957-58, receipts were Rs. 264.32 rores, but outstandings increased by only Rs. 69.6 rores. In 1958-59, receipts were Rs. 277.01 crores; ill, total outstandings rose by only about Rs. 72 rores to Rs. 581.75 crores (these last two figures ill presumably have to be revised upwards a ttle if, as was claimed at the Board's meeting, et collections actually amounted to Rs. 79.70 rores).

It seems, therefore, that between 60 percent ad 70 percent of the sum brought in by the small vings movement each year has gone back in payments. Some of these repayments are quite gical, since they are made as the investments ature. But a very large proportion are due the premature encashment of certificates. An alysis of the encashments in 1958-59 has shown at, on average, the certificates are held for out six to nine years, and only about 40 percent the certificates are held till maturity. The oportion of premature encashment is a reflecon not only on the economic condition of the ople buying the certificates, but even more so the unhealthy manner in which the small vings campaign is run. The charge has often en made that sales of certificates are forcibly de by the petty bureaucracy to people who do t wish to buy them, in order to inflate the receipt figures artificially. Mr. Desai did well to criticise this habit at the Board's meeting when he pointed out that the wide gap between gross and net collections showed the collection work has not been conducted on proper lines. Such unhealthy practices, he rightly added, are suicidal; apart from the discredit they bring, they defeat the aim of a steadily rising investment in small savings.

Yet, it seems the Board's meeting ended with little learnt. One of the conclusions reached was that, in order to discourage premature encashment, the loss involved should be given adequate publicity. The main point was ignored that the compulsion to disinvest is strong and fundamentally economic; it cannot be countered merely by incompetent propaganda of the sort the small savings organisers have indulged in so far. It was proposed that a new non-encashable five-year certificate be introduced. But this cannot make much difference; the rate of premature encashment shows that relatively illiquid investments have little chance of gaining popularity. Another recommendation—paying interest on certificates which are not claimed for encashment after maturity—does no more than touch the fringe of the problem. As for the remaining proposals framed at the Board's meeting, some were sound and some not. Measures for extending and simplifying the payroll savings scheme would be welcome, although the progress of the scheme has been extremely disappointing so far and is likely to remain so unless the trade unions take a more constructive attitude to the mobilisation of employees' savings. The appointment of agents other than the post office for selling savings certificates could yield good results. It might accentuate the unhealthy practices already prevailing, in that illicit influences are used for forcing people to buy the certificates, but, on the other hand, it might compensate for the gross inefficiency and corruption of the post offices, and for this reason alone be well worth trying. The Board's recommendation about producing greetings cards with a savings appeal for issue on important festivals was merely silly; the cost of producing the cards is likely to be far more than the returns they will bring.

The main point the Board and the small savings authorities might well begin to realise now is that the promotion of the small savings campaign needs to be given a fundamentally economic twist. It is no use telling people what a great country they are living in, what great plans it is making, and what great prosperity will result if they save enough to finance those plans. Unlike the intellectual giants of the Small Savings Board, the ordinary individual rarely enjoys the grand vision which might help him see how his Rs. 100 or Rs. 200 is important for building the Bhakra dam or a one-million-ton steel plant. Nor is he particularly interested in acquiring that vision. The important thing, from his point of view, is first to create the circumstances under which he will be able to save the Rs. 100; and then to show him that he has much to gain personally by investing it in savings certificates and the like. The first can be done primarily by stabilising the cost of living and the value of the rupee; the second by explaining in the simplest possible terms that savings certificates are a safe investment, that they yield attractive returns (especially with the fiscal advantages they carry), and that they are easy to buy and encash as circumstances dictate. But the crucial prerequisite is to ensure the stability of the currency; it is no use offering a person 4 percent annual interest when the real value of his original investment is at the same time being reduced by 4 percent each year through inflationary financial policies.

The failure of the official small savings schemes also points to the need for stimulating similar non-official efforts. The savings accounts which the commercial banks run are becoming more popular. Their attractions could be increased by extending cheque facilities and by discouraging bankers from forming cartels aimed at holding down deposit rates. The State Bank should accept a major responsibility in popularising bank savings accounts since it enjoys special advantages in implementing a branch extension scheme which is more ambitious than any other bank's. The idea of forming unit trusts to promote small savings in industry has hitherto received less attention than it deserves; banks, especially those which keep complaining that their profits are falling because their money is lying idle, might well show some enterprise by exploring the potential more seriously in this field. It is possible that, in course of time, companies too might be in a position to think experimentally in terms of giving shares to their employees in lieu of bonus or other benefits; at present, however, trade union opposition to any such move is likely to be strong. Finally, a powerful impetus to the mobilisation of small savings—whether by official or non-official agencies—would be to stop the price of bullion from rising. It seems that there are few ways of doing this at present, except by drastically undermining the marketability of gold and silver. The important point to recognise is that the scope for gathering small savings is immense; it can be exploited, not by offering people vague moral satisfactions, but by creating the economic climate and the organisational facilities which make the rewards for savers personal, direct and tangible.

A SEMINAR ON CO-OPERATIVES

THE Indian Co-operative Union's seminar on co-operation, which preceded by a few weeks the co-operative week in New Delhi, has published a summary of its proceedings in booklet form. These no doubt constituted a learned discussion of the subject, but considering that the participants were drawn from all political parties and included intellectuals, such as Dr. Gyan Chand, besides many who had considerable practical experience of the movement, they were a distinct disappointment where the practical issues were concerned. In other words, the discussions lacked that stamp of authenticity which comes from an intimate experience of co-operation and the ways and needs of the village people. Only vague generalities were aired on what might be considered the fundamental principles of co-operation as a voluntary and democratic movement.

The chairman of the seminar, Mr. Jayaprakash Narayan, initiated the proceedings by condemning the tendency to make co-operation a *sarkari* (official) movement and not the *sakhari* (voluntary) one that it should be, and then went on to denounce co-operative law designed to invest the Registrar—the chief State Government official who supervises the movement—with the powers of a dictator. This is usually the view that all genuine supporters of co-operation hold, although very few of them have been able to suggest good and workable alternatives. That extensive State participation has become unavoidable, is well known. The co-operative movement in India failed in the past chiefly because it lacked the resources with which to provide adequate credit facilities to the poor agriculturist, and it will fail again if the State withdraws its "partnership" now, since along with it would go the money. Most primary co-operative societies, as well as the majority of the central banks, are, significantly enough, still run with Government funds. Perhaps the organisers did not study the figures carefully; they would have seen that a major part of the working capital of these societies and "banks" has come

through borrowing from official sources. How then can they reasonably expect the Government to pour away its funds without ensuring that a proper check is kept on the way they are used? The hands of the bureaucracy are chilling, but for better or worse, they must continue to guide the movement until genuine local leadership takes over.

If the co-operatives are to be free agents, they will have to find the finances from within themselves, that is from the savings of their members. The Co-operative Union knows, or at least ought to know, that very little saving at the moment is taking place in these societies. The cause is easily traced. Only a small percentage of the village people have the capacity to save, while their need for credit is acute and pressing. It is the prospect of raising loans from co-operatives which has induced most people to join them, so it is no coincidence that the number of societies and their membership have grown as the extent of State participation has increased. There is, however, some force in the argument that it is the creditworthiness of the *purpose* rather than the *person* which ought to be the guiding criterion for advancing loans, but here again it has to be ensured that the money borrowed ostensibly for one purpose is, in fact, not being spent for another.

The Co-operative Union has made some suggestions on management, mainly of a question-bagging nature. How an "elected" manager is going to improve matters was not made particularly clear. Village elections are usually rigged in favour of the influential and the stronger against whom the Union would like the weaker members to be protected. The need is actually for trained managers who can run these co-operatives efficiently, and with proper training and incentives provided, there is no reason why the right people cannot be found. Mr. Jayaprakash Narayan tends to relegate the economic or the business aspect of the movement to second place; he looks at it more in terms of his *Sarvodaya* philosophy. But even Mr. Narayan should know that if the economic aspect is neglected, there will soon be no life left in the movement. The co-operative law, it is true, needs a drastic revision, at least to curb the excesses of the over-enthusiastic officials of the Government's Co-operative Departments. But that alone will not be enough. The co-operatives must develop the capacity to look after their affairs competently. The seminar has made the useful suggestion that some central organisations should be set up to supervise the movement, just as there are in some of the Scandinavian countries, especially Denmark. But there was no suggestion as to who is to take the initiative in the matter.

PROMOTING CAPITAL FORMATION

ONE of the obsessions of India's planners, Mr. Morarji Desai's denial notwithstanding, has been to secure more foreign loans to accelerate economic development. The possibility of a change in U.S. policy—as a result of the rapid depletion of that country's gold reserves—will undoubtedly cause a good deal of heart-searching among local planners to decide whether or not the megalomania for big dams or big river valley projects is not being responsible for wasteful planning. The prospective investment target for the third plan does not inspire any optimism either, for there are signs that it will be unrealistically over-ambitious. The repeated foreign exchange crisis and the necessity of pruning development programmes have not, apparently, made any impact on India's policy-makers, who seem to think that the easiest way of ensuring capital formation is to secure abundant foreign loans. But if the United States is unable to offer untied loans for balance-of-payments reasons, and the repayment of foreign loans is heavy during the third plan, the country may suffer a rude shock if it is required to mobilise its limited internal resources for development planning. These implications of official policy for capital formation have been intelligently discussed by Dr. D. Bright Singh, Professor of Economics of Madras University, in a pamphlet entitled *Measures to Promote Capital Formation*.

Professor Rostow has recently pointed out that economic growth in a country becomes self-sustaining when the level of investment rises to over 10 percent of the national income. Considering that India is now going through the "take-off" stage, and the need is for a sound establishment of the "infra-structure", it is questionable whether Government economic policy is firmly on the right lines. As it is, capital formation in an economy like India's can be achieved in three ways. First, consumption can be restricted to increase the amount of savings. This is not practicable in view of the low levels of income and consumption: it would also aggravate the cynical attitude towards planning. Secondly, the planners can increase the savings margin by raising productivity through a better use of existing resources. But although a productivity movement has been launched and numerous bodies created, *per capita* productivity in India remains low. Thirdly, savings in an under-developed economy, apart from being meagre, often cannot be mobilised because the proper monetary and financial agencies are lacking. In spite of the ambitious branch expansion programme of the State Bank of India, which now claims to have over 777 offices spread all over the country, much of the current income of cultivators is being hoarded, and that is retarding capital formation.

Capital formation could have been accelerated if there had been an adequate scheme to tax the rising agricultural income of cultivators who are mostly under-taxed. But, in doing this, the ruling party would risk its popularity, so it has evaded the responsibility, knowing that the increase in purchasing power among cultivators will enable them to hoard foodgrains and create shortages even when there is a record output of cereals, such as during 1958-59. There are, of course, other hindrances to capital formation in India, such as the low *per capita* income, the high dependency load in the population and the relatively high consumption propensity of the rich. Even so, the Government has worsened the situation through its misconceived policy for the mobilisation of resources. State enterprises have been pampered at the cost of the private sector, and inflationary dangers have been accentuated by confused official thinking on investment and returns. An increase in investment in private industry, Dr. Bright Singh argues, leads to a rise in the supply of consumption goods, whereas a rise in public investment creates a large inflationary potential because of the considerable time-lag between investment and returns.

The danger of fresh inflationary pressures during the third plan would not have been so great if there had been more scope for the expansion of private enterprise. The ratio of public to private investment in the first plan was 50:50, and in the second plan it is 61:39. The Reserve Bank's *Report on Currency and Finance* for 1958-59 has recently pointed out that the overall investment in the economy recorded only a modest increase during that year—the rise occurring in the public sector. Investment activity in the private sector was less than in 1957-58 due to foreign exchange difficulties and the decline in company profits. Dr. Bright Singh rightly says that the development of private enterprise is less inflationary because it relies less on created currency and has to fall back on the fresh issue of equity capital or retained profits in industry for launching any expansion programme. Furthermore, there is little wastage and extravagance, since a business undertaking, in order to increase profits, has to economise in the use of raw materials and keep down production costs.

In spite of claims to the contrary, private companies have been deprived of the opportunity for expansion through high taxation and labour legislation. To finance gigantic projects which have often involved a waste of men, materials and money, the Finance Minister has had to levy taxes indiscriminately. Dr. Bright Singh says that the abolition of the wealth tax on companies and the excess dividends tax is a welcome indication of the Government's desire to re-orient the taxation structure; but what has been given by one hand has been taken away by the other through the abolition of the system of grossing up of dividends. Furthermore, indirect taxation has been surreptitiously increased to mulct the consumer, for whom development and prosperity have hardly any meaning unless he feels the improvement in his living standards. The shortfall in the employment target of the second plan, constant threats of foreign exchange crises, vexatious delays in issuing licences and permits, and the short-sighted policy of keeping the private sector in a state of suspense, have only shown that India's planning policy is faulty. The Government's policy on the managing agency system, which has recently been criticised by the National Council of Applied Economic Research, confirms the impression.

SOCIALISM IN RETREAT

IN a stimulating address delivered to industrialists and business men in Calcutta on Monday, Mr. G. D. Birla, head of the Birla industrial empire, made a wide-ranging survey of political and economic developments throughout the world, especially as they concern India. The address was more in the nature of "thinking aloud" than a closely-reasoned analysis, but its apparent informality facilitated a useful insight into the minds of an important section of Indian business. Mr. Birla remains, as ever, an optimist—a quality which has provided the impetus for the steady growth of his industrial and business interests. Many of his compatriots will be reassured to notice that years of preaching of socialist nostrums by Congress Governments have dimmed Mr. Birla's optimism little; on the contrary, the main theme of his address on Monday was that private business should awaken to the vast opportunities which are arising in India as industrialisation proceeds and prepare to make use of them.

Mr. Birla was right in pointing out that socialism seems to be in retreat throughout the world. Like Marxism, it has become "out of date." In fact, he went so far as to say that even "Russia has become a bourgeois among communist countries" in that she is threatening the West with a trade war, producing more consumer goods and freeing markets. The remarkable prosperity achieved by the United States under private enterprise, and the rapid economic growth of West Germany under Erhardian liberalism, have hastened the decline of socialism; the latest evidence of the decline is the sharp setback suffered by the Labour Party at the British general elections last month. Mr. Birla might well have added that the weaknesses of socialism are partly political and partly economic. In political terms, it has implied regimentation and controls which are against the democratic temper of men in most countries. Economically, it has meant little more than the installation of rigid and orthodox bureaucracies in places where the free initiative of individuals, whatever their shortcomings, was the mainspring of invention, enterprise and progress. Modern capitalism's greatest achievement is that it has acquired the adaptability to cope with the moral and economic protest of socialism; it has shown that the social responsibilities of human beings, one to another, can be adequately safeguarded under the laws of a capitalist society. Socialism's greatest failure is that it has not been able to show the same adaptability; it has not yet been able to answer the question as to what superior incentive it can provide to replace the individual's urge for betterment which flourishes under capitalism.

Mr. Birla's broad advice to Indian business men seemed to be not to worry too much about the controversy between the private sector and the public sector. The important thing is to try to ensure that the resources available are put to the most advantageous use. As far as the business men are concerned, they need to assess the opportunities before them boldly; they should be ready with plans to equip themselves with tools and machinery, and to train the personnel who will be running their enterprises. As a first step, the Government, on its part, might well do something to speed up its administrative machinery; at present, it takes as much as ten months or more to get official sanction for starting a new commercial enterprise. Mr. Birla's view seemed to be that in the long run it will matter less whether the Government is leftist or rightist; the important point is that, while India remains democratic, the influence of public opinion will be decisive, and it is for private enterprise to show in practical terms that it offers the better prospect. This is a view which certainly deserves expression, although practical experience of day-to-day commercial life will not inspire in everybody the optimism about Government-industry relations which Mr. Birla seems to subscribe to. Mr. Birla's rather cheerful assessment of the prospects of getting foreign exchange may also not be easy to share; it is, however, interesting to see that a leading Indian industrialist has been saying, for near on two years, words to the effect that "foreign exchange will be no difficulty" if rational economic policies are adopted. The possibility of large sums of money becoming available to India and other under-developed countries through Russo-U.S. accord on disarmament was highlighted by Mr. Birla. Many will consider the possibility still rather remote, but the point is nevertheless worth mentioning if it makes Indian business better aware of its opportunities in case the cold war comes to be fought with economic weapons in the rice fields of Asia.

SAVED

Rs. 45,000 a year!

A textile mill which was spending Rs. 120,000 a year on baling materials before we undertook our studies is now spending only Rs. 75000 after carrying out our recommendations. Economies are possible in your line of business too.

Current News and Comment

Belsund Sugar Offers Wire Shares

The price of Belsund Sugar shares has been steady around Rs. 15.31 during the past couple of weeks for two main reasons. First, investors think that the prospects for the industry as a whole have improved since the incentive measures for increasing output were announced. But although it is believed that production will rise during the 1959-60 crushing season which has started already, the increase is likely to be only marginal. The higher minimum cane price alone will not raise cane supplies to the mills. The latter can expect to get more cane if more of it is produced, but this season's crop has already been grown and the price will not make any difference to its size. It is also far from certain whether mills can attract bigger cane supplies in competition with *khandsari* and *gur* producers. Seeing that *khandsari* and *gur* prices have also risen, it seems the cottage industry can very well obtain as much cane as it requires by competing with mills. The only really bullish point is the rebate on excise duty which mills will get on that portion of their output which is in excess of what they produced during 1957-58 and 1958-59. But not many mills are likely to be in a position to claim this fiscal advantage.

The second and more important reason for the rise in Belsund Sugar shares is this: the company has offered to sell to its shareholders the ordinary shares of Rs. 10 each in Hindustan Wire Products Ltd at par in the proportion of one Hindustan Wire Products share for every four Belsund Sugar shares held. Hindustan Wire Products is a subsidiary of Belsund Sugar. It will remain so even after the proposed sale of shares, as Belsund Sugar will still hold over 50 percent of the Hindustan Wire Products ordinary share capital of Rs. 12.5 lakhs. The Belsund management claims that transferring a portion of the Hindustan Wire Products share capital to Belsund shareholders will benefit the latter. It is authoritatively learnt that production in Hindustan Wire Products began from the end of 1958; the company, it is reported, is making satisfactory profits on current working. A considerable saving in tax will be achieved by passing on a portion of the profit directly to the Belsund shareholders. The parent company is otherwise obliged to pay tax at the full rate applicable to company incomes on all earnings from a subsidiary.

Bhartia Electric and Calcutta Steel

Bhartia Electric Steel shares have been moving sluggishly around Rs. 17 since the company announced a rights share offer. It is clear that the new issue is being examined with some caution. According to a scheme sanctioned by the Calcutta High Court, a new company known as the Calcutta Steel Company Ltd has been promoted with an authorised share capital of Rs. 1 crore, divided into one million ordinary shares of Rs. 10 each. It is proposed to issue 50 percent of the shares and offer them to the members of Bhartia Electric Steel at par in the proportion of one share for every share held. (Further details concerning the Calcutta Steel Company are published on page 652.) The new company is taking over the Khardah factory—which formerly belonged to Bhartia Electric Steel—by buying the fixed assets at their written-down value. The factory, it is reported, has a re-rolling capacity of 10,000 tons a month, but the output was lower than this as long as it remained with Bhartia Electric Steel. The latest Bhartia Electric Steel report shows that only 17,625 tons of rods and bars were produced in the year 1958. The management claimed that a shortage of billets hampered production.

The outlook for the new company, at least in the near term, is thus somewhat uncertain. As increased production depends upon an adequate supply of billets, it may take a rather longer time than is visualised at present before the factory can reach a stage of satisfactory working. Meanwhile, the sale of the Khardah factory to the new company might be beneficial for Bhartia Electric Steel. Apart from the fact that the factory was unremunerative and had to be fed at a substantial cost, Bhartia Electric Steel was obliged to give a portion of its own steel ingots to the Kharagpur unit in order to keep the latter going. Now it may concentrate attention on its own remunerative business. In fact, the directors mentioned in their report for the year ended December 1958 that the supply of 400 tons of steel ingots to the Khardah factory from Bhartia Electric Steel's Ballygunge works may not be possible as the latter's steel casting capacity is expanded. The Khardah factory will thus be left to obtain its entire supply of raw materials from outside sources. This may not prove easy as long as the shortage of steel continues.

Hindustan Aluminium Issue Soon

The Hindustan Aluminium Corporation has made further headway, and with almost all the major hurdles crossed, the stage is set for the issue of the prospectus. Sources close to the company hope that the prospectus might be published in the course of the next few weeks, or at any rate by the first week of December. The company's special adviser, Mr. D. P. Mandelia, told a Press conference in Bombay last Thursday that the terms and conditions of power supply, on which the company recently signed an agreement with the Uttar Pradesh Government, are satisfactory. Power is an extremely important factor in the manufacture of aluminium and Mr. Mandelia said that, according to the agreement, up to 55,000 kilowatts will be available to the company from early 1962 at the rate of Rs. 175 a kilowatt a year on the basis of the energy consumed. The rate is firm for the first 16 years, while for the rest of the period it can be raised by mutual consent or arbitration but not by more than 10 percent of the rate fixed now, which includes all taxes. The maximum energy which the company will be allowed to consume will be 433.62 million kilowatt-hours a year, the maximum in any quarter being not more than 110 million kilowatt-hours. If, however, the company consumes more than the agreed quantity, additional charges will have to be paid.

An agreement has been finalised with Minerals and Minerals Ltd for the supply of bauxite from its mines in Lohardaga, Bihar. The bauxite, it is said, will contain 52 percent alumina and the silica content will not be more than 2 percent. The company will get 4,000 tons a month, subject to a maximum of 8,000 tons. The rate, including taxes and royalties, is Rs. 16.25 a ton, f.o.r. Tori or Richiguda station. Mr. Mandelia said that the company will be getting a loan of Rs. 7.5 crores from the U.S. Export-Import Bank. The loan is repayable in instalments spread over a period of 25 years. Birla Gwalior Private Ltd will be managing agents of Hindustan Aluminium for ten years on a remuneration of 4 percent. The Government has approved of the appointment.

Standard Motor Rights Shares

A notice issued by the Standard Motor Products of India to its shareholders refers to the expansion schemes of the company and the need for capital to finance them. The company is one of the industrial establishments approved by the Government for the progressive manufacture of motor-vehicles. It has been engaged in the progressive manufacture and assembly of Standard Vanguard and Standard Ten cars. The company has taken up a programme for expanding production. It has begun constructing buildings and installing the machine tools and equipment required for the manufacture of rear axles, engines and gear-boxes, and also to supplement the manufacture already carried on. The financial requirements of the expansion scheme are very substantial and the directors think that part of the funds required should be raised by the issue of share capital. A substantial portion of the money is required in the form of foreign currency to finance the import of plant, machinery and tools from abroad. Part of the foreign exchange cost will be met by the Standard Motor Company of the U.K. The latter has agreed to subscribe for a substantial amount of the ordinary share capital, in excess of its proportion to the rights shares that will be offered to it; the total subscription from it will be £68,000.

The authorised capital of Standard Motor Products is Rs. 100 lakhs, of which Rs. 58 lakhs has been paid up. The directors have now decided to issue the remainder. The present issue consists of 20,000 6½ percent tax-free cumulative B preference shares of Rs. 100 each and 220,000 ordinary shares of Rs. 10 each, together making Rs. 42 lakhs. Out of the ordinary issue, 25,898 shares are to be offered to the Standard Motor Company of the U.K. The balance is to be given to the existing shareholders. The circular has laid down the proportion in which the shares are to be allotted to the various kinds of shareholders—ordinary, preference and deferred. The Rs. 10 ordinary shares of the company are currently quoted around Rs. 17 while the 6½ percent tax-free A cumulative preference shares are mentioned at about Rs. 103.50. The B preference shares that are to be issued will rank *pari passu* with the A preference shares in all aspects except voting rights.

Century Mill Does Well

Relinquishment of the managing agency by Birla Brothers will make little difference to the Century Spinning and Manufacturing Company; the agency is only going over to Birla Gwalior Private Ltd. What is more interesting is the directors' report and balance-sheet for the six months ended June 1959, which it is obligatory to publish under the Companies Act. The reports confirm an earlier mention in these columns of the many schemes the company has on hand as well as forecasts about the performance during the current year. The expansion of the viscose rayon plant capacity from 12 tons to 18½ tons a day and the 6½-ton tyre cord plant will together cost Rs. 5.5 crores. Sanction has been obtained from the Government and negotiations are going on for plant and machinery.

The report also refers to the proposed issue of 24,622 equity shares of Rs. 100 each at a premium of Rs. 20 a share. The company wanted the

shares to be issued at par, but the Government suggested that in view of the large financial requirements of the company and the high market value of its shares, it might mobilise resources by issuing the shares at a premium. The company revised its application accordingly and the final sanction has now been obtained. Century Spinning has withdrawn its application to the National Industrial Development Corporation for a loan. The original application, it is said, was for Rs. 162 lakhs. This was reduced to Rs. 148 lakhs but the Loan Advisory Committee of the N.I.D.C. boiled it down to Rs. 75 lakhs. The directors thought it better to take their application back. Pending sanction for the new capital issue, the directors have decided to raise the authorised capital by Rs. 6 crores to Rs. 10 crores by the creation of 300,000 equity shares of Rs. 100 each and 300,000 unclassified shares also of Rs. 100 each.

The working results for the six months ended June 1959 show that the company has done well. The report does not say how much has been earned on rayon yarn account but the total of cloth and yarn and waste is around Rs. 5.75 crores, against Rs. 10.31 crores for the previous 12-month period. The managing agents have been provided with Rs. 5.52 lakhs. The directors have decided to pay for the year ended December 1959 an interim dividend of Rs. 11.50 a share, subject to deduction of tax, on the ordinary shares issued prior to 1st July, 1959.

Asian Cable: A New Venture

A scheme for the manufacture of insulated low-tension cables has been prepared in Bombay and it is understood that Kotak and Company, the sponsor, has received the project licence. The name of the new company will be Asian Cable Corporation, and it will have an authorised capital of Rs. 1 crore. The present issue will be for Rs. 50 lakhs, half of which will be taken up by the promoters, directors and their friends, while the other half (Rs. 25 lakhs) will be offered to the public. Technical collaboration for the venture will come from the Enfield Corporation of the U.K. It is understood that Enfield will not participate in the capital but will guide the technical side of the venture. Production, it is estimated, will total 45 million yards of cables a year, valued at Rs. 125 lakhs. It is likely that manufacture will start by the end of next year. The plant and machinery will be worth about Rs. 30 lakhs, including the foreign exchange element of about Rs 22 lakhs. This latter, it is said, will be provided by the Industrial Credit and Investment Corporation. The machinery will be bought from Britain and Europe. Among the directors will be Mr. R. D. Birla, the Nawab of Palanpur, Mr. Morarjee Vaidya, and Mr. Pratapsinh Mathuradas Vissonji.

New Standard Engineering Expands

The expansion plans which the New Standard Engineering Company has on hand testify to the rapid progress which the engineering industry has been making in western India. The company started its career with a small machine shop under the name of Standard Engineering Company. Making use of the scope which the second world war provided for the engineering industry, it was converted into a private limited organisation in 1940 with a capital of Rs. 1 lakh. Its foundry produced various kinds of castings for the railways and other industries. Later an up-to-date sand preparation and sand conditioning plant was added. After a while, the company bought a new factory at Santa Cruz, a suburb of Bombay, from a firm then known as Mapara Parekh and Company. In 1956, Standard Engineering took over the management of the Empress Iron and Brass Works of Burjorjee Pestonjee and Sons, and its activities were expanded.

This expansion meant a further demand for capital, so the paid-up capital was raised in 1957 to Rs. 11.52 lakhs. With new plans on hand, the company amalgamated with Burjorjee Pestonjee in 1959 and the undertaking was converted into a public limited company called the New Standard Engineering Company with a paid-up capital of Rs. 22.28 lakhs. The new company has been looking out for possibilities of further development and new lines of manufacture. Many collaboration agreements, it is said, have been made with foreign manufacturers. The long list includes a scheme for the manufacture of fabricated steel structurals and a steel rolling mill. An agreement with a well known German firm for the production of complete blowroom plant, it is reported, has also been signed.

In order to meet the cost of financing development, the directors are thinking of issuing fresh capital. The authorised capital of the company is Rs. 1 crore, divided into 50,000 ordinary shares of Rs. 100 each, and 50,000 preference shares, also of Rs. 100 each. The preference shares are redeemable and cumulative, carrying a tax-free dividend of 6.3 percent. The subscribed capital is 22,277 ordinary shares. The company now proposes to offer to the public 24,500 ordinary shares and 25,000 preference shares. Of the sum of Rs. 52.72 lakhs which will be received, the directors propose to use Rs. 5 lakhs for land, Rs. 10 lakhs for buildings, Rs. 25 lakhs for machinery and Rs. 12.72 lakhs for working capital.

Madras Sugar Shares Up, Teas Dip

Sugar shares in Madras have hardened recently in view of the Government's new policy aimed at increasing production. The rise in the prices of these shares in Bombay and Calcutta has also inspired confidence among south Indian investors. The final dividend of 18¾ percent, subject to tax, recently announced by the Deccan Sugar and Abkhari Company is in line with market expectations. The general uptrend in prices has carried Cauvery to Rs. 137 and Mysore to Rs. 54, although the former has not even paid a maiden dividend. The 20-percent distribution payable by K. C. P. for 1958-59 has led to a rapid rise in its Rs. 10 shares to Rs. 20 c.d., and Andhra Sugar has advanced to Rs. 23.50 because of the new lines of manufacture it proposes to start in Tanuka. Many Madras investors have also gone in for E.I.D., which are quoted higher at Rs. 43.50 on the expectation of a rights issue soon in connection with the early establishment of a large fertiliser plant in Andhra Pradesh.

In tea, both Blue Mountain and Waterfall Estates have announced dividends of 12½ percent, subject to tax, and their quotations have declined. The fall in the prices of Nonsuch Tea shares from Rs. 29 to Rs. 27 followed the announcement of a 10-percent final dividend, subject to tax, making 20 percent, taxable, for the year ended June 1959. One broad effect of the Finance Act, 1959, is that preference shares offering a tax-free return are now often considered superior to ordinary shares, so the prices of the former have increased in recent months. Travancore Sugar 5-percent preference shares, for example, have risen to Rs. 9.25 and Travancore Rayon 5-percent preference to Rs. 9.62.

Cotton Imports and Exports

The Cotton Advisory Board, which met in Bombay on 3rd November, recommended that in addition to the annual import target of 600,000 bales stapling 1⅛ inches and above, the Government should permit the import of 100,000 bales of cotton stapling below 1⅛ inches but not below ⅞ inch from any area. It also recommended the early release of another export quota of 75,000 bales of Bengal Deshi. Neither the textile industry nor the trade seem to be satisfied with these recommendations. But that is mainly because they had pitched their expectations rather high. The Indian Cotton Mills Federation had asked for an import quota of 400,000 bales. But that was based on a crop estimate of 4.4 million to 4.5 million bales. Crop ideas have been revised since October and even the most conservative forecasters now expect that the output will be around 4.75 million bales, although some think that it might be as high as 4.95 million bales. The Board seems to have struck a compromise by taking 4.8 million bales as the basis. In view of this, criticism that the Board has acted in a way prejudicial to the industry's interest seems unjustified. On the contrary, the industry should be happy that the Board has made a notable departure from the traditional policy of allowing the import of cotton stapling only above 1⅛ inches. The decision to recommend the import of lower-staple cotton has been taken in view of the shortage of medium staples during the current season.

It is arguable that the decision on an additional quota could wait until the annual target of 600,000 bales had been reached. Out of these 600,000 bales only 180,000 bales have been released for import so far. It is not so much an additional quota that is important as the need for a timely announcement of the declared quotas in order that the industry might space out its purchases to its best advantage. It is regrettable that the Board should not have paid any attention to this problem although it has been troubling the industry for a long time.

There is little to complain about in the export quota for Bengal Deshi. The trade says that the quota should have been larger. It could have been; but it is unlikely that exports will be allowed to suffer for want of a quota. The supply of Bengal Deshi this season is distinctly comfortable. With the crop estimated at 400,000 bales and a carry-over of 60,278 bales, the total available would be more than 460,000 bales. Mill consumption is expected to total 108,000 bales during the current season, and another 14,000 bales will be needed for surgical dressings. Of the remaining 338,000 bales, only 75,000 bales have been allowed for export so far. Of the latter, hardly 15,000 bales remain unsold. This season's crop of 400,000 bales is 100,000 bales larger than the previous season's. Exports of Bengal Deshi last season totalled 186,000 bales. There can be little doubt that the country will have to depend this year mainly on Bengal Deshi for making good any shortfall in the export of other varieties resulting from the unsatisfactory supply. The Government would not be taking any risk in promptly accepting the Cotton Advisory Board's recommendation about the export quota, particularly since the price of Bengal Deshi has come down by nearly Rs. 50 a candy from the highest level recorded early in October.

U.S. Steel Strike: Losers All

The prolonged steel strike in the United States has just ended through the President's intervention. Labour has gone back to work for a "cooling off" period of 80 days. Negotiations are going on between the employers and the Union to settle the issues of the dispute. The steel strike reached a critical stage by late October, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Heavy inventories at the start enabled steel users to keep going through August and September, but in recent weeks secondary unemployment has been mounting. Nearly 200,000 persons were put out of work during October by steel shortages. By the end of the month, an estimated 865,000 persons (including 500,000 strikers) were without work because of the steel situation, and many thousands more had been hit by other strikes. The most acute pinch in steel supplies is yet to come, as it will take several days for furnaces to be re-heated, and several weeks before a balanced flow of finished products is achieved. Steel men fear that a shut-down as protracted as this may have caused extensive damage to furnaces and other steel-making facilities. Unless iron ore shipments on the Great Lakes are resumed soon, some blast furnaces may have to be shut down early next year.

Kaiser Steel has signed a contract with the union at an estimated cost of 22½ cents an hour in wages and fringes spread over two years. The money difference between the union and the other 11 major producers have narrowed, aided by mediation efforts by the President's board of inquiry, headed by Dr. George W. Taylor. The industry has raised its offer to 2.6 percent of payroll costs —equivalent to the industry's average annual productivity gain. The emphasis in the negotiations has been more in the direction of increased fringes than wages, the men evidently preferring tax-free benefits, although sometimes erroneously construing fringes as without cost to the employer. The main stumbling block remains the same as before —the issue of local work rules, work schedules and wildcat strikes. Management's insistence on the right to manage more efficiently has become a deep-set matter of principle, as well as an economic issue. Union proposals for joint committees to study the problem, accepted by Kaiser, have been rejected by the other companies, while employer offers to submit work rule questions to binding arbitration have been rejected by the union. Dr. Taylor noted in his report to the President that "the board cannot point to any single issue of any consequence whatsoever upon which the parties are in agreement." Bargaining has continued. Both parties are well aware that a settlement arrived at through free collective bargaining without outside pressure is far better for their own interests and those of the nation than one dictated by the Government. The Taft-Hartley procedure offers temporary relief, but does not settle anything. In a way, it may be said that free collective bargaining is on trial. The President also resorted to a Taft-Hartley injuction in early October to halt the strike of longshoremen on the East and Gulf Coasts. The impact of the steel strike has overshadowed labour unrest in other lines, including meat-packing (now settled), glass containers, copper, zinc, aluminium and railroads.

Not surprisingly, the same matter of principle which has been the critical issue in steel negotiations is at the heart of many of these other disputes. Whether negotiations refer to feather-bedding, automation, technological progress or improved materials handling, the basic issue is the same—the insistence of management on its right to introduce more efficient methods and equipment. At a time when U.S. industry is facing a difficult challenge in maintaining exports, business has become more sensitive to union rules which waste manpower. Excessive labour costs can no longer be offset by higher prices, and greater efficiency is management's major weapon in maintaining adequate profits to provide for growth. When all the losses in wages, profits and disruption of business are added up, this steel strike has been the costliest in the nation's history. Payroll losses of strikes alone are expected to exceed $1 billion. If the industry settlement, like Kaiser's, boosts wage rates by 9½ to 12½ cents an hour in the second year of the contract, the steelworker with a wife and one child would need nine to 11 years of full-time work to make up for the wages he lost during the strike. Reports received so far from 32 leading steel corporations show a net loss during the third quarter of $108 million. Profits have also been reduced in the various metal fabricating companies which have had to pay premium prices or incur extra costs to procure steel or have lost business because of material shortages. Federal, State and local Governments have shared the burden in the form of curtailed tax collections, as well as in relief outlays for needy strikers and unemployment insurance payments to those suffering secondary lay-offs.

Oil Trade Criticises Freight Rise

The decision of the Karmahom Conference Lines to increase the freight on vegetable oils and oilcakes to U.K. and Continental ports by 10 shillings a ton from 1st January, 1960, has led to considerable criticism from the trade. This is the third freight rise since June. In a telegram to the Central Ministry of Commerce and Industry and the Director-General of Shipping, the Bombay Oilseeds Exchange has protested against Karmahom's decision, calling it deliberate and arbitrary. The revised rates will be 195 shillings a ton for oils and 120 shillings for cakes. Latest reports say that the rates will be made effective from February, but this makes little difference as far as the principle is concerned.

The trade resents the rise not merely because it reduces the competitive strength of Indian oils and oilcakes in overseas markets, but because the increase is thought to be unjustified in view of the slump in the international freight market. Charter space to U.K. and Continental ports, it is claimed, is easily available at around 55 shillings a ton for general merchandise and 20 shillings higher for tankers. The complaint is that the Conference Lines have taken advantage of the marked improvement in the export of oils and oilcakes, particularly the latter. Exports of groundnut oilcakes have touched a record of around 350,000 tons up to the end of October, and outstanding sales, extending up to March, are put at the high figure of 250,000 tons. By their decision to raise the freight at this stage, the trade says, the Karmahom Lines have invited the charge of exploiting the situation to their own advantage.

Exporters have already been complaining to the Government that the system of deferred rebates has been a serious handicap in that shippers cannot seek space outside the Conference Lines even when the latter are unable to provide it. The Government was asked to persuade the Conference Lines to charge net freight, or at least to allow exporters to book cargo elsewhere without forfeiting the benefit of rebate, when these Lines are unable to provide space. The trade was hoping the Government would do something but instead the news came of a rise in freight. The increase of 10 shillings might not appear big, but it is considered substantial by the trade in view of the fact that groundnut oil can be sold abroad only because of the incentive of a 3½-ton expeller quota for each ton of oil shipped.

Prison for Selling Spurious Drugs

Addressing the fifth Drugs Conference in Lucknow, Mr. V. K. B. Pillay, Secretary to the Central Ministry of Health, announced that the Government of India proposes to amend the Drugs Act so as to make imprisonment compulsory in cases of conviction for the manufacture and sale of spurious drugs. He said that the Act will be amended further in order to enable the Central Government to issue directives to the State Governments for bringing about uniformity in implementing its provisions. The Government of India proposes to appoint central inspectors to ensure that drugs are manufactured under the conditions laid down by the Act. The extent of the trade in spurious drugs in the country is anybody's guess, but effective action to control the menace has been hampered by the slackness of State Governments, which are the main enforcing agency. Another reason why the spurious drugs racket continues to flourish is the violation of the Drugs and Magic Remedies (Objectionable Advertisements) Act, 1954. These advertisements are cunningly worded so as to avoid the penalties of the law, and are responsible for much more "self-medication" than is generally suspected. With more rigorous controls on the import of drugs, the market for the spurious products has expanded and the steep increase in prices has made it very lucrative. If the tendency persists, pleas for price control over drugs will become more frequent. This as a prospect which drug dealers, who already consider the existing system of registers and cash memos irksome, will not relish. Representatives of the drugs trade complained at the conference that the present rules and sub-rules involve a great deal of clerical labour. But no amount of labour clerical or otherwise can be considered too much where the public health is involved.

Jobs for the Novices

An analysis of the registrations and vacancies notified to the employment exchanges from January 1958 to March 1959, recently made by the Directorate-General of Resettlement and Employment, shows that, on average, the employment exchanges registered 545,700 persons during the five quarters. Out of these, 56.4 percent were new entrants to the labour market. Twelve percent of those registered were previously engaged in agriculture, 5.1 percent were working in manufacturing industries and 3.3 percent in the construction industry, while 10.4 percent came from the services. There was an upward trend in the number of persons registered. The number of new entrants also rose, for out of an increase of 74,300 in registrations between the first quarter of 1958 and the corresponding quarter of the current year, new entrants accounted for 40,600. Among others, the increase of 10,700 was comparatively large in the case of persons of agricultural arigin. There was also an increase in the number of employment-seekers from manufaeturing industries and services (5,400 each). It is clear, therefore, that while all industries and services contributed to the overall increase in registrations at employment exchanges, the greater part of it was due to young persons entering the labour market for the first time. Persons previously employed in agriculture, but seeking jobs in other vocations, also increased substantially. As against this, the total number of vacancies notified was greater during the first quarter of 1959 than during the corresponding period of the previous year, although there was a slightly downward trend during the last three quarters of 1958. Keeping in mind the limitations of the employment exchange statistics—not all jobless persons register at the employment exchanges, nor are all vacancies notified to them—it is evident that unemployment has grown with an increase in the number of new entrants to the labour market. Most of them have had no vocational education and are only fit to be clerks or unskilled labourers. They have swelled the army of unemployed, while the country still has a shortage of electricians, draughtsmen, overseers, trained teachers, etcetera.

Third Plan for U.P.: Aiming High

Although the planners have had enough experience already of the dangers of raising false hopes, some of the blueprints for the third plan prepared by the States betray the symptoms of "gigantism", against which the Prime Minister himself has warned on more than one occasion. An obvious example is Uttar Pradesh, whose Planning Department has proposed an outlay target of Rs. 1,500 crores for the next plan period. The extravagance of the estimate is apparent considering that the size of the State's second plan is only Rs. 253 crores. The first plan was limited to Rs. 164 crores. A review of the progress of the second plan indicates that, considering the unavoidable shortfalls in development expenditure, there will be a spillover of Rs. 20 crores at the end of the period. The argument in favour of a Rs. 1,500-crore third plan is that, without it, the gap in development between U.P. and other more prosperous States will continue to widen. The main emphasis in the blueprint is sensibly on agriculture. At the end of the third plan, it is proposed to raise food production by 50 percent to 19.5 million tons. It is also proposed to increase power generation by a million kilowatts. This would involve a capital investment of Rs. 200 crores, and the hope has been expressed that the availability of cheap power will attract private enterprise. The private investment thus expected is Rs. 500 crores, compared with the Rs. 100 crores which is the most generous estimate of private investment in the State during the second plan period so far. The State's planners hope that a sum equal to that invested by the private sector will be invested by the Central Government also in U.P. Schemes. An allocation of Rs. 90 crores has been made for major irrigation projects and Rs. 40 crores for minor ones. As for labour, the Planning Department feels that a lot of work could be done, if not through *shramdan*, then through reduced wages. It is pointed out that people in China work on irrigation projects for food and shelter alone, and that work on reduced wages should, therefore, be made a practicable proposition in India too. How this can be done without introducing certain other less desirable elements of the Chinese communist system, the blueprint does not say. In fact, an element of compulsion is implied in the stern comments of the Department on the average peasant's unwillingness to dig the channels necessary for fuller use of the irrigation potential. Persuading the peasant that digging channels is for his own benefit is one thing, but compelling him to do so is quite another. The State Government has, of course, time enough to think again about the size of the plan and the best way of implementing it.

Tobacco Export Prospects

In spite of a slight fall in U.K. tobacco imports in the seven months ended July this year, Indian tobacco shipments to that country rose by one million lbs. But Rhodesia too got a larger share of the U.K. market. The outlook for Indian tobacco in Europe is rather obscure, because the United States is competing with Balkan countries to maintain its grip there; only in the Netherlands and the Scandinavian countries might Indian tobacco retain its hold. The latest bulletin of the Central Tobacco Committee says that the State Trading Corporation will handle exports to Egypt and perhaps also to the Sudan. Exports of unmanufactured tobacco have risen this year, although those of tobacco manufactures are still inconsiderable. Traders say that the United States has a larger share of the Hongkong market than India or communist China. But imports from Rhodesia to the colony are expected to rise soon. The opening of new cigarette factories in Singapore might promote Indian tobacco exports to the Straits. Little is now known about the Andhra Pradesh Government's scheme to start a State-owned cigarette factory, mainly to help local growers, and the outline of State's third plan does not contain any proposal for tobacco manufacture. The Government presumably feels that excise revenue is more important than starting an enterprise to compete with the cigarette manufacturing concerns in the private sector.

Precision Instruments Profits

Aftr working at a loss for many years, it is good to hear that the U.P. Government's Precision Instruments Factory in Lucknow has begun to show profits. According to the State's Deputy Minister for Industries, Mr. H. N. Bahuguna, the water-meters and microscopes produced in the factory are sold at half the price of the imported variety or even the products of the private sector. He claims that the quality of the products is so good that the production for the next three years is already booked, and orders keep coming not only from other States but also from abroad. The factory has plans to double its output of micro-

scopes to 360, of water-meters to 72,000 and of pressure gauges to 24,000 during the next few years. It is also proposed to start the production of wall clocks, time-pieces and movie cameras. At present, every one of the 350 components of the water-meters is manufactured in the factory, as also all the 400 components of the microscope, except the optical lens. It appears that one of the main reasons for the improvement in the working of the factory is its switch-over from a time-rate to a piece-rate basis for wage payments. Introduced as an experimental measure in 1953, the piece-rate scheme now covers all shops in the factory. It has enabled workers to earn between Rs. 5 and Rs. 6 a day, against the previous daily wage of Rs. 2.25 to Rs. 3. In some instances, the daily earnings, it is reported, have gone up to Rs. 10. Piece-rate earners do not suffer a loss even on the days they are idle due to defects in the machinery, because they are paid the minimum fixed wages on such days. The workers themselves have been favourably impressed by the results, and all those whose work can be measured have opted for the scheme. Individual output has practically trebled, it is said, without loss of quality, because it is provided that wages will be deducted if the quality is poor.

Housing in the Third Plan

The State Ministers for Housing met last week in Hyderabad to discuss their programme for the third five year plan, but the available figures concerning the number of houses built under different schemes during the second plan show that the progress so far has been extremely unsatisfactory. The growing urbanisation accompanying industrial development has created a greater demand for housing in cities, while the slum problem remains acute. The subsidised housing scheme for industrial workers, which has been in force since the first five year plan, has made poor progress; out of a total allocation of Rs. 27 crores for the current five-year period, only Rs. 10.87 crores has been used during the first three years. The speed of construction has been hampered by a number of factors, the chief of which are the insufficiency of land at reasonable prices and inadequate building material supplies. As for the scheme to provide houses for low-paid Government servants at a cheap rent, a total of 42,663 houses have been built up to 31st July since the inception. Although the funds of the Life Insurance Corporation are now being used, progress remains poor. The most disappointing have been the projects for clearing slums. The total number of dwellings put up since the introduction of the scheme in May 1956, is 2,916, against the target of 52,000 for the whole second five year plan. It is not quite clear from the information supplied what progress has been achieved with the rural housing programme. This scheme visualises the starting of housing projects in about 5,000 selected villages in suitable community development blocks spread all over the country. Financial assistance is given in the form of loans not exceeding Rs. 1,500 or 50 percent of the cost of construction, whichever is less. The scheme was introduced in February 1957, but implementation began very much later. The only project which has made moderately satisfactory progress is that for housing the middle income groups (with incomes between Rs. 6,000 and Rs. 12,000 a year). The Life Insurance Corporation has agreed to provide finance on a loan basis to intending house-builders through State Governments. According to Mr. K. C. Reddy, the Central Minister for Works, Housing and Supply, Rs. 3 crores was disbursed during 1958-59 under the scheme, and during the current year the demand for funds from different States has gone up to Rs. 6.39 crores.

Viewing the needs of the third five year plan, as estimated by Government officials, against the background of progress made, it looks as if an almost superhuman effort will have to be made to meet the demand satisfactorily. It is estimated that at the beginning of the third five year plan, there will be arrears of 5 million houses relating to the second quinquennium. The total urban housing requirements by 1976 are likely to be of the order of 43.6 million units, requiring the construction of about 26 million new dwellings between 1961 and 1976. In terms of the cost of the land needed, such a programme would require an expenditure of Rs. 600 crores. Most State Governments have been complaining that apart from the acute shortage of building materials, the high cost of land in urban and semi-urban centres has impeded progress. At their Darjeeling conference last year the State Ministers for Housing stressed the need to acquire land in advance and to develop it wherever necessary for building residential houses. The Government of India agrees with this view and a plan has been prepared for land acquisition and development, "which will lay the basis for all housing activity in the years to come." It will enable the State Governments to acquire in bulk, and in advance, the land that they think they will need in the foreseeable future for the housing needs of the whole city, town or community. Furthermore, finance will be provided to develop this land and sell the building plots, largely on a no-profit-no-loss basis, to intending house-builders up to a maximum of 300 square yards a head. Mr. Reddy has expressed the view that the bulk acquisition and development of land will tend to eliminate speculation in real estate and will bring down rents. It will also help fashion an entire neighbourhood according to a pre-planned pattern. The States have already been asked to commit themselves to an expenditure of Rs. 15 crores during the remaining period of the second plan for this purpose, as against Rs. 2½ crores allotted originally. He has asked the Governments to acquire land as speedily as possible and pay reasonable compensation for it. It is expected that supplies of building materials will steadily improve during the next plan. Mr. Reddy expects that they will be "very much easier".

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 175

Managing Directors and Directors of Bird and Co. (Private) Ltd and F. W. Heilgers and Co (Private) Ltd.

Rs. 101

Central India Coalfields Ltd.

Rs. 100 each

The Gramophone Co. Ltd, F. P. Gilbert, E. C Benthall Charitable Trust.

JUTE MILL RESULTS

THE Report of the Budge Budge Jute Mill Company for the half-year ended 31st of October shows a profit of Rs. 2,00,925, and after setting aside Rs. 62,027 for depreciation, and paying the interest on debentures and preference shares, admits of a dividend of 5 percent and of Rs. 3,366 being carried forward. The result of the working for the past year is that Rs. 97,027 has been set aside for depreciation, and that the ordinary shareholders have received a dividend of 8 percent. The result of the working for the last eleven years is that the ordinary shareholders have received an average dividend of over 13½ percent. The jute manufacturing industry has its ups and downs, but of its profitable nature when well managed, there is no doubt. We observe that the mill holds stocks of jute, oil and stores, amounting to Rs 17,33,117 as against Rs. 10,88,413 at the same period last year. The report of the National Jute Mills for the six months ended 31st October discloses a manufacturing profit of Rs. 90,464, which after providing Rs. 32,221 for depreciation and paying debenture interest and bonus to staff, admits of the usual dividend on the preference shares and a dividend of 4 percent on the ordinary shares. The result of the working of this Company for the past twelve months is a gross profit of Rs. 1,92,227. Of this Rs 79,944 have been set aside for depreciation and after providing for debenture interest and preference shares, a dividend of 8 percent has been paid on the ordinary shares. This is very satisfactory. We observe that the jute and stores in stock are valued at Rs. 6,38,710 against Rs. 2,37,004 last year.

A Ditcher's Diary

PRESIDENT EISENHOWER SHOULD BE ARRIVING IN India at a good time, and I do not only mean for the cool weather. My only worry is that public opinion may be so responsive that India's relations with Russia will be damaged. The President, after all, is the living symbol of opposition to communist expansion, a struggle in which India is now firmly embroiled whether she likes it or not. Yet I am far from sure that Russia does not hold the real key to India's border problems, not the West, whose support can be relied upon anyway. In fact, the main reason for China's apparently irrational aggression may be to isolate the Soviet Union, both from the West, with whom she is at present effecting a *rapprochement*, and India. If China intends eventually to be the dominant power on the Eurasian land mass, as it is quite clear she does, then she cannot afford to permit the Soviet Union many friends. But we must not let such complicated considerations prevent our appreciation of Mr. Eisenhower's visit to New Delhi or any other of the world's capitals. I cannot be alone in applauding this recent transformation on the part of the head of what is still the most powerful nation in the world—*luniks* notwithstanding—into a man willing to face his Presidential responsibilities, although I do remember being somewhat unique in refusing to join the chorus of sentimental regrets when Mr. Dulles resigned—an event which I consider chiefly responsible for the change. The contrast between the U.S. attitude towards world affairs as it is at present, and as it was under the former Secretary of State, is both remarkable and reassuring. I have little faith myself in summit diplomacy, the world is just not that simple. But my view has always been that if one side wants a summit conference, or sets a fashion in personal contacts between summit leaders, then the other side must follow suit—such is the popular desire for peace and the prevailing illusions on how it can be obtained. The most obvious proof, I consider, of the change that has taken place in President Eisenhower is that the free world no longer shudders at the consequences of he and Mr. Khrushchev being matched at the summit.

JUDGING BY REPORTS, FOR SOME YEARS NOW Tagore's Visva-Bharati has needed a new broom. As it happens, the harshness of the cleaner-up will be mitigated somewhat by the fact that Mr. S. R. Das is a former pupil of Santiniketan—one of the best. His legal background should make it easy for him to unravel the labyrinthine complexities which some conspiracies, I am told, have developed; and his distinguished judicial record is enough to ensure justice to the victims of some of the intrigues. The affairs of Visva-Bharati have never been dramatised like those of Banaras Hindu University, and I am not suggesting that things are as bad, but I have heard some pretty disturbing stories involving some persons who were once very close to Tagore. There has been too much talk of the spirit of Tagore, which is hard to define, and there has been too little of more easily definable administrative supervision. Although it is a full-time job, not every one of recent Vice-Chancellors has devoted all his attention to his task; and at least one good man was heartily glad to be relieved of it. That I have to use such singularly unsavoury analogies is a measure of the rot, and I sincerely hope that in its new Vice-Chancellor Visva-Bharati at last has a man who will not let his attention be diverted by calls from other places and other offices. Santiniketan was too much of a personal institution around Tagore to be the same without him, but there is no reason why it cannot be run as an efficient seat of learning more or less on the lines laid down by Tagore, who was no visionary but a very practical man. He never tolerated imagination and all that as cover for indolence or inefficiency, and he personally saw to it that the kitchen and the students' dining hall were clean. It is this kind of cleanliness which has been neglected since, and dust (and worse) has settled on the soul of the once great institution.

WHEN I FIRST VISITED THE EXISTING PREMISES of the Asiatic Society at 1, Park Street a few years ago, I was a little shocked at the miserable condition of the building in which this famous institution is housed. I was then told that it had been constructed some 172 years ago through the efforts of Sir William Jones, a great European scholar and jurist, who founded the Society for a systematic study of the culture and civilisation of Asia, and that not much of renovation or repairs to the modest structure had been undertaken for several decades. Moreover, the lecture hall and the reading rooms appeared rather incommodious, not to say shabby, and piles of books and publications lay stacked in different corners. I wondered why its members and numerous beneficiaries had not raised a fund for some very necessary repairs, if not for a new building. The official with whom I talked about the affairs of the Society could give no convincing answer. No worthwhile move, it seemed, had been made. So it was a pleasant surprise for me to find in the papers the other morning that Professor Humayun Kabir, Union Minister for Scientific and Cultural Affairs, had laid the foundation stone of a new structure to be erected on the plot adjoining the Society's premises and next to Chowringhee Road, and that both the Central and West Bengal Governments have agreed to contribute handsomely towards its construction. The building will consist initially of four storeys with another four to come later. The work, I understand, will begin early next year and is likely to be completed within two or three years.

WHEN I WROTE A COUPLE OF WEEKS AGO ABOUT THE shortage of recreational facilities on the D.V.C. lakes, I had not entirely forgotten the Maithon Yacht Club. It was scarcely likely I would because I had the opportunity of sampling the amenities of this admirable institution just over a year ago when I spent a week-end there crewing for a friend of mine. I enjoyed myself, if for no other reason than that I have so little opportunity of getting away from my desk into the open air; but the episode was not without its incidents. For one thing there was almost no wind at all, so drifting rather than sailing would be a better description of the procedure we went through. When the wind did arrive, it was for half an hour only and with it came the rain. Even in August, a drenching monsoon shower borne along by a 30-mile-an-hour breeze can be a cold and uncomfortable experience scarcely compensated by the quiet pleasure of having one's clothes dried on one's back afterwards in a blistering burst of sunshine. If I remember, the only light relief that day was when two friends of mine overturned their boat at the anchorage and got a ducking—such was the rawness of my humour by that time. And the episode was not without its sequel either: I got a dose of sunburn which kept me from the public eye for a whole fortnight, and a few days after our return I received word that the friend I had been crewing for was down with diptheria and it would be necessary for me to take that distressing course of nauseating injections, from which, I soon learned, I am allergic. So it was not really likely that I should forget the Maithon Yacht Club in a hurry. But I would not like its Commodore, Lt. Col. B Basu, who has written me such a kind letter reminding me of the good work the Club is doing, to conclude that I have anything against the organisation or any of its members. Although only a visitor—and as must be obvious from the above account, a very green one at that—I was treated with admirable kindness by the then Commodore, Brig. N.R. Kirkby, with whom I remember exchanging some entertaining anecdotes about Ditchers past and present. For those less "incident prone" than I appear to be, the Maithon Yacht Club is an excellent institution in which to spend one's few leisure hours, and I can heartily recommend it to anybody who enjoys the sport or thinks he might if he learned it. I can appreciate Lt Col. Basu's point that it is attracting the attentions of many people in the area. The one thing which prevents it from having a larger Calcutta membership is, of course, the state of the Grand Trunk Road. Those 140 or so miles which separate this city from Maithon are just about the most hazardous and uncomfortable of any to be encountered on what is ostensibly a main road, anywhere in the world.

EVEN THOSE UNIMPRESSED SO FAR BY *sputniks luniks* and the other recent Soviet marvels must now think again and acknowledge what Mr. Khrushchev calls the superiority of communism over bourgeois capitalism. Leningrad has something which, to my knowledge, no other country has got: a Palace of Marriage. The big house Moscow Radio tells us, has a festive and cosy air "with fires blazing in the hearths". There is a jeweller's shop too, where the bride and the bridegroom can buy their wedding rings and presents, although I should have thought these things were part of the capitalist conspiracy to commercialise marriage. There is also a majestic (what a word) hall for the ceremony—shades of feudalism, I think—and a lounge for the reception. "And rooms are provided for the newly-married couples". All very correct and proper, I dare say; but, somehow, to me the report merely confirms the dreadful housing shortage in Soviet Russia. If I remember my Nabokov (*Lolita*), most of these amenities or services are available in the miserable United States, *plus* a little bit of needed privacy, in the thousands of motels in that country. In feudal or land-based societies marriages are elaborate and communal affairs, but today most people prefer a quiet marriage in which the community's participation is limited. I have a horrible suspicion that in the Soviet Union even so personal a matter as marriage is going to be held under the gaze of the Party and the People. The whole arrangement seems to me unspeakably vulgar.

PROSPECTS AND OBJECTS OF THE COMPANY

The company has been promoted with the object of acquiring fixed assets, lands, buildings, railway siding, machinery, furniture, fixtures, stores and stocks of raw and finished materials, rights, privileges quota rights, etc. appertaining to the business of steel re-rollers and manufacturers now carried on in their Khardah Works by Messrs. Bhartia Electric Steel Co. Ltd.

As is well known, Bhartia Electric Steel Co. Ltd. is the owner of two Engineering factories, one situate at Ballygunge and the other at Khardah, both in the District of 24-Parganas near Calcutta in the State of West Bengal. The factory at Ballygunge produces steel castings and ingots and the factory at Khardah is a Rolling Mill. The Khardah factory started operation in April, 1955. Both the units are more or less independent of each other. The Khardah factory is situate on land comprising about 24 acres with permanent rights. By a scheme of arrangement sanctioned by the Calcutta High Court on 11.8.1959 the fixed and other assets of Bhartia Electric Steel Co. Ltd. appertaining to and/or located at its Khardah factory, including land, buildings, machinery, furniture and fixtures together with the railway siding, etc., stocks of stores, raw materials and finished or semi-finished goods situated at Khardah and all other rights, privileges including quota rights and benefits of existing contracts and properties whatsoever of the company situated in or appertaining to Khardah Works and the tenancy rights in respect of the Head Office and the furniture and fixtures are to be transferred to and vest in this company for payment in cash at book value.

The Re-Rolling Mills plant of Messrs. Bhartia Electric Steel Co. Ltd. which is proposed to be acquired by this company is well equipped and modern. The products of this plant are in great demand and the demand is continuously growing and is also expected to continue to grow for a long time. Increased supply of billets from the major Steel Works will help greater utilisation of the capacity of the plant.

TOTAL OUTLAY & MINIMUM SUBSCRIPTION

The total outlay required in terms of the said scheme is estimated at about Rs. 70,00,000/- as follows :—

1. Land	...	Rs. 3,40,000/-	approximately.
2. Building	...	Rs. 11,50,000/-	-do-
3. Plant & Machinery	...	Rs. 25,00,000/-	-do-
4. Stores, etc.	...	Rs. 10,00,000/-	-do-
5. Working Capital	...	Rs. 20,00,000/-	-do-
6. Preliminary Expenses	...	Rs. 10,000/-	-do-
		Rs. 70,00,000/-	

In the opinion of the Directors Rs. 30,00,000/- is the minimum amount which must be raised by issue of shares hereby offered. The balance amount required will be met out of the balance of the said shares if subscribed and credit facilities from directors and their friends and from Company's Bankers.

STATUTORY & GENERAL INFORMATIONS UNDERWRITING AND BROKERAGE

The shares offered have not been underwritten. The company will not pay any brokerage on this issue.

MANAGEMENT

The company has no Managing Agents and will be managed under supervision of Board of Directors. One or more of Directors may be appointed as Managing Director or Managing Directors at a later date.

CONTRACTS

The company has not entered into any contract except that this company will implement the terms of the scheme above referred to sanctioned by the Calcutta High Court.

INTEREST OF THE DIRECTORS

Sri R. L. Bhartia and Sri B. P. Khaitan are also Directors and Shareholders of Messrs. Bhartia Electric Steel Co Ltd., the proposed vendors of the assets of business. Being Shareholders in Messrs. Bhartia Electric Steel Co. Ltd. they are entitled to allotment of shares in this company. Sri R. L. Bhartia is also a Managing Director of Messrs. Bhartia Company Ltd. who are entitled to allotment of shares in this company as Shareholders Messrs. Bhartia Electric Steel Co. Ltd. He is a Director of and a Shareholder in Messrs. Ran & Co. Private Ltd., landlords of the premises No Old Court House Street, Calcutta where the re tered and Head Office of the company is situa Sri B. P. Khaitan is also a Partner of M/s. Khai & Co. the Solicitors to the Company.

DIRECTORS' QUALIFICATIONS & REMUNERATION

The qualification of a Director shall be holding in his own right Equity Shares of company of the nominal value of not less t Rs. 5,000/-.

Each Director will be paid out of the funds the Company Rs. 100/- for every Board Meet he attends and shall also be paid his share of Commission on nett profits payable every year all directors jointly.

EXPENSES

Preliminary expenses payable by the comp inclusive of stamp duty, printing charges, charges, registration fees, are estimated Rs. 10,000/-. Part of this amount has been p by Messrs. Bhartia Electric Steel Co. Ltd. wh is recoverable from this company.

APPLICATION FOR SHARES

Each application other than an application terms of the said Scheme must be for a minim of 100 Equity Shares or in multiple thereof.

The full value of shares applied for is paya with application.

Applications for shares must be made on application form specified for the purpose available from the Registered Office of the Co pany. Applications and money payable with th should be delivered at the Registered Office of Company. Letters of renunciation (executed favour of another person, if any) should al together with the application, be sent to Registered Office. Cheques and Drafts should crossed "Account Payee" only and made paya to Messrs. Calcutta Steel Co. Ltd. or order. cheques and drafts must be payable by a Sched Bank in Calcutta. Any non-resident persons, fi or company applying for shares must first of apply for and obtain sanction of the Reserve Ba of India.

If no allotment is made, the full amou received on application and if a partial allotm is made the unutilised balance of the applicat money will be refunded to the applicant within months of the date of application, throu Registered Post at the risk of the applicant a the company will not pay any interest on amount so refunded.

INSPECTION

Copies of the prospectus and forms of app cation, etc can be obtained from the Registe Office of the Company.

THE CALCUTTA MONEY MARKET

INTER-BANK FUNDS EASY

Wednesday, 11th November.

THE seasonal increase in demand for advances has continued at a moderate pace. In the Calcutta money market last week the jute mills showed the largest increase in offtake of the main sources of demand. There was also a slight increase in the requirements of the sugar mills. Others, including grain storage, were round about the same. The interbank market has turned easier and the nominal rate is fluctuating between 1¾ and 2 percent. There is reported to be a large number of lenders over.

Export bills have again been scarce in the Exchange market. Remittances continue poor. In the London market, the pound sterling is stronger fractionally against all the principal currencies.

BULLION WAS STEADY AND BULLS APPEAR TO HAVE squeezed the bears. Silver advanced from the previous week's level of Rs. 208.75 to Rs. 209.75, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 209.25. The London and New York prices were shown at 89-7/8d. and 91.375 cents.

In sympathy with silver gold improved from Rs. 125.50 to Rs. 126. The sovereign at Rs. 81.25 showed a rise of 50nP.

DURING THE WEEK ENDED 6TH NOVEMBER, GOVERNment of India Treasury bills for Rs. 82,14,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 10th November. The total amount offered was Rs. 4,50,00,000. Tenders at Rs. 99.400 were accepted in full, the average rate of acceptance being Rs. 2.405 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 16th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 11th November to 14th November at Rs. 99.416 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 4th November to 7th November.

RISES OF RS. 18.19 CRORES TO RS. 1,715.08 CRORES in the total note issue and of Rs. 18.07 crores to Rs. 1,704.27 crores in active notes were outstanding features of the return of the Reserve Bank of India for the week ended 6th November, 1959. The currency expansion was covered by increasing rupee securities in the paper currency reserve by Rs. 20.01 crores to Rs. 1,301.66 crores. This was presumably done by partly transferring securities from the Banking Department in which investments declined by Rs. 11.08 crores to Rs. 229.56 crores. Deposits of the Government of India fell by Rs. 2.19 crores to Rs. 52.85 crores and other Government accounts were Rs. 16.34 crores lower at Rs. 13.92 crores. Balances of commercial banks at Rs. 73.61 crores showed a rise of Rs. 17 lakhs. Balances held abroad again rose by Rs. 1.76 crores to Rs. 36.95 crores. Other loans and advances declined from Rs. 92.47 crores to Rs. 89.99 crores, of which advances to scheduled banks against usance bills amounted to nil (Rs. 1.70 crores). Ways and Means advances stood at Rs. 24.93 crores, against Rs. 20.25 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 30th October, 1959, shows a drop of Rs. 7.80 crores to Rs 569.66 crores in total deposits. Investments in Government securities are down by Rs. 1.43 crores to Rs. 385.84 crores, while other authorised investments remain unchanged at Rs. 1.17 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 3.66 crores to Rs. 91.30 crores. Cash and balances are, in consequence, shown at Rs. 25.79 crores or Rs. 4.88 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 30th October, 1959, shows demand and Time liabilities at Rs. 726.28 crores Rs. 23.75 crores on account of borrowings from banks) and Rs. 1,126.55 crores (Rs. 27.28 crores), compared with Rs. 749.35 crores (Rs. 27.78 crores) and Rs. 1,125.51 crores (Rs. 28.07 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 3.76 crores and Rs. 2.42 crores to Rs. 39.48 crores and Rs. 72.31 crores, respectively. There is a drop of Rs. 1.03 crores to Rs. 794.10 crores in investments. Advances and bills discounted at Rs. 940.04 crores show an increase of Rs. 9.10 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.0 percent and 50.7 percent, against 6.3 percent and 49.7 percent.

THE BOARDS OF THE HONGKONG AND SHANGHAI Banking Corporation and the British Bank of the Middle East have announced that agreement has been reached subject to formal contract under which the Hongkong and Shanghai Banking Corporation will make an offer to the shareholders of the British Bank of the Middle East to acquire their shares in exchange for new shares of the Hongkong and Shanghai Banking Corporation to be issued, credited as fully paid, on the basis of one new share of the Hongkong and Shanghai Banking Corporation for every 14 shares (ex interim dividend to be declared on 10th November, 1959) of the British Bank of the Middle East which it is anticipated will be unchanged. The new shares of the Hongkong and Shanghai Banking Corporation will rank *pari passu* in all respects with the existing shares and will be registered on the London Register. The directors of the British Bank of the Middle East have agreed to recommend this offer for acceptance. Shareholders of the British Bank of the Middle East who do not wish to receive shares of the Hongkong and Shanghai Banking Corporation are to be given the option of taking cash at the rate of £3 17s 6d a share (ex interim dividend declared on 10th November, 1959) of the British Bank of the Middle East. The offer will be conditional upon acceptance in respect of 90 percent (or such lesser percentage as the Hongkong and Shanghai Banking Corporation may decide) of the shares of the British Bank of the Middle East and upon permission to deal in and quotations for the new shares of the Hongkong and Shanghai Banking Corporation to be issued in exchange being granted by the Stock Exchange, London. If the offer is successful, it is the intention of the Hongkong and Shanghai Banking Corporation to retain the separate identity and management of the British Bank of the Middle East operating in accordance with its Royal Charter which provides for its board meetings to be held in England. Full details of the offer will be communicated to shareholders of the British Bank of the Middle East as soon as possible.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of July 1959:

(1) At the Reserve Bank of India in India	...	Rs. 61,02,57,000
(2) At treasuries in India	...	12,18,000
(3) In England (Sterling converted at 18d the Rupee)	...	1,11,28,000
Total	...	62,26,03,000

TREASURY BILL MATURITIES

BIG INDUSTRIAL AREA AROUND U.P. ALUMINIUM PLANT FORESEEN

Mr Lloyd Amos, chief of Kaiser Aluminium's Foreign Operation Projects, has visualised a big industrial area around the proposed Hindustan Aluminium plant in Rihand, Uttar Pradesh. The plant, planned by Hindustan Aluminium, would be the basic essential plant and provide a foundation for many types of factories to transform the otherwise "useless blocks of aluminium into useful forms." The Kaiser expert has estimated that while the aluminium project proper may employ about 2,000 persons, the industries which would use the products of the Rihand plant would employ about ten times this number, counting only those directly in industry. Throughout the world, industries based on aluminium are started near the source of raw material after the basic plant goes into production. This, Mr. Amos feels, will be especially true of Rihand because finished products could be transported with equal ease to Delhi, Calcutta or Bombay. Mr. Amos considers the 20,000-ton plant, now planned, a good basic step and he is confident that it can be expanded to "five or ten times this size within a few years," provided dependable and economical sources of electric power are available. Aluminium cannot be produced without a dependable source of electrical power available at reasonable cost. With electric energy actually an essential raw material representing today approximately 20 percent of the entire cost of producing aluminium, the industry must and will establish itself near to suitable sources of power. According to Mr. Amos, the Rihand aluminium plant will be commissioned

HIGHER PRICE LEVELS ATTRACT PROFIT-TAKING

NEW CALCUTTA IMPROVEMENT TRUST LOAN

Wednesday Evening.

THE recent rise in share prices has attracted some profit-taking, and towards the close of the week under review prices dropped to well below the recent high levels recorded. The Sino-Indian border situation is still causing concern, and another factor which is tending to keep the market in check is the possibility of a reshuffle of the Central Cabinet when the forthcoming Parliament session begins on 16th November. The announcement regarding an increase in steel retention prices is eagerly awaited and if the increase comes up to market expectations, the speculative issues may begin to move again. The October jute goods stock figures released by the I.J.M.A. yesterday were encouraging and show that the statistical position of the industry is improving steadily.

The Calcutta Improvement Trust will approach the public on 16th November with a Rs. 65 lakhs, 4½% Debenture loan, at an issue price of Rs. 99.50. The loan will be repayable at par on 16th November, 1974. Interest will be payable half-yearly on 16th May and 16th November, respectively. With the approach of the busy season in the money market, institutional investors have been restricting their purchase of gilt-edged securities, although there is still a good enquiry for short-dated issues. Three percent Conversion Loan was marked down further to Rs. 74.60, which was tonight's closing quotation.

Little interest was shown in bank shares, but prices were generally unchanged.

With the exception of Burrakur Coal, which met with good enquiry and improved from Rs. 17.50 to Rs. 17.75, and Raneegunge which rose from Rs. 17.06 to Rs. 17.87, coal shares generally were shaded. Amalgamated were marked down to Rs. 25.25 and Bengal to Rs. 305. Karanpura were lower at Rs. 131 as were Pench Valley at Rs. 22.12. New Beerbhoom were fairly steady at Rs. 21.50.

In cotton textiles, Jay Shree provided the outstanding feature with the price moving up from Rs. 10.37 to Rs. 10.94. Elgin Mills were steady at around Rs. 16.12, but Kesoram were marked down to Rs. 19.81 from Rs. 19.25.

In electrics, Calcutta were steady at Rs. 15.44 while prices of other issues were unchanged at last week's levels.

In the engineering group, Indian Iron & Steel were at one time done up to Rs. 24.54, but later declined to Rs. 24.21; tonight's closing quotation was Rs. 24.25. Bhartia Steel were better at Rs. 17.37 and Indian Galvanising rose sharply to Rs. 22. Indian Standard Wagon were wanted at the higher rate of Rs. 96 and Jessops were firm at Rs. 34. Textile Machinery were easier at Rs. 24.95, but J. K. Steel were marked down from Rs. 13.81 to Rs. 13.37.

Despite the reduction in the October stock figures, jute shares met with moderate profit-taking and prices generally were slightly below last week's levels. The Bird group of shares, however, were comparatively better.

Tea shares moved from strength to strength and widespread gains were recorded, as will be seen from the following table :

	Opening 5th November, 1959	Closing 11th November, 1959
	Rs.	Rs.
Banarhat	282	290
Basmatia	27	27.37
Dhelakhat	21.25	21.75
Huldibari	21.50	22.25
Tezpore	18.75	19

In paper, India Paper Pulp provided the outtanding feature and at one time rose from Rs. 22 o Rs. 24.37, but profit-taking at the close brought he price down to Rs. 23.75. Orient were shaded t Rs. 37.50, as were Sirpur at Rs. 14. Titaghur were well maintained at around Rs. 45.37. Shree Gopal eased to Rs. 24.50.

In sugar, Belsund receded from Rs. 15.56 to Rs. 15, but Champaran and Dyer Meakin were better at Rs. 21 and Rs. 19 respectively.

Among miscellaneous industrials, Angelo Brothers were better at Rs. 19.69 as were Indo-Burma Petroleum at Rs. 27.50. Dunlop Rubber met with profit-taking and receded from Rs. 37.75 to Rs. 36.25. Indian Aluminium were softer at Rs. 22.75 and Indian Cables dropped slightly to Rs. 31. India Steamship recovered to Rs. 13.62 and Jaipur Udyog moved up from Rs. 10.12 to Rs. 10.44. Martin Burn were in keen demand and rose from Rs. 26.81 to Rs. 27.37. Metal Box were firm at Rs. 44, as were National Insulated Cables at Rs. 31. National Carbon were shaded at Rs. 39.87 while Rallis were well maintained at Rs. 87. Rohtas Industries met with profit-taking and reacted from Rs. 27.69 to Rs. 26.81.

In the mining group, Indian Copper fluctuated narrowly at around Rs. 4.01. Orissa Minerals met with moderate enquiry and recovered to Rs. 36.

Barnagore Jute

The Barnagore Jute Factory Company has made a profit of £286,539 for the year ended March 1959. Depreciation absorbs £55,154. Transferring £1,815 to development rebate reserve and making other adjustments, there is a balance of £278,004. Bringing in a loss of £175,567, an ordinary dividend of 10 percent, less tax, has been declared to absorb £16,844, leaving a carry-forward of £67,968. The directors say : "As to the future, we gave a note of warning last year that the industry was particularly vulnerable to any general recession in the volume of international trade throughout the world. While repeating this warning, we are pleased to be able to report that up to date the results are being maintained on at least as satisfactory a level as last year." By concentrating all production in the East Mill, the South Mill buildings and equipment became surplus to requirements. A contract for the sale of the South Mill land, buildings and machinery for Rs. 29,25,555 was entered into prior to 30th September, 1958, and the purchaser paid the earnest money of Rs. 2.25 lakhs due under the contract by that date. A dispute has, however, arisen about the terms of the agreement for sale and a case has now been instituted in the High Court in Calcutta.

West Bengal Coalfields

West Bengal Coalfields Ltd. has made a profit of Rs. 8.40 lakhs for the year ended March 1959. Depreciation is allocated Rs. 2.78 lakhs. Bringing in Rs. 7,951, transferring Rs. 82,171 to development

BEST VALUE
FOR YOUR MONEY

A cheap battery may seem a bargain, but it is really costlier in the long run. The cheapest battery in the end is the one that gives the most in months of reliable service. The long-lived CB 95 alloy plates, the virtually indestructible Porvic separators and the shock-resistant hard rubber container all add up to make Silver Exide the cheapest battery in the long run. You get the best value for your money when you buy Silver Exide, the battery manufactured under strict Quality Control at every stage of production.

Silver Exide

Still keeps going when the rest have stopped

CHLORIDE & EXIDE BATTERIES (EASTERN) PRIVATE LTD.

EBSC-3B

rebate reserve and making other adjustments, there is a balance of Rs. 2,07,902. A dividend of 40nP a share has been paid, leaving a carry-forward of Rs. 7,982. Raisings amounted to 254,969 tons and despatches to 249,458 tons. Depillaring operations continued in the Moira colliery, and working there remains satisfactory. But working at the Samla Manderboni colliery continued to be difficult, primarily because of various troubles in sand-stowing. Commenting on further development programmes, the directors state that they have started the work of opening the Jambad seam in the Moira colliery. The progress of this scheme is reported to be satisfactory so far. Sinking has reached a very advanced stage and it is hoped that initial production will be available by the middle of 1960.

National Rolling

Providing Rs. 4.81 lakhs for depreciation, against Rs. 5.34 lakhs, the profit of National Rolling and Steel Ropes Ltd has declined from Rs. 11.66 lakhs to Rs. 10.54 lakhs for the year ended June 1959. Taxation provision absorbs Rs. 1.60 lakhs (Rs. 2.70 lakhs) and general reserve Rs. 3½ lakhs (Rs. 5 lakhs). The ordinary dividend is maintained at Re 1 a share to absorb Rs. 4 lakhs. The carry-forward is Rs. 26,079, compared with Rs. 23,120 brought in. The directors state that the supply of M.S. billets continued to cause anxiety, although towards the latter part of this period it showed some improvement. The prospects for steel wires and steel wire ropes remain encouraging.

Lansdowne Jute

There is a profit of Rs. 6.97 lakhs for the Lansdowne Jute Company for the year ended March 1959. Depreciation absorbs Rs. 4.65 lakhs. Bringing in a loss of Rs. 9,72,635, transferring Rs. 52,500 from general reserve and making other adjustments, a debit balance of Rs. 7,58,162 is carried forward. Preference dividends for the six months ended September 1956 have been paid. The directors state that the arrangement with the Lawrence Jute Company Limited for using the loom-hours pertaining to 317 looms up to 28th February, 1959, and 309 looms thereafter following the 1½ percent scaling of looms on 2nd March, 1959, is now working smoothly to the benefit of both companies. The results for the current year to date show a substantial improvement.

Tata Steel Production

Tata Industries Private Ltd, managing agents of the Tata Iron and Steel Co. Ltd, report that the total approximate production of iron and steel at the steelworks in Jamshedpur during October 1959 was: pig iron 133,200 tons; steel ingots 129,600 tons; semi-finished steel for sale 36,100 tons; and finished steel 68,500 tons.

Bombay Market

PRICES FALL ON SETTLEMENT CONSIDERATIONS

INCREASED TAX FEARS SUBDUE SENTIMENT

Wednesday Evening.

THERE was a decline in share prices in the Bombay Stock Market towards the close of last week due to settlement considerations. Operators were inclined to take a cautious view of political developments. It was feared that increased defence expenditure might force the Government to increase taxation further. There was nevertheless no selling pressure, as corporate news continued to be encouraging. The piece-goods markets are buoyant and a number of companies have announced their plans for expansion. Advices from the commodity markets were fairly strong.

Tata Steels were quoted at Rs. 155.75 and the selling pressure in rights shares was offset to some extent by reports of increased output during October. Indian Irons were lower at Rs. 24.20 on pressure from Lyons Range, and the latest increase in the retention price of pig iron has had a temporary bullish effect. Premier Construction were bought at Rs. 359 and Tata Locomotives were placed at Rs. 201.50. Alcock Ashdown were available at Rs. 251. Motor shares were steady and Premier Automobiles were transacted at Rs. 139.50. Hindustan Motors realised Rs. 13.52 on influential support.

A substantial improvement to Rs. 625 in the price of Century high-lighted the cotton mill group and bullishness was helped by satisfactory working of the company during the first half of the current year. Bombay Dyeing were taken at Rs. 68.30 and Simplex were done at Rs. 160.50. Swadeshi were dealt in at Rs. 261.50 and Kohinoor changed hands at Rs. 319.50. India United Ordinary were offered at Rs. 10.84 and Apollo were quoted at Rs. 1.26.

In the miscellaneous group, Belapur Sugar declined to Rs. 318 on the payment of a lower net dividend. A dividend of Rs. 21 a share, subject to deduction of tax, has been declared. This is equal to a net dividend of Rs. 14.70 a share, compared with Rs. 20, tax-free, paid in the previous year. Phalton were indicated at Rs. 181 but Maharashtra Sugar were supported up to Rs. 263 by knowledgeable quarters. Cement shares were steady and Associated Cement were done at Rs. 155. Digvijay came to hand at Rs. 150.50. Steamship company shares showed little variation and Scindia Steamship were available at Rs. 16.80. Great Eastern Shipping were quoted at Rs. 19.44. Mining shares were quiet and Shivrajpur Syndicate were offered at Rs. 89. National Rayon reacted to Rs. 382 on profit-taking and Tata Chemicals declined to Rs. 17.80. Bombay Burmah were lowered to Rs. 539. There was scattered interest in Voltas at Rs. 179.50 and Ceat Tyres were transacted at Rs. 171.

Banking and insurance shares were quiet. Central Bank of India were shaded at Rs. 49 and Bank of India were transacted at Rs. 107. New India shares changed hands at Rs. 66.30 and Vulcan made Rs. 21.52.

Turnover in electricity supply company shares was limited and Ahmedabad Electric were bought at Rs. 95.80. Tata Power were quiet at Rs. 1,115 and Bombay Suburban were available at Rs. 103.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, and Quotations for the corresponding Closing Date a Year Ago. Bringing
greater prosperity to INDIA

As one of the thirteen British companies forming ISCON, Davy-United are responsible for all the Rolling Mills, the Wheel and Axle Plant, the Central Engineering Maintenance Shops and the Foundry of the great new Durgapur Steelworks from which will emerge the steel that is to be part of India's industrial future. Durgapur will produce over a million tons a year, enabling the Government of India to reduce considerably the yearly expenditure on foreign steel imports. It will provide the steel and pig iron for new industries and for urgently needed railways, hospitals and schools. And it will create nationwide employment for thousands of people. Davy-United are proud to be undertaking a major part in a project which will help to build a new and flourishing India.

Twice Weekly—

Wednesdays & Saturdays at 6 p.m.

Fly by LUFTHANSA German Airlines

DIRECT TO GERMANY!

Connecting India with the very heart of Europe, Lufthansa, German Airlines, forges yet another link in its world-wide net-work of routes.

Twice weekly, Lufthansa flies from Calcutta to the main cities of Germany—Frankfurt, Dusseldorf, Hamburg.

Whether you're an industrialist, a businessman, a student, a government official or an educationist—you'll appreciate the traditional, generous German hospitality of Lufthansa, aboard the swift Super-G constellations.

Lufthansa, German Airlines, directly connects Germany with Bangkok, Calcutta, Karachi, Cairo and Rome.

Coordinated flight schedules provide convenient connections with Air France and Alitalia.

STOCK MARKET RECOVERS TOWARDS CLOSE

INDUSTRIALS FALL: GILT-EDGED SLIGHTLY BETTER

London, 11th November.

THE stock market recorded its first material setback since the election during the past week, but this did not go very far and a recovery soon took place. Prices of industrials were lower on balance although they were above their worst levels. The rest of the market was irregular on balance. The pace of the advance since the general election could not be maintained indefinitely, and a setback was only to be expected sooner or later. It was, however, no more than a normal and healthy adjustment after the recent advance, and the underlying strength appeared to be quite unaffected. The chief effect of the setback was seen in the volume of business, which contracted appreciably compared with the post-election level of activity. The number of bargains a day fell to around the 20,000 level, compared with around 24,000 in the previous week. Buying was more selective, and there was a good deal of profit-taking. The U.K. Chancellor of the Exchequer's cautious speech on the economic situation and the lifting of many import controls contributed to the reaction, while the subsequent recovery was encouraged by a continued flow of good company statements and particularly by the half-yearly statement of Courtaulds which disclosed bumper profits and a sharp increase in the interim dividend. Gilt-edged eased further on profit-taking but buyers returned later, and on balance prices were slightly better. In foreign bonds, Greek bonds advanced sharply on debt settlement hopes. Gold shares improved on a selective demand but turned easier to show very little change on balance. Diamonds reacted on profit-taking but tin shares were firm. Lead, zinc and copper shares were lower. Oil shares receded and Middle East issues became somewhat unsettled by a report from Saudi Arabia that Arab States were preparing to demand 50 percent of the profits made anywhere in the world from Middle East oil. Rubber shares turned irregular after their recent strong advance but there were a number of good features. Gains predominated in a generally irregular tea share market.

The Money Market

Credit conditions in the money market had phases of ease and discomfort during the past week due to the manner in which discount houses took up their allotment of new Treasury bills. After a difficult day at the beginning of the week, the supply of funds was such that easy conditions prevailed, with borrowers paying lower rates for their overnight accommodation, ranging from 3½ percent to 2 percent, although the bulk of their requirements was around a level of 2⅞ percent and 3 percent. On Thursday, the situation changed considerably as discount houses were paying for a very large quantity of new bills, and with other factors to affect the position, money on that day was in short supply and met with keen demand with the rate for day-to-day loans as high as 3⅞ percent and the general rate 3½ percent. A small amount had to be borrowed from the Bank of England at Bank rate terms. Subsequently, there was a return to easier conditions, although the rate for money held firm at 3⅜ percent. At the weekly Treasury bill tender, there was a further small decline in the average rate to £3 7s 4.62d percent for 91 days' bills and to £3 8s 4.31d percent for 63 days' bills.

Activity on Wall Street

Activity in U.S. Government obligations during the past week was rather slow. Most interest centred in the new one-year 4¼ percent certificates and the four-year 4⅞ percent notes recently offered in exchange for nearly $9 million worth of maturing issues due on 15th November. The new issues, trading on a "when issued" basis commanded a small premium over their cash-in value at par during most of the period. Intermediate and longer maturity Treasury bills were narrowly mixed. Investment quality corporates were slightly higher and rails were mostly lower. Convertibles were generally mixed. The strength of the Greek issues featured the foreign bonds market. The 6 percents and 7 percents moved up by three points or more on reports that the Greek Government might be exploring possibilities of settling its debt with foreign bond holders. Elsewhere, trading was limited.

U.K. Export Licensing

The U.K. Board of Trade recently announced that from 10th November, the following items would no longer be subject to export licensing control: (1) gold in manufactured and semi-manufactured forms; (2) air-frame and aero-engine parts, spares and components to Egypt, Israel, Saudi Arabia, Syria and the Yemen. The control of exports of gold coin and gold bullion under the Exchange Control Act, 1947, remains in force. But an export licence is no longer required for gold compounds and articles, made of or containing gold, unless they are mounted or set with diamonds. Licensing control on air-frame and aero-engine parts, spares and components for export to Egypt has operated since 16th August, 1956, and to Israel, Saudi Arabia, Syria and the Yemen since 13th December, 1956.

New Delhi

SIR NORMAN KIPPING URGES GREATER REALISM IN PLANNING

GROWING SHORTAGE OF ELECTRICITY IN EASTERN INDUSTRIAL REGIONS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Director-General of the Federation of British Industries, Sir Norman Kipping, who was here last week, said that a realistic third plan would have greater chances of attracting foreign capital than a plan unrelated to resources but based on what is described as the needs of the people. "A realistic plan matched by resources will inspire greater confidence among foreign investors." His talks with officials and non-officials gave him the impression that planning is having a stultifying effect on initiative. "Everyone is waiting for the plan, instead of using his own initiative. I would have liked more private initiative generating new schemes." Another matter about which Sir Norman expressed his concern is "the involved question of tied loans and barter schemes of foreign assistance". He feared that the trend would have far-reaching consequences, "not very desirable from India's point of view."

Such foreign assistance as India has been receiving is not entirely untied. It can broadly be divided into three categories. First, there are the loans from the World Bank, tied to particular projects, although India is at liberty to purchase plant and equipment from any country. Loans from the U.S. Development Loan Fund were in the same category, but they are no longer going to be so. Thirdly, there are the loans from communist countries, which are not only tied to projects, but have been given in kind in the form of plant and equipment. In between are the loans from the western countries and Japan which have given freedom to India to buy from the cheapest sources within the country which has advanced the loan. The yen credit, for example, has given freedom to India to buy from any sources, but only within Japan. The point is made that the United Kingdom permitted India to use the sterling balances in buying goods even from non-British sources. India's contention is that the sterling balances belonged to her. She was using the Bank of England as her banker and was within her rights to use them in the best way she liked it.

It is true that India will no longer be able to use D.L.F. loans to buy British or West German equipment. She may also have to pay a higher price for the American equipment than she would have done otherwise. New Delhi, however, holds that the change in the U.S. loan policy makes India's reliance on Europe and Japan even greater. Sir Norman stated that in the postwar period, British private investment in India had more than doubled and he saw no reason why this trend should not continue.

Double Tax Avoidance Agreement

The Member of the Central Board of Revenue, Mr. V. V. Chari, has returned from Japan after signing an agreement for the avoidance of double taxation of income. India has already signed such an agreement with Sweden. There is also one with Switzerland for the avoidance of double taxation of income earned by the air companies of the two countries. Agreements have been signed with West Germany, Denmark and Norway, but they are still to be ratified. The U.S. convention for the avoidance of double taxation of income, it is expected, will be signed soon. Negotiations for such agreements are in progress with France and Greece. In the Commonwealth, India has agreements with Pakistan and Ceylon.

The Swedish agreement is regarded as the model on which all other agreements have been based. The following are extracts from the important provisions of that agreement:

"Tax shall not be levied in one of the territories on the industrial or commercial profits of an enterprise of the other territory unless the profits are derived in the first-mentioned territory through a permanent establishment of the said enterprise situated in the first-mentioned territory. If profits are so derived, tax may be levied in the first-mentioned territory on the profits attributable to the said permanent establishment.

"There shall be attributed to the permanent establishment of an enterprise of one of the territories situated in the other territory the industrial or commercial profits which it might be expected to derive in that other territory if it were an independent enterprise engaged in the same or similar activities under the same or similar conditions and dealing at arm's length with the enterprise of which it is a permanent establishment.

"If the information available to the taxation authority concerned is inadequate to determine the profits to be attributed to the permanent establishment, nothing in this paragraph shall affect the application of the law of either territory in relation to the liability of the enterprise to pay tax on an amount determined by the exercise of a discretion or the making of an estimate by the taxation authority of that territory: provided that such discretion shall be exercised or such estimate shall be made, as far as the information available to the taxation authority permits, in accordance with the principle stated in this paragraph.

"For the purposes of this agreement, the term 'industrial or commercial profits' shall not include income in the form of rents, royalties, interest, dividends, management charges, remuneration for labour or personal services or income from the operation of ships or aircraft, but shall include rents or royalties for cinematographic films.

"Where an enterprise of one of the territories carries on business with an enterprise of the other territory, and it appears to the taxation authorities of the first-mentioned territory that due to the close connection between such enterprises conditions are made or imposed between the two enterprises in their commercial or financial relations which differ from those which would be made between independent enterprises dealing at arm's length with one another, then any profits which would, but for those conditions, have acc ed to one of the enterprises, but by reason of th conditions have not so accrued, may be incluc in the profits of that enterprise and taxed acc ingly. In consequence, the necessary rectifi tions should be made concerning the income the other enterprise.

"Income derived from the operation of aircr by an enterprise of one of the territories shall be taxed in the other territory, unless the aircr is operated wholly or mainly between places wi in that other territory.

"When a resident of Sweden, operating shi derives profits from India through such ope tions carried on in India, such profits shall subject to tax in Sweden as well as in India; the tax so charged in India shall be reduced by amount equal to two-thirds of the tax so charg and the reduced amount of Indian tax payable the profits shall be allowed as a credit against Swedish tax charged on income accrued to or ceived by the resident of Sweden during the y in which such reduced Indian tax was paid.

"When a resident of India, operating shi derives profits from Sweden through such ope tions carried on in Sweden, such profits shall subject to tax in India as well as in Sweden; the tax so charged in Sweden shall be redu by an amount equal to two-thirds of the tax charged, and the reduced amount of Swedish payable on the profits shall be allowed as a cre against any Indian tax charged on such incor

"Royalties derived by a resident of one of territories from sources in the other territ may be taxed only in that other territory. D dends paid by a company which is a resident one of the territories to a resident of the ot territory may be taxed only in the first-mentio

WORKING TOGETHER
to help build Durgapur for India

A PARTNERSHIP of Indian and British skills is building a great new steelworks where sparse jungle lay at Durgapur. It is a project that will produce more than a million tons of steel for the nation every year.

Helping to build this giant of concrete and steel are the men of CEMENTATION-PATEL—13,500 Indian and 75 British engineers, technicians and workers. Together they have laid the foundations for most of this project's buildings and plant. Together they are building one hundred and forty miles of roads, railways and pipelines.

CEMENTATION-PATEL, the project's civil engineers, were first to arrive at Durgapur. In three years, they have moved enough earth and used enough concrete to raise a small city—three years that crown THE CEMENTATION COMPANY's 30 years of service in India.

territory. Interest on bonds, securities, notes, debentures or any other form of indebtedness, derived by a resident of one of the territories from soures in the other territory may be taxed only in that other territory.

"Income from immovable property may be taxed only in the territory in which the property is situated. For this purpose any rent or royalty or other income derived from the operation of a mine, quarry or any other extraction of natural resources shall be regarded as income from immovable property. Capital gains derived from the sale, exchange or transfer of a capital asset, whether movable or immovable, may be taxed only in the territory in which the capital asset is situated at the time of such sale, exchange or transfer.

"Remuneration other than pensions and annuities paid in Sweden for services rendered therein out of the public funds of India shall not be taxed in Sweden unless the payment is made to a national of Sweden. Remuneration other than pensions and annuities paid in India for services rendered therein out of the public funds of Sweden shall not be taxed in India unless the payment is made to a national of India.

"The provisions of this article shall not apply to payments for services in connection with any trade or business carried on by either of the contracting parties or political sub-divisions thereof for purposes of profits. The provisions of this article shall also apply to remuneration other than pensions and annuities, paid by the Reserve Bank of India, the public railway authorities and the postal administration of India and by Sveriges Riksbank, statens jarnvagar, postverket and televerket.

"Any pension or annuity derived by a resident of one of the territories from sources in the other territory may be taxed only in that other territory. Profits or remuneration for professional services or for services as an employee (including services as a director) performed in one of the territories by an individual who is a resident of the other territory may be taxed only in the territory in which such services are performed. An individual who is a resident of India shall not be taxed in Sweden on profits or remuneration referred to above

if "(a) he is temporarily present in Sweden for a period or periods not exceeding in the aggregate 183 days during the relevant calendar year;

"(b) the services are performed for or on behalf of a resident of India;

"(c) the profits or remuneration are subject to Indian tax; and

"(d) the profits or remuneration are not deducted in computing the profits of an enterprise chargeable to Swedish tax.

"An individual who is a resident of Sweden shall not be taxed in India on the profits or remuneration referred to in this paragraph if:

"(a) he is temporarily present in India for a period or periods not exceeding in the aggregate 183 days during the rele year;

"(b) the services are performed for or o half of a resident of Sweden;

"(c) the profits or remuneration are subje Swedish tax; and

"(d) the profits or remuneration are no ducted in computing the profits enterprise chargeable to Indian tax.

"Where an individual permanently or p minantly performs services on ships or air operated by an enterprise of the territories services shall be deemed to be performed in territory. A professor or teacher from one o territories, who receives remuneration for t ing during a period of temporary residence exceeding two years, at a university, co school or other educational institution in the territory, shall not be taxed in that other terr for that remuneration.

"An individual from one of the territories is temporarily present in the other territory s

"(a) as a student at a university, colleg school in that other territory;

"(b) as a business apprentice; or

"(c) as the recipient of a grant, allowan award for the primary purpose of or research from a religious, charit scientific or educational organisatior

"shall not be taxed in that other territory remittances from abroad for the purposes o maintenance, education or training, or again scholarship.

"The laws in force in either of the territ will continue to govern the assessment and tion of income in the respective territories e where express provision to the contrary is in this agreement."

Investment Guarantee Agreements

India will shortly sign investment guar agreements with the U.S.A. and West Gerr These will guarantee against the confiscatic investments from those two countries anc payment of fair compensation in the eve nationalisation of any particular undertakir which the nationals of these two countries ha stake.

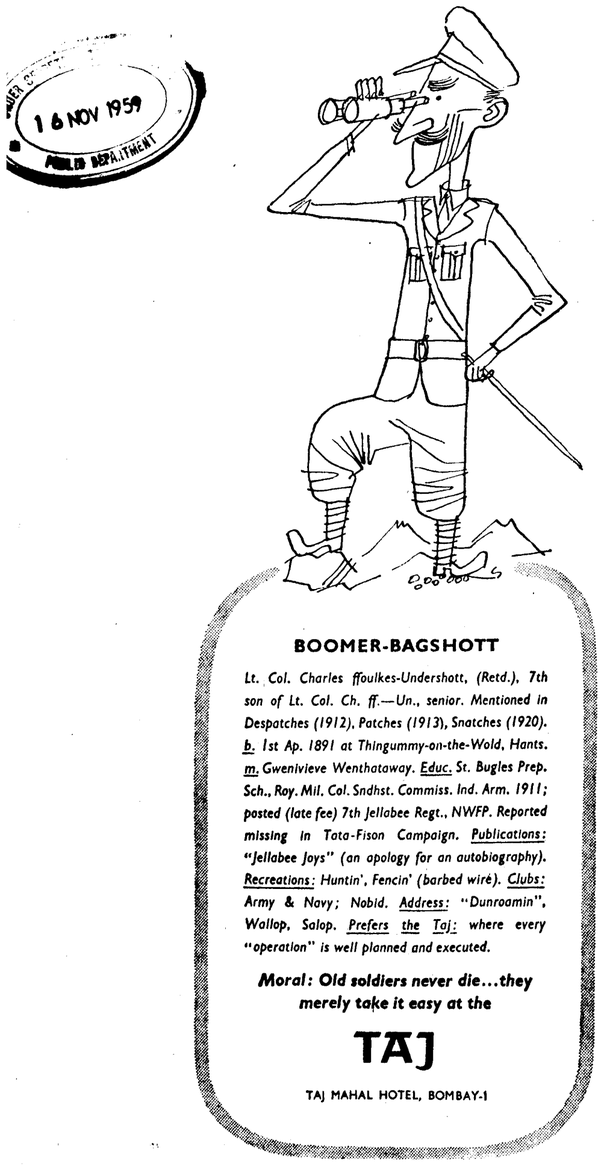
Business for Parliament

The Government proposes to introduce 19 Bills in the forthcoming session of the Lok S beginning on 16th November, 1959. Other bus includes the presentation, discussion and voti supplementary demands for grants for 1959-60 supplementary demands for grants (Kerala 1959-60.

Among the new Bills, two relate to the b ment of children. One, the Children's Bill, v it is proposed to refer to a joint committee, provide for the care, protection, mainten welfare, training, education and rehabilitatic neglected children and juvenile delinquents i Union territories of India. The other, the In Penal Code (Amendment) Bill, will provid the prevention of kidnapping of children.

The Import and Export Control (Amendn Bill will extend the life of the parent Act by years. The Indian Tariff (Amendment) B meant to continue or discontinue protectic certain industries.

Estate Duty on Agricultural Lands



Through the Estate Duty (Amendment) the 1958 Act will be made applicable to agr tural lands. Fragmentation of plantations is prevented through the Plantations La (Amendment) Bill. Two Bills will be introd one for Tripura and the other for Manipur, to vide for the consolidation and amendment o law relating to land and land revenue in Union territories. The Tripura Excise Law peal) Bill will also be introduced to repea Tripura Excise Act.

The working conditions of motor tran workers are to be regulated through the M Transport Workers Bill. The Motor Vel (Amendment) Bill aims at having a uniform concerning the insurance of motor-vehicles ag third party risks. Another Bill is mean amend and consolidate the law relating to practitioners and to provide for the constit of bar councils and an all-India bar.

The Indian Statistical Institute Bill is m to declare the Indian Statistical Institut Calcutta as an institution of national in tance. The Press and Registration of B (Amendment) Bill is meant to remove ce difficulties which have been noticed in the v ing of the parent Act. The Married Wor Property (Amendment) Bill is being exte to former Part B States.

Twenty-seven sittings have been put down the Lok Sabha session, including four and a half for private members' business, three and a days for resolutions and two days for Bills addition to 19 new Bills, seven Bills are alr pending before the Lok Sabha including the S rities Contracts Regulation Amendment Bill the Mines Amendment Bill. The Chinese ag sion will obviously dominate the proceedings the session. The trend of non-official resolu so far tabled showed a markely leftist bia if to beat the communists at their own g Congressmen have tabled resolutions deman the nationalisation of banks, reduction of the between the maximum and minimum incom

TAJ

TAJ MAHAL HOTEL, BOMBAY-1

the ratio of ten to one and a ceiling on moveable and immoveable property at Rs. 50,000.

The fixing of the maximum salary of Government servants at Rs. 1,000 a month has been proposed in a resolution. There are others urging the introduction of compulsory military training at one end and compulsory life insurance at the other. There are still others on free and compulsory primary education, abolition of the office of Governors, fixing terms for the President of India at only two, for an enquiry into nepotism, bribery and corruption among public servants, and into the condition of service of armed forces, on the abolition of the Social Services Board and banning the manufacture of vegetable ghee (vanaspati). There are "no days yet named for motions" to discuss the annual reports and accounts of Hindustan Steel, Asoka Hotel and the Registrar of Newspapers. Additional points have been indicated for raising a discussion on the need to give help to regional language newspapers and the decline in circulation of Hindi newspapers. The first resolution from the ballot seeks the appointment of a committee to suggest ways and means of reorganising India's administration "so that it could be helpful in achieving the goal of a welfare State." The committee asked for will consist of administrators, public men and two judges of the High Court.

Displaced Persons

Two other Bills relate to displaced persons. The Administration of Evacuee Property (Amendment) Bill is being introduced to provide for the separation of evacuee and non-evacuee beneficiary interests in *wakf-ul-aulad* properties. The proposed Displaced Persons (Compensation and Rehabilitation) Amendment Bill is meant to remove certain difficulties experienced in the working of the compensation scheme. The Haj Committee Bill will amend the Port Haj Committee Act, 1932, to bring it in line with the present requirements of Haj pilgrimage. Another Bill, the Indian Boilers (Amendment) Bill, is to be introduced to enlarge the scope of the parent Act.

Planning for Private Sector

Planning for the private sector has begun. The Planning Commission has asked all the industrial development councils to make their recommendations for inclusion in the third plan. It is also arranging meetings with the representatives of industries which have no development councils for them.

It is proposed to discuss the size of the investment programme for the organised industries, industrial priorities and some questions relating to targets with the representatives of the Federation of the Indian Chambers of Commerce and Industry early in December.

In any appraisal of resources, due account will have to be taken of the repayment programme for the very large-scale deferred payment arrangements entered into during the second plan period. Priorities will have to be allocated for the completion of projects under implementation at present. Similarly priorities will have to be given to

(a) expansion and diversification of capacity of heavy engineering and machine-building industries;

(b) increased production of iron and steel and ferro-alloys, fertilisers, aluminium, mineral oils and basic chemicals and intermediates;

(c) increased production from domestic industries such as basic drugs, newsprint, paper, cloth, sugar, vegetable oils and housing materials;

(d) fuller utilisation of existing installed capacity of industries in which there are wide gaps between capacity and production;

(e) filling of gaps in the industrial structure in relation to goods required by the industrial economy such as sulphur, carbon black and synthetic rubber; and

(f) the expansion of vegetable oils production, under consumer goods industries, so as to provide for the maximum exploitation of cottonseed and oilcakes.

Retention Prices for Pig Iron

The Government of India has decided that the prices of pig iron manufactured at the Burnpur works of the Indian Iron and Steel Company will apply provisionally to the corresponding grades of pig iron produced by the Hindustan Steel Ltd. Increases in the retention prices for the pig iron manufactured by the Indian Iron and Steel Company and T.I.S.C.O. have also been announced.

The Tariff Commission recommended a price increase of Rs. 10.64 a ton on a weighted average basis for the period 1st August, 1954 to 31st March, 1960, for pig iron produced by the Indian Iron and Steel Company. The Government of India, while accepting the recommendations of the Tariff Commission concerning the actual increases in costs, did not accept that the price increases should be given a weighted average basis. An increase of Rs. 17.23 a ton has been granted with effect from 8th July, 1957. The existing retention price of I. I. S. C. O. pig iron is Rs. 141.5 a ton. As pig iron production at the Burnpur works is not being separately costed, the Government has decided that the increase in prices recommended by the Tariff Commission and accepted by the former, should be applied to pig iron from the Kulti works till the Kulti plant ceased to operate, and to the corresponding grades of pig iron produced at the Burnpur works up to the end of March 1958 finally, and thereafter provisionally, with the intention that the prices of pig iron produced at Burnpur after 1st April, 1958, should be examined separately and adjustments based on costings made later.

An increase of Rs. 12.92 a ton in the retention price of pig iron produced by Tatas for the period 1958-60, has been granted by the Government of India. The existing retention price for T.I.S.C.O. is Rs. 128 a ton. The company represented to the Government that it was incurring higher costs in the manufacture of pig iron. The Tariff Commission also recommended a price increase on a weighted average basis of Rs. 9.54 a ton for the period 1955-56 to 1959-60. The Government has accepted the recommendation on the basis of actual increases in costs, but rejected that to raise the price on a weighted average basis.

Metallurgical Coal Shortage

An acute shortage of metallurgical coal has now begun to make itself felt, so much so that a conference was recently held in Calcutta which was attended by the representatives of the Central Government and of producers. The conference decided to set up a small committee composed of technical experts as well as business men to make an urgent review of both the short and medium-term aspects of the problem. Until the production of the Government-owned collieries operated by the National Coal Development Corporation is substantially increased and the coal washeries which have been planned by the Government are in operation, the country's steel plants will remain largely dependent on the private sector of the coal industry for their vital coal supplies. The industry has stressed that the strict pegging of production which has been in force for several years, the inadequacy of the controlled selling price to provide funds for ploughback and new development, and finally, the parsimonious nature of the assistance granted for sand-stowing, would between them culminate in just the shortage which has now arisen. A solution must await the recommendation of the committee to which reference has already been made. But it seems clear that unless increased stowing subsidies, special consideration for deep and difficult mines, a relaxation on the prohibition on new development, as well as a realistic selling price calculated to allow for new development are allowed, the serious shortage of this vital raw material is likely to hamper seriously the expansion of Indian steel production.

Electric Supplies Inadequate

The inadequacy of planning or its poor implementation for the expansion of electricity supplies is causing increasing concern in industrial circles, particularly in the eastern parts of the country. The planners have placed implicit faith in the large, multi-purpose river control projects which, it was supposed, would provide all the electricity which the country could possibly consume, and any other development of thermal stations in either the public or the private sector was for the most part disapproved. In the result, an acute power shortage is now asserting itself, not only in the "Ruhr of India", which should be served by the Damodar Valley Corporation, but also in the growing mining and industrial area of Orissa which is in the parish of the Hirakud Dam, and even in the Calcutta industrial area. The Calcutta Electric Supply Corporation, which could and should have built another thermal generating station five or ten years ago, was not permitted to do so on the ground that all the power it could generate or distribute would be available from the Damodar Valley Corporation. But this did not materialise, and even today cuts due to the shortage of power are quite a common feature in the Calcutta industrial area. Indeed, a point has actually been reached where in the jute industry, which is Calcutta's biggest single enterprise, besides being the second biggest export-earner in the country, many are of the opinion that even if an increase in production by the unsealing of further loomage were found to be desirable, the shortage of electric power alone would be a limiting factor.

Sugar Movement in Southern States

To ensure that in future each State in the southern region can arrange for the proper distribution of sugar on the basis of a fixed quota, inter-State movement has been prohibited in the area comprising Andhra Pradesh, Mysore, Madras, Kerala and Pondicherry. Movement will be allowed only on the basis of export permits to be issued by the Chief Director, Directorate of Sugar and Vanaspati, Ministry of Food and Agriculture, New Delhi. There will, however, be no restriction on movement between Madras and Pondicherry Until now there has been no restriction on inter-State movement of sugar in the southern region. In other regions, such movement is already banned.

Approaching Their Centenaries

Eleven joint-stock companies will celebrate their centenaries in the next few years. Of these, eight are tea companies. With the exception of the Bombay-Burmah Trading Corporation, Bombay, all the rest have been incorporated in West Bengal. Nine of these companies are managed by managing agents, including four by Williamson Magor and Company Ltd, two by Jardine Henderson Ltd, and one each by Gladstone Lyall and Company Ltd and Octavius Steel and Company Ltd. The following are the companies with their dates of registration:

Name of the company	Date of registration
1. East India Tea Company Ltd	7th August, 1861
2. Soom Tea Company Ltd	2nd March, 1862
3. Calcutta Landing and Shipping Company Ltd.	7th April, 1863
4. Central Cachar Tea Company Ltd.	2nd May, 1863
5. Bishnauth Tea Company Ltd	6th May, 1863
6. Bombay-Burmah Trading Corporation Ltd	4th June, 1863
7. Eastern Cachar Tea Company Ltd	5th July, 1863
8. Tukvar Company Ltd	20th July, 1863

Doubling Neyveli Lignite Output

In the third plan, the output of lignite from Neyveli, it is proposed, will be nearly doubled from 3.5 million tons to 6 million tons. Of the additional output, 1 million tons will be consumed by the thermal power station, whose capacity is being expanded by 150 megawatts. Another 1.5 million tons is being earmarked for conversion into lignite coke, to be used for the reduction of Salem iron ore. The project, it is estimated, will cost Rs. 28 crores. Three low temperature carbonisation plants for producing soft coke at an estimated cost of Rs. 22.41 crores, it is proposed, will be included in the third plan. The additional capacity of the three plants will be 1.6 million tons of soft coke.

London

U.K. CHANCELLOR URGES INDUSTRY TO KEEP DOWN PRICES

OFFICIAL MOVE TOWARDS FULL CONVERTIBILITY WELCOMED

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer, Mr. Heathcoat Amory, is not given to flights of fancy, so when he indulged in a glowing account of the country's economic prospects during the economic debate in the House of Commons last week, it carried more than ordinary weight. It was reinforced by a succession of events demonstrating his "robust confidence" that the outlook for Britain's external accounts and the reserves seems sound. Mr. Amory also had some sober advice and words of warning. He appealed to firms to keep down or even reduce prices. He also reminded those responsible for negotiating wages of their part in keeping prices steady. And he gave a warning that if the need arose, he would not hesitate to take action to check excessive demand, in other words, to reintroduce credit restraint in one form or another.

Meantime, the continuing strength of sterling and a healthy balance of payments position has enabled the Government to make rapid progress towards a return to full convertibility and the complete freedom of trade. The removal of most of the remaining controls on imports from the dollar area, western Europe and other countries outside the communist bloc came into force recently, although existing tariffs will continue to apply, and it is not expected that imports will be increased unduly. In addition, people now going abroad are able to take out of Britain £50 in sterling notes and £250 in foreign currency without formality, against only £20 and £100 previously. Both moves have been widely welcomed, and not least of all by foreign traders and Governments.

Drop in Gold Reserve

Britain's reserves of gold and convertible currencies fell in October by £93 million. This compares with a rise of £13 million in September. The fall was due entirely to the repayment to the U.S. Export-Import Bank, which involved an outlay of £91 million. But for the dollar loan repayment, there would have been a modest increase in the reserves in October. In addition to the £91-million payment to the Export-Import Bank, £4½ million was paid in settlement of debts outstanding from the European Payments Union and another £1 million was paid to the new European Fund. What is significant is that, allowing for last month's fall, the reserves at £1,080 million are only a little lower than at the beginning of this year. Meantime, the $200-million drawing from the International Monetary Fund, made at the time of the Suez crisis, has been repaid and the slate has been wiped clean with the Export-Import Bank. Britain has also had to make a payment of £58 million in gold to the I.M.F. when quotas were increased, thus strengthening second-line reserves. Nor is there any reason to suppose that the outflow of long-term capital to the Commonwealth has not been well maintained. All in all, this is an impressive performance.

American Debt Repayment

The British Government has repaid to the American Export-Import Bank the full amount of $250 million (about £90 million) which was advanced in October 1957, to support the sterling currency at a moment of heavy pressure. Interest of $5.5 million has also been paid. The Export-Import Bank advanced to the British Government a "line of credit" of up to $500 million to enable Britain to go on financing dollar purchases without undue drain on the reserves. Only half of it was actually drawn, and in February this year, the Government announced that it had decided not to draw the second half.

Repayment of the advance actually drawn was due to begin in October 1960, and to end in April 1965. The U.K. Chancellor of the Exchequer stated in a written reply to a parliamentary question that the Government had decided to pay the whole sum now "in view of the favourable external financial position of the United Kingdom." One reason for the earlier repayment is that the British Government likes to assist the U. S. administration in its efforts to reduce the balance of payments deficit which has given rise to some weakness of the dollar.

Take-over Bid Rules

Rules for take-over bids have been outlined in a report drawn up by a number of City institutions at the suggestion of the Governor of the Bank of England. They are in a booklet called *Notes on Amalgamations of British Industries*. The report recognises that take-over bids have been a feature of commerce since its earliest beginnings. It makes no recommendations that they should be curbed. It lays down the principles that there should be no interference with the free market in shares, that shareholders should be free to decide whether to sell out or not and that it is the duty of boards of directors to give full information and advice.

On procedure, the report suggests that bids are best made through the directors but, if they oppose, the bidder can still aproach shareholders direct and the board should co-operate in this. It says that a board is entitled to know who the bidder is, whether he has the resources, and his intentions concerning the future of the company. On secrecy, the report recommends an early announcement of a coming bid if there are signs of a false market in the shares, but suggests that directors should first be sure that an offer will, in fact, be coming. It declares against bids for only part of each class of capital except in very exceptional cases and says about the non-voting share: "While it may be justified in some conditions, it is not generally desirable." Referring to compensation to directors, the report says that shareholders should be given the fullest information as to how it is worked out. Its general views are summarised thus: "A board should be wary of refusing to put to its shareholders any serious and responsible offer. The well-being of the shareholders, as a whole, must prevail over that of the particular shareholders who may be directors."

Eastern Bank Merger

The long-expected bid for the British Bank of the Middle East has come from Hongkong and Shanghai Banking Corporation. Agreement has already been reached between the two boards. The Hongkong and Shanghai will offer one of its shares, quoted at £54¼, for every 14 B.B.M.E. shares ex-interim dividend, to be declared shortly. This works out at about 83s for each B.B.M.E. share, compared with a market price of 58s at the moment. Alternatively, a cash payment of 77s 6d a B.B.M.E. share ex interim dividend is offered. The board of the British Bank of the Middle East is recommending the acceptance of the offer, which is conditional on 90-percent acceptance. The Hongkong and Shanghai intends to retain the separate identity and management of the British Bank. Full details have still to be announced.

Training Commonwealth Journalists

A travelling fellowship scheme for training and educating young journalists throughout the Commonwealth has been established by the Commonwealth Press Union. It will be launched "on a modest scale" next year. Announcing this, the Union states that the objects of the scheme will be progressively achieved by arranging interchange visits by journalists of all Commonwealth countries, including Britain, to other parts of the Commonwealth. Six young journalists from overseas Commonwealth countries have been chosen for the pilot scheme. They will come to Britain for six months. Part of the time will be spent in acquiring a general idea "of the British way of life" through educational tours, covering history, culture, industry and sport. Nearly three of the six months will be spent on training, attached to one or more provincial newspapers or periodicals. A course of lectures at Oxford University on the Commonwealth will be included in the programme. The cost of the six months' visit will be met from donations by members of the Commonwealth Press Union. It hopes to extend the scope of the scheme in future years, so that fellowships can be granted to British journalists to visit other parts of the Commonwealth.

Brevities

The British Productivity Council's chairman for 1960 is Mr. W. J. Carron, president of the Amalgamated Engineering Union.

Attempts to establish a jute industry in Umtali, Rhodesia, look like failing, according to information reaching London. Already it has cost Rhodesia £1 million in subsidies and Mr. Owen, the Rhodesian Minister of Commerce, has said that he cannot continue with another similar amount spread over the next six years as the industry has asked for.

Hire-purchase trading increased sharply after the end of the August holiday period. Final estimates from the U.K. Board of Trade show that the total hire-purchase debt rose by £28 million in September, against an increase of only £14 million in August. This brought the total to £784 million at the end of the month.

The Bank of England has set up a central banking information department into which will be merged the existing overseas departments and the statistics office. This follows recommendations by the Radcliffe Committee.

SHAKESPEARE IN MADRAS

"...There was a marvellous and grand dramatic performance of "Merchant of Venice" which was celebrated by the members of the Triplicane Hindu Literary Society on the night of Sunday, the 29th September 1878...the place was over-crowded by very many audience...at every fall of the curtain the applause was great..."

The year 1878 also threw the limelight on another notable introduction—The "Three Castles" cigarettes.

In 1958, they came out in the flip-top 20's packet, changing their looks with the times. The "Three Castles" are as modern today as they were 80 years ago—and as satisfying.

PRICES RISE ON FORECASTS OF SMALLER INDIAN CROP

FALL IN SACKING STOCKS ACCENTUATES BULLISHNESS

ALTHOUGH the jute trade long ago stopped relying on official crop forecasts, a considerable amount of interest is still taken in them, their ability to sway the markets is well-known. orts have been current for the past two weeks the crop is not likely to be as big as was nally expected. It is rumoured that a leading whose figures are generally accepted, has ed its estimates downwards. These rumours had a considerable bullish influence. Talk maller imports in the mofussil markets has encouraged the belief that supplies will fall t of earlier expectations. It should, however, emembered that certain influences are at work h are tending to keep back supplies. The est this year is late, due to the lack of steep water in many places. This is bound to have effect on imports into Calcutta in the early of the season. Then, again, heavy flooding the consequent disruption of transport has ented supplies from being moved. It is only cent weeks that transport facilities have been hing like normal. Finally, when a bumper is forecast, there is often a tendency to hold supplies in the hope that "something" will en and lead to better prices. Invariably, the price rises and becomes established, much e jute is put on offer.

he trade now talks about a total crop of 5.1 ion bales, made up of 4.3 million bales of including Tossa, and 800,000 bales of mesta. total is compared with last year's availability 6 million bales, including 1.4 million bales of a. The estimated shortfall is, therefore, 1.5 ion bales, which is more than covered by the y-over from the last season. It must be emised that these are only trade estimates. If als of raw jute in Calcutta are any guide, forecasts may be justified. The available es show that arrivals are well below those e corresponding date of the last season. But, reasons already indicated, the current import es are misleading, and should not be used guide until later statistics are available.

Quality of Fibre Exports

ne cannot help wondering what effect the ges in crop estimates will have on consumers ad, and whether they derive any benefit from g presented with figures which time and again been proved unreliable. In the past few s, Indian crop estimates meant little to fibre ers abroad as there were no raw jute exports, now that raw jute is available from this try, more reliable figures need to be presented he outset. The Government might be well sed to seek the consumers' opinion on fores, as it is doubtful if the present system will urage them to buy more jute. Already buyers criticised the quality of Indian jute exports. spinners think that the quality is much er than what Pakistan supplies, and as there ittle difference in the prices, they consider an jute too dear. If there was an appreciable difference, manufacturers might have been ned to take more in spite of the lower quality, at present there are several parcels of Indian on offer in Dundee which cannot be sold ccount of the low quality and the price asked it. The only thing that may help Indian jute e report circulating in Dundee that Pakistan not be able to supply enough decent quality from the current crop.

Gunny Stock Figures

he bullishness induced by reports of a fall in production was accentuated by the I.J.M.A. ny stock figures for October. Good shipments ng the past month to the Far East, especially a and Indonesia, and to Cuba, helped the substantial fall in sacking stocks. Total gunny stocks were 72,500 tons, or 6,200 tons less than in the previous month and 34,900 tons less than in the corresponding month of last year. Sacking stocks dropped by 9,800 tons to 32,900 tons, which latter was 45.4 percent of the whole. This was the lowest sacking figure since November 1955, and the lowest percentage since August 1955. The fall was encouraging as sacking production was increased by the transfer of looms from hessians to sacking; it reflected the sound statistical position of heavy goods. The effect of the U.S. steel strike was obvious in the returns for hessians. For the second consecutive month, hessian stocks increased, this time by the substantial amount of 3,700 tons to 29,200 tons; the percentage rose to 40.3. This represents the highest hessian total since June 1958 and the highest percentage since November 1955. It is not very satisfying, considering that the production ratio for hessian has gone down, but it is expected that U.S. influence will begin to show now that the steel workers have returned to work. There was little change in the stocks of other goods, and at 10,500 tons they constituted 14.3 percent of the total.

Gunny Market Steady

The Calcutta gunny market showed a steady improvement over the week for a variety of reasons. The possibility that the Pakistani mills might have to cover their November-December heavy goods commitments in the Indian market proved bullish, and extensive speculative activity brought substantial price increases. There closely followed the news that the Indian jute crop may be smaller than was expected, and gunny prices were maintained at the higher levels in sympathy with raw jute. Genuine overseas buyers continued to show little interest in the Calcutta market, and this was even more obvious at the enhanced rates. But mills took advantage of the higher levels to release some goods for the January-June period, most of which found their way into local dealers' hands.

Raw jute prices advanced rapidly. Mills, particularly Indian-owned groups, bought steadily on the rise and a fair amount of business was done. Sellers' ideas were very steady, but many were worried as large quantities had yet to be covered from all agencies for November shipment to the mills. The reluctance of some mills to send jute to arbitration in favour of quick settlements, very often at well below their original claims, gave rise to the thought that they may not have as much fibre as they had indicated.

THE JUTE MARKETS

Activity in the futures market during the past week was brisk, especially in sacking. There were wide variations. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 4th November to 10th November, were as follows:

	Hessians 40in. 10oz. November	Sacking B Twills November	Raw Jute December	
	Rs. a 100 yds	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos
Opening	40.60	44.40	102.40	24.00	64.30
Highest	40.72	44.53	103.50	25.08	67.19
Lowest	40.34	44.11	100.85	23.72	63.55
Closing	40.38	44.15	103.20	24.74	66.28

Manufactured Goods: The market was quiet at the opening last Thursday following the previous day's spectacular gains, and apart from some speculative activity, there was very little to report. Opening quotations showed little variation. November B Twills stood at Rs. 103.05 and April-June at Rs. 100. Hessians showed small gains at Rs. 40.65 for November 40in. 10oz. and Rs. 40.10 for forward shipment. No overseas enquiries were reported and prices moved within narrow limits until late on Friday. Then a definitely bullish tendency developed. By Saturday morning, B Twills were up by 40nP, although hessians were quiet. Heavy speculative activity developed at this stage in sacking. Over the week-end B Twill rates advanced a further 45nP to Rs. 103.90, with hessians showing fractional gains in sympathy. The steady fibre market exerted an influence on goods and prices continued to rise throughout the day. On Tuesday morning, B Twills were up to Rs. 104.20 for the near position and Rs. 102 for forward shipment. Thus the gap between near and forward shipment had shrunk to Rs. 2.20 from Rs. 3.35 over the week, demonstrating the increased interest in the forward market. Prices moved up still further on the publication of the I.J.M.A. gunny stock figures, but profit-taking at the higher levels caused most of the day's gains to be lost before the close.

On Wednesday morning, opening quotations were as follows:

	Nov.	Dec.	Jan.-March	April-June
40in. 8oz.	33.25 (36.24)	33.00 (35.97)	32.60 (35.53)	32.35 (35.26)
40in. 10oz.	40.50 (44.14)	40.55 (44.21)	41.60 (44.25)	40.40 (44.04)
B Twills	102.85	102.80	102.40	101.50
Heavy Cees (Plain)	105.00	102.75	102.00	101.25
A Twills	124.25	123.50	122.00	120.75
Liverpools	115.75	114.50	114.00	113.40
Cornsacks	104.60	103.50	102.25	102.35

Raw Jute: The fibre market closely followed the pattern of the goods market in the early stages of the past week, and quiet conditions prevailed. Mills showed little interest and only scattered business was reported. Opening quotations were based on Assam jute at Rs. 23.50 a maund basis Bottoms. This price prevailed up to the week-end,

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports that the total stocks of jute goods at the end of October were as follows:

Description	31st October, 1959 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	30th September, 1959 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	Increase (+) or decrease (—) first month Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)	31st October, 1958 Lakh Yds. (000 metres)	000 Tons (000 Metric Tons)
Hessian Cloth and Bag	19.53 (16,62,96)	30.3 (29.6)	9.21 (8,41,73)	25.5 (25.9)	+1.32 (+1,21,23)	+2.7 (+ 3.7)	6.70 (6,12,79)	17.8 (18.1)
Sacking Cloth and Bag	7.72 (7,06,36)	32.9 (33.4)	10.26 (9,38,13)	42.7 (43.3)	—2.54 (—2,31,67)	—9.8 (—9.9)	18.69 (17,08,96)	77.5 (78.7)
Others		10.4 (10.6)		10.5 (10.7)		—0.1 (—0.1)		12.1 (12.3)
Grand Total		72.6		78.7		—6.2		107.4
(000 Tons/Metric Tons)		(73.6)		(79.9)		(—6.3)		(109.1)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures based on the actual (detailed figures, and are more precise.

ven a steadier undertone developed on reports that the crop being smaller than was originally timated. The price then rose to Rs. 23.75 for sam. Indian mills began to show interest, and fair amount of business passed. This caused my sellers to withdraw from the market and k for higher prices. These were not long in ning. On Tuesday morning, Assam was quoted Rs. 24.25 and business passed at the enhanced es. Steady buying developed and the market rained firm. Upcountry markets were very ely as a result of all this activity, and the mand for jute was big as many sellers still had cover November shipment contracts. Imports re smaller, which added to the already bullish itiment, and sellers found it very difficult to rchase jute at anywhere near their price.

Business was conducted in Assam at Rs. 23.75 Rs. 24.25 and in Northern from Rs. 23.50 to 24. Selected Murshidabad Tossa passed at 23.75 to Rs. 24 and Daissee-Tossa at Rs. 25. sam mesta Middles only fetched Rs. 25. White issee and desal mesta passed at Rs. 22.75 to 23.25.

On Wednesday morning, opening quotations re as follows:

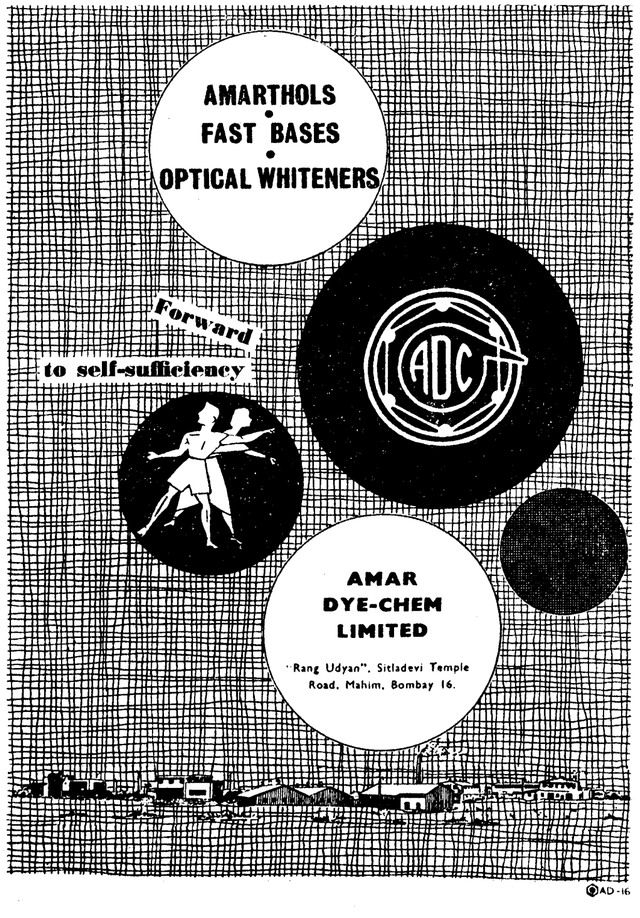
THE FOREIGN JUTE MARKETS

FIBRE PRICES UNCHANGED



(FROM OUR DUNDEE CORRESPONDENT)

THE recent improvement that set in in the Dundee jute industry has continued, and spinners and manufacturers have more comfortable order-books. It is difficult for those buyers who delayed their purchases to secure delivery now, although it has been obvious for some time that producers were obtaining sufficient orders. The industry has passed through a prolonged spell of quietness, and both spinners and manufacturers have lost workers. Many have found work elsewhere, often at better wages, and it will be difficult to persuade them to return to the jute trade now that it is busier. Many advertisements have been published in the local Press for both spinning and weaving operators.

Fibre prices remain firm and unchanged. There are one or two sellers who have secured parcels to offer for sale at £1 or 10s below the usual shipment rates, but these can be ignored. The values of Mill Firsts range from £108 to £112. Mill Lightnings £91 to £95, Mill Hearts £80 and Grade Hearts £65, with good marks of Daissee-2/3 from £92 and Grade £86, Grade Tossa-2/3 £104 and Grade Tossa-4 £94, c.i.f. U.K. and the Continent, November-December. Spinners are steadily buying shipment jute, but the quantities are small. Sellers do not report their sales nowadays, and it is usually a surprise to them when the figures of sales are published in Pakistan as to the amount of business that has been done against E.P.C.s.

The Calcutta goods market has been a little irregular, but the level of prices has altered little at around 61s 9d for 40in. 10oz and 47s 3d for 7½oz., November, 61s 6d and 46s 9d December and 61s and 45s 9d January-March, with B Twills 155s 6d, 154s and 152s 9d for the respective positions of shipment, all f.o.b., Calcutta.

The trade in Dundee is relieved that the Jute Control will continue to function as a protector to the industry. Imported goods will continue to be sold at the equivalent Dundee rates, except for the "depressed range", 36in. 10oz. and 40in. and 45in. 11oz. hessians.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded by 0.3 percent to 119.4 during the week ended 24th October, 1959, against 119.8 (revised) for the earlier week. The index was higher by 1.2 percent and 2.9 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles declined by 0.4 percent to 124.5 due to a fall in the prices of rice in Imphal (−11%) and in Ranchi (−6%), fish (−8%), bajra in Agra and gram in Delhi and Moga (−6% each), gur (−4%), jowar and groundnut oil (−3% each) maize, ragi, urad and gingelly oil (−2% each) and wheat, barley, bananas, milk, coconut oil and coffee (−1% each), although prices of oranges (+19%), bajra in Anakapalli (+18%), rice in Nandgarh (+10%), in Raipur (+8%), in Kanpur (+7%) and in Contai (+6%), onions in Nagpur (+10%) and in Delhi (+5%), chillies (+7%), gram in Patna (+6%), black pepper and betelnuts (+4% each), mung and mustard oil (+3% each), cardamoms and salt (+2% each) and potatoes, ghee and eggs (+1% each) showed advances. The index for Tobacco moved up by 2.4 percent to 101.1 due to the re-appearance of Pollah and Motihar tobacco at higher levels in Calcutta. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's revised level of 116.4 in spite of a fall in the prices of castor oil (−1%). The prices of groundnuts (−4%), lac (−3%) and raw jute, rapeseed, and copra (−1% each) showed declines while linseed in Calcutta (+7%), tanning materials and green bamboos (+5% each) and castorseed, gingelly-seed and cottonseed (+1% each) moved up, and the index for Industrial Raw Materials declined by 0.9 percent to 120.8, compared with 121.9 (revised) for the previous week. The index for intermediate Products also fell by 0.3 percent to 114.9 as a result of a decline in the prices of linseed oil and copper (−1% each). The price of zinc (+2%), however, moved up. The index for Finished Products worked out at 110.6, against 110.7 for the previous week. Items which showed variations were: jute manufactures (−2%), oilcakes (−3%) and bricks and tiles and glass (+1% each).

INDIA REMAINS LEADING BUYER OF U.K. AVIATION EXPORTS

India was the leading buyer of British aircraft and parts over the nine-month period January to September 1959, according to figures just issued in London by the Society of British Aircraft Constructors. During this period, total British aviation exports amounted to £121,294,252—some 7 percent up on the total for the corresponding period of last year. The main overseas purchasers were: India (£13,195,997), Switzerland (£7,420,642), West Germany (£5,483,234), and Argentina (£4,520,727), followed by the United States and Australia, each of which bought more than £4 million worth. This year's nine-month total of British aviation industry exports exceeded every preceding such total except that for 1958, S.B.A.C. points out. It represents an annual figure of more than £161 million, compared with last year's record £154 million.

Engineering and Transport

LAYING THE OIL PIPELINE FROM NAHORKATIYA TO BARAUNI

FIRST CONSIGNMENT OF MATERIAL ARRIVES

WITH the arrival in Calcutta of the first consignment of pipe from steel mills in the U.K. last week, work will shortly begin on preliminary stages of the 720-mile-long Assam oil pipeline project for Oil India Private Ltd. The first objective of the project is to connect Oil India's oilfields in upper Assam by a 16-inch diameter crude oil pipeline to the site of a refinery to be built in Noonmati, near Gauhati, a distance of approximately 260 miles. The second phase of the project will be the extension of the pipeline system, using 14-inch diameter pipe, from a point near Gauhati to Barauni, in the State of Bihar, a further 460 miles to the west, where a second refinery will be erected.

The job will be a race against time, weather, and the problems of transporting pipe and materials from Calcutta to upcountry areas in Assam, West Bengal and Bihar. The first stage of the pipeline has to be completed by the time the Noonmati refinery is ready to receive its first supplies of crude oil. The second link, to Barauni, should be completed by 1962, the date announced by the Government for the completion of the refinery there.

Oil India Private Ltd, which will produce crude oil from its wells in Nahorkatiya and Moran in Assam and transport it to both refineries, has appointed the Burmah Oil Company (Pipe Lines) Ltd as construction authorities for the project. Both the proposed new refineries will be in the public sector and will be operated by the newly-formed refining company, Indian Refineries Ltd. When the entire project is completed, Oil India will deliver a maximum of 750,000 tons of crude a year to the Noonmati refinery and 2 million tons to the Barauni plant.

Five-fold Increase

Since mid-1953 when the Nahorkatiya oilfield was discovered by Assam Oil Company, a total of 58 deep wells, most of them good oil producers, have been completed in Nahorkatiya, Hugrijan and Moran. The current estimated potential of these areas is about 2.75 million tons a year (more than five times the present volume of crude production in India), but further drilling and development operations are in hand in Assam and will continue throughout and beyond the period of pipeline construction. Nahorkatiya, where since 1953 the greater number of wells have been drilled, will be Oil India's main headquarters and good progress is being made with the provision of a power house, workshops, offices, housing and amenities for that company's staff and workers there.

The total investment by Oil India in the entire undertaking is Rs. 81 crores, of which the pipeline project will absorb Rs. 53 crores. As already announced, India has accepted credits of £23 million offered by the Burmah Oil Company Ltd and the British Government towards the cost of building the pipeline system. These credits include £10 million offered by the B.O.C. last year towards the sterling exchange cost of the project, and a further £10 million offered by the company more recently. The British Government's share of the total (£3 million) will be spent on steel pipe and equipment manufactured in Britain.

A preliminary survey of the general route for the pipeline has already been made. Quantities of pipe for the first stage of construction are now arriving at the port of Calcutta and deliveries will continue at the rate of 5,000 tons a month until March 1960. Pipe for the second stage of the project will be supplied by Hindustan Steel Ltd, whose plant in Rourkela, to be built by the West German firm of Mannesmann, is expected to be in operation in September 1960. Starting in Nahorkatiya, the route for the first stage of the pipeline generally follows the railway and roads on the south side of the Brahmaputra, passing through or near the towns of Moran, Nazira, Jorhat, Silghat and Nowgong to Gauhati, all in the State of Assam. In the second stage of construction, the line crosses the Brahmaputra river from a point near Pandu to Amingaon and from there it will go by way of Nalbari (Assam), Alipur-Duar, Hasimara, Sivok, Siliguri, Bagdogra (all in West Bengal), Kishanganj and Purnea to Barauni, in the Monghyr district of the State of Bihar.

The terrain in Assam is largely paddy land intersected here and there by swamps, forest areas and tea gardens, and since much of the ground is often flooded for long periods in the rainy season, the job of laying the line, which will be buried underground for most of its length, will be possible only during the dry months of the year, from November to March. Construction of pumping stations and certain other facilities will, however, be continuous throughout the different seasons.

Crossing the Brahmaputra

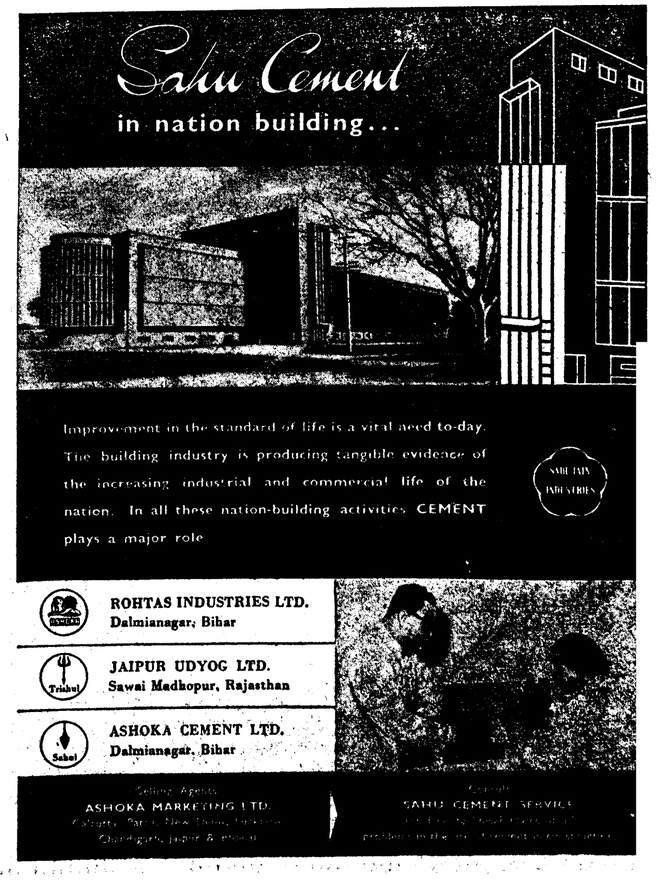
The Brahmaputra river crossing will be a major undertaking. Here the difficulties of fast-running flood waters, shifting pot holes in the river silt, whirlpools, and complicated approaches on both banks would call for the employment of special equipment and techniques to lay a doubly-strong submarine pipeline deep beneath the river bed and out of reach of all likely dangers.

As an alternative to this, the pipeline could be suspended over the river on cables strung from high towers on the banks. A third way, simpler and much less expensive than either of those plans, would be to accommodate the line on the new rail-road bridge currently under construction across the Brahmaputra. For this, the Railway Board's permission is necessary and efforts are being made to obtain this. Besides the mighty Brahmaputra, eight other largish rivers, varying in width from 100 to 1,000 feet depending on the season, are on the main pipeline route and will have to be crossed, and there are many smaller rivers and streams up to 100 feet in width. In all the number of river crossings is 78.

The pipeline will either be buried under the river bed, strung along existing rail or road bridges or carried on cable suspensions. Some of the rivers to have submarine crossings are the Derai, Jhanzi, Bhogdai (Disai), Kakadanga, Kalang (Nowgong and Malankata), Hajo Suta (Sessanadi), Buradiya, Kujia, Tarang, and the Holong. In the many irrigated areas, a multitude of canals and ditches will present further obstacles to the construction programme even during the dry season.

Preliminary Work

Much preliminary work will have to be undertaken before the pipeline laying operations proper can begin. In these initial stages, some of which are in hand already, a detailed survey will be made of a 60-foot-wide strip of land all the way from Nahorkatiya to Noonmati, and later to Barauni, for the pipeline system's legal right of way. Procurement and staking out of the land for this and for the several pumping stations will follow, and land will also be acquired for numerous upcountry pipe stockpiles, material yards and pumping plant storage points.



Pumping stations, automatically operated, will be built at intervals along the line to push the crude oil along on its two-miles-an-hour journey to the proposed refinery terminals. These stations will be connected to each other and to Oil India's pipeline operational headquarters in Gauhati and main headquarters in Nahorkatiya by V.H.F. voice and tele-printed wireless. Maintenance stations, anti-corrosion stations, and mobile pipeline patrols will also be linked by the tele-communications network to the pumping stations and operational headquarters.

Waxy Crude

The characteristics of Assam crude oil, with its high wax content, and the climatic conditions of the region traversed by the pipeline present an unusual pumping problem and for the past two years there have been experiments in the field and studies in laboratories in Assam and the U.K. to record its behaviour in pumps, pipeline, storage tanks and on the move. Exhaustive tests have proved that the crude is pumpable in a pipeline at any season of the year.

Close attention has also been given to the public safety requirements of the system. The pipe will have extra-thick walls where it spans bridges and goes below rivers and isolating valves will be installed on the line at intervals and at all vital crossings.

When completed, the Oil India pipeline will be the longest in India, although during the war a "trunk" six-inch diameter pipeline was laid from Bombay to Bhusawal and temporary oil pipelines were laid by military authorities from Calcutta and Chittagong to Assam and over the hills into north Burma and China, a distance of 1,835 miles. The Bombay-Bhusawal trunk pipeline was designed and built by engineers of the Burmah Oil Company who were also associated with the military pipelines in Assam.

ORIENT EXPRESS

TRAVEL SERVICE

Through its 3 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Air, Rail and Steamer tickets issued at tariff rates, Hotel reservations made anywhere. Advice and assistance given in securing Passports, Visas Health Certificates and Travellers Cheques.

PEPPER PRICES RISE

BIGGER NEW CROP EXPECTED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PEPPER is now selling at fairly high prices. Reports from Cochin say that purchases were recently made at Rs. 850 a candy of 6 cwts. (old crop), compared with Rs. 750 a candy of 6 cwt. a month ago. The present price is higher by Rs. 250 than that ruling at this time last year. Old crop pepper has almost been sold out and the new crop has started moving in. The season begins in Kerala in November, and fresh crop now reaching the market is not suitable for garbling in most cases. Dealers say that fully ripe and dried berries may not be available in sufficient quantity till December. Until then, old crop pepper is likely to meet with keen demand from exporters who are reported to have fairly good commitments for November-December. Prices of exportable varieties are not expected to show any appreciable fall until new crop supplies reach the market in sufficient quantity. The preliminary estimate of the trade concerning the size of the new crop in India is about 25,000 tons, against an output of about 22,000 tons during the last season. According to a trade estimate, the last season's 22,000 tons were distributed as follows: exports about 11,000 tons and home consumption another 11,000 tons. This compares with the previous season's exports of 14,000 tons and the internal consumption exceeding 10,000 tons.

Outlook for New Crop

The outlook for new crop pepper largely depends on the future buying policy of the United States and the communist countries, including Russia. Since the Sarawak and Indonesian crops were smaller during the current season India might be in a position to market her crop at better prices than last year. Overseas reports say that the demand for white pepper is greater now. The cold weather has helped raise the consumption of pepper in the West while supplies are expected to be depleted rapidly. Meanwhile, Sarawak and Brazil are reported to have sold out almost the whole of their exportable production from the current season's output. Resellers in Europe are also believed to have exhausted their stocks. Black pepper for spot delivery, on the other hand, is quiet mainly due to the lack of enquiry from the United States where sellers have built up large stocks on account of the U.S. dock strike. But there are reports of U.S. enquiry for November-December delivery, and the United States is stated to have bought about 1,500 tons of garbled black pepper at a price ranging between 28.5 cents and 30 cents a lb. Traders attribute the revival of U.S. interest in distant positions to misgivings about the size of the world crop.

Closure of Cashew Factories

Many cashew factories in the Quilon area have issued closure notices to their workers. The reason given is the inadequacy of raw cashewnuts. Two thousand tons of raw cashewnuts from Africa are expected to reach Cochin port shortly. This will be the last shipment from the African crop of the last season. Imports from Africa during this year, including the 2,000 tons which is expected shortly, are placed at 83,000 tons, against last year's 105,000 tons. The indigenous production this year amounted to about 65,000 tons. To keep them busy throughout the year, cashew factories in India will need about 200,000 tons, against 150,000 tons received this year.

The demand for processed kernels has been encouraging this year, and the price has been narrowly fluctuating between Rs. 2 a lb. and Rs. 2.25 a lb. India's main customers in cashew kernels are the United States, Canada, Britain, Australia, Russia, West Germany and some other European countries. Of them, the United States takes about 80 percent of total Indian exports. Last year, the country's earnings from cashew kernel exports amounted to Rs. 15.5 crores and the quantity exported was 39,045 tons.

Exports to Russia

The Cochin market has reported substantial shipment of plantation products to Russia. A Soviet steamer took 7,500 tons of pepper, 115 tons of coffee, 6,500 cases (50 lbs each) of cashew kerneis and 1,000 lbs of cardamom while an Indian steamer is taking about 7,000 tons of coir goods to Russia. Another Russian steamer is expected to reach Cochin shortly to take more of Kerala's plantation products. Meanwhile, 500 tons of pepper and 200 tons of coir products have recently been exported from Cochin to Poland.

COCHIN TEA SALES

At Sale No 43, 1,200,000 lbs of tea were on offer. There was a strong general demand, particularly for commons and low mediums which were 10nP dearer. Mediums and good mediums improved irregularly by 15nP or 20nP while best liquoring high-grown brokens were irregular and easier.

At Dust Sale F, 400,000 lbs of tea were on offer. There was a strong general demand. Price were fully firm to dearer, particularly for coloury medium sorts.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 20, held on 9th and 11th November, offerings at the Export auction totalled 72,114 packages. There was again a strong general demand. Plain Brokens and Fannings were a little irregular and some of the poorer types eased slightly, but the majority sold at about last rates. The better liquoring medium Assam Brokens and Fannings received good support and B.O.P.'s and O.Fgs. sometimes showed considerable advances, while better support was forthcoming for low medium B.O.P.'s. Best C.T.C. teas were well supported while secondary broken grades were once again well competed for, and were at times up to 20nP dearer. Legg-cut teas were in good demand and appreciated in price. Leaf grades were well supported while Darjeeling teas sold at about last rates.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.04 to 2.10	2.04 to 2.12
Plain B.P.	1.86 to 1.90	1.86 to 1.72
Plain Fannings	2.04 to 2.10	1.84 to 1.90
Medium B.P	1.90 to 2.08	1.90
Medium Fannings	2.12 to 2.20	1.95 to 2.00
Best Assam C.T.C. B.P.	2.60 to 2.80	2.15
Best Assam C.T.C. Fgs.	2.60 to 2.80	2.30

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings amounted to 20,945 packages. There was a strong general demand. Exportable Dusts were again a feature of the Sale and were fully firm and sometimes dearer. Other orthodox descriptions shared in the demand but a few plainer liquoring kinds declined by 2nP. Legg-cut Dusts continued to be well-supported and were sometimes dearer. Darjeelings were irregular, but generally realised satisfactory prices. There was a better demand for medium C.T.C. Dusts than in recent weeks, but some sold at from 6nP to 10nP below last rates. Those suitable for export, however, often advanced in price. The few lines of the very best C.T.C. Dusts on offer generally sold at satisfactory rates.

There was a good general demand for the 341 chests of Leaf on offer.

Quotations

	Rs.	Rs.
Medium Dooars Dust	1.98	to 2.04
Medium Assam Dust	1.94	to 2.00
Medium Assam C.T.C. Dust	2.00	to 2.12
Best Assam C.T.C. Dust	2.50	to 2.80

(Quotations are exclusive of excise duty.)

LINSEED FIRM

A firm tone prevailed in the linseed market during the past week, but business was restricted with both buyers and sellers pausing. Both ready and forward seeds prices moved upwards touching Rs. 26.50 and Rs. 26.62 by mid-week but, with diminished interest from crushers at these rates, the tone became easier towards the close. The April-May new crop delivery was transacted at Rs. 24.50. The oilcake market was dull with little interest from buyers, and sellers were reserved. There was little change in foreign advices and little business was reported. The oil market remained firm. Fresh Australian business was done at £121 and further enquiries were reported. Local prices at Rs. 56 for Ready and Rs. 56.50 for December were not in parity with the foreign price. Latest quotations are as follows: Ready, Rs. 26.36 a maund, November-December Rs. 26.50 a maund and May futures Rs. 24.50 a maund.

HIDES AND SKINS EASE

The market ruled easy and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 3rd November and 9th November 1959)

Cowhides : Wet salted (Ord.) 7,900 pcs. on the basis of Rs. 13 to Rs. 15; wet salted (slaughtered) 20,800 pcs. on the basis of Rs. 12.50 to Rs. 15.50 and Rs. 18 to Rs. 19.

Goatskins : Wet salted (Patna, Daissee, Kustia) 158,600 pcs. on the basis of Rs. 425 to Rs. 440, Rs. 460 to Rs. 480 and Rs. 490 to Rs. 520; Wet Salted (he-killed) on the basis of Rs. 6 and (she-killed) on the basis of Rs. 5.75 a piece; Assam-Dinajpur-Jalpaiguri 4,000 pcs. on the basis of Rs. 410 to Rs. 445 and Rs. 485 to Rs. 530; Purneah-Kissenganj 3,400 pcs. on the basis of Rs. 515 and Rs. 545 to Rs. 575; Patna-Pakur (Ord.) 62,500 pcs. on the basis of Rs. 440 to Rs. 455 and Rs. 460 to Rs. 470; Muzafferpore-Patna 4,500 pcs. on the basis of Rs. 415.

Bazaar Stocks

(9th November 1959)

Cowhides : Wet salted 126,000 pcs.

Goatskins : Wet salted (Daissee, Kustia, Patna, Killed) 46,500 pcs.; Assam-Dinajpur 50,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 81,200 pcs.

CHEMICALS THAT HELP INDUSTRY TO BRING A BETTER FUTURE CLOSER

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS—acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER—Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES—Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES—Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT—Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers

CHEMICALS FOR EVERY INDUSTRY

U. 43

"Why this fancy dress, Ram Gopal?"

"No more suits for me. After three washes, my suits get as limp as wet blotting paper. This outfit may be cumbersome, but it certainly retains its shape."

"What a pity! But, surely you've heard of BINNY'S? BINNY'S cloth retains its new look even after repeated washing. They Quality Control* their production, you know.."

"Quality Control? What's that?"

"Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to root out defects at every stage of production. That's why BINNY'S fabrics retain their shape even after repeated washing."

"Is the suit you are wearing made of BINNY'S cloth?"

"It certainly is"

"Then show me the nearest BINNY'S shop, my friend."

BINNY ...a great name in textiles

*Testing defects in processing
To guarantee that the yarns BINNY'S produce are uniform in strength and appearance, processing defects are continuously checked and remedied at every stage of their manufacture. That is why BINNY'S are able to supply quality fabrics to their customers.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels • Anticrease Suitings • Tussores • Union Fabrics • Silk Sarees Rugs • etc etc

JUA (JHERRIAH) ELECTRIC SUPPLY COMPANY LTD.

OTICE is hereby given that an Annual ral Meeting of SIJUA (JHERRIAH) CTRIC SUPPLY COMPANY, LIMITED, will eld at the Registered Office of the Company, tered Bank Buildings, Calcutta, on Thursday 4th day of December, 1959 at 3-40 P.M. for ollowing purposes :—

To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959, and to receive the Directors' and Auditors' Reports thereon.

To declare Dividend recommended by the Directors.

To appoint a Director in the place of the retiring Director, Mr. S. B. Bose, who retires by rotation, and being 71 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

AND in this connection to consider, and, if thought fit, to pass the following resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended below.

o be Proposed as an Ordinary Resolution.

"THAT the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

To appoint Auditors and fix their remuneration.

he Share Transfer Register of the Company be closed from 14th to 24th December, 1959, days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

tered Bank Buildings,
utta, 29th October, 1959.

s:

(a) A member entitled to attend and vote is meeting may appoint a proxy to attend and instead of himself. A proxy need not be a iber of the Company.

(b) The Dividend, if declared, will be paid r after 4th January, 1960, to those shareholders titled whose names appear in the Company's s on the 24th December, 1959, or to their datees. No application for Dividend Warrants be necessary.

EXPLANATORY STATEMENT

n the special notice given to the Company of resolution under item No. 3 of the above notice s been stated that the services of Mr. S. B. Bose proved most useful to the Company and as has considerable experience and personal wledge of the affairs of the Company, he should inue to remain on the Board of Directors of Company and that the age limit imposed by ion 280 of the Companies Act, 1956, should not y to him.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

72nd YEAR OF ISSUE — CALCUTTA, 19th NOVEMBER, 1959. — Vol. CXXXXIII No. 3585

COMMON MARKET AID FOR DEVELOPING COUNTRIES

WHILE India waits, with much less anxiety than Britain, to see what effects the European Common Market will have on her foreign trade, the venture has already produced one useful result in the minor, but still important, field of economic information. The Commission of the European Economic Community, which is the central administration of the Common Market, this year began publishing quarterly reports on the economy of the region, along with forecasts for the following quarter. The utility of this should be evident. The Common Market is the biggest importing region in the world; it buys more abroad than the U.S.A., more than Great Britain and of course more than the Soviet bloc. So the level of activity in the region, and the probable course of its import demands in the months ahead, constitute information of the greatest value to countries such as India, whose development is governed largely by their export earnings. This information was not previously available. The reports of commercial attachés in each of the six Continental capitals could not present the same overall picture, even supposing that someone in New Delhi took the trouble to compile and coordinate them. Moreover, the Commission's reports are of a very high quality; unlike the O.E.E.C. surveys, which cover a wider and more varied region, they are issued promptly, they are concise and they provide accurate and business-like forecasts of import trends. Along with similar information that has long been available for the American and British economies, they should make it easier for the authorities in India to foresee future demand for this country's exports and future availability of imports and capital.

This is made easier by a development that the first reports of the Commission have already revealed—the tendency for economic activity in the six member-countries to become more uniform. As integration proceeds on the Continent, there is less likelihood of contradictory movements in the various countries; business activity, and with it import demand, tends to move up or down concurrently in West Germany, France, Italy and Benelux. This is not surprising since the intention is to create a truly common market, but it is interesting that this tendency has emerged so soon. The main reason so far seems to be the extraordinary increase in trade within the region—it was 16 percent higher by the middle of 1959 than in 1958—which flattens out surpluses and shortages in the member-countries. This movement towards equal conditions throughout the region will be sharply reinforced as the six Governments begin to co-ordinate their monetary, budgetary and commercial policies, as manpower and capital move more freely inside the Market, and as they explore the possibility of using one nation's surplus to fill another's temporary trade deficit. All these things are written into the Rome Treaty, and the present desire on the Continent is to write them into the facts more quickly than was first thought possible. So we are not only better informed on the world's biggest import market, but we find that it is already becoming a more homogeneous market.

What is most important, however, is that it is also a rapidly expanding market. The region now covered by the Common Market has shown an astonishing vitality over the past decade, even before it began to benefit from the stimulation of economic unity. Its growth-rate has been higher than elsewhere in the non-communist world, and notably higher than in the United States and Great Britain. Its industrial production index, taken as 100 in 1952, was 128 at the start of 1956 and 153 by the middle of 1959 (against only 141 for the O.E.E.C. region as a whole). And the latest report of the Commission for the Community shows that, after the brief slowdown of the recession, this rapid pace of expansion has been resumed. The growth-rate of the Community fell to 1.8 percent at the start of this year, but is again back to the high figure of 6.4 percent today, and the Commission judges that the region is once again launched on an enduring phase of expansion. This will entail a substantial increase in its imports, particularly raw materials. The six countries are well placed to import more because their new expansionary phase is not based on inflation (as the last one was, at least in France) but, on the contrary, is accompanied by the accumulation of sizeable currency reserves, gained mostly from the U.S.A. Secondly, they know that productive capacity and stocks in the raw-material producing countries are high, and that therefore it would require a considerable increase in European demand to cause any awkward rise in prices. Finally, shipping freights are still low, and cannot quickly rise in view of the large tonnage laid up. It seems reasonable to expect a considerable increase in European demand for raw materials from this area in the coming six months. This will ease the foreign trade position of countries like India, although it will not be enough to turn the terms of trade, which are at present definitely in Europe's favour.

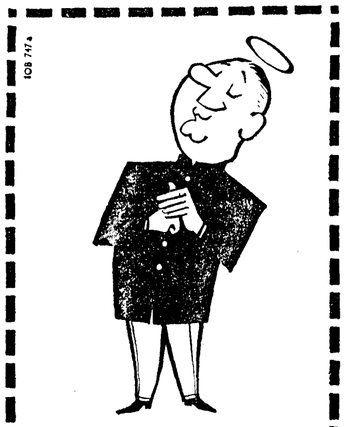
The same reasons that justify our interest in the Common Market—the fact that it is the biggest single buyer of foreign imports—place a special responsibility on that institution, because as the biggest trading partner of the undeveloped countries taken as a whole it has it in its power to contribute most effectively to those countries' development. The meeting of the six foreign ministers in Brussels in mid-October showed that they are fully alive to this question. The backward countries have benefited from the suspicion with which the Common Market has been greeted outside the Continent, especially in Britain, because the six capitals are now desperately anxious to demonstrate that their unification is not directed against anybody. The British Government tried for a time in 1958, with moderate success, to convince nations outside Europe that the Common Market was a dangerous protectionist venture that would eventually hurt overseas economies as much as it was expected to hurt Britain. While this campaign did not deflect the Continental six from going ahead with their plans, it did impel them to make all the conciliatory gestures they could in order to placate a suspicious international opinion, especially as reflected in G.A.T.T.

Some of these gestures were aimed particularly at Britain (hence the Anglo-French trade pact), others at all the O.E.E.C. members (hence the tariff cuts and quota increases in favour of European neighbours), others again at all G.A.T.T. members (tariff cuts in the high-duty Continental countries), and others finally at the U.S.A. (liberalisation of dollar-import restrictions). But few of these concessions were of any direct benefit to the undeveloped nations. The Continental foreign ministers realised, with some political acuity, that a gesture in favour of the undeveloped nations was the best way to answer the British attack. At a moment when assistance to the developing countries is a major preoccupation of western policy and the main zone of competition between the democratic bloc and the Soviet bloc, a new institution like the Common Market, that opened its account with a programme of aid to Asia and Africa, would be safe from criticism as a selfish protectionist club. That is why the account of the meeting in Brussels this month contains no reference to Britain's "Outer Seven", this being the ground on which London hopes to force the Continent to compromise, but it does contain interesting details on a plan to assist the backward economies.

The Brussels meeting set up a committee to suggest ways of offering this assistance, and the experts of the six countries and of the three joint executives (the Coal and Steel Pool, Euratom and the Common Market) are now at work. They will formulate proposals that will be considered again by the foreign ministers at the end of November. The intention is to concentrate on the stabilisation of raw material prices, this being held the most intelligent way of assisting developing countries to carry through their plans. In order to allay fears of "neo-colonialism" (several members of the Common Market have an inglorious imperialist past), it is suggested that the Continental nations form an "assistants' zone" and invite undeveloped countries to join a "beneficiaries' zone"; the two zones would then nominate an equal number of representatives to special organisms which would deal with individual markets or products or types of aid projects. These organisms could study the needs of the beneficiaries and the possibilities of the assistants, and settle on means of financing. Straight-out gifts would be avoided, the emphasis being on long-term contracts for the purchase of raw materials, matched with loans and technical help.

Obviously, the authors of this scheme have in mind the Arab nations and the newly independent States of black Africa, who are all extremely suspicious of accepting aid from a European club that includes their old imperialist masters, but whose economic needs can fairly easily be grouped with their neighbours' and treated on a zonal basis. As it stands, it sounds less interesting to India, who is self-confident enough to deal with the Common Market as an equal partner and whose special needs are less capable of being treated along with those of other backward countries. But that is no reason for not following this suggestion further, especially since it is known that at least one member of the Common Market—West Germany—is keenly interested in Indian development. As for the need to approach the new aid organism in concert with other developing countries, when the nationalists of Germany, France and Italy have consented to work together in a supranational body, they would find it hard to understand Indian reluctance to co-operate similarly with her friends and rivals in the distribution of assistance and in the stabilisation of markets in which they have a common concern. This point is worth pondering, with Pakistan in mind, for it is clear that one of the markets that the Continental nations would like to see "stabilised" is the market in raw jute and jute goods.

BALANCE OF PAYMENTS IMPROVES



THERE has been a slight improvement in India's external payments during the past year or so, but as it is due more to temporary factors than to any basic strengthening of the trade position, there is little room for satisfaction and a great deal for continued concern over the health of the foreign exchange reserves. The reserves held by the Reserve Bank during the week ended 6th November, 1959, amounted to only Rs. 199.96 crores. After deducting an amount of Rs. 163.01 crores held in the paper currency reserve, the working balances stand at the depressingly small figure of Rs. 36.95 crores. This badly needs increasing considering that the country's foreign exchange liabilities will grow substantially in the near future as soon as repayments on foreign credits become due. Judging from the figures concerning the balance of payments during the six-month period ended June 1959, as published in the latest issue of the *Reserve Bank Bulletin*, the deficit on foreign trading has amounted to Rs. 212 crores, against Rs. 214.9 crores and Rs. 264.5 crores during the second and first halves of 1958. This modest narrowing down of the trade gap has been effected by a considerable reduction in imports. The latter have amounted to Rs. 508.8 crores, compared with Rs. 503.3 crores and Rs. 541.2 crores. Exports have increased to only Rs. 296.8 crores, from Rs. 288.4 crores and Rs. 276.7 crores.

The flattening out of both imports and exports since the second half of 1958 is significant. At

present there is little scope for cutting the import bill any further. Up to now, the reduction in imports has been made solely at the cost of the private sector. For instance, private imports have declined to Rs. 249.8 crores, from Rs. 260.4 crores and Rs. 281.1 crores, but Government imports have amounted to Rs. 259 crores, compared with Rs. 242.9 crores and Rs. 260.1 crores. As a result of the import cuts, many industries are suffering from idle capacity following a shortage of essential raw materials, equipment and spares. So it appears that greater imports, especially of raw materials, will be required in future if production is not to be hampered. If the current crop estimates are any guide, it would seem that imports of raw cotton this season will have to be increased considerably to compensate for the shortfall in domestic production. The import bill for several commodities, such as metals and chemicals, may also increase, as the world supply position for metals especially is tending to become tighter.

An examination of the list of export commodities indicates that the improvement has taken place due to a cyclical rise in foreign demand rather than to any promotional efforts. The recession in western countries during 1958 held down India's exports. Now that a revival of economic activity has occurred abroad, an upward trend in exports can be expected. A disturbing feature is that exports have declined from Rs. 160.7 crores in the first quarter of 1959 to Rs. 136.1 crores in the second quarter. There is now little evidence that exports can be improved much during the remainder of 1959. For example, exports of tea have fallen to Rs. 53 crores during the first half of 1959, from Rs. 76.9 crores in the second half of 1959. Although these exports are at present running at a satisfactory level, average prices do not show much improvement. The exports of jute manufactures have increased to Rs. 56.3 crores from Rs. 53 crores, and the trend may continue considering the prospects for increased U.S. buying following the beginning of the "cooling off" period in the steel industry under the Taft-Hartley Act. Whether the increase from Rs. 30.7 crores to Rs. 33.6 crores in exports of cotton manufactures can be maintained, depends upon the supplies of raw cotton at reasonable prices. An important factor holding down exports is the high prices of Indian commodities, so vigorous steps could profitably be taken to make prices more competitive for encouraging sales abroad.

An important feature of the balance of payments during the first half of 1959 is a rise of Rs. 12 crores in foreign exchange reserves, against a decline of Rs. 28 crores in the previous half-year and a much larger fall of Rs. 77 crores during the first half of 1958. But this has occurred mainly because of large receipts against invisibles and capital transactions. As a result of the striking expansion in net invisible receipts during the first quarter of 1959, the surplus on invisible account for the half-year under review has amounted to Rs. 55 crores—a rise of Rs. 13 crores over the preceding half-year. A year ago they amounted to Rs. 43 crores. Compared with the first quarter, there has been a marked contraction of Rs. 11 crores to Rs. 22 crores in net invisible receipts in the second quarter. This is the combined result of a deterioration in the "investment income account" following higher payments on both private and government accounts, and of a fall under the head "Government not included elsewhere" on account of reduced U.S. Embassy expenditure out of P.L. 480 counterpart funds. Unilateral transfers in the form of official donations have shown a rise of Rs. 1 crore to Rs. 8.4 crores due to bigger receipts from the U.S.A. under the T.C.M. programme and Title III of the P.L. 480. Net capital inflow has shown an appreciable rise of Rs. 36 crores to Rs. 175 crores. This compared with a net inflow of Rs. 119 crores in the first half of 1958. The sizeable inflow in the first half of 1959 has helped to cover the current deficit of Rs. 163 crores—including a net payment of Rs. 22 crores, on account of "errors and omissions".

We are rather proud of ourselves

TODAY, banking is almost a public utility. Its success depends on its ability to give friendly and helpful service.

We modestly believe that our progress shows that our clients, whether they are industrialists, exporters or just men who want to deposit Rs. 5/- in a Savings Bank account, realise that in IOB they have an institution that has made friendly service the basis for all their activities.

THE INDIAN OVERSEAS BANK LIMITED

Central Office: Madras

M. Ct. Muthiah, Chairman — C. P. Dorsikannu, General Manager

SUBSTITUTION AND PROSPERITY

COFFEE-GROWING countries are worried by American experiments—evidently far advanced—to produce synthetic coffee. Tin-mining countries have been warned by a high authority in the Malayan industry that the price of tin must tend to rise and that at higher prices tin will eventually be replaced by substitutes. Natural rubber continues to live quite comfortably in the same world with the synthetic product, but there is always the long-term threat of substitution as processes for producing synthetic rubber develop and the cost of producing it is inclined to fall. Substitution of materials by better or cheaper ones is a natural and necessary factor in economic progress, but unfortunately it aggravates a problem which has been forced on our attention in recent years—the widening of the gap between the highly-developed and the under-developed countries.

It is possible that within a few years the British steel industry will be made uncomfortably aware that substitution of new materials for traditional ones does not affect only the primary-producing countries; for a method has already been evolved in Britain whereby car-bodies can be mass-produced from synthetic materials—whereas previously only small-scale production was possible and the big motor works had no alternative to steel sheet. But the primary-producing countries are naturally most affected by substitution, because in most cases substitution means replacing a natural product by a product made in modern factories—technically complex factories such as are likely to be established first in developed countries. It is easy to find exceptions to the rule. The development of manmade fibres has probably affected American natural fibres (both cotton and wool) more than the natural fibres (which are more wool than cotton) of the primary-producing countries. (Of course, the United States is a very big primary-producer, but not mainly such.) And substitution of margarine for butter has created a big demand for the vegetable oils of the primary-producing countries.

Still, we cannot argue round the fact that industrial technology is reducing the relative importance of some primary commodities and is thereby weakening the position of the commodity-producing countries in relation to the manufacturing countries. And this development is occurring at a time when most authorities on the world's nutrition are forecasting an even worse deficiency of food in the under-developed countries in future years. It is ironic that the problem is aggravated—at least in a statistical sense—by the advance of medical science. Irrespective of birth rates, the populations of the under-developed countries will increase rapidly as the average length of life increases. It is estimated that to keep pace with the increase in the world's population the world's production of food must increase more—in proportional, not only absolute, terms—than it has ever, over a long period, increased in the past. Two-thirds of the world's population, it is believed, is under-nourished now, and drastic changes in production and distribution of food will be needed merely to prevent the situation from growing much worse.

We have often been told in the past that population would grow faster than supplies of food, but stocks of some foods have accumulated, the deficiencies (though certainly they exist) are not obvious, and we have become rather sceptical of the whole idea of future under-nourishment—even famine and mass-starvation. But we ought to reconsider the position with that widening gap between the privileged and the under-privileged countries always in our minds. The trends indicate that the developed countries, with relatively static populations (excepting particularly the United States, whose population is increasing fast) will have no difficulty in feeding themselves adequately, but that the less-developed countries will be unable to earn the foreign exchange needed to import food (if available) on a large scale or to pay for the equipment that could greatly increase their own production of food.

The more advanced countries have recognised, in varying degrees, their obligations towards those less fortunate, but it may be questioned not only whether their financial and technical assistance has been adequate but also whether their help has been put into the proper form. General aid to expansion is certainly valuable, but specific aid to raise standards of nutrition may soon have to be recognised as indispensable. A British firm (British Glues and Chemicals) demonstrated recently a revolutionary machine to separate edible protein from almost any abundant vegetable matter (such as grass). Numerous technological developments of this character could be immensely useful; and they must obviously be evolved mostly in the countries whose industry and science are already well developed. To help the under-privileged it may be necessary to plan a programme of research into food, and to implement that programme at least as energetically as defence programmes have been carried out.

There must be no sense of charity in these ideas; on the other hand, orthodox ideas of financing will probably be irrelevant. Liberal trading practices are certainly relevant, for the new mass-scale industries of the developing countries can greatly increase the purchasing-power of those countries if the goods are admitted freely into the developed countries. Some of the developed countries' established industries will suffer from the new competition—as Britain's cotton industry is suffering now from imports of cheap goods from the eastern members of the Commonwealth; but the trade in commodities is unreliable, and it must be supplemented. However it may be done, the gap between the rich and the poor countries must be narrowed; and sufficient food must be ensured for the world as a whole. It is more important to be able to live in this world than to explore others.

CENTRAL JUTE COMMITTEE REPORTS

AMONG the interesting points raised by Dr. M. S. Randhawa, president, at the 23rd annual general meeting of the Governing Body of the Indian Central Jute Committee in Calcutta last week, was the rate at which internal consumption of jute goods is growing. From 121,000 tons in 1953-54, demand has increased to 221,000 tons in 1958-59. This is a trend which is in cheerful contrast to the lack of speed with which consumption of jute goods is increasing in the world as a whole. There seems no reason why this internal market should not continue to improve; at the rate of 100,000 tons every six years, it could be expected to absorb more than one third of the mills' output at current levels within the next 20 years. Such a development would completely transform the fortunes of the industry. Instead of being almost exclusively an export industry it would have a solid basis of internal offtake which, given Government co-operation, could be manipulated in such a way that the worst effects of fluctuations in world demand could be avoided. If the bulk of this home demand were for sacking, it would act as a valuable counterbalance to the inroads which the Pakistani jute industry is at present making in the Indian mills' markets. The prospect is a pleasant one for an industry which is at present facing numerous difficult problems of increased competition in a world market which is both highly unpredictable and apparently extremely reluctant to expand in line with increasing economic activity. As with the tea industry, a sound internal market for jute goods could be the future hope of the Calcutta mills.

It would appear unlikely from estimates already being received, and from what Dr. Randhawa himself said, that this year's raw jute crop will be anything like as good as last year's. The reason may be the weather; but it may equally be the disorganisation which hit the raw jute market last year when self-sufficiency was achieved for the first time. It is improbable, therefore, that the suggestions made by Dr. Randhawa for stabilising prices, will need to be adopted. The danger is likely to be all the other way, and it is possible that the end of the season may find the mills pay-

uneconomic prices for their jute while the Trading Corporation insists on exporting of the scarcer varieties in order to keep the will of the customers it has managed to mulate. There may be need to remind the oration before long of its original intention— t least the Government's—to export only the not required by the Indian mills.

The fact that, as Dr. Randhawa pointed out, acreage of jute has declined for the current on, appears to confirm that the reason for the ction in the crop may not be entirely the ther. There is no reason to regret the fall in acreage provided yield rises, and Dr. Randhawa seemed hopeful on this point. His main ground for optimism was that the jute grower is becoming fertiliser conscious and the use of ammonium sulphate is gaining popularity. This is all to the good provided the distribution problem can be solved. As Dr. Randhawa pointed out, there "should be no occasion in the future for the complaint, now almost general, that fertilisers did not reach the jute growers on time". It was unfortunate that Dr. Randhawa's report on the progress of the improved seed campaign was by no means as gratifying.

Current News and Comment

Delhi Cloth Does Well

There has been steady support for the ordinary res of the Delhi Cloth and General Mills Co. Ltd Rs. 35.19 This is due to the satisfactory results the year ended June 1959. The ordinary d vid of 10 percent (gross) gives a yield of 7.2 per t at the present price, and is covered over four es. During the year ended June 1958, an ordi y dividend of 8 percent, tax-free, was paid. estors seem to be greatly impressed by the wth prospects. The directors are planning an ditious modernisation and renovation programfor the cotton textile section. This will increase productive as well as the competitive capacity he mills. The modernisation and expansion of sugar mills is proceeding steadily. In the chals section, the new high pressure water tube lers and the new superphosphate plant have ted production. During the year under report, cotton textile, sugar, chemicals and vanaspati isions worked satisfactorily. Sales have increasfrom Rs. 29.42 crores to Rs. 30.08 crores. The fit is Rs. 53 lakhs higher at Rs. 1.58 crores. table allocations include Rs. 95 lakhs (against 56.92) for taxation provision, depreciation 65.53 lakhs (against Rs. 88.91 lakhs), development rebate reserve Rs. 11 lakhs (against Rs. 16.10 hs), general reserve Rs. 18.13 lakhs, debenture emption reserve Rs 10 lakhs and carry-forward 2,84,684 (against Rs. 4,80,599).

Speaking to shareholders at the annual general eting, Mr. Bharat Ram, chairman, has pointed the possibility of large financial outlays on exsion and modernisation plans. (A fuller ver n of the speech appears on a later page.) Conering the strong balance-sheet position, it looks if internal resources will be used, for the time ing, to finance the improvement. Reserves total 4.14 crores. A noteworthy feature is the sound uid position—current assets are Rs. 10.62 crores d cash is Rs. 1.11 crores. General reserve ounts to Rs. 1.29 crores, dividend equalisation nd to Rs. 22 lakhs and debenture redemption fund Rs. 30 lakhs. The earnings are adequate for vicing the preference capital of Rs 69.31 lakhs. e debentures for Rs. 1 crore are being covered by ilding a debenture redemption fund steadily. Mr. Bharat Ram takes a fairly optimistic view the prospects for the cotton textile industry in e near future. Sales at home and abroad have creased, and stocks have declined to reasonable vels. He is nevertheless worried about the trends raw cotton prices. Due to a lower crop, supplies e being squeezed and prices have risen. It is cessary to hold down prices by bigger imports. raw cotton values continue at the present level, is feared that the prices of the manufactured proucts will be increased. His observation about the gar mill industry is controversial. It is doubted hether *khandsari* production is as wasteful d unnecessary as it is made out to be. What erits consideration is his argument that there is ttle scope for mills to manipulate the prices of gar as long as both production and the price are rgely controlled. He points out that, out of the c-factory price paid to the mills, only 3 percent is ept by them; the remainder is handed out to hers, such as the cultivator, the Government (in e form of fiscal levies) and workers.

Calcutta Uses More Electricity

Sales of electricity by the Calcutta Electric upply Corporation during the year ended 31st March, 1959, amounted to 1,677 million units, or 76 million units more than in the previous year. All classes of consumers increased their offtake. barring the tramways whose operations were suspended for about six weeks due to a labour strike. An analysis of the C.E.S.C.'s working results, which show higher earnings despite increased costs, was given to shareholders by Sir Harry Burn, chairman, in a statement circulated on the occasion of the annual general meeting held in London last week. (A fuller version of the statement appears on another page of this week's *Capital*.) Industrial demand accounts for 90 percent of the company's sales. The jute industry is the principal consumer and its offtake during the year increased by 50 million units to 412 million units. "Sales of energy have been helped by a better load factor resulting from the policy of rationalisation and modernisation of mill machinery and by the benefit of a full year's consumption from the mills fed by the Bauria electrification scheme," Sir Harry said. Next in importance are the rolling mills and engineering workshops; sales to these increased by 25 million units to 211 million units. Their consumption should expand further when the present shortage of steel eases with the new State steelworks going into production. Cotton mills, chemical works and paper mills are also large consumers, and it can be said "that our high-tension power consumers cover almost every type of industry."

There was an increased demand for low-tension industrial power, sales of which rose from 91 million units to 99 million units. Among these consumers, the most important are the engineering workshops manufacturing components for larger concerns, but their demand has been depressed by the shortage of steel. Public water works and sewage pumping stations consumed 82 million units, an increase of 9 million units. Domestic power sales showed a further rise from 50 million units to 56 million units. Much of this was due to the larger number of air-conditioning units in middle-class homes, which reflected an improvement in their standard of living, Sir Harry reported.

Puket Tin Dredging Reorganises

The quotation for the 2-shilling shares constituting the £175,000 one-class issued capital of Puket Tin Dredging reappeared at 8s 7½d on the London Stock Exchange a few days ago. It will be recalled that dealings in the scrip were suspended earlier this year following the disposal of the company's tin interests and pending reorganisation of the business. The reorganisation has now been completed and the company is carrying on business as an investment trust. The directors propose to change the company's name so as to bring it more in line with the present business. Out of the money received from the sale of the mining interests, there is £256,000 of cash awaiting investment, and the total investments so far amount to £428,000. The first accounts of the company concerning the new business will cover the 15 months ended March 1960. Although the directors have not yet given any idea about the likely profits, they expect to pay around May 1950 a dividend of 12½ percent, which is nearly equal to 10 percent a year. It is believed that the company has between 500 and 600 shareholders, the largest being Waihi Investment and Exploration with a 56 percent holding.

Calcutta Tea Sales Postponed

The usual weekly tea auctions in Calcutta have been postponed indefinitely from this week because of doubts concerning the interpretation of the latest amendment to the West Bengal Sales Tax Act. The amendment seems to empower the State Government to impose sales tax on all teas (without blending) which are sold in Calcutta and sent to other parts of India. The wording of the amendment does not make it clear whether sales tax will have to be paid and, if so, by whom, so no one is prepared to do business. It is unfortunate that the sales have had to be postponed at this time. There is at present a very good enquiry for the commodity from domestic consumers as well as from abroad. It is, therefore, expected that the Government of West Bengal will make the tax position under the amendment clear. Unless an official clarification is issued soon, a good deal of business will be diverted to competitive producers.

Refrigerators: A New Company

Mr. J A. Howie, managing director, has announced that Britain's Lightfoot Refrigeration Company is to manufacture a wide range of refrigeration equipment in this country in collaboration with Indian interests. Especially welcome is Mr. Howie's declaration that the new company will also undertake the manufacture of compressors. Certain leading manufacturers of air-conditioning units claim that they have succeeded in making about 80 percent of the components themselves. The remainder, mostly compressors and electric controls, still have to be imported. When the new company starts functioning in about six months' time, the air-conditioning industry will move a step nearer self-sufficiency. The reason why the industry has not yet begun the manufacture of compressors is that they are a highly specialised item and are not always considered to lie strictly within its scope. Moreover, to be economic, compressors must be made on a mass scale. In the United States, for example, one manufacturer alone produces about 17 million compressors a year, while two of them together account for about 90 percent of the total national output. It is hoped, therefore, that the new company will not only meet its own requirements of compressors, but will also be able to offer them to other manufacturers.

Some believe that the bigger air-conditioning unit manufacturers are heavily burdened already. The lack of ancillary industries has compelled them to make 80 percent of the components in their own works, whereas their U.S. counterparts make only 30 percent and buy the remainder from other American manufacturers who specialise in the mass production of basic parts. The lack of similar facilities in this country means that Indian manufacturers of air-conditioners are unable to take advantage of the cheap parts made on a large-scale production basis. This, it is stated, accounts for the fact that prices in India are higher than they need be.

It would perhaps be unwise to expect that a complete range of ancillary industries will spring up very quickly. For instance, it seems that it will be quite some time before the electrical

industry will be able to make controls of the required specifications. But, in the meantime, a case seems to exist for reviewing the import policy for components required by the air-conditioning industry. Some domestic air-conditioner manufacturers make only a small proportion of the components themselves and they are given import licences to buy the remainder from foreign sources. This is on the understanding that they will progressively increase the manufacture of components according to a phased programme of development. It seems reasonable, perhaps, that instead of importing these components, they should buy them from the bigger air-conditioner makers who have ample capacity for the manufacture of parts. In effect, in the absence of ancillary industries, the smaller manufacturers could look to the bigger ones for supplies of parts. This would save a considerable amount of foreign exchange. By making it possible for the bigger manufacturers to use their surplus capacity, it would also reduce manufacturing costs.

Madhya Pradesh Industries Shares

The public is being offered 50,000 ordinary shares (par value Rs. 10 each) in the Madhya Pradesh Industries Ltd at Rs. 15 a share. The subscription list concerning the offer will open today (19th November), and the purpose is to get the shares listed on the Calcutta and Bombay Stock Exchanges. The company's total paid-up capital is Rs. 20 lakhs—divided into 5,000 6 percent tax-free cumulative preference shares of Rs. 100 each and 150,000 ordinary shares of Rs. 10 each. It operates a group of manganese ore mines in Bombay and Madhya Pradesh; it is stated that the ore produced there has a manganese content of 46 percent to 48 percent, and is largely exported. The working of the company in recent years has been satisfactory. The net profit, before taxation, has risen steadily from Rs. 1.41 lakhs in the year ended March 1955 to Rs. 17.67 lakhs in the year ended March 1958. Out of the latter sum, an ordinary dividend of 35 percent was paid—on the smaller ordinary capital of Rs. 10 lakhs—and it absorbed Rs. 3.5 lakhs. An interim dividend of Re. 1 a share has been paid for the year ended March 1959, and those who buy the shares now on offer will be entitled to the final dividend that may be declared for that period.

Shipping Shares Slipping

Although the stock markets generally have been quite cheerful, shipping shares have been conspicuously quiet for a long time. The index number of all-India variable dividend industrial securities has moved up from 143.4 in September 1958 to 153.1 in September 1959, but the figure for shipping and other transport shares has fallen from 143.4 to 123.7. The decline in shippings was due to investors' fears that the profits of the companies would suffer. That the fears were justified is borne out by the depressing results which shipping companies have begun to show. The report from India Steamship for the year ended March 1959 is disappointing; the tale of woe is repeated by Great Eastern Shipping, a company which over the past ten years has brought its shareholders a golden harvest in the form of good dividends and bonus share issues. Scindia Steam is expected to announce its dividend soon but there are no great hopes about it among investors.

The report of the India Steamship Company for the year ended March 1959 shows that although freight earnings have risen to a new record of Rs. 8.04 crores from Rs. 7.75 crores in the previous year, the net profit has dropped sharply to Rs. 60.67 lakhs from Rs. 174.97 lakhs. The entire net profit has been transferred to the development rebate reserve. The ordinary dividend of Re. 1 a share has been maintained only by transferring back Rs. 20 lakhs from the dividend equalisation reserve, and by reducing the carry-forward from Rs. 8.09 lakhs to Rs. 2.09 lakhs. The depreciation provision has been increased to Rs. 75.56 lakhs from Rs. 59.37 lakhs. The directors point out that the increase in freight earnings has not been proportionate to the increase in the number of voyages completed by the fleet. But the expansion of the company's tonnage continues. Two new ships were added in November and December last year, and another three new ones will be added during the current financial year. The company used 15 vessels during 1958-59 in the liner service on the India-U.K.-Continent run and the India-Black Sea route. One ship was employed in the coastal trade, and coastal cargo was also carried in the overseas vessels. For the first time, India Steamship entered the liner trade between India and South America, serving the River Plate ports in that Continent. Four ships were taken on time charter agreements in order to maintain the schedules which would otherwise have been disturbed on the usual routes by the opening of a new route and by the dry-docking of some ships for special survey. As for the prospects, the directors point to the general recession in international trade and say that it is affecting the volume and value of business in the international freight markets. Although they "do not take an unduly pessimistic view of the freight earnings in the current year, they feel that the conditions still continue to cause some anxiety."

India Steamship has had to draw on reserves in order to maintain its dividend. But even after writing back Rs. 15 lakhs from the general reserve, which incidentally did not meet with the approval of the Government director, Great Eastern Shipping has had to cut its dividend for the year ended June 1959. India Steamship was affected by the general recession in the international freight market, and perhaps this will be the case with Scindia Steam too. But Great Eastern Shipping has been affected in addition by the steeper decline in tramp freights, since part of its fleet is engaged in the international tramp trade. Although Great Eastern Shipping had 25 percent more tonnage on the seas, its gross freight and charter earnings fell sharply from Rs. 3.6 crores to Rs. 2.75 crores. The gross profit is, therefore, down from Rs. 121.35 lakhs to Rs. 86.16 lakhs. Operational earnings would have been much lower, but for the sizeable sum of Rs. 22 lakhs which became due from the underwriters as an insurance claim. After providing Rs. 50.99 lakhs (against Rs. 36.6 lakhs) for depreciation and Rs. 3.59 lakhs (against Rs. 9.29 lakhs) for managing agents' commission, the net profit amounts to Rs. 31.58 lakhs (against Rs. 64.97 lakhs). Bringing in Rs. 1.54 lakhs and making other adjustments, the total is Rs. 33.31 lakhs. In view of the development rebate allowance on the purchase of ships, the company has no tax liability. The directors say that in order to get the benefit of the development rebate allowance for income tax purposes, it is necessary to create, out of the otherwise taxable profits, a development rebate reserve equal to 75 percent of the development rebate allowance to be claimed for the year under report. An amount of Rs. 29.5 lakhs has, therefore, been set aside for development rebate reserve. This leaves a balance of Rs. 3.81 lakhs which, with Rs. 15 lakhs drawn from the general reserve, makes a total of Rs. 18.81 lakhs. Dividends absorb Rs. 15.46 lakhs, leaving Rs. 3.34 lakhs to be carried forward.

Cotton Supply Outlook Worsens

Since the recent rains in Punjab and in certain parts of Berar and Khandesh, ideas about the cotton crop have again been revised downwards. Spot prices have risen considerably, and most varieties, particularly medium and short staples, are again quoted near the ceiling levels. Traders who have sold cotton to mills for November-December delivery seem to be facing a serious situation. How to obtain the fibre to meet their outstanding commitments is alone a big enough problem. To supply mills the quality of the cotton contracted for makes matters even more complicated. Whether the mills will be satisfied with compensation in case the quality falls below specifications is difficult to say. If they insist on getting the quality stipulated, there might well be a crisis in the market. These thoughts have already begun to trouble spot dealers. A good deal of short-covering, it is said, has taken place in the delivery contract over the past few days. Even so, the business outstanding is varyingly estimated at between 400,000 bales and 500,000 bales. As arrivals seem to be behind the normal schedule and stocks with mills are estimated at barely around two months' consumption, there appears to be little prospect of the market developing a softer tendency in the near future. This explains the return of bullishness in the futures section. In kerb dealings last Thursday, Jarilla March was bid up to Rs. 638.75—a new high level for the season. Upcountry centres have been prominent buyers in the past few days.

The consumption of mills in September is estimated at 388,537 bales of Indian cotton and 41,953 bales of foreign cotton. The corresponding figures for August were 333,336 bales and 40,781 bales. The announcement of an export quota of 75,000 bales of Bengal Deshi is expected soon. Established shippers have already sold about 54,000 bales up to 10th November out of their share of 67,500 bales. The quantity passed for shipment is mentioned as 10,561 bales. Informed sources seem to be confident about the release of an import quota of 100,000 bales of U.S. cotton in the not too distant future. This is expected to come under a P.L. 480 arrangement. The trade is criticising New Delhi's delay in releasing a fresh import quota out of the annual target of 600,000 bales to relieve the difficult domestic supply position.

Oil and Oilcake Exports

It is rather surprising that Mr. Ramdas Kilachand's recent address to the Bombay Oils and Oilseeds Exchange should contain no reference to the excellent trend in exports of oils and oilcake in the current year. Groundnut oilcakes have already established an all-time record, while sales of castor oil during the first ten months of the current year are 50 percent more than in the whole of last year. If the present trend is maintained, exports of castor oil might not be much below the 1957 record shipments. Groundnut oil has also fared well and exports of linseed oil have not been discouraging. But the improvement is due no less to the favourable turn in the world demand-supply position than to the enterprise of the trade or the policy of the Government. However, these facts do not detract from the importance of the points made by Mr. Kilachand and their claim for careful consideration, particularly in view of the need for constant vigilance about exports and for more vigorous export promotion.

It is difficult to disagree with the plea for long-term export policies. Mr. Kilachand says that foreign buyers have been exploiting the Government's practice of announcing policies for short periods to India's disadvantage. The Government perhaps prefers short-term policies since they enable it to study market conditions in the light of changing circumstances and make adjustments accordingly. But at the same time it cannot be denied that long-term policies would help the trade in spacing out sales to the best advantage. Short-term policies, as Mr. Kilachand says, create difficulties for exporters, thereby thwarting the purposes of export promotion. The Exchange has requested the Government to extend the shipping period for H.P.S. groundnuts, groundnut oil and groundnut oilcake until March 1950 and Mr. Kilachand felt that the shipment period should now be extended until June 1960. Another valuable suggestion was that the incentive allowed for the export of vanaspati by way of imports of copra and chemicals should be extended to groundnut oil. This, he argued, will enable India's groundnut expellers to realise better prices abroad. Under the present incentive scheme for groundnut oil, expellers have to be sold under pressure.

Mr. Kilachand criticised the freight rise proposed by the Karmahom Conference Lines, saying that the decision will hinder exports and has been taken without consulting the trade or even the Government. It is stated that the Conference Lines are unable to provide enough shipping space for even November and December: the decision has been taken at a time when there are large outstanding sales of oils and oilcakes for shipment in January and later. Mr. Kilachand also criticised the system of margins since they tend to restrict the volume of speculative business on the Exchange. Their efficacy as a check on rising prices may be debatable, but few will deny that a situation often arises when the volume of business needs to be curbed.

Carbon Black from Sui Gas

An agreement has been reached between the Pakistani Government, the Pakistan Petroleum Company of Karachi, and the Continental Carbon Company of the U.S.A. to set up a $7 million plant at Sui, in West Pakistan, to manufacture carbon black from natural gas. The plant's capacity will be 36 million lbs a year or 50 tons a day. This will be enough to meet the home demand and to spare some for export. The plant will consume about 17 million cubic feet of natural gas to make 50 tons of carbon black a day. West Pakistan's current consumption of natural gas, all obtained from the Pakistan Petroleum Company's field at Sui, is about 50 million cubic feet a day. The project is expected to be ready in a little over a year's time. It will be controlled by a new company, to be incorporated in Pakistan as the Sui Carbon Company, with an initial capital investment of $7 million, divided between the Pakistan Government, represented by the Pakistan Industrial Development Corporation, the Pakistan Petroleum Company, and the Continental Carbon Company of the U.S.A. The ratio of the shares to be held by the three sponsors will perhaps be announced later. The P.I.D.C. will ultimately transfer its own shares to Pakistani private enterprise. Talks on the project were held in Karachi earlier this month. The proposal for setting up another plant at Sui, to liquefy natural gas for export, was probably not discussed. It is expected that a separate round of meetings will be held in February 1960 on this subject.

Intermediates for Chemicals

India will soon begin manufacturing intermediates for chemicals, which are essential for several industries. It is said that the Government of India is negotiating with a West German combine—the names of Bayer, Baff and Hoechst are mentioned—for setting up a plant in the public sector. Some private companies were interested in making intermediates, but the Government has apparently assumed that in view of the long time the development of the industry might take in the private sector, the scheme should be launched under State auspices. Representatives of the West German combine have visited India, as reported, and after a round of talks, a tentative agreement has been negotiated. It is likely that the West German principals will come to this country soon. The final agreement might be signed with the Government of India by the end of this year or early next year. The talks, it is believed, have taken three years to yield results. The scheme visualises the manufacture of intermediates not only for the dyestuffs industry, but for plastics, pharmaceuticals and certain items like printing ink; it thus covers a very wide variety of the intermediates required by the chemical industry.

The capital cost of the project is likely to be about Rs. 20 crores. If things proceed according to plan, work should commence by 1960 and the factory should go into production by 1963. The proposed output, it is said, will cover not only present requirements but also the needs likely to arise in the third plan period. The site of the factory has not been decided yet, but Bombay, being the centre of the dyestuff and chemical trade, is likely to be considered. The possibility of some place in eastern India, near the coalfields, being chosen is not ruled out. The basic raw material for the industry, coal tar, is available in sufficient quantities. The West Germans will supply the machinery and technical know-how.

Co-operatives Off the Conveyor Belt

The Prime Minister's doubts as to whether the 10,000 service co-operatives he inaugurated in Uttar Pradesh were "only a show or there was strength behind them" will be readily shared by others. These 10,000 service co-operatives represent half the total target for the entire country for the current year. It is not clear why the Centre should have approved of such a large number for U.P. alone in such a short time. The next stage after service co-operatives, as the Prime Minister said, is co-operative farming. Hence the former, by their success or failure, will determine the future of the latter. A record of 10,000 service co-operatives in two weeks gives a daily average of 175, which is too good to be true. The Co-operative Department has been insisting that it is a real achievement, but how good the societies are can be judged from the fact as many as 6,000 were brought into being by the paper conversion of already existing agricultural credit societies. If the conversion does not extend to the thinking of the men who are members of these societies, it will do more harm than good to the general cause of the co-operative movement.

The Registrar of Co-operatives has pointed to deposits totalling Rs. 1.28 crores and representing the share capital of these societies to prove that they are not a fake. Statistically they may not seem so, but that does not answer the main criticism which is directed against the very idea of fixing targets for setting up co-operatives. The dissenting minute to the report of the Patil delegation on China pointed to the "evident contradiction between the professed principle of voluntariness and the simultaneous setting of high targets for the number of co-operatives to be established year after year." The dissenting note also quoted a passage from Mr. Gomulka's famous report of October 1956: "A quantitative development of producers' co-operation cannot be planned, because on the basis of voluntary entry to a co-operative, this would amount to planning the growth in human consciousness and this cannot be planned." Compared with the old credit societies, service co-operatives are intended to provide many more of the services needed for improved agriculture, but it remains to be seen how they are going to bring in the landless labourer whose need is not for seeds or fertilisers but consumption goods, or whether they will now devote more attention to smaller tenants who were ignored by the old societies because they were not considered creditworthy. Again, if it is seriously intended that the service co-operatives will turn into co-operative farms at the end of two or three years, the bigger cultivators will keep out, and the whole movement may collapse for want of direction and management.

Freezing Land Prices

The recent Hyderabad conference of Housing Ministers discussed the question of freezing land prices, but apparently did not come to any concrete decision. Land prices at present are a considerable factor in boosting the cost of house construction, and any measure designed to curb speculation in housing sites should, therefore, be welcome. The Bombay Government, in fact, long ago enacted legislation freezing land prices at the 1948 level. The salutary effect of freezing land prices or of fixing a ceiling on them would be nullified if the U.P. Government's proposal is adopted. This is to the effect that instead of curbing land prices, it should be made obligatory by legislation for the seller to hand over all the unearned increments to local bodies. The finances of local bodies may improve by this device, but the cost of land to the builder will remain as it is, and conceivably even rise. In fact, the present practice of local bodies like improvement trusts auctioning housing sites has had to be discontinued in some States. The highest bidder is usually a speculator and he bids high because he is sure he can squeeze a handsome return on the investment from the hapless tenant.

The acquisition of land "in bulk and in advance", as suggested by the Central Minister for Housing, Mr. K. C. Reddy, will not be enough to stop speculation, but any legislative remedy that is sought should be uniform throughout the country. Mr. Reddy told the conference that pending amendments to the existing legislation, the State Governments should invoke "whatever authority or powers that exist with them". The subject matter of this type of legislation is on the concurrent list, and in the event of conflict, the Central law will prevail over that of the States. The Law Commission, commenting on the multiplicity of laws prevailing in the various States, recommended consolidation of the law and its enforcement throughout the country on a uniform pattern. In enacting uniform legislation, care should be taken that the rates of compensation are not made illusory. Even now, some State Governments are reported to be of the view that not only should the 15 percent solatium be done away with as in England, but also that the market value should be determined on the basis of the use to which the land is being put and not its potential use. The Government would be justified in curbing speculation but it should not seek to amend the traditional concepts of market value to suit its ends, however desirable they may be.

Prospects for Pakistani Jute

The threat to Pakistani jute from substitutes and from the fibre produced in certain foreign countries is growing. India, which used to buy a large quantity of jute from East Bengal, has now become self-sufficient and is exporting small quantities. The estimate of the Indian crop in 1958-59 was 6.8 million bales, against the Indian mills' normal consumption of around 6.25 million bales, thereby leaving a surplus of 550,000 bales. The Pakistani crop was about the same size as India's; about 4.75 million bales were exported and approximately 1.2 million bales were consumed by her mills. Speaking at the annual general meeting of the Narayanganj Chamber of Commerce and Industry in Narayanganj recently, Mr. M. Naser-ud-Deen Khan, president, said that Siam, China and Burma have started exporting jute, so the monopoly which Pakistan enjoyed in the international market is now being gradually lost. It is, therefore, necessary to pay greater attention to research so as to increase acreage yields and to produce better quality fibre. The Pakistani Government has realised the threat which jute is facing, and has set up a high-powered commission of enquiry. Its terms of reference, Mr. Khan said, are to study all aspects of jute from cultivation to consumption. Although the Pakistani mills at present enjoy better prospects than they did in 1957, the Government should extend greater support to them in view of the keen competition in export markets. Mr. Khan said that the production of the Pakistani jute mills has increased to 203,447 tons in 1958-59 from 157,860 tons in 1957-58. They have at present a loomage of 8,000 and a production capacity of 220,000 tons, out of which 55,000 tons is consumed internally. "The installation of a further 4,000 looms is also envisaged but with the greatly increased capital costs a loom and the uncertainty of returns, the economics of expansion must be carefully gone into."

Self-sufficiency in Raw Jute

India, after partition, was left with an annual production of raw jute, including mesta, of about 2 million bales, while the consumption of the jute industry was 6.5 million bales. The self-sufficiency in fibre achieved during 1958-59 was, therefore, an important event, having been facilitated by the concerted efforts of the trade, agriculturists and the Central and State Governments. During the year, the jute crop, including mesta, totalled 6.8 million bales, so India was able to export fibre for the first time in ten years. Speaking at the annual general meeting of the Bharat Jute Sellers Association in Calcutta recently, Mr. Nihalchand Jhanwar, president, said that the benefits of self-sufficiency could not be shared by the producer since prices began to fall as the raw jute came to the market. Although exports created some confidence, they were not sufficient to maintain the prices of all varieties; as a result, the jute acreage has decreased during the current year. "It was the view of your association all along that the internal consumption of raw jute should be increased by the Indian jute industry. In that direction, it was suggested to the Government of India that the industry should increase working hours or unseal the idle loomage of the running industry so that the working cost may be more economical and jute goods may be put to the markets at more competitive prices." Mr. Jhanwar said that the recent unsealing of 2½ percent of the looms is not sufficient. There is a shortage of ready goods, and the trends in the futures market show that they command a big premium. At present, jute goods stocks are equivalent to about three weeks' output only, and are insufficient, so he maintained the total loomage of working mills should be opened or the working hours increased. Mr. Jhanwar said that the rules for the conduct of business in transferable specific delivery contracts for raw jute are vague and incomplete.

ASTROLOGY

MR. H. F. T. MAGUIRE writes: "The discussion of the subject of astrology is not so very alien from the subjects suited for an Indian financial paper as might appear. For a large part of the Indian market in securities in grain and in piece-goods, depends considerably on the advice of astrologers. I had hoped to have approached the subject with something more than a smattering of knowledge, and had borrowed a work on astrology in Sanskrit and Bengali. But for various reasons I have been unable to reach further in it than the twentyfifth page out of 568. As it now appears that the world is likely to come to an end on the very day (November 16th) when this article might be expected to appear, or on the day before or the day after, it is obviously useless to delay my remarks till I shall have completed the perusal of this book. It appears that many Europeans still believe in astrology, and it is impossible for me to say, as I have never met any of them what the grounds of their belief are or how far they have studied astronomy. It may now be as well to explain the condition of astrological conditions to-day. This is the first day of the Bengali month of *Agrahan*. On this day the sun enters the zodiacal sign of Scorpio. In that sign, or its vicinity, I am not sure of the map in the Bengal Almanacs which I have, are all the other planets except the Moon and *Ketu*. It may here be as well to explain and dispose of this *Ketu* and its companion *Rahu*. These two so-called planets do several things, but chiefly *Rahu* becomes the dragon which swallows or tries to swallow the Sun when there is an eclipse, while *Ketu* is the whale which performs a similar attempt on the Moon. It is true that by beating drums these monsters are always driven away, but they still exist as a constant menace to the two chief heavenly bodies. We say that we know that eclipses are not caused in this way, and that 'there ain't no such passions' as *Rahu* and *Ketu*. However, even without *Rahu*, there are six planets there, including the Sun, and Mars is the lord of Scorpio and Scorpio is not a favourable sign, and exactly what may be looked for from such a conjunction of planets I might have been able to foretell if I had had time to finish the other 543 pages of this blessed astrology book. But if the gamblers who were arrested for gambling on the Kali Puja day have been released and there is any market in Barabazar on such future events, it will be a safe thing for punters to lay even what Mr. Topping used to call 'extravagant odds' on the continued existence of the world in the assured hope that, if they should lose, there will be no settling day."

Without Prejudice

Ex-prisoner Claims Damages

(FROM OUR LEGAL CORRESPONDENT)

"A JAIL was a vile place where dire diseases were bred that come into court with the risoners, and sometimes rushed straight from the ock at my Lord Chief Justice himself and pulled im off the bench. It has more than once hapened that the judge in the black cap has proounced his own doom as certainly as the risoner's and even died before him". And alough, thanks to reformers like Elizabeth Fry nd Wilberforce, conditions since Charles Dickens enned the above lines have immeasurably improved in British jails and the courts have no onger to be "all bestrewn with herbs and prinkled with vinegar as a precaution against ail air and jail fever", yet with three or four inoluntary lodgers occupying a tiny cell designed nd intended for the occupation of only one, conitions in British prisons, and probably even more o those in their Indian counterparts still leave great deal to be desired as far as the avoidance f the contraction of avoidable disease and the pread of infection are concerned.

These reflections have been induced by the erusal in a recent issue of the *Labour Law ournal* (Madras) of a report of what was probably one of the very last cases to be tried by hat great Chief Justice, Lord Goddard, before his etirement and which his lordship described as "remarkable" and "unique". What the writer, finds remarkable about the case is the fact that it should be unique; that during all the long centuries through which our prisons have existed, it seems never once to have occurred to any prisoner or ex-prisoner to sue the authorities of them for damages on account of disease contracted in jail by unhygienic or other faulty conditions therein. Apart from actual convicts, there must be many hundreds of people every year, convicted of no crime, in jail or remand, and some not charged or ever intended to be charged with any offence, but nevertheless kept confined indefinitely under the laws relating to preventive detention.

Take the extreme case with which Lord Goddard had to deal and, which, if one may hazard a guess, found his lordship, in the absence of any authority to guide him, considerably puzzled. A man, say, is justly convicted of a crime, he is sent to jail for it, and the sentence is a long one. He is perfectly healthy when he goes into prison. For years his living quarters are a tiny cell intended to accommodate one man, but actually occupied, through lack of alternative quarters, by himself and three other men. On his discharge, he is found to have contracted tuberculosis. Has he any claim for damage against the Prison Commissioners? No, you may say. The man's conduct forces the authorities to send him to prison, he well knowing that a prison is not a health resort, nor the Ritz. It's a case of "just too bad". No claim against anyone. Well, let us examine the actual case with which the Lord Chief Justice had to deal, and the marked caution with which the great judge dealt with it.

Mr. Pullen had the misfortune to have undergone a sentence of three years' imprisonment (which meant that having earned full remission for good conduct, he was released from durance vile after serving two years). He filed a suit claiming damages against the Prison Commissioners in relation to the treatment he got in Pentonville prison. When we say "treatment", we do not mean "medical treatment"; we mean illtreatment, negligent treatment, which, so the aggrieved Mr. Pullen claimed, was responsible for a condition of tuberculosis from which he was found to be suffering three or four months after his discharge. There was no doubt about the latter facts; "a doctor of eminence and repute", (per Goddard L.C.J.), so deposed and the court accepted it as true. But, you may ask, what was his condition immediately before his arrest; was he already suffering from tuberculosis then? He was not and there was at that time nothing wrong with his health, as was certified by the medical report of his condition while he was under remand at Brixton prison a month before he was tried and before, on conviction, he was admitted to Pentonville. In the latter jail, Mr. Pullen was employed, as many prisoners in India are too, on the making of coir mats. That work involves a certain amount of dust which cannot be avoided and, although steps can be taken to lessen the quantity of dust, "there must always be dust from any such manufacturing process to some extent, but a careful employer, apart from any obligation under the Factory Acts, would see to it that there was not an excessive amount of dust present". (per Goddard L.L.J.).

Note that word "employer". It hints at the relationship of master and servant. But the whole basis of relationship of master and servant is contractual. A bargains with B to employ the latter for a certain remuneration and on certain terms. Mr Pullen made no bargain. He could not do so. He was simply hauled off to jail willy-nilly, very much "nilly", in fact. And there we will stop; and ask the non-legal reader to think out the problem for himself. Can such a claim succeed and, if so, on what grounds? The writer has his own opinion and will disclose it presently. But the law being the embodiment of common sense and the extraordinary fact being that there is no precedent for such a claim in the whole history of our jurisprudence, the reader's opinion is just as likely to be right as that of any lawyer.

Mr. Pullen's advisers, with considerable ingenuity and, if we may respectfully so suggest, with still more audacity, based his claim on an alleged breach of the Factories Act. They urged that a prison workshop is a factory and must be administered by the Prison Commissioners, subject to the obligations, pains and penalties imposed on factory-owners by the Act. This argument was developed at great length, as one of these days it may be in India and disposed of also at length by the Lord Chief Justice, who rejected it on the grounds that ". . . . I am satisfied . . . . that I ought not to hold that a prison workshop is a factory. . . The Factories Act, 1937, is an Act which is designed for the protection of persons working in factories, that is to say, it is an Act which is intended to, and does, put obligations on employers of labour in factories and other places to take various precautions for the protection of their workpeople. It applies, as the Solicitor-General submitted, to people working under contract and not to prisoners employed on labour as part of penal discipline".

Mr. Pullen, a fit man when he went into jail, undoubtedly contracted tuberculosis therein. Yet he lost his case. Nevertheless, were it not for the absence of one element, we think he might have won it. That element may be expressed in one word—negligence. The Lord Chief Justice found as a fact that no one had been negligent towards Mr. Pullen. But what if someone had been? What if he had been put to work in unhygienic conditions? As we have said, there is no actual authority on the point, and we do not know the exact standard of care required to be exercised towards a prisoner by the authority in charge of him. In Charles Dickens's time, a Mr. Pullen could go into jail suffering from tuberculosis, cancer, diabetes, heart disease or anything else. He would simply be put into the prison infirmary to die or recover. No one would think anything of it. Today it is different; a standard of care is required. What standard? Well, not a high one perhaps. The State is the reluctant guardian of a most unwilling compulsory ward. And as to care of the latter's health, the standard, one suggests, is approximate to but less than that prescribed by the law of guardian and ward.

[*Pullen* v *Prison Commissioners*. *L.L.J.* 1959. (i) (ii)].

Safe Custody and Management of Shares and Securities

To those who buy and sell securities and shares, their safe-keeping and management is often a source of worry.

For a very small cost the State Bank of India undertakes to relieve you of this burden and to provide you with (a) safe custody for your Government securities and share and debenture scrips, (b) a prompt and efficient service for the collection of interest and dividends, and (c) other services connected with the buying, selling and transfer of the scrips.

This Safe Custody service of the State Bank is one of the many banking services the Bank renders to its clients. It may be worth your while to know how the Bank can be useful to you by calling on any of the local head offices or branches of the Bank.

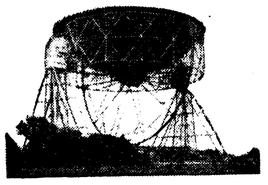
A Ditcher's Diary

IF WE DID NOT HAVE AN ADENAUER AND A RHEE ON THE world political stage, I would pronounce Mr. Nehru the youngest septuagenarian living: and neither of them carries a burden nearly as heavy in so trying a climate. This very human politician naturally lays himself open to all manner of criticism from all conceivable quarters; I have, without regret, gone for him more than once myself. But I just do not see how anyone is going to deny him an element of greatness. In Michael Brecher's recent political biography of Mr. Nehru some have read a sustained indictment of his political career; he is said to have compromised and temporised all his life with men stronger than he, Motilal and Gandhi; and he is said to have so many ideas that he has not the time or patience to see even one of them implemented. There is some truth in all this, but these are the products of what the French would call the defects of his qualities. He is no Peter the Great, no Kemal, no Stalin; and although he has given himself an assignment larger than any of them had, I am not sure he is grieved over not being classed with them. Look at his reactions to Chinese misbehaviour along the border. What I imagine shocks him most is that Mr. Chou En-lai should have done what he had been taught at school is "just not done". Nehru is a liberal humanist; and even had his lot been cast in a western land, his many fine qualities would have brought him to the forefront of political life. His opponents there would have observed the rules of the game, rules he knows and understands and respects. In the milieu of the emerging States of Asia, the rules are hardly known, and a "gentleman" is almost an anachronism in politics. I am well aware of a widely held Indian view that, during this transition, India might do better with a tough man who could get things done. I demur. Some of India's neighbours have plumped for strong men, and their muscles have muzzled freedom without giving in return much prosperity.

TO REMAIN A COMMUNIST, SOMEBODY ONCE SAID, one must learn to be agile. Of course, he meant mentally: but after Meerut, a certain amount of physical nimbleness will, I suspect, be a necessary prerequisite of a whole skin among Indian communists, because it is clear they are in for a thin time. Sympathy with communists can never be anything but misplaced; they consistently ask for what they get, and their unfailing opportunism and admirable sense of self-preservation make them well able to look after themselves anyway. This latest move of the C.P.I. is as characteristic as the pre-war French Communist Party's deliberate sabotage of the war against Hitler and the Hungarian Party's co-operation with the Red Army against its own people. But then, those who oppose communists are not just people, as India is finding out; by definition they have to be "crypto-imperialist hyenas" or "capitalist internationalist disruptionists", or something equally abusive. (I often think it would serve all communists right if they had to pronounce those tongue twisters in Russian every time they apply them to anybody.) So the fact that the C.P.I. is to change its erstwhile allegiance from the Left-wing Parties to the "progressive and democratic" elements in the Congress, is really nothing to be particularly surprised about. Except for those "progressive and democratic" elements that is: they now have the startling fact to face that if they were not the people most likely by their actions and policies to leave their country at the mercy of the Chinese, they would not have been singled out for this communist support at all. And this sudden enthusiasm for Mr. Nehru—not, *of course*, because he is pro-Chinese, but probably because he is liberal enough to resist the popular demand to have the Party banned—looks dangerously like what the Americans would call "the kiss of death". Surely no Prime Minister in Mr. Nehru's position could desire more embarrassing allies I can almost hear Mr. Jayaprakash Narayan, if not Mr. Rajagopalachari, declaiming that this is a measure of just how much Mr. Nehru and the "progressive and democratic" elements of the Congress Party are now out of touch with the Indian people.

THE U.N.E.S.C.O. RESEARCH CENTRE AT BARRACKpore, which studies the social implications of industrialisation in southern Asia, has been doing useful work in a field which ought to receive greater attention in this part of the world than it usually does. The governments in the region are all too eager to promote the industrialisation of their respective countries—often at any cost—but have so far shown a studied disregard for the many undesirable social consequences to which it inevitably gives rise. As a result, one sees industrial towns growing rapidly, with the peasants who flock into them from the villages in order to improve their economic chances, subjecting themselves to the strains of a life to which they were not used. At the same time, the old industrial centres are becoming increasingly overcrowded, with their growing populations pressing heavily on already inadequate facilities and amenities. So the tension grows and we can almost feel it within ourselves; yet the governments have done remarkably little thinking about how to solve the problem satisfactorily. They do not even seem to know its magnitude. The research work done by the U.N.E.S.C.O. Centre, I am sure, will provide enough suggestions for the authorities in this region as to what they should do for minimising the evils of industrialisation and the urbanisation which accompanies it—or to put it in the jargon of the social scientist, how best to keep down the "social cost" to the minimum. I am particularly interested in its studies into the social and cultural factors which affect labour productivity in India. I have always believed that there is something in the traditional and social values of the Indian people which does not easily meet the requirements of a modern industrial economy, and training alone will not make up for the absence of the right attitude. I hope the Research Centre will prove me wrong.



I NOTICE A CERTAIN AMOUNT OF SCEPTICISM about the World Health Organisation team's recent suggestion for an immediate Metropolitan Board to take charge of some of the municipal functions of Calcutta which its Corporation has never fulfilled. I wonder why. Anything taken from the hands of the Corporation at least begins to have a sporting chance of being implemented, although I can see that the Corporation itself is not going to make it easy to deprive it of anything it holds. But then the idea of a Board is not altogether new either. If I remember, Dr. Roy had a scheme not very dissimilar. A Board has to be composed of members, as the Corporation is; and if the same sort of personalities get on, not much improvement can be expected merely from a change of name. A Board consisting of technicians only might cut out the cackle, but it would require political backing if its funds are to be sanctioned; and that is where the politicians come in again. I liked the way Professor Wolman spoke: "Your major deficiency is managerial . . . Your habit of financing projects . . . is absolutely outlandish . . . This is what we do in America." Very American. And it may well be that the British were, and the Indians are, a trifle too patient ever to get things moving. What interests me about the W.H.O. proposal is that, perhaps for the first time, international attention has come to the problems of Calcutta. It is no longer the second city of what is no longer the British Empire, but it earns a sizeable amount of foreign exchange for the country and through it pass many of the international airlines. So I think it legitimate to demand that its affairs be not left to the demonstrably insufficient resources of the Corporation of Calcutta and the Government of West Bengal. I can anticipate the objections of our corporators: rank interference, that's what it is, and setting the clock of democracy back into the bargain. But, truth to tell, Dr. Roy has never taken such specious pleadings very seriously and he knows how to handle them. I hope he will see to it that, at long last, the city will get the managerial attention it has needed for as long as its oldest citizen can remember.

WHAT REALLY SURPRISED ME ABOUT MR. HERTER'S statement was not what it said, but the reaction it seems to have aroused in New Delhi. Here, for once, is a U.S. Secretary of State behaving impartially and cautiously, respecting India's neutrality and trying his best not to embarrass her relations with other powers, and the result is a mixture of official bewilderment and public annoyance. What, may I ask, would India prefer: That the United States should rush to her side with all possible verbal and material assistance, so compromising her neutrality, alienating the key sympathies of the Soviet Union and giving the Chinese the chance they may be waiting for to invade India in the name of liberating her from western imperialism? New Delhi should think again, as it no doubt has done by now. Even if Mr. Herter did perhaps lean over a little too far backwards in his efforts to be tactful, his intentions need not be doubted, and it is infinitely better he should err in this direction than in the other. Nobody can seriously believe that the United States—who has done more than any other power in the world to contain communist expansionism—is not firmly on the side of any victim of Chinese aggression. But what she can do in India's case is another matter altogether. It is not the logic of the border situation which will ultimately protect Indian territory; it is India's own ability to resist incursions together with her friends' willingness to help her do so. But India has studiously avoided such friendships in the past, and Mr. Nehru pointed out only the other day that she has no intention of cultivating them now. How then can the United States help, except to watch the situation and strengthen the defences against Chinese expansion elsewhere—something it is doing all the time? The only friend India has who can offer her assistance without compromising her neutrality is Britain—through the Commonwealth—and I remember reading the other day that this had already been done.

THE DITCHER

achievement depends on reliable steel

More and more industrial energy—to travel faster and over greater distances—the relentlessness of these demands has made technological development a race in which a modern industrial nation cannot afford to be left far behind—a race in which achievement depends on reliable steels, new steels and steels which are stronger especially at elevated temperatures. That is why a large part of United Steel's resources is devoted to research and development.

United Steel, with an annual output of 3 million tons of steel, meets many of the very exacting material needs of today. United Steel Structural Company built the radio telescope at Jodrell Bank (its reflecting bowl, 250 feet in diameter, was fabricated accurately to one eighth of an inch). All steel employed in this remarkable structure was rolled by United Steels.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED

GREATER FLEXIBILITY IN GENERATING CAPACITY

INCREASED SALES OF ENERGY

SIR HARRY BURN REVIEWS RESULTS AND OPERATIONS

The Sixty-second Annual General Meeting of The Calcutta Electric Supply Corporation, Ltd., was held on November 12 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C.

Sir Harry Burn, K.B.E., A.C.A., the chairman, presided.

The following is his statement, which had been circulated with the report and accounts:—

It is with deep regret that I have to record the death on February 9, 1959, of Mr. J. H. Waters, who had been a member of the board since 1952. He had served with the Company in India for 28 years, and was Chief Engineer when he retired from Calcutta. He was a valued colleague, and his experience and knowledge enabled him to give sound opinions and advice on many aspects of the Corporation's activities. We shall greatly miss his kindly presence. For some time prior to his death he had suffered from ill health, but this did not deter him from fulfilling his duties on the Board.

In April last Mr. I. A. Macpherson joined the Board. He has been with the Company for 24 years, and retired from Calcutta at the end of last year, after completing six years as our Agent, an office which he filled with outstanding ability. We are happy to welcome Mr. Macpherson as a member of the Board, and thus have available his wide knowledge and experience.

Distribution and Demand

There is attached to the Accounts a map of the Company's area of supply which shows that two important sections of the distribution system have been commissioned during the year. First, a third 33 kV feeder from Mulajore to Barrackpore and two 33 kV feeders from Barrackpore to Agarpara; this has resulted in greater flexibility of our generating capacity; secondly, two further feeders from Howrah Receiving Station to Fort Gloster in the Bauria Area, thus fortifying our system in that new and important area. I would again emphasize that the high tension industrial load is not confined to Calcutta and Howrah, but covers the whole of the Licensed Area in which industry continues to expand.

During the year ended March 31, 1959, there were increased sales of energy to all classes of consumers with the exception of traction, to which reference is made later in this Review. For the most part the increased demand was from industrial consumers. The total energy sold increased from 1,501 million units to 1,677 million units, an increase of 176 million units which compares with an increase of 107 million units during the previous year.

Power Sales

Sales for Power Purposes are mainly for industry, but also include public water works and domestic power, such as air-conditioning and refrigeration. Industrial demand covers 90 per cent. of these sales which, with a few small exceptions, have increased with every class of consumer. The principal consumer is the jute industry whose consumption during the year increased by 50 million units to 412 million units. Trading conditions for the Jute Industry still continue to be difficult, but for the season 1958-59—July to June—the off-take for both export and internal consumption of jute products has improved, the increase in the former being mainly accounted for by hessian. Sales of energy have been helped by a better load factor resulting from the policy of rationalization and modernization of mill machinery and by the benefit of a full year's consumption from the mills fed by the Bauria Electrification scheme to which reference was made in my last Review. Next in importance are Rolling Mills and Engineering Workshops; sales increased by 25 million units to 211 million units. Their consumption should expand further when the present shortage of steel ceases after the steel projects sponsored by the Government of India come into production. Cotton Mills, Chemical Works, and Paper Mills are also large consumers and it can be said that our high tension power consumers cover almost every type of industry.

There was again an increased demand for low tension industrial power, sales increasing from 91 million units to 99 million units and the number of consumers increasing by over 1,000 to more than 14,500. Of these consumers the most important are Engineering Workshops manufacturing components for the larger concerns and here again their demands have been depressed by the shortage of steel. Public water works and sewage Pumping Stations consumed 82 million units, an increase of nine million units. Half of this increase came from the Calcutta Corporation and the remainder was equally divided between the Howrah Municipality and the State Government's Sonarpur/Arapanch Drainage Scheme. Domestic power sales showed a further large increase, rising from 50 million units to 56 million units. Much of this is due to air-conditioning units reflecting an improved standard of living of many middle-class families.

Sales of energy for lights and fans again showed a satisfactory increase of 14 million units, consumption rising from 213 million units to 227 million units. Increased demand is in general due to an improvement in the standard of living resulting in greater use of fans and more plentiful illumination.

Public Lighting consumption increased by two million units; this was almost entirely due to the Calcutta Corporation, which continues to improve its Street Lighting.

The Calcutta Tramways Co. Ltd. is the sole consumer for traction purposes. The large decrease in sales is due to the six weeks' strike by tramway employees in August and September, 1958.

Bulk supplies are given to seven distributing undertakings; sales to these consumers increased by 19 million units from 44 million units to 63 million units. The most important supply is to the North Calcutta Grid of the West Bengal State Electricity Board, which takes more than three-quarters of the total sales under this head.

Of the sales under Special Contracts some 65 per cent. is at our special tariff for owners of large buildings. Sales under that tariff increased by six million units. The remaining consumers under Special Contracts are the Central and State Governments, the Calcutta Port Commissioners, and the Calcutta Corporation; consumption improved in each case.

Revenue Account

Reference to the revenue account shows how the growth in demand is reflected in the Receipts from the sales of current which rose by nearly £800,000 to over £8,000,000. Miscellaneous receipts declined by £40,000; hire charges for one of our jetty cranes unloading steel for the extensions to the Tata Iron & Steel Co., an exceptional item of income, ceased in the early part of the year now under review.

The cost of Generation and Distribution and larger purchases of power from the Damodar Valley Corporation by reason of the higher demand on the system are reflected in an increase in expenditure of £776,000 under these heads. Generation and Distribution cost over £4 million and of that sum more than £2,250,000 was spent on coal, which cost £315,000 more than in the previous year. This major item of expenditure represents 72 per cent. of the total generating cost. Coal prices and railway freights were further increased though not to the same extent as in the previous year and the average cost of coal per ton delivered to our stations showed an increase of 4 per cent. Additional Power Purchased accounted for over £200,000. Increases in basic pay and dearness allowances and higher costs in respect of materials and various services affected Generation, Distribution, and Administration expenditure. The Depreciation charge also rose by £57,000. Finally, I must mention the Wealth Tax of £109,000 which was £35,000 greater than for the previous year. I am glad to say that the Government of India has decided to abolish this tax and no charge will arise under this head in the accounts for the year ending March 31 1960.

The Net Revenue, after taking into account the Depreciation charge, is £82,000 less than that of the previous year which included the item of £43,000 for the hire of one of our jetty cranes to which I have already referred. I am glad to report that sales of energy for the current year show a satisfactory expansion and conform with our forecasts of future demands.

Net Revenue Account

I will now deal with the Net Revenue Account. In so far as the Indian Tax position is concerned considerable progress has very recently been made towards a settlement of the Appeals which were pending a year ago and to which I made a reference in the 1958 Review. In consequence of this the Board are now enabled to adjust the Indian tax element as it affects the Preference Dividend for the year ended March 31, 1959, and a payment in the form of a supplementary dividend will shortly be made. This payment will bring the dividend for the year up to 5 per cent. (net) and provision in respect thereof has been made in the Net Revenue Account. In view of the Indian Income Tax position it cannot be assumed that the rate of the Preference Dividend for the current year will be the same as that now being paid for the year ended March 31, 1959.

The charge for Indian taxes appearing in the Net Revenue Account covers tax on the items of expense still remaining under appeal and conforms with the provisions of the Electricity (Supply Act). The charge for United Kingdom Tax of £150,068—as affected by double taxation relief—to which I also made a reference in last year's Review has also been adjusted to meet the United Kingdom and Indian tax position as it rests at present pending the final outcome of the Appeals which I trust may soon be resolved.

The statutory allocation to Development Reserve of £11,412 takes into account the current Indian tax position and the Reasonable Return of 6 per cent. permitted on the Capital Base.

The Clear Profit for the year falls short of the Reasonable Return to which the Company is entitled by the sum of £106,247, and this has been made good by a transfer from the tariffs and dividends control reserve as permitted by the Electricity (Supply) Act, 1948.

The allocation for the Contingency Reserve Fund has been made as required by the Act and it is proposed to make the usual contribution to the Retiring Gratuity Fund. Provision has been made for the Interest and sinking fund charges in connexion with the Debentures. In order to conserve our finances for the continued expansion of the Company's operations the Board have deemed it advisable to appropriate a sum of £525,000 to Special Appropriations for Plant Expansion and Replacements. Dividends on the Preference Stock amounting to £65,075 have been paid and, as I have already indicated, a further pay-dividend to 5 per cent. (actual) for the year. It is proposed to pay a final dividend of 3½ per cent. (actual) on the Ordinary stock making 7 per cent. (actual) for the year. The balance left to be carried forward on Net Revenue Account is £122,137.

Balance-sheet

It will be seen from the Balance-Sheet that the bank overdraft has been cleared. Capital Expenditure during the year amounted to £1,365,000 and was again almost entirely for our distribution system. More than half the expenditure was on Mains and Service Connexions. As a provision for capital expenditure during the year, and pending at March 31, 1959, there was available the sum set aside for depreciation of £900,000 and the allocations to Special Appropriations for Plant Expansion and Replacement thus making a total provision of £1,435,000. Between January 1, 1951, and March 31, 1959, capital expenditure amounted to £10,765,000 and the depreciation provision, together with Revenue Reserves and Special Appropriations during the same period, amounted to £10,635,000. I give these figures—which follow on those given in the 1958 Review—to demonstrate what has been done during recent years within the limits permitted by the Reasonable Return on the Capital Base to provide internal finance for the expansion of the Company's undertaking.

Chairman's Visit to Calcutta

During December and January last I visited Calcutta and went over all sections of the Company's organization and saw ample evidence of the care and attention which our staff devote to their work in maintaining efficiency and promoting the interests of the Company. I toured Calcutta and Howrah and the outlying areas where industrial and housing developments are still in progress. During the latter course of my visit I had the pleasure of the company of Mr. Gauntlett, a member of the Board.

Our relations with the Authorities continue cordial. I was afforded the pleasure of meeting Dr. Roy, Chief Minister, and discussed the affairs of the Company with him. Dr. Roy and his officials continue to take a great interest in the Company's activities and appreciate fully all our problems and the service we give to the industrial and residential communities. I also met leaders of commerce and industry in Calcutta. I had meetings with the Chairman and officials of the Damodar Valley Corporation and discussed matters concerning our mutual interests.

Technical Training Scheme

Under our technical training scheme we have at present five trainees in the United Kingdom. During the next few months six more young Indian graduates will be coming from India for training and also several more of our permanent Indian staff for refresher courses. We are grateful to the Electricity Council, the Area Boards, and the various manufacturing companies that provide facilities for this training.

Tribute to Staff

I wish to express our thanks to the staff in Calcutta. The expansion of the Company's operations and the progress made in implementing same demonstrate the interest, efficiency and zeal which the members of the staff and employees devote to the Company's affairs. Mr. Macpherson, our Agent in Calcutta during 1958, carried out his onerous duties with ability in all respects, justifying the confidence which the Board reposed in him. Mr. Henderson, our Chief Engineer, took over the post of Agent as from January 1, 1959. He has a wide experience in the Company's affairs and has been with us since 1929 and is well qualified to carry out the duties of the Agent. To them and all members of our organization we express our high appreciation for the services rendered during the year. I also desire to record the Board's appreciation of the able manner in which Mr. Colley has discharged his duties as Secretary.

The report and accounts were adopted.

The above statement is not a report of the proceedings of the Annual General Meeting referred to.

E DELHI CLOTH AND GENERAL MILLS COMPANY LIMITED

HAIRMAN, MR. BHARAT RAM, DISCUSSES RAW COTTON PRICES

delivered by Mr. Bharat Ram, Chairman, Cloth & General Mills Co. Ltd., Delhi, at the eneral Meeting of shareholders held on nber, 1959 in the office of the Company at u Rao, Delhi.

Gentlemen,

our permission, I will take the Accounts ors' Report as read.

will notice, the profits of the Company better than last year, which is a matter atisfaction.

ton mill industry seems to have turned the l our textile mills have shared in this provement. But even so, the textile situa- whole has some disturbing aspects to which ke to draw your attention.

first place, I should refer to the export which as you know, has been showing this ct signs of improvement over the preceding the basis of present trends, exports for the r are likely to reach 700 million yards. y, I might mention with some pride that pany continue to hold their pre-eminent s the second largest exporter of textiles ntry. I am glad about the revival and the as cause to be thankful to the Government port incentive schemes which have been an or in the increase in exports. But perhaps not miss sight of the fact that even at 700 rds, the exports for 1959 will fall short of e during 1954-57, namely 805 million yards. rn, is considerably short, as you will recall, cond Plan target of 1,000 million yards of

Raw Cotton Prices

natter of fact, even as I speak to you today, tance has appeared which holds a threat port trade. The prices of raw cotton have g rapidly, and currently in several varieties 20 to 22% more than the prices prevailing last year. As a result, not only have Indian lls lost whatever advantage they once had ape of cheaper cotton but they have also position where the prices of Indian cotton etely out of parity with world cotton prices.

oblem of rising cotton prices has an urgency also from another angle. The rise in raw prices is bound to be reflected, sooner or the prices of cloth paid by consumers in

se circumstances, I feel justified in suggest- Government of India to license immediately t of 3 to 4 lakh bales of cotton of the staple 8" to 15/16", over and above the normal import of higher staple cotton. Only then have a balance between the supply of and nd for Indian cotton this season at prices fair to mills and to the consumers of cloth.

I am on the subject of the cotton mill indus- uld like to emphasize the great need of the dustry to equip itself with the latest machi- is is inevitable if the industry is to meet y the challenge of the world markets, and ve to the Indian consumer cloth at a price can afford and which will enable him to his standard of consumption.

Manufacture of Textile Machinery

not be out of place for me to say a word ut the indigenous manufacture of textile y. I am all in favour of the encouragement lopment of machinery manufacture in India. necessary to realise that extensive renovation ernisation do not mean merely having new . It is equally necessary to ensure that the y supplied is also of the latest kind, if our dustry is to stand in world competition.

is connection, it should be unnecessary to that your Company too will have to spend ounts in the next few years in the renovation ernisation of their textile mills, both in i in Lyallpur.

ing to you last year, I had referred at some o the progress made in our chemical indus- his progress, I am glad to state, has been ed, and I am sure, we will continue to do ure years.

ugar factories have shown satisfactory work- results, although the problem of *khandsari*, I had made reference last year as well, s to be a worrying factor. I cannot help g, even at the risk of repetition, that the policy of the Government is not only unfair ugar mill industry, but that it also amounts onal waste of food resources since the *khand-* ducer recovers only seven-tenths of the sugar e that the sugar mill industry recovers. In the State and Central Governments continue revenue, by way of cane cess and excise, ey would otherwise secure from sugar mills.

ht also point out in this connection that the these many-sided losses has been expanding Upto 1956-57 the production of *khandsari* ole around a lakh of tons per season. In the latest season for which Government s are yet available, *khandsari* production is t 2,25,000 tons, or two and a quarter times as the output before 1956-57. This situation to the diversion of cane supplies from sugar , and it has been at least one factor in the tput of sugar during 1958-59.

Sugar Prices

I am on this subject, I would like to say industry is being unjustifiably blamed for the present state of high sugar prices for the consumer. This charge against the industry is somewhat difficult to understand in an industry where ex-factory prices are fixed by the Government and the releases are entirely controlled by the Government. As a matter of fact, sugar mills have no control over virtually 88% of the constituents that enter into the ex-factory price of sugar.

Till recently, as you will recall, the ex-factory price of sugar used to be Rs. 36 per maund, with some adjustments for different varieties. Of this price, 43% went to the cultivator; some 34% went to the Government for cane cess, excise duty &c., and 11% went into the payment of wages. Of the remaining 12%, 9 to 10% went into other manufacturing expenses, leaving the sugar industry with some 3% of the price as its share. In the light of these details of the cost structure, I cannot help feeling that criticism directed against the industry looks like an attempt at misguiding the public and diverting the consumer's natural resentment of high prices on to the sugar mill industry.

At the moment, the coming Third Five Year Plan is in the news. Various estimates have been already offered, although the official document on the subject will probably not be available till sometime next year. In any case, I do not want to argue here about the relative merits of the various estimates, but would like to draw your attention to one aspect of all estimates. There cannot be two opinions on the need for quick industrialisation if living standards are to be decisively improved. But I would only like to say that the effectiveness of any planning in our country, which is and will remain for quite some time a predominantly agricultural country, will depend largely on the success we achieve in agriculture. This is so even from the point of view of many sectors of Indian industry which are agriculture-based.

Agricultural Production

The greatest failure of our Planning has hitherto been in the field of agricultural production, in the matter of ensuring adequate agricultural supplies from year to year. The central problem, it will be generally agreed, is not one of adding to the land under cultivation. It is also not a problem solely of absolute levels of production of particular crops. It is more basically the problem of breaking through the stagnation which confines Indian agriculture to the vicious circle of low productivity per acre. As a matter of fact, a study of available data shows that this stagnation is all pervading in Indian agriculture and covers not merely food crops like wheat, rice, maize and barley, but also other crops like cotton, tobacco, sugarcane and groundnuts.

As I understand it, only increases in agricultural productivity can provide a socially acceptable solution of the poverty of the Indian peasantry. Only rises in the productivity of their own labour can provide the agricultural masses with increases in income which are not accompanied by self-defeating price rises.

I also feel that the entire success of our Third Plan will depend on our capacity to contain and limit the inevitable pressure on prices when investment becomes very brisk. And there will be little chance of our being able to do so if agricultural productivity does not increase with our growing needs.

Before I close. I would like to refer to one matter of more domestic concern. At the last Annual General Meeting, several shareholders expressed a desire that some reduction be made in the fees charged by the Company for the registration of share transfers. Accordingly, the Board of Directors have decided that (from the 16th October, 1959) the charge per transfer will be reduced to half the existing rate. The rate will thus be 3 nP. per share, subject to a minimum of 25 nP. per scrip of 8 or less number of shares.

It has also been decided by the Board of Directors that as a further facility to shareholders, our scrips, which are at present in units of 11, will be made into units of 10, so that calculations become easy. It has, therefore, been decided to change the unit of the scrips from 11 to 10, and new scrips in terms of these units will be issued free of charge in the course of this year.

In the end, ladies and gentlemen, let me convey my thanks to all my colleagues who form a part of this Organisation—the D.C.M.—and whose efforts have been responsible for the satisfactory working of the Company.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

UNDER SECRETARY TO BOARD
23 NOV 1959

City Cable

FRESH BOOM IN STOCK MARKET

BANK OF ENGLAND GOVERNOR ADVISES CAUTION

London, 18th November.

THE boom in the stock market was renewed last week after the previous week's modest setback, and further substantial gains were recorded in the industrial market. Following the fresh advance, however, a further reaction developed. Nevertheless, gains predominated on balance. The renewed boom reflected the market's satisfaction with a number of favourable developments. These included the record export figures for October, the near-peak steel output and further good company statements, particularly those of Unilever and Marks and Spencer. Profit-taking was comfortably absorbed and the main difficulty confronting the market was a shortage of stock. However, the speech by the Governor of the Bank of England, in which he referred to the sometimes disquieting boom in industrial equities, injected a note of caution into the market. At one time, it looked as though the market was going to take this in its stride, but comment over the week-end drawing attention to the need to exercise caution, following the substantial and sustained rise in the market since the general election, brought out a good deal of profit-taking. The buying which had taken several issues to new peaks contracted sharply and prices reacted accordingly. Several losses were sustained at the week-end, but the market then steadied at the lower levels. Business continued at a very high level. The gilt-edged market was subdued throughout and prices were well maintained apart from undated stocks which were inclined to ease. Greek bonds fluctuated somewhat in an otherwise very quiet foreign market. Banking, insurance and hire-purchase shares went ahead, but lost some of their gains later. Gold shares generally recorded very little change. Tin shares were very firm, but other base metal shares eased. There was little interest in oil shares which were mainly lower. Rubber shares were strong reflecting the rise in the price of the commodity, the favourable outlook and yield considerations.

Tea shares also improved helped by favourable comment.

The Money Market

Credit was in keen demand in the money market during the past week. There was an excess of new bills over maturities while the banks' cash balances were at a low level due to a loss of maturities as the result of previous action undertaken by the authorities in giving assistance. The shortage of credit was most acute on Thursday when the market had a very heavy bill take-up. As a result of the difficult conditions, the cost of non-regular loans ranged between 3¼ percent and 3⅜ percent, while a small amount was borrowed on two days running at the penal rate of 4 percent for the week from the Bank of England. While there was a fair demand for bills, business was restricted by the cash position. At the weekly tender, discount houses revised their bids so that there was a moderate increase for the two classes of Treasury bills; 91-day bills advanced to £3 7s 9.55d percent and 63-day bills to £3 8s 11.81d percent. Applications for £230 million worth of 91-day bills totalled £403,520,000. £230 million were allotted at an average rate of £3 7s 9.55d percent against £3 7s 4.62d percent in the previous week. This week £230 million worth of 91-day bills are on offer.

Activity on Wall Street

After early softness, U.S. Government obligations turned firm on buying by commercial banks and other interests. Investment quality corporates were quietly maintained, but rail lines eased. Convertibles were mixed. In the foreign bonds sector, Belgian Congo 5½ percents lost ground on the Congo political troubles, but Cuban 4½ percents improved. Greeks rallied after early easiness. German nationals were generally little changed. Amsterdam 5½ percents and New Zealand 5½ percents were a shade higher and Denmark 5½ percents were unchanged. Japanese Government bonds were fractionally mixed, while Chile 3 percents were slightly lower on the week.

Hongkong Bullion Eases

The Hongkong bullion market eased in quiet trading last week, resulting in the loss of ¼th of a point, compared with the previous week. The easiness was attributed to the steadiness of sterling and the higher interest rates charged by banks. Carry-over charges were nil and deliveries were not available. Arrivals in Macao totalled 16,000 ounces and forward contracts were done at $(U.S.)38.01 c.i.f., Macao.

Vegetable Oils Mixed

Movements in linseed have ceased to have an important effect as a market factor and despite the fact that prices have tended to ease, they are still well out of line from an oil manufacturing point of view. Linseed oil prices moved narrowly in the vegetable oils market last week. Castorseed, however, became more active. Considerably more interest was displayed and Hull was reported to have bought quite a fair amount at firmer rates. A steady demand continued for Bombay castor oil on U.K. account, and prices improved. Enquiry for groundnuts was limited. Demand for Indian groundnut oil was quieter.

Paris Gold Rallies

The Paris gold market firmed for coins in the earlier part of the week. Business remained small, but some covering was noted. Generally well-informed sources thought that the rally was due to some foreign purchases. French investors continued to display little interest. Latterly, technical adjustments reduced the earlier gains.

Synthetic Industrial Diamonds

A method of making synthetic industrial diamonds of the same type as those manufactured by the General Electric Company has been developed by the Adamant Laboratory established in Johannesburg by the De Beers Company in 1958, Mr. H. F. Oppenheimer, chairman of De Beers has claimed.

Money

THE CALCUTTA MONEY MARKET

GOOD SUPPLY OF BILLS

Wednesday, 18th November.

THERE has been very little change in the volume of credit outstanding in the Calcutta money market during the past few days. The seasonal increase in demand has not yet made any appreciable impression. Apart from a rise in the requirements of the jute mills, most of the main sources of demand show little change. Demand from the sugar industry is beginning to show some signs of rising, but the movement so far is small. Advances to cotton and woollen mills are down.

The inter-bank market is extremely easy and funds are unlendable at the nominal call rate of 1½ percent. There has been a sharp increase in gunny bills in the exchange market with a fair supply of tea bills also coming to hand. Remittances continue very poor. On the London market, the pound sterling is slightly weaker against all main currencies except the Canadian dollar and Swiss franc.

SILVER REACTED ON PROFIT-TAKING. ACTIVITY WAS restrained because of the imposition of heavier margins on trading in Bombay. The price declined from the previous week's level of Rs. 209.75 to Rs. 208.25, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 207.50. The London and New York prices were shown at 80d. and 91.375 cents.

In spite of a fall in silver, gold was quietly steady. The price was quoted at Rs. 126. The sovereign fetched Rs. 81.25.

DURING THE WEEK ENDED 13TH NOVEMBER, Government of India Treasury bills for Rs. 63,70,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 17th November. The total amount offered was Rs. 5,45,00,000. Tenders at Rs. 99.405 were accepted in full, the average rate of acceptance being Rs. 2.388 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 23rd November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 18th November to 21st November at Rs. 99.421 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 11th November to 14th November, amounted to Rs. 1,60,00,000.

A DECLINE OF Rs. 8.25 CRORES TO Rs. 1,696.02 crores in active notes was a notable feature of the return of the Reserve Bank of India during the week ended 13th November, 1959, but the total note issue was fractionally higher by Rs. 58 lakhs to Rs. 1,715.66 crores. Notes held in the Banking Department consequently rose by Rs. 8.83 crores to Rs. 19.64 crores. Deposits of the Government of India fell by Rs. 2.40 crores to Rs. 50.44 crores but other Government accounts were Rs. 4.93 crores higher at Rs. 18.85 crores. Balances of commercial banks increased by Rs. 12.94 crores to Rs. 86.55 crores. Balances held abroad improved further by Rs. 2.93 crores to Rs. 39.88 crores. Investments at Rs. 243.29 crores showed a rise of Rs. 13.73 crores. Other loans and advances declined from Rs. 90 crores to Rs. 81.18 crores, of which advances to scheduled banks against usance bills amounted to Rs. 16 lakhs (nil). Ways and means advances totalled Rs. 25.83 crores, against Rs. 24.83 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 6th November, 1959, shows a rise of Rs. 2.26 crores to Rs. 571.92 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 23 lakhs and Rs. 15 lakhs to Rs. 386.07 crores and Rs. 10.32 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 7 lakhs to Rs. 161.23 crores. Cash and balances are, in consequence, shown at Rs. 26.41 crores or Rs. 62 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 6th November, 1959, shows Demand and Time liabilities at Rs. 735.63 crores (Rs. 24.26 crores on account of borrowings from banks) and Rs. 1,125.48 crores (Rs. 28.36 crores), compared with Rs. 726.28 crores (Rs. 23.75 crores) and Rs. 1,126.55 crores (Rs. 27.28 crores), respectively, in the previous week. Cash has increased by Rs. 7.27 crores to Rs. 46.75 crores, while balances with the Reserve Bank have decreased by Rs. 3.65 crores to Rs. 68.66 crores. There is a drop of Rs. 1.35 crores to Rs. 792.75 crores in investments. Advances and bills discounted at Rs. 934.73 crores show a fall of Rs. 5.31 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.2 percent and 50.2 percent, against 6.0 percent and 50.7 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 20-11-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
20-11-59	21-2-60	2,00,00	Rs. 2.388%

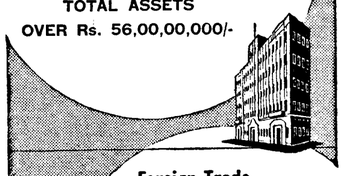
Total	27,00,00



RISE IN KATKI LAC CROP ESTIMATED

According to the preliminary report on the katki lac crop for 1959, issued by the Indian Lac Cess Committee, the total crop is estimated at 305,000 maunds, compared with the revised final estimate of 265,000 maunds in 1958 and 233,000 maunds in 1957. The average crop, based on ten years' production (1949-50 to 1958-59), is 277,000 maunds. Bihar and Madhya Pradesh have accounted for 112,000 maunds and 120,000 maunds, respectively, of the total output.

THE ECONOMICS OF ALUMINIUM EXPANSION

By A. L. Sabharwal

AS India's second basic metal industry and the premier among non-ferrous industries, aluminium commands considerable official and public attention. The development of the metal from a "kitchen" material into one required for varied industrial applications is the story of translation of advanced techniques from the developed western countries to India during the last two decades. Less than 20 years ago, aluminium was a pots and pans business, and some 10,000 tons went almost exclusively into the manufacture of kitchen utensils. Today the picture is very different, and it is being mainly consumed in the electrical, building, transport, packaging and other industries. With this change in the consumption pattern, the advantages of this modern metal have been increasingly appreciated, opening out an entire new vista of selling possibilities which in turn calls for a substantial expansion of primary and rolling facilities in the country.

The present annual primary smelting capacity for aluminium is 18,100 tons, from the three smelters in Alwaye, Asansol and Hirakud. As for the fabricating capacity, in addition to about 8,500 tons rolled by six rolling mills (who, although working on an organised basis with a reasonable scale of operations, are capable of producing only circles for the utensils industry), there is an annual capacity of 15,900 tons, of which 12,700 is in sheet, strip, coil, circles and other rolled products, 1,200 extrusions and 2,000 tons of foils and linings.

By the close of the third plan period, these capacities are expected to expand considerably, to a total of 83,100 tons of primary aluminium and nearly 30,000 tons of fabricated aluminium, as given in tables I and II.

Changing Consumption Pattern

In 1958, some 35,000 tons were consumed in India, with considerable unsatisfied demand resulting from a shortage of the metal. As estimated officially, the demand for aluminium at present is around 44,000 tons. Table III shows the present and expected consumption analyses.

These estimates show that against the requirements of 81,500 tons of aluminium, the available primary capacity will be adequate at 83,100 tons. There are, however, two factors worth examining in implementing the expansion plans. These are: (1) how accurate are the consumption figures and (2) the wisdom or otherwise of achieving expansion by setting up several plants instead of a few large ones. Taking the first, the development of uses during the last two decades and the relative insignificance of the consumption in relation to the population figures as compared with other countries, should leave no doubt in any one's mind about the vast scope for aluminium in this country. The estimate shown above works out to an average annual increase of approximately 17 percent in the consumption of virgin metal over the second plan period if it is assumed that the consumption in the electrical industry is 40,000 tons and 9 percent in case the offtake is 22,500 tons. Against the present 0.18 lb *per capita* aluminium consumption in India, the figures elsewhere are:

Country			Lbs
U.S.A.	...	...	20.7
Canada	...	...	11.5
France	...	...	9.5
Australia	...	...	7.6
Italy	...	...	3.7
Japan	...	...	2.4

The Price Factor

As for the second, the price has been and is one of the most important factors in determining aluminium's continued growth in competition with other metals and materials over a period of years. When one talks of the price, one has in mind not only the basic ingot price but also the level of semi-fabricated prices. Aluminium costs 30 percent to 40 percent more in India than in other developed countries. Furthermore, the price difference between other competing materials and aluminium is far more unfavourable in India than in those countries. This is unfortunate as, with a favourable price factor, aluminium could replace a sizeable tonnage of copper, lead and zinc which have to be largely imported. To give an example, India expects to consume about 100,000 tons of copper a year, most of which will have to be imported by the end of the third plan period, and, if the price factor is favourable, approximately 25 percent could be substituted by aluminium. Similarly, out of the 33,500 tons of lead which is expected to be consumed, aluminium could replace over 6,000 tons of it.

The only way to achieve a sizeable consumption of aluminium and at the same time to compete in the export markets, is to bring down ingot cost by having large plants capable of producing 50,000 tons a year and over. The present trend, however, is to have small units of 10,000 to 20,000 tons with the result the country is likely to get saddled with a high-cost metal. A beginning should be made by examining whether any of the plants listed above could be expanded to their full economic potential. This depends, of course, on the availability of additional firm power in their vicinity at prices which permit economic development of the industry. Expansion beyond such logical incremental growth might well look to 100,000-ton plants based upon hydro-electric development specifically planned for aluminium production. It is clear, in general, that the larger the scale of operation, the lower should be the capital requirement a ton of output. This is particularly significant in the aluminium industry which is capital-intensive. While the capital requirement for every ton of steel is about Rs. 1,000, for aluminium this is as high as Rs. 10,000. It has been estimated that the difference in unit capital cost for a 50,000-ton smelter (plus ancillaries) and a 20,000-ton plant, may well be of the order of 15 percent. Operating costs would be correspondingly reduced, especially when one considers other advantages in large-scale operations, such as the possibilities of incorporating ancillary plants to manufacture certain raw materials (*e.g.*, caustic soda) on an economical basis. The rolling phase of the industry should be regarded in the same light, as expansion of the existing units must lead to an appreciable reduction in capital cost.

The aluminium industry is on the threshold of a spectacular expansion. Its future lies in the down-to-earth economics of price and scientific planning. It is hoped that the Government of India will pay particular attention to these factors, as otherwise the country will be burdened with a high cost metal and expenditure of precious foreign exchange will not have been spent well and prudently.

TABLE I

Annual Primary Aluminium Capacity

	Present (long tons)	Third plan (long tons)
1. Aluminium Corporation, Asansol ...	2,500	7,500

Belur (Calcutta) ...	9,000	16,500
Alwaye ...	1,200	3,700
3. Venesta Limited, Kamarhati	3,200	3,200
	15,900	28,760

TABLE III

Annual Consumption of Aluminium

Industry	Present (long tons)	Third plan (long tons)
1. Building and construction	2,000	3,000
2. Transport ...	6,000	12,500
3. Household and commercial supplies ...	10,500	13,000*
4. Electrical industry ...	18,600	40,000**
5. Food and farming ...	900	1,500
6. Canning and packaging	3,500	7,500
7. Miscellaneous ...	2,500	4,000
	44,000	81,500

* To the figure of 13,000 should be added some 10,000 tons of secondary metal which will be available as scrap and consumed mainly by the utensils industry.

** It is possible that the figure shown against this industry is on the higher side and some authorities estimate it to be about 22,500 tons. The final figures can only be determined after the targets for power development have been fixed by the Planning Commission.

M. L. Khaitan, Chairman, Bata Shoe Co. Ltd.

good advertising means more goods at less cost

A popular fallacy about Advertising is that it increases the price you pay. Surely, people say, money spent on advertising an article must be added to its cost.

In fact, nothing could be further from the truth... as we in the Shoes Manufacturing Industry have good reason to know! Our aim is to bring good, well-made foot wear within the reach of millions... within reach of the man-in-the-street, the factory worker, the villager, the farmer. Obviously, this means our prices have to be *low* enough for them to be able to buy our products.

Through advertising, we offer our foot wear to hundreds of thousands of our present and potential customers. To meet the wide and expanding demand thus created, we mass-produce shoes by employing modern large-scale production methods. This results in savings in purchase of raw materials in bulk, achievement of high efficiency in production, rapid out-put of products of uniform and standardised quality and elimination of waste. All these factors help to lower the cost of production per unit, which enables us to pass on this benefit to our customers in the form of lower selling prices.

Thus, money spent on advertising instead of adding to costs and prices actually helps to cut them down. Advertising is an important reason why goods are now available in quantities never known before, and at prices which enable more people to buy them.

Good advertising serves *you*

Stocks and Shares

INDIAN IRON PRELIMINARY RESULTS DISAPPOINT MARKET

SHARP CONTRACTION IN TURNOVER

Wednesday Evening.

THE Calcutta Stock Exchange began the week on a dull note, with a progressive decline in business. Most shares ended the week with losses with the exception of tea—and brokers reported a sharp contraction in turnover. Interest appears to have shifted for the time being to new issues, the latest of which is an offer of 50,000 Rs. 10 paid-up ordinary shares of Madhya Pradesh Industries at Rs. 15 a share. Fuller details appear elsewhere in this issue of *Capital*.

The majority of market operators seem to have been disappointed with the preliminary figures released yesterday by the Indian Iron & Steel Co. Ltd., despite the fact that the net transfer to reserves was larger by almost Rs. 1 crore. The report and accounts for the year ended 31st March 1959 are expected to be released early next week and, perhaps, after these have been scrutinised, the pessimists may have reason to revise their opinion on the growth potentialities. Details of the preliminary figures released by the company are given below:

Year ended 31-3-1958 Rs.		Year ended 31-3-1959 Rs.
1,17,98,193	Net profit	1,17,49,499
2,02,65,000	Tax	18,62,500
1,40,00,000	Depreciation	2,00,00,000
2,11,53,865	Net transfer to reserves	3,11,46,512

Gilts were generally depressed and the 3% Conversion Loan 1986 was marked down further to Rs. 74.40.

In the banking section, United Commercial improved to Rs. 63.

Coal shares were lower and prices were marked down on a broad front. Bengal receded to Rs. 303, Burrakur to Rs. 17.44 and Raneegunge to Rs. 17.25. Contrary to the general trend, Katras Jherriah were slightly better at Rs. 67.

Cotton shares were featureless and prices, where changed, were slightly lower.

In electrics, Benares were taken at the higher-rate of Rs. 14.50 while Calcutta were offered at Rs. 15.06.

In the engineering section, Indian Iron shares were subdued throughout the week and tonight's settlement rate was Rs. 23.80. Bhartia Steel rose from Rs. 17.50 to Rs. 18.25 while Guest, Keen, Williams were unchanged at Rs. 40. Indian Standard Wagon were lower at Rs. 94.50 and Jessops fluctuated narrowly around Rs. 33.75. Textile Machinery were shaded at Rs. 24.60.

Jute shares were sluggish and prices generally were trimmed down. In contrast, National were better at Rs. 25.37.

Paper shares met with selling pressure on reports that paper prices might be reduced in the near future by the Government on the basis of the Tariff Commission's recommendations. Orients were knocked down from Rs. 38.25 to Rs. 37.65, Sirpur from Rs. 14.31 to Rs. 13.94 and Shree Gopal from Rs. 24.37 to Rs. 23.50.

In sugar, Belsund were easier at Rs. 14.94 as were Carew at Rs. 11.87 and Champaran at Rs. 20.31.

Among miscellaneous industrials, Angelo Brothers, after being done up to Rs. 21, met with profit-taking and closed lower at Rs. 20.25. Dunlop Rubber were quiet at Rs. 36 as were Indian Aluminium at Rs. 22.62. The outstanding feature was Hindustan Lever which spurted from Rs. 31.75 to Rs. 36 on Bombay demand. India Steamship were fractionally lower at Rs. 13.31 as were Martin Burn at Rs. 26.94. Metal Box were well maintained at Rs. 44 *cum*-rights, but Rallis were easier at Rs. 85. National Carbon eased to Rs. 39.50.

In the mining group, Indian Copper were depressed at Rs. 3.92 while Burma Mines were better at Rs. 1.72 on reports of better working.

Tea shares met with profit-taking during the last two days of the week under review and closing prices were lower than the highest touched recently.

Karanpura Collieries

The profit of the Karanpura Collieries Ltd has increased by Rs. 54,000 to Rs. 3.77 lakhs for the year ended February 1959, after providing Rs 1.75 lakhs, against Rs. 1.52 lakhs, for depreciation. An ordinary dividend of 5 percent has been paid to absorb Rs. 1 lakh, leaving a carry-forward of Rs. 20,442, compared with Rs. 11,229 brought in. Raisings were up from 167,051 tons to 171,391 tons and despatches from 164,095 tons to 172,923 tons. The directors state that wagon supplies generally showed an improvement over the previous year but closing stocks at 6,207 tons were "still uncomfortably high in view of the restricted space at the depot."

Dhunseri Tea

The Dhunseri Tea Company has made a profit of Rs. 3.15 lakhs for the year ended December 1958. A dividend of 20 percent has been paid. General reserve is allocated Rs. 1 lakh. The carry-forward is Rs. 8,826, against Rs. 24,897 brought in. The crop increased from 9,210 maunds to 9,753 maunds. The average sale price showed little change at Rs. 2.14 a lb. Estimates for 1959 provide for a crop of 9,500 maunds at a cost of Rs. 1.50 a lb. The Dhendai tea estate has been taken over. The estimate of crop from this garden in 1959 is 7,000 maunds at a cost of Rs. 1.90 a lb.

Kinnison Jute

There is a trading profit of Rs. 19.78 lakhs for the Kinnison Jute Mills Company for the year ended March 1959. Depreciation is allocated Rs. 8.88 lakhs and wealth tax Rs. 68,000. Statutory development rebate reserve receives Rs. 51,425 and machinery replacement reserve Rs. 3 lakhs. Bringing in Rs. 25,650, there is a balance of Rs. 6.96, 60. An amount of Rs. 5.40 lakhs is being paid as ordinary dividends. The directors state that under the scheme of arrangement with the Standard Jute Co. Ltd, approved by the Calcutta High Court, Standard Jute is now a subsidiary company of Kinnison Jute. They allotted 12,098 ordinary shares to the shareholders of Standard Jute and certificates were directed to be issued to such shareholders in exchange for ordinary shares of Rs. 70 each of

NSE 7 SEKAI

Standard Jute held by them in the proportion of one share of Kinnison Jute of Rs. 100 each for every two ordinary shares of Rs. 70 each of Standard Jute. The ordinary dividend recommended is based on the increased capital of 60,098 shares, including 12,098 ordinary shares in Kinnison Jute allotted to the shareholders of Standard Jute.

New Standard Engineering

The trading profit of the New Standard Engineering Company has amounted to Rs. 6.47 lakhs for the year ended March 1959. Depreciation absorbs Rs. 1.15 lakhs and development rebate Rs. 33,626. Making other adjustments, an ordinary dividend of 9 percent has been paid, leaving a carry-forward of Rs. 25,203. The company proposes to set up a heavy manufacturing and processing industry capable of serving the requirements of the building industry, Indian railways and other industries requiring special types of structures as well as mild steel fabricated plant and equipment. The steel construction workshop will, in the initial stages, have a capacity of 8,400 tons a year. The total capacity of this workshop is proposed to be raised to 12,000 tons a year.

Morarjee Goculdas Spinning

There is a trading profit of Rs. 75.48 lakhs for the Morarjee Goculdas Spinning and Weaving Company for the year ended June 1959. Depreciation absorbs Rs. 5.25 lakhs. Bringing in Rs. 21,633 and making other adjustments, there is a balance of Rs. 27,96,513. Notable allocations include development rebate reserve Rs. 1½ lakhs, general reserve Rs. 1.50 lakhs and taxation provision Rs. 10.35 lakhs. An ordinary dividend of Rs. 21.50 a share has been paid, leaving Rs. 2,38,354 to be carried forward.

Brooke Bond Estates

Brooke Bond Estates India Ltd has made a net profit of Rs. 13.83 lakhs for the year ended June 1959. Taxation absorbs Rs. 7.02 lakhs. Bringing in Rs. 4,29,840, there is a balance of Rs. 11,19,432. An ordinary dividend of 12½ percent, subject to tax deduction, has been paid, against 10 percent, tax-free. The carry-forward is Rs. 4,40,470. The crop increased from 3,001,268 lbs to 3,199,322 lbs, and the average sale price rose from Rs. 2·10 to Rs. 2·29 a lb. The crop in 1959-60 is expected to be bigger. The directors state that in the new 1959-60 season, prices so far have been lower than last year, but there is some indication of an improvement in the market in the remaining part of this season. About the deduction of income tax from the ordinary dividend, which has hitherto been paid without deduction of tax, it has to be noted that as the company's profits are liable to tax for the fiscal year 1960-61, it is obligatory under the provisions of the Finance Act, 1959, for tax to be deducted by the company and paid over to the tax authorities. Tax deducted from the preference dividend, which was previously retained by the company, now has to be paid over to the tax authorities.

Bombay Market

BUSINESS IMPROVES AFTER POOR START

SUBDUED UNDERTONE AT CLOSE

Wednesday Evening.

THE Bombay stock market was quiet last week and the closing prices were shaded all round. During mid-week there was selective buying and many shares improved. Investors were encouraged by the excellent corporate news, combined with reports of good offtake of cloth by both domestic and foreign customers. Towards the close, operators were disinclined to extend commitments in the light of uncertain political developments. The decision of the Ahmedabad Stock Exchange to impose heavy margins on dealings restrained activity. There was nevertheless little selling pressure and the technical position appeared to be healthier. The move to restrain speculation by amending the Securities Contracts (Regulation) Act has had little effect, as it is thought that no basic changes are being proposed.

Tata Steels were quoted at Rs. 154, but Indian Irons were sold down to Rs. 23.88 on pressure from Lyons Range. The Calcutta operators seemed to take little notice of the results of the latter company for the year ended June 1959. Alcock Ashdown were sold at Rs. 247 but Premier Construction were steady at Rs. 358 on knowledgeable support. Tata Locomotives were dealt in at Rs. 195.50 and Larsen and Toubro were steady at Rs. 27.40. Premier Automobiles lost at Rs. 141 in spite of paying a higher divilend. Hindusthan Motors were placed at Rs. 13.48.

The shares in the cotton mill group disclosed losses on balance. Century reacted to Rs. 619 on disappointment over the rights share issue move. The company has now decided to issue the rights shares early next year. Bombay Dyeing were transacted at Rs. 67.80 and Kohinoors were taken at Rs. 324 on improved prospects for the company. Simplex were transacted at Rs. 163 and Swadeshi changed hands at Rs. 259. United India Ordinary were offered at Rs. 10.92 and Apollo were available at Rs. 1.26.

Miscellaneous shares moved in line with the general trend. In the sugar group, Phalton were steady on buying by influential quarters. Belapur were quiet at Rs. 321.50 on a lower dividend. Among cement shares, Associated Cement were steady at Rs. 153.50 on prospects of an improved dividend. Digvijay Cement were quoted at Rs. 150. Steamship company shares were shaded and Scindia Steam were dealt in at Rs. 16.72. Great Eastern Shipping declined to Rs. 19.28. Mining shares showed little variation and Shivrajpur Syndicate were bought at Rs. 87. National Rayon reacted to Rs. 371 on profit-taking, but Bombay-Burmah were steady at Rs. 544. Tata Chemicals moved down to Rs. 17.40 and Voltas made Rs. 178.

Banking and insurance shares were quiet. Central Bank declined to Rs. 49, as did Bank of India to Rs. 107. New India Assurance were available at Rs. 66.

Turnover in electricity supply company shares was limited and fluctuations were narrow. Ahmedabad Electric were quoted at Rs. 91.50 and Bombay-Suburban were available at Rs. 103.75. Tata Power were placed at Rs. 1,110.

THE WEEK'S TRANSACTIONS

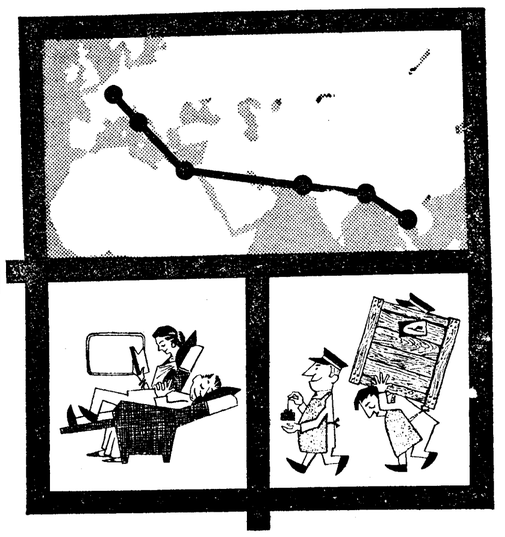
London Cries
and London buys
air-sped goods from India!



7 flights each week

TAKE advantage of *seven* flights a week to London to get *your* goods to London fast. Transport and insurance costs are reduced; warehousing charges cut; turnover is quicker; markets are satisfied. And Air-India are *such* experienced cargo handlers!

Remember, *only* Air-India offers you seven flights a week to London, via 8 cities—plus a *special* weekly cargo service for heavy and bulky wares.

AIR-INDIA

4, Dalhousie Square, Calcutta.
Telephone : 237314

Twice Weekly—

Wednesdays & Saturdays at 6 p.m.

Fly by LUFTHANSA German Airlines

DIRECT TO GERMANY!

Connecting India with the very heart of Europe, Lufthansa, German Airlines, forges yet another link in its world-wide net-work of routes.

Twice weekly, Lufthansa flies from Calcutta to the main cities of Germany—Frankfurt, Dusseldorf, Hamburg.

Whether you're an industrialist, a businessman, a student, a government official or an educationist—you'll appreciate the traditional, generous German hospitality of Lufthansa, aboard the swift Super-G constellations.

Lufthansa, German Airlines, directly connects Germany with Bangkok, Calcutta, Karachi, Cairo and Rome.

Coordinated flight schedules provide convenient connections with Air France and Alitalia.

FIRST CLASS OR TOURIST

For further information, consult your Travel Agent or any Air France or Alitalia office.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research

TRADE AGREEMENTS WITH EUROPEAN COMMON MARKET COUNTRIES

MODERNISATION OF JUTE MILL SPINNING EQUIPMENT LIKELY TO BE COMPLETED BY NEXT YEAR

(FROM OUR NEW DELHI CORRESPONDENT)

THE K. B. Lall mission to the countries of the European Common Market, which returned recently, has concluded five agreements with different member-countries. As reported earlier, the common feature of the agreements are the commissions which will be composed of the representatives of India and the Governments of the contracting countries which will meet at the request of either party and take such steps as may be found necessary to widen and deepen economic relations. It has been emphasised that it will be mutually beneficial if the manufacturers of the countries concerned could also meet to explore the possibilities of one another's requirements on a long-term basis. The need to foster closer relations between the banking institutions and sales organisations of these countries, in order to overcome current difficulties, has also been stressed. India, on the one side, and Italy and West Germany on the other, have agreed not to practise any shipping discrimination. This, however, does not apply to coastal traffic. India and Italy have also agreed to encourage each other's air traffic.

Under the Indo-French agreement, the French representatives have declared that they will abolish progressively all discrimination against India and all other less developed member-countries of G.A.T.T., while applying quantitative restrictions on imports into France. They will examine with the authorities of the different States in the French community, the possibility of importing Indian goods more freely.

The agreement with West Germany is the most comprehensive and should be of lasting benefit to India. It provides for the import into West Germany of Indian goods other than those provided in the schedule to the agreement. It provides for advanced consultation on priorities for projects to be included in the annual programme of technical co-operation. There is a provision for market intelligence. Facilities will be provided for the exchange of visits by Indian and West German experts for the furtherance of trade. Provision has been made to promote contacts with German dress designers, stylists and fashion experts; and for training in business administration. The agreement provides for the import of items into West Germany which are subject to global quotas. Until the allocation of quotas is made, licences for imports from India may be granted "automatically." A separate licensing category has been created for goods made by hand. The agreement provides for collaboration between India and West Germany to organise the manufacture in India of goods which can be economically produced from local resources for external markets. West Germany has also promised to consider sympathetically India's request to reduce the duty on tea.

Jute Goods Exports

In view of the fact that 871,600 tons of jute goods were exported during the jute year 1955-56, an export target of 900,000 tons was set in the second plan. Exports declined in the following two years, and exports during the final year of the plan are likely to be 875,000 tons only. The internal demand for gunnies is increasing steadily. The estimated consumption in 1960-61 will be:

Internal	Export	Total
275,000 tons	875,000 tons	1,150,000 tons

Rising Raw Jute Output

India attained quantitative self-sufficiency in raw jute for the first time in 1958-59. From about 4.2 million bales in 1955-56, the Indian jute crop moved up to 5.18 million bales in 1958-59. The availability of bimli and mesta, which are used for mixing with jute, has also been increasing. The mesta crop during 1958-59 amounted to 1.58 million bales, against 1.16 million bales in 1955-56. During the current year, the crop (both jute and mesta combined) was of the order of 6 million bales. The total requirements of raw jute by the industry are placed at 6.5 million to 6.7 million bales. As the domestic supply has increased considerably, it has been possible to cut down imports from Pakistan substantially. From 1.43 million bales imported during 1955-56, imports have dropped to only 330,000 bales during 1958-59. At present, imports comprise only high-grade jute required for the manufacture of bright hessian and wide hessian, and cheap cuttings required for the manufacture of cotton bagging cloth. Small quantities of jute cuttings have also been imported for the manufacture of standard varieties of jute goods to increase the competitive position of the industry in the overseas markets. Efforts are being made to improve the quality and the yield of Indian jute. The target of production for raw jute during the second plan period has been placed at 5.6 million bales. After about ten years, it has been possible to resume exports of raw jute, and it was decided early in 1959 to allow the export of a limited quantity through the State Trading Corporation.

Jute Mill Modernisation

The process of modernisation of the jute mills gained momentum in 1958 and 1959. On 31st March, 1959, 190,206 spindles on the fine side and 34,400 spindles on the coarse side of the modern silver spinning type had been installed in 51 out of the 82 mill companies. This would mean that about 55 percent of the installed looms are now being fed by silver spun yarn. Eighteen mill companies, representing a loomage of 15.3 percent of the installed capacity, have modernised 100 percent of their fine side spindles requirement, and 25 mill companies representing 31 percent of the installed sacking looms have modernised 100 percent of their coarse side spindles requirement as on 31st March, 1959. An *ad hoc* committee was appointed to assess the requirements of modern jute mill machinery and spare parts and also the manufacturing capacity for these items during the remaining period of the second plan, and in the third and fourth plans. This committee considered that the spindle requirements of the looms working at present would be fully modernised by the end of the second five year plan. A progressive unsealing of the sealed looms was anticipated by the committee, and the modern spinning machinery requirement for these additional looms would be met during the subsequent plan period. The committee has also recommended that with the beginning of the third five year plan, the industry should take up the modernisation of the weaving sections, including possibly the installation of shuttleless looms. The report of the *ad hoc* committee is under the consideration of the Government.

Loans have so far been granted by the National Industrial Development Corporation, for the modernisation of machinery up to the spinning stage, to 22 mills. Of the total loans of Rs. 4,55,58,762 sanctioned, Rs. 2,64,36,115 has so far been paid to 15 mill companies. All the mills given loans have shown better working results as a result of modernisation. The National Industrial Development Corporation has also approved of a scheme of short-term loans to jute mill companies for the purchase of indigenous machinery within a limit of Rs. 5 lakhs. No loan has so far been sanctioned under this scheme.

Jute Mill Machinery Imports

The following expenditure of foreign exchange has been incurred in recent years for the import of jute mill machinery:

Year	Jute Mill machinery (Rs. lakhs)	Spares and stores (Rs. lakhs)	Total value (Rs. lakhs)
1956-57	164	12	186
1957-58	54	41	95
1958-59	226	25	251
1959-60 (Provisional)	200	30	230

Simultaneously with the progress of modernisation, the jute industry has been making efforts to reduce the cost of production. The measures taken were to close down uneconomic units and merge the productive capacity with other mill units under the same managing agency, with a progressive reduction of superfluous workers within the limits permitted by natural wastage. Fifteen mill units have closed down in West Bengal and one in Bihar. The rate of retrenchment and the ultimate cadre strength in the West Bengal jute mills are being considered by a special committee of the State Government. There have been three wage awards in the jute industry in West Bengal—in 1948, 1951 and 1955. These resulted in increases of Rs. 12.50, Rs. 5 and Rs. 4 in the average monthly earnings of jute mill workers. A new charter of demands has recently been put forward by the unions in the jute mill industry.

Shoddy Wool Manufacture

The Government is considering the creation of some additional capacity for the manufacture of shoddy wool within the country to feed the shoddy spinning industry. In that case, only woollen rags and worn-out clothing would be imported instead of shoddy wool. This will also ease the position of foreign exchange to some extent, in addition to the creation of a new line in the woollen trade.

Semi-worsted Wool Plant

In the present difficult foreign exchange position, the import of more foreign wool and wool-top is not possible. Therefore, an attempt is being made to find a solution by the establishment of semi-worsted plant in the country which can produce a certain variety of hosiery yarn out of the finer variety of indigenous wool available. One such plant of 1,000 spindles has been licensed in Rajasthan on an experimental basis. After watching the results, steps would be taken for the installation of a few more plants to meet the requirements of the industry.

The total installed spindleage in the worsted sector of the woollen industry in India is 129,681, and it is expected that 5,500 spindles will be added during the next year or so against the industrial licences already granted to several parties. Wool top is the raw material for worsted spinning, and at present, the entire requirements are met by imports. It has been estimated that by the end of the second plan period, India's requirements of wool-top will be about 19 million lbs, and by the third plan period 26 million lbs a year. Although the worsted spinning industry has been in existence in India for quite a long time, none of the manufacturers produced wool tops for their own consumption. The development council for the woollen industry laid great emphasis on the establishment of a wool top-making plant in India to meet the internal demand. It is envisaged that although the wool used for top-making is either crossbred or merino, which is of better quality than the wool available indigenously, it may be possible to use Indian wool in admixture with the imported wool for the manufacture of wool tops after a wool-top combing plant is established in India.

Wool-top combing is a specialised job, requiring greater skill and a better blending technique, but more skill is required for the sorting and grading of wool prior to combing. Wool sorting is a technique which depends much on the judgment of the individual worker. This technique can only be learnt gradually in India under the guidance of expert foreign wool sorters. The Government has recently decided to allow the establishment of a wool-top combing plant in India to meet the partial requirement of wool top by the Indian spinning mills. A licence has already been issued to a firm to establish a wool-top combing plant of about 10 million lbs a year capacity with foreign collaboration in Calcutta. Several other applications are also under consideration. After the establishment of the combing plants in India, it is visualised that the requirements of wool-top will be met indigenously, thereby saving foreign exchange to the extent of processing charges and the value of Indian wool content in wool tops.

Target for Woollen Fabrics

The target for the production of woollen-worsted fabrics by the organised mill sector for the first five year plan was 15 million yards a year, which was raised to 20 million yards a year in the second five year plan, taking into consideration the increase in population and the improved standards of living.

The requirements of wool tops, it is estimated, will be about 19 million lbs by the end of the second plan and about 26 million lbs by the end of the third plan. The requirements of shoddy wool for shoddy spinners will be about 6 million lbs by the end of the second plan and 11.5 million lbs by the end of the third plan. The targets of capacity and production for the third five year plan are as follows:

	Wool Top (Million lbs.)	Shoddy wool (Million lbs.)	Worsted Hosiery and knitting yarn (Million lbs.)	Woollen yarn (Million lbs.)	Shoddy (Million lbs.)	Worsted woollen yarn (Million lbs.)
Capacity	30	15	26 (existing)	24 (existing)	10	36 on a three-shift basis
Production	26	11.5	22	13	10	30

The licensed capacity (except for the wool-combing and shoddy wool-making) is considered sufficient to meet the internal as well as export requirements of woollen-worsted yarn and fabrics by the end of the third five year plan.

Carbon Black Manufacture

Besides the interest shown by a private party in establishing a unit for the manufacture of carbon black on the basis of work done earlier by the National Industrial Development Corporation, the Rumanian Government provided the services of two experts to undertake a fresh project survey. These experts visited India between 7th June and 14th July, 1958, and have submitted a general report covering different aspects of the industry, including in particular, the use of raw materials available in this country for producing different grades of carbon black. This report is being examined.

Heavy Machine-building Plant

A heavy machine-building plant will be set up in Hatia, a few miles south of Ranchi town on the banks of the Subarnarekha river. During the first stage of construction, the heavy machine-building plant will have a production capacity of 45,000 tons of finished machinery items a year. The plant is designed to produce machinery and equipment for the iron and steel, mining, oil, coal and cement industries, as well as for the execution of other orders for heavy equipment, such as coke oven and by-product equipment, excavators, cranes, heavy oil drilling rigs, equipment for crushing and grinding, mining and press forging and also miscellaneous heavy machine parts and assemblies and other ancillary items. The following is the

approximate typical break-up of machinery items o be produced at the plant:

(Figures in tons)

	Stage I	Stage II
1. Coke ovens and by-product equipment	6,000	7,700
2. Blast furnace equipment	4,000	5,500
3. Steel making equipment	5,000	7,000
4. Crushing and grinding equipment	2,100	3,150
5. Crane equipment	4,400	6,570
6. Rolling mill equipment	20,000	34,500
7. Spare parts for metallurgical equipment	1,500	1,080
8. Mining equipment		880
9. Excavators		4,950
0. Press forging equipment		1,360
1. Heavy oil drilling rigs		5,500
2. Miscellaneous heavy machine parts and assemblies	2,000	1,810
	45,000	80,000

Foundry-forge Plant

The foundry-forge plant, built in technical ollaboration with Technoexport of Czechoslovakia, ill serve as a metallurgical base to the heavy achine-building plant. The capacity of the plant as follows:

Description	Stage I	Stage II
rey iron castings (maximum piece weight)	tons 25,000 30-ton	tons 38,300 over 50-ton
teel castings	14,000	26,000
aximum piece weight	50-ton	60-ton
orgings	13,950	27,700
aximum piece weight	17-ton	30-ton
ough machine shop	16,000	39,000

There is a provision in the contract for the tablishment of a machine shop for machine steel ill rolls of various descriptions and sizes with annual output of 10,000 tons. The foreign colborators have undertaken to provide training cilities for Indian technicians for this project Czechoslovakia. The plant is expected to start oduction by the middle of 1962. During the rther stages of the project, the planning of which as also been provided for, the capacity of the plant, both in terms of total output and sizes, will be raised to meet the requirements of heavy machine building fully. The detailed project report for the plant will be available soon.

Czech Credit for Third Plan

The details of the Rs. 36-crore credit extended by Czechoslovakia for heavy machine-building projects in the third plan are being discussed by the economic mission which arrived here from Prague last week. The three principal schemes to be financed under the credit are the third stage of the foundry-forge, to upgrade it to an output of 80,000 tons a year to match the capacity of the heavy machine-building plant, which will be the second project. The third will be a heavy electricals plant. This latter will be in addition to the Bhopal heavy electricals project and another project in this category to be set up with Russian collaboration under the 1,500 million roubles (Rs. 180 crores) credit announced some time ago. The plant from Czechoslovakia, which will be complementary to the Bhopal project, will be a little smaller, the respective overall costs being roughly Rs. 45 crores and Rs. 60 crores. It will concentrate on the production of such items as steam turbines, diesel generators, alternators and condensers. In line with the new economic arrangement with the Russian bloc, Czechoslovakia's credit will be repaid in goods, largely industrial raw materials like polythelene and hydrogenated oil and smaller quantities of traditional items, such as textiles, tea and jute.

Coalmining Machinery Plant

A coalmining machinery plant will be set up in Durgapur in West Bengal for the manufacture of coalmining machinery in collaboration with Technoexport, Moscow. This plant will be capable of producing 30,000 tons of coalmining machinery and spare parts a year including coal cutters, loaders, conveyors, locomotives, haulages, electric winders, main axial fans, booster fans, pumps, ball mills, sand pump, automatic cage keps, safety detaching hooks, and spare parts. In addition, the plant will also be capable of producing and supplying to other enterprises about 1,800 tons a year of steel and iron castings, forgings and stampings.

More P.L. 480, Aid

Three million tons of foodgrains—most of it wheat—and 100,000 bales of cotton will come to India under a new Public Law 480 agreement signed last week between the Governments of India and the U.S.A. in Washington. The announcement of the agreement was made in New Delhi by the U.S. Embassy. About 275 million bushels of wheat have been exported to India under previous agreements. The U.S. Secretary of Agriculture, Mr. Benson, said that an additional 110 million bushels were provided for in the new agreement. "It gives me great personal satisfaction to participate in this brief ceremony. I have witnessed in India the great good that is resulting from shipment of U.S. wheat, cotton, and other commodities. In the fall of 1956, we negotiated a three-year agreement which included 135 million bushels of wheat. Because food deficits in India soon thereafter became more serious than anticipated, wheat was shipped in less than two years and a supplemental agreement was signed in June 1958 for 20 million bushels of wheat to keep exports moving to India. An additional 120 million bushels of wheat has been moved under an agreement bringing the total wheat shipments to India to about 275 million bushels. This new agreement provides for the shipment of 110 million bushels of wheat.

"I believe that the Title I, Public Law 480 programme with India is a forceful demonstration of how U.S. agricultural abundance is being used for peaceful purposes. Besides the immediate benefit of increased food consumption, the programme makes foreign currencies available to India to speed its economic and social development. The new agreement is of particular interest to agricultural producers because some of the sales proceeds are planned for the construction of grain storage and handling facilities which will increase India's capacity to distribute agricultural commodities."

The agreement also provides for the import of smaller amounts of tobacco and foodgrains. The proceeds from the sale of these commodities will support Indian economic development plans. The agreement provides for the largest single grant of assistance to India so far made by the United States—$95.5 million worth of goods (Rs. 45.3 crores). The record grant portion is matched by a loan component of an equal amount, $95.5 million equivalent. The loan repayment is in rupees. The total amount involved in the accord is $238.8 million (Rs. 113.4 crores). American assistance from all sources to India now totals $1,988.1 million (Rs. 944.3 crores). Some 5 percent of the funds are administered by the Export-Import Bank under Public Law 480's Cooley Amendment, which provides loan assistance to Indian firms having an operating affiliation with American business. The funds also are available to Indian private sector companies, facilitating the sale of agricultural commodities. These businesses could include silos, grain elevators and flour mills. Some 15 percent of the funds are allocated for U.S. uses in India, such as the operation of the U.S. Embassy and other missions.

Public Law 480 is an Act of the U.S. Congress which authorises the sale of agricultural commodities to friendly foreign countries. Payment is accepted in rupees for these commodities and a substantial amount of the sales funds—in this case 80 percent of the rupee proceeds—are loaned or granted to the Government of India to support the five year plans. The agreement signed last Friday provides for the import of goodgrains valued at $182 million; cotton worth $14 million; tobacco worth $500,000; $4.7 million worth of foodgrains; and $37.6 million as the cost of transport. Public Law 480 agreements between India and the United States now total $897 million (Rs. 426 crores).

Steel Retention Prices Raised

The Government of India has decided to raise the retention prices payable to the Tata Iron and Steel Company and the Indian Iron and Steel Company by Rs. 5 a ton for the period 1955-56 to 1959-60 for all categories of steel taken together. The Indian Iron and Steel Company had represented to the Government in December 1958 that its costs had risen as a result of increases in wages, railway freight, and prices of coal, etcetera. A similar representation was made by the Tata Iron and Steel Company in January 1959. The two representations were considered by the Government and the matter was referred to the cost accounts branch of the Ministry of Finance in April this year for examination, which recommended:

(i) the average retention price payable to the Tata Iron and Steel Company and the Indian Iron and Steel Company for the period 1955-56 to 1959-60 on all categories of steel taken together should be increased by Rs. 7 a ton, if negotiated labour settlements are to be accepted, and Rs. 5 a ton if such settlements are not accepted.

(ii) The 1954-55 retention prices for the Indian Iron and Steel Company, as adjusted from time to time, should be increased by the same amount as mentioned in (i) above and consequently, the average amount a ton to be credited by the company to its development fund during the period 1955-56 to 1959-60, will remain unchanged.

(iii) As the 1954-55 retention price for the Tata Iron and Steel Company has been increased by only Rs. 4 a ton against the present increase of Rs. 7 a ton in the retention price if negotiated settlements are to be taken into account, and Rs. 5 a ton if negotiated settlements are to be ignored, the average amount to be credited by the Tata Iron and Steel Company to its development fund during the period 1955-56 to 1959-60, should be increased by Rs. 3 a ton, if negotiated settlements are admitted, and Re. 1 if they are not accepted.

The Government of India is examining separately the question of admitting increases in labour

Years of experience have proved to this factory manager that he can rely on WHEEL BRAND Industrial Glycerine — because it is of an *unvarying* high quality.

It is guaranteed to contain not less than 98% glycerol. What's more, it is backed by the experience and reputation of its makers, HINDUSTAN LEVER LIMITED.

In textiles, dyeing and printing, paints, varnishes and lacquers, plastics, leather, rubber and glass... in these and other industries, WHEEL BRAND GLYCERINE is used, and has been used for *years*.

Remember, PYRAMID BRAND GLYCERIN B.P. also has many uses in the industry as well as medicinal and domestic uses! Write for a *free* leaflet about its various uses in the home to: HINDUSTAN LEVER LTD, P. O. Box No. 409, Bombay 1.

Made by HINDUSTAN LEVER LIMITED, Bombay WG, 15-X52

sts due to negotiated settlements. The present crease in the retention price will enable the ta Iron and Steel Company to increase its conbution by Re. 1 to its development fund, mely, to the level of Rs. 50 a ton and the Indian on and Steel Company to maintain its contribun of Rs. 7 a ton. The present retention price T.I.S.C.O. and I.I.S.C.O. is Rs. 419 a ton, excludg the excise duty of Rs. 45.75 a ton.

Iron and Steel Advisory Council

The Government of India has decided to nstitute an Iron and Steel Advisory Council to lvise on all matters of a general character relatg to iron and steel and in particular to the oblems concerning production, distribution, ansport, research, import and export. The entral Minister for Steel, Mines and Fuel will the chairman of the council, which will include e president of the Federation of Indian Chamers of Commerce and Industry or his nominee, d the president of the Associated Chambers of ommerce of India, or his nominee, as *ex-officio* embers. The Government of India will nominate ot more than 21 members who, in its opinion, e capable of representing the interests of the oducers, consumers, the trade and mining and lied interests. There will be eight representaves of the various Ministries in the Government India on the council. The Secretary to the epartment of Iron and Steel of the Ministry Steel, Mines and Fuel, will be a member. The on and Steel Controller of the Government of dia will be member-secretary. The chairman ay also specially invite any other person or perons to represent the iron and steel industry or ade or consumers to attend the meeting of the ouncil. The council, which has been constituted or a term of two years, will meet at least twice a ear.

A Plan for Domestic Fuels

The National Council of Applied Economic esearch has published a domestic fuel plan for ndia, starting first with the big cities and aiming ltimately at providing the fuel needs of a large ajority of the urban population within the ext decade or 15 years. The aggregate demand n big cities is of the order of 3 million tons of oal equivalent and the Council feels that a start ould be made by setting up carbonisation plants f 1,000 tons of coal a day in or near some of the igger cities in the country producing coal gas nd coke. In addition to these city plants, a plant s recommended in each of the deficit zones located s centrally as possible in that zone, preferably ear one of the bigger towns or near the biggest ailway junction or near a colliery in that zone. n all about eight plants, it is suggested, will be ble to meet the requirements of about six zones. hese are to be located in major cities—Bombay, alcutta, Delhi, Madras, Itarsi, Durgapur or ourkela, Kanpur or Allahabad and Hyderabad. hese plants will certainly not meet even a third of he current net demand. But they can, according to he Council, pioneer a programme of progressive nergisation, beginning immediately with an ggregate plant capacity of 2.5 million tons of coal a year and expanding at a rate sufficient to attain a target of at least 50 million tons by 1980 or hereabouts. The Council estimates that a phased programme on the above lines will involve a total outlay of the order of Rs. 500 crores to Rs. 600 crores in about 20 years.

On a request made by the Ministry of Commerce and Industry, the Council took up the enquiry with particular reference to (i) the importance of preventing further deforestation and conservation of cow-dung, (ii) resources of coal available in different parts of the country, (iii) requirements to be met by way of soft coke or other coal-based fuels in different States or regions, and (iv) the size of a minimum economic unit. As part of the study, the Ministry proposed that an assessment be first made of local supplies of different domestic fuels in relation to current demand and future needs by 1965-66 so that the development of a rationally planned coal-based processing industry could be studied within the general framework of the overall energy requirements.

The gross *per capita* consumption of domestic energy in India in rural as well as in urban areas, according to the Council, is 0.25 tons of coal equivalent a year. The study shows that of the total amount of about 97 million tons of coal equivalent used in households, only 2.2 million tons constitute primary energy (mainly coal and kerosene). Roughly 37 million tons of coal equivalent of dung are burnt annually in the country for fuel purposes, the contribution of firewood and agricultural wastes being 55 million tons. The amount of dung burnt in India can produce, if used as a manure, about 9 million tons of foodgrains every year which means that the loss is roughly equivalent to burning 12 Sindris every year.

The surveys lead to some striking conclusions: (1) firewood is the major source of fuel for cooking while kerosene is the chief source for lighting —the two being gradually replaced by other efficient and costly fuels as urbanisation increases; (2) soft coke is a major item replacing firewood in the coal-bearing areas of north and east India while in the western areas it is charcoal that replaces firewood. In Bombay, kerosene and gas are being increasingly used for cooking purposes. Among the fuels for lighting, electricity replaces kerosene when family income rises. (3) Industrialisation and/or urbanisation leads generally to an increased use of primary fuels.

NEW RECORD IN U.K. EXPORTS SET UP

TRADE GAP REDUCED

(FROM OUR LONDON CORRESPONDENT)

BRITAIN'S exports, which showed some signs of slackening in August and September from the rising trend of the first half of the year, made a welcome recovery in October. At £306 million, they set up a new record, outstripping the previous one of £299.2 million set up in May and showing a rise of £59.5 million, compared with September. Imports were also higher, being £30 million up on September at £360.2 million, while re-exports totalled £14.6 million. The U.K. Board of Trade has stopped publishing the monthly trade gap, because these figures "are an inadequate guide to the state of the visible balance of payments on current account." But even as a very rough guide, there must be some significance in the reduction in the gap from £72.4 million in September to £39.6 million in October.

For the first time, the U.K. Board of Trade has worked out "seasonal adjustments" to eliminate normal variations in exports and imports in different parts of the year. After eliminating these seasonal factors, October exports were still £303 million, compared with a ten months' average similarly adjusted of £275 million. The adjusted import figure works out to £354 million, against a ten months' average of £328 million. This shows that there is no seasonal fluke in either export or import records. The adjusted figures for the three months, August to October, show exports 3½ percent up on the previous three months, and the adjusted average of exports in the first ten months of the year was 4 percent higher than the average for 1958. On the same basis, imports were 4 percent higher in August-October than in May-July, and the average for the first ten months was 5 percent up on the year. The seasonally adjusted monthly average of re-exports for the first ten months was £11 million, £1 million less than a year ago.

Steel Output in October

Steel production in October made a very good showing, being the highest ever achieved in that month in any year. The Iron and Steel Board, making this announcement, said that the output averaged 441,400 tons a week, compared with 426,400 tons in September, 353,500 tons in October last year and 437,800 tons in October 1957. Last month's figure was only slightly below the record average weekly production in May 1957, when it was 443,200 tons. The percentage of steel-making capacity worked during the month averaged 92. Production in the first ten months of this year was at an annual rate of 19,575,000 tons, against 19,609,000 tons in the corresponding period of last year. Pig iron production was at the rate of 269,800 tons a week, compared with 241,900 tons in October last year and 285,500 tons in October 1957. Industries showing a higher level of demand, states the Board, are essentially the consumer goods ones, motors, drop forgings and hollow-ware. Deliveries to the general engineering group and the wire industry remained slightly below the 1957 levels. Those to the building and constructional engineering industries, although still well below those of the third quarter of 1957, improved substantially compared with a year ago.

Retail Trade Variations

The U.K. Board of Trade's analysis of the 5-percent increase in retail sales for September shows that shops selling radio and television sets, furniture and domestic appliances showed the biggest rise over last year's corresponding month. The gain was 17 percent in value. In the five months from April to August, gains over 1958 ranged from 20 percent to 25 percent, but the smaller increase in September was largely because relaxations in many hire-purchase controls became effective about half-way through September last year, with an immediate effect on sales volume.

Continued fine weather was not very helpful to the clothing and footwear retailers. Their sales for September were only 3 percent up on last year, and a part of that gain must be attributed to a rise of about 3 percent in boot and shoe prices. Spending on food, however, is still rising. It was 4-percent higher in September. Here again price rises are thought to account for a little under 1 percent of this increase.

Treasury Posters

Posters showing where each £1 of revenue collected by the Government comes from and how it is spent have been distributed by the U.K. Treasury. A quarter of a million have been sent to offices, factories, libraries, schools, clubs and post offices. The posters show that the biggest single source of Government income, 6s 4d in each £1, is personal income tax and surtax. The biggest single item of expenditure, 5s 8d in each £1, is for defence. Taxes on tobacco and alcohol, at 4s 3d of each £1 received, more than cover the cost of the Health Service and family allowances, war pensions and national assistance. Payments on the national debt, absorbing 2s 5d of each £1, are covered by fuel and motor tax, stamp duties and some import duties.

Bank Loans for Small Businesses

A new type of loan to help in the financing of small businesses is being introduced by the Midland Bank, following a recommendation in the report of the Radcliffe Committee on the working of the monetary system. From now on, this bank will be prepared to grant loans to creditworthy industrial and commercial customers for the purchase or improvement of capital assets, such as plant, equipment and business premises. It is not expected that individual loans will be for amounts above £10,000. But this figure will not be taken as the maximum in appropriate cases. The bank's requirements in the matter of security will be the same as for normal lending. Loans will be granted for terms of three to five years for plant and equipment, according to the probable life of the asset, and up to ten years, or possibly longer, for the acquisition of business premises.

Repayments will be spread equally over the period of the loan, interest and instalments of principal being debited to the borrower's current account every six months. The loans will not be repayable on demand like ordinary bank overdrafts, the bank being entitled to repayment on demand only where the borrower fails to carry out his obligations punctually. The rate of interest on the new term loans is 2 percent over Bank rate, with a minimum of 6 percent. With Bank rate at 4 percent, the present rate will, therefore, be 6 percent, which is 1 percent higher than than the usual rate now current on overdrafts.

Investment in Building Societies

The Building Societies Association has once again warned against investing in unsound societies and has called for a revision of the Building Societies Acts. It points out that any four people can start a society for a registration fee of £20. In a pamphlet, it says that since the war a few societies have doubled and trebled their assets in a single year. This was usually a sign of unorthodox and sometimes dangerous policies. As a guide to choosing a safe society in which to invest, the Association warns investors against those offering high interest rates, and those which do not lend most of their funds on owner-occupied houses. It advises inspection of balance-sheets to ensure that cash and Government securities are in the right proportion to other assets. It also suggests that if a society is not a member of this Association and its deposits are not trustee investments, it should be asked why.

Figures for the third quarter of this year, just issued by the Association, appear to register some of the effects of the Jasper affair. Receipts from shares and deposits at £107.9 million compare with £111.6 million in the second quarter, while withdrawals rose from £66.5 million to £71.4 million. The net inflow was, therefore, down from £45.1 million to £36.5 million. Other influences were also at work during the third quarter, one being the reduced investment rates which many societies brought into effect. Another must have been the increasing competition from unit trusts.

To put matters in perspective, the net inflow of £36.5 million was still substantially higher than the £28 million for the third quarter of last year. New advances made during the September quarter set up a new record at £112 million, which easily exceeded the previous record of £94 million set up in the second quarter. At the end of September, total assets covered by these figures had risen to £2,098 million, a rise of £51 million during the quarter.

Cotton Agreement with Egypt

Tentative agreements on cotton trading with Egypt were reached by a British delegation which recently returned to Britain after talks with Egyptian Government officials. Mr. E. R. Orme, president of the Liverpool Cotton Exchange and leader of the delegation, said the talks were mainly about conditions of sale, and the proposals would have to be put to spinners and associated bodies. One of the difficulties, said Mr. Orme, was that the Egyptians wanted arbitration on disputed transactions to be in Alexandria, not Liverpool. "They made certain concessions concerning arbitration." He told the Egyptians that their cotton was too expensive. "They are asking about 1½d a lb more than the Sudan, which largely replaced the Egyptian market after Suez." He did not think that the trade with Egypt would improve while she kept the present price. Egypt was anxious to sell cotton to Britain again because she was short of sterling. At the moment, she was selling mainly to communist countries, who traded on a barter basis. The delegation's visit was at Egyptian request.

Publicity on Exports

The Government has decided to set up an Exports Publicity Council to assist the export drive. Mr. Maudling, President of the U.K. Board of Trade, announced this in a written answer in the Commons. Mr. Erroll, Minister of State, U.K. Board of Trade, will be chairman. Industrialists and publicity experts will serve on the council and their names will be announced later. Its duties will be to study official and unofficial publicity in support of British exports and to advise on markets and media and industries where increased publicity would be of value. It will also advise the Government on other matters of export publicity referred to it.

Jute

DROP IN U.S. BURLAP CONSUMPTION DURING OCTOBER DISAPPOINTS MARKET

SWITCHOVER OF LOOMS TO SACKING CONTINUES

THE publication of the U.S. burlap statistics is always eagerly awaited in Calcutta. Often, much of the effect is discounted before the actual figures arrive, as the market *pundits* can sometimes anticipate them with a reasonable degree of accuracy. Due to the U.S. steel strike, burlap consumption was expected to fall in October, in spite of the fact that this is normally one of the good months of the year. Few, however, expected the fall to be as large as 11 million yards, which pulled the October consumption down to 69 million yards—the lowest for that month since 1954. The average consumption in October since 1953 has been 77 million yards, over 80 million yards being recorded in two of those years. In spite of last month's shortfall, however, the total consumption so far this year is at a record high level. At 737 million yards, it is 41 million yards more than in the corresponding period of last year. U.S. burlap stocks surprisingly showed no change at 254 million yards. They were expected to rise in view of the low consumption, but it seems that the shipments to the U.S.A. last month were not as good as had been thought.

The publication of the I.J.M.A. production figures for October attracted less attention than the U.S. statistics. The total output of the Indian mills fell by 4,700 tons to 87,900 tons, all but 1,000 tons of which could be accounted for by the difference of 8¼ working hours between October and September. Hessian output dropped by 1,100 tons to 36,400 tons—the lowest since November last year—and constituted 41.4 percent of the whole. In spite of the sacking percentage increasing from 50.5 to 52.3, again demonstrating the pronounced switchover of looms to sacking, the production of heavy goods dropped by 2,800 tons to 46,000 tons. In the last six months, the proportion of sacking produced has increased by nearly 10 percent, 6 percent coming from hessians and 4 percent from other goods. Production an hour was disappointing last month, falling to 438.9 tons, against 443 tons in September.

India Using More Bags

At the recent annual general meeting of the Indian Central Jute Committee, it was stated that the consumption of jute goods in India had nearly doubled during the last six years, the increase being largely in the consumption of gunny bags. In 1953-54, internal consumption was 121,000 tons, and it rose to 221,000 tons in 1958-59. It is interesting to note that during the same period, Indian production has kept pace with the increased needs. Total production in the 1953-54 season amounted to 865,300 tons, and it rose to 1,040,500 tons in the 1958-59 season—an increase of 175,200 tons. Thus, nearly 60 percent of the increase in production was absorbed within the country. This was largely due to an increase in agricultural and industrial activity.

At the I.C.J.C. meeting, Dr. M. S. Randhawa, vice-president of the Indian Council of Agricultural Research and Additional Secretary to the Union Ministry of Food and Agriculture, suggested several ways of preventing raw jute prices from falling too low, and thus assuring the grower of a profitable return. One was that the I.J.M.A. should encourage mills to store raw jute up to five months' consumption. This remedy appears to be a little outdated, as it was suggested and adopted very nearly a year ago. On the subject of improved seeds, Dr. Randhawa reiterated a point which this newspaper has been emphasising for many years—producing more jute from a smaller acreage, or more green fibre a plant. It was suggested that it would not be difficult to saturate the entire jute area with improved seeds within a period of "three to four years." This dream could have been reality today if the advice and suggestions offered three to five years ago had been acted on.

World Output of Raw Jute

In a recent note issued from New Delhi, some interesting facts about the world production of jute were brought to light. In the 1958-59 season, world production of jute and allied fibres reached the record total of 3 million tons. The current season's world crop is expected to be even higher. Over the past five years, India's production has increased by nearly 80 percent and she now rivals Pakistan, previously the principal source of supply. In 1955-56, the Pakistani share of world production was 48 percent, but it has now dropped to 41 percent. In the same period, China has almost trebled her jute crop and last season produced 325,000 tons. Many countries are now within sight of their goal of self-sufficiency in jute. India, of course, has already reached it, so much so that the export ban was lifted early this year after nearly ten years. It was originally estimated that India would have a surplus of nearly 90,000 tons for export this season. It is doubtful, however, if this will be achieved, as the figures will have to be revised with the jute output during the current season being lower than was expected.

Pakistan to Increase Loomage

Many times this year India has had to swallow the bitter pill of losing overseas gunny orders to Pakistan. This is liable to occur more frequently if Pakistan can carry out the development programme proposed in her second five year plan commencing in July next year. This provides for raising the jute loomage from the existing 7,750 looms to 12,000 looms (an increase of nearly 55 percent) by the provision of new mills. In early 1956, Pakistan had just over 5,000 looms in operation and a further 2,500 under installation. At that time, the total looms planned amounted to 8,150, a figure now in sight of attainment. One of the reasons underlying this policy was said to be that, with India now self-sufficient in jute and able to enter the export market, mainly at Pakistan's expense, a further outlet must be found for Pakistan's jute production.

Gunny Markets Quiet

There was little activity in the Calcutta jute goods markets during the past week, mainly because of the almost total lack of interest from overseas buyers. Prices tended to move downwards, and variations were entirely dictated by speculative activity. The publication of the I.J.M.A. production figures proved a bearish factor although they conformed to market expectations. Similar conditions prevailed in the raw jute markets. After last week's rapid rise, prices fell back almost as quickly, although this left no parity with upcountry markets, which were much slower to react. For this reason, sellers were reserved in spite of the easier conditions.

THE JUTE MARKETS

Once again, there was pronounced activity in the futures market. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period from 11th November to 17th November, were as follows:

	Hessians 40in. 10oz. November	Sacking B Twills November	Raw Jute December	
	Rs a 100 yds	Rs a 100 metres	Rs a 100 bags	Rs a md.	Rs. a 100 kilos
Opening	40.38	44.15	103.30	24.74	66.78
Highest	40.40	44.18	103.60	24.82	66.50
Lowest	39.42	43.11	101.10	24.16	64.73
Closing	39.50	43.20	102.00	24.52	65.69

Manufactured Goods: At the opening last Thursday, goods prices were considerably lower than the previous day's closing rates. Lack of overseas interest and quieter conditions in jute were said to be the main reason for the fall. November B Twills lost 60nP to open at Rs. 103.25, and April-June shipment dropped to Rs. 100.80. Hessians lost about 25nP and 40in. 10oz. was quoted at Rs. 40.25 for November shipment and Rs. 40.15 for April-June. There was little activity throughout the day and prices tended to fall, indications being nominal in the absence of business. Speculative selling pressure in heavy goods caused B Twill prices to fluctuate rapidly, and with no genuine support in evidence, ready rates dropped to Rs. 102.40 by Saturday morning. The forward section, and hessians, recorded only minor falls. These conditions continued over the week-end, all price movements being governed by speculative activity, and Monday's market brought lower rates. Late on Tuesday, reports of a scarcity of ready goods, particularly sacking, gave rise to speculative covering. Heavy goods improved considerably, and most of the week's losses were made up before the evening. A little more confidence was also noted in forward hessian, and prices for April-June were quoted at a small premium over ready goods before the close.

On Wednesday, the market was very steady, and opening quotations were as follows:

	Nov.	Dec.	Jan.-March	April-June
40in. 8oz.	32.75 (35.70)	32.45 (35.37)	32.10 (39.99)	31.95 (34.83)
40in. 10oz.	39.70 (43.27)	39.70 (43.33)	39.65 (43.41)	39.85 (43.64)
B Twills	103.15	101.90	101.40	100.65
Heavy Cuttings (Plain)	104.75	102.50	101.25	100.30
A Twills	124.00	123.25	121.00	120.95
Liverpools	114.75	113.50	112.50	112.00
Cornsacks	103.10	102.75	102.15	101.40

Raw Jute: The fibre market tended to be quieter at the opening last Thursday, and the sharp rise which developed earlier was less noticeable. Calcutta prices fell back rapidly, and before the week-end, the previous week's gains had been completely nullified. Assam jute opened at Rs. 24 basis Bottoms, but by Saturday it was quoted at Rs. 23.75. Sellers were very reserved at this price as the upcountry markets did not fall and there was no sign of any easing. Mills showed limited interest, and only small business was reported. Arrivals upcountry were still very poor, and this was also reflected in the arrival reports from Cossipore. During the week, arrivals were reported as 585 wagons, or well below the normal for the time of year. Towards the close, the market tended to become firm on reports that raw jute arrivals in October were well below those of previous years. Assam Bottoms returned to Rs. 24, and a steadier feeling developed.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a mound	Rs. a 100 kilos	Shipment
Assam	24.00	64.32	Nov.-Dec.
Northern	23.75	63.75	,,
Purnea Desal	22.25	59.63	,,
Daissee selected	25.00	67.00	,,
Assam Tossa	25.00	67.00	,,
Northern (ex Calcutta)	23.25	62.31	,,
Mesta:			
Assam-Northern	23.00	61.64	,,
Desal	23.00	61.64	,,
Daissee	23.00	61.64	,,
Jungli	22.00	58.96	,,
Indian Cuttings	102.00 a bale.		,,

U. S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in October declined by 10 million yards, compared with the same month last year and was 11 million yards below that of the previous month. Both bag cut-up and sales of piecegoods for industrial uses were adversely affected by the slowdown in general business brought about by the steel strike. For the first ten months of this year, the estimated burlap consumption was 41 million yards more than during the same period last year, a gain of about 6 percent. U.S. burlap stocks at the end of October, overall, were the same as in September. At 254 million yards, 143 million yards were spots and 111 million yards were afloats. Appearing below are two tables which include the October figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry.

U.S. burlap consumption (as reported to T.B.M.A.) (Million yards)	1959	1958	U.S. burlap consumption (estimated industry total) (Million yards)	1959	1958

THE FOREIGN JUTE MARKETS

FIBRE QUIET

(FROM OUR DUNDEE CORRESPONDENT)

THE continued firmness of the raw jute mark in Pakistan has brought further business yarns and cloth in Dundee, and spinners a manufacturers have consolidated their sold po tion even further ahead into next year. Not many months have producers had so much ord on their books, and now there are instances wh orders have to be turned down as the spinners manufacturers are unable to engage more worke The shortage of weavers is becoming acute, a few young persons are willing to enter the Dun jute mills.

Business in fibre is quiet. Although the posit in general is firm, there is still considera irregularity. Mill Firsts, for instance, are quo at anything from £108 to £113 a ton, and M Lightnings from £92 to £96, good quality be around £110 and £93, for November-Decem shipment, c.i.f. Mill Hearts are now from to £84 and Grade Hearts £66 to £68, while g marks of Daissee-§ are lowest at £93 and Gr at £86, Grade Tossa-§ from £105 to £108 and fo from £94 to £97, same shipment. Secured par are still being offered, usually at the lowest pri Spinners are buying quietly but steadily, pick up a few odds and ends where suitable mate is offered.

Calcutta goods have shown weakness recen With stocks of sackings dropping to the low le of 32,800 tons, it is strange to see prices go down. The rate ruling in Dundee are 60s 6d 40in. 10oz. and for 40in. 10oz. hessian for shipm

November to March, and 46s 9d for 7½oz. November, 46s December and 45s 6d January-March.

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the tal production of jute goods for October as llows :

Description	Quantity
Gunny Bags	
(a) Hessian	4,787 tons (4,861 metric tons) 1,171.1 lakh yds. (1,071.3 thousand metres) 23.6 lakh nos.
(b) Sacking	44,593 tons (45,313 metric tons) 10,765.8 lakh yds. (9,57.17 thousand metres) 4,62.2 lakh nos.
Gunny Cloth	
(a) Hessian	31,873 tons (32,384 metric tons)
	11,79.8 lakh yds (10,97.66 thousand metres)
(b) Sacking	1,141 tons (1,159 metric tons)
	2,43 lakh yds. (2,2.20 thousand metres)
Other Manufactures	5,47 tons (5,563 metric tons)
Total Production	
(All kinds)	87,723 tons (89,313 metric tons)

Summary

	(0 .0 3 yds. and 0.09 metres)			(1.00 tons and metric tons)		
	Oct. '59	Sept. '59	Oct. '58	Oct. '59	Sept. '59	Oct. '58
Hessian	13,47 (12,31,59)	14,03 (12,82,49)	12,48 (11,41,75)	37.4 (37.6)	37.5 (38.1)	32.3 (33.8)
Sacking	13,71 (9,79,37)	11,38 (10,41,71)	10,31 (9 35,97)	46.0 (46.7)	48.8 (49.6)	42.0 (43.7)
Others				5.5 (5.6)	6.3 (6.4)	5.5 (5.5)
Grand Total				87.9 (80.3)	92.6 (94.1)	81.8 (23.1)
Hours worked				200.5	2.9.0	192.0

¶.—These statistics are based on rep ies received and represent all members of the Association and Gagal'bhai with estimates for three non-member mills. The figures in brackets are metric measures and those of length, being based on the actual (detailed) fig res, are more precise.

Engineering and Transport

POPULARITY OF JET SERVICES

FLIGHT RECORD OF SOME LEADING AIRLINES

JET aircraft have been introduced on the world's major air routes for over a year. Judging from the trends of the traffic operated with these aircraft, it seems that they have been proving popular. The following is an account of the record of operations of a few leading airlines :

In the first year of jet operations, Pan American World Airways has provided service with the *Boeing* jets to 21 cities overseas, flying to South America across the Pacific, from the west coast of the U.S.A. to London, and around the world. Pan American, since it inaugurated its jet service on 26st October, 1958, has flown over 210,000 jet passengers, Mr. Willis G. Lipscomb, vice-president of traffic and sales has said. Of this total, 189,000 were transatlantic passengers. The popularity of the jets, combined with the public preferennce for the economy fare, and frequent jet schedules to all of Pan America's major traffic centres, will result in a 20-percent increase in travel over the company's world-wide routes next year, Mr. Lipscomb has predicted. The airline's jet network now links New York with London, Frankfurt, Istanbul, Beirut, Karachi, Calcutta, Bangkok, Hongkong, Tokyo, Honolulu, Los Angeles and San Francisco, on its round-the-world service. In the winter, the airline's round-the-world jet service will be increased from the present two a week to six Jet service to Puerto Rico will be doubled, giving a twice daily service frequency. By next summer, the airline expects to place jets on its routes to South Africa.

Pan American's jet fleet now consists of 15 *Boeing* aircraft—nine long-range 321 *Intercontinentals*, the largest and fastest of the jets, and six shorter range *707s*. By the end of the year, five additional *Intercontinentals* will be delivered and by mid-1960, the entire *Boeing* fleet of 23 long-range *Intercontinentals* and six of the smaller *707s* will be in operation. Deliveries of Pan American's long-range DC-8C's also are expected to begin in December. In the year ended 26th October, Pan American carried 281,000 transatlantic passengers, an increase of 25 percent over the preceding 12 months. This compares with an 11-percent increase for the remainder of the carriers on the route. Low-cost economy service accounted for 70 percent of transatlantic jet passengers.

S.A.S. Passenger Traffic

Seventy thousand passengers have flown by Scandinavian Airlines System's *Caravelle* pure jetliners during the airline's first six months of jet operations. Since last spring when the airline put the jets into scheduled commercial service, the *Caravelle* fleet has piled up a total of about 5,500 hours in the air. The daily average has been close to 400 *Caravelle* passengers. On certain routes, the passenger load factor has been close to 100 percent. Among the S.A.S.'s *Caravelle*-served cities are Athens, Beirut, Cairo, Copenhagen, Frankfurt, Geneva, Helsinki, Istanbul, Milan, Munich, Rome, Stockholm, Teheran and Vienna. The *Caravelle* is powered by Rolls-Royce Avon engines, each developing up to 11,700 lbs of thrust. The engines are uniquely mounted to the rear of the passenger cabin on either side of the fuselage.

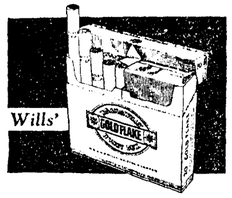
Air France Caravelles

On all Air France European routes where the *Caravelle* has begun to replace propellor-powered planes, the French twin-jet aircraft has proved a success. During their first three months in scheduled service—from 5th May to 31st July, 1959—on the Paris-Rome-Athens-Istanbul, Nice-Rome, Paris-Rome, and Paris-London-Nice routes —Air France *Caravelles* have carried a total of 33,773 passengers. This represents a daily average of 388 passengers for that period, when only three jetliners were operating on each route. Additional *Caravelles* have since been put into service, and now fly on the Paris-Beirut and Paris-Tel Aviv routes.

ROLLS-ROYCE SUPPLIES LARGEST NUMBER OF AERO-ENGINES IN THE WORLD

Rolls-Royce is supplying more than twice as many engines for the international airliner market as any other aero-engine manufacturing company in the world and more, in fact, than all its competitors put together. Of the 1,454 jet and turbo-prop airliners on order or in service in the world —excluding the Russian bloc—no fewer than 56 percent (817) have, or will have Rolls-Royce engines. The nearest rival is Pratt and Whitney, the American company, whose share is 21 percent (304 aircraft). The remaining 23 percent (333) is divided between Bristol-Siddeley, Allison and General Electric. In terms of hardware, this means that of the 5,362 engines concerned, Rolls-Royce's share is 2,814, Pratt and Whitney's 1,216 and the three remaining companies 1,332 between them. The overall British share is 62 percent (986) of the 1,454 aircraft, or 3,130 engines of the total requirement of 5,362. These figures refer only to firm orders for airliners and take no account of provisional orders, options or letters of intent, nor the supply of spare engines, itself a considerable figure.

The Rolls-Royce share in this world market is made up as follows : Dart (1,964 in 571 aircraft of four types), Conway (292 in 73 aircraft of 3 types), Avon (266 in 94 aircraft of two types), Tyne (220 in 55 aircraft of two types) and RB. 163 (72 in 24 aircraft of one type). All British, Canadian, French and Dutch designed airliners have British powerplants as standard fitting, while 38 American-designed aircraft have been ordered with Rolls-Royce engines.



B.O.A.C. COMET SERVICE TO AUSTRALIA

B.O.A.C. has introduced new jet services to and from Australia, at the beginning of November through its *Comet-4* airliners. The *Comets*, which will replace *Britannia* jet-prop services, will cut present schedules by several hours. The first *Comet-4* left London for Sydney on 1st November, arriving there on 3rd November. The first service from Australia left Sydney on 4th November arriving in London on 5th November. Five *Comet* services a week operate in each direction and make the 12,000-mile journey in as little as 33 hours and 15 minuts from Britain to Australia and 36 hours and 50 minutes from Australia to London. The inaugural Kangaroo Route *Comet* services called at Jakarta, Singapore, Bangkok, Calcutta, Delhi, Karachi, Bahrain and Beirut. Other cities to be served by *Comets* on their way to and from Australia include Rangoon, Colombo, Bombay, Teheran and Istanbul. Four of the *Comets* will each carry 20 first-class and 43 tourist-class passengers. The fifth service will carry 48 first-class passengers.

Madhya Pradesh, lying at the very heart of the country, was the once famous Vidharbha of ancient India, the land of the poet Kalidasa who is said to have lived in Ujjain in the 5th Century A.D. Five to eight centuries later were built the magnificent temples of Khajuraho, which present an overwhelming profusion and complexity of sculptural ornamentation, depicting life and love, human and divine No less fascinating are the murals of the Bagh caves of the 5th Century, or the ruins of 12th Century Mandu, then capital of Malwa.

Wherever You Go in India, from the more than thirty temples of Khajuraho to the land of the Todas in the Nilgiri hills, there is the full, rich flavour of Wills' GOLD FLAKE, to enhance the enjoyment of your travels.

Wherever you go...
they're good

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) went down by 0.3 percent to 118.9 during the week ended 31st October, 1959, compared with 119.3 (revised) for the earlier week. The index was higher by 0.2 percent when compared with that of a month ago and by 2.7 percent than that of last year. The index for October 1959 worked out to 119.3, compared with 117.2 (revised) for the previous month and 116.1 for October 1958. The index for Food Articles receded by 0.6 percent to 123.3, compared with 124.0 (revised) for the earlier week due to a fall in the prices of rice in Kanpur (−16%), in Sambalpur and Balurghat (−8% each), in Calcutta (−7%), in Imphal (−6%) and in Dumka and Raipur (−5% each), jowar in Rohtak (−12%) and in Hyderabad and Nagpur (−6% each), bajra in Rajkot (−12%) and in Agra (−7%), oranges (−7%), fish (−6%), wheat in Dhanduka and maize in Ludhiana (−5% each), milk and groundnut oil (−4% each), coffee and chillies (−2% each) and barley, mung, bananas, cashewnuts and mustard oil (−1% each), although the prices of rice in Ranchi (+16%) and in Tihu (+11%), maize in Bahraich (+10%), bajra in Hissar (+8%) and in Jodhpur (+5%), eggs (+8%), onions (+7%), jowar in Hubli (+6%), sugar (+5%), potatoes (+3%), ragi, urad and bete'nuts (+2% each) and gram, arhar, masur, gingelly oil and black pepper (+1% each) showed advances. The index for Tobacco rose by 1.3 percent to 102.4 due to an increase in the prices of raw tobacco, Motihar (medium) in Calcutta (+6%). The index for the Fuel, Power, Light and Lubricants group worked out to 116.5, compared with 116.4 for the earlier week ; the price of castor oil recorded a rise of 1 percent. Lower prices of groundnuts (−5%), green bamboos (−4%), rapeseed, copra and lac (−1% each) brought down the index for Industrial Raw Materials by 0.2 percent to 121.3, compared with 121.5 (revised) for the previous week. The prices of sugarcane (+13%) and raw cotton (+2%), however, witnessed increases. The index for Intermediate Products worked out to 115.0, compared with 114.9 for the previous week. As a result of a fall in the prices of general chemicals, oilcakes and bricks and tiles (−1% each), the index for Finished Products came down to 110.6 from 110.7 (revised).

G D Birla. Chairman
S T Sadasivan General Manager

This expert has won the trust of millions in the label *'Sanforized'*

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing maschine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for

SANFORIZED
REG'D TD. MK

on the label
and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

Plantation Topics

INTERNAL CONSUMPTION OF COFFEE RISES

SMALLER CROP ESTIMATED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE latest estimate of the Coffee Board places the standing coffee crop in south India at 47,725 tons, consisting of 32,455 tons of Arabica and 15,270 tons of Robusta. This represents a fall of about 3,000 tons from the blossom estimate of 50,820 tons. The excessive rain in the planting districts of Mysore during the past four months did some damage to the standing crop, and this has led to a lower estimate by the Board. Pool receipts from the 1958-59 crop to the end of last month amounted to 46,178 tons, against 44,044 tons in the previous corresponding period. Of this, 17,819 tons were Plantation, 7,464 tons were Arabica Cherry while 20,895 tons were Robusta. Corresponding figures for the previous season were 21,495 tons, 7,685 tons and 14,566 tons, respectively. This unexpected fall in the proportion of Plantation coffee was responsible, to a very large extent, for the rise in its prices noticed from June to September this year. A 12-percent increase in the domestic consumption of coffee was recorded during the first ten months of the year, when the total releases in the internal market amounted to 25,564 tons.

From the 1958-59 crop, 13,568 tons were sold for export up to the end of October. The amount consisted of 8,168 tons of Plantation, 2,529 tons of Arabica Cherry and 2,871 tons of Robusta. Last month, 200 tons of Robusta coffee was sold to Russia. Tenders have been invited for another 1,722 tons and they are due this month. Excluding quantities covered by tenders and direct offers, the quantity left for sale out of the 1958-59 crop is 1,610 tons. The total export allocation was 1,700 tons from an output of just over 46,000 tons. The difference between the internal and export prices of coffee is narrowing down. In the latest export sale, for instance, Arabica Cherry Flats fetched only Rs. 212.55 a 50 kilos, against Rs. 185.72 a 50 kilos realised in the corresponding internal sale.

Stalemate in Cashew Processing Industry

The Kerala cashew processing industry is in a stalemate. Apart from the seasonal shortage in the raw nut supply, the uncertainty on the minimum wages for workers, to be decided shortly, is responsible for this. The committee, which was appointed for standardising wages in the cashew industry, has recently submitted its report to the Government. The wages recommended by that body are reported to be much higher than the existing wages in many factories. But its recommendation is not unanimous; the employers' representatives have given dissenting notes. Efforts are being made to work out a wage rate acceptable to both workers and employers. If this attempt fails, the Government will have to arrive at a decision. Meanwhile, manufacturers are hesitant in finalising arrangements for the import of new African crop which is now available for shipment at the African ports. They apprehend that the standardisation of wages now proposed will raise their cost of production substantially.

It is stated that loading of new crop African nuts has started on a small scale and if the present uncertainty about wages is removed without delay, sufficient stocks would reach the processing centres by January next and will enable the industry to commence production. Reports say that the African crop is of the normal size of over 100,000 tons.

Lemongrass Oil Prices Rise

Lemongrass oil appears to be under the influence of speculators. The price recently shot up to Rs. 125 a dozen bottles on the Cochin market, compared with Rs. 55 a dozen bottles at the beginning of the season in May. Production is expected to be lower this year on account of the abandonment of lemongrass cultivation by some growers and heavy rain from June to September in the producing areas of Kerala. Bear estimate of the crop this year is 1,200 tons, against 1,400 tons last year. The market is experiencing a tight supply position now. It appears that dealers are hoarding in anticipation of still better prices. Export dealers, having previous commitments, are forced to pay "fancy prices" for the small arrivals in the market. There has also been some amount of panicky buying by exporters. There has recently been some keen bidding in London and most of it was from two or three re-selling interests who were keen on cornering stocks. A fall in the level of existing prices is regarded as certain by dealers when arrivals would pick up.

Bigger World Pepper Production

According to the U.S. Department of Agriculture, the world production of pepper is expected to be slightly higher this year than the last. It is estimated at 149.5 million lbs, against 147 million lbs produced in 1958. But it is still lower than the average of the prewar output and that produced in 1956 and 1957. In Indonesia, the output is expected to be slightly higher at 42 million lbs due to planting carried out in 1949 and 1950, although the confused political situation may prevent some of this year's crop reaching the market. Black pepper production has been increasing slightly, and the fall of 14.9 million lbs from the 1957 level of production seems to have occurred in the output of white pepper. Production in Sarawak is expected to fall again to 19 million lbs. The 1958 crop of 21.8 million lbs was 9.5 million lbs lower than the 1957 level and 22.6 million lbs smaller than the record output of 44.4 million lbs produced in 1956. Low prices and diseases have brought about this gradual decline. The Indian output remains the same, at an estimated 60 million lbs, compared with the revised estimates of 61.2 million lbs for 1956 and 1957. Ceylon still consumes most of the pepper it produces. The Brazilian production has continued to grow and should reach 10 million lbs within the next few years.

CALCUTTA TEA AUCTIONS IN OCTOBER

GOOD GENERAL DEMAND

ON account of the Puja holidays, only two sales were held during October, and offerings totalled 138,768 packages. There was a good general demand in both sales with plain teas remaining firm in Sale No. 17, while medium brokens and fannings tended dearer. In Sale No. 18, there was a slightly easier tendency, more noticeable in plain fannings than in broken grades, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. In the first sale of the month, medium O.F.s were strong and dearer, but in Sale No. 18, much of this advance was lost again, and medium B.O.P.s were a comparatively weak feature in both sales. C.T.C. Assams tended dearer at first, but were a little easier again in Sale No. 18, a feature being that more interest was generally shown in brokens as opposed to fannings. Secondery C.T.C. grades sold well in both sales, and non-wither leggcut Dooars teas came to a ready market at practically unchanged rates. The popular types of pekoe and O.P. advanced slightly, but the better O.P.s and Darjeelings in general were slightly easier to buy. There was quite a fair demand for the better tippy teas.

There was little change to note in either the leaf appearance or the cup quality of Darjeeling offerings. In general, leaf appearance continued to be satisfactory, although some of the O.P.s and pekoes were a little bold and lacked style. The liquors were of an ordinary rains description, but here and there a little flavour could be found. A little more stalk became noticeable in the whole leaf and lower grades of orthodox manufacture from Assam, and an increase in the fibre content of secondary C.T.C. grades was noticeable. There was little change to note otherwise, and the general standard of leaf appearance should be considered satisfactory for the time of year, with a number of quite useful tippy teas on offer. Cup quality tended to decline, and was of an ordinary rains description, although there were exceptions to this rule and a few invoices of both orthodox and C.T.C. manufacture had liquors which were bright and brisk in cup. The teas from Dooars, although in some cases showing a slight decline in cup quality and appearance, showed, in general, an excellent standard for the time of year. Stalk and fibre became a little more noticeable in the lower grades from some Cachar estates, but the teas from the better estates maintained a good average standard of appearance and cup quality.

Quotations

	1959-60 Rs nP	1958-59 Rs. nP
Sale No 17 Plain B.P.	1.93	1.75
Sale No. 18 " "	1.89	1.73

(Exclusive of zonal excise duty)

The Internal Market

The 1,650 chests of leaf on offer met with a good general demand. Due to the Puja holidays, only two sales were held during October, in which a total of 44,835 chests of dust was offered. Black exportable dusts continued to be a strong feature while legg-cut teas remained firm and often dearer. C.T.C. dusts were irregular but received rather more demand than in the previous month, particularly those suitable for export.

Quotations

	1959-60 Rs nP	1958-59 Rs. nP
Sale No 17 Clean Plain Dust	1.99	1.89
Sale No 18 " " "	2.01	1.89

(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 18 totalled 902,709 chests at an average price of Rs. 2.41, compared with 810,617 chests at an average price of Rs. 2.58 for the same period in the previous season. Internal sales at 9,087 chests of leaf and 300,722 chests of dust (average prices Rs. 1.75 and Rs. 1.99) go against 16,858 chests and 271,638 chests, respectively (average prices Rs 1.73 and Rs. 2.03) of the corresponding period of the previous season.

Business Export quota on 1st October was transacted at 2¼nP a lb. The price gradually dropped to 2nP on 12th October and, thereafter, it appreciated to 2¼nP on 19th October, and business up to the end of the month was done at this price. A further interim release of Export quota, amounting to 5 percent of garden's crop basis, was announced in the Press on 26th October.

Arrivals (in chests) in Calcutta warehouses during the period 24th September, 1959 to 23rd October, 1959, with the corresponding figures of the previous year in parentheses were: by steamer 438,640 (551,446), by rail 162,350 (138,926) and by air 7,624 (11,718), making a total of 608,614 (702,090) chests. From the beginning of the season 1st April, 1959 to 23rd October, 1959, arrivals have been: by steamer 1,869,517 (1,959,912), by rail 628,036 (517,361) and by air 46,252 (73,499), making a total of 2,543,805 (2,550,762).

Calcutta Markets

BETTER CONDITIONS IN FREIGHT MARKETS

DURING the past week an atmosphere of possible prosperity for shipowners prevailed in the freight markets. Grain continued to be the most important cargo; Chinese and Australian grain charterers were in the market with firm business and this has helped maintain a firm market in the Far Eastern area. A few more ships with foodgrains from the U.S.A. and Australia have been fixed to discharge at Calcutta after lightening at Haldia. The first foodgrain vessel with Rangoon rice lightened at Haldia and had to face difficulties in discharging at Calcutta as a section of registered labour boycotted the vessel, but the port authorities solved the problem by engaging the National Volunteer Force. It is hoped that any similar trouble on the second vessel which is due shortly will be avoided. The reduction of draft in the Hooghly river for November and December is causing considerable loss both to the shipowners and the shippers as most of the liner vessels have to shut out cargo, and the tramp bulk ore or coal carriers are leaving this port with even less than the stipulated minimum quantity.

LINSEED FIRM

Prices have been firm during the past week. Trading has been very limited. Crushers have shown a meagre interest in seeds and sellers have been rather reserved. The oilcake market has been inactive, with buyers uninterested due to discouraging overseas advices. The oil market has been firm but little business has been done, with buyers showing virtually no interest except at lower prices. Local rates are out of line with foreign markets which have been dull. Latest quotations are as follows: Ready Rs. 26.25 a maund, November-December Rs. 26.25 a maund, and May futures Rs. 24.37 a maund.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 10th November and 16th November, 1959)

Cowhides: Wet salted (Ord.) 7,500 pcs. on the basis of Rs. 11 to Rs. 14; Wet salted (Slaughtered) 21,600 pcs. on the basis of Rs. 12.50 to Rs. 15.50 and Rs. 18 to Rs. 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) 54,900 pcs. on the basis of Rs. 410 to Rs. 420, Rs. 480 to Rs. 520 and Rs. 510 to Rs. 530; Wet salted (he-killed) on the basis of Rs. 5.75 a piece; Assam-Dinajpur 40,800 pcs. on the basis of Rs. 410 to Rs. 475 and Rs. 490 to Rs. 520; Purneah-Kissenganj 7,300 pcs. on the basis of Rs. 500 to Rs. 515 and Rs. 520 to Rs. 545; Patna-Pakur 4,200 pcs. on the basis of Rs. 440 to Rs. 450 and Rs. 460 to Rs. 480.

Bazaar Stocks

(16th November, 1959)

Cowhides: Wet salted 113,300 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia and Killed) 60,500 pcs.; Assam-Dinajpur 54,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 54,500 pcs.

SUGAR STEADY

During the week ended 18th November, sugar sales in the Calcutta market averaged 2,000 bags daily. Arrivals were nil and stocks totalled 20,000 bags. Rates for ordinary grain were Rs. 44.75 and for big grain Rs. 45.50. The market was steady.

SHELLAC QUIET

During the week ended 17th November, the market was quiet. The range of quotations was as follows:

Standard Pure Button-lac	Rs. 90 buyers; 92 sellers.
Lemon No. 1 Shellac	Rs. 90, 92, 90 buyers; 92, 94, 92 sellers.
Lemon No. 2 Shellac	Rs. 87 done and buyers 86, 88, 87 buyers; 88, 89 sellers.
F.O. Superfine Shellac	Rs. 82, 81, 82 buyers; 84, 83, 84 sellers.
Standard One Shellac	Rs. 78 buyers; 81, 80 sellers.

COMPANY AND PUBLIC NOTICES

SIJUA (JHERRIAH) ELECTRIC SUPPLY COMPANY LIMITED

NOTICE is hereby given that an Ordinary General Meeting of SIJUA (JHERRIAH) ELECTRIC SUPPLY COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday the 24th day of December, 1959, at 3-35 P.M., for the purpose of electing the Chairman of the Board of Directors.

And in this connection to consider, and, if thought fit, to pass the following resolution as recommended by the Directors and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended.

Resolution to be proposed as an Ordinary Resolution.

"That Mr. D. L. V. Rowe be and is hereby appointed Chairman of the Board of Directors of the Company for a period of five years from the 1st September, 1959, in place of Mr. J. Hamilton White, whose terms of office has expired on that date, on the same remuneration as before, viz Rs. 2,000/- per month".

The Share transfer Register of the Company will be closed from 14th to 24th December, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta: 9th November, 1959.

NOTE:—

A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

The term of office of the Chairman having expired on 8th September, 1959, the Directors appointed Mr. D. L. V. Rowe as Chairman of the Board as from that date, pending election of a permanent Chairman by the Shareholders at an Ordinary General Meeting as per Article 91 of the Company's Articles of Association. The Directors recommend the adoption of the resolution particularly in view of Mr. Rowe's wide experience and knowledge of the affairs of the Company.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LD.

Seventh Drawing of First Debentures (5% Registered), 1976.

HOLDERS of First Debentures (5% Registered), 976 are hereby advised that the Seventh Drawing or Redemption will be held at 10 A.M. on Wednesday, the 9th December, 1959, at the Registered Office of the Company, Chartered Bank Buildings, Calcutta.

For & on behalf of
SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LD.,
J. A. STEVEN,
Director.

Chartered Bank Buildings,
Calcutta, 5th November, 1959.

It's the power beneath the bonnet that counts!

Yes, there's power beneath that bonnet all right—the kind of surging power you need for a quick pick up, safer overtaking and faster cruising. And that's not all: The efficient new OHV Engine guarantees superb performance under all conditions. The BIG Ambassador now takes the strain out of motoring and puts pleasure into it. The spacious, elegant interior seats six adults in luxury and the family-size boot can accommodate a surprising amount of luggage.

With the NEW O.H.V. ENGINE you get:
25% MORE POWER
25% MORE MILES
PER GALLON

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the pany indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which ounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary Rs.	Net Block Account Rs.	Reserve & other Funds Rs.	Acreage under Tea	Outturn and Average Price per lb realised for crop 1957 Lbs.	1957 Rs.	1958 Lbs.	1958 Rs.	Estimate 1959 Lbs.	NAMES	Accounts closed	Mg. Agts. Secretaries etc.	Net Profits including taxation Rs.	Dividends per cent 1956	1957	1958	Paid-up per Share Rs.	Latest Market Quotations as available until 18-11-59 Rs.	11-11-59 Rs.	A year ago Rs.

THE PROBLEMS OF PRIVATE STEEL PRODUCERS

THE Calcutta and Bombay Stock Exchanges may have misread the preliminary accounts of the Indian Iron and Steel Company for the year ended 31st March, 1959, (the complete accounts are discussed in the first paragraph of this week's Current News and Comment) but there is no mistaking the importance of the various points the chairman, Sir Biren Mookerjee, makes in the statement accompanying the report. What in fact Sir Biren does (the statement is published in detail elsewhere in this issue of *Capital*) is to question the entire basis of the Government's policy of expanding steel output irrespective of probable demand, if not in fact the whole theory of current Soviet-type planning itself. The question he puts is quite simply who is going to use 4½ million tons of steel when it is being turned out? This is a point which is often overlooked by the planners, whose concern is usually restricted entirely by the problem of how it is to be produced. In a recent speech, Mr. Nehru has intimated that a possible solution to the dilemma will be to absorb the surplus in armament production—also typical of Russian methods. But until this is confirmed, it is safer to take into account the only two possible alternative sources of demand, the home market and exports. What Sir Biren has to say about the prospects of both will repay careful study in Government circles.

To begin with the internal market: Is it possible that with the present high prices of steel, the disincentives to consume and invest and the low level of purchasing power in the country, an output of 4½ million tons of finished steel will be absorbed? Clearly Sir Biren does not think it is, and up to now the Government has not produced facts to contradict his views. One of the great weaknesses of planning as practised in India at the moment is that consumption potential has to be ruthlessly—and usually uneconomically—curtailed in order to pay for expensive development projects in the public sector, partly because development projects are undoubtedly needed, but mostly because the Government's socialist goals demand that they be publicly sponsored instead of being the result of voluntary private saving. The result is that when such projects reach the stage of production, the purchasing power which would normally provide the market for their products has already been syphoned off by the taxes raised to finance them. The two ways of breaking this vicious circle—apart from the Soviet method of the Government absorbing the increased output regardless of cost—are enumerated by Sir Biren as, simply, the reduction of steel prices, or the increase in internal purchasing power. The fact that both alternatives present almost insuperable difficulties, given the present economic set-up in the country, is a source of worry to private steel producers which it is the Government's responsibility to dispel. If there are official plans for absorbing all the steel which will soon be produced—as distinct from that turned out by the public sector plants alone—then it is time the Government announced them. Until it does, it must expect private steel producers to resist demands for further expansion of capacity; the risks are altogether too great.

The solution to the problem of possible steel surplus was originally conceived in terms of exporting the output not required on the internal market. This idea was based on the light-hearted assumption that the world would continue to be short of steel and that India's cost level would retain its favourable differential compared with the costs of its competitors. Radical changes have taken place in the world since then. There is no longer a steel shortage and in many producing countries deflationary policies and the process of technical innovation have combined to keep costs relatively stable, if in fact they have not actually declined. India has retained its favourable differtial, when the retention price and not the selling price is compared. But this has been drastically narrowed, and will probably disappear altogether when, as Sir Biren points out, the new retention price is determined on 1st April next year. The present retention price, due to the system of averaging over a five-year period, does not allow for all the increases in costs. When the basis is recalculated, it is inevitable that the retention price should be fixed for the next five-year period at a higher level than it is at the moment. Under these circumstances, the only solution to the steel export problem would be to grant direct subsidy, a move which would reduce the value of the foreign exchange earned and, as Sir Biren puts it, "may bring us within the mischief of anti-dumping legislation".

Private steel producers are entitled to satisfaction on this question of a possible steel surplus. They have been forced by the Government to increase their capacity at great expense to their shareholders and involving heavy strains on their available technical and managerial resources. Their performance has been commendable and, at least in the case of Indian Iron and Steel, the expansion has been achieved with remarkable smoothness and economy. Yet they are now facing a problem of over-production which is not made any easier by the unfair competition they may have to face in the home market from the new State-owned steel plants, whose output will no doubt enjoy priority in Government orders. The least that can be done for the private steel producers is to guarantee them the proportionate share of the Government market to which their comparative output entitles them. Other things, as suggested by Sir Biren, include the reduction of internal prices by dismantling the superstructure of indirect taxes which steel at present has to bear, the encouragement of internal consumption by permitting the standard of living to rise, and, most important in the context of both the internal and the export problem, by helping the industry keep down its costs of production.

This question of costs is not, of course, restricted to the problems of private producers. It concerns the whole economy, and especially that portion of it which serves the export markets. A large proportion of Sir Biren's statement is devoted to this problem of costs, from the comparatively simple question of the ash content of coke—the Government has not yet implemented its coal-washing projects and is too eager to earn foreign exchange on the high-grade metallurgical coal—to the much more complicated matter of wage payments and labour relations. It is totally irrational that a modern industrial economy should be burdened with customs of wage payment dating from distant, less competitive times. As Sir Biren points out, the system of automatic grade increments can impose an altogether impossible burden on an industry which is expected to match its selling prices abroad with those of producers whose wages are more closely related to productivity. It is also a built-in inflationary feature for the economy as a whole. The practice of bonus payments in this country, too, is out-dated in the light of modern productivity requirements; it is also one of the most fruitful sources of strikes, go-slows and bad labour relations generally. Sir Biren's plea for putting an end to gratuitous payments and replacing them by a system under which each worker "by his own effort...may earn directly the amount necessary to maintain himself and his family... with margin for supplement of his retirement benefits..." will be echoed by every employer of labour in the country. The case of the iron and steel industry proves that high wages and the nearest approach to ideal welfare conditions available in Indian industry do not necessarily lead to contented workers and higher output. The solution to the problem has to be sought elsewhere. In the meantime, Sir Biren's suggestion for a Wage Board for iron and steel, and a simplification of the wage structure, deserves Government consideration. The question of redundant labour is another one which seriously hampers the reduction of costs in Indian industry today, while the parochial bias of State Governments' labour policies is an irritating absurdity for a nation which regards itself as a single unit. The comments Sir Biren makes on the position of the Indian National Trade Union Congress are particularly outspoken. It is impossible, however, not to agree with him that the jealousy felt towards this body by the rival unions is creating a good deal of trouble at the present time. The possible solution suggested is more responsibility on the part of the I.N.T.U.C. leadership. Sir Biren might have gone further and recommended a less partial attitude from the Government itself.

The points Sir Biren makes in discussing the problem of costs and productivity in the iron and steel industry go to the root of the trouble with Indian industry as it is organised today. A certain amount of cost-absorbing difficulties are bound to be encountered when a country is seeking rapidly to build up an industrial system. But that does not mean that the problems should go unsolved and be allowed to develop into a permanent built-in competitive disadvantage. Unless these matters are dealt with, Indian industry will never be able to pay its way on world markets and the country will always have to rely on its friends for its foreign exchange requirements. Some of the official energy which at present goes into drawing up rigid plans might well in future be spared for the job of rooting out these damaging cost factors, which are otherwise likely to become permanent features of this country's industrial structure.

FOREIGN AID PROSPECTS

INDIA has reasonable hope of getting a large amount of foreign aid for her third five year plan. This is the main conclusion to be drawn from the statement made by the Central Finance Minister, Mr. Morarji Desai, in the Lok Sabha last week on his recent visit to Switzerland, France, Britain, the United States and Japan. (Extracts from the statement are reported by our New Delhi correspondent on a later page.) Many are disappointed that the Finance Minister could not be more specific or more reassuring; the disappointment has been projected into the assumption that, apart from vague assurances of the free world's "interest" and "co-operation" in this country's development plans, Mr. Desai has returned with an empty bowl. Yet the evidence suggests that such an assumption might be wide of the mark. Not even the outline of the third plan is ready yet; until it is, about four months hence, India herself will have only a vague idea of how much foreign assistance she requires, and in what forms. It is reported that the Government is thinking in terms of a plan involving a total outlay of Rs. 10,000 crores between 1961 and 1966, out of which about Rs. 2,000 crores will be required in the form of foreign exchange for meeting new commitments and around Rs. 600 crores of foreign exchange for servicing the commitments already made. It is not unreasonable to presume that Mr. Desai's discussions abroad centred round these estimates, and the mild optimism underlying his statement last week offers a clue as to how they were received. The main point the country might be justified in noting for the time being, therefore, is that a sum of this order *can* be raised—but only if certain important conditions are borne in mind. The first is that the third plan must be rational, in the sense that it should take realistic account of the men, money and materials likely to be available for implementing it. The second is that India will have to make a huge effort to mobilise internal resources for supplementing those coming from abroad. And the third is that while plans do often have some

political and ideological bias, the chances of winning support for them depend mainly on whether the priorities they contain can be justified on strictly economic grounds; few things discourage potential helpers more than to see a country offering parochial or ideological excuses for diverting its resources to socially wasteful schemes.

It is by these three tests that the third plan will be judged; and on that judgment will depend the prospects of getting the foreign aid without which no plan at all can be fulfilled. As they prepare the draft outline, the planners might well bear the point in mind. It is important to avoid repeating the cardinal error of the second five year plan, where highly essential schemes were immersed in a *pot-pourri* of quite unimportant ones, which were not only economically unproductive but also beyond the country's administrative and financial capacity; the latter did little apart from diverting energy and resources, and soothing the political consience of the ruling Party for a brief while, until the compulsion of circumstances caused them to be rejected. The planners now have a unique opportunity to combine political courage with economic wisdom in preparing a programme of development which impresses by its primary emphasis on production and productivity. If sectional and ideological pressures prove difficult to resist, they might well seriously consider even framing a plan which in some way distinguishes projects which are thought to be essential from those which are thought to be merely desirable. A precedent for such a distinction already exists in the second plan, where events anyway dictated a division of its projects into the "hard core" and the rest. A hard-headed, down-to-earth statement of aims in this manner would be valued for its realism and sincerity, and would be far more helpful in determining the quality and quantity of assistance required than a paper list of bloated ambitions.

India has been fortunate in the amount of foreign assistance she has got for her second plan. Mr. Desai recalled last week that firm promises of foreign aid already amount to Rs. 908 crores. In addition, P.L. 480 aid worth Rs. 432.6 crores has come from the United States (this figure has presumably been raised further by the agreements signed during the past few days). It is estimated that the external payments deficit during 1960 61 will be approximately Rs. 140 crores; the general impression is that it will be covered by further foreign aid of roughly that amount. These sums give an aggregate exceeding that expected a few years ago, and offer a hopeful augury for the third plan. But it is important to realise that strenuous efforts will still have to made if India is to qualify for the aid she wants. In broad and empirical terms, Mr. Desai seems to consider the prospects of getting it are reasonably good. At the Commonwealth Finance Ministers Conference in London, as well as at the annual meetings of the World Bank and the International Monetary Fund in Washington, he found greater interest in, and understanding of, the developing countries' problems. "This interest," he declared, "springs from a desire to consider to what extent and how best they could help us in carrying out our plans". The international political and economic climate for helping the under-developed countries is probably more favourable now than it has been at any other time since the war. The growing strength of the British economy, to which Mr. Desai particularly referred, and of the economies of west European countries, should increase the amounts of capital they can spare. The United States, which has given more aid than any other nation, is likely to continue doing so, although the real value of the help she gives might be affected by the recent tendency to "tie" her loans to purchases of U.S. goods.

Even on the most optimistic assessment of foreign aid prospects, however, there is every likelihood that the exchange position will remain difficult and the need to encourage the inflow of private investment will become more urgent. Mr. Desai spoke last week of the widespread interest shown during his tour in the Government's attitude to private enterprise and foreign private investment in particular. This was inevitable considering that private efforts have contributed most to the economic prosperity of the countries he visited. But it is questionable whether the explanations he was able to give were as reassuring as his audiences might have wished. To most, unfortunately, they will have seemed merely negative—that India allows profits to be remitted and capital to be repatriated freely, that she does not discriminate between Indian and foreign-owned enterprises, and that compensation will be paid if and when industries are nationalised. The impression might well have remained that positive incentives to attract private foreign capital, as distinct from merely guaranteeing it a certain security, are still not encompassed by the thinking of India's planners.

WORLD CURRENCY CHANGES

EUROPEAN industrialists who are no longer protected against American competition may console themselves with the estimates of experts in Washington that only a small increase in American exports next year will result from the removal of dollar import quotas. These estimates suggest that American exports will be about $2,000 million more in 1960 than in 1959, but of this figure only about $100 million is attributed to the freeing of trade—deliveries of jet airliners (already ordered) and increased shipments of cotton are thought to be much more important factors in the expected improvement in the American balance of payments. It is possible, of course, that American experts are too optimistic in estimating the nation's total exports next year; that in various categories of manufactured goods sales will decline because competitors' prices are more attractive. It is possible, too, that the continuing increase in American imports will be larger than the experts envisage—mainly for the same reason, that foreign prices are relatively low. The balance of payments can be strengthened by transferring some of the military burden to allies in Europe and by reducing economic aid to under-developed countries, but if the dollar is basically over-valued the fact will not be entirely concealed by such means. Present indications suggest that the deficit in the balance of payments, which will apparently be of the order of $4,000 million this year, may be approximately halved next year; but a deficit of the order of $2,000 million would still be formidable.

The weakening of the U.S. dollar is the outstanding monetary development of 1959, and if it continues it will be the outstanding monetary problem of 1960. However, we must not assume that if the dollar is out of harmony with the other currencies the other currencies are necessarily in harmony among themselves. Relations between them have not changed dramatically in recent months, but they have not been static. The strengthening of sterling, which is a development of world-wide importance extending over a longer period, has diverted some attention due to Continental European currencies. Surveying them, we see that the Dutch florin has, but the Swiss franc has not, maintained its high position; that the French franc has made a notable recovery from a long period of difficulty; that the German mark, temporarily out of favour in the early months of this year, has regained its former position; that the Italian lira has shown unusual signs of strength; but that the Belgian franc, which seemed rather vulnerable after the devaluation of the French franc last year, has remained in a rather unfavourable position.

The change in relations between the dollar and other currencies can be seen as a strengthening of the other currencies rather than as a weakening of the dollar. A significant exception among the non-dollar currencies is the Swiss franc. It is still resilient but has undeniably lost its special position, which was in some ways superior to the U.S. dollar's even when the U.S. dollar was strong. This relative deterioration of the Swiss franc in 1959 is essentially analogous to the deterioration of the U.S. dollar—though it is not attributable to weakness in the current trading position and is partly explained by attraction of Swiss funds to New York to take advantage of higher short-term interest-rates. The essential fact is that the specially favoured currencies are no longer specially favoured, because the abnormal conditions of the wartime and post-war era have been—laboriously over the years—adjusted. When the war-retarded countries came back into line with those that were less affected by the war the favoured currencies lost their privileged positions. There is no longer a special demand for scarce goods, because practically no goods are scarce (in the ordinary commercial sense). Convertibility of currencies is a natural consequence of rehabilitation of economies, and the resulting rise in the importance of London as an international financial centre has particularly affected Zürich this year. Both the United States and Switzerland have become increasingly interested in commercial investment in the rehabilitated and developing countries abroad, and the consequent deterioration (if it can be so called) on the capital side of their external accounts is reflected in the value of their currencies.

It is not some basic fault in the modern American economy but the basic strengthening of other economies that makes the dollar's position precarious. When non-dollar currencies were devalued in 1949 they were adjusted, more or less, to the circumstances then prevailing. After ten years the circumstances are completely changed. The American economy has advanced, of course, as well as others, but it has naturally not maintained its abnormal superiority of the 1940s. It is not surprising if the enhanced value attached to the dollar in 1949 is inappropriate now. We may have to make a similar reappraisal of sterling some years hence. Mr. Reginald Maudling, the new President of the U.K. Board of Trade, said at a recent conference on the "Outer Seven" free-trade bloc that the Common Market might compete more strongly than its members had individually by using common financial services for promoting trade. A logical development, he suggested, would be a common currency and a common reserve. In that event sterling as a medium for transacting international trade would be subject to powerful competition.

Another idea that has been considered recently is a North-American Common Market in which the U.S. and Canadian dollars would be fixed at a definite parity and might ultimately become a common currency. Significantly, such a union is seen as defensive, against the economic alliances in Europe and Latin America; but it would increase the power of the dollar and might, relatively, weaken the position of sterling. We shall certainly see big changes in the relation between currencies in the next decade. Rather than try to prevent them, it would be better to try to mitigate the uncertainty that precedes and the confusion that follows such changes.

INDUSTRIAL PROFITABILITY GROWTH DECLINES

RECENT trends in the country's stock markets appear to show that Indian investors are becoming more discriminating. It is time that they did so, because the prices of most high-grade stock have increased substantially. As a result, yields have declined and are now hardly competitive with returns obtainable on other kinds of investments. The improvement in prices is due more to growth prospects than to yield considerations. The present levels, however, appear already to have discounted probable growth prospects to a considerable extent. There are two important factors which usually guide an investor in selecting a scrip. The merits of a company need to be judged; the conditions of the industry as well as of the overall economy must be examined carefully. At present, the future growth prospects of shares are being undermined by a number of factors. To begin with, it is obvious that the profitability of industries during recent years has declined steadily, although total profits have increased following a bigger financial outlay on modernisation and expansion. This rate of the deterioration varies from industry to industry.

The index of profits, before tax, in tea plantations, has increased from 55.1 in 1951 to 59.0 (1950 is equal to 100) in 1957, in coal from 107.4 to 140.9, in sugar from 170.7 to 274.2, in iron and steel from 153.6 to 214.4, in engineering from 117.7 to 355.5, in chemicals from 113.0 to 240.9, in paper from 151.6 to 178.8, in electricity from 101.6 to 142.8 and in shipping from 662.1 to 1,976.9. The index number for cotton textiles declined from 166.3 to 28.6, for jute textiles from 151.5 to 40.2 (in 1955) and for cement from 135.6 to 134.5. But the index of profitability based on the ratio of gross profits to total capital employed in tea plantations fell from 58.2 in 1951 to 44.1 (1950 is equal to 100), in cotton textiles from 142.0 to 37.7, in jute textiles from 123.6 to 71.6, in the iron and steel from 141.5 to 65.3, in cement from 125.7 to 73.3, in paper from 125.0 to 85.3 and in electricity from 96.4 to 82.1. The index number for coal increased from 95.7 to 99.6, for sugar from 131.6 to 140.0, for engineering from 101.6 to 142.6, for chemicals from 109.6 to 144.1 and for shipping from 328.0 to 382.2.

The fact that total dividends have increased does not in itself provide any reason for optimism because the rise has taken place due to a large increase in corporate share capital. The percentage of dividends paid on the share capital—which is the criterion for judging the merit of an investment—has actually declined. It has fallen from 9.1 percent in 1955 to 8.7 percent in 1957.

uite apart from this consideration, it is disturbg that the incidence of the tax which is to be educted from dividends at source under the inance Act, 1959, is having a greater strain on orporate finance than was previously thought. he publication of the latest company reports ows that many companies have found difficulty paying the same amount of net dividends to e shareholders as before, after deducting the ividend tax. It is, therefore, thought that unless e rate of the tax is reduced, shareholders will making a mistake if they take too optimistic view of the future.

The claim for a reduction in the dividend tax the greater because the refund of the tax to areholders having a low assessable income is lusory for all practical purposes, in the light the cumbrous procedure which has to be llowed for obtaining the tax refund. More imortant is that the increased dividends in quantative terms are mostly being paid by reducing the amount of money ploughed back into the business. An examination of the balance sheets of 76 public limited companies, as made in the latest issue of the *Reserve Bank Bulletin*, indicates that profits before tax rose from Rs. 12.2 crores in 1957 to Rs. 12.5 crores in 1958. The provision for tax, at Rs. 6.6 crores in 1958, formed 52.5 percent of profits before tax; the corresponding figure for the previous year was Rs. 6.5 crores or 53.2 percent of profits before tax. Profits after tax, at Rs. 6.0 crores in 1958, showed a small rise over the preceding year's level of Rs. 5.7 crores. Though profits after tax did not rise appreciably, the dividends distributed, at Rs. 4.8 crores in 1958, recorded a rise of Rs. 0.5 crores. There was a fall in the retained profits, which were Rs. 1.4 crores in 1957, against Rs. 1.2 crores in 1958. Retained profits as a percentage of profits after tax worked out at 19.5 percent in 1958, against 25.0 percent in 1957. Of the profits before tax, 9.3 percent were retained during 1958, compared with 11.8 percent in 1957.

Current News and Comment

ndian Iron Accounts

The report of the Indian Iron and Steel Co Ltd r the year ended March 1959, which has just been ublished, is fairly encouraging. The profit, be- re taxation but after depreciation, has increas- l to Rs. 5,63,18,172 from Rs. 5.46 crores in the evious year. The rise of Rs. 17 lakhs is pro- ably to be attributed mainly to the increase in oduction, which in turn means that the effects the big expansion schemes the company has ndertaken are beginning to show. The profit as not, of course, risen quite as much as the oduction figures might have led one to expect. t that is understandable considering that the pansion schemes are still being implemented. hen completed, these schemes should make a bstantial contribution to the company's earngs. In this context, shareholders will be inrested to note the directors' statement that ave for certain minor auxiliary plant serces yet to be fully provided, the 1953 extension ogramme may be regarded as completed. Good ogress is being made with the 1955 extension ogramme", and its "completion is envisaged out the middle of 1960".

As announced last August, the total ordinary vidend for 1958-59 has been maintained at Re. 1 share. It offers a yield of 4.3 percent at a price Rs. 23.40 a share. The outlook for the next vidend is discussed in the statement circulated shareholders by the chairman, Sir Biren ookerjee, which is published on a later page of is issue of *Capital*.

The increase in production is satisfactory, though the directors state that "the main plant stallations during the last two years are as t working to a part only of their capacity out- t." The production and sales of both iron and el have risen. The output of pig iron rose to 9,933 tons in 1958-59 from 733,945 tons in the evious year. Excluding the iron used in the mpany's own foundries, the despatches of iron re as follows: 188,041 tons (against 106,941 ns) for local sales, and 634,287 tons (against 2,748 tons) for steel-making. The production steel ingots and castings rose to 608,205 tons om 507,580 tons; and the output of saleable el increased to 497,551 tons from 412,042 tons. espatches of steel were up at 506,141 tons from 3,978 tons. The directors explain that after the mmissioning at the Burnpur works of the two w batteries of coke ovens and the two new rge capacity blast furnaces, the two old and all capacity blast furnaces at the Kulti works, gether with their coke ovens and ancillary ant, were closed down towards the end of 1958 accordance with the overall expansion proamme. The coke and iron requirements of the ulti foundries, including the special grade of on for the two spun pipe plants, were thenceth met from the Burnpur works. The new el foundry was commissioned in August last ar, and has since been in regular operation oducing steel castings of various descriptions, cluding castings of manganese steel. The non-rous foundry continued to work to capacity.

Turning to the accounts, there are two notle features. One is that the allocation to the velopment rebate reserve (statutory) has been ised to Rs. 314.67 lakhs from Rs. 104.84 lakhs—flecting the progress of the expansion schemes. e other is that there is, accordingly, no prosion for taxation, against Rs. 134.25 lakhs in e previous year. 'Among the other allocations e: wealth tax Rs. 18.63 lakhs (against Rs. 27.4 khs); taxation contingencies reserve nil gainst Rs. 41 lakhs); plant rehabilitation re-rve Rs. 45.1 lakhs (same); extensions special reserve Rs. 24.79 lakhs (against Rs. 26.13 lakhs); general reserve nil (against Rs. 32.97 lakhs); steel prices equalisation account Rs. 42.5 lakhs (against nil); and general development reserve Rs. 1 crore (same). In addition, Rs. 1 crore has been written back from a previous allocation made to the works and ore mines new extensions reserve, in order to help pay the preference and ordinary dividends. As a result, it is explained, "shareholders should not be penalised in regard to tax credit on their current dividend by reason of the fact that no tax is payable on the profits for the year." The general position of the balance-sheet, as well as the progress of the expansion schemes, encourages the hope that the company will be able to pay the same amount as net ordinary dividend as it has been paying, after making the prior deduction of tax now stipulated under the Finance Act, 1959. It is important however, to qualify the hope on the lines indicated by the chairman in his statement to shareholders. In the 1958-59 accounts, the preference dividends are shown as absorbing nearly Rs. 13.5 lakhs and the ordinary dividends nearly Rs. 103.67 lakhs.

Jessops Rights Premium

The offer of rights ordinary shares by Jessop and Company Ltd has produced mixed reactions among investors. The issue had already been expected as the company needs money for expansion and modernisation. During the past couple of years there has been considerable progress in expansion. Schemes for producing electric multiple unit coaches and road rollers have been completed, but modifications are now being made to improve manufacturing facilities further. During the year ended October 1958, over Rs. 83 lakhs was spent on block assets. So far, the finance appears to have been obtained mainly from banks; the State Bank of India has advanced Rs. 1.48 crores. As the position of the company had suffered under its previous management, it is understandable that money has had to be obtained from outside sources. Now that the financial position is substantially improved, however, shareholders are being approached for more money. The price of the ordinary shares is steady around Rs. 34.12, which indicates the confidence of shar holders in the outlook. The proceeds of the n issue are expected to help the company meet t increase in working capital requirements resulti from expansion. As supplies of raw materia especially steel, improve, it is hoped that t bigger installed capacity will be more ful employed. So the growth prospects of the shar are reasonably good.

Shareholders are nevertheless disturbed by t terms and conditions of the rights share offer. T ordinary share capital of Rs. 1.02 crores is to doubled by offering one share for every share he at a premium of Rs. 2 a share. On the basis an ordinary dividend of 6 percent paid in 19 the premium can scarcely be supported. A claim for a premium loses force considering th shareholders got no dividends in 1956 and 1957. T management might consider whether it is tin they were rewarded by an issue at par for the past sacrifices. Nobody will question the abili of the company to maintain the dividend of percent on the increased capital. During 19 it was over eight times covered. It is, therefo hoped that a more generous dividend policy w be adopted in the future, as most of the expansi has now been completed.

The Government has attached a new conditic to the present issue which deserves careful notic The board of management which now runs t company is authorised to accept or reject a tran feree in whose favour a shareholder chooses renounce his rights shares. This exceptional pow has been given under the Industries (Developme and Regulation) Act, 1951. As it violates t fundamental rights of shareholders, it cannot supported generally. But as far as Jessops is co cerned, the special power is probably needed ensure the continuity of sound management.

N. I. Cables Pays the Same

The ordinary shares of the National Insulat Cable Company of India Ltd are steady ar ur Rs. 29.87. The support is based on the good r wards which investors have so far received in t form of dividends as well as capital appreciatio During the past few years, there has been an ir pressive growth in the business. Since the facto was shifted from the Central Provinces in 1945 Shamnagar in West Bengal, production has be diversified. During the year ended March 1959 the results for which have just been published sales amounted to Rs. 1.92 crores, but productic was hampered by a strike. So the profit has d clined from Rs. 59 01 lakhs to Rs. 36.78 lakhs, aft providing Rs. 1.92 lakhs (against Rs. 1.71 lakhs) f depreciation. The ordinary dividend of 20 perce has been maintained. This gives a yield of percent at Rs. 29.87 a share, and is over three tim covered. The taxation provision is lowered fro Rs. 31.51 lakhs to Rs. 20.11 lakhs. General reser is allocated Rs. 3.5 lakhs, compared with Rs. lakhs.

Meanwhile, the ordinary share capital has be increased by issuing 300,000 shares of Rs. 10 eac which rank for the dividend for the current yea Considering the adequate dividend cover and t dividend equalisation fund of Rs. 19.5 lakhs, the should be little difficulty in maintaining the distr bution for the current year. But the manageme might be worried about the heavy incidence of t tax which will have to be paid on dividends und the Finance Act, 1959, in future. In that eventu lity, there will be little scope for ploughing mon back into the business. Competition in the indu try will increase considerably, so it is necessa that attention be concentrated on keeping t

equipment up-to-date. The rapid growth of the electrical industry is a bullish factor for the cable industry, but many new cable factories are also expected to be set up soon. It is, therefore possible that the directors may start thinking less generously about dividends, if adequate resources are to be conserved.

Outlook for Jardine Henderson

Investors have become cautious about buying shares in managing agency companies, as the outlook for them has become uncertain. The doctrinaire official attitude towards the institution makes it necessary that a clear-cut policy be enunciated soon about its future status. Provided there is no further move to clamp down on managing agents, the ordinary shares of Jardine Henderson Ltd might attract attention. They are quoted at Rs. 73.50 x.d., which is below the par value of Rs 100 a share. During the year ended March 1959, the company's working has improved, and the indications are that the prospects are fairly encouraging. Its income from the jute companies under its management has increased and should continue to improve in the current year considering the present prosperity of the industry. As for its tea companies in Cachar and the Dooars, the results cannot be considered as satisfactory as might have been hoped for, since the price of the commodity was unremunerative in relation to the increased costs. So the move to shift its interests increasingly towards investment in the Assam gardens looks timely. The coal and coke companies are suffering from official controls as well as unrealistic prices for the commodities.

There is reasonable hope of better results in the trading departments, which are being helped by the diversification of activity. For instance, the new agency for the Central Gulf Steamship Corporation—which provides a service between India and the U.S.A.—has proved useful. Nevertheless, recent trends seem to indicate lower earnings from trading in the current year. The subsidiary companies are doing well. Sales of both Diamond Products Ltd and the Kassipur Co Ltd have increased. Expansion schemes are being considered for them, which might involve considerable capital expenditure. During the year under report, the entire share capital of Meameco Private Ltd has been acquired to produce mining machinery and equipment. A new works is being built by this company near Dhanbad and the directors think that the investment will turn out to be remunerative.

The profit of Jardine Henderson has improved from Rs 15.24 lakhs to Rs 27.51 lakhs in the year ended March 1959. The taxation provision has been raised from Rs 6.20 lakhs to Rs. 11.30 lakhs. General reserve is allocated the same amount of Rs 2.5 lakhs. The ordinary dividend has been doubled to 5 percent; it is covered over two and a half times and gives a yield of 6.8 percent at Rs. 73.50 a share. The carry-forward is Rs. 5,40,165, against Rs. 4,92,742 brought in. The notable features of the balance-sheet include a general reserve of Rs 67 lakhs, a dividend equalisation reserve of Rs. 5 lakhs, current assets of Rs. 1.76 crores and cash of Rs. 1.13 lakhs.

Bombay Burmah Pays More

It is not easy to guess with any measure of confidence what the working results of a company with diverse interests like the Bombay Burmah Trading Corporation will be; its range of operations extend from tea planting to the manufacture of steam launches, besides interests in overseas countries where political conditions are anything but conducive to peaceful commerce. Yet the company has done remarkably well during the year ended May 1959. The directors' report and audited balance-sheet indicate a substantial increase in costs under most items, as well as a setback in the income of some of the departments. But the adverse effect of these has been more than offset by the substantial increase in earnings from some major departments, with the result that the gross profit is nearly double that of the previous year. The directors have raised the dividend by 1 percent to 19 percent, free of tax.

By far the largest contributor to the company's prosperity is tea, followed by timber. Coffee and manufactured goods too figure prominently. The company's Indian estates are in the south, and they have yielded a record tea crop of 6,959,000 lbs, against 6,738,000 lbs in the previous year. Coffee, at 19,901 cwts, is a record figure too. It is noteworthy that while the average price realised is higher at Rs. 2.36 a lb, against Rs 2.29 in the previous year, costs are down from Rs. 1.44 to Rs. 1.38. Tea has earned the company a sum of Rs. 1.84 crores out of the total gross receipts of Rs. 4.45 crores, against Rs. 1.67 crores and Rs. 4.14 crores, respectively, in the previous year. Coffee has fetched Rs. 34.36 lakhs, against Rs. 30.9 lakhs. Timber has earned Rs. 1.39 crores, against Rs. 1.1 crores, although the year in general saw restricted trading conditions throughout Burma. The plant for the manufacture of asbestos cement sheeting has had its first full year of working. Although demand has been rather limited, the market has been gradually developed. For the first five months of the year, the output from the concrete products plant was restricted. Demand increased sharply later, and by the end of the year the factory was producing to capacity.

The company's interests in Thailand are now confined mainly to participation in the Joint Timber Company and to its interest in Thai Tapioca. Bombay Burmah has a 26 percent share in the equity capital of the former, which has declared a 45 percent dividend in its first full year of working. Credit for this will be taken in the current year's accounts. Thai Tapioca too has fared well with an output of 6,105 metric tons of starch, against 4,065 tons, but the average sales return was lower in view of the fall in the commodity prices in the United States, the company's main market. Development continues in the company's holdings in Tanganyika but although the rubber estates in Indonesia are well maintained and production has been kept at a steady level, currency, exchange and other difficulties reflecting unsettled local conditions have recently become more marked. The timber business in Borneo has been running profitably. A.F.C.O. has now become a wholly-owned subsidiary of Bombay Burmah and has paid a 12 percent dividend for the year to March 1959, credit for which, however, will be taken in the current year.

Salaries, etcetera, are up by Rs 24.5 lakhs and stores and spare parts by about Rs. 13.5 lakhs. Transport charges and miscellaneous expenses are also up. Despite this, the gross profit is almost double at Rs. 62.31 lakhs. The percentage of profit to sales is 13.2, against 7.3 in the previous year. Against the authorised capital of Rs 3 crores, the company's subscribed capital is Rs. 1.34 crores. Reserves total Rs. 3.96 crores. Current liabilities are Rs. 1.73 crores, against which there are current assets of Rs. 1.61 crores. On the liabilities side, unsecured loans total Rs. 54.06 lakhs, while on the opposite side there are loans and advances totalling Rs. 1.06 crores. Cash and bank balances total Rs. 51.89 lakhs.

Indian Aluminium Debentures

The Indian Aluminium Company Ltd is offering Rs. 3 crores' worth of 6¼ percent debentures at Rs. 102 percent for public subscription. The list will open on 1st December, 1959, and the details are published elsewhere in this issue of *Capital*. The issue is assured of a warm response, as the terms and conditions are attractive in comparison with those of similar stock. The gross redemption yield works out to 6.05 percent, the running yield to 6.12 percent and the net redemption yield to 4.22 percent. The issue has been fully underwritten, and debentures worth Rs. 1.5 crores have already been placed. The proceeds will be used to finance expansion schemes. The capacity of the Hirakud smelter is to be doubled to 20,000 tons a year, the capacity of the Muri alumina plant will be trebled to 50,000 tons a year and the Belur rolling mill capacity will be raised from 9,000 tons to 16,500 tons a year. There are other proposals also for the modification and modernisation of existing manufacturing facilities. The cost of expansion, including additional working capital, is estimated at Rs. 9.1 crores, and a dollar loan will be given by Aluminium Ltd of Canada. The recent performance of the company has been impressive. The profit, after depreciation and taxation, has increased from Rs. 2.75 lakhs in 1954 to Rs 57.72 lakhs in 1958. The profit has increased to Rs. 66.81 lakhs for the eight months ended August 1959. During the year ended 31st December, 1958, an ordinary dividend of 7 percent was paid. The ordinary share capital is Rs. 3.98 crores and the preference capital amounts to Rs. 40 lakhs. The amount of outstanding 5 percent convertible loan stock is only Rs 4.39 lakhs. So the earnings, which are expected to improve steadily due to the expansion, should be adequate for servicing the proposed debentures. They are repayable in 1970-75.

India United Mills: Cleaning Up

Mr. Dharamsey M. Khatau's position at last Friday's annual meeting of the India United Mills was rather unenviable, for he was certainly not to blame for the messy state of affairs which came in for severe criticism from shareholders. Mr. Khatau inherited a bad legacy; but it must be said to his credit that, having taken it up at the instance of Mr. Morarji Desai and Mr. G. D. Birla, who were appointed to arbitrate in the Mills' affairs and who, unable to bring the fighting partners of the managing agency firm to any understanding, closed the arbitration and quit their posts, he has made a good job of it. It is gratifying that shareholders appreciated Mr. Khatau's efforts, and it was pleasing too to hear that if things went on smoothly, the staggering losses of the past three years should yield place to profitable working, although it was too early to be definite about anything.

With 250,414 spindles and 6,412 looms, the India United Mills is perhaps the biggest single textile concern in the country. It comprises five units and a dye works. Once the company was well known for its efficiency and the shares were a blue chip on the Stock Exchange, but its fall from grace was both rapid and complete. The following are some of the facts. Against a capital of Rs. 2.5 crores, the company's reserves are nil. Stocks of cotton, cloth, process and stores and spares have been mortgaged for Rs. 3.3 crores to provide working capital. Current liabilities total Rs 99.03 lakhs, but current assets are no more than Rs. 44.14 lakhs. A lot of tax wrangles still await settlement. A debit balance of more than Rs. 57 lakhs remains. The machinery is old and out-dated. The lay-out is unsatisfactory. The speeds of various machines are low and a good deal requires to be done to improve lighting, humidity and other working conditions. The dye works need to be completely overhauled. The plant and machinery, whose original value was Rs. 322 lakhs, have been written down to Rs. 42 lakhs, indicating their low state of efficiency. The company has done nothing about renovation and modernisation. There is no plan for modernisation, and even if there were one, the resources are not available. The company's chances of raising finance in the capital market are almost nil.

It was under these circumstances that Mr. Khatau was charged with cleaning the augean stables of the India United Mills. He, along with Mr. G. D. Somani and Mr. N. K. Petigara, came in at a stage when banks had refused to advance money even to meet the workers' wage bill. But during his five months of office in the accounting year ended December 1958, Mr. Khatau did his best to avert a crisis. The partners of the managing agency firm, despite their differences, are cooperating with the committee of the board of directors headed by Mr. Khatau. The committee's term ends in August 1960 and Mr. Khatau hopes that by that time the affairs of the Mills should be more manageable. Mr. Khatau thinks that wholesale modernisation is almost impossible under the present circumstances, but the committee is making efforts to put the existing machinery in better working order and to realise as remunerative a price as possible for the cloth produced. Meanwhile, efforts are being made to manufacture and market fancy sorts on a fairly large scale. If finance permitted, which means a better understanding between the members of the managing agency firm (which again, as Mr Khatau says, does not exist), the committee would like to put in some of the essential modern machines in the near future in the dye works. It is proposed to add a unit of modern combers and make certain renovations in the spinning section. A provisional order for this unit has been placed. Since the retirement of Mr. Morarji Desai and Mr. Birla, earnest efforts have been made by Bombay's Labour Minister, Mr. Shantilal Shah, to smooth the Mills' affairs.

Tata Chemicals Growing

Mr. J. R. D. Tata is justifiably proud that considering the interference with manufacturing operations resulting from the programme of expansion, the results achieved by Tata Chemicals during the year ended March 1959 confirm his earlier assurance that the company is in good shape and that the slight setback suffered in the previous year had no long-term significance. His regret that the ordinary shareholders have derived no benefit from the better working results should be taken as sincere, for it comes from a person who has always wished the investor well. In fact, the dividend this time is subject to a compulsory cut of 30 percent but the Government is to blame for this. It would have cost the company an extra Rs. 5.59 lakhs to maintain the dividend at the previous year's level. Mr. Tata's contention that the distributable profits leave no margin for such an extra payment is amply borne out by the balance sheet and profit and loss account. It is, however, thoughtful of Mr. Tata to have anticipated shareholders' concern as to whether in view of the new tax system, enlarged share capital and heavy expansion and modernisation programme, and the additional charges concerning the development reserve, the company will be able to maintain the dividend. He assured shareholders at Friday's annual meeting that they have no cause for fear provided the Government does not impose fresh burdens and the expansion and modernisation programme gives the results expected of it. He was also prepared to repeat his assurance about restoring the cut in the dividend, but that again depends upon the Finance Minister and his Budget proposals.

Since the overall prospects for equity shareholders depend upon the progress of modernisation, it was encouraging to hear from Mr. Tata that the programme is running to schedule. The new kiln was blown last May and its operational efficiency has fulfilled expectations. It is the largest of its kind in the country and 95 percent of it has been designed and made in India by Indian engineers. The programme will, it is expected, be completed by June 1961. While some time will naturally elapse before full production is obtained from the various units of the renovated and enlarged plant, Mr. Tata hoped to see an increase in the production of soda ash and chemical caustic soda well before the completion of the programme. The financial picture of the company, as given by Mr. Tata, shows that capital expenditure commitments total Rs. 565 lakhs. This covers not only the main expansion and modernisation programme, but also additional projects for the manufacture of certain new products, such as copper sulphate, ferric chloride and lindane, as well as the normal annual replacements and additions. Of the total, Rs. 225 lakhs have already been spent, leaving a balance of Rs. 340 lakhs for the next three years. After allowing for the funds accruing from allocations to depreciation and the statutory development reserve, there will still be a deficit of Rs. 1 crore in financial resources. This excludes normal borrowings needed to finance the day-to-day business. The directors think that the best way of raising this amount is from debentures. The debenture money will fill the gap in the present programme of capital expenditure.

Mr. Tata said that since the time the plans were first made three years ago, the total requirements have grown further by Rs. 180 lakhs. Including the proposed debentures, the company will have raised about Rs. 308 lakhs in the short period of two or three years. By the end of 1961, when the main programme will have been completed, the total investment in the business should be of the order of Rs. 10 crores, compared with Rs. 5.2 crores in June 1957. Of this Rs. 10 crores, only Rs. 3.2 crores will have been provided directly by shareholders in the form of share capital. The balance has come from internal savings, borrowings and increased net current liabilities. Mr. Tata maintained that this is a reasonably satisfactory position considering the very large additions to the block during these years. But he was right in cautioning that borrowings will be rather large and that the aim should be to reduce their incidence to more manageable proportions. Referring to the impact of the Government's policy, Mr. Tata said that although manufacturers may not be happy over the innovation stipulating separate prices for liquid and fused caustic soda and caustic soda flakes, the departure is supported by logic, as there are significant differences in the manufacturing costs of the three qualities. The new system does not, however, adversely affect Tata Chemicals as its own price structure already incorporated the principle introduced by the Government.

Mukand Iron to Raise Capital

The progress made by the Mukand Iron and Steel Works is praiseworthy. It has received the Government's permission substantially to increase its steel-making capacity. An electric furnace with a roughing mill will be installed at a new site which is to be acquired. The estimated capital investment for the project is Rs. 1.2 crores, and the Industrial Credit and Investment Corporation has agreed to advance a loan of Rs. 60 lakhs in the required currency to meet the foreign exchange component of the scheme. The company is making arrangements for issuing fresh equity capital to meet part of the requirement of rupee finance. Its efforts at diversification have been successful. They have helped the company to maintain its business, although orders from the railways have fallen considerably following the curtailment of the wagon-building programme for the year. Mukand Iron has secured orders for axle boxes fitted with roller bearings for the new type of railway wagons. This is a highly specialised job and it is the first time that India is manufacturing the item. The Government has also allowed the company to increase its steel foundry capacity to 7,800 tons a year. Foreign exchange to the value of Rs. 19.8 lakhs has been allocated for importing machinery from the United States. The chief executive and production planning superintendent have been to that country for making the necessary arrangements.

After providing Rs. 3.87 lakhs for depreciation and Rs. 15 lakhs for tax, the profit is Rs. 14.95 lakhs for the year ended March 1959. With the previous year's carry-over and other sums adjusted, the total available is Rs. 15.76 lakhs. From this, the directors have provided Rs. 8 lakhs for general reserve and Rs. 2 lakhs for development rebate reserve. Dividends absorb Rs. 5.42 lakhs, leaving Rs. 34,430 to be carried forward. Sales are up from Rs. 3.03 crores to Rs. 3.56 crores, and stocks are valued at Rs. 33.97 lakhs, against Rs. 46.88 lakhs.

Mahindra Sintered Products

An agreement was reached early this year between Mahindra and Mahindra Ltd and a prominent U.K. engineering group represented by Birfield Industries Ltd, covering participation in the formation of a new Indian company to be known as Mahindra-Sintered Products Private Ltd. The main purpose of the new company will be to manufacture a wide range of self-lubricating bearings in a factory which is to be installed in Pimpri, Poona. According to the Mahindra-Birfield agreement, the British group will supply the machinery, tooling and technical know-how. The U.K. contribution will include 49 percent of the new company's capitalisation. The Government of India has approved the Mahindra-Birfield collaboration proposals and licensed the manufacture of the self lubricating bearings. The project is now being actively implemented and it is expected that manufacture will commence by the latter half of 1960. The project is of special interest as the production of self-lubricating bearings is representative of advanced manufacturing techniques in western Europe and these items are utilised by a substantial number of engineering industries in India. Generally speaking, these oil-retaining bearings have been evolved for applications under which it is difficult or undesirable to use the standard types of externally lubricating bearings. Some typical applications are connected with the manufacture of electric motors, generators, drilling machines, meters, motor-cars, motor-cycles, cycles, electric fans, tractors, agricultural machinery, aircraft, sewing machines, textile machinery and railway signal equipment.

Malayalam Plantation Results

In his address circulated to shareholders on the occasion of the annual general meeting to be held in London on 10th December, Mr. H. W. Horner, chairman of Malayalam Plantations Ltd, reports good working results for the year 1958-59. (A fuller version appears on another page of *Capital*.) The tea crop from the estates was just under 20 million lbs and was a record for the company, while the average selling price realised was slightly higher than in the previous year. The rubber yield was also larger at "very little below the estimated 7 million lbs." But as the net average selling price remained virtually unchanged because of official control, and the average cost of production was higher largely on account of increased labour charges, the profit on each pound of rubber was lower. Mr. Horner, however, points out that just as the increased cost of production has been mitigated by higher yields in the case of tea, so will the higher cost of rubber production proportionately decrease as the areas replanted in recent years with selected high-yielding material "come into full being." Discussing this year's prospects, Mr. Horner says that early in the current financial year exceptionally unfavourable weather conditions adversely affected the intake of tea crops, and at the moment, "there has been harvested considerably less than in the same period of 1958-59, although the rubber crop is slightly ahead." Given normal conditions for the remainder of the season, it is hoped to make up much of the tea so lost, but it is now doubtful if it will be possible to reach the original estimate of 20.5 million lbs. Prices, which a few months ago were at a low level for the types of tea which the company produces, have recently shown a welcome rising trend. If this continues, "we may hope to achieve final results comparable with those of the two preceding years." The estimated yield of rubber on the present indications will be about 7 million lbs. Mr. Horner refers to political conditions in Kerala, the State in which all but two of the company's estates lie, and says that the communist Government which was weak in enforcing law and order in the State, has since been dismissed by the Indian President. The firm action of the Government has had a salutary effect on law-breakers and agitators.

Paper Mill for South India

The establishment of a new paper mill in south India has long been talked about, and the Madras Government is keen on starting one in the Bhavani-Mettur area. It can get bamboo pulp as well as bagasse from sugar mills in the adjoining districts, while plenty of fresh water is available in the area. Chemicals may be easily obtained from local sources, and the State Government is said to be keen on assisting a new mill to produce 60 tons of paper a day due to the prevailing shortage of the commodity. Another reason for its willingness to start a mill is the prospect of getting large-scale foreign aid for the project. It is believed that Seshasayees of Tiruchirapalli, who have long considered the scheme feasible, are hoping to get firm State offers of aid before approaching local investors who might be ready to contribute part of the large capital required. Pessimists say that the experience of the Andhra Pradesh Government with the Rajahmundry paper mills has not been happy; but the shortage of paper and the growing demand indicate the urgent need to start another mill in south India. The cost of the one proposed is estimated at Rs. 6 crores, and the Industrial Finance Corporation and other statutory bodies are expected to contribute substantial sums.

Madras Newspaper Owners to Borrow

The Madras Stock Exchange has recently announced that two brokers will be allowed to place the 6½ percent debentures for Rs. 30 lakhs and the 9 percent taxable preference shares offered by Kasturi and Sons, who run the well-known Madras daily, the *Hindu*. The capital is being raised presumably to finance extensions and improvements. Public participation, to a limited extent, in the running of an old and well-established new paper may help dispel the notion that the Press in India is still shy about publicising its capital and revenue structure. The Carr family's successful efforts to sell shares in the *News of the World* to U.K. investors may inspire similar efforts in India also, making the Press a medium of investment. The tendency to create joint-stock enterprises to run newspapers abroad is in keeping with the desire of proprietors to encourage public participation in their concerns. It may also be due to a desire to prove that the Press barons are now ready to take a leaf from the book of the late Lord Rothermere—the eminent financier who had much influence on Mr. Neville Chamberlain at the Treasury in the 'thirties. The beginning of a trend that reduces the financial seclusion of the Press will be widely welcomed in India and one should hope that in presenting the accounts and reports, the Beaverbrook papers' admirable example will be followed so that the public can know more about how newspapers are run in this country.

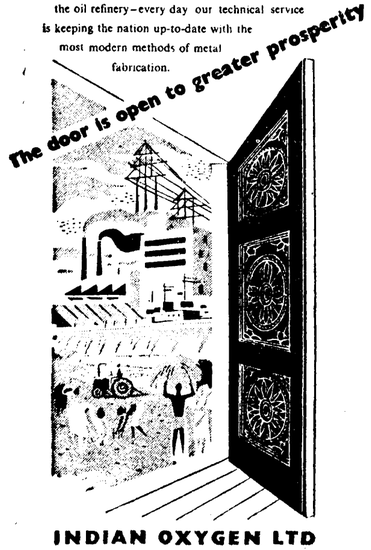
Ashok Paper Mills

A new company, the Ashok Paper Mills Ltd, is expected to approach the market for capital in the near future by issuing ordinary shares at Rs. 10 each and 6½ percent cumulative tax-free redeemable preference shares at Rs. 100 each. It is understood that a substantial proportion of the likely capital of Rs. 2.25 crores has already been promised. The French concern of Empacel is associated with the company, which will set up a paper mill near Darbhanga, Bihar. The plant will be built under the guidance and supervision of the French technicians and engineers, who will also supervise the operation and maintenance of the mill for a period of three years after it starts production. Empacel is participating in the capital issue. A major portion of the plant will be supplied by it, and other parts will be imported from the U.S.A. The mill will be served by adequate water and rail transport facilities. The principal raw materials—bagasse, sabai grass and bamboo—are readily available locally. The immediate planned capacity is 15,000 tons a year.

Ahmedabad, Bombay Share Margins

The action taken by the Ahmedabad and Bombay Stock Exchanges recently in clamping down stiffer margins on shares suggests that the authorities are aware of the dangers of a situation which, if left unchecked, might undermine the liquidity and solvency of the market. The rise in equities has been spectacular, but it cannot be called purely speculative, for no less impressive has been the rise in the cash scrip. The factors underlying the rise include rising production, protection through import curbs, larger money incomes and a generally inflationary psychology. But they would not by themselves have brought about such a spectacular rise, had it not been for the fact that the supply of investible funds has been steadily growing in a market where first-class scrip are getting scarce. There has also been a change in yield ideas brought about by the boom in the gilt-edged market. But while all this is true, the feeling has been steadily gaining ground that the stock market has discounted the future too optimistically and too soon. Its firmness in the face of equally strong counteracting forces, like dividend cuts under the new scheme of corporate taxation and the serious state of Sino-Indian relations, has intrigued many observers. Indeed the implications of a larger defence outlay could be so far-reaching as to necessitate rethinking on the outlook for equities.

It is in this context that the action of the stock exchange authorities is not only timely but justi-



fied. In Ahmedabad, free limits have been reduced in the case of buyers and margins against bulls have been tightened. In Bombay, the president, Mr. K. R. P. Shroff, invoked special powers under a board resolution passed in 1955 to impose special margins. Hitherto, margins in Bombay were based: (1) on the net position at the end of a settlement with an exemption limit of a total value of Rs. 20 lakhs, and (2) on individual shares. Tata Steel and Indian Iron, with an exemption limit of 4,000 shares and 10,000 shares, respectively. The list has now been widened to include 11 more. Among these are Century, Bombay Dyeing, National Rayon, Tata Locomotive, Premier Construction, Bombay Burmah, Hindustan Motor and Premier Automobile. For some time now, the Stock Exchange has been asking brokers for daily lists with a view to watching the pattern of trading. But, since recently, brokers have been asked to pay special margins on the basis of each day's business with varying exemption limits—1,500 for Century, 2,000 for National Rayon, 7,000 for Bombay Dyeing and 2,500 for Tata Locomotive. The rate of margin is mentioned as Rs. 50 a share for Century, Rs. 15 for Tata Locomotive and Rs. 5 for Bombay Dyeing. The margins are not really as stiff as might be supposed, but what brokers criticise is their arbitrary nature; the margins are imposed not only on the basis of the volume but on the standing of the parties—which may mean discrimination—and their normal holdings in the past.

More Shares Listed in Madras

The Madras Stock Exchange's official list now includes the shares of the Canara Bank, the Canara Banking Corporation and the Canara Banking and Industrial Syndicate. These shares, like other bank scrip, are quoted at a premium by virtue of their dividend records. The list also now includes the recently issued Mandya Paper Mill shares and those of Panyam Cement, which has started working this year. The most interesting recent addition to the list is Tube Investments of India Ltd. Its Rs. 100 shares, on which a dividend of 10 percent, subject to tax, was declared for the year ended July this year, are quoted at Rs. 223 x.d., but they are not yet readily available. The chairman's review of the expansion of the company, which now supplies E.R.W tubes, chains, fittings and saddles for bicycle manufacture, has been noted with special interest. He referred to the results of the merger between Tube Products and T.I. Cycles, both of which enjoy the support of Tube Investments of Birmingham. The extension of the list is generally expected to increase Bombay's interest in the Madras stock market. The support for Ashok Leyland and Travancore Rayon suggests that good-quality industrial scrip in Madras are attracting more attention on an optimistic estimate of future possibilities.

INDIAN OXYGEN is playing a vital role in building a more powerful and self-sufficient India in the Second Five-Year Plan.

From transport to electric power, from the steel works to the oil refinery—every day our technical service is keeping the nation up-to-date with the most modern methods of metal fabrication.

INDIAN OXYGEN LTD

Cloth Stocks at New Low

The cotton piecegoods market continues to be in good form. Internal offtake remains satisfactory and the export trend is very encouraging. Stocks with mills continue to decline. Total stocks at the end of October stood at 335,000 bales, against 601,800 bales a year ago, indicating the sharp change in the textile situation over the past year. Cloth is now in a sellers' market, but production has not responded to the spectacular improvement in demand. The provisional figure of 412 million yards for October brings the total production during the first ten months of the year to 4,098 million yards, which latter compares with 4,111 million yards and 4,447 million yards, respectively, in the corresponding periods of 1958 and 1957. The industry's anxiety to avoid a repetition of the 1957-58 glut is understandable. But in continuing to restrict production despite the emergence of a sellers' market, it exposes itself to the charge of exploiting the consumer by the maintenance of scarcity conditions.

The recovery in the textile trade has been widespread, reflecting perhaps the general recovery in world business conditions and increased consumer incomes. Most sections of the textile industry in the U.K. are enjoying boom conditions. From Hongkong come reports that the garment industry there is now enjoying the most spectacular boom ever seen in its history because of huge overseas orders. Most of the factories, it is said, are booked up to June 1960. Exports of Indian cloth have been picking up lately. Shipments in the third quarter are placed at 216 million yards, against 150.7 million yards and 154.89 million yards in the second and first quarters, respectively. The October figure is expected to reach a new high of 95 million yards. If the current trend is maintained, exports in 1959 might well exceed 725 million yards. The encouraging performance does not in any way affect the need for a sustained export effort with an increased emphasis on quality. This will depend on how quickly the Indian industry can modernise itself. It is here that New Delhi can play an important part.

Rayon Fabric Exports

The revised incentive scheme for rayon fabrics is beginning to show results. From a mere Rs. 7.62 lakhs in August, exports of Indian rayon and synthetic textiles jumped to Rs. 27.2 lakhs in September, which is the best performance since March. The figure for February was as high as Rs. 80.2 lakhs, but it was probably greatly inflated by the malpractices adopted by certain traders which compelled the Government to suspend the export incentive scheme on 6th March. A revised incentive scheme came into operation from July. In February, Rs. 80.2 lakhs were realised from a sale of 2.62 million yards, while the 1.79 million yards sold in September fetched Rs. 27.2 lakhs. Apparently the system of inspection has gone a long way in checking over-invoicing, which was widely practised up to March to earn exchange entitlements under the incentive scheme. The September figure brings the January-September total to Rs. 3.2 crores, which compares with Rs. 5.11 crores in the corresponding period of 1958 and Rs. 39.2 lakhs in January-September 1957. Exports in 1958 picked up only because of the incentive scheme. Reliable reports indicate that the recent encouraging trend has been well maintained in October. Exports up to 17th October are provisionally placed at around Rs. 17 lakhs. Exports of pure silk textiles also showed a marked improvement in September over the previous month. The figure rose from Rs. 3.5 lakhs to Rs. 7.52 lakhs. The September performance, it is said, is the best since 1956.

New Export Corporation Formed

The establishment of a new joint-stock company with a paid-up capital of Rs. 5 lakhs for promoting exports was announced recently in Madras. The organisation is modelled on the lines of a similar body formed earlier this year in Bombay, and its aim is to help exporters acquire new markets, gather trade information and create more opportunities for small exporters. It is claimed that 25 percent of India's exports originate from south India, and the new corporation will provide financial facilities and storage accommodation for shippers there. Its relations with the State Trading Corporation have not yet been defined, although it is possible that it will receive some assistance from the latter. Private enterprise alone is associated with the new organisation; it is obvious that it has been inspired by Japan's success in bringing small and scattered producers into the framework of a foreign trade organisation. Whether trade commissioners will extend assistance or the Government will provide additional incentives to small exporters remains to be seen, but shippers and manufacturers are eager to expand India's trade with neighbouring countries. Exporters hope that the removal of controls on trade will open up new opportunities for increased business with Burma, Ceylon and Malaya in the near future; but it is necessary that India's imports too should increase in some measure to permit larger exports of cloth, vegetable oils and tobacco to those countries.

Motor Vehicle Taxation

According to a recent report, all States except U.P. and Bombay have accepted in principle the Central Government's proposal for single-point taxation on motor vehicles. The multiplicity of motor vehicle taxes is now recognised as one of the chief factors hampering the development of road transport. It is, however, not without significance that most of the States which have accepted the Centre's proposal for a centralised tax are precisely those which have not developed their road transport systems. Even Madras, which has accepted the proposal, has laid down the condition that the State must be allowed to levy an extra one-sixth on all vehicles entering the State. Bombay is willing to accept the proposal on one condition—that public carriers, which are the main source of income for the State, will be excluded. U.P.'s rejection is total. The centralisation of all motor vehicles taxes, it may be recalled, was demanded by the Indian Road Congress. Early this year, its president, Mr. W. X. Mascarenhas, made the suggestion that all taxes levied on road users be centralised, whether in the form of licensing or by way of registration fees, Customs and excise duties, or as sales tax on motor fuels, lubricants, spare parts, tyres, etcetera. The belief is that a centralised tax will be less onerous in its incidence than the present multiplicity of levies. But more important than the uniformity of centralisation of motor vehicle taxes is a reduction in their incidence. This reduction might well be accompanied by a tax on bullock carts. It has been estimated that at the rate of Rs. 12 a cart a year the Exchequer could earn Rs. 10 crores annually. Carts not only use the roads as frequently as other vehicles; they damage them much more than any other forms of traffic put together. But the question of a cart tax will at once raise political and emotional protests, when, in fact, the decision needs to be made on purely economic grounds.

Insurance in Pakistan

The publication of the *Pakistan Insurance Year Book, 1958*, seems to be subject to the same inordinate delays as that of the Indian *Year Book*. The former presents a review of the business done in 1957 nearly two years later. The topical interest has by this time waned considerably, yet the delays are allowed to continue year after year. The Pakistani Government would do well to process the figures in such a way that the account can be presented within a year. Insurance business in that country has made all-round progress. New life business was only Rs. 559.41 lakhs in 1947. It rose to Rs. 16.79 crores by 1956 and reached Rs. 21.99 crores in 1957. Total life insurance business in force at the end of 1957 was Rs. 68.8 crores, as against Rs. 59.42 crores in 1956 and only Rs. 13.03 crores in 1949. The net rate of interest realised by Pakistani insurers on their total funds fell from 3.05 percent in 1956 to 3.02 percent in 1957. That realised by foreign insurers on their mean life funds for Pakistan rose from 1.42 percent in 1956 to 2.20 percent in 1957. The management expenses of Pakistani insurers on their total life business, expressed as a percentage of the premium income, were 44.1 percent in 1957, against 38.4 percent in 1956. The corresponding figures for foreign insurers in relation to their Pakistani business were 26.3 percent and 31.1 percent. Pakistani insurers must be worried that their expenses should have risen so much while the expenses of the foreign competitors seemed to have fallen.

General insurance in Pakistan during the past nine years has shown fluctuating results. There was a rapid decrease in business of all classes until 1952. Overall premiums fell—due entirely, according to the report of the Controller of Insurance, to a substantial reduction in marine premium. In 1953, except for a small increase in miscellaneous business, there was a further fall. The position improved in 1954, when gross direct premium reached Rs. 419.25 lakhs and net premiums Rs. 175 lakhs. Since then, there has been a steady improvement. Gross direct premiums rose to Rs. 458.88 lakhs and net premiums to Rs. 200.1 lakhs in 1955, to Rs. 563.62 lakhs and Rs. 581.1 lakhs in 1956 and to Rs. 236.58 lakhs and Rs. 247.7 lakhs in 1957. The claims ratios in fire, marine and miscellaneous insurance were 22 percent, 47 percent and 47 percent, respectively, in 1957, as against 15 percent, 69 percent and 39 percent in 1956.

Less Cargo for Bombay Port

The Bombay Port Trust Administration Report for 1958-59 shows that the policy of import restrictions has had an adverse effect on its working. Compared with the previous year, the volume of cargo handled declined sharply by 1.36 million tons to 11.75 million tons, chiefly due to a lower volume of imports. There was, therefore, a fall in revenue on general account from Rs. 1,231.51 lakhs in the previous year to Rs. 1,063.35 lakhs, and the surplus declined from Rs. 311.40 lakhs to Rs. 183.50 lakhs. On pilotage account, both revenue and surplus fell. The 1958-59 surplus was in part due to the "shortfall in expenditure" resulting from the slow progress of repairs and maintenance, new minor works and dredging, and "less expenditure than anticipated on water charges and the Chief Engineer's workshops, Station and Dock Masters' establishments". These mainly explain the lower volume of capital expenditure of Rs. 128.50 lakhs, as against the revised budget estimate of Rs. 2.27 lakhs for the year.

In a detailed account of the working of the port, the report says that the total traffic handled at the docks fell from 6.29 million tons to 5.34 million tons during the year; imports declined from 4.42 million tons to 3.70 million tons and exports from 1.87 million tons to 1.64 million tons. Machinery imports constituted the largest single source of revenue, while iron and steel, vegetable oils and cement were important ones. Manganese ore, oilcakes, piecegoods and cotton were the remunerative items on the export side. The traffic handled at the bunders including Butcher Island aggregated 6.41 million tons, compared with 5.82 million tons in 1957-58; imports were 4.71 million tons (against 4.88 million tons) and exports 1.70 million tons (against 1.94 million tons). The decreases, both in imports and exports, were chiefly in bulk mineral oils. The average labour cost a ton of cargo handled rose to Rs. 2.77, compared with Rs. 2.51 in the previous year, as the volume of cargo handled by departmental labour fell to 3,374,947 tons from 3,934,879 tons in 1957-58. The piece-work scheme remained in force.

Technical Education in U. P.

The working group for technical education in U.P. has recommended the development of post-graduate studies and research projects at the University of Roorkee and the Harcourt-Butler Technological Institute at Kanpur, as well as the introduction of a post-graduate course at the Central Textile Institute, Kanpur. The Government of India has estimated the intake of degree-holders in engineering during the third five year plan at 15,000. A target of 12,000 seats is expected at the end of the second plan, so 3,000 additional seats will have to be created during the third plan. The existing capacity in U.P. for training in engineering is 690 seats, and the working group has urged the creation of 950 more. As far as diploma holders are concerned, the Government of India has planned for an intake of 30,000; a target of 20,000 seats, it is expected, will be achieved before the end of the second plan. Out of the balance, the working group has recommended the allotment of 1,900 seats for U.P. The number of skilled and semi-skilled workmen required for the second plan period has been estimated at 650,000 for the country as a whole. The share of Uttar Pradesh is placed at 83,000 craftsmen during the third plan. This figure excludes village craftsmen and artisans. Taking into account the existing facilities for the training of 42,000 craftsmen, the working group suggests that arrangements be made for training an additional 41,000 craftsmen during the third plan. If the suggestion is accepted by the Government, five batches of 8,200 craftsmen will pass out during the third plan after 18 months' training. U.P.'s Chief Minister, Dr. Sampurnanand, recently referred to the paradox of rising unemployment among technically trained personnel. Their lot, he said, is worse than that of arts graduates, who have a wider field open to them for earning a living. The indiscriminate expansion of technical training facilities, without providing opportunities for employment, may prove to be a luxury which the State can ill afford.

More Patents, Less Designs

The annual report of the patent office of the Central Ministry of Commerce and Industry, which has recently been published, says that the total number of applications for patents, including those from foreign countries, increased to 3,572 in 1958 from 3,456 in the previous year. Six hundred and two applications originated in India, of which 529 were made by Indians. Bombay, West Bengal and Delhi together accounted for more than 75 percent of the applications from India. But the number of applications for registration of designs decreased from 4,306 in 1957 to 4,157 in 1958. Nearly 99 percent of these originated in India. Applications originating abroad were mostly from the United Kingdom. As in the preceding year, most of the Indian applications concerned textile designs. The chemical industry accounted for 40 percent of the patent applications. In the organic chemical industries, inventions were in the field of dyes, dyestuffs and synthetic drugs. In the inorganic field, the inventions related to nuclear reactors, preparation of heavy water, radiation measuring equipment, etcetera. Most of these originated from the U.S.A., the U.K., France and West Germany. Metallurgical industries, particularly iron and steel, brought a large number of inventions from abroad, mostly relating to processes of smelting iron ore in blast furnaces and the making and refining of steel. Inventions in the civil and mechanical engineering spheres related to buildings and structures, electric railways, compound sleepers, ejector seats for aircraft, projectiles, internal combustion reciprocating engines and turbines and railway couplers. Indian inventions concerned appliances for using solar energy, pumps, typewriters for Indian scripts and water coolers. Textile technology formed the subject matter of several inventions relating to the dyeing of textiles, loom shuttles, drafting machines, carding engines and spindles. Indian inventions also related to sewing machines, bobbins, *charkhas*, components of spinning machines, etcetera. Other spheres of Indian inventions were rubber compositions, vulcanising processes, lifting, loading and conveying machines, cigarette-making machines, optical instruments, advertising devices and carrier chairs for conveying machines. According to the report, the income of the patent office in 1958 was Rs. 9.81 lakhs and its expenditure was Rs. 6 lakhs.

No End to Shipping Slump

A seasonal rise in demand for shipping space, mainly for wheat, corn and sugar, has caused a 10 percent lift in voyage freights on certain routes, and some optimists have greeted this as the beginning of the end of the maritime slump. But freights in general still remain extremely low: oil tanker voyage freights are only 12 percent to 15 percent of what they were after the Suez crisis (the index number, 1947=100, was 435 in December 1956, but was only 51 this autumn), while dry cargo voyage rates are about one-third (the index was 181 in December 1956, and is 76 today). For both oil and dry cargoes, freight rates are today 10 percent or 15 percent below the lowest figure reached in the 1953-54 depression. At the present moment, super-tankers of 28,000 tons or more can cover their running costs, but owners cannot put by normal depreciation. Medium tankers, even if modern, are working at a loss; the standard T2 vessel of 16,600 tons can cover only 80 percent of its running costs. Owners have the choice between laying them up, which is expensive, or continuing to sustain a loss in the hope of early improvement. For prewar tankers, there is less hesitation: they are being increasingly scrapped. The breaking up of vessels has become more attractive since scrap prices firmed up, and the prolonged U.S. steel strike, among its numerous other consequences, will no doubt have encouraged this trend. But for every vessel broken up, there is one laid up and ready to be put back in service to take its place. There are about 5 million tons of dry cargo shipping laid up at present, and this will restrain any tendency to a rise in freights for a long time yet. The conversion of idle tankers to the wheat-carrying trade has a further depressing effect.

Apart from the re-activation of laid-up tonnage, there is the constant supply of new vessels ordered during the last shipping shortage and now being launched. In the first half of 1959, 3.6 million tons of tanker shipping was delivered, bringing the world tanker fleet to the record strength of 58.8 million tons. Deliveries in that half-year were almost equal to the volume of laid-up tonnage. These new vessels have a better earning capacity than the older ships, for they are principally super-tankers which can cover their running costs even at the prevailing freight rates. The comfort is that the wave of activity in the shipyards is about spent. There were still 2,097,000 tons of shipping being built in British yards at the end of September (53 percent tankers), but new orders are sharply down, both there and in other shipbuilding countries. The rate of delivery of new vessels will decline in the years ahead, but the effect on freight rates will be very gradual.

Raising Madras Food Output

It is officially claimed that Madras has made the maximum use of irrigation facilities and that it can increase its food output to 7.4 million tons a year by 1963. The use of pumpsets has helped cultivators to raise more than two crops, while improved seeds have been used on 70 percent of the cultivated areas. The fertiliser requirements of the State are expected to rise sharply, and cheap credit facilities have to be provided in the rural areas. American experts, it is said, will guide the Madras Government on intensified cultivation in villages, so interest is growing in the manufacture of sulphate of ammonia at a new plant located in Tiruvallur—25 miles from Madras city. Meanwhile, the Government has said little about the food imports required to meet sudden local shortages. It is evident that producers are offering a smaller surplus for sale because they expect prices to rise still further, and the reduction in the marketable surplus has distorted prices. But the idea

f imposing a levy on producers or fixing ceiling rices on foodgrains has not appealed to the autho-ities, who continue to hope complacently that the hreat of State trading will check the rise.

U.K. Investment in the Commonwealth

Soon after the World Bank announced that its oans in the past financial year had totalled $703 nillion, the British Treasury revealed that U.K. nvestments in the Commonwealth alone had veraged $672 million in each of the past five ears. Since the World Bank figure includes noney made available to Commonwealth coun-ries by Britain, through its subscription to the Bank, one must conclude that Britain's invest-ment effort in the Commonwealth equals that of he international institution for the whole world. The fact deserves to be meditated by those inte-ested in how far post-war international co-opera-ion has replaced the connections formed in the age f imperialism. Britain's Commonwealth invest-ment is equal to one percent of the U.K.'s national ncome. Canada receives $56 million a year, on verage; the remaining $616 million goes to the terling members of the Commonwealth. The ex-orts of capital to Canada are mainly repayments f loans made to Britain during and just after the var. The other capital exports may be divided nto private and public funds.

Private money flows to the Commonwealth by hree channels. The rest is direct private invest-nent, including the transfer of new funds by U.K. irms to their Commonwealth branches, the export f machinery to those branches, and the ploughing ack of local profits. The second is loans raised y Commonwealth authorities in the London noney market. And the third is the Common-wealth Development Finance Company, founded n 1953 to assist mainly private ventures; its capi-al is now £26 million ($72.8 million). Public noney reaches the Commonwealth by way of: (1) lirect grants from the British Government to ocal Governments, and inter-governmental loans: 2) the Colonial Development Corporation, a self-upporting business corporation founded in 1948 to assist development projects in the colonies, and empowered to borrow up to £160 million ($448 million) at any one time; and (3) sterling release-through the World Bank, which totalled £60 million over the past six years; another £20 mil-lion is now being made available in the same way.

Socialism and the Birth Rate

Claiming yet another unexpected superiority of communism over capitalism, the Russian demo-grapher, Smoulevitch, wrote earlier this year (*Coprossy Filosoffi* No. 2, 1959, page 121): "The cultural uplift of the masses achieved in socialist countries not only does not cause a fall in the birth rate but, on the contrary, provokes an in-crease". If this were true, socialist experience would contrast with that of all western countries and Japan. Moreover, this "superiority" would be little short of disastrous for the communist eco-nomies because an increased birth rate, combined with the fall in the death rate that inevitably ac-companies cultural and economic progress, would result in a population increase that would eat up most of the gains of higher production. Fortunate-ly for them, and for demographic theory, and for countries such as India which hope one day to see the birth rate fall in response to economic pro-gress, Smoulevitch is quite wrong. Russian vital statistics, released this summer for the first time, show that socialist experience precisely duplicates that of countries which achieved their economic expansion earlier. Not only has the death rate fallen, but the birth rate has dropped to levels known in western Europe in all those parts of Russia favoured by economic progress. Since 1940, the death rate has fallen to that of advanced western countries and of very young backward countries such as Puerto Rico that have benefited from good sanitation. It is still higher than in Israel, which combines both these features; its population is young *and* well-off.

The causes of the decline in the Russian death rate are less economic progress than improved medical services and sanitation, combined with the fact that the birth rate has fallen so recently that the population has not yet begun to grow older on the average. As for the birth rate, it has fallen heavily everywhere in Russia. It is down to 10.7 a thousand in the Ukraine and 20.1 in Moscow, with most of European Russia lying be-tween these extremes. These rates are compar-able to those of Holland and Finland, and slightly superior to France's. In Asian Russia, on the other hand, the fall is less marked, and in some remote republics there is even a small rise. First-ly, this confirms the familiar fact that the birth rate falls fastest in regions favoured by economic progress, whether this be achieved by socialist or other means. But one may also suppose that a major cause of the higher birth rate in trans-Ural Russia is the extensive migration of young people to those undeveloped regions, as a result of offi-cial policy and encouragement. So the larger number of births a thousand there is not due to increased fecundity, such as Smoulevitch claimed to result from socialism, but to the replenishment of the younger age groups. In any event, the faster population growth in Asian Russia means that Russia's demographic centre of gravity is moving eastwards, away from the European to the trans-Ural republics. Even apart from the effect of internal migrations, population growth is al-most twice as fast in Asian Russia as in Euro-pean Russia. The population of Latvia, at the present rate, will double in 90 years, whereas that of the eastern republic of Komis will double in 27 years. This is a matter of long-range interest, not only to the planners who since Stalin have wanted to move Russia eastwards, but to other Asians, and in the first place to the Chinese.

Grand Total Rs. 2,631.50

CURRENCY COUNTERFEITERS

THERE must, as long as human nature is what it is, always be something entertain-ing about wickedness—even to the virtuous. From a dramatic point of view, the Garden of Eden would lose half its charm without the Serpent, and the mere literary critic almost trembles to think what *Paradise Lost* would be like had Milton essayed to put no Devil into his masterpiece. In the way it must be confess-ed that the Annual Report upon the operations of the Paper Currency Department would be rather dull matter to the mere general and non-departmental reader without some account of the doings of those artistic brigands who try their level best to compete with the Govern-ment rupee and the currency note. To what extent these plunderers of the public fail and to what extent they succeed, may not, it is true, be entirely demonstrated by a perusal of the report, but the publication in question, at least, lets a little light upon a subject which, since the closure of the mints in 1893, has often been debated with much strength of opinion. There are three kinds of criminals in connection with currency—the "sweater," the illicit coiner and the counterfeiter of notes, and, as a rule, these branches of financial enterprize are pursued without any attempt at amalgamation. The forger of Indian currency notes does not seem to be a particularly active individual in India, but the report discloses one or two interesting bits of information in regard to his *modus operandi*. To make a pen and ink reproduction of a note upon tracing paper and then gum the tracing on to ordinary paper seems a clumsy enough method of obtaining a thousand rupees, but this was done and—in due course—detected. There is a suggestive passage in the report regarding Benares: "The moral atmosphere of that sacred place being, we are told, apparently favourable to fraud of this kind, for where pilgrims largely congregate sharpers generally abound."

from the seed...

...i the steel blaze of noon,
men of the earth 'drag the sun upon their backs',
toiling in the furrowed fields.

For a tomorrow, when the seed will burst to plant, flower and fruit.

For the fruits of tomorrow then, the striving, the effort.
For a world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for ... Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products ...

Today and Tomorrow... Hindustan Lever serves the home

A Ditcher's Diary

IT WAS GOOD TO HEAR, AFTER WHAT SEEMS A VERY long time, a good word said for Calcutta—which Mr. Ellsworth Bunker called the intellectual capital of India. Ours is a much maligned city, and I would confess readily enough that there is a great deal by way of civic amenities which Calcutta simply has not got. I am also aware of recent advances in experimental art that Madras and Bombay have made in recent years. But I would doubt that any Indian city has quite the intellectual air we breathe in Calcutta together with so much smoke and dirt. Once one gets to know the right people, which takes a little time for the Bengali is not an extrovert usually, one encounters a re-markable degree of mental alertness. Bengalis frankly admit that the torch lit by Ram Mohun Roy and kept burning by Rabindranath Tagore is not as bright as it once was, but the fondness for abstract ideas remains which is, of course, the mark of the intellectual mind. Much enthusiasm is sadly dissipated, admittedly, but the youngster who goes to the U.S Consulate to deliver a protest against Little Rock or something does so for a cause with which his immediate self-interest is in no way connected. He does it for an idea, for a theory, for an intangible ideal. Even if all this is rather vague for an outsider, it is still possible to see the positive achievements in the field of arts and letters. An amateur Bengali makes a film, and the Indian film immediately comes of age and attracts international attention. It was an un-known Bengali who, with his autobiography, be-came a figure in English writing. I like to think that the spirit of criticism (including sometimes ruthless self-criticism) will live in Calcutta far longer than elsewhere in the country, where con-formity now holds sway.

MY FIRST REACTIONS TO THE PROPOSAL TO BUILD A Planetarium on the maidan were that here was another unnecessary encroachment on Calcutta's "lung", and that if it is to be built at all, another site should be found for it. There is where I left the matter until the other day when I saw that circle of bricks laid out in front of the Calcutta Racket Club and realised with a shock that up-wards of a dozen old trees were obviously sche-duled for destruction. After the casualties caused by the recent cyclones, this city can ill afford to lose a single tree; now here is a scheme to trans-form a shady little corner of Calcutta's one remain-ing amenity into another brick-and-concrete oven. I would be the last one to deprive any long-suffer-ing Ditcher of some much-needed diversion; but surely a better site can be found than this one. What about the area opposite the Eden Gardens, for example, when it is not occupied by the Czech circus? There are other objections to this Chow-ringhee site, too, and a correspondent has just written in reminding me of them. He points out that some time or other it is reasonable to suppose that Chowringhee will be widened, and that if by that time trams on tracks are still in vogue, these will presumably be sited in the middle of the road-way, or else run along a line west of their present location. Whichever is the case, there will be no room for extension because the wall of the Plane-tarium will be in the way. There is also the ques-tion of congestion of both people and vehicles at what has earned the reputation of being the most dangerous corner in south Calcutta. And what about the problem of sanitary arrangements? I do not know whether suitable facilities are to be pro-vided in the building, and that it is intended they be maintained in a condition which will induce people to use them. But the maidan is odoriferous enough already, and any further concentration at a busy corner so near a residential area could be a positive nuisance. These are points that had not occurred to me, but I must agree with my corres-pondent that they are factors to be considered. It has often intrigued me why the maidan should so obviously offer such irresistible temptation to encroachment. Would this not be an excellent opportunity for drawing the line?

EVER SINCE THE UPRISING IN HUNGARY I HAVE been looking for authentic information about Soviet domination in communist eastern Europe. Now the Asia Publishing House of Bombay has sent me Pro-fessor Nicolas Spulber's excellent monograph en-titled *The Economics of Communist Eastern Europe*. ($12.50), jointly published by the Technology Press of the Massachusetts Institute of Technology and John Wiley and Sons, New York. With no less than 525 pages, this work is the result of consider-able research based on the official and semi-official literature available. A perusal of it convinced me that Professor Spulber has faced considerable diffi-culty in interpreting communist statistics, for they were inevitably based, like those of Soviet Russia, on upwardly biased reports of all planned perfor-mances. What could be the conclusions of com-munist economists or statisticians, I wonder, on the rises in agricultural or industrial output expressed as percentage increases when, as Professor Spulber points out, the absolute data about the base year are lacking. There is no facility for checking on the spot the exact significance of actual perform-ances either, which implies that communist statis-tics should never be accepted without circumspec-tion. But it is the actual process of indoctrination and the ruthless extension of the bulging State into the economic sphere which has helped firmly to establish communist control over eastern Europe. Professor Spulber shows convincingly that Russia is the greatest imperialist country in post-war Europe, and has criminally exploited its satellites in the name of furthering their prosperity. The expropriation of local and foreign concerns without compensation, the destruction of large landholders after describing them as enemies of the people, the discriminating concessions granted to joint com-panies started with Soviet patronage, the compul-sion exercised on these countries to export large quantities of raw materials to Soviet Russia as war reparations while at the same time starving them of essential imports, are extraordinary instances indicating to what extent Russian imperialism can go.

THE FLYING VISIT PAID BY MR. JAMES HAGERTY, President Eisenhower's Press Officer (I hope I have the title right) to India last week, seemed to me to be altogether too short. I have read some-where that Mr. Hagerty is ranked as the world's most powerful public relations officer, and I see no reason whatever for disagreeing with that assess-ment; this is the age of the common man and no national leader can afford to ignore the importance, or disregard the advice, of the expert he appoints to look after his relations with the public in general and the Press in particular. That puts a great deal of responsibility on Mr. Hagerty's shoulders which, I believe, he discharges in the United States with commendable distinction. He has not been so successful outside though. His handling of the recent Eisenhower-Macmillan meeting showed up the fallibility of his methods when it came to work-ing with the British Press. Far from putting Mr. Eisenhower over in the way required, Mr. Hagerty probably earned him a great deal of bad publicity which only the President's personal popularity with the British public was able to offset. That is why it strikes me that if Mr. Hagerty intends to handle President Eisenhower's Press relations on the India visit, he would have done well to spend more time studying the field. This will be the first time Mr. Eisenhower has been here; indeed, it is the first visit from an American President ever and it is vital for world peace that the impression he creates should be a good one. He has no personal popularity in India to fall back on; in fact, there may be a good deal he has to live down. I would have thought such circumstances called for a more careful approach to the public and Press relations aspects of the visit. Of course, I might be doing Mr. Hagerty an injustice; he may have decided—wisely after his experience in Britain—to leave the details in the hands of the local experts. If so, then I have nothing further to say. But if not, it is only fair to warn Mr. Hagerty, if not the President himself, that India is not the United States, nor even Britain, and that Indian newspaper men and more so their readers, are not even as interested in what Mr. Eisenhower eats for lunch as the British public turned out to be.

THE MORAL ARROGANCE OF THE GOVERNMENT grows daily, and between Messrs Pant and Keskar they sometimes make me feel that we who do not have the honour of being gazetted govern-ment servants are somehow members of a sub-human species. Not as though many people outside can afford to contemplate it, but some time ago there was a circular against All India Radio em-ployees having more than one wife. Now the Ministry of Home Affairs—the pun will be obvious to readers of Graham Greene's *The End of the Affair*—has told Central Government officials that they must be good husbands—as defined by Mr. Pant, aided perhaps by Mrs. Pant. If this is not going too far, I should like to know what is. The assumption is, as I have indicated, that there is one code of conduct for government servants and an-other for lesser breeds outside the law. Even if it were possible to appreciate the concern of the State for wives in distress, I would be interested to know what remedies the Government proposes for the protection of good husbands against bad wives, for I am not prepared to believe that nine such exists. And what does "neglect" mean? How often in the week does the wife have to be taken to the cinema? How many *sarees* does the poor husband have to buy her a month? Wou'd read-ing the newspaper, containing Mr. Pant's speeches, at breakfast, constitute neglect? I can see the en-quiring official facing some very embarrassing situations when looking into complaints; and I simply do not see how punishment of erring hus-bands, such as stopping promotions or even dismiss-al, is going to help a wronged wife. In the name of welfare, governments these days give themselves some pretty tough jobs, but the Home Ministry is asking for trouble in inciting the naggers among officials' wives to take their complaints to it.

THE DITCHER

THIS ANNOUNCEMENT IS NOT AN INVITATION TO SUBSCRIBE FOR DEBENTURE STOCK BUT IS ISSUED FOR THE PURPOSE OF GIVING INFORMATION CONCERNING THE COMPANY. A FORMAL PROSPECTUS, DATED 20TH NOVEMBER, 1959, HAS BEEN DELIVERED TO THE REGISTRAR OF COMPANIES, WEST BENGAL, FOR REGISTRATION AND COPIES THEREOF, ALONG WITH APPLICATION FORMS, ARE OBTAINABLE FROM THE BANKS AND BROKERS NAMED BELOW.

INDIAN ALUMINIUM COMPANY, LTD.

(Incorporated under the Indian Companies Act, 1913)

SHARE CAPITAL

Authorised		Issued, Subscribed and Paid Up
Rs. 5,60,00,000	Ordinary Shares of Rs. 10 each	Rs. 3,97,57,540
Rs. 40,00,000	5% Cumulative Redeemable Preference Shares of Rs. 100 each ...	Rs. 40,00,000
Rs. 6,00,00,000		Rs. 4,37,57,540

LOAN CAPITAL

Authorised		Issued, Subscribed and Paid Up
Rs. 2,68,13,200	5% Convertible Loan Stock (unsecured)	Rs. 2,68,13,200 of which Rs. 4,92,800 is outstanding, the rest having been converted into Ordinary Shares.
Rs. 3,00,00,000	6¼% Debenture Stock 1970-75 at Rs. 102 per cent being the Stock now to be issued.	

In addition to the Rs. 4,92,800, 5% Convertible Loan Stock above mentioned, the Company has bank loans with Lloyds Bank Limited, Calcutta, and The First National City Bank of New York, Calcutta (secured by an hypothecation of raw materials and finished goods in the nature of stock-in-trade and book debts), the aggregate debit balance of which bank loans amounted as at 7th November, 1959, to Rs. 2,62,00,000.

The total of the unsecured loans is stated in the Auditors' Report included in the Prospectus. Apart from the foregoing, the Company has no other loan capital outstanding.

ISSUE OF

Rs. 3,00,00,000 6¼% Debenture Stock 1970-75 at Rs. 102 per cent payable in full on application, at the rate of Rs. 510 for each unit of stock of Rs. 500 (nominal or par value).

DIRECTORS

KAILASH CHANDRA MAHINDRA,
Malabar Court, Ridge Road, Bombay.
Industrialist and Chairman of the Company.

HENRY VANCE ECHOLS,
7, Mayfair Road, Calcutta-19.
Managing Director of the Company.

MUTHIAH ANNAMALAI CHIDAMBARAM,
Adayar House, Madras-25.
Industrialist.

JAMES ATWOOD DULLEA,
Westport, Connecticut, U.S.A.
Senior Vice-President, Aluminium Limited, Canada.

JAKOB BOETSCHI, alternate for MR. DULLEA,
41, Chowringhee Road, Calcutta-16.
Merchant.

DAVID PLATT DUNDERDALE,
6, Merlin Park, Ballygunge, Calcutta-19.
Solicitor & Notary Public.

JAMES LESLIE ESPLEN,
6, Lyons Range, Calcutta-1.
Stockbroker.

CHUNI LAL KATIAL,
5, Ratendon Road, New Delhi.
Physician.

SIR UDAY CHAND MAHTAB, K.C.I.E.,
Maharajadhiraja Bahadur of Burdwan,
"Aftab Ville", 14/1, Burdwan Road, Calcutta-27.
Landlord.

DR. PARAMESWAR VELAYUDHAN NAIR,
"Saraswathi Sadan" Cotton Hill Road,
Trivandrum.
Director of Industries & Commerce, Kerala State.

MANU SUBEDAR,
Lotus House Marine Lines, Bombay.
Businessman.

SOLICITORS

SANDERSONS & MORGANS,
5 & 7, Netaji Subhas Road,
Calcutta-1.

AUDITORS

PRICE WATERHOUSE, PEAT & CO.,
B-4, Gillander House, Calcutta-1.

GENERAL INFORMATION

The entire issue has been underwritten and the Directors of the Company have been informed by the Underwriters and their friends of their intention to apply for Rs. 1,50,00,000 of the Stock. The balance of Rs. 1,50,00,000 is available for public subscription.

The Debenture Stock was created by a Resolution of the Board of Directors of the Company passed on 28th September, 1959 and will be constituted by a Trust Deed whereby payment of principal and interest will be secured by a first fixed and specific charge on the Company's immovable properties and fixed plant and machinery and a floating charge on the whole of the undertaking and assets of the Company.

OBJECT OF ISSUE

The purpose of the issue is to provide a substantial part of the finance required for the fulfilment of the Company's plans for an integrated expansion of its facilities.

DEVELOPMENT PLANS

It is proposed to expand the annual capacity of the Company's smelter at Hirakud from 10,000 tons to 20,000 tons, thus giving the Company an ingot capacity of 25,600 tons per year. Simultaneously, the Company plans to triple the capacity of its alumina plant at Muri (and related bauxite facilities at Lohardaga) to enable the Company to produce 54,000 tons of alumina per year. In carrying out this expansion, process improvements requiring considerable modification of the existing plant will be made. This, in conjunction with the elimination of imports of alumina, should result in substantial operating economies.

In addition, the Company's rolling mill at Belur, West Bengal, will be expanded from a capacity of 9,000 tons of rolled products per year to 16,500 tons per year. The expansion of the Belur Works will enable the Company to produce foil stock, container stock, strong alloy sheet (including sheet for aircraft production) and a wider range of rolled products for construction, architectural and other industrial uses.

The Company also proposes to instal a new extrusion press at Alupuram, Kerala, which will be capable of producing heavy and large extruded sections and powerful enough to handle an extensive range of medium and strong aluminium alloys. The Company believes that the new press, in conjunction with the present one, will give much greater flexibility to extrusion operations and will enable the Company to meet the demands for a wide variety of aluminium extrusions. The rated capacity of the press will be approximately 2,500 tons of extruded sections per year.

FINANCING AND FINANCIAL INFORMATION

The amount required for the expansion programme, including additional working capital, is estimated to be Rs. 9.1 crores, part of which will be financed by the issue of Rs. 3,00,00,000 6¼% Debenture Stock. In addition, the Company has made arrangements for a dollar loan from Aluminium Limited, Canada. The balance will be financed by depreciation reserves, development rebate reserves, undistributed earnings and bank loans.

It is estimated that, at the end of December 1959, the written down value of the Fixed Assets will exceed Rs. 6.5 crores.

The following is an extract from the accounts of the Company as reported on by its Auditors:

Year ended	Sales Rs.	Net Profits before Depreciation & Taxation Rs.	Net Profits after Depreciation & Taxation Rs.
31st December 1954	2,37,62,809	*14,94,492	*2,74,716
31st December 1955	3,65,66,903	48,39,370	20,44,011
31st December 1956	4,24,96,849	66,75,321	24,08,344
31st December 1957	5,44,39,477	92,03,928	35,63,604
31st December 1958	7,42,97,113	1,37,52,940	57,71,738
8 months ended 31st August 1959	6,02,95,303	1,54,96,229	66,80,661

Figures marked with * have been adjusted in view of information subsequently received from the figures shown in the Report dated 12th December, 1956, incorporated in the Prospectus issued by the Company on 20th December, 1956.

ASSETS AND LIABILITIES

as at 31st August, 1959.

	Rs.
Fixed Assets—At Original Cost less depreciation	6,54,29,521
Investments—At Cost	12,519
Current Assets	5,44,68,802
Total Assets ...	11,99,10,842
Less Liabilities and other Provisions	5,20,96,929
Net Assets as at 31st August 1959 ...	6,78,13,913

DIVIDENDS ON PAID UP CAPITAL

Dividends paid on Ordinary Shares were 9% for the year ended 31st December 1955, 10% for the year ended 31st December 1956 6% for the year ended 31st December 1957, and 7% for the year ended 31st December 1958.

PROSPECTUS AND APPLICATION FORMS

Copies of the Prospectus, on the terms of which alone applications will be considered, and Application Forms may be obtained from the following:

(a) any branch of Lloyds Bank Limited in India,
(b) any branch of The First National City Bank of New York in India,
(c) any branch of The Bank of India Limited situated at Calcutta, Bombay, Madras, Delhi, New Delhi, Cochin, Kanpur, Ahmedabad and Hyderabad (Deccan),
(d) Place, Siddons & Gough (Private) Limited, 6, Lyons Range, Calcutta-1,
(e) Messrs. Batlivala & Karani, Union Bank Building, Dalal Street, Fort, Bombay-1,
(f) Messrs. Lewis & Jones, Bank of Baroda Building, Apollo Street, Fort, Bombay-1,
(g) Messrs. Paterson & Co., Badsha Building, 22, Errabalu Chetty Street, P.O. Box 48, Madras-1,
(h) Messrs. Harbans Singh Mehta & Co., 33, Regal Buildings, Parliament Street, P.O. Box 300, New Delhi-1.

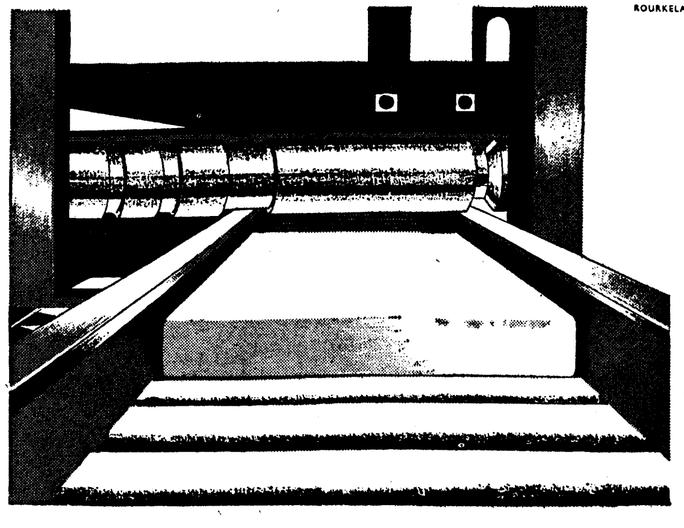
SUBSCRIPTION LIST

The subscription list will open at the commencement of banking hours on the 1st December, 1959 and will remain open until the close of banking hours on the 3rd December, 1959, or later at the discretion of the Directors.

INDIAN ALUMINIUM COMPANY, LTD.—*Cont'd*

BHILAI *takes a stride*

blooming mill commissioned november 12



As the first red-hot steel ingot passed back and forth between the heavy rolls of the blooming mill on November 12, Bhilai steel plant took a big stride towards the production of finished steel. Bhilai is one of the three steel plants in the public sector, under the management of Hindustan Steel.

Blooms and slabs of steel produced in the blooming mill at Bhilai will later be re-rolled into structurals, rails, rounds and squares in the other rolling mills under construction. A rail and structural mill, a continuous billet mill and a merchant mill are being built at Bhilai.

On completion, they will produce 110,000 tons of rails, 90,000 tons of railway sleeper bars, 284,000 tons of heavy structurals, 136,000 tons of rounds and flats and 150,000 tons of billets.

HINDUSTAN STEEL LIMITED

ROURKELA • BHILAI • DURGAPUR

★

WHAT IS A BLOOMING MILL?

A Blooming Mill is a unit of a steel plant where steel ingots made from the steel coming out of the Open-hearth or L.D. Furnaces are pressed between heavy rolls to reduce them to appropriate sizes and make them compact. Other important units of the steel plant are Coke Oven Batteries, Blast Furnaces, Open-hearth and L.D. Furnaces and Rolling Mills. Blast Furnace using coke as fuel produces pig iron which in its turn is converted into steel in the Open-hearth or L.D. Furnaces. The blooms are then rolled in various Rolling Mills to produce saleable steel.

PSHS 2

THE INDIAN IRON AND STEEL COMPANY LIMITED

CHAIRMAN, SIR BIREN MOOKERJEE'S REVIEW

The Annual General Meeting of the Indian Iron and Steel Company Limited will be held at 12, Mission Row, Calcutta, at 3 p.m. on Monday, the 21st December, 1959. The following statement by the Chairman, Sir Biren Mookerjee, has been issued to the shareholders along with the Directors' Report and audited accounts for the year ended 31st March, 1959.

At the Annual General Meeting held last year, members indicated their desire that the procedure of issuing a Statement by the Chairman along with the Annual Accounts should be continued. This procedure is accordingly now adopted as standard.

Production

Production of ingot steel at 608,205 tons showed a welcome improvement of 100,625 tons over the previous year, but the factors to which I drew attention last year continued to keep output well below plant capacity. There were no fewer than nine sporadic strikes in different Departments during the year and the discipline of the workers leaves much to be desired. Disorganisation of operations by reason of the extensions works continued and it will be some little time before facilities are freely available to enable the expanded plant gradually to be worked up to its full output capability.

I commented last year as an exception on the good performance of the Sheet Mills in 1957-58, and I should again like to commend their very creditable performance in having established a yet higher production record for 1958-59.

Production of castings at the Kulti foundries improved owing primarily to the operation of the Second Spun Pipe Plant, total output of castings being 147,325 tons against 115,969 tons in the previous year.

Accounts

I must apologise for the delay that has again occurred this year in presentation of the Accounts. This however arises through no fault on the part of the Company but is due to the fact that closure of the Accounts has had to await notification by Government of the revised sales retention prices of steel and pig iron. Inclusion of the amounts involved is necessary to avoid complete unbalance of the Accounts from year to year, and with the very large amounts involved your Directors do not consider it desirable to work on unconfirmed figures. It had been hoped that the machinery of Government could have been induced to turn somewhat more quickly in regard to the examination and settlement of the Company's annual claims in this connection; unfortunately however, it would seem that the relative Governmental procedure becomes more and more cumbersome as one fresh authority after another is drawn into the sphere of reference of this comparatively simple matter.

I commented last year on the taxation provisions relating to the allowance of development rebate and expressed my inability to understand why against a tax saving of 51½% a Company should be required by Government as a pre-requisite to the grant of such allowance to set aside to reserve 75% of the amount of the rebate, the difference of 23½% being thereby thrown as a dead charge against available profits. It is right and fair that the tax saving by reason of the development rebate should be carried to reserve, and we ourselves have always in the past voluntarily acted in accordance with this principle. But it is difficult to appreciate the reason for the statutory requirement as to the additional amount to be set aside, the inequity of this being highlighted when figures of the magnitude applicable in our case are involved where the compulsory reserve for the year of Rs. 3,14,67,099 amounts to no less than Rs. 98,59,691 more than the saving in tax. We may count ourselves fortunate in the strength of our reserves which makes it possible for us to compensate this position by writing back to profits the sum of Rs. 98,59,691 from the General Development Reserve so that the ultimate effect is a net charge against the profits of the year of the actual saving in tax. In the case of a Company with small reserves, the position in regard to any major development of its undertaking would indeed be serious as the incidence of the compulsory allocation to reserve might preclude the payment of a dividend. The grant of development rebate was intended to constitute an inducement for the expansion of industry; it will be appreciated however that in certain cases the conditions now imposed on the allowance of the rebate can in fact constitute an actual deterrent. It is greatly to be hoped that Government will see fit to modify these conditions which will become still more onerous following upon the change in the basis of corporate taxation introduced by the Finance Act 1959 since at the indicated revised taxation rate of 45% the compulsory reserve at its present level of 75% would throw a charge against available profits of no less than 30% of the amount of the development rebate.

Future Retention Prices

The Government of India took an admirable step in 1956 when it made the following declaration "that with effect from the 1st day of April 1955 the retention prices for all categories of steel by the Company (The Indian Iron & Steel Company) and any other main producer of iron and steel, either in the public or private sector, shall be the same and in respect of such categories solely manufactured by the Company the retention prices shall be fixed on a comparable basis."

This principle was applied to the two major producers after the enquiry of 1955 by the Tariff Commission into their retention prices. I hope that in the determination of the revised retention prices to apply from the 1st April 1960 there will be no departure, except where it is obviously needed by change of circumstances, in the application of this principle to all the five major units, including the three owned by the Hindu Tata Steel Company Ltd., in the public sector. In order to help the Tariff Commission to obtain all the relevant information for the purpose of determining the uniform retention prices, the Hindusthan Steel Company Ltd. no doubt will put forward its case and give evidence in the same way as the two major units in the private sector. Both the sectors should most definitely have as nearly as possible the same rights and liabilities.

Domestic Market

When all the plants in both the sectors get into production more or less according to schedule, my fear is that there will be so much iron and steel produced that it will be difficult for the producers to be able to dispose of their output. This fear has also been expressed to me by certain responsible shareholders coupled with expression of their hope that if, as I trust it may not, this position does in fact materialise, the requirements of Government, which constitute such a large proportion of offtake, would be spread equitably over all the producers.

As producers we are interested not only in producing more and more, but in selling what we produce at economic prices. The manufacturers in both the sectors are likewise interested in selling all that they produce in whatever form not only to the intermediate but to the ultimate consumers. Without an extensive domestic market not only for this, but for all other manufacturing industries, the persistence in calling for more and more production by new or the existing plants may, instead of promoting, actually retard the industrial development of the country by making the manufacture of goods unprofitable or the products unsaleable. The too rapid expansion of the cement industry provides a case in point in this connection.

By and large and in the final analysis the consumer of all goods and services is the common man. Under this description comes practically 99% of the total population including the clerks, the small traders, the agriculturists, the lower and middle class people, the railway passengers and the lower grades of administrative, domestic and other services, etc. It is, therefore, essential that the Government should ask not for more production and less consumption but for more production and more consumption to absorb what is produced. For this purpose several changes in the policy of the Government are necessary, the two most important of which are, first, the lowering of the selling prices by avoiding the setting up of Government Trading organisations and the mischievous idea of obtaining revenue by monopolistic high prices which is no more than indirect taxation without parliamentary control; and secondly, the increasing of the purchasing power of these consumers by reducing taxation, both direct and indirect. The whole burden of the taxation is practically carried by these people. Until it is considerably lightened, they will have no resources from which they can buy the goods produced.

An example of this indirect taxation is the excise duty that is levied on steel ingots. A duty of Rs. 4 per ton of ingot was imposed owing to the financial stringency of the Government in the dark days of the early thirties. This was raised in 1957 to Rs. 40 per ton. This means an increase of about Rs. 50 per ton on an average on finished steel. The incidence per ton of final product is further increased when the steel is fabricated or used for the production of capital or consumer goods by 20 or 25 per cent. This will throw a burden of many crores of rupees on the consumer. It will increase the cost of many projects depending on iron and steel which have been or are likely to be undertaken by both the public and the private sectors. In addition to this heavy excise duty there are several surcharges which make the price of manufactured goods of all kinds much higher than the common man can afford. Iron and steel play an important part at some stage or other in the manufacture of almost all producer or consumer goods and therefore, their prices can not be artificially raised without injury to the entire economy of the country.

But alleviation of taxation is not all. Cost of production must also be reduced and here, so far as the labour cost per ton of saleable product is concerned, industry finds itself faced with a further difficulty for so long as Government regards the establishment or expansion of industries primarily as a source of providing employment this cannot be done for two important reasons. First, of course, is that inflation has been constantly increasing the cost of living of all the consumers including the workmen. The latter therefore ask for increase in their wages from time to time. The industries on the other hand, are handicapped for reasons which I shall presently explain, by the compulsion to employ more men than are required. Whilst the problem of employment is an acute one, it cannot be solved merely by creating unnecessary jobs and increasing the cost of production and the burden on the consumer. The solution is to be found, if at all, in more production at lower costs and more consumption at lower selling prices as has been the case in other developed countries and not by adopting the reverse process.

As I have said, I am not at all sure that the 4½ million tons of steel scheduled under the Second Five Year Plan can be taken up by the country due to high cost and penal direct and indirect taxation measures. It is only the public sector and the larger private corporations that have accumulated reserves from their past profits or that are in a position either to raise further capital or to furnish adequate security against borrowings from Banks or other financial institutions who are in a position to expand and increase their consumption. This under present circumstances is impossible for the many hundreds of thousands of smaller concerns and the private individuals in the country who have little or no money left after meeting their expenses and their taxation liabilities. Even the black marketeer and tax dodger for whom I have no sympathy, dare not convert what is known as "black" money into "white" by either building a house to live in or starting a factory, as the taxation authorities would come down on him firstly to know from where the money came and secondly to subject him to wealth tax.

I am therefore doubtful whether a domestic market will be found for the extra steel production under the Second Five Year Plan and my doubts become positive forebodings as regards the further expansion of steel output at present under contemplation for the Third Five Year Plan unless immediate steps are taken to increase the purchasing power of the consumers and to reduce the present inflated prices they are required to pay.

Export Market

It is commonly assumed that if the production of steel is beyond the demand of the domestic market, then the surplus can be exported, but on the existing selling price structure, loaded as it is with heavy excise duty, freight equalisation and various surcharges in total amounting in the case of Structurals to Rs. 236 per ton and in the case of Plates to no less than Rs. 274 per ton or 56.37% and 59.7% of the respective retention prices, I do not see where we can find foreign markets. In the Far East we are likely to be faced with severe competition from Japan and now probably China, and also from Australia, whose cost of production is such that I see exports have recently been made even to Russia. The Middle East and Eastern Europe will be more successfully covered by the U.S.S.R. and her satellites, and the whole of Western and Northern Europe by Western Germany, France and the U.K. whose existing and potential capacity is in excess of the demand and who depend largely for their food and many essential raw materials on imports and must therefore export to pay for these imports. All these countries may become more formidable competitors than our planners seem to realise, and it is possible we may be entirely priced out of every foreign market worth capture.

It must be remembered in this connection that any encouragement of exports as has sometimes been suggested by means of Government subsidies direct or indirect or keeping in other ways our export prices substantially below the domestic selling prices, may bring us within the mischief of anti-dumping legislation. It is therefore essential that the most serious thought be given to the gradual removal of the burden now loaded by Government on the selling prices. This however of itself is not enough, but must be accompanied by a careful consideration of the cost structure of the industry, for in considering the export market it must also be remembered that if the country has to rely on the export of iron and steel to assist in the repayment of its foreign loans, it is necessary to pause and think where to export in order to earn the necessary foreign exchange to cover the repayable currencies. It would be of little or no use if we were to export to countries whose currencies we have not borrowed unless these currencies are freely convertible or unless by means of barter deals it would be possible to reduce imports that would otherwise have to be financed in such repayable currencies. If then we have to repay loans in dollars, sterling, marks, francs and roubles on the western side and yen and Australian pounds on the eastern side, the iron and steel industry of India must be able to compete in cost of production with the steel producing countries I have mentioned above who will themselves be seeking an export outlet.

Gone are the days when labour and raw material costs in India were cheap. Inflation has taken its full toll helped and abetted by paucity of food production, our planners having concentrated their main energies on creation of heavy industry to the neglect of the vital problem of growing more food. As an indication of what inflation coupled with the loading of selling prices has led to, I would mention that I am connected with one or two large steel fabricating concerns in India and can therefore tell you that they find difficulty in competing in fabricated structural steelwork with offers from the Continent whose costs a short while ago were below ours in some cases as much as 18% to 22% excluding import duties. On analysis it has been found that the price of steel to fabricators on the Continent is anything between Rs. 175 and Rs. 220 a ton cheaper, depending on the categories than the price our fabricators in India have to pay at the controlled rates fixed by Government. This constitutes far more than a theoretical illustration since there have been recent indications that in the placing of orders for certain large public constructional works price is to be the determining factor ignoring the artificial loading of the cost of steel to indigenous fabricators and that there is accordingly very definite danger of these orders being placed abroad despite the deprivation of wages to local labour and loss of benefit of further experience to Indian constructional engineering concerns that would result from such action. The seriousness of the position caused by the great disparity between Indian and foreign prices of steel will accordingly be realised not only as it affects the direct export of steel, but also in its effect upon the internal economy of the country and yet if we go back to 1950 the Indian prices of steel were the cheapest in the world. It is true that at the moment the sales retention prices to the Indian producers, that is to say, the prices which the producers are allowed to retain as distinct from the inflated prices which the consumer has to pay, are less than the Continental prices. For the following reasons however this position must cease to apply from the 1st April 1960 from which date new retention prices fall due to be determined. Firstly, the effect of averaging over the five year period of the current price fixation the incidence of those few cost increases for which the producers are allowed to claim adjustment is that the present retention prices do not reflect the full incidence of such cost increases. And secondly, cost of production for reasons beyond the control of the producers has increased of recent years under the hundred and one heads for which according to the terms of the present price fixation no claim for adjustment of current retention prices is permitted, but for which allowance must be made in the determination of the new prices. It would furthermore perhaps not be practicable for Government to relinquish the whole of the surcharges at present imposed and therefore the domestic selling prices must continue to be above those on the Continent unless steps are taken to reduce the cost of production to the producers. It is accordingly essential that Government should set into motion machinery to reduce the inflation that has to such a large extent been responsible for the increase in production costs. Otherwise as opposed to any export of steel the country may find itself

instead with the problem of protecting its en- steel industry either by direct means or by a iation into the far future of the existing rigid of imports.

urther consideration in regard to cost of pro- to which I have not referred above but to I feel I would be failing in my duty if I did w attention is that cost and in fact production s also threatened by the alarming position that en allowed to develop in the country in regard supply of suitable coking coal. Consequent he delay in the establishment of the Govern- Coal Washeries in the coalfield area serving el plants, the commissioning of the coke ovens steel plants in the public sector has increased mand for coking coal to a point beyond the ility of supply of coal without excessive ash . On the principle of share and share alike, tput of our established supplying collieries is ngly being in part compulsorily diverted from we are being forced by Government to accept nd more of our total requirements in coal that itably high in ash with the result that the ash of the coke produced is gradually rising. increase in the ash content of the coke means ction of Blast Furance output, an increase in ion cost and increased operational difficulties, ifficulties becoming more and more pronounced ash content of the coke rises until a point is where for technical reasons operation of the urnaces becomes impossible. The gravity of uation will be realised when I state that we approaching this critical point and yet, though ition is appreciated by the Coal Controller, we ble to bring Government to a realisation of the ing crisis. It would appear fantastic that in rcumstances exports should be permitted of ade metallurgical coal and yet such, I regret is in fact the state of affairs.

Cost of Production

ie iron and steel industry has to compete with on and steel making countries then we must their ways and means of production and What would this mean? We have firstly that the manning of our plants is if possible ar with theirs or in any event is not allowed ed the level at which our labour cost per ton competitive with theirs; then that the wage e is brought into line with their practice, that every job has its assigned wage unlike a where wages are increased yearly by ic grade increments with corresponding of the cost of production from year to year. tirements are few and far between, the time ne when practically every man will be at the his grade, resulting in costs of manufacture eyond control and exceeding those of other g countries. I am all for giving a man a fair the work he puts in, but until he rises to a graded post his pay will have to remain at igned to the work he does as is the practice her countries.

ly appreciate that the wage earner when he nust have something to fall back upon, but I much rather that this was secured by an of the Provident Fund Account even to a 12½% contribution on either side if necessary at we should be involved year after year in battles between the labour unions and the rs over the quantum of annual bonus, result- nany cases in go-slow movements and strikes production, most of which are engineered ble makers purely on political and/or per- ounds and result only in a loss for both the and the wage earner.

ur own case, if the workers have produced ey automatically get a generous production ntive bonus. This should cover, like other s, extra emoluments for extra work done. It rthy of the dignity of labour of which we much that the workers should each year come and, or as is unfortunately so often nowadays , stick in hand, on the question of bonus. ect should I maintain be to get away from is payments and instead to place each worker sition where by his own effort he may earn the amount necessary to maintain himself family in adequate comfort and dignity with for supplement of his retirement benefits so may look forward to security and peace of en his working days are over.

wever Government has decided as a matter listic ideology on the principle that every shall share in the prosperity of the factory, contention is that he can only share in the vith the owners of the factory, namely the ders. Therefore, any profit sharing that there should automatically be linked to the per- or amount of dividend whatever basis of is worked out, and not to the total earnings factory from which so many extraneous have to be deducted or kept apart in the forms of taxation and reserves compulsory wise required for further expansion, rehabili- d amenities for labour.

that very shortly five large units and one it will be functioning, it is in my opinion ve that Government by an Act of Parliament onstitute a Wage Board for the steel industry ould fix the basic wages of every type of worker does as well as the rate of incentive uction bonus and the extra cost of living e. I feel certain if the Wage Board authori- k on these lines, which are similar to other , there will be less anomalies in the wage as it would have more constants than and the relations between labour and would be very much better. At present us allowances that have crept in either under or by tribunal adjudication make the nt's life miserable and an army of clerks has nployed to check each other's calculations by the suggested methods the accounting ould be mechanised and errors eliminated. suggesting that we take anything from the oluments which the labour are now receiving; rely suggesting that the variables should be ted into one or two constants. Full use of aving devices that are incorporated in these ust of course be taken advantage of so that ctors may go to reducing the cost of ture.

Labour

is one point in connection with Government's olicy to which I feel I must draw attention because it directly affects particularly the iron and steel industry in the private sector. There is a provision in the Constitution that except as regards the Union employees, the Union Government and the State Governments have concurrent legislative powers in labour matters. Whenever there is labour trouble in the steel industry we have, therefore, first to approach the State Governments. Though we have found them on the whole helpful, they have naturally a parochial bias, particularly towards the exclusive employment of labour from their own states which often leads to avoidable delay in the solution of the difficulties created by a strike covering the entire works or any one particular unit of it. Also, though each one of the two major plants is situated in a single state, the supply of the principal raw materials, such as iron ore, coal, refractories, etc. and even labour have to be obtained from several states. Strikes at the sources of various essential raw materials and products are by no means unusual, and we have to approach the different states in which they may be situated. Concurrent legislation by the Centre and the States is, therefore, a great disadvantage from the point of view of the industry. The decisions of the Labour Tribunals which are appointed by the States also lack in uniformity. It is, therefore, very necessary that the Union Government in the exercise of the powers it possesses should solely deal with all labour matters and when necessary appoint National Tribunals in connection with this industry, especially as its production, prices and distribution are controlled by that Government. Indeed, it is highly desirable that all major industries which are controlled in a similar way should be subject only to the jurisdiction of the Union Government in all labour matters.

I adhere to the proposals which I have made in my previous speeches that there should be a single Union industrywise which should have the support of the employers as well as of the employees and be guided by non-careerist leaders who have no political affiliations. I cannot, without prejudice to those proposals, help feeling that the Indian National Trade Union Congress, whatever ideological, sentimental or political justification it may have had for its creation after the Congress came into power, has come to be regarded as an institution sponsored by the Government on political grounds. The impression, therefore, has been created on large sections of industrial and other labour that there is much favouritism shown to this body and rival unions are creating trouble in an endeavour to supersede it. The most impressive evidence of this conflict was provided by the strikes at Jamshedpur and at our Ore mines some time ago. Time, tradition and sentiment have made the constitution of the Indian National Trade Union Congress irrevocable and its existence must be accepted with good grace by all those whose interest it is to keep the Congress in power. But this position obviously calls for the utmost responsibility of leadership, which I am afraid is sometimes lacking, and it is therefore essential that Government should make it its duty to instil this sense of responsibility and to curb the ambition of some of the I.N.T.U.C. leaders to aggrandize themselves on political grounds as leaders of the Supreme Union.

I cannot quit this part of my statement without expressing my concern over the creation of grave difficulties in the future in labour matters. The private sector has by making heavy sacrifices, both of monetary resources and of production extending over many years, been able to train with a relatively small number of foreign technicians a large number of higher Indian technical personnel and skilled labour in all its productive and non-productive departments. I am afraid that in order to meet their requirements attempts have been made by the public sector and may continue to be made to take away some of the men indispensable to the private sector to their own works. Even if the attempts do not always succeed, the danger is that they may create a great deal of discontent and indiscipline among the employees of the private sector who may ask for increase in their wages or better terms otherwise and practically blackmail the management. This, it will be recognised, would be a sad state of affairs.

Productivity

An important step was taken by the Government of India in February 1958 when the National Productivity Council was established and a fund of three million dollars was provided by the U.S.A. for organisational purposes. Five local centres, including Calcutta which I inaugurated earlier in the year, were also set up to promote the productivity of labour.

Though it has become a habit of Government to blame the employers for the low productivity in all industries per man year, we can reasonably claim that it is not due in our case either to the wages and other cash and indirect benefits or inadequacies of the Production Incentive Bonus since for the year under review the production bonus earned by the entire labour force was 70 per cent of its monthly wages and in the main productive departments was between 90 and 140 per cent of the monthly wages, while in addition to basic wages we gave the benefits in cash or in kind of profit sharing bonus, provident fund, dearne allowance, free housing or rent allowance in lieu, lea allowance, amenities and social services, and fr hospital and medical facilities not only for the worke themselves but also for their families and relative

The reasons for the obviously low productivity at therefore to be sought elsewhere and may be brief summarised as follows :—

1. The compulsory retention in employment superfluous labour under the labour laws and decisio of Labour Tribunals. Overmanning breeds inefficien and the magnitude of the problem in our own ca will be appreciated when I state that in comparis with Western European or Japanese standards o manning is approximately double the normal.

2. The certainty of remaining in employment owir to the restriction on retrenchment, or alternatively obtaining compensation in the few cases where r trenchment is permissible. A High Court has recent ruled that this compensation is to continue indefinitel and that renovation, rationalization or mechanizatio cannot be allowed at the expense of labour.

3. Frequent resort to go-slow and other strike inspired on political grounds by rival Trade Union

4. Some Labour Ministers' encouragement to labou to demand an increase in cash wages irrespective o any consequential increase in production.

5. Pressure on industries on provincial grounds b some States to employ local labour only irrespective o its aptitude, training or other necessary qualification.

It would be entirely wrong if from anything have said the impression should be gained that India labour is inefficient or unwilling or unable to wor just as hard as the men in any other country. Ther is perhaps no clearer demonstration that such is no the case than is afforded by the example of our arme forces of whom many a foreign expert who has see these men at work has remarked that they are in n way inferior to any of the best armed forces in th world. And yet do we find two men in a fighter 'plan where one man is needed, or require double the man ning in a bomber? The naval complement in any o our fighting ships is on a par with that of a simila ship belonging to any other efficient Navy and ou guns and torpedo tubes are manned by no more me than in other Navies. Nor does our Army conside manning in excess of world standards is required i the operation of its artillery, tanks and mechanise equipment. Why then are we forced to employ mor men than are necessary in industry in general and i the iron and steel industry in particular?

The main reason is that when these industrie were started, labour was cheap and many of the labou saving devices were not then considered to be war ranted. During the last 15 to 20 years however, such devices have with the march of progress been incor porated in the design of every modern item of plan and yet for reasons best known to Government th question of maximum employment has been allowe to outweigh all consideration of the economy in manu facturing cost that should, if the country is to develop result from the vast sums of money that are being spent on the modernisation and expansion of industry The ground has thereby been well-prepared for th labour unions to swell their ranks by forcing over manning on the employers and in this they have beer ably supported by the industrial tribunals who have made it abundantly clear that the question of employ ment must enjoy priority and can yield to no such mundane considerations as economy in cost. Apar from the cost of manufacture being directly increase on this account, the luxury of overmanning a plan leads definitely to gross inefficiency and consequently to a still further indirect increase in cost. In the furtherance of its development plans the country can ill afford this artificial inflation in the cost of manufactured goods which threatens to price beyond the means of the consumer the goods produced and to endanger the building up of the export market that is vital to our progress.

Capital Structure

In February 1959 a bonus share issue of Ordinary shares was made in the proportion of one bonus share for every five Ordinary shares held by capitalisation o a sum of Rs. 2,07,34,830 out of the amount standing to the credit of the Share Premium Account, the total issued Ordinary share capital of the Company being thereby increased to Rs. 12,44,08,990.

In my statement last year I dealt with the problem of the Company's capital structure and explained that it would normally be the policy of your Directors that a part of the increasing reserves should be capitalised from time to time by means of issues of bonus shares, but that while the penal rate of tax on bonus shares remained such a course was precluded. It is disappointing that as opposed to any lightening of this taxation the scope of the tax has in fact since been extended to cover even the issue of bonus shares by capitalisation of share premium accounts, and for the present we must therefore console ourselves with the thought that the capitalisation of the Share Premium

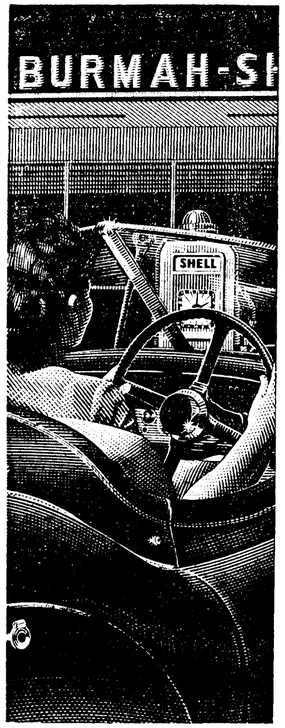
Account was effected just in time to avoid this transaction coming within the enlarged sphere of the tax.

As you will see from Schedule C to the Balance Sheet, drawings on Loan Account from the World Bank amounted at the 31st March 1959 to the equivalent of Rs. 18,22,91,822 against Rs. 13,61,50,557 at the end of the previous year. Repayment of the first World Bank Loan commenced on the 15th April 1959 with the payment of the first half-yearly instalment of Rs. 59,54,258 due in accordance with the Loan Repayment Schedule and repayment of the second loan will commence at the 15th April 1960, both loans being repayable in half-yearly instalments due in April and October each year until their final clearance at the 15th October 1967. Repayment of the loan from Government has also commenced with payment of the first instalment of Rs. 22,45,000 due on the 30th June 1959. This loan is repayable in half-yearly instalments due in June and December each year until its final clearance at the 31st December 1967.

The total of the loans for repayment will approximate some Rs. 29 crores with interest running on the outstanding balance and the necessity for conservation of the resources of the Company to meet these very heavy commitments over the period of the Repayment Schedules will accordingly be appreciated.

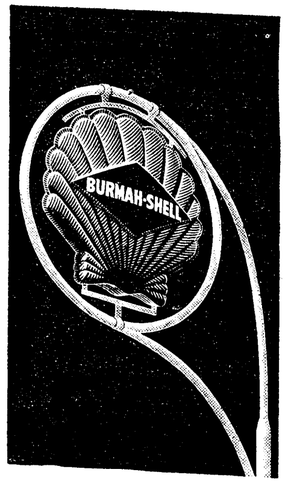
Future Dividends

The year under review is the last year for which shareholders will receive credit in respect of their dividends for income-tax paid by the Company. Under the provisions of the Finance Act 1959 future dividends will be declared gross and the only credit that shareholders will receive will be for the tax that must be deducted at the prescribed rates on payment of their individual dividends. Some indications of the Company's future dividend policy will therefore be expected of me.

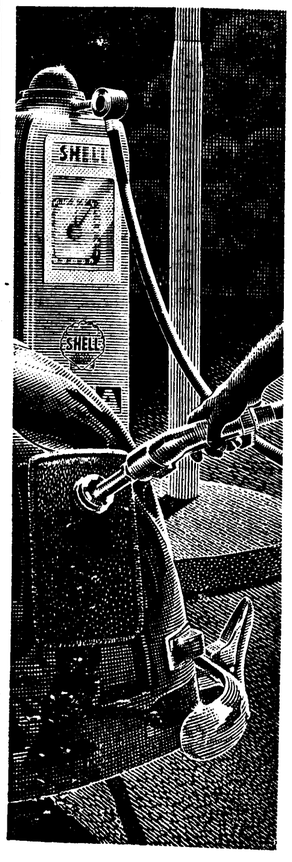


So far as the Preference shares are concerned, the dividend on these is expressed to be 5% free of tax and the dividend at this rate will in accordance with the provisions of the Finance Act 1959 be grossed up to such an amount as after deduction of 30% thereof would represent the previous amount payable free of tax and this gross dividend then paid to the individual shareholders under deduction of tax at the prescribed rates.

It will normally be the policy of your Directors, circumstances permitting, to apply so far as possible a similar principle in determining the future rate of gross dividend payable on the existing Ordinary share capital. It will be appreciated however that the ability of the Company to compensate its shareholders in this manner will to a large extent be dependent upon the saving under the new basis of corporate taxation and that for many years to come it will be necessary to make large reserve allocations out of profits in order to provide finance for the repayment of our very heavy loan liabilities. Finance will therefore be the determining factor, and I should perhaps point out in this connection that so far as tax saving under the new basis of corporate taxation is concerned there will be no cash saving arising from the difference in taxation rates in respect of such profits as are offset by the allowance of Development Rebate since if no tax is payable according either to the old or new rates, no question of a cash differential can of course arise.



Acknowledgments



In conclusion I would express on behalf of your Board our appreciation of the services rendered by the General Manager, Mr. J. McCracken, and his executive staff throughout another difficult year. An expansion on the scale undertaken by our Company throws a very great additional burden and responsibility on all staff which has been willingly and ably shouldered. It gives me pleasure to place on record this expression of our thanks.

The above statement is not a report of the proceedings of the Annual General Meeting.

MALAYALAM PLANTATIONS LIMITED

YEAR'S TEA CROP CONSTITUTES A RECORD

MR. H. W. HORNER'S ADDRESS

The Annual General Meeting of Malayalam Plantations Limited will be held on December 10 in London.

The following is the circulated address by Mr. H. W. Horner, the chairman :—

The annual meeting is later than usual this year. This is due to exceptional delay in the receipt from the East of the final accounts and other returns owing to interruption of work by strikes in India. The information available at this end enabled, the Board to decide, at their October meeting, that the total dividend for the year should be 20 per cent., the same as for the previous year. Accordingly, a second interim dividend was declared at 14 per cent. payable in November making, with the first interim dividend at 6 per cent. paid in June, 20 per cent. The intimation to members stated that no further dividend would be recommended in respect of 1958-59.

The tea crop for 1958-59, at just under 20 million pounds, constitutes a record for the company and the net average selling price realized is slightly higher than that for 1957-58. The rubber crop, though larger than that for the previous year, fell very little below the estimated 7 million pounds : the net average selling price, under Indian Government control, is virtually unchanged, but the profit per pound is lower owing to a higher average cost of production, largely on account of increased expenditure in respect of labour. The incidence of rising costs of production of tea has been mitigated by higher yields. The cost of production of rubber should benefit similarly in due course as the areas replanted in recent years with selected high yielding material come into full bearing.

For more than two and a half years, the State of Kerala (in which all except two of the company's estates lie), had a Government elected on the principle of Parliamentary democracy, whose policy was styled Communist, but which was not strong enough to pursue a consistent course. Weakness in enforcing law and order, coupled with differences and rivalry amongst the several trades unions, resulted in strikes in planting districts, some of which were prolonged and accompanied by violence and intimidation. In course of time, resentment by the general public resulted in outbreaks of violence, mainly in urban areas. In order to restore harmony, the President of India, in exercise of his emergency powers, superseded the State Government and established "Governor's rule" pending the holding of a general election, which is expected early next year.

At present, agitators are quiescent and there is evidence that the firm action of the Government of India has had a salutary effect and will rally to the support of orderly government significant numbers of the responsible members of the population.

India's Progress

India has made great progress in recent years in rural development and in rapid industrialization, but she is a poor country, with a vast population living for the most part on the margin of bare subsistence—far too many below that level. The efforts of those who dedicate themselves to planning amelioration are largely frustrated by the rapid increase in India's population.

The Reserve Bank of India, in its report for the year ended June 30, 1959, observes that the Indian economy is now heavily dependent on foreign support, which position is likely to continue for a number of years to come.

Very substantial increase in such foreign help is necessary to enable India to follow the course which the Government has set in successive five-year plans. These have been criticized as being too ambitious, but it is becoming obvious that they are too small to meet political requirements. Last year I mentioned that help had then recently been made available from Western sources under the aegis of the World Bank. Such help from the World Bank and from other foreign Government schemes of financial aid must continue as important sources of provision of capital. Increasing sums of private investment must also be encouraged by provision of a favourable climate for its growth as a further important means of enabling the free world to provide the necessary capital for India's development.

The profit for the year after taxation, at £336,597, is a little higher than that for 1957/58. The board consider it desirable that the policy of many years past, of maintaining the buildings, machinery, &c., in the books at no cost, should be continued. They have accordingly transferred £141,239 to buildings, machinery, &c. special reserve, and, to conform with the requirements of the Indian Finance Act, 1958, £11,850 to development rebate reserve. These two reserves taken together match the present book cost of buildings, machinery, &c. Taxation remains at a general level ; taxes on income of the year amount to about £555,000 and the levy of export and excise duties to approximately £460,000.

During the early months of the current financial year exceptionally unfavourable weather conditions adversely affected the intake of tea crops and, at the moment, there has been harvested considerably less than in the same period of 1958-59 although the rubber crop is slightly ahead. Given normal conditions for the remainder of the season, it is hoped to make up much of the tea so lost, but it is now doubtful if it will be possible to reach the figure originally estimated at 20¼ million pounds. Tea prices, which a few months ago were at a low level for the types of tea which this company produces, have recently shown a welcome upward trend and, if this continues, we may hope to achieve final results comparable with those of the two preceding years. Rubber prices remain controlled, and, on present indications, the estimated crop of about seven million pounds should be secured.

The directors and members of this company are indebted to the staff, visiting agents, and Eastern agents for the company's successful year and for its strong position. Thanks are especially due to them for their courage and steadfastness throughout the exceptionally difficult and disturbed period of 1958-59 to which I have already referred. In saying this the loyal and willing labour must not be forgotten. Individually, the vast majority of workers are happy to be allowed to carry on their work, without interference from outside and without involvement in political scheming. The labour strikers which I have mentioned resulted in some loss of crops and arrears of work on the estates but those arrears have been overtaken and we are advised that all properties are now in their usual first-class order. The company's senior visiting agent, Mr. T. W. U. Park, retired at the end of 1958—rather earlier than he had intended—owing to ill health. He gave the company 39 years of loyal and most efficient service and we offer him our best wishes for a long and happy retirement.

Sir Leonard Paton has recently dealt with the general position of the tea and rubber industries in his address to the members of Harrisons & Crosfield, Limited. Any member of this company who cares to apply for it will be sent a copy of that address.

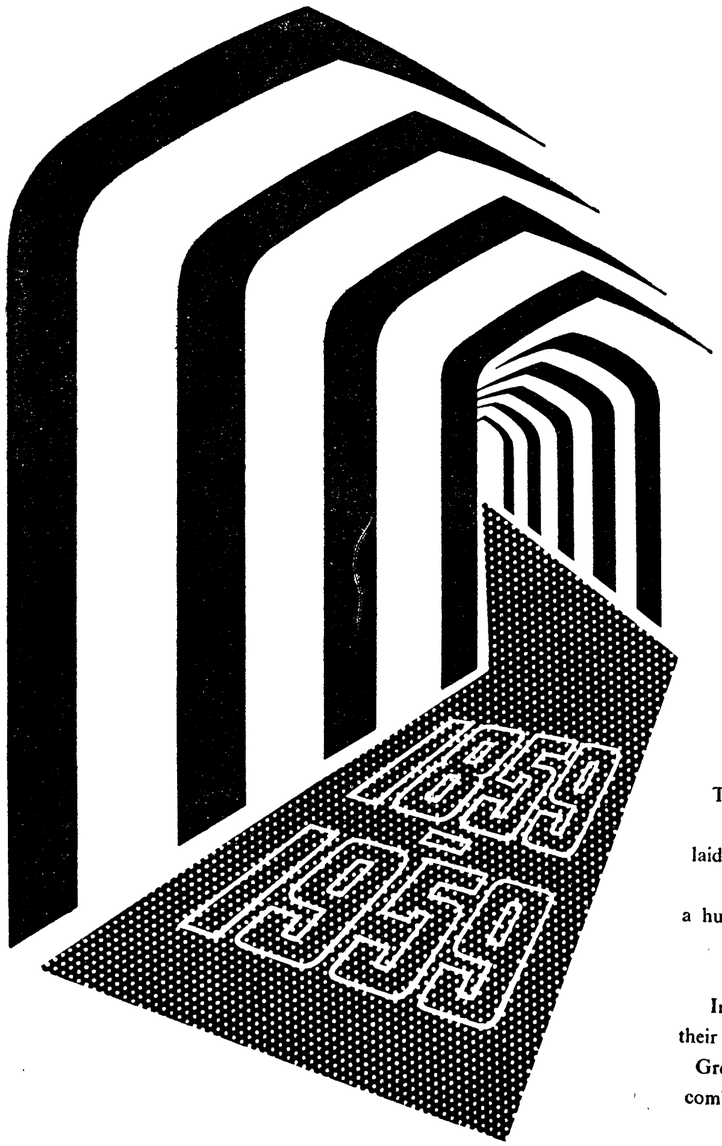
A PARTNERSHIP
helping to build Durgapur for India

The joint effort of thousands of hands is raising a tracery of steel against Durgapur's skyline. It is a joint Indian and British effort...the building of a great new steelworks that will make more than a million tons of steel every year for India.



CEMENTATION-PATEL—its 13,500 Indian and 75 British engineers, technicians and workers—are part of this effort. They have shared the task of turning sparse jungle into foundations of concrete for most of Durgapur's plant and buildings. Together, they are building 140 miles of railways, roads and pipelines.

CEMENTATION-PATEL, the project's civil engineers, were first to arrive at Durgapur three years ago. In this time, they have moved enough earth and used enough concrete to build a small city...an achievement that crowns THE CEMENTATION COMPANY'S 30 years of service in India.

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS UNLENDABLE

Wednesday, 25th November.

A SLIGHT fall has been recorded in the level of advances outstanding in the Calcutta money market during the past week. There is still no evidence whatever of the beginning of the busy season. The requirements of the jute industry have increased slightly, but demand from the cotton and woollen mills is down. The needs of the sugar industry and accommodation against grains and seeds storage remain round about the same. In the interbank market, funds are unlendable and the call rate is nominal at between ½ percent and ¾ percent. The reason for this unusual state of affairs is not clear, but it may have something to do with the fact that the banks have recently been selling securities in anticipation of their busy season requirements.

There has been a sharp fall in bills in the exchange market during the past week. The decline has been chiefly in gunny documents. Remittance remained extremely poor. On the London money market, the pound is firmer against the twin dollars and most Continental currencies but lost fractionally against the Norwegian and Swedish kroner.

BULLION WAS QUIET ON PROFIT-TAKING. SILVER declined to Rs. 207.31 and gold to Rs. 127. The price of silver was quoted at 80d in London and at 91.375 cents in New York.

DURING THE WEEK ENDED 20TH NOVEMBER, 1959, Government of India Treasury bills for Rs. 64,90,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 24th November. The total amount offered was Rs. 3,00,00,000. Tenders at Rs. 99.410 were accepted in full, the average rate of acceptance being Rs. 2.370 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 30th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 25th November to 28th November at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 18th November to 21st November, amounted to Rs. 3,70,00,000.

DECLINES OF RS. 12.18 CRORES TO RS. 1,683.84 crores in active notes and of Rs. 8.80 crores to Rs. 1,706.86 crores in the total note issue were the notable features of the return of the Reserve Bank of India for the week ended 20th November, 1959. The currency contraction was adjusted by reducing rupee securities by Rs. 9.99 crores to Rs. 1,291.69 crores. As a result, a transfer of securities was made to the Banking Department, in which investments rose by Rs. 8.70 crores to Rs. 251.99 crores. Deposits of the Government of India declined by Rs. 99 lakhs to Rs. 49.45 crores but other Government accounts rose by Rs. 2.82 crores to Rs. 21.67 crores. Balances of commercial banks at Rs. 83.31 crores showed a fall of Rs. 3.24 crores. Balances held abroad rose further by Rs. 1.66 crores to Rs. 41.56 crores. Other loans and advances fell from Rs. 81.18 crores to Rs. 80.90 crores, of which advances to scheduled banks against usance bills amounted to nil (Rs. 16 lakhs). Ways and means advances stood at Rs. 21.47 crores, against Rs. 25.83 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 13th November, 1959, shows a rise of Rs. 4.19 crores to Rs. 675.11 crores in total deposits. Investments in Government securities are down by Rs. 1.44 crores to Rs. 384.63 crores, while other authorised investments are up by Rs. 5 lakhs to Rs. 10.37 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 2.60 crores to Rs. 158.63 crores. Cash and balances are, in consequence, shown at Rs. 32.96 crores or Rs. 6.55 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 13th November, 1959, shows Demand and Time liabilities at Rs. 740.43 crores (Rs. 23.91 crores on account of borrowings from banks) and Rs. 1,133.30 crores (Rs. 28.07 crores), compared with Rs. 735.63 crores (Rs. 24.26 crores) and Rs. 1,125.48 crores (Rs. 28.36 crores), respectively, in the previous week. Cash has declined by Rs. 2.59 crores to Rs. 44.16 crores, while balances with the Reserve Bank have increased by Rs. 12.43 crores to Rs. 81.09 crores. There is a drop of Rs. 1.85 crores to Rs. 790.90 crores in investments. Advances and bills discounted at Rs. 928.23 crores show a fall of Rs. 6.50 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.7

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of August 1959 :

		Rs.
(1) At the Reserve Bank of India in India	...	80,03,92,000
(2) At treasuries in India	...	30,86,000

Twice Weekly—
Wednesdays & Saturdays at 6 p.m.
Fly by LUFTHANSA German Airlines
DIRECT TO GERMANY!

Connecting India with the very heart of Europe, Lufthansa, German Airlines, forges yet another link in its world-wide net-work of routes.

Twice weekly, Lufthansa flies from Calcutta to the main cities of Germany—Frankfurt, Dusseldorf, Hamburg.

Whether you're an industrialist, a businessman, a student, a government official or an educationist—you'll appreciate the traditional, generous German hospitality of Lufthansa, aboard the swift Super-G constellations.

Lufthansa, German Airlines, directly connects Germany with Bangkok, Calcutta, Karachi, Cairo and Rome.

Coordinated flight schedules provide convenient connections with Air France and Alitalia.

Stocks and Shares

I.I.S.C.O. SPEECH AND INTERIM BUDGET FEARS CAUSE NERVOUS SELLING

NEW ISSUE MARKET ACTIVE

Wednesday Evening.

NOT for a long time has the Calcutta Stock Exchange been in such a depressed mood as in the past week. The speculative counters declined steadily day by day, and most other shares followed the same trend. Many scrip were virtually unsaleable except at sacrifice prices. Investors retired almost completely from the market and business was reduced to a trickle. The main factors responsible for bringing the eight-month-old bull market to an abrupt halt were the apparently pessimistic statement released today by the I.I.S.C.O. chairman, the expected rise of Rs. 38 crores in the Government's annual salary bill as a result of the Pay Commission's recommendations, the possibility of a steep increase in defence expenditure due to the Sino-Indian border dispute, rumours of a possible increase in excise duties coupled with the introduction of an interim budget, and the Prime Minister's statement early this week, during the course of his address to the Delhi Pradesh Congress Committee's Political Conference, that the tax burden may be increased.

The offer of 50,000 Madhya Pradesh Industries Rs. 10 fully paid-up ordinary shares at a premium of Rs. 5 a share brought in applications for approximately 350,000 shares, so that the issue was about seven times over-subscribed. The list was closed at 5 p.m. on Monday last. The Indian Aluminium Co. Ltd has offered a Rs. 3-crore debenture, bearing interest at the rate of 6½% a year, subject to tax, at Rs. 102. The currency of the debentures will be 15 years with the company's option to redeem after the tenth year. The main object of the issue is to increase the production of the Hirakud smelter from 10,000 tons annual capacity to 20,000 tons, and to expand the Belur Rolling Mill to 16,500 tons annual capacity.

The Government securities market was quietly steady with the exception of 3% Conversion Loan 1986 which receded further to Rs. 74.15.

Tax-free preference shares were in strong demand, but in the absence of sellers, buying orders were difficult to execute.

Bank shares were unchanged and little interest was shown in railway shares.

Coal shares suffered from lack of interest and prices tended to lower levels, as will be seen from the following table:

	Opening 19th Nov., 1959	Closing 25th Nov., 1959
	Rs.	Rs.
Amalgamated	23.50	22
Bengal	305	297
Burrakur	17.56	17.12
Equitable	33	32.50

Contrary to the general trend, New Beerbhoom met with some enquiry and advanced from Rs. 21.31 to Rs. 22.62.

Cotton shares were softer and prices were marked down. Cawnpore were quoted lower at Rs. 5.56, as were Bowreah at Rs. 142, Dunbar at Rs. 222 and Kesoram at Rs. 18.62.

In electrics, Jubbulpore met with investment enquiry and improved from Rs. 12.31 to Rs. 12.87. Benares also were better at Rs. 14.87, while Calcutta were easier at Rs. 15.12.

In the engineering group, Indian Iron & Steel fluctuated between Rs. 24.05 and Rs. 23.25 to close tonight at Rs. 23.40. Bhartia Steel were marked at Rs. 14 ex-rights and Guest, Keen, Williams at Rs. 39.75. Indian Galvanizing shed 50nP to close at Rs. 21. Jessops were steady at Rs. 34 on the announcement of a rights issue, in the proportion of one for two, at Rs. 12. Textile Machinery receded from Rs. 24.75 to Rs. 24.35.

Jute shares were neglected and in some cases best rate selling orders were difficult to put through. The following table illustrates the trend in this section of the market:

	Opening 19th Nov., 1959	Closing 25th Nov., 1959
	Rs.	Rs.
Anglo-India	236	227
Bally	237	230
Birla	25.06	24.25
Cheviot	190	185
Nuddea	60	57.50
Howrah	24.25	23.50

Expectations of an imminent announcement on a reduction in the price of the commodity brought out sellers of paper shares. India Paper Pulp dropped from Rs. 23.37 to Rs. 22.25, Orient from Rs. 37.70 to Rs. 36.20, Shree Gopal from Rs. 23.50 to Rs. 22.19 and Titaghur from Rs. 44.44 to Rs. 44.

Little business was recorded in sugar shares and prices were more or less unchanged.

Among miscellaneous industrials, Alkali & Chemical were lower at Rs. 23.25 and Angelo Brothers, on selling pressure, dropped to Rs. 19.94. Britannia Biscuits met with some enquiry at the lower level of Rs. 26. Dunlop Rubber moved down to Rs. 35, while Hindustan Motors were reasonably steady at Rs. 13.69. Indian Aluminium were shaded at Rs. 22.56 as were Hindustan Lever at Rs. 35.25. Indo-Burma Petroleum were steady at Rs. 27.50 as were India Steamship at Rs. 13.37. Metal Box were taken at Rs. 43.87 while National Carbon dropped to Rs. 39. Philips India receded to Rs. 20.25 and Rallis closed Rs. 2 lower at Rs. 82.50.

In the mining group, Indian Copper were sluggish at around Rs. 3.90 while Orissa Minerals were better at Rs. 36 25.

The higher levels attracted profit-taking in tea shares and in the absence of enquiry, closing prices were lower than the highest recently touched, exceptions being Choonabhutti which moved up from Rs. 290 to Rs. 300 and East India from Rs. 20.50 to Rs. 22.

Burma Corporation

The profit of the Burma Corporation (1951) Ltd, which is jointly owned by the Government of Burma and Burma Mines Ltd, has amounted to £203,092 for the year ended June 1959, against £109,244. Depreciation is allocated £88,655 and taxation provision £165,000.

Gillanders Arbuthnot

Gillanders Arbuthnot and Company has earned a profit of Rs. 25.99 lakhs for the year ended March 1959, against Rs. 23.19 lakhs. Taxation absorbs Rs. 11.27 lakhs (Rs. 10.34 lakhs). The ordinary dividend of 10 percent is being maintained. General reserve is allocated Rs. 2 lakhs (Rs. 1 lakh) and contingencies reserve Rs. 1 lakh (Rs. 72,003). The carry-forward is Rs. 1,57,026, compared with Rs. 1,46,370 brought in. The directors state that

RC-74

the revenue from commissions and allowances is lower than in 1957-58 due to a general reduction in commission earnings from managed and agency companies, notable exceptions being the tea and pigment companies under the company's management, which showed improved results in 1958. A substantial improvement has again been recorded in income from investments, which is attributable to the generally higher rates of dividends, declared by the companies concerned and also to the additions to the company's investment portfolio.

Amalgamated Electricity

The gross profit of the Amalgamated Electricity Company has amounted to Rs. 20.86 lakhs for the year ended March 1959. Providing Rs. 7.20 lakhs for depreciation, Rs. 51,135 for contingencies reserve, Rs. 26,441 for development reserve and making other adjustments, there is a balance of Rs. 24,82,255. An ordinary dividend of 9 percent has been paid, leaving a carry-forward of Rs. 15,95,361.

Investment and Finance

Providing Rs. 22,000 for taxation and meeting other charges, there is a profit of Rs. 43,598 for the Investment and Finance Company for the year ended February 1959. Bringing in Rs. 32,772, there is a balance of Rs. 76,370. An ordinary dividend of 5 percent has been paid to absorb Rs. 33,150. The directors comment that during the year covered by these accounts, share values showed a considerable increase, particularly jute shares. The market value of the company's portfolio showed a satisfactory rise in comparison with the value as on 28th February, 1958. There has been a further improvement since the closing of the accounts.

Waterfall Estates

There is a profit of Rs. 10.70 lakhs for the Waterfall Estates Ltd for the year ended June 1959. Bringing in Rs. 1,34,481, there is a balance of Rs. 12,04,492. General reserve is allocated Rs. 2 lakhs and taxation reserve Rs. 4½ lakhs. An ordinary dividend of 12½ percent is being paid, leaving Rs. 1,17,892 to be carried forward. The tea crop declined from 1,200,000 lbs to 1,130,431 lbs, but the average sale price improved from Rs. 1.64 to Rs. 1.78 a lb. The coffee crop increased from 410,616 kilos to 620,342 kilos.

National Rolling

Providing Rs. 4.81 lakhs for depreciation, Rs. 1.60 lakhs for taxation and making other adjustments, there is a balance of Rs. 9,09,475, including Rs. 23,120 brought in, for the National Rolling and Steel Ropes Ltd for the year ended June 1959. An ordinary dividend of Rs. 1 a share has been paid. General reserve is allocated Rs. 3½ lakhs. The carry-forward amounts to Rs. 26,079. The directors state that the supply of M. S. billets continued to cause anxiety during the year under review, although towards the latter part of the period it showed some signs of improvement. The prospects for steel wires and steel wire ropes remain encouraging.

Bombay Market

ADVERSE RUMOURS DEPRESS PRICES

MODEST RECOVERY FOLLOWS EARLIER WEAKNESS

Wednesday Evening.

THERE was a substantial decline in share prices in the Bombay stock market last week. Sentiment deteriorated on a number of adverse rumours. It was said, for instance, that the Central Government would introduce a supplementary Budget imposing excise duty on rayon, paper and cotton textiles. Later, sentiment improved slightly when these rumours were discounted. Towards the close, steel shares weakened considerably on nervous long liquidation. The statement made by the chairman of the Indian Iron and Steel Company, which has been circulated along with the accounts for the year ended March 1959, is being studied cautiously. Tata Steel were dealt in at Rs. 154.25 and Indian Iron were lowered to Rs. 23.32. Premier Construction were sold at Rs. 351.50 on fears that the capital reconstruction scheme might be deferred indefinitely. Tata Locomotive were quietly steady at Rs. 194.50, but Alcock Ashdown were freely offered at Rs. 248. Larsen and Toubro were transacted at Rs. 26.30. In motor shares, Premier Automobile were quoted at Rs. 139.25 and Hindustan Motor met with influential support at Rs. 13.52.

Cotton mill shares showed losses on balance. Century recovered slightly to Rs. 621 on short-covering and Bombay Dyeing were placed at Rs. 68.10. Kohinoor were bought at Rs. 327.50 by knowledgeable quarters and Simplex were available at Rs. 166.50. Svadeshi changed hands at Rs. 257 and India United Ordinaries were freely offered at Rs. 10.96. Apollo came to hand at Rs. 1.24.

In the miscellaneous group, sugar shares were quietly steady and Belapur were transacted at Rs. 325. Phalton were dealt in at Rs. 175.50. Mining shares were subdued, and Shivrajpur Syndicate were sold at Rs. 86. Cement shares were steady, and Associated Cement were indicated at Rs. 154 on hopes of a higher dividend. Digvijay were taken at Rs. 147.50. Steamship company shares were quiet, and Scindia Steam were available at Rs. 16.80. Great Eastern Shipping declined to Rs 19.44. National Rayon reacted to Rs. 360 on rumours of an excise duty on rayon. Tata Chemicals were shaded at Rs. 17 and Bombay Burmah improved to Rs. 553 on replacement buying. Voltas were taken at Rs. 177.50 and West Coast Paper met with support at Rs. 165.

Turnover in banking and insurance shares declined and prices were shaded where changed. Bank of India were taken at Rs. 106.25 and Central Bank were transacted at Rs. 48.75. New India Assurance changed hands at Rs. 63.70.

Electricity supply company shares met with scattered interest, and Ahmedabad Electric were done at Rs. 91.60. Tata Hydro were taken at Rs. 113 and Bombay Suburban were placed at Rs. 103.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

INDUSTRIALS RALLY AFTER EARLY SETBACK

GILT-EDGED RISE

London, 25th November.

PRICES of industrial equities lost further ground in the stock market during the past week, subsequently rallied and recorded very little change on balance. Elsewhere, the market generally presented a satisfactory appearance following selective buying. The further setback in industrials reflected the recent speech by the Governor of the Bank of England in which he referred to the sometimes disquieting boom in industrial equities. The immediate effects of this statement were quite modest, but it was followed by comment on the need to exercise caution after the recent sustained rise, and this touched off a fair amount of profit-taking. Buyers adopted a very cautious attitude and consequently, prices reacted. The volume of business contracted and activity was at its lowest level since before the election at the beginning of October. With the opening of the new account after the week-end, however, a distinctly better tendency developed on selective buying and the losses were reduced or eliminated. Elsewhere, in the market, gilt-edged securities steadily improved on small but persistent investment buying and although the firm trend was not maintained, some useful gains were recorded on the week. The main feature of foreign bonds was a fall in Greek issues. Dollar stocks fluctuated narrowly in line with Wall Street. Banking and insurance shares tended lower and failed to participate in the subsequent rally. Gold shares were generally quiet, but there was a fair amount of selective buying, mainly on Johannesburg account, and prices were often higher on the week. Diamond shares were dull, however, being unsettled by the de Beers statement concerning the production of synthetic diamonds. Tin shares were occasionally supported, but coppers eased. Oil shares remained neglected and prices flutuated narrowly. Tea shares were very firm, the fresh advance being accentuated by a shortage of stock. Rubber shares were irregular.

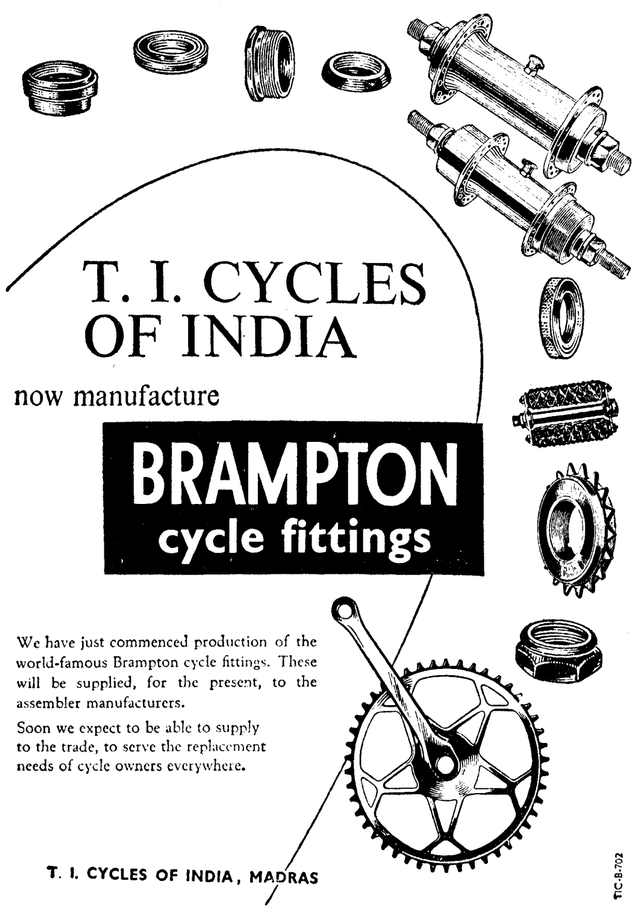
The Money Market

There was no easing in the tight credit conditions in the money market during the past week. Money was in keen demand throughout with the shortage reaching its peak on Thursday as a result of the very heavy bill take-up which is now currently taking place in connection with the 63-day bill. The rate for non-regular money was 3½ percent to 3⅝ percent throughout the week and only on two occasions, did it ease to 2½ percent. The authorities rendered help from time to time, but the market was forced to borrow a small amount from the Bank of England on one day. The demand for bills was held down by the poor cash position of the banks. Late January and early February maturities changed hands at 3½ percent. The Treasury bill rates showed very little change at the weekly tender on last Friday. The 63-day bill was virtually unchanged at present £3 9s 0.30d while the 91-day bill was slightly higher at £3 7s 11.96d percent.

Activity on Wall Street

Strength in high quality corporate issues highlighted bond dealings. This section forged ahead in active dealings in response to the heavy demand for the $25 million new 5⅜ percent Telephone and Telegraph debentures which were quickly oversubscribed. Long-term Government obligations were adversely affected by the telephone offering. The decline was attributed to selling by institutional investors in order to obtain cash for the telephone and other high-coupen bonds of recent issue. Rail lines were mostly lower. Convertibles fluctuated irregularly. Foreigners were slow. Australians and Germans were mixed. Italians advanced by fractions to a point. Greeks extended their recent advance, but finished below the best.

Vegetable Oils Mixed



Prices of Canadian linseed went lower again on but scant U.K. buying interest was reported. A much stronger market developed for castorseed, supported by a sustained demand on U.K. account. Almost neglected conditions had again to be recorded for groundnuts, with resellers willing to shade prices still further. Linseed oil has varied little in price over the week, but France and Germany were more interested buyers. Castor oil was active, with quite a sizeable business taking place in Indian oil. Most of the interest in groundnut oil was for early positions of British West African and Indian grades, with price changes limited.

Hongkong Gold Easier

The Hongkong bullion market tended to ease during the past week, reflecting the steadier trend of sterling, but movements were narrow in very quiet trading. Carry-over charges were nil, while delivery figures were not available. Arrivals into Macao totalled 32,000 ounces. Forward contracts were done at $(U.S.)38.01 an ounce.

Paris Gold Dull

The Paris gold market has been lifeless and without any particular trend in the past week. The basic tone was settled, but in the absence of any particular stimulant, the only business transacted was due to technical adjustment.

New Delhi

MR. DESAI CONSIDERS FOREIGN AID PROSPECTS FOR THIRD PLAN GOOD

MOBILISATION OF INTERNAL RESOURCES IS THE CHIEF PROBLEM

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Finance Minister, Mr. Morarji Desai, made a statement on his foreign tour in the Lok Sabha last week. He said: "I should like to stress that the purpose of my visit to the various countries mentioned was not to ask for financial assistance for our plans or to conduct any negotiations to that end. Undoubtedly, in all these places, the question was asked both by officials and non-officials as to how our second plan was going and what our requirements of external assistance would be for the third five year plan. I explained to them that we were still in the process of working out our third five year plan and it will be only in March or so next year that we hope to be ready with an outline. I stated, of course, and even emphasised, the fact that it was important for us to ensure, to the extent possible, that the third five year plan would be an acceleration of the effort that had gone into the second plan. Various aspects of our economic problem, such as the growth of the population, food production, the lines along which we were carrying forward the process of industrialisation, the price situation and the likely balance of payments position for the third plan, figured, in greater or less detail, in most of these discussions. In all the countries I visited, I was impressed with the interest there is, both in official circles and among the leaders of business, industry and finance, in our development plans. This interest, if I may add, springs from a desire to consider to what extent and how best they could help us in carrying out our plans. But, of course, this visit was in no way intended to concretise either the quantum or the terms of any such assistance.

"We have, in the past, been exploring the possibility of obtaining credit from, or raising loans, in Switzerland, and I took this opportunity of explaining to the representatives of the Government, banking houses and of business in that country our need for long-term rather than short-term or medium-term financing. The outstanding points concerning the proposal for a double taxation agreement between Switzerland and India, which is at present under consideration, were also discussed in the course of my conversations with the representatives of the Swiss Government. The detailed discussions on the various points that were gone over with me in broad terms on both the subjects I have mentioned, will, of course, be carried through our normal official agencies.

"The discussions in France followed the same general pattern as elsewhere, the focus being on our financial situation and the requirements, in broad terms, of foreign exchange for our development plans. There, as in the other countries I visited, I found a great deal of interest in our plans for development.

"In London, I took the opportunity of these meetings to explain how the balance of payments difficulties of the less developed countries like India were not short-term but were likely to continue, in spite of the best possible effort, until development had proceeded some way and the production and export potential of the country concerned built up sufficiently. The recent improvements in the economies of the more industrialised countries, welcome as they were both in themselves and as an augury for larger world trade and capital exports from these countries to the less developed ones, did not in any way minimise the enormity of the task which the developing countries had to face. I urged the point that this longer-term aspect of the balance of payments of the less developed countries was as important a problem as the relatively short-term fluctuations in the balance of payments of the more developed countries.

Commonwealth Bank not Favoured

"On the proposal for a Commonwealth development bank, which has been under consideration for some time past, I agreed with the general view that, in the context of the new U.S. proposal for an International Development Association, the Commonwealth bank idea need not be pursued at least for the time being, since it did not appear likely that such an institution would be able to mobilise any appreciable additional resources. As for the European Common Market and the proposed European Free Trade Association, I expressed concern over the possible adverse repercussions of the development of the regional grouping in Europe on the economies outside. I should like to mention, in this connection, that the proposal for an agreement between the United Kingdom and India for the avoidance of double taxation was generally discussed by me with the Chancellor. Discussions in pursuance of this objective will now continue at the official level.

"The only observation I would like to make by way of a summing up of my visit to the U.K. is that the growing stability and strength of the U.K. economy is, from the point of view of our plans, a welcome development. The U.K. already exports a considerable amount of capital to countries within the Commonwealth and the recent trends should favour a strengthening of this trend.

"I noticed that there is in the United States much better understanding and appreciation of India's plans and problems than ever before. The main point I stressed in my speeches and discussions was that, while we shall need assistance from abroad for a considerable time to come, our endeavour was to raise domestic resources to the maximum extent possible and to plan our development effort in such a way that the economy becomes more or less self-sustaining within as short a period as possible. Naturally, there were questions about our attitude to private enterprise, foreign private investment and the scope for it in the coming years. I explained our policy concerning foreign private capital and recalled the various assurances that we have already given in the matter of remittance of profits and repatriation of capital, emphasising, at the same time, our desire to ensure that whatever foreign capital came in, made a contribution to the objectives enunciated in our plan. I made it clear that in our country there was no discrimination between industries owned by nationals and industries owned by foreigners. The various tax incentives offered for investment in India are available alike to the foreigners and to our nationals. I pointed out, however, that for various reasons there were obvious limits to the inflow of private capital and, therefore, there was a need for continuing assistance on a government-to-government basis. On the subject of nationalisation, I made it clear that we did not believe in nationalisation as a creed, and had, therefore, no programme of nationalisation as such. This did not mean, however, that particular industries would not be nationalised if the public interest so demanded. In such an event, compensation would be paid. There was thus no scope for apprehension on the part of foreign investors about the security of their investments in India. To reassure such investors further, the Government of India had expressed its readiness to consider entering into suitable agreements with those countries which had programmes for insuring investments of their nationals in foreign countries, in cases specifically approved by both the Governments concerned, against expropriation without payment of full compensation.

Double Taxation Relief Pact with U.S.A.

"I am glad to be able to report that the negotiations with the U.S.A. on relief from double taxation have resulted in an agreement between the two countries. The agreement now awaits ratification by the Senate of the United States.

"My visit to Japan was also, as I have already stated, in response to an invitation from the Government of that country. I have every hope that, within its resources, Japan, too, will play its part in assisting the economic development of our country.

"I shall conclude this statement by mentioning the latest assessment of our foreign exchange situation. Our sterling balances for the week ended 13th November, 1959, stood at Rs. 202 crores, against Rs. 184.8 crores on 14th November, 1958. It is clear that we have succeeded in arresting the sharp decline that continued during 1957 and most of 1958 in our foreign balances while continuing with the implementation of the plan. We have also completed the payment of Rs. 24 crores in gold on account of the increased subscription to the International Monetary Fund which has now been deposited on behalf of the Fund in the Reserve Bank's vault in Nagpur. We have necessarily continued to maintain a tight control over our imports and the success of our policy, is, in no small measure, due to the co-operation and assistance we have received from all sections of our people in this effort.

"The comparatively stable position in our foreign exchange balances has been maintained, not by our own efforts alone, but by the very generous assistance received from friendly countries and institutions. The rate of actual utilisation of such foreign assistance has been greatly speeded up and during the 12 months ended 30th September, 1959, approximately Rs. 241 crores of foreign assistance has actually been drawn upon, in addition to commodity assistance from the U.S.A. Taking the second plan period as a whole, we have so far been given firm promises of assistance for this plan to the extent of Rs. 908 crores. This figure includes grants but does not include P.L. 480 assistance, which is additional to this and in itself amounts to Rs. 432.6 crores. Until 1st October, 1959, we have drawn Rs. 458 crores of this total and it is expected that, before the end of the second plan period, a further Rs. 322 crores will be utilised. This will leave a sum of Rs. 128 crores carried forward beyond 31st March, 1961. One reason for the carry-over is the fact that the projects to which the assistance is linked, such as the project for developing exports of iron ore with Japanese and U.S. assistance, the Koyna hydro-electric and the Calcutta and Madras port development projects financed with World Bank assistance and machine-building projects financed with Russian assistance, will, in themselves, not be completed before 31st March, 1961, but would be carried over into the next plan. Such assistance which is earmarked for specific projects can clearly not be diverted for financing any other project nor would there be specific advantage in seeking to do so. The other reason is connected with the fact that certain credits may be utilised only for purchases within the countries which extend the credits. Having regard to this limitation and our policy of utilising credits only for projects of high priority and for which equipment can be bought within those countries at prices which compare reasonably with international prices, the selecting of such projects, negotiating prices and placing orders to the full value of these credits necessarily take time.

Repayment of Foreign Loans

"Having regard to the greatly increased tempo of the development plans, there still remain payments falling due during 1960-61, which will exceed our expected earnings and the possible utilisation of foreign aid already provided, by approximately Rs. 140 crores. This is the extent of the further foreign assistance that is required for financing the second plan. The countries which are assisting us are already seized of our requirements. As a result of their last meeting in Washington in March this year under the auspices of the World Bank, we received indication that we could reasonably expect to maintain the momentum of our development programme and meet the essential needs of the economy during the current year, without any undue strain on our external resources. We already have an idea of the extent of assistance we may expect from the World Bank and from West Germany for the remaining period of the second plan. It is our intention early in the New Year to enter into bilateral negotiations with the countries concerned for assistance from them during 1960-61. By and large, I have reason to hope that we may count on continuing help and co-operation from our friends abroad in the completion of the core of the second plan, although I must add that it will, at the same time, be essential on our part to continue to exercise the utmost caution in relation to our foreign exchange expenditure in the coming months.

"As I have already emphasised, the object of this visit was not to ask for or negotiate assistance for the third plan. We ourselves are still in the process of working out the programme to be included in the third plan, and it will be some time before the plan as a whole takes fairly concrete shape. It is clear nevertheless—and this is well understood abroad—that our foreign exchange needs for the third plan will be quite large and that the assistance required will have to be on a fairly long-term repayment basis. The United States authorities are studying and will study further India's developmental needs and consider how best they could assist this country. The World Bank, too, will undoubtedly play its part, as it has over the last several years.

"On the whole, in so far as any general statement can at all be made at this stage, I should say that the prospects of continuing external assistance for the third plan strike me as good. But whether it will be adequate for our needs, it is too early to say, since our needs themselves are yet to be assessed in precise terms. One thing, however, is clear and it is this, that the success of our third plan—and, indeed of all our plans—depends on the extent to which we can develop and mobilise our own internal resources. This, I should reiterate, is our chief problem, and I think our attention needs, at this stage, to be concentrated on how to raise effectively the internal resources required for the plan."

West German Law on Investment Guarantee

The following are the important provisions of the law in West Germany concerning investment guarantee pacts:

Deprivation, including measures tantamount to deprivation as well as nationalisation, should not be permissible in the country entering into treaty relations with West Germany except for public benefit. Compensation would have to be paid and should represent the equivalent of the investment affected by deprivation. Such compensation should be given without delay, be actually realisable, and be freely transferable, namely, without restrictions, conditions or obligations. Provision should be made not later than the time of the deprivation for determining and giving such compensation. Furthermore, the legality of any such deprivation and the amount of compensation should be subject to review by the due process of law. In addition, provision could be made in this connection for the application of the most-favoured-nation treatment.

Investment losses resulting from conflicts involving violence such as war, revolution, revolt, etcetera, should in the matter of compensation or other valuable consideration, be given at least national treatment. In addition, the principle of most-favoured-nation treatment should be applied to the transfer of compensation payments. The transfer of the returns from invested capital, as well as the possibility of the latter's re-transfer in the event of liquidation, should on principle be guaranteed. All transfers should be made at the official rate of exchange as effective on the day the payment falls due or on the day the transfer is permitted or on the day it is made

the rate to be applied being the one most favourable to the creditor.

Provision should be made to the effect that, in the event of a claim arising out of a guarantee given by a contracting State, the other contracting State will recognise the succession in title of the first contracting State in relation to the claims of the investor.

Protection by treaty should not merely cover such investments as are defined by the Government of a country as particularly deserving of promotion and, therefore, especially favoured by the internal legislation of that country, but also all other investments. Nor should any distinction be made between investments to be made in the future and those already in existence at the time when the treaty enters into force, as investments previously made also promote the economic development of the receiving country.

Neither contracting State should permit any discrimination against the flag of the other contracting State in the case of the transport by sea of investment goods.

The protection of investments should be supplemented by the protection of business and professional activities. The contracting States should, therefore, undertake on principle not to impair such activities as are connected with investments or their appropriate management or utilisation. Such impairment is mainly understood to imply discriminatory economic measures, namely, restrictions on the purchase of raw and auxiliary materials, impeding the marketing of products, etcetera.

A special provision could define what assets in particular are to be deemed investments. They could first and foremost comprise, apart from movable and immovable property and any other rights such as mortgages, liens, pledges, usufructs, and claims, shares or interest in companies, as well as patents, technical processes, trade marks and business concessions of some duration under public law.

European Free Trade Area

The U.K Chancellor of the Exchequer, Mr. Heathcoat Amory, and the President of the Board of Trade, Mr. Reginald Maudling, left London for Stockholm on 18th November for a meeting with the Ministers of the "Outer Seven" countries who hope to co-operate for freer trade. Since India is interested in the free trade area move, the following broad outline of the treaty should be of interest.

The trade rules of the Seven will cover all imports of goods originating within their areas. There will be special provisions for trade in agricultural products and in fish and other marine products—provisions which will be designed to facilitate the expansion of trade between members. Denmark, Norway and Portugal have seen to it that the treaty offers such enlarged trading facilities to their agriculture and fisheries as will reciprocate the increased opportunities which the agreement opens for trade in industrial products.

Tariffs between member countries—except some revenue duties—will be cut first by an initial flat rate reduction of 20 percent on 1st July, 1960. They will continue to be progressively abolished in eight stages of 10 percent each. It is a simple system of linear reductions implying clearly defined obligations for the members. The time-table for the reductions is designed to enable the Seven to eliminate their tariffs at the same rate as the Six do. It should facilitate an association, if the two groups keep apace. If the Six accelerate their tempo, the Seven can decide to do the same. Any member will also be free to speed up, individually, the dismantling of its tariffs within the group.

The reduced tariff—and finally the duty-free entry—will apply to imports into member countries of goods originating within the area of the Seven. But what happens in the case of goods made partly at home, but partly abroad? In this matter, the Outer Seven, as befits their general philosophy, propose to be quite liberal. The rule of thumb is that when at least 50 percent of the sales value of a product has been added within the area, then the product will benefit from tariff reductions between the associated countries. This rule will be qualified in various ways to make it less rather than more restrictive. Certain materials not found in Europe, perhaps rubber and bauxite, for instance, may be regarded as of area origin. And again, if certain processes are used—such as the spinning and weaving of some textiles—the goods will also qualify for preferential tariff treatment.

Member countries of the Seven will also abolish quantitative restrictions on their imports. Such restrictions will be eliminated in the industrial field according to a fixed time-table. Quotas will thus be expanded by at least 20 percent annually. In so far as quotas are global, non-member countries will automatically benefit from their expansion. These are the basic rules. But with payments positions of trading nations generally in balance, the trend in the wider international organisations is at present towards a speedy liberalisation of trade. The treaty of the Seven takes account of this and foresees that member countries should in all cases where their wider obligations so imply, abolish their quotas at a quicker rate.

The Seven are aware that since convertibility has been introduced, quantitative restrictions should, according to the rules of G.A.A.T., no longer be applied in a discriminatory way. So it is not their intention to use quotas in such a way as to set up any preferential system as between one member and another. As for the rest of the treaty, it reflects the general policy of the Seven which is that the expansion of trade should take place in conditions of fair competitions. No measures should be taken which are designed to frustrate the benefits of the progressive elimination of barriers to trade. In particular, there will be provisions in the treaty for dealing with subsidies and governmental support measures. State trade enterprises are not to operate in such a way as to reduce the effects of the removal of trade barriers. There will also be provisions to deal with harmful restrictive business practices.

Coal and Lignite in Kashmir

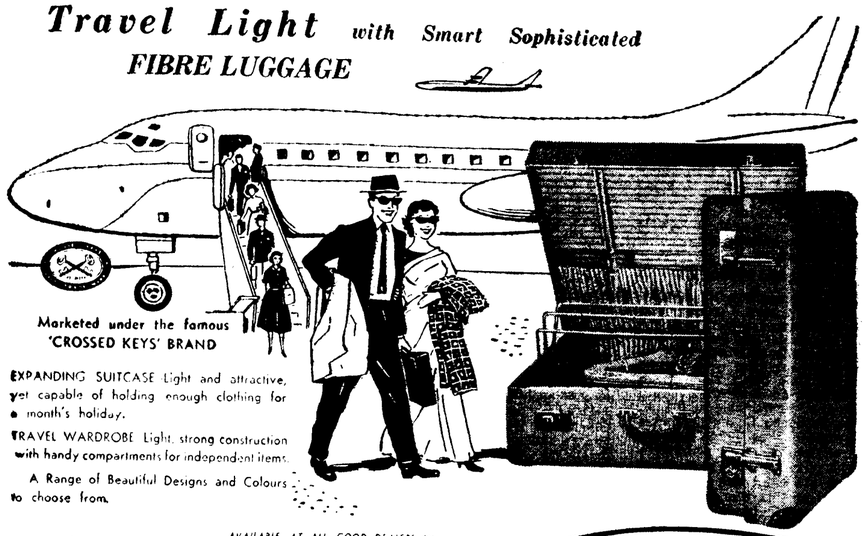
Deposits of fairly good quality coal have been discovered in Jammu and of lignite in Kashmir valley. The question of setting up industries for the production of fertilisers, cement and paper based on the lignite of Nichahom, on the assumption of a production of 1,000 tons a day, is now being examined. The possibilities of setting up a thermal power station based on a daily output of coal up to 300 tons by the development of the Kalakote coalfields are also being considered.

New Oil Policy

India's oil policy, it is expected, will be announced this week. It will confine Government exploration to Cambay in Bombay, Sibsagar in Assam and Hoshiarpur and Jwalamukhi in the Punjab, leaving the rest to the private sector. It is proposed to hold informal discussions with oil companies interested in exploration, in order to elucidate points arising from the petroleum rules which will be published along with the policy statement. The rules will broadly indicate the terms on which such exploration will be permitted. The possibility of a high Government official visiting the countries interested in entering the Indian oil market in order to elucidate points, is not ruled out. This striking change in policy on the development of the oil industry is probably due to the advice which the President of the World Bank, Mr. Eugene Black, has given that direct expenditure of foreign exchange should be avoided when foreign private capital is available for any project.

Next Indian Labour Conference

The Indian Labour Conference will meet here on 6th and 7th January. Its agenda includes a proposal for statutory wage boards, labour policy in the third plan, amendments to the Industrial Relations Act concerning illegal strikes and lock-outs and the revival of the labour appellate tribunal. The proposal for a wage board for the steel industry is also being examined. As for the statutory wage boards, the proposal is opposed by two employers' associations and one workers' association.



Iron and Steel Production on Small Scale

Two furnaces for making iron and one converter for making steel have been permitted to be put up; two iron furnaces are already in operation. One of them is in Orissa and another in Madras. The converter—a hot-blast cupola—is being put up in Bombay. Besides these, the National Metallurgical Laboratory has already put up a low-shaft furnace where experiments are being carried out, and a small converter for making steel is under construction. Proposals for two other furnaces and three other converters are being considered. It is the intention to permit some more furnaces and converters, so that out of the target for steel in the third plan, about 250,000 tons can be produced by small units.

Bucket Belt Excavators

Two bucket belt excavators, each of 350-litre bucket capacity, have been installed in the Neyveli lignite area so far. They are still on trial runs These excavators have satisfactorily passed the tests for capacity and performance. No defects were noticed. The rated capacity of these excacators is 920 cubic metres of solid overburden an hour, but during trial runs the average turnover has been only about 200 cubic metres an hour. The reason for this is that the State Government is yet to make satisfactory arrangements to firm up the voltage of power supplied to the excavators. Installation of boosters is in progress. Besides, experiments are still in progress for the best type of cutting teeth for the bucket wheels to tackle the Cuddalore sandstone.

Travel Light with Smart Sophisticated
FIBRE LUGGAGE

Marketed under the famous 'CROSSED KEYS' BRAND

EXPANDING SUITCASE Light and attractive, yet capable of holding enough clothing for a month's holiday.

TRAVEL WARDROBE Light, strong construction with handy compartments for independent items.

A Range of Beautiful Designs and Colours to choose from.

AVAILABLE AT ALL GOOD DEALERS IN TRAVEL GOODS THROUGHOUT THE COUNTRY

Raw Material for Wool Industry

There has been some delay in the issue of licences for raw material to the wool industry pending the finalisation of the foreign exchange allotment for the purpose. Licences to the value of Rs. 9.25 crores were issued during the year 1958-59, and the following quantities were imported:

Raw wool	2.42 million lbs
Wool tops	16.36 million lbs
Shoddy wool	3.38 million lbs

Due to the acute shortage of foreign exchange, the import of raw material for the industry has had to be restricted, but allocations are so made as to keep the units going.

Electrolytic Copper Imports

The requirements of electrolytic copper (including those for the manufacture of copper conductors and thin gauge wire for commercial use like zari-making) for the coming five years are estimated as follows:

1959-60	about 30,000 tons
1960-61	about 40,000 tons
1961-62	about 50,000 to 55,000 tons
1962-63	about 65,000 tons
1963-64	about 80,000 to 85,000 tons

A licence under the Industries (Development and Regulation) Act, 1951, for the manufacture of electrolytic copper has been granted to the Indian Copper Corporation.

New Aluminium Venture

Negotiations between Mr. G. D. Birla and Kaisers of the United States on the aluminium manufacturing project have been completed. The following arrangements, it is understood, have been made: the payment to Kaisers and their associate consists of (a) for engineering services Rs. 61 lakhs ($1.3 million), (b) for technical services consisting of "know-how", training of personnel, etcetera, Rs. 60 lakhs, payable in equity shares and not in cash and (c) out-of-pocket expenses of Rs. 1.22 crores (Rs. 86 lakhs to be incurred in India and Rs. 36 lakhs in the U.S.A.) on the basis of actual cost. In addition, Kaisers will participate in the equity capital, which will be subscribed as follows:

Messrs Birlas and others	Rs. 440 lakhs
Messrs Kaisers	Rs. 160 lakhs

of which Rs. 100 lakhs will be in cash and Rs. 60 lakhs in lieu of technical services.

A licence under the Industries (Development and Regulation) Act, 1951, has been granted to the Hindustan Aluminium Corporation Limited, Bombay, for the establishment of an aluminium plant in Rihand with a capacity of 20,000 tons of ingots a year. Permission for the issue of the requisite capital has also been given. The Corporation is negotiating a dollar loan from the Export-Import Bank of the U.S.A. for the purchase of equipment.

In addition to the aluminium project, Kaisers of the U.S.A. are participating in the Tata programme to expand their steel plant capacity, in the Mahindra and Mahindra scheme to manufacture jeeps, and in the Mysore Cement plan to manufacture cement.

Based on the report of an Italian firm, an application for the grant of a licence under the Industries (Development and Regulation) Act, 1951, to set up a plant to manufacture 10,000 metric tons of aluminium ingots has been received from Mr. R. Venkataswamy Naidu, Coimbatore. The Government of Madras has recommended the application, which is being considered by the Central Government.

Spun Silk Mill in Assam

The following statement shows the progress made so far in establishing a spun silk mill in Assam: (1) the construction of buildings in Jagi Road is nearing completion; (2) an agreement has been concluded with a Japanese firm for the import of machinery on a deferred payment basis; (3) arrangements have been made for procuring machinery items available in India; (4) arrangements have also been made for water supply and electricity; (5) the State Government of Assam has decided to form a private limited company under the Indian Companies Act with an authorised capital of Rs. 70 lakhs in shares for running the mills. The memorandum and the articles of association of the company are being finalised by the State Government; (6) arrangements are also being made by the State Government to obtain the services of an expert from Japan. The mill is expected to go into production by the end of 1960.

Progress of State Refineries

The progress report on the Nunmati (Gauhati) refinery shows that 516 *bighas* of land have been acquired by Indian Refineries Ltd. This is considered sufficient for the immediate works on the refinery and temporary townships. Proposals for the acquisition of additional areas have been submitted to the Government of Assam. Land required for the approach road to the township has been demarcated. The work of plotting the area required for permanent township, which is under tea plantation, was completed during October 1959.

Foundation investigations were started after the rains, in the middle of September 1959. Several boreholes were made for the study of soil strata at site, to help finalise the lay-out of the refinery. The technical designs were received from Rumania about the middle of August 1959 and they were discussed with the Rumanian experts and finalised. The supply and technical assistance contract was executed on 17th August, 1959. This contract closely follows the inter-governmental agreement signed on 20th October, 1958.

The approach road to a temporary hostel has been completed; earthwork for the preparation of site for the temporary township, store sheds and other constructions structures is in progress; construction of temporary garage is in progress; work of laying temporary siding is in progress; three temporary storage sheds have been completed; and a small temporary hostel building has been completed.

Arrangements are being made for the inspection and testing of material and equipment received from Rumania, by the Assam Engineering College and Assam Engineering Institute. It will take some time for the Indian Oil Company Ltd to formulate its detailed proposals for the distribution of petroleum products. The programme is, however, expected to include: (i) distribution of the products of the two Government refineries being constructed in Gauhati and in Barauni; (ii) imports of deficit products; and (iii) supply of the requirements of Government departments and undertakings. The existing oil companies already have product exchange and other mutually advantageous arrangements. The Indian Oil Company also hopes to have such co-operation and co-ordination with them.

Mineral Prospecting in Orissa

The following areas were prospected by the Orissa Mining Corporation:

District	Name of the area	Nature of mineral
Dhenkanal, Kalahandi, Sundergarh	Nil	
Mayurbhanj	Maharajpur	iron ore
	Jaidhanposi	iron ore
	Karanjharan (Khandadera)	iron ore
Keonjhar	Dubna	manganese ore
	Sidhamath	manganese ore
	Sialjora	iron ore

The following areas have been located for mining on the basis of prospecting done or information available otherwise:

District	Name of the area	Nature of mineral
Cuttack	Tungaisuni	iron ore
Mayurbhanj	Maharajpur	iron ore
Mayurbhanj	Khandadera	iron ore
Mayurbhanj	Bhitaranda	iron ore
Mayurbhanj	Ekdalpahar	iron ore
Keonihar	Sakradihi	iron ore
Keonjhar	Dubma	manganese ore
Keonjhar	Sidhamath	iron ore and manganese ore
Sundergarh	Silgora	
	Kumaritar	
	Lodapani	
	Lusi	
	Fulihari	

Concrete pipes can be made to fit any sewerage, drainage or water line schemes. They give the maximum –

STRENGTH AND DURABILITY to resist severe impact and to sustain heavy overburdens,

HYDRAULIC CAPACITY because of their smooth interior finish,

WEAR RESISTANCE to abrasion by suspended grit in high-velocity flow and

ECONOMICAL SERVICE because their moderate first cost *plus* long life and small maintenance expense result in *low annual cost*.

U.K. CHANCELLOR STRESSES THE NEED TO REDUCE PRICES

LARGER REVENUE SURPLUS EXPECTED

(FROM OUR LONDON CORRESPONDENT)

PRICES must come down. That was the message of the past week, voiced in another public speech by the Chancellor of the Exchequer and supported by one from the President of the U.K. Board of Trade. At the annual dinner given by the retiring Lord Mayor to the City merchants and bankers, Mr. Heathcoat Amory took a good view of things: the state of Britain's economy is healthy; the Budget year is likely to end with a somewhat larger surplus above the line than he had estimated; it will be another "miracle" year for national savings; the balance of payments seems likely to go on being favourable. In fact, it has been "a year of achievement," to be followed in 1960 by "a year of opportunity." World trade is expanding, and "we are well set to take full advantage of it." As for the strong rise in bank deposits and advances, this is only to be expected with the revival of the economy, and "I do not find the monetary situation out of balance, although I shall continue to watch it carefully." The Chancellor gave a warning that the present situation must not be exploited, for if it is, price stability will be in jeopardy and the rate of expansion will have to be curtailed. Britain's expansion must be a safe one, he added. The Governor of the Bank of England was left to strike another warning note. He referred to the "marked and sometimes slightly disquieting boom in equity prices." He thought the rise in bank advances was all right as far as it had gone, but it would need watching "if it should continue much longer at the same pace." There is a sharp reminder here that expansion has its limits.

The U.K. Chancellor of the Exchequer returned to this general theme a couple of days later when he addressed the National Production Advisory Council for Industry. Some people, the Chancellor commented, might think he had been harping too much recently on the theme of prices. He did so because (1) inflation had been Britain's most intractable problem since the end of the war; and (2) if the country handled its affairs sensibly, "we can continue to hold inflation by the scruff of the neck." The opportunity is that presented by the juxtaposition of rising productivity and stable or nearly stable import prices. "If we try to push up wages and salaries and profits faster than the growth in the total output, we shall throw away this chance." Unfortunately, no one had anything to say in reply, although Mr. Amory enlarged on this subject to some purpose.

Cost-of-Living Index

Later in the past week, it was announced that the cost-of-living index had remained steady at 109 between 15th September and 13th October. Calculated to one decimal, the October figure was 109.2, and that for September 108.7. The main changes during the month were increases in the average prices of milk and potatoes. At the same time, the price campaign was continued by Mr. Maudling, President of the U.K. Board of Trade, who repeated, at a luncheon given by the National Union of Manufacturers, Mr. Amory's thesis: if the general level of prices is to remain steady, there will have to be some decreases to balance some inevitable increases. Mr. Maudling was speaking on prices in the context of exports. He found the present export figures encouraging, but with a number of reservations. He was concerned at the extent to which Britain's export trade depended on one or two industries, notably the motor-car industry. He also wanted the country to get a better share of expanding markets in the Commonwealth, among the new middle-classes of the oil countries, and in the other industrial countries—notably in West Germany.

Anticipating the Budget

Are these exhortations having any effect? One would like to say they are, but unfortunately there is very little practical evidence to show that it is so. On the contrary, the Government has been a little disconcerted by the assumption made in some newspapers after the speech by the U.K. Chancellor of the Exchequer that purchase tax is about to be reduced and that in his next Budget, the Chancellor will make other tax reductions. This interpretation has been based on the Chancellor's statement that at the end of the current financial year, the above-the-line surplus might be a little larger than he had estimated. But the Chancellor in his last Budget also estimated a "below-the-line" deficit of some £750 million, and the estimates for the next financial year—only now beginning to be made—may call for additional expenditure. It was certainly not his intention to let loose a flood of hopes about big changes in the tax structure.

Exports to Dollar Area

Exports to North America in October were £51.7 million, the U.K. Board of Trade has announced. This was about £6 million more than in September; the dollar markets contributed only 10 percent to the rise of nearly £60 million in the United Kingdom's total exports in October. But the general increase in sales to North America achieved this year is striking. In the first ten months, exports to North America were no less than 25 percent higher in value than in the same period of last year; in September and October alone, they were 26 percent up.

As the U.S market has been expanding even faster than the Canadian one, the rise in shipments to the United States alone has been even more astonishing. In October, exports to the United States were £32.3 million; in the first ten months, they were 37 percent more than in the same period of last year. Exports to Canada were £19.3 million in October and in the January-October period they were 8 percent up on the year. But taking September and October only, shipments to Canada were 26 percent more than last year.

Wholesale Price Index Up

The wholesale price index of basic materials rose slightly last month and is now at its highest level since October 1957, states the *Board of Trade Journal*. The rise reflected the firmness of non-ferrous metal prices and of most textile materials, except wool. Imported foodstuffs and home-grown grain were also dearer. Rubber, hides and skins and bacon-factory pigs—all of which have risen sharply this year—were cheaper.

Commonwealth Scholarships

The Government's Commonwealth Scholarships Bill, which has just been published, authorises the establishment of a commission to select and place 500 Commonwealth students to study in British universities or colleges of technology. It implements the Commonwealth scholarship and fellowship plan, details of which were worked out at the Commonwealth Education Conference in Oxford last July, providing for 1,000 scholarships, for one-half of which the British Government will be responsible. The original idea was devised at the Montreal conference. Ministers hope that the Bill will become law before Christmas. The Opposition is expected to approve its terms. Arrangements have been made for the first 250 scholarships to be tenable from next October. Most of these first awards will be for post-graduate research. An interim committee, under Sir Eric Ashby, Master of Clare, Cambridge, is drawing up plans. Distinguished British scholars and scientists are helping in the selection, and names will be announced next April.

The Commission will be appointed jointly by the Commonwealth and Colonial Secretaries. Its ten to 15 members must include at least four leading figures in the academic world. The selectors will look for men and women "of high intellectual promise who may also be expected to make a significant contribution to life in their own countries." Normally, scholarships will be tenable for two academic years, 22 months. A few Commonwealth visiting fellowships, normally tenable for one year, will also be awarded. These will be given to senior scholars of established reputation and achievement. The scholarships will be open normally to people under 35, but preference will be given to men and women in the age-group of 22-28. They will include the cost of fares, tuition fees, a grant for books and apparatus, and clothing, maintenance and marriage allowances. The qualifying standard will be successful completion of university-degree courses or equivalent professional qualifications. It is estimated that when the full plan is in operation in 1962-63, the annual cost will be about £550,000. The British Council will be responsible for paying passages, fees and allowances and for arrangements for reception and welfare.

Timely Warning

Some Commonwealth students who come to Britain to attend commercial colleges "are not particularly well qualified for the courses they take," it is suggested in an article in the *Universities Review*, issued by the Association of University Teachers. The article says a certain "snob value" still clings to study in the U.K. Many of the courses were not devised for overseas people, so they will do better to avail themselves of the "excellent facilities" of their own countries. "We know of instances in which unsuitably qualified candidates have been embittered with their experiences here. The refusal of British firms to accept them as trainees or observers has been taken as evidence of colour prejudice when colour has nothing to do with the matter." Not every commercial college is ready to assume the special responsibility which the re-enrolment of overseas students entail. Even if the courses that Commonwealth students enter do not suit their needs, responsibility does not end with the class-room, and they should never be left to sink or swim as best as they can.

Retail Sales at High Level

Estimates of retail sales in October, made by the U.K Board of Trade, indicate a 3-percent increase, compared with the corresponding month of last year. This rise goes against a 5-percent increase recorded in the second and third quarters. This is not unexpected in view of the sharp upward movement in the trend of retail sales which set in in October last year. A substantial part of that rise was in sales of durable goods, and was directly attributable to the first stage of the hire-purchase relaxations in the middle of September 1958. Not surprisingly, the indications from the provisional results for October this year suggest that the increase on the year earlier for durable goods shops was appreciably smaller than in recent months. In absolute terms, however, sales are at a high level.

U.K. Disposal of Tin Stocks

The U.K. Board of Trade is to dispose of the 2,500 tons of tin still held by it. Selling will be handled by the Buffer Stock Manager of the International Tin Council, who will take over the Board's tin with effect from 28th December.

RAW JUTE PRICES RISE: ARRIVALS REMAIN DISAPPOINTING

SPECULATORS EXPECT SUBSTANTIAL DECREASE IN MILLS' FIBRE STOCKS

THE publication of the raw jute arrival figures, as often, has had a pronounced effect on the Calcutta markets. The fact that the total arrivals in October, and the separate figures from India and Pakistan, were the lowest for about six years made operators bullish. A drop was anticipated by the market in general, but the actual fall was much larger than was expected. There are still some who wish to wait until the end of the year—when normal transport conditions will make their effect felt—before expressing any definite views about raw jute imports, but they are few and far between. Sellers are steadily requesting mills for the option of delivery by lorry instead of rail, as "rail booking is severely restricted owing to the large quantities of jute awaiting shipment." This point is lost sight of by those very sellers when it is a question of assessing the significance of raw jute arrivals by rail.

Total arrivals during October amounted to 528,900 bales, made up of 11,500 bales from Pakistan and 517,400 bales from Indian stations. This was an increase of 174,250 bales over September 1959. Arrivals from Pakistan showed an improvement of 600 bales to 11,500 bales over the September arrivals, which were the lowest on record. Arrivals from Indian stations jumped by 173,650 bales to 517,400 bales. The figures make very poor reading when compared with the arrivals for October 1958. Arrivals from Pakistan are down by 37,900 bales, and those from India by 113,950 bales, making a total drop of 151,850 bales. The fall is emphasised when total arrivals in the current season are compared with arrivals in the corresponding period of the last season. The comparison shows that arrivals from Pakistan are down by 101,500 bales and those from India by 137,050 bales—a total difference of 238,550 bales.

During the current season—from July to October 1959—Calcutta mills, it is estimated, have consumed a total of 1,977,800 bales of raw jute. During this time, arrivals reached 1,530,300 bales—a deficit of 447,500 bales. In the last season, over a similar period, the deficit was 187,150 bales. It is normal for the gap between raw jute consumption and raw jute arrivals to narrow rapidly in October and November, and by the end of the year for arrivals to overtake consumption. This is still possible—in spite of this year's big deficit, which amounts to nearly one month's consumption—if arrivals in November can be kept up to the normal November average of about 800,000 bales.

The large difference between raw jute arrivals and consumption was one of the main points made by speculators when they became bullish. The fact that there is a shortfall indicates that mills have had to reduce their stocks, so the reasoning goes that those stocks cannot be as high as the mills would have the trade think. To some extent, this is confirmed by the mills' recent attitude on the settlement of claims. Often they are eager to get the jute used up and are prepared to settle at lower amounts than their original claim rather than go to arbitration, which takes time. If they had ample stocks, the question of the time taken for arbitration should not arise.

Forward Rates Improve

In spite of the fact that America has been taking little interest in the Calcutta markets, and genuine business elsewhere has been scarce, hessians have shown remarkable powers of recovery. Steady speculative activity in forward hessians has helped, presumably in preparation for the U.S.A.'s eventual entry into the market, which many think cannot be long delayed. Around 13th October, 40in. 10oz. hessians for near delivery were at a premium of Re. 1 over the April-June 1960 position. Within a month, the two sections were on par at Rs. 40 (14th November). Now the April-June position shows a premium of about 40nP or 50nP over November. In actual fact, this is due not so much to a recovery in the forward position as to a decline in the near deliveries. On 13th October, April-June 10oz. hessians stood at Rs. 40.10 and near deliveries at Rs. 41.10. On 14th November, both quotations were at Rs. 40, which meant that ready goods had dropped by over Re. 1. The current quotations show that ready goods have dropped further to Rs. 39.85, while forward shipments have advanced to Rs. 40.35. Thus the near positions have dropped by Rs. 1.25 while forward goods have increased by about 25nP. In heavy goods, similar trends have been apparent over the period. B Twills for April-June shipment have advanced from Rs. 100.10 and a Rs. 4 discount to Rs. 102.05 and a Rs. 1.35 discount, which means that ready goods have dropped from Rs. 104.10 to Rs. 103.40. The difference is even more marked in forward cornsacks. On 13th October, they were at a Rs. 3 discount, while now they are at a premium of 10nP, and the April-June quotation Rs. 1.75 higher than on 13th October. The trends augur well for the future, especially in hessians, as it is a very long time since forward hessians were quoted at a premium over other positions.

THE JUTE MARKETS

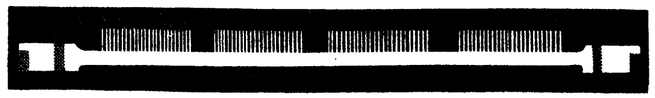
Heavy speculative activity was a feature of the futures market during the past week and prices showed wide variations. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period from 18th November to 24th November, were as follows:

	Hessians 40in. 10oz. November		Sacking B Twills November		Raw Jute December	
	Rs. a 100 yds	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos	
Opening	39.60	43.31	102.20	24.56	65.80	
Highest	39.88	43.61	103.10	25.94	69.50	
Lowest	39.26	42.93	101.30	24.42	65.43	
Closing	39.78	43.50	102.60	25.70	68.86	

Manufactured Goods: The steadiness which developed in the goods market towards the close of the last period did not continue at the opening of the past week. The rise had been inspired mainly by raw jute, but with no actual support, from either local or overseas markets, the position was difficult to maintain. Speculators attempted to consolidate their strength, and activity in the futures market was brisk; but the attempt faltered when rumours were spread that recent shipments of goods to China had been refused by that country. All the previous gains were lost almost overnight, and opening quotations for B Twills on Thursday morning indicated that November shipment had slumped by 95nP to Rs. 102.20 and April-June shipment by Rs. 1.05 to Rs. 99.60. Hessians reacted in sympathy and lost about 30nP for 40in. 10oz. to rule at Rs. 39.40 for both the near and the forward positions. The steadiness of the fibre market, however, proved too strong and on Friday substantial gains were recorded, especially in the forward section, where renewed covering activity in the futures market aided the recovery. Forward B Twills jumped up by Rs. 1.25 and the near position by 65nP, while forward 10oz. hessian improved by 50nP and the near delivery by 15nP. Profit-taking caused some small losses on Saturday but these were soon nullified as prices advanced rapidly on speculative activity, which was mainly confined to the forward section, and also on account of the very firm jute market. On Monday November B Twills had improved to Rs. 103.55 with April-June shipment shooting up to Rs. 101.25. Hessians showed a general advance of 30nP, with 10oz. quotations at Rs. 39.85 and Rs. 40.20, respectively, for the near and forward positions. Thus after opening at par, forward hessians had acquired a 35nP premium. The steadiness of the forward section continued on Tuesday with further advances, but near delivery B Twills fell back slightly due to lack of interest.

Opening quotations on Wednesday morning were as follows:

	Nov.	Dec.	Jan.-March	April-June
40in. 8oz.	32.80 (35.75)	32.65 (35.59)	32.45 (35.37)	32.35 (35.26)
40in. 10oz.	39.35 (43.44)	40.00 (43.6)	40.25 (43.87)	40.50 (43.98)
B Twills	103.75	102.85	102.60	102.10
Heavy Cees (Plain)	105.75	104.25	102.40	101.90
A Twills	125.75	124.50	122.25	121.25
Liverpools	115.75	114.75	114.00	113.25
Cornsacks	102.75	103.50	103.50	103.00



Raw Jute: The fibre market was very firm during the past week. The raw jute arrival figures and the continued small imports in many upcountry stations made sellers bullish. Opinions about the availability of jute varied widely, and it was impossible to gauge the real trend as heavy speculative activity dominated proceedings. Calcutta mills showed interest almost from the start, and good business was reported in many instances although its exact volume was difficult to assess due to the mills' reluctance to admit the business done. Much of it consisted of under-the-counter transactions, so the prices reported varied considerably. As the week progressed, sellers became very firm in their ideas, and prices rose rapidly. At the opening on Thursday, Assam jute was quoted at Rs. 23.75 a maund basis Bottoms, but soon it rose 50nP on covering and mill interest. Minor transactions on Friday brought very little alteration in prices. But on Saturday, and over the week-end, heavy buying combined with speculative activity forced Assam rates up by Re. 1 to Rs. 25.25. This was the largest single rise for several months. Mills lost interest at the enhanced rate, but the market remained steady on covering

BROKEN—BUT CERTAINLY NOT USELESS

Do you throw away a broken SCREWGRILL FALLER BAR as useless and buy a new one? Well now you need'nt! Because we at LAGAN, have installed a new FALLER BAR repair plant which does a marvellous job of repairing—MACKIE FALLERS—so good in fact, that your once broken FALLER BAR, can be made to look like new and serve as well too.

THE LAGAN JUTE MACHINERY CO. PRIVATE LIMITED

24, Chittaranjan Avenue, Calcutta-12.

business. The small imports upcountry were again reflected in the wagon arrivals in Cossipore, where 540 wagons were reported over the week. This was very much below the average for the time of year. Towards the close, the market was firm due to the rising moiusal rates and reports of continued interest by mills.

Business was done in Assam jute from Rs 24.75 to Rs. 25.25 and in Northern jute at Rs. 25. Assam Tossa was done at Rs. 26 as was Karimpore Tossa. Daissee passed at Rs. 26 to Rs. 27 for selected marks. There was demand for mesta. Daissee mesta was done at Rs. 23.75 and Assam mesta up to Rs. 25. Selected Northern mesta, Middles only, was also done at Rs 27. Small lots of jungli mesta were reported at Rs. 23.50.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs a maund	Rs a 100 ki'os	Shipment
Assam	25.25	26.67	Nov.-Dec.

1st to 10th September, 1959	16,468.4	211.6	16,680.0

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES FIRM

(FROM OUR DUNDEE CORRESPONDENT)

THE fear of higher prices has caused consumers of yarns and cloth to buy much more freely again, and producers of these in most countries are comfortably placed with orders more than they had been for some years past. Some of them are well booked for the next three months and others are in a position to raise further business for various reasons, the main one being the scarcity of workers.

There is no obvious reason for a rising trend in raw jute prices in Pakistan. The fact that the jute mills in that country are to work 12 hours extra each week may have something to do with it, but the upward movement commenced before there was any news of the increased working time. There is at present a scarcity of the finer qualities of fibre, such as Crack Lightnings and Crack Hearts, but it is now reported that Mill Firsts and Mill Lightnings are none too easily available. Offers from shippers have lately been noticeably reduced in most grades of white jute.

Mill Firsts are now offered lowest at £110 but up to £114 is also quoted, with Mill Lightnings at £95 to 100. Mill Hearts at £82 to £85 and Grade Hearts £67 to £69, November-December, c.i.f. U.K.-Continent. Dark jute is not of much interest as far as Daissee is concerned, but spinners are keen on buying Grade Tossa-4, for which they are paying £95 to £97, c.i.f. and Grade Tossa-2/3 is quoted at £107 lowest and up to £110 is offered in a number of cases, November-December. Good marks of Daissee-2/3 are from £95 and Grade has been raised to £88, same shipment. Spinners are not showing any interest in offers of jute on spot or afloat, but they are willing to buy for shipment, March-April onwards, if there are sellers at around present prices.

The Calcutta goods market has been erratic, but with a downward tendency. Hessians have fallen to 59s 6d for 40in. 10oz. and 45s 9d for 7½oz., November, 59s 9d and 45s 6d December and 59s 9d and 45s January-March, with B Twills at 153s 6d, 152s 6d and 151s 6d for the respective positions of shipment, all f.o.b., Calcutta.

Prices for jute yarns and cloth are firm, and any further advance in raw material rates will probably lead to a rise in the prices of manufactures.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953: 100) receded by 0.3 percent to 118.5 during the week ended 7th November, 1959, compared with 118.8 (revised) for the earlier week. The index was lower by 1.2 percent when compared with that of a month ago but was higher by 3.2 percent than that of the corresponding week of the previous year. Lower prices of jowar in Rohtak (15%) and in Jhansi (6%), potatoes in Delhi (12%), milk (11%), bajra in Hissar and Jodhpur (7% each), rice in Varanasi and urad in Bombay (6% each), maize in Khagaria, arhar in Bombay and eggs (5% each), cashewnuts and ghee (3% each), masur (2%) and wheat, bananas, gingelly oil, coconut oil, tea and cardamoms (1% each) brought down the index for Food Articles by 1.0 percent to 122.1, against 123.3 for the earlier week. The prices of orange (17%), onions (11%), rice in Dumka (10%) and in Matihat and Imphal (7% each), jowar in Hyderabad (9%), maize in Dohed and Bhilwara (6% each) and in Ludhiana (5%), bajra in Agra and fish (5% each), black pepper (4%), coffee (2%) and gram, mung, groundnut oil, gur and chillies (1% each), however, moved up. The index for Tobacco rose by 1.8 percent to 104.2 due to an increase in the prices of raw tobacco (2%). The index for the Fuel, Power, Light and Lubricants group worked out to 116.4, against 116.5 for the previous week. The prices of castor oil (1%) moved down. The index for Industrial Raw Materials advanced by 0.7 percent to 122.0, compared with 121.2 (revised) for the previous week due to a rise in the prices of lac (4%), groundnuts (2%) and raw jute, linseed and rapeseed (1% each), although the prices of bamboos (6%), tanning materials (2%) and raw wool, raw silk and cottonseed (1% each) showed declines. The prices of cotton yarn and zinc (2% each) and linseed oil (1%) moved up while leather (1%) showed a fall and the index for Intermediate Products advanced by 0.6 percent to 115.8, compared with 115.1 (revised) for the earlier week. The index for Finished Products stood at 110.7, against 110.6 for the previous week. Items which showed variations during the week were: jute manufactures, silk manufactures, bricks and tiles and glass (1% each) and oilcakes (1%).

MACH 3 TO 3.5 COMMERCIAL AIRCRAFT BY 1965 FORECAST

The next step in commercial aviation will be a transport capable of flying from New York to Amsterdam in 116 minutes, a top executive of Lockheed Aircraft Corporation has stated. Dr. Hall Hibbard, senior vice president of the corporation, has said that the aircraft which will cruise in the Mach 3 to 3.5 range could be operational in 1965 if current plans were implemented. Looking further into the future, the Lockheed official predicted a "clearly attractive commercial transport potential at Mach numbers above 5." He disclosed that design studies had been executed on both winged and wingless take-off commercial transports, having a cruising speed of Mach 6 to 7 and a range of 3,500 nautical miles, with reserves. These studies had been based upon current state-of-the-art in turbo-ramjets and what might expected in future pure ram-jet efficiencies. A vehicle flying at Mach 7, he stated, would cover the distance between Amsterdam and Los Angeles in an elapsed flight time of 98 minutes.

Further research must be accomplished to settle the question of winged or wingless vehicles at Mach 5 and higher. One attraction of the wingless design was its reduced structural weight—particularly in view of continually rising flight equilibrium temperatures. In other words, said Dr. Hibbard, at these high speeds the less airplane there was to be subjected to air friction, and hence heat, the better.

LAST DATE FOR APPLICATIONS FOR RENEWAL OF MANAGING AGENCIES

The Government of India has recently notified that companies seeking the Government's approval for re-appointment of their managing agents should apply to the Department of Company Law Administration in the Central Ministry of Commerce and Industry before 29th February, 1960. Companies which fail to apply within this date would do so at their own risk. The Companies Act, 1956, provides that the term of office of all managing agents will expire on 15th August, 1960 (if it does not expire earlier in accordance with the provision applicable immediately before 1st April, 1956) unless before that date the managing agent is re-appointed for a fresh term in accordance with the provisions of the Companies Act. While some companies have already asked for the Government's approval to the re-appointment of their managing agents, a large number of companies run by managing agents at present have yet to apply for its approval. The Government has also invited the attention of companies to the recent amendment to the Companies (Central Government's) General Rules and Forms. Under the amended procedure, seven copies of the application together with an equal number of copies of all documents, should be forwarded to the Department of Company Law Administration, with two certified copies of the notice published in newspapers. Seven certified copies of the resolution passed by the shareholders approving the appointment of the managing agents should also be sent.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to October 1959. As compared with September, the October Index for Food shows a rise of 4 points, while those for Clothing, Fuel & Lighting and Miscellaneous remain unchanged at 550, 282 and 292 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 2 points during October 1959.

NEGOTIATIONS WITH BURMA FOR VISCOUNTS FAIL

B.O.A.C.-AIR-INDIA TALKS ABOUT JOINT OPERATIONS ON U.K.-AUSTRALIA ROUTE

(FROM OUR NEW DELHI CORRESPONDENT)

INDIA'S negotiations with Burma for the purchase of three brand new *Viscounts* with their spares have fallen through. The deal would have saved India Rs. 30 lakhs but prolonged bargaining was apparently responsible for the loss of the opportunity. Discussions continued for weeks, first with the Ministry of Finance and then with the Planning Commission. Ultimately, it was decided to purchase the aircraft on a barter basis, Burma taking Indian goods. Burma, however, wanted payment in pound sterling. But later she changed her mind and decided to resume air services to India and Ceylon.

It is true that the Defence Ministry has a programme to manufacture *Avros* in India. These will be available in 1963. The Indian Airlines Corporation is losing money by operating *Dakotas*. It wants their replacement immediately. As already reported, it has decided to purchase five Dutch aircraft, Fokker *Friendship*. But their purchase has been entrusted to the State Trading Corporation to strike a barter deal—Fokker *Friendships* in exchange for manganese and iron ores. Such deals do take time.

B.O.A.C. Chief in India

Mr. Basil Smallpeice, managing director of B.O.A.C., arrived in Delhi last week for talks with Air-India International on the formation of a "parallel partnership." B.O.A.C.'s general manager for eastern routes, Mr. B. W. Bampfylde, will also participate in these discussions. The pooling talks are due to open in Bombay this week, and before leaving, Mr. Smallpeice will open the new offices of B.O.A.C. in New Delhi. The talks, it is understood, will concern pooling arrangements for services on the airlines' Britain-India-Australia routes and the integration of their flights through these areas. B.O.A.C. and the Australian airline, Qantas, already operate in partnership on this route. Preliminary talks on the formation of a parallel partnership among B.O.A.C., Air-India International and Qantas were held in London last August.

A pooling arrangement between B.O.A.C., Qantas and Air-India on the London-Sydney Kangaroo route may probably be concluded before the end of the year, Australia's Director-General of Civil Aviation, Mr. D. G. Anderson reports. The plan would be an extension of the 25-year B.O.A.C.-Q.E.A. partnership to include the Indian carrier. Each airline would retain its identity and pay its own costs, but would agree on the number of services each would make available. Revenues would be shared on the basis of aircraft capacity provided. Meanwhile, India and Australia have reached an interim agreement for matching air services between the two countries. Qantas' frequency of four services will be reduced to two and Air-India's increased to two a week. Equalising of the flights was agreed to at the instance of India because Qantas is introducing *707* jet services through India, and with only three *707s* on order, Air-India will not be able to include jet services on the Australia run for some years. It is expected that Air-India will be able only to operate jets five days a week to London and twice a week to Tokyo, leaving only *Super-Constellations* for the Australia run.

Air-India Pay Later Plan

The "pay later plan" is a credit scheme promoted by Air-India International in collaboration with the Bank of India Ltd. under which a prospective passenger intending to travel by Air-India will be enabled to pay the cost of air passage in easy instalments. An applicant wishing to avail himself of the facility under the "pay later plan" will submit his application to the local branch of the Bank of India Ltd. together with an application fee of Rs. 10 in India and £1 or its equivalent in countries outside India, for a loan up to 80 percent of the value of the charges involved. The bank makes the necessary enquiries about the applicant, and, at its discretion, grants the loan at the rate of 1 percent interest a month. The loan is repayable in 15 equal instalments. On the application being accepted, the applicant is required to pay 20 percent of the cost of the fare to the bank. The bank then pays the full cost of the fare to Air-India International. The application fee of Rs. 10 or £1 is not refundable if the loan application is rejected and in case the application is approved, the fee will be adjusted against the last instalment. Air-India International is completely absolved of all financial risk and liability arising out of the operation of this plan, namely, the non-payment of instalments dues to the bank by the applicant. The scheme was introduced with effect from 2nd October, and by 1st November, 1959, 20 applications had been received of which 21 have been accepted.

Delhi-Chandigarh-Kulu Service

A Delhi-Chandigarh-Kulu air service was inaugurated on 3rd October, 1959, on a twice-weekly frequency and operated until 2nd November, 1959. The service will be resumed in April next. The Indian Airlines Corporation intends to operate the service only during the summer season, namely April-October.

No Decision on New World Airport for Delhi

It has not been possible to take a final decision so far on the question of establishing a separate international civil airport for Delhi. In the meantime, Palam will continue to be in joint use by the I.A.F and the Civil Aviation Department, and it is also being developed for *Boeing* jet operations.

B.O.A.C. Cairo Service

B.O.A.C. hopes shortly to resume its London-Cairo service, dropped since the 1956 Suez crisis, with *Comet IVs*. The airline's four weekly flights on the Tokyo-London route will include a Tokyo-Hongkong-Singapore-Colombo-Bombay direct service, starting in November. B.O.A.C. plans to open its polar *707* jet service between London and San Francisco in the fall of 1960.

Lufthansa in Far East

Lufthansa's Far East service which began this month include two flights weekly to Bangkok *via* Dusseldorf, Frankfurt, Rome and Cairo, and will be extended next year to Tokyo and eventually to the U.S. west coast. Air France and Lufthansa have already reached an agreement on pooled services over the polar route from Europe to the west coast.

Lufthansa plans to extend three weekly *1049G* flights to Teheran and Delhi next winter, *Inter Avia* reports. In September, the airline announced it would extend present flights to Cairo, Karachi, Calcutta and Bangkok on 1st November.

Pakistan Buys Dutch Aircraft

Pakistan International Airlines has ordered three Fokker *F-27s* and taken an option on six more. First of the three will be delivered some time next year; the six on option are set for delivery in 1961.

Anglo-Italian Talks

Anglo-Italian talks in Rome on additional commercial rights for British and Italian carriers have been adjourned without agreement. Italy asked for a daily service on its Rome-London-New York route instead of the present three weekly flights; the British want to operate regular services to Turin, Rimini, Pisa and Alghero.

U.S. Aircraft Sales on Credit

In 25 years of lending, the U.S. Export-Import Bank has helped nine U.S. manufacturers sell 130 commercial aircraft costing £316 million to 21 airlines abroad by authorising credits of $174.6 million, the Bank's annual report to Congress shows. New credits extended since the report was issued bring total aircraft to 135, including 30 jets. Through the Bank's financing, Douglas has sold eight *DC-8s* in Italy and Japan (and three to Iberia, although the Bank's participation has not been formally announced); *Boeing* has sold 17 *707s* to Air France and three to the Union of South Africa; Convair has sold 29 *Convairs* of various types and three Lockheed *Electras* have been sold to Indonesia.

U.S. Demand for Jet Fuel

Total U.S. domestic demand for jet fuel, it is estimated, will be 500,000 barrels a day by 1964 (for kerosene-type fuels alone 250,000 barrels a day), a considerable increase over earlier forecasts, the U.S. *Oil and Gas Journal* reports. Current total demand is running at about 300,000 barrels a day of commercial consumption, which is principally for kerosene-type fuels, about 36,000 barrels a day. (Aviation gas demand amounts to about 201,000 barrels daily). Major reasons for the expected rise in demand is that commercial jets and turboprops are entering service faster than expected and Government economies have had less effect on military requirements than had been anticipated. There are about 500 turboprops and 50 pure jets in operation in the world today, compared with 4,300 piston planes. A year ago, the prediction was that jet and turboprop deliveries in 1959 and up to 1961 would total 667 aircraft. New deliveries worldwide in this three-year period are expected to total 828, a 24-percent increase over the previous estimate.

Japan Plans Round-the-World Service

Japan Airlines plans to establish a round-the-world service by 1963, according to a "white paper" released by the Civil Aviation Bureau on 20th September. In 1961, the airline hopes to begin its transpolar service between Tokyo and London and to open another route to London *via* India, the Middle and Near East. Japan Airlines' managing director, Mr. Kinjiro Yuchi, said the airline was planning to buy two more *DC-8s* for the round-the-world service. The first of four *DC-8s* now on order will be delivered in May next year. Mr. Yuchi will sign a $17-million loan contract with the U.S. Export-Import Bank in Washington to help finance the purchase of the four jets. The credit was approved by the Bank in December 1956.

New Service Plan under Air Union

Air France and Lufthansa plan to begin polar flights between Europe and the U.S. west coast early next year under the auspices of the European Air Union. They will pool services and equipment, probably using *Lockheed 1649s*. Air France will operate three flights between San Francisco-Los Angeles and Paris each week. Lufthansa three flights between these cities and Frankfurt.

"Same price everywhere"

UNDER SECRETARY TO GOVT. 30 NOV 1959 PUBLIC DEPARTMENT

It really is true then, Bhai Sahib, that Brooke Bond Tea is available everywhere?

It certainly is, my friend. No matter where you are in this vast country of ours you are sure to be able to buy a packet of Brooke Bond Tea—fresh, pure and at the same price everywhere, except of course for local taxes.

It sounds quite fantastic, Bhai Sahib—Tell me, how do Brooke Bond do it?

Basically, by operating on the simple principle that Brooke Bond Tea must move from factory to consumer within the shortest possible space of time. To put this in practice Brooke Bond employ almost every means of transport in order to reach such remote regions as the deserts of Rajasthan or the villages situated at 10,000 feet on the old Hindusthan-Tibet trade route from Theog to Chini, north of Simla. Camels and mules, trains and bullock-carts, boats, elephants and cycle rickshaws all play their part in the distribution of Brooke Bond Tea.

But surely this involves tremendous organisation and expense, Bhai Sahib?

True—but only by careful organisation and going to all this expense can Brooke Bond make sure that they give consumers full value for their money. Brooke Bond's unique system of direct distribution means there are no hold-ups at intermediate depots or godowns. That's why Brooke Bond Tea is always fresh. It means that there is no tampering with the Company's products, and so the tea the customer buys is always fresh and good. And, finally, direct distribution guarantees that the selling price can be determined by the Company and not by speculators and middle-men.

Bhai Sahib and friend studying a Brooke Bond Tea Map

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 21, held on 23rd and 25th November, offerings at the Export auction amounted to 69,906 packages. There was a very strong and general demand for all descriptions. Clean black teas, medium Assam B.O.P.'s and whole leaf grades were particularly strong features. The best liquoring C.T.C. teas met with strong competition and were sometimes dearer, but some of the poorer types were at times easier. Brown leafed Dooars teas were also in strong demand and appreciated in price.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.10 to 2.16	1.95 to 2.00
Plain B.P.	1.92 to 1.98	1.58 to 1.62
Plain Fannings	2.08 to 2.14	1.70 to 1.76
Medium B.P.	1.94 to 2.08	1.72
Medium Fannings	2.12 to 2.24	1.78 to 1.82
Best Assam C.T.C. B.P	2.70 to 2.90	2.00 to 2.05
Best Assam C.T.C. Fannings	2.70 to 2.95	2.10 to 2.15

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings totalled 22,815 chests. The market opened on a very strong note with exportable orthodox Dusts selling at 20nP and sometimes more, above the previous rates. As the sale progressed, however, prices declined and at the close these descriptions sold at from 4nP to 10nP above last rates. Legg-cut Dusts and the few Darjeelings on offer shared in the stronger demand. C.T.C. teas were keenly sought after and were fully firm and often from 10nP to 20nP dearer, particularly the poorer descriptions.

Quotations

	1959 Rs.	1958 Rs.
Medium Dooars Dust	2.18 to 2.24	1.84
Medium Assam Dust	2.04 to 2.18	1.83
Medium Assam C.T.C. Dust	2.10 to 2.30	1.60 to 2.20
Best Assam C.T.C. Dust	2.60 to 2.90	3.60 to 3.00

(Quotations are exclusive of excise duty.)

There was a strong general demand for the 909 chests of Leaf on offer and most teas realised prices which were well above last rates.

FREIGHT RATES WEAKEN

AS many ships have come out of lay-up and tankers are showing too much interest in the grain markets, freight rates in the Atlantic markets which reached their peak seem to be crumbling when Far Eastern rates are holding on. Wheat in bulk from Sydney to Karachi has been fixed at 62s 6d with 1,000 discharge free. Ore from West Coast India to Constanza paid 51s 6d f.i.o. and trimmed, Mormugao-Holland paid 50s f.i.o.t. A fixture for 7,400 tons 10 percent coal Calcutta-Colombo 1st to 30th January has been reported at 35s f.i.o. and trimmed, 1,000 loading, 500 discharge. According to the new contract signed between the State Trading Corporation and Japanese shipowners, effective from September 1959, daily loading rates at Calcutta have been increased from 900 tons to 1,500 tons when a vessel loads at 5 K.G.D., and 1,400 tons when a vessel loads at two berths 1 G. R. Jetty and 5 K.G.D.

LINSEED EASIER

There was little change in the market last week. Prices eased slightly as trading was very dull and little business was reported. Mills operated on a limited scale, and sellers were rather reserved. Oilcake prices declined. Due to the dull conditions in foreign markets, local shippers did not buy. The oil market was inactive, with both buyers and sellers pausing. Following small sales to the U.K. last week at £116, recent offers from India at £116 have been refused. Latest quotations are as follows: Ready Rs. 25.87 a maund, November-December Rs. 25.87 a maund, May futures Rs. 24.12 a maund.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 17th November and 23rd November, 1959)

Cowhides: Wet Salted (ord.) 10,000 pcs. on the basis of Rs. 13 to Rs. 15; Wet Salted (Slaughtered) 47,000 pcs. on the basis of Rs. 12.50 to Rs. 15 and Rs. 18 to Rs. 27.

Goatskins: Wet Salted (Patna, Daissee, Kustia) 21,800 pcs. on the basis of Rs. 430 to Rs. 450, Rs. 465 to Rs. 512.50 and Rs. 515 to Rs. 525; Wet Salted (he-killed) on the basis of Rs. 6 and (she-killed) on the basis of Rs. 5.75 a piece; Assam-Purulia - Dinajpur - Murshidabad 43,000 pcs. on the basis of Rs. 410 to Rs. 475 and Rs. 505 to Rs. 530; Purneah-Kissenganj 20,600 pcs. on the basis of Rs. 500 to Rs. 515 and Rs. 530 to Rs. 545; Patna-Pakur 39,900 pcs. on the basis of Rs. 440 to Rs. 450 and Rs. 460 to Rs. 480; Muzafferpore-Patna 1,100 pcs. on the basis of Rs. 530; Muzafferpore-Purneah (heavy) 1,400 pcs. on the basis of Rs. 625.

Bazaar Stocks

(23rd November, 1959)

Cowhides: Wet Salted 127,600 pcs.

Plantation Topics

PEPPER PRICES RISING

KEEN FOREIGN DEMAND REPORTED

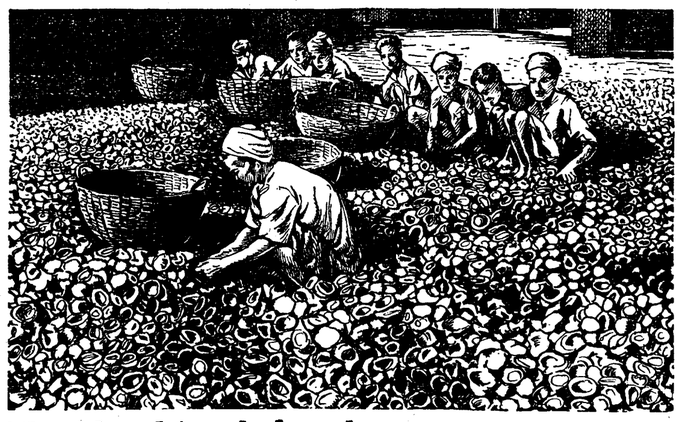
(FROM OUR SOUTH INDIAN CORRESPONDENT)

PEPPER prices at the Cochin market rose last week by another Rs. 475 to Rs. 1,375 a candy of 6 cwts., compared with Rs. 575 a candy of 6 cwts. at this time last year. Prices of Indian black pepper rose by over Rs. 600 a candy during the past one month. But an increase of this magnitude at this time of year when the season has just started is not fully justified, although there is a shortage of exportable quality. The paucity of old stocks and the delayed arrival of new crop pepper make it difficult for exporters to meet their export commitments. The foreign demand for the commodity is also great, mainly because of the paucity of supplies from other sources. But all these factors are not sufficient to justify a sharp rise in prices which the market has now witnessed. Dealers say that speculative buying is largely responsible for the recent rise in prices.

The Indian Pepper and Spice Trade Association, under whose auspices forward trading in pepper is conducted at the Cochin market, had to suspend forward trading for three days beginning from 18th November for the clearance of all pending contracts. The settlement terms for clearing these contracts were effected at Rs. 162.50 a cwt. and at Rs. 160.50 a cwt. for December and January deliveries, respectively, following mutual agreement among members to "avoid a crisis in the market" But even after the Association announced this decision, prices for spot supplies continued to rise and reached Rs. 233.50 a cwt. towards the end of the past week. The trade is hesitant to make any firm forecast on the immediate future for Indian pepper. It feels that in view of the keen demand from abroad, Indian pepper might sell well during the new season.

Kerala Bonus Dispute

The Kerala plantation workers' bonus dispute has again gone back to the State Industrial Relations Committee for Plantations, a body consisting of the representatives of workers, estate owners and the Government. It met last week in Ernakulam and discussed the possibilities of arriving at an amicable settlement on the bonus dispute for 1957 and 1958. It is reported that the representatives of labour, who demanded a bonus of 25 percent, have gone down to 9 percent, a figure equivalent to the bonus estate owners in the neighbouring Madras State have agreed to pay according to a recent settlement. They are even said to have indicated their willingness to consider a still lower figure for the sake of arriving at an out-of-court settlement. The representatives of managements, it is gathered, have expressed their inability to accept the plea of labour representatives for a bonus of 9 percent. They pleaded for the evolution of a formula on the basis of the Supreme Court award on bonus instead of arriving at a hotch-potch agreement. They made it clear that they were not at all delaying a solution to the vexed problem but agreed to give due consideration to the figures suggested by workers' representatives. The Industrial Relations Committee is meeting again this week to examine the question. So present indications are that there are possibilities of an agreement on the bonus dispute in view of the realistic attitude of labour representatives.



Coir and Pepper Exports to Russia

There were two errors in the newsletter which appeared in the *Capital* of 12th November. The quantity of pepper exported from Cochin to Russia was 750 tons and not 7,500 tons and that of coir 700 tons and not 7,000 tons.

COCHIN TEA SALES

At Dust Sale H, 360 000 lbs of tea were on offer. There was a strong general demand, and prices were irregularly 5nP to 10nP dearer for everything except high-grows which were firm.

At Sale No. 45, 1,150,000 lbs of tea were on offer. There was a good demand. Plain and low medium grades were firm while mediums and good mediums were irregular and easier. High-grows, which met with selective enquiry, were irregular and lower.

How banking helps the COCONUT OIL INDUSTRY

India ranks second among the coconut growing countries of the world. During the Second Five Year Plan, the Coconut Oil Industry, which is almost exclusively South Indian, has to fulfil a target of 210,000 tons!

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the industry.

We at Palai are proud that so many leading coconut oil producers of South India employ the complete banking service we offer.

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

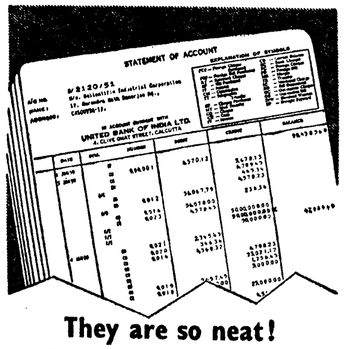
Books

LABOUR PROBLEMS

Labour Problems in Industry. By V. V. Giri. (Published by Asia Publishing House, Bombay. Price Rs. 18, pages 520.)

India has embarked on a large-scale plan for industrialisation, which will lead to the growth of a larger army of industrial workers. But industrial development will depend on whole-hearted co-operation between workers and management, so the question of labour relations is one of great importance. The publication of Mr. Giri's book has, therefore, been opportune. It was originally published in 1958, and in less than 12 months it has had to be published again. The author has availed himself of this opportunity to revise the book, bring it up-to-date and add two new chapters —one on women in industry and another on child labour. Mr. Giri has been "connected with the trade union movement in India from its very inception in various capacities—as an active worker in the field and later as Minister for Labour" in the Governments of Madras and India. Although the book was published when he was the Governor of a State, the impressions of a trade union leader are clearly discernible throughout the book. Mr. Giri advocates the settlement of industrial disputes through the machinery of collective bargaining and voluntary negotiations rather than through compulsory adjudication or Government intervention. But the trade union movement in India being what it is, there are reasons to doubt whether collective bargaining will lead to greater industrial peace. Mr. Giri is not in favour of wage boards, but for reasons different from those usually adduced by employers. The printing and binding are good, and the book discusses in one integrated volume most of the labour problems of India. It will be useful to university students as well as those who wish to understand the background of the Indian and international trade union movements.

STOCK EXCHANGE GUIDE



The Madras Stock Exchange Official Year-Book, 1958-59. (Compiled and published by Madras Stock Exchange Ltd., 322/323, Linghi Chetty Street, Madras 1. Price Rs. 10, pages 1,034.)

The latest edition of this well-known year-book contains, as usual, authentic information on joint-stock enterprises in south India. But in order to give it an all-India character, the compilers have incorporated the details of many companies whose shares are included in the official list of other stock exchanges. The year-book has been systematically revised and brought up-to-date, and the publishers have included the latest balance-sheets of leading companies.

COMPANY AND PUBLIC NOTICES

THE BISRA STONE LIME CO., LTD.

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Wednesday, the 23rd December, 1959, at 10-30 A.M., for the following purposes :—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of Sir B. P. Singh Roy who retires by rotation and being 65 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

TO BE PROPOSED AS AN ORDINARY RESOLUTION :

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir B. P. Singh Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution, namely :—

"Resolved that the Company may borrow money from time to time from its Managing Agents provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. 15,00,000/- in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents."

The Share Transfer Register of the Company will be closed from 8th December, 1959 to 23rd December, 1959, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 13th November, 1959.

Note :—(a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if sanctioned, will be paid on or after the 29th December, 1959, to those Shareholders so entitled whose names appear in the Company's Books on the 23rd December, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 3 and 5 :—

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Sir B. P. Singh Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

With regard to Resolution 5, the Company may require temporary financial accommodation from time to time and as the Managing Agents of the Company are prepared to lend money to it at a rate of interest lower than the prevailing Bank rate, if and when they have surplus funds so to lend, it is proposed to take advantage thereof. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Managing Agents at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Managing Agents constitute a service by them in terms of Section 360 of the Act, and that such arrangement should be approved by the shareholders by Special Resolution pursuant to the above Section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

SMITH, STANISTREET & CO., LTD.

NOTICE

NOTICE is hereby given that the Forty-second Annual General Meeting of the Shareholders of Smith, Stanistreet & Company, Limited, will be held at the Registered Office of the Company, 18, Convent Road, Calcutta 14 at 12 noon on Tuesday, the 22nd December, 1959, for the following purposes :—

(1) To receive and adopt the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1959.
(2) To declare Dividends.
(3) To elect Directors.
(4) To appoint Auditors of the Company for the current year and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 9th December, 1959 to 22nd December, 1959, both days inclusive.

Payment of dividends, if any, declared at this Meeting will be payable to shareholders registered on the Company's Book on 9th December, 1959, or to their mandatees: no applications for Dividend Warrants will be necessary; no claims on behalf of holders of shares on blank transfer will be recognised. Powers of Attorney, etc. where necessary should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,
C. A. BUXTON,
Secretary.

18, Convent Road,
Calcutta, 21st November, 1959.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

On 2nd Cumulative Preference Shares	... ...	4½% per annum.
On Preferred Ordinary Shares		10% per annum.
On 'A' and 'B' Ordinary Shares Dividend	... ...	87 nP. per Share,
and Bonus	... ...	50 nP. per Share.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 12th November, 1959

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED.

NOTICE is hereby given that the Ninety-sixth Annual General Meeting of the Shareholders of the Corporation will be held at Sunderbai Thackersey Hall, Nathibai Thackersey Road, Bombay 1, on Tuesday, 15th December, 1959, at 4 p.m. (S.T.), for the purpose of transacting the following business :—

1. To receive and adopt the Directors' Report and audited accounts for the year ended 31st May, 1959.
2. To sanction the declaration of a dividend.
3. To elect a Director in place of Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., who retires by rotation and is eligible for re-election, by passing the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Corporation.

   "Resolved that Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., who has attained the age of 80 years, and who retires by rotation, be and is hereby re-elected a Director of the Corporation and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
4. To elect a Director in place of Mr. E. S. Vernon-Jones who retires by rotation and being eligible offers himself for re-election.
5. To appoint Mr. James Alexander Ewen Macpherson a Director of the Corporation.
6. To appoint Auditors for the period until the next Annual General Meeting of the Corporation and to fix their remuneration.
7. To appoint Branch Auditors at a remuneration to be fixed by the Board.
8. To consider and if thought fit to pass the following ordinary resolution :

   "That the Corporation hereby approves of the appointment and consents to the continuance of Messrs. Jacobus F. Frank of 120, Wall Street, New York, U.S.A., as the sole Selling Agent of the Corporation's Teas in the U.S.A. for a period of one year commencing from 1st October, 1959 and thereafter for such further period or periods as may be deemed fit not exceeding in the aggregate five years from the 1st October, 1959, on a commission of 2 per cent. on the c. & f. value of the Teas sold through them."

By Order of the Board,
WALLACE & CO.,
Secretaries and Treasurers.

Bombay, 13th November, 1959.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Corporation.

Warrants for the dividend, if declared, will be posted to Shareholders on 4th January, 1960, and will be payable on and from that date.

The Transfer Books of the Corporation will be closed from 23rd November, 1959 to 30th November, 1959, both days inclusive.

Explanatory Statement as required by Section 173 of the Companies Act, 1956

1. The Resolution set out under item 3 is required as Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., has attained the age of 80 years and hence cannot be re-appointed a Director except by a resolution in respect of which special notice has been given in accordance with Sections 190 and 281 of the Companies Act, 1956. Special Notice has been received that this Resolution will be proposed.

Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., has been on the Board of the Corporation for over 28 years. In view of his wide and varied experience in the business life of the country and the valuable services he has rendered to the Corporation, it is most desirable that the Board should continue to receive the benefit of his services.

2. **Resolution No. 5 :** Mr. J. A. E. Macpherson is a Manager of Messrs. Wallace & Co., the Secretaries and Treasurers of the Corporation. He has served the Corporation for many years and is thoroughly acquainted with the business of the Corporation. His advice will, therefore, be of great value to the Board.

3. **Resolution No. 8 :** The Corporation, seeking to increase its Tea Sales in the U.S.A., has appointed Messrs. Jacobus F. Frank of New York as its Sole Selling Agent in that country for a trial period of one year, which may be extended if considered desirable. The Companies Act requires the approval of the Corporation for this appointment.

A copy of the relative Letter of Appointment may be inspected during business hours at the registered office of the Corporation in Bombay.

THE INDIAN IRON & STEEL COMPANY LIMITED.

NOTICE.

NOTICE is hereby given that the Annual General Meeting (being the Forty-second Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 3 p.m. on Monday, the 21st December, 1959, for the following purposes :

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1959 and the Directors' and Auditors' Reports thereon.
2. To confirm as the final dividend for the year ended 31st March, 1959, the interim dividend on the Ordinary Shares declared by the Board on the 11th August, 1959.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Calcutta, 24th November, 1959.

JESSOP AND COMPANY, LIMITED.

NOTICE is hereby given that the Members having passed the Special Resolution to increase the Authorised Capital of the Company and to create 11,00,000 new Ordinary Shares of Rs. 10 each at the Extraordinary General Meeting held on 20th November, 1959, and the consent of the Controller of Capital Issues having been received to the issue of 10,20,000 Rights Ordinary Shares of Rs. 10 each for cash at a price of Rs. 12 per share, the Board of Management have decided to issue and offer 10,20,000 Ordinary Shares at the price of Rs. 12 per share to the existing Ordinary Shareholders, whose names appear on the Register of the Company on 5th December, 1959, in the proportion of one new Ordinary Share to every share held.

The Ordinary Share Transfer Register will be closed from 30th November, 1959 to 5th December, 1959, both days inclusive.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 P.M. on Wednesday, the 30th day of December, 1959, for the following purposes :—

As Special Business.

1. To consider and, if thought fit, to pass with or without modification the following Resolution which will be proposed as Special Resolution, namely :—

RESOLVED that with effect from the first day of March, 1958, the Company may borrow money from time to time from its Managing Agents provided the Managing Agents are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Managing Agents and the Directors of the Company but so that the money lent shall not at any time exceed Rs. Twenty Lacs in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Managing Agents.

As Ordinary Business.

2. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1959, and to receive the Directors' and Auditors' Reports thereon.
3. To declare Dividends recommended by the Directors.
4. To appoint Directors in the place of the retiring Directors.
5. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 9th to 30th December, 1959, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 20th November, 1959.

Note :—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is annexed hereto.

(c) The Dividends, if declared, will be paid on or after the 20th January, 1960, to those shareholders so entitled whose names appear in the Company's books on the 30th December, 1959, or to their mandatees. No application for Dividend Warrants will be necessary.

Explanatory Statement.

As explained in the Directors' Report your Company has the benefit of financial accommodation afforded to it by its Managing Agents who lend money to the Company from time to time as required by it at a rate of interest which is more favourable than the Company could have obtained from its Bankers. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Managing Agents at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Managing Agents constitute a service by them in terms of Section 360 of the Act, and as from the first of March, 1958, such arrangement should be approved by the shareholders by Special Resolution pursuant to the above Section Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

Sir Walter Michelmore and Mr. J. M. Addison Scott, Directors and members of your Company are also Managing Director and Director respectively of Messrs. F. W. Heilgers & Co. (Private) Ltd., the Managing Agents of the Company.

To the extent indicated above the Managing Agents of the Company may be deemed to be interested in the business referred to in the resolution.

TEA COMPANIES

O., Po. and D.d indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Accounts	Reserve & other Funds	Acreage under Tea	Outturn and Average Price per lb realised for crop				Estimate	NAMES	Accounts closed	Mg. Agts. Secretaries etc.	Net Profits including taxation	Dividends per cent			Paid-up per Share	Latest Market Quotations as available until

AR OF ISSUE CALCUTTA, 3rd DECEMBER, 1959. Vol. CXXXXIII No. 3587

UTLOOK FOR INDUSTRIAL EXPANSION

RIAL expansion in India slowed down y during 1958, but has shown an ng recovery this year. Mr. Manubhai tral Minister for Industry, told the Cenory Council of Industries in New Delhi hat the index of industrial production e current year is expected to rise by e points to 148 (base year 1951 equals s compares with an increase of 2.4 points 1958, of 4.7 points to 137.3 in 1957, and ints to 132.6 in 1956. The stock markets cted the general improvement in industnaining buoyant for the greater part of and by subscribing readily to new ues. Their latest setback, however, indithe outlook is now being assessed less ally than Mr Shah might have led his o believe.

are four main reasons why industrial slowed down after the upsurge of 1956. is that the upsurge was, to begin with, primarily by the existence of much pacity. Production could be increased making major capital investments, as ose with the greater prosperity and the ncing featuring the last years of the ear plan. The scope for increasing pro y using idle industrial capacity was ited. To some extent, therefore, a slow- only to be expected, especially as ls in expansion schemes had yet to The second reason for the slow-down imports, especially of consumer goods rial raw materials, were drastically cut the foreign exchange shortage; the many enterprises too was stunted by r restrictions on the capital goods im- e private sector. The third reason was emand for many important commodities setback in agriculture and industry nsumer incomes at a time when they had en hit by inflation and by the drastic chari Budget of May 1957; as a result, oods such as cotton textiles accumulated t production had to be cut back. Final- te stringency which developed in the rkets after life insurance was nationalis6 and stiff new taxes were imposed in ing year, had its inevitable, if slightly fect on subsequent industrial expansion.

ter rate of industrial growth noticed is primarily due to the fact that the all these factors has waned considerough it has by no means disappeared. pansion schemes launched in earlier matured, leading to a substantial inproductive capacity. A large inflow of l has released resources for liberalis- s slightly. With greater experience, the imports too has been rationalised, alurther shift from capital goods to raw still seems necessary. The excellent l harvests of 1958-59 have increased mes and consumer purchasing power, g the demand for essential require- cloth and sugar. Inflation has offset e tax burdens imposed in recent years, sed demand. Finally, the improvement timent of the capital markets has been new burst of industrial investment, ling the financial resources necessary ing it. The general picture which us indicates that although industrial has proceeded apace, it has been considerable lack of balance. Big surcommodities have developed in certain sectors, such as cotton textiles and the same time as acute shortages have others, such as steel and sugar. As long ds are allowed to continue, industrial ill remain rather fitful: sudden spurts ars will alternate with a considerable deceleration of growth in other years. The fear is that, in accordance with this pattern, 1959 may prove to be somewhat exceptional, like 1956 was; and the encouraging rate of expansion noticed during the past few months may not be sustained. The danger of uneven growth is likely to be the greater as long as Government action to correct the surpluses and shortages remains tardy and inadequate. The fiscal adjustments which could have reduced the cloth glut, and the investment programmes such as housing and road construction which could have reduced the cement surplus, for instance, took an unconscionably long time to mature, while the steel and sugar shortages could not be relieved due to foreign exchange difficulties. (In the case of sugar, there was the additional factor of a misguided export policy.)

The latent threats to industrial expansion at the present time remain considerable, and the prospect that it will continue depends on the quality, adequacy and timeliness of the measures which the Government and industrialists take. The country's biggest industry, cotton textiles, has not increased its output this year although demand has risen, stocks have been reduced and a shortage of cloth is in sight. The fear of over-production, as in 1957 and 1958, still seems to be lingering over the mills. It is reinforced by the thought that production costs are rising so fast that strong consumer resistance may develop before long. If the rise in raw cotton prices could be restrained, the industry might be less indolent about increasing its output. But, in the short-term, raw cotton can become cheaper only if imports are liberalised much more than they have been already (the announcement of the latest import quotas has done little to bring down fibre prices). Foreign exchange being as short as it is, this will not be easy, and there is a limit to the amount of cotton the United States will give under her P.L. 480 programmes. Meanwhile, the industry is reluctant to produce more cloth because its labour costs have also risen, directly related as these are to the rise in the cost of living. Another major industry whose production will be restricted by raw material shortages is sugar. The incentives it has recently been given for increasing output are generally considered unlikely to make much difference over the season. The crucial bottleneck in its case is represented by the cane supplies which mills can get; these are limited not only by the discouraging outlook for the new sugarcane crop, but also by the fact that *gur* and *khandsari* producers are making profits big enough to enable them to continue diverting the raw material away from the mills.

Among the other major industries, the chances of an increase in the output of jute goods and tea are highly debatable. Much depends on the state of foreign demand, which varies widely and unpredictably from year to year. The jute industry is beginning to get worried about its raw material supplies; although they are likely to be adequate, their higher cost will tend to push up the price and depress the demand for gunnies. The output of tea, being an agricultural product, is not susceptible to accurate forecasting. Among the basic industries which have an important influence on the general level of production, it seems that coal, for one, will continue to expand; but the expansion will remain restricted, as it has been in recent years, by discouraging Government policies, curbs on equipment imports, and the irrational selling price structure which prevents collieries from raising the financial resources required for investment. The main industry where an increase in output seems assured is iron and steel; the benefits in this case are likely to be transmitted to the engineering industries, but doubts are arising whether in a few years' time India will have the fabricating and processing capacity to use all the steel she produces. Finally, cement output is expected to rise, although much more slowly than the increase in installed capacity as long as demand is depressed by a heavy excise duty.

The general outlook for higher production from most of India's biggest industries is thus not very encouraging. It is true, as Mr H. V. R. Iengar, Governor of the Reserve Bank, emphasised at the annual meeting of the Bureau of Industrial Statistics in Calcutta on Monday, that many new industries have grown up and have expanded fast; since their growth is not fully reflected in the industrial production indices, the latter tend to under-estimate the true increase in industrial activity. But the contribution of the newer industries is only marginal, and their growth offers little consolation if the bigger, established industries are stagnating. To condone the fall in cloth and sugar production by pointing to the rise in sewing machine and hurricane lantern production, for instance, is irrational. The fact is that a 100 percent increase in the supply of sewing machines cannot offset a 5 percent decrease in the supply of cloth. Industrial progress, and the relative importance of the various industries to the economy, has to be judged in that context. Economic growth would be faster if established industries were helped in using their capacity more fully and in developing according to the requirements of the market. For this, it is necessary to ensure that raw material supplies are cheap and plentiful, production costs are low, fiscal adjustments are prompt and adequate, and ideological considerations are not allowed to interfere with essential schemes.

GHEE BEFORE GUNS

RECENT statements by the Prime Minister, Mr. Nehru, and the Defence Minister, Mr. Krishna Menon, suggest that the Government is preparing to grasp another opportunity of diverting criticism from its continued stubborn adherence to Soviet-type planning. The need for a country to put its whole economy rapidly on a war footing certainly justifies planning of the kind which disregards costs and ignores the impact on the standards of living of the people, and it is the required willingness to make such sacrifices in the national cause, which every patriotic citizen possesses, that the Government seems about to play on to vindicate its economic policies. It appears, however, to be forgetting two important points. The first is that India does not require to be put on a war footing yet; any attempt to do so would only play into Chinese hands and weaken the country's long-term ability to resist aggression. And the second is that if the present rigid planning is to be justified in the circumstances of defence emergency, it is automatically disqualified in the previous circumstances of attempting to raise the country's standards of living. Any attempt to use national defence as an excuse for continuing mistaken planning policies can only prove the extent to which these are now more a matter of prestige for the Government or individual Ministers than of building the economy, and the continued official unwillingness to face the true facts of the situation.

The main defence against aggression, Chinese or otherwise, is not, as Mr. Nehru appears to suggest, to continue building heavy industry regardless of expense, or as Mr. Menon states, to achieve self-sufficiency in defence production. Quite simply, it is to make the country richer. The present military threat to India's independence is still more potential than real, as the Prime Minister himself implies when he calls for caution and restraint. The answer to it, therefore, is to put as much fat on the economic bone as possible on the simple principle that in a famine it is the thinnest man who dies first. It would serve India's interests not at all to subordinate every-

thing to building up military might which China could then dwarf in a few years' time by virtue of the more rapid growth of her own economy. It may suit Mr. Menon's satisfaction to be able to rule over an expanded defence empire and no doubt there are still a few short-sighted generals whose anxiety is only relieved when the guns are actually standing at their elbow. But this does not alter the fact that unless a country is already at war—and India is not that yet, thank heaven—defence requirements have to be kept in their proper perspective and for India this means they have to be subordinated to the much more urgent task of expanding the economy and improving the living standards of the people. It would be a pity if, for the sake of attempting to justify the mistakes of past planning, Mr. Nehru were to contradict this truth which he himself has asserted on so many occasions.

There are several points to bear in mind when a country is threatened by an aggressor. The first is how long the danger is likely to last. In India's case, there is every reason to believe that the answer to this question is, indefinitely. Communist powers have always made bad neighbours and there is no reason now for suspecting that China will be any different. The object, therefore, must be to maintain, as far as possible given India's democratic system, the present parity in economic strength between the two countries, or in other words, the defence potential. The second point to remember is that flexibility is an important factor in this defence potential; if there is any doubt on that score, it can be effectively dispelled by studying the rapidity with which the United States built up its military power almost from scratch in the two short years after Pearl Harbour, simply because of the mobility and flexibility which is inherent in the American economic system. The third point, and one which is often lost sight of by the planners, is that people fight best when they have something to fight for. It would be a profound mistake to mortgage the future prosperity of the Indian people too heavily in the cause of their own defence; stubborn opposition to an aggressor does not make sense to a man who has nothing to lose.

If Mr. Nehru's call for calmness and patience is to have any meaning at all, it has to be applied in the economic as well as the political and military fields. This involves avoiding all panicky resorts to emergency measures designed to make India self-supporting in immediate defence requirements. As an aid to balanced thinking on this point, it is as well to remember that the ideas put forward on this question of self-sufficiency by Mr. Menon so far have ignored the most important item of defence for any nation which finds itself threatened—that is, an adequate supply of food. India can never be self-sufficient in her defence requirements until she is able to produce enough to feed her people without outside aid. It is no good pointing to the example of Britain as a nation which managed to win a war on imported food because, until the alliance with the United States made the question of payment irrelevant, Britain was able to buy what she needed. But India is unable to do this; she is already living on foreign aid. What meaning, then, has talk of self-sufficiency in defence production in such circumstances? Would it not be more in accord with common sense if India were to concentrate her scarce resources on producing something she knows all about, food, instead of a series of complicated pieces of equipment in the manufacture of which she is almost completely inexperienced?

In spite of the undeniably increased need to attend to defence matters now, all the old criticisms of present planning methods still stand. There remains too great a concentration on expensive heavy industry and too little on building the essential infra-structure of the economy and improving the lives of the people. Present methods are still too bureaucratic and inefficient and too little attention is being given to the need to produce wealth quickly in ways which are inexpensive and will benefit the people direct. It is still true that too much reliance is placed on raising resources by the inefficient and uneconomic method of taxation and too little on the comparatively painless one of increasing savings. Worst of all, perhaps, there appears to be no change contemplated in the excessive reliance on politically-inspired assistance from abroad. Under these circumstances, talk of self-sufficiency is meaningless, and any attempt to justify the present fashion in planning as being directed to that end is simply misleading. If Ministers want to use the Chinese threat to help the country, their efforts would be better concentrated on calling for more work, greater discipline, an end to provincial squabbling and an increase in self-reliance and initiative. It is these things which ultimately make an economy and a nation, not perpetual State spoonfeeding. And it is these of which India is probably most in need at the moment not self-made army lorries, jet planes, guns or even ammunition.

CONVERTIBILITY AND INTEREST-RATES

IT was said after the debate on the Radcliffe Report in the House of Commons that Britain's Chancellor of the Exchequer, Mr. Heathcoat Amory, had rejected the main recommendations of the Radcliffe Committee. It is a matter of opinion which were the main recommendations, and some people in the City of London feel that the most important were not those relating to organisation and procedure (which the Chancellor rejected) but those concerning monetary policy in general and interest-rates in particular. Mr. Amory did not commit himself on these matters, but he made some general comments that could be interpreted as criticising the Committee's ideas on monetary policy also. A few days earlier Dr. Per Jacobsson, managing director of the International Monetary Fund, lecturing in London, seemed likewise to be aiming his remarks obliquely at the Radcliffe Committee when he contested the argument that changes in interest-rates had little effect on investment in stocks and fixed assets. The Radcliffe Committee was not convinced of the efficacy of Bank rate as an instrument of monetary regulation, whreas Dr. Jacobsson asserted that the raising of the London Bank rate from 5 percent to 7 percent in 1957 was an important factor in the strengthening of Britain's financial position.

Dr. Jacobsson is well known for his insistence on strict monetary behaviour, and his belief that it had subdued inflation over most of the world was not seriously challenged in London when he reiterated this belief in his recent lecture. However, while Dr. Jacobsson and Mr. Amory may agree in disagreeing with the Radcliffe Committee, it is by no means sure that on the question of full convertibility of sterling—a subject that was prominent in Dr. Jacobsson's lecture—their opinions coincide. The essentials of the present position are that non-residents' current-account sterling is convertible, that non-residents' capital-account sterling is restricted, and that residents' sterling is restricted on both current and capital account. Dr. Jacobsson doubts that the remaining restrictions serve any important purpose. Most of the discriminatory restrictions on imports from the dollar area have been removed, and tourists' spending abroad has been freed; so the restrictions on residents' current-account sterling are little more than a formality. The movement of capital from the U.K. to the rest of the sterling area is free; so the restrictions on residents' capital-account sterling, whether necessary or not, are difficult to enforce. Convertibility of non-residents' capital—which means in effect merging "security sterling" with "official sterling", in the same way as "transferable sterling" was merged with "official sterling" at the end of last year—is anyway less important, and nobody in London imagines that it would have appreciable adverse effects.

Controversy is centred on convertibility of residents' capital. It is well known that in times when confidence in sterling has been weak, some resident capital has been converted by devious means, but it cannot be convincingly argued that the controls are mainly ineffective. Dr. Jacobsson does not, indeed, argue along those lines. His main contention is that the risk of a massive flight of resident capital is much less than is generally imagined. "There has never been", he said in his lecture, "any substantial flight of capital from the British market, as distinct from movements of foreign-held funds and changes in 'leads and lags'." In such matters the British Treasury is generally more cautious than the City of London, and it must be said that the City is not, on the whole, convinced by Dr. Jacobsson's arguments. Few people believe that sterling would immediately be subjected to strain if convertibility were extended to residents' capital. But few people believe, either, that sterling will never again be in a position where exchange-control will be needed to support it, if only temporarily. We may reasonably expect—if we apply Dr. Jacobsson's prescription for stable money—that no such crisis as that of 1957 will recur, but the memory lingers, and it is surely obvious that if residents' capital could have been freely converted then the crisis would have been much worse.

Temporary weakening of sterling is not the only contingency that has to be envisaged. The capital-hungry countries, whose requirements may expand considerably at a later stage in the world economic expansion, can exert a strong pull on British capital. The broad policy of the British Government is to allow capital for overseas development to be exported as freely as possible, but some form of regulation is still accepted as necessary. It would, doubtless, be possible to counteract that pull by means of high interest-rates in Britain; but the authorities would not wish to aggravate a problem that is already difficult enough, how to reconcile the requirements of the external payments account with the requirements of the economy at home. This thought is particularly prominent now, when monetary conditions are easier in Britain than in many other countries and British interest-rates are not yet following the upward tendency observable elsewhere. It is indeed, possible that for this reason a considerable amount of foreign money will leave London in the course of the next few months—unless British rates move upward. This is not the most favourable situation in which to consider convertibility of resident capital. The authorities must, moreover, take account of the fact that the relaxation of monetary policy that has assisted the recovery of British industry would necessarily have been restrained if sterling had been fully convertible.

Such arguments will not convince Dr. Jacobsson for he does not accept financial laxity as an excuse for restricting currencies. There is a body of opinion in London holding similar ideas; but the Chancellor would doubtless argue that freedom to manoeuvre did not imply laxity. The course of events will probably represent a compromise between the two positions. Full convertibility will not be achieved in one more move; but Dr. Jacobsson may be right in believing that Great Britain and other Continental countries may be able to relax their controls even more than the Fund requires "sooner than many people expect".

THE WORLD ECONOMY AND THE I. M. F.

THE latest I.M.F. annual report covering the year ended 30th April, 1959, deals with an interesting period for the world economy. In 1958, global industrial production declined by 5 percent, thanks largely to the recession in the United States which later spread to other developed economies of the West. There was also a corresponding fall in the volume of world trade. But by early 1959, things had markedly changed and business activity, including international trade the world over, had improved considerably. Important steps had been taken in the meanwhile to consolidate the monetary improvements achieved since the war, and to strengthen the financial structure of the world's economy. Outstanding events in the later part of the year under review were the sharp rise in industrial production in the United States, together with indications of renewed expansion in other industrial countries; the increase of more than $3,500 million in the gold and foreign exchange reserves of west European countries; the adoption in December 1958 of external convertibility by 14 European countries and the complementary steps taken by 15 others to adjust their exchange controls to the new conditions thus established; and the approval by I.M.F. members at their New Delhi meeting in October 1958 for expanding the Fund's financial resources. The I.M.F. report agrees with the general conclusion that the duration of the third post-war recession, like its two predecessors, was short, chiefly because modern industrial countries appear to have developed strong powers of resistance to the downward thrust of the business cycle. Certain "stabilisers" which have been built into the economies help ensure that consumer income will be well maintained, even when business inventories and outlays on plant and equipment undergo substantial reductions.

The overall world picture thus seems to be reassuring, and it may well go on improving if the United States, which has recently been incurring payments deficits, drops the panicky measures it is taking to correct these, or appropriately modifies them. But it is not so for the under-developed countries. Their experience during the period, the I.M.F. report points out, was much less satisfactory. The decline in the prices of many primary products, which had begun in 1956, continued into 1958, and there was a reduction in the earning capacity of most of these countries, "which created further difficulties in their payments positions and acted as a brake on their economic development." They have had to deal with some difficult problems over the year, so it is to their credit that so many of them have taken steps to withstand inflationary pressures and in some cases introduce and carry out comprehensive stabilisation programmes. The importance of orderly monetary conditions and of the distortions of economic activity and the dissipation of resources which occur when such conditions are absent, has been increasingly realised. Yet they will not be able to combine stability with development if world conditions do not favour them. It is to be expected that with the progress of industrial recovery and expansion in world trade, these countries will reap substantial gains. The hope lies in the fact that the west European economies which import raw materials and foodstuffs from the less-developed countries—nearly twice as much as the United States does—are showing a vigorous measure of expansion, which is bound to have its favourable impact on the under-developed countries' terms of trade.

The improvement in the monetary reserves of many industrial economies including West Germany and Japan was reflected in the transactions of the Fund. Repurchases, equivalent to $537.3 million, and some of them earlier than was required, were twice as large as drawings. But the figure for the latter was in itself substantial—at $263.5 million. The total amount outstanding on 10th April, 1959, under stand-by arrangements, newly concluded or renewed, was $1,132.8 million. Most of the drawings were made by the under-developed countries, to tide over the difficulties in their payments position with the rest of the world. The volume of total I.M.F. transactions, however, was smaller than in the two preceding years, "when the total was dominated by a few large transactions which gave valuable support to several currencies, and in particular to sterling, the French franc, the guilder, the yen, and the Indian rupee." At the end of April 1959, the Fund held $2,500 million in gold and U.S. dollars, but of this only $1,400 million remained uncommitted, compared with uncommitted funds of $3,500 million at the end of September 1956—before the recent active period began. But this should cause no undue anxiety about the resources of the Fund becoming inadequate to meet the needs of its member countries. The decision to double the members' subscriptions, with additional quotas for some richer countries, ought to inspire greater confidence in the Fund as a source of accommodation when members run short of their foreign currency reserves in times of temporary payments difficulties, the report says.

Current News and Comment

Barnagore Jute Recovers

The ordinary shares of the Barnagore Jute Factory Company have risen from Rs. 146 to Rs. 166 since the beginning of this year. Shareholders' confidence is justified by the excellent recovery which the company has made during the year ended March 1959, the detailed accounts of which have just been published. The trading profit has amounted to £286,539, compared with a profit of £40,394 in 1958 and a loss of £121,539 in 1957. The performance is not exceptional, as the industry generally had a better year. Fibre prices were favourable in comparison with gunny prices, and modernisation and renovation plans helped the company. Although Barnagore Jute's working, it is believed, remains satisfactory so far in the current year, the outlook may need to be examined with caution. The prosperity of the industry depends on foreign demand and on adequate supplies of raw jute at reasonable prices. Here prices have increased recently, and a further rise is possible if the lower crop estimates prove correct. The rise will reduce the profit margins of the mills. The keen competition in the goods from foreign producers and from substitutes might make the industry's trading conditions difficult if the price of Indian fibre is not low.

Barnagore Jute has now concentrated production in the East Mill, which has been modernised with a large capital expenditure of £620,000. In concentrating all the production in the East Mill, the South Mill buildings and equipment became surplus to requirements. A contract for the sale of the South Mill land, buildings and machinery for Rs. 29,25,555 was made prior to 30th September, 1958, and the purchaser paid the earnest money of Rs. 2.25 lakhs due under the contract by that date. A dispute has, however, arisen over the terms of the agreement for sale and a case has now been instituted in the Calcutta High Court.

The payment of the ordinary dividend, for the year ended March 1959, comes after an interval of three years. The dividend of 10 percent, less tax, absorbs £16,844. Considering that there is a net profit of £231,385, after providing £55,154 for depreciation, the dividend is adequately covered. This is reassuring, as the next dividend will have to be paid after deducting tax under the Finance Act, 1959. At the present price, the yield amounts to 4 percent. Development rebate reserve is allocated £1,815 and wealth tax £5,800. The carry-forward is £67,968. There are impressive reserves of £693,410, against an ordinary share capital of £5,000 divided into 55,000 shares of £5 each. The bank loan—which has evidently been obtained to help finance modernisation—has declined from £6,001 to £200,347. Current assets are worth £13,572.

Rough Seas for India Steamship

The sluggishness of shipping shares shows that investors are worried about the prospects for the industry There is too much tonnage on the seas, so freight rates are low and competition has increased. As no indication has been forthcoming yet of any big improvement in international trade, it is possible that many ships will remain idle. Indian shipping is suffering, in addition, because port facilities are poor. The freight earnings of the India Steamship Company have increased from Rs. 7.75 crores to Rs. 8.04 crores during the year ended March 1959 but the net profit has declined from Rs. 1.75 crores to Rs. 60.67 lakhs; depreciation has meanwhile been increased from Rs. 59.37 lakhs to Rs. 75.56 lakhs. The rise in freight earnings has not been in proportion to the increase in the number of voyages completed by the fleet. In his chairman's address (a fuller version of which is published elsewhere in this issue of *Capital*) to the annual general meeting of the company, Sir A. Ramaswami Mudaliar points to the deterioration in conditions at Calcutta port. Draft restrictions have been tightened further and the loading of cargo has thus been reduced.

India Steamship is making steady progress in expanding its fleet. During 1958-59, two ships were added, and orders have been placed for three more. Of the latter, one has already been delivered, and it is expected that the other two will be delivered soon. With the additions, the strength of the fleet will increase to 18 ships. Sir Ramaswami mentions the new routes which have been operated. The company has started trading with ports on the Black Sea and along the Levantine coast of the Mediterranean. A direct service to the eastern ports of South America has also begun. The extension of the services should improve earnings, as shippers prefer companies which can carry cargo to many destinations.

The chairman's observations about the dividend tax under the Finance Act, 1959, are likely to worry shareholders. The burden of the tax—as shown by the dividend payments of some companies under the new system—has turned out to be much heavier than was previously thought. India Steamship has had to draw on reserves in order to maintain the ordinary dividend of Re. 1 a share during the year under review. But the dividend is not subject to the tax deduction under the Finance Act, 1959. As future dividends will have to be paid under the Act, more money will be required if the net distribution is to be the same. Whether India Steamship shareholders will be compensated for the loss arising from the prior tax deduction, has not been indicated by the chairman. Bearing in mind the difficult trading conditions which face the industry in the months ahead, shareholders cannot afford to be too optimistic.

A.C.C. Cuts Dividend

The stock market's suspicions about the dividend prospects of the Associated Cement Companies, as reflected by the fall in the shares, have been confirmed by the directors' decision to cut the dividend. Last Friday, they decided to recommend to the annual meeting a dividend of Rs. 11 a share, subject to tax, for the year ended July 1959. The dividend now declared works out to a net figure of Rs. 7.70, against the previous year's tax-free dividend of Rs. 8.50. While investors await the directors' report and balance-sheet which will be published soon, reliable sources indicate that after providing for depreciation, development rebate, tax and other charges, the company has made a profit of about Rs. 1.29 crores, against Rs. 1.81 crores in the previous year. In view of the fact that some new plants came into operation during the year under report, the allocation to depreciation has been increased by about Rs. 32.5 lakhs. The development rebate reserve, it is said, has taken about Rs. 53 lakhs more than it did last year.

Sales during the first half of the accounting year gave cause for anxiety. Following the slackening tempo of developmental activity, the demand for cement on Government account suffered and there was considerable consumer resistance. The situation in the second half of the year, however, improved considerably, with the net result that the company ended the year with total sales about 60,000 tons larger. This, however, is not considered a matter for gratification, as new capacity was added and it had to remain idle. It is said that the directors are not happy about the cut in the dividend but the Government's policy is to blame. Controls, it is said, have also affected the overall results. The company has made a plea for higher prices following the rise in costs since the prices were last fixed.

Belapur Sugar Disappoints

The disappointment which a lower dividend had caused among investors in Belapur Sugar and the sharp reaction in the quotation for the shares—from a high of Rs. 342 to around Rs. 312—which followed the dividend announcement, is understandable. But the Government's policy, as enunciated in the Finance Act, is to blame for this. From the directors' point of view—although they do not say it in their report in so many words—the quantum of dividend has been maintained at

the previous year's level. The dividend for the year ended September 1958 was Rs. 20 (including bonus), absorbing Rs. 28.2 lakhs, and the distribution for the year under review totals Rs. 29.6 lakhs, but the latter at Rs. 21 gross gives a net dividend of Rs. 14.70. While the investor has a right to grouse about a cut in the dividend, for whatever reason it might be, it is true that the excellent balance-sheet the directors have been able to draw up should provide him with some consolation. Sales have been well maintained at Rs. 2.02 crores, against Rs. 2.16 crores in the previous year, while stocks are only Rs. 16.86 lakhs, against Rs. 34.48 lakhs. The factory continued to work satisfactorily, with very few stoppages, and the recovery percentage of sugar was slightly better than in the previous year. The sugar produced was of the high Belapur standard. However, the output was lower as the quantity of cane available from the company's estates was nearly 16 percent less than in the previous year. This is attributed to a lower percentage of Adsali cane planted due to irrigation restrictions, and the consequent increase in the acreage of plant and ratoon crops which have a lower yield. No outside cane was purchased.

After providing Rs. 3.3 lakhs for depreciation, Rs. 37,500 for development rebate reserve and Rs. 12.5 lakhs for tax, there is a net profit of Rs. 27.48 lakhs. This, after the payment of the dividend, leaves Rs. 75,919 to go forward, against Rs. 2.88 lakhs brought in. The company has paid a sum of Rs. 62.01 lakhs, against Rs. 69.13 lakhs, as excise duty and sugarcane cess, while salaries, etcetera, are almost unchanged at Rs. 15.88 lakhs. Against a capital of Rs. 80 lakhs (Rs. 70.49 lakhs paid) the company has a sum of Rs. 113.37 lakhs. The comment in market circles is that the directors could have drawn from the huge reserves and maintained the tax-free dividend. But apparently they have preferred to stick to their usual conservative policy. W. H. Brady and Company are the managing agents.

Another Cable Company

Yet another company for the manufacture of cables will soon come into being. The scheme, the details of which have been worked out, is a joint venture of some leading Bombay and Delhi business men in collaboration with Technoimpex of Hungary. Among the Indian promoters are Mr. B. M. Ghia, Mr. S. G. Samani, Mr. B. M. Patel and Mr. B. K. Dilali. The authorised capital of the company will be Rs. 50 lakhs, of which Rs. 30 lakhs will be in the form of ordinary shares of Rs. 100 each and Rs. 20 lakhs in the form of preference shares, also of Rs. 100 each. The preference shares carry a dividend of 7 percent, tax-free, and are cumulative. Of this, the issued capital will be Rs. 15 lakhs, the preference shares being Rs. 5 lakhs and the ordinary shares Rs. 10 lakhs. The promoters and their friends will take up Rs. 9 lakhs, leaving the balance for public subscription. There will be no managing agents. The Hungarian firm, it is said, will not participate in the capital and will offer only technical collaboration. The name of the company will be Indian Aluminium Cables Limited. It will produce 3,000 tons of cables a year, valued at around Rs. 1.1 crores, working on a single-shift basis. There are proposals to double the capacity of the plant once the factory goes into production, which is likely to be fairly early next year.

Larsen and Toubro: Industrial Machinery

Larsen and Toubro has been working on a very ambitious scheme which may represent one of the biggest ventures in India so far in the manufacture of heavy industrial machinery and plant. It may take about four weeks for full details to become available, but the preliminary information suggests that the scheme is being worked out in collaboration with G.H.H. and two other well-known West German manufacturers of heavy industrial plant. The authorised capital of the joint venture will be Rs. 5 crores. The name of the company to be started for this purpose will be Utkal Machinery Private Limited. The capital will be held equally by Larsen and Toubro and the three German collaborators, the share of each of the four being 25 percent of the total. The issued capital of the company has not been decided yet but it is likely to be Rs. 1 crore or Rs. 1.25 crores. The West German participants will provide the foreign exchange for plant and machinery, the initial cost of which is likely to be Rs. 75 lakhs. The site of the factory will be somewhere near Cuttack in Orissa, and the choice is presumably because of its nearness to the steel and industrial engineering belt of eastern India.

Larsen and Toubro is a company which has grown into prominence within a short time. It began as an importer of industrial equipment, but today it manufactures in its works near Bombay dairy equipment, refrigeration equipment and earth-moving equipment, and has also gone in for manufacturing switch-gears, motor-starters and petrol-dispensing pumps, etcetera. The import side is as busy as present circumstances allow. The collaboration with West German firms for the manufacture of heavy industrial plant is the latest venture.

Larsen and Toubro has an authorised capital of Rs 2 crores, made up of Rs. 20 lakhs of preference capital and Rs. 1.8 crores of equity capital. Of the total, Rs. 95 lakhs are paid-up, comprising Rs. 15 lakhs in preference shares and Rs. 80 lakhs in ordinary shares. The balance-sheet, as on 31st March, 1959, shows a total reserve of Rs. 19.36 lakhs. The gross block of Rs. 68.12 lakhs has been written down to Rs. 24.19 lakhs. The last dividend was Rs. 1.25 on the ordinary shares which, Rs. 10 paid, are quoted currently at around Rs. 26.

Clive Row as an Investment

The ordinary shares of the Clive Row Investment Holding Company have declined to Rs. 9.50. Their par value is Rs. 10 each, and they now seem to be a good investment proposition. During the year ended March 1959, a total dividend of 83nP a share has been paid. Out of this, 46nP have been paid as dividends for the years ended March 1955 and March 1956. If the future dividend were to be maintained at this level of 83nP a share, the yield would work out to 8.7 percent at the present price. The prospects give the hope that there may be little difficulty in paying the same dividend. For a first-rate investment company, the yield is fairly attractive.

During the year under report, the profit has declined from Rs. 17.27 lakhs to Rs. 13.06 lakhs, since investments in the jute and tea industries suffered because of a recession in those industries. During the current year, the working of these two industries has improved considerably. The investment portfolio has been rearranged in order to broaden the spread of investments, and to replace certain ones which were not paying dividends or on which the yields were unsatisfactory. At present, out of total investments of Rs. 1.94 crores, jute accounts for 22 percent, coal for 17 percent, tea for 21 percent and miscellaneous for 40 percent. The big investment in miscellaneous industrials is wise because these are prospering. During the year under report, the carry-forward is Rs. 3,34,488, compared with Rs. 8,10,588 brought in. In December 1958, the company made an offer for the ordinary share capital of Andrew Yule and Co. Ltd. The offer was accepted by the holders of over 96 percent of the Andrew Yule and Co. Ltd ordinary share capital, but lapsed for certain reasons.

Madras Vanaspati may be Leased

A recent notice in the Press indicated that the Madras Vanaspati Company, whose assets were attached by the Madras Government because of unpaid debts, is likely to be taken over on lease by Kusum Products Ltd of Calcutta. The auction of buildings and plant, which was scheduled for 30th November, has been adjourned. The Government may approve the proposed lease in case the rent is paid to it since it has to recover about Rs. 15 lakhs taken as loan by the company. The attachment, and now the transfer, of the company's undertaking in Villupuram suggests that the manufacture of *vanaspati* in Madras has not proved a success. The East Asiatic Company and the Mettur Chemical Company produced the commodity, but the latter had to sell its plant in Trichinopoly to Hindustan Lever Ltd which alone has achieved real success. The Madras Vanaspati Company has not paid a preference dividend since its inception, and its Rs. 100 ordinary shares have long been on offer at Rs. 15. Its Villupuram factory has not attempted production, although it is located in the main groundnut growing area of the south. Its paid-up capital of Rs. 24.86 lakhs went into site, buildings, machinery, etcetera, so working capital was short from the start. Although the chief gainers from the proposed lease will be the creditors rather than the shareholders, the Calcutta concern, which is extending its business to the south, will no doubt try to tap the Madras market, which is gradually taking to *vanaspati* because of the high cost of butter and *ghee*.

Fire Insurance Rates to be Cut

The reduction of fire insurance rates from 1st January, 1960, will mark the culmination of a long controversy. The general directive from the Tariff Committee was to bring about a loss ratio of 37 percent throughout India. According to the *Indian Insurance Year Book, 1958*, net claims in the fire department were 38.8 percent for Indian insurers and 16.9 percent for non-Indian insurers during 1957. It is presumed that the proposed reductions, which generally range between 10 percent and 15 percent, will give the suggested loss ratio. The intention is to have a "progressively rising claims ratio"—a curious objective, considering that the endeavour the world over is to bring down the claims ratio. Any business would try to reduce its losses; if the trend is contrary in relation to India's fire rating structure, the reasons are to be sought elsewhere. The technical side of rating in insurance is governed by statistics of claims spread over a sizeable period, expenses, catastrophe liability reserves, etcetera. The Tariff Committee possessed only limited claims statistics. It did not collate statistics of expenses, nor could it gauge properly other factors influencing insurance rates.

The Controller of Insurance has long been of the view that the money for rebating and paying extra commissions comes from the surplus in fire insurance; there is hardly any surplus in marine and miscellaneous insurance. The Controller, therefore, felt that if, by a "progressively rising claims ratio," the surplus in the hands of fire insurers could be reduced, rebating might be checked. This view was offered regardless of the technical considerations which determine fire insurance rating. The Tariff Committee is considered to be the supreme technical body in the country. Its terms of reference are limited to technical considerations. It was not intended to follow blindly what the Controller of Insurance or any other body might have in view. The fact that the Tariff Committee and the regional councils had perforce to abide by the plea for a "progressively rising claims ratio" emanating from the Controller of Insurance, speaks poorly of the work they do.

Mr. B. K. Setalvad, who was chairman of the Tariff Committee for two years, spoke powerfully against reducing rates without adequate statistics. He was supported by Mr. M. S. Dastur this year in an address at the annual general meeting of the Indian Insurance Companies Association, Bombay. The issue of rebating is entirely different from rating. Reducing the trading surplus of companies is against the interests of general insurance, and will not serve the aims the Controller of Insurance has in mind. Such a theoretical bias on the part of an official is damaging, and if his thinking dominates the work of technical committees, their statutory functions are badly jeopardised. Fire insurance premiums over the past five years have been reduced by about 20 percent on the whole. The reduced premium income of the companies is causing them serious concern in view of the limitation on expenses. A "progressively rising claims ratio" will, in the long run, jeopardise the international exchange of business. The favourable surplus was a good bargaining point for Indian insurers. Its usefulness is now gradually disappearing.

Cotton Export and Import Quotas

New Delhi's announcement on 25th November releasing a fresh export quota of 75,000 bales of Bengal Deshi cotton is timely and welcome. Against their share of 67,500 bales out of the previous quota of 75,000 bales, established shippers had registered sales totalling 65,886 bales up to 24th November. The ceiling has now been reached. The new quota, therefore, will help maintain the continuity of exports. It is valid up to the end of August but the trade seems confident of using the entire amount within a few months. Notwithstanding the rise in Bengal Deshi prices to around the ceiling of Rs. 670 (of course, there is control on export prices), export prospects are rated high. Pakistan is India's main competitor and the crop there has been seriously damaged by the untimely rains in November. This has already turned Japanese buyers to India and fairly large business has been put through in the past few weeks. Enquiries persist and informed sources say that Japan is likely to raise the import allocation this season to around 3 million bales. An interesting feature of the new export quota for Bengal Deshi is the further reduction in the share of the co-operative societies from 10 percent to 5 percent. Originally, their share stood at 15 percent. The progressive cut in the share of the co-operative societies will be welcomed. Their export performance has been very poor, the bulk of their quotas always remaining unused, which can scarcely be tolerated when export promotion is an urgent need.

Equally welcome is the Government's simultaneous announcement releasing an import quota for nearly 280,000 bales, of which 200,000 bales are earmarked for actual user mills. These comprise 30,000 bales of cotton stapling 1⅞in. and above, 85,000 bales of cotton stapling 1⅛in. and above but below 1⅛in., both from any area, and 85,000 bales of American cotton stapling 1⅛in. and above under P. L. 480. Besides, exporting mills are being allowed to import 30,000 bales of cotton as advance retention quota, with an option to choose cotton

om any of the two staple categories. Non-actual ser mills are being allowed to import nearly ,000 bales of U.S. cotton stapling 1⅛in. and above nder P. L. 480 as the second half of this season's uota for a value calculated at the rate of Rs. 5 spindle. The new quota of 280,000 bales brings e total import allocations made since the beginng of the season to 460,000 bales, against a mere 7,000 bales released during the corresponding eriod of the last season.

The industry, therefore, has reason to be appy with the Government's import policy. But can complain about the delay in announcing the ew quota. Out of the annual target of 0,000 bales the Government has already eleased 460,000 bales when hardly three onths of the season have elapsed. Cotton prices East Africa, Egypt and the Sudan have risen about Rs. 100 a candy since the beginning of ovember, when the Cotton Advisory Board reommended an early release of the import quota. he early release would have helped the industry secure its supplies more cheaply. Except for e American cotton under P. L. 480, which will valid for shipment according to the terms of e purchase authorisation, the rest of the import uota will be valid for shipment up to the end of ugust. This should enable the industry to spread s purchases over a period of time. The import uota announcement has not had any noticeable fect on cotton prices in Bombay, which only nderlines the tight supply position.

extile Costs Up

The latest report on living costs in Bombay ty gives the cotton textile industry one more ck. The consumer price index number for the orking class in Bombay is rather disquieting in at at 427 it shows a rise of 21 points during ctober over 406 for May. This is a matter of ncern for the mill industry as it raises the dearss allowance to Rs 91.15 for November, against s. 89.70 in October. The increase of Rs. 1.50 in e dearness allowance of each worker means an ldition of Rs. 3 lakhs to the mills' wage bill. In ct, the dearness allowance has been moving up r quite some time. The monthly average conmer price index for 1957 was 366.4 and the dearss allowance was Rs. 73.99. The average for 1958 as 393, with the dearness allowance at Rs. 81.58. 1959, there has been a gradual rise from this ure, beginning with 398 and Rs. 82.55 for January d moving up to 408 and Rs. 85.20 for June and 7 and Rs. 91.15 for November. It is unfortunate at the cost structure of the textile industry ould be affected by a steadily increasing wage ll. Until as recently as 1957-58, the industry was ced with the crisis of accumulation of stocks. ie situation has now improved and the problem s been solved to such an extent that stocks ve declined to a record low level even for a osperous period. But just when the industry ought it had got some breathing space, a new oblem has risen in the shape of a rising wage l.

Compared with the price index for October 58, there has been an increase of 22 points in cost of living, involving a payment of about 13 lakhs more a month by way of dearness owance. This affects other industries in the y, employing well over 300,000 workers, as they have to bear the brunt of a rising dearness owance, for cotton mills furnish them with the terion for payment. It is argued that the rise the consumer price index is inexplicable in w of the exceedingly good harvest of *kharif* d *rabi* crops. It is also pointed out on behalf mills that it is high time the Government exined the extent to which the present unsatisctory state of affairs is due to the existence of defective system of zoning the country for the rpose of the movement of foodgrains.

rap Export Policy

Although pleas for a liberal export policy by exporters association are likely to be viewed h a certain measure of scepticism, the memoidum sumbitted to the Government by the Scrap iders and Exporters Association, Bombay, is an eresting document in that it gives a studied alysis of the present position of and outlook ferrous scrap. The strong point in the Assotion's plea is that the present policy of control- prices and restrictions on exports affects scrap lection, with the result that as much as an annual ,000 tons of scrap goes to waste. The Associan admits that in the coming years, demand for ap will possibly increase following the institun of more electric furnaces. But it points out t along with the rise in consumption, producn will also increase. It estimates that by 1961, ap supplies in the country will be about 1½ lion tons and by 1966 about 3 million tons. In w of the narrow base of domestic consumption, Association maintains that the solution is for the Government to free exports from the prevailing restrictions.

The Association points out that it is difficult to push exports of inferior light scrap, and that on top of this, an export levy of Rs. 7 a ton has to be paid, which is passed on to the benefit of domestic furnaces. This has made exports unprofitable. The barter export policy announced in January saved the processing industry from a breakdown. The incentive accruing from barter exports had a salutary effect in neutralising the disadvantages of low market prices for inferior scrap as well as in shouldering the burden of the export levy to be paid to local furnaces. The Association suggests that the Government should announce a new barter policy. Scrap exports have, however, been good, with 200,000 tons shipped until the end of October. Exports totalling 160,000 tons sanctioned under the barter export policy have been shipped, and it is estimated that India has imported nearly 50,000 tons of finished steel against barter shipments. The Association says that regular exports have not been possible on account of the severe restrictions. It thinks that another barter agreement for exports is essential to avert a crisis in the industry. Only this can help the industry tide over the remaining tight months of the current policy period and also until a liberal export policy is announced. The Association has made several other suggestions including one for decontrolling scrap prices, representation on the proposed advisory council for iron and steel, as well as a scientific assessment of the demand and supply potential of scrap in this country.

NOTICE

With the weekly issue of CAPITAL which is to appear on 17th December, it is proposed to issue a supplement of approximately 150 pages, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, such as jute, tea, cotton textiles and sugar, the Review will contain exclusive articles by well-known authors. Dr. P. T. Bauer will write about the problems, paradoxes and prospects of Indian planning; Dr. T. Balogh will discuss the promotion of economic growth in poor countries; Mr. C. Rajagopalachari will explain how bureaucratic plans are stifling economic enterprise; Mr. Asoka Mehta will discuss the food shortage; Mr. Geoffrey Tyson will review the Radcliffe Report; Mr. Neil McInnes will write about the aftermath of imperialism; Professor R. J. Taraporevala will explain how the new company tax scheme hits shareholders; Mr. G. M. Laud will review the working of co-operatives; Professor B. R. Shenoy will make a critical survey of the second five year plan; and Mr. K. B. Mathur will discuss the economics of railway freights. Other articles will deal with the control of public expenditure, concentration of economic power, advertising, control of money rates, the management system on plantations, small-scale industries, the progress of the Pakistani economy and tourism in Britain. In addition, there will be reviews of developments in the stock market, the freight market, life insurance, general insurance and banking. The supplement will be distributed free to all registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, Capital, at 5 Mission Row, Calcutta 1. Orders for extra copies should be placed early.

Wage Board for Plantations

The Industrial Committee on Plantations, which met recently in Calcutta, considered the setting up of wage boards, the housing of plantation workers, norms for fixing wages, employment and the application of the Code of Discipline. The major outcome of the meeting was the decision to set up a National Wage Board for plantations. Speaking at the annual general meeting of the Assam Branch of the Indian Tea Association, in Dibrugarh a few days ago, Mr. R. R. L. Pennell, chairman, said that the setting up of the board will have far-reaching effects on the industry. Its terms of reference will include laying down a wage structure based on the principles of fair wages as set forth in the report of the Committee on Fair Wages. A fair wage is different from a minimum wage in many ways, but it is necessary that it should bear some relation to a fair load of work and the capacity of the industry to pay. Mr. Pennell said that with rising costs and the unwillingness of the Government to reduce various imposts, it is the increased productivity of labour which can make it possible for Indian teas to compete in world markets. The average price obtained in the Calcutta export auctions, up to and including Sale No. 19 of 4th November, 1959, was 23nP a lb lower than that obtained during the same period of last year. "Many of you will now know that at a meeting of the Minimum Wages Advisory Committee, held in Shillong on 16th November, we most reluctantly accepted a large increase in the minimum wage for our labour. We must all hope that the grave fears we expressed at the meeting will not be realised, for if they are, not the least to suffer will be the labour themselves."

Bombay State Transport Expanding

The Bombay State Road Transport Corporation was set up in December 1949 as a statutory body with the State and the Central Governments as partners. It began its activities with only 3 vehicles and expanded steadily in the various areas of the State, according to the availability of vehicles, finance and permits from the State Government. It is now the biggest nationalised undertaking of its kind in India, with a capital investment of Rs. 16.72 crores and a fleet of 2,972 buses, covering a route mileage of 65,375 and offering employment to over 21,000 persons. In his address at the anniversary celebrations, which were held recently in Bombay, Mr. R. G. Saraiya, chairman, said that the Corporation's financial position remains sound, in spite of the rising taxes and additional expenditure on benefits to employees. During 1958-59, the revenue receipts amounted to Rs. 12.33 crores, and working expenses were Rs. 9.38 crores. So the "operating margin" was Rs. 299.94 lakhs, against Rs. 300.42 lakhs in 1957-58. After making the usual provision for depreciation, sinking funds, etcetera, the Corporation was left with a net surplus of Rs. 76.12 lakhs, subject to income tax. The major difficulty was the rising trend in operational costs. Mr. Saraiya said that "most of the articles which enter the cost of maintenance and operation of vehicles, as well as the vehicles themselves, showed a rising trend of prices over the years." The prices of spare parts, tyres, tubes, petrol and diesel oil went up considerably, while the Corporation had to provide more amenities to the travelling public as well as to its workers.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 100
Governor of Bombay

Rs. 250
Gestetner Duplicators Private Ltd.

Rs. 100 each
Lloyds Bank Ltd. Netaji Subhas Road, J.B.

Total Rs 895
Previously acknowledged Rs. 2,631.50
Grand Total Rs. 3,526.50

COMMERCIAL STATISTICS

IN a resolution on the Administration Report of the Presidency Division the Lieutenant-Governor observes with regret that the Manager of the Cossipore Sugar Factory had refused to furnish the Commissioner with the usual information about his Factory. He adds that these statistics are of the utmost importance to the communily generally, forming the basis of the commercial legislation of the Imperial Government; and he considers that in the absence of very powerful special reasons to the contrary, which could be communicated confidentially to the local authorities, the information might always be given. Now, this contention on the part of the Government raises a question of some difficulty, and it entirely depends upon the nature of the statistics whether these observations are justifiable. There is far too much disposition on the part of the officials to pry into the affairs of the other people; and we can quite understand that a flourishing business might be seriously hampered by competition consequent on an injudicious Commissioner drawing attention to the profits made from the statistics furnished by it. Naturally, manufacturers do not like to supply information, which may possibly be used to their detriment.

"So the struck eagle, stretched upon the plain,
"No more through rolling clouds to soar again,
"Viewed his own feather on the fatal dart,
"And winged the shaft that quivered in his heart."

Without Prejudice

The Right to Strike

(FROM OUR LEGAL CORRESPONDENT)

WHAT is the normal punishment which an employer is entitled to impose on a workman who goes on an illegal strike arising out of a dispute to which the Industrial Disputes Act applies? A plain and simple question and one, you may say, which should be capable of a plain and simple answer; and so it would have been a dozen years ago; and it could have been supplied in one word: Dismissal. Now the answer necessitates a disquisition, and when it comes, is by no means conclusive. The reason for this is that the answer depends on the construction of one single phrase prescribing the principles on which the Industrial Disputes Act has to be administered and which phrase, by reason of its vagueness, has wrapped the whole administration of the Act in uncertainty. The phrase is this: "The principles of natural justice, equity and good conscience"[1] with the addendum, intended to be helpful, that "the claims of workmen must be considered sympathetically on the grounds of social and economic justice".[2]

We do not profess to know what the word "natural", as distinct from ordinary, everyday, "justice" means and we take it that every judge does his duty with a "good conscience". So the key word is, we may assume, "equity," and reading the three expressions together, a court of tribunal under the Industrial Disputes Act is virtually not a court of law but a court of conscience, and equity consists in whatever the court thinks just in any particular case either without regard to legal principles or discarding them whenever it deems it proper or "sympathetic" so to do. In short, although always with a wary eye on the appellate courts above him and especially the Supreme Court, the trial judge may follow the law when he sees no good reason not to do so. Thus the litigant, be he employer or employee seeking elucidation of a new problem for which there is no reported precedent, enters a maze.

As Selden put it. "what is equity depends on the length of the Chancellor's foot", and Sir Thomas More more wittily, "on the state of the Chancellor's digestion." An industrial court today is in much the same position. It may at any time have to decide a case, on the result of which the continued existence of a business or the loss of employment of hundreds of workmen may depend, not on the fixed principles of law with which the court is familiar but on the simple basis of what he himself thinks fair and consistent with social justice in that particular case.

A noble, even a sublime ideal. The present year's reports present us with two excellent examples of how it works out in actual practice. Here they are:

1. "A strike may be illegal.....though it may be perfectly justified". (Industrial Tribunal, Bombay, quoting with approval *Punjab National Bank* case. 1952. ii *L.L.J.* 648.)

2. "An illegal strike can never be justified." (Supreme Court in *India General Navigation and Railway Company* case. The *Statesman*, 16th October, 1959.)

The first of these two expositions of the principles of natural justice, equity and good conscience was reported in March and the second in November, and one fancies that the average commercial man, factory manager, welfare officer and legal adviser may find it a trifle difficult to reconcile the two. The writer makes no pretence to be able to do so. Moreover, what we are concerned with in this note is not whether an illegal strike may be justified or not, so much as whether an illegal strike justifies the punishment of dismissal as a general rule. We will investigate the matter.

There is no doubt that under the common law of master and servant, in the absence of any provision in the terms of employment to the contrary, a master is entitled to dismiss his servant summarily for wilfully absenting himself from duty without permission. There is also no doubt that, as Professor Harold Laski puts it with unconcealed satisfaction, "there is no co-operation between capital and labour today and ..... the industrial world is organised not for peace but for conflict".[3] Thus gleefully the former chairman of the Labour Party and its counsellor on economics. The result of the conflict, following the classical case of the *South Wales Miners Federation* v *Glamorgan Coal Co.* way back in 1905, has been an overwhelming victory for labour and the common law has been so whittled down (both in Britain where it originated and in India which followed it) by the legislature and the judiciary that organised strikes far from being, as for years employers contended, not only actionable breaches of contract but within the mischief of the law of conspiracy, became and are today a perfectly legitimate weapon in the armoury of labour; subject, nevertheless, to the limitation that a general or "sympathetic" strike so as to put pressure on, or shall we say to blackmail, the whole community to yield to the demands of any particular body of workers demanding something from their employers, is unconstitutional and anti-democratic, as being an attempt to override the legal methods of the people's rule, just as is an armed insurrection. That is the opinion of a greater than the lovable, but irresponsible, disciple of Sidney and Beatrice Webb, Harold Laski. It comes from James (Viscount) Bryce,[4] and is supported by the authority of great constitutional authorities like Lord Chancellor Simon and Professors Dicey and J. A. R. Marriott, beside whom the irrespressible professor of the London School of Economics is but a flickering shadow.

The law in India, apart from statutory provisions with which we will presently deal, is substantially the same, with the result that after a long and bitter struggle, both in Britain and America, the employers' theory of the arbitrary right to "hire and fire" has gone for ever and the workers' constitutional right to strike is firmly established. But in India, as the Supreme Court put it in one of the latest reported decisions on strikes of the year, "our legislature has very wisely benefited[5] by the experience of other countries..... and has made progressive, just and fair provision governing the important problems of industrial relationships, the formation of trade unions and the settlement of industrial disputes.....and both parties submit their dispute to be resolved in accordance with the provisions of the (Industrial Disputes) Act." So they do. They have to. But however "progressive, just and fair" the statutory provisions are, judging from the enormous number of appeals by the said "both parties" from the decisions of the industrial courts constituted under such provisions, neither party seems to be satisfied that the decisions are generally either "progressive", "just" or "fair". In fact, both capital and labour seem very much of a contrary opinion. However, we are now concerned with strikes and will return to them.

The Industrial Disputes Act, where it applies, drives a coach and four through the doctrine, established at such bitter cost, of the right to strike. It absolutely prohibits any workman or workmen from going on strike while conciliation proceedings, or proceedings before a tribunal, are pending or during any period in which an award is in operation and also forbids any strike, whatever the circumstances, without the notices prescribed by the Act. It also, in like manner, prohibits lock-outs, but we are now talking of strikes only. Moreover, a workman guilty of illegally striking may be punished by fine, imprisonment or both. Punishment by imprisonment is, it is submitted, virtually a dead letter; and in any case, we are dealing now only with the employer's right to punish. The problem is a serious one because of the increase of what in Britain are termed "wild-cat" strikes and in India illegal ones. A "wild-cat" strike is an irresponsible cessation of work without the sanction of and, as often as not, in spite of the express prohibition of the union leadership. A typical instance is the strike still active, while this note is being written, of employees in British Railways on account of the feared loss of tips through the extension, approved by the men's union, of Pullman car services. In India it would not be a case of a wild-cat strike, as above described, in such an event, for the union leadership will probably heartily approve of and organise it. Nevertheless, wild-cat strikes are common enough in India. We cannot open a monthly law report without seeing instances of them. They occur with monotonous regularity when workmen go on an illegal strike in defiance of the provisions prohibiting the same contained in Sections 22 or 23 of the Industrial Disputes Act.

Well, thanks to the Supreme Court in the *India General Navigation and Railway Company* case, we now have clear guidance as to what an employer can and cannot do about it in the way of punishment of strikers in such an event. First, the court bowled out decisively the contention previously accepted and laid down that although a strike would be illegal if undertaken in defiance of the provisions of the Industrial Disputes Act nonetheless it could be justified if there was good and sufficient reason for the workmen to strike. The Chief Justice of India said: "It is not permissible to characterise an illegal strike as justifiable." That was that, and it is submitted that his lordship merely substituted plain common sense for palpable nonsense. The learned Chief Justice said that the only question of practical importance, which arose in the case of an illegal strike, would be the kind or extent of punishment and that had to be modulated in accordance with the facts and circumstances of each case; and the tendency to condone what had been declared illegal by statute must be deprecated, and it must clearly be understood by those who take part in an illegal strike that they thereby make themselves liable to be dealt with by their employers. (We will break off there for a moment and remind the reader that it is more than 50 years too late to look upon a striker as *ipso facto* committing any offence at all by striking. True it is that he is to be punished. But he is to be punished only for exercising what, were it not for the Industrial Disputes Act, would be his unchallengeable right—the right to withhold his labour. The tribunal had held that the strike by the workmen was illegal but justified and had directed the reinstatement of all the strikers except those who had been convicted for criminal offences connected with the dispute. It also directed that the workmen be paid full wages from the day they had abandoned the strike.) "Liable to be dealt with by the employers." But how? By dismissal, said the employers, contemplating the loss to them and to the public caused by hundreds of men in a utility concern going on an illegal strike.

"Not so", said the Supreme Court in effect. You must draw a distinction. While it is true that an illegal strike can never be justified, "it does not necessarily follow that the punishment for it should be the extreme one of dismissal. The learned Chief Justice described the distinction in the following words: "It is not in the interest of the industry that there should be a wholesale dismissal of all workmen who merely participated in such a strike.....(but) the punishment of dismissal or termination of service has.....to be imposed on such workmen as had not only participated in the illegal strike but had fomented it and had been guilty of violence or doing acts detrimental to the maintenance of law and order in the locality where work had to be carried on."

That seems fair enough. We tend to forget a fact of which the Labour Party had a fairly brusque reminder in the result of the recent general election in Britain that the trade unions contain a substantial number of Tories in the rank and file. They have to go out on strike if ordered by their union to do so or else incur intolerable persecution as "scabs" and "blacklegs" during the strike, of which they may disapprove and expulsion from their union after it. So the test for dismissal is not the fact of going on an illegal strike but the conduct during it of the individual workman striking. We must remember, too, that in striking, a workman is exercising his undoubted constitutional right to attain which his predecessors struggled against great odds during more than a century and of which he has been deprived, only in the past dozen years and in part, by legislation.

In this particular case, the Supreme Court upheld the dismissal of 91 workmen whose reinstatement had been ordered by the tribunal and who had been guilty of criminal offences during the strike but confirmed the reinstatement of those who had been presumably merely quiet and orderly participants. It must be borne in mind, too, that in the case, both parties were to blame because no charge-sheets had been given to the men and, therefore, it was impossible for the court to determine which of them merited dismissal.

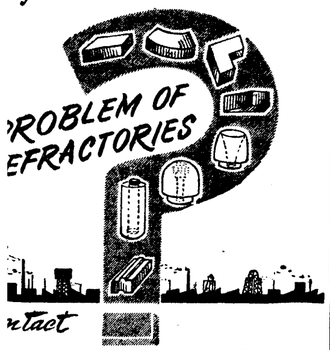
A Ditcher's Diary

NCOURAGING AS MY EXPERIENCE WAS OF THE Christmas Toy Fund collections of the past ple of years. I was nevertheless hoping for some her improvement this time. But a review of the ations received up to the end of last month vs that there has been a slight fall. Let me you the figures: On 30th November, 1959, the l was Rs. 3,341.50, including a carry-forward of 447.93, compared with Rs. 3,440.25 at about same time last year, including Rs. 561.55 ght forward. Yet I am not too disappointed use I am aware of the many competing ns there are on charity these days—that e West Bengal floods for one. Moreover, there such things as taxation and inflation to be reckd with, which have now left so little a margin charity that even the more generous-hearted ng us find ourselves unable to donate to every rving cause. Still, I do not believe that the d has already seen the last donor for this year. eady flow of donations, as usual, continued to received well after last Christmas, including from the Governor of Bombay which came too to be used. That explains why a large amount ained unspent and had to be carried forward. ve to remind you again that time is running and charity delayed will certainly be charity ed to the very large number of poor children whom this Fund is intended to bring a moment appiness on Christmas Day. As I said in my al a few weeks ago, we make no discrimination ne grounds of race, colour or religion; the true t and message of Christmas can admit of no differences. So please hurry with contribu- in cash or toys. If you prefer the former, the ue should be made out in favour of the *Capital* stmas Toy Fund at 5 Mission Row, Calcutta.

O ME, THE MOST INTERESTING FEATURE OF rnak's *Dr. Zhivago* was the way in which ntinually returned to the religious theme and ration. I seem to recall words like "the le coldness of pagan Rome", which may be gly quoted—I do not have my copy with me—which have left me with the impression that rnak for one is impatient with the commu- attempts to substitute science for religion as y of life. How widespread this feeling is in oviet Union I do not know. My own enquiries ucated young Russians in Moscow and Leningrad were usually met with a shrug of the ders and a casual explanation which amounted mply to the view that they had never known on and did not feel the need for it. I have finished reading a pamphlet published by the rican Committee for Liberation, entitled *The gainst religion in the U.S.S.R.*, which tends to m that religion is still largely confined to the Russians, but that it is gaining ground among ounger generation too. I have recently had iew supported by other sources, and it seems enough that now the Russians are becoming to think unorthodox thoughts, one of the men- d spiritual experiments they are making is religion. Poland, I see, has already had to lon official opposition towards the church, but s still a long way off in Russia; the Government's attitude as expressed through its propa- remains stubbornly anti-religious, although ode of attack is beginning to change from bitter hatred to one of contemptuous ridicule. In fact, about the most virulent adjective used against religion by the Russian authorities these days is "bourgeois". All this is perfectly understandable. The Soviet Union is becoming richer and less desperate and its people are searching for more spiritual consolations. The Russians are an emotional race, they have a long tradition of religion and allegiance to the church has not died out altogether among the elders. Furthermore, one can recall the writing of such eminent scientists as Sir James Jeans, Julian Huxley and William Smart, to say nothing of the entire generation of post-materialist philosophers, in support of the thesis that the nearer man gets to science, the more he appreciates the extent of his own ignorance and the readier he is to accept a divine explanation.



MR. NEHRU'S CRITICS IN PARLIAMENT SEEMED to feel that he is not firm enough about what he is, or is not, going to do about Chinese incursions into Indian territory. With the reader's permission, I shall proceed to call that a distinct improvement. First because there are some critics now of Mr. Nehru's hitherto sacrosanct foreign policy; and second, because whereas Mr. Nehru has in the past been firm about doing nothing, now he does not even rule out the use of force. None but the thoughtless can contemplate a full-scale war with China with anything but the extremest aversion, but it is now obvious that every friendly gesture from India—and there have been so many—has been accepted by Peking as a token of India's infirmity of purpose and an inducement for further Chinese aggrandisement. Mr. Nehru is quite right in saying that wars are not fought with hard words, but not saying them sometimes tempts aggressors into believing that they will get away with their adventures. It is fair and proper that a country should make its intentions known to all ambitious neighbours, and I am not unduly worried that Mr. Nehru's inclusion of Nepal in the areas India will defend has led to a display of some Nepalese sensitiveness in Kathmandu. The bourgeois and mid-Victorian administrators of India do not quite understand the children of the hills, and this has given rise to not a little avoidable dissatisfaction in the border areas. But New Delhi is slowly beginning to realise that the special relations the British Government established with Lhasa and Kathmandu and the other tiny States around were dictated by India's defence requirements and not inspired by imperialist fervour. These realities are lost sight of when vague idealism is in control, but those who blame Mr. Nehru for having been unrealistic would perhaps hate being told that they are being wise after the event. For myself I am rather happy that the moment of awakening has come before irreparable damage, and well do I realise why Mr. Nehru still appeals for calm. Popular passions in this part of the world do more harm to the country than to its enemy.

THE PRIME MINISTER IS AT THE MOMENT A sorely tried man, but what is being called the Dandakaranya scandal perhaps deserves a little more attention from him. I have only seen the Press reports, and heard some ugly backchat, about all that has been going on between Mr. Mehr Chand Khanna and Mr. A. L. Fletcher; but this seems enough to conclude that the almost physical removal of the Chief Administrator is nothing like the full answer to all that has gone wrong. I am not even sure that Mr. Fletcher was the right man to go and Mr. Khanna the right one to remain. What I suggest is that the rights and wrongs of the matter should have been gone into in greater detail by the Prime Minister, whose denunciation of Mr. Fletcher's involvement in a public controversy was neither here nor there. As I say, I don't know enough about the details; but it seems to me a little unfair to expect civil servants to behave impeccably when Ministers (and not Mr. Khanna alone) appear to have behaved very peccably indeed. But manners are the least important consideration in a project of such magnitude and promise; and although personal relationships have manifestly bedevilled the scheme right from the beginning, I am not sure that the priorities have been fixed aright. I am not lacking in sympathy for the hapless refugees from East Pakistan, the playthings of politicians for so many years, but the emphasis should in my view be on development rather than on resettlement. Here is a vast virgin area, said to be rich in all sorts of resources, and it has to be colonised by pioneers with a spirit of adventure which it would be unfair to expect in frustrated refugees. They should certainly be used as far as possible; and once the area has been developed they should be given preference to settle there; but the approach to Dandakaranya ought to be more businesslike than sentimental.

READING THROUGH THE PROPOSALS OF THE PAY Commission, I am struck by the observations made on the state of efficiency in the public services. For the Commission to question, openly, whether it was right in assuming a full day's efficient work as the basis for its calculations, is a remarkable comment on the degree of resignation with which such things are accepted these days. An ordinary, under-privileged taxpayer might ask why something is not done to correct the trouble before the question of higher pay was considered at all. I admit to being old-fashioned in this, but I still cannot rid myself of the idea that a public servant is a servant of the public and can therefore be required to give a full day's work for a full day's pay. But I am no doubt being too much of an idealist. Indeed, the Commission was probably optimistic in assuming that the lower limit of efficiency was 75 percent; 25 percent might have been a better guess. The point is that not only are Government employees—subordinate ones that is—unpunctual and frequently absent, but even when they are in their offices the amount of work they do is much below what it ought to be. When all the allowances that can be made for climate, new and unfamiliar functions, and the attitude of civil servants the world over, have been made, the position in India is still deplorable and is one for which the taxpayer should not be asked to pay. The Commission's comments about the difference in punctuality and absenteeism in establishments governed by the Factories Act and where the employee loses financially by being late, deserve careful study in official quarters. As for efficiency, some contribution towards improving this might be made if offices were cleaned up, employees held to some minimum, and smart, standards of dress, air-conditioning installed and a time-clock placed at the door.

INDIA STEAMSHIP COMPANY LIMITED

CHAIRMAN, SIR A. R. MUDALIAR'S REVIEW

The following is the address of Sir A. Ramaswami udaliar, K.C.S.I., D.C.L., (Oxon), Chairman, India eamship Co. Ltd., delivered at the Annual General leeting of the Shareholders of the Company, on ovember 27, 1959.

Before taking up the agenda the Chairman ferred to the irreparable loss that the Company as sustained in the untimely demise of one of its irectors, Mr. Gopi Krishna Khemka. Mr. Khemka as virtually the originator and the promoter of the dia Steamship Company. It was during the last ar that he floated this company and the robustness his optimism, his courage and the spirit of indomit-ble adventure could be realized from the fact that intended from the outset that the ships of the ompany should be utilized for overseas trade. It as an act of great faith that at a time of intense ompetition, when even coastal shipping was not served for National Lines, Mr. Khemka should have ecided on this great venture. During the last fifteen ars, he devoted himself wholeheartedly to the service the company and his advice and co-operation was immense value to the Chairman and other Directors the Company. He promoted various other indus-ies, some of them pioneering industry so far as dian venture was concerned, like the Cable Factory. ut his memory will ever be associated with the ogress that Indian shipping has made in the wide as of the world during the past decade. The hairman then moved a resolution of condolence to communicated to his wife and other members of e family. The motion was adopted all members anding. The Chairman then resumed consideration the Agenda and in moving the adoption of the irectors' Report, the Audited Accounts and the alance Sheet made the following speech.

Audited Accounts

The Audited Accounts and Directors' Report for e period ending March 31, 1959 have been in your ossession for some time. With your permission I ill take them as read.

The Directors' Report shows that the freight rned during the year was Rs. 8,04,04,160 as against s. 7,75,04,245 in the previous year and Rs. 6,00,17,188 1956-57. The total number of liner voyages ring the year was 39 compared to 30.5 in the pre-ous year. Though the amount of freight earned was e highest so far, the figure does not reflect a mparable net profit for the Company. The creased earning was partly due to the number of ips in service but there are other factors which ntinue to increase the expenditure side and to duce the net profit of the Company.

The net profit earned by the Company after ducting all charges and setting apart a sum of s. 75,55,777 towards depreciation, amounted to s. 60,66,726. Though in comparison with last year's gures these results may not appear striking, I enture to state that having regard to the conditions revailing in the shipping industry during the period, e results are not unsatisfactory.

Freight Rates

I stated last year that it is the experience of all ipping companies that while boom periods are mparatively rare, lean years, when the quantity f freight falls and the rates are brought down arply, are more common. International shipping is eculiarly susceptible to world conditions, economic r political. These anticipations were unfortunately terally fulfilled during the year. Freight rates were arply cut down to meet the competition of tramps nd the over-tonnage of some of the shipping mpanies has led to unhealthy conditions and rther reduction in freights in some of the important mmodities. The declining trade has also contri-uted to some extent to the fall in the profits earned. he ships had to call at many more ports both for ading and for unloading cargo than in the previous ear owing to scarcity of cargo -the ports called at uring the year being 768 as against 496 in the revious year.

Port Conditions

The conditions in the port of Calcutta further eriorated, in as much as draft restrictions were much more serious during the year than in the previous period. The obvious effect of such restrictions is that less cargo can be loaded at the port of Calcutta and very often ships have to remain for long periods waiting for favourable drafts. I have emphasized on more than one occasion that the port of Calcutta is the most important port in India from the point of view of the volume of traffic both inwards and outwards. It is also the port, through which the largest amount of foreign exchange can be earned by the export cargo available at the port. On its functioning satisfactorily depends in the main the economic life of West Bengal. I trust that these factors have been fully realized and measures will be taken by the Government expeditiously and the assistance that the World Bank is giving for the reconstruction and proper navigability of the River will enable a more rapid improvement of the port.

Progress

During the year under review, two more ships, the "Indian Success" and the "Indian Strength" were added to your fleet; and three ships were under order, one at the Visakhapatnam Shipyard and two at the German Shipyard of Messrs. Howaldtswerke. During the current year, the "Indian Industry", built at Visakhapatnam, was delivered and is now on her maiden voyage to the United Kingdom and the Continent. Two more ships, the "Indian Tradition" and the "Indian Trust", have been launched and their delivery is expected, the first, in the last days of the year and the second early in February. With these additions, your fleet will consist of 18 ocean-going vessels including the "Indian Industry" and one coastal vessel, the "Indian Commerce". All these vessels, as I stated at the last annual meeting, have been ordered on the basis of immediate foreign exchange payment which the Government of India allotted in 1956 when this programme was approved and for which one cannot be sufficiently grateful to the Government. One more ship has been ordered from the German Shipyard on the basis of deferred payment, the necessary foreign exchange being found over a period of years. The system of deferred payment has not proved attractive as it involves a larger capital outlay for a ship which, after all, has to compete in international waters with shipping of other companies which are not handicapped in the same way. It is hoped that by the combined efforts of shipping companies and of the Governments, both Indian and foreign, at whose yards ships are built, a fairer and a more natural solution of the foreign exchange problem may be found shortly.

New Routes

I referred last year to the new routes that have been opened up by the ships of your Company to facilitate the export and import trade of the country and to establish connections with shippers in other parts of the world. The establishment of these new routes enables your Company to get the support of more shippers not only for the freight which will be carried by the new routes but also for freight which has to be carried by the old established route. Shippers, especially those who have connections in several parts of the world, desire to have facilities to ship to different places and will seek companies which are in a position to carry freight not to one destination only but to more than one destination. We have now opened our shipping to trade with the ports in the Black Sea and along the Levantine Coast of the Mediterranean. We have also opened a direct service to the Eastern ports of South America and our ships are calling regularly at the ports of Argentine and Brazil. These services call for a larger number of ships, while the existing routes also require a fair number of ships to keep regularity of service and thereby satisfy our regular shippers. These are the considerations which weighed with your Directors in increasing the fleet—an increase which was planned and programmed as early as 1956.

Dividend

I have already referred to the fact that after providing over Rs. 75 lakhs towards depreciation, the net profit earned by the Company amounted to over Rs. 65 lakhs. The whole of this amount has been set apart as "Development Rebate Reserve" in accordance with the law promulgated on the subject. I would, however, like to mention that this Development Rebate Reserve, which with the present addition amounts to Rs. 1,14,00,000 is not available for the payment of dividends but is available for such expenditure as payment of interest and instalments due on loans from the Government. While we have received loan from the Government for the construction of ships, your Directors have had constantly under review the financial resources of the Company for repayment of these loans. You will therefore find from the balance sheet that in addition to payment of over Rs. 19 lakhs as interest on these loans, the Company has also paid the instalments on the loans due. I may finally state that, as the financial year under review ended on March 31, 1959, the new dividend tax is not applicable to the dividend that is now paid and therefore the shareholders will receive the same amount as in the previous years.

Dividend Tax

I have expressed my view elsewhere that the new proposal of a Dividend Tax is much more onerous than the previous proposal of a tax on dividend paid direct by the company. The new dividend taxation proposal was stated to be necessitated because of the complexity of grossing up the income earned in this respect before giving relief to the assessee. It was also stated that in view of the relief given to the Company by reduction of income tax and abolition of wealth tax, this proposal would not in any way seriously affect the payment of dividends nor would it bring additional revenue to the Government. That these forecasts, whose accuracy was even then doubted, were mistaken has been realized by every company which had to declare a dividend in a financial year which ended after March 31, 1959. Under the previous law, the declaration of a dividend of 6% did not attract any dividend tax. Under the present law, the declaration of a 6% dividend will mean that the shareholder will receive only 4.2% on his shareholding. The relief by way of refund to such an assessee is in most cases illusory. I would put in a plea for the small shareholders who have, for many years, been dependent on the earnings from dividends on their share capital. A payment of nearly 43% as tax on the amount actually received as dividend is certainly a very serious imposition on such shareholders. I do trust that the matter will be further examined and that if the complexity of grossing up the earnings is to be avoided, at least a smaller percentage of tax may be declared as fair and just.

Foreign Companies and Restrictive Practices

It is no pleasure to me to once more draw your attention to the fact that we have made no progress by negotiation and argument in the claim that we have advanced, that Indian Shipping should be allowed into the conferences at least of the way-side ports on the direct route from India to the U.K. and the Continent. We have not been allowed even to participate in the freight from Colombo to the U.K. and back. On the other hand, quite recently, while we were calling occasionally at other ports in Ceylon like Trincomalee and Galle, the Colombo Conference extended its sphere to all the ports in Ceylon and announced that as the Indian Lines were not Members of that Conference, they could not call at any of the ports in Ceylon; a supreme example of the freedom of the Seas and non-discrimination of flags which some of the lines constantly speak of! This communication was considered by the two Indian Lines as adding insult to injury and they have now both definitely declared that they will call at all the Ceylon ports including Colombo as necessity demands and that they will not be bound by any rules of that Conference except that, in the first instance and in the absence of any other action by the Conference, they would observe the freight rates laid down by the Conference. I must confess that the decisions of the Conference, even in the India-U.K./Continent trade, have surprised Indian Lines and, with all the desire to co-operate with the Conference, they have found it difficult to see eye to eve with some of the members of the Conference. These decisions have been sometimes wanting in logic and sometimes clearly aimed at Indian Lines. Matters have come to a head, and unless a reasonable attitude is taken, the conference system itself is likely to be endangered. I may mention that recently, during my last visit to England, I have had frank and full discussion with the two Chairmen of the Conferences of which we are members, and I hope that there will be a better understanding of the position of the Indian Lines and their requirements very soon.

Shipping Board

During the year under review, a National Shipping Board has been constituted to look after the promotion and development of Indian Shipping, with Mr. G. L. Mehta, who has long been associated with Indian Shipping and who has held the high position of Ambassador in the United States, as its Chairman. I trust that the activities of the National Shipping Board will help in fostering the growth and development of Indian Shipping, the need for which is more apparent today than ever before. The Ministry of Transport has a new Head in my esteemed friend, Dr. P. Subbarayan. The Minister of State, Mr. Raj Bahadur, continues to be in direct charge of Shipping. We are thankful to both of them for the interest they have taken in the expansion of Indian Shipping and in the development of Indian ports. We have had throughout the period, consistent and valuable help, assistance and advice from the Director-General of Shipping and his Deputies and from the Secretary to the Ministry of Transport. The Departments of Government, who are placing large orders for the import of various kinds of commodities, plant and machinery from abroad, are, I am glad to state, realizing the important part that Indian Shipping can play in the economy of the country and we are also thankful to them for this increased awareness of the position.

Tribute

As I have already stated, the financial year has been a year of great difficulty in a falling freight market and it required the wholehearted and devoted services of all its officers afloat and ashore, and all its employees of every rank to enable the Company to achieve the results that it did. I must also convey the thanks of the Board and of the shareholders to the Shippers who have given their firm support to us and to the Brokers and Forwarding Agents who have shown confidence in us and in the excellence of our shipping services. Your fleet is one of the fastest in cargo service from India to the U.K. and the Continent and, taken as a whole, I venture to state that it is the fastest existing. It has established a record for its reliability and for the reasonably careful handling of the cargo entrusted to it. Every year brings new problems to the shipping world and your Company is determined to keep in step with all the progress that has been made either in regard to shipping itself, or in regard to the services which are ancillary to carrying freight by your ships.

Over ten years have now passed since I took direct interest in your Company as its Chairman. More than a decade of strenuous and sustained work has been possible by the enthusiastic co-operation of my colleagues and of all the staff in the service of the Company, and by the generous support which you, as shareholders, have given. I trust, I may have your continued confidence in the full hope that whatever the results may be, there will be nothing lacking in thought, in attention and in devotion to the affairs of your Company. I hope also that the Government will realize that a shipping company such as yours is more than a mere commercial organization and that with your encouragement, it will play its part not merely to earn profits but to be of the foremost service to the economic and political life of the country.

The above statement is not a report of the proceedings of the Annual General Meeting referred to.

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS STILL EASY

Wednesday, 2nd December.

ONCE again there has been little change in the quantity of funds outstanding in the Calcutta money market during the past week. Whatever movement there has been is probably downward and there is still no sign of any seasonal tightening. Of the main sources of demand, only the jute mills show an increase. The sugar industry, and call for accommodation against grains and seeds storage, show little change. The needs of the cotton and woollen mills have declined. Money remains extremely easy in the interbank market and the call rate is nominal at $\frac{3}{4}$ percent. Tighter conditions, however, have arrived in the Bombay market where the call rate is now 2 percent, and this is expected to influence Calcutta in the near future.

It has again been a poor week for bills. Those exchange documents which have come to hand have been chiefly on account of tea. Remittance has been negligible. On the London money market, the pound is generally weaker and has recorded fractional losses against most important currencies, including the twin dollars.

THERE WERE NARROW FLUCTUATIONS IN BULLION LAST week and activity was restricted either way. Silver closed at Rs. 207.75. The price was quoted at 80d. in London and at 91.375 cents in New York.

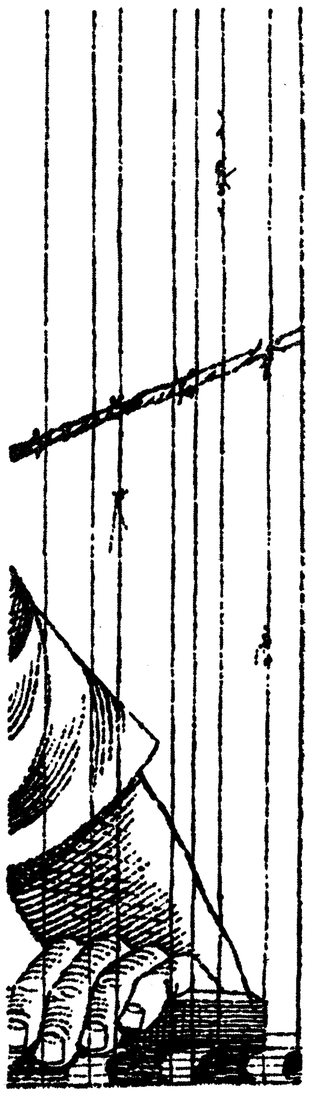
Gold was steady at Rs. 126.50.

DURING THE WEEK ENDED 27TH NOVEMBER, 1959, Government of India Treasury bills for Rs. 38,10,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 1st December. The total amount offered was Rs. 2,40,00,000. Tenders at Rs 99.420 were accepted in full, the average rate of acceptance being Rs. 2.338 percent a year. Tenders for Rs. 2 crores of 91 day Government of India Treasury bills will be received at all centres up to the close of business on 7th December.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 2nd December to 5th December at Rs. 99.431 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 25th November to 28th November, amounted to Rs. 2,20,00,000.

THERE WAS A DECLINE OF RS. 4.63 CRORES TO Rs. 1,679.21 crores in active notes, according to the return of the Reserve Bank of India for the week ended 27th November, 1959, but the total note issue was Rs. 91 lakhs higher at Rs. 1,707.77 crores. Notes held in the Banking Department consequently rose by Rs. 5.53 crores to Rs. 28.56 crores. *Deposits of the Government of India at Rs. 49.4 crores showed little change, and other Government accounts rose by Rs. 5.54 crores to Rs. 27.21 crores. Balances of commercial banks declined by Rs. 1.68 crores to Rs. 81.43 crores. Balances held abroad fell by Rs. 43 lakhs to Rs. 41.13 crores.* Investments declined by Rs. 3.51 crores to Rs. 248.48 crores. Other loans and advances rose from Rs. 80.90 crores to Rs. 81.18 crores, of which there were no advances against usance bills as in the previous week. Ways and means advances stood at Rs. 22.95 crores against Rs. 21.47 crores.



THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 20th November, 1959, shows a rise of Rs. 2.73 crores to Rs. 578.84 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 11.51 crores and Rs. 10 lakhs to Rs. 395.94 crores and Rs. 10.47 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 2.42 crores to Rs. 156.21 crores. Cash and balances are, in consequence, shown at Rs. 25.01 crores or Rs. 7.95 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 20th November, 1959, shows demand and time liabilities at Rs. 735.99 crores (Rs. 19.01 crores on account of borrowings from banks) and Rs. 1,144.10 crores (Rs. 30.38 crores), compared with Rs. 740.43 crores (Rs. 23.91 crores) and Rs. 1,133.30 crores (Rs. 28.07 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 95 lakhs and Rs. 42 lakhs to Rs. 43.21 crores and Rs. 80.67 crores, respectively. There is a rise of

With great skill, interlacing threads of many colours, the weaver transfers the master design to the cloth . . . symbolising, as it were, our many-sided efforts to redesign the fabric of the nation's life.
In this national effort, rubber products are playing an integral part. Tyres, latex foam cushioning and industrial rubber products manufactured by Dunlop, for instance, are helping to transport men and materials, move mountains of earth, build dams and factories, and bring comfort and elegance into the home.

DUNLOP

Rs. 15.74 to Rs. 806.64 crores in investments. Advances and bills discounted at Rs. 925.13 crores show a drop of Rs. 3.10 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.6 percent and 49.2 percent, against 6.7 percent and 49.5 percent.

LONDON FINANCIAL LETTER

IDEA OF FLEXIBLE BANK RATE ABANDONED

By Air Mail.

THERE was no change in Britain's Bank rate on 19th November. It was, in effect, the anniversary of the reduction of the rate to 4 percent (the actual date last year was the 20th, for Bank rate is customarily announced by the Bank of England on Thursdays). Whatever else may be deduced from the maintenance of the rate for a whole year, it is obvious that the idea of a flexible rate, moving frequently as conditions change, has been abandoned. Present conditions are different from those of a year ago. It was not even sure a year ago that the recession had "grounded" (although it was revealed later that the low point had been reached a few weeks earlier); now it is quite obvious that a boom is in progress, and the main questions concerning it are how far it will proceed by its own momentum, and how soon, if at all, it will need restraining. The London rate would presumably have been more flexible now if the authorities had taken the opportunity offered by the recession to bring it down to a level which would have seemed normal before the era of "dear money". (When Bank rate was put up to 4 percent in 1952, the rate seemed high.) No clear policy is discernible, although the City has, from time to time, offered plenty of gratuitous advice, mostly on the lines that Bank rate should be as low as possible when the economy needs a stimulant, if only because there will be more room to manoeuvre when gentle restraint is needed.

But the recent rises in other centres have not put London's 4 percent out of line with European rates. The North American trend is not quite clear, but the recent resumption of high rates, after a decline, seems to be due to temporary factors. If the U.S. dollar were in a normal condition, more funds would be attracted to New York at current relative rates, but the recent performance of sterling gives no reason for defending it by raising Bank rate.

Internal Restraint

The question of internal restraint, whether by Bank rate or otherwise, is more difficult. A few months or even a few weeks hence we may have to think back to what was said at the Mansion House dinner this year (in November, instead of October as customary). One could hear in the remarks of the Governor of the Bank of England an echo of the warning uttered on the same occasion in 1954, at a similar stage of the boom that was then in progress. Few of the unhealthy manifestations of 1954-55 are perceptible in the present boom but the country has been warned. The warning, as previously, came from the Governor, not from the Chancellor. It concerned specifically the increase in bank lending. On this matter, the comments of the Chancellor and the Governor were set in quite different keys. Mr. Heathcoat Amory said that the expansion of bank credit was "to be expected with the revival of the economy", and he did not find the monetary situation "out of balance". But Mr. Cobbold, Governor of the Bank of England, said: "I judge the increase in bank advances ... to need watching if it should continue much longer at the same pace."

It may be thought that, exalted as Mr. Cobbold is in the financial hierarchy, Mr Amory's opinions on such matters are supreme. But it should be remembered that when the optimism of previous Chancellors has been tempered by the financial orthodoxy of the Governor, the latter's ideas have tended to prevail; not so much because—as some critics believe—the Bank has undue influence on the U.K. Treasury as because the underlying facts of the position have supported the Governor's ideas.

Boom in Industrial Equities

Another matter which engaged the attention of the Governor was the boom in industrial ordinary shares, which he described at the Mansion House as "slightly disquieting". The stock market has not easily shaken itself out of the despondent mood that his warnings partly caused. Indeed, dealers in the market itself—at least, the more conservative among them—had been disturbed by its behaviour. The boom that was building up before the shakeout had some unstable characteristics. "Democratisation" of investment is an excellent idea, but many of the people (of remarkable variety, by all accounts) who have recently entered the market for the first time, are not much interested in investment. Much more appealing are the big capital gains they have seen accruing to others. Profittaking is automatic when prices hesitate, and it has caused some sharp reverses. There are also some investors of long standing who wonder if industrial shares can go much higher and are disposed to consolidate their gains and, in many cases, to transfer some of their capital to gilt-edged stocks.

None now doubts that the industrial expansion is well based; nor that it will continue unless stopped; nor that the Government wishes it to continue. It is spreading from the consumer tracks to the capital trades; but not to coal mining, shipbuilding, or aircraft building, which are governed by their own particular problems. In the first half of next year, most of the economy should be advancing at a "tonic pace." But it is not yet certain that profits will advance at the same pace. In some industries, working uneconomically in the recession because part of their capacity was idle, profits are now rising strongly; but in others, no longer protected by collective price agreements, competition is intense and profits are low, if not negative. The Chancellor insists on the need to lower prices; partly so that wages can be held down, partly to provide a favourable atmosphere for exports, partly to moderate the appeal of foreign goods, now freed from import control over nearly the whole range. It must not be assumed that his apparent complacency at the Mansion House implies a policy of inaction. He said just previously that if the need arose, he would "not hesitate to take action to check the build-up of excessive demand".

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 4-12-59.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
4-12-59	5-3-60	2,00,00	Rs. 2.338%

February 1960	10,00.00
March 1960	2,00.00
Total	29,00,00

NEW JET-AGE AIR TRAFFIC CONTROL SYSTEM

Details of a new low-cost method of air traffic control that automatically and continuously tells ground operators the location, altitude and identity of every aircraft in the skies over America are now disclosed by Lockheed. The system was designed by Lockheed's Electronics and Avionics Division to cope with the higher speeds and increasing aerial traffic of the jet age. Position reports would be obtained 600 times a minute—every 500 feet—for a supersonic transport flying at 3,000 miles an hour. The U.S Federal Aviation Agency is currently evaluating the Lockheed tracking and control system concept, which was under development for over one year.

Stocks and Shares

SUCCESSIVE BEAR RAIDS DEPRESS PRICES FURTHER

INDIAN IRONS WEAK

Wednesday Evening.

SUCCESSIVE bear raids during the past week brought a steady decline in the prices of most of the shares on the forward list with the exceptions of Hindustan Motors and Indian Aluminium, which advanced from Rs. 14 to Rs. 14.56 and Rs. 22.94 to Rs. 23.12, respectively. On Monday last, Indian Irons fell heavily to Rs. 22.92 following the announcement that the Government of India, on the recommendations of the Tariff Commission, had decided to charge interest, with effect from July 1958, at the rate of 5 percent per annum on the special advances granted to T.I.S.C.O. and I.I.S.C.O. for financing their modernisation and expansion programmes. This announcement was interpreted to mean that I.I.S.C.O. would have to provide Rs. 50 lakhs annually for the purpose of making payment of the interest. Later, when it was clarified that the Government's decision would not actually affect the normal profits of the companies—because the agreements between them and the Government stipulate that both the advances and the interest will be repaid from earnings arising from a special element in the retention prices—Indian Irons recovered to Rs. 23.20. But they soon resumed their downward trend; tonight's settlement rate was Rs. 22.96, against Rs. 23.80 a fortnight ago.

So far as the rest of the market was concerned, most sections suffered from lack of interest and prices generally moved to lower levels. Business, in consequence, was adversely affected.

The market is now awaiting, with a certain degree of trepidation, Mr. Morarji Desai's arrival in Calcutta on Saturday, when for the second consecutive year he will address the annual general meeting of the Associated Chambers of Commerce and Industry.

Government securities were quietly steady, but 3% Conversion Loan 1986 was weak and the price declined further to Rs. 73.85.

Bank, coal, and sugar shares were featureless and prices showed little variation. In cottons, Elgin and Kesoram improved today to Rs. 15.69 and Rs. 18.81, respectively.

Electric supply shares were quietly steady, but business was on a restricted scale.

In the engineering group, Bhartia Steel were better at Rs. 14.25 while Guest, Keen, Williams were shaded at Rs. 40. Jessops fluctuated narrowly around Rs. 33.75 and Textile Machinery were slightly easier at Rs. 24; J. K. Steel were steady at Rs. 13.19.

Jute shares were neglected and prices were marked down on a broad front.

Paper shares were extremely quiet and prices declined further since these notes were last written. India Paper Pulp were marked down to Rs. 21.50 and Titaghur suffered heavily, receding from Rs. 43.62 to Rs. 40.87. Orient Paper were quiet at Rs. 35.90 as were Shree Gopal at Rs. 22.50.

Among miscellaneous industrials, Alkali & Chemical shares were sold down to Rs. 22.62 and Angelo Brothers were quiet at Rs. 19.56. Clive Row were marked down sharply from Rs. 9.31 to Rs. 8.50. Dunlop Rubber, however, recovered slightly to Rs. 35.50. Hindustan Lever were easier at Rs. 34.50 as were Imperial Tobacco at Rs. 10.87. India Steamship were marked at Rs. 12.25 ex-dividend, while Jardine Henderson were better at Rs. 72. Metal Box changed hands at Rs. 34 ex-rights and Rallis were softer at Rs. 82.25. National Carbon eased to Rs. 38.50, but Shaw Wallace were steady at Rs. 19.62.

In the mining group, Indian Copper were subdued at Rs. 3.86 as were Metal Corporation at Rs. 11.75.

Owing to the satisfactory prices being realised at the auctions, tea shares met with renewed enquiry and prices, in the majority of cases, closed above last week's levels.

Saran Engineering

There is a profit of Rs. 2.54 lakhs for the Saran Engineering Company for the year ended March 1959, compared with Rs. 3.48 lakhs in the previous year. Rehabilitation reserve is allocated Rs. 87,800. Bringing in Rs. 21,638, there is a balance of Rs. 59,328. A dividend of 25nP is being paid, leaving a carry-forward of Rs. 21,828. The directors state that the supply of pig iron, and the availability of import licences for roller shafts, remained difficult. After the closing of the financial year under review, supplies of pig iron have improved and import licences for roller shafts to the value of over Rs. 3 lakhs have been received. Negotiations are in progress for obtaining supplies of cast iron roller shells at competitive rates from outside so as to enable the company to make advantageous use of the foundry capacity so relieved, for more lucrative business in lighter castings. "With the rapid development of the engineering industry in our own line of business, we are facing increasingly severe competition, which is likely to reduce profits unless we can increase the production."

Smith, Stanistreet

Smith, Stanistreet and Company has made a profit of Rs. 9.84 lakhs for the year ended June 1959, against Rs. 9.66 lakhs in the previous year. A gross ordinary dividend of 25 percent has been declared, compared with 16 percent tax-free. Meanwhile, the ordinary share capital has been increased by Rs. 5 lakhs to Rs. 15 lakhs. Taxation provision absorbs Rs. 4.37 lakhs (against Rs. 5.70 lakhs), development rebate reserve Rs. 13,000 and general reserve Rs. 50,000 (against Rs. 1 lakh). The carry-forward is Rs. 75,219, compared with Rs. 87,455 brought in. The directors hope that sales during the current year will increase. Unfortunately the strychnine plant has been idle for most of the year under report for want of raw materials, but it is believed that adequate supplies will be available in future.

Peninsular Plantations

The profit of Peninsular Plantations Ltd has amounted to Rs. 3.64 lakhs for the year ended February 1959, against Rs. 1.96 lakhs. A dividend of 20 percent has been declared. Taxation provision is allocated Rs. 1.60 lakhs (against Rs. 90,000), leaving a carry-forward of Rs. 1,24,226, compared with Rs. 43,070 brought in. The rubber crop increased from 271,910½ lbs to 341,789 lbs. The cardamom crop rose from 6,725¾ lbs to 16,042½ lbs.

Jaipur Metals

The profit of Jaipur Metals and Electricals Ltd has amounted to Rs. 9.77 lakhs for the year ended December 1958. Bringing in Rs. 3,296 and making other adjustments, there is a balance of Rs. 9,92,660. An ordinary dividend of 6 percent has been paid. Notable allocations include depreciation Rs. 2.47 lakhs, development rebate reserve Rs. 1.75 lakhs and taxation provision Rs. 3.20 lakhs. The carry-forward is Rs. 10,348. The operations of the meter division have improved during the year under review, as 87,909 house service meters were produced, compared with 69,420 previously. The working of the metals division has been satisfactory; production has been maintained at the same level as last year. It is stated that the negotiations which were being conducted with Siemens-Schuckertwerke Aktiengesellschaft of West Germany for the manufacture of Siemens type house service meters, have now been finalised. The agreement has been entered into, which has been duly approved by the Central Government. The company has also got the industrial licence and the import licence for this scheme. For implementing the agreement, an order for machinery worth Rs. 20 lakhs has been placed and preparations are being carried out at the works.

Singareni Collieries

The Singareni Collieries Company has earned a profit of Rs. 30.12 lakhs for the year ended December 1958, after providing Rs. 31.31 lakhs for depreciation. Development rebate reserve is allocated Rs. 6.03 lakhs. Bringing in Rs. 17,041, there is a balance of Rs. 30,28,977. The taxation provision is Rs. 20 lakhs. A dividend of 17½ percent has been declared to absorb Rs. 4.74 lakhs. To the redemption account is allocated Rs. 5 lakhs. The carry-forward is Rs. 54,868. Production rose from 1,919,494 tons to 2,116,566 tons and despatches from 1,815,601 tons to 2,022,862 tons.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for November 1959 are published below, the figures for October being given in brackets.

	(Tons)		
Production			
Pig Iron	77,380 (79,539)		
Steel Ingots	71,112 (67,901)		
Saleable Steel			
(a) Semis	20,629 (11,503)	55,610 (48,868)	
(b) Finished	34,981 (37,365)		
Despatches			
Saleable Steel	56,138 (53,009)		

Martin Burn Ltd, managing agents, state: "The production of pig iron is low on account of one blast furnace being off for relining".

ICES FALL ON BROAD FRONT

'OLITICAL AND STEEL NEWS DEPRESSES SENTIMENT

Wednesday Evening.

Bombay stock market closed on a subdued ...od last week and the prices of shares lost ... broad front. Sentiment weakened on a ... interpretation of the speech made by the ...an of the Indian Iron and Steel Company ... annual general meeting. Operators were ...nxious about the Indo-Chinese political ...ns.

...er moving both ways, the share prices were ...y steadier towards the close. The steadiness ...out of a belief that output of the steel ...nies during November would show a sub...l improvement. Although sales of piece-... have improved considerably, it is feared ...he profits of mills will suffer because of the ...sed cost of production. There is an acute ...ge of the domestic raw cotton and the prices ...re have increased.

...ta Steel rallied to Rs. 155.25 on short-cover...ut Indian Iron were depressed at Rs. 23.12 ...ling from Lyons Range. Engineering shares ... shaded on balance. Alcock Ashdown de... to Rs. 244 and Premier Construction were ...down to Rs. 350.50 on disappointment over ...postponement of the capital reconstruction ...ie. Tata Locomotive were lower at Rs. 195 ...arsen and Toubro lost at Rs. 26.60. Mukand were steady at Rs. 18.08 on a good report. ...otor shares, Hindustan Motor improved to ...4.76 on influential support, but Premier ...obile were stagnant at Rs. 140.50.

...the cotton mill group, the prices of shares ...ed more due to the absence of buying in... than to selling pressure. Standard Mills ..., however, a firm feature and increased to ...7. Century reacted to Rs. 619, as did Bombay ...g to Rs. 67.80. Kohinoor were taken at ...22 and Simplex came to hand at Rs. 164.50. United Ordinaries were offered at Rs. 10.88 Apollo were indicated at a lower price of ...08.

Miscellaneous shares moved down in line with the general trend. Among sugar shares, Belapur were quiet at Rs. 323.50 and Phalton were quoted lower at Rs. 176.50. Walchandnagar Industries were available at Rs. 313.75. In the cement group, Associated Cement declined to Rs. 150.50 on disappointment over a lower dividend. Digvijay Cement were dealt in at Rs. 145. Mining shares were quiet, and Shivrajpur Syndicate lost at Rs. 85. Sellers predominated in steamship company shares, and Scindia Steam were placed at Rs. 16.80, but Great Eastern Shipping recovered to Rs. 19.24 on short-covering. Bombay Burmah declined to Rs. 550.50 and National Rayon were done at Rs. 362.50. Chemical shares showed mixed movements. Tata Chemical were quiet at Rs. 16.64, but Alembic Chemical were steady at Rs. 200 on knowledgeable support. Voltas were done at Rs. 181.50 and Ceat Tyre changed hands at Rs. 161.50.

Banking and insurance shares were quiet and turnover was restricted. Central Bank were available at Rs. 48 and Bank of Baroda were transacted at Rs. 94.50. New India Assurance lost at Rs. 61.50.

There were irregular fluctuations in electricity supply shares. Ahmedabad Electric were steady at Rs. 90.70, as were Bombay Suburban at Rs. 103. Tata Power were shaded at Rs. 1,081.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. Oh joss-stick ! wake me up in time !

The ancient Chinese courier tucked a burning joss-stick between his toes as he stopped for a roadside nap. When the joss-stick burned down to his toes, sure enough he awoke !
The joss-stick — the earliest known alarm clock is no longer in use. Today you wake up to the melodious sound of alarm clocks of various types of which the JEWEL is the finest and the most dependable.

FURTHER FALL IN STOCK MARKET ACTIVITY

OIL SHARES IMPROVE

London, 2nd December.

THERE has been a further contraction of business in the stock market over the past week, and with the daily total of bargains now down to the lowest level since before the election, conditions became more orderly. There was a good deal of profit-taking by those small investors who were encouraged into the market by the boom and prices of many stocks receded from their peak levels. In stores, Woolworths were very much in demand on expectations of a good preliminary statement in January, although there was a pause in the upward movement in stores generally on the view that consumer spending will now tend to ease off and that it will now be the heavy industries that will expand. There has certainly been a revival in the shares of some of the engineering and electrical equipment companies, among which Vickers were the subject of favourable week-end Press comment. Steel shares have been quieter and showed no definite trend. Gilt-edged securities drifted lower in the absence of support. Apart from some activity in Baltic stocks, the foreign market was devoid of any noteworthy feature. The steadily improving trend on Wall Street brought a sympathetic advance to London prices of dollar stocks. There was a fair amount of movement in gold shares, sometimes under the influence of United States buying through London and Johannesburg, but best levels were not always held. Copper shares moved erratically, but tin shares improved after some uncertainty. Oil shares were brighter than for some time on a revival of confidence in the industry and leading stocks gained ground. The Royal Dutch-Shell Transport quarterly statement was considered satisfactory, but was not an important influence on the market. Tea shares lost their firm tone and prices tended to ease. Rubber shares also encountered some profit-taking following the setback in the price of the commodity, and share prices were mainly lower.

The Money Market

There was some easing of the credit supply position in the money market over the past week. The banks, especially in the early part of the week, were in an improved position to lend to the market and enabled discount houses to finance a bigger uptake of the Treasury bills without the usual struggle, while the authorities provided only a very modest amount of assistance. Thursday was a more difficult day, but even then, conditions were not too bad with the supply of funds just about adequate, while the subsequent end-month factors created very little disturbance. As a result, the overall cost to the market of securing their requirements was cheaper than usual with the rates for day-to-day loans fluctuating between a high of 3¼ percent which was the general rate current during the mornings, cheapening in the afternoon down to a low of 2 percent, and on one day, down to 1½ percent. There was a fairly good offtake of bills by the banks with late Januarys and early Februarys sold at 3½ percent. The Treasury bill rates were virtually unchanged at the weekly tender last Friday. Applications for £220 million worth of 91-day bills totalled £343,450,000. £220 million were allotted at an average rate of £3 7s 11.95d percent, against £3 7s 11.96d percent in the previous week. This week £230 million worth of 91-day bills are on offer. Applications for £60 million worth of 63-day bills totalled £66,985,000. £60 million were allotted at an average rate of £3 9s 0.40d percent, against £3 9s 0.30d percent in the previous week.

Activity on Wall Street

Bond dealings during the past week were light. U.S. Government obligations finished mixed, with intermediates generally off small fractions and longer maturities steady to a shade higher. Investment quality corporates were mostly unchanged to a little higher with the volume sharply reduced from the previous week. Speculative rail lines moved narrowly in quiet dealings, while convertibles, following the stock market, were generally higher. Foreign dollar bonds were quiet and mixed. Belgian Congo 5¼ percents added nearly two points early, but eventually gave up most of the gain. Belgian Government 5½ percents eased over one point to sell at $102 for a new 1959 low. Greeks were soft. Amsterdam 5¼ percents were higher. Australian, Norwegian and Union of South Africans showed mostly fractional changes either way. Japanese Governments were unchanged to higher by a major fraction.

Vegetable Oils Fall

The demand for oilseeds was mostly restricted and values were lower. There was more business possible however in linseed as prices have come down to a workable level. Groundnuts attracted very little notice, while linseed oil made a more definite downward move on a continued limited demand and occasional selling pressure, while the announcement that the United States would shortly begin to liquidate its surplus stocks, provided little encouragement to traders to take a firmer view. Castor oil went quieter for the time being, while demand for castorseed fell away and prices eased at least £1 a ton. Tung oil occasioned a revival of buying interest.

Hongkong Bullion Bearish

A bearish trend prevailed in the Hongkong bullion market during the past week. Trading remained negligible with no deliveries reported. Carry-over charges were nil. Arrivals at Macao totalled 24,000 ounces. Forward contracts were done at $(U.S.)38.01 c.i.f., Macao.

ECONOMY OF ANDHRA

The Economy of Andhra Pradesh. By Dr. V. V Ramanadham. (Published by Asia Publishing House, Calcutta. Price Rs. 20, pages 302.)

Being a critical economic guide to Andhra Pradesh, the book attempts to make a cogent and complete study of a region which is beset with difficulties of shifting boundaries, unreliable statistics and inadequate data. There are nine chapters in the publication, and the topics covered are the formation of the State, the uneven development patterns of the different regions, the socio-economic setting (with particular reference to problems of population and employment), the industrial structure, public enterprise, trade and transport, economic aspects of town planning and the pace of economic development *vis-à-vis* the five year plans. Andhra is one of the agriculturally surplus States, and agriculture is by far the main economic activity of the people there, but only about ten pages are devoted to it, although there are some useful tables. The author says (on Page 58) that an Andhra Stock Exchange might function in Guntur or Vijayawada for ensuring greater mobility of capital in the State. But unless there is a large class of investors in equities, the establishment of a Stock Exchange may not be of much help. Mr. Ramanadham believes that for stimulating investment, "the most appropriate agency for the purpose may be found in the State Finance Corporation". But the directors of the Hyderabad State Finance Corporation lately remarked that it would never make enough profits to be able to meet in full the guaranteed dividend of 3½ percent. The author concludes with the remark (Page 257) that economic conditions in the State indicate an active rôle for the Government. But from Table 49A, it is clear that none of the State-associated concerns is working at a profit. It would appear, therefore, that economic development in Andhra Pradesh—well endowed with natural resources as she is—might be possible by private capital, including foreign capital invest ment, and the State should create a proper climate for it.

BUSINESS ORGANISATION

Essentials of Business Organisation. By J C Bahl. (Published by New Book Company Private Ltd, Bombay 1. Pages 799.)

Mr. Bahl's book is intended to meet the needs of the B Com. degree-course students of the Indian universities in general and the Bombay university in particular, it will also be useful to those who prepare for the "National Diploma in Commerce" examination conducted by the Central Government. People engaged in business, who wish to have some knowledge of the academic side of business organisation will find it useful. When the Companies Act, 1956 is fully brought into force, it will bring far-reaching changes in the business structure. Mr. Bahl has referred to the important sections of the Act and has drawn the attention of the reader to the changes contemplated. The amount of labour legislation, since 1947, has been large, so the author has rightly allotted 200 pages of the book to labour problems facing business. He admits that the book is not strictly the result of any independent research, but is a study of standard works on different aspects of the subject. Besides, it has collected information from several Government publications and reports. The statistical information given is useful, and the book deserves a place in every college library.

JOINT-STOCK COMPANIES

The Rôle of Joint-stock Companies in India: Economic Progress. (Published by Jaico Publishing House, 125 Mahatma Gandhi Road, Bombay 1 Price Rs. 2, pages 146.)

Joint-stock companies in India have played a vital rôle in accelerating economic development although the burden of company taxation, which is one of the heaviest in the world, has retarded their growth in recent years. The publishers have brought out a collection of authoritative essays on various aspects of company management. Written mostly by experts who are well known in their own spheres, the book will be welcomed.

FRESH U.K. EXPORT CREDIT FOR INDIA

CZECH AID FOR THIRD PLAN PROJECTS

(FROM OUR NEW DELHI CORRESPONDENT)

AN Indo-British agreement was signed last week concerning the credit of £19 million which has been granted to India by the U.K. under Section 3 of the Export Guarantees Act, 1949. This credit forms part of the joint programme of assistance to India to help finance her second five year plan. (The programme was agreed upon at the meeting convened by the World Bank in March this year in Washington, which was attended by the U.S.A., Canada, West Germany, Japan and the U.K.) At an earlier joint meeting in Washington in 1958, the U.K. had agreed to make available a Section 3 credit of £28.5 million as part of a similar joint programme, and this has been fully used.

The following are the main features of the agreement: (1) one-third of the loan will be repayable in ten years, and two-thirds in 20 years; (2) capital repayments will not begin before May 1965; (3) the rate of interest agreed is ¼ percent above the rate at which the U.K. Government itself can borrow; (4) the credit can be used in the same way as under the previous agreement; and (5) reimbursements will be made by the U.K. to India for payments by India to U.K. suppliers completed since March 1959. This is a Commonwealth assistance loan of the kind announced by the Chancellor of the Exchequer at the Commonwealth Trade and Economic Conference in Montreal in September 1958.

Indo-Czech Aid Agreement

An agreement on economic collaboration between the Governments of India and Czechoslovakia concerning the establishment of certain industrial plants in India was signed here last week. According to this agreement, Czechoslovakia will make available to India long-term credit amounting to Rs. 23.1 crores as the cost of the machinery and equipment for the third stage of the foundry-forge, heavy machinery building plant, heavy electrical plant and for other projects included in the third five year plan to be supplied by the former.

The credit will be for a period of eight years and will bear an interest of 2½ percent a year, the first instalment becoming payable one year after the completion of the last delivery against each project. Repayments will be in Indian goods such as pig iron, chemical and engineering goods, non-ferrous metals, processed and other ores and semi-finished products. Mr. F. Krajcir, Minister of Foreign Trade of Czechoslovakia, has expressed the hope that the agreement would contribute to a further promotion of economic and technical co-operation between the two countries. He said that the Czechoslovak Government would take all necessary steps to ensure the smooth implementation of the agreement. Announcing the offer of Rs. 60 lakhs for the education and training of Indian technicians, Mr. Krajcir said that the Czechoslovak Government would be willing to supply equipment for a technological institute in India, and loan the services of experts for this purpose. The Czechoslovak Government would also train Indian technicians in Czechoslovak industrial plants and scientific institutes.

Double Tax Avoidance Agreements

As a result of negotiations with foreign countries in recent years, agreements for the avoidance of double taxation have been concluded with (i) Sweden and (ii) Switzerland (limited to profits of enterprises operating air services), which are now in operation. With the U.S.A., Denmark, Norway and West Germany, the negotiations have resulted in the signing of agreements at the governmental level. Negotiations with Japan have led to an agreement being initialled at the official level, and those with France and Greece have resulted in the drawing up of *aide memoires* covering the field of agreement. These are expected to be followed up. The talks with the U.K. have so far been inconclusive. Shipping is the main hurdle with Britain. The U.K. claims that the head offices of the shipping companies are situated in Britain, which should levy taxes on the earnings of the ships registered in Britain. It holds that any departure from this established practice will prompt other countries to claim a similar concession. As British shipping operates to all countries, its profits will have to be distributed on a global basis. The U.K., however, is opposed to double taxation. The British Department of Internal Revenue will shortly make further suggestions to the Government of India, demanding more concessions over its previous draft proposals, which may open the door for fresh negotiations.

German Assets in India

A statement on the release of prewar German assets in India was made in the Lok Sabha by the Minister for Commerce, Mr. Nityanand Kanungo, last week. The Minister said: "In September 1939, all the German assets in India amounting to Rs. 2.96 crores were vested in the Custodian of Enemy Property. Later, this amount was allotted to India as a part of German reparations. In view of the present happy state of India's relations with West Germany, it has been decided to release the vested assets to the West German owners after checking their title to them. The amount actually released will be the net amount after retaining Rs. 70 lakhs, which is the total value of the Indian claims against Germany. The release will be subject to the condition that the amounts of the claims whose value exceeds Rs. 5,000 will not be allowed to be repatriated, but could be invested in approved projects in India. Earnings on such investments would, however, be allowed to be remitted to West Germany in accordance with the current exchange control regulations. Amounts of the claims whose value is up to Rs. 5,000 will be allowed to be repatriated. The magnitude of such repatriation will be of the order of Rs 6 lakhs."

Report on Second Shipyard

The U.K. shipyard mission, which visited India in November 1957 under the joint auspices of the Colombo Plan and the U.K. Shipbuilding Conference, to advise the Government on the site and lay-out of a new shipyard, submitted its report to the Government in April 1958, after inspecting 19 sites. It recommended that the Ernakulam site in Cochin offered more than any other site examined towards a successful development of a shipyard. After a preliminary examination of the report, the Government of India appointed an inter-departmental committee in June 1958, under the chairmanship of Sir Raghavan Pillai, Secretary-General, to consider and process the report of the mission. This committee has since submitted its report to the Government, and has come to the conclusion that the shipyard should be located in Cochin at the site recommended by the mission. The Government of India, after careful consideration of the report, has decided that, subject to the results of the further investigations in to the soil conditions being satisfactory, the second shipyard should be located in Cochin at the site recommended.

Development of Shipping

The National Shipping Board, meeting here last week under the chairmanship of Mr. G. L. Mehta, reviewed the report of its *ad hoc* committee on the third five year plan for shipping in the light of the further discussions that had been held with the railways about coastal shipping and with the Ministry of Mines and Fuel on the requirements of tankers. The Board expressed its grave concern over the prospects of coastal trade in coal which is being progressively diverted away from shipping. The Board felt that the vital importance of coastal shipping in emergencies, as a training ground, as a feeder of merchant navy as well as the country's second line of defence had to be considered at the highest level so as to evolve a consistent and a long-term policy for its development. It also discussed the provision of adequate foreign exchange for the development of shipping in the third five year plan period. The Board was of the unanimous opinion that high priority should be given for this requirement. Among the suggestions made were the creation of a pool consisting of the foreign exchange earnings of Indian shipping, inclusion of shipping in the core of the third plan, long-term credits and various other measures. The Board noted that if the proposals now under consideration materialised, the prospects of achieving the second plan targets would be good. The question of employment opportunities both for ratings and officers was also reviewed.

Calcutta Port Development Loans

In 1958, the Calcutta Port Commissioners entered into an agreement with the World Bank for a loan of $29 million to finance the foreign exchange part of specified development schemes included in the second five year plan. In view of the deterioration of the Balari bar on the Hooghly river, the Commissioners subsequently decided to postpone some of the items already included in the agreement so that the foreign exchange earmarkd for those schemes could be used for constructing a new suction dredger and for certain other allied schemes. In accordance with the agreement, the consent of the World Bank was sought to a proposal to place an order with Messrs William Simsons and Company for a new suction dredger, estimated to cost Rs. 1.77 crores, out of which the foreign exchange content will be Rs 1.57 crores. The Bank has agreed to the proposal. The order for the dredger has been already placed with the firm. The terms of the loan negotiated with the Bank are as follows:

(i) Amount of the principal	$29 million.
(ii) Period up to which the loan can be drawn upon	30th September, 1962.
(iii) Commitment charge	¾ percent a year on the amount of the principal not withdrawn from time to time.
(iv) Rate of interest	5½ percent a year on the principal amount of loan withdrawn and outstanding from time to time.
(v) Repayment of the principal	In half-yearly instalments beginning on 15th April, 1963, and ending on 15th April, 1978.

Intermediate Ports

The Dutch port expert, Mr. Posthuma, has recommended that fresh traffic forecasts should be prepared for the port of Mangalore and if these show that the traffic is likely to be of the order of 700,000 tons of general cargo a year within some years, the construction of a deep draft port for the accommodation of ships of about 10,000 tons dead weight would be economically justified. He has also examined three alternative sites under consideration by Indian experts, namely, (1) in the estuary of the Netravati river; (2) lagoon type harbour by giving a new mouth to the Gurpur river and converting the portion of the Gurpur river running parallel to sea-coast into a lagoon harbour; (3) an artificial harbour on the lines of the Madras port about 3½ miles south of Netravati.

The first alternative is not suitable as the experiments at the Poona Research Station has shown that it is difficult to maintain drafts exceeding 22 feet in the river estuary. Mr. Posthuma has given preference to the lagoon port over an artificial harbour for the following reasons: (1) the lagoon itself can be used for the harbour; (2) the lagoon port is nearer to the town of Mangalore and tile factories. It will be possible to carry the tiles to the ships by means of river craft; (3) the existing port facilities will continue to be useful when a lagoon port is built. As there was disagreement between the Indian experts about the magnitude of silt that would reach the lagoon harbour from the Netravati river and the littoral drift, he has also recommended constructing two experimental groynes as well as observing the movement of silt. The recommendations contained in Mr. Posthuma's report are being considered by the Intermediate Ports Development Committee set up by the Government to select suitable intermediate ports for extensive development. The committee, it is expected, will submit its report by March 1960.

Heavy Electricals to Buy U.K. Gas Plant

Heavy Electricals Ltd, Bhopal, has placed an order for a gas plant with Humphreys and Glasgow Ltd, London, through Associated Electrical Industries, London, who are the technical consultants for the project. The value of the contract is Rs. 16 67 lakhs and it is expected to be completed by December 1960.

Cement Producing Units

At present, there are 32 cement factories in India with an installed capacity of 8.35 million tons. The following table shows the number of factories, capacity, anticipated production, etcetera, during the period 1954 to 1960-61, on the basis of approved schemes already covered by import licences materialising during the remaining period of the second five year plan.

Year	Number of factories	Rated capacity (million tons)	Actual production (million tons)
1954	25	4.5	4.5
1955	27	4.9	4.5
1956	28	5.7	4.9
1957	29	6.6	5.6
1958	31	7.05	6.06
1959 (at present)	32	8.35	5.55 (end of October 1959)
1959 (end)	35	9.12	
1960-61	41	10.25	

Nine new cement factories are likely to be set up during the remaining period of the second five year plan at the following places:

	Location	State
1.	Visakhapatnam	Andhra Pradesh
2.	Cherrapunji	Assam
3.	Pondicherry	Pondicherry
4.	Porbandar	Bombay
5.	Veraval	Bombay
6.	Ramanathapuram	Madras
7.	Thiruvottiyur	Madras
8.	Ammasandra	Mysore
9.	Near Srinagar	Kashmir.

S.T.C. Price of Cement

The State Trading Corporation sells cement at a uniform price of Rs. 117.50 a ton of packed cement, f.o.r. destination. This price is inclusive of excise duty, packing charges, freight, sales tax and other charges. The State Trading Corporation's remuneration is only 60nP a ton. The price of Rs. 117.50 a ton has been worked out as follows:

1.	Average ex-works price	Rs. 58.10
2.	Packing charges (jute bags, etcetera)	Rs. 13.50
3.	Average freight	Rs. 18.00
4.	Excise duty	Rs. 24.00
5.	Sales tax	Rs. 1.00
6.	Selling expenses to the selling and distributing agencies	Rs. 1.50
7.	Rebate on rate contract	Rs. 0.50
8.	Contingencies	Rs. 0.30
9.	State Trading Corporation's remuneration	Rs. 0.60
		Rs. 117.50

Under the Cement Control Order, any rebate discount payable by a producer to a consumer nder any earlier agreement is to be continued, nd the amount of the rebate or discount is to be educted from the ex-works price payable to the roducer and passed on to the consumer. The acherla factory had agreed to supply cement to ie Nagarjunasagar Control Board at a rebate hich worked out to Rs. 7 a ton. Accordingly, the tate Trading Corporation deducted the amount this rebate from the ex-works price and gave ie benefit of this rebate to the Nagarjunasagar ontrol Board.

Helping Durgapur Steelworks

Mr. D. Vernon, assistant manager of blast furnaces of the Consett Iron Company Ltd, Consett, ounty Durham, will be leaving Britain by air n 5th December to help start production at the urgapur steelworks. At Durgapur, he will join wo other employees of Consetts who have already left for India—Mr. E. Aikenhead of Consett's research department, and Mr. J. McCourt, blast furnace operative. The services of all have een made available for some months.

Iron Ore Exports

The following statement shows the countrywise xports of iron ore for the years 1958 and 1959 January-July) :

Countries	Quantity in '000 tons (value in lakhs of Rs.) 1958		1959 (January-July)	
	Quantity	Value	Quantity	Value
zechoslovakia	428	223	316	148
ast Germany	7	4	44	24
oland	39	21	38	22
ugoslavia	42	23	47	24
apan	1232	657	1013	531
Vest Germany	4	2	6	3
ther countries	114	69	30	15
	1,866	999	1,494	767

Fountain Pen Manufacture

Replying to a question in the Lok Sabha last eek, the Minister for Industries said that there ere 15 units in the large-scale sector and about 00 in the small-scale sector manufacturing ountain pens Their actual production in 1958 as 10.7 million pieces and that during the first alf of 1959 was more than 5 million pieces. The roduction of the small-scale units is estimated at about 14.4 million pieces in 1959. The Minister claimed that any addition to the number of fountain pen-making units in the country would not be conducive to the possibility of improving the quality of fountain pens.

This should indicate the pattern of industrialisation in this country. As many as 115 units have been allowed to grow up to make fountain pens, manufacturing 10 million pieces in a year. None of the units, as was admitted, is capable of manufacturing high-class fountain pens. On the one side, the Government has banned the further expansion of industry. On the other, in spite of the ban on imports, the market is glutted with imported fountain pens, which obviously are smuggled.

Replying to another question, the Minister for Industries told Parliament that no precise information was available about the prices of vehicles manufactured by the foreign associates or collaborators of the Indian motor-car manufacturers in their countries of origin. In other words, the Indian consumer has no means to judge whether he is paying a fair price for his motor-car. The answer will surprise everyone, for the Government does maintain a costly administrative machinery in India and abroad, including the Indian Tariff Commission, which should be in a position to supply comparative prices of the goods manufactured abroad, the imports of which have been banned largely because of the balance of payments crisis. The quality of goods manufactured in India is another aspect of the same problem. There is a standards institute which lays down standards. How the standards are enforced can be seen from the fact that due to the poor quality of cement, the foundations of a certain building at the Rourkela steelworks were found to be weak. In the prevailing craze for industrialisation, the consumer's interests are neglected. The first emphasis is on the volume of employment and the second on the indices of production. The price, quality and durability of the goods manufactured do not figure in the plan. It is not surprising that exports are not making any headway.

Steel Imports

The following quantities of steel were imported during the period January 1948 to March 1958 :

Year	Tonnage
1948	203,077
1949	396,298
1950	502,532
1951	178,649
1952	196,030
1953	247,611
1954	387,401
1955	899,321
1956	1,853,921
1957	1,729,564
1958 (up to March)	345,339

On 1st July, 1959, 1,154,252 tons was outstanding as balance of orders to be imported.

Cadburys to Expand

The managing director of Cadbury Brothers Ltd, Bournville, England, Mr. Michael H. Cadbury, was in Delhi in connection with his company's future expansion programme.

New Oil Policy

The Government's new oil policy was announced in Parliament last week. According to the statement, consumption will increase to 14 million tons of crude oil by 1966 and to 25 million tons by 1971. The present import bill for petroleum products is already about Rs. 100 crores a year. Indigenous production of crude oil at present is 500,000 tons, but it is expected to go up to 4 million tons a year by 1965. The Government is anxious to augment the resources by at least 10 million tons a year by 1965. As already reported, with the exception of four areas, namely, Sibsagar in Assam, Cambay on the west coast and Jwalamukhi and Hoshiarpur in Punjab, the rest of India has been thrown open to the private sector on such terms as will be mutually agreed upon. These terms will include refinery rights, transport and marketing of oil and making available of the data collected by the Natural Gas and Oil Commission.

The Secretary of the Central Ministry for Mines and Fuel, Mr. S. S. Khera, will shortly hold discussions with the interested oil companies, in order to elucidate point or points, if any. The new rules were also published, under which the four stages stipulated in the Petroleum Concession Rules of 1949 have been reduced to two, namely, the exploration licence and the mining lease. The term of the exploration licence will ordinarily be four years, with two yearly renewals and the area covered by it will ordinarily be 3,000 square miles.

It is not so much the rules and the declarations but the manner and method of negotiations with the oil companies which will encourage private enterprise to undertake exploration work. West Germany and the French Institute of Petroleum have approached the Government of India to participate in the exploration for oil. West German seismic teams will conduct geophysical investigations in the Indo-Gangetic plain. The offer has been accepted. The French Petroleum Institute proposes to collaborate with the Oil and Natural Gas Commission for explorations in the Kutch area. On discussion, the French Institute has agreed to send revised proposals which are awaited.

An agreement between the Governments of India and Russia was signed earlier this year for setting up an oil refinery in Barauni, Bihar. The agreement provides that the Russian organisation concerned will be responsible for the following:

(i) to conduct research and analysis of the Nahorkatiya crude oil;

(ii) to prepare a project report, design and working drawings;

(iii) to determine, on the basis of research and analysis carried out on the crude sample, the techno-economic expediency of producing oils, including lubricating oil;

(iv) to supply the equipment, steel structurals and certain other materials, as may be mutually agreed upon;

(v) to render technical assistance in selecting the site, in collecting initial data for designing, in erecting and in tuning up the equipment, in commissoning the refinery and in reaching the rated capacity of 2 million tons a year;

(vi) to train Indian specialists and skilled workers in the designing, construction and operation of the refinery, both in Russia and in India.

A credit of 100 million roubles, at 2½ percent interest a year, has been extended by the Government of Russia to cover the cost of equipment, materials and technical services to be provided by its organisation. Such further amounts in excess of 100 million roubles as may be required (not exceeding 50 million roubles) will be met from the 1,500 million rouble credit offered by Russia for third plan schemes. The credit will be repaid within 12 years in equal annual instalments, the first repayment beginning one year after the completion of deliveries of equipment and materials from Russia.

F.I.C.C.I. Seminar on Third Plan

The Federation of the Indian Chambers of Commerce and Industry held here a seminar on planning. About 200 representatives of trade and industry attended. The seminar endorsed the Planning Commission's outlay target of Rs. 10,000 crores, considering it feasible provided immediate steps were taken towards modifying taxation measures as well as the administrative procedure. The seminar also urged that the public and private sectors should receive equal treatment and units in the former should not get preferential treatment in the matter, for example, of obtaining railway wagons, raw materials and import licences. Public sector units should also be subject to all taxes that applied to the private sector. Various panels were set up, included in which were those on transport, agriculture and labour. There was a panel neither on resources nor on trade.

The seminar was inaugurated by the Finance Minister, Mr. Morarji Desai, who assured his audience that he was in an exploratory frame of mind and would rather like to hear from the seminar to what extent and how best the necessary resources for the plan could be raised. He disagreed with the view that the question of finances was not an important one. He asserted that planning was an attempt to get the maximum out of the resources available and find ways and means of enlarging them. "The resources needed have to be raised by maximising the contribution of each mode of financing, whether it is taxation or loans or small savings or the profits of public enterprises", he added. The Finance Minister urged that the stage had come when India should increase her exports, if she is to meet her growing demands for imports.

Paper by Mr. G. L. Mehta

A former member of the Planning Commission, Mr G. L. Mehta, made the best contribution to the seminar. He asserted that India's growth depended, not on exports, but on the growth of the internal market, where 80 percent of the rural population were potential buyers. Surveying the second plan performance, Mr. Mehta said that about 45 percent of the public sector outlay had come from domestic savings, 35 percent from deficit financing and 20 percent from foreign aid. "The failure of domestic saving has left us with no alternative but to depend on increased amounts of foreign aid. Two main conclusions derive from this reliance on external resources. Firstly, the course we propose to pursue must commend itself to friendly countries on which we depend so heavily. Secondly, we must maintain a climate that will attract increasing amounts of foreign private capital."

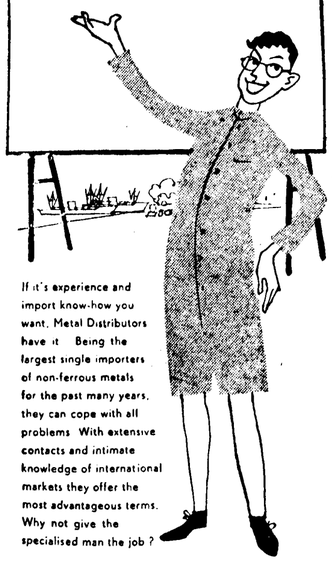
Mr. Mehta further said: "The crisis of the second plan period that loomed largest was the sudden, apparently unexpected and severe shortage of foreign exchange. The main facts about it are well known, as are its outward effects: the drastic curtailment of imports, the reduction in Government plan outlays, the slowing down of the tempo of private investment, the appeal for large foreign aid, etcetera. The ramifications and implications of the crisis have been manifold and I need not review them here. However, the experience inevitably raises some pertinent questions about the second plan.

"Firstly, was there a foreign exchange budget? Or, to put it in another way, were the foreign exchange requirements of the plan estimated with sufficient care and was enough leeway left for those inevitable contingencies which we cannot foresee, but must always provide for? And was a reasonable calculation made of the import content of rising current expenditures by the Government and for the effect on imports of the higher income which India is now generating?

"A second question concerns agriculture generally, and food particularly. India's food supply unfortunately still depends on a variable monsoon. Did the allocation of resources and human energies in the second plan take account of the fact that a bad monsoon can mean a crushing increase in foreign exchange requirements for food? I shall return to this question later.

"A third question concerns an issue I discussed earlier. Foreign exchange has been and will continue to be a crucial problem in India's plans. Was the encouragement of exports given sufficiently high priority in the second plan in order to expand our ability to provide our own foreign exchange?

"A fourth question concerns the severe cutback of the private sector in relation to the public sector, once the crisis emerged. Can one say that there was proper co-ordination of private and public sector activities, which are supposed to be complementary, when a crisis of shortage of resources causes a slow-down of private investment and production, in order to maintain the pace of public investment? Did the plan take full advantage of the momentum which private investment had developed during the first plan and recognise the fact that private activity is responsible for the overwhelming bulk of Indian output? These questions would be of little significance if private and public sector activities were more or less in the same fields; or if the stress of the second plan had been on consumer goods; or if public sector investments had been in industries which bring quick productive results. But this was not the case."



Mr. Mehta did not deal with two other matters. Professor Oskar Lange, a member of the Polish Communist Party Central Committee, and others spent long periods with Professor Mahalanobis in Delhi and left their imprint on the plan-frame, which the latter presented to the Planning Commission. Thereafter, there was competition between the Planning Commission and the plan-frame authors to map out a socialist plan, the fundamentals of which were incorporated in the final report. The second one was the minute of dissent of Mr. Mehta's successor, Mr. K. C. Neogy. At this stage, the deputy chairman of the Planning Commission had an inspiration. He said that the plan was capable of being implemented if the agricultural production targets laid down in the plan were stepped up by 20 percent. This was to be achieved without any additional outlay. The Prime Minister endorsed the suggestion and the Central Minister for Agriculture was directed to implement it.

Another aspect of the second plan was that the full financial implications of several important projects were not fully worked out. In fact, the plan outlay was not Rs. 4,800 crores, but in the neighbourhood of Rs. 6,200 crores. It may be argued that all this is past history and very soon India will be witnessing the completion of the second five year plan. But these recollections are necessary, since the same mistakes are likely to be repeated in connection with the third five year plan. Professor P. C. Mahalanobis has already drawn up his plan-frame. In fact, the outlay of Rs. 10,000 crores is his idea, which is being endorsed all round.

Pharmaceuticals and Dyes

The communist leader, Mr. A. K. Gopalan's resolution for the nationalisation of the pharmaceutical and dyestuffs industry will come up for discussion in the Lok Sabha on 4th December. The Government is opposed to the resolution, it is learned. First, the industry has so far been in the private sector and it is only recently that some units were set up in the public sector. At the present stage of development, it is impracticable to nationalise the industry.

Import know-how makes the difference

If it's experience and import know-how you want, Metal Distributors have it. Being the largest single importers of non-ferrous metals for the past many years, they can cope with all problems. With extensive contacts and intimate knowledge of international markets they offer the most advantageous terms. Why not give the specialised man the job?

LITTLE CHANGE IN U.K. RETAIL PRICE INDEX

SPECIAL FACTORS CONTRIBUTE TO STABILITY

(FROM OUR LONDON CORRESPONDENT)

THE general level of retail prices has not changed much since the second quarter of last year. Whether prices will remain stable is another matter, as the U.K. Treasury admits in its latest *Bulletin for Industry*. The good behaviour of the index since October 1958 is due only partly to the wisdom of the Government (the Chancellor of the Exchequer made important reductions in indirect taxes in the Budget). Other factors were the fall in import prices, mainly in 1957; a seasonal reduction in coal prices; and the drop in the food index after the potato shortage, which inflated food prices in the second quarter of 1958, ended. Because these helpful influences were in a sense special, the U.K. Treasury finds it impossible to say that the underlying trend of prices is not still upward. All it says is that the trend has been much more moderate in the last 18 months than at any other time since the war. And it sees the main reason for this in the slowing down of the rise in wages and earnings. In the first half of this year, the wage rates index was, on average, 3½-percent higher than a year earlier while the total income from employment was only 3-percent higher (3 percent, however, is still above the average increase in output during the last ten years). The rise in total incomes in the first half of 1958 was 5 percent; in 1957 it was 6 percent and in 1956 10 percent. Profits, which include for this purpose income from rent and self-employment, were 7-percent higher in the first half of this year.

Price Cuts: An Answer

At last there has come a hesitant response to the Chancellor's plea for lower prices. It came from industry's chief spokesman. Mr. W. H. McFadzean, president of the Federation of British Industries, told members of the London and south-eastern region that he hoped all businesses would give particular attention to "some of the benefits of increasing productivity being reflected in lower prices." He would not go farther than that. "With the greatest respect for the Chancellor of the Exchequer, I do not think that this is a fruitful subject for exhortation," Mr. McFadzean added. He argued that, by and large, the pricing policies of business firms were rightly dictated primarily by commercial considerations. He admitted, however, that strong habits had been formed in 20 years for rising prices.

Hire-purchase Debt

The U.K. Government is evidently not worried by the steep increase of the hire-purchase debt, provided that savings remain at a sufficiently high level. This emerged from questioning in Parliament, when Mr. Anthony Barber, Economic Secretary to the U.K. Treasury, answered questions on the figures published recently. They showed an increase of £303 million in the 12 months after restrictions were removed in September 1958. Mr. Barber points out that the increase for the next 12 months is likely to be substantially less. The rise, he said, cannot be taken as an indication of inflation, nor is there reason to believe that the restriction on hire-purchase facilities will have any appreciable effect on reducing prices. "We shall continue to keep hire-purchase expenditure under review along with other elements in the national economy," he added.

Licensing Indo-Pakistani Imports

The British Government, it has been announced, with the full agreement of the Governments of India and Pakistan, will operate a licensing control to implement the agreements which the cotton industries of the two countries have made with the U.K. Cotton Board to limit their exports of cotton cloth and made-up cotton goods for retention in the United Kingdom. Carpets, mats, rugs and shawls, and also handloom products, fall outside the agreements and there is to be no limitation on imports for re-export in the piece after processing (or in the same state) or on made-up goods imported for re-export.

From 1st January, 1960, individual licences will be required for importing the goods, subject to limitation. Licences will be issued, on application, to traders who imported the goods, subject to control from India or Pakistan, for retention in the United Kingdom in the 12 months ended 30th September, 1959, or in the previous 12 months, and will be proportional to imports during whichever of these periods the importer prefers. Applicants will be entitled, in the first place, to licences for a quantity not less than 100 percent in the case of India, and 125 percent in that of Pakistan, of their certificate imports during that period. Initial licence-holders, who need additional licences, should apply for a share of the outstanding balance of the quota as soon as they have fully used or contracted to use their initial licences. Applications for a share of any balance will also be considered from other traders who apply for the first time after the initial licences have been issued. Licences for goods imported for re-export will be issued without limitation, but they should be applied for separately. Licences for goods for retention in the United Kingdom will be valid for the 12 months ending 31st December, 1960, but may be extended on request for a further period not exceeding six months.

Trade Expansion

October's striking increase in British exports from £245.5 million in September to a record £305 million was no mere flash in the pan. The full figures, now issued by the U.K. Board of Trade, with seasonally adjusted averages covering recent months, provide evidence of a strong underlying trend of expansion. Taking exports in September and October, the rise—compared with the corresponding months of last year—amounted to 10 percent. In the eight months from January to August the improvement over the previous year was only 3 percent. Detailed figures show that the 10-percent increase, amounting to £26 million a month in September and October, has been spread over a very wide range of commodities. Exports of engineering products rose by 7 percent (£7½ million), in spite of falls of 62 percent in exports of ships and 40 percent in those of railway vehicles. Machinery, both electric and non-electric, made the largest contribution, increasing by 15 percent or £9 million a month. Another striking rise was in exports of commercial vehicles which, on the two months' comparison with the preceding year, were 31-percent higher. Textile exports also recovered sharply. The rise in wool yarns and fabrics was 21 percent and exports of cotton manufactures, after being 17-percent down in the first eight months of this year, showed a 2-percent increase.

The area pattern also strengthens the impression of a broad improvement. Exports to North America and western Europe have accounted for most of the recent increase. But all the main areas show rises and exports to the sterling area, which a few months ago were showing signs of reacting to the lower level of commodity prices, have also begun to make a substantial contribution to the recovery. In October, the terms of trade, measured by the ratio between import and export prices, moved slightly against Britain. At 109 (1954 equals 100), the index of export prices was unchanged but the import price index rose from 98 in September to 99. The index of the terms of trade, therefore, moved up by one point from 90 to 91.

Bank Loans still Expanding

There is no let-up in the expansion of bank loans. In their latest monthly statements, the London clearing banks show a further increase of more than £51 million in advances between 21st October and 18th October. This follows the rise of £65.4 million in the preceding month and the £42.4-million increase which took place in the four weeks ended the middle of September. During the month, the banks did not disturb their investment holdings but it is significant that their liquid assets have been substantially reduced. Although money at call has increased by £41 million, holdings of cash are down by more than £5 million and bill portfolios have fallen by nearly £90 million. The net result is that liquidity ratios have been pulled down, which is contrary to normal experience at this time of year.

These figures inevitably prompt the question whether the Bank of England, working with the U.K. Treasury, may not have been giving a gentle pull on the reins. The high level of savings and possibly the operations of the Exchange Equalisation Account may have provided the authorities with the opportunity for some quiet funding, which has made its impact on the liquidity of the banking system. The City has not forgotten the Bank Governor's warning at the Mansion House, that the increase in bank advances would need "watching" if it continued much longer at the recent pace.

Credit Scheme

The banks are to arrange "in a few months' time" for a wider use of their traders' credit system. This will be the first step towards extending the transfer of payments between banks. A benefit of this system is that a person with a number of payments to make at one time enjoys a big saving in cheque stamp and postage costs. Many salary payments are made in this way. The present traders' credit scheme is used to make about 150 million payments a year. This compares with 800 million payments made by cheque. Its extension will create problems concerning banks' staff hours and premises. The London clearing banks have hinted that banking hours will be extended.

Outer Seven Trade Pact

Both the British Ministers who attended the convention of the European Free Trade Association for initialling the "Outer Seven" pact were optimistic on their return of its probable effects, since it will mean higher imports and exports for Britain. Mr. Heathcoat Amory has said that there will be no sharp change because the proposals are for a gradual reduction in tariffs of 20 percent next July, followed by further reductions of 10 percent each year until all tariffs disappear. Mr. Reginald Maudling, President of the Board of Trade, who accompanied the Chancellor, has said recently that it should eventually mean a wider range of choice and better value for Britain's shoppers, and that although some British industries will face increased competition, the dangers of this might be exaggerated. If any serious blows are suddenly inflicted on industries, there are provisions in the agreement for dealing with that. Mr. Maudling has said that the U.K. Government will be sending to the six countries of the European Economic Community the message that it is ready to initiate negotiations. "It is our desire to see at the end of ten years all barriers on European industrial trade abolished."

Machine Tool Orders

The latest statement of the Machine Tool Trades Association, which relates to August, shows that net new home orders for that month totalled £4,027,000, against £3,480,000 in July and £3,107,000 in August 1958. At the end of the month, the home order-book totalled £35,576,000, against £34,199,000 at the end of July, but it was still more than £10-million lower than a year earlier. Export orders in August, at £972,000, were down both on July and on the corresponding month of last year.

New Bank Notes

The Bank of England has announced a new series of bank notes of £10, £5, £1, and 10s value. They will bear the Queen's portrait for the first time, and the new £1 note will be smaller than the present one and the 10s note will be identical in size to the £1 note. The £1 note will be "predominantly green in colour," as at present, but different colours, not yet announced, will be used for the other denominations. The issue of the £1 notes will begin early next year, but the other notes will not circulate until 1961 or later. Work has been going on for over two years on the new £1 notes. One welcome fact about the new £10 and £5 notes is that they will be smaller than the present £5 note, and should easily fit into the note-case or wallet of standard size. The £5 note at the moment is just too big and usually has to be folded.

But there may be some difficulty in differentiating between the new £10 notes and £5 notes and between the new £1 and 10s notes, especially in the dark, for even today with the £5 note slightly larger than the £1 note, there have been complaints that they are difficult to distinguish. It is known that certain banking quarters hoped that the £10 note, which is generally wanted, would be of crinkly white paper, although they seemed prompted more by sentiment than by practicability. Although the £1 and 10s notes were only introduced in 1914, larger paper notes of values up to £1,000 had been in circulation for a long time. It is evidently intended to change the portrait of the Sovereign from time to time so that it is kept as a contemporary likeness.

A.E.I. Re-organisation

The names of three well-known companies are to disappear from the British industrial scene. From 1st January, Metropolitan-Vickers, British Thomson-Houston, and Siemens Edison Swan are to become, respectively, Associated Electrical Industries (Manchester), Associated Electrical Industries (Rugby), and Associated Electrical Industries (Woolwich). The change forms part of a general re-organisation by their common parent company, Associated Electrical Industries. Making the announcement, Lord Chandos, chairman, said that although A.E.I. would be sorry to see the old names go, the change would help the group to compete more effectively with the other big electrical firms. Employees of the three companies will be asked to agree to the transfer of their engagements to the three new A.E.I. firms, but this, Lord Chandos emphasised, is a matter of legal form only. Wages and other conditions of service will remain unaltered.

Brevities

The duty on imported machine tools has been reduced from 17.5 percent to 10 percent *ad valorem*.

In the ten months so far this year, the office machinery industry has exported a record £17,749,000 worth, against £15,900,000 in the corresponding period of last year.

Exports by Britain's aircraft industry rose by £3 million in October to £6.281 million, bringing the total for the first ten months of the year to a record £134.066 million, an increase of £11 million over the same period of 1958.

Sir Leslie Rowan, Finance Director of Vickers, Ltd, has been appointed chairman of a Federation of British Industries standing committee on policy towards underdeveloped countries.

Sir Frank Lee is to be the new Joint Permanent Secretary to the U.K. Treasury from 1st January. Sir Frank, who has been Permanent Secretary of the U.K. Board of Trade for the past eight years, will succeed Sir Roger Makins, whose appointment as chairman of the Atomic Energy Authority has already been announced.

Jute

GUNNY PRICES FLUCTUATE WIDELY ON SPECULATIVE ACTIVITY

SHARP RISE PRECEDES NOVEMBER DUE DATE

THE dominating feature of the Calcutta jute goods markets during the past week was the activity in connection with the November shipping due date. With several steamers loading in port, some prominent operators were caught short, and a run developed on genuine ready goods, particularly sacking. Demand was so heavy that over a period of about four days ready B Twill prices moved up by Rs. 4 and hessians by nearly Re. 1. The rise was also due to speculative activity, as the emphasis was on ready goods for immediate shipment and against November settling day. Mills had only small balances to release for the period, and so the search for delivery order goods was keen and delivery orders changed hands quickly at rising prices. Near delivery rates were really the only ones affected but other shipping periods moved up in sympathy to a lesser extent, only small business being recorded in these sections.

As anticipated, immediately the due date was over, the quest for goods waned and near delivery prices dropped rapidly. The price difference between ready and forward B Twills, which last Saturday was Rs. 4, shrank to Rs. 2, and activity was on a much smaller scale. Forward hessians displayed greater steadiness on reports of interest from the Argentine, and continued to command a small premium over the near positions. There were many in the trade who considered the prices too high, and thought that a recession might induce more business. U.S. buying was considered imminent, but the rise, it was felt, would delay it, especially since forward hessians were now at a premium and it was most unlikely that any demand the U.S.A. may make for ready goods could be satisfied. At the end of October, the U.S.A. held nearly 3½ months' stocks of goods at the average consumption rate, nearly two months of which were spot stocks, so there was no great necessity for her to make a hurried entry into the market. With the Argentine, it was different. Economic difficulties had forced her to buy on a hand-to-mouth scale, so now purchases had to be made as and when the situation demanded.

The Jute Crop

The jute situation has come in for a great deal of discussion over the past few weeks. From some aspects, it is difficult to pinpoint the true reasons for the recent rapid rise in fibre prices, because, as so often happens, the jute section infers that the rise is in sympathy with heavy goods, while jute goods operators more often than not indicate that their market is merely following jute. The popular belief, however, is that, in spite of all the advance publicity early in the season of a bumper crop, the final outturn will not be as high as was anticipated. Estimates of the size of the shortfall differ widely, according to the position of the calculator, and no official estimate can be accepted with confidence.

That the crop will be smaller is generally believed, however, and the reasons given are sound. Firstly, there is the gain in popularity of paddy over jute due to the former showing a larger monetary return to the farmer at the time of sowing. Second comes the failure and lack of supervision of the fertiliser distribution scheme. This paper has long been an advocate of stricter supervision over the use of fertilisers and modern methods of sowing. It is one thing demonstrating the methods that will yield a greater return and indiscriminately distributing fertilisers; it is an entirely different matter seeing that they are carried out. Unless the farmers are subject to very strict supervision, this situation is liable to occur year after year, and Government crop estimates will be treated with even more disdain than at present.

The small imports into nearly all upcountry agencies have caused prices there to increase and have lent credence to many of the stories about a short crop. It is said that most of the jute is already out of the farmers' hands and that very little is now available. This has caused agency prices to show a marked increase over Calcutta rates. A feature this season has been the persistent premium of agency prices over those ruling in Calcutta. On only a very few occasions have levels been even at par. Many have used the arrival figures in Calcutta as indicating a short crop, but the large drop in wagon arrivals in Cossipore is easily explained. During the recent floods, transportation of all commodities came to a standstill. The railway authorities have now, very wisely, rationed wagons to carry jute to ensure that essential goods, notably coal, are conveyed with the minimum delay. The coal situation in many areas is desperate, and it is only with difficulty that the railways themselves in some places have managed to keep trains running.

Wagon Allocations

The decision of the railway authorities to allocate less wagons for jute was influenced to a certain extent by the mills themselves. Many large groups have requested that certain of their mills be closed for the booking of jute, as not only are they finding it difficult to cope with the heavy seasonal influx of jute, but are also having difficulty in finding storage space, and some have had to resort to storing jute in the open under tarpaulins. Not all mills are in this happy position but it undermines the claim of many sellers who persistently indicate that the mills are short of jute. There are one or two mills who are reported on good authority to have less jute in actual stock than the average, but these appear to be mills with their own agencies, and the are known to be holding large quantities up country.

While mills showed no interest in the Calcutta markets on the excuse that prices were too high, many mills' agencies were buying similar jute upcountry at prices considerably higher than Calcutta rates. The steady quest for high quality fibre by one buyer pushed up rates to fantastic levels, and it is reported that the premiums demanded and paid for good quality jute were exorbitant. This tended to lower the standard of ordinary marks, as much of the jute that was previously packed in Middles and Tops is now being kept aside and offered as special marks. Once again, the question of jetty purchases has been brought to the fore by malpractices that have been indulged in by what were thought to be tried and trusted suppliers. One large group has now virtually stopped jetty purchases, but there are still many who favour this type of business in spite of its pitfalls.

Mesta Shortage

The shortage of mesta continues to cause concern, not only to buyers but also to sellers. A fair quantity was contracted for September-October shipment at prices between Rs. 20 and Rs. 21. Most of these contracts were extended up to the end of November on genuine grounds of lack of jute and transport facilities. Large quantities have still to be covered against these contracts but the price today is about Rs. 4 higher than the contract rate. Sellers are faced with heavy losses if they deliver, even if they could get the fibre, but it is very scarce and only small quantities are on offer. If the buyers cancel the contracts because of non-delivery, the sellers will be faced with heavy difference bills.

THE JUTE MARKETS

Heavy speculative activity and rapid price alterations occurred daily during the past week. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 25th November to 1st December, were as follows:

	Hessians 40in. 10oz. February 1950.		Sacking B Twills February 1960	Raw Jute December,	
	Rs. a. per 100 yds.	Rs. a per 100 metres	Rs. a per 100 bags	Rs. a md.	Rs. a per 100 kilos
Opening	40.08	43.83	102.70	25 62	68.64
Highest	40.74	44.55	105.35	26.74	71.64
Lowest	39.92	43.65	102.15	25.30	67.78
Closing	40 48	44.23	104.65	26.26	70 35

Manufactured Goods: Only small variations in prices occurred in the opening quotations last Thursday, when the lack of overseas interest or fresh activity caused quiet conditions to prevail. Ready shipment B Twills registered a small loss at Rs. 103.50 but forward shipment was unchanged at Rs. 102.10. Hessians were more or less unchanged at Rs. 39.95 for ready 40in. 10oz. and Rs. 40.25 for April-June. During the day, reports of a shortage of ready goods, particularly sacking, not only for steamers loading in port but also against November settlements, caused prices to

Profits blossom

when your goods fly to Tokyo

Every Tuesday, Friday and Sunday via Bangkok and Hong Kong

MODERN, busy, bustling—Tokyo won't *wait* for goods! Send yours by Air-India...and satisfy this eager market *quickly*. You'll cut down on transit risks and costs, increase your turnover, increase your profits.

Air-India offers three flights to Tokyo each week, via Bangkok and Hong Kong... easy connections to cities all over the Far East. Let *us* fly your goods!

AIR-INDIA

UNDER SECRETARY TO G. VERNMENT 7 - DEC 1959 DEPARTMENT

advance rapidly. Heavy goods moved up by Rs. 2 and hessians by 35nP. This trend continued under the influence of heavy speculative activity, and by Saturday morning ready B Twills reached Rs. 106.75. The steadiness of raw jute helped maintain prices but most of the support still came from the speculative element. A new high level of Rs. 107 was recorded for ready B Twills on Monday morning, and at this stage the premium over forward shipment was about Rs. 3. Hessians were quiet and remained at Rs. 40.40 for ready delivery. Immediately settling day and November due date were over, prices receded almost as quickly as they had advanced. On Tuesday morning, ready B Twills were Rs. 1.25 lower than the previous day's opening quotations. Hessians once again showed little change. During Tuesday afternoon, however, a firmer tendency again became apparent due to rumours of a Government tender and enquiries from the Argentine.

On Wednesday morning, opening quotations were as follows:

	Ready	Dec.	Jan.-March	April-June
10in. 8oz.	33.20 (35.18)	32.66 (35.97)	32.70 (35.64)	32.40 (35.32)
10in. 10oz.	40.45 (44.09)	40.30 (44.14)	40.60 (44.25)	40.65 (44.31)
Twills	104.10	105.30	104.75	104.20
Heavy Cees (Plain)	105.75	105.50	104.75	104.50
Twills	129.50	128.00	126.25	125.25
Liverpools	118.00	117.50	116.25	115.50
Gunsacks	104.75	105.25	105.50	105.00

Raw Jute: The market was steady at the opening last Thursday with mills showing little interest in offers from Calcutta. Sellers were reserved as prices in the agencies were well above those ruling in Calcutta. Shortly after the opening, the market showed signs of rising due to the paucity of imports. Calcutta rates moved up by 25nP from the opening levels to Rs. 25.75 but the rise upcountry was more pronounced. This did not deter mill agencies from paying the higher prices, and good business was done on the rise. In sympathy with the goods market, rates continued to rise and on Saturday Assam Bottoms were quoted at Rs. 26.25. Again business was reported in the agencies, and over the week-end a further 50nP was added to Calcutta indications. Sellers were very reserved at this stage and many withdrew from the market completely. This proved to be the highest price of the week, and over the next two days there was a slight easing in rates. The shortage of transport helped maintain prices, and in Cossipore wagon arrivals amounted to only 450. This was well below the average and was nearly half the total for the corresponding week of last year.

Business was done in Assam jute at Rs. 25.75 to Rs. 26.25 and in Northern at Rs. 25.75 to Rs. 26. Narimpur Tossa was done on the basis of Rs. 27 and Assam Tossa at Rs. 26.75. The same prices were paid for Daissee with selected marks at Rs. 27.50. Mesta was in demand and Assam. Daissee and Daissee mesta fetched Rs. 24 to Rs. 24.25.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottom) Rs. a maund	Rs. a 100 kilos.	Shipment.
Assam	26.50	71.02	Dec.-Jan.
Northern	25.50	68.34	..
Purnea Desal	24.50	65.66	..
Daisee (Selected)	27.50	73.70	..

Juneli	24.00	64.32	..
Indian Cuttings	100.00 a bale		..
Pakistan Cuttings	53.00 a bale		..

GUNNY SHIPMENTS IN OCTOBER

The following are the total net figures of manufactured jute goods shipped from Calcutta during October 1959 after providing for short shipments. These figures include shipments to coastal ports.

Hessian

	Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	4,485.8	26,706.9	31,192.7
Short shipped	384.6	1,336.2	1,720.8
October 1959 (Net)	4,101.2	25,370.7	29,471.9
September 1959 (Net)	2,229.3	35,837.4	38,066.7
August 1959 (Net)	3,720.0	31,743.0	35,463.0
Sacking			
Gross	46,799.3	972.7	47,772.0
Short shipped	7,901.6	42.4	7,944.0
October 1959 (Net)	38,897.7	930.3	39,828.0
September 1959 (Net)	49,382.3	627.7	50,010.0
August 1959 (Net)	35,460.0	906.1	36,366.1

GUNNY SHIPMENT STATISTICS

The following figures including coastal shipment relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

Hessian

	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th November, 1959	2,951.8	13,719.2	16,671.0
1st to 15th October, 1959	2,195.2	11,068.3	13,263.5
1st to 15th September, 1959	980.4	13,585.6	14,566.0
Sacking			
1st to 15th November, 1959	12,051.4	90.4	12,141.8
1st to 15th October, 1959	21,163.1	203.7	21,366.8
1st to 15th September, 1959	25,819.4	211.6	26,031.0

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES RAISED

(FROM OUR DUNDEE CORRESPONDENT)

AFTER some delay, the authorities have raised the prices for most jute yarns and cloth in the U.K. by the usual amount of £5 a ton. There are one or two exceptions, such as J.C.C., J.C.2.R. and the small sizes—4's, 5's and 6lbs yarns, which remain unchanged. Prices of common hessians have been raised by the usual 3 percent.

The continued rise in raw jute prices in Pakistan is responsible for dearer rates for manufactures. Mill Firsts are now lowest at £113, Mill Lightnings £96, Mill Hearts £83 and Grade Hearts £68, but up to £118, £102, £88 and £70, respectively, are also quoted for December-January shipment, c.i.f. U.K. Some secured parcels of jute are being offered at about £1 less than these lowest prices. Dark jute shows little change. Not much interest has been shown in good marks of Daissee-2/3 at £94 and Grade from £88, Grade Tossa-2/3 from £109 and fours £96, c.i.f. same shipment.

Recent news from Calcutta says that the market there is strong for goods, with speculators operating freely due to the rise in raw jute rates. Dundee manufacturers are pleased to see that gunnies are higher, as prices of Continental hessians might also increase. It is reported that some Continental hessians are being brought into the U.K. and sold at slightly lower rates than Dundee goods, after paying an import duty of 20 percent. It is believed that when the new pact with the seven countries gets going, the tariff of 20 percent might be reduced or even dispensed with.

Calcutta hessians rose recently to 61s for 40in. 10oz. and 46s 6d for 7½oz., December, 60s 9d and 46s 3d January, and 60s 9d and 46s 3d February and 61s and 46s 3d March, with B Twills at 156s 9d December and 155s 9d January-March, all f.o.b. Calcutta. Hessian yarns rose from 14.29d to 14.86d for 8 lbs C.H.W. cops and 15.43d to 16.01d for J.C.H. 8 lbs spools. The new rate for 3 ply 8 lbs twist is 17.93d a lb. and rove is dearer at £92 15s for 48 lbs and £74 5s for 200 lbs a ton, compared with £92 15s and £68 15s formerly. Hessian prices are 13.26d for 40in. 10oz. and 11.33d for 8oz.

May we help you to export your goods?

Today, the word "Export" is very much in the air. But you need full details of your market before you can take any risk. Perhaps, our branches in Bangkok, Colombo, Hong Kong, Ipoh, Klang, Kuala Lumpur, Malacca, Rangoon and Singapore may be in a position to assist you.
Why not look us up?

FOREIGN DEMAND FOR COIR MATTING DECLINING

EXPORTS TO U.K. FALL

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE demand for Indian coir mattings from traditional markets is declining. The United Kingdom, which is the largest buyer of these products, has been importing smaller quantities during the past four years. Exports of Indian coir mattings to that country amounted to 57,380 cwts. during the year ended 30th June, 1959: this was only 75 percent of the exports during the previous year. The rest of the world market, except Russia, is not also much interested in Indian coir mattings. The Russian demand for mattings improved sharply and that, in fact, provided a lot of work last year. That country imported as much as 44,607 cwts. of mattings during the year ended 30th June, 1959, and this has compensated, to some extent, the lower offtake by traditional buyers. The case is otherwise with door mats, since the demand for them from the U.K. is increasing. That country imported 113,000 cwts. during the aforesaid period. Informed sources say that proper publicity will help increase the consumption of the material, especially in the United States. But the trouble is that no individual exporter can meet the exorbitant cost of publicity in that market. Both mats and mattings have a fine potential market in India. So if the internal market can be properly tapped, the coir manufacturing industry's future can be made absolutely safe, it is pointed out.

Major Importers

Most of India's coir yarn exports go to Holland. West Germany, Belgium, Switzerland and the U.K. where the yarn is used for the manufacture of mattings. Other important buyers are Italy, France, the U.S.A. and Burma. By and large, there had not been much fluctuations in the exports and prices of coir yarn, for co-operative marketing has gone a long way in stabilising prices. The Coir Board delegation, which recently visited some foreign countries, has drawn attention to the weaknesses in India's export trade and has suggested some solutions. Manufacturers of coir goods in this country have sold their products at low prices and have not apparently improved their quality through modernised production methods. They are still working on looms, which are about 100 years' old and usually employ the manual process and not modern powerlooms which are used by manufacturers abroad. Furthermore, producers here give too much stress on designs, styles and marketing techniques, which are too old to keep pace with the vast changes in house designing and decoration, convenience of carriage and use in western countries. The members of the delegation feel, therefore, that unless Indian manufacturers modernise their production methods, it will not be possible for them to compete in foreign markets.

Standardisation of Wages

Another important development in the coir manufacturing industry in Kerala is the gradual break-up of the larger established units, which were mostly owned by Europeans. During the last two years, the Coir Industrial Relations Council constituted by the Kerala Government has brought about a gradual standardisation of wages on a higher level. Labour legislation of the State Government has also imposed additional burdens on the established units, so their cost of production has gone up. Smaller units, which were not statutorily bound to pay many of these additional benefits to workers, could offer effective competition to larger units. The latter in turn started reducing their labour, and more and more smaller units have come up. Smaller units can avoid paying the minimum wages as workers are willing to offer their services at lower emoluments. The net result is that while established houses, which are largely responsible for building up the industry to its present stature, are sinking, mushroom organisations are coming up here and there. But it is doubtful whether this development will ultimately benefit the industry.

No Agreement on Bonus Dispute

Contrary to expectations, the Kerala Industrial Relations Committee for Plantations has failed to effect a compromise between plantation owners and their workers on the question of bonus. While workers' representatives insisted on getting bonus at the Madras rates, the representatives of management said that they could not pay that much considering the higher cost of production in Kerala. Since no agreement could be arrived at even after considerable discussions, further talks on the issue have been postponed *sine die*. Although adjudication is the only solution for the impasse, the administration is stated to be reluctant to order it. Its attitude appears to be to pass on the legacy to the Government which will be formed after the elections.

COCHIN TEA SALES

At Sale No. 46, 1,200,000 lbs of tea were on offer. There was a strong general demand, and prices were irregularly 5nP easier for everything except best liquoring high-growns which were irregular and lower following quality.

At Dust Sale I, 400,000 lbs of tea were on offer. There was a strong general demand, particularly for medium sorts which were irregularly 10nP dearer.

DWINDLING PROFIT MARGINS FOR CEMENT INDUSTRY

(BY A CORRESPONDENT)

CONDITIONS for the cement industry have changed sharply in recent years. Only two years ago, there was an acute shortage of the commodity and it had to be imported at a very heavy cost. Internal prices had to be kept artificially high in order to subsidise imported cement. This position lasted until the middle of 1958. Even as late as January-February 1958, when the Tariff Commission conducted its enquiry into the cement industry, it was never thought that producers would face a severe crisis within the next few months.

The history of the cement industry in India is interesting. It achieved a spectacular growth in a remarkably short time. On the eve of partition, production was 1.5 million tons. The capacity was doubled just before the first plan, during which period, production increased by 50 percent. The present level of output is 6.3 million tons a year. The industry was thus able to increase production by four times in the last decade, and imports consequently have been greatly reduced. However, because of the plan activities, an acute shortage of cement arose temporarily, and imports had to be made at a heavy cost, necessitating an increase in the internal prices as well.

The shortage continued up to the middle of 1958. The Tariff Commission envisaged bright prospects for the cement industry when it submitted its report during May-June 1958. The Planning Commission was also of the same view, so the target of 16 million tons was fixed for the second plan. Licences were freely issued. The industry, however, felt that this target was too ambitious and should be scaled down to 10 to 12 million tons. In the course of the discussions at the Tariff Commission's enquiry, the producers pointed out that a production of more than 10 million tons could not be absorbed in the internal market. The Government, however, thought that the industry was unduly pessimistic, and overruled its objections.

Fall in Consumption

Few months after the Tariff Commission's enquiry, a severe crisis developed when the demand fell considerably. At the beginning, the units worked more or less to their full capacity and built up stocks, but very soon a falling demand resulted in the cement silos getting full and huge stocks of clinker accumulating in the yards. By and by, several units had to close down or work partially as it was not possible to go on building clinker stocks indefinitely. The extent of accumulation can be judged from the fact that against the normal stocks of 300,000 tons of clinker and 50,000 tons of cement, the present stocks with the industry are estimated at 700,000 to 800,000 tons of clinker and 135,000 tons of cement, and this too after a curtailment of production.

In June 1959, which is the month for which latest figures are available, production was only 480,000 tons, while in the corresponding month of last year, it was as much as 499,000 tons, in spite of the fact that during the current year, the installed capacity has been increased markedly. It is thus very clear that the additional capacity created during 1959 has remained idle.

Another matter of serious concern for the industry is the dwindling margin of profit. The prices are strictly controlled, based on cost enquiries of the Tariff Commission, the first of which was conducted in 1951. The uniform price of Rs. 71 a ton of naked cement was allowed to the industry on the f.o.r. destination basis. Even though the base price was below the cost of production of some of the costed units, there was a comfortable margin of profit for the industry as a whole up to 1955, since the actual production turned out to be much more than the figures estimated by the Tariff Commission. In some cases, the freight incurred was less than the freight allowance of Rs. 15 in the price structure. There was also a small margin of profit through the use of second-hand packing bags.

Retention Price Enquiry

The latest enquiry was conducted by the Tariff Commission in January 1958. Based on its recommendations, the Government has fixed unitwise prices on an ex-works basis for naked cement, packing allowance being fixed every quarter as usual. The Tariff Commission has estimated the cost for the different units on the basis of production equivalent to 100 percent of the installed capacity. The costs of several items were assessed taking into account the prices prevailing in 1957-58. To provide for unforeseen factors during the three years, a contingency allowance of Rs. 2 a ton was included in the cost. On this basis, the Tariff Commission assessed the weighted average cost of all the cement producers during the three-year period ending June 1961 at Rs. 47.55 a ton. The net average price allowed to the industry was Rs. 58.10 a ton, giving a gross margin of Rs. 10.55 a ton. Out of this, the producers will have to bear interest charges on their borrowed capital, bonus to employees and managing agency remuneration which are treated by the Commission as appropriations of profit.

It will be interesting to study what amounts in absolute terms will be available to the industry after meeting the above charges. Interest on working capital, it is estimated, works out to Rs. 1.35 a ton, while bonus to staff and labour are estimated to cost another Re. 1 a ton on the average. Managing agency commission will cost 80nP so that the net balance available to the industry is only Rs. 7.40 out of which income tax is to be paid; the remaining will be available for the payment of dividends and provision for rehabilitation and other reserves in order to maintain and strengthen the financial resources. On the basis of Rs. 7.40 a ton and on the estimated annual production of 7.85 million tons of cement, the profit will amount to Rs. 5.8 crores. After provision for taxation at 45 percent, there will be a net profit of Rs. 3.19 crores with the industry. Deducting from this the tax at 30 percent, the net earning comes to Rs. 2.23 crores. The total paid-up capital of the companies studied by the Tariff Commission works out to Rs. 38.79 crores, so that the net earning works out to only 5.7 percent of the the paid-up capital. Taking into account reserves, the earning works out to 4.5 percent only, that is, if the industry is able to achieve full production, and the cost remains at the levels the Tariff Commission has anticipated. Unfortunately, the case with the cement industry in 1958-59 was entirely different; there was a short-fall of 20 percent in production. This factor alone would have pushed up costs by Rs. 6 a ton. The increase in freight since 1st October, 1958, has penalised short distance traffic, and has thus imposed a very heavy incidence on limestone which is usually carried over short distances.

Rising Costs

In particular cases, the incidence has been as much as Rs. 2 a ton of limestone or Rs. 3 a ton of cement. Increases in the prices of stores and of the freight on them and also the effects of revision of wage-scales of the workers have imposed a considerable strain. All these factors have raised the cost much more than that anticipated by the Commission. The payment of stockists' commission is an additional cost. Some producers have also started consumer service organisations, the cost of which will have to be borne by them. The contingency allowance of Rs. 2 a ton included by the Tariff Commission in the cost for the three years has been more than absorbed in the very first year. Many companies will not be in a position even to provide for the full depreciation and the statutory development rebate, leave alone the question of paying dividends.

There is thus a crying need for an increase in the retention price. A general increase by Rs. 5 a ton is the bare minimum required, and some units may deserve a higher figure. Before it is too late, the Government should realise the seriousness of the situation and come to the rescue of the industry at the earliest possible time. Any further delay will cause very serious loss to the industry, and thus hamper its development. A few lessons from the experience in the recent past need to be derived. Official circles have been mentioning of late a production target of 25 to 30 million tons to be aimed at towards the end of the third plan. The planners and the Government would be well advised to bear in mind the fact that the economy is at present unable to absorb even 8 million tons of cement. Nearly 20 percent of the capacity remains idle.

Steel and Cement Consumption

The shortage of steel may be to a certain extent responsible for this slackness, but it should also be borne in mind that a larger availability of steel will not lead to a proportionate increase in the consumption of cement. A study of cement and steel industries in different countries of the world will clearly show that in the initial stages of development, the ratio of cement consumption to that of steel is higher, but as the economy gets strengthened, this ratio comes down. The following table shows the position of steel and cement production in different countries of the world during the past 30 years. It will be found that the ratio of steel to cement was about 1.5 about 30 years ago, and today it is only 0.5 in the U.S.A. and about 1 in other advanced countries. Steel consumption in India at present, it can be estimated, is about 3½ million tons (crude) and the consumption of cement is about 7 million tons giving a ratio of 2. There will be a progressive decline in this ratio as the economy develops. Ultimately, the ratio of 1 for 1 can at best be achieved. When the Government steel plants and the private plants attain full production, total steel supply in India will be of the order of 6 million tons. Even allowing for a fourth steel plant in the public sector, and a few small-sized plants of the Chinese model in the south, the availability of steel can be expected to be of the order of 7.5 million tons towards the end of the third five year plan. Even on the current ratio of 2 for 1, the total consumption of cement at the end of the third plan can at best be estimated at 15 million tons. The capacity at the end of the second plan, it is expected, will be 10 million tons, with 20 percent of the capacity remaining idle. Any capacity of more than 15 million tons in the third plan will be unrealistic, and it will create serious hardships both to the industry and to the Indian economy. It is high time the planners thought of more realistic objectives, and used the available resources more prudently. Idle industrial capacities are a menace to society. This is particularly so when resources are in short supply, and every effort should be made for co-ordinated development.

TREND OF CEMENT AND STEEL PRODUCTION 1930-56

Country	Cement production ('000 metric tons) 1930	1940	1950	1956	Crude steel production ('000 metric tons) 1930	1940	1950	1956	Ratio of cement to steel 1930	1940	1950	1956

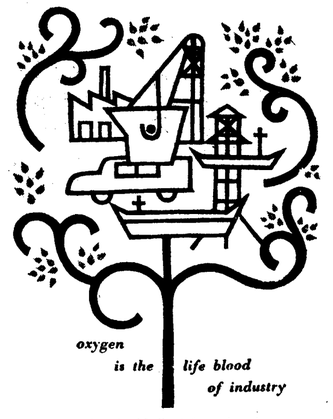
FORWARD MARKETS BULLETIN
(Monthly)

Published by Forward Markets Commission, Government of India, Bombay.

Regular Features.



* A 'General Review' presenting an assessment of trading conditions in the futures markets during the month * Special articles on technical aspects of forward trading * Extensive information relating to developments in futures markets * Detailed commodity market reviews * Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contract, etc.

* About 200 pages in print in crown ¼ size.

* Attractive get-up.

Annual Subscription:		Single Copy:

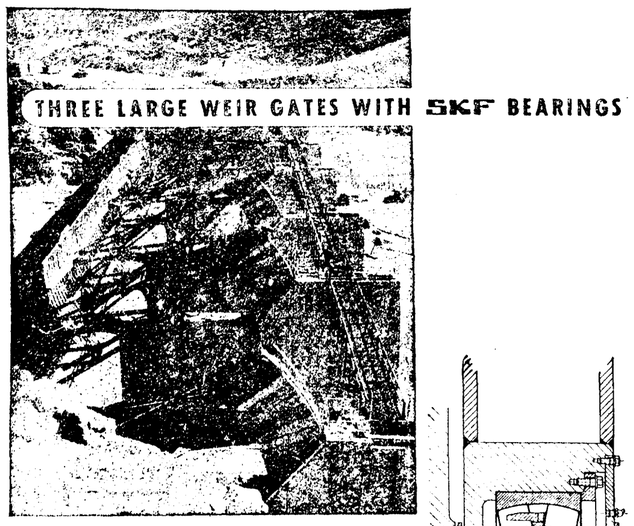
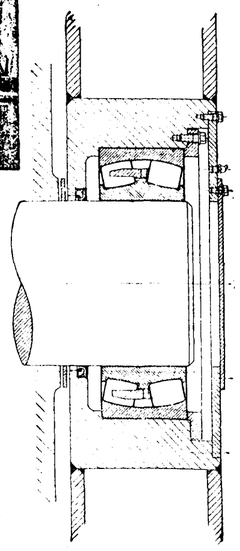
WHOLESALE PRICE INDEX RISES



THE official wholesale price index (base : year ended March 1953 100) advanced by 0.3 percent o 118.8 during the week ended 14th November, 959, against 118.4 (revised) for the previous week. The index was lower by 0.9 percent when compared vith the corresponding week of the previous month ut was higher by 4.4 percent than that of a year go. The index for Food Articles moved up by .4 percent to 122.5, compared with 122.0 (revised) or the earlier week due to an increase in the prices f maize in Bhilwara (+21%) and in Ludhiana (5%), cloves (+11%), milk and potatoes (+8% each), bajra in Hissar and musur in Bombay (+7% ach), salt (+6%), ghee in Khurja (+5%), urad, nions and black pepper (+4% each), chillies (+3%), eggs and tea (+2% each) and barley, bana as, mustard oil, coconut oil and meat (+1% ea h). lthough the prices of maize in Khagaria (-10%) nd in Dohad (-6%), ghee in Madras (-8%), arhar n Bombay (-5%), gingelly oil (-4%), oranges and ish (-3%), rice, wheat, gram and turmeric (-2% each) and jowar, ragi, mung, groundnut oil nd gur (-1% each) showed declines. The index or Tobacco remained stationary at the earlier week's level of 104.2. In spite of a fall in the prices f cas or oil (-1%), the index for the Fuel, Power, ight and Lubricants group stood unchanged at the revious week's level of 116.4. Higher prices of aw hides (+7%), tanning materials (myrobalams) n Calcutta (+6%), raw jute, raw skins and raw ingo (+3% each), castorseed and bar (+2% each) nd linseed and copra (+1% each) raised the index or Industrial Raw Materials by 0.6 percent to 122.6, ompared with 121.9 (revised) for the earlier week. he prices of bamboos (-4%) and raw cotton, raw ilk and gingellyseed (-1% each), however, moved own. The index for Intermediate Products fell v 0.3 peccent to 115.5 due to a decline in the prices f linseed oil (-2%) and coir yarn (-1%) in spite of a rise in the prices of zinc (+6%). The prices f bicycles (+2%) and cotton mill cloth (+1%) moved up while those of general chemicals, b icks nd tiles and glass (-1% each) showed declines, nd the index for Finished Products worked out to 110.9, against 110.8 (revised) for the previous week.

INDEX NUMBERS BY GROUPS AND SUB GROUPS

(Base : 1952-53 = 100)



Groups and Sub-Groups	Week Ended 14-11-59	7-11-59	15-11-58
I Food Articles :	122.5	122.0(R)	118.0

Nearly 10 million gallons of water per minute flow through three [illegible] equipped sector weir gate which were put into service during 1950 at the Horse shoe Dam near the town of Phoenix, Arizona, U.S.A

Each gate has a height of 26 ft. and a width of 114 ft. and is carried by two arms fitted with counterweights — the shaft bearing housing of the arms resting on support pillars. The gates can all be operated together, or individually. Operation is usually automatic and is regulated by the level of water in the dam, but the gates can also be driven electrically. Since it is essential that the gates should move freely and that the bearings should be reliable and easily maintained, each counterpoise-arm shaft is fitted with two [illegible] spherical roller bearings

NEW HOT TOP PROCESS IN STEEL MAKING

POSSIBILITY OF ADOPTION BY INDIA

STEEL output in Europe is being increased and improved through the use of a revolutionary "hot top" device, and interest in its use is growing in all steel producing countries. Current negotiations are expected to lead to its early introduction into Indian steelworks, and its adoption by other Eastern steel producing countries. At a recent meeting in Tokyo, all the leading steel producers of Japan decided unanimously that the use of the Vallak hot top was desirable. In the manufacture of small ingots this would result in an increased yield of between 3 percent and 5 percent. They also showed interest in using the process for bigger ingots. In Europe, the hot top has been successfully used for the manufacture of ingots up to 28 tons and over.

Invented by Mr. Enn Vallak, a Swedish citizen, the radical new hot top was developed in close cooperation with the Swedish steel mills and patented in most steel countries in the world. It consists of nothing more than rectangular cakes of crushed coke and sawdust with a binder. After forming and drying, the cakes are coated on the inside face and lower edge with a thin layer of a refractory material which prevents the steel from being carbonised by the hot top material or by exothermic lining. It also generates heat in contact with molten steel. Most important among the advantages of the Vallak hot tops are increased yield (up to 8 percent), easier and quicker operation in the melting shop, cleaner, better quality steel and a high safety factor. Moreover, they can be used for any kind of steel and any size of ingot.

U. K. AIRCRAFT EXPORTS CONTINUE AT RECORD LEVEL

Boosted by a record monthly aero-engine figure of £6,281,410, the U.K. aircraft industry's exports for October 1959, £12,694,827 (more than £3 million up on the equivalent figure last year), brought the total for the first ten months of 1959 to £134,066,669, an increase of £11 million or 9 percent, over the equivalent 1958 figure. The ten-monthly total represented an annual figure of £161 million and exceeded comfortably every previous annual total. Since the war, aviation exports have amounted to £920 million, of which £271½ million has been accounted for by the sale of aero-enginess. By way of comparison, October exports (£12.7 million) exceeded the cost of the Chiswick flyover by about £1 million, or almost equalled the cost of the tunnel under the river Tyne. The October total was made up as follows (equivalent amended 1958 figures in brackets): aircraft and parts £5,780,844 (£5,103,182), aero-engines £6,281,410 (£3,935,059), electrical parts and appliances £329,190 (£354,244), tyres £73,751 (£55,721), and aeronautical instruments £229,632 (£222,692). Leading buyers of aircraft and parts were Canada £1,167,796, India £1,159,911, Switzerland £955,073, the United States £786,919, Pakistan £477,373 and Ceylon £141,567.

AMERICAN AIRLINE BUYS USED BRITISH AIRCRAFT

An agreement signed recently by the American operator, Allegheny Airlines, with Napier covering the purchase of five Eland-powered *Convair* airliners, with options on ten more, is significant. It is the first order placed by a civil operator for the Eland as part of a "used" airliner re-engining programme; it confirms that it can be an economic proposition to buy airliners from other operators—as Allegheny is doing—and have them converted to turbine power: the agreement was signed "in the teeth of severe U.S. competition", as Napier put it. Allegheny has been evaluating an Eland-*Convair* since last July on its non-stop Pittsburg-Philadelphia and Pittsburg-Atlantic City routes. The operational cost of the 44-seater version used during these trials amounted to 2.2 cents an available seat mile, but the airline estimates that this figure will be reduced to below 1.5 cents when operating a 52-seat version of the aircraft—as it intends to do.

MOTOR-CARS WITH NATURAL RUBBER TYRES REQUIRE LESS PETROL

Which is the most economical in the long run—a natural rubber or a synthetic rubber tyre? According to Dr. A. Schallamach of the British Rubber Producers Research Association, natural rubber has the advantage. Although it may wear a little more quickly under certain conditions, it absorbs less power and, therefore, requires less petrol to run it long. In the course of a lecture to the Institution of the Rubber Industry in London recently, Dr. Schallamach commented: "Running a synthetic S.B.R tyre instead of a natural rubber tyre might save about $6.50 concerning tyre life, but put the motorist out of pocket by some $60 for extra petrol in doing so. In other words, two natural rubber tyres could be bought for the cost of buying and running one S.B.R. synthetic tyre". The lecture, entitled "How Tyres Wear", was based on a series of investigations carried out by Dr. Schallamach at the B.R.P.R.A. during the last three years.

Calcutta Markets

STRONG DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 22, held on 30th November and 2nd December, offerings at the Export auction amounted to 71,619 packages. There was a strong and active demand, prices tending dearer for all descriptions plain and medium brokens and Fannings grades being particularly strong. Medium B.O.P's and O.Fgs. sold readily and were often dearer, particularly the B.O.P's with bright liquors. Best C.T.C.'s were barely steady, but others were very strong and secondary grades again appreciated in price. Non-wither legg-cut teas were fully firm and were sometimes dearer. Whole leaf grades met with a good enquiry at firm to dearer rates and there was good demand for Darjeelings and tippy teas which tended dearer.

Quotations

	1959 Rs.	1958 Rs.
Clean Black Pekoe	2.12 to 2.18	1.95 to 2.00
Plain B.P	2.02 to 2.10	1.76
Plain Fannings	2.14 to 2.20	1.62 to 1.68
Medium B.P	2.01 to 2.12	1.64
Medium Fannings	2.20 to 2.30	1.73 to 1.74
Best Assam C.T.C. B.P	2.75 to 2.90	2.10
Best Assam C.T.C. Fgs.	2.75 to 2.95	2.20 (nom.)

(Quotations are exclusive of excise duty.)

At the Internal Sale, Dust offerings totalled 24,045 packages. There was a good general demand. Orthodox teas were generally up to 4nP easier with the exception of a few black cleanly sorted teas which sold well. Legg-cut dusts were well sought after, and were often dearer. C.T.C. descriptions were again in good demand, but prices were irregular except for the poorer fibrous types and the smaller bright liquoring sorts, which generally appreciated in price. The few lines of Darjeelings sold well.

Quotations

	1959 Rs.	1958 Rs.
Medium Dooars Dust	2.08 to 2.22	1.75
Medium Assam Dust	2.04 to 2.16	1.70
Medium Assam C.T.C. Dust	2.10 to 2.30	1.90 to 2.15
Best Assam C.T.C Dust	2.60 to 2.90	2.40 to 2.50

(Quotations are exclusive of excise duty.)

There were 1,346 packages of Leaf and these met with a good general demand.

FREIGHT RATES FIRM IN EASTERN MARKETS

CONDITIONS in the Atlantic grain market remained in a "fluid" state, as both the charterers and owners were awaiting definite news of the U.S. dock strike possibilities. The Eastern market has remained firm and there is no indication of an immediate weakening. In December position, coals from Hampton Roads to West Italy paid $ (U.S.) 4.70 with 3,000 discharge, while Hampton Roads-Japan paid $ (U.S.) 8.75 with 1.000 discharge. Some 13,600 tons 5 percent bulk wheat Sydney-Karachi was fixed at 62s 6d, 1,000 tons discharge free. Enquiries for tonnage from mainland China were quite frequent. A fixture of 9,500 tons cement Whampoa-Persian Gulf was reported at 43s f.i.o. In India, the market is definitely firm as there is a shortage of bottoms. Japanese buyers are seeking cover for shipment of considerable quantities of salt, iron ore, scrap iron and pig iron. The best feature in the Far Eastern trade was that four vessels accepted $ (U.S.) 8.75 on f.o.b. terms for carrying ilmenite ore from Koilthottam to Northern Range. Bookings were made from Calcutta-Japan for 30,000 tons scrap iron at the rate of 10,000 tons a month from last November at 77s on liner terms and pig iron at 49s 6d f.i.o.

SKINS STEADY, HIDES EASIER

The market for skins ruled steady, while that for hides was easier. Stocks were higher than in the previous week.

Bazaar Sales

(Between 24th November and 30th November, 1959)

Cowhides: Wet salted (Slaughtered) 31,700 pcs. on the basis of Rs. 13.50 to Rs. 17 and Rs. 19 to Rs. 29.

Goatskins: Wet salted (Patna, Daissee, Kustia) 1,24,100 pcs. on the basis of Rs. 430 to Rs. 445, Rs. 470 to Rs. 490 and Rs. 490 to Rs. 520; Wet salted (he-killed) on the basis of Rs. 6.60 and (she-killed) on the basis of Rs. 5.81 a piece; Assam-Rampurhat-Dinajpur-Siliguri 45,700 pcs. on the basis of Rs. 425 to Rs. 440, Rs. 480 and Rs. 525 to Rs. 605; Patna-Pakur (Ord.) 9,600 pcs. on the basis of Rs 450 to Rs. 470 and Rs. 480 to Rs. 485; Muzafferpore-Patna 2,500 pcs. on the basis of Rs. 505; Siliguri (heavy) 900 pcs. on the basis of Rs. 650.

Bazaar Stocks

(30th November, 1959)

Cowhides: Wet salted 1,29,000 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 39,000 pcs.; Assam-Dinajpur 47,500 pcs.; Muzafferpore-Patna - Pakur-Purneah - Kissenganj 80,000 pcs.

COMPANY AND PUBLIC NOTICES

HUKUMCHAND JUTE MILLS LTD.

Notice to Shareholders.

NOTICE is hereby given that the next Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Tuesday, the 29th December, 1959, at 4-30 P.M. for the following purposes:—

(1) To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1959.

(2) To declare Dividends.

(3) To elect Directors in place of those retiring.

(4) To appoint Auditors.

(5) To pass the following resolution as a Special Resolution:—

"Resolved that all the Directors together be entitled to receive by way of remuneration a Commission at the rate of 1% of the nett profits of the Company over and above a sum of Rs 100/- for each Director, for each meeting of the Directors, attended by him."

(6) To transact any other business that may be brought before the meeting.

Dividends, if declared, will be paid to Registered Shareholders only.

The Share Transfer Register of the Company will be closed from the 21st December, 1959 to 23th December, 1959, both days inclusive.

By Order of the Board,

RAMDUTT RAMKISSENDASS.

Managing Agents.

Calcutta.

the 27th November, 1959.

Explanatory Statement relating to Resolution in Item No. 5 of the above Notice.

Although our Articles of Association which was adopted by Special Resolution passed at a General Meeting of the Company held on the 29th December, 1958 provided in Clause 91 the payment of Directors' Commission at the above rate, we have been advised to have the above Special Resolution passed at a meeting of the Shareholders.

A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

Director.

Dated at Bombay this 30th day of November, 1959.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Applications for "A" second preference shares and new ordinary shares.

NOTICE is hereby given that the last date for applications for the "A" second preference shares and the new ordinary shares in terms of the Company's circular dated the 12th October 1959 expires on the 30th November 1959. However, for the convenience of the shareholders, the Directors have resolved that the Company's bankers be authorised to receive applications on and after 1st December 1959 up to but not later than 15th December 1959 for such shares provided that along with each such application and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) shall be paid to the Company's bankers. No application received on and after 1st December 1959 will be entertained by the Directors unless such interest is paid as aforesaid. No application will be entertained after the 15th December 1959.

By Order of the Board,

TATA INDUSTRIES PRIVATE LIMITED,

Managing Agents,

J. D. CHOKSI,

Director.

Dated at Bombay this 30th day of November, 1959.
