The Bristol Siddeley Orpheus, the world's most advanced lightweight turbojet engine, powers this Fiat G 91 strike fighter (chosen by NATO). The Orpheus is already in service in 6 different aircraft and is specified for 8 others.

The Bristol Siddeley Viper turbojet powers the Italian Macchi MB 326 trainer (illustrated). The Viper family ranges from 1,640-3,000-lb thrust and powers many different aeroplanes including the RAF's basic trainer, the Hunting Jet Provost.

THE WORLD OVERSEAS

Mr Eisenhower in Europe

BONN: DIALOGUE OR MONOLOGUE?

FROM OUR BONN CORRESPONDENT

THAT President Eisenhower and Mr Khrushchev, before they meet in Washington, have considered it proper to listen privately to the irreconcilable hopes and fears respectively of Dr Adenauer and Herr Ulbricht strengthens the general assumption that the future of Germany is the last subject on which the American and Soviet leaders are likely to agree. In the western and eastern camps alike, an official voice of Germany can be heard asserting that the big brother in the White House (or the Kremlin) can be utterly relied upon not to imperil the fine spadework which junior has put into the construction of the Federal (or the Democratic) Republic. Yet, just to make sure, the German federal government has obviously been at special pains to make the most of the President's brief visit. If only there were a more positive policy at hand for the Chancellor to recommend to the leader of a western coalition showing signs of restiveness at the conflicting demands of the alliance and national self-interest.

Although Mr Eisenhower's public welcome received something of an official fillip, there was none the less much spontaneity in the warmth with which he and Mr Herter were greeted in the provincial streets of Bonn and Godesberg, and along the ten miles or so of country road between Cologne airport and the provisional capital. The government frankly hoped that the President's heart would be touched by such a turn-out and consequently hardened against any temptation to pay Danegeld to the Russians at Bonn's expense. Dr Adenauer is understandably resentful of the widely-held conception of himself as a difficult old man, deaf to all counsel, standing alone in the way of European concord. With the help of his loyal Rhinelanders, he hoped to remind his powerful guest that he, the Chancellor, was supported by the free votes of the majority of the west German electorate. His claim to speak for the many has been reinforced by many messages surreptitiously addressed to President Eisenhower from Germans east of the Elbe.

As usual, Dr Adenauer has seemed to be largely unaware how many touches he himself contributes to the portrait of the aloof supernumerary that so offends him when he sees it reproduced in the foreign press. He spent the fortnight preceding the President's visit brooding in seclusion at Cadenabbia, some 500 miles from Bonn. True, he was visited in his seclusion by General Norstad, M. Spaak, Signor Segni, and Professor Furler, the chairman of the Bundestag foreign affairs committee. But all this time his foreign minister was at Baden-Baden, and it was not until the day before the President arrived that the Chancellor consulted —if that is the right word—his cabinet colleagues.

It had been agreed in advance that there should be no set agenda for the talks; that no themes requiring the presence of experts should be discussed at any length. It is possible to hazard a fair guess at what went on in the Palais Schaumburg on Thursday. For one thing, it can be safely assumed that Dr Adenauer did most of the talking: President Eisenhower had already intimated that he was coming to Europe primarily to listen; and in his first talk with Mr Herter as Secretary of State last month Dr Adenauer as good as monopolised the conversation with the single-minded importunity of a man whose heart is inditing of a good matter. For another, it is no secret that the Chancellor is unshakably convinced that there is no call for a major change in western policy towards Russia.

Consequently, it can be assumed that in reply to the President's invitation to say what was on his mind, Dr Adenauer has been restating his now familiar theses: that the prime aim of the West must be to bring about a relaxation of international tension, and thereby the possibility of a German settlement, through controlled all-round reduction of both conventional and nuclear arms; that the positions adopted by the West in the recent talks at Geneva, including the Berlin position, must be unyieldingly maintained; that the price of a concession can be no less than a counter-concession of approximately equal value; and, lastly, that west Germany must be on an equal military footing with every other Nato country —that is, the Bundeswehr should not be expected to forgo the use of nuclear weapons before a satisfactory political solution has been reached. In Dr Adenauer's opinion, to pursue any other course would be to write off the eastern territories and perpetuate partition, if not to push the Federal Republic on to the slippery slope leading to the bolshevisation of the whole of Germany and most of Europe.

How much talking President Eisenhower wanted, or managed, to get in, as well as listening, is not known at the time this is written. It was generally expected that he would broach two relatively new matters, if Dr Adenauer omitted to do so himself. The first concerns the possibility of achieving at least a modest reduction of tension in Europe by improving the relations between western Germany and Poland. The second concerns the embarrassment caused to the Nato alliance by the recent friction between various partners for various well-known reasons.

The prospect that something might be done about Polish relations seems to have been improved in American eyes by the friendliness with which the Poles received Mr. Nixon. And since the federal government has long been urged by many of its supporters in the Bundestag, as well as by the opposition, to show some initiative in resuming contact with Germany's eastern neighbours, the moment may be considered ripe for another good look at the arguments for and against such action. The greatest impediment to progress is the Bonn government's still inexorable maxim that it cannot enter into diplomatic relations with any government (except Russia) that has officially recognised the east German regime.

UNHAPPILY for the advocates of a more conciliatory policy, in recent modest dealings with Poland the Christian Democrats have shown an Adenauer-like disregard of other people's susceptibilities. For the forthcoming Warsaw meeting of the Interparliamentary Union they originally selected a delegation including Herr Majonica, a Bundestag deputy well known for his militant support of General Chiang Kai-shek; Herr Krüger, the Pomeranian president of the refugees' federation; a Balt named Eplée and a Sudeten German named Szaja; Freiherr von Guttenberg, who is vigorously opposed to any resumption of diplomatic relations with the eastern European countries; and lastly the Baltic Baron Manteuffel-Szöge, a former president of the refugees' organisation. All these incongruous messengers of goodwill have now been withdrawn from the team in response to Polish protests. But the harm has been done.

President Eisenhower and Dr Adenauer can hardly have avoided taking a look together at the aberrations and the ill-natured biting and back-biting in which some of the Nato partners have lately been engaged. It is assumed here that the President has come to Europe not only to listen but also to utter fatherly warnings in all three capitals; and that he will have left Bonn with the assurance from Dr Adenauer of a loyalty to the western alliance that transcends the Paris-Bonn axis.

PARIS: THE GENERAL UNDER PRESSURE

FROM OUR PARIS CORRESPONDENT

ON the eve of General Eisenhower's visit to Paris official secrecy surrounds the French agenda for the meeting. What is obvious is that General de Gaulle has been chiefly brushing up his Algerian file in preparation. He returned from holiday this week to preside over a council of ministers on Wednesday that lasted four hours and was described in advance as "the most important of the present government." Nothing was revealed about the business transacted, but it is known that the ministers had been asked previously to use their holidays to crystallise their views on the Algerian situation and on the best way of tackling it. On Thursday the General flew to Algeria, where for three days, avoiding the big towns, he is trying to get the feelings of officers of all ranks on the same subject.

The Algerian question may thus dominate the background of the Franco-American talks and there would be nothing astonishing in this. The war of repression in Algeria affects French relations with the United States directly because France needs American backing, both generally and, just now, to avoid defeat in the United Nations when this topic comes up for debate. French spokesmen have thus been active in proclaiming that support for the French policy is the price for its alliance. The indirect effect of the Algerian problem is not less important: General de Gaulle's claim for greater international status—his bid for a share in the effective control of the world strategy of the Atlantic Alliance and for a seat in the nuclear club—would be greatly strengthened by the prospect of this costly war coming to an end. General de Gaulle may well be lining up his forces to show Mr Eisenhower such a perspective.

The members of the cabinet are reputed to have opinions, and even differing opinions, on the Algerian problem. M. Debré, the prime minister, now loudly expresses his own almost every week, uttering warnings that "France's policy in Algeria cannot be contested or opposed by anyone who wishes to be our ally." Yet it seems unlikely either that ministerial views would deter President de Gaulle once he had taken his decision, or that cabinet opposition would go beyond mere sulking. The general's second consultation is more important. He is not the man to split an officer's corps to which he owes so much. He must, therefore, test how far he can carry it with him when making political concessions in Algeria.

The Army's view, often expressed, is that it needs time, plenty of money and men to solve the problem. Operation "Binoculars," launched with triumphant publicity orchestration six weeks ago, is now described as merely a stage in a long-drawn process. Twenty thousand crack troops were thrown into Kabylia to join an equal number stationed in that mountainous, obstinate region. The rebels replied by dispersing their forces. French commentators had to tone down their reports. They now argue that everything is working to plan, and that the region must be heavily occupied for a long period so that the population can be won over. Officers resent any suggestion that "the last quarter of an hour" is approaching. Their critics claim that they are comfortably settling down to a Hundred Years' War.

Mr. Eisenhower cannot welcome such a prospect. He does not share the French army's conviction that it is the vanguard in an anti-communist crusade. On the contrary, American diplomats consider that the continuation of the war weakens western influence in Asia and Africa. Unless the French suddenly announce a spectacular new initiative, the most they can expect from the United States, in Mr Lippmann's words, is "benevolent neutrality and discreet abstention." Paris knows, however, that without American backing France runs a very strong risk of being condemned by a two-thirds majority at the next session of the General Assembly of the United Nations. This would be a blow to its prestige which the French government would like to avoid.

GENERAL DE GAULLE'S bid for a higher status in Nato is also hindered by the Algerian war. General de Gaulle's view of this higher status was set out a year ago in memoranda, the gist of which seems to have been that France is a world power bound to be involved in any world conflict and must, therefore, have an effective share of control over allied policy outside Europe as well. Critics argued that the general was actually asking for the setting up of an Atlantic triumvirate and for a French veto over American strategy in, say, Formosa or the Middle East. Judging the response cold, the general has been trying to reach the same objective by turning France into a nuclear power, but here again American refusal to share atomic secrets has prevented him from reaching this aim by a short cut. Resentfully, the general has replied—by a policy of obstruction.

He has withdrawn his Mediterranean fleet from Nato's control. He has refused to allow the United States to set up intermediate range missiles on French territory unless France shares more fully in American nuclear secrets. He has even turned down American offers of a double-veto (the system accepted by Britain) on the use of American atomic bombs stored in France, as a result of which Nato bombers have now been moved to west Germany. Neither side wants a breach, but the Americans have politely stuck to their guns, with the exception of help in constructing a French atomic-powered submarine.

If a dozen up-to-date French divisions were an integral part of the Nato military structure, the general's claim would certainly be more solid. But his divisions are trained for guerrilla and psychological warfare, and, tied down in the Algerian djebels, they are not even available in Europe. Finally, the nuclear programme, the progress of which could lead the American Congress to waive the rules of secrecy, at least in part, must also compete for funds with the Algerian war effort.

International politics have brought some disappointments as well. Gaullist policy, based on a Paris-Bonn axis, is beginning to feel some strains in the post-Dulles era. General de Gaulle and Dr Adenauer could work together on economic integration, or weep together over allied trippers to Moscow. The general has noticed that Bonn, as well as Rome, has no intention of considering France as the spokesman of a continental alliance, and that his European partners show no enthusiasm for French claims to superior status in Nato. He has also become aware that German backing cannot be relied upon in any French conflict with Washington.

The feeling that gaullist foreign policy is in a dead end has given ground to rumours of a search for an alternative. Mr

Khrushchev recently sent messages to several western heads of government, but only the French press, in reporting Mr Vinogradov's call at Colombey, tried to represent the message as possibly a friendly Russian overture. These rumours may have been merely the fruit of journalistic invention ; or they may have been inspired to remind allies that the general has other cards in his hand.

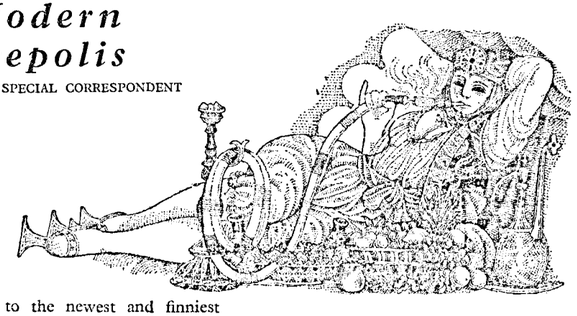
The mood of frustration has prompted journalistic bad temper. Picking a country nearer France's size, commentators are currently incensed with Britain. British newspaper criticism of French efforts to join the nuclear club provided an excellent opportunity for reviving old saws about pots calling kettles black. In vain did *Le Monde* try to put things rationally in perspective. Right-wing French dailies, forgetting M. Debré's claims about freedom of opinion, lumped all English papers together as mouthpieces of the Foreign Office. Indeed, for some of these French papers the hand of perfidious Albion can be seen everywhere. If France has difficulties in Africa, the blame is placed squarely on Dr Nkrumah's appointment as Privy Councillor. If there are troubles in Europe, they are inspired by British desires for revenge on the Six. Should east-west relations improve and an agreement be reached on nuclear disarmament, even this might be put down to a British plot to hold the French back from greatness.

Such nonsense, whatever its source, is unimportant in itself. But the irritation is a symptom of the growing awareness that gaullist foreign policy lacks the means to attain its ends. What would undoubtedly improve its chances (and strengthen the regime at home) would be a settlement of the Algerian war. And this is why again there are persistent rumours that, after fifteen months of rule, General de Gaulle is finally to make a choice. It will not be easy. The rebels are apparently in no mood for concessions. Something more than an invitation to cease-fire talks will be needed this time. The assertion of Algeria's right to independence, with guarantees of a genuinely free choice, might be called for to convince the rebels (or at least to convince the United Nations) that France is doing everything in its power to make peace. But can the French army accept such a prospect? Can the general take such a decision without its assent?

All these questions are being raised in Paris on the eve of President Eisenhower's visit. Not that General de Gaulle feels bound to render account to anyone. But he may choose to share his plans with the American President in an attempt to get his backing in this and other fields.

A Modern Persepolis

BY OUR SPECIAL CORRESPONDENT



TEHERAN is not the fairest or the oldest among the cities of Persia. It did not exist at all during the days of the great Achaemenian and Sassanian kings and it was of no importance when the Safavid kings ruled Persia from Isfahan. Only since the end of the eighteenth century, when the Qajar rulers chose the well-watered plain at the foot of the Elburz mountains for their capital, has it increased in importance and size. Critics say there is nothing in it over thirty years old, but this is not quite true. The Gulistan palace was built over a century ago. Its gardens are what the poets have led us to believe Persian gardens should be—shady trees and blue-tiled pools. Inside, visitors with satisfactory credentials may gaze upon one of the world's largest pieces of jewellery, the peacock throne which Nadir Shah brought from Delhi in 1738.

The interior of Gulistan represents a style of decoration as yet unlabelled by Mr Osbert Lancaster but which might safely be called "elaborated eastern Rothschild." Mirrored stalactite vaulting reflects handsome carpets and a collection of showy gifts from foreign royalty to Persian royalty. These knick-knacks were obviously chosen with great care for the royal whatnot and one can only sympathise with the courtiers whose job it was to think up an appropriate offering for a shah who had everything. Gulistan is used only for formal occasions these days. The Shah lives and works at the more comfortable, if only slightly less ornate, marble palace that his father built not many years ago in a quiet residential district on the other side of the town.

The taxi-drivers of Teheran, perhaps 16,000 strong, are said to wield a tremendous amount of influence in local politics. The cost of a ride—anywhere in the sprawling city for about one shilling and threepence—is cheap enough, but the risk is great. Teheran traffic is the worst in the Middle East and the drivers the most reckless. The cars range from Volkswagens and Morris Minors through Pobedas and Chevrolets to the newest and finniest American giants. The Russian Pobedas are more popular than might be expected among the Russophobic Persians but they can be bought on more favourable terms than American or British ones and, anyhow, they look just like 1932 Fords.

There are few reminders of the romantic east about the streets of Teheran. Reza Shah's dress reforms left the Persians as drab and undistinguished as their brothers in the West. The bazaars are filled with cheap European manufactured goods, not sold very cheaply however, or Persian copies of the same kind of wares. The famous carpets on sale in hundreds of small shops reflect a decline in the arts of weaving and design. In the bazaars of Teheran some of the most pleasing carpets are those found nailed over the counters of shops selling shoes or second-hand clothing. The porters' packs are often padded with scraps of finer carpets than can be found in the stalls. In the smart shops of Firdowsi Avenue, Teheran's Piccadilly, one comes across good carpets, but even there the selection is limited and better ones are on sale at cheaper prices in any large western city.

About 35 miles west of Teheran lies Karaj, a large village at the foot of the mountains, whose only claim to fame used to be the presence of an agricultural school. Now, seven miles beyond the village, along the river of the same name, the Plan Organisation is building the Karaj dam. It is Persia's first attempt to build a dam to supply both electric power and water-storage facilities. When it is finished, perhaps in 1961, the dam will be 590 feet high and will store over 200 million cubic metres of water. Pessimists say that Teheran has grown so large while plans for the dam were being discussed by the government that it will not furnish enough water or electricity when it is finished. Too often in the Middle East there is more talk of public works than actual work in progress. The construction of Karaj dam is already an impressive sight. On the edge of the canyon there is an observation point with a restaurant attached. The construction men felt that the building should not have been built until there was more to see, but the whole operation will provide amusement to those Teheranis who can tear themselves away from their television sets (two channels) on hot summer evenings.

In general, the Persians give the impression that they are anxious to catch up with the rest of the world. Their government is justly criticised for not doing business in a business-like way and there is never enough money to carry out all the schemes the planners dream up but, given the right kind of guidance, the Persians show greater promise of becoming a modern nation than most of their neighbours.

Alsogaray Says No

FROM A CORRESPONDENT IN TUCUMAN, ARGENTINA

DURING the ten years of the Perón regime Argentina lived in an economic wonderland where all the rules were turned topsy-turvy. It was paid for by the sale of Argentine beef and wheat to post-war Europe at famine prices ; to ensure his popularity General Perón gave regular wage increases and social benefits to government-sponsored trades unions and kept rents and foodstuffs absurdly cheap by price-fixing and subsidies. All this lasted only as long as the foreign reserves that financed it ; General Perón was overthrown shortly after he confessed that Argentina had become a debtor nation.

President Arturo Frondizi, elected in 1958, was not at first prepared to carry out unpopular reforms with sufficient ruthlessness. He resorted instead to more subsidies and salary rises, financed by the printing press. But by the beginning of this year Argentina had come to the end of its Peronist joy-ride, and the president, inaugurating an austerity programme, secured loans of $325 million from the United States by promising monetary reforms and a limit to government spending. In June, threatened by a revolt in the armed forces, he reorganised his cabinet and gave a free hand to the new minister of economics and labour, Señor Alvaro Alsogaray.

Señor Alsogaray is a staunch believer in free enterprise. In his first weeks in office he removed controls on the sale of wheat, demobilized the transport workers who had been drafted by President Frondizi, discharged 10,000 of the government's million civilian workers, and even persuaded the armed services to dispose of some costly installations and study the possibility of a 25,000 man cut in their forces. In daily press conferences and weekly radio-television talks Señor Alsogaray stressed the gravity of the situation, called for greater productivity and announced the elimination of one government subsidy after another.

Such a programme, after a dozen years of guaranteed wages and prices, was bound to be unpopular. Last month, Señor Alsogaray encountered the first major opposition to his policies in one of the poorest and most peronist-dominated areas of Argentina, the sugar-producing north. Tucumán, the nation's smallest, most backward, and most densely populated province, has lived almost exclusively upon sugar ever since the British-built railway reached the area in 1876. Lack of other resources and the need for a cash crop have kept the industry there, though conditions are far from ideal. Insufficient rainfall in some years, and killing frosts in others often cut the crop in half from one harvest to the next. The cane is cut and cultivated entirely without machinery, by a dissatisfied labour force that has gone on strike five times in the last four years, and hauled to the mills in antiquated trucks over inadequate roads, with frequent breakdowns and delays. The mills have not imported any new machinery for over twenty years ; one of them uses a press made in the Germany of Kaiser Wilhelm II, and the boiler in another was manufactured in England in 1922.

The 20,000 independent cane-growers in the province are paid, under law, according to the weight of their product regardless of its sugar content, with the government making up the difference by subsidies. Consequently, Tucumán cane has a sugar content only about half that of, say, Cuban cane, and there is no incentive to develop better varieties. In the absence of other fuels, all the crushed cane is used to fire the boilers, and there is no output of any by-products. The peronist slogans of anti-imperialism and agrarian reform were meaningless in Tucumán, for there is no foreign capital in the sugar mills and most of the land is already in the hands of small holders.

Because of these handicaps, Argentine sugar has always been well above the world market price, and even Uruguay buys Cuban sugar, rather than that of its neighbour across the River Plate. The industry has survived only with the help of government subsidies and an absolute prohibition on imports. An 80 per cent price increase last year, and perfect weather during the growing season, produced a record crop of over a million tons, but a quarter of this had to be stockpiled. This year the industry faced a crisis. Señor Alsogaray obviously intended to cut or eliminate the subsidies, and yet the workers were demanding a substantial increase in their basic daily wage of 85 pesos (about 7s. a day).

The minister's plan for the industry, announced on July 25th came as a distinct disappointment to mill-owners, cane-growers, and workers alike. He proposed the elimination of all subsidies over the course of the next five years and an increase in the retail price of sugar from the present 8 pesos a kilo to 14.50 pesos ; if the price went above this limit, he warned the industry that the government would allow in foreign sugar. As for wages, and the price to be paid to cane-growers, he insisted that these were matters to be worked out between the interested parties without government interference.

The next day every cane harvester and mill worker in the country went on strike, this time with the tacit support of the growers and factory owners. The latter were willing to give their workers a 75 per cent increase, and they hoped the strike would force Señor Alsogaray to let them more than cover this by keeping the ban on imports. "After all," said one of them, "we're already very short on foreign exchange, and it would be crazy to import sugar when we've got six months' supply left over from last year. If you want

to see my mill in operation come back in a few days and I can promise you it will be running. The government won't dare let us stop grinding in the middle of a harvest."

But that was exactly what Señor Alsogaray intended to do. After two weeks of fruitless negotiations, the Sugar Workers' Union in Tucumán declared a two-day general strike throughout the province which closed everything but the power plants, the water supply, the hospitals, and the police stations. But neither this measure, nor a one-day general strike throughout the country on August 11th, made Señor Alsogaray change his mind. President Frondizi apparently had full confidence in his minister, and public opinion has begun to swing around to support a man who has the courage of his convictions. Argentina appears to be heartily tired of economic demagogy, of wage increases not earned by increased productivity, of repeated strikes and violence. As the sugar mills started up again on the terms Señor Alsogaray had insisted upon from the beginning, it seemed as if the nation might indeed be ready to take a new road.

The Bodegas and the British

FROM A CORRESPONDENT

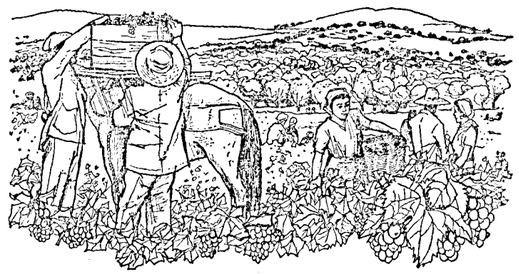
ABOUT two-thirds of all the sherry, and imitations of sherry, exported in the world is drunk in the United Kingdom: roughly five and a half million gallons a year. It is not surprising, therefore, that Britain has from the earliest times had a great deal to do with the whole sherry business.

About a third of the "sherry" consumed in Britain is empire wine, which comes mainly from South Africa and Australia, or wine manufactured in England by firms like Vine Products and Whiteways from must or concentrated grape juice imported largely from Cyprus. The rest comes from the true home of sherry—a small area between Jerez and Cadiz in Southern Spain. Even there the number of British names and the sum of British connections reflect the powerful influence of the best customer.

Although English, Scottish and Irish factors (and one or two arbitrary interlopers like Drake and the Earl of Essex) had been shipping sherry from this area since the sixteenth century, it was not until the nineteenth century that the British managed to infiltrate into the actual business of making it. In fact, although sherry has probably been made in Spain since Phoenician times, few of the hundred-odd factories or bodegas, as they are called, which now make sherry, are much more than 150 years old. They themselves are the results of the processes of fusion and elimination which have substantially reduced the number of sherry firms in the last hundred years, and which will probably continue as competition and taxation weed out the weaker and smaller units.

The making of sherry, which is a blend or mixture, not a vintage wine, is long, complicated and costly. To appreciate the complications and the cost some understanding of the processes involved is necessary. In its simplest form sherry is made by what is called the solera system from three or four tiers of barrels in long rows one on top of the other. There may be as many as eight separate rows in different places. Each row contains wine of a different age. When the rows have been built up, wine is drawn off from the bottom row. A half or even more may be drawn from each barrel. This is then replaced by similar amounts from the barrels in the row above, and so on until each barrel contains equal mixtures of the old and the new, the last barrel being topped up with a fresh brew. When this process has been repeated often enough to produce a uniform stable mixture, and not before, the producer is ready to sell a particular brand of sherry. His stocks must be such that at any given moment and in any given year he can produce sufficient supplies of exactly the same mixture.

A newcomer, therefore, has to wait many years before he can start to sell and get his money back. He must have capital; and once established, he has to hold very large stocks to be able to meet demands for any particular brand at any time. The value of the sherry held in this way by the larger bodegas at Jerez runs into millions of pounds. It will be seen, therefore, that for economic reasons alone it is difficult for anyone to enter the sherry



producing business. It is, moreover, a highly skilled affair, and its secrets are and always have been well guarded.

Behind each British name on a bottle of Spanish sherry there lie fascinating histories of merchant adventure. Some, like Sandeman's, started as shippers and importers in the eighteenth century and eventually took over the bodega which supplied them with sherry when its owner went bankrupt through eccentric personal extravagances on a grand scale. Others, like Garvey and Osborne, were able to graduate from agents to producers by marrying into established Spanish sherry-making families. The Scottish name of Byass shares the labels with the name of Gonzalez as the result of a long association between producer and London agent which eventually became a partnership.

In the last hundred years only one British firm, Williams and Humbert, has succeeded in entering the field from scratch. Alexander Williams went to Jerez originally to work for another sherry concern. Refused a partnership, he had the temerity to start on his own, and got away with it. The firm is now one of the largest in the business. There are several other British names on sherry bottles. Mackenzie, Duff Gordon, and Wisdom and Warter operate both in Spain as producers and in London as agents. Other well-known names like Harvey of Bristol and Saccone and Speed are not bodega owners. They buy sherry in bulk from established bodegas in Spain, blend and bottle it in England, and sell it under their own names.

In 1958, 52,000 butts of sherry were exported from Spain. Exports do not seem to have varied much in recent years; 400 years ago the British imported as much as they do now, and in late Victorian times they drank nearly twice as much. A butt contains 108 gallons, and from this, allowing for ullage, come 54 dozen bottles. The quality and price of the wine in the butts of course varies considerably, but on an average a butt is worth about £85 in Spain. By the time it has been shipped and stored and passed through Customs its cost will be over £300, of which £205 is excise duty. The duty on sherry is now 38s. a gallon, which works out at 6s. 4d. a bottle. Empire sherries have an appreciable advantage with a preferential rate of 4s. 8d. a bottle. Although the duty on sherry was reduced by 12s. a gallon in 1958, it is still nearly three times the duty on table wines. The alcohol content is higher, largely because sherry for export is always fortified with brandy—partly to make it travel and keep, partly

to meet the alcoholic requirements of the British. From these exports Spain earns not far short of £4 million sterling a year. This may not sound a lot in terms of modern international trade, but it amounts to nearly a tenth of Spain's total sterling earnings.

Most of the shares in the sherry-producing firms (in many of them, all the shares) are held privately. The firms are very much family concerns, and it is often impossible to tell what profits they make. But one does not have to stay long in or around Jerez to realise that large fortunes have been made out of sherry in the past, or that even now, despite more competitive conditions and some frustrating restrictions, the firms are still very prosperous.

Jerez itself is one of the most prosperous and pleasant looking towns in Spain. The sherry bodegas themselves are mostly spacious and gracious: so are the houses and the style of living of their owners. But these are for the most part hard-working, conscientious men and there is little ostentation. They are more inclined to spend their money on good horses than on expensive cars. Much of the money they make goes back into the bodegas or into their farms in the neighbouring countryside. They are an enchanting and distinctive caste; among the caste marks are a disinclination to die before the age of eighty, and a tendency to count their children in double figures and their grandchildren in scores.

The sherry business is now for the most part in the hands of Spaniards and of Spanish firms. By now the Osbornes, Gordons and Garveys in the business are mostly Spaniards, and the very names are accented to groove smoothly into Spanish. But the links with Britain are still very close. Links forged in commerce have persisted in other ways: marriages, horses, nannies. Sherry and horses have always seemed to go together, and English and Irish blood is plentiful in the flourishing stables around Jerez. Nannies from Scotland and Ireland and tutors from England have brought up the numerous broods of the sherry families for generations; old school ties are commonly seen, and excellent English spoken. When the Princess Royal paid a private visit to Jerez not long ago she was received with the same natural welcome as if she had been among her own people. The British and their descendants at Jerez have never behaved as a colony to such an extent as their counterparts at Oporto, who established their own chaplain and church and club. Some benefits of British civilisation, polo and golf and flat racing, were introduced to Spain by the sherry families; but it was left to the settlers at Oporto to go one better, persuading the Portuguese to play cricket.

Turkey's Worst Problem

FROM OUR CORRESPONDENT IN ANKARA

BEFORE his defeat of the Ottoman Sultan Bayazit at the Battle of Ankara in 1402, the Mongol conqueror Timur hid his elephants in a forest near the battlefields. The treeless waste which today stretches in all directions from this historic spot tells an important story better than words can. Deforestation of the once fertile peninsula of Asia Minor has proceeded apace through the centuries, and in its wake has come soil erosion. A recent survey of the subject by technicians of the United Nations concludes that only drastic action taken without delay can save large parts of the Anatolian plateau from becoming desert.

The situation is made much more serious by the high Turkish birth rate, which produces a net population increase of 3 per cent a year, one of the world's highest. Since 1927 the Turkish nation has exactly doubled in numbers; it now stands at over 26 million. By 1975 it will be 40 million. The increase is accelerated by the abrupt decline in infant mortality and by Turkey's remarkable success in extirpating malaria. There seems little prospect of an early fall-off. Birth control, frowned on by the great Ataturk, is practically taboo. How can Turkey feed this population?

Nothing can be done to extend laterally the area under cultivation. Indeed, it is already over-extended. Of the 77 million hectares that form Turkey's total area, only 16.4 million—so mountainous is the country—are suitable for arable farming. But more than 24 million hectares have been ploughed. This means that the Turks have ploughed up marginal or forest land to the tune of 8 million hectares, thus increasing the disastrous soil erosion. Turkey is a dry country and is getting drier.

Wind, water and goats are the villains of the erosion tragedy. Turkish rivers run red with the burden of the Anatolian soil. When the Sariyar barrage, on the Sakarya river, west of Ankara, was built recently, it was estimated that it would take 150 years or so to silt up. But when the experts came to assess the actual rate of silting, they found that it would be solid with sediment in 46 years. The soil, so precious in the right place, so calamitous in the wrong, is also blown by the winds off the flat central plateau in clouds of yellow dust which have become steadily more frequent in the last few years. For this the goat is blamed.

There are 24 million goats in Turkey. Voluminous flocks roam the great plateaux of Central Anatolia, not only over-grazing the steppe pasture and stripping it of grass, but also pounding the soil to a loose powder which is easy prey for the March and April winds. The United Nations report bluntly advises that 80 per cent of the existing goat stock should be destroyed. But how?

ODDLY enough, the tractor, that mark of progress, has also contributed to wind erosion on the Anatolian plateau by damaging the already fragile structure of the dusty soil. As the UN report pertinently remarks, the disc harrows and steel ploughshares, imported with 45,000 tractors into Turkey over the last ten years, are of a type long since abandoned in dust-bowl areas of the West in favour of implements that burrow but do not turn the soil. The old Turkish wooden plough did far less harm.

Lack of fertiliser is another crucial problem; Turkish consumption is remarkably small, and imports are kept low by lack of foreign exchange. A nitrate plant recently started production at Katakya, but its annual output will only be in the region of 100,000 tons. The Anatolian peasant burns his animal dung as fuel instead of spreading it on the fields; the forests having gone, he has nothing else to burn. The UN report calculates that not less than 1 million tons of nitrogen and 2 million tons of phosphate are needed each year by Turkey.

That there are no trees to burn is of course originally the peasants' fault. Turkish peasants, in the words of the UN report, believe in their unlimited right "to use the forests with the same freedom as they breathe the air." Desperate for land, those who live near the remaining forests cut and uproot the trees, and take a crop or two off the devastated hillside. Erosion swiftly follows. The rains sweep the soil into the rivers, and the rivers carry it to the sea. In law the control of forest use is strict, but in practice it is hardly enforced at all.

To make a start on this appalling problem, the experts advocate a "pilot scheme" of irrigation to be carried out in the sub-tropical plain and hinterland of the province of Antalya, in southern Turkey. Under this project 200,000 hectares would be brought under irrigation, and 32,000 mountain families, at present miserably poor, would be resettled on fertile land in the newly irrigated valleys. The Turkish government is understood to have approved this plan and to have applied to the United Nations Special Fund for the required finance. The UN report further states flatly that a minimum of $350 million a year must be spent for ten years on irrigation, forestry, and counter-erosion work, if the galloping disease is to be arrested.

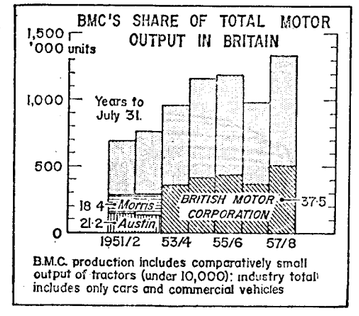
THE BUSINESS WORLD

BMC: the Merger Matures

THERE are three great areas of automobile production in the free world; they are the United States, Western Europe and the United Kingdom and since the war the pattern of development has been quite different in each of them. In the USA the major phenomenon has been the fluctuating struggle between the three majors, General Motors, Ford and Chrysler, all making rather similar vehicles each year becoming larger and more imposing; the minor manufacturers, being progressively squeezed out of the production of "standard" size cars, have replied by building smaller vehicles, a market which until this year the three giants left alone. On the Continent, the major phenomenon has been the establishment by single manufacturing units, both in France and in Western Germany, of a clear lead over competitors by virtue of the development of an outstanding vehicle. In Britain, the major phenomenon has been the continued co-existence of two major producers each controlled from the USA (Ford and Vauxhall, of which Ford has now by far the larger output) with two medium-sized British producers (Rootes and Standard, roughly comparable in car production with Vauxhall), and of two major native producers (Austin and Morris) which were merged to form the British Motor Corporation in the spring of 1952. That merger took effect seven years ago; but only this year has BMC become fully effective as a single integrated producer of cars. The new baby cars that BMC has introduced this week rank as the first entirely new venture, breaking fresh ground in technique as well as in marketing, conceived within the corporation.

The main objects of the BMC merger in 1952 were to achieve economies of large scale output. The new group controlled roughly 40 per cent of Britain's car production, 35 per cent of commercial vehicle production; it also produces tractors and industrial engines. Rationalisation might have seemed to imply that redundant models in the two lists should be eliminated—to scrap either the Austin or Morris models in direct competition with each other, and concentrate on a single vehicle in each size or price range. Such an abstract view is out of touch with the realities of making and selling cars. Supplying a car to the user divides, from the manufacturer's point of view, into six major inter-related jobs: design and development of the vehicle; buying raw materials and a host of components; making the body; making the engine, gear box, axles and other mechanical components; assembling the body and other components into a car; and selling and distributing the finished vehicles, and servicing them after sales.



B.M.C. production includes comparatively small output of tractors (under 10,000): industry total includes only cars and commercial vehicles

Economies of scale in motor car manufacture emerge mainly from two of these six—making bodies, and making mechanical components. Here exists the greatest scope for labour-saving investment, and increased volume of identical or nearly identical parts is likely to lead to reduced operating cost, and capital cost, per unit. This applies to engines, which practically every manufacturer makes for himself; to bodies, which he may or may not make; to such components and sub-assemblies as electrical equipment, which are bought out; and to the host of other components that he may buy or make himself. Economies of scale apply much less in car assembly, since the unit costs and the investment directly involved are not heavy. An assembly plant for 4,000 units a week may not be much less costly than two plants each for 2,000 units a week.

A FACTOR that has determined the whole integration policy of BMC is the sixth group of operations: selling and distribution. The capital invested in the motor car trade is substantial, and with increased production of cars, the amount of capital required to distribute them increases in step, if not fully in proportion. One of the important problems in the car industry's expansion is the increased capital needed by the agents to carry a bigger turnover. A great part of the trade, and a high proportion of the best situated show-rooms, garage and workshop premises, are in the hands of small men.

On strictly manufacturing considerations, it might have seemed best after the merger to reduce the number of names under which BMC vehicles were sold. But this would have meant finding ways to preserve the goodwill of Austin and Morris, Wolseley and Riley. Quite a small loss of sales, resulting from some sacrifice of the buying public's attachment to particular names, would have been enough to wipe out the further economies that might have been achieved by a more drastic policy of rationalisation. The mutilation of the two existing distribution organisations,

moreover, would have put it out of court. That would have left BMC with an inadequate number of good dealers, with insufficient capital to manage their existing volume of business, let alone an increased volume. BMC's competitors would have had the chance to enrol the best of the dealers it discarded: in the vital field of selling, the prime beneficiaries of the merger would then have been the other manufacturers.

BMC's managers, moreover, were quite clear that the great bulk of the economies of scale in production could still be achieved without drastically sacrificing public goodwill or disrupting their duplicated but smoothly-running distributive organisation: indeed, they thought this was possible without quite as much reshuffling of work between plants as would have been caused by the elimination of some marques.

THE simplest opportunity for rationalisation was in the manufacture of engines. At the time of the merger Austin had five sizes of engine for its range of passenger cars, all with overhead valves and of modern design; Morris had eight passenger car engines in production, of which those for the Minor, the Oxford and the Six, had side valves, the five others, all with overhead valves but without much else in common, serving the Wolseley, Riley and MG ranges. Within a few months of the merger, BMC put the 800 cc ohv engine used in the Austin A30 into the Morris Minor—the car with probably the largest volume of production in the combined companies. Production of all passenger car engines up to 1,500 cc has been concentrated at Longbridge; almost all engines above this capacity are made at the Morris Engine factory at Coventry. Moreover, all gear boxes are made in association with their corresponding engines, so that the completed engine and gearbox leave the production line as one.

Production at Longbridge is divided between the A series engines and the B series. The A series now consists chiefly of the 948 cc engine used in the Morris Minor 1000, the Austin A40 and the Austin-Healey Sprite, with a new variant in the 850 cc engine for BMC's new Mini-Minor and Austin 850. The B series consists of the 1,489 cc engine now used in the five cars of 21 cwt—the Austin Cambridge, the Morris Oxford, the MG Magnette, the Wolseley 14/68, the Riley 4/68 and the MGA sports car, as well as in the two smaller

A Design for the Sixties

WITH the Austin Seven and Morris Mini-Minor models that it introduced this week, BMC is bidding for a place in the development of mass motoring comparable to those historically established by the Model T Ford and the original Austin Seven, and that still held by the Volkswagen. Porsche's pioneering VW design, half a generation ahead of his time, was later matched and modified by more conventional engineering in the Renault 4 cv, the chrysalis from which the handsome and successful Dauphine emerged; and a further evolutionary advance was achieved in the Fiat 600. Today, it is with these top three of the Continent that BMC must compete commercially. With these new vehicles, it can.

The cardinal element in Alex Issigonis's "ADO.15" design (the name by which the new BMC vehicle was known in prototype) is the use of 10-inch wheels. Porsche in the VW used 15-inch wheels; the 4 cv Renault did the same. Giacosa gained much of his extra roominess in relation to size in the Fiat 600 by using 12-inch wheels. Issigonis, acknowledging the example of Continental designers in putting small wheels as near to the corners of the car as possible, has cut the diameter down to 10 inches, making it possible, within a 4 ft. 7 in. width overall, to mount the 850 cc engine (a redesigned version of an existing A series power unit) transversely between the front wheels. The 4-speed gearbox—to name what does not exist—has been combined with the differential and mounted in the sump below the crankshaft, a solution of masterly simplicity.

To these two elements of the engineering solution, the only important addition technically is the use of rubber spring units in independent suspension all round.

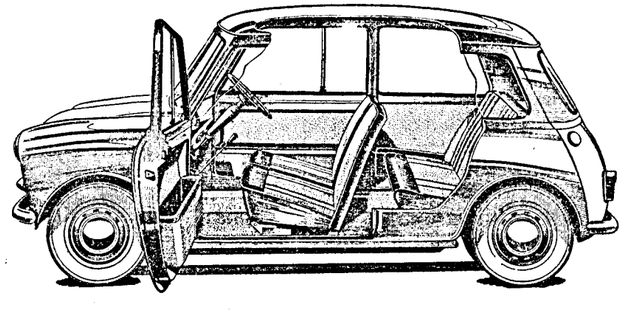
Inside a body measuring 10 feet long BMC has achieved leg room comparable to the standard 1959 American car, 66 inches from panel to rear squab, against an average of 62 inches for the VW, Dauphine and Fiat 600: its rear seats are as wide as in its Continental rivals, and it has beside them more space for parcels than any saloon car of any size that one can recall. It has only 5½ cubic feet of enclosed luggage space; but BMC has returned to a boot lid that hinges down, so that extra luggage can be piled on top.

It is markedly lighter than the average of the three European best-sellers, so that with its engine developing 34 bhp it has a much higher power-weight ratio, 45 bhp per ton, than they. The authoritative road test figures published by *The Motor* afford comparisons in performance.

In appearance, the new design is neither inspiring nor inspired. We accept the appearance of a plum pudding: the public may accept a vehicle which, looking like a pudding, is as full of good things. But the crispness and modernity of line that Farina has recently bestowed upon other cars for BMC finds no reflection here.

Production plans for these vehicles are disappointingly modest, which has affected the basic price of £350 (£497 with purchase tax) that BMC has put on them. At 66d. per lb of the 1,275-lb vehicle, this seems a figure that might have been improved upon (the discontinued A.35 was priced at 58d. per lb). There seems to be nothing in this design to justify extra cost on a pound per pound basis except for the front universal joints and the rubber of the suspension. But the planned rate of output, 4,000 units a week, can hardly partake of the economies of scale inherent in producing 3,000 VW and 2,200 Dauphines and 4 cvs each day.

	Overall Fuel Consumption mpg	Maximum Speed mph	Acceleration 0–50 through gears sec.
Morris Mini-Minor and Austin Seven	40·3	72·4	17·0
Volkswagen	30·8	68·2	18·2
Renault Dauphine	40·2	66·4	24·7
Fiat 600	44·7	58·3	32·5



cars, the Riley 1.5 and the Wolseley 1500; and a major variant with two overhead cam-shafts in the MGA sports cars.

In this way the whole production of engines for the cars selling in volume is concentrated in two sizes, with a total capacity of more than 15,000 units a week. Save for minor variations, all the machining operations on each of the two series are identical, so that most highly mechanised labour-saving plant can be installed. It seems unlikely that variations in engines for BMC's high volume cars will call for any substantial change in this plant for some years to come.

The larger engines are produced at the Morris Engines plant at Coventry (including the Princess engine, which is the same size as the petrol engines for the four- and five-ton trucks made by BMC); all the reconditioning of engines is also handled in the same plant. Even more rationalisation has taken place in engines above 1,500 cc than in those below. The 2,199 cc engine formerly used in the Austin A70, the 2,215 cc engines that powered the Morris Six and the Wolseley 6/80, and the 2,443 cc ohv engine for the Riley have all been dropped. When the Austin A90 Atlantic was dropped, its engine was continued only for the Austin-Healey 100; in 1954 a different engine of 2,639 cc was introduced in the Austin A95; and in the enlarged form of 2,912 cc this is used in the new larger Wolseley 6/99, the Austin A99, and perhaps will go into a Morris car of similar size.

A rather wide gap is thus left in the BMC range between the 1,500 cc 4-cylinder engines developing 51 bhp and the 2,912 cc engines developing about 110 bhp. Otherwise, BMC has all the power plants (and gear boxes) to cover practically the whole range of passenger cars for which there is a substantial demand, excluding the highest-powered vehicles in the Rolls-Royce and Jaguar classes, but including smaller sports cars such as the MG and Austin-Healey.

SIMILAR rationalisation is nearly complete in body building. In the lowest priced market, the new Mini-Minor and the Austin Seven with the 850 cc engine have a body made by Fisher and Ludlow, which BMC owns. For the 948 cc version of the A engine, the bodies in high volume production are the Morris Minor, made by Nuffield Metal Products, and the Farina-designed Austin A40 made by Fisher & Ludlow. The Morris Minor has now been selling more than ten years; it must have earned greater profits for BMC than any other vehicle in the history of the corporation or of its predecessor companies. Its great popularity keeps production running at 3,000 units a week, but it would be surprising if this continued for more than another year, when the Minor's place might well be taken by a Morris version of the Austin A40.

In the main range of saloon bodies for the 1500 cc B engine, rationalisation is most apparent. Five bodies are made as variants of the basic Farina design by the independent Pressed Steel Company of Oxford, for the Austin Cambridge, the Morris Oxford, the Wolseley 15/16, the Riley 4/68 and the MG Magnette, in which most of the major pressings, and the method of construction and assembly, are the same. The total cost of body dies for the five is £1½ million; if only a single body had been made, the cost would have been more than £1 million. Thus an extra investment of less than half a million pounds, mainly to secure variation in the frontal appearance, has given the pressings for the hulls not only of the high-volume Austin and Morris models, but also of three lower-volume models, the MG, Wolseley and Riley.

Major economies in body-building are thus realised by the unification, at the Pressed Steel Company, of the operations in which volume gives the greatest saving basically from one investment in dies. The presses can be set up for the longest continuous runs, and the costly interruption of changing dies is incurred as seldom as possible. By concentrating the welding into one structure of the large number of individual pressings, the optimum investment can be made in jigs and other labour-saving equipment. Since the work is done by Pressed Steel, which makes bodies for other manufacturers, the presses may moreover be utilised at a better load factor than would similar presses working for BMC alone.

This five-body programme produces almost identical silhouettes for cars offered under five different names. This follows from a rationalisation, and the decision that Wolseleys, Rileys and MGs should offer a "package" of motoring identical with that offered by the Morris and Austin 1,500 cc vehicles. Greater variation in the silhouette of the five would have been mere elegant (or inelegant) variation in body design, causing considerable extra cost. It is true that General Motors, for example, have been able to do much more than BMC in using many identical pressings to produce different bodies with superficially very little in common; but GM has achieved this mainly by a lavish use of cosmetic variations in chromium decoration.

These medium-sized vehicles are now being paralleled by a range of Austin, Morris and Wolseley cars, using the C series engine of 2,912 cc in bodies similarly "influenced" by Farina, with most of the panels common to all three made by Pressed Steel. Of the remaining bodies, Van den Plas (a wholly owned subsidiary) makes the Princess; Morris Motor Bodies of Coventry makes the MGA sports body; and Jensen Motors Ltd. of Birmingham the Austin-Healey which uses the BMC C engine. Fisher and Ludlow make the Austin-Healey Sprite body.

THE main field for manufacturing economies, after the engine and bodies, is in back axles and suspensions. Production of these items for all the passenger cars is concentrated in the former Wolseley factory at Ward End, Birmingham. BMC's spare parts business is concentrated at Cowley, as part of the Nuffield organisation. A large covered area is needed for the storage and dispatch of spare parts; and there are examples in the industry of new buildings for spare parts being built to high and even lavish standards. The BMC spares organisation gives an impression of admirable frugality, with an investment per square foot of space much less than half that of at least one of its competitors.

Taken all in all, the development of BMC's plants since the merger in 1952, has been logically conceived to produce at the lowest possible costs its range of cars to meet the demands of the home and overseas markets, using the marketing set-up that the Corporation inherited. But the long maturing of this merger had its costs. Attention seemed to be concentrated upon improving production efficiency at the expense, for a time, of improving the looks of the models; and the effects became evident in BMC's share of the car market and in its finances. To these aspects of the merger, and its prospects, a second article will turn next week.

The Radcliffe Report

Following last week's summary of and commentary on the sections of the Radcliffe report dealing with the domestic monetary mechanism, and the special problem of sterling, we deal here with the other main sections

IV—The Bank of England

We do not think it likely that the complete constitutional structure of the central bank of the United Kingdom with its special responsibilities to the rest of the sterling area can ever be built up out of a series of statutory forms and prescriptions. In that sense the introduction of the 1946 power of direction may have had some disadvantage. . . . (766*)

(i) Status

We are however dissociating ourselves from a view . . . that public interest requires that the central bank should be assured complete independence from political influence (768)

THE eleven page chapter on the organisation and status of the Bank of England needs to be read with extreme care. The present relationship of the Bank with the Government, as it exists in fact, is regarded by the Radcliffe committee as "generally satisfactory." The Bank has a unique relation with the London financial market, in which it is "at once an operator and to some extent a controller," exercising in both functions a technical skill that finds no counterpart in Whitehall. Its voice carries weight over a wide sphere. The Bank has special relations with overseas central banks and with international organisations. Its management of sterling is "in the hands of experts whose technical brilliance is admired the world over." For all these reasons, the committee agrees, the Bank should not be organised as a glorified government department.

On the big question, therefore, the committee is recommending no change. But it suggests three adjustments. It advocates new means of co-ordinating monetary policy and ensuring that policies pursued by the central bank are "from first to last in harmony" with those of the Government. It wants to see the present reality of responsibility for major decisions such as Bank rate changes recognised in the form in which they are made. And it seems to be proposing a diminution in the policy making responsibilities of part-time directors; if the committee's proposals are accepted, directors will have less reason for the embarrassments that were mentioned in the report of the Parker tribunal.

The basis of these recommendations is the committee's assessment that (1) it is in the nature of the existing situation that the burden of initiating and formulating the Bank's policy and its proposals to the Government today falls on the Governor and the Deputy Governor; and (2) that on major questions of policy, the Chancellor necessarily has the final say. Even the Committee of Treasury, the "conscience in these matters" of the full Court, "is and must be in essence advisory" to the Governors. The committee believes that the picture in the public mind has been distorted by the evidence before the Parker tribunal on the alleged Bank rate leakage; it points to the special circumstances present in September, 1957.

The committee does not openly criticise the Bank of England Act, 1946; but it is clearly and understandably unhappy about the central section 4. It finds it very difficult to say whether the power given to the Treasury of issuing directions to the Bank, after consultation with the Governor, has "brought about any actual change in the accepted existing relationship between Bank and Treasury" (761). And the subsequent clause in the Act, stating that subject to any such directions "the affairs of the Bank" are to be managed by the Court, is held by the committee to have been given "mistaken stress" by the Bank. The committee does not accept the traditional distinction drawn by the Bank between these affairs, including fixing of Bank rate and management of the money market and the vast portfolio of the Issue Department, on the one hand, and the Bank's "agency" functions, such as management of the Exchange Account and exchange control, on the other. In practice, the committee says with much reason, the Bank's technical exchange operations and advice tend naturally to have a big impact on policy.

The committee rejects the view that in the one field the Bank makes its own policy, subject to the Chancellor's power of issuing a direction, and that in the other field it makes no policy. Over the whole range of its operations, it argues, the relationship should be that "the Bank contributes to the Government's discussions on policy the advice and suggestions which its unique operational experience and contacts qualify it to offer, while the Government on its side is careful to associate the Bank with the formation of those decisions on economic policy in which monetary operations are capable of taking a part" (769). This status may not be quite what the Bank would like; but it is more acceptable than it probably feared it would get, and is not an unreasonable form for this delicate relationship in a democratic society.

*This numerical reference and subsequent ones are to paragraphs in the committee's report.

(ii) Bank Rate and the Court

In our view the true responsibility for decision today lies with the Chancellor of the Exchequer, not with the Bank; and it would be better that this should be made explicit (771)

THE committee has however gone somewhat further. First it wants the reality of ultimate power and responsibility to be recognised formally. Changes in Bank rate should be made in the name and on the authority of the Chancellor. And it would see an incidental advantage in using statutory direction for this purpose, since if this power is never used, "it may acquire by disuse too momentous a significance to allow of its being used at all." This is less than convincing. If Government and Bank can get along without a directive, does one really have to invent circumstances for it to be dragged out? Feelings of self respect and of pride in the Bank's stature among members of the Bank staff and Court are not to be lightly disregarded. They could never be decisive over a real contrary interest, but does this exist here? The popular newspapers and the general public already ascribe Bank rate movements to the Chancellor. And since the committee still envisages that Bank rate proposals would originate from the Governor, the form of the announcement suggested by the committee might itself be held to be misleading to the public. If change is needed, a better and more accurate form might be announcement by the Bank and in its name, but on the authority of the Chancellor.

Secondly, the committee believes that full co-ordination of the Bank's policy with the Government's economic policy needs more than the present "detailed and continuous" confidential exchanges between Bank and Treasury. It recommends the setting up of a Standing Committee, deliberative and advisory in character, to keep under review all matters relating to co-ordination of monetary policy as a whole. The chairman would be the Chancellor and its other members would be four representatives of the Treasury, four from the Board of Trade, and four, including the Governor and Deputy Governor, from the Bank.

Decision on Bank rate, it seems, would lie between the Governors, the Chancellor and the committee. And, a vital passage, "it will not be either necessary or appropriate that the timing or measure of any change should be communicated to members of the Court before it is made public, except for good order at the time of the change" (785). The committee regards this as in line with the Court's present function (784). But it does not make any specific reference here to the Committee of Treasury. Are the only directors in the know to be the two on the Standing Committee—and will they be executive or part time directors? The committee says that in substance there will be little change (775). The Governor will still put together a Bank view, including in his consultations the part-time directors.

But in saying that "the function of the part-time director is to act as a special consultant to the Governor" (786), and in supporting the continuation of part-time directors "so long as it is clearly understood what is the true nature of the services that they can render and no more than these services is asked of them," the committee is surely recommending a change of substance. Something very close to its proposals were put to Mr Cobbold at the Parker tribunal*, by the Attorney General of all people.

Q. 8060. Have you considered the possibility of a change in the Bank rate being made not by a decision of the Court but being made by the Governor and Deputy Governor with the consent of the Chancellor of the Exchequer?—Not at any length.

Q. 8061. I would like to put this to you. Of course, if it was the position, it would be possible for you and the Deputy Governor to get all the valuable advice from the other directors?—It would be impossible.

Mr Cobbold explained why in his reply to Lord Parker:

Q. 8113. Then I am right in thinking that you would not like to have your directors in a purely advisory capacity for two reasons: (1) that you wanted the decision to be a joint responsibility and (2) that you feel you cannot consult them without (as it were) taking them into your confidence?—Yes. I place much more importance on the second than on the first. It is nice to be able to share one's responsibility with one's colleagues, but what I really want to have is their views and advice on the sort of thing I want to do.

Asked whether he could not consult directors by putting to them hypothetical courses of action rather than the exact proposal, the Governor replied: "I think it would be much more difficult to focus their judgment on the specific issue."

In the penultimate paragraph of its section on the Bank, the Radcliffe committee seems to take the point: people who have a "corporate responsibility" for the views on which they are canvassed will give a different quality of advice than mere consultants. But would part-time directors under the proposed system still have a corporate responsibility in a meaningful sense?

*Proceedings of the Tribunal, December, 1957, HMSO, £2.

(iii) Telling the People

From the point of view of monetary policy, we suggest a revival of the 1844 idea that the Bank should publish certain key figures exposing its operation in the monetary system (367)

THAT poignant thrust ought to strike home in the Bank itself. Besides its specific recommendations for regular information from the Bank (reported in our concluding section), the committee puts in its plea for detailed discussion of technical matters in a quarterly bulletin and, naturally, for a transformed annual report. It suggests that the Bank might consider preparation of short monographs appearing under the name of their authors. The new information should not exclude the Bank's external business, on which there is nowhere available any detailed account.

As an essential foundation for telling the public more, the Bank is urged to strengthen its research and intelligence departments. It should co-operate closely with the Treasury in collection of financial statistics and consider an interchange of staff; and it might find it useful to recruit academic economists and others for limited periods to help in specific projects of research. Finally, the head of the intelligence department should have the rank of an executive director. This, as well as other suggested reforms in the Bank, would probably require legislation. It might not be popular in the Bank, with its natural insistence on the primacy of operational judgment rather than back room views. Yet if the right man could be found such a move might have salutary effects. Other central banks have managed to achieve quite a high degree of economic sophistication without losing their practical touch.

V—New Financing Institutions?

In general we have seen that financial institutions are quick to develop in response to changing needs . . . (866)

THE committee finds that the gap highlighted in the Macmillan report has on the whole been pretty well filled, and it has no desire to see a proliferation of institutions, public or private, to provide finance for small businesses. It makes three recommendations for improving facilities. First, the banks should be prepared to offer term loans for those industrial customers who dislike the legal obligation to repay bank overdrafts on demand and do not mind a higher interest cost. This proposal is in line with some thinking within the banks, and would entail to a large degree a change of form rather than of substance. Secondly, the limit of £200,000-£250,000 for advances by Lord Piercy's Industrial and Commercial Finance Corporation should be reviewed by the banks, which are its shareholders. Thirdly, the committee does propose one new institution—an Industrial Guarantee Corporation to help small firms who have difficulty in finding capital to exploit technical innovations because they lack adequate security and may appear unduly risky. The proposed corporation, which would not be concerned with the initial stages of research and development, would guarantee for a commission an agreed portion of loans made by existing financial institutions. These institutions would thus still be left with the decision of whether or not to lend, and they would continue to bear some portion of the risk; this follows the well tried procedure in insuring export credits.

The committee also takes a sober view of the many pleas it heard for easier credits for exporters and farmers. It points out that any decision to break the generally agreed line of insuring not

more than five years' credit after shipment (which means six to nine years from date of contract) involves two major considerations: not only whether Britain wants to start a credit race, but also whether its balance of payments and its domestic economy can stand the strain of increased overseas investment through this channel. It mentions the possibilities of making a bank's paper arising from export credits rediscountable at the Bank of England, and of establishing a semi-public Export Finance Corporation. But it stresses that such steps would be justified only on the twofold view that the Export Credits Guarantee Department should lengthen its period of cover and that the demand for such longer credits would not be met by existing institutions.

The committee rejects outright the suggestion of preferential low interest rates for farmers; even if it were considered desirable to increase the State's subsidies to farmers, this would be a bad way of doing it. It reports no particular lack of credit facilities for farmers, who get 11 per cent of total bank advances compared with their contribution of 4 per cent to national output, and also draw on hire purchase companies and merchants' credits (pretty expensive) as well as on special institutions such as the Agricultural Mortgage Corporation. The committee's one recommendation is that here, too, the banks should consider term loans. Presumably it would approve of the Midland Bank's 20-year farming loans announced this week.

VI—Figuring It Out

We have suggested that there are certain areas where we are still too much in the dark and where day-to-day decisions have to be taken with only a limited perception of the relevant factors (862).

BY the resolution at one of its first meetings, that it would entertain no evidence that it could not later publish, followed by an insistence upon establishing "a factual foundation for our inquiry and conclusions," the committee has managed in eighteen months to bring into the public domain more new financial statistics and new arrangements of financial statistics than the Treasury or the Bank have been able or have cared to furnish in the past thirty years. It has published the more important compilations of these in last week's report—a selection appears on the opposite page. A great many of its recommendations for improving current financial statistics involve no more than the continued collection and publication of those it has elicited from the authorities and the City for the first time.

Publication of what has so far been known only in limited circles, in the view of the committee, is second in importance only to the collection of some figures that so far nobody knows. Much of what it wants drawn into the open is of this first kind. It recognises the reluctance of financial institutions to disclose more of their private affairs than is necessary or to devote undue resources to gathering fresh data. But it leaves to the monetary authorities the task of balancing the "social importance" of extra data with the cost of their collection or the potential damage to public or sectional interests through disclosure.

The report pauses briefly to single out one or two gaps in economic statistics that "the steady improvement over the past thirty years" has not yet filled. But its main concern is with financial statistics, which have hardly shared that improvement.

From its emphasis upon the essential unity of the market for credit there follows logically the committee's desire for financial statistics to measure the whole flow of transactions in assets over a given period; the size, composition and ownership of the stock of assets at a given date; and the return upon these assets at any time. The committee deals somewhat tenderly with individual banks' inhibitions about revealing, for example, hidden assets; it suggests that aggregate figures of security holdings and of cash transactions should be published only for groups of institutions such as the joint stock banks or the insurance companies. They should be published for the same dates.

But it is anxious that these grouped figures should be comprehensive. It sees no reason why the Scottish banks or the discount houses should not accept publication of the regular figures of assets and liabilities that they already provide to the Bank of England. It proposes quarterly analysis of the larger deposits with the clearing banks on similar lines to the analysis of advances; publication of quarterly figures of holdings of gilt-edged securities by the banks, distinguishing short bonds with less than five years to maturity, for the joint stock banks, the accepting houses and the discount houses together; and of net cash transactions in gilt-edged securities.

Similar demands are made upon the other main groups of financial institutions. Insurance companies, the committee considers, should be required to provide quarterly figures of purchases and sales of financial assets and also of net life premium income. Similar data might be obtained from superannuation and pension funds (by sampling) from investment trusts and unit trusts, and from the hire purchase finance houses.

The committee "has found no satisfactory explanation of the large changes that have taken place in the rate of private saving over the past ten years." The whole personal sector, it suggests, might best be investigated by private surveys, if necessary with Government finance and backing.

Statistics showing the transactions of the public sector with the rest of the economy are partly a matter of organisation and presentation rather than of inquiry. The committee proposes quarterly publication of figures showing operations on capital account for the public sector, for the central Government alone, for public corporations, and for the local authorities. In the published figures of the National Debt there should be a clear line of division, such as is given in its report for the first time, between debt held by the market and debt held by departments within the Government. The Government is not much better advised than the public about the division of market debt between the main groups of outside holders, at home and abroad; fuller estimates should be attempted. Local authorities, on a sampling basis, might also be required quarterly to record the amounts and sources of their borrowing.

The committee gives only a flick in passing to one of the dryest of all statistical sources: "We hope that the Council of the Stock Exchange will examine the possibility of publishing better data on the business transacted, particularly in gilt-edged." Many of the extra statistical series that it has suggested would logically, it thinks, be published by the Bank of England; and the Bank should publish figures of its bankers' deposits, deposits of non-residents, official and other, its holdings of Treasury bills, and its holdings of Government bonds, with periodical analysis of these by maturity. The committee recognises that it is proposing a quick revolution in financial statistics, to match the slower revolution that has been taking place in economic information. It offers for consideration the question whether this more compendious array of financial information—when and if it all sees the light of day—might deserve its own Digest of Financial and Monetary Statistics, and some official comment, to do it justice.

BUSINESS NOTES

INTEREST RATES

Jolt from New York

THE London market began thinking about Bank rate this week for reasons very different to those usual in August. On Tuesday, following reports that the Treasury bill rate in the United States had risen to a new peak and above the London rate, gilt-edged were marked down sharply, War Loan dropping by $1\frac{5}{16}$ to $65\frac{1}{4}$, within half a point of its nadir for the year. At the same time, the boom in the equity market broke, and on Wednesday, while Government securities recovered somewhat, the fall in Ordinary shares continued.

The yield on the *Financial Times* ordinary index, which on Tuesday was within 0.01 per cent of the yield on Old Consols, rose to give a margin of 0.06 per cent. The equity market faltered momentarily before crossing this line of entirely psychological significance, determined as it is by one particular index set against a government security that has a special scarcity value. But on Thursday the lines crossed, it may be noted that *The Economist* ordinary indicator, which rose slightly from 290.9 to 291.7 in the week to Wednesday, shows an average yield 0.71 per cent below the yield on War Loan.

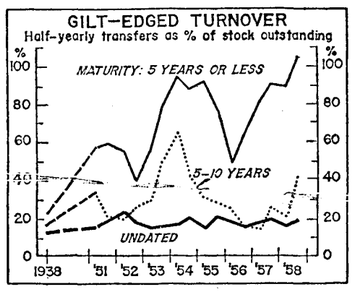
The London markets have reason for their pause. The warning signs of dearer money in America were discernible some months ago, and now they are flashing unmistakably. The three months' bill rate in New York this week reached 3.82 per cent. The extraordinary jump of 0.41 per cent in a week and 0.67 per cent in a fortnight is a result of restrictive open market activities by the Federal Reserve, and of the market's anticipation of the implications of Congress's refusal to raise the maximum permissible coupon of $4\frac{1}{4}$ per cent on bonds of more than five years' maturity. This will inevitably increase pressures in the short market, which has already seen a coupon of $4\frac{3}{4}$ per cent on a one-year bill. The Federal Reserve is reported to be considering a further rise in its rediscount rate of $3\frac{1}{2}$ per cent, which the Treasury bill rate has now overtaken, though the steel strike complicates the issue. The big New York banks in turn are considering a further rise in their prime loan rate, at present $4\frac{1}{2}$ per cent; that would make bank advances more expensive in the United States than in Britain.

This sharp rise in money rates (it has gone still further in Canada, as is discussed in a subsequent note) must have its impact on London. Already there have been signs of further switches of funds to New York. Many of these balances managed by Swiss bankers and others have been denominated in dollars, and the London banks accepting them have covered themselves in the forward market. To that extent the withdrawal of balances involves an unwinding of the forward sale of sterling, and while the spot rate has dipped a little further to \$2.80$\frac{3}{4}$, the forward quotations have strengthened, the dollar going to an unaccustomed discount. This is a sign that confidence in sterling itself remains high, but the switching does produce a certain strain. Few people expect Bank rate to be raised before the end of the summer; but few would care to predict that 4 per cent will last until the end of the year. On Friday the tender for Treasury bills will have been watched with unusual interest.

RADCLIFFE IN THE MARKETS

Gilt-edged Reflections

THE City has a well-known predilection for hard news, and a report that may or may not be accepted by the authorities seems to be regarded by many people as outside that category. Market reactions to the Radcliffe report have been very modest; few people this week have placed immediate significance on the minor role the report seems to envisage for Bank rate. Yet for the gilt-edged market and still more in the mortgage market the report could have a big influence. While the report is by no means pessimistic about gilt-edged, the first



effect will probably be depressing; possibly this was a contributory influence in the market's fall on Tuesday.

Everyone welcomes the new information, and the prospect of continued information. This itself puts gilt-edged in better light. As the tables on page 660 show, important groups of investors including the general public have at times been quite substantial buyers of gilt-edged; and the accompanying chart shows an impressive turnover, even among the medium and undated stocks. Everyone is looking forward to meaningful figures on the response to new government issues: this week's announcement that £54 million of maturing 3 per cent War Loan has been converted into $4\frac{1}{2}$ per cent Conversion 1964 and £144 million into the new 5 per cent Treasury stock 1986-89 tells one nothing except that the government broker again has a good supply of a long-dated stock.

The report is optimistic, in the long run, in its confidence that there is an underlying demand for gilt-edged and in its striking revelation that, despite the huge borrowings in the war, the national debt as a whole is smaller today in relation to national income than it was in 1935. At the same time, it should probably be regarded as pessimistic for prices in the short run in its whole approach to debt management. The central argument is that this provides the authorities with power, which they should use, to influence long-term rates; that the concept of "Government credit" as reflected in the yield on government securities is an outdated hangover from the days when London was the world's market for every country's bonds; that gilt-edged yields may have to rise in relation to current yields on equities, even if inflation is held in check; and that while the authorities obviously have to be wary of knocking the gilt-edged market too hard they may find that a positive cut in gilt-edged prices accompanied by a clear statement of intentions is less demoralising to the market than a slow sag in prices such as has been experienced in recent years. Any investor has to be prepared for market fluctuations; it is long-term depreciation that puts him off. Sharper fluctuations that checked the downward drift would be no bad thing.

Would it Work?

IN the discount market the feeling is that a threatening cloud has passed. Now that the syndicate has survived the scrutiny of the Radcliffe committee its place should be secure. Lombard Street's general relief is accompanied by irritation about the report's reference to "deliberately manipulating the syndicate bid week by week in order to discourage 'outside' tenders," with particular reference to early 1959. It is pointed out, reasonably, that the fluctuations then were a response to the change in

expectations about Bank rate, and that the London market, sensitive to the wishes of the authorities, avoids really sharp fluctuations. Even the rare movement of 9d. in the bid is equivalent to only 0.15 per cent in the rate; if bill rate fluctuated as it does in New York outside tenderers would have more to worry about. The discount market might also have admitted that it can hardly stay passive in the face of competition from outsiders; if the Radcliffe committee really wanted a fully free money market it should have recommended more competition, that is abolition of the syndicate practice, not less competition.

The mortgage market has reacted very quietly to the prospect of its virtual disappearance, if local authorities as the committee recommends are given free access to the Exchequer at the gilt-edged rate. Few people in the City think that this extraordinary suggestion will be implemented. Consequently, there has been no noticeable increase in demand for mortgages or change in rates, which remain at $3\frac{5}{8}$-$3\frac{3}{4}$ per cent for short money, $5\frac{5}{8}$ per cent for loans up to five years and $5\frac{3}{4}$ per cent for longer loans.

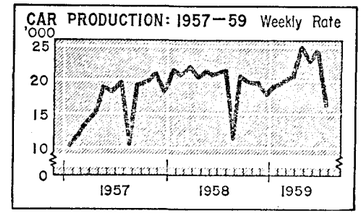
The clearing banks seem to have given the report a general welcome, although views have not yet crystallised. Bankers welcome the stress on interest rates rather than on quantitative controls in normal circumstances; and naturally they are relieved that the suggestion for use of liquidity controls in "stage two" (not normal circumstances but short of a full emergency) stresses that these should be extended to a wide range of other financial institutions.

That relief, naturally, is not shared by the institutions concerned. But again the main topic of debate is how the committee's proposal could be implemented. The problem for the building societies is bad enough, as is discussed in a later note, and they already have some generally recommended standards of liquidity. The finance houses, despite long attempts, have been able to find none, while for insurance companies and pension funds liquidity considerations vary greatly. One may seriously doubt whether a control on liquidity is applicable to any institutions other than commercial banks, since these are the only institutions that in the past have held pretty rigorously and uniformly to a certain standard. And if the authorities agree that control of the banks alone is both ineffective and unfair, they might think again about using this instrument at all.

MOTORS

Holidays Cut Output

PRODUCTION of cars and commercial vehicles fell sharply in July from the record level reached in June. Only 65,704 cars and 22,038 goods vehicles and buses were built in the four-week month, compared with 123,059 and 39,623 respectively in the five weeks of June, and 85,468 and 23,383 in July, 1958. This year, unlike last, most large makers lost one week's output from holidays in July, while Ford lost six days and Vauxhall a fortnight; these holidays account for most of the fall in production. The rest resulted from the strikes at the British Motor Corporation and the effects of the introduction of new models—which again probably affected BMC most, where production of the A.35 was being replaced by the Austin 7 and Mini-Minor. Apart from the holiday period, all makers report that they were making as many cars



as they could, working overtime and some night or Saturday shifts, but still could not keep up with the demand for them; delivery delays remain on most popular models.

Exports were higher in July than in June; 53,561 cars and 11,903 commercial vehicles were exported, compared with 47,586 and 9,853 in June; 49,945 and 11,360 were exported in July, 1958. The rate this July was little below the record reached in the second quarter; the rise in sales to the USA seems the most dynamic factor in exports at present.

HARRODS

The Morning After

MR HUGH FRASER has earned his short holiday in Monte Carlo. His shrewd tactics have won the House of Fraser control of Harrods at last, after a long and hard fought battle. Debenhams' counter offer to the improved bid by the House of Fraser came too late, and on Friday Mr Fraser, more willing to exploit every opportunity than the directors of Debenhams were, was a buyer in the name of the House of Fraser for the big amounts of Harrods' ordinary and preference shares which came on offer. On Saturday, the House of Fraser's offer for the preference shares was closed, but its offer for the ordinary shares was extended until Wednesday (and now has been extended once more, to September 9th). On Sunday, Mr Fraser said he was supremely confident and seemed to be taking pride in the fact that, having bought shares in the market, he was paying more for Harrods than the £34 million many commentators had estimated. On Monday, Debenhams withdrew its offer and Mr Fraser had won his victory.

The price he has paid for that victory is enormously high. Quite how much cash Mr Fraser will have to find is not yet apparent, but it can hardly be much less than £15 million. Capital to fund that sum and to complete the building of the Harrods' store in Birmingham will have to be found. Mr Fraser has made no promises, as the Debenhams directors did, that he will not sell any of the Harrods' freeholds. He, after all, was the first to exploit the hidden cash reserves that inflation has created in freehold property. But if he does sell off some of the Harrods' freeholds and secure a long lease upon them he is buying cash at the moment at the cost of heavy rents in the future. He must, to justify the price he has paid for control, jack Harrods' earnings up. When he purchased the John Barker group he realised some cash by selling some of its properties and he re-organised its stores. As yet, the earnings of the John Barker group have not moved up dramatically.

Mr Fraser has been quoted as saying that only a fool would alter the character of the Harrods' business and he has said that the "separate traditions and high reputations" of its stores will be respected. Can he, however, afford to maintain the extravagant use of selling space which is the tradition of the Knightsbridge store and to leave the character of the other London and provincial stores unchanged? All the House of Fraser shareholders will soon have votes and they, having seen the market price of their shares drop from 35s. 6d. to 32s. and the price of the Debenhams' shares go up from 29s. to 31s. $7\frac{1}{2}$d. once victory was in sight for the House of Fraser, must want to know what Mr Fraser intends to do. Department stores have gradually been losing trade to the multiples and their profits have been sticky. Can the personality of one man reverse that trend for Harrods? Is it possible to do so without altering its character? The House of Fraser shares have been growth stocks. Can they remain so, now that they include the equity of Harrods bought at this sort of price?

OVERSEAS TRADE

Industry's Import Needs

RISING production, calling for bigger stocks, continues to push up Britain's import bill. In July imports rose further by £21 million to £353 million cif, and were 10 per cent above the average rate in the first half of the year. But exports resumed their upward trend, rising sharply by £36 million to nearly £288 million fob, $5\frac{1}{2}$ per cent above the rate in the first half of the year. Exports may not fully match the rise in imports over the year as a whole, yet the trade gap does not seem likely to grow uncomfortably large. During the first seven months the apparent deficit totalled £277 million, an increase of £66 million over the same period of 1958.

Detailed trade figures for July show clearly how industry's growing needs are driving up imports. Industrial materials, at £141 million, were 15 per cent above the first half year's average imports, with

seasonally large arrivals of timber, and heavier imports of iron and steel, metal ores and scrap, chemicals, paper and raw cotton. Imports of finished manufacturers, at £41 million, were 40 per cent above the average rate in the first half of the year. Nearly half of the rise represented ships and boats (which can fluctuate sharply), but imports of machinery were 16 per cent higher, while miscellaneous manufactures, road vehicles and aircraft and scientific instruments rose even more sharply. In contrast to these groups, imports of petroleum were only marginally higher in July, while food, beverages and tobacco rose by only two per cent.

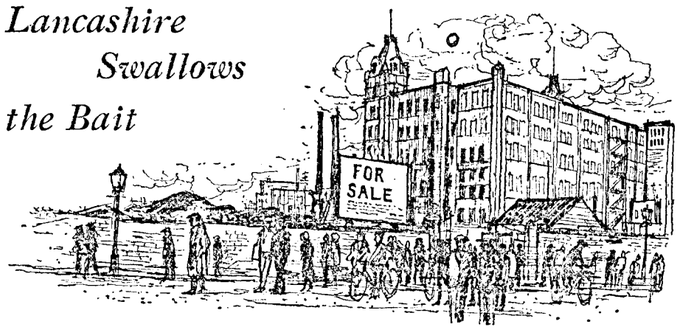
The rise of 5½ per cent in British exports in July, compared with the first half year's rate, was widely spread. Engineering products, the dominant group, rose by 5½ per cent to £131 million. Ships and boats accounted for two-thirds of the increase, rising by over £4 million to £8.4 million, though this was offset by the fall (to £4.9 million) in deliveries of aircraft, another volatile item. Shipments of non-electric machinery also rose by 5½ per cent to £54 million (aircraft engines alone rising by 17 per cent to £6 million), while shipments of electric machinery were 2½ per cent higher at £20 million. Exports of cars and chassis continued to forge ahead, showing a rise of 13 per cent over the first half of the year, thanks mainly to another jump in deliveries to North America. Exports of metals rose by 12 per cent to £39.7 million, and exports of textiles recovered further, being 9½ per cent above the first half year's rate ; cotton yarns and fabrics alone showed a fall.

CANADA

A Financial Mess

THE clash between the policy of the Bank of Canada and the policy of the Canadian Government reached a new stage last week. The Finance Minister rejected one quarter of the bids for the week's tender of Treasury bills and thereby succeeded in bringing the yield down from 6.16 to 6.04 per cent. The extraordinary rise in Canadian bill rates is attributable primarily to the restrictive open market operations of the Bank of Canada, which has concentrated all its attention on limiting the supply of money to prevent inflation in 1960 and 1961. This restrictive policy naturally conflicts with the Canadian government's efforts to continue recovery from the recession. The Government became particularly alarmed last week after the chartered banks had announced that, since they were now having to pay well over 6 per cent for their borrowings from the central bank while still being bound by law to charge no more than 6 per cent for loans, those loans would have to be curtailed. Mr Diefenbaker promptly announced this reasoning to be invalid since the banks borrow only a small portion of their funds at Bank rate. It is a sorry example of economic and monetary management.

Lancashire Swallows the Bait



SUCCESS, if that is the right word, is now assured to the schemes for eliminating surplus machinery in Lancashire cotton spinning and weaving. The bait of compensation is working, and offers to scrap now already exceed the necessary minima of six million spindles and 45,000 looms. The flow of applications will slacken after next Monday, when the bonus payment of five per cent lapses, but by September 30th, the closing date, eight to nine million spindles and roughly 60,000 looms may be earmarked for the scrap-heap. The response from doublers, however, has been disappointing, and it is possible that the target of 400,000 doubling spindles may not be reached. If it is not, no compensation will be paid. As each scheme stands by itself this would not matter much—except to the firms that would forgo compensation for mills that they will close anyway. A scheme for the finishers is still being considered.

Ironically, the business of cutting Lancashire down to size has coincided with a big improvement in real business. The revival started early in the spring, and a glorious summer has boosted sales still further. Stocks at the mills have been sold off and order books have lengthened appreciably. In spinning, for example, order books are nearly twice as long as they were early this year ; spinners were working, on average, at 71 per cent of capacity before the holidays began, compared with 66 per cent in January, and were running for 44 hours per week instead of 41.

But selling margins are not much higher, and are widely considered to be inadequate. There are grounds for believing that influential producers, in spinning at any rate, have deliberately kept margins low to encourage the weaker fry to close down. Margins will have to be raised soon, if only because firms will have to recover the costs of the levies to finance their third of the compensation to the mills that are closing down (with the government finding the other two-thirds), and to displaced workers. If about 8½ million spindles are scrapped the remaining spinning firms will have to raise roughly £2¾ million, of which nearly £1 million may be needed to compensate workers.

By the end of March, when all the machinery offered for scrapping has to be scrapped, the outlook for what is left of the industry will be brighter than for several years. The revival in trade may continue throughout next year, and though demand will fall off when stocks have been re-built, there will be far fewer mills to compete for the available business. Sellers' hands will be stronger, and they should be able to obtain an adequate return on their capital. It may not be long before some mills again find themselves short of labour. Mill closures, however, cannot be evenly spread, and even in districts where displaced workers could soon be re-employed in reorganised mills nearby there may be some loss of workers to other trades.

ELIMINATION of surplus capacity is only one step, and the least difficult one, towards putting Lancashire on its feet. The next step is to modernise the remaining mills and move over to two or three shifts. The government is prepared to pay a quarter of the cost of re-equipment during the next five years. To qualify for the full subsidy a firm must scrap an additional amount of machinery equal in productive capacity to the new machinery installed. No one can guess how vigorously this next step will be taken. Fears about unrestricted competition from duty-free imports of Commonwealth textiles loom larger in the minds of some firms than others. Some are evidently prepared to go ahead, on the assumption that the existing restrictions on imports from Hongkong will remain for some years at least. This surely is the sensible view. A lot of public money is being made available to help Lancashire, and the cotton industry will be expected to do its utmost to make effective use of it.

EUROPE'S BIGGEST GASWORKS SPECIFY JOY LIMBEROLLER CONVEYOR IDLERS

Many industries have taken kindly to the revolutionary Limberoller. Offering several advantages over conventional idlers in general, they have exclusive operating features appealing to specific industries in particular.

This is amply demonstrated by the impressive list of industries which Limberollers already service. 15 gasworks, 8 steel mills, 2 of the big 5 motor manufacturers, and in quarries, coal mines, foundries, chemical plants, etc. . . . these in Britain alone.

LIMBEROLLERS are demonstrably superior on most conveyor installations. See how they would cut your materials handling costs by writing for leaflet L125, and the address of your local distributor.

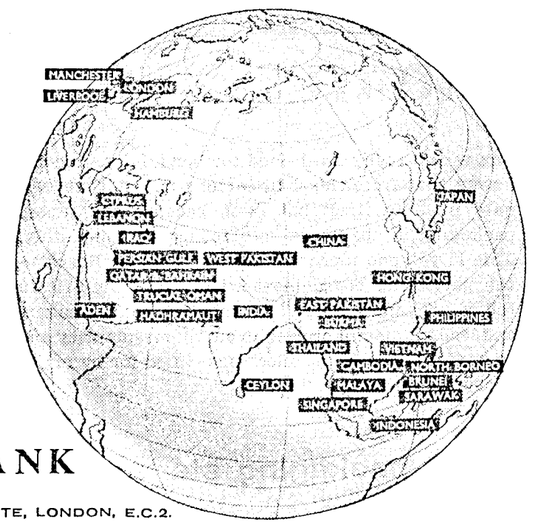
British Banking in Asia



These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK
(Incorporated by Royal Charter 1853)
HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2.
Branches in the United Kingdom at Manchester and Liverpool. Agencies at New York and Hamburg.

THE EASTERN BANK LIMITED
Head Office: 2 and 3 Crosby Square, London, E.C.3.

She trusts us implicitly

SHE WANTS really fresh food for her family. And she knows that frozen food in cartons is just that. Not only fresh in itself but fresh because the superb packaging keeps it so—protecting it completely. This is yet one more tribute to "Thames Board"—the packaging board most widely used in Britain today. "Thames Board" is supplied to boxmakers and leading manufacturers in enormous quantity and to a wide range of specifications called for by major consumer markets and industry.

So does he

The public realises that cardboard boxes are necessary protection. And the boxmaker puts skill into making them. In turn he relies on the experience and technical know-how behind every ton of "Thames Board" he uses.

Good packaging starts with — THAMES BOARD

THAMES BOARD MILLS LIMITED, PURFLEET, ESSEX & WARRINGTON, LANCS

Also the sole manufacturers of "FIBERITE" Packing Cases

BUILDING SOCIETIES

Record Advances

THE reduction in the rate of interest paid on shares and charged on mortgages recommended by the Building Societies Association early in May was not implemented by many societies until the beginning of July. But the knowledge that rates were to come down made an immediate impact and in the second quarter of the year, especially in May and June, new receipts of savings tailed off a little and withdrawals went up. Net receipts, as the table shows, were however still running at a high level.

DEPOSITS AND ADVANCES*

(£ million)

	1958 III	1958 IV	1959 I	1959 II
Shares & deposits:				
Gross receipts	86·9	107·1	117·8	111·7
Gross withdrawals ...	58·3	51·3	56·9	66·5
Net receipts..	28·6	55·8	60·9	45·2
Advances	66·3	74·9	68·5	94·0
Repayments, etc..	68·0	76·0	68·3	78·4
Funds:				
Liquid assets..	277·4	311·1	336·7	347·3
Total assets ...	1,902·1	1,957·0	1,992·5	2,047·3
Liquidity ratio (per cent)	14·6	15·9	16·9	17·0

* Based on returns made by 197 societies, whose combined assets represent about 75 per cent of total assets of all building societies in this country.

The building societies were anxious to lend their funds out on new mortgages and those that are members of the association did so to the tune of £94 million in the second quarter, more than had ever been recorded in any quarter before. Repayments were also high, so that the average liquidity ratio remained practically unchanged at 17 per cent.

Liquidity Controls?

SINCE the war the building societies have been reluctant to change their rates; though as the rates offered by other competing media, especially National Savings, moved up they, dragging their heels, had to follow suit. They did not, however, do so when Bank rate went up to 7 per cent, with the result that the net inflow of funds dwindled and mortgage advances were put on a strict ration—except by those societies that offered shareholders higher rates than those recommended by the association. One reason why the building societies left their rates unchanged when it was in their self interest to raise them is revealed in the Radcliffe report. Following an invitation from the Governor of the Bank to the chairman of the association in September, 1957, the association held informal talks each month with the Treasury, at which the chairman of the National Savings Committee was present. Neither side could make irrevocable pledges to the other in these talks, but the discussions "led to an understanding that the building societies and the Government (as responsible for national savings) would not try to poach upon each other's deposits by competitive raising of rates," so long as the Bank rate remained at 7 per cent. These regular talks now seem to have been discontinued; but the contact was established and it would be easy to set the machinery in motion again.

In these talks the members of the Building Societies Association showed a willingness to let their policies be influenced by considerations of the national interest. But in a future crisis they may find themselves, if a suggestion in the Radcliffe report is implemented, subject to formal and restrictive controls. If a control is clamped on the banks' liquidity, the Radcliffe report argues that by necessity and in equity similar controls should be imposed on other lending institutions, including the building societies. The building societies would be among the easiest to control. Their statistics, except on gilt-edged transactions, are readily available; the Government's House Purchase and Housing Act has gone a long way to establishing minimum standards on liquidity and reserve ratios; and a powerful association is preparing to insist on these standards as a condition of membership.

Even so, the difficulties of imposing controls upon the building societies would be very real. First, the Government might have to insist that all societies outside the association—and there are several of these which, with the air of property finance companies about them, hold only a tiny proportion of their assets in liquid form—should come into line with those enjoying trustee status. Even then, it would presumably have to insist that all societies had to operate with a liquidity ratio higher than that of 7½ per cent, at market values, required by the House Purchase and Housing Act. As the leading societies already maintain a much higher ratio than this, a control that would really cut deep into mortgage advances by these societies would have to be very severe indeed and to be fully effective it would have to be applied with rigour to all societies.

MIDLAND BANK

Term Loans to Farmers

ONE recommendation of the Radcliffe committee has been implemented with record speed. The Midland Bank has this week announced a scheme, prepared before publication of the report, under which advances for the purchase or improvement of farms may be given for a maximum period

How Much Consumer Credit?

Nearly a third of total retail credit consists of weekly and monthly shopping accounts.

MOST of the findings of the 1957 Census of Distribution were released earlier this year. But among the new information in the Board of Trade's complete report published last week (HMSO, 5s.) are the answers to the questions put to retailers for the first time about their credit transactions. While this business has magnified considerably since then, this report provides the only virtually complete picture of the composition of consumer credit.

Retailers' sales on instalment credit terms, whether or not the retailer financed the transaction, amounted in 1957 to £677 million, or 9 per cent of total sales of all goods. Of this amount, credit traders calling on customers accounted for £93 million, mail order houses £98 million and check trading companies (which issue tickets paid for by instalment and exchangeable for goods at the shops) £60 million. As might be expected, large multiple traders do more credit business than the small shopkeepers—as much as 80 per cent of multiples' furniture sales and nearly three-quarters of their sales of radio and television equipment were made on instalment credit terms in 1957. Altogether, in that year, about one-third of all household goods and one-sixth of clothing and footwear were sold on instalment credit terms.

Of the outstanding credit of £514 million at the end of 1957 on goods sold by retailers, only 10 per cent was provided directly by finance houses, 3 per cent by check traders and the rest by the shopkeepers themselves. But only 70 per cent of the debt was instalment credit; 30 per cent consisted of balances outstanding on weekly or monthly accounts and the like. For retailers other than co-operatives, these customers' debts averaged about 2 per cent of turnover, or about one week's sales, but for department stores the proportion was 5 per cent and for household goods shops even more.

The amount of retailers' hire purchase and credit sale agreements subsequently discounted by finance houses was surprisingly small—only £15 million. The finance houses advanced directly a further £35 million for retail goods, but the bulk of their business is in hire-purchase and credit sales agreements on cars and commercial vehicles. Balances outstanding on the books of finance houses at the end of 1957 totalled £276 million, bringing the total of debt covered by the census to £740 million.

of twenty years. Previously, the bank reveals, the maximum was ten to twelve years, still some way from the short-term self-liquidating overdraft. The new facilities are described as term loans, but the bank reserves the right to call in the advance on demand, though this will only be exercised if it is evident that the farm is being mismanaged. Repayment will be on an agreed annually reducing basis, and interest will be at the normal overdraft rate, 1 per cent over Bank rate for most farmers, that is 5 per cent for the present. Other banks will certainly be under pressure to meet this competition. There might also be some switching by farmers from use of the Agricultural Mortgage Corporation, which charges 5½ per cent and has greater legal formalities, but is prepared to lend for up to 60 years.

OVERSEAS INVESTMENT

More of the Figures

UNTIL last week the only useful figures of Britain's overseas investment officially published were the "net external investment" figures in the balance of payments white papers, which show merely the balance between outgoing and incoming capital, and give no clue as to the actual amounts of capital moving both ways in all these transactions (which might for once reasonably be called "global"). The Radcliffe committee, in its report, has published "tentative estimates" of the scale of Britain's gross investment overseas since the war provided to it by the Bank of England; and the Treasury has capped this with "broad estimates" of long-term private investment from and to Britain since 1952, in rather greater detail.

Britain's average net private investment of about £200 million overseas over the last few years is now seen to have represented the difference between gross investment averaging £330 million and an inflow of about £130 million of capital from overseas, mainly from the United States. And the negligible net investment in countries other than the sterling area actually represents the balance between £100-£120 million moving each way each year.

The data from which the Treasury builds up its estimates vary in quality and adequacy; estimates of the amount of profits re-invested, for example, are available only in a few cases. This is a large element in the accounts: the Radcliffe committee quotes an estimate that re-investment by British firms of earnings overseas is of the order of £200 million a year, not far short of the rate of net private investment in most recent years. The Treasury reckons that private investment in the Commonwealth has been running at well over £150 million a year, of which direct and portfolio investment in Canada represented perhaps £55 million (before 1956 and 1957, when heavy buying of Canadian securities through the Kuwait and other sterling area gaps brought portfolio investment up to some £45 million a year, as much as the increase in the value of British direct investments in Canada). The new figures support the Treasury's recent claim that British investment in North America in recent years has matched the volume of American investment here: in 1955, for example, Britain invested perhaps £45 million in Canada and £34 million in the United States, against American investment in Britain, direct and portfolio, of £71 million.

British investment in the sterling area totalled £1,450 million gross from 1952 to 1958, with an inflow, up to 1957 of about £150 million; net investment there averaged £190 million a year, of which about a third represented Commonwealth Government, public corporation and company issues on the London market. "A large part of private investment abroad is in the oil industry, which also accounts for most of the sharp increase in the past few years", remarked the Radcliffe committee.

RADIO INDUSTRY

Fifteen Million Licences

BY the end of July, the Post Office had issued more than five million radio and nearly ten million television plus radio licences; in the first half of this year manufacturers' deliveries of television receivers were more than a million—nearly double those in the first half of 1958, and even sales of radio receivers were beginning to pick up by mid-summer. The annual radio show that opened at Earls Court this week showed these trends at work. An immense effort has been made to push marginal products such as portable radio receivers, tape recorders, and record players of all kinds. Television displays, by contrast, were limited to the few standard models produced by each big company. The industry has the cathode ray tube makers to thank for radical modifications in the way that the beam of electrons hits the face of the screen, which have reduced in turn the length of the tube and the repulsive bulk of the television cabinet built around it. These new tubes have become standard throughout the industry; in most cases they have halved the depth of the receiver without doing anything to its price.

The industry, in short, feels that it has no need to woo the viewer by price cuts but only by offering improvements in convenience and styling for the same price. The fall in retail prices since the beginning of the year reflects more or less exactly the reductions in rates of purchase tax made in the budget. Thus the average price of a 17-inch television set, a size that now accounts for 90 per cent of all sales, has come down from £73 to £67. The price of radio sets also shows little change. Small receivers cost much the same as they have done for years, between £10 and £14. Transistor sets are considerably more expensive, partly because the transistors themselves cost two to three times as much as ordinary valves and more of them are needed. Their prices appear to range between £18 and £20.

Something amounting to a price war is, however, breaking out in the record and tape recording side of the industry. The flood of cut-price, long playing records of pop music, touched off earlier in the summer by the appearance of the first 16s 9d. Gala long playing records, suggests that the industry may be preparing to stabilise the price of a long-playing pop record at about £1, compared with 30s to 40s which has been common up till now. The £24 to £30 tape recorders making their debut at the show may raise the eyebrows of purists but they represent a very big reduction on the £40 to £60 charged by most established firms in the industry.

RAW WOOL

Prices Rise 10 per cent

AT this week's wool auctions in Australia, the first of the new season, prices have risen by about 10 per cent compared with last season's close. This corresponds closely to expectations before the opening. Initially prices rose by more than 10 per cent—though not as much as some optimistic reports claimed—and then eased later. Continental countries and Japan clearly dominated the buying; Eastern European countries were active at times, but Bradford appears to have bought sparingly. Quite a lot of business was done in Bradford, and

judge with *his* eyes

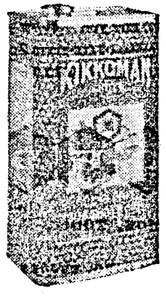
Kikkoman SOY SAUCE



One gallon container

Here is an easy, thrifty way to add tempting flavor to all everyday foods. Rich and delicious Kikkoman soy sauce, made entirely from soy beans, wheat, salt and water, naturally enhances any recipe. And it is so easy to use! Just add a small amount of Kikkoman soy sauce during the cooking process or season dishes at the table directly from the bottle. The combination of appetite-appealing color, taste and fragrance has made Kikkoman soy sauce a favorite of gourmets everywhere.

Kikkoman soy sauce, backed by more than 300 years of experience in the manufacture of quality soy sauce, today is produced in 9 modern factories under the strictest sanitary conditions. With an annual output of 45,000,000 gallons, Kikkoman soy sauce is presently exported to more than 80 ports throughout the world.

Available in 6 oz., 12 oz. and 4/5 qt. dripless plastic-top bottles. A recipe is attached to each container.

NODA SHOYU CO., LTD.
Nihonbashi, Tokyo, Japan

covered by raw wool or tops, before the auctions opened, and most firms can evidently afford to play a waiting game at least for another week or two. If demand from other countries slackens after the first few sales it will be interesting to see whether Bradford will buy more heavily.

DISTILLING

How Much Whisky is Too Much?

FEARS that whisky production may prove to have anticipated a greater increase in demand than will actually exist when current output comes to be sold in several years' time has been troubling some people in the industry in the last few years; so has the high level of maturing stocks. The rate of growth in sales has not risen as fast as the rise in production; moreover, all calculations are complicated by the fact that whisky is not sold for an average of six to seven years after production—after four to five years for grain whisky and seven to ten years for malt. (Most whisky sold is a blend containing some 30 to 50 per cent malt whisky, with the rest grain.) Yet production shows no sign of slackening. A projection of the present rate of growth of sales suggests that sales in 1965 might reach 36 million proof gallons (20 million gallons more than in 1954), whereas the 1958 output of 52 million gallons would then be ready for sale; with the evaporation losses of 15-20 per cent in seven years, this matured whisky would amount to about 42 million gallons. Nevertheless, the rate of additions to stock actually rose in the six months to March, 1959, when the stock reached 243 million gallons; there seems little doubt that distillers are generally assuming a rise in the rate of growth of sales.

Home sales in the first half of 1959 were lower than those for the same period last year—2.94 million gallons, against 3.01 million—though Distillers' more expensive brands and the standard brands of some of the independents are still on quota, and annual sales are still about .1 million gallons below the pre-war level. Exports are obviously expected to provide most of the increased sales; and here much hope seems to be placed in the opening of new markets and the reduction of import restrictions in existing ones. Eastern Europe is regarded as a possible example of the former, while France—where the popularity of whisky has risen surprisingly with the aid of Francoise Sagan—and South America are examples of the latter.

The clearest evidence of optimism in the industry is the fact that a number of new distilleries are now under construction. One of the largest expansion programmes is significantly that of Seager Evans, controlled since 1956 by Schenley Industries of New York. This company has recently built a new malt distillery in Glasgow, and is now building another at Tormore on the Spey. This is expected to begin production in September, and will have a capacity of about 300,000 gallons a year. Other new distilleries are being built by independent distillers, including Highland Distilleries and two new companies, Glen Deveron Distilleries and the Aberporth Property Investment Co. The Distilleries Company has not needed to add to its existing capacity since the war, apart from re-commissioning an old distillery; a revision of the excise regulations in 1945, allowing "brewing" and "distilling" to be carried on concurrently instead of consecutively, allowed a considerable increase in the output of existing distilleries. The new distilleries seem unlikely to add substantially to the total capacity of the industry—probably the increase will be less than five per cent. But they suggest growing competition for the tippler's dram.

SHORTER NOTES

Nearly half of the ordinary shareholders in Kemsley Newspapers (other than the Kemsley family interests) have decided to retain their investment in Kemsley Newspapers, now controlled by Mr Roy Thomson. Between them these shareholders own 34½ per cent of the £1,500,000 of the Kemsley stock not owned by the family: by staying on, they will become akin to participating preference shareholders in the company. Owners of the other 65½ per cent of the shares have accepted 90s. in cash for each of their shares.

★

Earlier this year, the Hawker Siddeley Group announced that it was converting the factories of the Gloster Aircraft Company to the production of automatic vending machines built under licence from America. A joint company to market them is now being formed with J. Lyons the caterers. Hawker Siddeley has already formed a new subsidiary, Primapax, with an issued capital of £20,000 to handle distribution, in which it is now proposed that Lyons should become an equal partner, supplying a good many of the products to be sold through the machines.

★

Albright and Wilson, the chemical manufacturers, has raised its interim ordinary dividend from 4 per cent to 6 per cent and it is also proposing to make a 25 per cent scrip issue. The group's net profit for the first half of the year was £1,122,000 compared with £793,000 in the corresponding period of 1958. The directors say that profits for the second half of the year may be a little lower than in the first half.

★

Monsanto Chemicals has maintained its interim dividend at 5 per cent for 1959. The value of its net sales was £8,727,000 in the first half of the year (against £7,490,000 in the first half of 1958) and its net profit was £372,000 (against £248,000).

★

British Relay is to make a 50 per cent scrip issue. In his remarks accompanying the latest accounts Sir Robert Renwick, the chairman, has virtually forecast an increase in the effective dividend following the issue. He said, giving an old phrase a new twist, that "naturally it should not be assumed that the same dividend as last year will be paid." The latest 20 per cent payment is covered one and a half times by earnings, and profits are expected to increase further in the current year.

★

Dealings began on Thursday at 1½ premium in the new tranche of the H. J. Heinz 5½ per cent debenture stock 1976-85. The stock ranks *pari passu* with the existing debenture and £2 million was placed by Helbert Wagg at 98½ per cent.

★

Lewis's Investment Trust has raised the interim ordinary dividend from the equivalent of 6 per cent to 7 per cent on the capital as increased by last year's 25 per cent scrip issue. The group's trading profit in the six months to August 1 was £2,071,075 against £1,895,596 in the first half of the previous year. In their interim report the directors say that the increase in the interim dividend does not necessarily imply any increase in the total distribution.

★

The directors of Patons and Baldwins, manufacturers of knitting wools and hosiery yarns, have raised the interim ordinary dividend from 2½ per cent to 5 per cent. The chairman, Mr J. S. Bullimore, told shareholders at the company's annual meeting that the higher interim payment is designed to remove the disparity between the interim and final distributions.

COMPANY MEETINGS

L M ERICSSON TELEPHONE COMPANY

SALES OF TELEPHONE EQUIPMENT IMPROVED IN 1958

LARGE ORDERS FOR ERICSSON CROSSBAR EXCHANGES

The eighty-third annual general meeting of L M Ericsson Telephone Company (Telefonaktiebolaget L M Ericsson), Stockholm, Sweden, was held on May 27th in Stockholm.

The following is an extract from the circulated annual report of the Board and the Managing Director:

WORLD CONDITIONS AND ERICSSON GROUP GROWTH DURING 1958.

The year 1958 was characterised by slackening economic conditions. The decrease in the volume of business suffered by commerce and industry in the United States during 1957 continued into the early months of 1958. A distinct recovery has since occurred but unemployment is still a factor. Although Europe's economy turned out to be less dependent on conditions in America than had been feared earlier, a marked decrease in business has also been noted on this side of the Atlantic, particularly in export industries. The consequent decreased demand for raw materials has hit the countries which produce them even harder; their own export markets have also shrunk in recent years since part of industry's historical raw materials have been replaced by new synthetic types. With their balance of trade upset these countries have been forced to restrict imports sharply, which has had its effect on the telephone industry.

Activation of the six-nation European Common Market should have scarcely any effect on the telephone market, in any case not for the Ericsson Group, which has its own factories in the area involved. It would appear that the same can be said of the currency convertibility agreements executed at the end of 1958.

Despite restraining influences, the telephone market last year was by no means stagnant. The Ericsson Group definitely strengthened its own position. Sales, including the telephone operating companies' revenue, increased to Kr.750 million, compared with Kr.694 million the preceding year.

The Group's production facilities, which have doubled during the past ten years, did not change appreciably during 1958. A substantial enlargement of the telephone manufacturing plant in São José dos Campos (Brazil) and construction of a new plant in Rome for FATME, Soc. per Az., were approved, however.

The Group's sales organisation was expanded through creation of a sales company in Johannesburg, South Africa. The staff of experts in various parts of the world has also been enlarged.

The Ericsson crossbar system for automatic telephone exchanges continues to achieve increasingly enthusiastic acceptance. Thus by the year end, orders for crossbar exchanges from Brazil alone comprised 54,000 lines, including a central exchange of 5,000 lines and eight satellite exchanges for Brazil's capital city, Brasilia, currently under construction.

Mention of new markets for Ericsson crossbar equipment should include Australia, whose telephone administration—following keen competitive bidding—ordered a central exchange for 6,300 lines for the city of Toowoomba in Queensland.

The telephone administrations of the provinces of Alberta and Manitoba, Canada, should also be noted among the many new customers for the Ericofon outside Sweden.

In June, 1958, Teleric, Inc., the Group's holding company for operations in the Western Hemisphere, sold all of its shares in Teléfonos de México S.A. to a Mexican syndicate.

OPERATIONS IN SWEDEN

Ericsson Group sales in the Swedish market increased from Kr.285 million in 1957 to Kr.300 million in 1958.

The reduction in incoming orders, noted in 1957, continued to affect the Group's Swedish companies during the first half of 1958. Thanks to an upturn during the latter part of the year, orders booked for the full twelve months were 13 per cent higher than during the preceding year. Deliveries exceeded orders received, however, so that the backlog at year end showed a decrease of about 5 per cent.

As a result of the decrease in incoming orders during 1957, the production capacity of the Parent Company could not be utilised fully in 1958. The number of employees in Sweden decreased during the year from 15,300 to 13,600. No change in production volume is currently anticipated during 1959.

Orders from the Swedish Telephone Administration were somewhat higher during 1958. The increase involved primarily local telephone exchanges and material for the extension of direct distance dialling. Also notable were orders for the first expansion of an exchange in Stockholm for semi-automatic servicing of international telephone traffic. The installation will make it possible, for example, for an operator in Hamburg, Germany, to connect a caller there directly with subscribers in the fully automatic areas of the Swedish network. The Administration has also ordered from the Company terminal equipment which makes it feasible to increase from 960 to 2,700 the number of simultaneous conversations over the same circuit in a coaxial cable.

Incoming orders for automatic private exchanges were higher. Of special interest during the year was an order for a crossbar private exchange (3,500 lines) designed for pushbutton dialling.

OPERATIONS IN EUROPE

Group sales in European markets outside Sweden were approximately Kr.160 million, compared with Kr.147 million the preceding year.

Operations of the Group's subsidiary companies in this area were largely unchanged.

During the year 34,000 lines of crossbar equipment were placed in operation in Denmark, raising to 162,000 the number of crossbar lines installed there. Sales in Denmark increased nearly 45 per cent. In the Netherlands, the Parent Company delivered equipment for the international central exchange in Rotterdam.

An order was received from Norway for terminal equipment serving the international links between Oslo and Stockholm. A number of overhead systems and equipment for carrier programme channel transmission were ordered from Iceland to increase the capacity of the toll network.

Société des Téléphones Ericsson, in France, concluded an agreement with two other manufacturers for the joint use of a French version of Ericsson's crossbar system, thus creating distinct opportunities for substantial orders.

In Yugoslavia, five new crossbar exchanges (6,200 lines) largely produced in that country, were placed in service.

The Parent Company received from Italy orders for crossbar central exchanges, totalling 14,400 lines, intended for cities in the southern and northeastern parts of Italy where this type of equipment has not previously been installed. In addition, a rather large order has been recorded for a coaxial cable system for the toll networks in Sicily.

OPERATIONS IN ASIA, AFRICA AND AUSTRALIA

Sales of the Ericsson Group in these markets decreased from Kr.35 million, in the preceding year to Kr.29 million. These markets are developed partly through sales companies, partly through agents assisted by experts from the Group's headquarters in Stockholm.

The Indonesian telephone administration ordered crossbar central exchanges totalling 11,000 lines for seven cities in Sumatra. A crossbar central office was cut over in the city of Magelang in Java. The traffic capacity of the overhead lines between Semarang and Surakarta as well as Semarang—Djokjakarta, in Java, was increased by installing two 12-channel systems and a number of voice frequency telegraph systems.

The system for centralised traffic control (CTC) on railways, developed by L M Ericssons Signalaktiebolag, has earned considerable acclaim overseas as well as in Sweden. Orders totalling more than Kr.20 million for railway signal installations, including CTC, were received from Pakistan, Formosa and Ceylon.

OPERATIONS IN THE UNITED STATES AND CANADA

Ericsson Group sales totalling nearly Kr100 million in these two countries were approximately the same as during 1957.

In the United States, a number of constructive measures were adopted at North Electric Company, Galion, Ohio, the Group's manufacturing subsidiary in the States. As a result, efficiency increased appreciably and operating results were improved. Sales efforts were strengthened substantially. The existing market was thereby expanded for the Ericofon which received a gold medal for superior design at the California State Fair in Sacramento last summer.

North Electric received sizeable government contracts and also booked new orders for crossbar central exchanges. During the year the backlog of orders rose from $8 million to $15 million. Crossbar exchanges already in service, based on Ericsson specifications adapted to American requirements, continued to earn the customers' approval.

Development of the Canadian market by the Group subsidiary, Ericsson Telephone Sales of Canada, Limited, is still hampered by certain problems. A breakthrough for several Group products can, however, be reported.

OPERATIONS IN LATIN AMERICA

Ericsson Group sales in the Latin American markets increased during 1958 to Kr.167 million as against Kr.131 million the preceding year. This increase is due primarily to the billing of some large installations completed in Colombia and Venezuela.

Economic conditions in most Latin American countries are rather disturbed, being characterised by instability in the internal economy and an unfavourable trade balance. Customers of the telephone industry, usually national or municipal administrations, are therefore anxious to obtain long term credits. Due to the Company's satisfactory liquidity it has been possible to grant the terms required to assure maintenance of the Group's strong competitive position.

Operations in Brazil have been unusually active. New orders for a total of 40,000 lines of exchange equipment were booked during the year. Crossbar exchanges in Borda do Campo, with a total of 7,600 lines, were placed in service. The large Brazilian operating company, Cia Telefônica Brasileira, installed sizeable terminal equipment delivered by the Group for the Rio—São Paulo link and for a coaxial cable connection between São Paulo and Santos. The latter, when installed to full capacity, will be able to carry 2,000 simultaneous conversations.

The Group's position in the Mexican telephone market should not be affected appreciably by the Company's sales of its holdings in Teléfonos de México (TDM) noted earlier. The Parent Company has, in fact, concluded an agreement with TDM covering orders and continued technical assistance. Orders booked from Teléfonos de México involved, among other projects automatic telephone exchanges totalling 19,000 lines.

RESEARCH AND DEVELOPMENT

With the completion of the Group's new headquarters office building in Midsommarkransen, it has been possible to set aside increased space for technical research by the Parent Company.

In the field of component development, semiconductors—diodes and transistors—continue to be of special interest. It is now possible through improved production methods to manufacture transistors at lower cost and to such quality standards that they fulfill the requirements of longevity and stability demanded in telephone installations. The Company is now equipped for regular production of semi-conductors to meet quality specifications.

By the use of transistors, other miniature components and printed circuits, the Parent Company's Long Distance Division has redesigned its carrier frequency and amplifying systems, thereby achieving greater operating dependability and substantial reductions in size of equipment.

FINANCIAL STATEMENTS

The Ericsson Group

Sales in 1958 reached a new high due to the completion of some major installations which had been in progress for several years. Combined sales of the Parent Company and all subsidiaries, including revenue from the telephone operating companies, amounted to Kr.750 million as compared with Kr.694 million in 1957 and Kr.705 million in 1956, the previous record year. As was the case in 1957, orders filled during the year exceeded new orders received, so that the Group's backlog of orders continued its downward trend. At present, however, an increase in order bookings is noticeable.

The Argentine subsidiaries have not been included in the Group's consolidated financial statements. For this reason, consolidated net sales for the Group amounted to Kr.718 million (Kr.663 million in 1957).

After a long period of vigorous expansion, a gradual adjustment of production to meet changed economic conditions took place in 1958. This was accompanied by a decrease in personnel, not the least of which occurred in the Group's Swedish factories. The number of employees at year end was approximately 23,200, compared with 25,100 at the close of the previous year.

Capital expenditures during the year were lower. The Group's cash position improved markedly.

After provisions for miscellaneous purposes totalling Kr.42.9 million (Kr.28.0 million in 1957) and provision for taxes totalling Kr.25.0 million (Kr.18.6 million), the Group had a consolidated net income of Kr.26.5 million (Kr.22.5 million). Total consolidated unappropriated earnings at December 31, 1958, amounted to Kr. 123.9 million. The Boards of Directors of the respective companies have proposed that Kr.3.6 million of this amount be appropriated to reserves not available for distribution.

During the year the share capital of certain subsidiary companies was increased as follows:

Dansk Signal Industri A/S increased its share capital from 300,000 to 600,000 Danish Crowns through conversion of a debt to L M Ericsson A/S.

Ericsson Verkaufgesellschaft m.b.H., West Germany, increased its capital from 20,000 to 100,000 German Marks through conversion of debts to the Parent Company and through the issue of additional shares.

Société des Ateliers Vaucanson, France, increased its share capital from 150 million to 185 million Francs through a scrip issue which was effected through application of revaluation and other capital reserves.

Sociedade Ericsson de Portugal Lda. increased its share capital from 1 million to 3 million Escudos through conversion of debts to the Parent Company, and *Cia Ericsson S.A.*, Peru, increased its share capital from 500,000 to 1 million Soles through conversion of debts to Teleric, Inc.

Cia Sudamericana de Teléfonos L M Ericsson S.A., Argentina, increased its share capital from 12 million to 20 million Argentine Pesos through a scrip issue.

North Electric Company, Galion, Ohio, increased its share capital from $2,100,000 to $3,850,000 through conversion of a promissory note due to the Parent Company. The new shares were issued at the rate of 120 per cent of par value, and the excess over par—$350,000—was credited to capital surplus.

A sales company, *L. M. Ericsson Telephone Company Pty Limited*, was formed during the year in Johannesburg, South Africa, with a share capital of 25,000 South African Pounds. The new company has taken over sales activities formerly handled through an agent.

The Swedish subsidiaries, with minor exceptions, had satisfactory operating results. Generally, subsidiaries in other countries also showed progress; Société des Téléphones Ericsson, France, alone suffered any considerable loss, resulting from the fulfilment of old delivery contracts with the French government at firm prices. For subsequent contracts the government has accepted a price adjustment clause which will have a favourable effect on the results of the French company's operations. It appears that North Electric Company has now overcome the difficulties which had led to considerable losses during 1956 and 1957, and a small profit was recorded in 1958.

The Italian holding company, SETEMER, Soc. per Az., Milan, on one hand reduced its share capital through the return of capital by a cash distribution to shareholders and, on the other hand, increased its share capital through application of a revaluation reserve. The cash distribution was made possible by SETEMER's sale in 1957 of its shares in the telephone operating company, SET, Soc. per Az. in Naples. As a result, the share capital of SETEMER was reduced from 9,180 million Lire to 6,500 million Lire. The Group participated proportionately in these transactions and also acquired additional shares, as a result of which the Group's total interest in SETEMER increased from 40 per cent to approximately 48 per cent.

The Group's holdings of common shares of the Mexican telephone operating company, Teléfonos de México S.A. (TDM) were sold during the year to a group of Mexican investors for $12,300,000. Thus ended more than half a century of the Group's telephone operating activities in the Republic of Mexico. The stock sold representing 37 per cent of TDM's outstanding shares was owned by the Panamanian holding company, Teleric, Inc. An initial payment was made in 1958, and the balance is to be paid in installments within the period 1959 to 1963. Due to the nature of the agreement, no profit from the sale has been included in the Group's income for 1958.

THE PARENT COMPANY

Sales of the Parent Company amounted to Kr.303.0 million as against Kr.289.8 million during 1957.

The backlog of orders decreased during the year from Kr.509 million to Kr.472 million and, as a consequence, the production capacity could not be fully utilised. It is anticipated that the rate of production in 1959 will be approximately the same as at the end of 1958.

Subject to approval of the shareholders at the Annual Meeting, Kr.5 million has been provided for a reserve for future investments. Subject to the same approval the profit of Kr.14.7 million arising from the partial return of capital in SETEMER has been credited to the general reserve.

After provision for taxes of Kr.17.3 million (Kr.11.5 million), the Company's net income for 1958 amounted to Kr.16,867,000 (Kr.15.0 million). In addition to the Reserve for Contingencies and the General Reserve, Kr.30,709,000

is available for disposition by shareholders at the Annual Meeting.

The Board of Directors and the Managing Director propose that the above amount be distributed as follows:

To the Special Legal Reserve	3,200,000
To the shareholders Kr.2.50 per share against coupon No. 32, equivalent to 4.2 per cent of the shareholders' equity at December 31, 1958	11,652,000
Unappropriated earnings to be retained in the business ...	15,857,000
	Kr.30,709,000

The report, the accounts, and the proposals put forward by the Board of Directors and the Managing Director were adopted.

BOARD OF DIRECTORS

Marcus Wallenberg, Chairman, Ernfrid Browaldh, Vice Chairman; Erik Boheman, Vice Chairman; Erik Anderberg; Edmond H. Leavey; Sven Salmonson; Henry H. Scudder; Wilhelm Söderman; Ragnar Woxén; Sven Ture Åberg, Managing Director.

DEPUTY MEMBERS

M. Richard Mitchell; Nils Sterner; Lars-Erik Thunholm; Marc Wallenberg Jr.; Stig Ödmark.

MANAGING DIRECTOR

Sven Ture Åberg.

AUDITORS

Arvid Olsson; Nils Olsson, Swedish Certified Public Accountant; John Dickinson of Price, Waterhouse and Company.

Readers can obtain the full Annual Report by application to Swedish Ericsson Company, Limited, 329 High Holborn, London, W.C.1.

THE GOLDEN HOPE RUBBER ESTATE LIMITED

SIR ERIC MACFADYEN'S STATEMENT

The Fifty-third Annual General Meeting of The Golden Hope Rubber Estate Limited will be held on September 21st in London.

The following is an excerpt from Sir Eric Macfadyen's circulated remarks:

The rights issue of one share for ten made last October raised the capital in issue to £774,560. Gross profit for the period was £371,414 (£339,095). At the date at which we closed our accounts, February 28, 1959, rubber prices had been on the decline for more than a year and the average we received for our crop was a little under 22d. per lb compared with over 23½d. the previous year. Rubber output improved, the total coming out at 8,203,000 lb as compared with 7,952,200 lb the year before. Oil products increased by over one-third, from 3,115 tons to 4,246 tons. As in the case of rubber the selling price of our oil products also was lower at £79.9 per ton (£85.7).

Against the 20 per cent paid a year ago on the then issued capital, we feel justified in recommending a total distribution of 22½ per cent on this year's increased capital by paying now with your approval a final dividend of 17½ per cent.

IBE LIMITED

GRATIFYING TRADING ACHIEVEMENT

The thirty-first annual general meeting of IBE Limited was held on August 25th at Slough, Mr Robert Montgomerie (the chairman) presiding.

The following is an extract from his circulated statement:

I am pleased to be able to report some improvement in the results disclosed by the accounts for the year ended March 31st last. This improvement, although not spectacular, is very gratifying when it is remembered that it has been achieved against a background of trading conditions which, so far as concerns the main activities of our Group, were very much the same as I reported to you in my last Statement.

Our Net Profits, after charging Taxation and all other outgoings, reflect an improvement of approximately £7,000 and, as a result, your Directors have felt no hesitation in maintaining the Ordinary Dividend at last year's rate of 10 per cent.

I have already mentioned the background of trading conditions against which the year's operations were conducted and, so far as these concern the marketing of our bituminous road emulsions, the difficulties to which I have referred in some of my recent Statements showed few signs of abating. However, I have in the past also indicated that we were engaged in developing a new type of road emulsion and I am pleased to report that in several areas this new material is now steadily justifying our confidence in it.

The manufacture and sale of our specialised building materials continued to expand in a very satisfactory manner throughout the year and the latest reports from this section of our business indicate that the growth has continued up to the present time. Still further developments into additional specialised fields are contemplated.

Highly competitive conditions in the paint manufacturing industry have meant still lower profit margins for our companies engaged in that trade, but the effect of this has to a large extent been offset by an increase in turnover.

The operations of our associated company in South Africa once again resulted in a most satisfactory profit and this was reflected in the increased Dividend which we received from that source. Recent indications, however, point to the fact that during the past few months trading conditions generally in South Africa have become more difficult and we cannot ignore the possibility that their long record of continuous expansion and improvement may be temporarily halted.

Satisfactory arrangements have been made by which our subsidiary in Pakistan could obtain supplies of essential raw materials, the company's plant, which had been virtually closed for some months, was again operating successfully during the latter part of the year. As a result, a reasonable contribution to the Group profits was possible, although this was retained in Pakistan in order to finance anticipated expansion there. During the first quarter of the current year encouraging reports have been received from several of our subsidiaries and, provided we meet with no unforeseen disturbances, I look forward to reporting some improvements when I address you at this time next year.

The report and accounts were adopted.

WILLIAM HANCOCK AND COMPANY

TOTAL SALES MAINTAINED

The 72nd annual general meeting of William Hancock and Company Limited was held on August 20th in Cardiff, Mr Joseph G. Gaskell, TD (chairman and managing director), presiding. The following is an extract from his circulated statement:

The accounts for the year show a profit before charging taxation of £319,157 which compares with £331,346. The weather during the summer of 1958 was extremely bad and affected sales of all our products, in particular soft drinks. Our own beer sales for the year were down by 1½ per cent but as a result of our policy of satisfying a demand for beers produced by other brewers total beer sales were maintained. I think this can be considered very satisfactory when compared with the reduction in output of about 3½ per cent for the whole industry. Sales of our Five Five bottled beer and wines and spirits continue to expand.

Despite the reduction in trading profit the net profit is better as a result of the reduction in the standard rate of income tax. Your Board has therefore felt justified in recommending an increase in the total distribution on the Ordinary Stock from 14 per cent to 16½ per cent.

The Government's decision to approve a new strip mill near Newport is very welcome, and some new industries are coming to Swansea. At the Meeting the Chairman announced that a long term trading agreement which the Board considered would be of advantage to the Company had recently been signed with BASS, RATCLIFF & GRETTON LTD.

The report was adopted.

BANQUE DE L'INDOCHINE

(Paris)

The Annual General Meeting of Banque de L'Indochine was held in Paris on June 17th, and the following are details of the report presented by the Board of Directors:

Whilst in Vietnam, Cambodia, Laos, Hongkong, Saudi Arabia and French Somaliland, the Bank's operations produced satisfactory results, activities in Singapore, Ethiopia and certain of the Pacific Territories were adversely affected by current economic and political conditions.

Operations in Japan covered all expenses in spite of the increasingly difficult situation, and the past year's activities in the Malay States give rise to the hope that this new branch will function profitably very soon. The French Bank of South Africa, the Bank's South African subsidiary, returned satisfactory results and a new branch was opened at East London in May 1958.

The profits of the London Branch benefited from the continuing high rate of interest and the New York subsidiary's results also gave rise to satisfaction.

In France the Bank continued to devote much energy to the financing of export operations, but its activities were hampered by the stringent economic measures at present in force.

Net Profits amounted to Frs.969,166,953, compared to Frs.744,803,966 for 1957, and it was proposed to distribute a net dividend of Frs.750 per share in respect of all of the 856,000 shares. The report, the accounts and the proposals put forward by the Board were adopted.

JOHN BROWN AND COMPANY LIMITED

Engineers and Shipbuilders

MORE COMPETITIVE TRADING CONDITIONS

PROFITS BETTER THAN FORECAST

LORD ABERCONWAY'S REVIEW

The 95th Annual General Meeting of John Brown and Company Limited will be held on October 2nd at 4, The Sanctuary, Westminster, London, SW1.

The following is the statement by the Chairman, **The Right Hon. Lord Aberconway**, which has been circulated with the Report and Accounts for the year ended March 31, 1959:

The accounts before stockholders show the effect of the Rights Issue, which was completed shortly before the Company's year end on March 31st. The issued Ordinary Capital is increased as is the Share Premium Account, whilst the Cash at Banks reflects the proceeds of the issue.

The consolidated profit before taxation of the Company and its subsidiaries for the year was (to the nearest £1,000) £3,353,000 which was some £17,000 more than for the previous year. At the time of the Rights Issue it was forecast that the consolidated profit before taxation would be not more than ten per cent less good than that of the previous year. Estimates for such purposes must be on the conservative side, and in the businesses of the Company's subsidiaries it is not easy to foretell the outcome of current trading. I feel, therefore, that it is a matter of gratification, and not of apology for a cautious estimate, that the consolidated profit has exceeded the forecast.

After taxation the consolidated profit is £1,684,000, some £292,000 more than that of the previous year. The final settlement of the group liability for Excess Profits Levy has enabled a tax provision no longer required of £70,000 to be brought in, compared with £135,000 last year; but this is the last occasion on which such a credit item can be expected.

For reasons fully explained in the Directors' Report, and connected with the strike in the printing industry, the directors have decided, instead of recommending to the Annual General Meeting a final Ordinary dividend, to pay a second interim Ordinary dividend at the same rate. This will be 6 per cent less tax which is the rate forecast, subject to unforeseen circumstances, at the time of the Rights Issue. With the interim dividend paid in February, 1959, of 4 per cent less tax, the total dividend for the year is thus 10 per cent less tax, the same rate as for the previous year but the second interim dividend is payable on the capital as increased by the Rights Issue.

A large proportion of their earnings has, as usual, been left with subsidiaries, and rather more than enough has been brought, by way of dividend, into the Company's accounts to cover the service of the Company's dividends.

Stockholders will notice that in the Consolidated Balance Sheet, the item "Future United Kingdom Taxation" has this year been divided to show separately the amount of Income Tax that will fall to be paid next January, and the amount of the Taxation Equalisation Account. The balance on this account represents, in terms of tax at current rates, the amount by which the book value of plant exceeds its written down value for taxation purposes. The tax upon this excess has to be found over the remaining life of the plant. In the years when the provision for depreciation in the accounts exceeds taxation capital allowances, the balance on Taxation Equalisation Account will be reduced, and when the contrary obtains it will be increased. In this way the tax on this excess will be debited to Taxation Equalisation Account and not to Profit and Loss Account. By this system the charge for tax in the accounts each year is more closely related to actual as distinct from taxable profits.

SHIPBUILDING

The Shipyard and Engine Works at Clydebank continue to be fully employed. ss "British Duchess," the first of the 42,000-ton deadweight tankers built for BP tanker Company Limited was completed, as was ss "Lincoln," a tanker of intermediate size for Federal Steam Navigation Company Ltd. HMS "Tiger" was commissioned and handed over. In her armament and communications she is probably the most modern cruiser afloat.

As has been reported in the press, Clydebank has for some time been in close consultation with The Cunard Steam-Ship Company Limited, and has developed with them the basic design for a new express passenger vessel for the transatlantic service.

The modernisation of the West Yard is almost complete. Two berths, served by heavy cranes, have been contructed for the building of large tankers; and the fabricating shops have been extended. Her Majesty the Queen Mother has graciously consented to name and launch on September 16th ss "British Queen," the first large ship from the West Yard, and the first of the 50,000-ton deadweight tankers to be built for BP Tanker Company Limited.

In the East Yard all four building berths are occupied by various types of ship, including ss "Transvaal Castle" of 33,000 tons gross, a passenger-cargo vessel for The Union-Castle Mail Steamship Company Ltd.

Few new orders for ships are being placed, but in the types of vessel in which Clydebank specialises the outlook is reasonably favourable. Clydebank, with its excellent facilities and trained personnel, is well placed to maintain a leading position in all the developments that are foreseeable in the near future.

LAND BOILERS AND NUCLEAR ENGINEERING

John Brown Land Boilers Ltd. has had a busy year. The first of the six large boilers for the new CEGB Belvedere Station on the Thames has been steamed and a number of other large boilers are nearing completion for the Board, as well as two for the South of Scotland Electricity Board, and others in South Africa. The contract has been obtained for the large boiler unit to complete the second half of the Bankside Station in London. A repeat order has been obtained from the Warmbaths Municipality, South Africa. It remains a difficult problem, for the reasons which I gave last year, to obtain enough work to keep Whitecrook Works in full production. It is to be hoped, however, that there will be some easing of the position with the increasing realisation that the modern large boiler, fired by coal or by oil, is inherently cheap and competitive. Production facilities at Whitecrook are excellent, and the organisation is technically well able to play its part in the field of big boilers.

The application of nuclear power continues to be watched with interest but the Company's approach to this subject remains cautious. A contract has been obtained from the UK Atomic Energy Authority for the design and manufacture of the refuelling machine for the Advanced Gas-cooled Reactor. This important piece of equipment involves the solution of a number of complex engineering problems.

MACHINE TOOLS AND ENGINEERS' TOOLS

In the machine tool industry the recession has continued, but lately there have been signs of a gradual increase in enquiries. Much idle capacity users' works remains to be filled, however, before the market becomes active again in machine tools. Wickman Ltd. has accordingly not been fully employed in the manufacture of multi-spindle automatics and, with its smaller order book, it can now quote deliveries to meet the customers' needs. Exports of Wickman automatics have, however, increased, and in particular a sales campaign in USA has prospered. Wickman's business of factoring imported machine tools has suffered from intense competition, although its specialised sales service, and the wide range of first-class machine tools that it handles, enable it to take every opportunity to sell these machines. Sales of "Wimet" tools, made from tungsten carbide, have held up well.

Webster & Bennett Ltd continued in full production during the year and, thanks to its heavy backlog of orders, will need to produce to capacity during the current year. Incoming orders have, however, fallen far short of what is required to keep the factory busy thereafter. Webster & Bennett's three basic sizes of vertical boring mills represent excellent value for money and the company receives a satisfactory proportion of orders available.

Firth Brown Tools Ltd, despite very keen competition and the considerable recession in tool buying, has had a satisfactory year. Its success can be attributed to the excellent range and quality of its products and to the untiring efforts of its sales staff at home and abroad. There are now signs of gradual improvement in demand, but the intensely competitive conditions in all markets must reduce profit margins. It is pleasing to report that during the year three senior executives of Firth Brown Tools, who have spent their entire working lives with that company, were appointed to its board.

OTHER UK ENGINEERING SUBSIDIARIES

S. N. Bridges & Co. Ltd. has found trading difficult at home and overseas. Demand for portable electric tools continued low, and competition was intense. Recently, however, sales have somewhat improved. The introduction of new tools and attachments and sustained advertising have enabled Bridges to retain its place in the forefront of the electric tool business. The rebuilding and modernisation of the large works acquired in the previous year are almost completed, and they will shortly be occupied.

Cravens Ltd. has found that international competition for rolling stock orders for the export market has over the years become more and more intense. British rolling stock manufacturers have little hope of competing effectively overseas unless they have an active home market; and if the British Transport Commission themselves were to manufacture substantially the whole of their rolling stock requirements, as their workpeople are pressing them to do, that vital home market would be withdrawn from an industry whose contribution to exports has in the last ten years exceeded £100 million. As a result there would be much unemployment among members of Trade Unions which are urging BTC to be self-sufficient; whereas continued manufacture by the rolling stock industry of a proper proportion of the needs of BTC would assist firms to obtain further export orders, involving further employment.

Cravens has completed its outstanding wagon orders for the home market, and, in view of the poor prospects of more wagon orders, has reorganised some of its shops to increase carriage production and to undertake alternative work. Two important orders were received for carriages from the London Transport Executive, one for 12 prototype motor cars for the Central Line, and the other for 248 light alloy motor and trailer cars for the Metropolitan Line.

Markham & Co. Ltd. has been kept reasonably occupied during the year. Three large drum winders and three large friction winders have been delivered to the National Coal Board, as well as two steel towers for the new colliery at Bevercotes. To the order of Boving & Company two Francis turbines have been delivered to Spain, two sets of Kaplan turbine parts to New Zealand and two further sets of Francis turbine parts to Kariba. Orders unfortunately are not being received at the required rate, the order book is low, and available work ahead is diminishing. This is due partly to the policy of retrenchment on capital expenditure which the National Coal Board have been compelled to adopt in the face of their present difficulties, and partly to intense world-wide competition on water turbines.

Constructors John Brown Ltd. has continued to enhance its reputation for good engineering and workmanship in the chemical engineering field, and has done work for several new clients. Various new engineering and construction contracts have been started which will extend into or beyond 1960. The acrylic fibre factory for Chemstrand in Northern Ireland and the nitro-chalk fertiliser factory for Imperial Chemical Industries at Heysham have, among many other contracts, been completed.

In the Automatic Control Division the volume of work has increased on the assembly of control panels and the installation of control systems. Considerable interest has been shown in CJB's theoretical design work on automatic and remote control of plants, and CJB is being called upon to advise on various schemes, including the remote control of a pumping station in the Persian Gulf.

In Persia CJB is well established. With six other companies CJB is constructing on Kharg Island a £20 million crude oil terminal connected with the oilfield by a 26/30-inch pipeline, which CJB is laying in a joint venture with Williams Brothers. CJB has been awarded the contract for a sugar beet factory in Persia of 1,000 tons a day capacity; and also in joint venture with two French firms, the contract for a fertiliser factory at Shiraz combined with a gas pipeline to Shiraz from the oil fields. In Turkey, work continues, again in joint venture, on the pumping station for NATO pipelines; but many political difficulties are delaying payments, and are thereby prolonging the work, and making it more costly.

CJB's research facilities and staff at Leatherhead have been increased. Development work on the pressurised coal gasifier for the Ministry of Power has proceeded intensively. When this work is successfully completed, it may make a major contribution to the economic use of coal. A process of CJB's for producing heavy water from ammonia, which aroused great interest at last year's Nuclear Exhibition at Geneva, is being developed.

The move into new offices at CJB House, Paddington, has enabled all the staff to be for the first time under one roof, with obvious benefit to efficiency.

OVERSEAS INTERESTS

John Brown's Canadian subsidiaries have satisfactorily held their own during a year made difficult by the continued recession. The recent signs of improvement in the economy strengthen confidence in the future of Canada.

In Rhodesia, F. Issels & Son Ltd. in common with other local firms, continues to find competition severe and orders few. Rhodesian Alloys (Pvt) Ltd. has operated satisfactorily. This company represents a new and basic industry to the Federation, and the possibility of a modest expansion of its smelting facilities is under review; the decision turns largely on the price at which it may be possible to buy electricity after the commissioning of the new hydro-electric station at Kariba.

WESTLAND AIRCRAFT LTD.

The recent acquisition of Saunders-Roe Ltd., by Westland Aircraft Ltd., in which the Company is a substantial shareholder, emphasises Westland's position as the leading British helicoper designer and manufacturer. Its technical, production and financial resources are such as to enable it to undertake with confidence all demands which may arise for helicopters, the future of which seems bright.

Earlier this year Westland opened in London, as a public facility, the United Kingdom's first commercial Heliport. Westland designed this, obtained planning permission for it, and constructed it at its own cost in a remarkably short time; this project fully upholds the imaginative and pioneering tradition of that company. Westland London Heliport is being used extensively, and it is hoped that the experience and data it is providing will be used in due course by the authorities to provide a chain of central heliports in London and the provinces. Following a successful demonstration tour of Northern Europe, the large Westminster gas turbine engined helicopter, which as a crane lifts six tons, recently made the first direct flight from the centre of Brussels to the centre of London. Great interest is being shown abroad in this machine, a second prototype of which has now been constructed. The development costs have been borne entirely by Westland and their engine partners, Napiers Ltd.; it is to be hoped that the British Government will now extend some support to the Westminster, both for its great potential military value and, what is even more important, as a prerequisite to the obtaining of export orders. Westland's principal subsidiaries, Normalair Ltd. and Westland Engineers Ltd., continue to make good progress.

INTENSE COMPETITION

In reporting on the affairs of the UK subsidiaries, I have had to record in almost every case, whether the field is light, medium or heavy engineering, intense competition. When such competition prevails as at present in, particularly, heavy engineering, margins obtainable towards overheads and profit are certainly too small. It is to be hoped that before long there will be a better reward for the skill, experience and knowledge required, and for the commercial risk and technical responsibility involved. This is essential if brains and capital are to continue to be attracted to such work.

STEEL

Steel is the main raw material of every one of the Company's subsidiaries, and we, therefore, cannot be indifferent to the political and economic future of that material. Since the de-nationalisation successively of the greater number of steel companies originally nationalised, each has gone, without exception, from strength to strength. The shortage of steel which only a year or two ago handicapped many industries, has been overcome, and the steel industry, despite the present setback in demand, is still going ahead with its plans to make itself more efficient and its output more competitive. And it is doing this despite the difficulty, inseparable from the threat of re-nationalisation, that there is little incentive for those with savings to invest to risk them in an industry threatened with re-nationalisation, when so many other avenues are open to them. For this reason, in two major schemes Government help has had to be sought and has rightly been given; but this does not constitute an argument for re-nationalisation. Once an industry becomes a pawn in the political game its efficiency, and the service it can give, are impaired. Labour relations in the steel industry have always been excellent. In the national interest as a whole, and in particular in the interest of those who work in the many industries that use steel, the Labour Party should drop their doctrinaire proposal to re-nationalise steel.

It is only proper that in the foregoing review I should record the main problems facing each subsidiary. To balance these difficulties, however, there are many compensating factors, and, given a reasonable industrial, political and economic climate, my colleagues and I look to the future of the Company and its subsidiaries with high confidence.

The credit for a not unsatisfactory year, and for a not unsatisfactory outlook, must go to the skilful guidance and the keen commercial and technical ability of our managements, and to the industry and loyalty of our staff and workpeople.

ABERFORTH PROPERTY INVESTMENT COMPANY LIMITED

SUMMARY OF INFORMATION RECENTLY CIRCULARISED TO SHAREHOLDERS

Acquisitions : G. & C. Finance Corporation Ltd.

With the entry of the joint stock Banks into the field of H.P. Finance your board deemed that it would be an advantageous move if the Company were able to acquire an interest in this accepted and rapidly expanding field of finance. The G. & C. Finance Corporation is one of the major Companies in the well-known Industrial Bankers Association ; its head office is situated in Brighton and it has branch offices throughout the U.K. The Managing Director of the G. & C. Finance Corporation is Mr G. F. Corber, the very active Chairman of the Industrial Bankers Association.

In furtherance of our policy of acquiring properties and property owning companies we have acquired a large industrial estate known as the *Roker Industrial Estate* situated in Oldham, Lancashire, comprising mainly Freehold and Long Leasehold properties ; one of the principal tenants is The Ferranti Company. This Estate has been professionally valued at £327,500. In addition the following well-known and excellently situated London residential properties have been acquired.

Riverside Drive—a magnificent Leasehold block of Luxury flats situated in the residential suburb of Golders Green.

Palace Court—a Modern block of flats situated in the Hampstead-Finchley Road area.

Turners Reach—a block of flats situated in the Chelsea area, overlooking the River Thames.

Ormond Terrace—a Leasehold block of flats situated close by Regents Park, London.

Waterloo Court—a Leasehold block of flats bordering Hampstead Heath.

Various other commercial Freehold and Leasehold properties situated in the Metropolis and West End of London have been acquired.

Scotland—a premier multiple position store has been acquired in Paisley which is to be the forerunner of a Group of Stores which will specialise in consumer goods, in addition a multiple position store has been acquired in Hamilton which will be developed in the same manner.

Profit and Prospects—As a result of these acquisitions the profits of the Company, subject to tax for the year ended December 31, 1960, should not be less than £180,000 per annum. The Capital of the Company as a result of these acquisitions will have increased to £219,500. The net assets of the Company will be approximately £1,200,000. The Board is at present time finalizing on several other acquisitions, details of which will be circularised to shareholders in the near future. It will be a definite policy of the board to promote and expand the substantial potentialities of the G. & C. Finance Corporation Ltd. whose capital has recently been increased to £500,000.

THE ANNUAL GENERAL MEETING OF

ISTITUTO MOBILIARE ITALIANO (I.M.I.)

ROME

The twenty-seventh Annual General Meeting of Istituto Mobiliare Italiano (IMI) was held in Rome on June 10, 1959, under the chairmanship of Mr. Stefano Siglienti.

The Board of Directors' report began with a general outlook on the Italian economic situation. In particular it emphasized the need of maintaining and increasing the pace of development which had been a marked feature of the past, provided there was sufficient capacity to exploit the positive factors in the Italian situation, despite the uncertainties prevalent during 1958.

Afterwards the report reviewed in detail IMI's activities for the period April 1, 1958-March 31, 1959, and underlined the considerable volume and satisfactory results achieved.

New applications received totalled more than Lit. 183,202 million, of which more than Lit. 166,000 million have been authorised. This amount was only slightly lower than that of the preceding year. Credits granted amounted to Lit. 124,142 million—with a 34.9 per cent increase over the fiscal year 1957-58—including Lit. 112,942 million of ordinary loans.

The export credit operations proved again highly satisfactory, totalling Lit. 18,130 million, that is a rise of 20.6 per cent over the preceding year. After having gratefully thanked the "Istituto Centrale del Mediocredito" (Central Institute for Medium Term Credit) for its collaboration in this particular sector, the report mentioned the good results obtained from the financial co-operation agreements signed in the preceding years with "Nacional Financiera" of Mexico, "Banco Nacional do Desenvolvimento Economico" of Brazil and "Investbanka" of Jugoslavia, and announced that another agreement was signed this year with the "Banco Industrial de la Republica Argentina."

The report referred to the new borrowing agreements with the Export-Import Bank of Washington, totalling an amount of $18.5 million, and with a group of main Swiss banks for Frs. 30 million that were signed during the fiscal year ended March 31, 1959. Other important dealings—again with the Export-Import Bank and other United States financial groups—were about to be agreed, so that a new flow of considerable financial aid for the benefit of Italian industry was shortly to be expected.

Outstanding loans at March 31, 1959, showed another 7.7 per cent rise over the corresponding period of 1958, in consequence of a further increase in ordinary loans, which again largely offset the natural fall in special loan transactions. The aggregate amount of operations outstanding is shown in Lit. 692,125 million.

New bonds issued during the period examined amounted to Lit. 75,124 million (a 17.5 per cent increase over 1957-58 fiscal year). Consequently the total of bonds outstanding on March 31, 1959, reached an amount of Lit. 373,603 million and thus showed a net increase of Lit. 51,678 million.

Once more there was a rise in the reserve funds, bringing the amount from Lit. 31,437 million up to Lit. 36,381 million, and in the net profits, which totalled Lit. 1,733 million as against Lit. 1,647 million in the preceding year. Net profits were confirmed by the statement of income and expenses, which showed an amount of Lit. 26,518 million under the item "income" and of Lit. 24,785 million for the "expenses."

As a result the General Meeting approved the resolutions submitted by the Board of Directors for the distribution of a dividend of 8 per cent on the paid-up capital and for the appropriation of more than Lit. 1,253 million to the reserve funds, which thus reached a total of Lit. 37,635 million.

The report and accounts were unanimously adopted.

SAINT-GOBAIN SA

PARIS

EXTRAORDINARY GENERAL MEETING
JUNE 22, 1959

The following are summaries of the Directors' reports at extraordinary general meetings held on June 22nd and July 10, 1959.

We have convened this Extraordinary General Meeting in order to submit for your approval various assets brought in to your Company.

They comprise 59,995 shares of the Société Chaux et Carrières de la Maurienne, 11,443 shares of the Société l'Electro-Verre and a glass furnace.

We would remind you that the Société Chaux et Carrières de la Maurienne was founded in order to supply one of our Works and those belonging to another Chemical Company with lime.

The latter, as its requirements of lime have decreased, has advised us of its wish to assign its interest to the Société Chaux et Carrières de la Maurienne. We have thought that it would be in the interest of your Company to increase its participation in the said concern.

On the other hand, we have also considered it desirable that your Company should interest itself in the manufacture of glass insulators, in which industry it has hitherto only been interested through the intermediary of an associated Company from which we now propose to you to take over a considerable block of shares as assets brought in.

This policy would be carried into effect by the bringing-in to your Company of a glass furnace and shares in the Société l'Electro-Verre, one of the principal glass firms specializing in the manufacture of toughened glass insulators under licence of processes and patents belonging to your Company.

The reading of the agreements relating to the bringing in of assets entered into between your Company and the various firms bringing in the assets will acquaint you with all the conditions for these transactions.

Payment of the assets brought in will entail an increase in the Company's capital of 80,325,000 francs, corresponding to 16,065 new shares of the nominal value of 5,000 francs each, which will rank for dividend from January 1, 1959.

The provisional approval of the assets brought in, the increase in capital resulting therefrom and the modifications of the Articles which it will be consequently necessary to make are the object of the first resolutions submitted to you.

If you give your approval to these projects, you will then have to appoint an Auditor and his substitute, instructed to check the assets brought in and to submit to you at a subsequent Meeting a report as to the value of the assets concerned, as well as on the burdens and the advantages of which they are the equivalent.

We can only advise you to approve, by voting for these resolutions, the operations which we propose to you and which seem to us to be in the interest of your Company.

EXTRAORDINARY GENERAL MEETING
JULY 10, 1959

We have convened this Extraordinary General Meeting in order to submit for your definitive approval, the question of bringing in of sundry movable and fixed assets, which you ratified on June 22nd last, subject to their verification.

You will then have to resolve on the definitive character of the increase in capital resulting from this transaction as well as on the modifications made to Clause 6 of the Articles of Association.

On the occasion of this Meeting we will ask you to authorize your Board of Directors, the case arising, to increase the share capital of your Company.

The amount of the new authorization which we are today requesting you to give would enable the present share capital to be doubled, thus bringing it to a maximum of 50,240,550,000 francs, the remaining amount of 1,653,350,000 francs by which the capital could be increased in accordance with the first resolution passed by the Extraordinary General Meeting of June 24, 1957, being cancelled.

As you will have been able to see from the reading of the Report of the Board to the Ordinary General Meeting, your Company is taking a full part in the present evolution, both economic and industrial. In these circumstances, it seems to us to be desirable for your Board to dispose of a possibility of eventually realizing a part of the financing requirements by an increase of capital.

The transaction which is the object of the present proposal for authorization could be carried into effect either by the issue of new shares for cash or by the incorporation of profits or reserves or by the successive or simultaneous application of one or the other of these methods.

In addition, your Board thinks that it would be desirable to give to your Company in official form, the name by which it is generally known ; it is for that reason that a resolution will be submitted to you in accordance with which the trading style of the firm will in future be: "Compagnie de Saint-Gobain."

Finally, in a few months' time our Registered Office will be transferred to No. 62 Boulevard Victor Hugo, Neuilly, in the building, the preparation of which is now proceeding ; consequently we would already today request you to resolve on the modification of the first paragraph of Clause 4 of the Articles of Association.

The Auditor instructed to verify the assets brought in will read his report to you.

We will then ask you to be good enough to approve the resolutions relating to these various proposals, the wording of which was submitted to you within the time limits prescribed by law.

DE WENDEL & CIE

SOCIETE ANONYME

PARIS

(Iron and Steel)

The Annual General Meeting of de Wendel & Cie, SA was held in Paris on June 23rd with Monsieur le Comte Emmanuel De Mitry in the chair. The following is a summary of the report presented by the Board of Directors.

REVIEW

Analysing the economic developments of the past year as they affected the iron and steel industry, the report mentions the general slowing-down of world steel output, the falling-off in the rate of new orders in domestic markets, and the lower level of trade between the European Coal and Steel Community member countries.

The volume of sales to overseas buyers, however, was maintained during the year, although this continued activity was accompanied by sharp price reductions.

In the face of these less favourable conditions, de Wendel & Cie, SA nevetheless maintained output at the high level which had been reached previously. A total of 6,469,278 tons of iron ore was mined, whilst 1,850,001 tons of pig iron and 2,288,040 tons of steel were processed, both in the Company's plants and in the Sollac steel-works on the Company's behalf.

The Company sold 1,702,196 tons of finished products and semis, with a total turnover amounting to Frs.115,996,503,931 inclusive of taxes.

INVESTMENTS

Investments in industrial plant amounted to Frs.9,970,658,973 and enabled the Company to continue the widespread modernisation and expansion programme launched a few years ago within the framework of the third stage of the French iron and steel industry's re-equipment programme.

Projects undertaken during 1958 included the re-equipment of the iron ore mines, the erection of an ore breaking and grading plant, the construction of a new battery of blast furnaces, additions to the rolling stock and the construction of dwellings for the staff.

SUBSIDIARIES

Information given regarding Société Lorraine de Laminage continu "Sollac," in which de Wendel & Cie, SA has extensive interests, bears witness to the continued progress being made by this Company. In 1958 output amounted to 1,255,000 ingot tons of steel, whilst the hot rolling mills' production amounted to 1,508,800 tons.

A new electrolytic tin-plating line was put into service at the end of the year, and in January, 1959, work began on the erection of steel-making facilities with an annual capacity of 500,000 tons.

Through its participations in capital increases which occurred during the year, de Wendel & Cie, SA contributed to a large extent to the expansion of all the subsidiaries connected with its activities.

PROFITS AND DIVIDENDS

Net profits amounted to Frs.1,154,929,175 after having set aside Frs.10,260,034,284 in respect of depreciation of equipment. It was accordingly proposed to distribute a gross dividend of Frs.350 in respect of each Frs.5,000 share equivalent to 7 per cent.

The report, the accounts and the proposals put forward by the Board were adopted.

COMPANY AFFAIRS

JOHN BROWN

Apart from its shipbuilding yards on the Clyde, John Brown controls a number of engineering and machine tool subsidiaries. New orders dwindled in the recession, but there were still old orders to work off and this helps to explain why in the year to March 31st the group's trading profit was maintained at £3.2 million. With the backlog worked off, order books are now thinner and the chairman of John Brown, Lord Aberconway, does not see the market in machine tools becoming active again until idle factory capacity is employed again. Competition, he insists, is intense in light, medium and heavy engineering and so much so, particularly in heavy engineering, that margins are "certainly too small."

An immediate, dramatic reversal of this trend for John Brown or for the machine tool industry does not seem possible. Nevertheless, Lord Aberconway describes the outlook for John Brown as "not unsatisfactory." The yield of 5.4 per cent offered by the £1 ordinary units at 37s. on the dividend of 10 per cent suggests that investors are not anticipating much growth.

INVESTING IN SUCCESS

The stockbroking firm, Vickers da Costa, is offering for sale 4,000,000 5s. ordinary shares at 8s. each in the new company, "Investing in Success" Equities. Firm offers are said to have been received for more than one million shares and these applications will be allotted in full. The trust is not yet operating and when it is, it will, in effect, be an equity investment company with rigidly laid down rules for its portfolio. Broadly, any investment it makes must have already proved itself; the latest trading profits of the company whose shares are bought must be at least double the average of two financial years ended within the period June, 1951, to June, 1953; trading profits must at no time since the beginning of 1951 have fallen by more than 25 per cent from their previous peak; and ordinary dividends must not have been reduced since the beginning of the period. Other investments may be made in companies which do not pass these tests, but which in the directors' opinion have proved themselves. This important reservation gives the directors an opportunity to invest in the equities of new companies and those whose growth is yet to come.

Substantially the whole of the company's income will be distributed until a rate of 8 per cent has been reached. Only after that point will part of the surplus be placed to a dividend equalisation reserve. No application has been made to the Stock Exchange for permission to deal in the shares, but an application will be made not later than three months after the publication of the accounts for the year to January, 1961. A holding would be at least a medium-term investment and, with no possibility of any payment until September, 1960, when an interim may be paid, the issue is not likely to arouse a great deal of speculative interest—nor be attractive to small investors.

BORAX (HOLDINGS)

At the time when Borax (Holdings) was having great difficulty in getting its new plant at Boron, California, into production, the yield on the 5s. deferred shares was never higher than 3⅛ per cent. Today, when the plant is fully productive and is earning a good profit, the yield at the current price of 20s. 4½d. has fallen to 2⅛ per cent on the 8¾ per cent dividend paid out of the parent company's reserve. Investors have thus given yet another demonstration of their faith in the growth prospects of this enterprise. Each successive quarter since January, 1958, has seen a sharp improvement in earnings. Throughout the period demand for boron products has remained strong in the United States. Boron prices were raised at the beginning of July, and the early announcement of this pending increase helped to stimulate demand in the second quarter of the year.

POWELL DUFFRYN

As Powell Duffryn's interests in shipping and the distribution of coal still account for more than half its consolidated profits, it is not surprising that in the year to March 31st its trading profits fell from £2,675,815 to £2,489,544. The group has other interests: in engineering, timber and wagon building. But the emphasis at the moment seems to be more on diversification within the established framework than of adding to the list of products which the group produces or handles. On coal, for example, the chairman, Sir Henry Wilson Smith, says: "by deliberate policy we have developed, and will continue to develop, parallel interests in the distribution and storage of fuel oil, in nuclear power work and in various forms of heating engineering."

In shipping, where the group's subsidiaries act as agents, brokers and charterers as well as owners of colliers, six coastal tankers have been added to the fleet and some ships have begun to make deep sea voyages. But as a coal factor the group is very much at the behest, on margins as well as the volume of trade, of its principal supplier, the National Coal Board; and as, like other coal factors, it adds to its interests in the distribution and storage of fuel oil it becomes equally dependent upon the policies of the oil companies.

London Stock Exchange

FIRST DEALINGS:	Aug. 19	Sept. 2	Sept. 16
LAST DEALINGS:	Sept. 1	Sept. 15	Sept. 29
ACCOUNT DAY:	Sept. 8	Sept. 22	Oct. 6

Equities continued to be firm in an active market before the weekend and they remained so on Monday. But the rise in the United States Treasury bill rate and talk of increased short term rates in London and perhaps even a higher Bank rate unsettled the market. There were widespread losses in gilt-edged stocks and with the yield gap narrowing almost to vanishing point the equity market too suffered a slight reaction. Over the week, however, *The Economist* Indicator rose 0.8 to 291.7. Following the setback there was a modest rally in British Funds which brought a generally steadier tone to the whole market.

Before the weekend gilt-edged prices were moving lower. Few buyers were in evidence and the market was vulnerable once talk of higher interest rates went the rounds. On Tuesday morning prices were marked down largely as a defensive move by jobbers, but with little support at the lower levels, the easier trend broadened into a widespread setback and losses were in some cases well over £1. The undated stocks led the decline, 3½ per cent War Loan falling from 66⅛ to 65⅝. 3½ per cent Conversion came down from 88⅝ to 88. Corporation and Dominion loans were marked down in sympathy, but the high coupon stocks showed some resistance, with 6 per cent LCC (1975-78), for example, remaining unchanged over the period at 106.

Among industrial equities, hire purchase shares were at first subjected to a bout of profit-taking after their recent rise. But demand picked up again later and most shares scored good net gains over the week; UDT, in fact, put on 10s. 6d. to 175s. 6d. and Bowmaker 2s. 1½d. to 33s. 1½d. Insurance shares turned dull, Atlas losing 2s. 6d. to 53s. 9d. and Pearl 2s. 3d. to 127s. 3d. With the success of the House of Fraser bid for Harrods, the Harrods ordinary rose close to the bid price, putting on 10s. to 137s. but the preference shares fell from 29s. 9d. to 24s. 9d. Other store issues were dull. Where gains were scored in industrials it was largely on the news of good company results, Albright and Wilson putting on 1s. 9d. to 28s. 1½d. and Wellington Tube jumping 18s. 9d. to 92s. 6d. on the doubled final dividend and the proposed scrip issue.

Oil shares were quiet and prices were steady at first, but with the easier tendency on Wall Street they tended to react. Burmah Oil fell from 48s. 6d. to 47s. and BP from 58s. 6d. to 56s. 3d. Gold shares remained generally dull. Free State Geduld, rose at one time from 193s. 9d. to 196s. 10½d. and changed hands in Johannesburg at over £10. Cape demand later fell away and the price began to move erratically and on Wednesday came down to 180s. 10½d., a net loss of 3s. 10½d. over the week's trading.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended August 22, 1959 there was an "above-line" surplus (after allowing for sinking funds) of £686,000 compared with a deficit in the previous week of £31,258,000 and a deficit of £6,354,000 in the corresponding period of last year. There was a net expenditure "below-line" of £22,293,000 leaving a total cumulative deficit to date of £329,240,000 compared with £296,092,000 in 1958-59.

THE MONEY MARKET

The market's attention this week has been centred on New York, where at the latest tender for US Treasury bills, the average rate of allotment for 91 day bills rose sharply from 3.417 per cent to 3.824 per cent, the highest level since 1933. This is well above the London rate which last Friday was almost unchanged at £3 9s. 8.39d. per cent.

Funds were short around the weekend. The authorities gave a small amount of assistance on Friday and intervened again on Saturday morning. On Monday a moderate amount of official assistance was given but two or three houses had to borrow from the Bank. Subsequently a small surplus of funds emerged and the rates paid for short loans eased correspondingly. On Wednesday the authorities intervened to take up a small surplus of funds.

- Labour Force to Grow 80%
- Natural Income to Triple
- Per Capita Income May Double

We all know just how rapidly Canada is growing, but the Gordon Royal Commission was the first to make any studied forecasts of that development. The growth predicted by 1980 will mean constant changes in Canada's economy. Through our more than 500 branches of the Toronto-Dominion and by our close participation in that economy, we're right at the centre of all Canadian business activity ... able to assist any manufacturer planning market expansion in prosperous Canada by supplying such information as:

- market statistics • corporation procedure • information on plant sites
- advice on customs problems • data on market distribution • incorporation procedure

This cable cost a fortune

The jib structure of the excavator appeared to be in good working order. Suddenly the bridle rope broke. Down came everything and up went the daily costs owing to production delays and loss of profits.

—and two people could have prevented the accident

An accident like this, caused by the fretted corrosion of a strong-looking bridle rope, need never happen — if a qualified Engineer Surveyor regularly inspects machinery. But first it is the responsibility of someone at top-level — a director, the secretary or chief engineer — to see that all their industrial machinery is inspected *and* insured by specialists.

1859 1959

Vulcan inspects and protects

Vulcan, who this year celebrate a century of experience—and look forward to learning more every day—provide just such a service. It costs no more than insurance and inspection by 'general practitioners'. Our appointment is always welcomed by company engineers and insurance brokers — because they know that if defects are to be found, a Vulcan Engineer Surveyor will find them, and prevent the accident that would have happened.

MAY WE SEND YOU FREE

'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to Dept. 17.

Notice

On the basis of the authorization contained in Section 4 paragraph 3 of our by-laws and with the approval of our Board of Directors, we decided to increase our Bank's capital stock from DM 60,010,000 by DM 30,000,000 to DM 90,010,000, through the issue of new bearer shares (common stock) at a price of 350%, excluding the legal subscription privilege of the shareholders.

The new common stock will participate in dividend distributions from January 1, 1959. A group of banks has taken over the new common stock with the obligation to offer it for subscription to the holders of our common stock at the ratio 2 : 1 and a price of 350%, plus transfer tax.

We, therefore, ask our holders of common stock to exercise their subscription right in the period August 22 through September 4, 1959. For further details please be referred to our Subscription Offer published in Bundesanzeiger Nr. 159 (Federal Gazette) of August 21, 1959.

Munich, August 1959.

CAMPBELL DISCOUNT COMPANY LIMITED

INDUSTRIAL BANKERS

Paid up Capital **£544,000** · Assets exceed **£3,000,000**

Directors: J. B. Campbell. J. W. W. Huntrods. P. H. Russell Smith, A.C.A. P. J. Cannon. G. Keighley.

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms:
Money at 1 month's call, 4% per annum, maximum £5,000
Money at 3 months' call, 5½% per annum, maximum £25,000
Money at 6 months' call, 6½% per annum, maximum £50,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. NC3 explaining our mode of operation.

APPOINTMENTS

MARKET RESEARCH OFFICER is required by BEECHAM GROUP LIMITED in its Consumer Research Department. The successful applicant will be responsible for all aspects of the consumer surveys carried out on behalf of Group companies operating in interesting and highly competitive product fields. He will probably be under 30 but will certainly have not less than one full year's experience in market research. An attractive salary is offered and the prospects are excellent. Profit Participation and non-contributory Pension Schemes are in operation.—Applications in writing, giving full details of age, qualifications and experience, and quoting reference MRO 42, to be forwarded to the Personnel Controller, Beecham Group Limited, Beecham House, Great West Road, Brentford, Middlesex.

MAJOR PETROLEUM COMPANY requires an Economist/Statistician for work at their Head Office in London as a member of an existing team engaged on the Company's estimates of trade within a Head Office department providing a service of information and advice to management. Applicants should preferably be within the age bracket 24-30 and have an Honours Degree in Economics, and have specialised in Statistics, but as important a requirement is the practical ability to get on with the job and whilst working under direction, to make an original contribution of his own and be able to act on his own initiative and responsibility. Starting salary commensurate with qualifications and experience.—Apply, giving full details of age, qualifications and experience, to Box 1187.

PSYCHOLOGIST. Large advertising agency has a vacancy in its Motivation Research department for a qualified psychologist. Applicants should be interested in personality theory and in social psychology generally and should have had some interviewing experience. Initial salary £900 to £1,000. Bonus and pension scheme.—Write to the Personnel Manager, F. C. Pritchard, Wood & Partners Ltd., 197 Knightsbridge, S.W.7.

A MECHANISATION ACCOU TANT

is required by

TEXACO TRINIDAD, INC.

for service in Trinidad, West Indies.

Applicants should be Chartered or Certified Accountants aged not more than 35 and be fully experienced in accounting and office methods in a large industrial undertaking. They should also have particular experience in the investigation, programming and installation of Hollerith punched card applications involving electronic equipment.

The salary for this pensionable position should attract a man earning up to £1,600 in this country.

Please write with brief particulars to the Personnel Officer,
Trinoil (U.K.) Limited,
Trinidad House, Old Burlington Street, London, W.1.

UNIVERSITY OF LONDON

READERSHIP IN ECONOMICS AT LONDON SCHOOL OF ECONOMICS

The Senate invite applications for a new Readership in Economics tenable at the London School of Economics (salary £1,475 — £1,775 — £2,150 a year plus £80 London Allowance). The Readership is not limited to any special aspect of Economics but candidates with qualifications in industrial and business organisation and administration will receive special consideration.—Applications (10 copies) must be received not later than September 23, 1959, by the Academic Registrar, University of London, Senate House, W.C.1, from whom further particulars may be obtained.

22 RYDER STREET, LONDON, S.W.1

NEW APPROACH TO FINANCE WORK

Ford of Dagenham has now reached a size and complexity which require a new and imaginative approach to finance work. The existing system of accounting, profit budgeting, cost control, forecasting and analysis is being augmented by a wider ranging service to management.

Only men of the highest possible calibre who are capable of appraising complicated data and understanding all the implications of important policy matters are being assigned to this new work.

Applications from men between the ages 25 and 30 are now invited. Salary and prospects will be most attractive but the standards set are uncompromising and it is unlikely that men without a good honours degree or professional qualification will be accepted.

Replies should be addressed to: Mr. H. G. DeVille,

FORD

DAGENHAM, ESSEX.

SENIOR MARKET RESEARCH MANAGER, preferably with experience in the Pharmaceutical industry and with knowledge of retail audits, required by specialist Advertising Agency.—Reply fully to Box 1192.

RUSSIAN INTERPRETERS/TRANSLATORS, both full and part-time, required by established firm. Thorough knowledge of language essential and technical and commercial terminology an advantage.—Apply with full details to Box 1190.

DIRECTOR OF STUDIES

The British Iron and Steel Federation invite applications for the appointment of Director of Studies at its Management College at Ashorne Hill, Nr. Leamington Spa.

The residential Management Courses have been established for three years and the College is now on a permanent basis.

The Courses, which are for men of high calibre and potentiality both on the Production and Commercial side of the Industry, are designed to develop their appreciation of the technical and managerial problems of the Industry.

The Director of Studies will be responsible to the Principal of the College for the preparation and satisfactory running of the Courses. In this he will be assisted by the tutorial staff.

Applicants should have a sound academic background and preferably some knowledge of current thinking on problems of organisation and management. Experience in research methods is desirable since the successful applicant will have the opportunity to develop lines of research in co-operation with the Universities.

On taking up his appointment, the Director will spend a period visiting works within the Industry.

The salary will be commensurate with the importance of the post and the position will be pensionable.

Applications should be sent to the Secretary, British Iron and Steel Federation, Steel House, Tothill Street, Westminster, London, S.W.1, not later than September 30, 1959.

MANAGER — PUBLICITY DEPARTMENT

Owing to the promotion of the present office holder, Metropolitan-Vickers Electrical Co., Ltd., an A.E.I. Company, invites applications for the position of Manager of its Publicity Department at Trafford Park, Manchester.

The Manager of the Publicity Department is responsible to the Commercial Director of Metropolitan-Vickers for the overall publicity for the four Associated Electrical Industries Product Divisions managed by Metropolitan-Vickers, as well as for the Company's departments. The divisions cover turbine-generators, switchgear, traction equipment and transformers. He has a staff of 85. He is required to work in close liaison with the Manager of the A.E.I. Central Information Department in London.

This position demands a high level of both creative and administrative ability. Applicants should be in their early forties, have an engineering background and a wide experience of technical publicity.

Applications, in the form of a full statement of personal details (including present salary) and experience, should be addressed to:

The Manager, Personnel Department,

METROPOLITAN-VICKERS ELECTRICAL COMPANY, LIMITED,

TRAFFORD PARK, MANCHESTER, 17.

Applications will be treated as strictly confidential. Please mark envelope Q.13.

AUTOMATIC TELEPHONE & ELECTRIC CO. LTD.,

STROWGER WORKS, LIVERPOOL

Require

QUALIFIED ACCOUNTANTS

(A.C.A. or A.C.W.A.)

preferably with experience in the Light Engineering Industry, in the approximate age range 30-35, to undertake specific studies to implement full scale Management Accounting.

Applications, giving full details of qualifications, experience, age, present salary and approximate salary required, should be sent to the

Personnel Manager,
Automatic Telephone & Electric Co. Ltd.,
Strowger Works, Liverpool.

ACCOUNTS DEPARTMENT of a large industrial organisation in S.E. London requires qualified accountant aged 30-40 as assistant to the Divisional Chief Accountant, Central Services, to prepare monthly returns and to assist with consolidation of the company's monthly and annual accounts. Knowledge of punched card systems desirable. Will also be required to assist with preparation of budgets and the control of staff. Good prospects and attractive salary. Pension scheme.—Write with full details, including age and present salary to Staff Officer, Ref. 744/80/E, Siemens Edison Swan Ltd., Woolwich, London, S.E.18.

THE BRITISH OXYGEN COMPANY LIMITED

ECONOMICS AND STATISTICS SECTION

require

at Head Office in the West End young

ECONOMIC STATISTICIAN

to join a small team responsible for the study of a wide range of problems; primarily, though not wholly, on questions of financial policy. We seek a man with a special and strong liking for this branch of applied economics and statistics. Exact nature of experience less important. Statistics at least equivalent of R.S.S. Certificate. Salary will be in accordance with age, qualifications and experience and the Company operates a contributory pension scheme.

Applications to:
The Staff Officer,
The British Oxygen Company Limited,
Bridgewater House, Cleveland Row,
St. James's, London, S.W.1.

MERCHANT BANK has immediate vacancy for male clerk aged 20-25 with some knowledge of Security and Stock Exchange Work. Expanding business, good prospects and excellent conditions.—Write Box AG/62, c/o 95 Bishopsgate, E.C.2.

MARKET RESEARCH

PETFOODS LIMITED

manufacturers of Kit-E-Kat, Lassie, Chappie, Pal-Meet, Whiskas and Trill, require a RESEARCH OFFICER for their MARKET RESEARCH DEPARTMENT, which employs a permanent Field Force of nearly forty interviewers.

Applicants (male or female) should not be over 30 years of age and preference will be given to graduates with Statistical qualifications. Previous Market Research experience is not essential but would be an advantage. This is a managerial position and the selected candidate will prepare questionnaires, research plans, supervise the analysis and tabulation of data and produce the final reports on both consumer surveys and product tests.

Starting salary will not be less than £900 per annum and the Company operates a non-contributory pension plan, sickness benefits and life assurance cover.

Applications, giving full details of education, etc., should be sent to the

Chief Personnel Officer,
Petfoods Limited,
Melton Mowbray, Leics.

UNIVERSITY COLLEGE OF WALES ABERYSTWYTH

Applications are invited for the post of Assistant Lecturer or Lecturer in the Department of Agricultural Economics, to take up duties as soon as possible. Applications, with the names of two referees, should reach the undersigned, from whom further particulars may be obtained, by September 5, 1959.

T. MAELGWYN DAVIES,
Registrar.

OPERATIONAL RESEARCH, AIR MINISTRY. Senior Scientific and Scientific Officers required in Scientific Adviser's Department. Qualifications: 1st or 2nd Class Honours Degree in mathematics, statistics or physical science such as Physics, Engineering. Honours Degree in natural or social science if candidate possesses at least mathematical knowledge at G.C.E. Advanced level. Appointments offer great scope and interest to versatile scientists capable of working well with Service officers and of adopting methods suited to Service environment. Work is mainly Operational Research in variety of subjects of concern to R.A.F., including tactics, technical development and logistics and offers S.S.O. and S.O. entrants valuable experience in principles of Operational Research. Salaries London S.S.O. £1,233 to £1,460, S.O. £655 to £1,150. Outside London slightly lower. Salaries for women being raised by stages to men's rates.—Forms from M.L.N.S. Technical and Scientific Register (K), 26 King Street, London, S.W.1 (quoting A.163/9/X/PC). Closing date September 24, 1959.

THE UNIVERSITY OF MANCHESTER

Applications are invited for an ASSISTANT LECTURER IN SOCIAL ADMINISTRATION. Salary on a scale £700 to £850 per annum with membership of F.S.S.U. and Children's Allowance Scheme.—Applications should be sent not later than September 30, 1959, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

AUSTRALIAN NATIONAL UNIVERSITY

CANBERRA

RESEARCH SCHOOL OF SOCIAL SCIENCES

Applications are invited for a SENIOR FELLOWSHIP or SENIOR RESEARCH FELLOWSHIP in INTERNATIONAL RELATIONS.

Other things being equal, preference will be given to applicants with a background in International Relations and research experience in that field.

The salary range for a Senior Fellow is from £A2,553 — £A3,063; increments are £A85 per annum, and appointment is made on a salary and incremental limit within this range according to experience and qualifications. Appointment is for an initial period of five years; thereafter it may be made permanent.

A Senior Fellow is entitled to one year's study leave on full pay, plus a contribution towards travel and other expenses in every six years.

The salary range for a Senior Research Fellow is £A2,233 — £A2,713 and appointment is made for three years with possible extension to the maximum of five years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid and assistance with housing is provided.

Further particulars are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London, on October 1, 1959.

FINANCIAL NOTICES

CAPITAL INVESTMENT IN SPAIN

NEWS

FOR THE BRITISH BUSINESSMAN WHO ASKS: *"What credit and financial policies guide American businessmen?"*

In today's tight-profit economy, the need for credit and financial controls commands the attention of businessmen on both sides of the Atlantic. In answer to this need, the world-renowned organization of Dun & Bradstreet has prepared what hundreds of banks and corporations acclaim as the finest training and retraining course of its kind anywhere available . . .

Dun & Bradstreet's Correspondence Course in

CREDIT AND FINANCIAL ANALYSIS

Students are enrolled as individuals or on a group basis by many firms which have integrated the Course into their own management training programs. Study units sent every two weeks take the student step by step to a clear understanding of credit fundamentals, profitable policies and their day-to-day application under today's conditions. Students learn how to interpret financial statements and trial balances, how to apply ratios, appraise good, bad, and marginal risks quickly and accurately.

PARTIAL CONTENTS OF THE COURSE

- Selling Terms
- Antecedent Information
- Examination of Financial Statements
- Introduction to Analysis
- Internal Analysis
- Comparative Analysis
- Working Capital Analysis
- Business Reorganizations, Bankruptcy

Especially important—students *learn by experience* through a practical down-to-earth *case history approach.* They deal with actual situations, develop shrewd judgment, reduce risks, make decisions to increase sales volume . . . and profits, too. They get more real "experience" on more kinds of credit problems in the six and a half months of D&B training than many men get in years on their jobs.

How does the American businessman think and act when it comes to financial and credit management? Dun & Bradstreet's Correspondence Course in CREDIT AND FINANCIAL ANALYSIS is your best answer. Forty per cent of the students are officers in their companies or have responsible positions in departments where *sound* financial analysis and *sure* credit decisions are vital.

For full information about the Course . . . cost, registration, and other details . . . mail the coupon below.

DUN & BRADSTREET, INC., Business Education Division
Box 283, Murray Hill Station, New York 16, New York

Send me without obligation full details about the Dun & Bradstreet Correspondence Course in CREDIT AND FINANCIAL ANALYSIS.

take a rest from routine

Business, so they say, isn't t! fun it used to be. Whose fault is that may we ask? *Paperwork* .. that's the culprit! Too much documentation, too little mechanisation. BULMERS, however, are fast bringing business up-to-date. Latest line is the fabulous new FRIDEN fully automatic ... the machine to take the hard work out of figurework and do more *without operator decision* than any other calculator. And there's a complete range to choose from. If you favour a rest from routine, write for details to: Bulmers (Calculators) Limited, Empire House, St. Martins-le-Grand, London, EC1. Tel: MONARCH 7994

BULMERS
BUSINESS MACHINES

Random sample

People don't just make sweeping generalisations any more, one iconoclast remarks. Thanks to the advance of market research techniques they take random samples, *then* make sweeping generalisations.

What he meant was, you don't just take space in a paper and announce 'Nearly Everyone Uses I.C.I. Silicones' just because someone thinks it would make a good slogan. You've got to find out if it's true, by taking a random sample. You ought to pick names from the voters' list, but if you want to cheat you ask more or less the first person you meet 'Do you use I.C.I. Silicones?' If he says 'Don't know' you start asking him, how about his new raincoat, hasn't he noticed how it simply sheds the water, and what about the furniture polish his wife uses, doesn't it give a marvellous easy shine, and did he happen to notice that she isn't having that trouble with her cakes sticking to their paper cases any more, and is he by any chance a paint technologist, because if he is he probably knows all about the heat-resistant properties of silicone paints—all that sort of stuff.

Anyway, when you've got it written down and thanked him very much, there's your random sample. *Now* you can make your sweeping generalisation:

Nearly everyone uses

John Silverside, News Chronicle photographer, took this photograph off Iceland earlier this year in the Hull trawler "Auburn Wyke", a 185 ft. vessel of 579 tons gross.

Why do British trawlers have to fish in the waters off Iceland under protection?

FISH — good fresh fish — are a vital part of Britain's food supplies. Fish are caught, not in the middle of oceans, but in coastal waters.

The waters of the continental shelf round Iceland abound in fish of very high quality – they are one of the richest fishing grounds in the world.

One year ago Iceland declared a fishing limit of 12 miles round her coast, without any International Agreement.

For the past year, Iceland has sought to enforce this limit claim by the use of gunboats.

British trawlers harried

For the past year, British trawlers have had to pursue their difficult task, subject to constant harrying by these gunboats, which have attempted to intercept and arrest them by boarding, ramming, and firing blank and solid shot.

This is why, for the past year, our trawlers have had to fish in the waters off Iceland under protection.

Many times during that year, Iceland has accused Britain of aggression. The charge must be emphatically refuted.

Protection is not aggression. Even small nations cannot take the law into their own hands.

Contrary to Iceland's claim, there *is* much fish to be caught inside the 12-mile limit, and in the "havens" where our trawlers fish under protection.

Contrary to Iceland's claim, modern trawlers are *not* "expressly designed to go anywhere." They are designed to go where the fish can be found – and cod, plaice, halibut and haddock are found most prolifically off the Icelandic coast.

And contrary to Iceland's claim, the British fishing industry *continues* to honour her trade agreement with Iceland, whose vessels have been landing fish in this country throughout the past year.

Iceland refuses compromise

Britain has made a number of generous compromise offers to Iceland, and the Government has made repeated overtures to the Icelandic Government asking for talks to reach at least a temporary settlement. These approaches have met with no response whatever from Iceland.

Iceland's action is said to be based on the need to conserve fish – to combat alleged overfishing of these waters. *Britain has never refused to examine joint conservation measures*, since balanced, controlled fishing is just as much to our interests as to those of Iceland. But these offers have found no response.

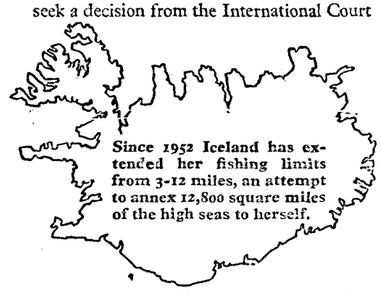
The result is that British trawlers now face another long hazardous winter of fishing under protection.

Certainly they will be going to other fishing grounds – Greenland and Bear Island, for instance – as Icelandic trawlers do themselves. But the fish caught off Iceland are the richest in quality. They are the most important to the housewife's shopping basket.

Iceland's action seeks to preclude our trawlers from the major part of those grounds – grounds that were pioneered by British fishermen; grounds that have been fished by Britain traditionally and continuously since the sixteenth century.

Iceland ignores the rule of law

The British Government has suggested that if the Icelandic Government wishes to base its case upon its rights under international law the two parties should agree together to seek a decision from the International Court



Since 1952 Iceland has extended her fishing limits from 3-12 miles, an attempt to annex 12,800 square miles of the high seas to herself.

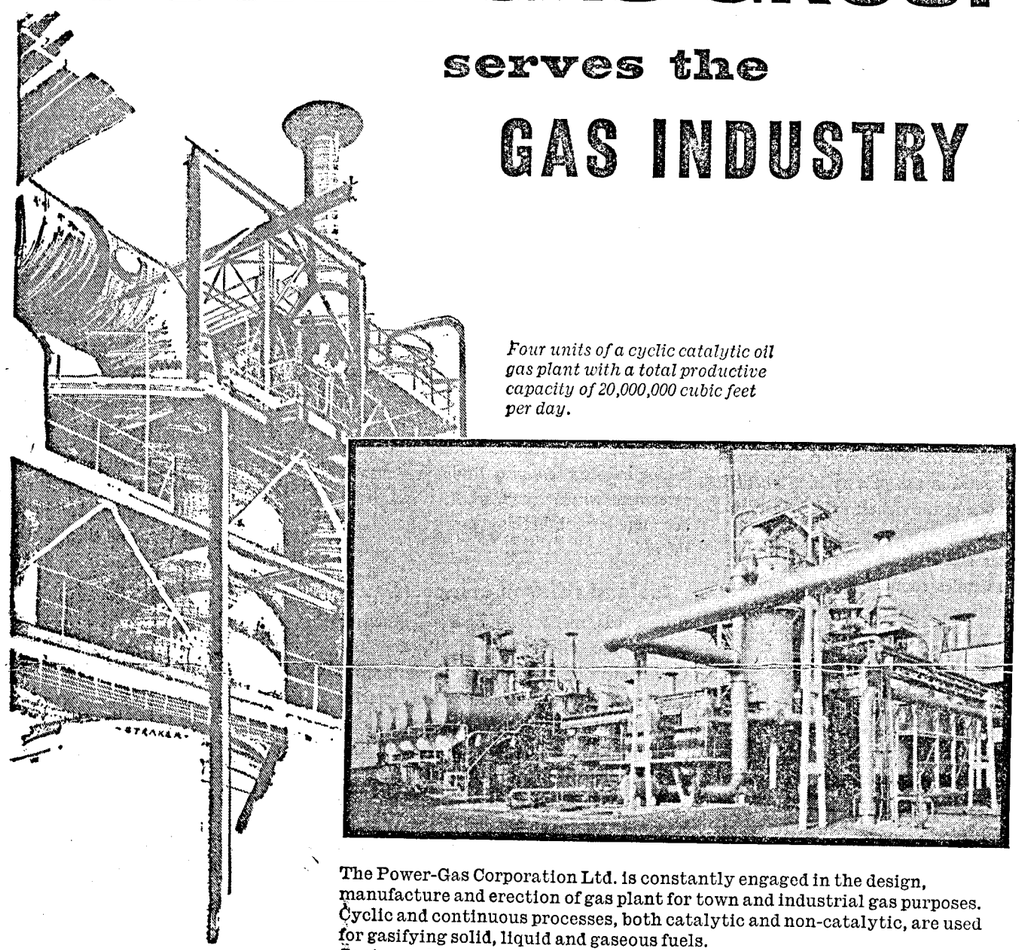
of Justice at The Hague. This Iceland has refused to do.

The International Court in 1951 expressed the view that "the delimitation of sea areas has always an international aspect; it cannot be dependent merely upon the will of the coastal state." Iceland's action continues regardless of the fact that a United Nations Conference on the Law of the Sea is to convene again in Spring 1960.

Britain has made repeated offers to seek a compromise. Iceland has not agreed to any of them.

This statement is issued by the British Trawlers' Federation to ensure that the public get the true facts.

how the POWER-GAS GROUP serves the GAS INDUSTRY



Four units of a cyclic catalytic oil gas plant with a total productive capacity of 20,000,000 cubic feet per day.

The Power-Gas Corporation Ltd. is constantly engaged in the design, manufacture and erection of gas plant for town and industrial gas purposes. Cyclic and continuous processes, both catalytic and non-catalytic, are used for gasifying solid, liquid and gaseous fuels.
Contracts have recently been secured in the United Kingdom, East Germany, West Germany, Holland, Italy, Sweden, Switzerland, Australia, South Africa, Japan, Hong Kong and Malta.
Power-Gas has made notable contributions to the gas industry which it has been serving for nearly ninety years. In addition, the Power-Gas Group plays an important part in the planning and building of new plants for many large companies in the chemical, petroleum, iron and steel, nuclear energy and oils and fats industries.

The rapid post-war development of Thorn Electrical Industries Limited owes much to the company's decision to move certain of its manufacturing activities in the lighting, radio and electric cooker fields, to Spennymoor in County Durham.

THE KEY TO INDUSTRIAL SUCCESS...

Like other industries which have taken this step, Thorn have not regretted the move. Today, after only seven years, they occupy some 400,000 sq. ft. of factory and office space and employ 2,700 people on the manufacture of radio and radiogram receivers, fluorescent lighting fittings and control gear, and domestic electric cookers. Local people, who know little of light electrical engineering, have surprised and pleased the company by their ability to learn a wide range of skills.

Development laboratories set up at Spennymoor are engaged on the design of new products and local people are taking over many of the jobs in these laboratories. The company's apprentice scheme for local youths is intended to train young men to take over as designers and executives in the organisation. Willing co-operation from local authorities, trade unions and other organisations have enabled Thorn Electrical Industries Limited to establish themselves as a progressive and highly productive manufacturing unit. Their decision to move to County Durham proved a key to industrial success.

...COUNTY DURHAM

In many parts of County Durham there are first-class industrial sites, offering a wide range of advantages to different industries. All have excellent access to provide the vital communications links, the essential services in County Durham are plentiful and cheap, labour is available and adaptable. A booklet "Industrial Opportunities in Durham" gives more details of these positive advantages. Copies are available from **The County Planning Officer, Durham County Council, 10 Church Street, Durham, who will be pleased to assist in any way.**

Tests at Allied Chemical's National Aniline laboratories prove permanence of new textile finish.

Now—a **permanent** polyethylene softener for all your fabrics

A-C *Polyethylene, another new Allied Chemical product, means good news for both consumers and textile manufacturers.*

For consumers, it means fabrics with the soft, pleasant feel you like . . . quality you can't wash out.

Wash-and-wear finishes containing emulsifiable A-C Polyethylene can be applied to *any* fabric—cotton, wool, silk, synthetics, blends. And there's no limitation on color either. They're going into ladies' dresses, sportswear, housecoats, suits . . . men's suits, slacks, shirts.

Emulsifiable A-C Polyethylene for wash-and-wear fabrics isn't the only Allied Chemical product for the textile industry. NATIONAL ANILINE dyes have been world-famous since 1879. Our new polyamid fibre, CAPROLAN, is already widely used in rugs, rope and auto tires.

For more information about A-C Polyethylene or our chemicals for the textile and other industries, write the nearest office of Allied Chemical International.

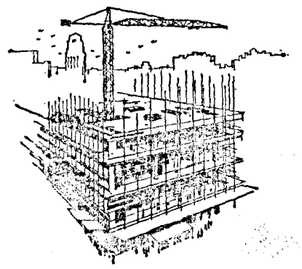
8 storeys with a happy ending!



COSTAIN built

in Old Jewry...

three months ahead of schedule

To the changing city skyline this new eight-storey office block makes its own pleasing contribution. Sited just off Fenchurch Street, it consists of centre, south and west blocks. Besides the *normal* difficulties encountered in building in a *restricted space* bounded by busy streets, it involved the construction of a temporary road clean across the main site!
In spite of such hazards, Costain's completed the contract no less than three months ahead of schedule—evidence of the sound planning and *operational skills* which every Costain client can expect to get.

Agreement with a Difference

WARM, friendly, natural, and impossible not to respect, Mr Eisenhower has made himself in nine days almost as close a father-figure to the people of north-west Europe as he is to his own people. Among the British in particular he has given an appearance of being at home that is unimpaired by the almost total absence of public information about the subjects discussed and the matters (if any) decided. The impression of an Anglo-American partnership so close, personal and long-established as to be independent of any pacts or agreements has been strengthened. To the British people this is more than an impression; it is a belief, and an important one. Without doubt there is substance behind it, though there are also gaps, mental reservations, and areas of incomprehension that are only occasionally explored, and then sometimes (as in the Suez crisis) to frightening effect.

Between nations, a partnership may be none the worse for being difficult to put down in written agreements; and it is luckily a fact that the areas of disagreement between the American and British governments are at present small. This does not mean that they are non-existent. In their unscripted television broadcast from Downing Street on Monday night, Mr Eisenhower and Mr Macmillan naturally did not want to draw attention to the differences. Certainly Mr Macmillan did not; he, after all, knows best how imminent the general election is. But he also wanted to make known once more his views about the need for an early summit conference; and they were views that Mr Eisenhower found it necessary, ever so gently but without any equivocation at all, to contradict:

> I am not going to be a party to a meeting that is going to depress and discourage people; therefore we must have some promise of fruitful results.

British and American views about a four-power summit conference, then, remain apart. The conditions for a summit conference were created, in the British view, at Geneva from May to July, when (it is held) the gap between the eastern and western attitudes over Berlin was sufficiently narrowed by the foreign ministers, and the issues were sufficiently isolated, to permit the four heads of government fruitfully to take up the work. In the American view they were not; it is still necessary for Mr Khrushchev in his talks with Mr Eisenhower to give an earnest of goodwill; and this must probably take the form of withdrawing any threat of denial of western rights in Berlin. Without that, in the American view, Mr Khrushchev's goodwill remains questionable and the chances of success do not justify calling the heads of government together. That is not all. Mr Eisenhower said at Bonn that yet another meeting of the foreign ministers might be necessary first; and he did not change his mind in London. Thus the prospect of the summit recedes into 1960.

What is remarkable is that neither on the American nor on the British side does anybody seem to have asked out loud why a four-power summit conference is so necessary, now that the heads of the United States and Soviet governments have agreed to exchange visits and to have talks on their own. The main argument for a summit conference was, after all, that it would have brought these two together. Formally speaking, it is true, the British and French governments have equal occupation rights with the Americans in Berlin and an equal say in the ever-elusive German peace settlement. In fact, the conferences that will draw up a German peace treaty and establish a permanent settlement in Berlin remain distant and as yet academic prospects. The immediate problem

is to get the principal antagonists, the United States and Russia, on terms that will permit concrete disputes, such as the German question, to be tackled seriously at all. Limited as it is, this work will take longer than the next few months. Why, then, is a four-power summit so important now?

The truth is that claims are already being staked for seats on a directorate of world affairs that would become just conceivable once the cold war ended. General de Gaulle has never left any doubt what he would expect for France in such a situation. The west German government at Bonn is embarrassed by the existence of another German government into refusing seats of honour for itself lest they might likewise be claimed by east Berlin; but it claims in effect a right of veto on all that is said and done about central Europe. Mr Macmillan and Mr Selwyn Lloyd have been emphatic in their agreement with Mr Eisenhower that he will do no negotiating when he meets Mr Khrushchev. They hold that the place for negotiations on east-west questions in Europe is in meetings of four powers.

MR EISENHOWER and Mr Herter have deferred to these strong and articulate feelings of their allies—willingly, no doubt. To disclaim the intention of negotiating is not only tactically convenient; it is also simple prudence when there is so much exploration to be done, and when the chance so strongly is that progress will be slow and uneven. Yet they may reasonably have begun to ask themselves what kind of a concert of powers their friends in north-west Europe envisage as settling itself, in an atmosphere of relaxed tension, into the saddle of world affairs.

The idea has been outlined in London this week that a regular series of summit meetings might then take over the kind of general responsibility for world order that was, in the underlying conception of the Charter, to have fallen to the five permanent members of the Security Council of the United Nations. That conception never worked because of the estrangement that quickly arose among the permanent members, and in particular between the two most powerful of them. The postwar institution of the Council of Foreign Ministers broke down for the same reason; and the procedures of the war alliance, in which meetings of deputies narrowed down differences for resolution by the ministers, and meetings of ministers narrowed down issues for resolution by the heads of government, became useless the moment the overpowering common interest, the prosecution of the war, ceased to hold the system together.

Desirable as it is, the ending of the cold war is not going to restore that overriding common interest. It follows that while four-power conferences will continue to have their uses, they are never again going to be such a source of authority and order in the world that any promising form of negotiation ought to be neglected for their sake. It ought not to be taken for granted that the Americans, in their dealings with Moscow, have a duty to tie their hands in order to preserve a four-power system which does not really exist. Mr Eisenhower has been very ready of his own accord to reassure Bonn, London and Paris by accepting limitations on his freedom in dealing with Mr Khrushchev. It is to be feared that he may have gone too far. His effort to put Soviet-American relations in better order is important to everybody; and his allies can best help by not insisting too jealously on what is due to them.

The President's Tour

A running commentary on an unusual excursion in personal diplomacy

PRESIDENT EISENHOWER'S tour through western Europe has been a gay, gregarious, vociferous, triumphant, platitudinous, nostalgic and infinitely human progress. The effectiveness of the secret diplomacy he conducted in Bonn, London and Paris was at no time self-evident, least of all in the baffled commentaries of the dignified, but sometimes easily baffled, press. The public, and particularly Eurovision's vast audience, invariably seemed happier with its impressions of the state of western diplomacy than, say, former President Truman, certain members of the Labour party executive, and the diplomatic correspondents *en masse* were with theirs. Mr Eisenhower's televised remark that "I think people want peace so much that one of these days governments had better get out of their way and let them have it" was an acute expression of this mood.

During the hectic week external signs and portents of change multiplied. General de Gaulle ended a four-day visit to Algeria. Indian and Chinese patrols skirmished in the Himalayas. Mr Khrushchev and Dr Adenauer conducted a restrained exchange of views which Mr Khrushchev said had made "a favourable impression" on him. The British electorate braced itself for word of the general election. But everywhere the spotlight was on Ike, the cheers were for him, and the record of what he did, even to his practice swings on the lawn at Chequers, made the top of the news.

The President arrived at Bonn on the evening of August 26th, after a drive from Wahn airport under welcoming banners (a number of them demanding reunification and the eastern provinces) and amid enthusiastic crowds whose reception he later called "as overwhelming as it was magnificent."

Reassurance to Germany

SIX hours of talks with Dr Adenauer began at the Palais Schaumburg the following morning, interrupted at noon by a brief press conference designed to include the German public in the reassurances given to Dr Adenauer in person. The final communiqué gave an unwieldy list of topics discussed in the private talks; the principal ones appeared to be:

> France's attitude to Nato, which Mr Eisenhower later told the press "had been talked about considerably." Unofficial estimates said it had occupied the whole morning.
>
> *Disarmament, a subject that Dr Adenauer* has emphasised in his latest letter to Mr Khrushchev, made public on August 30th.
>
> Mr Eisenhower's talks with Mr Khrushchev, which the President insisted would be merely exploratory. The President and Dr Adenauer both considered that a further meeting of foreign ministers would be a necessary precondition of a future advance to the summit.
>
> The population of west Berlin, who were given further assurances of American support.
>
> Mr Eisenhower told the Chancellor that the time was inopportune to agitate about Germany's eastern frontiers.

The President's visit appeared to achieve its main purpose in calming German fears on the Eisenhower-Khrushchev exchanges. Dr Adenauer's waning personal prestige received a sensible lift. But it seems likely that Mr Eisenhower encouraged, if he did not indeed initiate, the current west German efforts to conduct a reasoned debate with the Soviet Union and to offer a new olive branch to the Poles. So far these have been mainly confined to personal utterances of a reassuring nature by Dr Adenauer, including a sympathetic broadcast on the anniversary of the German attack on Poland on Sepember 1, 1939, and an earnest letter to Mr Khrushchev, from which our Bonn correspondent gives extracts on page 742. There has been no sign this week that any substantial diplomatic initiative in eastern Europe is in contemplation in Bonn; indeed, the indications are the other way.

Mr Eisenhower arrived at London airport at 6.45 on Thursday evening, August 27th. His first words to Mr Macmillan summarised his feelings rather than his views on the existing state of Anglo-American relations: "I did not have to come here," he said, "to assure you or the British people that the American people stand with them. . . . You people know we feel that way." The crowd of three-quarters of a million along the route had made him over forty minutes late when his car finally reached Winfield House, the American Ambassador's residence.

He was off first thing on the morning of the 28th to Balmoral for a day with the royal family that included a picnic, a drive round the estate and a private dinner party. A working (not very hard) week-end at Chequers with Mr Macmillan began with a report on their preparatory discussions by Mr Herter and Mr Selwyn Lloyd, and then ranged over the broad horizon of affairs. Sunday's programme was interrupted by a surprise outing to Oxford, which a persevering Mr Hagerty explained as a valuable opportunity for top-secret discussion; it was the one flight of fancy he permitted himself before an importunate press.

A Spanish Interlude

ON Monday morning the President shook hands with two housewives in Kensington High Street and visited St. Paul's. In the afternoon he received a private letter from General Franco at the hands of the Spanish foreign minister, Señor Castiella. This assured him that a well-known anti-communist approved of his intention of meeting Mr Khrushchev; it also contained an invitation to visit Spain, to which he sent a friendly but non-committal reply. More pertinent questions that came up at this Spanish-American meeting concerned American military and economic aid and, it is believed, the establishment of missile sites on Spanish soil. In the evening Mr Eisenhower appeared with Mr Macmillan in a twenty-minute television broadcast before dining with the four living British prime ministers at No. 10 Downing Street. The broadcast, a substitute for both a press conference and a communiqué, produced the following main points:

> Britain and the United States are still divided over the urgency of the need for a summit meeting and the conditions that ought to exist before one is held.
>
> They are in full agreement to stand firm behind the people of west Berlin. This advertisement to Mr Khrushchev was deliberately couched in the strongest terms.
>
> They are convinced of the primary importance of aid to the underdeveloped countries. Mr Eisenhower called this "more important for western civilisation . . . than the Soviet-western differences and quarrel."
>
> Peace has become "the imperative of our time."

Although Mr Macmillan was later accused of electioneering, as in the self-justification for his Moscow visit and his appeal for American help for British wool textiles, world reaction seemed particularly impressed with the sincerity of the Anglo-American will for peace.

Mr Eisenhower spent Tuesday dealing with American domestic affairs; that evening he dined with a party of wartime colleagues including Sir Winston Churchill and Lord Montgomery.

London Balance-Sheet

THE impression left by his visit was first and foremost of his own vigour and renewed health. As the first modern President of the United States to possess a close personal knowledge of British life, he inspired sympathy and great affection. No one doubted that Anglo-American ties were the stronger for his coming. It seemed likely that his most productive talks with Mr Macmillan centred on disarmament. Little else of substance emerged, except that the British plan for arms ceilings in an area of central Europe appeared to have disappeared from the board altogether. It was also obvious that both Mr Eisenhower and Mr Macmillan had made up their minds to try to be more accommodating to General de Gaulle, if they could.

The only doubt in British minds was that the President's readiness to accommodate every shade of opinion in the alliance might end in producing a larger crop of misunderstandings than those of the past year. This danger was particularly great in France (as our Paris correspondent reports on page 742, French opinion now seems to believe that it has secured substantial American backing on Algeria). But Mr Eisenhower's firmness on Berlin and the way he took issue with Mr Macmillan over the summit—even in front of a television audience—helped to silence the critics who had always questioned the wisdom of leaving him alone with the redoubtable Mr Khrushchev. The official British view, which might or might not be prompted by electoral considerations, remained stubbornly convinced that at the end of the day Mr Macmillan would win to his summit meeting.

Mr Eisenhower arrived at Le Bourget at 10 a.m. on Wednesday. With Fifth Republican ceremonial and a mild Parisian welcome, he drove with General de Gaulle to the Quai d'Orsay, where talks continued through lunch. In the late afternoon there were further presidential ceremonies at the Arc de Triomphe and the Hôtel de Ville. Talks with the Italian prime minister, Signor Segni, and with Nato personalities occupied most of Thursday. Final talks with General de Gaulle at the Chateau de Rambouillet in the evening completed the programme.

Surprise Appearance

The President characteristically changed one item in his schedule on Thursday morning. He had not intended to sit in on the Nato council meeting, where Mr Herter would expound American policy to the smaller allies. But after private talks with Mr Luns and M. Spaak, the President went to the meeting and gave a short personal testimony on the value of the Atlantic pact. Mr Eisenhower plainly considers it imperative that one result of his tour should be an impressive stiffening of the western ranks against any future Soviet pressure on Berlin. His gesture to Nato may have reassured the Belgians and others, but it was thought in Paris that the Italian delegation of Signor Segni and Signor Pella was still slightly miffed that Mr Eisenhower had not been able to include Rome in his itinerary.

The main outcome of the Eisenhower-de Gaulle discussions, which seemed to be intentionally restricted in length, although General de Gaulle eventually secured an extension, was a sensible improvement in understanding, although outright agreement could not be expected. The particular confrontations of opinion included:

> Algeria, on which General de Gaulle expressed his dissatisfaction with previous American conduct at the United Nations, but attempted, by emphasising the prospect of eventual self-determination for the Moslem population, to enlist American backing this year.
>
> Nuclear weapons, including the sharing of atomic secrets and dual control of weapons on French soil, produced the repetition of the customary French and American theses.
>
> Joint western strategy, which General de Gaulle discussed in his memorandum to Mr Eisenhower and Mr Macmillan last year. France continues to argue the need for consultation on such questions as the use of nuclear weapons in the Formosa strait and similar actions which might precipitate a world war.
>
> The Russo-American exchanges, which General de Gaulle, like Dr Adenauer, now seems to be treating with greater equanimity.

French hopes were clearly centred, not on immediate advantages from the talks but on a steady improvement in Franco-American relations in the coming months.

On the ninth day even Presidents are allowed to rest. When it was finally announced on Wednesday morning that Mr Eisenhower would be going home by way of the good golfing country round Culzean castle, Scotland was flattered and everyone else relieved. The next stages of Mr Eisenhower's initiative in personal diplomacy promise to be even more gruelling. Europe owes him a holiday.

Blackpool and Beyond

The last Trades Union Congress before the election finds the movement rigidly positioned to make the worst possible mess of its next five years

NEXT week's Trades Union Congress will not be an occasion for deep thinking. It would be idle to hope that it should. At the best of times, this gathering of over a thousand delegates from two hundred loosely knit and often quarrelsome unions must aim at the consensus, rather than the contentious; and a congress that is taking place when a general election may be only a few weeks away has a special incentive not to look at disturbing things beyond the end of its nose. But, after the election, major economic and political questions will soon face the trade union movement. It would be fair to ask what the general council intends to do about them.

The first set of problems would arise if Labour wins the election. This is what all the union leaders are hoping for, though they have done much less in practice to bring about the victory than the party executive at one time hoped. The bull point of Labour's economic policy was to have been an agreement with the unions about a moderation of wage claims during a period of industrial expansion; the unions would no longer demand more than the whole of each year's increase in national production, so that resources would be left over to stimulate investment, and increase old age pensions, and expand the health service, and do all the other attractive things which Labour says it wants. The country has now reached the eve of the election without any vestige of such an agreement having been made.

If Labour should be returned to power, the prospect is therefore that wage claims will go on being tabled which will demand more money than can be found without constant price inflation; that employers (including some nationalised employers) will continue to make at least an initial show of resisting these claims; and that a Labour government will sit unhappily on the sidelines, unwilling to interfere except indirectly by appointing courts of inquiry at moments when strikes look imminent. There will be a few stoppages and many inflationary settlements, which (unless Labour happens to be very lucky with the terms of trade) will periodically impel the economy into crises.

Trade union leaders may say that they cannot see that this would be any different from the situation now. But there would be one very important difference: the existence of a Conservative opposition. One does not require a very large crystal ball to guess that the Tories, when and if they are relieved of the responsibility of office, will become less and less coy about throwing trade union affairs into the centre of British political controversy. The long-term effect of this is something that the men of Blackpool resolutely refuse to think out. If they did think, a shadow would haunt next week's congress: a shadow of the Tories going to the country in the election of 1964 on a platform that might promise to curb the unions by the most stringent sort of American-style labour laws—and getting a landslide mandate to do so.

For a Labour government the best tactic would be to absorb this sort of prospect by partially yielding to it. The Labour movement would be wise to agree to the establishment of a royal commission, not on collective bargaining generally, but on the scope of individual liberty within the unions (and perhaps within employers' associations) under the present system of trade union law. There is a strong case for such a commission already, and just possibly the Tory manifesto for the coming election will propose to set one up. But at the moment probably not one delegate at Blackpool would agree that Labour should pinch this useful item from the Tories' clothes.

IF the Conservatives should win the election, the trade unions are likely to face even more pressing problems, which they have been equally unwilling to recognise. The first challenge, probably early next year, would come over wages. Money wages have been held back throughout 1959 by a combination of short-term circumstances—among them the standstill terms of some of last year's settlements, the recession difficulties in most of the traditional wage-leading industries, the aftermath of Mr Cousins's gaffes during the bus strike, and the tactical soft-pedalling of the TUC. As the retail price index, on which an arbitrator's "fair" awards are usually based, has now remained stable for more than a year, the present period of wage stability may be very difficult for the unions to break.

Nevertheless, soon after the election, a flood of wage claims is likely to break over the dam. It looks as if the engineering workers, who are already formulating their claim, may lead the way, while other unions such as the busmen, keeping their eyes on arbitration, or the railwaymen awaiting the Guillebaud report (from which they expect something material, and may get it), will follow on behind.

In the circumstances of this year, with Britain recovering from recession, it may be that the unions will once again get what they want. But some time in the next five years, if the Conservatives return to power, it is surely evident that they will not. The year of the firm front against wage inflation has been unconscionably long in coming, but the country is now littered with signals of its approach. Throughout this Parliament the resistance of employers, including nationalised employers, to wage claims has much stiffened. Political resistance has stiffened too; Tory Ministers of Labour have now learned that they may gain actual electoral advantage by refraining from setting up courts of inquiries with instructions to run away from strikes. Hitherto, the reef on which a firm policy has foundered has usually been the belief that the country could not stand a long railway strike. But it is now more fashionable to point out that the railway unions, on their own, could not stand one either. The auditor of the National Union of Railwaymen revealed in July that of the union's total funds of £16 per member only £6 7s. per member, much less than an average week's pay, is available to support a strike.

The rest of the money is tied up in provident benefits, the political fund and property.

Some time in the next five years, if the Tories return, the trade union leaders are therefore likely to face the full impact of a problem which last year's bus strike projected as a pale shadow. Either, first, they will have to combine behind a pacemaker in the year's wage struggle, backing some individual union's national strike with sympathetic action that would quickly lead into a political challenge. Or, secondly, they will have to accept that the day is past when automatic annual wage increases could be secured by every big union, even in industries where total receipts have gone down; of course, wages will still go up as national production increases, but they will be determined much more by the state of the market and much less by the Ministry of Labour's state of quake.

All the indications are that the union leaders are not at present sufficiently united to take the first course—that of a general strike—for long; this is just as well for them, for if they did try to throw down a prolonged political challenge to the state they would, in the present state of the public's temper, quite certainly lose. What is not so certain is whether they will eventually accept the second course with good grace, or do so only after a half-hearted struggle which will exacerbate political emotions sufficiently strongly to make assaults upon their privileges the most popular Conservative battle-cry of the age.

SOVIET LIVING STANDARDS—II

Catching Up with the Joneses

The ways in which the Russians are succeeding in their efforts to overtake western standards of living, and the ways in which they are not

AT the American exhibition in Moscow Russians were apparently most fascinated by two items: the house and the car. One was a reminder of their own uncomfortable overcrowding; the other was the traditional symbol of western luxury. Both are the extreme examples of fields in which Soviet living standards in 1965 will still be far behind the western levels of today.

Elsewhere the gap is narrower and the Russians should catch up more easily. For the main foods (with the exception of eggs) their targets for 1965 match or exceed the present American averages. Assuming that they will be reached—a big assumption, particularly for meat—two points remain. One is that Russia will produce its food with an incomparably higher proportion of labour; more than half its population still lives in the countryside. Secondly, equality between Russia and America in the volume of the main foods does not exclude wide differences in more fancy items, and in quality, packing and presentation. The same is true of clothing. The average yardage of cloth planned for the Russians is not very much behind the quantity now used by the British or Americans. But the output of shirts, socks, stockings and knitwear will still be much smaller. So will the production of nylon and synthetic textiles, though the Russians hope to fill that gap quickly, with the help of western "know-how" if they can get it.

Sales resistance and competition compel western traders to provide novelties, attractive patterns, and bright colours. What driving force will urge Soviet suppliers on? Russian writers make much of "capitalist waste" in distribution. They proudly proclaim that in the Soviet Union the share of the population employed in trade is less than a quarter of the proportion in Britain or the United States (1.6 per cent compared with more than 7 per cent). Yet they concede that Soviet distribution services must be improved and expanded. Service to customers is a new problem for the planners. Reared in a perfect sellers' market, they must progressively

get used to the existence of consumers' preferences. Decentralisation of management and market research institutions will help them. The Russians certainly do not wish to imitate American expenditure on advertising but they will soon have to evolve a communist mechanism to do the work of what they call the "anarchy of a free market." Their success in this will determine the course of competition between the communist and western blocks.

Soviet manufacturers of durable consumer goods are only now getting into their swing, but their output is expected to rise fairly fast. By the middle nineteen-sixties the Russians should overtake present French levels, with the notable exception of motor-cars. If Russia's rate of progress is maintained, present British standards will be approached at the end of the sixties, though the further goal—to match current American levels—will not be in sight before the seventies. The exceptions come back to the two items from the Moscow exhibition. The share of the national output absorbed directly and indirectly by the motor industry in the West is still considered prohibitive by the Soviet leaders. For some years to come the Russians will remain at the bicycle stage. The other major lag is housing. At the best, there will still be at least two Russians to a room in the middle of the next decade. Two average Anglo-Saxons now have three rooms at their disposal. Cars and houses are the two striking examples of Russia's lag. Others are less obvious. There are lots of gadgets, lots of small comforts that go with an advanced standard of living which defy statistical comparison.

BROADLY speaking, Russia must achieve three things to match western standards. It must increase the productivity of its farms and so release manpower for other employment. It must devote still more resources to housing. And it must shift a higher proportion of investment to durable goods, including cars. Mr Khrushchev knows that he can speed up this process by international agreement. A deal on disarmament would release resources, and increased imports from the West would help while Russia was building up its own production of consumers' durables. He will be under pressure to get all that he can, because Russia is aiming at a moving target and not (as has here been assumed for the sake of the argument) a stationary one.

But the Soviet Union has advantages as well. As a latecomer it can benefit from the experience of other countries. Its problems in satisfying the wants of Russian consumers are relatively new, but it confronts them with a highly skilled and diversified engineering industry. And it may draw advantage from this new era of technological change in which, perhaps, aircraft or even rockets will take the place of coaches; helicopters may substitute for cars; and atomic energy and automation may open up new industrial vistas. While the Soviet challenge can rightly be cut down to size, all experience suggests that it should not simply be dismissed.

It may be objected that such economic changes in Russia will have political consequences, that as daily troubles diminish and leisure and culture increase, the Russians will claim a greater say in the political life of their country. Why should Mr Khrushchev bother to keep up with the Joneses, if this might spell the doom of the present political system? It is quite probable that a new deal for consumers will ultimately mark the end of Khrushchevism, just as the earlier economic and social development undermined the bases of Stalinism. But that will not stop it. The political perspectives that might be opened up in the Soviet Union are one of the most tantalizing possibilities of "peaceful competition" in living standards. For Washington, London, Paris or Bonn to argue that a race in armaments would be preferable to competition in living standards would be implicitly to admit Mr Khrushchev's premise that Russia is bound to catch up. The West is capable of finding the answer to Mr K's challenge for the nineteen-seventies for itself.

(Concluded.)

NOTES OF THE WEEK

GENERAL ELECTION

The Swan Begins to Sing

THE death watch over this Parliament has begun. Nobody in London will now be surprised if Mr Macmillan calls the general election for as early as October 8th or October 15th; as it would be a normal convenience for him to give about a month's notice before either date, an announcement may even come within the next few days. The way the wind seemed to be blowing became very evident during the first few minutes of the Prime Minister's famous telecast with President Eisenhower on Monday. Three months ago Mr Macmillan's main concern in this programme would have been to speak to the people of America, imbuing them with reassurance that Britain is not the "shaky ally" which some American newspapers have alleged. On Monday, however, Mr Macmillan's main concern was plainly to speak to the people of Britain—there was the opening reference to Anglo-American disagreements at the end of 1956 (to show prickly-proud Tories that Britain is wearing no white sheet for Suez), the later references to the healthy state of the British economy, the self-parade of the peacemaker who did not think that his journeyings "had turned out too badly." It was all adroitly, and fairly legitimately, done.

Ever since the local council elections last May suggested that the Conservatives had regained some electoral ground, an autumn election has been probable. It will be normal political procedure if the recent glowing public opinion polls have now finally tipped the scale. It will be interesting to see if they have had one other effect as well.

In the election of 1955, which the Conservatives expected to win, their manifesto was an elegant and carefully unspecific essay, mainly designed so as not to lose votes. At the beginning of this year, when it seemed that the election of 1959 or 1960 was likely to be more evenly balanced, it was generally expected that the Conservatives would feel tactically obliged to put many more positive proposals into their manifesto this time—perhaps including a promise to establish a royal commission on certain aspects of trade unionism and contentious things of that sort. Will the good tidings brought by Dr Gallup have dispelled all such possibly vote-winning—but also possibly dangerous—ideas? It will be odd if the polls, by reporting a swing of opinion to the right, prove also to have impelled the policies of the next government towards the quiescent centre.

INDIA AND CHINA

Criss-Cross Skirmishes

MR NEHRU has now been obliged to take up a public attitude over Chinese infringement of India's north-east border. In Parliament on Monday, he described the Chinese action as a "clear case of aggression." Such tough talk comes reluctantly to a man justifiably sensitive about his relations with Peking, and it should not be interpreted as a sign of change in Mr Nehru's determination not to get entangled in Chinese-Tibetan affairs. But the boldness with which China is taking advantage of a difficult and unmarked border terrain has provoked Mr Nehru into remonstration.

Apart from the legal complications of the McMahon line, the long, remote, mountainous frontier is, for forces operating on the ground, almost impossible to delineate. The Chinese troops, as they carry out their policy of sealing off Tibet, have seized the benefit of any geographical doubt. Mr Nehru's warning may pull them up short; on the other hand Peking has made it perfectly clear that it does not care much what outsiders, including Indians, think about what it is doing.

Mr Nehru's outspokenness with China has been contrasted with the friendliness of his short meeting with the President of Pakistan, General Ayub Khan, who on Tuesday stopped off at Delhi on his way to East Pakistan. Without exaggerating the coincidence, the Indian defence ministry has in the past paid more attention to Kashmir than to the Chinese frontier. If the quarrel with Pakistan could simmer down, there are obvious opportunities for the realignment of troops. And General Ayub, having tidied up some of the illogicalities of government in Pakistan, may in the manner of most military rulers be looking around for some outside achievement to bolster his standing at home.

The frontier incidents sparked off the fulminating quarrel between India's Commander-in-Chief, General Thimayya, and the defence minister, Mr Krishna Menon. Mr Menon's efficient handling of the defence portfolio has not prevented him from being bitterly resented by senior military men. The skirmish was smoothed over on Wednesday, when General Thimayya, under pressure from Mr Nehru, withdrew the resignation he had offered the day before. But all might not have ended so easily had it not been known that Mr Menon departs next week to head the Indian delegation at the United Nations.

THE VISIT

How Right to Know?

IN spite of the flower show atmosphere (in which it was possible to imagine Mr Randolph Churchill as a vegetable marrow, getting first prize) American newspapermen were far more at home from Friday to Tuesday in the huge tent in Carlton House Terrace than were their British and continental colleagues. The White House press representatives are used to these highly organised mass flights from Washington so that each may send his newspaper his personal interpretation of Mr Hagerty's daily bulletin on the President's meals and meetings. The Americans would have been happily surprised if any news really worthy of the headlines had come from the smiling stonewall of Anglo-American spokesmen, who offered themselves for questioning twice a day to hundreds of reporters from all over the world. But to others it was hardly believable that this wealth of official organisation had been undertaken merely to enable secret diplomacy to be openly arrived at.

Some of the British, having looked forward to trying their skill at a presidential press conference, were particularly indignant at being denied a privilege that had been tactlessly granted to the Germans. And they were justified in regarding the substitute which they were offered—Mr Eisenhower's televised chat with Mr Macmillan—as no substitute at all, since no questions were possible and no subsequent clarifications were available—although admittedly the unscripted conversation contained little enough of substance to be worth clarifying. Moreover, it was not the President, preparing the way for a new effort to establish world peace, who was presented as the star, but Mr Macmillan, preparing the way for a Conservative victory in October.

Nevertheless, however much sympathy may be felt for those journalists who claim that this evasion of the press sets a deplorable precedent, the precedent (if it is one) does seem to have needed setting. As the Downing Street spokesman, Mr Evans, explained so patiently on Monday, these were private, personal talks, part of an as-yet-unfinished series to make plans for dealing with Mr Khrushchev. Such plans as were made would lose much of their effectiveness by being made public.

More important, perhaps, if what was said was to be public, the whole character of the talks would have had to be different. In short, the public's right to know does not deprive the leaders of their right to keep their own counsel.

SPAIN

Foot in the Door

SPAIN, though not a member of the North Atlantic Treaty, is an ally of the United States under the agreement of 1953; when President Eisenhower was putting the Nato governments in the picture of his coming talks with Mr Khrushchev, it was natural that the Spanish government, too, should be informed. Its spokesmen seemed to enjoy pointing out this week that the Spanish foreign minister, Señor Castiella, had been allotted a special place in Mr Eisenhower's European programme because Spain was *not* a member of Nato.

This might be a nod, or it might be a wink; who can tell? For public consumption, the Spanish government's attitude is that it is perfectly content with its present position—outside Nato, but on a direct line of its own to Washington. It is host to important American military installations, and able to require in return substantial American aid; and its control of its own armed forces is uncomplicated by any international system of command, as General de Gaulle would like his to be.

Certainly Señor Castiella has not done badly in his exercise this week of establishing Spain's right to be informed and consulted when east-west political moves are afoot. Interviews in one week with Mr Eisenhower, Mr Herter, Mr Macmillan, Mr Selwyn Lloyd, General de Gaulle, and M. Couve de Murville seem to settle the matter. The British press, probably reflecting in this point the feelings of the British public, which remains obstinately touchy about its memories of the nineteen-thirties and of the second world war, has shown more than a suggestion of resentment of the importance that the Spanish foreign minister secured for himself, of the fact it happened in London, and of Señor Castiella's personal history. Even the British government made a point of announcing that it had not been consulted before the American government invited him to London. But before the week was out the civilities had been handsomely restored with a suggestion to Señor Castiella that he should come back to London soon, this time on an official visit to the British Government. The initial frostiness and the press sniping will have done the British position in Spain no good, but Spain's position in London has been improved.

ALGERIA

On Reconnaissance

GENERAL DE GAULLE returned to Paris on Sunday, in good time to digest his four days' discussions with the army in Algeria before facing Mr Eisenhower. From what he said to Moslem audiences on his tour, the general's new policy is to offer eventual self-determination to the Algerians. The idea seems to have been conceived for Mr Eisenhower's benefit. But, not for the first time, General de Gaulle had different words for different listeners as he pursued his way from command post to command post last week.

Whatever phrases the Moslems may have picked up with new hope, the emphasis for

the army was still on the task of pacification. The officers came away from their conversations with the general reassured by the impression that no negotiations would be begun with the rebels in the field. If this proved to be true, and if there was to be no time limit for the end of pacification, the general's new initiative would begin to look like the Fourth Republican formula all over again.

But if General de Gaulle were revolving new ideas, it seemed a sensible time to start when Mr Eisenhower was in Paris and when out of deference to the interests of the Franco-American relationship, watchdogs in Algiers, or in the cabinet, could not bark too loudly. Whatever is in the general's mind is now expected to be made known later this month. A declaration of self-determination would seem to push French policy more openly towards the creation of a Franco-Maghreb community as a means of providing the Algerians with an acceptable alternative to full independence. The difficulty is that Morocco and Tunisia have been moving steadily away from France this year. More immediately, General de Gaulle's attention is centred on the United Nations. It is not by coincidence that M. Malraux, the apostle of Gaullist culture, has been touring South America, where votes that could prove decisive on the Algerian issue are now very much in the balance.

The McMahon Line

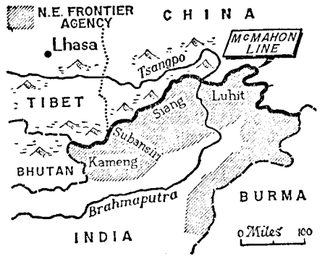
THE north-eastern frontier of India as claimed by the Indian Government follows what is called the McMahon Line, named after Henry McMahon, who was British plenipotentiary at the conference at Simla which produced the tripartite British-Tibetan-Chinese Convention of July, 1914. The convention was duly ratified by Britain and Tibet; it was initialled, but never signed or ratified, by China. The war in Europe broke out a month after the conclusion of the convention, and the Chinese government of that time thought it might as well wait and see.

By the time the war was over there was no longer a central government in China with real authority over the provinces, and no serious effort appears to have been made subsequently by the British government to obtain ratification of a treaty that no longer seemed to have practical importance so far as China was concerned. The frontier was effectively with Tibet, not with China—the Tibetans having managed to clear the Chinese out of the whole frontier area, including the borders of Assam—and from 1912 to 1951 Tibet was in fact an independent state, not subject to any kind of Chinese control. The Tibetans recognised the frontier clause of the 1914 convention as binding, and the Chinese, having no armed forces or administration anywhere near the frontier, were in no position to challenge it.

THIS situation came to an end with the Chinese reconquest of Tibet in 1951, which meant that Chinese troops occupied points close to the McMahon Line. Successive insurrections in the last two or three years, involving guerrilla operations near the frontier, and leading to the flight of Tibetan refugees into India, again made the frontier an active question. The circulation in China of maps showing Chinese territory extending far to the south of the McMahon Line suggested that the Communist regime would one day challenge the frontier; to Indian protests, Peking's answer was that the maps had been made under the Kuomintang regime, but this excuse wore very thin as time passed and nothing was done to correct them.

The McMahon Line forms the northern and north-eastern boundary of Assam, but not of the province itself as a state of the Indian Union; a zone about 100 miles deep within the frontier, comprising the tangle of mountains and valleys between the plain of the Brahmaputra and the high watershed of the Himalayas, is known as the North-east Frontier Agency. Since India took over the agency in 1947, it has been organised into four administrative areas —the Kameng, Subansiri, Siang and Luhit divisions.

GEOGRAPHICALLY, the country of the Frontier Agency presents a striking contrast both to the flat lowlands of Assam to the south and to the high plateau of Tibet to the north; its steeply mountainous character differentiates it from Assam, while its dense forests watered by the heavy monsoon rains falling on the southern slopes of the Himalayas distinguish it from the open, almost treeless, highlands of Tibet. Ethnically, it is inhabited by a number of tribes of primitive culture, speaking languages of the Tibeto-Burman family, traditionally without any large-scale political organisation and unconnected with the more civilised inhabitants of the Assam plain, who are Assamese or Bengali by speech and Hindu by religion. The principal tribes from west to east are the Monba, the Aka, the Dafla, the Apa Tarang, the Hill Miri, the Abor, and the Mishmi. Except for the Monba, they were all formerly independent in their mountain valleys; the Ahom kings of Assam took no notice of them except to make occasional punitive expeditions against them when they raided the lowlands. A section of the Monba, however, were under the jurisdiction of the lama monastery of Tawang, a branch of the Drebung monastery in Lhasa; this could be regarded as a Tibetan suzerainty, though it was primarily an ecclesiastical authority, the governing officials being Buddhist monks.



After the British annexation of Assam the British authorities made a number of agreements with the hill tribes, whereby the latter undertook to desist from raids on the lowlands in return for small annual subsidies to their chiefs and permission to trade in Assam markets. In no case was there any reference to China in these agreements, but in the case of the Monba there was mention of the Tibetan suzerainty, though the local chiefs did not deem it necessary to refer to Lhasa. The British did not wish to administer the tribal areas directly and saw no need to define the frontier with the Chinese empire, since the independent tribes formed a buffer zone between India and Tibet. But after the Tibetans gained their independence in 1912, a definite boundary running as far as possible along the Himalayan watershed, was thought desirable.

The primary aim of the Chinese in challenging the McMahon Line is probably, as in Dadakh, Nepal, Sikkim and Bhutan, to bring under Chinese control all the centres of Lamaic Buddhism which continue to recognise the spiritual authority of the Dalai Lama; as long as any of these remain beyond their reach, Tibetan nationalism cannot be decisively crushed. A secondary purpose is doubtless to impress the Chinese people with a display of the Communists' patriotic zeal in revising a frontier which was established without China's formal consent. A third motive may well be a desire to demonstrate, for the benefit of everyone in south and South East Asia that China is stronger than India and can force the Indian government to give way.

Somewhere day and night, silvered by sunshine or deep in darkness, aircraft are always flying.

All those built in Britain today have part of their equipment provided by one of the ⌐≡ group of companies. Jet airliners commanding the skies, the Comet, Caravelle and new DH 121 depend on Lockheed hydraulics. So do turbo-props like the Vanguard, Argosy and Viscount.

The ⌐≡ group is indeed active in the air, and, setting itself no limitations, throughout the rest of industry too.

There are wider issues at stake in the big beer election than the Local issue of draught *v.* bottled. When you vote for bottled you're voting for bottles themselves.

What a shining record they have! They bring you so many good things — to drink, to eat, to keep you well, to lighten work around the house. Have any other containers ever brought you so much? Not on your life!

Glass deserves your support! Vote for bottled beer at your local! Vote for bottles every time!

ANTI-UGLY POLITICS

Parties and Leisure

WE are all anti-uglies now. Who would have guessed up to a short while ago that in this coming election all three parties would choose beauty as a political issue? There is more than one kind of political issue—the kind which does and is intended to divide parties and the kind on which each party suddenly feels obliged to keep up with a strange new shift in the winds of opinion. The Labour party's new policy document, which appeared last Sunday indignantly hard on the heels of the Conservative pamphlet on the "Challenge of Leisure," ranges widely over questions of architectural design, takes in all the arts and the uses of leisure, and touches on the archaism of the moral laws. It recognises, at much greater length than the unofficial Tories did, that now that working class families have leisure to use and the money to put it to some use, an opportunity arises to make Britain a friendlier and less stuffy place—but also a danger of turning it into an appalling mess. The Labour party has special reason to be worried, partly as a matter of conscience because mass culture is the genie which it feels it has been mainly responsible for bringing out of the bottle, partly as a matter of self-preservation because unless the party is for ever to be thought of in the grim killjoy terms of the late nineteen forties it must find some way of wiping a smile on to its face.

Whatever circulation this new document achieves—and if the printing unions had not ditched the party it would by now be flooding the market in a glossy version with a tasteful cover—its style, content and presentation are worthy of its high pretensions. It supplies a graceful, urbane account of present achievements and failings of official patronage and neglect of the arts. Here and there, of course, since this is a political document, commercials are inserted to show that æsthetic statesmanship was born in the last Labour government. But the tone of the argument then proceeds dispassionately, unaffected by the interruption. In the end only one small cavil must regretfully be made—but it damages the practical value of much of the exercise.

Enlightened, expensive thoughts about subsidising gracious living are scattered throughout the essay. But Labour regards it as too much of a violation of good taste to discuss in any detail what price tags would have to be attached—or to list its projects in any order of priority.

Modernising Morals

THE Labour party's references to the morality laws have been smuggled a little surreptitiously into the introduction to its new policy document; they are not referred to in the body of the essay, rather as if someone had woken up at the last minute to the fact that the *Daily Mirror* was offering its raffish support to the party which should propose to attack "these damn silly laws." Nevertheless better in an introduction than nowhere and, with Mr. Butler promising to do something about legalising betting shops and making Sunday drinking legal in Scotland if the Tories get in, it might look as if the battle for individual freedom from Victoriana was already as good as won.

But it would be too soon to toss Sunday bonnets in the air. The Tories have not yet promised to do anything about either drinking or Sundays in England, although the Bow Group (in the current issue of *Crossbow*) has urged them to. The Labour party hedges with promises only of a royal commission on licensing laws and of a free vote on Sunday observance. It is not wrong to do so. The surface unanimity of the liberal-minded newspapers ought not to leave anyone under the impression that there is general agreement, even among those who want reform, about the extent to which legal regulation of personal habits should be dropped or modified. There is no hope that such proposals will escape sharp controversy. Any government is liable to have trouble with important sections of its rank and file when it ventures into this mine-strewn field. A Labour government would have to wrestle with the movement's strong methodist conscience.

The test of a party's sincerity in this field is its willingness to work hard at converting its own rank and file. No whips should be imposed to prevent backbenchers from agreeing with the temperance and Sabbatarian lobbies if they want to, but the central organisations of the parties have an equal right to do at least a similar amount of lobbying on the other side. Meanwhile the prominence now being given to issues on which party discipline is traditionally not imposed suggests that backbenchers in the next Parliament will have a livelier time than in the present one. Public interest in Parliament should also be increased, since these are pre-eminently the kinds of subject which television is best fitted to illuminate. It is none too soon for advocates of out-and-out reform to brush up their parliamentary procedure and their lobbying technique. The great danger of the next Parliament, whichever party wins the election, is clearly going to be that the country may be saddled with patchwork adjustments that will take the heat off the present campaign but may actually help to preserve for another generation many of the present anomalies.

AGRICULTURE

Liberals on the Farms

THE report of the Liberal party's agricultural committee bears the marks of inevitable conflict between the convictions of a party which stands for the grand old principles of free trade and undistorted markets, and the expediency of one which happens to be struggling hopefully for electoral support in a large number of rural constituencies. In its analysis of the agricultural situation—and in most of its policy recommendations—this report stands head and shoulders above its Conservative and Labour counterparts; but there is about it a strong whiff of the legendary Scottish preacher who told his congregation "My friends, here is a verra grave deefficulty, let us look it boldly in the face and pass on."

The committee's aim is to redirect public aid towards making British agriculture capable, on an average, of matching overseas producers' prices, thus enabling it to thrive not on direct subsidies but on its own low costs and high productivity. The instruments it recommends are an improved, enlarged, better paid and independent advisory service; more specific and more logically chosen production grants; better rural transport and amenities; encouragement of ancillary and complementary industries; and, above all, a Land Bank providing medium-term credit at lower and more stable rates. It is bad luck that it lays so much emphasis on the Land Bank just after the Radcliffe committee has agreed with a Ministry of Agriculture memorandum on "the inefficiency of this method of subsidising agriculture production and the dangers of over-commitment and abuse to which it could give rise."

Apart from the Land Bank, the other policy recommendations are admirable. But the general tone of this-isn't-going-to-hurt-anyone, the picture of an agriculture not just profitable at an economically rational level but actually expanding beyond its present size, has more electoral charm than verisimilitude. The much-needed transformation of British farming into a technically efficient, commercially alert, low-cost industry implies not only a large number of individual casualties but also, unless something very odd has happened to the law of comparative costs, a net shrinkage of output. Perhaps the Liberals can be excused for not emphasising this. But between a suicidal degree of outspokenness and the tactics of the Scottish preacher it should have been possible—and might even have been better policy—for the writers of this generally intelligent document to steer a more central course.

ARAB WORLD

Fireworks at Casablanca

ADOPTING the fashionable view that there is safety in talk, the Arab—foreign ministers are holding their heralded Arab League council at Casablanca. Of the ten member states, Iraq and Tunisia are absent, Iraq refuses to take any notice of a league whose headquarters are in Cairo and whose activities are under the Egyptian thumb; Tunisia has not attended a league meeting since its representative stalked out of the council last year. President Nasser is steadily back-pedalling his way out of inter-Arab quarrels by resuming diplomatic

courtesies with King Hussein and entertaining King Saud in Cairo; he has not yet got round to making it up with President Bourguiba.

The two main items on the council's agenda are the Algerian war and the Palestinian refugees. Both topics are good stuffing for Arab solidarity, and the communiqué will probably reiterate high-principled agreement in very general terms. The actual talk may be more acrimonious. Even the discussions about the Algerian war and the French nuclear tests in the Sahara may not altogether be plain sailing. The minister of finance of the Algerian shadow government, Dr Ahmed Francis, is in Casablanca with his colleague for north African affairs, and it is quite on the cards that they will embarrass the meeting by asking for less sympathy and more cash. The league members, however testy their differences, may be at one in filibustering their way through such heresies.

The refugee issue is no longer as straightforward as it was at the beginning of August when the league met at Sofar to reject out-of-hand Mr Hammarskjöld's economic proposals for integrating the refugees in the countries where they now live. Since then, the ex-Mufti of Jerusalem, Haj Amin, and M. Pierre Gemayel, the Lebanese minister of public works, have separately produced their suggestions for a provisional Palestinian government and army. In face of the Jordanian reaction, discussed by our Middle East correspondent on page 741, these proposals are unlikely to win much support. The trouble about this kind of bellicose and unrealistic talk is that it forces the Arab governments to take up attitudes from which they cannot easily climb down.

SUEZ CANAL

Pressure on the Bank

For more than three months the Danish ship *Inge Toft*, chartered to carry Israeli goods to south-east Asia, has been stuck in the Suez Canal. This is now far too long for either side to be able quietly to give way. Mr Hammarskjöld's private negotiations with Cairo having failed to budge the freighter, the Israelis are hesitating to raise the issue at the United Nations General Assembly when it meets later this month. Argument at the United Nations would be bound to degenerate into tired legal skirmishing over whether or not the United Arab Republic was technically at war with Israel.

A more effective form of pressure might be through the World Bank. A group of American congressmen have suggested to the bank that its proposed loan to Egypt for widening the canal might be made conditional on the passage being kept open for all shipping—vessels carrying Israeli cargo included. Mr Eugene Black, the president of the bank, will be well placed for hearing all points of view; both Dr Kaissouny, the UAR minister of economics, and Mr Horowitz, the governor of the Bank of Israel, will be in Washington later this month for the World Bank's annual meeting. The obligation in honesty to insist that the canal should be genuinely an international seaway has to be weighed against the knowledge that western lending policies can come to grief over built-in conditions.

The bank, having recently sent a mission to investigate the possibility of a loan to Israel, is well aware of the importance that Israelis attach to their eastern trade routes. But Mr Black may decide that this is a case for the right hand not knowing what the left hand is doing.

NATIONALISATION

Wasted Survey

Between the beginning of last October and the end of last July Mr Colin Hurry's associates visited some 2,650,000 of the estimated 3.1 million households in 129 marginal constituencies of Britain. Of these, 314,000 households told him to go jump in a lake, in another 394,000 households nobody was at home, and so just under 2 million answered his questionnaire. One of the most interesting conclusions to be drawn from their answers, although it is carefully discounted in Mr Hurry's somewhat tendentious report, should in fact bring some much-needed cheer to the Labour party. Some 37.4 per cent of those questioned considered themselves to be supporters of Labour, against only 35 per cent who were supporters of the Conservatives. As the Conservative-held seats in the survey were all those in which the Conservatives had a majority of under 4,000 in 1955, while the only Labour-held seats were those with a majority of under 2,000 in 1955, these figures (granted, they were unscientifically unweighted) go some way towards confirming the evidence of last winter's by-elections: throughout most of the period while this survey was in progress, Labour should probably have been regarded as slight favourites to win a general election. Whether this picture has been changed by the recent swing to Conservatism which has been reported by all the public opinion polls is a question which cautious prophets should still regard as being open to debate.

For the outsider, the most heartening feature of Mr Hurry's survey was that over 90 per cent of those questioned had the sense to say that they did not regard nationalisation as a particularly important issue; one could wish that Mr Hurry's sponsors had shown equal sagacity. With similar commonsense, 63½ per cent of those questioned (including a small majority even of Labour supporters) did not want any more nationalisation and only 18.6 per cent actively wanted more of it. The material published this week is broken down according to constituencies only on the answers to this nationalisation question; it provides a few interesting regional variations which will be of some minor value to political analysts at election time. But the main reaction must be one of thwarted irritation: if only some more scientific research team had had the money which Mr Hurry was able to deploy in this survey, how many much more valuable questions could have been asked to help find out what it is, both politically and sociologically, that makes the British people tick.

DOCKERS

Port Pensions

Because of the general absence of wage claims, certain unions and employers have had time in the past few weeks to bargain seriously over fringe benefits. This follows sound American precedents. A special welcome should be given to the news of an offer by the port employers of a pension scheme for dockers. The actual level of the pension—varying from 10s. a week and £100 down for the over-seventies to an eventual £2 a week flat for men now under 25—may not look munificent. But since the payments will come on top of the national insurance retirement pension, and since 68 per cent of the workers in this ageing industry will qualify for retirement and the pension in the next thirty years, the scheme is in fact a generous one.

It may nevertheless prove to be well worth the employers' while. The peculiarity of British docks is that they sprang straight, at Ernie Bevin's command, from a harsh Victorian system of labour relations (based on casual labour) to a pretty fuzzy welfare state one (under which discipline over the men is very largely the responsibility of staid trade union leaders who sit on the dock labour board and can expect to get CBEs when they retire). The advantage of this system in a naturally ungentle industry is that it has helped Britain to avoid most of the extremes of labour racketeering that are a feature of so many wharf unions abroad. The disadvantage is that it leads to a slower tempo of work done.

One of the causes of this slower tempo, in addition to union featherbedding, has been that unloading can sometimes proceed only at a pace set by some frankly decrepit old worthies. Under the dock labour plan, attendance money must be paid to any docker, however old, who reports for work at least six times a week. In consequence, dockers have stayed at work, and in some cases drawn substantial wages, long after they have become incapable of doing heavy work at all quickly. Many of the 5,700 currently registered dockers aged over 65 must come into this category, and even more of the 1,900 aged over 70 certainly do. The net effect of the new pensions scheme is that instead of paying dockers of over 70 about £26,000 a year in attendance money and a lot more in wages for work not properly done, the employers are putting

NO. 6 HOW TO MAKE CERTAIN THAT ONE'S WORDS ARE WINGÉD

Too little attention has been paid to the actual speech of a speech. Too many speakers ignore the infinite capacity of the English language for filling up time in the most eloquent way. Let us end with this list of speech improvements on humdrum ordinary language. These phrases are particularly suitable for the sociologico-politico or the serio-humanchapio.

HUMDRUM ORDINARY	SPEECH EQUIVALENT
I can give you the gen	In default of someone better qualified to accept this privilege, it has fallen to my lot to undertake the task of attempting to tell you something of
Don't listen to the other side	A great deal is heard nowadays . . . I know all of you will be chary of giving too much credence to the easy prophecies of wishful thinking
The other side is no good	None of us must be over eager to find fault but . . . Our opponents are gentlemen of mercurial temperament, and vivid, perhaps over-vivid imagination
Everyone here is nice	Rooted deep in the national character . . . instinctive appreciation of the simple things of life and hatred of all that is false
I am nice myself	This is something which I, personally, find enormously heartening
Stand up everybody on our side	Each one of us, today, is conscious of an urgent need for the spirit of co-operation. It is the fulfilment of our inner want. Urgent want . . . inner need . . . co-operation . . . urgent

Since the speaker (as will be seen in the illustration) is already bubbling with wingéd metaphors, he ought, if he uses this wingéd connecting matter, to succeed in being eloquent, without notice, on nothing whatever.

IN LIFE INTERNATIONAL

NEWS IS ONLY THE BEGINNING!

Influential people read LIFE INTERNATIONAL for its searching examinations of world-wide topics

News of people, places, events is the end product for *many media*. But LIFE INTERNATIONAL *makes* news its point of departure—for the most comprehensive analyses possible.

LIFE INTERNATIONAL draws together all the threads. That is why it is read by people who need to be informed: leading people in business, government and the professions in 120 countries around the world; people who appreciate the unique standard of LIFE's photo-journalism, the stimulating diversity of its full-length features and special issues, the authority of its expert opinions.

Moreover, they are people who not only buy for themselves, but who also influence the buying habits of others. In LIFE INTERNATIONAL's advertising pages they see first-class industrial products and consumer goods—prominently displayed in large pages, beautifully reproduced on quality paper.

To promote *your* business overseas advertise in . . . . .

LIFE INTERNATIONAL

down a lump sum of £190,000 and paying pensions thereafter costing £50,000 a year. It may not be a bad exchange—especially as, in return for the pensions, the employers have asked the unions that new entrants to the docks should in future undergo a medical examination and a period of training, both very reasonable requests.

TRADE UNIONS

Non-Punitive Punishments

WHEN the printing strike was settled, the public was informed that the return to work was to be on the basis of "no victimisation." Behind the scenes, however, the unions had apparently given notice that they maintained the right to exercise internal discipline within their organisations, although with various assurances that no action that they took would be punitive or vindictive or discriminatory. The printing employers (and even, indeed, Lord Birkett) should never have agreed to be associated with such vague terms, since they should have known what was likely to happen.

The usual isolated but shabby stories of union action have now begun to appear. In Yorkshire, union fines of £50 have been imposed on certain apprentices for doing what their employers told them to do, even though the terms of their indentures (to which the union had agreed) forbad them to take any part in an industrial dispute. Perhaps even more depressingly, the National Union of Journalists, which was not directly involved in the dispute, is calling 30 members of one of its Derby chapels before a private union court on September 10th; its assistant general secretary has declared that "there will be a degree of domestic discipline" which will not be "exclusive to Derby—we will take the appropriate steps in other places as opportunity serves." What these last three words presumably mean is that the NUJ will take action only where it judges that its local strength permits it to do so. It looks as if the union is going to practise some strictly non-discriminatory discrimination in its non-punitive punishments.

In the case of the printing unions, all that can be done is to watch whether the promised procedure for appeals is honourably implemented—and to resolve that in all future strikes the power of public opinion will be brought to bear upon employers who may be inclined to sign the principle of "no victimisation" away. The case of the NUJ is different. This body has made considerable efforts to broaden the base of its membership beyond the provincial papers in which its chapels exercise effective power. The proper answer to any fines which it may impose on September 10th will be a clatter of resignations from those of its members who regard journalism as being an occupation with something of a libertarian and professional code.

FISHERIES DISPUTE

Heavy Weather

THE British trawler owners issued a communiqué on the progress of the cod war on Monday, exactly a year after hostilities began around the Iceland twelve-mile limit. The news was not good. British landings from Icelandic waters have fallen by a third, and the price to the housewife will have to go up. Sir Farndale Phillips, the president, could also see new storms ahead. The talks on the little free trade area might mean marketing concessions to the Norwegians; the British fishermen, he said, were being treated like pawns in the game.

He also insisted on the point that the British protest off Iceland was a governmental one, and that the fishermen had been too long under fire in the front line of the publicity campaign. The owners' report makes many of their difficulties perfectly clear. Thus, Fleetwood, which has been hardest hit, has been unable to add modern ships to its fleet for the past two years (Hull added ten and Grimsby seven). Fleetwood also scrapped six of its old coal-burning vessels.

It is a credit to the good sense of the trawler owners that, despite some pressure, they have not repeated the mistake of imposing a landing ban on fish brought by Icelandic trawlers. There seems to be a fair case for helping Fleetwood, in particular, to acquire more modern and economic ships, and rising unemployment—the port is said to be facing its most serious crisis since the depression of the nineteen-thirties—may eventually force the government's and the owners' hands. It may be pertinent to mention that financial aid is to be given to the American fishing industry, to meet Canadian, Icelandic and British competition.

COMMONWEALTH SERVICE

Neither Fish nor Fowl

SOME of the weaknesses of the Commonwealth Relations Office have been probed by the select committee on estimates in its third report for 1958-59 (HMSO, 9s.). The committee finds that there is a dearth of good men at the top so that senior posts, such as the high commissionerships, frequently have to be filled from outside the service. It criticises the organisation for the rigid separation of its departments; officers in the political department never touch trade (which is handled by officials seconded from the Board of Trade) while information is the special province of a third set of experts drawn mostly from the Central Office of Information, the British Council, and Fleet Street. The committee also questions the wisdom of the CRO's reluctance to recruit staff from the dwindling colonial service. It recognises that this policy springs from a desire to avoid antagonising newly emerged states by sending old colonial faces to new high commissions, but suggests that in this respect Whitehall's tenderness for other people's feelings has over-reached itself.

The difficulties about staff have historical origins. The CRO started life in 1947 as an amalgam of the Dominions Office and the rump of the extinguished India Office. The first had never had much glamour; members of the second had, with few exceptions, never served abroad and could not be made to do so. The new department missed the opportunities that were going at the end of the war of attracting good men in search of jobs, and in particular allowed the Foreign Office and other competitors to snap up the best of the old Indian Civil Service.

The Economist

SEPTEMBER 3, 1859

NO DECIMAL COINAGE

"After a much longer delay than was expected, we have received the Report of the Commission on Decimal Coinage, and, as the judgment of the Commissioners is unfavourable, we apprehend that for the present it will be fatal to the scheme . . . So far as paper calculations are concerned, the advantage of a decimal currency is obvious and undisputed. The extent of the advantage is a matter of controversy; but some advantage is admitted to exist by every one . . . With regard to calculations in the head—which are those most common in the market, and are, even in large matters of business, as common as those on paper—it is very much doubted whether a decimal system is not *less* advantageous than our present system . . . But it is remarkable that the Americans, though using a decimal system on paper and in large transactions, in common calculations use shillings and sixpences as means of reckoning, though such *coins* are almost everywhere rare, and, in some States, do not exist . . . The reason which is assigned for the preference of the shilling is its remarkable divisibility by lower numbers. 10 is only divisible by 2 and 5; 12, by 6, 4, 3, and 2. The power of telling easily what is the price of a quarter of a thing, or the third of a thing, when you know the price of the thing itself, is very important in the daily transactions of the ordinary market; and no decimal system can be so easy in this respect as the system which we have . . . The state of our coinage, unfortunately, makes the difficulty of any change to a decimal system very considerable. We have two coins—the penny and the pound,—both excessively important in their respective spheres, both bound up with our ordinary habits, both very difficult to part with. Yet no decimal system will include them both . . . We have either to give up the pound and confuse the rich, or the penny and puzzle the poor. Is either evil counterbalanced by the expected advantage,—the greater facility of decimals in paper calculations? For our own part, we altogether doubt whether it is. We think the evils of the change very great; and we are sure that in the ordinary decimal scheme, which rejects the penny, they would fall on the *mass* of the community who never write their calculations, who could not write them, and who would therefore suffer the certain inconveniences without having any share in the anticipated benefit.

Proconsul to Diplomat

IN the years that followed, the CRO still failed to create a magnetism of its own sufficient to compete with its obvious rivals, the Foreign Office and the Colonial Office. Both these departments attract recruits who feel they have a gift of dealing with people, whether on equal terms, as in embassies abroad, or in the capacity of benevolent superior, as in colonial districts. The CRO, emphasising the vision of a commonwealth based on the circulation of telegrams, seemed to offer far less scope for initiative and influence.

Some reorganisation of the commonwealth service is certainly overdue. But the problem is not simply an organisational one; there could be more thinking about the place of the service in the structure of British government. A spirited commonwealth service could have a vital function in such activities as providing technical and other aid, spreading information and promoting British trade. But as time goes on it becomes clearer that some of the posts are essentially diplomatic. The High Commissioner in Delhi, for example, has a job that is more important than that of most ambassadors, and there are strong arguments for his being, as a rule, a career diplomat. There is not much logic in having a diplomat in, say, Addis Ababa and not in Accra. It is even possible that some day the Foreign Office may make a case for formally taking over most of the diplomatic functions that the CRO is responsible for at present.

MEDICAL SERVICES

Doctors in the Forces

THE small band of MPs on sub-committee D of the select committee on estimates deserve congratulations for the moderate and restrained report which they have submitted on the medical services of the armed forces. This is a subject on which politicians could very easily have been tempted to play for a *succès de scandale.*

Under present establishments, servicemen and their dependants are treated as if they require between 2½ and 3½ times as many doctors as an equivalent number of civilians would do. In service hospitals the occupancy of beds is noticeably lower (the Admiralty consider an acute hospital with 70 per cent occupancy to be full, whereas the Ministry of Health accept a figure of about 85 per cent) and costs are certainly higher than in civilian hospitals; how much higher is difficult to estimate because costing at service hospitals "was abandoned at the outbreak of war, and the army and the RAF have not re-introduced it" (the navy did re-introduce it eleven years ago, but has since given up).

To the layman most of the arguments for integrating doctors in the three services into a single inter-service medical branch—with consequent administrative economies and greater flexibility in the deployment of specialists, research workers and temporarily idle doctors—sound convincing; and most of the arguments against integration—the "differing tasks, functions and organisation of each service," the "loyalty of medical and dental officers to their own service and consequent *esprit de corps*"—sound like unmitigated military guff. But the select committee shows itself sensibly cognisant of the fact that two inquiries in the last 37 years, which had more time than itself for detailed examination, nevertheless reported against integration. Both of them did, however, favour closer co-ordination; and co-ordination plainly is not being carried out.

The select committee's own opinion is that the services should adopt integration as their long-term objective, along the trail which the Canadian Forces Medical Service has recently blazed. But, more immediately and thus more important, it says that there should be a freer exchange among the services of medical officers working in service hospitals, that the medical services co-ordinating committee should be enlarged by the co-option of two or three civilian doctors of high standing, that costing in service hospitals should be re-introduced, and that there should be a thorough investigation into co-operation between the national health service and the armed services in utilisation of hospital beds; finally, the armed services should be ahead of, not behind, the rest of the country in the consideration it gives to such matters as the practicability of employing semi-trained dental ancillaries and the recruitment of women doctors. The service departments will deserve to be unmercifully chivvied if they stonewall against this report.

LETTERS

Rostow on Growth

SIR—Professor Rostow's fascinating sketch of the economic growth of modern nations might in one respect mislead readers less wary than himself, by the very natural use of expressions which are inevitably "loaded." No doubt the words "take-off" and "maturity" are used in a purely economic sense; but the first suggests exhilaration, and the second ripeness, even wisdom. In real life, having taken off, we may yet be taken in, and to be ripe is in nature a prelude to becoming rotten. Socially, these are not necessary results; but one implied contract between the traditional and the mature society may be questioned. Is "non-productive" spending less conspicuous in the latter than in the former (except by being more widespread)? If surplus income in the former was "largely spent . . . on religious feasts and ceremonies, monuments, wars, high living for the land-owning minority," is not much of it spent in the latter on similar things (omitting the adjectives "religious" and "land-owning")? The many individuals who now enjoy some surplus income might spend it more wisely if they were at least aware of earlier attitudes towards spending on the part of the few. Professor Rostow would be the last to conclude that the culture as well as the economics of any age before the take-off must now be regarded as totally irrelevant to the mature society.

Unfortunately, Sir, anyone who *both* has a surplus income *and* most lacks tradition in culture is not likely to be among your readers.—Yours faithfully,

Trinity Hall, Cambridge C. W. CRAWLEY

SIR—If Professor Rostow's work can fairly be judged by the interesting excerpts you have published, his "Non-Communist Manifesto" suffers from a serious weakness on the sociological side. The successive "stages of growth" in his rather abstract scheme are only very casually linked to social changes, though he deserves praise for having stressed the importance of an integrated theory which does not leave the economic mechanism suspended *in vacuo.* Unfortunately it is not enough to label each successive economic stage a "society"; one must also indicate in what respect it really constitutes a social and cultural whole. Whatever the shortcomings of the Marxian scheme, it does just that, e.g., by making the *bourgeoisie* responsible for the industrial revolution and even giving it credit for transforming the world (see the relevant passages of the Communist Manifesto); whereas Professor Rostow leaves us in the dark about the social forces which have brought us to the threshold of the promised land of "high mass consumption," and will be needed to sustain it. Talk about millions more "suburbanites" and "consumers" is not enough. One would also like to know where the managers, the intellectuals, and the workers come in, what social place is likely to be held by technicians, whether there will be any farmers left, etc. Again, in relation to the USSR the author seems unaware that the technical intelligentsia is at once the hard core of the regime and the main threat to the continued hegemony of the party apparatus. If one wants to direct one's appeal to this stratum, one must first of all note its existence and identify its place in society.

It may be said that this is unfair criticism of what is after all primarily an exercise in economic history, but a writer who offers an alternative to the Marxian scheme cannot rest content with anything short of a fusion of history, sociology, and economics. Some such programme is sketched out in Professor Rostow's lectures, but the synthesis he suggests does not differ markedly from the current American emphasis on "countervailing forces," all operating within the framework of an economic system propelled by what Marxists call accumulation, and what the author prefers to describe as compound interest. Apart from technology, the only major historical factor in this simplified scheme appears to be nationalism. No mention is made of the totalitarian integration which surely represents something qualitatively different from mere dictatorship; while the adequacy of liberalism in the new industrial society in the West is apparently taken for granted. In short, we are offered the skeleton of a neo-liberal theory, but no flesh to put on the bones.—Yours faithfully,

G. L. ARNOLD

London, NW3

SIR—Before the present balance of atomic power was achieved between the Soviet Union and the Nato powers, it was often suggested in the West that a change of regime in the USSR could only be a cataclysmic one. Inevitably, as the prospects of violent upheaval receded, more and more hopes were pinned on the "natural" evolution of communist totalitarianism into a more humane system.

Professor Rostow's excursion into the philosophy of history is the latest and certainly the most persuasive attempt to outline the possible mechanics and dynamics of this great western hope. Unfortunately his non-communist manifesto is marred by a rather incongruous conclusion. Is it always true that when a country reaches the stage of high industrial development, it is faced with a choice between high mass consumption and assertiveness on the world scene? It seems to me that this is an unwarranted generalisation.

If we were to apply it to the Soviet Union, we could only conclude that a substantial increase in the USSR's standards of living is bound to mollify the Kremlin's aggressiveness *vis-à-vis* the western powers. This is of course a very respectable *non sequitur* endorsed by such eminent people as Sir Winston Churchill. In fact America has demonstrated that a great well-endowed country's ability to maintain high mass consumption and its ability to be at the same time an assertive military world power are not incompatible. This compatability is bound to become evident also in the USSR in the not so distant future. What appeared hitherto as an ineluctable choice between cannons and butter may not bedevil the Kremlin for much longer: the Soviet Union may well be able to produce both in adequate quantities. It is probably true that the first steps towards greater affluence will only increase the appetite of the masses but it does not follow that by throwing a bone or two to the people, the communist machine will lose control or crumble. The lessons of Poznan and Budapest have sunk very deep. Nor does it follow that high mass consumption in the Soviet Union will ever persuade her rulers to abandon the reality of the communist "old time religion of world domination" or relegate it to rhetorical status. Hitler succeeded in winning the blind allegiance of the Germans by making them aware of their apparent interest in the expansion of the Third Reich. Through this technique of collective complicity, he got more popular backing than many a democratic prime minister enjoys today. A variant of the same technique is now used by the Kremlin.

The popularity of the Soviet regime (and of its aggressive foreign policy) can only increase with each "concession" made to the consumers. Mr K is quite able "to hold the dam" but he also knows when to release the steady flow of incentives required by the Soviet economy. The day when every second family in the USSR will have an "American home" is not all that remote, but even then will the Kremlin hesitate to engineer a little regional aggression when expedient or crush another satellite revolt? In the last analysis, will the TV set, the car, the new flat and all the other "presents" of the party to the people, stop many Soviet soldiers from firing? Will they stop Soviet agents from working for communist world hegemony? They may well have the opposite effect.—Yours faithfully,

LIONEL BLOCH

London, NW3

Grimmer Reckoning For Coal?

Sir—When details were announced of the new National Coal Board Plan, I waited with much interest to read what your comment on it would be. You summarise the board's proposals succinctly in your issue of August 22nd. There are, however, only two words of comment by you, which appear in the heading: "Grimmer Reckoning."

I am doubtful whether the situation in the coal industry warrants the word grim, let alone being described as grimmer. Under the new plan, the NCB expect supply to equal demand next year; in your issue of May 30th you thought supply and demand might not be equated till 1961, but you expected only 4 million tons more being put to stock in 1960. According to the NCB plan, the objective of equating supply to demand is to be achieved by closing down 170 pits for normal reasons, these closures having been agreed nearly 10 years ago, and by closing down a further 35 to 70 pits for economical reasons, which represents a very marked slowing down in the rate of closures for the sake of economy.

Finally, the new NCB plan expects the labour force to decline by only 35,000 to 85,000 over the next 5 years or 6 years, which is a relatively small reduction when one considers that it is only recently that the NCB were recruiting 60,000 men a year simply to make good their losses through wastage, whilst the labour force decreased in number by some 20,000 in the first six months of this year.

It does seem to me, therefore, that unless the new plan is remarkably wide of the mark, the board will be able to equate supply and demand in the fairly near future, and, moreover, with only minor dislocation either of mines or men. The only point which is not covered by the new plan is how the existing stocks are to be disposed of, but one would have thought that if the NCB heeded the advice contained in your issue of May 30th it should be possible to dispose of these at cut prices to new customers over the next few years. It is surely better to do this than to use steamrollers to crush down stocks of large coal to prevent spontaneous combustion during the time they may lie untouched.—Yours faithfully,

A. R. C. ARBUTHNOT

London, EC2

The German Deadlock

Sir—I asked a prominent German journalist what he thought of your leading article on this subject. At first he shrugged it off as "a piece of typical English wishful thinking combined with shameful appeasement." When I insisted on a serious answer to a hypothetical possibility, he said that an overriding of German legitimate interests by America would provoke an outburst of despair among his countrymen—"and despair is the worst adviser." Russian policy being guided by Leninish dogma there could of course be no question of any of the satellite regimes, including the East Germans, being deprived of their *raison d'être.* Therefore the result of "putting into reverse" the present trend of relations between the "two German states" could only be the acceptance of Russian terms for reunification. A coalition government of a confederated Germany would, of course, follow the well-known pattern of coalitions with communists in what are now all satellites. I wonder if that is what *The Economist* has in mind. —Yours faithfully,

A. ROMER

London, EC4

BOOKS

The Economic Gymnasium

Economics for Pleasure

By G. L. S. Shackle.
Cambridge University Press. 279 pages. 21s.

THIS is a most refreshing book ; and not the least refreshing thing about it is the aim stated in its title. Intellectual activity is pleasurable. It is also necessary and useful ; but, for the moment, never mind about that. Here, says Professor Shackle in effect, is a satisfying arena or gymnasium ; come and enjoy yourself, stretch your muscles, give yourself a brisk workout ; never mind if you are not equipped for the mathematical flying trapeze or high wire—there is plenty of fun to be had at ground level. Ready ? Here we go.

And here, indeed, we go, very enjoyably indeed, through value, production, income, distribution, employment, finance, government and foreign trade. Professor Shackle may not have quite the heaven-sent lightness and sureness of touch, in his role of coach or trainer, of Sir Dennis Robertson, but his gifts are of the same kind ; an unerring eye for the essential crux, a capacity to analyse and organise the approach to each such crux as it comes, a command of lucid and civilised English, a nice taste in homely and vivid analogy. Under his guidance, the reader finds himself performing feats of understanding as far beyond those demanded by the ordinary " general public " introduction to economics as chess is beyond halma ; an exhilarating if strenuous experience.

And yet. . . . who, one wonders, are to be the readers ? They have got, in the first place, to have a pretty high IQ ; it is no use pretending that the first-come man-in-the-street is going to be able to go through this set of hoops. They have got, too, to be willing to take their economics neat, dispensing with all the usual institutional, historical and gazetteer-stuff, the applications to current experience, which demonstrate and exemplify the real-life relevance of what they are learning. How many people—since this is the harassed twentieth century, not the leisurely seventeenth or eighteenth—have the necessary combination of cultivated detachment and spare energy ? They must not be the professional neophytes to whom the usual introduction to pure theory is addressed ; for these, the self-denying ordinance, which forbids even the most elementary, fifth-form resort to mathematics and diagrams, is disqualifyingly inappropriate.

One may suspect, nevertheless, that the professionals will provide " Economics for Pleasure " with its largest audience. Read in parallel with the more normal introduction, it could help the non-mathematically minded over many forbidding hurdles. Treated as a refresher-course, as a means of catching up with the march of modern theory, it will enable numbers of what one might call ex-economists to link what they once knew about analysis with recent developments—not least those for which Professor Shackle himself is responsible. This rather specialised usefulness may be far from the general appeal of Professor Shackle's intention. But in one respect at least that intention is fulfilled. Whatever the reader's primary object, he can be sure of getting a lot of incidental pleasure from its pursuit.

Domesday and After

Rural England 1086-1135 : *A Study of Social and Agrarian Conditions.*

By Reginald Lennard.
Oxford University Press. 415 pages. 45s.

IT is just over sixty years since Maitland published his " Domesday Book and Beyond," in which his aim was to proceed from the known to the unknown, and to press back our knowledge of early English agrarian history from the description of 1086 to the dark centuries beyond. His volume concluded on a note of hope :

> There is every reason why the explorers of ancient English history should be hopeful. We are beginning to learn that there are intricate problems to be solved and yet that they are not insoluble. . . . Above all, by slow degrees the thoughts of our forefathers, their common thoughts about common things, will have become thinkable once more.

The years since these words were written have gone far to shatter the optimism that inspired them. " Domesday Book and Beyond " has proved a dead-end rather than a new beginning ; its most brilliant generalisations have been shown to be false or at least curiously unstimulating. Maitland wrote in the full flood of discoveries about Domesday Book, and with the confidence that they would continue ; but they have not continued, and in many ways the England which it purports to describe seems more unknown, and even unknowable, than it did to Maitland ; and as for the knowledge of " common thoughts about common things," it seems more than ever unobtainable.

Mr Lennard's book is in a sense a new beginning. It is significant that he seldom mentions Maitland's book, and it would be hard to think of two minds with less in common. Mr Lennard has no itch for generalisation. He is content to observe, to count, and to record ; he takes pleasure in qualifying statements that might seem to others unexceptionable ; he is more ready to suggest doubts than to draw conclusions ; he is glad to think that things are always more complicated than they appear to be in the records. He seems almost to rejoice in the frustrations of an intractable subject. It is a rare and salutary state of mind.

Most historians like to emphasise change, and to discern large and significant tendencies in this change. But what emerges from Mr Lennard's study is that, in a primitive agrarian society such as that of England in the eleventh and twelfth centuries, things change very slowly and for obscure reasons. Archaic customs and temporary expedients lie side by side and it is hard to know to which class any particular fact is to be assigned. Mr Lennard never allows the reader to think more highly of his knowledge than he ought to think. The result is an austere but, in an unobtrusive way, a stimulating study of every aspect of rural England in the first two generations after the Conquest—except in so far as trade is concerned, about which almost nothing is said. Everything in this book has the air of having been long and deeply pondered. It embodies the results of a lifetime of quiet, meticulous work. Here and there Mr Lennard defers perhaps too readily to the judgments of previous scholars, but for the most part he has himself covered every inch of the ground, as it were on foot. He writes with the familiarity of one who has lived with his material, and what he says can be trusted unreservedly. In this field there is no quality which is more entirely necessary.

The Suffragettes

Unshackled : *The Story of How We Won the Vote.*

By Christabel Pankhurst. Edited by Lord Pethick-Lawrence of Peaslake.
Hutchinson. 312 pages. 25s.

THE suffragettes of fifty years ago pioneered the tactics now being pursued by the League of Empire Loyalists. But political rights for women was an easier aim than putting the British Empire together again. It is hard today to see why there should have been so much fuss on either side of the suffrage issue. The really significant stages in female emancipation—changes in the property laws, admission to universities and so on—had preceded the granting of political rights and did not depend on having women MPs in Westminster or male competition for female votes. On the other hand, the House of Commons had voted for female suffrage by a substantial majority as early as 1897, showing that there was no great public prejudice against it. The obstacle that made the suffragettes' militancy appear necessary was the incomprehensible stubbornness of Asquith. Women politicians and the Irish were the two great nuisances of his long and distinguished career. They were alike in that once their demands were met they would cease to matter. It is strange that Asquith, who saw this so clearly in the case of the Irish, failed to see it in the case of the women. It is stranger still that since female suffrage was granted, the only woman politician with a touch of genius should have been Asquith's own daughter and that she should always have been rejected by the voters.

Dame Christabel's posthumous memoir adds nothing of historical importance to the accounts already published by her sister Sylvia and by Mr Roger Fulford in his excellent " Votes for Women." But Lord Pethick-Lawrence was right to publish it, as well as generous, since it was Dame Christabel's relentless militancy that created the famous breach between the Pankhursts and the Pethick-Lawrences. Dame Christabel, whose full version of this episode would have been valuable, treats it airily like one of Mr Macmillan's " little local difficulties." But her account of " Mother " and her movement has simplicity and charm. As a human document it is well worthwhile.

These respectable ladies got a great kick out of behaving—for a cause—like the criminal classes. One remembers the expression of beatific nostalgia with which Lord Pethick-Lawrence's present wife (who was on the Pankhursts' side of the great cleavage) recently described on television how she slipped her " bag of arson stuff " into a Cabinet Minister's residence. But it is right to be reminded of the ladies' bravery when captured and forcibly fed.

Was it all worth it? It is hard to say. The women were given the vote more because of their war service than because of their pre-war disorderliness. Since then they have not done anything very spectacular with it. The first woman MP to be elected stayed away from Westminster, but then she was also Irish. And since the foundations of the welfare state were laid by those targets of the suffragettes' resentment, Lloyd George and Sir Winston Churchill, it seems a bit far-fetched to claim, as some arch-individualists have done, that this expression of modern British " softness " is attributable to " feminine democracy."

For the Technologist

Technical Colleges and Colleges of Further Education

By Barbara Price.
Batsford. 160 pages. 75s.

Sandwich Courses : *For Training Technologists and Technicians*

By P. F. R. Venables.
Max Parrish. 160 pages. 18s.

THESE two books together deal with what one might call the soul and the body of the new technical education on which so much money and thought is rightly being lavished. The core of technical education in future is likely to be the sandwich course: not the evening study, which was the more usual approach in the interwar period, or even the full-time course, which is more appropriate to the university, though the Colleges of Advanced Technology make, of course, considerable provision for the latter (and in some subjects it is indispensable). But both educators and industrialists are now at one in thinking that the right balance is most often achieved by trainee and apprenticeship schemes in industry alternating with periods of fair length in technical colleges on a wholetime basis. Such courses may cover a period of four to five years, and lead to the Dip. Tech. (and, further, via CAT or university for the outstanding pupil, to the Membership of the College of Technology). Such courses bring the technical colleges and the business firms together in a partnership requiring give and take from each ; they bring the staff of a college closer to industrial developments ; and they are better adapted to the exacting demands placed nowadays on a student of a technological subject.

Mr Venables deals with the practicalities of such courses: how to start, staff, and run them. It is a book for the staff of the new colleges, and for the (unusually) thoughtful industrialist who will sample the results. It does not venture very deeply into the wider question of educating the rising technocrat in the full sense, but Mr Venables is here on the side of the angels. His main concern is the most immediate one: which is how to make the industrialist —and not simply the industrialist at the lowest level of the personnel department—genuinely interested in technical education, prepared to serve on governing bodies, provide material and experience to the curricula, and to be (as he must be) moderator and assessor of the standards achieved. To these pragmatic men in particular this perfectly pragmatic work may be as confidently commended as a treatise on new petrol-cracking techniques.

Miss Price's book deals with the architecture and layout of the modern technical college (with a glance at its historical development) and should provide a counterpoint to Mr Venables's remarks on the need for publicity for technical education. The industrialist is not impressed with the old type of college ; but he is impressed by a college that has research and administrative facilities which measure up to his own. In fact, modernity and efficiency are to the technical college what tradition and atmosphere are to the university, even in red brick. Miss Price provides drawings, plans and elevations of some of the best examples of modern colleges (including some for further education—the " county colleges " of a more spacious future) which should spur a lot of civic pride. Once again it is an eminently practical treatise, down to the last locker. It will not, however, do county architects any harm to read Mr Venables as well as to study Miss Price before they draw plans for their own colleges ; and let them always remember that the technical college of today may be the university of tomorrow. There must be big windows to let in light, but space also for future departments of arts and humane studies to let in sweetness too.

Exploration of a Poet

Coleridge the Visionary

By J. B. Beer.
Chatto and Windus. 367 pages. 30s.

SEEN from a biographical angle, Coleridge is a pathetic, frustrated, defeated figure ; a man whose enormous potentialities had dwindled sadly away before his death. His literary reputation, however, is very much alive. His was a seminal mind, which his contemporaries could not wholly appreciate, but which is more available to us, who have at our disposal not only the range of his published works but also his letters and notebooks. A great deal of scholarship and critical attention have been devoted to Coleridge during the past twenty or thirty years, and Mr Beer's book should take its place in the forefront of these studies. It is an exploration of the poet's development during the period that culminated in the great visionary poems, The Ancient Mariner, Christabel and Kubla Khan. Much of the book is devoted to a close examination of these poems, and a demonstration of the complex pattern of ideas that can be discerned in them.

It is perhaps disputable whether Coleridge can strictly be called a visionary in the sense that Blake was one ; but that he was profoundly interested in a visionary kind of speculation is abundantly clear. Even at school he was reading the neoplatonists ; and Mr Beer is as thorough in his investigation of Coleridge's reading habits as Professor Lowes was in " The Road to Xanadu." His sympathy with Coleridge's speculative and mythologising tendencies, however, is far greater than was Lowes's, and his unravelling of the visionary poems is accomplished by reference to the neoplatonic and Egyptian symbolism with which Coleridge was so familiar.

Although there are times when we may become wearied with this painstaking and ingenious exposition of poems that, even to the most unsophisticated reader, are at first sight beautiful, marvellous and enchanting, this does not at all detract from the debt which we owe to Mr Beer. His demonstration that Kubla Khan is an intricate web of highly significant symbols does not lessen the impact of the poem itself, but gives to those who care to follow his clues the chance to penetrate more deeply into the mind of Coleridge. The wealth and profundity of that mind have not yet been fully explored, and the undertaking would be beyond the resources of any one critic. Of Coleridge himself, Mr Beer says :

We see a man who tried to take as his sphere all human experience, whether in the world of measurable sense-perception or in the universe of the imagination, and to harmonise it into a single pattern. In this man, the shaping spirit and the inquiring spirit were equally strong, and he was never happier than when exercising both to the limit of their powers.

During the *annus mirabilis* in which the great poems were produced, Coleridge was a happy man, at the summit of his powers. Mr Beer's researches have charted the most fascinating region of the poet's mind with imaginative skill and scholarship.

From Peace to War

History of the Second World War: *Factories and Plant*

By William Hornby.
Her Majesty's Stationery Office. 421 pages. 37s. 6d.

After the first world war it was clear that war had become a conflict of machines and that the capacity to wage war was directly related to the capacity to manufacture the engines of war. The present volume is the last in the series of official histories of war production and it deals with the creation of capacity for arms production, with the provision of capital assets, with factories and plant. The manufacture of arms for use on the sea, on land and in the air raised different if parallel problems, and these are dealt with under their departments of Admiralty, Supply and Aircraft Production with special consideration of the royal ordnance factories and a general survey of the common problem of machine tools.

The lessons learned from the shortage of factory capacity in the first world war had not been ignored in planning before the second world war broke out. It was on the proposals of the Weir Committee, which reported in 1934, and earlier similar proposals for the aircraft industry, that the expansion of capacity from 1936 onwards was founded. Outside firms were brought into armaments production and shadow industries were created.

In the second world war the Admiralty made little demand on new capacity, perhaps because of the volume of idle capacity during the two wars. The royal dockyards, the earliest industrial undertakings under state administration, provided an essential pool of trained expert personnel, which permitted the use of civilian capacity for wartime needs. The demand for tank landing craft was met largely by groups of engineering firms, and in shipping, as in all other armaments production, it was by spreading out into the broad engineering industry that the vast expansion was made possible.

For military arms, however, a great deal of new capacity was needed. The royal ordnance factories employed only about 8,000 workers, but these factories provided the technical basis for expansion during the war period, and 40 new factories, employing over 300,000, were built. Even so, large sections of arms production were carried on outside the state factories, for the Ministry of Supply also sponsored over 162 agency factories and gave capital assistance to contractors. Altogether, a total of 1½ million people were employed on munitions production.

For aircraft production the cost and pattern were similar. There were no government managed factories similar to the royal ordnance factories, but expenditure on government agency factories and contractors expanded the aircraft industry from an employment of 60,000 in 1936 to a wartime peak of more than 1½ million in 1944, which made the aircraft industry the largest sector of war production. A very large proportion of the factories that made the wartime record delivery of aircraft were state owned but managed by aircraft firms. But the vast expansion of production was only possible by bringing in as sub-contractors thousands of firms of all types. This history also reminds us that the change from wood to metal for aircraft was inadequately appreciated even in the spring of 1939 and that in consequence much of the expansion of the basic light alloy industry had to be made in wartime.

The account of the strategic location of factories shows that surveys were academic, for location was dictated by economic and industrial factors rather than by strategy. The proximity of management in the early days and later on of labour were the predominant considerations.

The tables are the least satisfactory part of this volume. In the Admiralty narrative they are so qualified as to give little enlightenment. In the chapters on the royal ordnance and agency factories there are careless errors; thus on page 101 the cost per worker is given as the cost per 1,000 workers and on page 159 the cost of factories is given as £ millions instead of £ thousands. In Chapter XI the imports and exports of machine tools are given in four or five overlapping tables with obvious arithmetical errors.

This history of the provision of factories and their conversion from peace to war will provide material for future study, but perhaps it will find its most interested readers among the many people who are engaged in some part of war production and who, probably for the first time, may now see how vast was the production capacity that had to be created, equipped and maintained. The general reader will be additionally grateful for the short history of the armaments industry over the past century with its recurrent insoluble problem of fluctuating demand. It is this extreme variation from insatiable demand to a complete lack of requirements, with a concurrent need to maintain production capacity and development, that has led to so much dependence on state factories and royal dockyards, which, for conventional weapons, persists to the present day.

Family Concern

A Liverpool Merchant House

By A. H. John.
Allen and Unwin. 197 pages. 21s.

Nothing is more promising for a historian than the chance to study some side of the operations of those remarkable groups of nonconformist families who dominated the economic and social life of industrial Britain in the nineteenth century. Dr John has certainly been presented with an outstanding opportunity, for the first half of his book is much concerned with the work of Charles Booth, one of the most eminent even in that company of the elect.

The firm of Alfred Booth and Company was founded just under a century ago, beginning as a typical merchant house of the time, dealing in leather with the United States. Soon the Booths were attracted by the experiments in high pressure steam engines of a fellow Unitarian, Alfred Holt, and eventually started up a shipping business, trading with ports in Northern Brazil. In 1881 the first Booth Steamship Co. was formed, and the parent firm swept to a peak of success in the last two decades to 1914 through a great rise in demand for rubber from Brazil and also as a result of new methods for tanning in its leather manufacturing concerns established at home and in the United States. During the interwar years both these trades declined and by 1946 had been entirely disposed of. Meanwhile the firm had moved into civil engineering largely through the Unit Construction Co. acquired from Crittalls in 1919. This is now its major interest along with a revived interest in the old occupation of supplying raw stock to the American light leather industry and the manufacture of glue and leather at home.

But Dr John has thrown his chance away. It is an unusually varied story and one wonders how he has managed to make it so dull. The best chapters—on labour relations and the financial structure of the firm—come at the end but generally, though the work is conscientious enough, his treatment is unimaginative. Things are not made any better either by mediocre binding and a poor collection of illustrations. The basic fault is an absence of the critical spirit. Dr John is content to state and accept the firm's actions and asks himself too few significant questions. Major issues such as the use of pooling agreements and conferences are skated over: the diesel-steam controversy in shipping is not mentioned though it is noticeable that the Booths made no use at all of motor ships.

There is, too, a wider point. To diversify activities so widely may be a safe way of running a company, but is it the most efficient way? Could they have made shipping more profitable and continued in business after the second world war if more of their energies had been put in that direction? Dr John describes the shipping side of the firm in 1914 as a "triumph of conservative financing," but what of its fate in the

next thirty years? He writes somewhat nostalgically of "the pleasant features of the old industrial way," but how much have they contributed to Britain's relative industrial decline? Certainly the more brilliant nonconformist business men like Chamberlain had no time for them.

On the other hand, it is a pity that the Unit Construction Company is so inadequately discussed, for here the firm seems to have made striking progress in a traditionally highly conservative industry. The book should be bristling with vital issues of this kind, but they lie unrecognised under the mass of detail.

Humani Nihil Alienum

A History of Science Volume II: *Hellenistic Science and Culture in the Last Three Centuries BC.*

By George Sarton.
Harvard University Press. London: *Oxford University Press.* 580 pages. 63s.

ONLY the late George Sarton himself could adequately review this book, for in range and conception it is founded on preliminary achievements entirely his own and on knowledge of which he was sole master. Sarton gave the history of science its modern form, and though there are now giants in the field (Charles Singer, Otto Neugebauer), he alone possessed the largeness of view and royal ease of judgment of a founder.

This is the second of a proposed eight-volume "History of Science" and the last of Sarton's monumental works. It deals with that brilliant and crucial period in which Greece and the Orient mingled in the east while Rome advanced toward world power in the west. In the geography of the mind, Egypt lay at the centre; there, Roman, Hellenic, Oriental and native energies interacted to produce some of the richest moments in the entire history of science. And this process of interaction is Sarton's essential theme. The conquests of Alexander and of Rome broke down the ancient barriers of language and distance. They threw men into a crucible of change. Such fusion is vital to the progress of scientific ideas. In matters of science, nationalism and racial prejudice are dangerous absurdities.

The Hellenistic period was a golden age of mathematics, the like of which did not occur again until the seventeenth century (when many of the problems it raised were first solved). Euclid, Archimedes, Apollonios and Conon of Samos defined much of the essential terrain of geometry, spherical geometry and trigonometry. Without calculus, they achieved uncanny solutions to many of the classical problems of line and area. Archimedes's speculations reached forward into frontier reaches of the modern theory of numbers. Concurrently, it was a great age for the astronomer. One cannot read unmoved Archimedes's statement of Aristarchos of Samos's heliocentric theory. Here, before 216 BC, are the root propositions to which Copernicus and Kepler were to return after laborious centuries.

In every domain, men seemed to take inventory of creation. Hipparchos established one of the earliest major catalogues of the stars and Strabon set down a geography of the world. Asclepiades of Bithynia advanced further into the atlas of the human body and the Librarians of Alexandria and Pergamon had the brilliant insight that language too has its anatomy and evolution. It was a time of which Sir Charles Snow would approve, for in it pure science and technology were closely allied. Archimedes and Vitruvius knew that the progress of theory was inseparable from that of the instruments of observation and measurement.

But this book surveys far more than the history of science. It is a history of Hellenistic culture in the broadest sense. There are chapters on Horace, Virgil and Ovid; discussions of Judaism after the destruction of the Temple; critical observations on the sculpture, architecture and painting of the period. And for each topic there is a most fascinating postscript: the history of how the relevant text, scientific theory or work of art came down to modern times. Sarton is unrivalled as a chronicler of those complex, often tenuous bridges of papyrus, Islamic translation or modern archaeology whereby civilisation transmits its always imperilled heritage.

"The whole past and the whole world are alive in my heart," writes Sarton. Beautifully put, but would any other modern historian have quite the assurance and the naiveté to say it? For there is in this *magnum opus* a deliberate simplicity of tone. Sometimes there is a point of late Edwardian slang: Cleopatra "could not swing" Octavian. Sometimes, there is a touch of naive prejudice: Ovid's work is mere tinsel and the modern interest in the Metamorphoses is "curious" and "perverse." Even the arrangement of the material is faintly Victorian: a short biography is given of each important figure, his work is summarised and the author delivers appropriate judgment. Thus, the book is at times meant for reference rather than sustained reading.

But such minor cavils do nothing to mar the splendour of the result. In final salute to one of its greatest authors, moreover, the Harvard Press has produced a book that is magnificently illustrated and a sheer joy to handle.

OTHER BOOKS

Rostow on Growth
In our issue of August 15, 1959, page 409, we stated that Professor Rostow's lectures on growth would be published later this year by the Cambridge University Press. We have since learned that it is hoped to publish the book some time during the first half of next year.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editoral staff in London.

Slow March For Negroes

WASHINGTON, DC

SEPTEMBER in America is the month when lawns turn brown and legislation withers on the vine. Each year Congress, parboiled by Washington's summer, goes home before it has done all those things which it ought to have done. Cynics have suggested that the founding fathers, those good conservatives, put the country's capital where they did because they realised that there is nothing like steamy heat to deter legislators from passing too many laws.

This year is no exception. True, Congress looks like sitting unusually late. The hopeful idea that it could adjourn before Mr Khrushchev arrives on September 15th—thus avoiding the awful choice between either officially welcoming him or officially ignoring him—has been virtually abandoned. Mr Lyndon Johnson, the Democratic leader in the Senate, now thinks that the session may last until the beginning of October. But a large part of the remaining time is likely to be occupied in working out Congress's differences with the Administration over foreign aid, the housing Bill and funds for building roads and improving rivers and harbours. As a result, a number of measures on which a betting man would confidently have put his money last January will probably never reach the finishing post.

One of the most important of these is the Civil Rights Bill, to remedy injustices to Negroes, which in different forms President Eisenhower, Senator Johnson and the liberals in Congress were all calling for at the beginning of the year. If the session yields no legislation in this field, the chief fault will lie with the House of Representatives, or rather with the conservative coalition which has dominated it in the last few weeks. A fairly innocuous Bill has been drawn up, but it is now being quietly done to death by the Rules Committee, through which all legislation has to pass on its way to the floor of the House, by the usual process of sitting upon the Bill until it stops breathing. Rumour has it that Mr Charles Halleck, the Republican leader in the House, is abetting the Democrats from the South in return for their support of the stiff labour reform measure which was passed by the conservative coalition last month. Mr Halleck, with his hand pressed to his heart, denies this but his denial would be more convincing if he used his hand to stir up the immobile Republicans on the Rules Committee.

Thus the only hope of action this year lies in the Senate. There the Judiciary Committee, with Senator Eastland of Mississippi in the chair, provides the blockage; Senator Eastland's special contribution to the technique of obstruction consists of letting his fellow Southerners propose amendments, allowing the discussion to ramble on all day, and then adjourning. But in the Senate the diehards have to contend with Senator Johnson, that unique machine for imparting energy to an inert mass. If Mr Johnson can prevail on the committee, as he may yet do, to pass the bare bones of a Bill extending the life of the Civil Rights Commission, which would otherwise expire in November, and requiring local registrars to preserve voting records for the commission's inspection, it might then be possible to add other provisions on the floor of the Senate. If this move fails, the liberals will try to bypass the committee by attaching their proposals to some other Bill, on a different subject, which the South wants.

In either case, the result of all this manœuvring is likely to be fairly minimal. Mr Johnson is said to be seeking only a couple of minor reforms over and above the two items affecting the Civil Rights Commission. One would provide education for servicemen's children in parts of the South which close down their schools rather than submit to racial integration; the other is designed to deter the semi-lunatic segregationists who turn to dynamite when words fail them. Neither of these palliatives is likely to get a single extra coloured child into a white school.

Even Senator Johnson's own pet proposal for a conciliation service to mediate between the opposing sides has now been silently buried by its author. Two measures which might really have hastened the end of segregation in the schools—by empowering the Justice Department to initiate law suits on behalf of Negro parents, and by giving financial aid to communities willing to mix the races in their schools—have apparently been killed by Senator Johnson's frosty disapproval.

Even if some modest Bill passes the Senate, this is still only one lap of the congressional obstacle race. The single item which might conceivably be passed by the House of Representatives as well as by the Senate at this session is the prolongation of the life of the Civil Rights Commission. The rest will have to wait until next year for the House's consideration. Apparently the reformers hope that the Republicans' loyalty to their conservative allies from the South will waver as election time approaches. But even if this happens, the resulting measure will not only fall substantially short of what the liberals in Congress wanted (which was to be expected); it is also likely to be less than either President Eisenhower or Senator Johnson himself, that mildest of reformers, originally sought.

ALL this represents a major success for the South. By allowing a few young Negroes to enter white schools in a few states, it has already dimmed the ardour for legislation in many northern eyes. But the figures show how little this token compliance with the Supreme Court's orders amounts to. Of the eleven states which formed the Confederacy in the Civil War, five obeyed the Supreme Court to a modest extent during the school year which ended last June. If Texas, which has made some genuine progress, is excluded, this means that exactly 206 coloured children, out of a total of more than two and a quarter million, were admitted into previously all-white schools in ten states. In the coming school year a sixth state, Florida, will let four more young Negroes past the racial barrier, and the five existing "compliers" will admit a further handful. It is true that, because most Negroes in the South have been badly educated in the past, complete mingling is impracticable in the immediate future, but the present process is hardly rapid enough to let the reformers relax.

Nor are Negroes' voting rights in the South in much better shape. A survey by the Southern Regional Council published this week shows that only a quarter of the coloured population is registered

to vote, compared with 60 per cent of the white population. In the eight states where the council was able to get reliable information, the total number of registered Negroes has in fact fallen slightly since the last survey in 1956. This is the field in which the Civil Rights Commission has done most of its investigating since it was set up two years ago—though it has been badly hampered by the sullen obstruction of local officials. It has duly noted the various devices by which Negroes are prevented from registering. But so far the Department of Justice, which was empowered by the Civil Rights Act of 1957 to go to court to stop these practices, has taken action in only three cases, and not one of these actions has yet been successful.

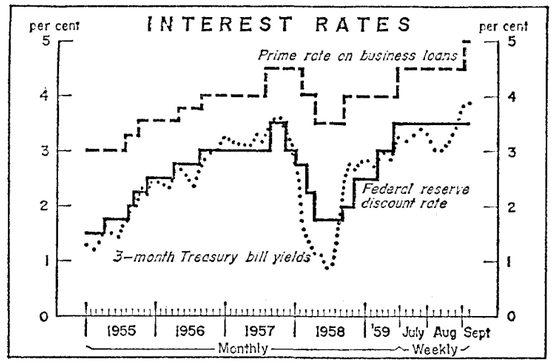
It would be a mistake, however, to conclude that the Civil Rights Commission has been a failure. It may yet inject some new life into the campaign for racial equality. Next week it is due to present a report on its first two years of work (but not, it is to be hoped, its last two) which is likely to make many Southerners jump. Among its proposals, it is believed, is one which would set up federal machinery to help Negro voters register and thus bypass the local officials in the South who have prevented them from doing so in the past. Another suggestion—supported, however, by only part of the commission—is said to call for a constitutional amendment prohibiting some of the devices, including the poll tax, which restrict the right to vote.

These measures would require action by Congress, and it is not at all certain that Congress in its present mood would act. Nevertheless, the commission's report will be valuable. It gets down to the heart of the problem, the question of voting; once Negroes go to the polls in substantial numbers, the other forms of discrimination will gradually melt away. The report will also help to rally the battered moderates in the South. Half the commission's members are Southerners—one comes from Virginia, one from Florida and one from Texas—and this courageous trio have apparently supported almost all their colleagues' proposals. Although they do not come from the states where white supremacy is dying hardest, their voices cannot be entirely ignored by the segregationists. The commission's report will strengthen those who believe that the federal government must do more to help the Negroes win their rights.

Peak Prices for Money

WHILE the latest rise in short-term interest charges was set off by Congress's adamant refusal to allow the government to pay the going rate for its long-term borrowing, the rise had been developing, in a less sensational way, for some time out of the booming prosperity of the country. When it was realised that the Treasury must rely on the short-term market, already under heavy pressure, for the $15 billion or so which it will need for cash and refunding before the end of the year, the interest it had to pay on its three-month bills shot up to the highest level since 1933. The discount rate, the amount which the Federal Reserve Banks charge on loans to member banks, cannot long remain below the Treasury bill rate; therefore it seems probable that the discount rate will go up to 4 per cent this week and certain that it will before long. The commercial banks have already put up their prime rate to 5 per cent, the highest in 28 years, instead of waiting for the discount rate to go up as they usually do.

The rise in the prime rate, the interest which banks charge on loans to their best customers, began in New York, as it customarily does, but is spreading fast across the country. It is particularly welcome in the west and south-east where banks have been squeezed for funds more severely and for longer than they have been in the east. Bank loans are now higher in relation to deposits than they have been for over 25 years. This demand for money is largely seasonal—shopkeepers borrowing to pay for their Christmas stocks, food processors to buy the newly harvested crops—but it is accentuated by the general expansion in business and particularly by the rise in capital spending. Normally this is financed by bond issues but long-term interest rates are so high that some companies are paying for their new facilities by short-term borrowing, in the hope that conditions will be more favourable later.

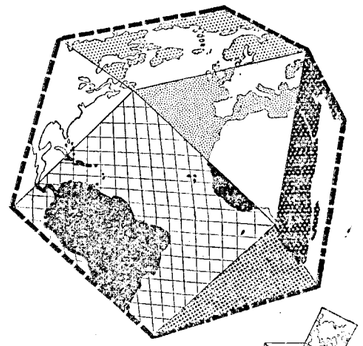


At the same time, businessmen are now using cash which until recently they were prepared to leave in the bank and other depositors, attracted by high interest rates elsewhere, have also been running down their accounts. Banks normally supplement their supplies of money by selling government securities but they are reluctant to do this when prices are so low. Finally the Federal Reserve is keeping bank credit exceptionally tight.

The increase in the prime rate, which sets the standard for all interest charges by banks, will discourage some borrowers and is already driving up other short-term money rates. It is bound to become more expensive to borrow on mortgages or for buying cars and other consumer goods on the instalment plan. Thus the chief sufferers from a situation which is at least partly due to Congress's obstinacy will be the small businessmen and the consumers whom Congress is normally most anxious to help.

Laos: Case in Point

ONE of the subjects which Mr Eisenhower has said he would like to discuss with Mr Khrushchev when they meet is the pressure of Communist North Vietnam on the pro-American government of neutral Laos, in Southeast Asia. Some of the more stirring American columnists have jumped to the conclusion that once Mr Khrushchev had his invitation to Washington safe in his pocket, he chose this method of showing his contempt for the President's mission of relaxing tension. The State Department, with its allegations of "Sino-Soviet complicity," has not been far behind. The President has been careful, however, not to speak of any "invasion" of Laos or to assume that the Chinese and Vietnamese Communists would necessarily have called off the attacks if Mr Khrushchev found them embarrassing. There is, indeed, a school of thought which believes that the skirmishes in Laos, and perhaps even those along the Indian border, are an attempt to disrupt the talks in Washington or at least to remind Mr Krushchev that Communist China is not controlled from Moscow. Few Americans imagine, however, that he has no influence in Peking, and thus Laos may be regarded as a test of his good intentions.



First in world-wide banking

At important points around the globe (shown here in the unorthodox Dymaxion projection, which minimizes distortion) First National City gives helpful service to British exporters.

78 branches in 27 countries

Why The First National City Bank can do more for you overseas

WORLD-WIDE COVERAGE. First National City spans the globe, with 78 branches in 27 countries, equipped to handle personal and business accounts, loans, advances and securities.

LARGE STAFF. 6,300 skilled personnel overseas and 9,200 in New York are ready to help in every way.

PERSONAL SERVICES. We will be pleased to give our business friends a letter of introduction to any of our branches to ensure for them a warm welcome and personal attention.

FACTS QUICKLY AVAILABLE. Up-to-date credit and economic information are readily available through our world-wide branch system.

LOCAL INFORMATION. First National City can also call on many thousands of knowledgeable banking correspondents in every important centre of commerce. Their exact information about local conditions can make all the difference to your business.

Call on us at either of our two London branches, and find out for yourself how much we can help you.

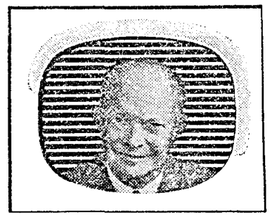
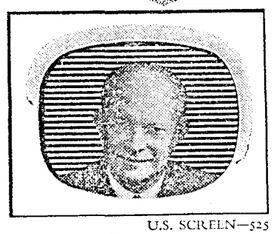
GRANADA converted- the President



BRITISH SCREEN—425



U.S. SCREEN—525

EUROPEAN SCREEN—625

The European screen has 625 lines, the U.K. screen 425 lines, and the U.S. screen 525 lines. The new Granada TV Convertor can convert any one of these screens to either of the others.

At the request of Columbia Broadcasting System, Granada TV Network carried out the conversion of the full TV coverage of President Eisenhower's visit to Europe from European and British screens for transmission to U.S. screens.

For this assignment Granada TV travelling eye and Convertor teams were sent to London Airport so that the video-tapes of the converted programmes could be flown immediately to the States by next available jet plane—thus giving U.S. viewers 'live television' quality pictures.

P.M. Wednesday August 26: Complete pictures of President's arrival at Bonn received at London Airport from Eurovision, converted and video-taped, put on next plane out.

P.M. Thursday August 27: Complete pictures of President's departure from Bonn received from Eurovision, converted, video-taped, put on next plane out. President's arrival at London Airport, shot by Granada TV, converted, video-taped, and put on next plane out.

Noon, Friday August 28: Pictures of Queen Elizabeth greeting President at Balmoral, converted, video-taped and put on lunch-time plane.

A.M. Monday August 31: President and Prime Minister drive to St. Paul's. Converted, video-taped, and put aboard mid-day plane.

P.M. Monday August 31: President and Prime Minister joint broadcast from Downing Street—converted, and video-taped, put on next plane out.

A.M. Wednesday September 2: Eurovision pictures of President's arrival in Paris converted, video-taped, sent on next plane out.

P.M. Wednesday September 2: Eurovision pictures of President's Paris parade with De Gaulle, converted, video-taped, put on next plane.

In some cases—depending on plane timings—audiences in the States were able—thanks to the Granada Convertor—to see live television shots of morning events in Europe that same afternoon.

GRANADA TV NETWORK

DOW CHEMICALS *and paint*

Man owes his bright world of color to modern chemical ingredients which make paints more workable, washable and durable. To produce a variety of enduring paints for use on metals, interiors and on exterior masonry, the paint industry requires modern high-purity chemicals like those provided by Dow.

Research is the vital force behind Dow's continual development program . . . a program which produces a constant flow of new and improved chemical products for the paint industry. From Dow research has come latex to make washable, quick-drying paints that roll on easily. From Dow research have come essential thickeners and preservatives, solvents and plasticizers. From Dow research will continue to come new chemical products for the benefit of the paint industry, and for the brightening of countless tomorrows.

For more information about Dow chemicals for paint, contact your local Dow representative or the branch office in your area.

As a member of the Southeast Asia Treaty Organisation the United States is pledged to defend Laos against aggression and since 1954 it has been supplying it with "defence support" funds to meet the payroll of its 25,000 strong Army and with the older types of military equipment permitted under the Geneva Armistice. A handful of American technicians and military aides hardly justify communist charges of an American base in Laos. The emergency aid now being flown from Formosa and the Philippines will enable a few more soldiers and militia to be armed and give them more mobility, though they would hardly enable Laos to repel any large-scale attack.

In Washington, the trouble in Laos is an opportune reminder that there may be need for continuing military assistance even in the under-developed countries. Many Democrats in Congress believe that useless expenditures on arms are swallowing up money which ought to be spent on economic development and only $1.4 billion was authorised for military aid this year instead of the $1.6 billion requested; the House cut this further to $1.3 billion when it voted on actual appropriations. In its final report, published last month, the Draper committee takes the strongest issue with this idea that swords can safely be turned into plough-shares. The committee, created last year by the President, recommends more money for both military aid and development loans than either the President or Congress have approved, and insists that any significant decline in military aid to the under-developed countries would be a serious danger to the security of the free world.

Pork over the Barrel

On Wednesday the House of Representatives failed, by a single vote, to muster the two-thirds majority needed to over-ride the President's veto of the public works Bill. This is the famous "pork barrel," which normally is sacred because it contains money for post offices, harbours, dams, irrigation facilities and other desirable projects in every state of the Union. The Democratic leaders felt sure of the Senate, where the final vote was 82 to 9, and they had good hopes that in the less certain House enough Republicans would desert the President to give the opposition its first clear victory over the White House since the session began. Only eleven did so, thanks to frantic efforts by the Republican leaders who had themselves advised the President that it would be the path of prudence to let the pork barrel roll through as usual.

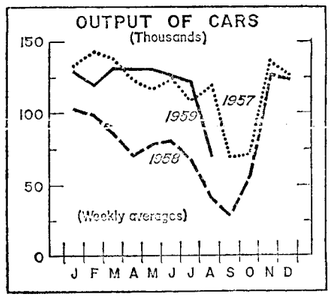
The Bill called for $1.2 billion to be spent in the present fiscal year, only $30 million more than the President recommended originally. Mr Eisenhower vetoed it because it also included 67 new projects not provided for in the Budget which, he estimated, would cost over $800 million by the time they were finished. This illustrated, the President said, how easily effective control over future Budgets can be lost. He had asked Congress not to approve any new starts this year. Congress will now have to add a new public works Bill to the obstacles lying between it and an early adjournment, unless it takes Senator Ellender's mischievous advice and adds the whole vetoed Bill to the foreign aid appropriation which the President must have.

Mr Eisenhower's remarkable record of never having a veto overturned, even after five years of a Democratic Congress, remains unblemished. But it might have been spoiled if the President, pursued by White House business even while he was staying at Chequers, had not signed the ex-servicemen's pension Bill. This involves far larger sums than the housing, airport and harbour Bills on which he has stood firm. But a veto of this popular measure might well have been over-ridden, encouraging the Democrats to defy the President on other issues and blunting the chief weapon with which he has defended his Budget. The Bill gives pensions to all the widows and children of men who served in the second World War and the Korean War, unless their income exceeds a certain level, and will cost the government $150 million in the first year and $22 billion by the year 2,000. On the other hand, it introduces a sliding scale of pensions, based on means, for men disabled for reasons not connected with their war service. Virtually all ex-servicemen over 65 draw such pensions. None of these existing pensions will be reduced, but the government expects to save about $13 billion on future ones in the next forty years in this way. If Congress had been forced to write a new Bill in the election year of 1960 it might have been much worse.

Detroit—Ready to Go

Last month the final 1959 models and the four millionth car to be produced since the beginning of the year came off the automobile assembly lines. These are now practically closed down for retooling for the new 1960 models, a few of which are already being made. The industry is so optimistic about the demand for these new cars that it is planning to produce some two million of them during the next four months; only if the steel strike continues well into October are these schedules likely to be upset. They will bring total output for 1959 almost back to the 1957 level and for 1960 the talk is of at least 7 million cars being sold, approaching 1955's all-time record. These forecasts are based on a combination of booming economic conditions and of the presumed attractions of the new models; together they are expected to push the demand for cars, already good, straight up.

Most, if not all, of 1960's increase in sales over this year would consist of the Big Three's new compact cars, according to the calculations of their makers, who are able to produce during the year at least 800,000 Falcons (by the Ford Company), Corvairs (from General Motors' Chevrolet Division) and Valiants (the Chrysler Corporation's offspring). The idea is not, officially at least, that the compact cars will cut into the current sales of existing cars, whether small, medium, large or imported, but only that the compacts will keep both sales of these other cars and their share of the expanding market from rising. Imported cars have been responsbile for over 8 per cent of sales this year, with 330,000 being sold in the first eight months, nearly as many as in all of 1958, and the share of the Rambler, the existing small American car, has been 6½ per cent of sales. Both the importers and the American Motors Corporation, which makes the Rambler, expect to do better next year; nor are the other divisions of the Big Three prepared to abdicate to their comparatively small and undoubtedly cheap new step-brothers. October will bring not only the new models into the show rooms but also cut-throat competition into the motor industry.



Atom Tests Still in Suspense

The negotiators at Geneva who have been struggling for ten months to write a treaty prohibiting tests of atomic weapons won a two-month extension last week. The President announced that the self-imposed American ban on any such tests would be

extended from October 31st to December 31st. This is to give the negotiators, who have recessed until early October, adequate time to take advantage of any new concessions which may emerge from Mr Eisenhower's talks with Mr Khrushchev this month. This reprieve is shorter than some of the President's critics, such as Senator Humphrey, would like. But it disposes of any fears that the United States has abandoned hope of an agreement. These were probably founded on no more than the wishful thinking of officials of the Department of Defence who find the ban irksome. Some Americans fear, however, that if the talks still come to nothing, and the Russians keep their promise to test no bombs unless the West does so first, some day the United States may have a disagreeable choice between continuing an unpoliced ban and resuming atomic tests which would be hard to justify to a world frightened of the fall-out from them.

Last week Congress's Joint Committee on Atomic Energy published an authoritative and up-to-date evaluation of the danger which, without being alarmist, strengthens the case for an end of tests, except for those which can be conducted underground or far out in space. The report is based on hearings held in May. In the committee's view, the danger to human life from past tests is comparatively small, though it has not yet reached its peak (this will come in 1962-65) and although it is greater in some "hot-spots" where fall-out is concentrated. Radiation from natural sources still predominates. But if testing is resumed at the former rate, within two generations there may be a real risk.

Not nearly enough is known about the extent of physical damage from radiation, the committee pointed out. It was highly critical of the Administration for not giving adequate support and stimulus to the study of fall-out and for its failure to develop standards of safety that the public can understand. Last month the President took a step toward meeting criticism of this kind when he created a Federal Radiation Council, to be composed of the Secretaries of Defence, Commerce and Health, and the chairman of the Atomic Energy Commission and to be advised by the President's own scientific consultant, Dr Kistiakowsky. The council's task is to provide "general standards and guidance" on protection of the public from radiation. It may also acquit the Administration of charges that this task was being left to a body—the AEC—which is inherently unsuited to discharging it. Unfortunately, the President's directive is vague about when or how the Public Health Service is to undertake the day-to-day responsibility for atomic safeguards.

Transport's Unruly Team

FROM A CORRESPONDENT IN SAN FRANCISCO

ALLEGATIONS that Mr Hoffa, the head of the largest American trade union (the teamsters, or lorry drivers), is plotting to create a labour monopoly in all types of transport cropped up again this summer. It is now about a year since he first boldly announced, in the teeth of all his troubles with Congress, the courts, and the American Federation of Labour and Congress of Industrial Organisations, that he intended to form a loose federation of all the unions involved in transport to consider their common problems and seek common solutions. A somewhat similar move by the building trade unions had been greeted with approval. But Mr Hoffa's statement was received with indignation by Congress and the press as a sinister attempt to achieve a stranglehold on the whole economy by a powerful outcast union and a leader famous for the unscrupulous use of power.

To knowledgeable trade unionists, the task of creating even the loosest federation of this kind seemed a formidable one. Apart from the railway brotherhoods, which turned a cold shoulder at once, six principal trade unions were involved, with the following membership in 1958:

Affiliated with the AFL-CIO	
National Maritime Union ...	40,000
Seafarers' International Union	57,500
International Brotherhood of Longshoremen	20,000
Independent	
International Longshoremen's Association	60,000
International Longshoremen's and Warehousemen's Union	62,500
International Brotherhood of Teamsters	1,355,928

The two largest sailors' unions, the NMU, whose president is Mr Curran, and the Seafarers, headed by Mr Hall, have been rivals for many years. Moreover, the NMU was formerly a CIO affiliate and had once been dominated by Communists, while the Seafarers belonged to the AFL and was headed for a long time by Mr Lundeberg, a bitter anti-Communist.

The two dockers' unions were also at odds with each other and isolated from the trade union movement. The ILA, on the east coast, which had fallen into the hands of gangsters, had been expelled from the AFL even before its merger with the CIO. On the west coast, the ILWU, headed by Mr Harry Bridges, had been expelled by the old CIO in 1950 for consistently following the Communist party line. Its feuds with the teamsters were notorious.

BUT with the creation of the AFL-CIO and the death of Mr Lundeberg, relations between the sailors' unions became less strained. On the east coast, the ILA defeated the IBL, the rival dockers' union set up by the AFL, and got rid of some of its worst criminals. On the west coast, the Bridges' union was beginning to feel the pinch of being isolated from the other trade unions, although its membership did not fall off.

Into this fluid situation stepped Mr Hoffa, always interested in increasing his power. Discussions with Mr Hall, Mr Curran, and Captain Bradley, of the ILA, on the one hand, and with Mr Bridges on the other, led to no formal organisation. But it was a triumph for Mr Hoffa to secure the participation of Mr Curran, who is a member of the AFL-CIO committee which recommended the expulsion of the teamsters.

Confederations of unions whose jurisdictions overlap or lie side by side are fairly common, in the metal trades for example; building trades councils also abound on the state and local levels. A generation ago, there was an attempt to create a federation of ship and shore unions, but it was torn apart in the struggle over communist influence. Nevertheless, the dockers have always sought friendly relations with both the teamsters, who take goods to and from the docks, and the sailors.

The new practice of loading whole motor trailers full of goods on ships and trains has brought the teamsters into increasingly close contact with other transport workers. Furthermore, "piggy-back" and "fishback," as the two methods are called, threaten to displace dockers while creating new kinds of work for sailors and drivers. So do other automatic techniques of loading and unloading cargoes. These problems can best be solved if the dockers, sailors, and drivers work together.

TO the public, the prospect of such alliances, particularly between labour leaders as suspect as Mr Bridges and Mr Hoffa, looks alarming. This is particularly true in Hawaii, where Mr Bridges's union, by far the strongest in the new state, is beginning to co-operate with the teamsters. But the ILWU is unlikely to submerge its identity in the teamsters as long as it seems able to survive without doing so; and it has just signed a remarkable contract with employers on the west coast which gives the union a substantial share of the savings effected by new machines and techniques, as well as a guarantee of full employment for dockers.

Moreover, dockers on the east coast, many of whose leaders are influenced by Cardinal Spellman, have turned down Mr Hoffa's suggestion of co-operation with the communist-tainted Bridges union. Instead the ILA has applied for readmission to the AFL-CIO and, if the conditions laid down are not too onerous for the rank and file, the ILA will probably become the first union to be welcomed back. One condition is that the ILA should conclude no formal alliances with the teamsters, though day-to-day co-operation is not forbidden. The history of labour in the field of transport suggests that such informal co-operation, for limited ends, is probably the most that Mr Hoffa can hope to attain.

Victory for Reaction

MISSISSIPPI, the poorest state in the Union, with more Negroes in proportion to its white population than any other state, has never been noted for liberalism, but any such tendencies which exist there have been sharply checked by the victory of Mr Ross Barnett, an elderly and outspoken segregationist, in this year's contest for the Governorship. He has just won the Democratic primary, the internal party election in which nominees are chosen; but since the Republicans offer no opposition in Mississippi, he has in effect been elected. Originally four candidates sought the Governorship, but no one gained an absolute majority and a second contest was held between the two top candidates; in this Mr Barnett did much better than his opponent, the present Lieutenant-Governor, Mr Gartin.

Mr Gartin is no liberal: he takes credit for strengthening Mississippi's laws against racial integration, is a member of the violently segregationist White Citizens Council and had pledged himself to close the state's publicly financed schools rather than allow Negro children to attend white classes. Such views are essential for any political aspirant in Mississippi, but Mr Gartin's enthusiasm for such extreme measures was less marked than Mr Barnett's. Furthermore, Mr Gartin was backed by the present Governor, who has some claim to be considered a moderate and was courageous enough to call in the federal authorities to investigate the recent lynching of a Negro in the state, a move which was held against Mr Gartin.

Governor Coleman cannot succeed himself by law, but he is well-liked and his endorsement might have won the election for Mr Gartin had he not been embarrassed by the unsolicited support of the local labour leaders. Trade unions are not powerful in Mississippi but they are very unpopular, particularly among the many small farmers, and their help seems to have been fatal to Mr Gartin even though he went out of his way to repudiate it. Judging him a certain winner the unions hoped to increase their influence by claiming part of the credit for his victory; but they achieved precisely the reverse, confirming the southern tradition that support from organised labour guarantees a candidate's defeat.

A surprising feature of the election was the good showing made by a newcomer, Mr Charles Sullivan, a lawyer, who polled 131,725 votes in the first primary against 150,808 for Mr Gartin and 154,479 for Mr Barnett. Mr Sullivan advocated a redistribution of seats in the State Legislature and a united southern front against northern liberalism at the 1960 Democratic convention. Neither were novel proposals, but he also came out for the legalised sale of liquor in the state, something which no other local politician had dared to suggest before. Mississippi is traditionally dry but, since Oklahoma went wet last week, it is the only state where prohibition is still in force; Mr Sullivan's boldness may account for his success.

Marginal Defence

As the President signed this year's $39 billion defence appropriation Bill, the service departments and the Bureau of the Budget were already struggling with the next. With the shock of the sputnik almost forgotten, with the Berlin crisis no longer pressing and with Mr Khrushchev's visit fostering a general feeling of reassurance, no great popular agitation is expected against the determination to hold spending down to this year's levels. But the practical difficulties of this will be great. All the obvious economies, and most of the less obvious ones, have been made. In particular manpower cuts, which provide an easy way of saving money on pay, food and equipment, have gone as far as they can; only the minimum number of men are serving in the armed forces. On the other hand a series of expensive research and development programmes are now reaching the stage where they will require heavy outlays if they are to be of any practical use in the defence of the country.

The answer is obviously to prune out all marginal programmes—those which are becoming obsolescent, which seem unlikely to justify their cost or which duplicate more promising and better developed projects. Enquiring journalists, obviously briefed by service officials who fear that their favourite schemes are due for the knife, have been warning their readers that such cuts are coming. The Titan intercontinental missile, squeezed between the Atlas and the Minuteman, is in danger. So are the North American Aviation company's B-70 bomber and F-108 fighter, both of which will, it is thought, be outmoded by missile developments before they become operational. Convair's B-58 bomber may also be dropped; the number on order has already been cut back.

But the reaction to this and other recent contract cancellations, made to keep current defence spending within the limits of available funds, shows that even if the public does not object, legislators and manufacturers will. A full congressional investigation was begun at once when the Navy and the Air Force announced that they were abandoning their attempts to develop a powerful boron fuel for aircraft, after spending several years and $250,000,000 on the scheme, just as two new plants were about to begin producing this fuel. The reasons given were that it had not come up to expectations, that jet engines had been improved so that they could give a similar performance on cheaper fuels and that in any case aircraft were now being replaced by missiles. But to Representative Teague this was "flushing down the drain" funds which had been secured for research purposes with much difficulty from a stingy Administration.

SHORTER NOTES

American railway companies are joining forces to insure themselves against financial losses during strikes. The railways are particularly vulnerable to strikes because they are compelled by federal law to pay unemployment benefits from a fund to which they alone contribute to employees engaged in a "lawful" strike. Virtually all the companies have applied for policies under the scheme drawn up by the Association of American Railroads; premiums will vary from company to company.

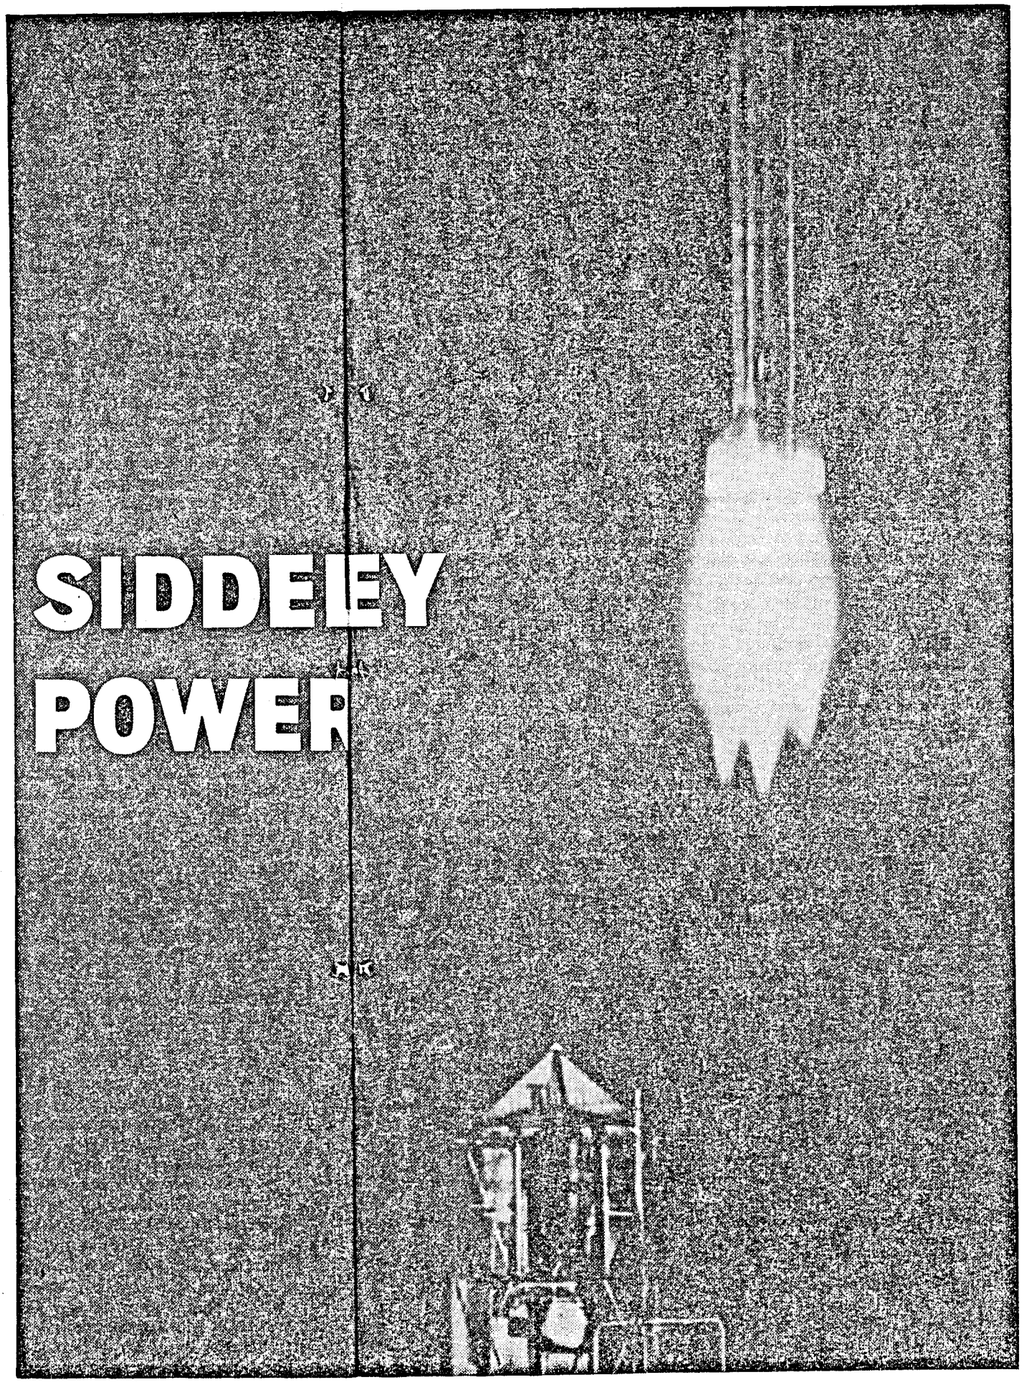
* * *

The American Cancer Society is making a six-year, $300,000 study of possible environmental causes of cancer with a million Americans as guinea-pigs. Large corporations and trade unions which compile health records of their members and employees are being asked to help the society to carry out what is probably the largest statistical study of disease ever undertaken.

THE ECONOMIST SEPTEMBER 5, 1959

A space research vehicle rises to 500 miles above the earth's surface...

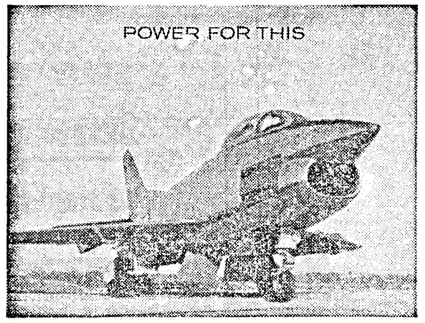
...AND BRISTOL SUPPLY THE POWER



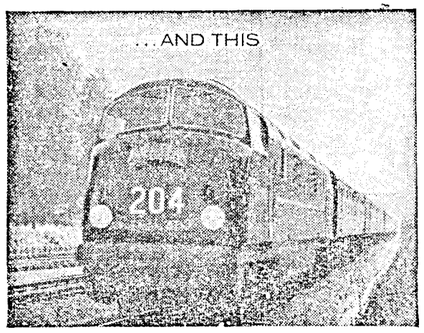
One of the largest manufacturers of motive power units in the world, Bristol Siddeley Engines Limited produce the Gamma. A liquid propellent rocket engine, the Gamma powers the Saunders-Roe Black Knight, Britain's highly successful space-research vehicle. An extremely reliable powerplant, the Gamma produces a total sea-level thrust of 16,400 lb (7,438 kg) and nearly 19,000 lb (8,618 kg) outside the earth's atmosphere, for a total powerplant weight of only 700 lb. The Gamma sends Black Knight over 500 miles into space above the Woomera rocket range in Australia.

Since Bristol Siddeley's rocket division began work in 1946, it has developed a wide range of components. By combining these components in single or multi-chamber layouts, any thrust requirement between 500 and 90,000 lb can be met.

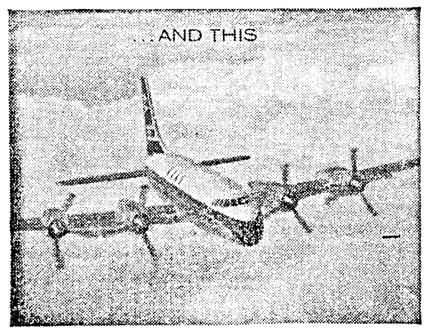
BRISTOL SIDDELEY ENGINES LIMITED



The Bristol Siddeley Orpheus, the world's most advanced lightweight turbojet engine, powers this Fiat G 91 strike fighter (chosen by NATO). The Orpheus is already in service in 6 different aircraft, and is specified for 8 others.



Bristol Siddeley Maybach diesel engines are designed for a wide variety of applications and range from 200-3,000 hp. Here is a British Railways diesel hydraulic locomotive powered by two Type MD 650 engines, developing a total of 2,200 hp.



The Bristol Siddeley Proteus powers the Britannia airliner. Four Proteus give this 130-seat aeroplane a speed of over 400 mph—a range of over 5,000 miles. Britannias are in service with twelve airlines and with RAF Transport Command.

the answer to immediate expansion problems . . .

TERRAPIN *PACK BUILDINGS*

FROM SHELF TO SITE DELIVERY
You can order and obtain Terrapin Pack Buildings as easily as any other everyday commodity—they are normally delivered from stock, ready for immediate erection and *occupation.*

SPEEDILY ERECTED YET PERMANENT
Erection can be carried out at the rate of 1,000 square feet a day—yet this is no temporary structure—it's built to last for years and years.

COMPLETELY PREFABRICATED
Delivered in pack form, for single or multi-span construction, complete with lighting installation, glazing, floor covering and interior and exterior decoration. Plumbing and heating systems can be supplied.

SUPERIOR DESIGN
A fine handsome structure of high quality and appearance, yet with low maintenance costs.

ECONOMICAL RE-SITING
Dismantling and re-erection can be carried out easily, rapidly and at incredibly low cost, without fear of damage. You can move Terrapins when you like, where you like and as often as you like.

ALL THIS AT A BASIC COST OF NO MORE THAN 30/- TO 35/- PER SQUARE FOOT OF FLOOR SPACE—ERECTED AND FINISHED.

PREPARE YOUR OWN ESTIMATES

Terrapin Broadsheet No. T.P.3 not only contains full details of this unique service, it also shows you how to estimate your own costs. Write or 'phone for a copy NOW.

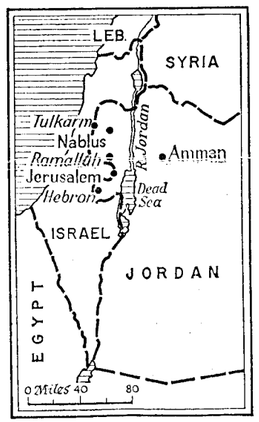
THE WORLD OVERSEAS

Amman Courts Its Palestinians

FROM OUR MIDDLE EAST CORRESPONDENT

SINCE Mr Hazza Majali became prime minister of Jordan in May, vigorous attempts have been made to deepen the roots of the Jordanian regime in Palestine. There are still Palestinians who regard the Hashemite dynasty as alien—a Hejazi house imposed on Jordan by British arms—and who hanker after republican forms of government. In an effort to reduce their number, the King has taken to showing himself, with increasing frequency, to his Palestinian people. There was first the tour of the northern districts, which took in Nablus, traditionally a centre of opposition, and the frontier town of Tulkarm. Then there was the visit to the centre and the south, which embraced Ramallah, Jerusalem, Bethlehem and Hebron. The King's reception was spontaneous and warm; and, if the government's calculations prove correct, the number of people taking part in such demonstrations will gradually increase with repetition.

Much of the warmth displayed is due to the King himself. As the months go by, he is gaining rapidly in maturity, and is making his own an attractive blend of dignity and informality. On his tour of the southern districts, he was in khaki shirt-sleeves and army breeches, with a keffiyeh tossed rakishly over his head. The heavily-armed jeep escort, and the lone horsemen brooding on the peaks overlooking the royal route, were there for decoration rather than business, as was shown by the freedom with which the King mixed with the crowds at his whistle-stops. Three giggling English ladies, holiday-making in Jerusalem, all but swooned as the King brushed by them, paused, held out his hand, and said with a grave smile: "Yes, I am Hussein."



Practical plans are also afoot for giving the King a stronger standing on the west bank of Jordan. A new palace is projected in the Jerusalem area; hitherto the King has only had one residence outside Amman, the winter palace in the Jordan valley, some miles from the East Bank. Another seat of government is contemplated, also in Jerusalem. Whether it is conceived only as an alternative seat, or as a truly alternating seat, is not yet known. The latter more radical concept would not be out of place in a country where half the chamber, half the senate and, often, half the government are Palestinians. Some of the more enthusiastic West Bank partisans of the King speak of Jerusalem superseding Amman altogether; but they are probably *plus royalistes que le Roi.*

While these plans are going ahead, the Jordanian attitude towards Palestine as a whole has broken surface in a manner that promises lively debate, if not dispute, between Jordan and other Arab states. The challenge came from an unexpected quarter. For several months, Arab politicians and intellectuals have been concerned by Mr Hammarskjöld's proposals for a solution of the Palestinian refugee problem. In particular, they have set themselves against the suggestion that the refugees should be integrated into the economies of the countries where they now reside. Such a step, they argue, would relieve the pressure for a return of the refugees to Palestine, and thus concede much of Israel's case by default. Early in August, Shaikh Pierre Gemayel, a member of Lebanon's four-man government and one of the outstanding Christian leaders in the country, suggested that the best way of scotching Mr Hammarskjöld's proposal would be the formation of a provisional government for Palestine, complete with army and other machinery of state.

Shaikh Gemayel argued that the formation of such a government would keep the Palestine problem in the forefront of world consideration. It would help maintain the pressure for a return of the refugees to their homes, and thus avert the economic dislocation that would result if they were integrated wholesale into the economies of the host countries. He pointed out that the refugees in Lebanon constitute 12 per cent of the total population of the country, a bigger morsel than could be digested. At the back of his mind, doubtless, was also the thought that most of them are Moslems, whose integration would affect the even balance of confessional power in Lebanese political life.

The immediate result of Shaikh Gemayel's proposal was a rejoinder from Mr Majali. Both in Amman, and in Beirut, on his way to the Casablanca conference, he declared that the formation of a Palestinian government would be absolutely unacceptable to Jordan. Half of Palestine, he said, is already incorporated in Jordan; Palestinians, including the refugees, make up two-thirds of Jordan's population. Shaikh Gemayel implied that the only possible Arab government of Palestine was the present government in Jordan. In his Beirut statement he went further, possibly way out on a very long limb, by saying that Jordan "would not oppose a regroupment of all Palestinian refugees on her territory." As Jordan already has more than 400,000 refugees, politically but not economically integrated, the implications of this offer are by no means clear.

The sources of the anxiety that prompted Hazza Majali to his forthright statements are not far to seek: the formation of a provisional government for Palestine would be more likely to split Jordan than to win back Israeli Palestine for the Arab cause. One remembers uneasily the fury aroused in other Arab states when King Hussein's grandfather annexed parts of Palestine during the Arab-Jewish war; but so far there are no signs of explosive reactions to the words of the Jordanian Prime Minister. He has disclaimed any intention of seeking "unilateral solutions"; his aim at the Casablanca conference will be to gain pan-Arab support for the Jordanian point of view.

A comforting sign of the times is the silence of President Nasser. Having just repaired his bridges with Jordan, he is unlikely to

destroy them at once by taking violent issue with the Jordanian stand on Palestine. What could a provisional government do anyway? The feeling is gaining ground in Arab circles that President Nasser has made his own arrangements with Mr Hammarskjöld, though what they are is anyone's guess. On balance, it seems likely that Mr Majali will carry his point at Casablanca, and that the conference will agree to condemn Mr Hammarskjöld's proposals for refugee integration, and urge instead an indefinite extension of the United Nations Relief and Works Agency's mandate. If so, nothing will have changed, for better or for worse.

Mr Eisenhower in Paris

FROM OUR PARIS CORRESPONDENT

IT takes a republic to stage an imperial show; or so one has been constantly obliged to think, during President Eisenhower's two-day visit to Paris. It is not simply that President de Gaulle and he have done their talking in Empire surroundings—on Wednesday in a salon of the Elysée which once found favour in the eyes of the Empress Eugénie de Montijo, and on Thursday at the Chateau de Rambouillet which had been the favourite of Napoleon I. The spacious symmetrical structure of Paris, devised a century ago by Haussmann under Napoleon III, with its wide avenues and boulevards, lends itself superbly to ceremonies, and the new regime is not averse to pomp.

The Eisenhower show was not as rich and varied as the long-prepared visit of the Queen in April, 1957, but it was still worthy of full colour and the wide screen. The sun shone; 101 guns thunderously announced Mr Eisenhower's arrival; and at the end of their progress through Paris, preceded by the horsed Republican Guards, the two stood side by side in their car—behind them the Place de la Concorde; in the background the façade of the Madeleine and, further off, the wedding cake of the Sacré Coeur. No producer could have wished for a better picture, though he might have wished for a bigger and more enthusiastic crowd. American veterans of this presidential tour claimed that the atmosphere had been much warmer in Bonn and London. They maintained this even in the evening when many Parisians had been released from work early to see the parade down the Champs Elysées. A reason may have been the absence of children still on holiday. In fact, some were brought back specially from holiday camps to brighten the scene outside the Hôtel de Ville and they chattered unceremoniously even when President de Gaulle (in uniform) and President Eisenhower (in civilian clothes) rose to speak.

But the main reason for Paris's restraint was the too sudden change of direction by the propaganda machine. Until very recently the popular French papers were full of suspicious comments about perfidious partners. Only in the last few days had they discovered that Britain could be a helpful ally, America a reliable friend. The conversion was probably too recent to be transformed into popular enthusiasm. The authorities, however, spared no effort to ensure success by distributing flags and appealing to the Parisians. Indeed one was struck by the contrast between these last-minute endeavours and the scarcely concealed displeasure with which the French government had greeted the announcement of the Eisenhower-Khrushchev exchanges, the prelude to this European tour.

The interpretation of this change now put forward in Paris is that General de Gaulle has reshuffled his priorities. When he sent off his memorandum on Nato last September, he was apparently assuming that a quick end to the Algerian war would make the problem of France's power in Europe and status in the world much more pressing. Now he is realistic enough to grasp that since the Algerian premise has not been fulfilled, his bargaining position is weak. He has therefore decided that France's bid for a place in the nuclear club and higher standing in the Atlantic alliance can wait; while the need for American backing on Algeria, particularly in the United Nations, has become more urgent.

DESPITE official secrecy, there is general agreement in Paris that the Algerian question was the most prominent item of Mr Eisenhower's talks. Undoubtedly, General de Gaulle's new slogan of future self-determination for the Algerians, with its Wilsonian undertones, is music to American ears. But his orders to the troops to go on with the work of pacification spoil the score. It remains to be seen whether the next official definition of Algerian policy, now promised for the second half of this month, is so liberal that the Americans will be able to back France without losing ground in the uncommitted countries. It is not clear whether Mr Eisenhower so desires a show of western unity before his talks with Mr Khrushchev that he will be content with French words rather than deeds and dates. But the present French air of satisfaction gives the impression that the general is already assured of American support.

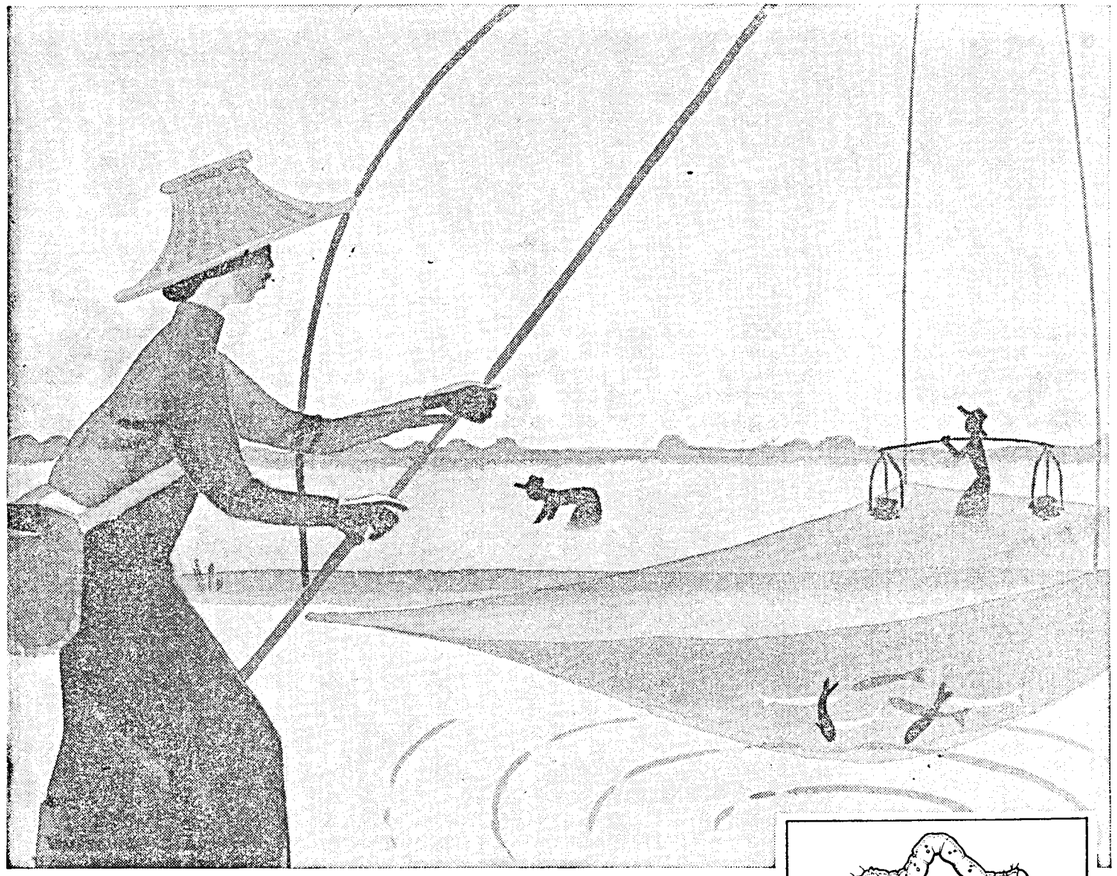
Once General de Gaulle's change of priorities and Mr Eisenhower's desire to improve relations became apparent, there was no room for major clashes of opinion. General de Gaulle could not genuinely suspect Mr Eisenhower of selling the path to the Russians. He apparently showed a perfect understanding of the constitutional difficulties with Congress over sharing nuclear secrets. He also agreed that the formal establishment of a Nato directorate would be resented by other partners. For the time being, France will be satisfied with more frequent consultations; with having, as was graphically described, a line to the White House as good as the one from Downing Street. Indeed, in their newly enthusiastic mood the popular French papers have greeted as a concession the American proposal to have dual control (and a dual veto) over atomic weapons stockpiled in France, though it is known (and was confirmed by Nato circles) that such a proposition had been made earlier and turned down by the French. Changes of front as striking as this are not to be expected in all the fields where they have been obstructing Nato in the past months, but Mr Eisenhower was able to assure M. Spaak and Mr Luns that France would be less unco-operative than it had been.

Paris was considered to be the most difficult stage in Mr Eisenhower's tour. But the French papers have announced in big headlines that they like Ike. He himself proclaimed on the staircase of the Hôtel de Ville that he loved all Frenchmen. General de Gaulle then personally asserted that their talks had been going very well. All this sounded too good to be true. Some observers were left with the sneaking suspicion that in their quest for the appearance of unity the Americans may well have bought an Algerian plan in a poke, that French claims within the alliance have merely been postponed, and that a three-power agreement on the suspension of nuclear tests would promptly revive the problem of the French bomb. Even an imperial show in republican Paris must have its doubting Thomases.

Dr Adenauer's New Manner

FROM OUR BONN CORRESPONDENT

A CERTAIN satisfaction is widely discernible in west Germany at the course of President Eisenhower's brief visit. Over this issue the major parties have for once been able to still almost completely their habitual bickering. The cheering bystanders and the professional actors seem alike to be convinced that they have



Cabbage semi-looper *Phytometra acuta* Walk.

Twice best

Spreading rings to rock the sleepy lotus blossoms. A flash of gold in green-grey water, jumping silver in the meshes of the wide-mouthed net. Fish are important in the rural economy of Thailand. So, too, are vegetables. Unfortunately, what protects the one can be harmful to the other.

The main vegetable-growing area of Thailand lies in the delta around Bangkok formed by the Menam Chao Phraya and neighbouring rivers, where in rich alluvial soil deposited through the centuries by the Mother of All Waters, vegetables sufficient for many millions of people are grown over a period of nine months each year. Crop protection chemicals have been used on an extensive scale for at least ten years and insecticides, in particular, are used as a routine measure. Many pests cause damage to the various vegetables grown, particularly the destructive cabbage semi-looper caterpillar—and spider mites. These pests attack the crop right up to the day of harvest and farmers are forced to continue spraying until the last moment before sending the vegetables to market.

To meet the farmers' need for an insecticide which could be used safely up to the day of harvest, Shell's new insecticide Phosdrin was tried—with immediate and outstanding success. With cabbage loopers, Phosdrin, at a few ounces per acre, achieved a complete kill *within only thirty minutes* and the same amount completely eliminated mites on cucumbers. A lower dosage gave control of cut-worms and thrips on onions, and in all cases the crops *remained* 'clean' for several days after spraying. Equally important, this insecticide, despite its quick-kill power over insects, showed no harmful effect on the fish which teem in the klongs and irrigation ditches between the vegetable gardens. Phosdrin, in the eyes of those who raise both fish and vegetables in Thailand, is indeed twice best.

Phosdrin

new systemic Shell insecticide

Phosdrin is the sixth in the series of Shell pesticides. In addition to its uses on vegetable and fruit crops, it has potential applications for the control of insects and mites on forage crops, tobacco, cotton and ornamentals. If you have a pest problem in your area, consult your Shell Company. Between them, aldrin, endrin, dieldrin, Phosdrin, D-D and Nemagon offer control of almost every significant pest.

Protective covering

Helix the snail has a home of his own. Self-contained, portable, lightweight, made to last a lifetime without maintenance. No risk of corrosion. No problems of painting. Perfectly, permanently weatherproof. Better protection than even *Epikote* resins can provide. And *Epikote* resins are themselves remarkable—and responsible for better man-made surface coatings than ever before, for a very wide variety of uses.

These remarkable synthetic resins form a series ranging from mobile liquids to high melting point solids, and all combine great adhesion, flexibility, toughness and chemical resistance in one. On them are based new, longer-lasting surface coatings of many kinds; from paints for the structural protection of factories and industrial plants, to special coatings for aircraft, designed to withstand the exceptional corrosive and abrasive influences of modern jet flight. Even airport runways find a use for *Epikote* resins in the form of wear-resisting marking paints.

New, longer-lasting, non-chip-or-crack finishes for domestic appliances owe their resistance to hard knocks to *Epikote* resins. Food cans and wine barrels can be lined for safety with *Epikote* resin-based lacquers, tanker holds and pipe-lines protected from corrosion. Have you a use for these four-in-one resins in *your* plan of production? Formulations can be devised incorporating any or all of the desired qualities of *Epikote*. Flexibility of formulation is a further Epikote virtue: ask your Shell Company for full details.

Epikote *Trade Mark*

Epoxy resins

Epikote resins are by no means the only Shell chemicals to serve the surface coatings industry. Shell chemical and hydrocarbon solvents, synthetic glycerine... all find important uses. *Glycols, detergents, resins, plastics. Base chemicals, additives, and synthetic rubber... Shell chemical production serves every industry.*

sent the President on his way with a refreshed sense of responsibility for the future of the nation on which fourteen years ago, it fell to him to impose the humiliation of unconditional surrender.

Although no one, apart from the two protagonists and their interpreter, honestly knows what Mr Eisenhower and Dr Adenauer really said to each other while they were alone, the henchmen of both have confidently put it about that each persuaded the other of his reasonableness and his loyalty. To some extent unexpectedly. Apparently the President cut an altogether livelier and more robust figure than the Chancellor had expected, and seemed to intimate that he sympathised generously with General de Gaulle's preoccupation with Algeria. In his turn, Dr Adenauer refrained from lugubrious admonition and from pointing possessively to the moon. There is practically nothing the Germans can do for the time being to ease the east-west deadlock satisfactorily to themselves. Almost instinctively, most of them have apparently decided to trust President Eisenhower and do as little as possible to embarrass his coming effort to talk turkey with Mr Khrushchev.

The very vague, but very general hope that the leaders of east and west may be about to ease their rigid postures without harming others in the process has been enhanced by Dr Adenauer's temperate reply to the hard-hitting message he received from Mr Khrushchev on the eve of Mr Eisenhower's arrival. It is worth quoting from both letters for their remarkable flavour. Having

Raiffeisen's Legacy

FROM OUR BONN CORRESPONDENT

THERE is a loading ramp at the back of the *Spar und Darlehnskasse* at Odenwald, and the manager of this Rhineland village savings and credit bank obviously enjoys demonstrating his kingdom's versatility; it is with a touch of ceremony that he unlocks the door leading from the spruce world of ledgers and adding machines straight into the warehouse where his clients can obtain a roll of barbed wire, a drum of diesel oil, or a bag of fertiliser—where, indeed they can even commit their home-grown strawberries or home-made *Wurst* to long-term refrigeration in their own rented lockers.

Yet the functions of Odenwald's bank-cum-stores are not unique. They are performed, with local variations, by many of the 11,000-odd banks run in western Germany under the aegis of the Deutscher Raiffeisenverband—the federation of German rural co-operatives. It requires only a down payment of 100 marks (£8 10s.), the price of one share, to secure initial entitlement to a rural co-operative bank's manifold services, of which the timely granting of credits is often not the least important. Odenwald's *Spar und Darlehnskasse* has 331 members, of whom roughly a third are farmers, a third craftsmen and tradesmen, and the remaining third farm workers and employees of district authorities. The total deposits with the co-operative lending banks, and with the federation's central clearing banks, amount to over DM 5.4 milliard (£425 million) and the credits to over DM 4 milliard (£340 million).

The prospect of intensifying European competition is infusing the complex of rural co-operatives with fresh vigour. There are altogether some 23,000 of them in western Germany, loosely but effectively co-ordinating the efforts of nearly four million members engaged in pretty well every branch and offshoot of agricultural activity, including wine-growing, cold storage, dehydration, machine-repairing, printing and insurance. They are descendants of the *Brodverein*, which was founded by Friedrich Raiffeisen, the mayor of Weyerbusch, during the famine of 1846-47 in order to set local farmers on their feet again by procuring them equipment and credits.

Raiffeisen's experience led him to set up the first rural loan bank operating on the principle that the recipient of a loan must be a shareholder, however modest. His ideas soon caught on, among them his advocacy of joint buying of seed and equipment, and of joint marketing of produce. In general, his principles still hold good. Although it has been found necessary to establish eleven central institutes to cope with such collective business as importing seed and determining standards of quality, the working boundaries of the majority of the co-operatives are still confined to one or very few parishes, as Raiffeisen recommended they should be. It has been impossible to carry on, as he considered desirable, with a wholly unpaid administration. Yet there are still 73,000 voluntary workers along with the 81,000 full-time and 27,000 part-time employees. Raiffeisen's name is to be found in the designation of many, though not all, of the various local and regional organisations; you cannot travel far through the German countryside without seeing it spelled out in large letters across some warehouse, silo, or collecting centre.

Of the 1.9 million farm holdings in western Germany only 6.5 per cent are bigger than 50 acres. It is the little farmer—the man with fewer than 50 acres, and sometimes with even less than ten—who is in the overwhelming majority; and it is his livelihood and independence that the co-operatives are sturdily preserving in face of the currents that everywhere in business are advancing the man, or the amalgamation, with big resources. How shrewdly the German co-operatives are adjusting themselves to the new pressures and opportunities is to be seen in the success of the *Milchverwertungsgenossenschaft* (milk processing co-operative) at Cologne. This co-operative, representing some 1,900 dairy farmers in the area, supplies the 800,000 inhabitants of Cologne with four-fifths of their milk and fresh cheese, as well as much of their ice cream and other dairy products. The 1,900 farmers own, on an average, six or seven cows each, and membership of the co-operative requires the purchase of one share of 150 marks (£12 15s.) for every cow. The milk is collected by contract with private transport companies. At an up-to-date plant at Cologne, with a staff of 390 workers, is is pasteurised and bottled, or turned into yoghourt, buttermilk, Quark, and such products—all of which bring in the farmer a steady income and occasional bonus in accordance with the profits and the number of shares held. The milk supplies of Frankfurt, Bonn, and many other German towns are being organised increasingly on ambitious co-operative lines.

The federal and regional institutions of the rural co-operatives, which fulfil to some extent the role of an army's general staff, are making it their business to prod the local organisations into adopting the labour-saving methods and attractive presentation that have done so much to sell Danish, Dutch, and Italian produce in European markets. The thriving wholesale market at Roisdorf, between Cologne and Bonn, where the fruit and vegetables of this especially fertile district are auctioned according to the Dutch *Veiling* system, is considered a model of its kind. Most of the local growers have now been persuaded to display their produce winningly; and their Roisdorf co-operative further woos the buyers, some of whom come from as far afield as Berlin, with such attractions as electric auction clocks and a pleasant canteen.

restated his familiar arguments that the German Democratic Republic and its eastern frontier have come to stay, Mr Khrushchev complained of forces in west Germany thinking in terms of revenge and revision of frontiers. He then went on:

> Your hatred of socialism and communism apparently prevents you from correctly appreciating the historical events that have occurred in sight of our generation. If you continue to indulge in wishful thinking, and to let this wishful thinking guide your policy, your activity will not lead to relaxation of tension but to fanning of passions and preparation for conflict. . . . We (himself and Mr Eisenhower) naturally cannot limit our talks to the question of maize or cucumbers. We shall discuss political questions, state affairs, and unsolved problems. And the main unsolved problem is the elimination of the last traces of the second world war, without which it is difficult to consolidate peace and the security of the nations.

There was a good deal more in this vein, and some of it rather more provocative. Ignoring Mr Khrushchev's toughest talk, mainly about the anomaly of west Berlin and the indestructibility of the east German regime. Dr Adenauer replied, presumably to the stupefaction of the west German Social Democrats:

> I hate neither socialism, nor the form of socialism sometimes called communism, nor for that matter a person who is a socialist. I would go even further. It is possible that in certain stages of a nation's development socialism is a form of economic organisation necessary to advancement. That can be particularly so when the preceding stage of development has been especially bad. But . . . I do not believe that socialism is the final stage, the final good stage, of a great nation's growth, for human beings are not saints and angels acting without regard to their personal interest.

And to Mr Khrushchev's charge of revisionist agitation in the Federal Republic:

> You write that the German people are possessed by a desire for revenge, that there are revanchists even in my government. Indeed you go so far as to suggest that I am possibly a revanchist myself. No, Mr Prime Minister. Here you are utterly wrong, and here quite frankly I cannot see in you that sense of reality which otherwise you possess in so high a degree. I am not a revanchist and have never been one. There is no revanchist in my government. I would not tolerate a minister who was a revanchist. And the German people? There may be someone here and there who dreams of Hitler and revenge. But they are very, very few, and altogether uninfluential persons. . . . I take comfort in knowing that the German nation has returned with inward conviction to the good traditions of its long past.

HERE is a conciliatory Dr Adenauer indeed. No mention of Berlin, of the division of Germany, of the necessity for free all-German elections. Along with his rebuttal of Mr Khrushchev's charges of political prejudice and revengeful dreaming, Dr Adenauer confined his advocacy strictly to a plea for general disarmament. Such restraint is obviously timely. How far it accurately reflects the Chancellor's inmost thoughts is not clear at present. Some members of the foreign ministry, as well as the opposition and several independent publicists, have long been trying to persuade him to sound such a note. As though he may have taken their advice to heart, the Chancellor repeated it this week in a broadcast recalling Germany's invasion of Poland twenty years ago.

It seems that a sincere attempt to cultivate better relations with Poland may be the first tangible fruit of west Germany's reaction to the new diplomatic prospect. Mr Eisenhower has been at pains to avoid giving the impression of having urged Dr Adenauer to take such a step. But there is little doubt that the President and the Chancellor looked at the problem at least briefly together, while Mr Herter and Herr von Brentano discussed it at some length. The tentative draft of a non-aggression pact with Poland may be taken again out of its file in the Koblenzerstrasse. But that does not mean that the argumentative maps showing Germany in the frontiers of 1937 are being taken down yet from the walls of government offices. One thing at a time.

The Size of a Man's Hand

FROM OUR CORRESPONDENT IN SOUTH AFRICA

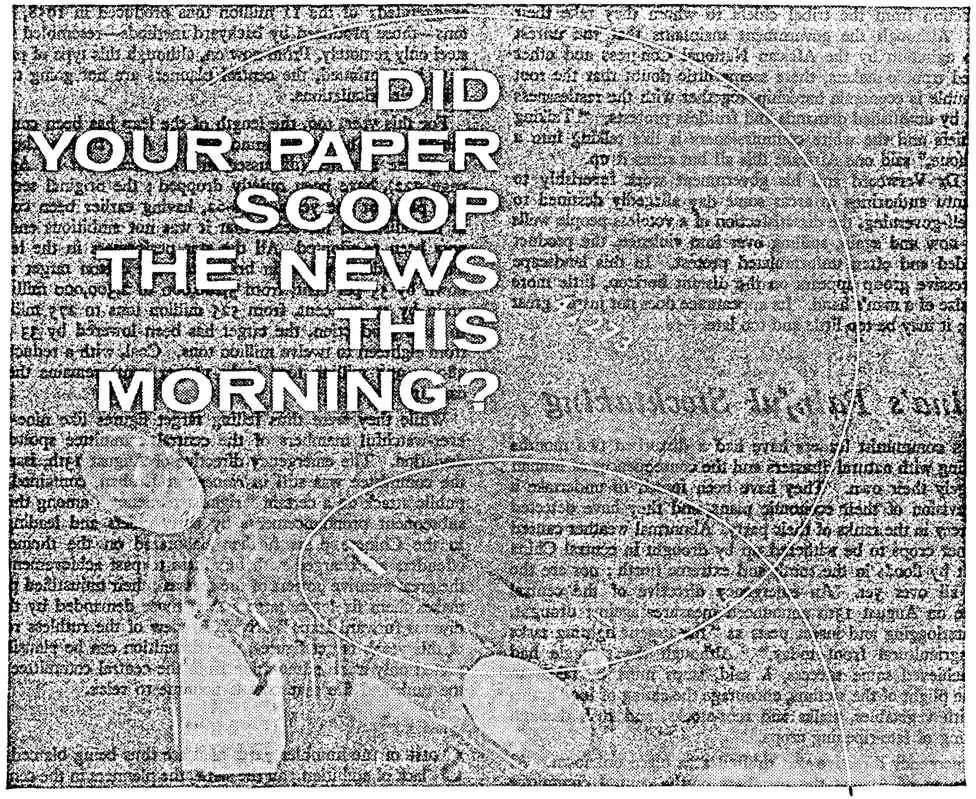
WITH the birth of a new party, politics in South Africa have become a little more real. When the dozen members of Parliament who have broken with the United party formally launch their new party, as they are expected to do soon, there will for the first time be a sizeable group of white legislators elected by white voters uninhibitedly advocating reasonable representation for non-Europeans in Parliament, probably by people of their own race. Committed to a broader and more dynamic interpretation of colour policy than the United party has ever thought desirable or feasible, they will probably urge some kind of multi-racial political system. Under growing conservative pressure the United party is expected to move further to the right in an attempt to gain support among those Nationalists who have begun to waver under the impact of Dr Verwoerd's interpretation of apartheid. The Progressives, as the dissident group is likely to be called, have promised to consult with African leaders on matters of common concern, and they have already made preliminary contacts—a considerable advance for orthodox white politicians.

Until the new party formulates its policy, it is difficult to say what impact it is likely to make on an electorate that is notoriously conservative on colour questions but which has recently shown signs of a stirring conscience under the pressure of developments in Africa and elsewhere. The new group possesses talent and influential support on a narrow front, including that of Mr Harry Oppenheimer, the chairman of the Anglo American Corporation who has resigned his membership of the United party. Logically, and in time, the Progressives and the small non-racial Liberal party should form a common front; but logic has never been a feature of South African politics.

Meanwhile the Nationalists under Dr Verwoerd are watching developments with far less joy than might be expected of a party that has just seen its principal opponent badly split. In fact, there is some apprehension in the Nationalist hierarchy. Dr Verwoerd's plans for separate Bantustan states are beginning to frighten the more timid and also the more realistic of his followers, who may now be casting eyes at the "purified" United party as a possible political home. Stern warnings have been issued against talk of a coalition, and Nationalist tactics are to suggest that the new party is quite as bad as the old, that both are on the road marked political integration, and that integration must end in the political swamping of the white man. Nevertheless, there may be a reorientation of polical forces, with moderate Nationalists throwing in their lot with the purged United party—out of fear of what Dr Verwoerd's extremism may produce. If the United party continues to try to be all things to all men—the weakness that led to the recent crisis—some such regrouping may in fact take place and produce a liberal and reactionary wing on either side of the conservative block.

AFRICAN women have lately begun for the first time in South Africa's history to assert themselves as a political force. So far their demonstrations have been confined to Natal, the province where the proportions of non-white to white is greater than anywhere else in the Union, where the so-called Bantu areas are more diffuse, and where the Africans are less politically conscious, and the African National Congress less influential and more poorly organised, than on the Witwatersrand or in the Eastern Cape.

In rural and urban areas Zulu women have come forward to voice their protest on a variety of grievances such as increased taxation, the state's failure to pay them for filling cattle-dipping tanks, the influx control which makes it difficult for rural Africans to get into urban areas to earn money, passes for women, restric-



In the newspaper world the outlook has changed considerably over the last few years. Nowadays it's not so much news as features; features or comment; the news-room scoop is almost a thing of the past - an exciting aspect of newspaper life remembered only by the journalist whose career began in the heady Fleet Street days before the war. Today, alas, the scoop has become the prerogative of ITN or the BBC.

What then does today's reader require from his newspaper? Entertainment and an easily digested interpretation of the day's events? Confirmation of opinions and systems to which he has clung faithfully all his life? There are a number of newspapers which can do this for him admirably.

But a growing section of the community want more: they want comment that doesn't merely emphasize but guides; they want intelligent, well balanced leaders; reliable, corroborated information on world affairs. That is why so many are changing to *The Scotsman*; not only for its refreshing impartiality, but also for the stimulating articles on sport, farming, the arts, women's features, and almost every other topic known to Man.

Make a habit of THE SCOTSMAN

tions on the home brewing of beer, and their frustration at getting no satisfaction from the tribal chiefs to whom they take their troubles. Although the government maintains that the unrest is due to agitation by the African National Congress and other unspecified trouble-makers, there seems little doubt that the root of the trouble is economic hardship, together with the restlessness produced by unsatisfied demands and fruitless protests. "Talking to the chiefs and the white commissioners is like talking into a toy telephone," said one African; this all but sums it up.

While Dr Verwoerd and his government work feverishly to create Bantu authorities in areas some day allegedly destined to become self-governing, the dissatisfaction of a voteless people wells up every now and again, spilling over into violence, the product of unheeded and often unformulated protest. In this landscape the Progressive group appears on the distant horizon, little more than the size of a man's hand. Its appearance does not justify great optimism; it may be too little and too late.

China's Painful Stocktaking

CHINA'S communist leaders have had a disturbed two months dealing with natural disasters and the consequences of human folly, largely their own. They have been forced to undertake a painful revision of their economic plans, and they have detected a new heresy in the ranks of their party. Abnormal weather caused the summer crops to be withered up by drought in central China and spoilt by floods in the south and extreme north; nor are the disasters all over yet. An emergency directive of the central committee on August 13th announced measures against drought, flood, waterlogging and insect pests as "the urgent fighting tasks on the agricultural front today." Although the struggle had already achieved some success, it said, steps must be taken to relieve the plight of the victims, encourage the eating of food grains mixed with vegetables, stalks and root-stocks, and rush through the planting of late-ripening crops.

The emergency directive was drafted at a place unknown. At the beginning of August the members of the central committee had quietly left Peking, leaving no forwarding address. Not till the end of the month was an official communique published describing the committee's eighth plenary session. It had been held at Lushan in the Kiangsi province, from August 2nd to 16th, "under the guidance of Comrade Mao Tse-tung." This remarkable document assumes either that Chinese memories are very short, or that nobody can tell the difference between a leap and a hop. An effort is made to impress on the reader that all is well and that everybody is leaping forward according to plan:

> The various branches of the national economy in the first half of this year continued to leap forward on the basis of the great leap forward of 1958, and won new, important successes.

Thus in the first six months of 1959 the total output of industry increased by 65 per cent compared with the same period last year, the volume of railway freight by 49 per cent, and retail sale of commodities by 23 per cent; the total output of wheat, early rice and rapeseed has also allegedly exceeded last year's bumper crops, but by an unspecified figure.

This cheerful opening of the central committee's report is a piece of planners' acrobatics. This year's figures are compared with last year's but not with those originally announced, since

> repeated check-ups made in the first half of this year show that the figures originally announced are a bit high. Owing to lack of experience in assessing and calculating the output of such an unprecedented harvest, the agricultural statistical organs in most cases made an over-assessment.

The actual amount of grain reaped last year was therefore not 375 million tons, but only 250 million; of cotton not 3,350,000 tons but 2,100,000 tons. The output of steel had also been exaggerated: of the 11 million tons produced in 1958, 3 million tons—those produced by backyard methods—resembled industrial steel only remotely. From now on, although this type of production is to be continued, the central planners are not going to include it in their calculations.

For this year, too, the length of the leap has been considerably shortened. The figures announced in April by Mr Chou En-lai, the prime minister (discussed in *The Economist* on April 25th, page 322), have been quietly dropped; the original second five-year plan for the years 1958-62, having earlier been condemned as unrealistic in the sense that it was not ambitious enough, has now been re-adopted. All the star performers in the leap-stakes have considerably lost in brilliance: the cotton target now goes down by 55 per cent, from 5,200,000 to 2,300,000 million tons; grain by 47 per cent, from 525 million tons to 275 million tons. In steel production, the target has been lowered by 33 per cent, from eighteen to twelve million tons. Coal, with a reduction from 380 to 335 million tons (only 11 per cent) remains the lightest casualty.

While they were thus felling target figures like nine-pins, the ever-watchful members of the central committee spotted a new deviation. The emergency directive of August 13th, issued when the committee was still *in camera* at Lushan, contained the first public attack on a certain "rightist tendency" among the cadres; subsequent pronouncements by party chiefs and leading articles in the Chinese press further elaborated on the theme. The offenders are charged with blindness to past achievements and to the great creative powers of the masses; their unjustified pessimism makes them fix lower targets than those demanded by the "continuous forward leaps" drive. In view of the ruthless reductions of this year's target figures, the admonition can be plausibly interpreted only as an admonition from the central committee down to the rank and file that now is no time to relax.

SOME of the humbler party men are thus being blamed for their lack of ambition; all the same, the planners in the central committee were forced to climb down. The committee's report contains plenty of evidence that at the Lushan meeting a compromise had to be hammered out between the ruthless thrusters and the cautious go-slow men. Although the tone of the report is still ambitious, its aims are in fact moderate; there are other indications of two conflicting attitudes towards planning. The agricultural communes, at the time of their inception last summer, were much publicised in China as the main instruments of the great forward leap; clearly they were the creation of the ambitious men on the central committee. Since then, the claims—both ideological and economic—that were being made for the communes have been toned down. Although they are to be kept in being, the central committee has now directed plenty of implied criticism against them. The labour power allocated to getting in last year's bumper harvest was inadequate; "reaping, threshing and storing were all done in a somewhat hurried manner"; last winter, the sown acreage was "somewhat reduced"; finally, the communes will no longer be expected to make a significant contribution to China's industrial output. The victory of moderation in planning and the necessity of admitting grave errors in calculations of past achievements may have deprived some of the central committee members, perhaps even Mao Tse-tung himself, of considerable former prestige. It is also likely that Peking will listen more readily in future to advice from Moscow on economic matters. There is another possible repercussion; however diluted they have been by rhetoric, the central committee's admissions of failure can hardly come as anything but a shock to those Asians who have been inclined to regard the Chinese experiment as a model for rapid economic development.

'TCA certainly brings home the value of Canadian markets'

It was only yesterday—wasn't it?—that rich Canadian markets seemed just a little distant. Funny how quickly geography dates: because these very same markets are now practically on your doorstep almost begging you to collect your share of new business. This situation is nicely helped along by TCA—Canada's own international airline. TCA's transatlantic services enable you, your executives, and technical men, to make flying visits to anywhere in Canada, *any day of the week*. And TCA Air Freight offers you a direct-delivery service that ties up the whole of Canada into a neat marketing proposition.

For the rest of the story, the people to get in touch with are your Travel Agent and Forwarding Agent.

ONLY TCA OFFERS YOU:

- Through flights to Toronto from the U.K.
- To and beyond the Montreal 'gateway' to Ottawa, Toronto, Winnipeg, Edmonton, Vancouver, and to key U.S. cities
- Through flights from London to Winnipeg and Vancouver
- Daily services with same-airline connections to *all* Canada

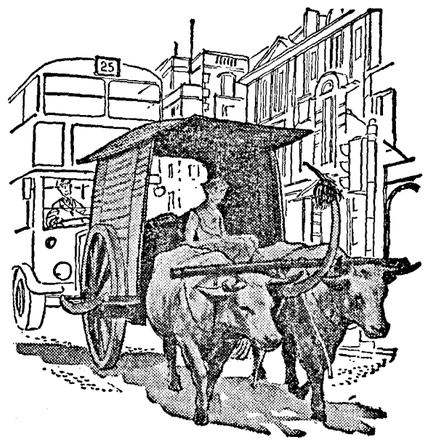
TO CANADA—ACROSS CANADA—AND TO KEY U.S. CITIES

Your Travel Agent is the man to see

TRANS-CANADA AIR LINES

27 Pall Mall, London, S.W.1. WHitehall 0851 And at Glasgow, Manchester and Birmingham

SERVING EUROPE, ALL CANADA, THE U.S.A., BERMUDA, NASSAU AND THE CARIBBEAN



Bullock Cart in Bond Street

Delivering goods to somewhere out East? Right here in London we can produce for you facts and figures about your market. We can provide you with up-to-date credit information, and advise you on currencies and monetary regulations, for any part of South or East Asia. For ours is the largest British bank established by the Far East for the Far East. We are intimately connected with the life and commerce of thirteen Far Eastern countries. We have offices in most of the main trading centres. Our knowledge and services are available to you whenever you need them.

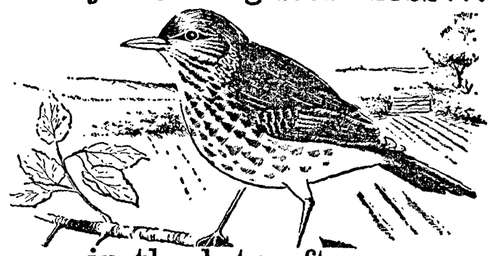
THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG

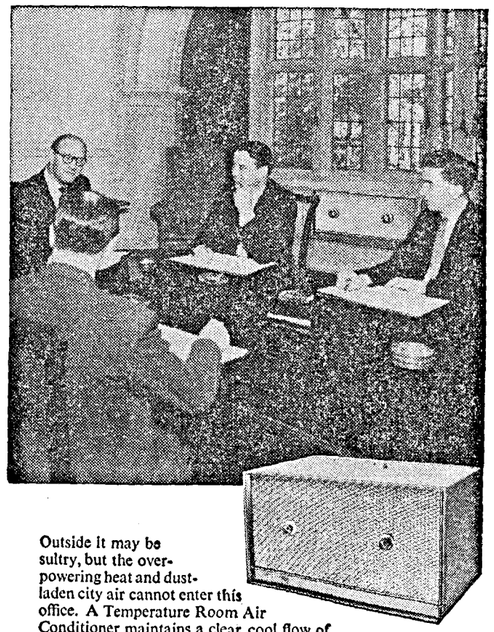
LONDON OFFICE: 9 GRACECHURCH STREET · EC3

Branches throughout the Far East; also in New York, Hamburg and Paris. Offices of our Subsidiary in San Francisco and Los Angeles.

Early morning freshness...



...in the late afternoon



Outside it may be sultry, but the overpowering heat and dust-laden city air cannot enter this office. A Temperature Room Air Conditioner maintains a clear, cool flow of air, fresh as morning dew, throughout the work-long day. It filters out the irritating dusts, controls temperature and humidity, is unobtrusive and easily fitted in any room or office.

LIVING FACTS

- Promotes comfortable, healthy conditions
- Dispels fug and staleness
- Conditioner can be flush mounted inside or out
- Window or wall fitting with simple installation in glass-fronted and concrete multi-storey buildings
- Water or air-cooled
- An installation with a conditioner in every room is less than half the cost of a central station system

TEMPERATURE LIMITED

ROOM AIR CONDITIONERS

Make life fit for living!

THE BUSINESS WORLD

Stocktaking for Aircraft

AIRCRAFT builders are not in depression—yet. Some of them have adopted the remarkable course of building civil aircraft for stock; Viscounts, Britannias, some of Westland's helicopters and possibly also Comets can be bought over the counter for delivery in two to three months. But the aircraft industry does not encounter its critical problem—the dismantling of entire production lines, civil and military, for want of orders—for another year. So far the industry's main concern has been to find money for development. From late 1960, its main concern will be to find work. The table shows in an approximate fashion the timetable when outstanding orders for existing types will have been met, and the likely start of deliveries for new projects now coming off the drawing board. It suggests that a real slump with redundancy on a major scale (by comparison with which the current troubles at Shorts in Ulster, at Bristol, de Havilland, Armstrong Whitworth and Folland will seem minor affairs) will hit the industry late in 1960 or early 1961 and persist probably until 1962-63 after which things should be a good deal brighter for the survivors.

This industry's long-term problem is to adjust itself to the divorce between military and civil production (until recently engines at least were interchangeable) and the cutting off of further government finance for the development of civil aircraft. These are matters for management; they raise questions of finance and administration rather than of aircraft design. The government might like to see them dealt with by mergers, but the industry appears to think otherwise.

The industry's medium-sized and vulnerable companies cling stubbornly to their identity, relying mainly on branching into other industries where they can earn profits to finance their aircraft production. They are not blind to the changes in the industry and some of them are trying to work together in loose association; the Airco company formed by de Havilland, Fairey and Hunting to build British European Airway's new jet airliner means that independent aircraft ventures either by Fairey or by Hunting would be unlikely. But whether Airco can develop into a tightly controlled production unit capable of producing aircraft at a profit in the difficult conditions of the 'sixties has still to be seen.

There will be great regret if it does not. The next decade promises to be much more exciting in aerodynamic progress than the decade that is now closing. Ballistic missiles, rockets and satellites are opening new fields of knowledge and new branches of engineering in which the rewards, scientific and practical, may be great. The jet airliner is in a Bleriot stage, capable of great development and refinement. The cult of speed in the air, often presented so that it appears as a form of lunacy, is in fact part of the search for economy.

The link between jets and space, again, is real and not a trick of science fiction. The first task of a rocket designer is the difficult one of getting a package—a warhead for a ballistic missile or instruments for a space rocket—out of the earth's atmosphere and safely back again. Sober experimental engineers in the aircraft industry studying these techniques suspect that a great deal that they learn about getting in and out of space will provide theoretical data on which the next generation of fast-flying airliners will be built. They say in private that the aircraft industry and the country would gain more from spending £20 million on a modest looking but scientifically stimulating space programme than £200 million in building a supersonic airliner; indeed, they think that some such data are necessary before a supersonic airliner can be built at all.

BENEATH this gilt is a solid wedge of gingerbread in substantial orders from Transport Command for freighters, from Bomber Command for its technically exacting Canberra replacement, and from all branches of all the services for missiles to be capable of obliterating anything from a tank to a city. Government interest in vertical take-off fighters is growing sufficiently to give them some hope of a future. Changes in ballistic missiles may give the V-bombers an extended life as missile platforms. Civil air transport is booming, and the market for civil aircraft is booming too for those companies that can offer the right kind of machines. But not one of these projects of the 1960s, with the possible exception of Transport Command's freighter, which is an interim design bitterly criticised inside the Air Ministry, can be handled by any but the biggest production units.

If the British aircraft industry is to take advantage of the technical opportunities of the 1960s, managements must prepare themselves for a far-reaching degree of concentration. This may have to emerge from the growth of individual concerns, and the decline of others, simply because resistance to the idea of mergers runs so deep in the industry. For example Airco, the de Havilland-Fairey-Hunting company, was formed specifically to manufacture civil aircraft, although

there would seem to be obvious advantages in extending it to cover de Havilland's manufacture of the massive Blue Streak missile and Fairey's complicated anti-tank rocket.

It has been suggested in *The Economist* that the industry's antipathy to mergers rises out of the small size of available Government orders and the need to compete for as many of them as possible. The only way to increase the size of these orders is to persuade some of our allies to buy British, which means in turn buying from them—a point ignored by the Select Committee which recently criticised Britain's arms exports.

None of these long-term plans will, however, help the industry much with its pressing short-term problem of warding off unemployment next year and the year after. This is the business of the industry's vast corps of salesmen, who will be deployed next week at Farnborough. It involves selling machines already in production to customers who regard them dubiously as obsolescent and order them, if at all, in twos and threes. Thus there is a persistent and steady business in the Canberra bomber, now ten years old, and a more erratic one in the Vampire trainer, 15 years in production. Hunter fighters sell well, in spite of customers' complaints about their price. Comet sales might be easier if potential customers had fewer currency problems; it is said that de Havilland has been offered payment in onions and in cotton. Although outstanding orders for Viscounts are virtually nil, Vickers expects to sell between 50 and 100 more before finally dismantling an assembly line that was a mile long and produced ten aircraft a month.

Only one company has moved fast enough to be ready with a new design. This is Hawker Siddeley, now emerging from a management re-shuffle and still in the process of digesting its Canadian venture. Most aircraft built in Britain are tailored to the needs of a customer—the air corporations or the services. Having no customers, Hawker Siddeley worked to a general-purpose specification suggested by market research for two very ordinary bread-and-butter transports, and may make a striking commercial success. The only novel feature about these two aeroplanes is the speed with which they have been sold.

There is little wrong with British aircraft design. Farnborough next week will provide evidence of engineering and finish second to none. But there is a great deal wrong with much of the industry's administration. It has been waiting like a mesmerised rabbit for a slump whose approach three or four years off was only too obvious. A company with a world-wide reputation like Rolls-Royce has been bitterly criticised for selling its engines to foreign aircraft builders, competing with Rolls-Royce's customers at home. Yet if it had not done so, the company would now be going short of work. The revival of Hawker Siddeley in a short space shows the great influence of management even in this highly technical industry. The group's commercial success in fields where other companies have tried and failed also shows that buyers will prefer to do business with a big company rather than a small one. These facts have no connection with the technical business of aircraft production, but they are essential conditions on which the industry can hope to stay in business.

Work in hand at the engine companies will be analysed next week.

The Cost of Metamorphosis

The second part of a survey of BMC's achievements

Last week's article discussed the productive and marketing strategy that the British Motor Corporation has pursued since 1952. This strategy has been aimed at getting the greatest possible economies of scale in output without sacrificing the goodwill and distribution-network attached to the existing names. How effectively has it enabled BMC to compete?

Almost every size and kind of motorcar for which there is a significant popular demand in Britain or in its main overseas markets is now covered in the range offered by the British Motor Corporation. The two small cars introduced last week represent the corporation's response to the demand for the lowest cost in motoring. BMC has rejected the conception embodied in the Isetta and Heinkel bubble cars and the Goggomobil—and the lack of success of the Fiat 500, and the trend of German demand away from ultra-small cars, shows how right they were. It has instead produced cars which in accommodation and performance rival the VW, the Renault Dauphine and the Fiat 600—and, incidentally, better each of these at significant points. The one criticism of this part of the corporation's programme was that a maximum volume of 4,000 units a week, as contemplated, is too small; it is less than half the rate at which Renault are building the 4 cv and Dauphine and less than a third of Volkswagen's volume. The retail price (excluding purchase tax) works out at the relatively high figure of 66d. a lb.

This major extension of the BMC range farther down into mass motoring leaves only one significant gap, namely, between the various saloon cars using the B series engine, of 1500 cc and 50/55 bhp output, and selling at £565 upwards—that is, the Austin Cambridge, the Morris Oxford; and those embodying the C series engine of 2912 cc developing 100 bhp—the Wolseley 6/99 and the Austin A99 selling at £800 (basic) upwards. There is nothing in the corporation's range to give the sort of performance that an engine of about 75 bhp would give with a 5/6 seater saloon body. In this field, Ford offers the Zephyr with 85 bhp at £610, Vauxhall the Velox with 82½ bhp at £655, and Standard the Vanguard with 68 bhp at £695. If BMC wanted to fill this gap, there should be no difficulty in embodying in the Farina bodies for the Oxford and Cambridge a larger four cylinder engine than the B engine, to give about 80 bhp; and the necessary "beefing up" of the transmission and structure to match should not add substantially to weight or cost. If a six-cylinder engine were called for, to set against the Velox or the Zephyr, a modest modification of the structure of the hull, but not of the body panels, might be necessary. But it is not easy to judge from outside whether such a complication to a streamlined production programme, particularly so in the case of engines, would be justified by the extra sales.

BMC's operations during its first seven years have not been as consistently successful in financial terms as might have been hoped. It is not fair to compare BMC's results during the years in which its production has been undergoing prolonged rationalisation with those of Ford, which has not. But it is fair to say that in the seven years of its life, BMC has not been able to work its production facilities as intensively as has Ford. The chairman's statement of November, 1954, predicted an output of 10,000 vehicles a week in the spring of 1955, and 12,500 vehicles a week for the spring of 1956; a year later this figure was repeated, though with some qualification. In the outcome, BMC's production for the year to end July, 1956, was 439,558 vehicles, which is an average of 8,800 units a week, for 50 weeks. Admittedly, 1956 was a bad year for the whole industry—output of cars fell from 900,000 to 700,000, and of commercial vehicles from 340,000 to 300,000. But there is clear evidence that during that difficult period Ford increased its proportion of the total British market at the expense of BMC.

Over that seven years, in comparison with its competitors, the corporation's passenger cars did lack something of sales appeal. The Morris Minor has been a really popular car since its introduction, and so continues today. But until recently, no other BMC model really endeared itself to the public as a best-seller. If BMC's results for these years could be broken down to show investment, sales, and net profits, it might well be that the Morris Minor accounted for a modest proportion of the total investment, but produced an even higher average rate of earnings than the high Ford earnings shown in the table. BMC's spare parts business probably shows a generous return, perhaps 50 per cent per annum on the investment. The commercial vehicle business perhaps averages 10 or 12 per cent per annum. But motorcars other than the Minor would account probably for more than half the total investment, and yet barely pay their keep for the capital involved. This analysis is guesswork, but it is in line with what is known of the widely different financial outcome of making cars which sell at their full planned rate of output, and of making cars which fall substantially short of it.

This failure over past years to achieve the planned rate of sales of most of the models is not due to any general shortcoming in performance. Austin and Morris cars have a reputation for reliability that is second to none in the popular price range. In economy of operation, particularly in fuel economy, they have in general had the edge over Ford. There has been nothing wrong with their prices. It seems that it was chiefly in appearance, in styling, that they were deficient. If so, then the trouble has been set right almost at a blow. Some would even argue that the range of bodies now in production, wholly designed or "influenced" by Farina has now put BMC ahead of its competitors, across much of its range. Such leadership can never be counted as lasting—the new baby cars, for example, are likely to be challenged within a matter of weeks. During last winter, when the new Farina line appeared, and again this year, it has not been difficult to sell cars of any make and style: ability to produce has been what mainly counted. But these new designs have enabled BMC to resist any further encroachment on its share of the market by other makers, particularly Ford.

I BMC's SHARE OF THE MARKET.

	Production of cars, trucks and tractors	Total UK production	BMC's share per cent
1953/1954	353,834	953,057	37·1
1954/1955	418,705	1,153,340	36·3
1955/1956	439,558	1,196,809	36·8

* Stock and work in progress plus creditors less debtors. † Investment in fixed assets less depreciation.

There can be few industrial organisations which have had more labour troubles than BMC, so constant a succession of small strikes, and especially at Austins—though lately the contagion has spread to Cowley. If one is to search for an explanation of this in the first logical place, namely the corporation's own management, one can diffidently suggest three causes. First the management at Longbridge, in the time when it was seeking additional labour to build up production, always bid up the price to attract the labour force it needed. Reliance on easily earned big money can make for an uneasy relation between management and the work force; it takes longer to build up a reputation for good conditions and atmosphere as well as good money—as Vauxhall has done. Second, BMC seems to be short of good personnel men to whom the top management could leave the handling of negotiations and all but the most important of decisions. It is exceptional to find the "top brass" of such a large organisation dealing so much and so directly with labour problems as in BMC; and there is much to be said for the more usual practice. As production men, BMC's top executives are first class; but the best of executives are not usually particularly good at the tricks of a successful personnel manager—indeed the very qualities of personality which are invaluable in the one function are apt to be grave disabilities in the other.

THE third problem BMC faces, in company with many other big firms, is how far to deal with shop stewards on matters of negotiation which ought formally to be handled by the permanent officials of the trade unions concerned. The shop stewards know what the argument is about and have the say-so on the floor; the local official does not. If the management, insists on dealing according to the letter of the agreement, with the local officials, this may strengthen their position in observing proper procedure and discipline—though at Cowley a fortnight ago this policy, somewhat ham-handedly pushed to the point of playing off the one centre of union authority against the other, produced an unconstitutional strike that the local officials hastily called official. But dealing with the shop stewards in order to get decisions quickly and speed up production can strengthen the power of these "unofficial officials" even more. It is hard to resist the conclusion that an important cause of BMC's labour troubles has been faulty labour management.

Another field in which the corporation's policy does not seem to accord with current thought is in planning and training, and above all in the recruitment of the personnel who will be the generals in future years. In the whole of BMC's staff, the number of men with a University degree is tiny. Whatever may have been true in the past, in the years to come large organisations that make no effort to promote a flow into their organisations of men from the Universities, whether with technical or arts degrees, will be at a disadvantage. If BMC is to continue to hobble itself in its recruitment policy, it is bound to find itself at a disadvantage compared to competitors who seek out the best brains where they are more likely to be found.

In the market's view, BMC has found a new look, like its cars. The 5s. shares have risen from 10s. to 17s. 7½d. this year, and are yielding the low return, for them, of 4½ per cent. They could easily be worth it.

BUSINESS NOTES

IN THE MARKETS

Sterling Nears Par

STERLING has fallen quite sharply in the spot exchange markets this week; on Wednesday it came within ⅛ per cent of the parity of $2.80, having stayed comfortably above it since the move to external convertibility at the end of last year. Continental holders of sterling have continued to sell it against dollars in order to take advantage of the further rise in interest rates in New York, and to this has been added some commercial demand for dollars, which this year has been so late in appearing. There is no sign at all of speculative movement against sterling. In the forward market, sterling continues at a premium against the US dollar, and this has widened in line with the interest parity; there has also been an improvement in the forward margin against the D-mark this week. Expectations that the general election may be held quite soon have had little effect in the exchange markets—possibly because of the simultaneous improvement in the prospect of a Conservative victory.

This week's pressures in the exchange markets may have cost the authorities some dollars, and later this month gold may have to be found from the reserves to meet the subscriptions of some overseas sterling countries to the International Monetary Fund. So far, however, the reserves have given a very good showing. In August they rose by £10 million, despite payments of £9 million in settlement of old debts under the European Payments Union and a first payment of £2½ million to the new European Fund, to help meet the credit granted to Spain. A true rise of more than £20 million in the reserves in August is a very good result; for the third month in succession, the gold figures have been better than in 1958.

The Treasury has also published this week movements of sterling balances in the second quarter. All countries together increased their balances by £25 million, to £3,362 million, their highest since September, 1957. Holdings of the independent sterling countries rose by £81 million; those of the colonies dropped by £10 million. The non-sterling countries show a fall of £46 million, but this is entirely attributable to the deployment of funds of the German central bank already in London: some £22½ million has been paid in advance instalments of debt to the Treasury, and a further £37½ million has been invested in a non-marketable Treasury bond that is technically outside the coverage of the published figures. Up to the end of June, therefore, there was no sign of a net withdrawal of funds from London.

Since then, the rise in interest rates in New York has certainly quickened the movement of short-term funds from Europe, and some of these funds in the hands of Swiss or German banks have come from London. Most of these transactions, however, have been covered in the forward swap market, and have therefore had little impact on movements in the reserves. Also, there has been a contrary flow of long-term American capital for investment in European securities. This week the rise in New York rates has gone a stage further. The rate on 3-months bills has risen to 3.89 per cent and that on 182-day bills to nearly 4½ per cent. Expectations have grown that the Federal Reserve will raise the discount rate from 3½ to 4 per cent without waiting for settlement of the steel strike; and leading New York banks have raised their prime loan rate from 4½ to 5 per cent. Thus bank borrowing for a big business becomes more expensive in the United States than in Britain. The American banks are unable to satisfy demand for loans, and they now face new pressure from withdrawal of funds from time deposits, on which they are prevented by law from paying more than 3 per cent at six months' notice.

Focus on Interest Rates

THE London money market last week showed a proud unconcern for these transatlantic difficulties; unexpectedly, the discount houses made no change in their bid for Treasury bills and the rate remained below 3½ per cent. But London can hardly remain unaffected for long. Gilt-edged have already taken a knock. A number of stocks now stand near their lowest points for the year. Equities have remained firm, even after Tuesday's sharp setback on Wall Street. There is indeed good reason to suppose that prices of ordinary shares in London are better placed to withstand a general move to higher interest rates than share prices elsewhere. Investors in the United States and Germany can certainly see no cause for alarm in the lowering of yields on London blue chips below long-term fixed interest yields; in their markets, the margin is already quite wide. Share prices in America and Germany have recently risen much faster than in London, and in both countries the central banks have expressed their concern about the equity boom. In Germany, where share prices in the thin markets have risen by 50 per cent since the beginning of the year, and the reduction of rates in the bond market has suffered a check, a shake-out in share markets has taken place this week. Some bankers in Frankfurt think this may enable the Bundesbank to avoid the rise in interest rates it might otherwise have felt obliged to make.

THE ECONOMY

More Cheerful Again

OFFICIAL statisticians are always giving the picture of the British economy a new look. Their latest calculations of the index of industrial production (after seasonal adjustments, based on 100 in 1954) give a forecast for July of 111-112, following 110 in June and 109 in May. The rather faltering course depicted a month ago has thus changed into a continuously expanding one. Moreover, but for the stoppage in the printing industry, the July result would have been slightly better. Taking this forecast at its face value suggests that output in July was running 1 to 2 per cent above the level in the second quarter, 3 to 4 per cent above that in the first quarter, and 5 to 6 per cent above that a year ago. In May, the National Institute was expecting output to be up by 4-5 per cent by the end of 1958 than at the beginning.

It seems that the increase in output was widespread. Fine weather helped sales of food, drink and clothing; building activity remained high; and engineering output, including machine tools, seemed to be rising too. Recovery appears to have begun to spread through the economy from the consumer goods industries. One decelerating influence this autumn, however, could be hire purchase. Obviously, the growth in hire purchase debt, which has been gathering speed this year from a monthly rate of £20 million in the new year to £34 million in June and July, may slacken; and any slackening in this rate of increase would involve a reduction in the injection of new purchasing power. It is conceivable that car production may not be maintained at record levels through the winter. Total hire purchase contracts for vehicles dropped from 167,217 in July to 125,691 in August, still a high figure.

Registered unemployment on August

17th totalled 427,000, some 32,000 more than in July. But in August, school leavers are seeking their first jobs and this year more children reached the age of 15 than at any time since the war. Unemployment among adults fell by nearly 6,000 during the month, compared with increases of 5,000 and 3,000 in the corresponding periods of the last two years. Scotland was the one area in which total unemployment fell and in this region the number of 15-year-olds was no different from last year. Although there was a decline in unfilled vacancies between July 8th and August 12th of 12,000—all in the under eighteen age group—there remained 80,000 vacancies available to school leavers and other unemployed juveniles, which is more than last year.

CREDIT EXPANSION

Prepare to Restrain?

THE latest bank figures show a check to credit expansion as a whole but a continuation at a pretty rapid rate of the rise in advances. Total advances of the clearing banks in the five weeks to August 18th rose by £19 million gross, a definite deceleration. But extraneous transit items have distorted the picture; allowing for these, advances rose by £35 million, and allowing for a fall in advances to State boards advances to private borrowers rose by £43 million—a rate broadly comparable with that in the second quarter and distinctly high for this time of year. Advances have now risen by £703 million or 37 per cent in twelve months.

The demands of the Government on the banking system have, however, dropped in the latest month. The banks' liquid assets fell by £3 million and their total deposits fell, though net deposits, excluding all transit items, rose somewhat. There is still little sign in the financial accounts of the big projected increase in the budget deficit.

Table I

* Excluding items in course of collection. † Excluding all transit items. ‡ Excluding transit items except for changes on year and ratio to gross deposits. § Ratios to gross deposits.

The deficit is somewhat larger than a year ago, but this is roughly offset by the bigger rise in the note issue; a deterioration on tax reserve certificates is almost offset by better small savings. The increase in the Government's borrowings from the banking system in the current fiscal year seems attributable rather to the reduction in its sales in the gilt-edged market. If the authorities want to be in a position to impose restraint on the banks towards the end of the year without bringing in special deposits or a Radcliffe liquidity control, their funding sales will have to be stepped up. It will be interesting to see whether the authorities' traditional reluctance to press the market will be in any way influenced by the Radcliffe recommendations that they should give a positive lead.

COTTON INDUSTRY

A Rush to Scrap

A SHORT while ago Lancashire's mills were facing a shortage of customers; in six months' time their customers may be facing a shortage of some types of textiles. The response to the scheme for eliminating surplus and obsolete machinery has exceeded all expectations. By August 31st, when the bonus rate of compensation lapsed, applications to scrap had risen sharply to virtually 12 million spindles, nearly half a million doubling spindles and over 95,000 looms. By March 31st, when all this machinery is due to be scrapped, capacity in spinning will have been cut by almost a half, in doubling by roughly a fifth and in weaving by nearly two-fifths. The reduction in working capacity is much less marked. When the Government announced its proposals last April about one-third of the spindles and a quarter of the looms were idle, and many mills were working short time besides.

This high response is all to the good; it improves still further the prospect for the remaining mills, though it accentuates the transitional problems of meeting demand. Initially the spinners may be able to cope by widespread resort to the women's short evening shift, but in weaving a wider use of double day shifts, plus a male night shift in many mills, will be required. In extreme cases of need the Cotton Board's special agency may use its discretion to grant a postponement of the scrapping date. Finally, with the remaining mills making better profits, the incentive to re-equip should be all the stronger. The Board of Trade announced the introduction of the second stage of the scheme this week. It will pay one-quarter of the cost of re-equipment, provided that expenditure is incurred between April 24, 1959, and July 9, 1962, and the machinery installed before July 9, 1964.

BEA

It Depends What You Mean

IN the jargon peculiar to airlines, British European Airways describe the 12.4 per cent increase in international passenger traffic and the 7.2 per cent increase in the corporation's own sales last year as a "major slump" from which BEA was extremely lucky to scrape by with a net profit of £232,695 on a revenue of £30.6 million. Like the other airlines, BEA had planned its 1958-59 operations on the assumption that traffic would continue rising at 15 per cent per annum—the corporation did in fact increase its passenger-carrying capacity by nearly 16 per cent. Airline planning is so inflexible that failure of traffic to come precisely to expectations does have serious financial consequences and by the end of the year many airlines, including BEA's partner, BOAC, were deep in the red. Nevertheless, it would be interesting to know what words BEA would find to describe a genuine sales recession in which passenger traffic actually fell.

BEA has reason to feel smug with its unbroken five-year record of profit. It has few of the long distance routes on which the majority of international airlines earn profits to offset, they hope, losses on their short-haul flights. The average BEA flight is less than 300 miles, and while American internal airlines make handsome profits over these distances, they do not, as BEA does, have to carry the overheads of an international as distinct from a domestic airline. Nor do they depend on that unpredictable animal, the holidaymaker, for so large a slice of their revenue. With business flying relatively inelastic, but tending to fill the corporation's newly restored first-class seats, big increases in traffic can only be expected nowadays from among people paying their own fares.

BEA knows, as does every other airline, that the quickest and easiest way of stimulating this traffic is a straight cut in fares of between 15 and 20 per cent on present tourist rates, leading to the abolition inside Europe of tourist flights and their replacement by the type of third-class service that has led to this year's boom on the North Atlantic. But BEA, for all its brave talk, is in no position to make such a cut this year. Although the corporation will ask at the coming fare meeting of the International Air Transport Association for the extension of these fares to Europe, it is prepared to settle, as it explains in its annual report, for piecemeal reductions on routes where traffic most needs encouragement, and especially for fare cuts in the middle of the week and at off-peak flying hours. The innovation, which may establish an impor-

tant precedent, is that BEA now wants to sell these cheap tickets direct to passengers, no longer wrapped up in a packaged holiday deal that can be bought only through a travel agent.

TIN MARKET

Export Quotas Increased

BUYERS and sellers of tin awaited with special interest the outcome of the meeting of the International Tin Council in London on Thursday this week. Would export quotas be increased in the fourth quarter, or even completely removed? The council's decision might be held to be governed solely by its forecast of the amount of metal in the buffer stock at the end of September, for article VII of the tin agreement states that export control shall not become effective unless at least 10,000 tons is held. But some people argue that this rule was intended to apply only to the introduction of export control. While no one outside the council knows exactly how much metal is held, it may not be far above 10,000 tons (excluding what is left of the 2,500 tons that is being sold on the British Government's behalf). In the event the council settled only part of the controversy; it decided to increase exports by 5,000 to 30,000 tons, thus leaving its interpretation of article VII still open to doubt.

Despite the steel strike in the United States the big American companies are still buying tin, though at a slower rate than before, and consumption in other countries is rising. With exports from member countries restricted to 25,000 tons in the third quarter, the buffer stock manager has had to continue selling to prevent prices rising; throughout the last two months tin has held steady in London at a little over £790 a ton. Indeed, some people argue that prices should have been allowed to rise to the mid-point of this range—£780 to £830 a ton—in which the manager does not normally operate unless the council decides otherwise. Yet it seemed hard to justify a claim for higher prices while exports remained severely restricted. It is also difficult to see the merit of maintaining restrictions on exports when the buffer stock holds less than 10,000 tons. It would mean control for control's sake, and could lead to the absurdity of fixing exports at, say, 110 per cent of the base. The case for bigger quotas, on the other hand, is unquestionable. Without that increase, the manager of the buffer stock might lose so much tin that he would be less well placed to restrain a rise in prices than a fall.

INDONESIA

Financial Confusion

BUSINESS life in Indonesia is virtually at a standstill as a result of a series of drastic, and at points conflicting, financial

decrees. President Sukarno appears to have acted without consulting the governor of the central bank, Mr Lukman Hakim, who has lately been criticising the extent of government spending on defence. Mr Hakim, who became governor of the bank last year when his predecessor, Mr Prawiranegara, abandoned the job to become leader of the rebel forces in Celebes and Sumatra, resigned on Tuesday. The government has attacked the chronic inflation, not, as the central bank had urged, by cutting deficit spending, but by a currency reform accompanied by devaluation and the blocking of bank accounts.

Rupiah notes of 1,000 and 500 denomination are apparently to be depreciated to one-tenth their value, and all bank accounts of 25,000 rupiahs and over are blocked. Externally, the rupiah is devalued to 126 to the pound (compared with the former theoretical basic rate of 31.9); even so, the new rate is well below what can be got in the unofficial market. While the cabinet meets to try to sort out the muddle (at present employers cannot even get money to pay wages), President Sukarno, with his usual sang-froid, has absented himself on a fortnight's tour of the Indonesian islands.

NEW CARS

Minx, Mercedes and Rover

THE chief innovation on the 1960 Hillman Minx is the adoption of the Smiths automatic transmission as an optional extra. This is the first time that a fully automatic transmission has been available on a small British car, and other makers are likely to follow this example if it proves popular with the public. The Smiths transmission, described in *The Economist* of May 16th, combines two magnetic particle clutches with a three-speed gearbox, and gear

Smaller Profits at Lloyd's

IN the three-yearly account for 1956 which has now been closed, the underwriters on Lloyd's have suffered another sharp reduction in profits, despite a further growth in premium income. The market was left with a profit at the closing of this account of £5.7 million after meeting all claims and providing for reinsurance and reserves. This represents a rate of profit of only 2.2 per cent on a total income of nearly £256 million. That is less than half the rate of 5.4 per cent returned in the 1955 account, when a profit of £12.8 million was recorded from a total income of £235½ million. As the accompanying table shows, bigger claims on the marine and fire and accident accounts whittled down profits. Profits on the motor business, reflecting an adjustment in premiums, were better, but the aviation account did little better than to break even. The 1957 account, which will be completed at the end of this year, seems likely to be just as bad.

The number of underwriters on Lloyd's has continued to grow, as has the volume of insurance business they handle. Capital was attracted to Lloyd's by the high profits that were earned in the early 1950's. That itself added to the competitive pressure inside the market while outside Lloyd's the competition of insurance offices grew keener. The American market brought losses to the Lloyd's underwriters just as it did to the insurance offices; and reinsurance, which has always played an important part in Lloyd's, became less profitable. Inevitably, premium rates had to be raised and it may be that the 1958 account will mark the turning of the corner. But Lloyd's is less attractive to idle capital than it once was.

* Largely fire and accident insurance.

changes are made automatically unless the driver wishes to override the mechanism. The extra cost of the automatic transmission is £88, plus £36 13s. purchase tax; this is effectively £4 10s. below the lowest price for automatic transmission on a larger car, but it represents a larger proportion of the total price—£764 for the de luxe saloon.

The Rover range for 1960 has been reduced from five to three models: the 60, 75, 90 and 105 are replaced by the 80 and 100. The 3-litre model introduced last year stays unchanged. The new models retain the body design of their predecessors, but have new engines; the 80 has the Land-Rover engine, a four-cylinder unit developing 77 bhp, compared with 60 bhp of the 60 model and 80 bhp of the 75. The 100 has a 2.6 litre short stroke version of the 3-litre engine, developing 104 bhp, which compares with 108 bhp for the 105. The performance of these new models should thus resemble that of the 75 and 105 respectively; the basic price of the 80 is £64 more than that of the 60, at £963 (£90 more at £1,365 including tax); but Laycock-de Normanville overdrive and Girling disc brakes are fitted as standard equipment on both. The 100 sells at the same price as the 105, £1,085 or £1,538 including tax.

Three new models recently announced by Mercedes-Benz, the 220, 220S and 220SE, combine a slightly higher horse-power output from the six-cylinder 2.2-litre engine previously used in the company's "middle" range of models with a restyled —attractive if somewhat solemn—saloon body. Engine power is now 105 bhp in the 220, 124 bhp in the 220S and 134 bhp in the 220SE, which uses Bosch fuel injection in place of carburettors. Claimed top speeds are 96 mph, 102 mph, and 105 mph; the new models are stated to be slightly lighter than the cars they replace, and with about five per cent more power, acceleration should be perceptibly improved.

ANGLO-RUSSIAN TRADE

A Taste of Honey

In an "atmosphere of friendly co-operation and mutual understanding," the Board of Trade and the Soviet Trade Delegation in London have now settled the import quotas for consumer goods for the first year of the new trade agreement beginning on July 1st. Each country is to provide for an increase of £2 million a year in trade in consumer goods. As such trade amounted to roughly £1.4 million fob each way in 1958, the new quotas are worth £3.4 million fob. While this is certainly a step forward, the extra £2 million seems positively minuscule when broken down into categories. It may whet the Muscovites' appetite for Western goods and titillate the Londoners' taste for novelty, but will anything be left over for those unfortunate creatures who live elsewhere?

The British quota for Russian cars may be self-defeating. Is it really worth anyone's while to set up distribution facilities for £150,000 worth of cars and spare parts? Apparently this low limit reflects Russia's wishes, not Britain's. On the other hand the quota for Russian wrist watches, £30,000, seems at least adequate. Cameras get a quota of £150,000, though not more than £35,000 can be spent on cameras with a cif value over £7 10s. Other quotas for Russian goods include £200,000 for hand-made carpets, £320,000 for medicines and pharmaceutical products, £400,000 for vodka, brandy and wine, £85,000 for caviar (including red caviar), £1½ million for canned crabmeat and salmon (with another £550,000 worth of salmon licensed outside this agreement). Britain will also allow in £50,000 worth of finished cotton piece goods, but all the grey cloth (£100,000) must be re-exported after processing. Does mutual understanding here include Russian recognition of Lancashire's difficulties?

The Russian quota for British motor cars and other vehicles is £260,000, and British textiles get a quota of nearly £1¼ million—£835,000 for woollen piece goods and knitwear, £270,000 for cotton piece goods and £135,000 for made-up clothing, stockings and socks; in addition another £275,000 is earmarked for carpets and floor coverings. Russia apparently intends to buy £470,000 of British shoes and £10,000 worth of razor blades, but only £100,000 worth of medicines and pharmaceutical products, less than one-third of what it hopes to sell here. Herring and white fish together get a quota of £800,000, and Russia also wants £45,000 of whisky and gin.

NYLON

Discreet Supervision

This week British Nylon Spinners announced a discreet scheme for supervising the use made of the 50 million pounds of nylon yarn that the company is now supplying annually to the clothing industry. This yarn varies in property and in price; put to the wrong use it can leave a legacy of sales resistance that rebounds on nylon as a whole. Men who have bought shirts made from nylon cloth intended for overalls rarely risk a second buy. Damage has been done in America to sales of nylon carpets by those manufacturers who made them of nylon waste instead of the specially spun carpet yarn. The volume of nylon production in this country is now large enough for loss of goodwill, so carefully built up by a long campaign of prestige advertising, to have serious effects on BNS's sales.

The method by which the company intends to exercise control over the quality of nylon goods sold is devious. It proposes to use its prestige advertising to promote two brand names, one for thin and one for thick types of nylon. Customers can, if they wish, become registered users of these brand names, in which case they enter into a tight legal agreement with BNS which gives British Nylon Spinners the right to withdraw the trade mark from any company whose products it considers sub-standard. So far, 400 companies have entered into these legal agreements, only three per cent of those approached have turned the scheme down. The recent slump may have found them more receptive than usual to a plan that seemed to offer simultaneous protection from nylon imports and under-cutting at home. Although retail sales of nylon goods remained steady earlier this year, running down of stocks produced the fair semblance of a depression in nylon. There are signs now that the textile industry has gone to the other extreme, and is over-ordering nylon yarns for fear of a shortage.

TITANIUM PIGMENTS

A Major Expansion

British Titan Products plans to spend £14 million on the expansion of its British and Commonwealth plants for the production of titanium dioxide. This is a striking sign of the continued growth in demand for these pigments. In 1947 total British production was about 20,000 tons; this year it is expected to be some 125,000 tons, 90,000 tons from British Titan and the rest from Laporte. This growth has been largely at the expense of other white pigments; more titanium dioxide is now used in Britain than all the other white pigments combined. It is estimated that some 85-90 per cent of white and light-coloured paints now contain it, with rather more for interior use and less

The Decline in Margins

Profits in British industry continue to mark time. In the quarter which ended on June 30th last, the accounts of 843 public companies, including those of many of the giants of industry and of international trade, were analysed within the customary framework. The detailed statistical results of this analysis appear on pages 778 and 779. Almost all these companies drew up their accounts on or after December 31st so that these results reflect their trading experience in the calendar year and just a little after. The combined trading profits of the 843 companies rose by £8.4 million to £1,091.3 million, that is by three-quarters of one per cent. With the exception of the first quarter of 1958, absolute profits have hardly shown any significant growth since the middle of 1956: expressed as a rate of return on net capital employed they have been declining.

Except, however, in industries such as cotton textiles that are faced with a secular decline in trade equity shareholders have not fared badly. The introduction of a flat rate of profits tax and more recently the cut in the standard rate of income tax have cushioned the effect of shrinking margins upon net earnings. Thus in the latest analysis, the reduction in the tax bill by £30 million to £404 million is reflected in the increase of 4½ per cent in net earnings available for ordinary distribution (from £380½ million to £398 million) and in the increase in net ordinary dividend payments from £147 million to £159½ million. The ordinary capital on which these dividends have been declared has, however, been swollen by £271 million in scrip issues and £52 million in rights issues. Ordinary dividends expressed as a gross return on this capital have therefore fallen, from about 16½ per cent to 14 per cent.

Industry has continued to build up its assets. Quite how much in the latest analysis reflects the installation of new productive capacity or the normal process of replacement at higher prices it is difficult to gauge, especially as the comparative figures in the chemical and paints group and hence in the combined totals for all the 843 companies have been influenced by the revaluation of assets made by Imperial Chemical Industries. Thus the decline in the rates of return on capital employed—from 24½ to 22 per cent when trading profits are related to net worth attributable to the ordinary capital and from 8½ to 8 per cent when net equity earnings are related to net worth—is slightly over-stated.

Underemployment of capacity in the individual industrial groups can be discerned by comparing the absolute rises and falls in trading profits with the relative trends in rates of return on capital employed. Only two groups, tobacco (largely reflecting the experience of the growing concern, Gallaher) and motors, cycles and aircraft (reflecting boom conditions in the motor industry), have reported really big increases in trading profits: in both groups profits are up by about 19 per cent. These are the only two important groups in which the gross return on capital employed has risen: in tobacco from 32½ to 36½ per cent and in motors from 27¼ to 30¾ per cent. Elsewhere, the rise in trading profits has been accompanied by a fall in the gross return. Of these groups, the oil companies have the biggest influence: their trading profits rose by 4 per cent, but the gross return fell from 17¾ to 15 per cent. In the food and confectionery group, reflecting largely the experience of Unilever, trading profits advanced by 6¾ per cent but the gross return fell from 32 to 31½ per cent. The other noteworthy increases in profits have occurred in shops and stores (up by 3½ per cent); building (up by 3 per cent) electrical manufacturing (up by 5 per cent); and newspapers and paper (up by 4½ per cent). These are not big increases and they have been accompanied—as in brewing, clothing and footwear, and shipbuilding where profits were virtually unchanged—by declines in the gross return on capital employed.

In the engineering group, which like oil and food has an important statistical influence on the total results, trading profits fell by nearly one per cent but the gross return declined from 30½ to 27¾ per cent. Equivalent or even bigger declines in the return on capital employed are reported by the other groups which earned less last year: in iron and steel trading profits fell by 3¾ per cent, in chemicals and paint by 2¾ per cent and in miscellaneous manufacturing by 3 per cent. Much bigger falls, however, occurred in the textile industries: profits in the cotton group fell by 25¾ per cent, in wool by 13 per cent, in silk and rayon by 2¾ per cent and in other textiles by 4¾ per cent. The biggest decline of all came in shipping, where profits, reflecting the surplus tonnage and the steep decline in freight rates, fell by as much as 30¾ per cent and the gross return on net capital employed slumped from 19½ to 13 per cent.

For the investor in ordinary shares, this accounting for the past carries a message for the future—a message, moreover, that is not discouraging. As trade expands, there is capacity available to meet the new demands made upon it and any expansion in profits that results from the recovery will have a more than proportionate effect on the gross rate of return on capital employed and, because of lower taxes, on net earnings.

for exterior. The advantage of titanium dioxide over the older pigments such as white lead, zinc oxide and lithapone is that it is whiter and more opaque, so that thinner or fewer coats of paint can give the same coverage. This is especially valuable in industrial applications where the paint is sprayed. The saving in cost that it makes possible means that the older pigments are now confined to special applications. White lead seems to have been hit hardest ; though it has good weather-resisting properties it is slow drying. Zinc oxide has anti-fungal properties that find it some specialised uses in paint, and it is used in rubber ; while lithapone is used in distemper, and its total production is estimated to have remained almost constant over the last ten years.

Most of British Titan's expenditure on new plant will be in the Commonwealth, though capacity of the Grimsby plant will be raised by 15,000 tons, raising total British capacity to about 105,000 tons. The construction of plants in Canada and South Africa, markets previously supplied from Britain, will, moreover, make more of the home output available for sale in Britain. The Canadian plant will have a capacity of 20,000 tons a year and will cost about £6 million ; British Titan has been selling there since 1950, and states that it had 49 per cent of the market by 1957. Plans for the South African plant were announced in 1956 ; this will have a capacity of 10,000 tons a year and will be completed by 1962. The existing plant in Australia will be expanded from a capacity of 10,000 tons this year to 22,000 tons by 1964-65, and that in India from 1,800 tons to 3,600 tons a year by 1961.

SHIPPING

Depressed Freight Markets

THE shipping industry remains obstinately depressed, despite the apparent growth of industrial and economic activity throughout the world. The summer months are seasonally quiet ones for tramp shipping, and although a revival in demand may be expected later in the autumn, it is doubtful if the half-point improvement in the Chamber of Shipping freight rate index achieved in July was maintained last month. Grain chartering is usually hesitant and intermittent at this time of year, while the crop position is being re-assessed, and the favourable harvest conditions in Britain and Europe foreshadow a fall in European import demands during the winter. There has been some slight improvement in demand for ore cargoes, and this may further increase when the American steel dispute is resolved. Time charter rates show little resilience, and last month a contract for 120,000 tons of coal from Hampton Roads to Japan, for shipment in 1960, was reported at an average rate of 52s. 9d. per ton, about 3s. less than current rates for a prompt voyage.

What holds the shipping market down is the chronic surplus of tonnage which was built up during the recent years of shipping shortage. Not only were large numbers of obsolescent war-built standard ships kept in service, but numbers of new, larger, faster, and more efficient modern vessels were brought into service, thus adding to the surplus which soon developed. The value of secondhand ships for trading has fallen to new low levels, but there are chances that an improvement in the price for scrap would remove some of the surplus tonnage from the market. The rate of scrapping has, in fact, been increasing ; but even so, this has not yet caused any noticeable decline in the total volume of ships laid up. It is apparent that much time will elapse before the tonnage situation can be brought into better equilibrium by normal economic factors. There is an even greater surplus of tankers than of dry-cargo tramps, and the outlook for tankers is even more depressing.

More Talk of Superliners

PLANS for the construction of vast liners to offer low fares on the Atlantic service have been canvassed for several years by the American hotelier, Mr H. B. Cantor, like his compatriot Mr E. Detwiler. Now Mr Cantor, too, has found a European shipyard that has the facilities to build his proposed ships ; *Deutsche Werft* of Hamburg has decided that it is technically feasible to build them and both are now seeking sources of finance. Mr Cantor had proposed that there should be two 90,000-ton vessels with a speed of 34 knots, allowing them to make four-day crossings, carrying 6,000 passengers at single fares of from £17 17s. to £44 11s. Like Mr Detwiler, Mr Cantor proposes that food should not be included in the fare, but bought by the passengers in restaurants on the ships. And as with Mr Detwiler's project, the chief weakness of the plan economically is that the ships could not be used for any service but the Atlantic because they would be too large for most ports, and that there is little tourist traffic on the Atlantic in winter. The 700,000 berths a year that these ships would provide would be a large addition to Atlantic capacity at any time.

Mr Cantor and *Deutsche Werft* are hoping to obtain some help in financing the project from the German Federal Government, and to obtain the rest of the money from private sources in Germany such as banks and insurance companies. Some form of government subsidy, whether direct or indirect, would seem necessary if the ships were to pay private backers a reasonable return.

FOREIGN DEBTS

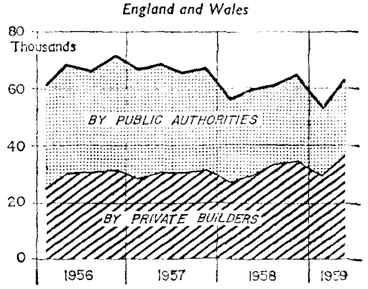
Balkan Debt Talks

DISCUSSIONS about the resumption of debt payments by Jugoslavia and Rumania to creditors in the United Kingdom have recently taken place in London. Jugoslavia has evidently decided that the time is ripe to "come clean" in its external debt relations and has begun a series of bilateral debt settlements. As was to be expected the first of these has been negotiated with the United States—whence most subsequent bounties to Jugoslavia are likely to flow. It is estimated that $25 million of Jugoslav bonds are held in the United States and a partial resumption of debt service is to be made in the near future. The temporary settlement envisages an immediate payment of $15 per $1,000 bond, which is to be regarded as repayment of interest arrears since 1939. Thereafter there are to be yearly payments of $2.50 per $1,000 until 1964. By then it is hoped that a permanent settlement will have been negotiated. An agreement on rather less favourable terms has also been made by Jugoslavia with French bond holders. Discussions have taken place in London for a settlement of the minimal amount—about £200,000—owing to British bond holders. Though these discussions have now been broken off they are to be resumed in October and it is hoped that the more generous tone of the agreement with the United States presages a more satisfactory settlement of British claims than has hitherto seemed likely.

Rumania is still in complete default on its external debt, though the administrator of Rumanian property has been able out of blocked Rumanian funds in this country to pay interim and final dividends of 8s. 8d. in the £ in respect of established British claims. Last month talks were held in London with a Rumanian trade delegation concerning the possibility of resumption of external debt payments. It emerged from these discussions that the Rumanians would not be interested in anything other than outright settlement by a repayment of capital at a heavy discount, with repayment spread over a number of years. But there may be a ray of faint hope of a more generous attitude. The Foreign Compensation Commission has

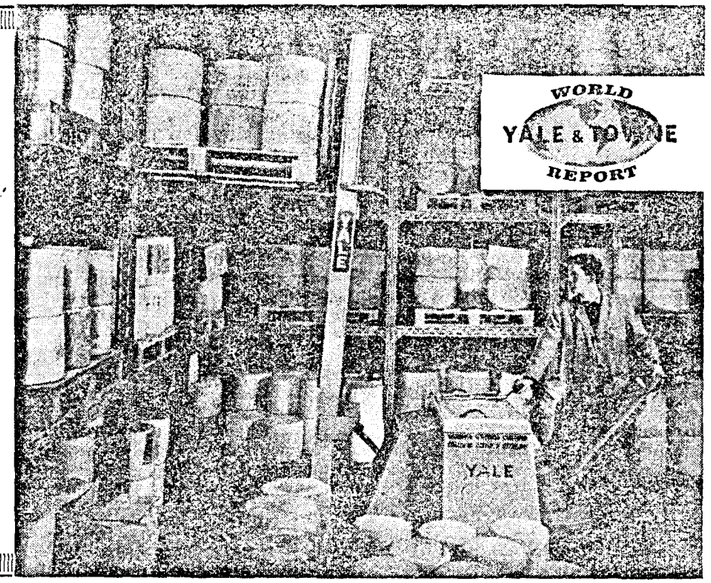
DWELLINGS COMPLETED

England and Wales

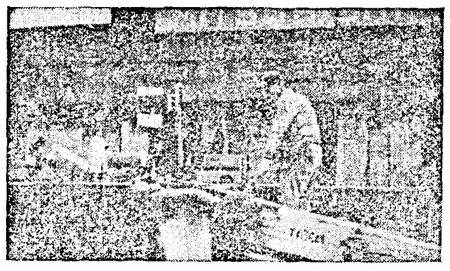


62,700 houses and flats were built in the second quarter of 1959. The number completed by private builders—an increasing proportion—reached a record of 36,600.

YALE
LIFT TRUCK
SPEEDS
CROWDED
AREA
STACKING



KIRKBY, ENG. – These zesty cheddar cheeses go through the factory untouched by human hands. Yale Worksavers help maintain this hygienic standard as part of a day's work. These clean, fumeless electric trucks bring raw materials to storage – stack ageing cheeses on racks – speed finished products to market. What Yale Worksavers do for cheeses, they can do for practically any product in loads up to 7500 lbs. Worksavers are light and compact – can manœuvre in crowded, narrow areas – on ramps or low-load floors. Yet they have the power and durability you expect from heavier trucks. Complete line includes fork, pallet, platform and tractor models.



YALE PETROL TRUCKS MOVE THE GOODS THAT MOVE WORLD TRADE

YOKOHAMA, JAPAN – Bales of raw silk are sped from warehouse to quay by this Yale petrol truck. From warehouse to quay – from quay to ship – it's the same the world over as Yale trucks expedite goods in world trade. In factories, too, durable Yale petrol trucks save costs, time, space and labour as they move loads ranging from 2000 to 20,000 lbs.

YALE ELECTRIC TRUCKS HANDLE UP TO 200,000 LBS.

CHICAGO, U.S.A. – Stacking and lowering giant rolls of newsprint are easy tasks for this mighty Yale electric truck. With capacities ranging from 2000 to 200,000 lbs., Yale trucks have a wide range of handling applications. Specify Yale electric trucks where cleanliness and economy of operation and maintenance are paramount.

• Yale makes the world's most complete line of Petrol, LP-Gas, Electric and Hand Lift Trucks.

• All Yale Industrial Lift Trucks are uniformly high in quality, wherever manufactured.

• All Yale equipment available in currencies of the free world.

• For further information contact your Yale Sales and Service Representative—located in Principal Cities of the World.

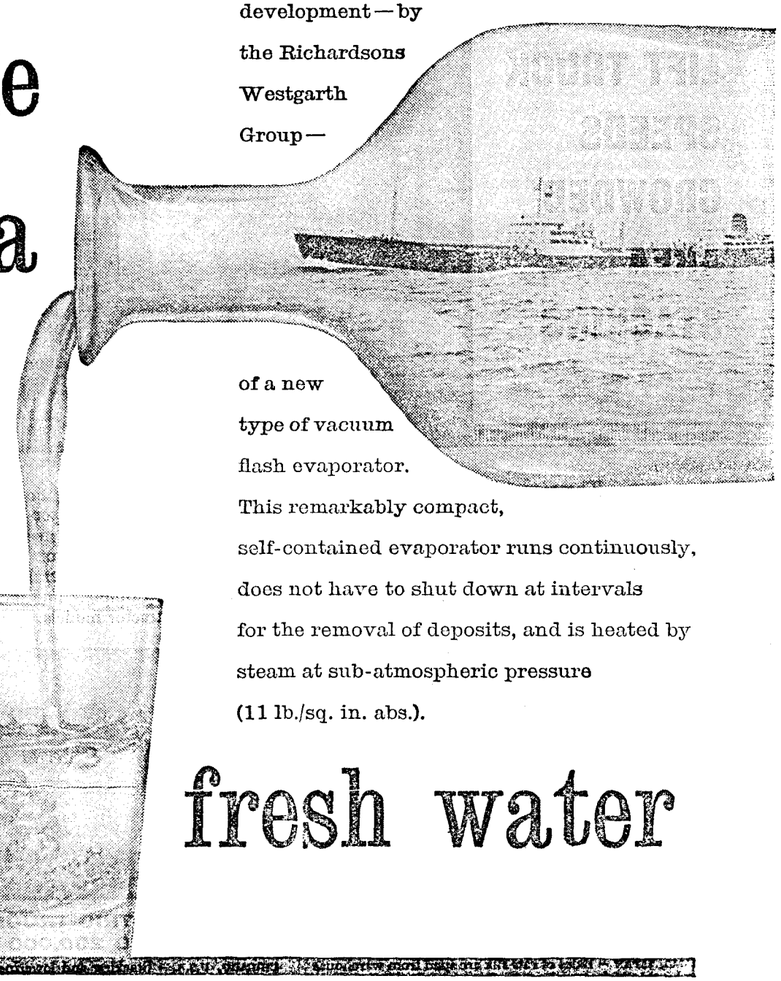
To the sea for fresh water

The idea of getting fresh water from the sea by evaporation is not new, but the ability to do so simply and economically dates from the development—by the Richardsons Westgarth Group—



of a new type of vacuum flash evaporator.

This remarkably compact, self-contained evaporator runs continuously, does not have to shut down at intervals for the removal of deposits, and is heated by steam at sub-atmospheric pressure (11 lb./sq. in. abs.).

For further details apply to :—**RICHARDSONS, WESTGARTH & CO. LTD.**

just reminded British nationals who had property in Rumania that it is now ready to receive further claims under the 1954 Foreign Compensation (Rumania) Registration Order. Only Rumania has even got to the point of talking and there seems to be no truth in the rumours that Hungary and Bulgaria are willing to take even a first step in settling their debts.

GRAMOPHONE RECORDS

Spinning Up

By mid-summer, the value of gramophone record sales was 12 per cent higher than it had been a year before. The industry was even producing much the same number of records as it was a year ago, although the old, cheap 78 rpm shellac record that was being produced only two years ago at a rate of more than 50 million a year is fast disappearing. If the trend of the second quarter continues, current production of 78 rpms will be unlikely to reach 7 million this year ; by June it had fallen as low as 500,000 a month.

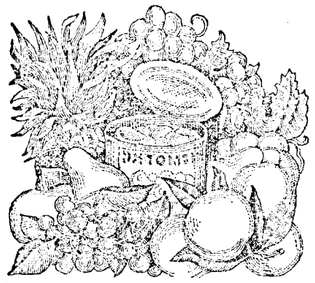
It has been replaced basically by the 45 rpm disc playing for about the same time and costing, in its cheap forms, much the same. The industry's output of these small records was almost twice as high in the first quarter of the year as it was in the same period of 1958, and 73 per cent higher in the second quarter. Last summer, production of 45 rpm records drew level with the 78s for the first time and this summer it is six times greater. It would obviously help the industry if it could drop the production of 78 rpms entirely ; retailers have recently become touchy about the amount of capital tied up in stocks on their shelves, especially when these move so slowly that they can be caught by changes in rates of purchase tax. Yet in spite of this, radio dealers are becoming increasingly interested in sales of record players and records. Record players do not need the tiresome after-sales service that has to be given to a television set, and once sold, they bring the retailer steady business in new records.

METALLURGY

Chromium into Sheet

A new process developed by Metal Diffusions enables thin and ductile chromium sheet to be produced for the first time. This is done by a metal-diffusion process, of the kind normally used to apply a thin layer of the chromium to another metal to make it resistant to corrosion, heat or wear. The chromium is applied by removing particles of the metal to be treated and replacing them by particles of chromium, which are bonded to the base metal and in effect become part of it. Metal Diffusion's new process carries

Sweet Taste of Excess



The fruits of dollar liberalisation are not sweet for all. Now that Californians and Hawaiians can send more canned peaches and pineapples to Britain than before, Commonwealth canners fear that they are losing their grip on their mainstay—the British market, worth over £40 million a year. Four months ago Mr G. H. Whitehead, general manager of Langeberg Co-operative, which cans half South Africa's pack, said that the canning industry was standing on the edge of a precipice.

It has not toppled over yet. The British import quota for American canned fruit in the season beginning next month is £3,335,000, one-third bigger than last season but still only eight per cent of all imports of canned fruit in 1958. But Commonwealth canners are convinced that quotas will be progressively increased. If they are right, American canners would eventually be able to squeeze Commonwealth producers dry—despite the preferential duty. Australia and South Africa export the bulk of their packs; the United States does not. So a substantial cut in prices of American fruit sold here would hurt Commonwealth canners much more than Californian—and the British housewife is firmly convinced that American fruit is best.

It is a conviction born before the war, when Britain bought more than half its canned fruit in the United States. Less than 15 per cent then came from Australia, about a fifth from Malaya, and almost nothing from South Africa. Australia and South Africa seized their chance after the war, when Malaya's industry was knocked out and the dollar shortage kept out American fruit from Britain for many years. Australia now sells three times as much canned fruit to Britain as before the war. South Africa, starting almost from scratch, sold over £12 million worth to Britain last year, and for the second time ranked ahead of Australia—by a margin of £2 million.

Though the British market continues to grow, more countries are selling to it and the shares of South Africa and Australia have been falling. Last year their combined shipments of £22½ million were equivalent to only 55 per cent of all shipments to Britain, compared with 70 per cent in 1954. Faced with this competition, and the threat of more to come, Commonwealth canners are waking up. The compulsory standards of quality introduced by South Africa in 1956 are being tightened, and the government is considering further action in the light of a long report on the export of canned fruit and vegetables presented by a select committee of the Union Parliament last June. It is kinder to forget some of the sins disclosed in this report ; it would be like spoiling a good meal by peering too closely into the kitchen. Australian export standards are high and rigidly enforced.

Gentlemanly agreements on prices are withering away. Australia abandoned minimum price control on pineapple exports last June, and has since sold here at cut prices. So have the Americans. For some time now Australia has been spending heavily on sales promotion in Britain, and is expected to spend still more. South Africa's Langeberg Co-operative is spending about £60,000 on a sales campaign that began in March this year and intends to spend more next year—though its advertising budget would still be puny compared with Australia's. There are less overt ways of combating competition, such as political pressure on Britain to maintain restrictions on American sales. This is sometimes successful, as suggested by the purely token increase of £10,000 to £135,000 in the quota for American pineapples this year, and which compares with total imports of £8,150,000 in 1958.

In the first half of 1959 more vigorous selling seemed to be having an effect. Though total imports into Britain fell, the Australian and South African shares went up. But it is much too early for Commonwealth producers to relax. In any event, the prospect for the British housewife is a wider selection of better fruit at lower prices. One reason why South African canned fruit cocktail does not sell well in Britain, the select committee was told, is that the British consumer likes cherries in the salad. If the market stays as it is, expect cherries.

this to the point where the sheet of steel on which chromium is being diffused is almost entirely replaced by chromium, leaving a sheet of 96 per cent pure chromium.

This new material has many possible applications as a replacement for stainless steel, many of them military; it can resist considerably higher temperatures than stainless steel, and should be slightly cheaper and lighter. Its properties are valuable as an outer protective covering on supersonic aircraft and missiles. Its resistance to corrosion makes it suitable for lining chemical vessels, again replacing stainless steel.

If the process is limited to producing a surface of chromium on the base metal, it gives a coating of higher purity chromium than diffusion processes could produce hitherto. This improves the treated metal's resistance to corrosion and abrasion; and it also gives a finish that can be comparable to that of plating. Despite the low cost of modern plating, it is claimed that chromium diffusion can be competitive in price; some interest has already been shown in it by the motor industry, but it is likely to be some time before durable brightwork in this form becomes available. In the meantime, it has many potential applications as a cheap means of obtaining the properties of a high chromium steel.

OIL

Undersea Costs

SINCE oil was first discovered offshore on the Louisiana continental shelf in 1938, American oil companies have spent some £714 million in capital and operating expenditures, most of it since 1953. Up to the beginning of 1958 these investors had earned less than £180 million in income from oil and gas from undersea wells. But this relatively low return—mainly the result of restrictions on "allowable" production in the States, rather than of increasing costs at the wells—has not dulled the oil industry's enthusiasm for offshore drilling. In a recent symposium presented before the Institute of Petroleum, members of British Petroleum's staff outlined the economics of this kind of oil exploration.

Most of the elements of cost in exploration cost more at sea than on land. Aerial photography and surface mapping are not much use offshore, and exploration depends almost entirely on geophysics and the test drill. Seismic exploration, which uses shock waves to investigate the strata, is one of the few jobs that can be done more cheaply at sea, but more expensive gravimetric surveying, and the need for precise location of position when out of sight of land, add heavily to the preliminary costs. Drilling itself may cost four times as much at sea as on land. The drilling rig may cost £250,000-£290,000, against £180,000 for a land rig: the tender and platform also required may add as much as £650,000-£700,000. Large mobile platforms can cost £1½-£1¾ million. All are subject to greater risks than on land: in 1956 Shell had a heavy drilling platform worth £800,000 wrecked by a storm in the Persian Gulf. Drilling in particularly deep waters may involve special techniques in which the surface vessel has to operate the rig by remote cable controls. Once oil is found, it has to be transported to the shore: barges are heavy on operating costs, but the large investment of a pipeline needs a major oil reserve to justify it.

These adverse comparisons in cost, however, apply to land drilling in developed areas: exploration in remote parts might come closer to off-shore costs. And such remote parts are today becoming the oil industry's main practical alternatives. For in the United States, in particular, the amount of drilling expended per million barrels of new reserves proved has more than doubled during the last decade. Oil as an extractive industry, is not exempt from increasing costs: but these show mainly in the expenditure required to find fresh oil, not in taking the oil out of existing reserves. Continental "shelves" and "slopes" in which oil might be found underseas would add some 28 million square miles to the 54 million square miles of the world's land surface: and various estimates have been made in the oil industry suggesting that oil reserves in these offshore areas might be three times as much as has ever, so far, been found under dry land.

SHORTER NOTES

A private placing of £2 million of debenture stock is being arranged by Philip Hill Investment Trust. It will take the form of a further tranche of the existing 4½ per cent 1979-83 stock, of which £2½ million is at present in issue. The price of the new offer has not been made known. The money is to be used for general expansion; there is apparently no direct connection between this issue and the planned merger with Erlangers.

★

D. C. Thomson and Company, the Dundee magazine and newspaper publishing group, has bought the remaining 25,000 of Fleetway Publications' holding of 33,333 £1 ordinary shares in Southern Television. This purchase gives D. C. Thomson a 25 per cent interest in the television company at an estimated cost of £1,125,000. The other 8,333 shares were bought by the Rank Organisation and Associated Newspapers, which now each own a 37½ per cent interest in Southern Television. The sales were required by the clause in the Television Act that no one should have an investment in more than one commercial television organisation: the Daily Mirror group, which bought Fleetway Publications (then Amalgamated Press), had already a big interest in Associated Television.

★

Several changes have been made in the *Financial Times* ordinary share index. Now that the House of Fraser controls Harrods its ordinary shares have been substituted for those of Harrods and the opportunity has also been taken to drop J. & P. Coats, the sewing thread manufacturers, and William Cory, the coal and oil factors whose shares were originally introduced into the index at the time of the nationalisation of the coal industry. They have been replaced by Bowater Paper, the newsprint and paper manufacturers, and Alfred Herbert, the toolmakers. These changes should give the index a more up-to-date look.

In last week's note "How Much Whisky is Too Much?" home consumption of whisky in the first half of 1959 should have been given as 2,542,000 proof gallons against a corresponding figure for 1958 of 2,561,000 proof gallons. Home consumption for the year ending March, 1939 was 6,900,000 proof gallons and for the year to last March 6,224,000 proof gallons.

★

The World Bank has arranged the sale of $100 million of short term US dollar bonds entirely outside the United States. The 4¾ per cent bonds, maturing in 1961, were sold by private placement to 62 official organisations and institutional investors in 34 countries.

★

The table of Western European Statistics on page 684 of last week's issue gave seasonally corrected figures for industrial production in the United Kingdom. Unadjusted figures comparable with those for other countries for the first half of this year are:

January	February	March	April	May	June
115	118	117	121	118	121

COMPANY MEETINGS

UDDEHOLMS AKTIEBOLAG

INCREASED TURNOVER DESPITE WEAK MARKETS

SCANDINAVIAN PULP PRODUCERS AGREE TO REDUCE OUTPUT

Uddeholm is situated in the west of Sweden and its main activities are based on the natural assets of the region—iron ore, timber, and water power. The business includes the production of iron and steel, hot rolled and forged, cold rolled and drawn, sponge iron, ferro-alloys, rolled and drawn tubing, tungsten carbides, as well as numerous manufactures such as carriage and other springs, wire rope, etc., in addition to sawn and planed timber, sulphate and sulphite pulps and by-products thereof, paper and board, and electrochemical products.

The Company's main activities are centred on the mines at Persberg, Nordmark, Taberg, and others, the sponge iron works at Persberg, the steel works at Hagfors, Nykroppa, Degerfors, cold rolling mills at Munkfors, tube mills at Storfors, wire rope plant at Blombacka, and saw mills, pulp mills, paper mill, electro-chemical plants, etc., at Skoghall.

The sales organisation of Uddeholm comprises offices and service plants in several countries in Europe and America: Birmingham, London, Paris, Brussels, Dusseldorf, Solingen, Stuttgart, Nurnberg, Copenhagen, New York, Cleveland, Los Angeles, Mexico City, Sao Paolo, and Rio de Janeiro. Uddeholm is also represented by agents in almost every country in the world.

The head office and administrative office is at Uddeholm.

At the Annual General Meeting on May 30th a survey of the Company's activities was presented by the Board and the Managing Director.

After a weak start the market for the Company's steel products gradually improved in terms of orders received, although prices remained poor.

The demand for forest products declined and prices remained unsatisfactory, particularly as regards sawn timber and pulp. The drop in pulp sales may be attributed largely to the prevailing overcapacity in the pulp producing countries.

The tonnage output of steel remained about the same as in the previous year.

The output of the timber processing plants declined compared to the previous year, due in part to the slackening demand, in part to plant modernisations at Skoghall, and in part to the destruction of the Göta sulphate mill in 1957.

Three fully owned subsidiaries: Blombacka Aktiebolag, Sulfitaktiebolaget Göta, and Grufveaktiebolaget Långban, which the Uddeholm company previously operated on lease, were merged with the parent company. With the acquisition of 2,841 shares in Persbergs Grufveaktiebolag, Uddeholm AB assumed full ownership of this subsidiary.

Total number of employees of the parent company and its wholly owned Swedish subsidiaries in 1958 was 14,950; salaries and wages amounted to Kr. 175 M.

Output	1958	1957
Electric power	752,000	818,000
Timber from own forests, cubic feet	21,145,000	24,314,000
Iron ore, tons	84,412	84,246
Dolomite, tons	13,441	14,755
Steel ingots, tons	135,156	151,409
Finished steel, tons	95,816	96,404
Sawn timber, standards	24,390	23,503
Sulphate pulp, tons	67,804	71,813
Sulphite pulp, tons	61,000	81,208
Paper, tons	46,246	50,385

Invoiced sales of the Uddeholm Group amounted to:

	1958 Kr. M.	1957 Kr. M.
Iron and steel products	279·0	313·3
Timber products	158·2	188·4
Other products	29·2	32·0
Total	466·4	533·7

Steel Division

MARKET CONDITIONS AND SALES

Orders on hand were low at the beginnmg of 1958 and did not improve, particularly as regards tubing and cold rolled products. Towards the end of the year, however, there was a marked improvement and the prospects for 1959 appeared somewhat brighter.

However, in some product lines sales improved compared to the previous year. Alloyed wire rod obtained a marked increase and "Uddia" carbide drill bits enjoyed profitable sales both at home and abroad.

Timber Processing Division

Throughout 1958 the timber market remained unstable and a particularly sharp fall in prices occurred in the autumn, due to over-supply. Contributing also to the downward trend were the Russian sales policies and the improved competitive position of the Finnish sawmills resulting from the currency devaluation.

Pulp and other cellulose derivatives also suffered from overproduction, particularly noticeable in dissolving pulp. Sales declined 15 per cent from the previous year and necessitated an adjustment in prices. The prospects for pulp and paper remain poor for 1959, and producers in Finland, Norway, and Sweden have therefore agreed to reduce their output.

The entire output of the electrolytic chlorine plant was disposed of and sales of the TRI and PER solvents (trichlorethylene and perchlorethylene) proceeded according to plan. Alcohol sales retained their previous level.

FOREST OPERATIONS

Comparatively good weather favoured forest operations and the annual cut was carried out according to plan. Several millions of board feet were cut in the Company's forests. Nearly 16 million plants, from the Company's tree nurseries, were planted. Some eight miles of new forest roads were built during the year. By the end of 1958 the combined length of the forest road network built and maintained by Uddeholm, singly or jointly with other companies and local authorities, was 1,084 miles, 730 miles of which the Company alone was responsible.

HYDROELECTRIC POWER

Total consumption of electric power amounted to 976 million kwh, an increase of 2 per cent from the previous year. The Skoghall plants and the Degersfors steel mill increased their base load, whereas nearly all other Uddeholm plants reduced their needs.

GROSS PROFIT

Total gross earnings were Kr. 65.6 M. The book value of the stock rose by Kr. 9.0 M, but the stock reserve on the whole remained unchanged. Stock valuation continued at about 30 per cent. The Profit and Loss Account includes the following:

	1958 Kr. M.	1957 Kr. M.

HIGHLANDS GROUP

RUBBER AND PALM OIL PRODUCERS

Main points from the Directors' Report and Statement by the Chairman, Mr. T. B. Barlow, to the Annual General Meeting on June 23, 1959.

Summary of Combined Balance Sheets after latest amalgamation:

Issued Capital	**£1,807,386**	**Estates & Trade Investments, &c.**	**£2,517,858**
Reserves & Surplus	**£1,558,997**	**Working Capital**	**£974,900**
Minority Interests	**£126,375**		
	£3,492,758		**£3,492,758**

ACREAGE.—43,800 acres Rubber. 10,800 acres Oil Palms.

PROFIT.—After allowing for the acquisition of Scottish Malayan Estates Limited and the full calendar year 1958 of all other subsidiaries, the profit amounted to £900,000.

DIVIDENDS for 1958 31¼ per cent. covered 1.6 times.

OUTPUT.—21,353,700 lbs. rubber, or 12 lbs. per £1 of issued capital. 9,267 tons Palm Oil and Kernels, or 11 lbs. per £1 issued capital.

PROSPECTS.—Prices to date are better than last year.

MALAYA.—Peaceful. Prosperous. Progressive.

COZENS & SUTCLIFFE (HOLDINGS)

(Constructional Engineers)

BOARD'S PROGRESSIVE POLICY

The annual general meeting of Cozens & Sutcliffe (Holdings) Ltd. was held on August 28th in London, Mr H. V. Cozens, MInstBE, the chairman, presiding.

The following is an extract from his circulated statement:

The Accounts before you reflect the acquisition by your Company of the 75 per cent interest in the share capital of Messrs A. S. Duran & Co. Ltd. on September 22, 1958. Members will be well aware of the acquisition, details of which were circulated at that time, but I should like to remand you of my considered opinion that the profits of this Company would not be less than £18,000 for the ensuing year. For this year's Accounts we have had the benefit of just over nine months' trading, but this has been eminently satisfactory. I have no reason to revise my opinion either for the current year or for the future.

Consolidated profits for the year amount to £105,350 out of which £46,765 has been set aside to provide for Income Tax and Profits Tax. With the balance of profits brought forward from previous years there is a disposable surplus of £200,844, which is more than sufficient to maintain our usual distribution of 30 per cent for the year.

I am continuing negotiations with a view to extending and diversifying your Company's activities and have at present under consideration the acquisition of a Group whose activities are allied to those of Messrs Cozens & Sutcliffe Ltd. Matters have not yet come to a head and it is too early for me to say whether the contract will be completed by an exchange of shares, a rights issue, or even for cash. Nevertheless, whatever the outcome, I am sure shareholders have every confidence that I shall not lose sight of their interests and that the matter will be concluded to our mutual benefit.

Your Principal Subsidiaries' order book continues to reflect a satisfactory trading level, and with Plant and Equipment maintained at their usual high level of efficiency I have no reason to doubt that the coming year will attain yet higher trading profits.

The report and accounts were unanimously adopted.

CARTER & CO., LTD.

(Manufacturers of Tiles, Mosaic, Faience and Poole Pottery; Tiling and Terrazzo Contractors)

TURNOVER MAINTAINED

The fifty-first annual general meeting of Carter & Co., Ltd., was held on August 27th in London, Mr C. Cyril Carter, chairman, presiding.

The following is an extract from his circulated statement for the year to March 28, 1959:

In spite of my hesitation to forecast the future at this time last year, the turnover of the Group has in fact been maintained during the year under review. Prices in the contracting field have been still more competitive and the effect of this, together with the incidence of certain unavoidable increases in operating costs, has resulted in the Group trading profit not being as high as last year. However, the effect of tax easements has meant that the net Group profit is virtually unchanged and the total picture is not discouraging.

TILE SALES HIGHER

Carter Tiles Ltd., may be said to be firmly established as a viable unit. Tile sales were higher than in the previous year and the export trade in tiles has been slightly increased, in spite of considerable periods of import restrictions in our best markets.

In our pottery business total sales have also been increased although the export markets have been more difficult. A recent tour by the Managing Director of that company to Australia, New Zealand and the Middle East has produced encouraging results, and he will shortly be making further extensive visits overseas.

For the contracting companies the outlook may be said to be brighter in that during the last three months enquiries have been maturing into orders at a satisfactory rate.

I referred last year to the need for a new firing unit at our floor tile factory at Poole. By the end of this financial year, a new kiln will be in operation. I also referred to the closure of the Stoke-on-Trent factory and to our consideration of alternative products for its profitable employment. After close examination of various possibilities we came to the conclusion that it would be in the company's best interests to sell the factory and its equipment. An offer was made in May of this year and the sale has now been effected.

THE OUTLOOK

If I say that I hesitate to speculate on or forecast our future prospects I appear to lack confidence. Nothing could be further from the truth. We have increased our output and our productivity on our tile factories and can increase them still further but in that field we are inevitably dependent on the activity of the building trade, in which there is a general atmosphere of optimism. We are very conscious of the need to develop new products within the limits of our material and equipment. Our technical development team are always working with that in mind. That goes, too, for the design unit, which works closely with them.

Poole Pottery is well established in the fine earthenware world but, there again, constant attention is being devoted to broadening the basis of the product. In both cases the equipment and the personnel are there so that I am confident of our ability to maintain and improve our position.

The report and accounts were adopted.

BRITISH MATCH CORPORATION

A Year of Growth

RESULTS For the year to March 1959 the group profit before taxation was £2,765,300, the highest ever (last year £2,329,656). Of this 85% came from matches, both at home and overseas; the rest from other activities, including some which are new, such as the expanding Airscrew Co. & Jicwood Ltd. which, like Bryant & May, is now wholly owned by British Match.

BALANCE SHEET Group fixed assets have nearly all been revalued at their current worth and the total assets are now £26,291,112. Issued ordinary capital was increased in June to £9,942,108.

THE MATCH INDUSTRY Sales of Swan Vestas and special lines, such as *Harlequin* and *Souvenir* matches, again reached new heights. In total the group's British matches kept up well against fierce competition from abroad.

Bryant & May's £1¼ million modernisation programme has passed the half-way mark. There has been a real advance in manufacturing efficiency but much of the benefit has been whittled away by increased costs of materials and services.

In the Commonwealth and South America group companies have again prospered; their sales total nearly three times the home figures.

GROUP CHANGES The 50% interest in the Chambon group has been sold by friendly agreement. Bryant & May has acquired Setright Registers Ltd. (ticket machines, totalisators, etc.) and has also bought more than 75% of the capital of H. W. Chapman Ltd., boxmakers, of Wellingborough. Another recent acquisition is L. N. Mills & Co. Ltd. (wire brushes, filters and curtain rodding and pot scourers), whose sales will be linked with those of the Stephenson group (steel wool and scourers). Outside matches, the group's main interests are in timber utilisation and packaging.

Copies of the accounts and statement, and of a booklet "Man Improves on Nature" describing the Airscrew Co.'s products, from British Match Corporation Ltd., Fairfield Road, London, E.3.

AB GÖTAVERKEN

(Shipbuilders and engineers)

GOTHENBURG, SWEDEN

WORK STARTED ON NEW LINE PRODUCTION YARD FOR 100,000 TON TANKERS

The fifty-third General Annual Meeting of AB Götaverken was held in Gothenburg on May 19th, Mr A. Gabrielsson, Chairman, presiding. The following is an extract from the report circulated with the accounts:

Although no new orders were signed during the year orders at the end of 1958 amounted to 933,900 dwt; in addition there were orders on hand for ships' repairs, diesel engines, turbo-compressors, and high-pressure steam boilers. During the year deliveries were effected to the sum of Kr.457 million (£31 million).

PRODUCTION

Eleven merchant ships with a combined tonnage of 234,480 dwt and two naval destroyers of altogether 4,700 tons were delivered during the year, viz:

Six motor tankers of 17,300, 19,200, 19,250, 33,700, 34,150, and 40,120 dwt, respectively.

One turbine tanker of 20,420 dwt;

One bulk carrying motor freighter of 14,070 dwt;

Three cargo motor ships of 10,500, 12,440, and 13,330 dwt, respectively.

Two naval destroyers of 2,050 and 2,650 tons, respectively.

Nine merchant vessels of altogether 197,690 dwt were launched during the year.

GÖTAVERKEN DIESEL ENGINES

Main machinery from the engine shop consisted of 24 diesel engines with a combined rating of 218,300 hp. Eleven of these engines were delivered to other yards in Sweden, Spain, and Italy. Total value of diesel engines delivered during the year amounted to Kr.56.6 million (£4 million).

The number of licence builders of diesel engines of Götaverken's design increased by three during the year, viz. Kieler Howaldtswerke A.G., North Eastern Marine Engineering Limited, and Nederlandsche Dok en Scheepsbouw Mij V.O.F. Nine domestic and foreign firms now build Götaverken engines under licence.

WORK STARTED ON 100,000 TON YARD

Work has begun on a new yard capable of building ships of about 100,000 tons. The cost of the yard is estimated at Kr.150 million (£10 million). It will be ready for production by the end of 1962.

The New Arendal yard is planned on new principles. It will be the first shipyard in the world entirely arranged for line production. Sections of a ship weighing up to 250 tons will be erected under roof and added to each other in a graving dock extending into the erecting shed. The bottom of the dock is provided with a conveyor belt incorporating steel rollers, and as a number of hull sections have been completed and joined the hull, stern first, is conveyed along the dock into the open. Main and auxiliary machinery, fittings, joinery, etc. are installed simultaneously with the erection of the hull, so that the entire ship is completed by the time the bow leaves the erection shed.

As the ship moves down on the conveyor belt in the dock, the stern section of another vessel can be assembled in the space freed by the first ship. When finished the completed ship is launched simply by flooding the graving dock and towing it out through the open gates.

RESULTS

The company's net profits for 1958 amount to Kr.15,037,500 : (£1,037,068) which added to Kr.7,757,829: (£535,022) makes a total of Kr.22,795,329 : (£1,572,090) for appropriation as follows :

	Kr.
New share capital	11,000,000
Reserve	1,600,000
Dividend of Kr.8 : per share ...	3,520,000
Balance carried forward	6,675,329
	22,795,329

GROUP ACTIVITIES

The following are wholly owned subsidiaries of the company:

Öresundsvarvet
AB Göteborgs Skeppsdocker
Rederi AB Zenit
Götaverken Fönster AB.

From Öresundsvarvet were delivered two motor tankers of 18,850 and 29,250 dwt, respectively, and four motor cargo ships of 4,025, 9,330, 9,740 and 15,015 dwt respectively, or all told 86,210 dwt. Total turnover of the yard was Kr.113.6 million and net earnings Kr.1.5 million.

The report and accounts were adopted.

DONALDSON TEXTILES

INCREASED NET PROFIT

The thirteenth annual general meeting of Donaldson Textiles Limited was held on August 27th in London, Mr Alasdair Donaldson (the chairman) presiding. The following is an extract from his circulated Statement:

The Consolidated Trading Profit amounted to £428,507 compared with £441,990 in the previous period. The net profit for the period is £197,291 against £167,256 in 1957-58.

Trading conditions for the Wool Textile Industry continued to be difficult during the period under review. Once again we saw a heavy fall in wool prices which necessitated some adjustment to stock values at March 28, 1959, and although the write-downs were not as substantial as the previous year, your Directors are perturbed at these continuous fluctuations in wool prices.

Against a background of lower selling prices and recession in general trading throughout the world, it is significant that the Group's turnover has been maintained at almost the same level as last year, but lower prices must be accompanied by increased production and sales otherwise we shall not be in a position to maintain our earnings at their present level.

Export trading continues to be a serious challenge. Although during the period we lost at least temporarily in New Zealand another important market for our products through import restrictions, I am pleased to report that our export sales have been maintained at the same level as last year.

PROGRESS AND FUTURE

Your Directors continue to review the productivity of your Group and in this connection it was decided during the year to embark on a policy of centralisation of the main manufacturing unit of the Group by building an extension to our Lornshill Factory in Alloa. The entire Alloa production will be concentrated at Lornshill by August of this year. This move will enable us to streamline production, introduce improved methods with a view to increased productivity and ultimate reduction in costs. In addition, we shall be able to develop complementary lines to our regular knitwear products which we have wanted to market for a number of years, but have been prohibited from so doing, due to limitations of space.

Also during the year we completed the first stage of the re-equipment of our Spinning Mill at Halifax. It is anticipated that the last part of this modernisation plan will be completed during the current financial year.

We have accepted the heavy capital expenditure involved in these projects because of our strong belief that further expansions at home and particularly overseas will largely depend on our capacity to meet increasingly severe competition from foreign competitors. We must be able to take full advantage of trading possibilities wherever they may arise through having the most modern factories, up-to-date machinery and improved methods of production.

It is always dangerous to attempt to forecast the future in the Textile Industry. I will therefore confine my remarks in this direction to the simple facts that the general "climate" of trading conditions appear to be more favourable than at this time last year and that we have had the benefit of more stability in wool prices during the last few months.

The report and accounts were adopted and a final dividend of 17½ per cent on the "A" and "B" Ordinary Shares, less tax, making 25 per cent for the year, was approved.

THE GLOBE TELEGRAPH AND TRUST COMPANY

PREVIOUS EARNINGS RECORD SURPASSED

The eighty-sixth annual general meeting of The Globe Telegraph and Trust Company Limited was held on August 28th in London.

Sir Edward Wilshaw, KCMG, DL, JP, LLD, FCIS (the chairman), presided and, in the course of his speech, said:

The earnings for the year ended June 30, 1959, after providing for taxation, are £102,268 more than last year. This constitutes another record. We have also passed another milestone in that our earnings, before taxation, now exceed the million mark for the first time. During the past nine years, with one exception, the earnings have increased year by year. In 1951, after taxation, they were £170,485; last year they were £619,748. The annual net distribution to stockowners during the same period has risen from £145,097 to £417,813.

The dividend for the year is 10 per cent, and we have transferred £200,000 to General Reserve. The carry forward is £351,179, which is about £2,000 more than the carry forward for the preceding year. The book value of the investments is £12,368,472, and their value not less than £26,481,844, that is to say £14 million more than the book value. Eight years ago, in 1951, the book value was £8,120,872 and the corresponding value £10,608,343, an appreciation of about £2,500,000 against the present appreciation of £14 million. It must, of course, be remembered in connection with these figures that from time to time the capital has been increased, £2,618,000 of the increase representing cash subscribed by stockowners.

Much has been said in recent times about encouraging the small investor to take an interest in equities, and it was with regret that I learned that there was no worthwhile reduction in the transfer stamp duty announced in the last Budget. I hope this may be rectified in the next. I am still hopeful that in due course the shares of leading companies may be sold "over the counter" by the Joint Stock banks.

THE SMALL SAVER

It is now four and a half years since we split our £1 stock into units of 5s. with a view to widening the market and encouraging the small saver. The effect has been that the number of stockowners has increased from approximately 7,100 to 9,500, and our success has been such that our 5s. units, which were originally quoted at about 10s., now stand in the neighbourhood of 16s. The return, at the present level, is modest, but as you know it is our policy to maintain a 10 per cent dividend and from time to time to make scrip and/or rights issues. The Company has substantial reserves and, it is interesting to note, has a stake in over 500 other companies. What better investment can a small or inexperienced investor have than to spread his capital over such a very wide field? By buying only one 5s. unit for 16s. he knows that in effect he is investing that 16s. in over 500 different undertakings.

I have on previous occasions referred to Unit Trusts and their merits and demerits from the point of view of the small investor. I welcome the Press reports that active steps are being taken to form an Association of Unit Trusts and also that the Board of Trade regulations are in course of revision.

In conclusion, I feel that we can congratulate ourselves upon the progressive success of this Company over the years and I have every confidence that this advance will continue. Our aim is to maintain the dividend of 10 per cent and, in addition, to make either scrip or rights issues, or both, from time to time. You may rest assured that we shall do our utmost to carry out this policy, and I can see no reason why it should not be achieved.

The report and accounts were adopted.

APPOINTMENTS

MARKET RESEARCH OFFICER is required by BEECHAM GROUP LIMITED in its Consumer Research Department. The successful applicant will be responsible for all aspects of the consumer surveys carried out on behalf of Group companies operating in interesting and highly competitive product fields. He will probably be under 30 but will certainly have not less than one full year's experience in market research. An attractive salary is offered and the prospects are excellent. Profit Participation and non-contributory Pension Schemes are in operation.—Applications in writing, giving full details of age, qualifications and experience, and quoting reference MRO 42, to be forwarded to the Personnel Controller, Beecham Group Limited, Beecham House, Great West Road, Brentford, Middlesex.

UNIVERSITY COLLEGE LONDON

A RESEARCH ASSISTANT is required in Department of POLITICAL ECONOMY. Duties to commence as soon as possible. Salary £700, plus £60 London Allowance, per annum.—Applications, to be received by October 1, 1959, should be sent to the Secretary, University College London, Gower Street, W.C.1, from whom further particulars may be obtained.

ANGLO AUTO FINANCE COMPANY LTD. require several District Managers. Only thoroughly experienced men with first-class records who are eager to make advancement should apply. Good salary, commission, pension scheme. —Write personally to the Managing Director, 31 Windsor Place, Cardiff.

RESEARCH DEPARTMENT of Civil Service Staff Association requires assistant. Experience of research work desirable. Should be good at figures and able to handle statistical data. Typing essential. Salary age 23 or over £11 rising to £11 14s. 6d. in two years. Hours 9.30 to 5.30; no Saturdays. Three weeks' annual holiday. This year's holiday arrangements respected. Non-contributory pension scheme. Canteen facilities.—Apply, in writing, to General Secretary, Institution of Professional Civil Servants, 28 Broadway, London, S.W.1

ASSISTANT STATISTICIAN

required by National Coal Board at London Headquarters. Applicants should have a good statistical qualification preferably a degree in economics with statistics as a main subject. Appointment superannuable and salary according to qualifications and experience within £922 — £1,192.—Write to Staff Department (X1532/2 C), N.C.B., Hobart House, London, S.W.1, for application form which should be returned by September 16, 1959.

THE UNIVERSITY OF SOUTHAMPTON

Research Assistant required by the Department of Economics for a research project into British investment in the United States and Canada. Salary £650-£700. Duties to commence October 1, 1959.—Applications (five copies), together with names of three referees, should be sent to the Secretary and Registrar, University of Southampton, by September 26, 1959, from whom further particulars may be obtained.

DIRECTOR OF STUDIES

The British Iron and Steel Federation invite applications for the appointment of Director of Studies at its Management College at Ashorne Hill, Nr. Leamington Spa.

The residential Management Courses have been established for three years and the College is now on a permanent basis.

The Courses, which are for men of high calibre and potentiality both on the Production and Commercial side of the Industry, are designed to develop their appreciation of the technical and managerial problems of the Industry.

The Director of Studies will be responsible to the Principal of the College for the preparation and satisfactory running of the Courses. In this he will be assisted by the tutorial staff.

Applicants should have a sound academic background and preferably some knowledge of current thinking on problems of organisation and management. Experience in research methods is desirable since the successful applicant will have the opportunity to develop lines of research in co-operation with the Universities.

On taking up his appointment, the Director will spend a period visiting works within the Industry.

The salary will be commensurate with the importance of the post and the position will be pensionable.

Applications should be sent to the Secretary, British Iron and Steel Federation, Steel House, Tothill Street, Westminster, London, S.W.1, not later than September 30, 1959.

MAJOR OIL COMPANY requires a male graduate, aged 23-27, to assist in the preparation of economic studies. Candidates must have an Honours degree in Economics or equivalent, and preferably some experience in interpreting and presenting statistics; they should preferably have had one or two years in commerce or industry. A practical outlook and the ability to write clearly and simply are essential. This post will lead to position of wider responsibility within the Company.—Apply, giving full details, to Box 1193.

ECONOMICS GRADUATE under 26 required for Information and Statistics Division to assist in the preparation of reports on various aspects of the Company's business both at home and overseas.—Write EG/1, Personnel Services Division, The Metal Box Company Limited, 37 Baker Street, London, W.1.

BRITISH TRANSPORT COMMISSION requires to fill the following Operational Research posts in the Department of the Traffic Adviser at 20 Euston Square, N.W.1. Candidates should have a degree in mathematics, economics or science, with considerable mathematical background. Qualifications in, and experience of, operational research an advantage. The work entails analysis and interpretation of current transport problems.

Post 1. Scientific Officer—Salary range: £1,045 — £1,150.
Post 2. Scientific Officer—Salary range: £665 — £985.

Superannuation scheme. Certain travel facilities. Medical examination.—Write, quoting post number and stating age, qualifications and experience, to Director of Establishment, British Transport Commission, 222 Marylebone Road, London, N.W.1, not later than September 10, 1959. S.A.E. for acknowledgment.

BRITISH TRANSPORT COMMISSION

Vacancy for graduate (man or woman) in economics and/or statistics with an interest in the problems of inland transport and their repercussions. The post can be filled by a recent graduate. There are good prospects of promotion within the organisation. Salary according to qualifications and experience.

Superannuation scheme; medical examination; certain travel facilities.

Write, giving full details of age, education, qualifications and career, to Director of Establishment, British Transport Commission, 222 Marylebone Road, N.W.1.

For other appointments see page 783

COMPANY AFFAIRS

THE RANK ORGANISATION

IF the profits of the Rank Organisation had failed to recover in the year to June 27th, as Lord Rank predicted they would a year ago, the policies adopted by the directors in the face of falling cinema attendances would indeed have failed. As it is, the advance in trading profits from £4,615,796 to £5,634,989 cannot justify excessive jubilation after a year in which efforts were made to cut down "non-productive expenditure," to cut back film production (which occasioned losses in 1957-58) and to close unprofitable cinemas.

Profits of the exhibiting subsidiaries, Odeon Theatres and Odeon Properties, have risen and the profits of the other big circuit, Gaumont-British, have advanced from £2,037,804 to £2,833,291. How much that is due to the more profitable exhibition of films or to the reorganisation scheme announced in May (which altered the profit-sharing arrangements between the Rank circuits) is not revealed in the preliminary statement. The venture into commercial television through Southern TV will begin to make its contribution to earnings only in the current financial year.

Having been cut from 12½ to 5 per cent in 1957-58, the ordinary dividend of the Rank Organisation has been set for 1958-59 at 10 per cent. It is not fully covered by earnings; nor is the Gaumont-British dividend of 12½ per cent (against 7½ per cent). Part of the dividend is, in effect, found from tax provisions no longer required and from non-trading profits. Net profits from trading are small because the Rank Organisation is still setting aside over £2 million for depreciation and because the share of minority interests in trading and non-trading profits has risen from £806,972 to £1,354,780. Shareholders should be told whether this increase in minority interests arises from the reorganisation scheme or from other factors. The arithmetic of earnings does not justify the yield of 3.9 per cent offered by the 5s. shares of the Rank Organisation at 12s. 10½d.

CITY AND CENTRAL INVESTMENTS

THROUGH City and Central Investments, the new title of Prince of Wales (Properties), Mr Charles Clore has been very active in building and developing properties in London. Theatres form only a small part of the undertaking, whose interests are almost entirely concentrated upon office and multiple shop blocks in the London area. Many of the buildings, including those in Southwark Street, in Kingsway, in Portland Place and in St James's Square will not be ready for letting before 1960, while Villiers House in the Strand has only just been completed. A first mortgage debenture of £10 million from Legal and General Assurance will help to finance the completion of these buildings. The directors do not anticipate any difficulty in letting the properties now being built and on the assumption that they are indeed fully let the company's rent roll should grow, on estimates made by Messrs Healey and Baker, from £350,000 in the year to June 30, 1960, to £1,200,000 in 1960-61, and to £1,338,000 in 1961-62. Negotiations are also already in hand for the acquisition of other properties.

Eight million 5s. ordinary shares in the company are at present owned by one of Mr Clore's holding companies. Through Philip Hill, Higginson and Company, 1,500,000 of these are now being offered to the public at 25s. each. The dividend for 1959-60 will be only 10 per cent, so that the shares are being offered on an initial yield of 2 per cent. But the dividend is to be raised to 25 per cent in 1960-61, giving a prospective yield of 5 per cent. Property shares have been popular in the last few months, and though some of the speculative froth has been blown away, this new flotation, coupled with the name of Mr Clore, will find plenty of supporters.

ROYAL DUTCH/SHELL

THE stock market took the half-yearly statement of earnings from Royal Dutch/Shell in its stride and "Shell" Transport ordinary has remained around 150s., to give a yield of just over 4 per cent. Because of the adjustments in Venezuelan tax, the latest figures can be compared only with those in the first two quarters of 1958, when profits from oil were on the ebb; they cannot be compared with those of the second half of last year, when profits were showing some signs of recovery. Another slight improvement in margins, both gross and net, is, however, apparent in the second quarter of the year. Certainly, the net margin of 10.2 per cent is better than the 8.1 per cent recorded in the first quarter of this year and 8.0 per cent in the second quarter of 1958. The proportionate weight of tax is less, but the margins before tax are better, too—18.9 per cent, compared with 18.1 per cent in the preceding quarter and 16.0 per cent in the second quarter of last year.

SALES AND INCOME
(£ million)

	1958 Quarter I	1958 Quarter II	1959 Quarter I	1959 Quarter II
Sales:—				
Including duties	565·3	579·9	591·8	601·9
Excluding duties	437·9	431·0	458·3	445·1
Net income	36·8	34·6	37·1	45·6
Net income/Net sales	*8·4%*	*8·0%*	*8·1%*	*10·2%*

Tight control has been maintained on operating costs while sales have been rising. Prices have played little or no part in bringing about this improvement in profits, for though sales have risen there is still a surplus of oil. In the first half of this year Royal Dutch/Shell was selling 2,417,000 barrels of crude oil and oil products daily (compared with 2,251,000 barrels in the first half of 1958). Net of sales taxes and excise duties, its sales brought in £903 million (compared with £868 million), but, even with this growth in sales, operating costs went up by only £3 million to £653½ million. Gulf's figures are even more striking: in the first half of this year sales, net of sales taxes, were $1,343½ million, against $1,302 million; but operating costs fell, from $453 million to $435 million, and net income improved sharply from $115¾ million to $141¾ million. It is not simply a 7 per cent growth of sales that will bring better oil profits this year.

HOUSE OF FRASER

IT is too early to expect Mr Hugh Fraser to explain how he will make Harrods pay for the price he has paid. Not surprisingly at this week's meeting of the House of Fraser to authorise the creation of 12 million new 5s. ordinary shares he did little more than express assurance about the deal. He estimated that the House of Fraser's holding of the Harrods equity will soon pass the 90 per cent mark. As the House of Fraser had already bought a slice of the Harrods equity from United Drapery Stores and from other shareholders through the market, satisfaction of the terms of the bid will require, apparently, the issue of less than nine million of the new shares.

The directors are not contemplating any further issue of the ordinary shares, either for cash or in connection with the acquisition of any other undertaking. This suggests that for the present Mr Fraser does not intend to raise the cash portion of the Harrods payment by a capital issue; but it will absorb the House of Fraser's own liquid resources—and more. The obvious way out would be property deals on the lines used by Mr Fraser in the past. Shareholders in the House of Fraser would certainly find any further dilution of the equity hard to take and they will welcome Mr Fraser's assurance that the coming dividend will be substantially covered. But they will not delude themselves in thinking that a property deal, though it releases capital, has no impact on earnings.

HANDLEY PAGE

HANDLEY PAGE appears to be in danger of losing on its Dart Herald airliner what it is gaining on its crescent-winged Victor bombers. The chairman, Sir Frederick Handley Page, says in his annual report that the Victor B.1 is "the showpiece of Britain's power in the air." Its contribution to earnings, however, has been affected by delays in production and delivery caused, Sir Frederick says, by changes

ordered by the Ministry of Supply. This led to a fall in profits in 1956-57 and to a further fall, by £129,466 to £187,241, in the year ended December 31, 1958. The latest profit figure was arrived at after including the proceeds of an insurance claim for £272,152 on a lost Herald. But the Victors represent current and potential earning assets, and their production now accounts for much of the company's business. The private-venture Heralds, on the other hand, have cost £2,628,353 to date in development expenditure written off against revenue each year. With production costs of £1,106,346 added, the sale of 80 Heralds would be needed for the company to break even on this venture. So far three have been ordered.

Further development in civil aircraft is being hampered by a reduction in military contracts, says Sir Frederick. Nor have orders been forthcoming for the civil and military transport versions of the Victor bombers. The company has formed a commercial division, and its "technological and engineering talents may be directed into rewarding channels if the demands upon its aircraft-producing capacity become fewer."

Sir Frederick expects that the current year's results will be better. Though it was not fully covered by earnings, the ordinary dividend was maintained at 15 per cent, so that the 5s. shares at 7s. 6d. yield 10 per cent.

BRITISH MATCH

BRITAIN buys more foreign matches every year, and the British Match Corporation, which produces nearly all British matches, is securing a smaller share of the almost static home market. As a result the group has spread its interests by increasing its stake in the match and allied industries overseas, and by entering other industries at home and abroad. This policy has resulted in a record profit before tax of £2,765,300 for the year ending March 31, 1959, compared with £2,329,656. The valedictory report of the chairman, Lord Kindersley, who will be succeeded by Viscount Portal of Hungerford, shows that sales of matches by associated and subsidiary companies overseas have trebled since 1953—reaching 32.9 million gross boxes in 1958, compared with 30.5 million in 1957. Sales of British matches on the home market have fallen from 12.8 million gross boxes in 1953 to 11.1 million in 1958: comparable figures for imported matches are 4.8 million and 6.2 million.

About 84.5 per cent of the British Match group assets, as revalued, are being used in the match industry at home and abroad to earn, in 1958-59, some 84.8 per cent of the profit before tax. Group interests outside match manufacturing are largely concerned with the timber and packaging industries. Rationalisation of the home factories is going ahead: Bryant & May's £1¼ million five-year plan for re-equipment and modernisation is half-way to completion, but the advantages so far gained by the company from this rather heavy capital expenditure have largely been offset by higher costs in materials and wages.

The effective ordinary dividend for 1958-59 is 8½ per cent, which is equivalent to 12¼ per cent on the capital before the scrip issue and compares with 11 per cent in 1957-58. The yield on the £1 shares at 36s. 9d. is 4½ per cent.

NEW ISSUES

AUGUST was no holiday for the new issue market this year and the flow of new capital issues shows no sign of abating. Following the announcement by Plessey of a one-for-two "rights" issue of 3,600,000 10s. ordinary shares on the bonus terms of 23s. 6d. a share, the 10s. ordinary shares were immediately marked up 5s. 3d. to 38s. 6d. This made the "rights" worth 5s. a share. In their circular to shareholders the directors say they expect the group's 1958-59 trading profit to be around £2.2 million (against £1.24 million); a final dividend of 7 per cent is forecast, making the total distribution on the present capital equivalent to 13 per cent (against the equivalent of 10 per cent). But there is a strong hint that next year's dividend on the capital as increased by the "rights" issue will be 14 per cent. At an ex-rights price of 33s. 6d. the 10s. ordinary shares would on this payment offer a yield of 4.2 per cent.

Flowers Breweries of Luton is to make a one-for-nine "rights" issue of 5s. ordinary shares at 15s. a share. The 5s. ordinary shares now stand at 21s. in the market and the "rights" are therefore worth about 8d. a share. On the expected dividend of 18 per cent (against 17 per cent) the 5s. ordinary shares offer a yield of 4.4 per cent.

Whitbread and Company is raising new money by placing £2½ million of a 5½ per cent redeemable debenture stock 1981-86 at 98½. The stock has been placed through Baring Brothers and J. Henry Schroder, and it is expected that about 25 per cent of the stock will be available in the market at around 99. At this price, the running yield is £5 11s. 1d. per cent and the redemption yield to the latest date is £5 11s. 5d. per cent.

Thomas Hedley, the subsidiary of the American company, Proctor and Gamble, which manufactures soap and detergent products, is placing £2 million of the 5¾ per cent debenture stock 1980-84 at 99 through Morgan, Grenfell with institutional investors, without a market quotation.

JOHN THOMPSON

THE decision to cut the interim ordinary dividend from 10 per cent to 7½ per cent followed hard on the announcement that the AEI-John Thompson nuclear power consortium is to join forces with the Nuclear Power Plant Company. Early this year John Thompson received far less orders than it did in the same period in 1958. The directors say that there are now signs of "an improving trend in orders," but they add this may not be reflected in the final results for 1959.

London Stock Exchange

FIRST DEALINGS:	Aug. 19	Sept. 2	Sept. 16
LAST DEALINGS:	Sept. 1	Sept. 15	Sept. 29
ACCOUNT DAY:	Sept. 8	Sept. 22	Oct. 6

UNTIL the opening of the new account on Wednesday all sections of the market remained firm. But on Wednesday the rise in United States interest rates and rumours of an early announcement of the election date combined to unsettle gilt-edged stocks and industrial equities. The short-dated stocks suffered particularly, with 4¾ per cent Conversion 1963 falling 15/32 to 100½. Among irredeemables, 3½ per cent War Loan came back 5/16 to 65 5/16 and in medium dated stocks 4 per cent Gas 1969-72 declined 9/16 to 88 7/16. The high coupon stocks showed some resistance and 6 per cent LCC 1975-78 put on ⅜ to 106¾.

Industrial equities over the period to Tuesday's close were affected by some end-account profit-taking but even so the tone remained firm. On Wednesday, despite the satisfactory industrial production figures, prices tended to slip from the peaks reached earlier in the week. Over the week to Wednesday's close, however, *The Economist* indicator rose 3.3 points to a new peak of 295.0. By far the brightest section of the market was in hire purchase shares. United Dominions Trust rose 8s. 6d. to 184s. Bowmaker put on 2s. 4½d. to 35s. 4½d. and Astley Industrial Trust gained 3s. to 38s. 6d. on the satisfactory results and the scrip issue. Brewery shares have also been active; following news of the proposed debenture placing by Whitbread the shares jumped 2s. 3d. to 121s. 3d. Recent news of increased activity in the building trades helped most building shares to improve: Associated Portland Cement gained 2s. 6d. to 60s. 6d., and British Portland improved 1s. 6d. to 43s. 6d.

Stores, too, were a fairly active section—particularly in the House of Fraser issues. The ordinary gained 5s. 9d. to 37s. and the "A" ordinary closed 3s. 9d. better at 35s. 9d. Harrods improved in sympathy; the assented rising 11s. to 145s. ex-dividend and the non-assented gaining 8s. 3d. to 144s. Marks and Spencer "A" were 1s. 6d. better at 60s. 3d. News of more demand for man-made fibres put Courtaulds up 1s. to 41s. 9d. After last week's speculative flurry most steel shares were quieter. Even so over the week most of them made net gains: typically, Steel Company of Wales improved 2s. 4½d. to 33s. 4½d. and Consett rose 1s. 3d. to 24s.

Oil shares drifted lower, under the influence of the setback on Wall Street. Shell Transport, after falling to 140s. closed 1s. 6d. lower at 150s. Similarly, Burmah Oil lost 1s. 6d. at 45s. 6d. and British Petroleum closed 1s. lower at 55s. 9d. The main feature in the gold share market was renewed buying of St. Helena from the Cape which helped them to close on Wednesday above their worst at 83s. 6d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended August 29, 1959 there was an "above-line" deficit (after allowing for sinking funds) of £16,120,000 compared with a surplus in the previous week of £686,000 and a deficit of £17,687,000 in the corresponding period of last year. There was a net receipt "below-line" of £6,589,000 leaving a total cumulative deficit to date of £338,771,000 compared with £322,030,000 in 1958-59.

THE MONEY MARKET

THE result of last week's Treasury bill tender was awaited with keen interest; but the average rate of discount was almost unchanged at £3 9s. 0.03d. per cent. This week the market's attention has continued to be drawn to New York where the discount rate on 91 day bills has risen from 3.824 per cent to 3.889 per cent, and that on the 182 day bills from 4.152 per cent to 4.468 per cent.

At the tender last Friday the discount market syndicate left its concerted bid unchanged at £99 2s. 7d. and as outside tenderers appear to have reduced their bids, the market's allotment at the minimum price rose from 49 per cent to 61 per cent. Total applications were only £1 million lower at £413 million. This week the tender has been raised to £290 million, the largest amount of 91 day bills to be offered for three years, but maturities at £270 million are also at a peak for the year.

Credit has remained generally adequate, but on Friday, Monday and Wednesday a small amount of official assistance was given through special purchases.

Estate Duties Investment Trust Limited

is an investment trust whose business it is to purchase and to hold minority shareholdings in family businesses, and small public companies, whose shareholders have to meet Estate Duty liabilities.

Executors and trustees holding shares in such companies and faced with Estate Duty liabilities will wish to avoid selling out or losing control. They will find Estate Duties Investment Trust Limited—known as EDITH—ready to help in this problem.

Our booklet, MG, 'The Death Duty Problem', will be sent on request.

CAMPBELL DISCOUNT COMPANY LIMITED

INDUSTRIAL BANKERS

Paid up Capital £544,000 · Assets exceed £3,000,000

Directors: J. B. Campbell, J. W. W. Huntrods. P. H. Russell Smith, A.C.A. P. J. Cannon. G. Keighley.

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms:
Money at 1 month's call, 4% per annum, maximum £5,000
Money at 3 months' call, 5½% per annum, maximum £25,000
Money at 6 months' call, 6½% per annum, maximum £50,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. NC4 explaining our mode of operation.

APPOINTMENTS

MSL have been retained to advise on the appointment of a

CONTROLLER OF PUBLICITY

for one of the largest groups of companies in the world and the largest in the United Kingdom in its field. This newly created public relations post will be one of the most important of its kind in the country and will command a salary in the £5,000 — £7,500 range.

The Controller will be responsible for developing and controlling a new and comprehensive central information department which will incorporate the existing advertising and public relations departments. He will also build up a film unit and whatever other specialised services are necessary.

Candidates must have successfully held a similar position within a company or group or in a Government department and they must be familiar with both public and press relations and advertising in all its forms.

Please send brief details in confidence, quoting reference S. 1853, to P. J. H. Fryer. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17, Stratton Street, London, W.1.

For other appointments see page 772

UNIVERSITY OF MALAYA IN KUALA LUMPUR

CHAIR OF ECONOMICS

APPLICATIONS ARE INVITED FOR THE ABOVE CHAIR
Salary between £2,268 and £2,548 per annum, at fixed point determined by qualifications and experience.
Allowances: expatriation £378 per annum, variable allowance, including cost of living allowance £210 — £560 per annum. Allowances payable are subject to revision or abolition at any time. Passages for appointee, wife and children under 12 years. Part-furnished quarters at reasonable rent. Provident Fund Scheme.
Details of the general terms and conditions of appointment in the University of Malaya in Kuala Lumpur may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.
Applications close, in Kuala Lumpur and London, on October 13, 1959.

APPOINTMENT REQUIRED

POST OF EXPORT MANAGER

SOUGHT BY

Export Executive with successful sales record who now holds overseas managerial post with leading British manufacturer. Aged 34 and feels his experience, interests, energy and administrative ability now provide qualifications to achieve his ambitions in this field.
Experience mainly confined to Eastern and African Export Markets but with thorough practical knowledge of shipping, advertising, office management, sales planning and promotion; in particular the marketing of branded proprietary articles.
The scope of this applicant's desire for advancement is limited by his specialisation in and dedication to export work but this, and his understanding of markets continues him that this is the field where his value is greatest. VP Dealer position with a view to eventual promotion would be attractive but acceptance of any post might involve up to three months' notice to present employers.—Box 1193.

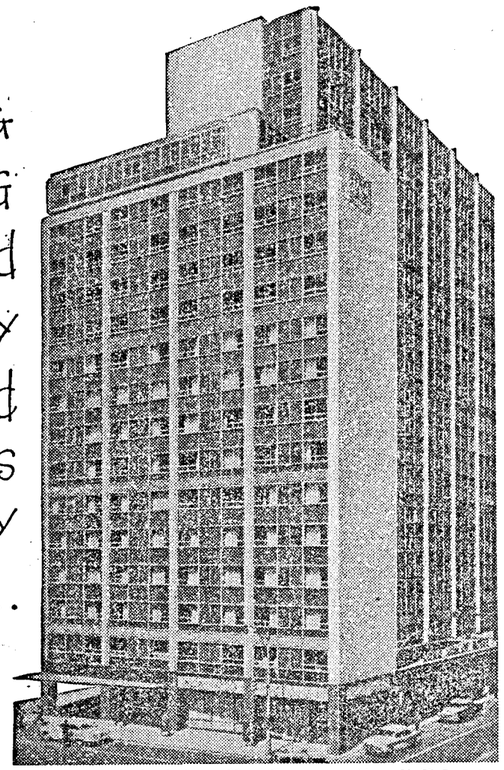
CURTAIN WALLING IS WHEN A BUILDING STANDS BEHIND IT AND KEEPS WARM AND DRY AND LOOKS PRETTY AND...



The Lord Simcoe Hotel Toronto. *Architect: H. T. Langston*

"Is when a building stands behind it? Does the child mean a wall?"

"But of course he means a wall. A transparent wall, a translucent wall, or if you prefer it a wall of opaque panelling hung on concrete and steel."

"The child means WALLSPAN?"

"That is undoubtedly what the child does mean—WALLSPAN—the name that Williams and Williams contributed to British Architecture—to World Architecture. The name for the glittering aluminium murals that form one or more sides of those soaring monolithic office blocks, those airy garden-landscaped factories, those gay and utterly functional schools. With WALLSPAN the skeleton building is clad in days instead of weeks. WALLSPAN telescopes the time between the first glint in the architect's eye and moving-in day."

"Williams & Williams" products make better buildings sooner?"

"Sooner—better—more beautiful even."

forward looking building products

WILLIAMS & WILLIAMS

Williams & Williams make steel windows of every description. ALOMEGA and other aluminium windows, movable steel and glass partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products.

A NEW RESEARCH ORGANISATION IN AFRICA

Research Services Ltd, the research division of The London Press Exchange Ltd, announces the formation of its subsidiary company MARKET RESEARCH AFRICA (PTY.) LTD to do market, consumer and media research throughout Africa

MR. WALDO LANGSCHMIDT

The Chairman of the new Company, which has offices in Johannesburg, is Dr. Mark Abrams, Managing Director of Research Services Ltd., the well-known British research organisation. The resident Managing Director in Africa is Mr. Waldo Langschmidt.

Mr. Langschmidt graduated at Witwatersrand University, and after war service with the Royal Navy returned there. Later he joined South Africa's first market research company, and was responsible for the first readership and radio listening surveys to be done in South Africa. Then for over four years Mr. Langschmidt headed the research department of a leading South African advertising agency. His experience includes the planning and direction of several large scale surveys into the buying habits of all racial groups in the Union and the Federation.

The resources of Research Services Ltd. and the experience of Mr. Langschmidt are thus combined into an organisation of great value to all concerned with the selling and advertising of goods and services anywhere in Africa.

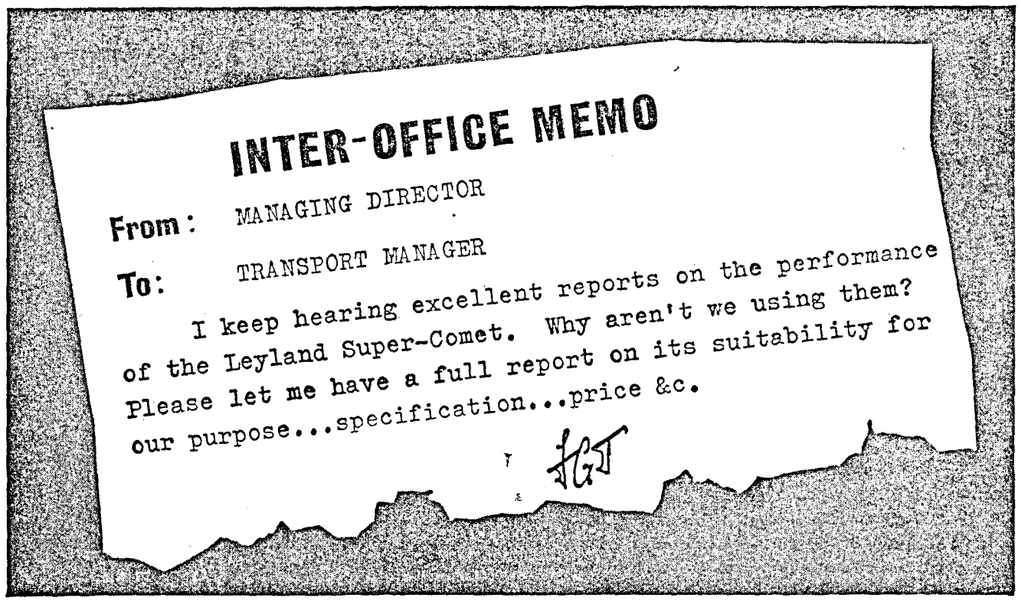
(Electronics Division, Gas Purification & Chemical Company Ltd.)



Yes, operators are speaking very highly of the Super-Comet range of trucks, tippers and tractors.

A feature which pleases everyone is its ability to carry a 9-ton payload at high average speeds over difficult routes. Fuel economy too comes in for plenty of praise — that's where the Leyland 0.375 engine takes a bow. Maintenance men admire the straightforward design — which certainly makes their job easier, while drivers reckon the all-steel, luxury-style cab superior to that of any other commercial vehicle.

Why not get your transport manager to come and look one over. We'd be delighted to meet him and, if the Super-Comet shouldn't quite suit your purpose, there are other models in the Leyland range from 3 to 150 tons. In those limits there is certainly the truck for you — and at the right price too.

THIS MAN'S JUDGEMENT...

It is not important to know precisely what the man in the picture is doing. Go into any modern factory and you will find people like him at the control panels. What is important is that he has never mattered more. His judgement is the critical factor in today's industrial processes.

In an age when industry is developing faster than ever before, each year sees some great technological advance. More and more processes mechanized; new techniques needing new machines to make things better and cheaper.

In all this fast-changing pattern one factor remains constant and vitally important—the skill and experience of the men who watch the dials and move the levers. On their judgement depends the *quality* of the product.

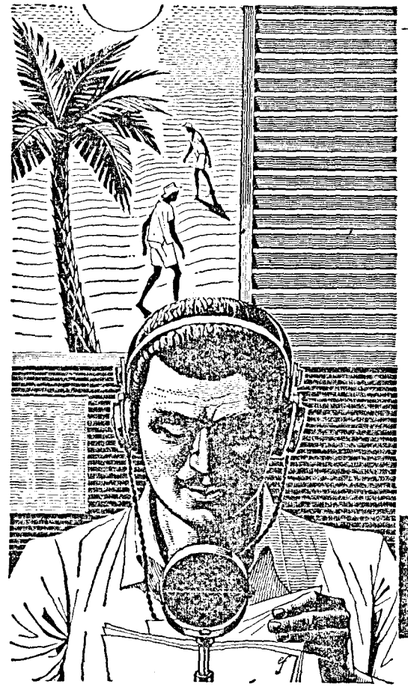
Nowhere is this more important than in a highly competitive industry like steel. Modern high-speed production methods mean that steel's need for craftsmanship is greater than ever.

CITY OF STEEL

The man in the picture is in fact helping to make tinplate in the City of Steel, tinplate that will go all over the world. Quality is important; so is price. On his skill and efficiency depends a very great deal: the weight of The Steel Company of Wales' contribution to Britain's essential export markets—markets that affect directly the food we eat, the clothes we wear, our standards of living. This man's judgement is vital.

THE STEEL COMPANY OF WALES LIMITED

This is Broadsheet No. 15 from the City of Steel



THERMOTANK IN THE MIDDLE EAST

Now they can give of their best

at an Iraqi wireless station

WORKERS can now enjoy ideal surroundings for comfort and efficiency where outside conditions of heat and humidity would make energetic activity almost intolerable. This typifies the installations carried out in the Middle East by Thermotank's branch at Basra. These include the Shatt-el-Arab Hotel, the head office of the Agricultural and Industrial Bank of Iraq, and the Iraq Spinning and Weaving Company's mills near Baghdad. *Thermotank can plan, design and instal air conditioning equipment for any requirement in any part of the world.*

A WORLD OF BETTER CLIMATES WITH THERMOTANK

Here are a few more examples of world-wide service from Thermotank:

BRITAIN Full conversion of the liner S.S. 'ORCADES' carried out, providing an installation with a capacity of 14,000,000 B.t.u's per hour.

UNITED STATES Extensive air-conditioning equipment supplied for the State Department Building, Washington.

AUSTRALIA Installations for hospitals, hotels, schools and an electrical research laboratory, and for new 19,000-ton ships.

SOUTH AFRICA Thermotank installation for the new ten-storey headquarters of the United Building Society in Johannesburg, South Africa's largest office building.

The first successful turbine vessel ever built was Sir Charles Parsons' Turbinia. She gave her name to the works in which she was built and which, a few years later also built the first geared turbines to be put in to a ship. To-day Turbinia works builds the finest of marine turbine machinery for ships of every class and power.

Without Option?

Now, at last, we know. A new Parliament—and Her Majesty's next Government—will be chosen on October 8th. Much may happen in the weeks when minds are being made up, but at the moment it looks likely that the Conservatives will win for a third time running. If so, it would be one more feather in Mr Macmillan's hat. It was he who retreated from Suez almost without losing a man, except Lord Salisbury. It was he who, very sensibly, advanced to Moscow last February. He has become personally identified with the boasts, in the contemporary idiom, that we "never had it so good" and that "there ain't gonna be no war." It is upon these two sentiments—the feeling that times are good and brighter hopes of peace—that the expectations of a Tory triumph are based.

Will the present prophecies be confounded? All will certainly not be over until the shouting has died away; and in each issue of *The Economist* from next week until the election, the state of opinion in the country and the course of the campaign will be tested and charted in a special section. If it is not easy to see how Labour can take up the running between now and October 8th, only sworn Tories will simply jump for joy because of this. It is not a good thing in a parliamentary democracy for the same party to rule for a dozen years or more; it is bad for winners and for losers—and, in the end, for the country.

What is more, the mood which looks like sweeping the Tories back to power yet again is mixed with a deal of illusion. It is just not true that our Conservative rulers have hit upon panaceas for either prosperity or peace. Some very good luck has played as large a part as good management in their several successes. And no amount of the showmanship which is nowadays the garb of statesmanship, if not the substitute for it, can disguise a longish list of unsolved problems, and likely failures, home and colonial and foreign. The Tories have still a lot more to learn about living in the world of 1959 and after.

Certainly the uncommitted voter (and the independent newspaper) would very much like to say that now is the time for a change. But what better alternative is there? A series of articles in *The Economist* between now and election day (beginning with the one overleaf on the economic issues) will weigh in the scales the attitudes of the parties to the major matters of policy; and some attention will be given to whether in 1959 it would be more sensible to vote Liberal. The balance will be fairly struck. But one is bound to confess to start with the reluctant preliminary belief—the exasperated, even angry, belief— that there is no better alternative in sight to the devil we have.

What will be chosen next month, it must be repeated, will be this country's Government. It is a choice of men as well as of measures. The Labour Opposition has its men of character, of capacity and of sensible foresight; but they are still too trammelled and contained by the Labour movement's past, by the Bourbons who are still living in the 1930s and before: the few thousand devoted zealots and dichards who form a woolly curtain in the structure of the party between an alternative Labour Government and the thirty-odd million of voters. Simply because this country cannot hope to have consistently good Governments unless it has consistently good Oppositions, the removal of Labour's own peculiar straitjacket has become a national imperative. No country should be sentenced to pick its rulers without the option.

The Economic Issues

The first article in a series on the choice before the electorate on October 8th

VOTERS in a general election should look towards the future. But election campaigns themselves are inevitably largely about the past. Let two things therefore be said at once about the mass of economic propaganda that will flow from the parties in the coming weeks. First, the Tories are quite right to castigate the postwar Labour governments for the fact that the extremes of austerity and rationing continued for so long after 1945; they could have been eased at least two years sooner than they were if Labour Chancellors had resorted promptly after the war to a dearer money policy, to trimming the food and rent subsidies, and to a gentler progression in the introduction of the welfare state. But these were not remedies that the Tory opposition itself advocated very loudly at the time. Secondly, Labour is quite right to harry the Tories for the protracted pause in industrial growth between 1955 and 1958; expansion might have been resumed much earlier than this year if Tory Ministers of Labour had not run away from railway and engineering strikes by setting up inflation-breeding courts of inquiry. But Labour certainly did not clamour for this remedial policy either.

The record is spotty on both sides. The real question for October 8th is which party seems likely in the future to come nearer to attaining the economic objectives which the ordinary man ought to want. The principal one of these objectives should be the maximum possible increase in the standard of living of the people.

The Will to Expand

To a very small extent, this might sometimes depend on which party has the desire for expansion more deeply embedded in the marrow of its political bones. Perhaps Labour can claim to have some slight advantage here; at any rate the new Labour leadership does seem to have made a significant advance in this respect since the days when it put much less emphasis on expansion and much more on equality. One could even envisage circumstances—at the bottom of an American slump, for example—when Labour might rightly expand internal demand and the Tories wrongly hold it back, either through excessive caution or because they paid too much attention to certain fixed ideas: to the maintenance of rigidly fixed exchange rates, for example, or of technical external convertibility, or of free access by the overseas sterling area to borrowing in the London capital market—all of them desirable things in themselves, but not necessarily all simultaneously indispensable.

But to say this is to look pretty hard and pretty desperately for something that can be put to the economic credit of the Labour party. To a much larger extent, and much more frequently, the question for the voter to ask will be not which party seems keener on maximum expansion (both are keen), but which seems more likely to attain it—not which has more will, but which would find or put more impediments in the way. The main things in the way of maximum expansion in Britain are the limitations set by an uneasy foreign balance and the wretched recurrence of intolerable cost inflation.

A Scarecrow for Sterling?

THE Labour governments' record in handling the foreign balance in 1945-51 was very bad. The reason for this was simply that it was constantly expanding internal demand not just up to the limits set by possible internal supply but well beyond them. The result was a series of balance of payments crises; Labour's claim that it expanded industrial production by an average of 5 or 6 per cent a year between 1945 and 1951 is quite misleading, because at the beginning of that period most of Britain's able-bodied young men were in the army, not the factories, and at the end of it Britain was running a quite unmaintainable balance of payments deficit of over £400 million a year. That early postwar record of running balance of payments deficits is one (though not the only) reason why foreigners are nowadays liable to run away from sterling, and thus stop British expansion, when our balance of payments surplus slips below quite a sizeable level. Moreover, whether British electors like it or not, the point at which foreigners start to withdraw money, and thus enforce a slowing down in activity here, is likely to be different according to which party is in power. Of which party's government—and present manifestos—are foreign bankers likely to be more apprehensive? From which are they likely to run away first? These are questions that can be answered by the facts, and the facts are frankly not with Labour.

It may be said that foreigners' suspicions of Labour are mainly a product of the past, and since Britain is obviously going to have to have a non-Conservative government some time, Mr Gaitskell may be the right sort of leader to put in power now in order to persuade foreign bankers that all socialists are not extravagant wastrels. To that, there are two answers. One is that the promises Labour has made to the domestic electorate before this election have been obstinately extravagant—especially about pensions, housing and the health service. Moreover, whenever even this new Labour party has had the choice between not saying something that will worry foreign bankers and saying something that will appease its internal party militants, it has consistently chosen the latter. (Thus, in private, most Labour leaders will agree that steel nationalisation is not essential to their policies; they will say merely that it will have much less effect, for bad or good, than excited foreigners assume, but they do not see that this provides an overwhelming case for abandoning it.)

The other, and more technical, point concerns the weapons of economic policy that Labour would use in order to keep foreign liquid funds here. Because Britain is so vulnerable to movements of foreign funds, it is going to be wiser for this country in the foreseeable future to rely on relatively high short-term interest rates as an instrument of restraint, and to use lower taxes (not cheap money) as the main instrument for encouraging expansion. Labour has no doubt learned many lessons since the extreme cheap money folly of its Daltonian period, but it is a fair judgment that it is still likely to have a greater bias against hard money than the Tories. One reason for this is its greater susceptibility to that most powerful of pressure groups against economic interest rates, the local government authorities.

Inflation through Trade Unions

THE second attribute needed by a government that is to enrich Britain is a policy that will maintain a course of reasonable expansion without immediately provoking intolerable cost inflation. This at once raises the problem of the trade unions. Whenever Britain has set out in recent years to secure a rate of increase in national income at between 2½ and 4 per cent a year, the trade unions have at once demanded between 5 and 10 per cent a year increase in wages. The image which Labour wants to put before the electorate is that it would use its good offices to persuade its old friends in the trade unions, please, not to go on asking for these increases. The image which the Tories are gradually managing to convey is that they may tell the unions that they cannot have them.

As a matter of realistic judgment, the latter policy, if it is really carried through, seems much more likely to work. Perhaps in certain very special circumstances—for example after a grave inflationary crisis such as the fuel stoppage of 1947—the trade unions might agree to help a Labour government by initiating a temporary period of wage restraint. But it is hardly reasonable to urge the voter to give his franchise to the party which might possibly be better fitted to get out of a very great mess, rather than to the party which might be more likely not to get into it. The practical question for the voter to ask himself in this field is this: if, during a period of 3 per cent per annum expansion in the national income, the railwaymen's union threatened a railway strike unless it got a 6 per cent per annum increase in wages, which party's government, as things are today, would seem less likely to urge the British Transport Commission to give way? On this count, a tremulous, unconfident, but quite definite vote for the Tories.

Who Favours Competition?

THE trade unions, however, are by no means the only cause of cost inflation. This is an age when Britain badly needs a Cobden and a Bright. At a time when technological innovations are providing unimaginable opportunities to increase standards of living, but when the main thing in the way is the difficulty of keeping prices down, it is supremely important to get rid of all protectionist and restrictive practices whose sole object is to keep prices up. Traditionally, the Tories would be expected to be very bad at this. It is therefore gratifying to record that this is the one economic field in which the Tories' record, during the dying Parliament, has been quite extraordinarily good.

Mr Thorneycroft's Restrictive Trade Practices Act has enabled a serious beginning to be made in the task of sweeping away the worst sorts of trade association agreements. Sir Anthony Eden deserves much of the credit for trying to bring Britain into the business of tariff reduction in Europe, although the initial instinct of his party backwoodsmen was to fight against it. Sir David Eccles has not fallen into the easy temptation of maintaining dollar import controls in order to protect weak domestic industries, and he has firmly resisted pressure to impose new controls on cheap textiles from the poorer countries of the east. Mr Amory and Mr Hare have even begun to instil some sense into agricultural policy. In retrospect—and this is a point which always annoys Labour intellectuals—perhaps the most successful anti-inflationary move since the war was the abolition of building licences; one of its main effects was to make possible the building of new supermarkets, which then began to break through some parts of British industry's zareba of resale price maintenance. Labour would not have achieved this.

Admittedly, Labour, too, is less protectionist than it used to be. Mr Wilson deserves credit for bringing the trade unions along with him in a constructive attitude towards Europe. But, in general, Labour still seems more ready to give way to particular pressure groups. It wants a "national fuel policy," which means putting up British industrial costs by buying expensive British coal even if imported oil (or imported coal) is cheaper. It would be more likely to use import quotas against foreign countries (including underdeveloped countries), in order to protect inefficient British industries. Its agricultural policy is based on more marketing boards, which means putting up the price of food.

Planning, Investment, Fair Shares

WHAT other economic issues are there? During the campaign Labour is likely to talk a lot about its intention to introduce a more planned and co-ordinated economy; there is nothing to hope for from this, although Tory alarmists should be told that there is not so very much to fear from it either. In 1945 Labour inherited, and improvised upon, a number of wartime expedients called controls. It will not inherit them this time, and the phrase "Labour planning" would in practice tend to be a euphemism either for the subsidies it gave to particular pressure groups, or for the steps (possibly sometimes wrong and restrictive ones) which it took to extricate itself from any external crisis. The idea that Labour would try to plan the business decisions of the six hundred largest British industrial companies, because its national pensions fund would buy ordinary shares, is a Tory bogy—although Labour's own misguided utterances in two of its policy statements allowed this bogy to be raised.

Much more sensibly, Labour will also campaign on the need to increase productive investment in Britain. But it does not say how it would effect this. In practice, productive investment in the public sector of the economy could be significantly increased only by a government which held down its spending in less productive social fields (especially council housing); while productive investment in the much larger private sector can be stimulated only by tax concessions designed to increase the incentives to earn and save. The Tories seem likely to be ahead of Labour in both respects.

Finally, the elector who passes judgment on economic issues should sometimes pay attention to his heart as well as his head. A warm welcome should be given to the fact that both Labour (in its policy statements) and Mr Macmillan (in his telecast with President Eisenhower) have said that Britain

should do more to aid the underdeveloped countries of the world. The party that will do more to aid them is the one that will manage to have the larger balance of payments surplus (you cannot lend deficits), and the one that would be less inclined to block imports of cheap consumer goods (however much they annoyed British managements and trade unions).

On "fair shares" at home, Labour would have a more positive urge to do some desirable things to clear away squalor. But the Tories have generally been quicker (or more honest) in recognising that the party that will do more to banish poverty from Britain will be the one that is more ready to discriminate: to increase old age pensions for everybody—including the retiring managing directors—is nowadays a less humane, even though electorally more popular, policy than steadily to increase national assistance scales for those in real need. At the other end of the argument about "fair shares," Labour would be likely to remember enough from its 1956 policy statement on equality to introduce a capital gains tax and to make a sharp increase in death duties. Individual voters must make up their own minds about the desirability of these; the economist can only say that they would be likely to bring in only very small sums for the Exchequer, and that in certain forms they could obviously accord ill with Labour's professions to increase investment and savings.

Such, then, are the economics of the choice that voters will have to make on October 8th. The Tories' economic record throughout most of this Parliament has not been as successful as in that of 1951-55. But this first article about the alternative governments must still end on very much the same note as we ended the equivalent article in 1955. Considered as against Labour alone, and judged on the economic issues alone, the Tories—although not achieving a knock out, or even winning every round—undeniably pile up a large lead on points.

Dragon and Elephant

The threat to Laos from North Vietnam is more subtle than the conventional picture of aggressive war

FEW can have expected the experiment in personal diplomacy which Mr Eisenhower and Mr Khrushchev are to open on Tuesday to take its course undisturbed by outside events; and it was always a fair guess that the disturbance, whatever it was, might come from the general vicinity of China. In the event it has come from Laos, which was the subject on Monday of a Security Council meeting of the old, familiar, acrimonious kind; nothing about this meeting suggests that the cold war is over yet.

Laos having complained of invasion from north Vietnam, the Security Council appointed a special sub-committee (Argentina, Italy, Japan, and Tunisia) to find out the facts and to report. Article 29 of the Charter of the United Nations, one of the articles grouped under the general heading of "procedure," empowers the Security Council to form such subsidiary bodies as it thinks fit; but the Soviet member, who voted against, maintained with some heat (and with some reason) that this was not really a procedural vote and that the council was acting illegally in ignoring his veto.

The new sub-committee is to go to Laos and make an investigation on the spot. The hope in London, at any rate, is that its arrival there will reassure and perhaps calm the Laotian government, and that it may even, for a time, deter the Vietnamese communists from persisting in their interference with the northern provinces of Laos. Considered by itself, it is a sensible and innocent move; however, since the Russians regard the sub-committee as an illegal body and will presumably disregard its report, while the Chinese and Vietnamese communist governments are excluded from the United Nations altogether, it is a move that can do no more than help to hold the situation for a limited time; it cannot, so far as the imagination can stretch, be expected to lead directly to a negotiated settlement of the trouble.

Laos had not asked the Security Council to send a sub-committee; it had asked for an emergency force "to halt aggression." The fact that the Security Council did not decide to send a force does not prove anything; against the inevitable Russian veto, it could have done no such thing, though it could have passed—and may yet pass—the matter to the General Assembly as was done in the Suez crisis. But the sending of a sub-committee, and the hopes, however modest, that are placed in it, reflects the fact that in the eyes of most people (and certainly of the British Government) what is happening in Laos is not a straightforward, overt military aggression on the lines of, say, the communist attack on South Korea in 1950. Laos is certainly in danger, and the danger certainly comes from north Vietnam; but the method is more oblique than in Korea, and the plan has a longer range. A closer parallel is with the communist pressure on Greece between 1945 and 1948.

It has been the misfortune of Laos never to have quite succeeded in winding up its modest share in the Indo-China war. That war did not take much account of frontiers; in its course the two northern provinces of Phong Saly and Sam Neua fell into communist hands, and for three years after the Geneva settlement of 1954 they remained detached from Laos and attached, for practical purposes, to communist Vietnam, although the agreements provided that they should return to the Laotian kingdom. It was not until November, 1957, that the communist leader in northern Laos, Prince Souphanouvong, came to terms with his half-brother, Prince Souvanna Phouma (then prime minister of Laos); and even then the agreement looked like an unaccountable gamble on both sides. The Lao communists agreed that their troops should hand over the territory they controlled, lay down their arms and return to their allegiance; the royal government agreed to accept two communist battalions into the royal army and two communist ministers into its own ranks.

Prince Souvanna Phouma's policy of reconciliation at home was complemented, logically enough, by a policy of neutralism

in foreign relations, though he and the majority of his colleagues remained anti-communist themselves. His policy broke down, and his cabinet fell to pieces, under the shock of the supplementary elections made necessary by the agreement. Faced by a divided right, the new communist (Neo Lao Haksat) party and its associates got 13 out of the 21 supplementary seats, though with only some 30 per cent of the votes. This caused a violent reaction among the right-wing officers and politicians and a realignment of the government parties. The two communist ministers were dropped; Prince Souvanna Phouma, who had been regarded more or less as a permanent institution, was dropped himself, and the policies of compromise and neutralism went overboard.

The new government, led by Mr Phoui Sananikone, has done many things that are in themselves sensible. But it took over before the royal authority had been fully re-established in the northern provinces, when the communists still had a small but useful army in being in the north, and on a programme which the communists (whether in Laos, in Vietnam, or in China) were obviously not going to like. The army and the Committee for the Defence of National Interests (a kind of Young Turk movement) tended to push the new government into more extreme attitudes than Mr Sananikone might have adopted if left to himself. Thus, the acceptance last December of a Chinese Nationalist consulate was not calculated to disarm the hostility of Peking. In January the government took dictatorial powers for a year, putting the legislature in suspense and postponing the next elections. The Neo Lao Haksat virtually lost its newly won legal status. Mr Sananikone's next step was to attempt, with only partial success, to disarm and intern the two surviving Pathet Lao battalions.

Thus it can be argued plausibly enough that the retaliation which has come from the north was inevitable if the Sananikone government pursued the policy it did. But it cannot be plausibly argued, as Hanoi and Peking have been maintaining, that the communist retaliation was provoked by American military interference. Before July the United States government had done little beyond reforming the reportedly gross errors of its administration of aid to the Laotians. But, even if the limited infiltration of armed communists into northern Laos last January is disregarded, communist troops attacked a Laos army post in Sam Neua province about July 16th, while it was not until July 23rd that the announcement was made that an American military mission was to help the Laotian army to train in the American weapons which it had acquired. Washington came to the help of its Laotian friends when they were already hard pressed.

JUST how hard pressed they are is not easy to say. Estimates of the strength of the hostile forces in the north have gone up and down between a few hundreds and a few thousands. Grave military threats to Sam Neua and other places, some of them not far from Vientiane itself, have appeared, disappeared, and reappeared. The royal government is at one moment observing public holidays in idyllic somnolence, at another declaring states of emergency and sounding the tocsin. No large-scale military attack seems to be going on at the moment, and quite likely there is none on the way. What is certain is that the Laotian government is at a disadvantage in its northern provinces, that it is being harassed across the border from north Vietnam, and that the Vietnamese communists are well placed to make difficulties for Laos, while maintaining the appearance that what is going on is a civil war.

Most probably the north Vietnamese are engaged in Laos in a sapping and mining operation which may last for many years, and in which political opposition to the Lao government will be supported by subversion, and the subversion helped out on occasion by military force, until one day, as the communists must hope, Laos will rot and fall off the tree; and when that is done, south Vietnam will be more vulnerable than it is now, and the union of Vietnam under communism can take place. The West's answer is to help and encourage Laos, and its non-communist neighbours in South East Asia, to refuse to rot. The situation is not one that is likely to be soluble by conventional military means. Nor is there any reason to suppose that its solution would be made any easier if communist China were forced to share the blame for what is going on with the south Vietnamese, or if Soviet Russia were forced to share the blame with China. It is always tempting to simplify such an issue by generalising it into a world crisis.

Obviously enough, the Chinese communists would rather their communist friends in the Indo-Chinese states won, than that they lost; they have given plenty of evidence, in Tibet, the Himalayas, Korea, and elsewhere, that they prefer subservient states to independent pro-western states on their borders. Just as obviously, the Russians are not going to repudiate their friends in South East Asia, or in Peking. It does not follow that the trouble in Laos is a plot for aggressive

The Economist

SEPTEMBER 10, 1859

AT THE FAIR

We always go into a cattle fair with more zest and interest than into the show-yards of any of the great Agricultural Societies. True it is we do not meet at fairs with any specimens of live stock so perfect as a great many of the animals exhibited at the cattle shows. But their condition is more natural. And there is a reality, an eager business-like air about a fair not to be found at a prize stock show. Business is doubtless done at the shows by stock-breeders, but the amateur, the dilletanti character of very much of the proceedings is painfully obvious. The farmers very generally stand aloof and criticise, making indeed very often unfair remarks as to the condition and character of the animals. In short, a prize stock show is in the main an agricultural holiday. Not so the fair. Everybody is in earnest and eager to do business. Cattle are brought to be sold. Farmers come to buy. If you go into any part of the fair as a spectator—if you stop to look at a horse or a herd of cattle, you are solicited to make an offer for the one and a selection from the other. No dealer supposes for a moment that you go there only to look on. And whoever went to Barnet Great Fair on Monday last and noticed the large numbers of cattle driven off before 12 o'clock, could not doubt that real downright business was the purpose of the greater part of the busy crowds there assembled. The fair was a good one, all sorts of stock usually brought there were numerous, and most of them were in good condition. In particular we never saw a finer show of milking cows. . . The horse fair was very full, sales were brisk, and the wild Welshmen, who are the principal dealers, appeared wilder than ever. Some 3,000 horses were said to be on the ground. Most of the horses were young, and formed for the most part the raw material of good saddle and harness horses, but he must have been somewhat fastidious who could not have suited himself at Barnet with a young horse likely to meet his requirements.

war, drawn up in Peking and counter-signed in Moscow. On the contrary, it is highly inconvenient for Mr Khrushchev, bent as he is on his mission to Washington ; and it would be disastrous for his whole policy if east and west were now to involve themselves in a second Korean struggle on the mainland of South East Asia.

The Business of Beauty Contests

THIS summer has been the busiest ever for Britain's beauty competitions. Many seaside resorts and holiday camps organise a bathing beauty contest at least once a week during July, August and September ; firms, co-operative societies, trade unions and local councils run such competitions by their thousands from early spring to late autumn ; while dance halls and palais include beauty contests as a staple part of their winter, as well as their summer, entertainment diet. Some of these contests are taken much more seriously than cynical outsiders might assume ; the rumpus created at a recent Ilfracombe beauty contest over the election of a grandmother (who was alleged to have packed the voting attendance with her supporters, and was threatened with a pelting of eggs in consequence) is sufficient proof of that. The plain fact is that, in the last few years, these competitions have come to occupy a prominent place among British recreations and social life.

Slightly superficial reasons for this are not hard to find, quite apart from the obvious basic one which no doubt rears its ugly head. Beauty contests appeal primarily, but by no means exclusively, to teenagers of both sexes with lots of time and money to spend. To the girls there is the chance, at the least, of showing off to their boy friends and, at the most, of rising to modelling, stardom and fame ; earnest promoters will also claim that a working-class girl who enters these contests can get for nothing a practice in dress and poise for which her middle-class counterpart might have to pay many pounds. There are two further appeals to the surprisingly large number of women of all ages in the audience: the clothes and make-up worn at these contests can serve as models for their own dress ; and the plush surroundings in which the contests are usually held make a pleasant change from a modest home. Beauty competitions, as well as being a good party game, have rapidly become the mannequin parades of the working classes.

The first British commercial enterprise to recognise the full potentialities of this new hobby was Mecca, the dance hall operators and now certainly the largest beauty contest organisers in the country. In 1947 the company ran only one contest, for a conventional "Bathing Beauty of the Year"; now it runs more than a thousand, often of a markedly different sort. Instead of being just general beauty contests, competitions in its dance halls now tend to be based selectively on almost every beauty spot that a girl can have ; there are contests singling out the most beautiful hands, feet, legs, hair, make-up, figure and face. Mecca's dancing business has increased regularly by 10 per cent a year since 1945. No doubt there have been other reasons for this besides its beauty shows (sixty per cent of British marriages now originate in dance halls, according to a recent estimate), but the contests have certainly drawn people in.

A second reason why the promotion of beauty contests is so popular is that they bring good publicity for everyone concerned. Industrial enterprises have been quick to recognise this (Norvic Shoes sponsors the "Teenager of the Year" and Mazda Lamps the "Queen of Light"). The publicity is increased if a big newspaper, hungry for uncovered cover girls, can be brought in as a partner to the contest. Butlins runs its "Princess" competition in association with the *Empire News*, another competition in association with *Blighty*, and a third in association with *She*. Moreover the prizes at smaller competitions, generous though they often are, consist usually of products given away by manufacturers for advertising

purposes and thus cost the organisers nothing; Mecca's prizes of ball point pens, cosmetics, soaps and dresses are all of this kind. Even the judges do well out of it ; they are usually radio and TV personalities—but now sometimes also aspiring politicians or company or trade union executives—anxious for a bit of extra publicity.

MOST important of the year's competitions are the "league" contests which lead to such titles as Miss England, Miss United Kingdom, Miss Europe, Miss World and Miss Universe. (The Miss Great Britain contest has declined in importance now, and is largely a local competition held at Morecambe.) These national or international competitions, whose proliferation in this country dates partly from the Miss World contest of 1951, which was designed to celebrate the Festival of Britain, are highly organised and since they offer substantial prizes are fairly expensive to run ; the Miss World contest, for instance, now costs its backers £15,000 a year. Girls enter the local heats held at any one of Mecca's 23 ballrooms in April and May, where they can win up to £10 ; if successful, they go on to Blackpool in August where, under the further auspices of the Blackpool Corporation and the *News of the World*, they can be elected Miss Blackpool (£250 prize) and Miss United Kingdom (£300) ; later, there is the further chance of becoming Miss World. Miss England belongs to a different league ; she is elected in April and is then given, among other things, an expenses-paid trip to Hollywood for the glittering chance of becoming Miss Universe.

The rules for these league competitions are strict. A Miss England competitor must appear in a one-piece bathing suit "complying with recognised standards of propriety"; she may wear a few bones in her costume "but none to accentuate the bust"; she must not wear "artificial aids on the body or the costume nor any foundation garment"; and she must be aged between 17½ and 25 and unmarried. Breaches of any of these rules, which are not unknown, lead to disqualification if detected (though detection sometimes proves hard). This year about 50 girls will enter the final round of Miss World ; the winner, as well as her money prizes, can expect substantial advertising and modelling fees. But every beauty queen's wish, which is to become an actress, is more difficult to achieve. The major film companies, like J. Arthur Rank, are chary of promising screen tests to girls who have won a contest. Their experience in the past has been that these girls may be handsome, but that they usually cannot begin to act.

As well, however, as having to fight her way through the various competitive leagues, a girl who hopes to use these beauty competitions as a way to the top has to contend with important vagaries of public taste. To say that the ideal of British beauty has changed over the years is a commonplace: the raffishness of Regency, Victorian velvet and the tubular twenties, all ideals in their time, had little, if anything, in common. But the same process of change in the prototype of beauty is going on today. Developing from the thirties, when the waist came back into fashion, emphasis today has shifted to the bust and to a lesser extent to the hips; hence the modern publicist's almost obsessive concern with "vital statistics." (Comparison of the challenging measurements of Mlle Bardot or Miss Jayne Mansfield with the seductive, but well clad, film beauty of the thirties brings this point home.) The modern ideal of youthful undress in part reflects the younger age of the beauty audience; but no girl can go far in any competitive company today without a good bust.

One pleasing feature of the postwar social scene in this country has been the raising of women's standards of dress in Britain, as anybody who remembers earlier frumpish generations of British women will remark. It is at least possible that the beauty contests have made some contribution here. The introduction of new styles fifty years ago used to be a process that filtered slowly down from the higher to the lower social classes ; today, apart from a select group of models, the best dressed girls in England are the city typists who enthusiastically and immediately buy Paris reproductions from the cheaper department stores. The upper middle classes, with their traditional conservatism, follow far behind. But with pressure both from above and below, the businessman's wife, as well as that of the film actor and the teddy boy, is taking a new interest in her appearance. The pressure is on to keep up with every sort of Jones.

NOTES OF THE WEEK

GENERAL ELECTION

The Uncertain Election

IN London this week bookmakers were laying odds of up to 3-1 on a Conservative victory on October 8th, and professional dealers on the stock exchange were picking a Conservative majority of between 60 and 70 as their favourite guess at the result. It may therefore come as a shock to Conservative optimists to hear that the electoral statistician, sticking strictly to his figures of form, must still regard this as a rather more uncertain election than even those eventually close-run affairs of 1951 and 1955. At the beginning of those last two election campaigns, nearly all the signposts—the public opinion polls, the by-election results, the pattern of Liberal candidacies—pointed towards the likelihood of a Conservative victory. This time only the public opinion polls quite distinctly do so.

During the next three weeks, as the campaign proceeds, the arithmetic of this election will be scrutinised in *The Economist* in the maximum digestible amount of detail. But the broad figures to remember at the start seem to be these. In the election of 1955, the Conservatives won a majority of 68 over Labour. This time, therefore, Labour would need to gain 34 former Conservative-held seats in order to gain parity with the Conservatives in the House (although, unless the Liberals joined with it, it would probably need upwards of 40 gains in order to have a workable overall majority). There are 48 Conservative seats which would go Labour if there was a straight swing of 3 per cent from Conservative to Labour right across the country compared with 1955. It is worth looking carefully at the pattern of candidacies which is at present expected in these seats.

Labour's Hopefuls

IN 14 of these 48 very marginal Tory seats, the Liberals are expected to put up candidates ; they contested only seven of them last time. All of these 14 Tory seats are obviously very vulnerable. So are at least another four or five Tory seats with only slightly larger Tory majorities where Liberals are joining in the assault. If all these seats went against the Conservatives, Labour would need to gain only 15 seats in straight fights in order to become the largest party in the House, and there are 17 "straight fight" Tory seats which would be vulnerable to a 1½ per cent swing to Labour. In the last two by-elections of the expiring Parliament, which took place as recently as June, the swings to Labour—both in straight fights—were ½ per cent and 1¾ per cent respectively (at Whitehaven and in the Penistone district of Yorkshire).

Since June, it is true, the *News Chronicle* Gallup poll, with other public opinion surveys in concurrence, has reported about a 2 per cent swing back to the Tories ; on that reckoning the Conservatives might hope to win up to 30 more seats than they did in 1955, giving them an overall majority of some 120 in the House. The balance of probability therefore obviously points to a Conservative return to power; probably, indeed, the fairest summary of the evidence is that an increase in their majority is more likely than not. But anyone who says that a Conservative victory of any sort is an absolutely foregone conclusion should check up on what he is assuming: he is assuming, in effect, that more than 98 out of every hundred people in this country are quite certain to vote on October 8th in exactly the same way as the public opinion pollsters suggest that they might vote now.

TRADES UNION CONGRESS

Report from Blackpool

Our special correspondents at Blackpool write :

THE trades unions' voice was pitched in a low key at Blackpool's Opera House this week. To do justice to this cavernous meeting hall, one would need the massed ranks of northern choirs; instead even when the general election was announced on Tuesday, the thousand-odd delegates produced little more than a mildly enthusiastic cheer. Mr Willis's presidential address, well delivered from his mammoth chair under the arc lamps, set the tone. There had been some apprehension about the embarrassment that this year's congress president happened to be a Cousinsite, so Mr Willis made his speech a careful, constructive but essentially defensive piece of work. He dwelt at length—some said too greatly—on his own problems in the printing industry ; he made only the gentlest of digs at the general council for not giving him greater support during his eight week strike. He was sufficiently unspecific neither to rile his opponents nor to rouse his supporters to dangerous raptures ; his speech was therefore received with moderate but by no means expansive applause.

The delegates then went on to the main business of a congress which, for more than anyone, was to be a victory for the TUC's back room staff. Theirs was the responsibility, in their hurried asides on the platform, to see that the trade union image was not projected badly before the public. On the first two days they achieved full success. The awkward moment when the penitent and much maligned stevedores and dockers were refused reaffiliation was smoothed over by the chromium-plated manner of Sir Vincent Tewson. The resolution about shop stewards, put forward in spite of vigorous opposition from the general council by one of the smallest unions present, was adroitly smothered. Even Mr Birch's delicately phrased motion on closer unity, which, while urging unions to get together, avoided most of the contentions involved, was hustled through a card vote with a minimum of fruitful debate. With Mr Macmillan stalking in the wings, no member of the general council could have wished otherwise.

Unexploded Bomb

ON the whole, the attempt to brush awkwardnesses under the carpet was successful even on the dreaded third day. Mr Cousins' speeches in moving and closing Wednesday's debate on nuclear disarmament were fortissimo in delivery but for him diminuendo in content. This may have been partially because he was worried by the time limit ; it was also, however, because he had been persuaded to avoid supplying the Tory press with damaging quotes, containing the reflections on the wisdom or honesty of Messrs Gaitskell and Bevan that flow logically from his attitude to the non-nuclear club.

Adopting his usual shirt-sleeved stance, which contrasted suitably with the tailor who seconded him, Mr Cousins therefore gave the shorter version of his speech about his famous seven points, designed to show that they were in fact only carrying the party back to the true wisdom of 1958 after the sad deviation of the party's last statement. There was no talk this time about rather losing the election than winning it for the wrong reasons. Instead there was a brief appeal for unity after the vote, on the ground that however asinine Labour policy might be it must be streets ahead of anything the Tories could do. Mr Cousins was not perhaps helped in sustaining this impression by the chief communist contribution, from Mr Haxell of the Electrical Trades Union, who gave the straight Macmillan line about tripartite agreement in Geneva being vastly superior to any unilateralism and then voted for the Transport and General Workers' motion.

In the voting Mr Cousins lost by 5¼ million votes to 2¾ million and a similar margin carried the AEU's resolution endorsing Gaitskellite policy, which was seconded in the outstanding speech of the debate by the president of the Transport Salaried Staffs Association, Mr Ray Gunter: a Welsh orator who looks at a distance rather like Ernest Bevin and who should make a mark on the next parliament, which he will enter for Mr Isaacs's old safe seat in Southwark. The lessons of these figures are that Sir Thomas Williamson's precaution in marching his General and Municipal Workers down from the very high hill on to which they had wandered was just as well and that, even with Sir Thomas's 600,000 votes thrown his way, Mr Gaitskell might have had a narrow shave had there been a party conference.

Then, at the end of the day, the delegates found emotional relief from so much toeing of the general council's line by carrying the Engineer and Shipbuilding Draughtsmen's motion against American missile bases in Britain. This aberration will inevitably be a Tory talking point during the election ; it illustrates Mr Gaitskell's difficulties in pretended policy-making-by-conference, but the incident was not as serious internationally as it may sound. It is not very clear—indeed it was deliberately meant to be unclear—from the motion's diffuse wording whether congress has committed itself against having such bases at all or whether its only grievance is a patriotic objection to the nuclear warheads on the bases being in exclusive American control. In any case Mr Gaitskell in office would scarcely be seriously embarrassed by the anticlimactic conclusion to which the resolution's aggressive opening leads up—that "what is needed is not the extension of nuclear bases in Europe but summit negotiations for military and nuclear disengagement." The resolution was won because of the general council's fumbling and its desertion by the miners and postal workers. Being a ragbag of confused aspirations which does not directly instruct a Labour government to do anything, it seems ideally suited for one of the special pigeonholes which the general council keeps for such contingencies.

Beneath the Surface

WHAT, if any, are the long term consequences of this year's Trades Union Congress likely to be? On the political front, the week's proceedings have not thrown much light on the vexed question of Mr Cousins' future in the movement. Much will depend on whether Mr Gaitskell delivers the goods by winning the election. If he does not, Mr Cousins clearly wants to be in a position to show from the punctiliousness of his performance at Blackpool that he has given Mr Gaitskell no cause to reproach anyone but himself. Indeed it was Mr Cousins who first suggested to some hesitant colleagues that the TUC should throw open its platform to the returning traveller from Moscow.

On the industrial front, the criticism will inevitably be made that the congress has sidestepped all issues; one is not quite sure whether that is fair. Admittedly, the TUC's agreement to look "at some future date" into the overlapping functions of shop stewards and local officials may mean nothing; so may the large vote in favour of closer unity. Such resolutions have meant just that before. But about shop stewards who call unofficial strikes in flagrant and dishonourable breach of written agreements—a burning question of trade union organisation just now—the unusually forthright strictures of Sir Thomas Williamson could be an important spur; while the growing stature of the shopworkers' Mr Birch in the TUC may enable him later to put some stuffing into his wordy resolution on inter-union planning. Mr. Birch is not helped in this by the fact that most union leaders are in a great muddle about what his motion meant. Mr Cousins voted against it because he thought that it implied that unions like his transport workers should get agreement from the TUC before they started strikes which could throw other people out of work. Some right wing leaders eyed it askance for precisely the opposite reason. They feared that coordination would be bound to take the form of the embryo "triple alliance" now being fixed up by Mr. Foulkes, the communist president of the Confederation of Shipbuilding and Engineering Unions; and that it might some day lead the movement into supporting a near general strike.

But, despite all the muddle and the arguments of tradition, the seeds of slow structural change on two important matters —greater control over unofficial strikes and greater consultation over official ones—may have been quietly sown. It is significant that it should have been white collar unions who provided most of the impetus for this, and who thought that finally they had carried the day.

INDIA AND CHINA

Out in the Open

ONE striking feature of China's recent activity along the Himalayan border was the silence that both Peking and Moscow so long maintained on the matter. For two weeks, while Indian opinion grew steadily more enraged at Chinese encroachments and attacks on frontier posts, and newspapers as far away as Indonesia asked anxiously what China's smaller neighbours could expect if big India was to be treated thus, the peoples of the communist countries were given no hint that anything was amiss. On Wednesday, however, the silence was at last broken. Moscow, with significant caution, urged that this "deplorable incident" should be disposed of amicably. Simultaneously, Peking published a letter sent to Mr Nehru by Mr Chou En-lai.

Mr Chou's letter gave an assurance that China would respect the position of Bhutan and Sikkim, India's protected states in the Himalayas. But it made renewed charges that it was India that was guilty of trespassing across the frontier, and, as to the frontier itself, declared that China "absolutely does not recognise the so-called McMahon line"—the section in the north-east, between Assam and Tibet, on which India is standing firm.

This categorical rebuff came just before the Indian parliament was to debate this week's white paper covering Sino-Indian exchanges on border questions since 1954. The white paper brings into the open a sorry record of Chinese evasions or rejections of Indian complaints that goes back almost to the original Tibet agreement of 1954. Peking may eventually regret having provoked Mr Nehru into publishing it. The revelations in the white paper can scarcely encourage Indians to accept at face value Mr Chou's talk of maintaining the *status quo* while negotiating all outstanding border issues.

UNITED NATIONS

Rich Mixture

ON Tuesday the Assembly of the United Nations will meet in an atmosphere of confused hopes and fears. During the formal business of the first couple of days at Turtle Bay, most eyes will be turned to Washington, where Mr Khrushchev is due to arrive with a bagful of ideas that are summarised on page 817. On Friday he will be in New York to address the assembly in person. One may assume that his speech will be a long one, and not limited to the banalities that the delegates usually hear from visiting heads of government. Will it help them to decide whether their debates of the next three months are likely to develop against a background of sunshine or storm?

Laos and the Chinese pressure on India's borders are now the most imminent of the dark clouds scudding over Turtle Bay. They are bound to affect the annual clash over the Chinese seat in the UN. Mr Khrishna Menon must presumably go through the established routine of pressing Peking's claim to the seat, but China's recent actions have scarcely been calculated to muster support for that claim in the Asian world or, indeed, in India itself. However, the Asian and African delegates can find relief from these embarrassments in expressing their solidarity over Algeria. Cyprus, mercifully, has at last vanished from the agenda.

Many delegates, particularly among the smaller nations, must share the Secretary-General's mixed feelings about the major powers' present attitudes towards the UN. Mr Hammarskjöld made his views clear in the introduction to his annual report, published last week. While giving a general welcome to every kind of effort to resolve international differences, he insisted that the organisation cannot be simply pushed aside when it comes to such problems as disarmament, which concern great and small alike. There is a clear conflict between this approach and the great powers' evident preference for more direct and cosy dealings between themselves, most recently expressed in their decision to form a disarmament commission of their own. More will be heard of this before the assembly wins its way through to Christmas.

RHODESIA AND NYASALAND

More than a Fact Finder

THE appointment of Lord Monckton to be chairman of the preparatory commission on the review of the federal constitution of Rhodesia and Nyasaland, to which the Government committed itself after the Nyasaland debacle, keeps the ball in play. It will be impossible to proceed with the appointment of the other commissioners until after the election. If Labour wins, it will have to consider if it will go ahead with a type of mixed commission to which it has all along objected ; if it loses, it will have to consider whether to collaborate —and thus ensure that the African point of view is represented, since it does not feel that the nominees from Central Africa will possess the Africans' confidence. Something will depend, too, on the size of either party's majority in the new Parliament.

One thing is clear. The effect of the three-cornered battle between Salisbury, the Colonial Office and Transport House, and of the Devlin report, has been to transform the nature of the commission's task. It can no longer merely set out the facts of the situation in the protectorates ; it will clearly need to put forward suggestions, probably alternative suggestions, on the constitutional future of the Federation in the light of present race relations, past performance, and the pledges set out in the preamble to the federal constitution. Lord Monckton can no doubt be relied on to ensure that judgments are temperately expressed, and alternative suggestions for constitutional change are carefully thought out.

But he can be in no doubt that the analysis of Nyasaland attitudes in the Devlin report is certain to appear as a conference document in 1960, along with that of the preparatory commission. The commission's report must be correspondingly thorough, as well as constructive.

KENYA

Hot Seat for Sir Patrick

IN selecting Sir Patrick Renison to succeed Sir Evelyn Baring as governor of Kenya, the Colonial Office has evidently decided to play a tricky hand as safely and solidly as possible. There has, after all, been no attempt to bring in a *deus ex machina* from outside the colonial service. But from the limited choice within the service the lot has fallen upon a career man who is at once young and dynamic, experienced in constitutional imbroglios, and demonstrably unattached to any of the contending interests in Kenya. These advantages may outweigh Sir Patrick's unfamiliarity with African affairs in general and the mosaic of Kenya complexities in particular. Kenyans of all colours may take note that Sir Patrick's forte has been to operate unpopular constitutions—in British Guiana and British Honduras—based on compromise, and to work with (if not quite to tame) nationalist leaders who have flirted with violence in the past

These characteristics seem to mark him out as a governor with whom moderates rather to the left of centre might be able to do business. The trouble is that Mr Blundell's moderate New Kenya group is still vague in its intentions, and still toying with such conservative devices as a qualified franchise. These no longer fit the tempo of East African events. The multi-racial National party, led by Mr Muliro, is more radical in demanding a transfer of power to African hands by stages—but it is still a question whether this party can stay in business at all under the counter-attacks of Mr Mboya and the other African Nationalist leaders in the Kenya Independence Movement, who call for a prompt and almost unconditional take-over by Africans. It used to be said that a new governor of Kenya had to face a showdown with the white settlers in his first six months (and normally lost) ; but it is most unlikely that the settlers will ever again

march on Government House in Nairobi. Diehards like Group Captain Briggs are too busy studying Swiss federal expedients. It seems much more probable that Sir Patrick must nerve himself for a clash with Mr Mboya, Dr Kiano and other black diehards—and it will be for the soul of the African political moderates. Before Sir Patrick gets into the fight, he should be in no doubt that "moderation" in East Africa is increasingly a matter of methods and time-tables, rather than of objectives.

ELECTION ISSUES

Speech, Free and Expensive

ONE of the Tories' incidental advantages in this election is that certain groups within the Labour party seem implicitly to have decided that Labour has no chance of winning it. That is the only logical conclusion to be drawn from the way in which they are making complaints about the expensiveness of Conservative propaganda into a principal early election issue.

Last weekend Mr Morgan Phillips carried these complaints to extraordinary lengths. After a wide assault on the amount of anti-Labour propaganda now being carried on, he said solemnly:

> A very good case can be made for a public inquiry into this secret expenditure for the purpose of subverting democracy in this country.

There are three things wrong with this sort of statement. First, it is tactically puerile, for it can win no floating votes; its only appeal is to Labour pessimists who are already looking for scapegoats to blame if they lose the election. (Incidentally, one of their other scapegoats, if they do lose, will be Mr Morgan Phillips.) Secondly, it is factually untenable. Expensive propaganda in this country does not win votes; it is more likely to repel them. In last May's local elections at Bristol Labour certainly lost support because it paraded some of its Bristol councillors on the television screen just before election day, and the net effect of Dr Hill's rumbustious electioneering for the Conservatives last week was probably to deprive his own party of the prigs' vote. This week, however, Mr Greenwood's party telecast for Labour seemed to be mainly designed to throw some of this small vote back again.

Thirdly, the itch to curb one's opponents' flow of aggravating argument is desperately unhealthy. Free speech is already too much circumscribed in this country; the law about election expenses is on the whole too tight, and the great new medium of television is still subjected to a degree of censorship which the older medium of a free press would never tolerate. In his calmer moments—say, after October 8th—Mr Morgan Phillips should seriously ponder what historical company he is keeping when he starts classing his opponents' pin-pricking propaganda as subversion.

WALES

Welsh Auction

IF a majority of the people of Wales or Scotland want a measure of devolution of their national government, there is every reason why they should have it. What they should not have, however, is an offer from either party at Westminster of a little more trumpery election bribery than anybody else.

The Labour party's turgid new official policy statement for Wales falls straight into this trap. The main purpose of the document is to summarise Labour's general policies for spending more money, and to end each section with the promise that special attention will be given to the needs and problems of Wales. Either this re-iterated promise is meaningless, or it can only mean that rather less attention would be paid to the needs and problems of other parts of the country.

To co-ordinate this special attention to the Principality, Labour is now in favour of establishing the office of Secretary of State for Wales. This is perhaps not seriously injurious, even though the new cabinet minister would not have much to do. A much more disturbing point is the extent to which Labour is now willing to go in promising to prop up inefficient local industries in order to win votes. Thus Labour proposes an inquiry into whether public authorities could "provide a stable market" for Welsh slate, and it declares that:

> An unplanned and unco-ordinated fuel policy, which fails to make the maximum use of our indigenous resources, can mean both the death of whole sections of the coal industry and the exposure of our economy to all the upsets and vagaries of foreign politics.

The implication is that it would be better to have a planned and co-ordinated fuel policy, which would put up British industries' costs by forbidding them to buy cheap oil.

The Bow Group of young Conservatives, who have repeated the rather mischievous Tory trick of publishing an unofficial policy document ("Work for Wales") the day before Labour's arrived, have shown much maturer economic wisdom. Their main and unexceptionable theme is that the people of Wales should not "waste energy in fighting only to preserve the past. We must have the courage to accept economic change as our ally." But, in more sophisticated vein than their Labour elders, they put in some bids for a few more pennies for the Principality too.

FRANCE AND AFRICA

Great Expectations

GENERAL DE GAULLE'S intention of making a major pronouncement on his Algerian policy was revealed last week by, curiously enough, Mr Hagerty, President Eisenhower's spokesman. The general is now expected to broadcast his intentions on Wednesday, but nothing specific is known of his proposals, except that they will be built around the principle of self-determination. Secrecy has been admirably preserved, and the contesting parties are, for the moment, reduced to quarrels in the conditional tense.

One reason for the delay may be the meeting of the executive council of the French Community which opened in Paris on Thursday. General de Gaulle apparently wants the community's blessing for his plan. The Algerian question thus overshadows all other items on the agenda. The clash between M. Houphouet-Boigny, the Ivory Coast leader, who wants the community to restore federal links between France and the oversea states, and the leaders of Mali (Soudan and Senegal) who see it as a first step towards a loose grouping of states on the Commonwealth pattern, has once again been postponed. The rival advocates have, in fact, toned down their attacks on each other.

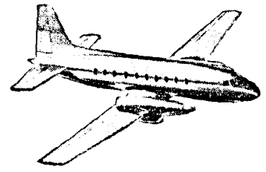
This truce is partly the result of France's changing attitude. Hitherto the government has been putting its money on M. Houphouet-Boigny, but in the past few weeks it has veered towards neutrality. This was demonstrated, for instance, in the appointment of M. Senghor, speaker of the Mali assembly, as one of the community's four minister-councillors. The policy has paid dividends: the Mali leaders have become increasingly cautious in their statements on the Algerian war. Official African support for his Algerian policy would strengthen General de Gaulle's hand. But in the end reaction in Africa, as elsewhere, will depend on whether tomorrow's proposals match today's great expectations.

M. Pinay's Predicament

M. PINAY can wear a satisfied smile when he contemplates the rising curve of France's gold and dollar reserves. At the end of August these reached $1,851 million, and their continued growth is the best advertisement for the sweeping financial reforms introduced last December. But M. Pinay knows that the recovery is still fragile, and this is why he acts as the guardian of price stability and budgetary caution. An overall budgetary deficit of less than 6,000 million new francs (13.8 new francs to the £1), which does not overstrain the treasury's borrowing capacity, has acquired a symbolic significance. And it is this limit that M. Pinay is now defending against the encroachments of his colleagues.

Budgetary battles used to be fought out in the Assembly and often lasted well into the new financial year. Now the budget will be voted on time, and the decisive struggle is at the departmental stage. Total revenue for 1960, assuming that fiscal reform does not bring any major changes, is estimated at some 59,000 million new francs. Estimates

INDIA CHOOSES AVRO 748



Introduced to India by Hawker Siddeley Group
The Avro 748 is now launched on World markets

SOON THE AVRO 748 will be flying in India. And soon the first aircraft of this type will take shape on Indian production lines. With the Avro 748, India takes a major step in the expansion of its aircraft industry, producing within the country every part and spare for an aircraft that will advance internal communications and may eventually earn foreign currency as an export product.

The turboprop Avro 748 (Rolls-Royce Dart Mk. 514 engines) will play a versatile role in Indian life, operating often under difficult conditions, with near-continuous flying a routine demand.

India has chosen the Avro 748 as replacement for its fleet of DC-3 aircraft because of unrivalled advantages in its rugged construction, economy of operation and ease of maintenance.

And Hawker Siddeley Group has extended to India its full and unmatched resources, forming a working partnership which will put the first all-Indian 748's into the air in rapid time.

HAWKER SIDDELEY GROUP

HEADS OF FIRMS IN WASHING MACHINES

SHOULD GET IN TOUCH WITH LORIVAL

(THEY'RE **LIVELY** LADS AT **LORIVAL**)

It's a fact – they're lively lads at Lorival! They're the picked men of the plastics world. Let them help you in production planning, scheduling, lowering production costs and boosting production. You'll get first-class work from Lorival – high finish, true colours, precise accuracy of all repetition parts. So call in Lorival and their lively lads. It's good business for you!

LORIVAL PLASTICS

UNITED EBONITE & LORIVAL LIMITED · LITTLE LEVER · BOLTON · LANCS

of expenditure are still somewhat above the desired level of 65,000 million. M. Delouvrier, the president's representative in Algiers, apparently now accepts the fact that public credits for Algeria will not exceed the 1,000 million new francs scheduled under the Constantine Plan, but the bargaining continues about housing, education and defence. The minister of defence is asking for 16,700 million new francs, or 900 million more than this year's estimates and 500 million more than the actual expenditure in 1959. It will be up to M. Debré and, finally, to General de Gaulle to decide.

M. Pinay stands as firm as he does because he feels threatened on both the wage and the price fronts. Retail prices rose less than was expected in the first half of the year, but by last month the cost-of-living index reached a level which, if it is kept up for another month, entails an automatic increase in the guaranteed minimum wage. To prevent prices from rising, the government, forgetting M. Rueff's liberal principles, is now resorting to controls reminiscent of the days of M. Mollet. Increases in minimum wages, affecting just over half a million workers, are not economically decisive by themselves; but it is feared that a new increase will precipitate wage demands throughout industry. The autumn may be a testing time for the new franc.

ARAB WORLD

Solidarity Never

For the first eight days of September the Arab League council met behind the closed doors of Casablanca's new *hotel de ville* while trying to work out a common attitude to its members' problems. The task was not easy. Iraq and Tunisia preferred to act individually and stayed at home. Some of the other members, Jordan and Lebanon in particular, were determined that if Arab problems were to be settled the credit should not all go to President Nasser of the United Arab Republic.

The problems were not new and when the conference ended, on September 9th, no solutions had been found. Since the league was founded fifteen years ago it has been held together by Arab antagonism towards Zionism and the state of Israel. The Arabs agree that they want to reconquer Palestine but they could not, at Casablanca in 1959 as at Cairo in 1948, agree how it was to be done. The resolutions on Palestine would sound fierce enough when relayed to the Arab people, but they were no more likely to stir up the Arabs than alarm the Israelis.

The Imamate of Oman is the most shadowy among Arab problems. Most Arabs would be hard put to say where Oman is; but they have been fed a rich mixture about it from Cairo, and gradually the idea that it is a real place has gained acceptance. The ruler of Oman recognised by the rest of the world is the Sultan of Muscat and Oman. Cairo script-writers, however, have turned south-east Arabia into a British colony where thousands of British soldiers and dozens of RAF planes are blown up and shot down every week. At Casablanca the political committee agreed to the demands of the Omani representative: to try to bring his case before the United Nations, and to give him £2 million to pay for his war against the Sultan.

The chief problem in the Arab world today is no longer Palestine, and it is certainly not Oman; it is Algeria. The political committee quickly adopted all the suggestions made by the representatives of the Algerian government in exile. These included demanding independence for Algeria, asking the UN to investigate conditions there, urging the Afro-Asian countries to recognise the provisional government, and reminding the Arab governments to pay up their subscriptions to its £12 million budget. The change in venue from Cairo to the Atlantic shores of Morocco produced no miracles.

ARGENTINA

The Dog it was that Died

The acrobatics in the Argentine army high command last week demonstrated alarmingly how little President Frondizi is able to control his unruly generals. On September 2nd the minister of war, General Elbio Anaya, dismissed the commander-in-chief, General Toranzo Montero, after a dispute over senior army appointments. General Montero refused to go. He established a command post at a military school in Buenos Aires, where, sheltered behind a barricade of several hundred city buses, he exchanged messages of solidarity with his colleagues in garrisons scattered throughout the country. At first Dr Frondizi tried to impose discipline by alerting the air force and ordering a tank force into the city; but two days later the president and the general came to terms—General Montero's terms. The war minister lost his job, the commander-in-chief was reinstated and the tanks about-turned, the only reported casualties being some trees and a traffic signal.

One of the most alarming things about this crisis is that it is not isolated, but is one of a series of upheavals. In June the president was forced under army pressure to dismiss his under-secretary for war, Colonel Raimundez. But the colonel, once the "strong man" in the army, is still believed to have a good deal of influence; it was General Montero's bid to oust the Raimundez men that brought him into conflict with the war minister. The accepted practice is to line up the army factions into anti-Peronists and less anti-Peronists. Officers of the school of General Anaya and Colonel Raimundez believe, with the president, that there is some virtue in being all things to all men, even if some of the men are ex-Peronistas. General Montero and his group talk about making a clean sweep of all Peronistas. But in Argentina Peronist labels are applied as lavishly as "communist" labels elsewhere, and are therefore losing some of their significance. A prison sentence under Perón is as fair a sign of grace as a good record after his departure. In this climate, it is all the harder for Dr Frondizi and Señor Alsogaray, the minister of economics, who was appointed in July at the army's insistence, to go ahead with the economic reform that alone will put the country straight.

BELGIAN CONGO

Putting the Brakes on

The resignation from the Belgian cabinet of M. Van Hemelrijck, the minister of the Congo, was brought about by his failure to carry his colleagues with him far enough or fast enough. M. Van Hemelrijck had only been in office for a short time when the Léopoldville riots in January strengthened the case of those who advocated a liberal policy on the ground that it is better to give soon and freely than later and under duress. But there still remained the question of how soon. The plan announced after the riots (but reportedly elaborated before) contained a programme of local elections leading to the formation of some kind of central assembly which would gradually take over responsibility for government.

M. Van Hemelrijck's interpretation of this plan included the beginning of a central government this year. This was going much too fast for most of his colleagues. Yet the appointment of M. De Schrijver to succeed him suggests that while a brake has been applied, there is no intention of going into reverse. The new minister is closely connected with the new Congo policy, and was chairman last year of a study group whose investigations led to the formulation of the government's plan. Since taking office, he has confirmed that elections for local councils will take place in December, and that next year will see the creation of provincial councils with a certain amount of autonomy, and of some sort of bicameral central legislature.

The change of ministers may mean no more than a fairly modest modification of time-tables. M. Van Hemelrijck's departure could be an attempt to appease the more conservative elements in the cabinet and, possibly, to mollify the settlers. But if the government fails by these tactics to rally its forces, or fails to win adequate support among Africans in the Congo, M. Van Hemelrijck's turn may come again.

CYPRUS

Violence Lingers On

In Cyprus, as elsewhere, habits of lawlessness die hard, and weapons can be hidden from the authorities without too much difficulty. The present recrudescence

of violence in the island is disturbing, but perhaps inevitable. Although Archbishop Makarios is having some trouble with youthful extremists among his own followers, Turks have been the principal victims, and, it appears, the authors, of the recent violence. Four Turks have been murdered and one wounded in recent weeks. Some of the crimes may be non-political, but it is widely suspected that the Turkish underground organisation, TMT (which has never given up its arms), may be responsible. It has been found necessary to re-arm some sections of the police, who gave up carrying arms soon after the February settlement. No doubt, too, Dr Kutchuk, who returned to Cyprus after a month's absence last Sunday, will do his best to prevent further violence.

Meanwhile extremists of the right and of the left are trying to upset the London and Zurich agreements. The new right-wing, pro-Grivas, Greek Cypriot underground organisation, KEM, continues to distribute leaflets attacking the agreements and the Greek government and advocating enosis. And at a series of "peace meetings" held by the extreme left-wing Federation of Labour throughout the island last weekend, the retention of British bases in the island was strongly condemned. But those who are negotiating on the implementation of the February agreements are pressing on doggedly, and a compromise over the delicate problem of the powers of the Turkish vice-president seems to be just round the corner. However disquieting the activities of the extremists may be, there is a heartening determination among the men at the top in Cyprus that the island should be able to make a new start.

FREE TRADE

The Seven Analysed

OFFICIALS of the seven countries committed to the European Free Trade Association are at work in Stockholm drafting a treaty. They have been set a strenuous timetable. The bulk of the work is to be finished by October 31st. Ministers will meet in November to approve the draft. A great many matters in the two crucial fields of institutions and the outer tariff have still to be resolved. But it is believed that the work done on the outer tariff in the past provides the answers. Fish is the only matter where an open difference still exists, between Norway, which wants free trade in fish, and Britain, which does not. A move on this question may be easier for a British government after the election.

Next week the Council of Europe will discuss what the new plan of the Seven means for Europe as a whole. Reports from Bonn suggest that Dr Erhard is to make some new proposals for a broader free trade area. His chances of success are not particularly bright, if a new PEP pamphlet by Mrs Miriam Camps on the European Free Trade Association (Political and Economic Planning. 4s.) is to be believed. Mrs Camps has produced by far the best study of the group of Seven that has yet appeared. She summarises the developments which led to the scheme in some detail and analyses it with sophistication, giving due weight to the various arguments for and against the view that the scheme is a means to agreement with the Six. She envisages the possibility of a free trade area embracing the two blocks, each working as a group but with trade barriers between them wholly or partially removed. But her concluding sentence gives the game away:

> Although today the Stockholm decision may seem to be a sensible tactical move, in retrospect it may appear to have been another turning point in the development of the British relationship to Europe.

In other words, the danger is that the existence of the European Free Trade Association, once it is established, may make it difficult for Britain later to forge a political relationship with continental western Europe even if it wants to.

EUROPEAN ECONOMY

After the Pause

ECONOMIC recovery is gaining ground in continental Europe with even more assurance than in Britain. In July west Germany passed the critical mark into full employment; for the first time since the war there were more jobs on offer than men looking for them. The tightness in the labour market was partly seasonal, but there is no doubt that the strong underlying currents of expansion in Germany are in flood once more. Real national product, which grew by some 3 per cent in the second half of 1958, was up by some 4 per cent in the first half of 1959; industrial output was up by more than 6 per cent. Holland and Italy are booming too. Even Belgium, the most sensitive indicator of the business cycle, is climbing back out of last year's trough, while in France, the last to feel last year's economic setback, the drop in output which many people expected early this year has not materialised.

Stimulated by the recovery, British exports to the Continent have done relatively well so far this year. Exports to western Germany, in particular, were up 15 per cent in the first seven months. The figures for the rest of the year may not be quite so good, since the early figures were inflated by orders placed last year when business men were still banking on some form of free trade area. All the same, this performance, in the first months of the European common market, is surprisingly good. It is a reminder that the impact of the common market will be gradual.

When the real but limited compensations that the British exporter may enjoy in the little free trade area are taken into account, the biggest worry that the common market holds in store for him may be increased competition in third markets later on. Here one feature of the present European boom seems relevant. On the whole, expansion on the continent, especially in Germany, is being driven by high investment, as in the past. In Britain's pre-electoral upsurge consumption is leading the way, a less potent augury for growth in the long term.

SOVIET UNION

Penalties of a Reform

As it appears, the decentralisation of Soviet economic management, and the slight relaxation of Moscow's political control over the periphery, have in many places been more effective than the Soviet leaders bargained for. In all the regions and republics the party's central committees are now holding meetings, with the struggle against "parochialism" as the top item on their agenda. Many regional economic councils—the institutions set up by Mr Khrushchev as part of his managerial reform—are being accused of cooking their plans and sending false reports to Moscow, all this in order to increase local consumption by reducing their planned supplies to other areas. In short, the new offence is to put local interests first.

In the non-Russian republics this sin smacks of national deviation. What tends to happen is that the political authorities of the republic combine with the regional economic leaders to get the greatest advantages for their national republic. Charges of nationalism were heard at a recent party conference in Uzbekistan. It was probably for the same reason that Mr I. D. Mustafayev was removed from the post of first secretary in Azerbaidjan. True, he was accused of neglecting agriculture and, particularly, cotton cultivation. But he was also found guilty of "immaturity" in political matters; the term may well have included tolerance for the new "economic nationalist" deviation.

No doubt was left in the case of another "culprit," Mr E. K. Berklav, the Latvian deputy prime minister and member of the Latvian party presidium. The indictment against him states plainly that he had ignored all-Soviet requirements, opposed the development of heavy industry, and sought to devote all investments to light and food industries, the products of which would be consumed locally. Such centrifugal tendencies seemed inevitable when Mr Khrushchev launched his managerial reform. Their importance should not be exaggerated; they are the teething troubles of decentralisation.

A Survey of Mr Khrushchev's likely approach to his American hosts next week appears on page 817.

Eee . . . it's wet!

So deliciously, clingingly wet that it has taken the young lady's breath away. And yet, this wetness of water is relative. For many modern industrial processes to be fully efficient, water must be made wetter still by breaking down the surface tension, so that it flows easily into every tiny crevice and soaks in thoroughly.
Marketing and advising on the use of products that make water *wetter* is the main preoccupation of the Shell Chemicals' Detergents Department. By far the best known and most widely used industrial liquid detergents are the 'Teepol' range. Together with the nonionic 'Nonidet' products, they have scores of applications throughout industry both for cleaning and maintenance and wherever wet processing is involved. 'Lensex' detergents, another Shell commercial range, are specially made for textile scouring and commercial laundering.
Today Shell are not only the biggest producers of wetting agents and synthetic detergents (anionic and nonionic) for industry but they also supply the basic materials and intermediates used in the manufacture of many of today's household washing and cleaning products.
If you have any task involving wet processing, or if you have any problems concerning the use of chemicals, industrial or agricultural, Shell will probably be able to help you. It's easy to find out.
Write to the Sales Promotion Manager, Shell Chemical Company Limited, Marlborough House, 15-17 Gt. Marlborough Street, London, W.1.

YOU CAN BE SURE OF SHELL CHEMICALS

SHELL

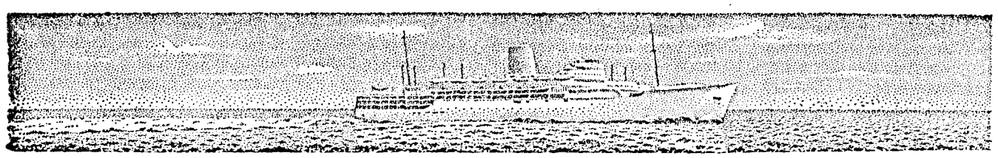
WHICH CAME FIRST:
the business or the trip?

A fortnight ago the gentleman on the right was happily combining a visit to his overseas agents with the first real holiday in years. Now he is eagerly planning a new factory in Australia and a totally new export programme. Unusual? Not at all. For this is the P & O First Class Service to Australia. Here in one of the mighty ships of the P & O fleet the British businessman gets a *personal* picture of Australia and the East.

It's inevitable. Out of some six hundred and fifty fellow passengers travelling first-class *nearly half will be people with similar or connecting interests in the same territory as yourself.* A high percentage of *those* will be people from the very area you are visiting. *They'll* give you the lie of the land you're visiting as none else can. Conditions are ideal. On P & O both the sun and the service wear a smile. You have time to know people, to pursue ideas without interruption, to rest properly. You do more constructive work in four weeks at sea than you do in four months at home. Yet you arrive back fresher than when you left!

If you have interests in Aden, India, Pakistan, Ceylon, Malaya, the Pacific or 'Down Under'—it *pays* to travel *all or part way* by P & O First Class Service to Australia (or the Far East). Special seasonal terms and Executive Tickets are available. Ask someone to check *now* with your Travel Agent or with P & O direct. 14/16 Cockspur St., S.W.1. Tel: WHI 4444 or 122 Leadenhall St., E.C.3. Tel: AVE 8000.

P&O First Class to Australia is an investment



The Icebreaker Cometh

THE official Soviet attitude to the Eisenhower-Khrushchev talks in Washington next week is still buoyant. If Mr Khrushchev himself and Moscow radio have both now lost their first, almost careless, rapture over the invitation to Washington, the impression from Soviet statements remains one of confidence that something useful can be achieved. The publicity machine has plainly been instructed to do nothing that might jeopardise Mr Khrushchev's reception in the United States. Although the crisis over Laos has now brought a barrage of Soviet complaints at the "incendiary activities of certain circles" in the United States, Mr Eisenhower has been treated with deliberate respect, and his influence on Bonn and Paris during his European tour has been assumed to be pacificatory. Britain, and Mr Macmillan in particular, has been included in the Russo-American détente, although Mr Khrushchev has given no recent sign of sharing the British sense of urgency to get to a four-power summit.

Mr Khrushchev's idea of the purpose underlying the exchanges is, in his own words on August 5th, that "agreement between the great powers is the best guarantee that peace will be safeguarded, not only for big countries but also for small countries." He cheerfully accepted the agreement that the exchanges would be conversational only, "and I mean conversations, not negotiations." But, he added, "the question of how to frame the results achieved is no problem. Agreement can always be reached on this." For him, it is primarily a matter of "the two greatest world states" getting together to try to settle their differences. The smaller powers can have no complaint: "When nobles fight, their serfs tremble." All the same, he will be flying to consult his allies in Peking on September 29th, the day after he gets home from the United States.

HE has listed the main issues to be discussed in Washington as follows:

The conclusion of a *German peace treaty* and a *settlement on west Berlin* are the most urgent. He warned Dr Adenauer in his letter on August 18th that he was not going to the United States merely to talk about "questions of maize and cucumbers."

Disarmament and American overseas bases: he declared at Veshenskaya, the home of the novelist Mikhail Sholokhov, on August 30th that he was ready "for any efficacious control of the reduction of armaments and the withdrawal of troops (in central Europe), if the western powers will do the same and will agree to the liquidation of military bases."

Suspension of nuclear tests: Soviet publicity has shown acute interest in the prevention of further tests. The United States and Britain have been accused of obstruction in the Geneva talks, and Moscow mounted a sharp propaganda campaign last month against American advocates of resumed testing after October 31st, when the present gentleman's agreement expires. The State Department has now said that the United States will not resume testing until after the end of this year. Soviet preoccupation with this issue may also be seen in the attacks on General de Gaulle's atomic preparations in the Sahara.

Increased Soviet access to *American trade*, and even Wall Street investment, is clearly thought to be a natural outcome of improved relations. In a special article in the American journal *Foreign Affairs*, Mr Khrushchev emphasises the value of trade in improving the international atmosphere, and recalls the Soviet request of June last year.

Aid to less-developed countries is a subject to which he has also been addressing himself, partly, perhaps, in anticipation of Mr Eisenhower's proposals.

THE Russian public has been encouraged to expect progress on some, if not all, of these points. But signs have now become evident of official concern not to let expectations run too high. Initial enthusiasm prompted *Izvestia* to declare: "There have been very few events in the history of international relations which have been welcomed with such striking unanimity." The Soviet press carried many letters in this vein. In *Pravda*, a letter from a writer, Lebyedyenko, said: "May the exchange of visits . . . be that turning point in the history of mankind which will open up the wide road to universal peace." In *Komsomolskaya Pravda* the polar explorer Somov wrote: "I regard the news . . . as the approach of a new era in international relations, and I wholeheartedly wish Nikita Khrushchev success in his noble mission."

The end of August brought an appreciable change, partly in an attempt to prevent disappointment and partly, perhaps, to remind Washington that Mr Khrushchev would in no sense be negotiating from weakness. He himself set the tone on August 30th, when he took Mr Nixon to task. "At present," he said, "Mr Nixon is, as it were, apologising for his recent pronouncements in the Soviet Union. He resorts to the typical language of McCarthyite reactionaries and repeats stale phrases about the threat of communist domination." (Mr Nixon was, in fact, adapting his language in a successful attempt to persuade the American Legion that wisdom lay behind the madness of inviting Mr Khrushchev to the United States.)

In a speech to graduates of military academies on September 3rd, Mr Khrushchev painted a picture of the world that might be thought reassuring to the military mind. "One should not forget the fact," he declared, "that aggressive forces do exist and are active. . . . One should not ignore such unpleasant facts as the lasting arms race, the existence of many military bases around the Soviet Union, or the transfer of atomic weapons to west German revengers." But his main emphasis is still on expounding the merits of peaceful co-existence, as he understands it.

HIS *Foreign Affairs* article used the following arguments for co-existence:

It was imposed on the two great powers by technical progress and the destructive power of modern weapons. "Whether you like your neighbour or not, nothing can be done about it; you have to find a way of getting on with him, for you both live on one and the same planet."

It should not mean that the two sides "will only fence themselves off from one another by a high wall and undertake the mutual obligation not to throw stones." There must be peaceful competition.

It would not imply that communists had given up their hopes of winning throughout the world. Communism would win because it would prove a superior system.

Mr Khrushchev made an expansive speech at the Polish embassy in Moscow on September 4th, in which he denied any intention of forcing communism on other countries. He asked: "Why drag a man up into paradise by a rope? Let him see for himself that socialism is bringing him release from capitalist slavery." He also altered his boast that he would "bury capitalism" to the observation that "the imperialists are digging their own graves." In the economic race, he said, "Messrs Capitalists, we shall show you where to get off."

This dialectical armoury is plainly being burnished for Mr Khrushchev's invasion of the American publicity media on Tuesday. He seems convinced that he has a triumph in store. What part his new thinking plays in his talks with Mr Eisenhower is less certain. But he seems to have accepted the idea that talks of some kind or other must go on into next year if there is to be solid progress. "The important thing is to find through these exchanges a common language and a common understanding of questions we are to settle." It is a sensible improvement on the language of last November.

LETTERS

Reactions to Devlin

SIR—In your recent article "an African correspondent lately in Nyasaland" says:

> The constitutional changes that have been announced by the Governor of Nyasaland .... have not made any impression on the Africans. . . . It has been openly stated that only stooges will be nominated and the United Federal Party is not allaying African fears when it claims that because it has about 1,200 African names on its register, it should provide the Africans to be nominated. This claim is treated with scorn by most Africans in Nyasaland, many of whom told your correspondent that African organisers of the United Federal Party, who are paid a commission for every member enrolled, are getting signatures on United Federal Party cards by telling Africans that if they sign the cards they will be given jobs or loans to run their businesses. Some of these Africans have now discovered that they have been taken for a ride and have consequently become very bitter and suspicious of European-run parties.

Firstly, it is interesting to know the use of the term "stooges" as meaning those Africans who believe in racial co-operation in the sense the United Federal Party does. Secondly, I refute absolutely and officially the untruths regarding UFP organisers. The UFP employs one European and two African organisers in Nyasaland. They are paid travelling expenses and a flat salary which by Central African standards is not generous. Their main task is the dissemination of information to those Africans who want to know—and for the first time have the opportunity to discuss calmly—the truth about Federation. They do not issue membership cards but merely accept applications for membership which are considered by the Nyasaland UFP office. If applicants are accepted for membership, their cards are posted to them. In most villages the mail is received by the Headman so there is no secrecy or hole-in-the-corner membership—and deceit, such as that blandly suggested by *The Economist* correspondent, would not get very far. No visits by organisers are ever made to African areas without prior sanction from the District Commissioner (a British Colonial Civil Servant) and the local Native Authority, who would be unlikely to tolerate any abuse of this privilege.

Elsewhere in the article the author laments the failure of the Opposition in the House of Commons to force the resignation of the Colonial Secretary. It is interesting to compare this with the judgment of Sir John Moffat, a joint deputy-President of the Central Africa Party: "Were he (Mr Lennox Boyd) to resign, we in this Federation, and the Africans especially, would lose a valiant champion and a faithful friend."—Yours faithfully,

ROGER BRICKHILL

United Federal Party,
Salisbury, Rhodesia.

Mr Hurry's Survey

SIR—Your comment on the Nationalisation Survey confesses to "thwarted irritation," which obviously thwarted you from writing with care and deliberation. In describing 14 per cent of "refusals to answer" (a not unusual figure) must you descend to the schoolboy slang of "to go jump in a lake"?

You accuse Mr Hurry's sponsors of not showing "equal sagacity" with the electors in regarding nationalisation as of no importance. A beautiful example of hindsight. The decision to take the survey was made in the spring of 1958. Who knew at that time nationalisation was not important? In October 1957 the Labour party had come out with a vague and vast programme for the extension of public ownership. Nowadays the subject is flyblown but that is the result of the last six months of public argument, during which Labour has become more and more uneasy and evasive in its defensive tactics. Mr Hurry's survey completes the picture in a manner beyond challenge.

Finally, don't let us follow you by being blinded by too much "science" in the conduct of polls. If it is possible to obtain the opinions of 1,000 persons instead of 10 scientifically selected representatives, why not do so? I submit, Sir, that despite the last paragraph of your comment, there is much in the report—though "unscientifically unweighted" (whatever that means)—which tells us "both politically and sociologically what makes the British people tick."—Yours faithfully,

R. KELF-COHEN

London, SE19.

The Baalbek Festival

SIR—The United States, Italian and French Governments, or official organisations in those countries, subsidised their appropriate contributions to the Baalbek Festival which has just ended. But the local festival committee itself had to provide the funds for Britain's contribution.

Here in the Middle East British influence and prestige are but slowly climbing the lower slopes of the Sisyphean hill down which they finally plunged in 1956. I am convinced that the Baalbek Festival will become truly international, not only in its performers but in the character of its audience. Can we not offer to contribute

something of our cultural heritage each year to this international festival of the Middle East?

The goodwill towards us is there; the members of the festival committee have given us the lead by bringing out at their expense one of our leading ballet companies and some of our leading critics. Is it too much to ask that the British Government, through the British Council or some other agency, should be prepared to subsidise a visit each year by the Old Vic or the Royal Ballet or the Hallé Orchestra or Glyndbourne? For unless they do, the Baalbek Festivals of the future will be devoted entirely to artists from the United States, from the continent of Europe—and from Russia. And if in the emotional Middle East to-day trade no longer follows the flag it certainly follows the band.

This is something which perhaps the Advisory Council on Middle East Trade should consider.—Yours faithfully,

Beirut. P. F. NIND

Air Fares

SIR—May I comment on one part of the interesting article in your issue of September 5, 1959, on BEA's annual report for 1958/9. It seems to me that anyone reading the last sentence might be left with quite the wrong impression, that the cheap fares we are proposing can only be purchased direct from BEA's own sales offices and that BEA is no longer convinced of the efficacy of selling inclusive tours through the travel agent.

As readers of *The Economist* will readily appreciate, an era of mass travel requires an air ticket to be easily available at a sufficient number of points of sales to meet the needs of the mass market. For this reason, BEA must continue to rely heavily on the outlet provided by the travel agent, both at home and abroad, for public fares no less than for inclusive holidays. We believe, too, that a considerable proportion of the new market, attracted to air travel for the first time by the reduction in public fares, will find packaged tours sold by our agents, the prices of which will correspondingly benefit, a convenient way of making their holiday arrangements.—Yours faithfully

HENRY J. A. HILL

British European Airways
London, W1.

China's Stocktaking

SIR—It is not very surprising that the Chinese were dizzy with success as a result of their economic achievements in 1958. That, however, is no excuse for *The Economist* to become so dizzy with delight (in its last two issues) as a result of the scaling down of the estimates of China's 1958 output that it forgets where the Chinese economy had stood in 1957. The revision of the 1958 figures makes the "leap" more credible, it does not turn it into a "skip" (*The Economist*, August 29th) or a "hop" (*The Economist*, September 5th).

On the revised figures the rate of growth still looks unprecedented:

	1957	1958	
Steel (m. tons)	5.35	8	(+50%)
Grain	185	250	(+35%)
Cotton ...	1.64	2.1	(+28%)

The increase of coal output was apparently in the region of 100 million tons, and this year's (reduced) target would require an equivalent increase.

Obviously such a rate of growth imposed serious strains, e.g. shortage of electric power, transport bottlenecks, but were these not the concomitants of hectic growth rather than of "failure"? Again, the Chinese produced by primitive labour-intensive methods some 3 million tons of iron over and above the 8 million tons of steel; what might be asked is whether the massive diversion of labour from agricultural work was justified. Local initiative and Utopian community building seem to have contributed to uneconomic use of labour. None of this, however, justifies your conclusion that "the central committee's admissions of failure" will come as "a shock to those Asians who have been inclined to regard the Chinese experiment as a model for rapid economic development." Where is the better model?

Finally, it is strange that *The Economist* should argue that "the original second five-year plan has been re-adopted." The target figures of that plan related to 1962. The (reduced) 1959 targets are in most cases as high as the original 1962 targets, in some cases higher; grain and coal seem to have reached the 1962 target last year. Was the "great leap" a myth?—Yours faithfully,

Ruskin College, JOHN HUGHES
Oxford

Restrictions on Motorists

SIR—In your issue of August 29th, Mr Clare complains that, after driving for eight years in Germany, he must now be treated as a "Learner Driver" on taking up residence in the UK.

He may not know that in some countries of the world (not Thailand so far as I am aware) it is possible to obtain a driving licence solely on the strength of the possession of a UK provisional driving licence, because bureaucrats of "new" nations will seldom admit their inability to read English. People who have obtained licences in this manner are therefore able, while visiting the UK, to make the roads there even more dangerous than before. I am sure that Mr Clare could not wish them to have this facility on a permanent basis.

The solution lies in the fact that British people living for some years abroad usually visit the UK for holidays. A visit to the central authority in London with the offer to take a test any time, anywhere, will usually result in fairly rapid action. I took this course in 1955 and, at the cost of a 70 mile drive, passed the test within two weeks of applying.—Yours faithfully,

Bangkok, R. V. MUNDEN.

BOOKS

Growing Pains

The Strategy of Economic Development
By Albert O. Hirschman.
Yale University Press. London: *Oxford University Press.* 230 pages. 36s.

Possibilities of Economic Progress.
By A. J. Youngson.
Cambridge University Press. 325 pages. 36s. 6d.

SINCE the "economics of growth" is almost too new a subject to have developed a full-scale orthodoxy, one can hardly call Dr Hirschman a heretic. His book, however, stands a good many generally accepted notions concerning the mechanism of growth on their heads. Dr Hirschman's approach, though it uses economic analysis confidently enough, is essentially psychological. What ails the underdeveloped area is typically not an absolute lack of resources—they are there, running to waste in concealed unemployment, individual extravagance, and faulty techniques; nor an inadequately acquisitive set of motives in general—their citizens, in any bargaining situation, show themselves keen enough on the main chance. The trouble is that the economic motive which ought to set entrepreneurs to combining resources, improving techniques, and generally turning themselves into "binding agents" or catalysts of economic potential, is generally of the wrong kind. Either it is "ego-centred," with advancement seen always as achieved at other peoples' expense—the attitude so exquisitely delineated in Hilaire Belloc's "Mercy of Allah"—or it is "group-centred," intolerant of individual achievement and differential reward. The one attitude is fatal to the co-operative and persuasive elements of enterprise; the other imposes on all advance the pace of the slowest and most conservative. The essence of the break-through or take-off is the requisite change in the psychology of the potential developers; this is the crucial element in the "ability to invest," which includes, among other things, the capacity to mobilise potential savings, the willingness to take calculated risks, and a proper respect for the dull uninspiring jobs of maintenance and administration.

Policy, it follows, should aim at creating the sort of conditions that will encourage, indeed impose, these changes. Immediate yields, even immediate losses and wastes, matter little. The main thing is to develop the "ability to invest." Some paradoxical conclusions ensue. So far from "balanced growth," the simultaneous advance on a wide front, being essential or even desirable, unbalance is a prime dynamic factor; for it is out of unbalance that there emerges, unmistakably, the felt want, the private profit-opportunity or the irresistible pressure on public authority, which stimulates the next surge of investment. So far, moreover, from ambitious "show pieces"—steelworks, airlines, atomic power stations—being a waste of resources, they are an essential educational influence; for their administrators must run them properly or not at all.

Dr Hirschman does not, of course, leave the argument in this windily general form. He has closely argued chapters on the transmission of the developmental impulse between industries, on the relations of social overhead capital and directly productive activities, on foreign trade, on fiscal policy, on regional interactions and on aid, all of which have a usefulness far from wholly dependent on his main thesis. He realises, too, that his policy entails some unpleasant risks. The mainspring of advance, as he sees it, is discontent and discomfort; not the general dissatisfaction of people who would like to be better off, but the sharp, highly specific irritation and frustration of those whose standards have been deliberately or inevitably made lop-sided—who, metaphorically speaking, have been deprived of their immemorial clogs or sandals and given one beautiful shiny shoe apiece. In his closing chapter, he acknowledges the danger that frustration may explode into despairing reaction or totalitarianism, but justifies the policies producing it on the ground that a set of identifiable and manageable problems is likelier to evoke constructive action than the single, massive, unformulated problem of poverty. This is probably a sound argument. But it hardly diminishes the reader's impression that economic growth, however desirable, is an even more painful process than more orthodox analysis would lead one to suppose.

WHAT have hitherto been lacking in the literature on economic growth are historical studies of the growth process. In a sense, of course, the greater part of economic history is about economic growth, and it has often been plundered for occasional instances to bolster up or pull down some generalisations, but the historical facts have never been systematically set out to illuminate the problems of growth. This new book by an economic historian who is also an economist is therefore particularly welcome. The first part of the book is devoted to a theoretical discussion of categories, influences and relations; it is an extended raid on economic theory for working hypotheses. In Part II Professor Young-

son tests these hypotheses against four historical episodes: Great Britain, 1750-1850; Sweden, 1850-1880; Denmark, 1865-1900; and the southern United States, 1929-1954. In a final section he makes some tentative generalisations from these cases, and in their light offers some suggestions to modern underdeveloped countries.

Professor Youngson (whose book can profitably be compared with Professor W. W. Rostow's lectures on the same theme, summarised in recent issues of *The Economist*) has interesting and penetrating things to say on theory, history and practice; but the frontier between the various disciplines cannot be said to have taken fire. The case studies are excellent, and those on Sweden and Denmark contain a large amount of material that will be new to English readers; but they could have been written without the disquisition on investment that precedes them, lucid and fair-minded though this is. It would not be fair to say that Professor Youngson spends a lot of time packing trunks for a journey he does not undertake, but he may fairly be said to include a great deal of theoretical luggage which he does not need on the journey, or at any rate does not use. And if the historical essays are only loosely linked to the analysis, the policy suggestions do not gain much in force and conviction from the historical experience from which they are ostensibly derived. The general tenor of his recommendations is prudent and sceptical: economic progress takes time and we tend to be over-optimistic; countries seeking to accelerate their economic development should find and concentrate upon some export line, reform their agriculture, and create a more flexible social system. The sense of the complexity of economic progress which underlies Professor Youngson's recommendations no doubt springs from his detailed historical studies, but the same cannot be said of their specific content. Indeed, if the aim of the work was to discover the most promising economic policies for the present day backward areas, the four episodes are not well chosen. Considered, however, as three loosely linked studies rather than a unified treatise, the book deserves a wide public among economists, historians and policy-makers.

Soviet Strategy

War and the Soviet Union

By H. S. Dinerstein.
Stevens. 268 pages. 37s. 6d.

THE bibliography available to careful students of Soviet policy is now very large, and this is as true in the esoteric realms of a strategy and military policy as in more mundane fields. It is therefore not surprising that two of the leading American sovietologists should have published, within a few months of each other, studies that give a different picture of the ideas and fears animating Soviet strategic thought and planning. Raymond Garthoff's "Soviet Strategy in the Nuclear Age," published at the beginning of this year, was primarily concerned with the still dominant role of the Soviet army, as the central element in the Soviet concept of military strength. According to Mr Garthoff, the development of Soviet naval, bomber and even missile strength, is ancillary to the goal of actually overrunning ground.

> In the Soviet concept, the use of the Long Range Air Force to neutralise SAC is not a diversion (as SAC's neutralisation of Soviet Air Power is), but the primary mission of that Force. The way to *win* a war is still considered to be the subsequent destruction of the rest of the enemy's military forces, of all arms, wherever they may be, and the physical seizure and control of territory and its resources.

He drew from this view the important implication that the Soviet Union could contemplate either a global war without the use of nuclear weapons, or a broken-backed war.

There is much common ground between Mr Dinerstein and Mr Garthoff. Both trace the almost total stagnation of Soviet strategic thinking under the ageing Stalin, and his refusal to take the problem of nuclear weapons seriously, the three-year interlude of Malenkov with his belief—still cherished in the West until very recently—that nuclear weapons had produced a situation of mutual deterrence that made total war impossible, and the evolution after several years' debate of a new strategy under Khrushchev, both more realistic and more aggressive. But Mr Dinerstein is primarily concerned not with the role of the army but with the effect of the missile revolution in Soviet strategy, and in particular with the evolution of the doctrine of pre-emptive war. He traces this from the sudden preoccupation of the leaders with the military advantages of surprise attack (a subject that had been virtually taboo under Stalin), dating from an article in *Military Thought* by Tank General Rotmistrov in February, 1955, coincident with Mr Khrushchev's consolidation of power. General Rotmistrov went far beyond mere analysis:

> The duty of the Soviet armed forces is not to permit an enemy surprise attack on our country, and, in the event of an attempt to accomplish one, not only to repel the attack successfully, but also to deal the enemy counter-blows or even pre-emptive surprise blows, of terrible destructive force.

Mr Dinerstein traces the growth of this concern with pre-emptive war since then, and its ramification into many fields of policy. The Soviet leaders are well aware that they cannot produce a foolproof air defence system for all but a very few targets; they know the inadequacies of their own civil defence effort; they know that the West is very unlikely to make an attack without warning despite the statements of such men as Mr McElroy last winter, ("Our policy is that we will not attack first . . . whether that will always be true, could I think be something else"). Therefore the strategy of striking the West when it appears on the verge of striking Russia makes the most sense. Preventive war is ruled out for the present, since Russia does not have a decisively superior striking force. Pre-emptive war is not.

Mr Dinerstein builds up his thesis with skill and ludicity. It is true that he is a senior official of that brilliant collection of minds, the Rand Corporation, whose principal client is the US Air Force, and that his thesis fits a little too neatly with the preoccupation of its senior officers. But it is cold comfort to play Garthoff against Dinerstein, for both have been concentrating on different aspects of the same problem—the enormous flexibility of Soviet strategy, and their conclusions are almost identical: that the guiding principle of Soviet strategy is to be able to fight any kind of war in the most effective way, no matter what the relative likelihood of each may be. The reading of these two books together is a corrective to the fashionable idea that the Soviet Union has now embarked on a purely economic competition with the West.

Martyr—and Saint?

The Life of Girolamo Savonarola

By Roberto Ridolfi.
Routledge. 336 pages. 35s.

THIS is the most authoritative of the many lives of Savonarola. Two hundred-odd pages of critical underpinning have been removed from the Italian edition, but the text is given entire, faithfully and easily translated by Professor Cecil Grayson. Marchese Ridolfi's book is very much a labour of love, of more than twenty years' active research, of gradual adjustment, on its author's part, from distrust and dislike of his hero to something like worship. To this devout Florentine scholar Savonarola made the deepest of appeals: many details of his life remained teasing historical puzzles; though by birth a Ferrarese, he identified himself passionately with Florence, the scene of his triumphs and martyrdom; and he was, in all it seemed but formal acknowledgment, a saint. This biography was first published in 1952, the fifth centenary of Savonarola's birth, at a time when there were hopes of his canonisation, and it is an intriguing example of History, with a mixture of awe and cantankerous caution, serving the cause of Mystery.

In his preoccupation with the spiritual side of his hero's career, however, the author omits much that is needed if sense is to be made of Savonarola's place in the political and intellectual life of Florence. For three years he was the dominating influence in the most sophisticated, the most politically self-conscious state in Europe, at a time when the raw edges of its class structure were gaping dangerously, and when it was angrily concerned for its tax-blanched and war-straitened economy. In 1494 the Florentines exiled the current representative of three generations of Medici domination and chose to confront the gravest foreign menace of their history—French, German and Spanish interest in Italian territory—with a republican constitution that was remarkably broadbased and fatally inexperienced, hesitant and wasteful. The working out of this experiment has long been considered one of the key moments in the political

history of the Renaissance, especially as it is well documented, and the subject of discussion by observers of the calibre of Guicciardini, Machiavelli and Savonarola. The preacher-prophet was actively concerned with it from the start; with its popular basis, with its dependence on alliance with France to guard itself from nearer, more rancorous foes, with its atmosphere of spiritual regeneration that was bound, once the initial joyous hysteria had worn off, to provoke private resentment as well as what came to look more and more like deliberate political opposition to the Borgian papacy.

Savonarola can best be understood if we are made to see how far he was the excuse for as well as the cause of constitutional, economic (finance was one of the subjects dealt with in his pulpit editorials) and moral reform, how far he was the sport as well as the maker of the Savonarolan Republic. The present author shows us every authenticated footprint, but not the road whose dust and blood they marked. Until the end, that is: when the fallen leader is imprisoned, tortured, faced with gallows and fire, then society, the complex of forces that jostled him, can be forgotten, and the historian can describe, as the author movingly does, a private pathos and grandeur. This book must be read for the facts: what Savonarola did, when he did it, and with what intention. To grasp more sympathetically what he was like and what part he played in Florence, it is still necessary to go to the bulky works of Villari (in English, out of print) and Schnitzer (in German, out of print). Ironically, it is in his life of Machiavelli that Marchese Ridolfi portrays a warmly living character, and not, alas, in this one.

Managing

The Role of the Managing Director

By George Copeman.
Business Publications in association with *Batsford.* 314 pages. 42s.

THE reader who expects from its title that this book will contain an analytical discussion of the functions of the managing director, or a systematic analysis of what managing directors actually do, will be disappointed since it contains neither. If he wants the former, he will find it much more worthwhile to read Peter Drucker's "Practice of Management"; if he wants the latter, he will find that it does not exist. The nearest approach to such a study is the one by Sune Carlson on "Executive Behaviour." What the reader will find in this book is an assembly under a large number of different headings, of some quite interesting bits of information on how a most varied group of sixty-eight managing directors, whose comments are included, say they deal with particular problems. This will appeal to the squirrel-minded. For each problem selected there are about three or four illustrations of how Mr A or B deals with, for example, firing unsatisfactory executives, encouraging friendly relations amongst executives or dealing with customers' complaints.

The illustrations are interspersed by Dr Copeman's own comments. Most of them are non-controversial, but a few are surprising in a discussion of good management practice, for instance: "Another 'advantage' of a general post may be that at one stroke the managing director succeeds in making every subordinate slightly uneasy. Every one of his executives is now beholden to him for future promotion, transfer or dismissal."

This book may be useful to the managing director of a small or medium-sized company who has not thought a great deal about management practice but wants a plain man's check list, on the American model, to some of the things he should be thinking about and some ideas of how other people have dealt with the problems he faces. Unfortunately, the value of the illustrations is greatly limited by the fact that they are presented with little or no background, so that it is impossible to judge the context in which these management practices are used. There is also no independent assessment of whether they work satisfactorily where they are applied.

Italian Liberal

Cronache Economiche e Politiche di un Trentennio (1893-1925) Volume I 1893-1902

By Luigi Einaudi.
Giulio Einaudi Editore. 577 pages. 3,500 lire.

THIS latest volume of the collected works of Luigi Einaudi consists of articles written when he was a young man in his twenties, mainly for *La Stampa* of Turin. They provide a valuable insight not only into conditions in Italy at the turn of the century, but also into certain problems with which that country is still grappling. The discussions of municipal maladministration, of teachers' protests about their low salaries, of attempts at fiscal reform, and of proposals to deal with the problems of the south, for instance, have a contemporary interest.

At the time when Sr. Einaudi was writing Italy was passing through a period of severe political tension, and its parliamentary regime was being subjected to its first major crisis. One of the consequences was that there was little public interest in the problems with which the author was primarily concerned. His pleas for a more liberal trading policy passed unheeded: it was—he now admits—an "ingenuous hope" that Italy might contribute to what he then believed, again mistakenly, to be a general trend towards freer trade.

He was not discouraged, however, either by the rejection of these ideas or by later political developments which for a time were to lead also to the suppression of political liberty in Italy. What emerges so strongly from the present volume is the strength of the author's convictions, and his tenacity in defending certain liberal principles which, when he was called to the highest office in the state, were to contribute so decisively to the restoration of his country's fortunes.

Labour and the Nation

Social Evolution of Industrial Britain

By L. G. Johnson.
Liverpool University Press. 186 pages. 25s.

HOW did the new class of industrial wage-earners, created by the Industrial Revolution, become integrated into English society, and why did it accept Parliament as a means of achieving its ends? In the early nineteenth century there were several other possibilities. The general labour unions of the 1820s and 1830s looked as though they were deliberately aiming at the overthrow of existing political authority; at the other extreme, Mr Johnson suggests, the working-class might have inaugurated a period of utilitarian despotism under a popular monarch. Why instead did the growth of the new class lead ultimately to Parliamentary democracy? The commonly accepted answer is that British institutions were flexible, and the ruling groups responsive to pressure and persuasion. Without denying the relevance of this explanation, Mr Johnson is primarily concerned with the other side of the story: with the institutions that the working classes created for themselves while they still lacked political power, with the experiences, economic and intellectual, that created common sentiments and habits of thought, and with the critical periods of their political education. The strength of modern British democracy springs, as Mr Johnson neatly puts it, from "generations of crudely conducted meetings," and it is with the form and agenda of these meetings that he is concerned.

Most of this ground is well worn, but it is worth retreading with this perceptive, though occasionally idiosyncratic, guide. While there is little new about the facts, they are placed in fresh and illuminating juxtapositions and glossed by apt quotation from the less well-known nineteenth-century writers, who are often nearer the grass roots than their eminent contemporaries. What emerges from the story is that working-class acceptance of parliamentary politics and the incorporation of Labour into the political nation owe less to a few long-standing characteristics of English society than to a succession of specific historical experiences. A comparison with industrial countries would have defined more clearly which were the exceptional features in English development.

The book does not pay sufficient attention to the immense changes in the composition of the British working classes in the last hundred years. By 1939, Mr Johnson concludes, "the working classes may be said to have incorporated the nation." But would it not be truer to say that because of changes in occupational structure the working classes have been incorporated into the middle class?

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editoral staff in London.

Labour's Lost Battle

WASHINGTON, DC

LIKE Ancient Pistol, the American trade union movement tends to cry out that it is murdered as soon as an opponent's sword tickles its ribs. It greeted the Taft-Hartley Act of 1947, which tightened the rules governing the relationship between management and the unions, as a "slave-labour Act," an exaggeration which now brings a blush to the cheeks of those who were guilty of it. An observer may thus be tempted to smile at the death-bed groans wrung from union leaders by the labour legislation which Congress finally passed last week. But Mr George Meany, the head of the American Federation of Labour and Congress of Industrial Organisations, has genuine cause for pain. Part of it comes from the spot where, if there is justice in the world, he has lately been kicking himself; it was he who originally insisted that Congress include amendments to the Taft-Hartley Act in the new law, instead of confining itself to the separate and narrower task of ending corruption in the unions—and Congress has obliged by making the Taft-Hartley rules stricter than ever. Mr Meany is now confronted with a measure which diminishes the power of all trade unions, the just and the unjust alike, without necessarily getting rid of the racketeers in the comparatively few unions which contain them.

Perhaps there was a case for readjusting the balance of power between unions and management, but it is a pity that the readjustment had to be made under the guise of an anti-racketeering law. The two parts of the measure which emerged rather unexpectedly from the conference committee between the Senate and the House of Representatives last week are linked together as awkwardly as Siamese twins. The first sections are designed, rather hopefully, to end corruption and foster democracy in those unions which—like Mr Hoffa's teamsters, or lorry-drivers—have too much of the one and too little of the other. Title VII, containing the amendments to the Taft-Hartley Act, is the one which will be found engraved on Mr Meany's heart when he dies and on which the passionate debate of the last few weeks has been concentrated. It is not surprising that nobody has been willing to give his name to this odd composite creature. Half a dozen Senators and Representatives can claim a share in fathering it; but none of them—least of all Senator Kennedy, who had quite a different end in view when he first introduced a reform Bill last year—wants his parenthood to be recorded for posterity.

If the new legislation were to break Mr Hoffa's grip over the teamsters, Mr Meany might find the result sweet enough to make the other consequences palatable. But it is not at all certain that it will do even this. The measure prescribes regular, secret elections for union officers; but so does the teamsters' very proper constitution. Congress forbids certain categories of law-breaker to hold office; but this will affect only about a dozen of Mr Hoffa's 3,000 officers, and none of the national leaders of the teamsters. It is doubtful whether the teamsters, with the army of lawyers and accountants whom they can afford to hire, will find much difficulty in satisfying the provisions of the law that require them to submit financial reports to the Secretary of Labour. Nor is the "bill of rights," which entitles individual unionists to sue their leaders if they feel that they are being exploited, likely to fill the courts with litigating lorry-drivers; it has long been plain that the rank and file of the teamsters are less interested in Mr Hoffa's ethics than in the bulging pay-packets which he wins for them.

In any case, it is probable that Mr Hoffa, like Mr Khrushchev, has graduated beyond the crude and murky methods he used in his climb to power. Indeed, there is only one provision in the new law which will certainly hurt him, and that only indirectly. This is the clause banning "hot cargo contracts," under which the teamsters get employers to agree not to move goods in and out of factories where a dispute is in progress. The teamsters, who man the supply lines of American industry, have cheerfully helped other unions to fight their battles by means of these contracts. They are one of the main reasons why, even after Mr Hoffa was thrown out of the AFL-CIO two years ago, many honest trade unionists kept looking wistfully over their shoulders after him. Now that this kind of contract is forbidden, the influence which the obliging teamsters exercised through it will diminish sharply.

BUT, whatever it does to the teamsters, the new law will also be judged by its broad effect on the union movement as a whole. The pinch is likely to be felt in at least three ways. In the first place, small unions are liable to find the reporting requirements burdensome. This is not merely because some unions conduct their finances with a certain comradely carelessness (which is true of a few big ones as well as of many little ones), but also because the small fry cannot afford the accountants who could put their books into good order. Senator Kennedy unsuccessfully sought to exempt these small unions unless the Secretary of Labour had particular reason to feel suspicious about them. It is these which will also be the hardest hit if the "bill of rights" encourages a crop of irresponsible malcontents—as distinct from victims of genuine persecution—to take their complaints to court. At the moment two-thirds of all unions have less than 200 members each and probably many of these will now find it necessary to merge. This may well make good economic sense, but it is not at all what the conservative authors of the present legislation, who loathe "big union power," had in mind.

Secondly, a large number of workers—the number is estimated at several millions—will find that when they become involved in labour disputes their rights will depend on what part of the country they live in. These are the employees of small businesses, mostly in the retail and service industries, over which the National Labour Relations Board refuses to exercise jurisdiction, even though their operations cross state lines. The quarrels between these workers and the managements will now fall under the generally unsympathetic eye of state judges administering state law; three-quarters of the states do not even protect the rights of workers to bargain collectively. It is no defence of this arrangement to point out that the federal system is designed to allow for local variations in the definition of justice. The federal government long ago assumed responsibility for imposing uniformity in many questions involving interstate commerce; the new law, in effect, lays down that in settling labour disputes only the big cases are entitled to

uniformity. It was one of Senator Kennedy's greatest defeats that he failed to establish that the state courts should at least apply federal law.

The third handicap is probably the most troublesome. Congress has made it substantially more difficult for the unions to organise the large numbers of workers who are still unorganised. Picketing is the principal weapon used for this purpose ; but now, in effect, the union will be able to picket a plant for only thirty days before an election is held to decide whether the union is to represent the employees. This is unlikely to give the union long enough to counteract all the different kinds of pressure which the management is able to put on its employees to prevent them from joining a union. One probable consequence is that in the South, where six million or more workers, not counting white-collar employees, are still unorganised, the unions will be frozen out even more effectively than they are now ; since this will tempt industry to speed its migration southwards, it might even cut into union membership in the North. There may also be an increase in the number of " company unions " which employers recognise in order to keep out the more demanding kind.

The 1959 LABOUR REFORM BILL falls into three sections:—

1. The **bill of rights,** to guarantee democracy in trade unions, provides that
   - (a) all members may take part in the election of the officers of a union and in its meetings ;
   - (b) union dues may only be raised after a majority vote ;
   - (c) members may sue the union provided they have first used established procedures for arbitration.

2. The **anti-corruption provisions** require that
   - (a) all trade unions adopt constitutions and by-laws, file annual financial reports with the Secretary of Labour and open all these to public inspection ;
   - (b) officers of unions and employers report to the Secretary on all financial transactions with each other, whether directly or through middlemen, apart from ordinary wage payments ;
   - (c) unions exercising trusteeship over a branch report regularly on how and why this is being done and carry out certain other conditions ;
   - (d) union officers be elected regularly with adequate provisions for fair voting ;
   - (e) officers handle union money solely for the benefit of members with various safeguards against misappropriation or misuse of funds and against the election of unsuitable people.

3. Amendments to the **Taft-Hartley Act** :—
   - (a) no-man's land labour disputes, which are too small for the federal government to handle although it had exclusive jurisdiction over them, will now be dealt with by state agencies and under state law ;
   - (b) secondary boycotts, in which employees stop work in order to force their employers to cease doing business with another firm involved in a labour dispute, are prohibited more rigidly than before.
   - (c) hot cargo contracts, in which an employer agrees not to do business with firms involved in strikes, are outlawed, with some minor exceptions for clothing and building workers.
   - (d) blackmail picketing, designed to induce unwilling employees to join a union, or employers to recognise one, or to inform customers that the concern is " unfair " to its workers, is restricted in various ways.
   - (e) workers employed by railways, airlines, farmers and local governments are brought under the Act.
   - (f) other changes concerning labour organisation, which the unions had requested, are made in the Act.

The law is not all grief and tears for the trade unions. They have won a couple of amendments to the Taft-Hartley Act which they have long desired. Senator Kennedy also managed to keep the new restrictions on secondary boycotts, so distasteful to a great many people, within reasonable limits. But the general effect of the measure will be to constrain the labour movement more tightly than it has been constrained for a quarter of a century. This has happened only ten months after the unions appeared to win a resounding victory in last November's elections. Next week Mr Meany has to explain this dismal fact to the convention of the AFL-CIO in San Francisco. It will not be surprising if the critics who have long been grumbling at his leadership ask how it is that labour's fortunes have declined so sharply and so soon.

Struggling to Adjourn

THE President and Senator Morse had one thing in common this week: they were both placing obstacles in the way of Congress's beating an orderly retreat from Washington before Mr Khrushchev arrives next Tuesday. If it can adjourn before then, the embarrassing question of whether he should be invited to address a joint session will not arise. Senator Morse thinks Congress should remain to face the music and to tackle issues which other members are glad to shelve until 1960. Personal pique probably played a larger part than principle, however, in prompting him to declare a " parliamentary war " on his own Senate leader, Mr Johnson. By making the Senate work over the Labour Day weekend, Senator Johnson made it impossible for Mr Morse to fulfil speech-making engagements back in his native Oregon. Senator Morse retaliated by trying to strangle the Senate in its own red tape and by refusing the unanimous consent needed to relax its time-consuming rules. Unless he relents, which would be out of character, it will be Saturday before the Senate can vote on the foreign aid appropriation ; agreement with the House must then be sought.

The President's vetoes, which have made Congress rewrite legislation, at least have a constructive purpose: to force Congress to respect the Budget which he has tried so hard to balance and which, in spite of higher spending than he planned, will show only a small deficit, if there is one at all. His veto of the omnibus housing Bill last week—his second rejection of such legislation within a month—was upheld in the Senate, but he ran the risk that Congress would refuse to try again. This would have left the Administration without any new authority to insure private mortgages, but this uncontroversial programme probably could have been kept going by one device or another. The real victim would have been further slum clearance, which is far more urgent. However, in turning down the second housing Bill because it still contained many features which he found objectionable, such as direct loans for college building and for homes for the elderly, and a public housing scheme, the President assumed—correctly, it seems—that Congress would not want to take the political blame for abandoning the housing programme and would make new efforts to write a Bill which he could sign.

Mr Eisenhower can also claim a partial victory in Congress's decision to raise the petrol tax by 1 cent a gallon for 21 months to cover the growing cost of the interstate highway programme instead of succumbing to the temptation of raiding the Treasury. Mr Eisenhower had asked for an increase of 1.5 cents. Members' capacity for conciliation was exhausted, however, when it came to the public works Bill which the President vetoed; all their repressed resentment of his high-handedness came out when they defiantly repassed the Bill by huge majorities without removing a single one of the 67 new projects which were the President's sole reason for condemning the measure.

It's only natural, when you engage a new employee, or contract a new supplier, to want to know his 'references'. Is he giving satisfaction? And are the people he's working for qualified as judges? I.S.R. is supplying rubber to many of Britain's leading rubber users—leaders in some cases because of their great size, leaders in other cases because of their specialised rubber knowledge and needs. These firms, who are most exacting in their demand for high, consistent quality, and who have the technical background to make sure they're getting it, are now taking the greatest part of their SB Rubber supply from I.S.R.

Moreover, they are calling upon us for technical services, for recipes and tests and recommendations. They rely upon us, not only for the rubber itself, but for additional 'know-how' to combine with their own. Some, as we said, are large buyers, some are small, taking only a few tons of 'Intol' a year. They all receive, we think, the same first-class attention. They are our 'references'. We always welcome additions to the list. We'd like to have *you* on it. Like our present customers, you'll find that you can rely on I.S.R.

* * *

(What do our customers like about us? We're always interested to know, and you might be, too. We keep hearing about several good points. That we're *dependable*: in particular, that we maintain our grading rigidly, and that we keep our delivery promises. That our facilities are large and up to date. That we're *here* in Britain—not a matter of sentiment but of practical convenience. That we're *helpful*; but we can't expand on that one without blushing, because, you know, with it all, we're very modest, too).

Five types of 'Intol' are in production, covering the full range of SB Rubber uses. Write for details.

YOU CAN RELY ON I.S.R. The International Synthetic Rubber Co. Ltd.

Another West Side Story

CRIME in the United States continues to rise steeply, largely, it seems, as the result of juvenile delinquency; the figures for 1958 show an increase over 1957 of 8.1 per cent in arrests of young offenders against only 1.8 per cent for adults. New York City's recent ferocious outburst of juvenile crime has underlined these figures dramatically. Within two hot summer weeks a fifteen-year-old girl has been fatally shot, a fourteen-year-old boy stabbed, and two sixteen-year-old youths murdered, as they sat talking in a playground, by gangs operating on the West and Lower East Sides. But at least the authorities have taken prompt action to stem such outrages. Hundreds of police diverted to the troubled areas are maintaining continuous patrols there and the perennially under-staffed force is to be raised by over a thousand to its full complement of 24,508 men. Over 145 arrests were made within twenty-four hours and the number now exceeds 300; but a curious feature is that a high proportion seems to have been of the homosexual prostitutes who ply their peaceful if disagreeable trade along the western fringe of Central Park. A curfew for young people, such as that enforced in Chicago and other American cities, was proposed but was rejected as an infringement of the rights of the virtuous majority.

Such a display of vigour reassures the public and will do something to calm the growing clamour for a "tougher" policy. But these and other long-overdue measures, such as floodlighting the public parks at night, do not approach the root causes of these outbreaks of lawlessness. Poverty, overcrowding, broken homes, irresponsible and immature parents, are obvious factors, as is the tidal wave of Puerto Rican immigrants which has overwhelmed whole districts of New York; but Puerto Ricans are not especially law defying, and only a tiny percentage engages in criminal activities. At the heart of the problem of juvenile crime in New York, as those who have seen *West Side Story* will appreciate, are the gangs; there are thought to be 150 of these potential fighting groups in the city, with about 7,000 members altogether. The New York City Youth Board has consistently taken the view that gangs are a reasonable and healthy phenomenon, providing association, status, and an outlet for adventure to those deprived of all three, and that they should be diverted to peaceful ends as "clubs" rather than be stamped out.

This attitude has always been criticised, and the 73 officers specially trained by the board to infiltrate the gangs are said only to increase their self-importance. On the other hand, by acting on advance "tip-offs," the officers have forestalled repetitions of such excesses as the "rumble" of 1955, when five hundred battling youths had to be dispersed by troops of mounted police. Nevertheless, more positive action seems desirable, but the board is unfortunately hampered by shortage of funds. So is the city, since every dollar available at present is needed for the expanded police force. But now the state authorities have stepped in: Governor Rockefeller has announced a "crash programme" for expanding the existing State Youth Camps for potential delinquents and minor offenders. He also wants to improve the supervision of young people on parole and to change the work laws so that those over 14 may take jobs.

Steel's Unwelcome Record

THIS week the strike in the steel industry became the longest in its postwar history, exceeding the 55 days lost in 1952. So far the government has been able to stand aside because stocks of steel accumulated before the strike started in July have been big enough to cushion the rest of the economy from its impact. (Some of this steel came from abroad; imports were higher in June than they had ever been before and higher still in July.) But if the strike continues into October and production and employment in other industries begin to suffer seriously, Mr Mitchell, the Secretary of Labour, says that he will advise the President to invoke the Taft-Hartley Act, for the first time in the steel industry. To wait longer would be dangerous, for it takes time for the steel mills to regain the near-capacity operations which will be needed, and much of their post-strike output is already earmarked.

In effect both the steel companies and the steel workers have just over a fortnight if they wish to stave off government intervention. The industry certainly does, and so does the trade union if the Taft-Hartley Act is to be employed. This law provides that the President may require workers to return for an 80-day "cooling-off" period if a strike endangers the health and security of the country. Before this time expires, and the workers are free to walk out again, they must vote on whether to accept the last offer of the management. But the President is not empowered by the Taft-Hartley Act to appoint a committee to look into the dispute and recommend a compromise, a procedure used by other Presidents which has generally helped the strikers.

The first hint that either side was prepared to give and take came last week when 450 union officers and representatives of the rank and file were called to New York to discuss local issues, particularly the work rules which the companies insist must be relaxed, in the interest of greater productivity, before they make any concessions on wages or other benefits. The industry's official stand is that, if this is done, it is prepared to raise benefits this year and wages next year. Up to now Mr McDonald, the union's president, has replied that safeguards painfully won over many years are not negotiable. But the wage increases recently granted to workers in meat packing and in other industries make it nearly unthinkable for Mr McDonald to forgo a wage increase this year. He may hope that, if the union is prepared to consider changes in its work rules, the steel companies may reconsider their determination not to increase wages—as opposed to benefits—until next year. This seems to be the kind of compromise recommended this week by Mr Mitchell to the President, who is now asking both sides to make every effort to reach an agreement.

Interest Deadlocked

WITH the stock market staggering under the sharp and continuing rise in interest rates and the government bond market practically knocked out, with the commercial banks scraping the bottoms of their vaults to meet the booming demand for loans, the Federal Reserve Banks were the only financial institutions where calm prevailed last week. There was no sign of the expected increase in their rediscount rate, lagging far below other interest charges. But the rise must come soon, in spite of the steel strike, the official reason for the delay. What may have been the unofficial reason no longer holds good for it now seems certain that Congress will not raise the 4¼ per cent ceiling on the interest which the government may pay on its long-term borrowing. While there was still a chance that Congress might relent on this, the Federal Reserve Board was reluctant to add fuel to the charge that the Administration was holding back economic growth by pushing up interest charges.

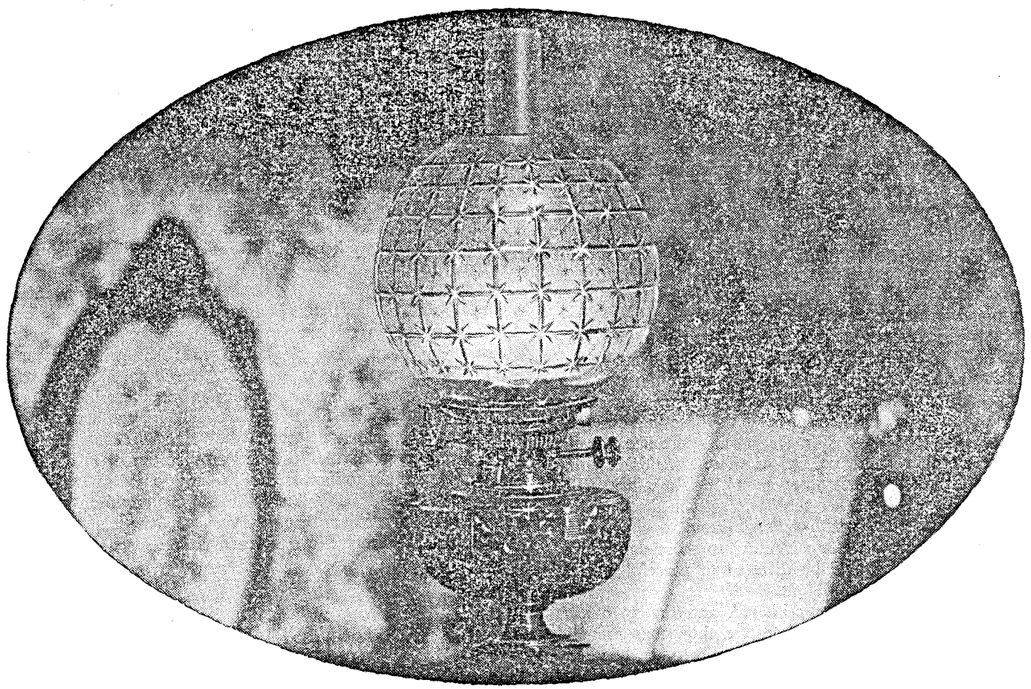
Originally the request for the removal of the ceiling on long-term rates was coupled with one for a similar change in the rates permitted on savings bonds, a proposal which had more appeal for Congress. But now the House has acted on this "sweetener" independently and has agreed to lift the 3.26 per cent ceiling on

Oil Industry Centenary: 1859-1959

This Company has been

in the **OIL BUSINESS** in Britain

for over seventy years



In fact, since 1888. Then, and for many years, we were known as the Anglo-American Oil Company. Now you know us as ESSO, the oldest established oil company engaged in all major aspects of the industry in this country, with 14,000 British employees.

Seventy years . . . of service and growth and the use of more and more oil for more and more purposes. Now we are looking forward to our next 70 years . . . .

ESSO PETROLEUM COMPANY, LIMITED · 36 QUEEN ANNE'S GATE · LONDON SW1

savings bonds, although it has left on the President the onus of deciding how much the rate is to go up; the forecast is that it will be to 3.75 per cent. The Senate is expected to approve this move, much needed since redemptions of these bonds have been running far ahead of sales.

In its present mood the Administration is probably not unhappy that the two measures have been separated. Its original readiness to compromise on the long-term interest rate was frustrated by Congress's attempt to use it as an opportunity to interfere with the cherished independence of the Federal Reserve Board and by the board's determined resistance. Now the Administration sees in Congress's obstinacy an issue which can be used against the Democrats in the coming election year. The refusal to allow the Treasury to pay the market rate for its long-term borrowing forces it to raise the substantial sums it needs in the short-term market where the pressure, already heavy, is sure to become worse. Eventually, it seems, the Federal Reserve System will be unable to avoid making funds available in some quantity at the commercial banks, an inflationary move for which it will be possible to blame the Democrats. Equally, their attempts to undermine the Federal Reserve's inflexibility can be made to look like irresponsible advocacy of "soft money." But by the time Congress is faced with the interest rate question again next year the Democrats will surely have recognised the trap which is being set for them.

Michigan: Political Bankrupt

FROM A CORRESPONDENT IN DETROIT

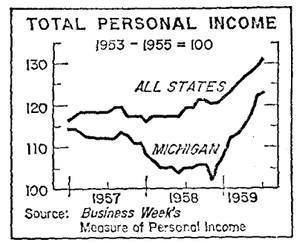
Nowhere have the deficiencies in standards of state government been more apparent recently than in Michigan, the seventh largest state in the country with a population of 7.8 million, which is the centre of the huge automobile industry. Although it ranks sixth among the states in wealth, Michigan nonetheless has been so short of cash that it has not been able even to afford the new typewriter ribbons needed in state offices. On one occasion this year the state had to postpone paying the salaries of its 26,000 employees, and it has had to resort to some fancy book-keeping to avoid other payless paydays. Businessmen who sell to the state have had to wait months, instead of days, for their bills to be met.

Michigan's deficit reached $110 million before the Legislature agreed recently on a programme to bring in $128.5 million a year in new taxes. This financial crisis attracted widespread attention, partly because of the state's economic importance and partly because of the possible effects of the crisis on the presidential aspirations of Michigan's Democratic Governor, Mr Mennen Williams. The state's troubles are not new. They have been piling up for years and the business recession of 1958, which imposed new strains on state governments, was the last straw. Michigan probably suffered more from the recession than any other state. At one time there were more than 400,000 unemployed, four times as many as is normal, and the motor industry had its worst year since the depressed nineteen-thirties. One firm lost $34 million. But the return of prosperity did not mend the state's finances, which went from bad to worse while the legislators and the Governor quarrelled over what should be done.

One of the long-term causes of the problem is that several constitutional amendments have been adopted in recent years which specify how certain funds shall be spent. As a result the Legislature, which ought to control all spending, now controls only about one-third of it and the state has no flexibility in financial matters. The other difficulty is that, although a Democrat has been Governor for the past eleven years, the majority in the Legislature has been Republican and he has thus been checkmated regularly. This situation is the result of unrealistic laws on legislative representation which have permitted the Republicans to retain control of the Legislature although they have slipped behind the Democrats in popular voting strength. There was a change this year, but for the worse. The Republicans kept a majority in the Senate, but the House of Representatives was divided 55-55. Thus Democrats in the House can block anything passed by the Republican Senate, and the Senate can block anything the Democrats manage to get through the House. The result of this divided authority and uncertain responsibility is stagnation, and the blame for the financial crisis cannot legitimately be ascribed to any one man, political party or unit of government.

The worst instance of a drain on legislative power by constitutional amendment occurred in 1946 when the state's school districts and municipalities were given five-sixths of the $300 million a year received from the state sales tax. This diversion of revenue might well be taken as the beginning of the financial crisis. The state has never been able to make up the loss, which is particularly unfortunate since its expenses have increased from $471 million in 1948 to $1 billion this year. In 1957, when the recession began to cause a further drop in state revenues, the Legislature ignored Governor Williams's warning that new taxes would be needed. The state ended the year with a $20 million deficit. In 1958, with the recession at its peak, revenues dropped even more sharply and at the same time the demands on the state government increased. Unemployment compensation had to be paid to thousands of workers and many families were added to the assistance rolls.

This year all state officials were agreed on the need for new taxes but the Democrats and the Republicans in the Legislature were sharply divided over how much money was needed and how it should be raised. They finally agreed on an increase in the use tax to bring in $120 million a year and on an $8.5 million increase in taxes on business. In the past the use tax applied only to goods bought outside Michigan. Its extension to all goods sold or used inside the state was proposed by the Republicans and is of doubtful legality. The State Constitution prohibits an increase in the sales tax and some authorities hold that the use tax is simply a sales tax under another name. If the courts accept this view, then presumably the Legislature will have to be called back into session to start work all over again. The only alternative to the use tax that has been suggested is a personal income tax favoured by the Democrats.



The publicity that Michigan's troubles have received has dashed what small chances Governor Williams had of winning the Democratic presidential or vice-presidential nomination; fairly or not, the impression that he is a spendthrift on welfare has been confirmed. But if he stands for Governor again next year, as he may, one point in his favour is that the immediate shortage of cash could have been alleviated and the payless payday averted if the Legislature had released $50 million being held in a trust fund to provide aid for needy ex-servicemen. This fund actually serves no worthwhile purpose and Mr Williams tried to get the Legislature to release it months ago. But the Republicans said they would not do so until a tax programme had been enacted. In retrospect, they realise this was a tactical blunder, giving Governor Williams the opportunity to pin the blame for the payless payday on them. Also

to Mr Williams's advantage is the fact that he has one of the most powerful political organisations in the United States, after eleven years in the Governorship. This is the longest tenure of any Governor in the country and has been made possible primarily because Mr Williams has had the unswerving support of organised labour, a powerful force in Michigan.

On the other hand, although economic conditions in the state have improved greatly this year, there are still 240,000 people out of work and little prospect that many of them will find jobs soon. Employment opportunities have been reduced by mergers and automation in the automobile industry, by the movement of one firm (the American Motors Corporation) out of the state, and by a sharp decline in the amount of defence work handled by the automobile companies.

Republicans blame Governor Williams for the state's failure to bring in many new industries. They say businessmen are reluctant to move into Michigan because his spending policies have resulted in high taxes on business. But Mr Williams can point out that the Republican-controlled Legislatures of his first ten years could have blocked any of his spending programmes if they had wished to do so. And he can argue, with justification, that his spending has probably not damaged the state's chances of attracting new industry nearly so much as has the Legislature's delay in putting the state's finances in order.

Jets in Competition

FROM A SPECIAL CORRESPONDENT

NEXT Friday regular services with the new Douglas jet aircraft, the DC-8, will be inaugurated by two domestic airlines, United and Delta. Delta will actually be first, ironically enough, for United Air Lines was the first domestic carrier to order the DC-8, the first to take possession of the new aircraft and the largest customer to date, having placed contracts for 40 of the new planes at approximately $5,000,000 apiece. Altogether 143 of these aircraft have been ordered by domestic and foreign airlines. Both United and Delta decided almost four years ago to order DC-8's rather than the Boeing 707's, which have now been in use for months by other airlines. At that time, the DC-8 was still on the drawing board and, in fact, no prototype of the plane was ever produced. The maiden flight in May, 1958, was made by an early production model and by then the Douglas Aircraft Company had already obtained orders for 138 of its Jetliners. This was testimony to the great prestige of the company with both domestic and foreign carriers, based on the commercial success of Douglas airliners in the years since 1935, when the DC-3 was the first really economical transport to be developed.

For the Douglas company Friday will also represent a "payoff" on decisions made long ago. The DC-8 cost more than $250,000,000 in research and development outlays, allegedly the largest amount ever expended on the development of a single product by private capital. Inevitably, comparisons will be drawn between the new Jetliner and the very similar Boeing 707. The DC-8 is a somewhat larger plane and it is the first true jet designed in the United States completely for commercial use. The 707 was developed from Boeing's aerial tanker, and is being produced on the same assembly line as its military parent, with tools and equipment leased from the government. This arrangement enabled the Boeing Aircraft Company to offer its machine initially at about $500,000 less than the DC-8, a saving which influenced American Airlines, the largest air carrier in the United States and usually a close associate of the Douglas Company, to equip its fleet with 707's. However, the Boeing Company is said to have lost at least $100,000 on every aircraft delivered so far, and the Douglas Company has invoked an escalator clause in its early contracts which allowed it to push up prices by 10 per cent.

In engineering advantage and passenger comfort, both planes are thought to represent a great jump from their propeller-driven predecessors. The DC-8 contains fewer movable parts, for example, and this is expected to reduce maintenance costs and increase reliability, while the design of the landing gear is different from that of the 707's. The company is now turning its attention to a cargo-carrying version of the Jetliner, while United and Delta are turning theirs to methods of filling the vastly increased passenger capacity which is one of the most prominent features of the jet age from the point of view of the airlines. But the jet aircraft which have been flying so far have all been full, or very close to it, and it is generally agreed that the attractions of jet travel are bringing new passengers to the airlines, ones who never used piston-powered aircraft.

Surpluses to Share

CONGRESS, having failed to pass a Bill to discourage the accumulation of agricultural surpluses which the President would sign, has also rejected, this time on the Administration's advice, most of Senator Humphrey's "food for peace" scheme, which envisaged long-term, large-scale distribution of existing surpluses to relieve a hungry world. The foreign sales programme would continue at about its present level of $1.5 billion a year under both the Senate and House Bills extending the life of the Agricultural Trade Development and Assistance Act; since it was first passed in 1954, this has authorised the sale of $4 billion of agricultural commodities for foreign currencies and donations, for relief purposes, amounting to $800 million; Congress is now providing $300 million a year for relief. The House extended the Act for only one year, the Senate for three, and a compromise on two years seems likely; this would have the advantage that the problem would not have to be considered again at next year's short pre-election session of Congress.

The Administration opposed Senator Humphrey's plan for disposing of $2 billion worth of surpluses every year for five years, which appealed to the Senate Foreign Relations Committee, partly because it does not like to admit that surpluses are here to stay. Its spokesmen also argued that the scheme would alarm exporters in other countries (Pakistan, for example, may welcome American food-stuffs, but hates to see its markets for cotton suffer); because a long-range programme would discourage backward countries from developing their own supplies of food; and finally because the American authorities have not found it possible to get rid of more than $1.5 billion worth of commodities each year. Elements of the Administration's much more modest scheme, including donations of food to under-developed countries to help establish stockpiles of food to be used in emergencies, were approved.

Congress's understandable attempt to speed up the distribution of surpluses to hungry Americans as well, by reviving the old food-stamp plan, is opposed by the Administration and, if the final version were to include a large-scale mandatory programme (which is unlikely), the President might be forced to veto the whole Bill. Surpluses are already available, on request, to states and voluntary agencies and the Administration does not want to assume the burden of distributing them. Less disinterested views of the crop disposal scheme were taken by those who tried to make mandatory, instead of discretionary, the programme of bartering surpluses for foreign strategic materials and by spokesmen for the eastern and Gulf ports, who tried to forbid use of the St Lawrence Seaway for government-subsidised exports of grain. Both of these efforts were apparently beaten off; and the barter scheme is, in any case, likely to be much reduced by administrative order.

Light on Africa

FROM A SPECIAL CORRESPONDENT

THE organisation of a high-powered committee of businessmen to advise the Department of Commerce on African investments, like the creation of an Office for African Affairs in the State Department or the long-term study which the Army Quartermaster Corps has been making of the central region of the continent, need not be viewed with alarm as indicating that the Americans are about to march in. These are only straws in a rather gentle breeze. American interest in Africa is blowing up, but by no means at gale strength.

When Africans were arguing about the Cameroons last spring in New York, some of them made friends outside the United Nations building; when riots flare in Nigeria or the Congo the whole continent becomes front-page news. But even then there is little public reaction outside the cities on the eastern seaboard. Enthusiasm for such African leaders as Mr Nkrumah or Mr Mboya does not mean a boom in tourist travel to Africa or in Afro-American development shares on the New York Stock Exchange. Some Americans [illegible] Mondays this summer, some 200 American business firms are said to have interests there. Some economic aid is being given, some political links are being forged. But as far as a general American understanding of Africa is concerned, the continent has done no more than cease to be "darkest" and take on an interesting, if still confusing, tone of grey.

An alert body of well-informed internationalists is keenly aware of the complex political problems to be solved if Africa is not to flop straight from colonialism into communist hands and of the effect of such unhappy American phenomena as race riots in Little Rock. In another sphere, business ears prick up when the World Petroleum Congress is told that known African oil reserves have increased by twenty times in the past four years, and that the Sahara region alone, with estimated reserves of 3½ billion barrels, now ranks among the top ten oil-bearing areas of the world.

Meanwhile, able newspaper reporters travel in Africa and do their best to translate strange scenes into familiar American terms. Dispatches come back about political uprisings and the hazards imposed on wild game by hydro-electric dams, or on traditional nudity by native moralists. In the magazine field, two very different monthlies and a weekly have each recently devoted an entire issue to various aspects of the African continent.

THIS sympathetic curiosity feeds, and is fed by, the work being done by charitable foundations and voluntary service committees. The amount of aid now going to Africa, from public or from private sources, is still small compared to the funds allotted to Asia and the Middle East, but the quality of interest makes up in warmth what it lacks in dollars. Most of the major foundations have money and people working there. The Carnegie Corporation, which supported the 1956 revision of Lord Hailey's famous survey, which has assisted the publications project of the International African Institute in London, and has provided part of the funds for a five-year study of Benin history, has since 1928 put more than $3 million into South Africa and the colonial areas alone.

Two major Carnegie grants were made in March of this year—one establishes in Nigeria a library training course at the post-graduate level which will benefit all West Africa; the other will start, with British and Nigerian co-operation, a survey of higher education in Nigeria. Primary education there is being surveyed by the Ford Foundation, while the Rockefeller Foundation has for several years been working on yellow fever research in both Nigeria and Uganda. The newer Rockefeller Brothers Fund has established an office [illegible] to advise the Africans, both there and in Nigeria, on obtaining capital and other financial assistance for economic development. The Twentieth Century Fund is almost ready to publish its three-year study of Africa south of the Sahara, the Phelps Stokes Fund continues to assist African students eager to study in the United States.

The voluntary service committees have less money than the foundations, and perhaps for that reason they pursue quite different goals. For example, the African Studies Association, with some two hundred members and an office at Columbia University, provides a centre for academic investigations of several kinds; the American Committee on Africa is concerned mostly with political interests, is warmly pro-African and reputed to be extremist; the American Society for African Culture is a Negro intellectual group, allied with the Paris agency which promotes the concept of *Présence Africaine*; the African-American Institute, which has offices in the Carnegie Endowment building, tries its best to be enthusiastically informative and unbiased.

SOME of these groups are by temperament and training bent on propaganda, but others are beginning to acquire a deeper understanding of what Africa must face in the next few years. Many of them start with the typical American prejudice against colonial rule of any sort, but the far-sighted now recognise the difficulties posed for the new African states by the withdrawal of British aid, British officers, British influence. This change of attitude may not yet show itself in the press, in speeches on the floor of Congress, or among the most inflammatory Negro orators who try to make Kenya sound like Arkansas, but it is evident among the men who administer private funds. Their reports and their conversations show that they are aware of the need for stepping softly, for trying to establish tripartite relationships which shall include Britain as well as its former colony, for basing new work on values that exist rather than trying to remake everything in the American pattern.

This relatively new development in American thinking showed itself in two conferences that were held on African affairs last year, and in a discussion on the same subject which was held not long ago in London. At least one of these conferences took as its point of departure the hopeful assumption that British and American attitudes to Africa are not as dissimilar as they may look; that a major aim of both is to develop political, social and economic strength in African countries so that they will prosper under governments of their own choosing, preferably of the kind that will side with the free nations. To this end lessons were stressed which are hard for Americans to learn: that financial aid alone is not enough in Africa; that foreign aid is more effective when free from military or political strings; that confidence in African leadership is [illegible] to a people trying their wings for the first time; that economic inefficiencies are best attacked by way of improving African agriculture and exports.

The existence of such views does not mean that there are not still people who see African aspirations in the light of 1776, and are bent on hurrying the end of British rule without regard to cost. There are others who would have Britain and the other colonial nations hold on to power, again without regard to cost. But the important thing is that these traditional prejudices are now counterbalanced by other approaches inspired by a longer vision and working behind the scenes.

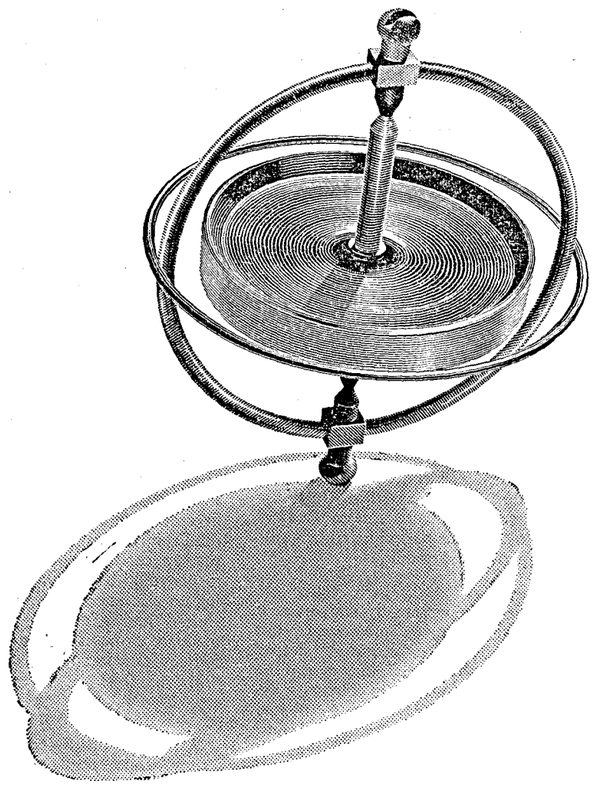
SHORTER NOTES

Congress has agreed to exempt regularly scheduled news broadcasts from the legal requirement that all political candidates must be granted equal time on the air waves and television screens. Strictly interpreted, in a country where fringe parties such as the Prohibitionists or Trotskyites frequently put up candidates for office, this requirement would have made news coverage during an election campaign practically impossible. But in passing the Bill, Congress made it clear that broadcasters must give fair coverage to conflicting political views.

Mr Dale Alford seems to be safe in his congressional seat until the end of 1960. The House committee which has been investigating the unorthodox methods by which he defeated the respected Mr Brooks Hays in Little Rock last November has found various irregularities in the election, but nothing to justify unseating Mr Alford.

UNDER SECRETARY TO ... 17 SEP 1959 PUBLIC DEPARTMENT

WIDE AS THE WORLD IS...



There is nothing parochial about the GKN Group of Companies. Its interests reach to the four points of the compass: east to Europe, India and Australasia; west to Canada and the Americas; north to Scandinavia; south to the farthest tip of Africa.

If there is one word that links them all it is steel. Steel is not the be-all and end-all of GKN but it is certainly the mainspring of the whole organisation. The making and working of steel is something that the great majority of GKN companies, here and overseas, have in common.

There is much else that they have in common—enterprise, for example, an expansionist outlook and ample scope for skills and abilities of all kinds.

Anyone looking for opportunity and progress within the GKN Group does not *have* to go to the ends of the earth to find them; but if he does, he will surely come across them there too.

THE GKN GROUP OF COMPANIES

FOR ANYTHING AND EVERYTHING IN STEEL

MAKING THE BEST OF IT

Gladstone was Prime Minister when Simon-Carves built Britain's first by-product coke ovens in 1882. Simon-Carves have since become leading international coke oven builders and have immensely extended their connections with coal. Today Simon-Carves build collieries: they build plants to wash as well as carbonise coal *(to make steel and gas and smokeless solid fuel)* and to recover and refine coal by-products *(used in dozens of industries in hundreds of ways)*. They build great water-tube boilers at power stations and collieries and factories and so forth *(coal into steam and electricity)* and plants to prevent chimney gases polluting the air with dust and grit and chemicals *(cleaner towns, less smog, fewer coughs)*. Total gasification, briquetting of non-coking coals and other look-to-the-future coal processes are right up their street. Simon-Carves do these things in a big way all over the world.

COAL?

Simon-Carves have been learning to make the best of it ever since Gladstone was Prime Minister.

THE WORLD OVERSEAS

The United Nations Looks at Laos

FROM A SPECIAL CORRESPONDENT

THE name "Dien Bien Phu" strikes a chill into the heart of any western diplomat, and when a few days ago there were reports of north Vietnamese troops massing there for an attack on Laos, there was an unhappy feeling that we were moving back to the "brink" which many hoped had been buried with Mr Dulles. When last weekend Laos appealed for help from the United Nations against "communist aggression," there could be no thought of disregarding or pigeonholing the request. The Secretary-General's prompt action in calling the Security Council was generally welcomed in the West and accepted by the East.

The State Department in Washington for some days past had been fulminating against communist aggression in Laos, and well informed Washington correspondents were writing about the official view that only an ultimatum could stop the "Reds." The press was also privately assured that there was ample evidence of invasion by north Vietnamese troops. When they dutifully wrote about these assurances, Mr Cabot Lodge was able to point to the newspapers as evidence that the fact of aggression was common knowledge.

Yet, when the Security Council met on Monday afternoon (on one of the stickiest Labour Day holidays New York can remember), it turned out that no one had any real knowledge of what was going on in Laos, nor was prepared to take Mr Lodge's word for the facts of the case. As a result, the Laotian request for a United Nations force was simply a non-starter. The United States, however, was determined that Laos must not be allowed to remain neglected or forgotten. The weekend talk of an ultimatum was dropped and a rumbling threat of action by Seato was pushed into the background, but some substitute had to be found that was also acceptable to America's allies—particularly to Britain, which was reluctant to take any drastic action.

The result was a proposal, sponsored by Britain, the United States and France, to send out a team of observers to find out exactly what was going on in Laos and to report back. This looked harmless enough, but the Soviet delegate, Mr Sobolev—one of the veterans of the United Nations—voted against it and demanded that his vote should be regarded as a veto. He was able to quote the 1945 agreement that the setting up of commissions of enquiry should be regarded as a substantive matter and liable to the veto. The Italian delegate, Signor Ortona—in the chair for September—ruled that this agreement was only between Britain, America and Russia and did not bind the Security Council. Therefore by a series of ten to one votes the commission was set up as a procedural matter. By this weekend, representatives of Italy, Argentina, Japan and Tunisia should be arriving in Laos to establish whether that little kingdom has indeed been the victim of communist aggression.

What are the likely results of this action? First of all the fact-finders are unlikely to find any facts—though it is reported that they will be shown two captured north Vietnamese officers. It is hard to say exactly how anyone can establish that a prisoner is a genuine north Vietnamese communist and not merely a masquerading south Vietnamese officer. However, it is expected that in fact the despatch of the commission will have the desirable result of causing the withdrawal of all invaders from Laos—at least as long as the commission remains.

The main results of this action are likely to be felt more in New York than in Asia. The United Nations has been put back into the old routine of cold war. It is now containing Chinese communist expansion just at the moment when rather different methods of containing Russian expansionism are being tried out. The question is whether the Assembly, meeting next week and being harangued by Mr Khrushchev next Friday, will accept this situation. India almost certainly will not, because, as chairman of the International Control Commission set up in 1954, which the present Laotian government does not wish to accept again, it maintains that if any body should restore the peace in Laos it should be this one. Secondly, India and some other Afro-Asian powers have grave doubts about the Laotian government, which they fear has sold out to the Americans and in return for military and economic aid is violating the neutral status agreed at Geneva.

Nevertheless, it is likely that China has behaved sufficiently badly in the past few months to discourage most of its possible friends from making a fuss. If the fact-finding commission does not demand any drastic action by the United Nations, the Assembly will probably be glad to keep a fatherly eye on Laos from a distance. Who knows: perhaps, behind all the protests, Russia will not be too sorry to see its great ally given a mild cautioning.

India's Mood

FROM OUR CORRESPONDENT IN INDIA

IN the last six months, for the first time since independence, India has been shifting to the right, dragging Mr Nehru with it. Behind this shift there lies a combination of reactions—not only to Chinese moves, but also, at home, to state trading in grain and the threat of co-operative farming; and behind these, again, there have been the calls of the five-year plan.

India's disillusionment with China began before the Tibetan revolt. China's cartographic aggression for instance, goes back to Chiang Kai-shek; but until this year it never rated more than a parliamentary question every few months and half a column on an inside page. Tibet jerked Indian consciousness of China on to an altogether different plane. Here was colonialism just across the border, colonialism testified to by the Dalai Lama and 13,000 refugees. The public declared its sympathies so clearly that the government, despite its obvious embarrassment at the damage being done to relations with China, was eventually carried along.

Now there is trouble on the border itself; the Chinese road through Ladakh, the threat to Sikkim and Bhutan, the attack at Longju, Peking's refusal to recognise the McMahon Line or the

1842 frontier on the Aksaichin plateau. Mr Nehru has made it clear that India will negotiate on details, even consider arbitration, but that its frontiers are sacred.

The damage done to communism by China's behaviour has been made more serious by the Indian communists' own actions. They supported the Chinese allegation that Kalimpong was a nest of spies and they made light of the border incidents. The verbal help that they have given to China will seriously affect their future ; in particular, it has further alienated the Praja Socialists and the Lohia group, with whom they hoped to form a united front ; the Socialists have, indeed, been much more bitter about Tibet and China than the Congress party.

This isolation of the communists from the general stream of national feeling made it easier for Delhi to remove the communist government of Kerala State. In Kerala itself, every party, from the Revolutionary Socialists to the Muslim League, combined against the communists. Outside the state, people were shocked to discover how deeply the communists had made themselves hated there, and how regularly they had favoured their own followers, especially in lending money to co-operatives, and in their withdrawals of criminal cases. Mr Dange's defence in parliament shocked people further. And then, after swearing by the constitution in Kerala, the communists started setting fire to milk vans and ambulances in Calcutta.

To isolate the communists seems now to have become a definite objective with other parties. In West Bengal the chief minister has made considerable concessions over rationing and land revenue to the Praja Socialists. In Kerala the Congress are even considering an electoral arrangement with the Muslim League. In Bombay it has virtually been decided to split up the state into its linguistic components of Maharashtra and Gujerat, thus taking away from the opposition the one bond that has kept communists and non-communists together.

THE swing to the right has not been confined to this growing distaste for the communists. There has also been the foundation of the conservative Freedom party. The reasons for this go back nearly a year. Last winter the National Development Council decided to nationalise the wholesale trade in grain ; this has been done in varying degrees in different states—often all that happened was that traders were licensed—and it has been a complete fiasco everywhere. There was no proper preparation and there were not enough warehouses. Crops were held back from the market, prices went up and not down ; rice prices have risen by a quarter in the last six months. The traders were bitterly disgruntled, and nobody was happy. More important still, in January the Congress accepted joint co-operative farming as its goal, and Mr Nehru talked of using preference in credit and fertilisers to get people to pool their land. Nobody believes that land will be shared through any love for co-operation. Overnight there was created the base for a conservative party.

This has already had an effect on official policy. Mr Nehru has been reiterating that co-operative farming will be completely voluntary, which means that even the pilot projects will probably never come into being. Mr S. K. Patil, the new minister for food and agriculture, whose appointment is in itself a sign of the new influence of the right, made it clear in his first statement in parliament that he had no doctrinaire attachment to state trading in food, but looked back rather to the example of Mr Kidwai, who made food plentiful by removing controls.

Policy is further affected by the needs of the five-year plan. If there is to be a £7,500 million third plan, there will have to be some £1,850 million of foreign aid ; and that means primarily American aid. Moreover, if the domestic resources for the plan are to be found, state enterprises will have to make a profit, profitable schemes will have to be preferred to unprofitable ones, and the whole community will have to be heavily taxed. A society which judges the success of its state enterprises by the normal criteria of business can hardly be as hostile to private enterprise as has been the fashion during the years when it was considered a merit for a state bus service or irrigation scheme to lose money.

The swing to the right has not yet gone far, and Mr Nehru's capacity to swing with the public has taken some of the steam out of the Freedom party much as he used to take it out of the Left. But the swing could go much further if there is any new misbehaviour by China or by Mr Krishna Menon, the defence minister, or another hint of compulsory co-operative farming. For the first time since 1947, the Congressmen of the right, who are the majority of the party, can feel the weight of public opinion behind them.

What Markets for Canada's Oil?

FROM OUR CORRESPONDENT IN OTTAWA

THE great Canadian debate about national energy policy, which in recent years brought the fundamental economic problem of this country into the forefront of political dispute, now looks like fizzling out in a feeble attempt at blackmail. The Conservatives, who achieved great political gains by taking up a strongly nationalist position during the Liberals' fumbling of the natural gas problem, are now themselves facing the massive arguments for placating American capital and accepting a "continental policy." Rival policies—or at least rival philosophies, for they barely reached the stage of practical policies— were very much in the centre of public attention when the Conservatives took office in June, 1957. But Mr Diefenbaker wisely pushed them behind the arras into the care of a Royal Commission on Energy Policy, headed by Mr Henry Borden, president of the Brazilian Traction Company. From behind this discreet curtain the problems have been handed out into public view piecemeal.

First came a report on natural gas policy, which approved the export of gas to the United States because it found that Canada had enough and to spare. It also approved the establishment of a National Energy Board to regulate the building of interprovincial pipelines and the export of energy in the form of natural gas or electricity. The government has recently appointed this Board, after putting through Parliament a complicated National Energy Act which is identical in nearly all respects with the sort of Act

the Liberals would probably have passed in 1957 if they had been returned to power.

The Borden Commission's second report, published last month, is almost entirely devoted to the question whether the Canadian oil industry should seek expanded markets in the United States or eastern Canada. In its final chapter the commission says:

> Canada is not a natural economic unit. There have always been powerful forces of an economic nature tending to separate the

nation into regions. It has been necessary that these forces be resisted to some degree in order to build a nation from a group of widely separated regions. Confederation itself involved the construction of a transcontinental railway to link the outlying provinces with the central ones even though cheaper transportation might have been obtained through the United States.

This is the "underlying principle," says the commission, behind its recommendation that gas exports must be limited to the surplus left after all foreseeable Canadian needs have been fulfilled—a policy which the Liberals had implemented in its difficult part by getting the trans-Canada gas pipeline built, leaving the Borden Commission and the Conservatives to fulfil the easy part of licensing exports.

In the case of oil the practical application of the "underlying principle" also involves a pipeline—either a new oil line from Alberta all the way to Montreal, or at least an extension and enlargement of the existing "Interprovincial Oil Pipeline" which reaches as far as Toronto after crossing the prairies and passing through the United States south of Lake Superior. The western Canadian oilfields, and particularly the largest producers in Alberta, badly need larger markets. Last year their production had to be held down to 47 per cent of their potential output. But Canada was importing 45 per cent of its total requirements of crude, which could all have been met from its own production. At the same time the United States was producing 72 per cent of its potential, and putting quotas on all imports. Canadian crude oil has not been able to penetrate to any refineries east of Ontario. The country's largest refining centre, Montreal, is supplied by crude from Venezuela (and in smaller degree from the Middle East), most of it being pumped through a pipeline from Portland, Maine; and the Montreal refineries, with another small one at Halifax, Nova Scotia, supply all of eastern Canada and even put refinery products equivalent to 50,000 barrels per day into Ontario.

The Borden Commission pinned precise figures to its calculations. Last year Canadian production of oil amounted to 454,000 barrels per day—a reduction from 470,000 in 1956 and 498,000 in 1957 when markets were expanded by the Suez crisis. The commission says production should be 700,000 barrels per day by 1961. This is made up of projected demand of 440,000 b/d in Ontario and the western provinces, plus 50,000 b/d to displace the products from Montreal, together with an additional 210,000 b/d which the Montreal refineries might draw from western Canada. This target is still barely 70 per cent of the estimated potential production; but the commission says that it would be enough to ensure a "healthy and vigorous industry."

Unfortunately the big oil companies which control the five Montreal refineries—with a sixth now under construction by British Petroleum—stated flatly that they would not switch to Canadian crude even if it were delivered to their doorstep. They are Standard of New Jersey (through its Canadian subsidiary, Imperial Oil), Gulf Oil Corporation (through its subsidiary, British American Oil), Royal Dutch Shell (through Shell of Canada), the Texas Company (through Texaco of Canada), and Petrofina SA of Belgium (through Canadian Petrofina). Petrofina has guaranteed to supply its subsidiary with imported crude at competitive prices. The other four companies between them are estimated to have an 87 per cent interest in Venezuelan oil. The five companies own or control, it is stated, about 80 per cent of Canada's refinery capacity; and they produced in 1957 43 per cent of total Canadian crude production. They are sole owners of the

United Nations as Observers

WHEN in doubt, set up an international commission and send it to have a look. In the case of Laos, the devotees of this system have resorted to a questionable manipulation of an unobtrusive section of the United Nations Charter. The Russians had made it clear that they would block any attempt by the Security Council to send observers to investigate the Laotian government's complaint. This obstacle could have probably been circumvented by referring the matter to the UN Assembly, but that would have involved either waiting for the opening of the annual session on September 15th, or summoning a special meeting—an expensive and unpopular procedure. Instead the United States, Britain and France submitted a resolution in such terms that though no mention was made of a visit to Laos, the business to be undertaken could not be done from New York. The Russians have announced that they will not recognise the newly formed sub-committee or its findings.

If the sub-committee finds that there is evidence of persistent infiltration, the Council, or more probably the Assembly, will have to decide whether to dispatch a group of observers to keep the United Nations abreast of the situation. There are precedents for such action. Immediately after the war, when the Greek government complained that the rebels in its northern provinces were receiving help from Jugoslavia, Bulgaria and Albania, the Security Council sent out a fact-finding mission. The report of this mission led the Assembly to override Russian opposition and establish the UN Special Committee on the Balkans (Unscob). This committee set up headquarters in Salonika and kept observers in the area until the insurrection petered out. From 1948 until 1952, Unscob reported regularly that the rebels were receiving assistance from Bulgaria and Albania (and until 1950 from Jugoslavia) and similar reports were put in for another two years by its successor, a sub-committee of the Peace Observation Commission.

In May, 1958, the Lebanese government complained to the Security Council that the United Arab Republic was interfering in Lebanese affairs by taking a hand in the civil war. On a proposal to establish a United Nations observer group in Lebanon (Unogil), the Soviet delegate abstained from voting and the plan was adopted on June 11th without any need to go before the Assembly. A small advance party (borrowed from the United Nations Truce Supervision Organisation on the Arab-Israel frontiers) reached Beirut the next day. The group was built up to 134 men drawn from 14 countries and remained in Lebanon for about three months. But for the first three weeks they carried out patrols only by day, and it was a month before they were able to operate effectively in the frontier areas controlled by the rebels. They were faced with the difficulty of distinguishing a Lebanese from a Syrian in an ethnically indeterminate border area, and of deciding whether the arms they saw had reached Lebanon by way of Syria or direct. Not surprisingly, their reports were inconclusive.

The United Nations has assumed functions of a somewhat different kind in two other frontier zones. The Truce Supervision Organisation (Untso) operates along the Arab-Israel armistice lines (except for the border between Israel and Egypt where it has been relieved by the United Nations Emergency Force). It checks allegations from either side of infringements of the armistice agreements, has its headquarters in Jerusalem and, unlike its counterparts in Greece and Lebanon, has been free to operate on both sides of the line. In Kashmir, a group of 50 military observers have been sending in reports on a static cease-fire line for eleven years, and will probably continue to do so until India and Pakistan agree to eliminate the reason for its existence. But there are worse fates than being forgotten in Kashmir.

'Pier Wharf, half an hour from now!'

pipeline from Portland, Maine, to Montreal. If the Canadian government, therefore, decides that Canadian crude should be used in the Montreal refineries, it will have to compel its use. Customs duties are rejected by the commission, because nobody knows how high they would have to be to become prohibitive. The method it recommends is licensing of imports.

But this is drastic action, and it would not be necessary for the "health and vigour" of the oil industry if the same amount of additional oil could be sold in the nearby markets of the United States. Until last June this was prevented by American restrictions. But when Canada was exempted from them, the commission found itself up against an equally formidable power—the international giants of the oil business. The same American companies which own the Montreal refineries, Standard of New Jersey, Gulf, and Texaco, plus Standard of California and Socony Mobil, account directly, says the Borden Commission, for one half of the imports into the United States and indirectly for much larger amounts. They dominate the American refining industry. They could, if they would, import all the Canadian crude Canada wants to sell. So far as price goes, says the commission, Canadian crude is now fully competitive at the refineries of the Pacific north west (Puget Sound) and at an even larger number of refineries in the Middle West. But it is not being used. Exports reached an average of 151,000 b/d under the spur of the Suez crisis in 1957. In 1958 they were down again to 85,600 b/d. They are rather worse this year. The commission finds that the big oil companies are responsible.

> The use of Canadian oil owned by these refining companies tends to be less attractive financially (than use of their other overseas sources) because under the prorationing system applied in Alberta they are required to purchase oil produced by other companies as well as from their own holdings.

Also, it says, oil produced from Canada may cost them more in exploration and development to replace the reserves; and low tanker rates have also favoured use of overseas supplies.

This leads the commission to recommend that the Canadian government should attempt a form of blackmail on the giant oil companies. This is the form: let them make a "vigorous and imaginative effort" to raise Canadian sales to the United States; a year to a year and a half would give them time; if by the end of 1960 they have not raised their imports from Canada to 210,000 b/d —for a total Canadian production of 700,000 b/d—then let the Canadian government and the National Energy Board put the Montreal pipeline back on the agenda, complete with import restrictions and the rest of the necessary paraphernalia.

It should be a neat trick if it worked. Meanwhile the Conservative government is excused from asserting the "underlying principle" of "resisting economic forces in order to build a nation."

The Vanoni Plan Reappraised

FROM OUR CORRESPONDENT IN ROME

In January, 1955, the late Signor Ezio Vanoni, then minister for the budget, who is still regarded as the guiding economic spirit of the Christian Democrat party, presented a "plan for the development of employment and income in Italy from 1955-64." The Vanoni plan has been the main plank in the Christian Democrat platform in two general elections and numerous local contests although probably few voters had more than a vague idea of the targets it set up and the means it proposed to achieve them. Last April, the prime minister asked Professor Pasquale Saraceno, chairman of the committee for the development of income and employment, and one of the authors of the Vanoni plan, to draw up a report on how far the national economy had developed during 1955-58 along the lines traced in the plan and to estimate whether the plan's aims and policies are still valid in view of such new factors as the common market.

The "Vanoni Plan Reconsidered" contains a number of salutary shocks. It shows that although one of the basic assumptions of the plan has been achieved, since the national income has increased at the rate of 5.2 per cent (the assumption was 5 per cent), neither investments nor employment have kept up the prescribed pace. What is worse, investments have been concentrated in the already advanced sectors and areas, so that the distribution of income has not tended to improve the conditions of the unemployed and underemployed, while the gap between the depressed and the progressive parts of the economy has remained constant in spite of the progress which public works and other incentives have brought about in the South. The report concludes that in present conditions this gap tends to become permanent.

The Vanoni plan prescribed that investments should increase by 7.8 per cent per annum. The actual rate of increase for global investments is 6.8 per cent, less than the target but higher than the rate of increase of the national income. This was prescribed, but the distribution of investments is very different from that envisaged in the plan. Investments in agriculture have increased by only 2.5 per cent per annum instead of 7.5; public utilities by 5 instead of 7.6, and total investments in the so-called propulsive sector (agriculture, utilities, public works) by 4.1 per cent per annum instead of 7.3. Investments in industry and services have increased annually by 6.1 per cent instead of the prescribed 8.9 per cent. Only housing has boomed with an annual investment increase of 11.5 per cent instead of the scheduled 6.5. No wonder visitors to Italy are impressed by the amount of building going on. In point of fact Italians have been spending their increased income on the least productive form of investment. The boom in houses, one is tempted to think, depends partly on the desire to satisfy new aspirations towards a higher standard of living, but mainly upon the conservative habit of speculating in real estate. Whatever its cause the trend conflicts with one of the fundamental conditions for the fulfilment of the Vanoni plan: that the nation should practise austerity.

Investments in industry have been influenced by technological progress to a much greater degree than the plan foresaw. The trend is to modernise and extend existing plant rather than build new plant in new places. Professor Saraceno sees a conflict between investments tending to increase productivity and those tending to increase employment. The criterion of productivity is likely to get more emphasis because of the common market as well as a probable slowing down in the rate of expansion of world trade. If the criterion of employment is to prevail the report sees the need for an energetic investment policy.

The Vanoni plan recommended that the state should not compete heavily with private industry for investments. This line has been followed in the period 1955-58 when state bonds dropped from 45.8 per cent of the total of loans to 24.1 per cent. (The proportion will be higher now since a three hundred billion lire state loan was floated early this year and covered by the banks.) It is odd, however, that Professor Saraceno does not mention the fact that the banks are bursting with savings which no one will use. The prime minister himself has drawn attention to the fact in an appeal to private industrialists to show more courage. This point might well have been noted in the report and set against the doubts expressed about public spending. The report considers that in future a much greater part of the tax yield will have to be spent on welfare and education, leaving less available for investment in the "propulsive" sectors of industry. In that case, since private industry is not coming

forward, why should the state not borrow more from the banks?

The Vanoni plan set a target of four million new jobs by 1964. The rate of progress in the period considered has been slower than this (1,400,000 new jobs instead of 1,600,000) although emigration has drawn off more than was foreseen. Professor Saraceno thinks that the target itself falls short of national requirements. He foresees an increase in the demand for jobs as more people leave agriculture and more women come on to the labour market. Moreover, the Vanoni estimate that technological progress would shut down 800,000 jobs in ten years is now considered too low. The whole problem of employment and a more equitable distribution of national income, says the report, calls for more vigorous policies of investment, prices and salaries. But would not a sound tax reform be useful? The report is silent on this point.

The factors which determined the pattern of economic development from 1955-58 were the building boom and the expansion of exports; the deficit in the payments balance was eliminated in 1957, sooner than Signor Vanoni foresaw. The report considers that these factors, which are probably destined to disappear, have carried the economy away from the lines traced in the plan. But the report does not say that the main reason why the Vanoni plan has never become the inspiration of an economic policy is that governments have lacked the courage to implement it by a minimum of coercion. Thus, for instance, the report laments the failure to invest in the South and ascribes it to the fact that the increased demand for goods arising out of increased income could be satisfied by increasing the productivity and the dimension of existing industrial centres. It does not say that one cause of the delay in investing in the South is the high cost of electricity there, a drawback which could be eliminated or at least attenuated by government action.

There are signs however, and the report itself is one of them, that public opinion, or perhaps it would be more proper to say Christian Democrat opinion, is becoming convinced that the time for such action is now ripe. It is significant that the government has recently decreed that IRI (the Institute of Industrial Reconstruction) should set up a new steel plant at Taranto. Another sign will be the government's acceptance, or rejection, of the project presented by ENI for the industrial development of Gela in Sicily. The project, which contemplates investments of 110 billion lire (with a net profit of 14.38 per cent) was submitted several weeks ago to the inter-ministerial committee.

A VISIT TO BRNO—I

Switzerland of Eastern Europe

BY OUR SPECIAL CORRESPONDENT

FOR the first time since before the war, the engineering fair at Brno has been made an international show. The fair, the Czech prime minister declared, when he opened it last Saturday, is to be a meeting-place for peaceful economic competition between east and west, as well as a demonstration of the economic strength of the "socialist camp." The Czechs, who ran an international fair for many years before the war, have been slow to reopen the door to western exhibitors. The Leipzig fair has been international since 1951. But now that the Czechs have made the move, they have done it impressively. The wide range of engineering products, the colourful well-designed fairground which sets many western fairs to shame, testify to the economic prowess of the "Switzerland of eastern Europe."

The picture of Czech prosperity has its flaws. Caught up in the cold war taboos which surround the western visitor, or in the tangles of buck-passing and indecision which bedevil the lower ranks of the bureaucratic hierarchy, the visitor to Czechoslovakia can suffer in ways which would have made Kafka pale. Taps drip: Prague could do with a coat of paint: with a mere 30,000 houses built each year, there is a frightful housing shortage. Clothing is adequate, but only the rare smart girl finds ways to break through the general drabness.

All the same, the Czech economy gives an impression of underlying strength. Relatively little damaged by the war, the country's traditional industries provided the planners with a sturdy base to build on. Standards of life do not compare with Britain's, it is true: real wages in terms of purchasing power for consumer goods are perhaps a good third lower. The Czech pays little rent, but he may get very little for what he pays. But real wages are rising year by year. Russians and Poles come to Prague to shop for a wide range of durable consumer goods.

In the investment industries the characteristic communist achievements can be plainly seen. Czechoslovakia already occupies a key place in the development plans of the Soviet block. It has won notable contracts in the undeveloped countries. Since 1937 the engineering industry has expanded more than fourfold, the premier explained last week, and today it covers some four-fifths of the range of engineering products that are made in the world.

One notable economic feature distinguishes Czechoslovakia from Russia or east Germany. Income differentials are remarkably small. In east Germany the need to compete with western standards of pay for management has fixed a biggish gap between privileged and poor. In Russia the gulf between top-pay technocrats and unskilled workers yawns even wider. Czechoslovakia is far nearer to an older communist ideal—or, for that matter, to Britain. Workers' pay ranges from 800 to more than 2,000 crowns a month and the best-paid skilled worker may get more than the don or foreman. Engineers' salaries range modestly between 2,000 and 3,000 crowns. This may in part reflect the fact that in economic matters the workers as a group, indispensable to the regime, still enjoy considerable power. That has meant moments of strain when the regime has sought to cut back wages. But in the long run it is a source of stability and strength.

SINCE Mr Macmillan went to Moscow, a good many Czech officials have been suggesting that especially favourable opportunities await Britain in trade with their country. The attempt to distinguish between one western state and another has, of course, a political motive. Those Czechs who take this line perhaps forget that the more they attempt to "divide the imperialist camp," as they put it, the less easy it is for any western country to take a more flexible line. Economically, there obviously are opportunities for some growth of trade with the west. The Czechs placed a large order for paper-making machinery with a British firm at the Brno fair. They are interested at present in capital goods for chemicals, metallurgy and the metal industries. They will always be interested in the latest western technical developments.

But there is much in the view of many western business men that the only major export opportunities are for goods that are not produced at all in the eastern camp. Ask a Czech official whether he can visualise a major expansion in mutual trade in consumer goods, and he will point to the instabilities of western markets which raise such problems for the planner. The Czech planners seem prepared to buy a few western consumer goods to give a little colour to life. But there is no deep interest in buying goods in the west just because they are made more cheaply there than at home. Trade officials suggest that long-term trade agreements and more generous import licensing in Britain may help to expand trade between the two countries. But their own central purposes remain unequivocal: to develop the economic co-operation and strength of the communist countries; thus, they believe, they will increase their bargaining power with the capitalist world.

(To be concluded)

Electrical Aids to Industry *Data Sheet* **No. 6**

Lighting—1

Good lighting affects productivity in three ways: (1) by directly increasing the speed of working and reducing errors and wastage; (2) by improving overall factory efficiency through better supervision and housekeeping; (3) by providing better working conditions, thus improving labour relations. This, of course, avoids frequent changes of workpeople.

It is not possible to judge by the eye alone whether the lighting in any factory is good enough to serve these purposes because the eye has a tremendous range of adaptation (vision of some kind is possible within an illumination range of 1,000,000 to 1) and is hence an unreliable measuring instrument. Severe mental and eye strain or unconscious slackening of working speed may occur under lighting which *appears* to be quite adequate.

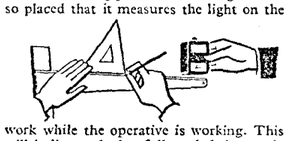
The only reliable way to appraise factory lighting is to conduct a lighting survey using a lightmeter, an inexpensive instrument which measures the actual illumination available. These figures can then be compared with official recommended values for the various tasks.

Lighting Survey

A methodically conducted lighting survey is the first step towards achieving good productive lighting. The average artificial illumination at working height should first be measured. This requires a number of readings at a number of positions relative to the lighting fittings, particularly beneath and between fittings and by the wall. The average of the readings should then be compared with the illumination values recommended by the Illuminating Engineering Society. The following is a general guide to illumination requirements.

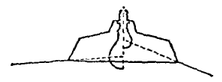
NATURE OF WORK, PROCESS OR MATERIAL	ILLUMINATION LUMENS/SQ.FT.
Rough or routine work. Large detail. Medium to light material of good contrast.	7
Ordinary work usually involving workers' inspection. Medium detail and contrast.	15
Skilled work, small detail or dark material.	30
Very fine *exacting* work.	100

In addition, readings should be taken at selected working points with the lightmeter so placed that it measures the light on the work while the operative is working. This will indicate whether full use is being made of the light or whether shadow is obscuring part of it.



Glare

Any direct light on the eye tends to reduce its sensitivity—thus reducing the power to see. Increasing the intensity of the light source may therefore not improve matters unless care is taken to avoid glare either by correct positioning or by the use of correctly matched reflectors and lamps.



Shadows

Unnecessary shadows may seriously slow down work and also cause accidents. Lightmeter readings should always be taken under conditions exactly similar to those obtaining while work is going on. The operative himself may mask his work, an overhead crane or a heavily loaded conveyor belt may periodically obscure a light fitting, or a dust-laden atmosphere may reduce the calculated lighting values.

For further information, get in touch with your Electricity Board or write direct to the Electrical Development Association, 2 Savoy Hill, London, W.C.2. Telephone: TEMple Bar 9434.

Excellent reference books are available on electricity and productivity (8/6 each or 9/- post free)—"Lighting in Industry" is an example.

E.D.A. also have available on free loan in the United Kingdom a series of films on the industrial uses of electricity. Ask for a catalogue.

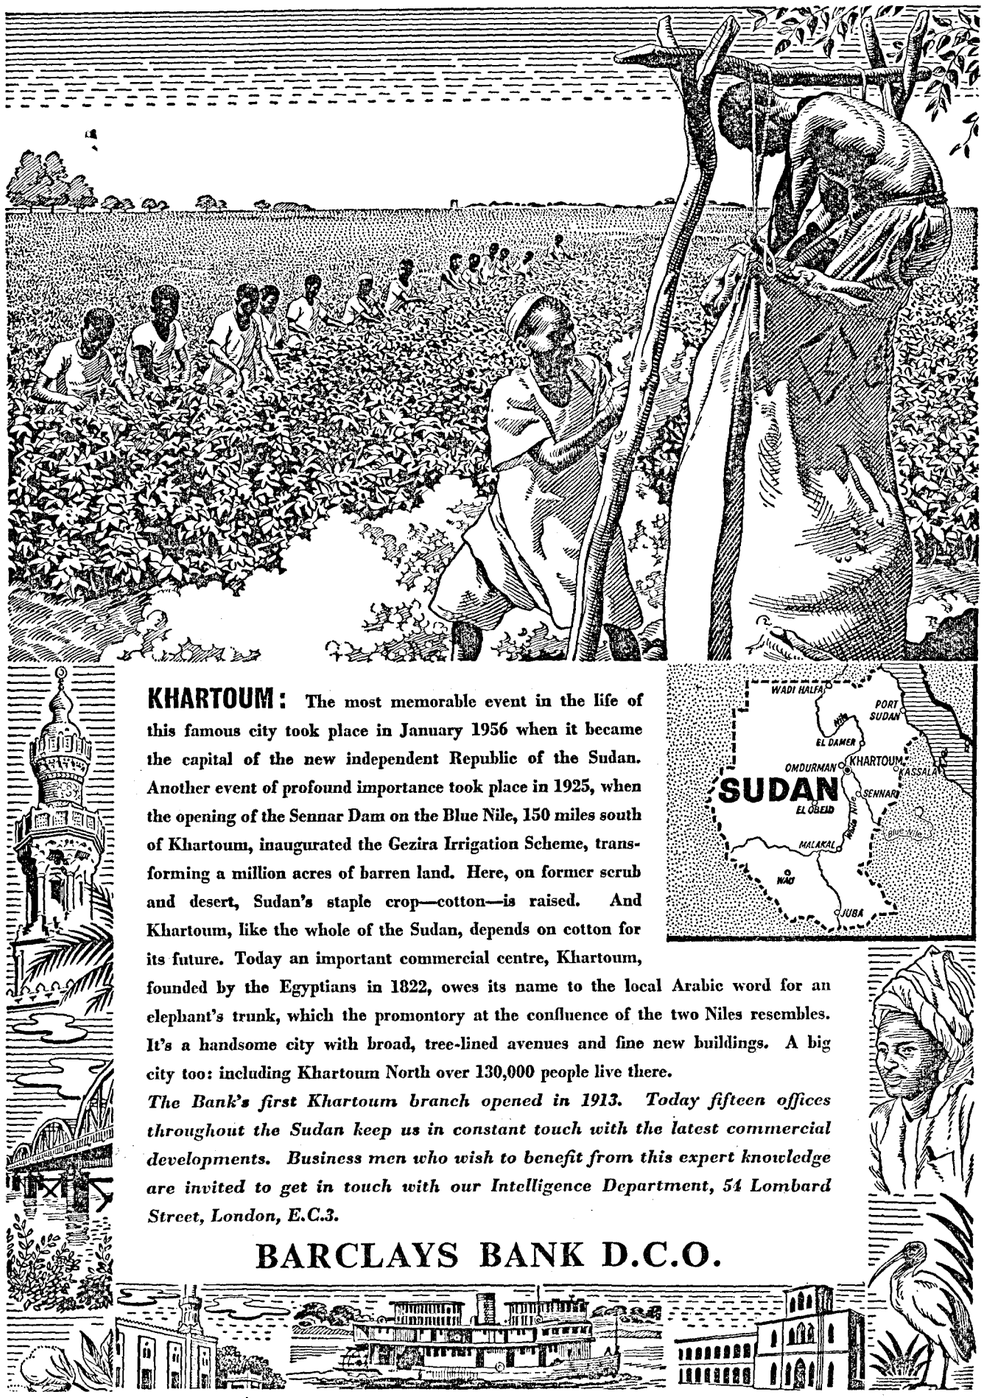
Carley and Clemence Limited, 49 Hatton Garden, London E.C.1.



KHARTOUM: The most memorable event in the life of this famous city took place in January 1956 when it became the capital of the new independent Republic of the Sudan. Another event of profound importance took place in 1925, when the opening of the Sennar Dam on the Blue Nile, 150 miles south of Khartoum, inaugurated the Gezira Irrigation Scheme, transforming a million acres of barren land. Here, on former scrub and desert, Sudan's staple crop—cotton—is raised. And Khartoum, like the whole of the Sudan, depends on cotton for its future. Today an important commercial centre, Khartoum, founded by the Egyptians in 1822, owes its name to the local Arabic word for an elephant's trunk, which the promontory at the confluence of the two Niles resembles. It's a handsome city with broad, tree-lined avenues and fine new buildings. A big city too: including Khartoum North over 130,000 people live there.

The Bank's first Khartoum branch opened in 1913. Today fifteen offices throughout the Sudan keep us in constant touch with the latest commercial developments. Business men who wish to benefit from this expert knowledge are invited to get in touch with our Intelligence Department, 54 Lombard Street, London, E.C.3.

THE BUSINESS WORLD

How Much Science?

In slightly different words, some such statement as the first quotation below must have appeared in almost every presidential address to the British Association since the war, as well as on innumerable occasions elsewhere. Sir James Gray, in this year's address, had no need to argue the point; he merely cited it in passing, as one of the accepted truisms of our times.

In our times, the second quotation would certainly not be accepted as a truism (though it might have been so accepted by many scientists, and proudly, a century or so ago). As a philosophical aside, the British Association must have heard it before—but not recently, and not from an economist presuming to question one of the bases upon which the whole scientific establishment nowadays stands so tall in public esteem. Professor Jewkes's address on "How Much Science?" delivered from the very forum of that establishment, was thus as provocative as it was characteristically hard-headed and empirical and distinctively an economist's contribution (a model, incidentally, of what such addresses to Section F should be and in recent years practically never have been).

Early last year Professor Jewkes in his book *The Sources of Invention* examined critically and indeed corrosively one reigning assumption about science: that industrial innovation derives mainly from organised large-scale research and can therefore be guaranteed or even accelerated by the proliferation of research departments. Last week he turned his attention to another such assumption: that Britain today is either actually suffering from a shortage of scientists, or ought to be demanding more of them than it in fact does. As an economist, Professor Jewkes could readily define a shortage—circumstances in which at the prevailing price the demand for scientists is greater than the supply. The other circumstances often loosely called by the same name, in which the institutions actually exercising demand for scientists, such as universities, public laboratories and industrial firms are alleged not to be demanding enough for the public good, Professor Jewkes distinguished as an "unmet need," which is "a vague and perplexing concept (although I am not prepared to argue that it is entirely without meaning)."

Is there a market shortage of scientists in Britain? Professor Jewkes showed that the supply, measured in degrees and diplomas obtained in pure science, was in 1956-57 more than twice as great as in 1938-39 and 11 per cent greater than in 1949-50; since then the number of students taking up pure science has gone up by 25 per cent, so that this increase is certain to continue. In the three years 1956-59 the total output of scientists from British universities would be about 18,000; according to a Ministry of Labour enquiry in 1956, industry, government and the educational authorities then reckoned they would need 9,500 extra scientists (net) by 1959. From such scrappy evidence as is available, the salaries of scientists still do not appear to be particularly high in comparison with those in other professions; nor, Professor Jewkes thinks, do those earnings appear to have risen much out of line with other salaries during the years when shortage of scientists has been so much discussed. In market terms, the universities seem to have been producing quite as many scientists, in total at least, as their actual customers wanted.

An unmet social need for scientists is a more slippery thing to identify and measure. Various arguments have been advanced to demonstrate that Britain's supply of scientists, even if adequate for the actual demand, is so merely because the country is not sufficiently "science-conscious," or is falling behind other countries in the promotion and application of science. A detailed comparison of the output and stock of scientists in Britain and the United States can be alarming or comforting, according to the view one takes of the degrees awarded in the two countries. If first degrees in pure science are taken as equivalent, the United States possesses and is producing about twice as many scientists in relation to its population as Britain. If the first science degree in Britain is taken as equivalent to the second degree in America, then

WE cannot shut our eyes to the fact that our national economy depends on our ability to make and exploit new scientific discoveries. If we wish to maintain or extend our standards of material comfort we must have more professional scientists and highly-trained technicians. . . .

—Sir James Gray, President of the British Association.

. . . AS an observable fact, the overwhelming mass of scientific thought and observation in the western world was never designed to bring, has not brought, and is highly unlikely ever to bring the slightest improvement in material standards of living.

—Professor John Jewkes, President, Section F (Economics).

Both to the annual meeting of the British Association at York, 1959.

Britain appears well ahead. "A reasonable compromise solution," Professor Jewkes suggested, "is that the two countries are in roughly the same position." As a proportion of national income, again, the amount of money devoted to research and development in Britain is much the same as in the United States. Comparisons with Russia rest on an even more rickety statistical basis, and the inferences to be drawn from them are not unmixedly unfavourable to the West.

Assumptions that there is some "definable" (but usually undefined) relationship between the number of scientists and technicians available to a country and the rate of economic growth, Professor Jewkes had little difficulty in showing, rest on practically no evidence whatever, and that inconclusive. Britain's Committee on Scientific Manpower, in 1956, reckoned that demand for such trained manpower within each industry would increase in direct proportion to increases in industrial output; being advised (the official crystal-gazers were then in rosy mood) to work on the basis of an average increase of 4 per cent per annum in industrial output, it concluded that Britain would need 4 per cent more scientists each year. Professor Jewkes dryly called this reckoning pessimistic, since it assumes that scientist and technologists could economise in everything but themselves: it would incidentally, he notes, mean a rise in the number of engineers from about 120,000 in 1955 to 5,171,000 in AD. 2050. (One might only add that by then Britain might be able to support any number of people in any vocation to which they might care to become accustomed: income per head, on this same beautiful extrapolation, might be perhaps 30 times what it is now.)

Upon so cold-blooded an analysis of a subject that is usually overheated with special pleading, therefore, there would appear to be no general market shortage of scientists in Britain (though demand and supply of particular specialists, obviously, will be difficult to match up at particular times.), and the alleged "unmet need" is as difficult to find as it is to define convincingly. Customers—for example, the big companies that employ scientists in large numbers—have incidentally been aware of the first point for two or three years now; quite apart from the relation of output to expected demand, defence research, which employs more than half the scientists in Britain, has been cut since 1956. Professor Jewkes has not done the same calculation so far as technologists are concerned: his suspicion, however, is "that the shortage of, and the need for, qualified engineers in Great Britain may have been exaggerated."

QUITE obviously, what one needs for rational decisions about the amount of resources that an economy should devote to scientific research that it hopes will eventually produce economic gains (as distinct, perhaps, from the amount that a society may care to devote to widening human knowledge or simply to making the ordinary educated person, whatever his eventual vocation, as literate as he wants to be in the alphabet of modern science) is some cool calculation of net return. This calculation should count not only science's successes, but also its far more numerous failures. So far, little such calculation has even been attempted: organised research is still young. Much room, even when such calculations become available, will no doubt still be left for intuition, judgment, and common sense: "The process of shuffling resources about until something like the correct balance is struck is not, in itself, scientific procedure and certainly not one in which scientists should be allowed the last word."

Professor Jewkes could very fairly argue to "those whose task it is to put science and technology on the proper map and in its proper place" that religious, political and social (and not scientific) ideas are the great moulding forces of our world, and that the development of new social and economic institutions may have contributed as much to economic progress as the technical inventions and scientific discoveries of the last two centuries. "It is by no means clear that for those countries with urgent short period economic problems, such as intractable balance of payment difficulties or levels of poverty which are politically explosive, more science and technology should have the highest priority"; Britain might need good salesmen more, and the under-developed countries certainly need better administrators and managers to help them make use of the existing stock of technical knowledge. Are scientists and technologists, claimed to be short, really being efficiently and economically employed? If they are short, why is the price of them held down by rules that academics in other disciplines must be paid as much, or that administrators must be paid more? He is entitled to warn scientists not to sell science on false promises that it can everywhere guarantee economic gains: "the ultimate purpose of science is not to cater for the lower claims of material progress, where indeed its yield is uncertain, fluctuating, and sometimes even negative, but to satisfy the higher needs of knowledge for its own sake, where its returns can hardly ever fail to be positive."

All of this needed saying, particularly among scientists. It was inevitably travestied, by some illiterates, into "Professor Jewkes doesn't want any more scientific research"; that does not matter. What matters more, however, is that this should not be mistaken for any suggestion that "How much science?" is a question about which Professor Jewkes or other economists think they know it all. He himself was careful to emphasise his main conclusion: that we should go on searching for better criteria to decide, or inform the decision, how much the community should devote to science and to technology. For the decisions have continuously to be made, rational or not. With Professor Jewkes about, we must watch our words, and not suggest that they are more difficult decisions to make than men in history have often had to take; but it is perhaps not exaggerating to suggest that they may be among the most complex. Industrial research, which can only precede investment and seems inherently far more risky, lengthens the period between decision and return, if any; and a society such as Britain is not yet affluent enough for even a few very big wrong guesses not to matter. Economists, certainly, as yet possess no lore to calculate this nicely less or more; nor would the decisions, even if they had, ever be wholly economic. What they have to offer is the best information they can dig out about net returns upon resources devoted to science for economic ends, and their own knowledge of the problems always encountered in allocating scarce resources. One of the first of those contributions, which Professor Jewkes has made, is to remind scientists and the public how much we do not know about the matter.

A Stake in Hire Purchase

OPPORTUNITIES to put money on deposit in the hire purchase finance houses are plentiful. Opportunities to share in the growth of these companies through an investment in their equity stocks are very limited. Only seven HP finance houses are quoted today on the London stock exchange. The famous 1,200 HP organisations that the Board of Trade has managed to count are for the most part quite small; often they are family affairs closely linked with a specific line of retail business. Over half of them together own less than £2½ million of hire purchase debt, which is half of one per cent of the total. Some of the medium sized companies have been growing fast, but only one or two are big enough to consider coming to the market for a quotation.

When the banks bought their stakes in HP finance—at what are now seen to be bargain basement prices—they prevented the corpus of HP finance shares from growing. In three instances a house that had been a public company became instead a wholly owned subsidiary of a bank; and in other cases, investment by the banks obviated the need for raising new capital from the public. Just as in commercial television, only a handful of shares in a handful of companies change hands and price movements can be correspondingly sharp. But the trend has been obvious: outstanding trading results; lyrical comments on growth prospects; and earnings and dividend yields brought very low.

Expansion in hire purchase finance has now been discounted a good way ahead and the best British finance house shares yield no more than 2½ to 3 per cent. (It may be noted that as good a share as Custom Credit in Australia currently yields 5¾ per cent.) The primary stage of automatic growth for hire purchase finance is now perhaps past in Britain and the investor has to weigh two uncertainties. Will the finance houses continue to provide a growing share of a growing total of consumer credit? Could they be checked by official controls? Controls on hire purchase have been shelved—not abolished. On balance the Radcliffe report is reassuring about this; it argues that any controls over the liquidity of the banks should be extended to other lending institutions, including hire purchase houses, but it is difficult to see how they could be equitably and effectively imposed. Hire purchase was nowhere cited in the report as the knave in the pack. Controls on the terms of HP contracts, it was stressed, should be used only in an emergency when other sources of credit were being subjected to severe restrictions.

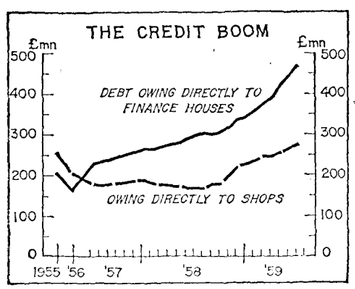
So the risk that hire purchase houses might lose business to other credit institutions as a result of discriminatory controls imposed by the Government is now lower than before the Radcliffe report appeared. But a broader question is still unanswered. Will the community as it grows richer continue to rely heavily on hire purchase if it can get ready access to cheaper credit from the banks? So far, the ability of hire purchase to compete against other sources of credit has not been severely tested; since the end of the credit squeeze a year ago, bank advances and hire purchase transactions have climbed rapidly together. Plainly the first urge was to satisfy the demand for credit which formerly was dammed up; but when this backlog of demand is worked off (as it may soon be) competition to provide credit may become more intense.

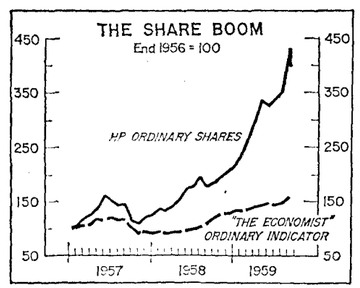
AT the moment, about 70 per cent of the credit extended by the HP finance houses is for new and secondhand cars; another 10 per cent is in industrial and farming equipment and the rest mostly in consumers' durables. Some of the business, particularly in cars and producers' equipment, will be affected if the banks start to hunt for business—and if borrowers wake up to getting cheaper credit. If this should happen, the balance of the business of the finance houses might veer away from cars and towards the block discounting of HP paper held by retailers on household durables.

But competition for credit business, if the authorities allow it, will be in a market that will surely grow in total. Mass consumption boosts the demand for instalment credit, and only now is Europe beginning to follow the lead of the United States, Canada and Australia. The well worn statistic is that consumer credit in the United States is about 14 per cent of disposable annual income, and still only about half that in Britain. So there seems plenty of opportunity for growth here even though Britain will hardly follow the United States all the way in its use of consumer credit. Differences in social habits, some of which may even endure, and the fact that fewer Britons than Americans pay for their cars out of their own pockets will limit the possibilities of growth in important credit fields.

Hire purchase finance houses have strikingly increased their share of instalment credit in Britain over the last few years. In December, 1955, £256 million was owed directly to shops supplying household goods and £205 million to finance houses. By July this year the debt owed to the shops had risen only slightly, to £273 million, but the finance houses had more than doubled their stake to £469 million. They may not be able to do so well in the future. Restrictions on their sources of finance were largely ineffective, despite the squeeze, but they would not necessarily be so if the authorities clamped down generally on liquidity.

The rate of growth in hire purchase credit has for the moment levelled out





and the Board of Trade expects a fall early next year. At this point, the finance houses will be subject to a test different in kind from that imposed by the credit squeeze and likely to produce different results. The squeeze was lopsided: it made business easy for the very small finance house, which could duck under the controls on capital issues; and the big houses, struggling to raise funds, could not meet the small in full competition. Today, the advantages seem to lie wholly the other way—with the big houses and particularly with those linked with the banks. This covers virtually all the big houses (except Lombard Banking); and some of the medium sized houses have important links with merchant banks and insurance companies.

THE big house pays less for its moneys and enjoys correspondingly better margins than those of the smaller houses. Members of the Finance Houses Association are paying 1/1½ per cent above Bank rate for deposits whereas the medium sized house, with no banking name to lend it lustre and security, may be paying up to 3 per cent above Bank rate and some small houses are advertising for money at 8 to 9 per cent. Nor have the banks been slow to funnel business to the finance houses in which they are shareholders; and if a credit squeeze were to return, it would be only patriarchal if the banks in being forced to be hard found it possible to be less hard on the finance houses with which they are associated.

For the investor, then, the big house seems to offer the better security against the prospect of greater competition and of the risk from a renewed tightening of credit. Earnings and dividends of the big finance houses seem certain to grow, because of the weight of the business they have transacted in recent months, but the current yields on their shares probably discount that growth pretty fully. Between those houses that are linked with the banks there seems little to choose. Some investors may be particularly attracted to the companies that are expanding abroad. So far this expansion, notably by UDT and Lombard Banking, as well as some deposit banks, has been confined to the Commonwealth, but the finance houses are planning closer contacts with European counterparts and some would do business on the Continent if they could secure exchange control permission.

Growth in business is more beneficial to the ordinary shareholder in a finance house where the ratio of risk capital to total borrowings is low. Some striking differences are shown in the accompanying table. It would now be to the banks' own advantage as shareholders to keep the ratio as low as possible, by financing an expansion in debt through additional advances or deposits and not through a further increase in the ordinary capital. It may be significant that the new issue of £2½ million by Mercantile Credit, in which two clearing banks have an interest, is in preference shares and not in ordinary shares.

The judgment of investors, as reflected in current yields, that the big houses would grow and that the shareholdings the banks acquired in them gave them respectability, stability and security, has obviously proved right. It would not, however, be wise today to lump all the finance houses together and regard them as a growth industry. The big houses are much stronger than before and their vulnerability to swings in the market for credit is less. But in gaining status they may have lost some of their opportunities to live adventurously. The smaller houses, on the other hand, are now more vulnerable in this more competitive market in credit. But, so long as they are well managed, they could still have the chance of expanding at a pace that their more mature big brothers might find difficult. Institutional investors and others who get a chance of a private participation in such a company before it is publicly quoted are to be envied by those whose only investment opportunity is to add to their stake at a high price in the big and established giants.

BUSINESS NOTES

ELECTION MARKETS

All Over Bar the Voting?

PROBABLY no election in recent years has cast as long a shadow before it in the financial markets and in the minds of businessmen as the election now fixed for October 8th. Yet on the day the election date was announced, while the *Dow Jones* average on Wall Street dipped 9½ points to 643, the *Financial Times* index of ordinary shares in London shot up by 4 points to 255, its biggest gain since the aftermath of Mr Butler's autumn budget in 1955. At the same time on this remarkable Tuesday gilt-edged rallied, and the Continent bought sterling. The election spectre has evidently become less ominous as it has actually come into view.

But the buoyancy of the markets on the election news is attributable to more than confident political forecasting. It is a reflection of the firmness of the undertone, in equities, in sterling, even perhaps in gilt-edged. Sterling has done unexpectedly well this year. It has got half-way through the season of commercial strain without dipping below parity, and it has had to contend with a rise in interest rates in New York pulling funds back across the Atlantic. This week, it seemed likely the spot rate would dip below $2.80. Instead, it rallied slightly, and the Exchange authorities probably made good their modest losses of gold and dollars incurred in their supporting operations last week. Significantly, too, the discount on the forward dollar remained, while the premium on dollar securities in London narrowed to 1¾ per cent. The forward exchange margin continues to be roughly at its interest parity, offsetting the differential between three months' Treasury bills in London and New York—though there is a distinct margin in favour of covered arbitrage in longer bills and short bonds in New York.

On present indications it seems the exchange authorities should have a smooth run. In any case they have ample means to fight off any speculation that may develop—and the knowledge that they have those means is itself a major element in discouraging such speculation. The central reserves now total $3,248 million and there is a standby credit immediately available at the International Monetary Fund of $939 million. If any short-term pressure appears the reserves will be used; that is what reserves are for.

Bank rate, for the next four weeks, is presumably immovable. Certainly the authorities have given no encouragement in their money market operations to a rise in bill rates to follow New York. Nonetheless, a growing number of people are thinking that a rise in Bank rate may be called for before the end of the year; and outside applicants at the Treasury bill tenders are holding off. Some observers are predicting, not too dogmatically, a rise in Bank rate soon after the election, whichever party gets back.

Equities Go Ahead

PUNDITS on the behaviour of the stock markets cannot have it both ways: equities took quite a knock in the second half of last week because of the prospect of an early election, and then after the polling date was announced they jumped ahead again. Yet the illogicality of these movements is more apparent than real. Two forces are exerting differing tugs on investment decisions and they will continue to do so until the last vote has been cast and counted. The first is a natural reluctance of investors to commit themselves wholeheartedly when the outcome of the election is uncertain; that may be especially important for investors contemplating a big commitment to buy, with prices already at high levels. The second is the belief, as sustained by the public opinion polls, that the Tories will in fact win, and that there will be a run of four or five years in the stock markets without much, if any, political interference.

Equity prices will thus for the next few weeks tend to swing in time with the opinion polls, though as October 8th draws nearer, election nerves will be more in evidence. While the speculators will find it difficult to resist the short-term gamble, investors for the longer term may move rather more cautiously, keeping their buying to a minimum. But if they are convinced, as the institutional investors generally seem to be, that whatever political party is in power the weight of equities within their portfolios has to be increased, they will still be buyers and not sellers. The undertone of the market should remain reasonably firm, as indeed it did on Wednesday, though Wall Street had suffered quite heavy losses. Any drop in equity prices which is not occasioned by a forecast of a victory for the Labour party is more likely than not to lead to renewed buying.

Nor are investors likely to be afraid of taking up any attractive new issues that come on to the market this month. Last week they gave a rip-roaring reception to the issue by General Electric of a 6 per cent loan stock (1979-84) at par, putting in subscriptions of £43 million for £4 million worth of stock. This week they have battled for copies of the prospectus of the offer by Mr Clore's property company, City and Central Investments, putting in applications worth more than £37 million for the 1,500,000 ordinary shares at 25s. each. That is a sign of their willingness to buy growth equities, just as the widening of the premium on the GEC loan stock (£25 paid) from ½ to 1⅞ demonstrates their eagerness to take up high-coupon fixed interest stocks. This offer and that by Thorn Electrical of £3½ million of a loan stock on exactly the same terms may mark the end of the regime of a 6 per cent coupon for good-class industrial loan stocks. Indeed, hard on their heels came an offer by Ranks, the flour millers, of £7½ million of a 5¾ per cent unsecured loan stock (1976-81)

* Adjusted for scrip issues.

at 98½. These terms offer a running yield of £5 16s. 9d. per cent and a redemption yield to the latest date of £5 18s. per cent. They seem to be sufficient to ensure a premium on the offer price when dealings begin. Similarly, the high coupon as well as the name of Mercantile Credit and the business of hire purchase should attract subscribers to the issue by that company of 2½ million 6½ per cent cumulative preference shares of £1 each at par.

The Steel Gamble

STEEL equities are the obvious gamble. They have been so throughout the whole of this year and only a few weeks ago German and American investors joined British ones in buying them on the chance of another term of office for the Conservatives. If the threat of nationalisation is pushed once more towards the Greek kalends, the prices of steel shares must rise so as to bring their yields down to a level comparable with their investment merits. There is a gap of 1½ to 2 per cent between their present yields and those offered by blue-chips in other industries. A Tory victory would narrow that gap for all steel equities and perhaps close it entirely for those companies whose prospects are the brightest. The speculators gambling on a political chance are already discriminating between the individual companies.

The jump in the prices of steel equities this week was a natural response, but it was exaggerated by two factors. First, when prices fell at the end of last week very few steel equities were sold, so that on Tuesday the jobbers had little stock on their books to absorb the sudden increase in buying orders. Secondly, the option market in steel shares became more active than ever—so much so that the call option prices on steel shares went up by not less than 1s., with the option price on Colvilles going up by as much as 1s. 9d. to 5s. 9d. As investors bought three months forward "calls" on steel shares, the dealers, to cover themselves, bought the shares spot in the market, where the usual practice is for a dealer to buy about half of the amount of the shares on which he has sold a call option. These dealings added to the volume of turnover and pushed prices up. The capital gains made on steel equities, if the Tories win, will still be big: they will have to be if a buyer of a "call" on them is to see a profit after paying the option price, contango interest, dealing costs and stamp duty. On Wednesday it was significant that many more "takers" of call options began to come forward.

NATIONALISED INDUSTRIES

Improving the Scrutiny

WHEN the appointment of a sessional Select Committee on Nationalised Industries was first proposed in 1953, the suggestion was that it should be served by an officer of the status of the Comptroller and Auditor-General, plus at least one professional accountant, and such other staff as required, and should be able to call for information from the auditors of the public corporations. No such staff or powers were in fact ever given to the sessional committee that was eventually set up at the end of 1956, which was in any case given different and looser terms of reference, i.e. to examine the reports and accounts of the nationalised industries: it is served only by a clerk and a Treasury liaison officer. In the two and three-quarter years since, the committee has reported on Treasury control of the nationalised industries; on the North of Scotland Hydro-Electric Board; on the National Coal Board; on the two airline corporations; and on the Atomic Energy Authority. It now however feels, it told Parliament in a special report this week, that if it had had an accountant used to analysing the accounts of large concerns, and/or a research worker trained in economics to inform it what had been written on the subject and to pursue research on specific matters, that its inquiries might have been shorter and more effective, and that at least one additional inquiry might have been completed during the period.

It has not made up its mind quite how it would like to obtain this expert assistance (if indeed, to judge from some of the questions that it put to an august array of witnesses, quite what calibre of person it has in mind). It sets out three general principles:

- that any such staff should be and should be seen to be the servants of Parliament and not of the executive (i.e. not a seconded Treasury official);
- that any such staff should not alter its present lines of inquiry and should not lead to interference in the working of the nationalised industries;
- that the nationalised industries should be able to have full confidence in the staff of the committee, which has access to much confidential information.

The committee divided on party lines over the employment of firms of professional accountants, a Conservative majority getting into the body of the report the idea that using such firms might be useful (against, it might be noted, the advice of Mr Butler, as Leader of the House). It remains not quite clear whether some of the Labour minority would have preferred economists to accountants, as several of the witnesses suggested, or, in the final analysis, nobody to anybody.

What Kind of Help?

THE agreed conclusion of the committee, however, has put the question of using the accountants on one side. It has left the final choice to the Commons: between getting somebody from within the staff of the House (if necessary an expert taken on specially), or giving the committee powers to appoint an assessor from outside for any individual inquiry on which it felt it needed help.

People outside the committee, too, may want more time to reach any conclusion about this, possibly in relation to any other proposals for the nationalised industries which the next government, of either colour, may have to suggest. The committee is probably too modest in thinking it takes too long to get through the nationalised industries; at its rate so far, it could certainly examine the whole lot at least once within the life of any Parliament, which will surely be enough if the country wants to get or retain men of calibre and self-respect in the top managements of these huge industries. Its second and later reports on any given industry, after all, can build on the basis of the understanding it achieved in the first, assuming at least some degree of continuity in membership. Equally, it is perfectly reasonable for it to ask some assistance (preferably at a fairly low level) in understanding the peculiarities of nationalised industries, accounting and otherwise. It could obviously not count upon always commanding a chairman and members of the calibre of Sir Toby Low and, say, Mr Albu.

EMPLOYMENT

Still Rising

THE level of civil employment rose by 34,000 during July, that in manufacturing industry rising by 11,000 and that in other industries by 23,000. Rough allowance for seasonal factors would suggest that the "real" increase was about 14,000. Employment in manufacturing industry usually falls by about 7,000 people in July, but in other industries it usually increases about 27,000. The less than seasonal increase outside manufacturing in July seems to have been because employment in building and contracting fell surprisingly more than seasonally by 10,000, partly offsetting an unusually large increase in employment, 22,000, in the service industries. The rise in total employment provides some evidence to support the estimated increase in industrial produc-

Missing from Farnborough

SIXTEEN Hunters black in a cerulean sky, their roundels glowing like the eyes on a butterfly's wing, cannot fill the gap left in the aircraft industry's annual flying display by the absence of all but a single, solitary example of the one species of aircraft on which the industry's future depends —the experimental machine. For the second year running, Farnborough has been an exhibition given over almost exclusively to commercial aircraft with an immediate market, military or civil. It is occupied by functional, bread-and-butter products: heavy duty helicopters, civil aircraft like Vickers-Armstrongs' Vanguard and Hawker Siddeley's Argosy with not a new aerodynamic idea between them, and military trainers to accustom pilots to fly at 700 to 1,500 miles an hour.

This follows from a wholly praiseworthy effort both by the industry and the Ministry of Supply to make better practical use of the public money still flowing into the industry, but it can be carried too far. Research is this industry's lifeblood. Technically qualified visitors who come to Farnborough as the industry's guests will look beyond the polished aerobatics for evidence of forward thinking and experiment. Whatever may be going on behind the scenes, all that has been publicly demonstrated to them are two forms of vertical take-off. One is the only experimental aircraft in the whole show, built by Shorts as a flying test-bed for Rolls-Royce's vertical take-off engines. This is part of an investigation that began many years ago with the flying bedstead, and may end with official support for a vertical take-off fighter on Hawker Siddeley's drawing board. Had the programme been carried through in full, there would have been two, not one, of these experimental machines now flying. The National Research Development Corporation's Hovercraft, demonstrating the second form of vertical lift as it bumbled along Farnborough's runway on a cushion of air that became noticeably deflated when 20 marines scrambled on board, may be four tons of inspired lunacy or it may be a serious rival to ships or even helicopters; but it is certainly not an aeroplane.

The Ministry of Supply is probably spending more this year on research than it has ever done, but with little hardware yet to show for it. The gap in research so blatantly obvious in the Farnborough flying programme and even in the exhibits on the manufacturers' own stands (for Farnborough they presented an unusually austere display) is the result of cancellations made and decisions not taken during the past two or three years when research fell out of favour in government circles. The price that the country will have to pay for this dilatoriness is becoming obvious. A great deal of wishful thinking was heard at Farnborough this week about Ministry support for a design study on a supersonic airliner, until the Ministry itself had to issue a flat denial. But before a supersonic airliner can be built, manufacturers must know something about supersonic flying. For several years past, the Bristol Aeroplane Company has been working on a research aircraft for this purpose, using stainless steel and ceramics in its construction, both materials that may be needed on a big, high speed airliner.

It is not entirely Bristol's fault that by the time this aircraft flies its once high design speed of two and a half times the speed of sound will be only a few miles an hour faster than speeds reached regularly by the RAF's Lightning fighter; it will be a good deal too slow to give all the answers for a supersonic airliner. Much more research needs to be done in supersonic flight before it is clear whether the building of such an aircraft would be worth the effort. The present controversy about its size, shape and speed should be sufficient warning against a rushed decision.

British Aero Engines

ENGINES	USED IN
	Alvis (Staff 2,500)
Leonides piston engines	Pioneers and Twin Pioneers Bristol and Westland helicopters Italian transport
	Bristol-Siddeley Engines (Staff 27,000)

Avon jet	Canberra bomber; Lightning, Hunter, Scimitar, Sea Vixen fighters; Comet; Caravelle
Tyne turbo-prop	Vanguard, Canadian and Britannic transports, Rotodyne
Dart turbo-prop	Viscount, Fokker, Fairchild, Grumman, Herald and Avro 748 transports, Argosy freighter
Rocket motor	Blue Streak missile

AN alternative to supersonic civil aircraft would be sub-sonic machines flying at about 600 miles an hour with greatly improved aerodynamic performance. Here again development is hampered by lack of research. Aircraft are now being built to test such theories as laminar flow and jet flaps, but if this work was to be of real help to the aircraft industry, those aircraft should have been flying at Farnborough this week, and not some time far off in the 1960s.

The switch to missiles took a great deal of the Ministry of Supply's research funds at a time when it would ordinarily have been putting these other projects in hand; for this it cannot be blamed. It now faces, among other claims, an immensely difficult investigation into the principles that must be built into the RAF's new small bomber if this machine is ever to have its planned performance; and a great part of the cost of marrying the two ballistic missiles, Blue Streak and the much smaller research rocket, Black Knight, into a composite vehicle able to put a satellite into orbit.

It should be possible to dovetail some of this research. A certain amount of data acquired during the development of missiles, especially those launching recoverable payloads, can be applied to aircraft design. But at some point government spending on aerodynamic research will have to be stepped up, and it is not at all clear that this fact is well understood, either in or outside the industry. The Red Queen appreciated that it was sometimes necessary to run faster and faster just to keep in the same place. The next government will have to do the same if it wants to keep the same kind of aircraft industry that it has now; it may even have to run a bit faster to make up for lost time.

This assumes that the industry will continue to bear the whole cost of its own civil developments, something which presents the engine side of the industry with a much bigger problem than it does airframe manufacturers. The table, which is the companion to that published last week on the state of the aircraft manufacturing side of the industry, shows work in hand in the engine factories, omitting only a small turbo-prop motor built by Blackburn for a helicopter ordered last week by the Army from Saunders-Roe. All the big engines on the list that are already in production have been developed with some government aid. The two engines not in production but on order, the Rolls-Royce 141 and 163 jets, will be the first developed completly out of the company's own funds and the bill may come to £20 million, twice the cost of an airframe. But the engine manufacturers, with a great deal more work in hand than the builders of airframes, can presumably afford to shoulder the extra risk.

Continued from page 850

tion in July announced last week, and general impressions that the recovery in industrial production is continuing.

Manufacturing is no doubt the section in which activity is rising fastest; but its level of employment at the end of the month, 9,121,000, was still 166,000 below the peak reached in September, 1957, in seasonally adjusted terms and in actual figures 6,000 below the level of July last year. Though the number working on short time has fallen since then from 157,000 to 54,000, production rose about 5-6 per cent. Labour is clearly more fully employed than it was a year ago, when concealed unemployment must have been considerable. The rise in employment was spread fairly evenly through the manufacturing industries in July. Employment in the cotton industry is shown as 212,000, the same as in March, suggesting that the increase in demand that has been noticed this year may have served to stabilise the situation, if not to produce expansion. The largest increase, of 5,000 in food, drink and tobacco, probably owes something to seasonal factors.

STEEL

Are Stocks Low Yet?

STEEL output in August was at the rate of 337,100 tons a week, 13 per cent more than in August last year but still 10 per cent less than in August 1957. The strength of demand for sheet, tinplate and other light steel products has been spreading more widely and demand for the heavy products is improving to some extent as well. Steel consumption has indeed recovered somewhat more than the rate of home deliveries, because up to the middle of the year at least consumers were still running down their own stocks.

At the end of June, the Iron and Steel Board reckons, these stocks were down to 3,235,000 tons, which it estimates as 12.3 weeks' consumption. That is still a large amount of steel *in hand*; but at the end of March, 1958, when demand had already begun to soften, consumers had 16.1 weeks' consumption in stock. This may have included some "involuntary stocking," in that demand for products made from steel had fallen faster than customers cared or were able to cut steel deliveries to them; but throughout the whole of the postwar period customers generally appeared to like on average something over three months' steel in stock. Has there been enough change in the economic climate—measured in the confidence customers feel about getting the supplies they want pretty quickly—to make them satisfied with a relatively lower level of stocks for the time being?

BRITISH PETROLEUM

Marking Time

IN the first half of this year British Petroleum sold 31 million tons of oil and oil products as it had done both in the first half and second half of last year. But, as the accompanying table shows, an increase in sales taxes and custom and excise duties, brought the value of net sales down. With the net prices realised from sales somewhat lower, British Petroleum has not been able to do anything better than to preserve its gross margin of profit; as the tax charge is slightly higher the net margin of profit is lower. It does not, in fact, seem to have been as successful as Royal Dutch/Shell and Gulf Oil in keeping its operating, selling and administration costs down. Relying on Middle Eastern crude oil, its costs are naturally lower than those of the Royal Dutch/Shell group and for that reason its costs may have been more difficult to trim.

SALES AND PROFITS
(£ million)

Six months ended	June 30, 1958	Dec. 31, 1958	June 30, 1959
Gross sales	404·2	425·1	410·5
Net sales	295·1	303·2	293·8
Gross profit	57·9	62·5	57·7
Net income	25·9	37·0	23·5
Gross profit/net sales %	*19·6*	*20·6*	*19·6*
Net income/net sales %	*8·8*	*12·2*	*8·0*

The decision to pay a tax free interim dividend of 8d. on the ordinary capital as increased by last year's 100 per cent scrip issue leads to some awkward arithmetic. The tax free interim payment is effectively raised from 6d. to 8d. per share, or from 2½ to 3⅓ per cent. Last year, the final tax free dividend was 1s. 3d., or 6¼ per cent. The directors specifically say that the higher rate of interim dividend should not be taken to imply any increase in the rate of total dividend for 1959. At its face value, that statement implies the clumsy distribution of 1s. 1d. per share as a final dividend. By the time the dividend is declared, the accounts will be credited with over £10 million in tax relief, as they were last year; no credit is given for this tax relief in the interim half-yearly reports.

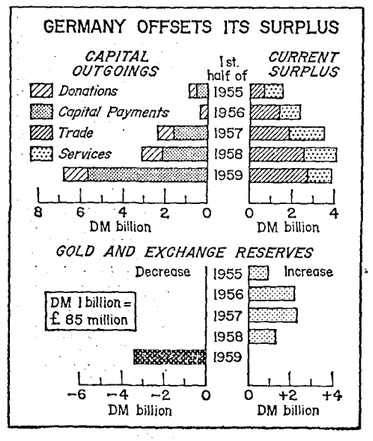
INTEREST RATES

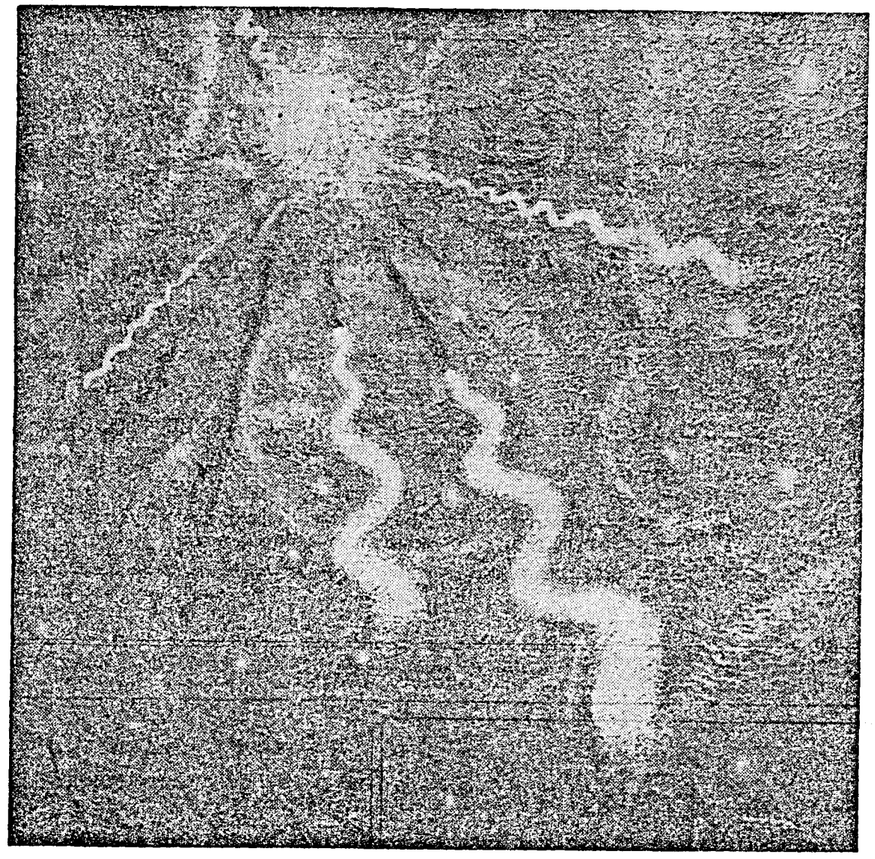
A Lead from Germany

THE German central banking authorities since the war have established an impressive record of monetary and economic leadership. The Bundesbank is rarely content to follow in the wake of events, as has been known in London and New York; its political weight certainly seems to be greater, and that must be an important influence. Last week, while the New York market was expecting a move from the Federal Reserve and the Bank rate board was again being watched in London, action came from Frankfurt. The Bundesbank raised its discount rate from 2¾ per cent, the low point to which it was reduced in January, to 3 per cent. This is a modest increase to a level that is still low—a full one per cent below both London and the rate to which New York is expected to move shortly.

The chief aim of this warning signal is to check the pace of Germany's domestic boom, which last month brought unemployment down to 1 per cent of the labour force. The Bundesbank and Dr Erhard are urging a better spreading out of public building orders, and the bank gives a clear-cut warning to trade unions and employers: "Sharper measures of credit policy would become necessary if the concentrations of new orders and the tightening of the labour market variously observed were to be exploited to demand price and wage increases calculated to endanger the stability of the price line." The central bank was also worried by the hectic rise in share prices. It now seems reconciled to seeing the rate on fixed interest securities back to 5½ per cent; the 5 per cent basis established in the spring met with much resistance.

The upward trend of interest rates in New York was another influence in the Bundesbank's action, but a supporting rather than a primary one. Ever since 1957 the German authorities have been very anxious that their domestic monetary actions should not have embarrassing consequences for other countries. Their effort to match Germany's huge current surplus with exports of capital, which many people wrote off before it was attempted, has been achieved in a remarkably short time. Germany's exchange reserves have fallen substantially this year; special capital items have played their part, but the main cause has been private lending, both of long-term and short-term funds. This new-found equilibrium gives the German authorities much more leeway in domestic action, since they need no longer look so closely over their shoulder at the effect of their actions on bull positions in D-marks. The reduction in German interest rates of the past two or three years, the Bundesbank pointed out with frankness a couple of days before raising its discount rate, has thus not restricted but enhanced the effective scope for monetary action.





"X-rays" by Roy Nockolds

The Inquiring Rays

The value of medical X-rays in diagnosis is incalculable. Over 25,000,000 pictures are made every year, each revealing to expert eyes otherwise hidden internal conditions.

Elaborate precautions are taken to ensure that patients and staff suffer no ill effects. Apparatus and X-ray tubes are designed to prevent unwanted radiation exceeding the recommendations of the International Commission on Radiological Protection.

Even so, continuous research is undertaken to widen the safety margin still further. From the Mullard Laboratories there now comes an outstanding development in the shape of two new X-ray tubes which reduce 'off-beam' radiation to only one-tenth of the recommended maximum level. This is far below that of previous tubes, so low, in fact, as to be a quite insignificant component of X-ray dosage.

These 'Guardian' tubes, as they are known, are as efficient as they are safe. They are new and powerful weapons in man's unceasing fight against disease.

RADIOACTIVITY

Measuring Fall-Out

A MEETING opened in Vienna this week under the auspices of the International Atomic Energy Agency to discuss standardisation of methods of measuring radioactivity. Although the official statement from Vienna referred obliquely to "a system of collection and accurate measurement of radioactivity, both natural and artificial" this conference may be of great importance in the assessment of fall-out. It is quite impossible to say how much radioactive contamination has been added to man's environment by bomb tests while every country, and even different laboratories in the same country, use a different technique of measurement and measure different substances. The US Atomic Energy Commission and the US Navy have got wildly different results simply by using two different methods to collect samples of dust in the air. In Britain, where the only substance measured is strontium, and the long-lived strontium 90 at that to the exclusion of the short-lived strontium 89, which is 150 times more plentiful, quite different measurements are obtained from those taken in western Europe, where scientists go by the general level of radioactivity in air and water regardless of what causes it. The health division of the Euratom secretariat in Brussels has been trying this summer to get the member countries to agree on a standardised method of measurement so that they could publish regular monthly figures of radiation levels; an agreement by the member countries of the Vienna Agency would represent a major advance.

Whether or not Professor Mayneord is right in his suggestion to the British Association that the dangers of strontium have been greatly exaggerated, the need for accurate measurement of minute changes in background radiation will grow with the spreading use of radioactive substances in industry and, for that matter, of research reactors outside atomic energy establishments. It is this aspect that is being stressed at the Vienna meeting. A great deal of the uncertainty about the amount of fall-out and its medical effects has been due to the tiny quantities involved and the difficulty of measuring them and Professor Mayneord's is not the first detailed investigation to suggest that the consequences are not as serious as first thought. But until there is conclusive proof, most people would probably prefer to be safe than sorry.

WATNEY MANN

Future Bounty

ONE name is missing from Mr Simon Combe's confident statement on the future of Watney Mann—Mr Charles Clore. Before he made his abortive bid for Watney Mann, the directors had set in train a plan to hive off into a separate company those properties which could be put to a more profitable use than as licensed premises. Whether Mr Combe's statement would have taken the form it now does if Mr Clore had not made his bid must remain an unanswered question. But it establishes a firm price for the Watney Mann equity well above that which Mr Clore was prepared to pay: the response in the market has been to mark the £1 shares up 3s. 6d. to 75s. 6d.

Immediately, the ordinary dividend is to be raised from 21 per cent to the equivalent of 30 per cent on the old capital and the growth in profits this year has been such that the earnings cover on the bigger dividend will remain much the same as it was in 1957-58. Within a year or two, Mr Combe also expects the redeployment of resources released from the Stag brewery site in Pimlico and the integration of brewing operations at Mortlake and Whitechapel to add £400,000 a year to profits. Thus when the capital structure of Watney Mann is simplified, as the directors promise, the chance of even better dividends from brewing alone look good. Watney Mann is already a national brewer, doing a big free trade in bottled beers. How far, after the initial impetus given by the sale of the Stag site is spent, it can push profits still higher will depend on its ability to compete ruthlessly in beer, wines, spirits and soft drinks and on any equally ruthless decisions taken to prune out unprofitable undertakings and properties.

Since 1955, the group has closed 149 properties as uneconomic and has sold another 18 which had higher values unlicensed than licensed. Now the directors have established an approximate value of £4,650,000 on properties which are capable of development entirely or partly in uses other than their present ones. These properties will be hived off in a separate subsidiary. The properties which Watney Mann will retain on its own books have also been revalued, with the result that the combined revaluation gives rise to a surplus of £6,792,762 over the present book value of £27,212,520. The important thing for Watney Mann stockholders is not the size of this book surplus but the decision to issue to them free scrip in the property subsidiary. Watney Mann will retain control, but the directors intend to distribute not less than one 5s. share in the property concern (which is to have a capital of over £4,500,000) for every £1 of deferred ordinary stock in the parent company. A stock exchange quotation will be sought for these new shares and the property company will find any additional finance it requires in the future from outside the group. Its initial income will be only £121,500, but that will increase considerably as the properties are redeveloped. So in addition to bigger dividends from brewing, shareholders can expect a dividend from the property subsidiary—perhaps by 1961. The directors of Watney Mann deserve congratulation for the decisions they have taken, but shareholders might spare a thankful glance for Mr Clore.

SPAIN

Market in Pesetas

SINCE the beginning of this month a somewhat halting market in the new devalued Spanish peseta has begun to function in London. It deals in telegraphic transfers and is quite distinct from the well-established market in peseta notes so long known and beloved by British tourists in search of cheap holidays in Spain. That market continues to flourish though it now offers little margin of advantage: this week's rate has been around 170 to the pound, compared with the rate of 168¾ quoted in the official market. Business in the new official market is hampered by the inordinately heavy charges made by Spanish banks and also by the fact that there is still no possibility of arbitrage between pesetas and other currencies. All business in pesetas has to be done direct with Spanish banks.

The basis for the reopening of this market was laid with the belated issue of regulations governing the Spanish foreign exchange market, which made their appearance in Spain precisely one month after the peseta was devalued and its new parity of 60 to the US dollar was notified to the International Monetary Fund. According to these regulations foreign currencies in Spain are divided into two groups, negotiable and non-negotiable. The negotiable group includes US and Canadian dollars, sterling, Danish, Norwegian and Swedish crowns, D-Marks, French, Belgian and Swiss francs, lire, schillings and guilders. For these the Spanish institute of foreign exchange fixes daily lower and upper rates at which it is prepared to deal; within these margins the 48 authorised banks in Spain are free to deal among themselves. For the non-negotiable currencies, dealings can take place only directly with the institute.

PHILIP HILL

Thrustful Expansion

AMONG the merchant banks Philip Hill, Higginson, which is a subsidiary of the public company Philip Hill Investment Trust, has in recent years been one of the most thrustful. The trust has just acquired all the equity capital of the long-established house of Erlangers, paying about £2¼ million for the 950,000 ordinary shares of £1 each and the 5,000 management shares of £10. This merger does not seem to be the summit of ambition: it seems rather to be a stepping stone for a further stride forward. That is clear from the financing plans that Philip Hill has announced. In addition to the £2¼ million paid for the Erlangers equity it will have to find £600,000 in cash to pay off at par the Erlangers preference shares when that company is liquidated. But it is raising nearly twice that sum in new money. At the beginning of this week it placed privately

£2 million of a 4½ per cent debenture stock at 85½, and it is selling 500,000 new 5s. ordinary shares in Philip Hill at 30s. each to the vendors of the Erlangers equity. In addition, it is proposing to make a one-for-four "rights" issue of new ordinary shares at 22s. 6d. each, in which the shares issued to the Erlangers vendors are entitled to participate. After satisfying the terms of the merger, the group will have nearly £3 million in new money ready for investment. The new combination of Philip Hill and Erlangers has thus given notice to the City that it is prepared to expand.

HOW TO EAT GRASS

Direct to the Protein

DIRECT extraction of protein from vegetable materials appears to have been made fully practicable by a new process developed by British Glues and Chemicals. Vegetable material is a rich source of protein, but in a form that man is unable to use until it has been digested by an animal and converted into some form of animal protein. Unfortunately this is an inefficient process; the cow or sheep only turns about 14 per cent of the protein that it eats into protein that man can eat. Any means of extracting protein directly from vegetable matter at a higher efficiency would offer huge promise, particularly to the large proportion of the world population that suffers from a chronic lack of protein; and some attempts have been made to do so, especially in the last ten years. All the products so far produced, however, have had the drawback that they are not pure protein, so that considerable bulk has to be used to give an adequate nutritive content, and they may have unpleasant tastes. The special importance claimed for British Glues and Chemicals' new process is that it produces a cheap and pure protein which is tasteless and of which only 4 per cent need be added to flour to provide normal human needs for protein, by a process with an efficiency of about 95 per cent. It can work from almost any vegetable material: nuts, oilseeds, grasses and wheat are amongst those already tried.

The process has been developed from one that the company is using for the extraction of fat from bones and animal fat. Called "impulse rendering," it employs shock waves set up in a flow of cold water to break open the cells and free the fat without using heat. Applied to the vegetable materials, it similarly frees the protein and oils from the cells. The chief difficulty in applying the process to vegetable material was to separate the various materials extracted from the fibrous matter. Apart from the protein and oils, these include carbohydrates that are indigestible for man but useful foods for animals, and with grasses and other leafy materials there are many valuable pharmaceutical materials including cortisone and other steroids. This problem appears to have been overcome: indigestible materials can now be separated from the proteins and oils in a centrifuge.

Probably the biggest problem with an invention like this, which finds its most likely application in the underdeveloped countries, is that of exploitation. Fortunately the plant is simple, and can be economic in small sizes; it may therefore be practicable to establish factories in the countries where the protein is needed, and where there are also adequate supplies of suitable vegetable materials. British Glues and Chemicals intend to grant licences to any who wish to use the process; there has already been much interest in it. They hope that companies operating in the underdeveloped countries will use it—seed crushers, for whom this process may have interesting implications, would seem obviously suited—or that the governments of the countries concerned will set up their own plants. By-products of the process should help to make it a commercial proposition; so far they have not all been studied, especially those from grass, but they are known to contain many valuable chemicals.

RESTRICTIVE PRACTICES

Registrar's Progress

A SUMMARY of the considerable progress made to date under the Restrictive Practices Act was given last week by the Registrar, Mr R. L. Sich, in a paper to the British Association in York. The number of restrictive agreements abandoned or in the process of being abandoned has risen threefold since the beginning of the year, and now accounts for almost 30 per cent of the total number of agreements on the register. This total now stands at 2,200, against 2,020 at the beginning of this year; of these 600 either have been or will soon be abandoned (though they remain formally on the register even when they are no longer in operation), against an estimated 150 on January 1st. Of the total of 2,200, the parties to 380 have so far been warned of the Registrar's intention to start proceedings against them, and following this warning 250 agreements have been abandoned without further proceedings being taken. The other 350 were wound up without even a warning having been given.

Only six cases have come to trial, all but one—that of the Water-Tube Boilermakers' Association—resulting in declarations by the Court that the agreements in question were contrary to the public interest. But the effect of the Court's decisions on other cases has been even more general than had been expected. There are now about 130 cases in which proceedings are now pending, but it is likely that a high proportion of these will not come to trial. There are 1,450 agreements on which no action has yet been taken; but 1,050 of these are closely connected with cases already started and will probably stand or fall with them. Of the remaining 400 agreements, Mr Sich stated that as many as 200 may be removed from the Register as being of no economic significance; the remaining 200 are mainly newly-registered agreements, or old ones which should have been registered earlier.

On paper, then, the Act has had most promising results to date; whether they will continue or will be nullified at least in part by ancillary effects which are not so easily measurable is another matter. Professor S. R. Dennison of Queen's University, Belfast, who testified for the Registrar in the Cotton Yarn Spinners' case, commented on these possibilities in a paper immediately preceding the Registrar's. While recalling that none of the five main arguments used in attempts to justify agreements before the Court on the grounds of benefit to the public had so far succeeded, Professor Dennison noted that some of the more subtle variants of these arguments—particularly in connection with providing for research and modernisation—have yet to appear, and may well do so in the future. Certainly more sophisticated economics in defence of restrictive practices have been expounded—with some success—in anti-trust cases in the United States.

TRANSPORT

Road + Rail = ?

ECONOMICS is an inexact kind of art, even when its judgments are based on hard facts and accurate accounting; and in the field of transport, even the accounting is often imprecise. Moreover, in a free economy, choices neither by men nor by governments are seldom wholly economic; again, this is particularly true of the choices between different forms of transport. In the paper on the Economics of Transport which he presented to the British Association this week, Sir Reginald Wilson showed that he is well aware of these difficulties; he is also

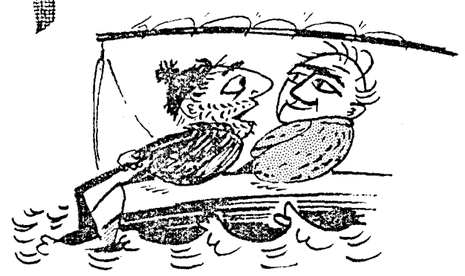
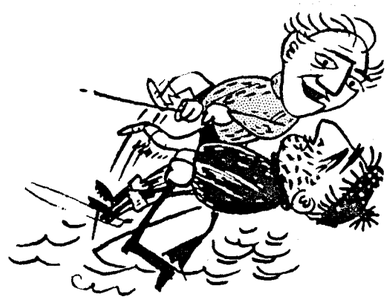
Fingers in the Pie

But who controls I.C.I.—
some of those 'top hats' in the City?





Not at all. It's run by a Board of Directors—nearly all of them men who've worked their way up through the business and spent their whole working lives in it.

Yes, but I mean, who *owns* I.C.I.?

It's a public company, owned by its stockholders—nearly 330,000 of them. And around 50,000 of these are I.C.I.'s own employees, who got their stock through the company's Profit-Sharing Scheme.

The things they say!

ICI

aware of the extra costs that continued failure to find the most scientific solution possible may entail. It is impossible adequately to summarise here Sir Reginald's extremely lucid analysis of the problems confronting economic analysis of the road-rail problem. He himself offered no solution, and recognises that any solution found—even a partial one—would be apt to be ignored, by a public which prefers private transport to public, whatever the cost.

One-tenth of the right-of-way in Britain is composed of railways, the rest of roads; the railways, however, carry one-half of the nation's freight and one-fifth of its passengers. Comparisons of "quality" or "utility" between the two methods are virtually impossible. To leave the decisions as to future spending completely to the interplay of free competition is manifestly impossible politically: the Transport Commission, while it faces competitive pressures, is not allowed the freedom to react competitively to them. The complex nature of private transport and of the social and economic issues involved make a totally managed, integrated transport system an unattainable ideal. The natural characteristics of both rail and road are distinguishable, if not exactly measurable, and Sir Reginald is convinced that total social cost would be lowest when they are used in combination. But even if the advocates of road against rail agreed to this (which they certainly do not) the correct proportion would be no easier to determine.

Sir Reginald wants joint approach to the problem: a co-ordinated study and research, leading towards "a community of policy" regarding both the provision of new roads and/or railways, and the charges that carriers who use road or rail track should pay. This revives the ever *thorny question of "track cost": some road* interests purport to see in Sir Reginald's essay the shape of some new square deal and the lines on which the Transport Commission would like some of its burden of interest reduced. He deployed his usual battery of figures arranged to bring out fresh aspects of the argument, but warned his hearers of the pitfalls that beset figuring about transport. It would have been unmannerly for him to have cited a horrid example of how not to measure transport performance from the Presidential address to the Engineering Section this very week. Sir Ewart Smith offered the association a table comparing British, French and West German railways which defined "railway productivity" as "total passenger-miles plus ton miles divided by total employees," and showed how well each country's railways do in "productivity (tens of thousands)." What can this mean?

The import quota for canned grapefruit from the dollar area has been maintained at £450,000 for the year beginning October 1, 1959, but, unlike the previous year's quota which was valid between June and September only it will be valid for the whole twelve months.

COFFEE

An Awful Lot of Coffee

By withholding supplies Brazil and its partners in the Latin American coffee agreement have averted a collapse in prices, but have not prevented them from weakening. As production has continued to rise, stocks have grown larger, and when the 1958-59 season ends this month the world carry-over will be about 36 million bags of 132 kilos, nearly half as large again as a year ago; of this total, Brazil itself will hold roughly 24 million bags. The forecast for exportable production in 1959-60 is a record 56 million bags, and even if world exports were to rise as high as 40 million bags, the carry-over a year hence could easily exceed 50 million bags. Without harvesting next year's crop, Brazil could meet a year's home and export needs and still have a large stock.

With this dismaying prospect, the international coffee study group meets in Washington next week. The Latin American countries will again seek the support of the African territories for their system of export quotas. If the African producers refuse fully to co-operate, as seems likely, the Latin

The World Capital Market

A concise and workmanlike analysis of the growing international flow of private capital has just been published by the United Nations. It brings together key figures otherwise available only from diverse national sources, and makes a careful assessment of recent trends. The report points out that even allowing for the decline in the value of money, private foreign investment in past years has been higher than in the late twenties, the last and not very auspicious period of high international investment. After the war the vacuum was filled by grants and loans from governments, and these have continued on an unprecedented scale. But the report estimates that today the total contribution of private investors, including reinvestment of their ploughed back profits, is comparable in scale to the official contributions. In the past year or so there has been a significant increase in buying of foreign securities; but the main medium is still direct investment, especially for investment to the poorer countries.

The major development of the last few years, the report points out, is the growing capacity of Western Europe to export private capital. In the table below we have inserted the Treasury's new figures of gross investment by Britain published since the UN report went to press. Britain makes a good showing beside the United States; its foreign investment has been as big as that of the countries of western continental Europe together. France's contribution is higher than is often supposed. Germany is coming on fast; in the first half of 1959 its net private long term investment overseas has quadrupled, and the annual rate of £170 million, net, is not far short of Britain's.

The report makes a sensible distinction between three quite different kinds of underdeveloped countries. There are rapidly expanding countries with a substantial industrial sector—Australia, Canada, South Africa, and also Brazil and Mexico. This is a small group that gets a big share of private investment funds—including some portfolio investment. Then there are low income countries with natural resources, mainly oil and non-ferrous metals, that can be profitably exploited; these attract large direct investments by international companies. Finally, there are the poor countries with few natural resources ready for exploitation. These not unnaturally find it difficult to attract foreign capital, and some of them have only recently begun trying. More surprisingly, the report calculates, the countries with annual incomes per head of less than $100 have since the war also received less aid from official sources than the richer countries.

* Excluding retained profits of United States subsidiaries abroad. † Including only part of retained profits. ‡ New issues only.

American countries will continue export restriction alone. African coffee producers are not only reluctant to restrict exports of a very profitable crop; they regard export restriction as a mere placebo that positively encourages the disease.

Though the Latin American countries know this, their export agreement contains only a vague reference to restricting production. It does require countries to encourage coffee consumption at home and abroad, as many are doing already (and it might fairly call on some European countries to help by cutting their prohibitive duties on coffee). The British East African territories and the British Government will probably press next week for the completion of official studies of the coffee surplus so that effective action can be considered. Even rich countries do not find it easy to persuade farmers to grow less. Poorer countries vitally dependent on coffee find the task baffling. Yet if they do not find some orderly means of curbing output, a collapse in prices will eventually do it for them.

BUILDING RESEARCH

Should Builders Pay?

WHEN the Select Committee on Estimates examined the work of the Department of Scientific and Industrial Research, it said that DSIR should get companies to pay its research stations for information that they had found commercially useful. The Building Research Board, which controls one of the stations specially singled out, has politely told the Select Committee that if it carried out only research that it thought could definitely be sold to industry "it would effectively prevent much research of importance . . . from being done at all." In other words, builders won't pay.

The Building Research Station costs DSIR £541,371 a year to run and the chairman makes no bones about his dissatisfaction with the meagre £18,000 contribution made by the industry. The reason for this is probably not difficult to find. Building is one of the most diverse of industries, and also one of the least scientifically minded, as many who have had dealings with small to medium-sized builders know to their cost. Of the 7,235 inquiries received by the Building Research Station during 1958, a bare seventh came from builders, roughly the same number as it received from private individuals. The board still seems to think that it is worth while publishing its results to reach some of the industry's backwoodsmen; and indeed since the war it has promoted some useful technical advances among the larger builders and the plant makers; but some of its most interesting work seems to be done for other government departments on such things as flood defences.

The question of making industry pay is one that affects all DSIR stations and even the research associations, where the industries concerned pay a more reasonable proportion of the total cost. But not the least difficulty in implementing the Select Committee's suggestion would be to know who has gained commercially from DSIR-financed research and, more important, to what extent. The solution may lie, as the Building Research Board suggests, in getting bigger annual contributions all round. This might not be too difficult to arrange in an industry with a tightly organised trade association, but collection of dues in "an industry so divided in its structure and fragmented in its organisation as building" is another matter.

WOLFRAM PRICES

Back to Normal

AFTER being stable for an abnormally long period wolfram prices started to rise four weeks ago and in the last fortnight have shot up. On Thursday, when the market paused for breath, wolfram was 162/167s. per unit (of 22.4 lb), two-thirds higher than a month ago and 2½ times what it was in the depressed market of a year ago. The Board of Trade, which has been sitting on at least 250 tons of wolfram for longer than it cares to think, must be itching to sell. Prices now are well above the level of mid-1957, when the Board stopped selling. Its policy is to sell without disrupting the market and at a reasonable price. Present conditions are certainly a golden opportunity.

The improvement in demand for ferro-tungsten has not been spectacular, but enough to bring a spectacular change in price in this habitually thin market. Japanese buyers have been mainly responsible for the recovery, but European and American consumers have been active too, showing increasing interest as prices have risen and so pushing them higher. Many mines were forced to close down during the period of low prices and producers and merchants do not hold big stocks; they are naturally seeking the best prices they can get.

SHORTER NOTES

Lloyds Bank and the Commercial Bank of Scotland are making a further venture in hire purchase finance. In a consortium together with the Netherlands Bank of South Africa and the British and Commonwealth Shipping Company, they are to acquire about 85 per cent of the ordinary capital of the big Credit Corporation of South Africa. The consortium already operates in hire purchase through the South African Scottish Finance Corporation.

★

Mr Hugh Fraser is now the chairman of Harrods. Sir Richard Burbidge, the former chairman, remains on the board as joint managing director with Mr Fraser. But, apart from Mr W. R. Leathes, all the other directors of Harrods have left the board. Mr Fraser's son has joined the Harrods board along with five other House of Fraser directors. Mr W. T. H. Davies, a former Harrods director, will remain as general manager. The House of Fraser shortly expects to have received in assents to its bid more than 90 per cent of the Harrods equity, and its offer has been extended to September 29th.

★

Teacher (Distillers), which makes "Highland Cream" Scotch whisky, has declared an interim dividend of 5 per cent on the ordinary capital as increased by the 50 per cent scrip issue, against 5 per cent on the original capital—thus effectively increasing the dividend by 1⅔ per cent. In their circular to shareholders the directors say that it must not be assumed that the final distribution "will be similarly maintained."

E. K. Cole, the radio and television manufacturers, is to issue 1,300,000 of 5s. ordinary shares at 16s. each, of which 1,117,583 will be provisionally allotted in the proportion of one for every three 5s. ordinary units held on August 27th.

★

Cable and Wireless Ltd have been named to carry out the financing, laying and maintaining of Britain's share (about half) of the £80 million Commonwealth round-the-world telephone cable system, the first section of which—between Scotland and Newfoundland—will be laid in 1961. The company will work in conjunction with the Post Office, which is partly responsible for designing and engineering the telephone cables; a joint cable and repeater development unit will be formed, partly financed and staffed by Cable and Wireless and the Post Office.

WOODALL-DUCKHAM can engineer all these . . .

You rather surprise me. I've always connected Woodall-Duckham with coal carbonisation plant.

I hadn't realised you were civil engineers . . .

Certainly, and on a large scale. Take a recent project. A virgin site of a hundred and eighty-eight acres cleared and levelled, and fourteen miles of road and rail-tracks laid on the prepared site. This is typical of the work of our Civil Engineering Division. In this particular £10,000,000 project, we were also responsible for large-scale structural, chemical and mechanical engineering.

Do you always work on combined plant?

We have unrivalled experience at combining the different branches of engineering, but we also design and build separate plant—chemical or mechanical.

Well, I live and learn!

So do Woodall-Duckham. That's how we stay in the front rank.

COMPANY MEETINGS

PINCHIN, JOHNSON & ASSOCIATES LIMITED

RECORD HOME SALES

DIFFICULT OVERSEAS CONDITIONS

SIR HORACE W. CLARKE'S STATEMENT

The Annual General Meeting of Pinchin, Johnson & Associates Limited was held on September 9th at the Connaught Rooms, Kingsway, W.C.2, Sir Horace W. Clarke (The Chairman) presiding. The following is the Chairman's Statement circulated with the Report and Accounts for the year ended March 31, 1959.

I am sure you will be pleased to note from the Report of the Directors that sales in the United Kingdom again reached a record level. The Home market is covered by the Parent Company, through its units, each of these having a distinct and well established goodwill.

The progress of some of the Subsidiary Companies operating overseas was retarded by special factors and group sales did not reach the previous year's level. In particular, the world-wide decline in shipping activity led to a falling off in orders for marine coatings and compositions. In the United Kingdom the reduction in this field was more than offset by increased sales of materials to other industries. This satisfactory feature did not arise with certain of the overseas Companies whose products are more specialised.

ACCOUNTS

The Consolidated Net Profit for the year at £1,695,724 compared with £1,810,474 for the previous year. Total taxation at £827,754, calculated after crediting £56,000 in respect of United Kingdom taxation overprovided in previous years, was substantially reduced as compared with the previous year mainly because of lower profits tax and income tax ratios in the United Kingdom, and to a lesser extent by reliefs obtained in other parts of the world. After deducting profits attributable to minority shareholders of Subsidiary Companies, the Parent Company's proportion of the net profit for the year is £705,656, compared with £591,032 arising from the previous year's operations, when £60,000 in respect of taxation overprovided in previous years was also credited.

You will observe from the Company's Balance Sheet that substantial additional expenditures were incurred during the year on properties and plant. These were mainly in connection with the acquisition and development of further areas of land adjoining the Silvertown and Birmingham factories, referred to in my last statement, and were needed to augment productive resources. Despite the expenditures on fixed assets, net current assets increased by approximately £106,000, the liquid position being strong.

The Consolidated Balance Sheet reveals that Shareholders' Funds at March 31, 1959, were £9,680,908 compared with £9,400,860 at the end of the previous year.

Your Directors have transferred £100,000 to General Reserve and recommend the payment of a Final Ordinary Dividend of 11⅔ per cent, less tax, making a total of 16⅔ per cent for the year, less tax. This is the same rate as that paid for 1957-58. If this recommendation is approved, the balance of the Profit and Loss Account to be carried forward by the Parent Company at April 1, 1959, will be £827,791 compared with £697,148 brought in at April 1, 1958.

PROGRESS IN THE UNITED KINGDOM

During the major part of the financial year 1958-59, the general level of industrial activity in the United Kingdom was barely sustained. It is therefore gratifying to report that in such a year your Company continued to progress and recorded a further expansion in home sales. Your Company increased its business with the motor car and ancillary industries, domestic appliance and many other important industrial users. The reduction in orders for certain materials supplied to other major consumers, such as shipping and transport undertakings, was due to reduced activity in these spheres; nevertheless, the widespread popularity of our materials continues to grow.

The efforts of our laboratories and Research Division continue to meet with great success. Not only do the materials at present supplied meet the exacting requirements of our customers, amongst whom are included the largest consumers of surface coatings in the country, but new materials are being perfected and designed to cater for industries developing in new fields of potential growth.

OVERSEAS TRENDS

I have already informed you that the progress of some of the Subsidiary Companies operating overseas was retarded by special factors. This is not surprising, for your Company has extensive interests abroad and economic activity slackened off in 1958 in many parts of the world.

In Australia and New Zealand, the paint industry continued on a highly competitive basis and there was some reduction in sales and profit margins. The policy of the board of the Australian Holding Company, in which your Company has a substantial investment, has been to concentrate on segments of turnover which will return a reasonable margin of profit rather than expend energy in fields where the profit margins are not commensurate with the risks and finances involved.

Sales of the Indian Company in the last financial year reached a record level, and there was a moderate alleviation of the tax burden. The net profit available, after tax, showed a satisfactory increase. The sales outlook for this Company continues to be good and it may be necessary in the near future to infuse further capital to finance the expected increase in turnover.

The Canadian Company returned increased sales but profit margins were not maintained. The Management of that Company are taking active steps to improve the position.

The French Company again incurred a loss although at a reduced rate compared with the loss returned for the previous year. Efforts are continuing to establish that Company on a sounder basis. The sales and profits of the Italian Company continued to improve, but in other parts of the world some of the operative Companies were adversely affected by difficult trading conditions.

To summarise, operations of some of the overseas Companies in 1958-59 were disappointing. The returns to date do not yet show any collective improvement, but I am hopeful that the present difficulties overseas will be resolved and your Companies operating abroad will renew their interrupted progress.

CONCLUSION

An undertaking such as your Company, with extensive ramifications in this country and in the world's main centres, cannot remain unaffected by a reduction in the general level of demand. As I have pointed out, the greater part of 1958-59 was a period of diminished activity and in view of this I consider the results for the year to be satisfactory.

You will be pleased to know that sales in the United Kingdom for the first three months of the financial year show a satisfactory increase, whilst the order load is substantially higher than at this time last year. The outlook overseas is more obscure as will be appreciated by my comments made earlier in this statement.

Your Company's ability to supply a wide and growing range of surface coatings at competitive prices is ever increasing and I am confident that this will bring its reward.

In conclusion, I am sure you will join me in thanking the Management, members of the staff and all other workers throughout the world for their continued co-operation and loyalty.

The Report and Accounts were adopted.

DAVY-UNITED LIMITED

PREVIOUS RECORD PROFIT SUBSTANTIALLY EXCEEDED

MR D. F. CAMPBELL ON BENEFIT OF INCREASED EFFICIENCY

The eighty-sixth annual general meeting of Davy-United Limited will be held on October 2nd at Sheffield.

The following is the statement by the chairman, Mr D. F. Campbell, circulated with the report and accounts:

The accounts which are before you today relate to your Company and its subsidiary company, Davy and United Roll Foundry Limited, before the reorganisation in June last, and also before the increase in capital and the scrip issue, which took place at the same time.

PROFIT

In my statement last year I said that the profit was then a record by a substantial margin, and this year I am happy to report a further advance. The net profit of the Group before taxation is £1,586,001 as compared with £1,024,163 in the previous year. We have spent considerable sums of money over the last few years on development schemes for the purpose of providing well-equipped modern plants and raising our efficiency in administration and management control. We are now reaping the reward for that expenditure in reduced costs of manufacture and greater output and this is one of the principal reasons for the higher profits.

CONCENTRATION AT DARNALL

A notable feature in this connection is the move we made eighteen months ago in establishing the new Design and Administrative offices at Darnall, Sheffield, and in concentrating all Sheffield operations there. The improvement in efficiency and productivity, particularly in the all-important Design offices, cannot be evaluated in money, but there is no doubt that this move has been of great value. A modest contribution also arises this year from our entry into the wider field of comprehensive construction contracts for steelworks and I fully expect this contribution to increase in the next few years.

The net profit for the year, after taxation, amounts to £909,932. The Directors have appropriated £373,000 to the reserves, as shown in the Consolidated Profit and Loss Account, and recommend a dividend for the year of 30 per cent, less income tax, amounting to £277,375.

BALANCE SHEET

The major features of the Consolidated Balance Sheet are the increase in the Fixed Assets, the increase in the Work-in-Progress and the improvement in the cash position. The increase in the Fixed Assets relates principally to expenditure on machinery and partly to the new office block. In order to ensure that the works of the Group are maintained at a high pitch of efficiency, and having in mind the heavy and expensive nature of many of the machine tools in use, substantial expenditure on plant is continually necessary. It is for this reason that the Directors are earmarking a substantial part of taxed profits for replacement purposes.

The Company, through its Construction Division, is in course of carrying out the contract for a substantial part of the Durgapur steelworks which I mentioned last year. Of this contract, about £15 million relates to sub-contracts for the supply of plant from the United Kingdom of kinds not manufactured by the Company. The increase in the Work-in-Progress largely arises from payments being made to these sub-contractors.

It will be recalled that during the year an issue of 377,382 shares was made to members and Debenture Stock, amounting to £1,600,000 was also issued. The Unsecured Loan Stock and the Mortgage Loan, together amounting to £964,000 were repaid. These arrangements are largely the reason for the improvement in the cash position, but I should mention that part of the cash is required for the completion of the Development Programmes referred to in previous years.

It is of interest to examine the growth of the Group over the past ten years. In 1949 the net assets representing the Members' interest amounted to £1,626,593 and today they are £5,767,268. This growth of about £4,100,000 has been achieved thus:

	£
Profits retained in the business ...	2,800,000
Subscribed by members for shares	1,100,000
Profit from sale of assets	200,000
	£4,100,000

IMPORTANT CONTRACTS

ENGINEERING DIVISION which, under the recent reorganisation, now becomes Davy and United Engineering Company Limited. Some of the principal contracts delivered in the year were a Universal Slabbing Mill and a Tandem Cold Mill for the Steel Company of Wales Ltd., a Combination Wire Rod, Merchant Bar and Strip Mill for Dorman Long (Steel) Ltd., a Wire Rod Mill for Spain; and a Blooming Mill, being one of the mills to be supplied for the Durgapur contract, was shipped to India. The Universal Slabbing Mill for the Steel Company of Wales was of particular interest. To meet the needs of greater output, it replaced a mill built soon after the last war and its construction was the subject of more than two years of the closest collaboration between our engineers and those of the Steel Company. It culminated in the dismantling of the old mill and the installation of some 2,375 tons of machinery comprising the new mill, including single items weighing 142 tons, in the world record time of 12½ days. During this period over 1,000 men were employed in the installation. This mill has already rolled 57,000 tons of ingots in a single week and is giving every satisfaction.

CONSTRUCTION DIVISION

The Durgapur Steelworks contract which is being managed by this Division and which will take about another two years to complete is proceeding satisfactorily and the centre of effort is now being transferred to the site in India. The total weight of machinery to be supplied from the United Kingdom under the Company's contract is about 75,000 tons and about 49,000 tons have now been shipped. The division has also assisted in the preparation of proposals for other similar schemes which are still in the embryo state.

DAVY AND UNITED ROLL FOUNDRY LIMITED

The supply of rolls and steel castings is subject to more rapid fluctuations than that of the other products of the Group and market difficulties have been experienced during the year. Despite this, the Roll Foundry Company had a better year than the previous one and has contributed substantially to the Group profits. It is evident that the improvements which have been carried out in recent years to the plant and site have been a good investment.

INSTRUMENTS

THE INSTRUMENT DIVISION, now known as Davy and United Instruments Limited, is not yet fully developed and suffered to some extent during the year from a shortage of skilled electronic engineers. We believe in the extensive training of young staff but this perforce takes some time in a developing and technically advanced branch of the business. Accordingly, the progress may be slow but I am satisfied that it is sure and this subsidiary is a most valuable adjunct in the Group's activities. Apart from the profit potential of the company, the development of instrumentation is of considerable value in improvement of the design of rolling mills and presses.

Some time ago I mentioned that negotiations were proceeding to license manufacturers in Canada and the USA for the manufacture of automatic gauge control, i.e., the automatic control of the thickness or gauge of strip steel produced at high speed on hot and cold rolling mill plants. Since then licences have been granted to General Electric Company, USA, Canadian General Electric Company Limited and Canadian Westinghouse Limited. It is expected that further licensing arrangements will be made in the USA and in Switzerland, Germany and Japan.

PROSPECTS

Having regard to the present order book, I can confidently predict a satisfactory year in 1959/60 with good prospects for 1960/61. Beyond that you would not expect me to comment and while I am sure we shall continue to obtain a substantial share of the home market, I am concerned about the future of export business.

Foreign companies, often with support from their respective Governments, frequently offer us attractive contracts and want our machinery, but have no sterling available for immediate payment. In the past, with our associates in the Metallurgical Equipment Export Co. Ltd., we have supplied many million pounds worth of machinery on deferred terms arranged with bankers, the principle being that the customer was the borrower. In such cases the bankers were able to obtain Export Credits Guarantee Department cover for their loans from the inception of the contract and made payments to us on behalf of the customer as the work proceeded.

Due to a change in the policy pursued by the Export Credits Guarantee Department such

loans are no longer being made to the customer and a prospective lending bank cannot obtain a guarantee to cover the financing of progress payments before shipment.

PROBLEM OF FINANCING

The finance required during the manufacturing period up to shipment, on any one contract, can run into several million pounds and in the absence of progress payments during manufacture the acceptance of an order with long-term credit would involve your Company in borrowing the pre-shipment finance. Having regard to the magnitude of the sums involved even in relation to the not inconsiderable value of your Company, it is not surprising that bankers are reluctant to make the necessary advances. The financial structure of your Company and many like it all over the world engaged in the manufacture of heavy capital equipment, is not designed to finance large contracts during manufacture and it is traditional that payments are received from customers to finance or partly finance work-in-progress.

In the opinion of your Directors, it would be unsound to alter the present financial structure of the Company so as to meet this situation. It would involve bringing several million pounds of additional cash into the business and the money would only be intermittently employed for the purpose intended, as not all our business involves extended credit. The financing of work of this kind is properly the business of the banking system with the aid of the Government controlled Export Credits Guarantee Department, but these institutions do not speak with a common voice on the subject.

SOLUTION IMPERATIVE

There ought to be little difficulty in finding a practical solution acceptable to all parties, but attempts to persuade the Export Credits Guarantee Department to modify its rigid attitude and the banks to be slightly more adventurous in their lending, have so far come to nothing. As private industry has not so far been successful in reconciling the differing views of the banking and credit insurance systems it should now be for the Board of Trade to bring the parties together to seek a solution. Under present conditions we are having the utmost difficulty in competing with offers from Continental firms whose banking and credit systems are apparently untrammelled with these problems. Your Directors are actively pursuing the matter.

During the year Mr W. F. Cartwright joined the Board at the invitation of the Directors. Mr Cartwright has a wide knowledge of the steel industry and I wish to extend an especial welcome to him.

Finally, I would thank, on your behalf, all our workers from the Managing Director downwards and express our appreciation of the hard work and loyalty which they give to the Group and which has yielded such an excellent result in the year under review.

ST MARTIN'S LE GRAND PROPERTY COMPANY

The thirty-third annual general meeting of St Martin's Le Grand Property Company Limited was held on September 9th in London, Mr John B. Andrews, FCIS (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement: During the past year the Group has continued to expand and a substantial increase in profit has been earned, continuing the record of progressive improvement shown over the past ten years.

After commenting on the acquisition of P.H. Estate Limited and R.L. Property Company Limited, Winchester House, Old Broad Street, EC2, and the purchase of 9, Devereux Court, Strand, London, WC2, out of the proceeds of the sale of Hasilwood House, Bishopsgate, London, EC2, the statement continued:

The Company has contracted to purchase certain freehold sites together forming a large island block with main frontages to Euston Road and Tottenham Court Road, London, WC. In association with Laing Development Company Limited, the Company intends to develop these sites by constructing thereon a large block of offices and shops. Expenditure on this project is estimated at £4 million over 3 years. Other projects include a new floor at Adelaide House, and the development of a site adjoining one of our existing buildings.

You are recommended to declare a final dividend of 7 per cent making 13 per cent for the past year. The Directors propose to pay in October, 1959, an interim of 7 per cent in respect of the year ending March 31, 1960, and expect to be able to recommend a final dividend of not less than 8 per cent for that year. I am confident that you may, given normal conditions, look for steadily increasing dividends.

The report was adopted.

GALE, LISTER & CO., LTD.

DIVIDEND MAINTAINED

The twenty-third annual general meeting of Gale, Lister and Co., Ltd., was held on September 4th at Leeds. The Right Honourable The Earl of Hardwicke, chairman, presided.

The following is an extract from his circulated statement for the year to March 31, 1959:

Profit amounts to £30,236 as compared with £43,090. Your Directors propose to maintain the dividend at its present rate of 12½ per cent. The fall in profit reflects the difficult trading conditions. Relaxation of credit restrictions brought us no real relief as public spending seems to have been directed towards the purchase of those goods which had been mainly affected by hire purchase and other regulations.

Apart from these factors, profits have been affected by the impact of higher advertising expenditure and by passing on to the public the reduction in duty rates on high strength wines in the 1958 Budget. Sales of our Dowcester and Marievale Sherries continue to grow, and whilst the reduction in duty has no doubt played its part in this expansion the effect has not been as great as perhaps might have been envisaged. I am however quite sure that our sherries, and in particular Marievale, will play an increasingly important part in our future. We are introducing on a pilot basis a new French aperitif. Preliminary reaction within the trade has been encouraging.

Our hotel company was able to acquire a further property near Wetherby towards the end of 1958. We remain confident that our investment in this field will be rewarding.

The report and accounts were adopted.

HAZELL SUN LIMITED

MR T. R. WALKER ON EFFECTS OF PRINTING DISPUTE

The seventy-fifth Annual General Meeting of Hazell Sun Limited will be held on October 2nd at 44 Great Queen Street, London, WC2.

The following is an extract from the statement by Mr T. R. Walker, the Chairman, which has been circulated with the accounts to March 31, 1959:

PROFIT AND DIVIDENDS

The net profit after providing for tax is £425,334, compared with £384,285, last year. Your Directors have given much thought to the dividend policy that should now be pursued and we decided to pay a second interim dividend of 10 per cent on the Ordinary Shares (in place of a final) making 15 per cent for the year—an increase of 3 per cent on last year. Throughout the postwar years we have retained in the business a considerable portion of the profits; this practice has been of immense benefit to the company and it has been very largely from the retained profits that our rebuilding and new development has been carried out. But conditions are now easier and we think the time has arrived when a larger share of the earnings should be distributed to shareholders. The Ordinary and Preference dividends account for £152,508 of the net profit.

RISING COSTS

Shareholders will be aware of the events that led to a slowing down and ultimately a cessation of production throughout the printing industry (except for the London daily and Sunday newspapers) for a period of about nine weeks in all. With the further increases in wages and the reduction in hours, the price of printing is bound now to increase. The concessions granted by the Unions can help the industry to minimise the additional cost and we hope that the recent dispute will leave no bitterness on either side and that the old friendly relations and spirit of co-operation will continue. Full employment is essential in the interests of all engaged in the industry and for that the Directors, with the help of the staff, will continue to strive.

THE FUTURE

During recent months the control of certain of our important customers has passed into other hands. A great deal of the work we produce for these customers is under contract, indeed the major portion is covered for a substantial period of time.

The cost of the strike was very heavy and a considerable fall in profits for this year must be expected. It is still too early to make any close estimate of the extent of the fall, and I must give notice that, when the final figures for the year are available, the Directors may not think it prudent to recommend, in respect of this strike-affected year, the payment of the dividend that was forecast earlier in the year when the issue of additional capital was first announced.

In the longer future, however, in spite of the uncertainties overhanging the businesses both of periodical and book publishers, we think the outlook is not unhopeful and your Directors are confident that any setback in profits that may occur this year will prove to be no more than temporary.

SHEEPBRIDGE ENGINEERING LIMITED

A DIFFICULT YEAR

The annual general meeting of Sheepbridge Engineering Limited was held on September 9th in London, The Right Honourable Lord Aberconway, chairman of the company, presiding.

The following is an extract from the chairman's statement circulated with the report and accounts for the year ended March 31, 1959:

Last year reference was made to the effect which the restrictions on credit facilities were having on our business. During the year under review orders were more difficult to obtain, and some of our factories had no alternative but to work at reduced capacity, thereby adding further to the already increasing costs. Fortunately some of the products recently developed by the group came into production and helped to maintain group sales at little less than those of the previous record year. The reduced trading margins, however, caused a fall in the consolidated profit before taxation to £800,379.

The directors recommend a final dividend of 11 per cent. This, together with the interim dividend of 5 per cent, makes a total distribution for the year of 16 per cent less tax, the same as last year.

SOME SALES RECORDS

All the subsidiary companies contributed to the group profits; and record sales were achieved by Sheepbridge Equipment Ltd., Bray Construction Equipment Ltd. and Twiflex Couplings Ltd.

The widening of the activities of Sheepbridge equipment Ltd. is being continued. Specialised equipment is being supplied to Bord na Mona for the processing of peat. Run out tables for rolling mills are being manufactured for the steel industry. Fabrication work is being supplied for the modernisation programme of British Railways. Complete cabs in moulded fibre glass are being supplied to Bray Construction Equipment Ltd., who previously bought them from suppliers outside the group.

At Sheepbridge Stokes Ltd. good progress has been made in the foundry specially equipped to produce individually cast high-radial-pressure piston rings.

Sheepbridge Alloy Castings Ltd. experienced a further reduction in demand for aero engine castings, together with a slackening in demand from other users of castings.

Sintered Products Ltd., in widening the range of application of its products, has started to supply more industries.

The sales of Bray Construction Equipment Ltd. for the year were the highest on record. This emphasises how attractive Bray's range of loaders is in the world markets.

The machine tool trade generally suffered a severe setback, and orders taken by Hardinge Machine Tools Ltd. were less than in the previous year.

Sheepbridge Engineering (Canada) Ltd. has continued to make satisfactory progress.

Throughout the year the business of your group of companies has suffered from reduced demand occasioned by the general reduction in industrial activity; but following upon the lifting of restrictions on credit facilities and the impetus given to trade and industry by taxation reliefs, there are signs that industrial activity is on the increase.

CAPITALISATION OF RESERVES

In order to bring the issued capital more closely into line with the funds irrevocably committed in the business, your directors propose to capitalise £1 million out of Capital Reserve and to distribute the resulting shares, as fully paid up, to the shareholders in the proportion of one new share for every three held. The issued capital would then be £4 million and the Consolidated Reserves £2,252,031.

The report and accounts were unanimously adopted, and the Board's capital proposals approved.

TO HIS EXCELLENCY THE MINISTER OF FINANCE, FEDERAL GOVERNMENT OF THE UNITED KINGDOM OF LIBYA.

We have examined the above balance sheet comprising the assets and liabilities of the Issue Department and of the Banking Department and the annexed statement of profit and loss which, with the note to the latter, in our opinion give respectively a true and fair view of the state of the affairs of The National Bank of Libya as at March 31, 1959, and of its profit for the year ended on that date.

We have obtained all the information and explanations which we considered necessary. In our opinion the Bank has kept proper books and the balance sheet and statement of profit and loss are in agreement with them and with the said information and explanations.

STEEL BROTHERS AND COMPANY LIMITED

A DIFFICULT YEAR

MR J. K. MICHIE'S REVIEW OF WIDESPREAD ACTIVITIES

The sixty-eighth annual general meeting of Steel Brothers and Company Limited will be held on September 25th in London.

The following is an extract from the circulated statement of the chairman, Mr J. K. Michie:

Last year in looking forward to 1958 results I said that because of the economic difficulties through which certain Eastern countries (i.e. India, Pakistan, Burma and Ceylon) were passing they were difficult to foretell but added that Canada and the Middle East appeared to hold out better prospects for our Company.

In the event I regret to say my fears of reduced trading opportunities and profits were justified; my hopes of better things in Canada were only very partially realised while in the Middle East they were completely discounted mainly because of the economic consequences of the revolution in Iraq in July, 1958, which had a major effect on our Companies' activities.

In consequence our profits for the year fell from £553,174 in 1957 to £392,918. Taxation amounted to £280,000—leaving a balance of £112,918.

I very much regret it has been impossible in the circumstances to recommend dividends for the year 1958 on either the Preferred Ordinary Stock or the Deferred Ordinary Shares of the Company.

Turning to the different areas in which we operate:—

UNITED KINGDOM

Commissions earned and trading profits were somewhat higher than in 1957.

Carbutt & Co. (1928) Ltd. As expected results showed a distinct improvement on the previous year's performance, but the tariff preference on imports of rough rice came too late to prevent a loss being made.

Prospects are better this year and a substantial improvement in throughput at the mills is being achieved.

Sondes Place Research Laboratories Ltd. There was some reduction in the activities of this Company last year, particularly in the Engineering Section, and a considerably smaller profit was made. 1959, however, is more promising, and we hope the additional facilities recently provided will be more fully utilised.

Peterlite Products Ltd. This Company continues to improve the quality of its products but is still largely in the experimental stage and results for last year still showed a considerable loss though a smaller one. However, commercial orders are now coming along and promise to increase, but it is inevitable that a further loss will be incurred in 1959.

Expanded Perlite Ltd. A small profit was made last year and offtake and production have since continued on the increase. We therefore confidently expect considerably better results in 1959, though it should be realised this is an activity with a limited potential.

Oil Prospecting in Lancashire. This was a geological prospect of considerable promise, but so far neither oil nor gas in commercial quantities has been encountered. We are now nearing the ultimate depth at which the area will be proved or disproved and have decided it is prudent to write off our 50 per cent share of expenditure to December 31, 1958, amounting to £22,345.

Our several attempts to prove mineral oil and/or gas in the United Kingdom we regret have been unsuccessful so far and the expenditure has had to be met out of taxed profits.

Steel Brothers (Insurance) Ltd. As mentioned in my Statement last year the new Company Steel Brothers (Insurance) Ltd. being duly formed commenced business July 1st as Lloyds Brokers and steady progress has been made.

OVERSEAS ACTIVITIES

BURMA. Due to the drastic cutting down of imports our trading opportunities were considerably reduced last year and our profit in consequence much lower. However, the energetic measures taken by the new Government to balance the economy of the Country met with considerable success.

Burma Cement Company Limited. I regret to report we are still without a settlement of this and of nationalisation which took place nearly five years ago. However we are promised a final hearing during this month of August which I hope will also mean a decision fair to the shareholders.

Strand Hotels Ltd. The hotel was fairly fully engaged last year, but turnover and profits both declined from the 1957 level.

INDIA. Our trading activities suffered a setback last year and provision has had to be made for a loss.

Our procurement agency for the Indian Tea Association continues on friendly and active lines.

PAKISTAN. Our overall earnings in both Karachi and Chittagong were higher than in the previous year. We have made some progress with the Exchange Control Authorities over the remittance of back profits and hope to have further success in the near future.

HONGKONG. This branch again operated at a loss if a slightly smaller one. The scope of our future activities is now under consideration.

JAPAN. Operated at a small loss against a satisfactory profit in 1957. The Government of Japan is putting difficulties in the way of remittance of profits and our future activities are being considered from this angle.

THAILAND. Trading conditions here continue to be difficult and the reorganisation of our operations is in train.

CEYLON. Conditions in the port of Colombo were very bad during a great part of 1958 and this made trading more than usually difficult. Our two companies, E. B. Creasy & Co. Ltd. and Darley Butler & Co. Ltd. both showed profits but on a somewhat reduced scale.

MIDDLE EAST. This area has been a major disappointment and is a continuing problem. The revolution in Iraq of July, 1958, has had a very serious effect on business generally and in our case on the activities of Rafidain Developments Ltd. and W. J. Coker & Co. Ltd. The economic measures taken by the new Government have reduced our customers, cut our margins and at least temporarily made the collection of outstandings more difficult.

Our associated company Messrs. Spinneys (1948) Ltd. had a satisfactory year.

EAST AFRICA. Our associated company A. Baumann & Co. Ltd. had another satisfactory year.

Steel Brothers (Tanganyika Forests) Ltd. Owing to trade recession in South Africa and Rhodesia and increased competition from similar timbers from areas enjoying lower freights, prices had to be cut and profits fell sharply. Markets continue difficult.

CANADA. *British Columbia.* Our trading activities in Vancouver again showed a loss though a smaller one.

Pitkethly Brothers Ltd. While distributing the same dividend this Company increased its activities and its profits last year and is in a good position to undertake further expansion.

Mainland Clay Products Ltd. This small company almost "broke even" last year and prospects for this year are of a very similar result.

Hope Lumber Co. Ltd. Last year the loss made by this Company was practically halved, but this is still by no means a satisfactory performance and further measures to rectify matters are essential and are now being actively considered.

Alberta—Loders Lime Co. Ltd. This our first investment in Canada is now repaying the capital and effort we have put into it and the profit last year showed an increase—after depreciation—of over £10,000 on 1957. The Company continues to do well.

Alberta Ytong Manufacturing Co. Ltd. Last year I was hopeful of the Company doing considerably better in 1958, but I regret these hopes were falsified and it has been necessary to make a considerably larger provision against accumulated losses.

Dales Brothers Limited came out with a square position last year, but this was after a considerable allowance for depreciation on plant.

Prospects for this year are expected to be somewhat similar.

PROSPECTS

In the circumstances you will expect me to say more than usual about prospects.

Admittedly for somewhat special reasons which I have explained under the appropriate heads the Company is going through a more than usually difficult period, which I cannot promise will be ended with the accounts now before you; but the heart of the business is sound and strong and I see no reason whatever for pessimism about the future. In previous statements and in this one I have drawn attention to the effect on our business of the policies including those pertaining to import licences of the Governments of those Countries in the East in which we are established. These policies stem from a variety of reasons, some economic, others the extent Governments themselves have acquired a stake directly or indirectly in Industry and Trade. The effects and indeed the policies have varied from year to year and we have been loath to take any non-reversible steps until we had a clearer appreciation of ultimate prospects.

FURNESS, WITHY & COMPANY

SATISFACTORY TRADING RESULTS

MR FRANK CHARLTON'S REVIEW OF ACTIVITIES

The sixty-eighth annual general meeting of Furness, Withy & Company Limited will be held on September 16th in London.

The following is an extract from the circulated statement of the chairman, Mr Frank Charlton, FCA.

Consolidated Profit and Loss Account: The results compare favourably with the figures of the previous year. The total net Revenue from all sources, after providing for Contingencies and, in the case of a Subsidiary, Special Depreciation on new tonnage, was £5,035,185. The provision for Depreciation of Fixed Assets requires £3,066,596, an ever-increasing figure due to the high cost of new tonnage. There is a substantial reduction in the charge for Taxation, viz., £417,666 as against £927,852, which reflects benefits arising from Investment Allowances and arrears brought forward from previous years.

The recommendation of the Board is that there should be distributed to Ordinary Stockholders £612,500, maintaining the same 10 per cent Dividend as last year but representing a slightly larger net distribution owing to the lower rate of Income Tax.

Bearing in mind the extremely depressed state of the Shipping Industry during the past two years, which, unfortunately, shows little prospect of any early improvement, the combined figures may be regarded as satisfactory. They, of course, include the benefit arising from new tonnage delivered during the period and satisfactory charter arrangements.

NEW TONNAGE

The Consolidated Balance Sheet discloses an increase of £1,540,522 in Shipping Property which is due to Payments to Shipbuilders in connection with new tonnage delivered, and payments on account of vessels still under construction less Sales and Depreciation written off during the year. The Cargo Liner *Mystic* and three Tugs for service in the Mersey all built to the order of the Johnston Warren Lines Limited, and *Ionic* built for Shaw, Savill & Albion Company Limited were delivered during the year. The vessels disposed of as being no longer suitable for our requirements were *Jessmore, Arabian Prince, Stuart Prince, Brazilian Prince.*

SHIPPING ACTIVITIES

So far as the New York/Bermuda Service is concerned, earnings have been maintained satisfactorily during the past year, but we are faced with ever-increasing rises in operating costs which seriously curtail the financial return from this Service.

As mentioned in last year's Report, five cruises were operated by the *Ocean Monarch* from Port Everglades, Florida. Bearing in mind that this was a new venture, the response can be considered satisfactory. This year extra time will be required during the forthcoming refit of the *Ocean Monarch* when she will be entirely air-conditioned and as a result it will only be possible to make four cruises of twelve to twenty days' duration, commencing in the latter half of January, 1960.

Earnings have also been maintained in the service to and from the Pacific Coast operated by the Parent Company, but here again the costs of handling cargoes, particularly at Pacific Coast ports, continue to rise, mainly due to the continuing demands by longshoremen.

On July 26, 1959, the St Lawrence Seaway was formally opened by Her Majesty The Queen and the President of the United States, thus setting a triumphant seal on this great joint enterprise which can mean so much to both the Dominion and the United States. We have continued our Service to and from Great Lakes ports and are now operating with tonnage owned within our Group of Companies.

The two Ore Carriers *Edenmore* and *Saga-more* continue to operate satisfactorily under charter to the British Iron and Steel Corporation.

The Prince Line, which is one of our important subsidiaries, has had an extremely difficult time in the Mediterranean, and in the Far Eastern trades, in which it has been engaged for many years. For the first time for many years the Parent Company received no dividend from its substantial investment in Prince Line.

During the year under review our Subsidiary Shipping Company, Shaw, Savill & Albion Company Limited, celebrated the Centenary of its foundation in 1858. The Shaw, Savill Company operates a Fleet engaged principally in the New Zealand and Australian trades, and it is no exaggeration to say that this well-known Company has made an outstanding contribution during the course of its long history to the economic development of both New Zealand and Australia.

OTHER ACTIVITIES

Dealing with our activities outside the sphere of shipowning, one of the lesser known is our trading Branch in Trinidad, where we are engaged in various enterprises such as general engineering, ice manufacture and cold storage, building construction, merchandising and lime production, as well as our usual business of Shipping Agency. Trinidad is an island with increasing opportunities for expansion of which we are well equipped to avail ourselves.

Airwork Limited continue to make satisfactory progress. The balance of the Capital of the F. A. Laker Group of Companies, the main operating company of which is Air Charter Limited, and to which reference was made last year, has now been acquired as has also the entire Capital of Morton Air Services Limited. These acquisitions have enlarged the scope of the Company's activities. The policy of maintaining an efficient fleet of modern aircraft has been pursued by the acquisition of three more Vickers Viscount and two Bristol Britannia Aircraft, and the disposal of obsolete types. A reasonable dividend is again assured for the current year.

It is not an easy matter to forecast the future trend of events in the Shipping Industry. The continued and substantial increase in operating costs in this country and other parts of the world which, unfortunately, it is not possible to match by increased earnings, means that profit margins are reduced to narrow limits. Nevertheless, so far as figures are available for the first quarter of the current financial year we appear to be maintaining the position disclosed by the Accounts under review.

PURNELL AND SONS

(Book Printers and Publishers)

SATISFACTORY RESULTS

SCRIP ISSUE PROPOSED

The twenty-fifth ordinary general meeting of Purnell and Sons Limited will be held on September 28th in London.

The following is the statement by the Chairman and Managing Director, Mr W. Harvey:

It gives me pleasure to submit to you the Accounts of the Company for 1958. The Profit of the Group for the year, before providing for Taxation, is £711,781, being £604 less than 1957. The reduction in the standard rate of Income Tax is reflected in the decreased charge for Taxation of £384,060 as compared with £416,527 in 1957. After providing for Taxation the balance of Profit for the year is £327,260 against £296,325 in 1957. The year's profit together with the balance brought forward from the previous year, after adjustment of Taxation over-reserved, brings the amount available for allocation to £1,186,989. Of this balance your Directors have transferred £500,000 to General Reserve, and provided for Dividends to Members of £131,310, leaving a balance to be carried forward of £555,679.

In making the offer of Ordinary Shares in October last it was estimated that the Dividend for 1958 would be 32½ per cent. It is, however, found possible to distribute the equivalent of 33⅓ per cent, but in order to take advantage of the Profits Tax provisions of the Finance Act, 1958, it is recommended that a Final Dividend of 16⅔ per cent be paid in respect of 1958 and an Interim Dividend of 5 per cent on account of 1959, both on the present Ordinary Capital of the Company and both payable on the same date.

In my review of the accounts for 1957 I mentioned that it was your Board's intention to revalue the Fixed Assets of the Company. Whilst this valuation has been made your Board has considered it inadvisable to write up the Fixed Assets at this stage, but you will be pleased to know that the valuation exceeds the present Balance Sheet figure by approximately £1,500,000.

CAPITAL PROPOSALS

Your Directors are of the opinion that the Capital of the Company should more accurately represent the Capital employed and in consequence are recommending the Capitalisation of £711,269 of the General Reserve and the issue of one New Ordinary Share for each Ordinary Share held. To give effect to this recommendation it will be necessary to increase the Nominal Capital of the Company and for this purpose an Extraordinary General Meeting is being convened, the requisite notice for which accompanies the Accounts.

Up to the date of the Printers Strike all branches of the Group were working to capacity and the results for the current year will therefore depend on how much additional production can be made up during the remaining months of the year to compensate for the heavy loss sustained by the strike. Under the circumstances our Profits may be affected to some extent but it is anticipated it will be possible to recommend a Dividend in respect of 1959 of some 17½ per cent on the proposed increased capital, in addition to the Special Interim of 5 per cent now being paid on the present capital.

Once again I wish to pay tribute to my colleagues on the Board, all of whom are full-time executives, and to express my thanks to the staff and to all employees for their services and co-operation.

APPOINTMENTS

B·T·P TITANIUM PIGMENTS

British Titan Products CO. LTD.

wishes to appoint an

ASSISTANT

in its

ORGANISATION AND METHODS

Department with Headquarters in London. The work consists primarily of investigating clerical and office methods in London and at factories in the north of England.

Applications are invited from men not more than 30 years of age, of good education, and with some evidence of professional or academic achievement. Previous office experience is essential and some knowledge of O. & M. work would be an advantage.

General conditions of service are attractive and include a Bonus Scheme and Non-Contributory Endowment Assurance. Commencing salary will not be less than £800.

Applications will be treated in the strictest confidence and should be addressed to the

PERSONNEL MANAGER,
BRITISH TITAN PRODUCTS COMPANY LIMITED
BILLINGHAM, CO. DURHAM
(quoting Reference S.7.)

ECONOMIST. Vacancy for an assistant occurs on the staff of the Cotton Board Economics and Statistics Department. The possession of a good degree in economics or statistics is an essential qualification and some post-graduate experience either in industry or in research would be an advantage. Commencing salary within the scale of £700-£900. Contributory pension scheme.—Replies, stating age, details of education and experience, should be addressed to Director of Statistics. 3 Alberton Street, Manchester, 3.

ATV require a university trained girl with some market research experience to fill a vacancy for an assistant in their research department. The work particularly concerns programme research and is of an interesting and non-routine nature. Good statistical knowledge essential, some knowledge of psychology an advantage.—Write, giving full personal details and salary required, to the Personnel Manager, Associated Television Ltd., ATV House, Great Cumberland Place, W.1.

THE ROYAL INSTITUTE OF BRITISH ARCHITECTS invite applications from young graduates in Law or Arts for the post of ADMINISTRATIVE ASSISTANT. Initially the successful candidate will assist in the R.I.B.A. Practice Department, with work some of which has a legal content relating to professional practice. This will include some Committee work and report writing. Salary within the range of £700 x £50 — £1,250.—Applications should be sent to The Secretary, The Royal Institute of British Architects, 66 Portland Place, London, W.1, by September 18, 1959.

UNIVERSITY OF NEW ENGLAND
AUSTRALIA

ASSOCIATE PROFESSOR and
SENIOR LECTURER in ECONOMICS

Applications are invited for the above positions. The salary for an Associate Professor is £A2,850. The commencing salary for a Senior Lecturer is fixed according to qualifications and experience within the range £A2,200 x £A80 — £A2,600. For both positions a cost of living allowance at present amounting to £A18 per annum is payable. Grants to assist in research are available. Provision is made for superannuation, travel and removal expenses, assistance in buying or building a house.

Further information may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London, on October 16, 1959.

MAKERERE COLLEGE
THE UNIVERITY COLLEGE OF EAST AFRICA

EAST AFRICAN INSTITUTE OF SOCIAL RESEARCH

Applications are invited for post of Research Secretary to the Applied Research Unit of the East African Institute of Social Research. This unit will include three Research Fellows and is being set up with the aid of a grant from the Ford Foundation. Appointment for five years in first instance. Salary up to £2,000 per annum, according to experience and qualifications. Passages for appointee and family (up to four adult passages) on appointment, termination and leave. F.S.S.U. Child allowance £50 per annum per child (maximum £150 per annum). Rent according to quarters provided £45 to £84 per annum, including basic furniture.

The Research Secretary will be responsible to the Chairman of the Institute for the detailed supervision of the Research Fellows in the Unit. Importance will be attached both to training and experience in the social sciences and to practical knowledge of research conditions in Africa. Further details obtainable from Chairman, East African Institute of Social Research, P.O. Box 262, Kampala, Uganda.

Detailed applications (six copies) naming three referees, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, by December 1, 1959.

GALLUP POLL.—Senior Secretary to Managing Director. Must be able to handle staff matters. Exacting but interesting post.—In first instance write for application form to Dr Henry Durant, 211 Regent Street, London, W.1.

ADMINISTRATIVE MANAGER

A leading public works contracting company operating at home and overseas seek a Manager for their Canadian subsidiary to be responsible for general office administration and handling commercial aspects of the business. Starting salary not less than £2,000.

There is great scope in this appointment for a well-educated man of character aged 28-35 with an accountancy background and experience in management accounting, who is ready to settle in Canada and who has the administrative ability to take a leading part in expansion plans.

Write briefly in strictest confidence.

THE MANAGING DIRECTOR (RL.46),
EXECUTIVE APPOINTMENTS LIMITED,
78 WIGMORE STREET, LONDON, W.1.

YOUNG MATHEMATICS or STATISTICS graduate required for training as PRODUCTION COST CONTROLLER in progressive and expanding organisation.—Reply to The Secretary, ENGLISH NUMBERING MACHINES Ltd., Queensway, Enfield, Middlesex.

ACCOUNTANCY—ASSISTANT EDITOR. *Accountancy*, the journal of the Institute of Chartered Accountants in England and Wales, requires an Assistant Editor. A member of the Institute, a graduate (in economics or law) or a barrister is preferred. Some journalistic experience is desirable. Commencing salary between £850 and £1,350 per annum; non-contributory pension scheme.—Apply, by letter, to the Editor, *Accountancy*, 23 Essex Street, London, W.C.2. Envelopes should be marked "Personal—Asst. Ed."

MONTHLY ECONOMIC JOURNAL, City, world-wide circulation, dealing with major commodity in international trade, requires, for permanent staff, a writer with economic background and able to handle financial topics in respect of the U.K. and elsewhere. Pension fund. Luncheon vouchers. —Write, giving details of qualifications, experience, to Box 1201.

MAGEE UNIVERSITY COLLEGE, LONDONDERRY

Applications are invited for the post of Assistant Lecturer in Economics and Political Science or History and Political Science. The appointment will be for three years commencing October, 1959. Salary scale £700 x £50 to £800 per annum (initial salary £750 at age 26). F.S.S.U. and child allowances. Preference will be given to candidates able to lecture in Economic History and Political Thought and Institutions.

Applications, with the names of two referees, should be received not later than October 3rd by the Secretary to the Trustees, Magee University College, Londonderry, from whom further particulars may be obtained.

For further appointments and other classified advertisements see page 879

MAKERERE COLLEGE,
THE UNIVERSITY COLLEGE OF EAST AFRICA

EAST AFRICAN INSTITUTE OF SOCIAL RESEARCH

Applications are invited for the post of Research Fellow to undertake a survey of the human factors affecting productivity on sugar and tea estates in Uganda for a period of eighteen months. Salary in scale: £1,200 — £1,500 per annum, entry point determined by qualifications and experience. Passages for appointee and family up to four adult passages on appointment and termination. Superannuation contribution F.S.S.U. or similar. Child allowance £50 per annum per child up to maximum of £150 per annum. Rent according to quarters provided £45 to £85 per annum, including basic furniture.

Detailed applications (six copies) naming three referees, by October 10, 1959, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

AIR SUBSCRIPTIONS TO *THE ECONOMIST*
22 Ryder Street, London, SW1

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/28 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

COMPANY AFFAIRS

BOWATER PAPER

As had been expected, the interim ordinary dividend of Bowater Paper has been raised from 4½ to 5 per cent. This is the first movement in the dividend payment for three years but Sir Eric Bowater says that the increase has been designed to narrow the gap between the interim and final rates. Whether or not it foreshadows an increase in the final payment he does not say and at the moment it is best to continue to calculate the yield on a 12½ per cent dividend. On that basis the yield offered by the £1 stock at 58s. 3d. is 4.3 per cent.

The half yearly results certainly do not justify any wild optimism about the final payment. The printing dispute had only a minor effect on profits in the six months to June 30th but its adverse effects will be reflected in the results for the second half of the year. At the moment, moreover, Sir Eric cannot find any reason—apart from the printing dispute—to modify his earlier view that the full year's results will approximate to those for 1958. Sales and gross profits were better in the first half of this year than they were in the first half of 1958; in Britain the newsprint and paper mills were better employed and the volume and range of products of the packaging business of Bowaterin the market (as in fact many other shareholders did) were surprised and not a little annoyed when the jobbers in the London market suspended dealings in the shares on September 4th, ten days before the official distribution period ends. The jobbers' decision was made on the grounds that the distribution has involved an immense amount of paper work which will take them a long time to complete. This reason may seem scarcely adequate for the investor who had decided to wait until the last few days before making up his mind what action to take. Now it is impossible for the shareholder to sell through the market and he is obliged to make his own arrangements for receiving his entitlement of "Shell" and Royal Dutch shares.

	Six months ended		
	June, 30, 1958	Dec., 31, 1958	June, 30, 1959
Sales and Earnings:	£'000	£'000	£'000
Total sales.....	52,156	55,027	55,196
Trading surplus	8,795	9,350	9,066
Depreciation	2,517	2,730	2,954
Taxation	2,200	2,058	1,980
Net income	2,728	3,097	2,611

Eburite continued to expand. In North America, the mills shared in the recovery in the consumption of newsprint with the result that the Newfoundland mills have now resumed full time operation. But the recovery in consumption has not been strong enough to keep all the group's new productive facilities in North America and Britain fully employed.

There is, in fact, still a surplus of papermaking capacity and the competitive pressure on the manufacturers to keep prices down does not appear to have slackened. That is apparent in the fact that the gross trading margin to sales at 16.4 per cent in the first half of this year was slightly less than the 16.8 per cent returned in the first half of 1958 and the 17.0 per cent in the second half. The fall in the net profit margin is even more apparent: at 4.73 per cent it compares with 5.23 per cent and 5.63 per cent. That decline reflects the heavier weight of loan interest and depreciation, both arising from the installation of new capacity.

CANADIAN EAGLE

SHAREHOLDERS in Canadian Eagle who had not complied with the terms of the merger agreement with Royal Dutch/Shell or who had not disposed of their holdings

A further factor that must be considered is the possibility that holders—and former holders—of Canadian Eagle may find themselves having to pay a 10s. stamp duty unless they obtain a "transmittal form" from the London distribution agent and have surrendered their Canadian Eagle shares and claimed their Royal Dutch and Shell shares before September 14th. Shareholders, therefore, who have not yet acted must in their own interests do so immediately. Those who have recently bought in the market—and turnover has been extremely large—will also have to comply with this procedure and as it is extremely doubtful whether all will have received delivery by the official expiry date the sellers of the stock may find themselves liable for the duty. This possibility arises, again, because the jobbers have been swamped by sales.

When dealings were suspended both Canadian Eagle bearer and registered shares stood at 90s. 3d. The distribution of two Royal Dutch and three Shell for every 12 Canadian Eagle puts a current value of 89s. 3d. on each Canadian Eagle share with "Shell" quoted at 145s. 6d. and Royal Dutch at £15⅞.

GREAT UNIVERSAL STORES

MUCH the greater part of the sales of Great Universal Stores is made for cash or on short-term credits. By the end of March, 1958, the proportion done on hire purchase had been brought down to a mere 10 per cent. In the year to March 31st last HP sales, Mr Isaac Wolfson says, increased "materially" and the boom in hire purchase after the restrictions were put into cold storage must be largely responsible for the increase of 11 per cent in total sales achieved by this multiple empire. Trading profits rose by just under 6 per cent, by £1,375,438 to £24,569,202; that is less than the rise in sales because credit for the profit on HP sales is taken not at the moment of the sale but as the instalments are collected. In the latest financial year, for instance, £3,379,253 was set aside in a provision against unrealised profits on HP debts before striking the trading surplus, compared with only £326,366 in 1957-58. The total deferred profit on HP debts is now £14,915,647, which, subject to collection charges, will be brought into profit over the ensuing years as the outstanding debts are collected. That points to bigger profits in the years to come, unless short-term credit or cash sales suddenly collapse—a most unlikely contingency for such a strong and well-managed concern as GUS.

Mr Wolfson described the latest financial year as one of "consolidation and development of existing interests." The number of shops owned by the group remained practically unchanged in total and only £200,000, compared with £2,100,000 in 1957-58, was brought into the profit and loss account in respect of new subsidiaries. The decision to simplify the capital structure of the group, by replacing the minority preference shareholdings in various subsidiaries by preference shareholdings in the parent company, will permit this process of simplification and consolidation to be taken a stage further. The number of subsidiaries will be reduced and the managerial structure will become more stream-lined. If another group of stores came on to the market, Mr Wolfson would find it hard to resist a bargain, but the process of merging within the retail trade has already gone so far, in this country at least, that the eagerness to acquire new subsidiaries which once characterised GUS may not be so apparent in the future. In looking at the yield of 4.0 per cent offered by the GUS 5s. "A" shares at 44s. 3d. xd on a dividend of 35 per cent, investors may have to think in terms of the expansion of trade within an empire instead of the expansion of the empire itself.

THORN ELECTRICAL

TERMS of Thorn Electrical's twin issue of an unsecured loan stock and of ordinary shares, to raise a gross sum of £6.2 million were announced last week-end. The "rights" issue of 2,179,520 5s. ordinary shares at 25s. a share is on the basis of one new share for every three ordinary or "A" ordinary shares held. The issue of £3,500,000 of 6 per cent unsecured loan stock (1979-84) will be made at par. The holders of the present £500,000 5¾ per cent loan stock may opt for repayment in cash at par or may convert their present holdings into new 6 per cent unsecured loan stock. After deducting £500,000 to meet these conversion or repayment tenders and £117,000 to meet issue expenses, the amount available to the group from both issues will be

£5,607,000—which will be used partly to repay bank overdrafts and partly to finance the group's expansion programme.

The directors say that the group's turnover for the current financial year is higher than for the same period last year and they "confidently anticipate" an increase in the trading profit: they therefore intend to maintain the dividend of 20 per cent (which last year was covered 4.2 times by earnings) on the increased capital. This puts the new 5s. ordinary shares now standing at a premium of 8s. 9d. on a yield basis of just under 3 per cent.

RADIO AND TELEVISION RESULTS

Radio and television companies whose financial years ended in the spring, have recently been reporting quite strong advances in their profits. This improvement reflects the ending of hire purchase and credit restrictions and cuts in purchase tax. This has not only boosted sales but rentals as well. The boom has left some of the manufacturers short of liquid resources. One example is **Pye** which, though it has earned high profits, has had to rely on a substantial bank overdraft in recent years. Last year, a debenture issue brought in more than £2,500,000, but even so higher sales meant that stocks and work-in-progress had the first call on the new funds, with the result that though the net overdraft was reduced by £421,000 it was still as high as £3,486,000 at the end of March. Not surprisingly, therefore, further funds have recently been raised by a "rights" issue which has brought in about £3¾ million, which is being used partly to pay off overdrafts and partly to finance further expansion.

Radio and Allied, the manufacturers of Sobell and McMichael television and radio sets and gramophones, has not had to rely on bank overdrafts. It has just published its results for its first year's trading as a public company. The prospectus had forecast a profit of more than £800,000, but helped by the boom conditions in the industry the trading profit was in fact £1,253,000 for the year to April 30th—almost £250,000 up on the year. The total distribution of 22½ per cent compares with a dividend forecast of 15 per cent. The company now claims to be among the three largest television makers in the United Kingdom.

Shareholders in **A. C. Cossor** will be pleased with the good recovery it made in the year to March 31st. The preliminary statement shows that a profit before tax of £223,000 compares with a loss of £15,000. This result owes something to the sale of the unprofitable subsidiary, Cossor Radio and Television, to Phillips. The ordinary dividend payments have been resumed with a distribution of 5 per cent, which is amply covered by earnings of 18¾ per cent. The statement by Mr Michael Sobell, the chairman of Radio and Allied, that sales and production in the current year are "appreciably higher" may be taken as an indication of the current prospects of the industry as a whole.

COPPER PROFITS

The gradual recovery in the copper price from the slump which began at the end of 1956 is reflected in the preliminary profit statement of the Rhodesian Selection Trust group of copper companies for the year ended June 30, 1959. Roan Antelope's estimated profit before tax for the year rose from £2.3 million in 1957-58 to £4.9 million in 1958-59; the gross profit per ton sold has doubled to £60. There was a small increase in sales, from 77,444 tons to 80,617 tons. As predicted in January by the chairman, Sir Ronald Prain, all the copper produced appears to have been sold, and the 52-day strike in the second half of 1958 seems to have had little effect on the year's sales or profits. The average amount received for a ton of copper rose from £177 in 1957-58 to £219 in 1958-59. Profits in the June quarter were higher than in the March quarter as an increase in sales offset the fall in prices.

Mufulira's sales were lower for the year, but the average price per ton realised was higher, and its estimated profit before tax per ton rose from £47 to £75. The estimated profit before tax for the year advanced from £4.2 million to £6.6 million.

GEORGE COHEN

The full accounts of the George Cohen 600 group, whose activities range from general engineering over the whole gamut of iron, metal and machinery merchanting, do not reflect any upturn in business in the year to March 31st last: consolidated trading profits fell from £1,813,815 to £1,308,109. A lower tax charge of £650,000 (against £997,000) left the consolidated net profit at £657,739, compared with £817,177. Sales fell by 15 per cent from £32.7 million to £27.6 million and the fall of 19 per cent in the net profits must therefore reflect narrower margins.

But shareholders may gain some comfort from the remarks made by the chairman, Mr Cyril Cohen, about trading prospects. In the last quarter of the financial year trading profits showed "a welcome upsurge," although the rise was too late to offset fully the decline over the previous nine months. The group's order book is now "healthier" and, he says, "trends are better." Even so, Mr Cohen is still cautious: and he is careful not to predict any "material change" in the level of profits in the current year. The 5s. ordinary shares at 13s. 3d. now offer a yield of 4.3 per cent on the 12 per cent dividend which is, in spite of the fall in profits, still covered 2½ times by earnings.

BRITISH MATCH

In last week's note in these columns on British Match it was said that sales of matches by the corporation's associated and subsidiary companies overseas had trebled since 1953. In fact, they rose from 29.8 million gross boxes in 1953 to 32.9 million in 1958.

London Stock Exchange

FIRST DEALINGS:	Sept. 2	Sept. 16	Sept. 30
LAST DEALINGS:	Sept. 15	Sept. 29	Oct. 13
ACCOUNT DAY:	Sept. 22	Oct. 6	Oct. 20

The general election has been the major factor influencing the stock market this week. Conditions were unsettled before last weekend and the decline in Wall Street prompted some selling. The beginning of the week saw a further stream of selling orders from outside London, but later conditions became firmer following the news of the election date and equities, in particular, rallied strongly from their recent setback, reflecting the market's confidence in a Conservative victory at the election.

Gilt-edged stocks remained under the influence of the rising trend of overseas interest rates until the end of last week, but with no sharp rise in the United States discount rate and with the United Kingdom Treasury bill rate unaltered, the tone became firmer after the weekend. Business was rather thin early in the week, but the trend was decidedly better. Short-dated stocks attracted little attention, although some buyers appeared on Wednesday and Thursday and 2½ per cent Funding (1956-61) rose from 97¼ to 97$^{21}/_{32}$. Medium dated stocks were patchy at first, but later scored numerous small gains. Typical of the movement was 4 per cent Gas (1969-72), which rose from 88$^{7}/_{16}$ to 88$^{5}/_{8}$. Among irredeemables 3½ per cent War Loan gained ¼ to 65$^{1}/_{32}$ after touching a "low" of 64$^{13}/_{16}$.

Industrial equities were rather weak until the election date was announced. Thereafter, many gains were recorded, but over the period *The Economist* indicator lost 1.9 points to 293.1 After their recent rise there was some heavy selling of hire purchase shares and prices reacted. Later, however, a good market once again developed and over the period there were some small net gains with Bowmaker putting on 9d. to 35s. 1½d. and UDT 2s. to 182s. Stores have lost much of their recent brightness, but House of Fraser and Harrods remained active. Before the weekend steel equities were marked down but later speculation led to some spectacular rises and dealings in options became hectic. John Summers was outstanding and put on 6s. net to 43s. 4½d. after falling to 35s. at one time. More typical was Steel of Wales which made a net gain of 2s. 3d. to 35s.

With interest concentrated on industrial equities the oil and mining sections of the market remained rather quiet. Oil shares, where they did move at all, fell in sympathy with the general trend in Wall Street, though BP managed to put on 1s. to 56s. Shell, on the other hand, lost the same amount to 148s. 9d. Gold shares were quiet throughout and there were few price changes with both the Johannesburg and New York markets closed over a long weekend. Copper shares were largely neglected and lead and zinc shares were lower.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended September 5, 1959, there was an "above-line" deficit (after allowing for sinking funds) of £17,192,000 compared with a deficit in the previous week of £16,120,000 and a deficit of £13,009,000 in the corresponding period of last year. There was a net expenditure "below-line" of £35,566,000 leaving a total cumulative deficit to date of £389,529,000 compared with £356,375,000 in 1958-59.

THE MONEY MARKET

For the fifth successive week, the syndicate maintained its bid at £99 2s. 7d. at last Friday's Treasury bill tender, and the average rate of discount was only slightly higher at £3 9s. 9.53d. The tender was raised by £20 million to £290 million and the market's allotment at the basic price jumped from 61 per cent to 80 per cent. Total applications were £17 million lower at £396 million, and it is clear that with the present uncertainty about the course of money rates outside tenderers are holding off from bidding to some extent. This week the tender is again for £290 million while maturities will be £260 million.

In New York the discount rate on 91 day bills rose further from 3.889 per cent to 3.979 per cent; the rate on 182 day bills rose from £4.468 per cent. to 4.473 per cent.

A large amount of help was given to the market on Thursday of last week. On Saturday the authorities gave a very small amount of assistance. This week funds have just about been adequate to finance the large intake of new bills. There has been a fair business in bills mostly at 3 27/64 per cent.

(1) Retained imports. (2) Owing to changes in classification, 1959 figures are not strictly comparable with those for earlier years. (3) Average for first quarter. (4) Average for second quarter. (5) Average for third quarter. (6) Annual figures include re-exports of second-hand aircraft and exposed cinematograph film. (7) In 1959, indices for total imports and exports, but not for the classes, are adjusted to include trade with the Channel Islands.

Abridged Particulars

The List of Applications will open at 10 a.m. on the 17th September, 1959, and will close on the same day.

MERCANTILE CREDIT COMPANY LIMITED

£6,100,000	in Ordinary Shares of 5s. each	£6,100,000
£ 387,120	in Unclassified Shares of £1 each	—
£10,500,000		£10,112,880

ISSUE OF

2,500,000 6½% CUMULATIVE PREFERENCE SHARES OF £1 EACH AT PAR

Payable as follows:

On application	10s. 0d. per share
On 26th November, 1959	10s. 0d. per share
	20s. 0d. per share

The Prospectus will state (inter alia) that:

1. The Company was incorporated in 1934. Its business which is carried on directly or through subsidiaries in Great Britain, Ireland, the Union of South Africa and the Federation of Rhodesia and Nyasaland, covers virtually the entire field of hire purchase finance, and there are over 70 branches in the British Isles.
2. The adjusted profits of the Group (before tax) increased from £626,575 in respect of the year ended 30th September, 1954, to £968,402 in respect of the year ended 30th September, 1958. Hire purchase and other instalment debtors, less provision for doubtful debts, grew from £11,491,430 at 30th September, 1954, to approximately £49,500,000 at 30th June, 1959.
3. The Directors anticipate that, subject to unforeseen circumstances, the profits of the Group (before tax) for the year ending 30th September, 1959, will be approximately £2,000,000.
4. The estimated net assets of the Group at 30th September, 1959, together with the estimated net proceeds of the present issue, will be sufficient to cover the whole of the Preference capital nearly 2½ times. The estimated net profits for the year ending 30th September, 1959, after deducting tax at current rates, will be sufficient to cover more than 6½ times the net dividends on the whole of the Preference capital.

Copies of the Prospectus and Forms of Application (on the terms of which alone applications will be considered) will be obtainable on 14th September, 1959, from:

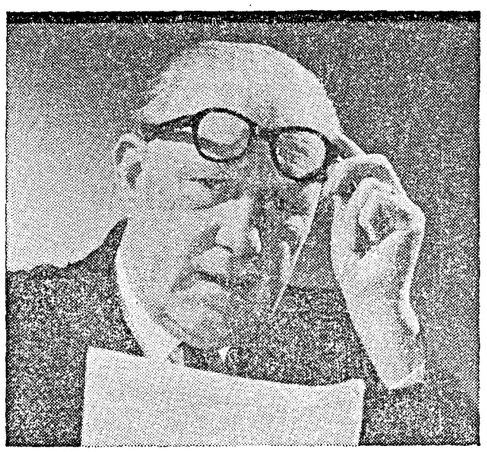
Whatever the currency, the Bank of Kobe is expert at solving all foreign exchange problems. Our head office is conveniently located in Kobe, world-famous trading port. Write us for complete information on our export-import services.

THE BANK OF KOBE, LTD.

Head Office : Kobe, Japan
Representative Office : London · New York.



The other day we wanted some top level advice from the bank—something rather beyond the scope of the ordinary branch. I must say having our branch linked with a district head office saved a lot of time, and the people up there were familiar with the special problems in this area. So we got what we wanted and beat our competitors to it . . .

APPOINTMENTS

COMMISSIONS IN THE R.A.F. EQUIPMENT BRANCH

R.A.F. Equipment Officers control the flow of equipment, both technical and general, to R.A.F. stations and its distribution. The work is infinitely varied and deals with the most advanced weapons and apparatus.

Permanent commissions are open to men under 30 with appropriate professional qualifications, or with G.C.E. in four subjects including English Language and maths and three years' suitable business experience gained since the age of 20.

Short Service commissions of 5-6 years with a tax-free gratuity are open to men with similar experience under the age of 37. Such officers may also be granted permanent commissions.

Write for further details to the Air Ministry (A.R.I) (EOS49), Adastral House, London, W.C.1.

MARKET RESEARCH MANAGER required for expanding organisation engaged in aluminium production and fabrication with worldwide interests. Applicants should have had training in market research and at least five years' experience in charge of market research in an industrial manufacturing organisation. Qualifications in economics in addition to market research experience will be helpful but will not be regarded as essential. Approximate age range 30-40. Salary according to qualifications and experience.—Write Box E512, LPE, Romano House, 399-401 Strand, W.C.2.

RESEARCH DEPARTMENT of Civil Service Staff Association requires assistant. Experience of research work desirable. Should be good at figures and able to handle statistical data. Typing essential. Salary age 23 or over £11 rising to £11 14s. 6d. in two years. Hours 9.30 to 5.30; no Saturdays. Three weeks' annual holiday. This year's holiday arrangements respected. Non-contributory pension scheme. Canteen facilities.—Apply, in writing, to General Secretary, Institution of Professional Civil Servants, 28 Broadway, London, S.W.1.

ECONOMICS TUTORS. Applications are invited from recent graduates of London University for appointment as part time tutors on the staff of a leading correspondence College. Place of residence unimportant.—Please reply, stating Special Subject, to Box 1196.

PHILIPS ELECTRICAL LIMITED

invites applicants for the post of

PURCHASING OFFICER TRAINEE

After successful completion of training, Trainees will be appointed to a responsible post within the Philips Group. Candidates should be of good educational standard and between ages 24-26. They should possess a real desire to make a commercial career and have a wide interest in business affairs and be of a calibre to benefit from training in order to achieve a responsible position within the Company. It is particularly important that candidates should have the personality necessary for a commercial career. During the training period, which is initially in the London Area, further study will be expected and encouraged. Commencing salaries will be according to age, qualifications and experience.

Applications should be addressed to the Personnel Officer, *Philips Electrical Ltd., Nine Road, Millbank Junction, Surrey* quoting ref. JEG/PT.

UNIVERSITY OF SYDNEY

SENIOR STAFF TUTOR

Applications are invited for the position of Senior Staff Tutor, Department of Tutorial Classes, University of Sydney, at Newcastle, N.S.W. Applicants should possess an Honours degree in either Economics or Economic History; History; Literature; Psychology or Philosophy. The appointee will work under the direction of the Director of Tutorial Classes and will be required to conduct tutorial classes, discussion groups and other adult educational activities.

Salary will be within the range £A2,200 x £50 — £2,600 per annum, plus cost of living adjustment and will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London on October 24, 1959.

SALZBURG SEMINAR IN AMERICAN STUDIES

SCHLOSS LEOPOLDSKRON, SALZBURG, AUSTRIA

Scholarships are offered for the following sessions:

AMERICAN FOREIGN POLICY
January 10 to February 6, 1960.

LITERATURE AND THE MASS MEDIA IN AMERICA.
February 14 to March 12, 1960.

ART, ARCHITECTURE AND MUSIC IN AMERICA.
March 20 to April 16, 1960.

Lectures and Seminars at the post-graduate level. Admission is granted for evidence of ability and accomplishment. General age range 25 to 35. Special attention given to those engaged in public life, teaching, journalism and creative work.

For further information and application forms, please write promptly to: Salzburg Seminar, 38 Upper Brook Street, London, W.1.

A RESEARCH ECONOMIST is required by London Merchant House handling a wide range of commodities. The work involves both the preparation of commodity reports analysing basic supply, demand and price trends, and continuous reviews of economic and market developments. Candidates should have: qualification in economics; familiarity with information sources; judgment in assessing trends; understanding of commercial problems. The post provides considerable scope and interest, and salary will be fully commensurate with ability and qualifications.—Apply Box 1197.

STAFF MANAGEMENT

Applications are invited for two interesting vacancies, in a large industrial Company, for : newly created section of its Head Office Personnel Department. One will involve research on salary levels and structure, and the assessment of maximum salaries; and the other calls for the design, introduction and operation of a scheme for the appraisal of individual merit and potential. Both positions call for similar qualifications. A university education plus previous experience in industry, preferably in the Staff Department of a large company, are the basic requirements; but the applicants should additionally possess good personality, mature judgment, and a keen analytical mind. For men aged around 30 who have an interest in staff management these are openings of unusual scope and interest: they will carry attractive initial salary with good prospects for further progress. Conditions of employment are in keeping with the Company's high standing.—Box 1199.

UNIVERSITY OF READING

PROFESSORSHIP OF POLITICAL ECONOMY

The Council invites applications for the newly-created Professorship of Political Economy, which will be established in the Session 1959-60.—Further particulars may be obtained from the Registrar (Room 22 O.R.B.). The University, Reading, by whom applications should be received not later than Saturday, October 31, 1959.

For other appointments see page 886

OFFICE MANAGER/CASHIER required by important and rapidly expanding company in West End of London. The post offers good opportunities for advancement. Applicants must have wide practical experience and possess ability to manage staff.—Apply in writing, giving age and full personal information plus complete details of experience and salary at present being earned, to Box 1195

MERCHANT BANK has immediate vacancy for male clerk aged 20-25 with some knowledge of Foreign Exchange work. Expanding business, Security and Stock excellent conditions.—Write Box SE/23, 70d Prospects and E.C.2. 95 Bishopsgate.

HOOVER (Washing Machines, LIMITED

of

MERTHYR TYDFIL, SOUTH WALES,

wish to appoint a

PERSONNEL ASSISTANT

Hoover Limited has a group of modern factories in South Wales manufacturing Washing Machines and Spin Dryers. The present appointment is for a man in the age range 23-35, to be responsible for a comprehensive range of Personnel Management functions within a unit of the group.

Candidates should have a degree and/or training in Personnel Management with preferably no less than two years' Personnel Management experience.

This post is superannuated, and the total remuneration offered is in the region of £1,000 per annum.

Letters of application should be addressed to the Employment Officer.

STATISTICIAN required to join research section of expanding retail consultancy organisation. Must be prepared to take share of dullish routine, but work is generally interesting and possibilities of advancement very good.—Applications in own handwriting to Box 1200.

APPOINTMENT REQUIRED

EXPORT trade opening sought. Ten years' wide experience foreign banking. Good appearance. Spanish, German, French.—Box 1198.

EDUCATION AND COURSES

B.SC.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE

Toshiba...
in this modern space age

The second half of the 20th century has become the space age—the age of electronics. And the most essential product in electronics is the transistor. Radio, television, telecommunications ... all necessities of modern life ... use transistors. Electronic computers for business and research, various types of automatically controlled measuring equipment, and space missiles ... these all need transistors, too. Transistors are even being used in clocks. Toshiba's ultra-modern transistor plant, the largest in the world, is annually turning out 3,000,000 transistors of the highest performance and quality.

TR SERVICES provide more than

SYNCHRONISED CLOCKS

They provide a service which enables business to do routine jobs more effectively. They are often simple things such as quickly locating and talking to someone in another part of the building, but a great deal of time and money can be wasted unless this is done efficiently. T.R. Internal Telephones will solve this problem. The T.R. Press Button Telephone, for example, provides a system that is ideal for the organisation where the number of internal telephones is limited to up to seventeen. However, no matter the size of your organisation, T.R. Services can provide a telephone system on rental which will give the *instant* contact between departments which is the key to business efficiency. T.R. Services are at present helping thousands of business organisations to increase their efficiency—they can help your organisation—ask your secretary to write today for details.

"Something new in partitions, old chap"

"Tell me more."
"Well, these new Stramit 'Movaflush' partitions are ready-made panels with an L-shaped piece at each side and they simply butt up together, one after another. They go up at simply astonishing speed. Knock pounds off the usual erection costs."

"What are they like, when they're up?"
"Oh, excellent, old chap. They're over two inches thick, you know. They're strong and rigid and faced with hardboard. And they deaden sound. What's more, they're surprisingly low in price."

"I must get some further details right away."
"Get *your* secretary to fill in a coupon, or something old chap."

Please send me, without obligation, full details of Stramit Movaflush partitions

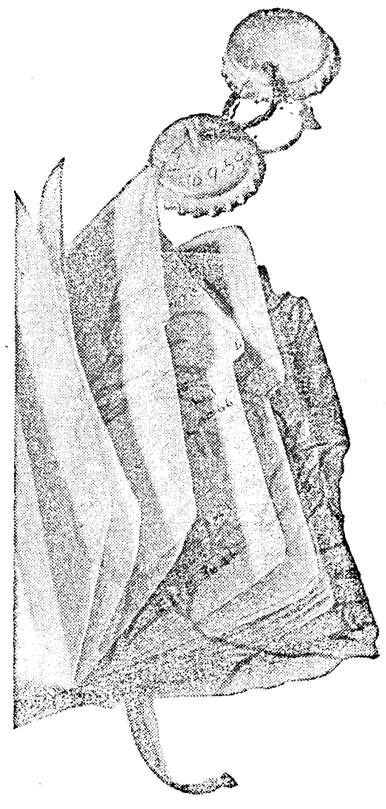
A secret letter to Mrs. X



My Dear Lydia,

Perhaps this is the most difficult letter I have ever had to write. (Generally I can ask my wife to help . . .)

To come face to face with you again after—how long? . . . To see you looking so confoundedly serene, after spending nearly half your life with the wrong man . . . What right have you to look serene?—no, sedate, that's the word! Answer me. And what right had you to try to park that little transparent car of yours right under my nose, just as I was standing by the Rose and Crown dreaming of nothing in particular. You always were a careless girl.

Ah, well. Ah.

Of course, Lyddy (this is rather a subtle letter—you notice we're getting somehow closer to each other?), of course, I'm not jealous of George or Bernard or whatever he's called in any boring, everyday sense. So he gives you enough to eat? Well, let's not be petty . . . But some of the things you said after your second iced tonic water were pretty revealing, I thought. (I have kept both bottle-tops . . . I shall always keep them.)

"Happy . . . somehow almost too happy. Too settled maybe . . . not enough to sharpen my mind on." Oh yes. Your own words. Though one's heard it before.

It shocks me to think of *you* married to this hulking, healthy, conventional autocrat—don't interrupt—who does nothing but feed and clothe you, etc. Six children, you said? Great heavens. I keep thinking about you. I feel it is so important, now, that we should keep touch . . . on the higher plane that *we* share . . . Don't you feel that too?

I've found us a way! No argument. I've been round to my newsagent's shop and ordered you The Observer, (remember? . . .) every Sunday for a year. Most cleverly—in your name, prepaid—and it starts next Sunday. You don't know the shop, so you can't stop it. You never would take me seriously. Well, now you've got to, aha.

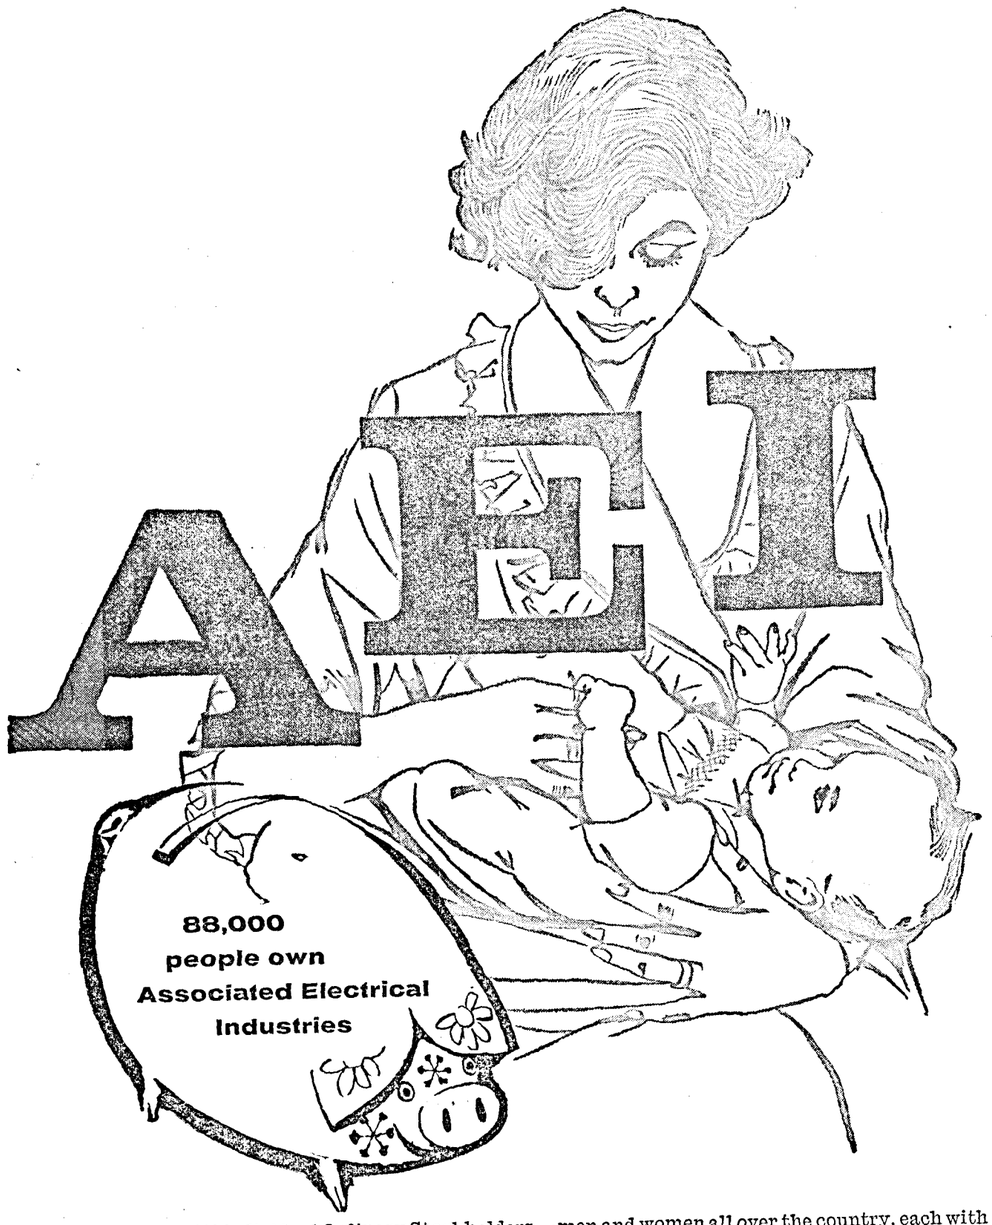
For this is as neat a plot as ever I plotted. Point 1: You won't be able to resist the bait—the whole paper's just too interesting. Point 2: I *know* somebody on the Observer, and I shall bribe him to slip in code messages which only you can understand . . . (no, it's not William Clark). Point 3: If he proves unbribable, which is remotely possible, I shall use the Personal Column *this very next Sunday as ever is.* So life will be full of meaning and your eyes will dance again. And who will know why? Me.

I won't sign myself James or anything, but just

THE OBSERVER

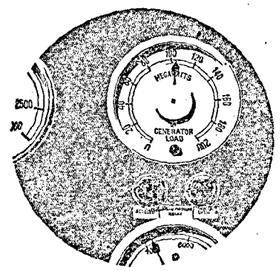
with love, then nobody can tell who I am. (Not a word to George, mind. I've said nothing to Polly.)

This is No. 1 in an enthralling human drama, "The Observer and Mrs. X". Next Week, DOES GREGORY KNOW ?



Among them are 76,200 individual Ordinary Stockholders — men and women all over the country, each with an average holding of £272. Ordinary Stockholders? Their money sends giant generators to Quebec and Spain, locomotives to Africa, transformers to Siam; builds atomic power stations, ground control gear for guided missiles, X-ray equipment, TV tubes, washing machines. Their pounds, shillings and pence are transformed into watts, volts and amperes, often for places in the world that have never known the benefit of electricity. They are as ordinary, these stockholders of A.E.I., as anyone can be who has £272 stock invested in the future. AEI *part of a great Britain*

AEI



600 million watts of power by AEI

This Megawattmeter is recording the steady output of *one* of the six Metropolitan-Vickers turbine generators. Each unit converts 1,000 tons of coal a day into power at the C.E.G.B. power station at Castle Donington.

The Case of the Tidy Corpse

An odd corpse or two around the house is one thing; but when your better half finds herself knee deep in crime she is liable to take a sudden passionate interest in the vegetable garden. If you find she has prepared an onion bed 6 feet long by 2 feet wide and 6 feet deep, it's time to stand well back from high cliffs, or you may well end up with policemen drawing chalk lines round the body—*your* body.

You have been warned. Don't risk it. *Today* (for it may well be later than you think) buy a Minty bookcase . . . and put your murderers where they ought to be—'Inside'—condemned to stay neat, tidy and dust-free for life. Your wife will admire the elegant prison, which can expand to take in the entire criminal fraternity. What's more, she'll plant onions in the onion bed.

Minty bookcases are *sectional* and may be started from as little as £10.1.0—on deferred terms if you prefer. Only at Minty showrooms can you see and buy Minty bookcases (and furniture); only by this *direct* selling from Minty to *you* can Minty offer you such fine furniture at such moderate prices. There are seven Minty showrooms each within reasonably easy reach of most people, but if for any reason you can't call, Minty will be glad to send you a catalogue and particulars of post orderings. Write to Dept. E.4. Minty Ltd., 44-45 High Street Oxford.

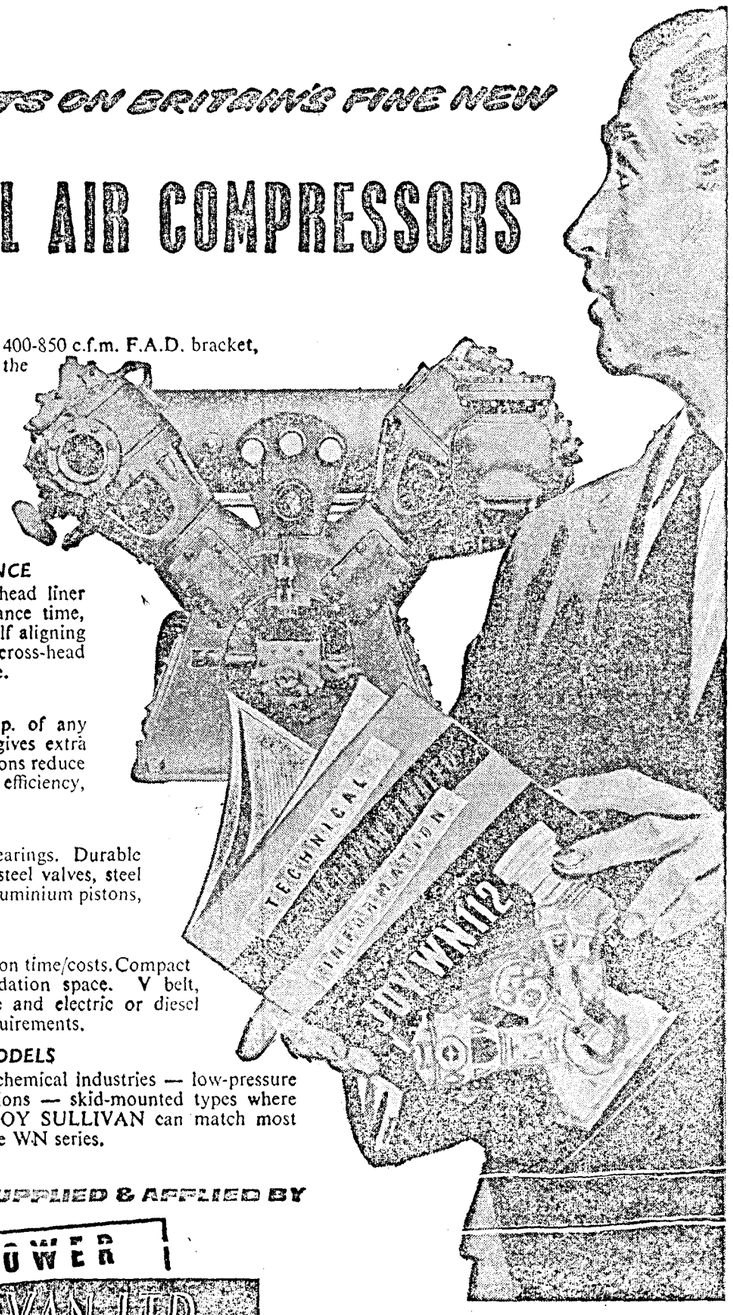
GET THE FACTS ON BRITAIN'S FINE NEW

INDUSTRIAL AIR COMPRESSORS



Where air consumption is in the 400-850 c.f.m. F.A.D. bracket, at pressures up to 125 p.s.i., the new British made Joy WN.112 Industrial air compressors handsomely meet your specification. Look at these design features — each one *positively* contributing to the efficiency and durability for which Joy-Sullivan plant is renowned abroad.

FOR MINIMUM MAINTENANCE

Replaceable cylinder and crosshead liner eliminate rebores, cut maintenance time, restore 'new' performance. Self aligning main bearings and box-type cross-head guides for low loading, long life.

FOR TOPMOST EFFICIENCY

Joy control requires least h.p. of any system. Tubular inter-cooler gives extra cooling surfaces. Truncated pistons reduce recompression loss, improve efficiency, give streamlined airflow.

FOR EXTRA LONG LIFE

Oversize spherical roller main bearings. Durable construction embodies stainless steel valves, steel piston rods, replaceable liners, aluminium pistons, mehanite frame.

FOR EASY INSTALLATION

Package design reduces installation time/costs. Compact vertical design for small foundation space. V belt, direct or flange mounted drive and electric or diesel motors match in with most requirements.

SPECIAL JOBS — SPECIAL MODELS

Oil-free versions for food and chemical industries — low-pressure models for specialised applications — skid-mounted types where portability is required . . . . JOY SULLIVAN can match most individual requirements from the WN series.

take a rest from routine

Business, so they say, isn't the fun it used to be. Whose fault is that may we ask? *Paperwork* ... that's the culprit! Too much documentation, too little mechanisation. BULMERS, however, are fast bringing business up-to-date. Latest line is the fabulous new FRIDEN fully automatic ... the machine to take the hard work out of figurework and do more *without operator decision* than any other calculator. And there's a complete range to choose from. If you favour a rest from routine, write for details to: Bulmers (Calculators) Limited, Empire House, St. Martins-le-Grand, London, EC1. Tel: MONARCH 7994

ELEMENTARY MATHEMATICS IN ECONOMICS

By W. T. Dowsett, M.Ec.(Syd) University of Western Australia.

Primarily written for the student who must have a good knowledge of mathematics for studying the problems and principles of economics. W. T. Dowsett stresses the important facets of mathematics in economics rather than attempting a mammoth survey of the whole subject. This book has been specially set out to enable the reader to study the course over a maximum period of three years without adversely affecting his other work. Working examples and exercises are included in each chapter, and a special feature is the booklet at the back containing working diagrams of the problems referred to in the text. A must for the economics student. Price 30/- net.

BUSINESS COMPUTER SYMPOSIUM

This book comprises all the papers (with discussions) read at the Business Computer Symposium held during the 1958 Electronic Computer Exhibition at Olympia. At six sessions, executives from concerns of diverse nature and size—both private and State Owned—gave an audience of management the benefit of their own practical experience in applying electronic computer techniques to their particular problems. Specific subjects ranged from wages accounting to sales analysis, as well as the latest and most advanced techniques of business mathematics. Every progressive executive should possess this book. Price 75/- net.

Allied Chemical brings you new products to do new things...chemically

New products from Allied Chemical are offering new opportunities for increased growth and added profits to industries throughout the world. Today, with over 3,000 products, it offers one of the world's most complete lines of basic chemicals from one source.

Here are a few examples of new Allied Chemicals in action:

- NEW FOAMING URETHANES based on Allied's raw materials are inspiring functional creativity in cushioning, packaging, vibration and heat insulation, adhesives.
- NEW, TOUGH PLASKON NYLON RESINS bring the economy and mold-ability of plastics to the heavy-duty machinery field.
- FLUORINATED HYDROCARBONS provide the "push" for aerosol products, cool refrigeration equipment.
- NEW CAPROLAN NYLON is now being used in the manufacture of tires, upholstery, carpets, conveyor and automotive safety belts.
- LOW-MOLECULAR-WEIGHT POLYETHYLENES are the bases for better floor waxes, paper coatings, polishes, printing inks, textile finishes.

For information on how new chemicals from Allied can be used in your industry, contact your nearest Allied Chemical International Office. Also ask for our new illustrated booklet, *"Introducing Allied Chemical International"*, which briefly describes our company and its major products. Write on your company letterhead.

you have never seen lighting like this before...

The trend in lighting today is towards high illumination. High illumination is an excellent thing in itself, but until now it has inevitably been accompanied by excessive glare with consequent discomfort to the eyes. This discomfort glare, caused not only by the light source itself, but also by the fittings, results in the increased light becoming instead of an aid to efficiency, the very reverse, an actual distraction.

Look at the picture. The office is more than adequately lighted, yet the light fittings themselves are not emitting any appreciable glare. The light source is, in fact, *unobtrusive*.

This is G.E.C. comfort in lighting—a new technique in which the G.E.C. has gone a long way towards removing discomfort glare by using high illumination in conjunction with low brightness fittings of high luminous output sometimes called "dark" fittings because by correct design and use of suitable materials, they actually appear to be dark.

You have never seen lighting like this before and no advertisement can hope to make clear to you its remarkable superiority over conventional methods. It takes 40 pages of a new G.E.C. publication No. F4695, to do this, and a copy will be sent to you on request.

Which Voice in the World?

THIS election is supposed to be largely about foreign policy. Mr Macmillan said so when he named the day, and Mr Gaitskell promptly took him up on it. For the first time since 1945, in fact since 1935, it is a credible reason for troubling the electorate; and this second article in our series on the choice before the elector is therefore devoted to external affairs. The uneasy cohesion of the parties—or, rather, of their front benches—in the postwar conduct of foreign policy ended abruptly in 1956 with the Suez conflict, and since then the parties, patently unwilling to forget or forgive, have fumbled and stumbled into what they assert are conflicting attitudes toward the outside world. This conflict has been barely evident when seen from Washington or Bonn, and least of all to anyone watching the television screen in Moscow. But it is Labour's particular argument that it exists.

Foreign policy has seldom been observed to win votes. Yet it can easily lose them: this was Sir Winston Churchill's handicap from 1945 to 1951 (although in 1951 Labour had an even greater handicap after the retreat from Abadan). Sir Anthony Eden, with an unimpeachable record in modern Tory eyes, and in Labour ones as well, was able to pick up the full Conservative swing in 1955. The Suez adventure shattered this knightly image. But Mr Macmillan's efforts to refurbish Sir Anthony's accoutrements have been sufficient tribute to the fallen hero. The dove of peace is brightly blazoned on Mr Macmillan's shield, yet the reeking lance has never been openly cast away. The electoral calculation in this has always been apparent, yet the electorate (to which Lord Salisbury does not belong) has scarcely seemed to notice. It might have been more surprised if Mr Macmillan had attempted to do anything else.

The public usually accepts that success or failure in diplomacy depends more on the play of forces in the world than on any decisions taken in Downing Street. This popular fatalism was possibly never stronger than when the Suez operation was under way; and the outcome could be said to have strengthened it. However unbelievable it might seem to bruised and bleeding consciences, a highish proportion of the public emerged from the crisis with the fixed and comfortable opinion that it had been a brave try. Britain, they concluded, was no longer a great power, but it was no one Briton's fault that this was so. In this mood, the public has not visibly responded to the artful suggestion that it was Mr Macmillan who really brought about the Eisenhower-Khrushchev exchanges, and this despite the great men's personal expression of their own appreciation. The electorate retains a touching faith in the parties' claims to control external economic forces. Its estimate of what a government can, and cannot, do in diplomacy is less naive.

The image that the Conservative party has always sought to project is one of experienced diplomatic management. This is the obvious bid that Mr Macmillan makes when he talks about the summit, and it is the first of the three big issues in foreign policy on which the electorate has to make up its mind. In fact, there is precious little to choose between the parties on summitry. If the Tory interest in scaling the dizzy heights goes back at least to Sir Winston Churchill's speech in Edinburgh in the 1950 campaign, Labour can always point to Mr Bevan's happy perspicacity on how the east-west struggle would ultimately resolve itself into an economic confrontation. The public has been positive enough in wanting summit talks, but it has been unashamedly muzzy on what should be negotiated with the Russians there. However clear or unclear

the parties themselves are about the difference between the Eden proposals on disengagement in 1955 and the Gaitskell-Healey ones today (and it is considerable), the electorate clearly does not care. It feels reasonably sure that neither party has much choice on any possible agreements on Germany, or even disarmament, that it could hope to get with the Russians and Americans at the same conference table.

Influence and Alliance

BUT the party images in practical diplomacy do differ in two important ways. First, a major Conservative interest is to offer a programme which, in the words of the party's own manifesto, "maintains British influence in world affairs unimpaired." This means, among other things, hanging on to the bomb as long as the Russians and Americans do. Labour, in its readiness to enter the non-nuclear club, means to be no more self-effacing, but its idea of the type of influence that Britain ought now to exert is sensibly different. Secondly, Mr Macmillan demonstrated in Moscow, and later in Washington, that a Tory prime minister can make an independent diplomatic initiative, and that the major western allies—however put out they may be about it—will accept his right to do so. It seems doubtful if Mr Gaitskell and Mr Bevan could do as much; certainly the damage in Bonn and Paris this year would have been appreciably greater. The hard fact for Labour is that it is easier for a Conservative prime minister to show flexibility toward Moscow without upsetting the Atlantic applecart. It may seem unfair. But could a Democratic president have invited Mr Khrushchev to Washington?

This argument for the Conservatives is always extended to the management of Anglo-American relations in particular. The crucial importance of these in any conspectus of Britain's future is sufficient to make this the second big issue in foreign policy before the electorate now. If Suez is swept under the rug the Tory argument is a valid one; for Mr Macmillan the chief political gain from the Eisenhower visit was simply that the President held up the rug for him. The television audience could be presented with as close a relationship as ever existed before a certain *contretemps*—the blandness of it was breathtaking—"two or three years ago about the Middle East."

The Labour party has never been accorded so open an expression of confidence, nor has it sought one. It did seem that at one time Mr Bevan saw the restoration of the Anglo-American alliance as the major achievement of his (then probable) term as Foreign Secretary. Mr Gaitskell knows well enough, and says steadily enough, that the alliance is indispensable. Labour's policy under him will still hold to the transatlantic link; but his party has been doctrinally unable to accept American leadership without being prone to fall back upon the third force ideas, usually restricted to self-interested neutralism—that its left wing urges upon it.

Such behaviour has never taken any tricks with the State Department. By dint of great strain and exertion the Labour leadership has faithfully quashed the successive revolts on German rearmament and the bomb, only to let some new, and equally damaging, cat out of the bag—as when the Trades Union Congress last week rejected American missile sites. Again, in allied eyes, Labour's defence policy has seemed, if anything, even more disruptive than Mr Sandys's. If Labour really means to do away with nuclear weapons, will it accept the corollary of reintroducing conscription? The party has plainly not thought out the consequences of its policy on the bomb, and it seems reasonably certain that the whole idea of the non-nuclear club would have to be gone into again before any Labour administration regarded it as a practicable policy. Labour may be given credit for its desire to think, however unspectacular the results, but it is its pacifist wing that will attract to its side whatever protest vote the nuclear disarmers can muster. Most of them would probably have voted Labour anyway.

Europe, Middle East, Cyprus

THE third big question that confronts the electorate is concerned with relations, not with the Russians or Americans, but with the rest of the world. Here, too, the party images are not as distinct as they might logically have been expected to be. The approach to continental Europe offers no real conflict—unfortunately. In opposition, both in their fashion have championed European unity; in office, neither has shown the slightest impulse toward political integration. Economically, a Conservative government would be expected to pursue its efforts for a broad free trade area, even if its chances of success have to be heavily discounted in advance, just because of its political inhibitions. Labour's doctrinal insularity in economic planning would make even this a doubtful course for it to follow. Yet an election may still have to be fought over economic ties with Europe as soon as the main parties can be persuaded to put their minds properly to it; at the moment, in terms of the game of bridge, they both "pass."

The Middle East has provided Labour with a theatre in which to demonstrate its antipathy to Tory ideas of influence. Mr Macmillan is plainly at a disadvantage in any competition over new ideas; for he cannot desert the Suez thesis until, in fact, the election itself is over. He has sensibly left the Iraqis alone, and may thankfully reflect that Jordan, after all, has held together. It would be reasonable to expect a Tory rapprochement with President Nasser shortly. But the fact remains that by far the strongest arguments that Labour can put in this election depend on the record of unsuccessful Tory violence in Suez, Cyprus and Nyasaland. If Iceland's claim that British policy on the twelve-mile limit is merely a projection of colonial ideas were accepted, the list should properly finish with the cod war. The uncommitted countries of Asia and Africa would certainly have high expectations if Labour were returned to power; whether they would be realised is another matter. Even where the Conservative performance has been vulnerable, the tangible party differences have not always been too apparent. A Labour government would not have found the Cyprus problem as simple as Mrs Barbara Castle has suggested. Nor have Labour members from the fishing ports protested at all audibly against naval protection off the Iceland coast. The Conservatives have no monopoly of expediency.

The Colonial Test

EVEN in the broad scope of colonial policy, a Labour administration would not greatly dissent from Mr Lennox-Boyd's policies, except—and it is a vastly important qualification—in the plural societies of Central Africa and Kenya. There is little quarrel about Nigeria or the West Indies; Uganda and Tanganyika prompt no serious dispute; even in the resolution of Kenya's troubles the difference is largely one of timing and adjustments in method. The real test for the electorate is over Central Africa. The ideological vote can go only one way. The practical one is harder to cast. If Labour came to power there is every likelihood of a major breach with the federal government in which, as Lord Malvern indelicately suggested, it might not be the white Rhodesians who came off worst. The Tories' balancing act may prolong the uncertainty, but it is still likely to end in a steady reduction of British influence in the federation and a corresponding increase in white Rhodesian sympathy for South Africa.

Neither side has much to promise in this field. Labour would certainly dissociate Britain from the advocates of white domination, with appreciable results in Afro-Asian opinion; but it would not, thereby, improve the immediate prospects of racial co-operation in Central Africa. The Tories would merely be waiting for something to turn up, with little real chance that it would. The basic confrontation is clear enough. By and large (and outside North Kensington) the Labour party's clients are black; the Conservatives', white. Labour has the moral advantage, but it is hard to rouse mass indignation over Devlin and Hola. It is equally hard to rouse enthusiasm for Labour's talk of allocating one per cent of the national income to Commonwealth investment, particularly when the Tories can produce figures that claim they are providing much more than that already.

The choice between the parties is plainly not a straight one. On the three main counts in foreign policy—east-west relations, the management of the American alliance, and relationships with the emerging Afro-Asian world—neither has an unqualified superiority. It probably matters least of all whether it is Mr Macmillan or Mr Gaitskell who speaks up at the summit. The Conservatives boast a traditional advantage when it comes to Anglo-American exchanges. But could not the Suez breach happen again? Labour's advantage in dealing with the new nations needs to be narrowed down to the territories where it is really evident.

Labour has clearly not secured the decisive lead that seemed to open up for it in the aftermath of Suez, when it was almost impossible to imagine a Tory prime minister going (or being allowed to go) to the country on the strength of his diplomatic performance. In this sense Mr Macmillan has won unexpected dividends for his party: there will be few, if any, Tory defections over foreign policy. Probably the balance here should be, in the light of several events, on the Opposition's side. Regrettably, perhaps, it is not. But it cannot honestly be said that on these world issues—Mr Macmillan's own chosen wicket—he has any clear advantage on the first innings, let alone the bonus points the Tories claim.

Plan for Algeria

De Gaulle's plan looks liberal, but can it bring the Algerian war to an end?

FOR sixteen months, everyone has been reduced to making varying interpretations of General de Gaulle's oracular pronouncements on the future of Algeria. On Wednesday evening the general at last defined his views publicly. His broadcast, heralded during President Eisenhower's visit to Paris, was eagerly awaited—and not merely by Frenchmen. Though the French president now has unprecedented powers and prestige, there were two evident limits to his scope for manœuvre. His policy statement had to be sufficiently liberal to get the blessing of his allies, particularly of the United States, without whose backing France runs a strong risk of being defeated by a two-thirds majority in this year's United Nations assembly. It also had to have enough nationalist flavour to reassure the army, whose officers have to some extent replaced deputies as an important factor in French politics. Judged by these two criteria, the president's performance was a brilliant one.

What could be more liberal than to entrust the people of Algeria themselves with the destiny of their country? General de Gaulle firmly promised that they would decide their own fate through universal suffrage, and he set practically no limits to their freedom of choice. They would be able to choose secession, a term he preferred to independence. This, in his opinion, would be disastrous and was most unlikely. But if such were the verdict, France would accept it—though it might have to "regroup and resettle" all those who wanted to remain French; and it would keep control of the Sahara oil. Thus independence might involve some sort of partition. The other extreme would be Algeria's complete assimilation with France, which the president, allergic to the word integration, described as "*francisation*." Between the two lies the middle course of home rule on a federal basis with guarantees for minorities, in association with France; defence, foreign and economic affairs would be controlled jointly. The selection of these fields of joint activity suggests that Algeria would in fact be offered a place within the French community. Any of the Algerian electorate's decisions would have to be endorsed by the people of France.

The right to independence: this concept had apparently already caused some sleepless nights in officers' messes in Algeria. Yet the new Gaullist plan is unlikely to cause a great stir in the army, except among a few colonels who are personally committed to integration. The officers had been forewarned; and they know that they have no need to worry for some time. The Algerians will be allowed to make their choice within four years after the return of peace; and peace is plainly defined as a state in which there are less than 200 victims of ambush and other attacks in a year. Army headquarters in Algeria, for all their triumphant reports, know well that mere military "pacification" will not bring about

that state for years, if at all. The defeat or the surrender of the FLN rebels must be the prelude to the execution of the new plan.

It might be supposed that rebel co-operation is the alternative to surrender. But the terms suggested will not be to the insurgents' liking. For the first time General de Gaulle has emphatically declared that he will never negotiate with the FLN, because, in his opinion, this would merely bestow a representative character on a body which has none. True, the rebels are offered what amounts to an amnesty, and full opportunity as well to woo the electorate. But the Algerian "government-in-exile," now gathered in Tunis, may retort that it has no guarantee, beyond the general's word, that the French will keep their pledge once it has ordered its guerillas to cease fire. It may simply condemn the years of preparation for the voting as a delaying device and a trap, and dismiss the promised presence of witnesses from all over the world as an inadequate safeguard for the final vote. It is a question of confidence. After last year's referendum the FLN will not be enthusiastic about entrusting its fate to universal suffrage under French army control.

The outlook would be more promising if the FLN could make counter-proposals to the de Gaulle plan. Any bargaining with it is, however, now ruled out in advance. It is thus unfortunately probable that the rebels may reject the plan as a fraud. Such a rejection would be likely to get the blessing of the Arab League and the support, however reluctant in some cases, of the Afro-Asian block in the United Nations. This would not be encouraging for Britain, and even less for the United States. Even so, the present busy search for Atlantic unity and the liberal tones of the Gaullist plan should suffice to carry the Anglo-Saxon allies along; and France ought to scrape through yet another awkward session in New York.

In Algeria itself then, short of a spectacular *volte-face* by the FLN, the war will go on. This does not mean that the solemn clarification of the general's intentions has not brought immediate benefits. The myth that Algeria is bound to remain for ever an integral part of France has been destroyed. The idea of independence, while deprecated, has been admitted as a possibility. The general has also foreshadowed further steps towards local self-government to be taken as early as next year. Economic progress, social transformation, the emergence of a new élite, self-government—this is an outline of the future which has tempted previous French leaders. General de Gaulle, too, like his predecessors though with greater imagination, seeks an intermediate solution which would fall short of independence. But he, too, seeks to find it while by-passing the FLN. It is to be feared that, as it stands, the new plan, for all its liberal look and for all the general's power and prestige, may still not provide the answer to the difficult and bloody problem which has bedevilled France for five years.

Dr Gallup's Tranquilliser

The Tory manifesto is a grievous disappointment

THE Conservatives have brought out the "entrenchment" version of their manifesto for this election. It is designed to dig a ditch round the safe conqueror's ground that they think they now hold and not to lose any votes. This is a great misfortune, for three reasons.

First, if the Government does return to power, this manifesto will saddle it with two major undesirable negative commitments, and a string of minor positive ones. Thus, in bold letters, the Tories promise that "in the next Parliament we shall take no further action to decontrol rents" and "we give a pledge that the long-term assurances to agriculture contained in our 1957 Act will continue for the lifetime of the next Parliament." It is absurd for any party manifesto to say what it will not be desirable to do in the long and uncertain period between now and 1964. Moreover, these two pledges happen to tie the Tories' hands against removing the two most glaring remaining distortions within an expanding economy. In the same agricultural breath, the manifesto declares that "we shall continue to use the tariff as the main instrument of protection" for horticulture; despite Mr Macmillan's denial at his press conference, this is bound to impede new trading arrangements with Europe into which Britain needs to enter.

The Tories' promises to spend more money are less specifically worded than their promises not to remove protective controls, but they stretch right across the alphabet. The impression is given that the next Conservative government will be able to afford more money for atomic energy and the arts, bridges and building societies, cotton and the countryside, doctors and dentists, education, fishing and forestry—and so on right down the list, ending with polio vaccine and pensioners on the earnings rule, the Queen liners, railways and roads, Scotland and students and sewage, training colleges and technologists and the theatre, universities and underdeveloped countries, victims of violent crime, Wales and water and widows, the youth service and youth leadership. Many (though not all) of these are forms of expenditures in which an increase in state subventions would be desirable, but there is little indication that the Tories have thought out any order of priority.

SECONDLY, and following from this general exudation of the spirit of Santa Claus, the next Conservative government gives notice that it would enter at least as wholeheartedly as Labour into the business of state control of industry. The difference is that it would use subsidies instead of licensing controls. At one end of the industrial spectrum, the promise to establish a Ministry for Science may be meant mainly as an eye-catching political gimmick. But the new minister, once installed, will certainly want to increase and extend government responsibility for industrial research. There are some arguments (mostly rather good socialist arguments) for this, but the Tories give no sign of having begun to think out what it means.

At the other end of the spectrum, the Conservatives' first major Bill in the new Parliament (it is already drafted) will seek to make yet another jab of the mop at the problem of pools of local unemployment. The government will take new and more "flexible" powers to offer capital grants "to encourage the building of new factories" wherever they are "most needed." In consequence, the Tories' man in Whitehall is obviously going to have an ever widening (and in the end, one suspects, plain impossible) accounting job to do when deciding which speculative ventures in which areas the government is to aid, and how he is to ensure that it gets some value for its money. If the socialist policy can be pilloried as leading eventually towards the part-public-ownership of the six hundred largest British firms, the Conservative policy can now equally be pilloried as leading towards the eventual part-public-ownership of the six hundred oddest ones. It is a wry footnote to all this that the one positive commercial reform in the whole manifesto is the promise at last to set Mr Marples free by nationalising the post office *à la mode Morrison*—though, some Conservative shrimper for votes has carefully added, with the "status of Post Office employees as Civil Servants" being retained.

THIRDLY, this manifesto is as disappointing for the things it leaves out as it is for the things it puts in. At the beginning of this year, when the Conservatives still seemed likely to lose the election, it was widely rumoured that this time the Tories would take risks by putting forward controversial proposals in an effort to win votes. Now that the polls suggest that the Conservatives already have the votes, the edict has clearly gone out to avoid controversy and thus run no risk of losing them. The much debated proposal for a royal commission on trade unions' restrictive practices and impairments of individual freedom is whittled down to a sentence of circumlocution under the heading "Unity":

> None of us can afford outmoded approaches to the problems of today, and we intend to invite the representatives of employers and trade unions to consider afresh with us the human and industrial problems that the next five years will bring.

Mr Macmillan assured last week's press conference that this will be done in "our usual friendly way," through the Minister of Labour's regular meetings with the National Production Advisory Council.

Elsewhere in the manifesto, Mr Butler's once heralded campaign to sweep away Victoriana is reduced to a promise that "we shall revise some of our social laws, for example those relating to betting and gambling and to clubs and licensing, which are at present full of anomalies." There is no mention of the Sunday Observance laws or of encouraging breaches in individual resale price maintenance. There is no mention of.... But why go on? There is no mention of any of the really controversial burning problems before this twentieth century British society and economy. The theme song throughout is "don't rock Dr Gallup's boat." By encouraging the belief that that boat can drift gently back to Downing Street, instead of ploughing its way there through the high seas of turbulent initiative and contention, Dr Gallup has unwittingly done a grave disservice to the future of dynamic Conservative government in this country.

The Helpless Majority

Nobody—not even in election campaigns—ever hears anything about English claims to self-determination; the simple Saxons are caught without escape in their Rulers' version of guided democracy

NATURALLY, the articles on "Nationalism in Britain" recently printed by a respected contemporary had nothing to say about the English. English nationalism does not exist; it has been cunningly snuffed out. A few harmless individuals occasionally write to *The Times* about the oblivion into which St George's Day has lapsed, while the feasts of SS Andrew, David and Patrick are annually celebrated with shamrock, leeks, eightsome reels and general mayhem; but the suppressed Saxon majority in these islands merely smiles tolerantly, fondly supposing that it already enjoys the national independence for which other peoples have to struggle, and forgets about it—even during election campaigns.

Yet the English do not govern themselves, and hardly ever have. Are they fit for self-government? Their last real bid for independence foundered in the chaos of the Saxon heptarchy. Since then, their affairs have been taken in hand successively by Danes, Normans, Angevins, Welsh Tudors, Scots Stuarts, Hanoverians, and, after the full flowering of party politics, by the now dominant association of Scots, Welsh, Irish, Cornishmen, Channel Islanders, returned "colonials" and assorted *uitlanders* who may, for brevity, be termed simply the Rulers.

It has been a brilliantly successful tutelage. We are most unlikely ever to see an English National Congress taking shape under the messianic inspiration of some Saxon Hastings Banda, with "Quit England—Celts Go Home" on its banners, for the simple reason that the natives are now so accustomed to alien rule that they no longer notice it. The Rulers have shrewdly drawn into their ranks a number of trusted *assimilados*, one of whom is sometimes even put forward as prime minister, though that post has in this century been held by as many non-English as English.* England's hereditary Chiefs, their fangs drawn long ago on Lloyd George's demand, have been made into a docile and decorative instrument of government which satisfies the Saxons' craving for continuity; but it is no secret that, at any time when it proved necessary, the House of Lords could be de-stooled in a body.

In the Commons, the Rulers have not needed to resort to the crude and obvious forms of discriminatory "fancy franchise" which less able ruling minorities rely on in other territories. They do not even trouble to secure the absolute majority which their political talent could easily obtain if they wanted it, but are content to occupy less than a third of the seats. They are quite safe. What does an English majority

* Balfour, Campbell-Bannerman, Lloyd George, Bonar Law, MacDonald, Macmillan; 6 out of 12.

in Parliament produce? A Ministry headed by a Macmillan, with an Iain Macleod frequently tipped for the succession; with a Selwyn Lloyd, a Geoffrey Lloyd, a Lennox-Boyd, a Maclay, a Kilmuir, a (Douglas-) Home, a Perth, a Brecon, a Dundee, a Jones, a Boyle, a Forbes (premier peer of Scotland), a Hope (of Hopetoun), a Grant, a Profumo, a Milligan, a Fraser, a Macpherson, and a Duncan Sandys (whose mother was a Cameron); the Admiralty, a potentially dangerous rallying point for English emotions, being safely under the hands of a Selkirk and a Galbraith.

Among the few members of the present Ministry who look like simple Saxons, some have merely tucked their real origins discreetly away in little-known middle names: Sir David McAdam Eccles, Cuthbert James McCall Alport, Quintin McGarel Hogg (alias Hailsham). Others are *assimilados*, dutifully moulding themselves to the Rulers' ways; Dr Charles Hill was holidaying this year in Scotland, Mr Henry Brooke in Wales, Mr Heathcoat Amory in Ireland. Mr Butler is still thought a bit unreliable, though every effort was made to break his spirit when he was installed as Rector of Glasgow University. Lord Salisbury, even after marrying into the Galway dynasty of the Earls of Arran, proved insufficiently loyal and was regretfully discarded.

SAXONS need entertain no hope of escape by turning to an Opposition in which Mr Gaitskell is surrounded and submerged by an Aneurin Bevan, a Griffiths, a Callaghan, a Healey, a Morgan Phillips, a Tom O'Brien, a Donnelly, a Stewart, a Jennie Lee, a Jean Mann, a Strachey (member for West Dundee), six Joneses and all the powers of Evans, Williams, Rees, Davies, Rees-Davies, and David Rees Rees-Williams (alias Ogmore). The Liberal leadership has passed from a Davies of Meifod to a Grimond of Dundee. Among the Communists, Gallacher may go but the Campbells are coming.

Mr Speaker Morrison (from Argyll) has had as his deputy Sir Charles MacAndrew, while Kilmuir and Drogheda have lorded it over the Lords. The Rulers' strength in the Lords reflects their ability to reach the top in all walks of life—in war, diplomacy, finance, technology, and even the Church of England. (When it is thought needlessly obvious to put a man with a name like Cosmo Gordon Lang actually in the See of Canterbury, the Rulers are content to station a Ramsey—married to a Hamilton—at York).

Double-locking this grip on Parliament, the Rulers usually keep in their hands a sufficiency of the top posts in Whitehall, where, at any time in recent years, their men might be seen drawn up in knightly ranks: Cunningham, Hoyer Millar, Kirkpatrick, Lang, Macpherson, Milne, Muir, Powell. (An example of the perfected *assimilado* here is Laithwaite, educated at Clongowes and trained under MacDonald, Lothian and Linlithgow; his successor being groomed in Dublin.) Key ambassadorial posts are likewise kept safely in non-Saxon hands: a Caccia in Washington, a Gladwyn Jebb in Paris, a MacDonald in Delhi; in Peking an O'Neill was lately replaced by a Duncan Wilson, now being followed by a Stewart; in Moscow a Patrick Reilly is now installed where a David Kelly represented Britain before his translation to the British Council.

Even the Saxons are dimly (and ungratefully) aware that a Reith shaped the BBC; they have probably forgotten that he was also the first chairman of BOAC. The editorial chair, or the chairman's chair, of most of their newspapers is apt to be occupied by a Haley, a Hetherington, a Scott, a McCarthy, a McKenzie, a Stuart Campbell, an Aitken, a Duncan, a Rhondda, or a Gilmour. The present-day arbiters of a literature shaped by Swift, Scott, R. L. Stevenson, Shaw, James Joyce and Dylan Thomas are usually Connollys, MacCarthys and Pryce-Joneses. The London stage ranges from Rattigan to Samuel Beckett, from Guinness to Behan; Ninette de Valois was born a Stannus in County Wickford; the musical giant of our time was Vaughan Williams; pictorial art is dominated by such names as Gerald Kelly and Graham Sutherland. Speed records are pretty well all left to Donald Campbell. The list could be extended almost indefinitely; in philosophy, for example, Mackinnon, Mayo and MacIntyre are less Saxon than Wittgenstein.

The Rulers' discreet but absolute grip on the world of business and finance scarcely needs elaboration; suffice it to recall that the Bank of England's notes are signed by an O'Brien. Saxons are, however, almost wholly unaware that the Court of St James—a name with blatantly Caledonian and Hibernian associations—is no misnomer. The principal royal titles, Edinburgh, Cornwall, Wales, ought to show the Saxon where he gets off; Windsor is a title used only for the discard. And Arundel Herald Extraordinary, who might be taken as a personification of the English Establishment, footing it as he does between the Palace and *The Times*, is a Mr Dermot Michael McGregor Morrah.

IS this pattern of smoothly guided democracy safe for all time? The Act of Union was, of course, forced on the English masses without any consultation; it is highly doubtful whether the natives even understood what the word meant. Certainly they did not realise that "partnership," in this context, meant the permanent domination of Ulster field marshals, Scots financiers, Irish diplomats, and Welsh wizards. Some of them may have half hoped that with the approach of one-man one-vote democracy, their greater numbers would tell. They were wrong. The Rulers took their precautions in good time, filtering their men steadily into key positions throughout England. And they took the further precaution of surrounding the English with an empire, today the Commonwealth, whose loyalty to the Rulers is beyond question.

However, in this age of surging nationalisms, when almost everybody else has a National Congress and a xenophobic "Quit X" rallying cry, one can never be sure. Under the Rulers' tutelage, the Saxons have unquestionably prospered; and their relative backwardness would condemn them to poverty and chaos if they did ever try to go it alone. But nationalism is unreasoning, and the humiliations of alien rule have goaded many peoples into a revolt that was bound to impoverish them. What if the Saxon worm were finally to turn, led, perhaps, by some disgruntled chiefly aspirants whose claims had been rejected by Mr Morrah's court of heraldry? What if mass non-co-operation, satyagraha, boycott, even mass murder, were plotted at secret meetings in the Shepherd's Bush?

The English should be warned in good time that this would be a forlorn hope from the outset. The Rulers hold all the keys of physical as well as political power. The very first signs of sedition would be detected by Scotland Yard. The London Scottish and London Irish Rifles could probably handle any local unrest in the capital without even needing to call out the Irish, Scots and Welsh Guards. And since Haig's day, the Rulers have steadily tightened their grip on the highest positions in the armed services; of the field marshals and admirals of the fleet, one need merely cite Alanbrooke, Auchinleck, Alexander, Montgomery, Templer, Cunningham, Cunningham, Forbes, Fraser, McGrigor, Cork and Orrery.

The English haven't a chance. If need be, the Rulers have only to call in their reserves from beyond the seas. Canadians from Nova Scotia to Mackenzie, Australians from Perth to New South Wales, New Zealanders from Dunedin to Hamilton, would answer the call. Indian, Pakistani and Gurkha armies would march to the Rulers' aid behind their famous pipe bands. (Restive Saxons should also note that Dr Nkrumah has just been enrolled in the Privy Council, that overwhelmingly Ruling clique, at Balmoral.) In the last resort, the Irish Americans, whose anti-English revanchism has been skilfully kept alive for a whole century, might even be unleashed; but the Rulers, who are really very humane, would be reluctant to use this terrible ultimate weapon unless all else failed.

Once suppressed, the English could scarcely expect to be allowed to retain their present constitutional rights. Like other dependencies where there has been similar trouble, England would revert to a less advanced constitution, probably with a purely consultative House of Chiefs, and a legislative council (Legco) indirectly elected through municipal bodies and containing a safe number of officials drawn from the Rulers' ranks; the Governor (probably another Ulster field marshal) would preside over an executive council (Exco) made up of officials and members elected by Rulers only. District commissioners would take over local government; each would have his boma in a castle or stately home transferred from the National Trust. London would be directly administered by the central government, whose own seat would rotate (on the Delhi-Simla, Capetown-Pretoria model) between Edinburgh, Cardiff and Belfast. The Saxons would then be given a tribal capital at Winchester and encouraged to immerse themselves in traditional ritual. All their potential leaders, having been whisked off in the first pick-up of the Emergency to the Highlands and Islands, would remain behind barbed wire in Muck or Eigg or Rhum until there was no further possibility of their causing trouble; and the Rulers would confidently await the appearance of a more moderate and responsible leadership among the Mugs, the term they use in private conversation for the English.

NOTES OF THE WEEK

RUSSIA AND AMERICA

Serenity or Vapours?

"A HAPPY COINCIDENCE" is the phrase applied to the Russian moon-shot on the eve of Mr Khrushchev's American visit by Mr Surkov, late head of the Soviet Writers' Union. Mr Surkov is, or was, a poet, and may be allowed some poetic licence. Sterner devotees of Marxist dogma have no liking for coincidences. *Pravda* hailed the rocket as the culmination of an "inevitable" historical development inspired by Marxism-Leninism; East German spokesmen hailed it as timely evidence of Soviet military superiority.

Politically, even moon rockets can ricochet. The first impact of this one was presumably just what Mr Khrushchev wanted. It exhilarated the Russian people, whose inferiority complex still calls for this kind of shock treatment. It inspired awe abroad by freshly confirming Soviet claims about accurate long-range rocketry, and also, particularly in the non-western world, as a simple, colossal symbol of Russian prowess. For all its scientific value (see page 955), it was probably as a spectacular gesture of strength that it most appealed to the boyish exuberance that Mr Khrushchev retains at 65. But "bang, bang, I'm king of the castle" is doubtful diplomacy.

The moon rocket crash-landed somewhere between the Sea of Vapours and the Sea of Serenity. It doubtless gratified the Soviet leader to see certain American politicians instantly prostrated with a fit of the vapours (our correspondent further discusses American reactions on page 926). But a silent, and pretty cool, serenity seemed to prevail among those who watched his arrival in Washington. His reception might have been a shade less cool if he had not presented such an outsize calling card. How many of the silent watchers were struggling to repress the question: "What sort of a people does he think we are?" In the next few days, Mr Khrushchev may learn a surprising amount about his hosts. He is a quick learner; and until now he has, unfortunately, concentrated his gaze, with a perverse ingenuity, on the dark side of the American moon.

UNITED NATIONS

Eclipse Over Turtle Bay

AS had been foreseen, the United Nations Assembly slipped into session on Tuesday almost unnoticed. While Mr Khrushchev (to quote a Polish newspaper) "stepped on to American soil radiant in the glory of the moon," Turtle Bay was in eclipse; and the delegates were doomed to remain persons sitting in darkness until the Moon Man himself came to shed his beams over them on Friday. Groping through the murk, however, they linked hands successfully enough to elect Dr Belaunde of Peru as their president for the year. There was no dissent from this choice. Dr Belaunde is an honoured veteran of the assembly; and his translation to the presidential chair may noticeably shorten the debates to which he has always brought a somewhat generous eloquence.

Electoral preoccupations ought not to mislead the British public into under-estimating the importance that others are attaching to this session. Over fifty foreign ministers are attending its early stages. The smaller nations are not content to watch the superpowers holding a private contest in the higher lunacy, and there is debate to come over the committee on the use of outer space which was appointed last year, but has been hamstrung by a Soviet boycott. The Irish are recruiting for their version of a non-nuclear club (see page 941). The question again arises of enlarging the Security Council to give better representation to Asia and Africa.

No government has committed itself, up

to the time of writing, to act as sponsor to the Dalai Lama's appeal for consideration of Tibet's plight. Two weeks ago a number of Indian members of parliament proposed that India should do so. Mr Nehru secured the withdrawal of their motion, arguing that it would merely mean an acrimonious UN debate in which "the expression of strong opinions by some other countries" would probably make China get even tougher with the Tibetans. This is a familiar argument in a curious setting. Nobody will expect the Asian and African countries, proceeding on the same reasoning, to spare this assembly its annual acrimony over Algeria and South Africa.

LABOUR POLICY

Youth Shows the Way

THE least important consequence of the report submitted by Mr Gaitskell's unofficial committee on youth problems is that it has tossed into the headlines the old controversy about whether young people should get the vote at age 18. The most important consequence is that it should have taught Mr Gaitskell, if he has any sense, how he should draw up Labour's future policy if he is returned to Opposition in the next Parliament. The reason why this youth committee has produced such a readable and radical report is that its ten members, under the chairmanship of Mr Gerald Gardiner, QC, were all singularly free from orthodox affiliations with the trade union movement or other Labour vested interests. Mr Gaitskell should set up many more such independent committees in the next Parliament, and "rethink" Labour policy by setting his personal approval or considered rejection upon their recommendations.

The Gardiner committee's refreshing starting point is that it welcomes the fact, which many older people either ignore or deplore, that modern teenagers are usually much more prosperous, and physically (and sexually) more advanced than their counterparts twenty years ago; they are also likely to get married earlier, indeed some (as in America) will get engaged while they are still at school. The committee therefore wants a radically different relationship between schools and their teenage pupils. It calls for the introduction of a new sort of day release scheme for further education in non-technical subjects (it would be voluntary for the students, but compulsory for teachers to release them). It wants the 80 per cent of children who leave school at 15 to be given facilities for sport and non-academic pursuits on something nearer to the scale provided for the 20 per cent who stay on at school after that age; all new secondary schools should have annexes for the use of the youth service, and "adventure scholarships" should be introduced. In industry the committee recommends a new scheme for expanded apprenticeship training (operating through tax rebates for co-operating firms and financed by a training levy on all firms using skilled workers), and it calls for "second chance" training courses for young people who wish to embark on a new career; it does not forget to prod some of the craft unions for their restrictive attitudes in these fields. The committee also recommends a reduction of the voting age to 18, marriage loans, a new type of marriage saving scheme, and assistance for the lonely and isolated young mother.

Most people will disagree with one or more of the radical recommendations in this report; it is easy to poke fun at the "votes at 18" proposal by reminding the committee which are some of the few countries that have adopted it (Dr Verwoerd's South Africa, some of the Deep South states of the USA, most of the communist lands). But any party which published a shoal of reports like this youth document would gradually come to be recognised as the thinking party; Labour's official and carefully trimmed policy statements during this Parliament have had precisely the opposite effect.

ELECTORAL LAW

Anomalies over the Screen

THIS is bound to be called, and possibly to be, a television election. The increase in viewers since 1955 makes that inevitable; so does the increase in telecasting of political material, not just in official party political set-pieces but in news and feature programmes as well. In the last few weeks the politics of television coverage have been fascinating. Tyne-Tees television has announced that, because of the Representation of the People Act and the Television Act, it can present no political feature programmes, while Granada is going ahead with several schemes, including its very ambitious marathon in which any candidate in the North (if his rivals agree) can have two minutes of television oratory. On the whole, ITV and the BBC have handled news and views rather gingerly. Compared to the blanketing of all news on the air in 1955, there is much to be grateful for—but a good deal of absurd overcaution still surrounds broadcasting policy.

These obscurities in relation to television only underline the growing obsolescence of electoral law. The essential provisions of the Representation of the People Act really date back to 1883. The leading cases which define what an agent may or may not do almost all date back to the 1880s and 1890s. The law of agency was brilliantly devised to prevent the abuses prevalent in the 19th century. But it does not acknowledge the activities of parties and it cannot cope with the centralised campaigning of the present day. Obscurities abound; there are even disputes about such relatively straightforward things as when an election is legally presumed to begin—a matter that becomes very important in an era of long-term image-building.

Nobody who has looked at these problems from the outside can doubt that the time is ripe for a change in the electoral law; and it ought to be a change in the direction of greater freedom for the propagation of every sort of view on all media. Many MPs who come back to the House on October 8th will want an investigation into the law. There can be dispute about what form that investigation should take, but it is important to say one thing at once. The matter should not be left exclusively in the hands of a select committee of MPs in the traditional Speaker's conference.

INDIA AND CHINA

Two Faces

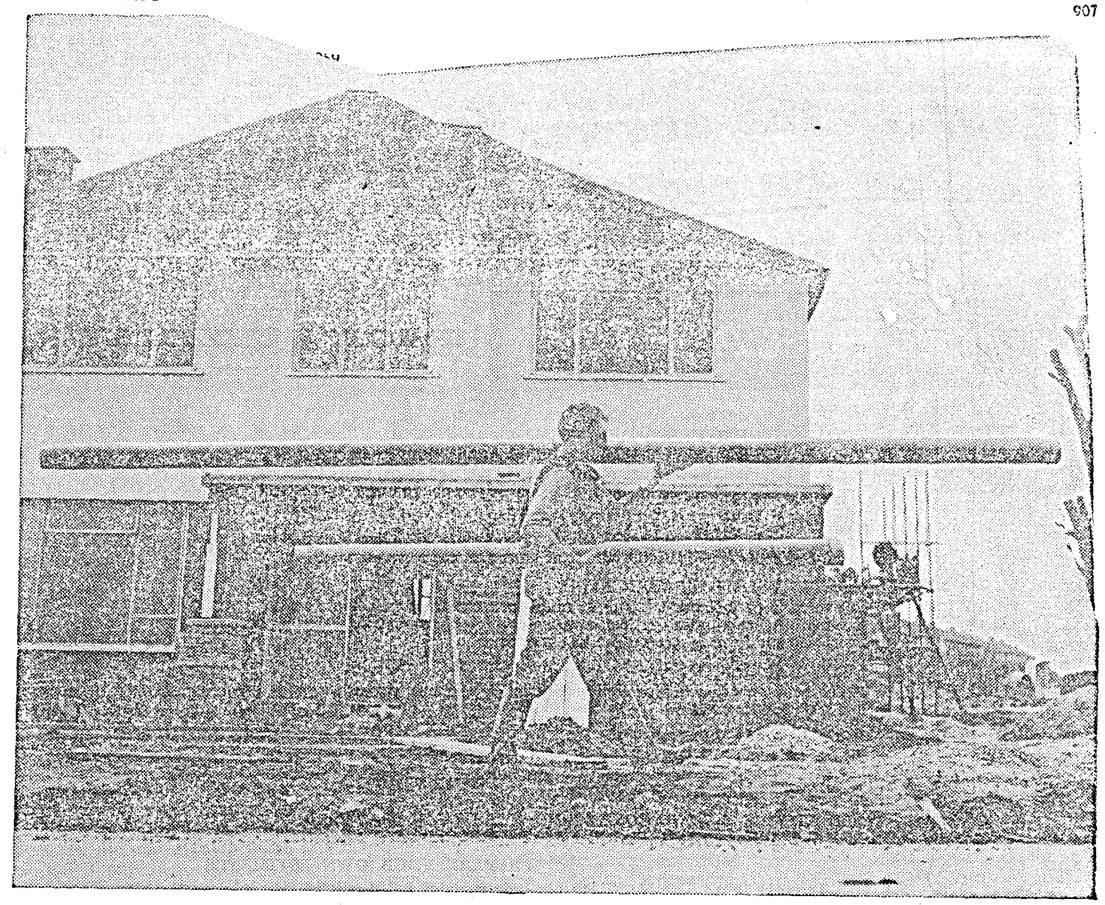
NEITHER Peking nor Delhi paid much overt heed to Moscow's statement last week expressing confidence that they would settle their Himalayan border dispute quietly and without more ado. The Soviet statement was strikingly, almost painfully, impartial as between the two disputants. Mr Nehru welcomed it; but its reception in China was a restrained one. In fact, Peking's next move was to launch a wave of organised indignation. For three days, members of Mao Tse-tung's "parliament," meeting in special session, competed in vilifying the Indian government and Mr Nehru, who were accused of provocation, aggression, slander and high-handedness. Leaders of Peking's tame "democratic parties," understandably stung by Mr Nehru's gentle reminder that in India different views could be safely aired, declared this an "insult" and tried to assert their individuality by saying the same things as their masters, but even louder: "India is trying to bully China" . . . "Mr Nehru is defending British Imperialism"—and so on.

Marshal Chen Yi, the foreign minister, said that the Indian government had "always used two-faced tactics over Tibet," despite Mr Nehru's claim to be merely "steering a middle course." He accused India of showing no "consideration for the Chinese people's national pride." But in Delhi, at almost the same moment, Mr Nehru was showing that he, at least, took Chinese pride fully into account. In the course of a speech in parliament on China, he said:

> I do not wish to use strong words, but it is pride and arrogance of might that is showing in their language, in their behaviour to us, and in so many things that

THE ELECTION OF 1959

The first of a series of special sections analysing the trends in the campaign and the prospects in the constituencies begins *on page 915.*



Pipe dream becomes reality

Pitch-impregnated fibre pipes, the modern medium for drainage and electrical conduits, are basically derived from *paper*. They're so strong as to be virtually proof against damage . . . yet so light that one man can carry four eight-foot lengths! Once these pipes would have seemed a mere manufacturer's dream. They were first made in this country by a Reed Paper Group company—one of the many products made *better* because of *4 extra assets* shared by the many individual Reed companies.

THE 4 EXTRA ASSETS ARE THESE:-

REED EXPERIENCE The know-how of men who have pioneered many of the great advances of modern paper making . . . who today make a vast range of paper and paper board products, from wrapping papers to corrugated cases, printing papers to pitch-fibre piping, horticultural packs to laminated plastics, paper sacks to all types of cartons.

REED RESEARCH Exhaustive market and scientific research both at Group and company levels.

REED RESOURCES The great modern machines and abundant raw materials which make it possible to standardise quality and "deliver the goods" in *any* quantity.

REED INITIATIVE Each Reed company is free to think and act for itself and for *you* the customer.

Reed Brands

"YOU profit from the initiative of each Company backed by the resources of the Group"

the answer to expansion problems immediate

TERRAPIN PACK BUILDINGS

FROM SHELF TO SITE DELIVERY
You can order and obtain Terrapin Pack Buildings as easily as any other everyday commodity—they are normally delivered from stock, ready for immediate erection and *occupation.*

SPEEDILY ERECTED YET PERMANENT
Erection can be carried out at the rate of 1,000 square feet a day—yet this is no temporary structure—it's built to last for years and years.

COMPLETELY PREFABRICATED
Delivered in pack form, for single or multi-span construction, complete with lighting installation, glazing, floor covering and interior and exterior decoration. Plumbing and heating systems can be supplied.

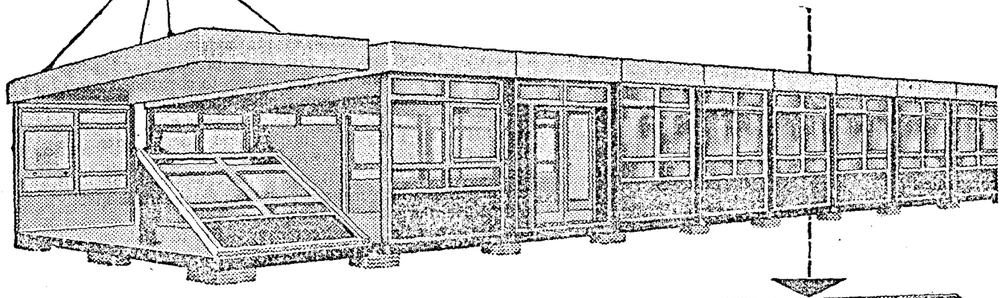
SUPERIOR DESIGN
A fine handsome structure of high quality and appearance, yet with low maintenance costs.

ECONOMICAL RE-SITING
Dismantling and re-erection can be carried out easily, rapidly and at incredibly low cost, without fear of damage. You can move Terrapins when you like, where you like and as often as you like.

ALL THIS AT A BASIC COST OF NO MORE THAN 30/- TO 35/- PER SQUARE FOOT OF FLOOR SPACE—ERECTED AND FINISHED.

PREPARE YOUR OWN ESTIMATES

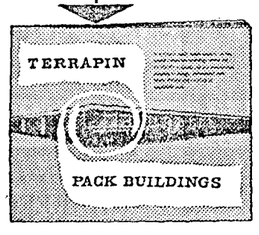
Terrapin Broadsheet No. T.P.3 not only contains full details of this unique service, it also shows you how to estimate your own costs. Write or 'phone for a copy NOW.



TERRAPIN LIMITED

bring you tomorrow's buildings today

6 PORTER STREET, BAKER STREET, LONDON, W.1
Telephone: WELbeck 7996 (5 lines)
Telegrams: Terrapin Wesdo London. Cables: Terrapin London.



they have done . . . Sometimes there is a paranoia in nations, and one sees that in this matter . . .

He also dealt firmly with Peking's sudden discovery, after a decade of silence, that it cannot possibly accept a frontier "created by British imperialist aggression against China." How, he asked, had the huge Chinese state itself been built up? "It was built up by conquest—violent conquest."

A grave and very general issue is, in fact, raised by Peking's latest argument. Nearly every frontier in Asia and Africa today (including that between Russia and China) is a product of former "imperialist aggression." European withdrawal undoubtedly means the challenging of some of these frontiers by the successor states. There are obvious cases where the opportunity could well be taken to revise borders that were always arbitrary and accidental. But if sweeping claims are to be made merely on the ground that no line laid down in colonial times has any validity, then the map of the Old World may go into the melting-pot—and that is not a reassuring prospect.

THE ARABS

Nasser as Suitor

PRESIDENT NASSER'S doves of peace brought back no olive branches from President Bourguiba when they returned from the Arab League meetings at Casablanca last week. The Tunisian president was not as amenable to Egyptian overtures of friendship as Kings Saud and Hussein had proved only a few weeks before. Among the Arabs, the differences between Tunis and Cairo attracted attention only in Baghdad, where the Iraqis were quick to claim that they and the Tunisians were the only true believers in Arab solidarity.

Meanwhile Dr Abdul Moneim Kaissouni, the United Arab Republic's minister of economy, arrived in Britain for a round of unofficial calls on officials. His chief interests were in trade and finance (he visited the Treasury and lunched with Mr Heathcoat Amory on Wednesday); but there was cautious hope in business and diplomatic circles that his visit would be followed by the resumption of diplomatic relations between his country and Britain. Perhaps President Nasser was beginning to realise that a few Egyptians on the Thames could be just as useful to him as a few Britons on the Nile might be to the United Kingdom.

Dr Kaissouni is now bound for Washington to see officials of the World Bank about a loan for widening the Suez Canal. Back home in Cairo, however, his government has taken up a position well out on a limb. On the day Dr Kaissouni arrived in London, President Nasser's favourite political commentator, Sayyid Hassanain Haikal of *Al-Ahram,* said that if the UAR

detects an attempt to link freedom of Israeli navigation in the canal with the loan, it will not wait for the bank to refuse, and will withdraw its request without anger or regret.

Such statements will hardly help Dr Kaissouni in Washington, where the attempt has already been made to hold off the loan until the matter of Israeli use of the canal is cleared up. So far, nobody has been able to discover who is to clear it up or on what basis. There are, however, plenty of people in Washington who would not mind sawing off a limb if they thought President Nasser was sitting on the end of it.

Old Diplomacy for New

THE Iraqi government, having spent the past year alienating the affections of Iraq's old friends, is out to win new ones. It is planning to open information centres in carefully selected capitals—London and Vienna this side of the Iron Curtain, Prague on the other side, and Beirut among the Arabs. Besides information of a general nature, the centres are to deal with commercial questions and sell tickets for use on Iraq's own airline.

From time to time the Arabs, collectively through the Arab League or individually as in this case, decide that they must burst upon the world with information about their causes, their picturesque antiquities, and, less often, their products. It is all in keeping with the times, and they could use any goodwill or trade that results from the use of modern techniques; but they might consider first whether they have made the most of the diplomatic representation they have enjoyed since they became independent.

Adequate diplomatic representation would serve them better than independent information offices. A commercial attaché who knows the answers would have more effect on trade, and any travel agency can sell a ticket. There is more to modern diplomacy than tax-free petrol, cocktail parties (euphemistically described as receptions among Moslems), and calling on other diplomats. The weakness of the Arabs' voice in the world is not always the fault of the men their governments send abroad. The governments, for reasons best known to themselves, fail to keep their representatives informed. Their press and commercial attachés in London, Washington or Moscow are likely to know only what they read in the local papers. They are often, understandably, as eager to get information about the situation back home from the inquiring reporter or commercial traveller as they are to pass on information about governmental changes or new products to be sold. Sometimes they know little about the countries they try to represent. The *chargé d'affaires* in London of one Arab country, for instance, has never set foot in that country.

Before the Iraqis and their Arab brethren embark on expensive new public relations schemes, they should first take stock of what they already have on hand. Perhaps they will find that old-fashioned diplomacy, well organised and properly administered, would bring in more tourists and trade than flashy establishments in Piccadilly or the Ringstrasse.

TRADES UNION CONGRESS

Fag Ends

Our correspondent who was at Blackpool last week writes:

THE last two days of the Trades Union Congress were dominated by Mr Gaitskell's carefully worded plea for wage restraint on the one hand and the delegates' unanimous vote for higher wages and shorter hours on the other. The wages motion, put forward by the Electrical Trades Union, led to the usual stream of union shibboleths; the debate on the 40 hour week, half-hearted and diffuse as it was, was tactically the more interesting. The union leaders who wanted to push the shorter working week faced two major difficulties: the first was that most union members do not want it (many work all the overtime they can, even with a 44 hour week), and the second was that employers, who rightly see the demand as just a concealed wage claim, are not ready to concede it. This made an unpropitious background for any motion; it is probable that unions demanding straight wage increases will make the running after October 8th, and possible that we may have seen the last of the 40 hour week slogan for some time.

Friday at Congress is always a time for tying up loose ends, and this one was no exception. The report on the general council's exchange with the ETU was passed over without a word—a result not only of the TUC's cold feet in the matter generally, but also of their lack of confidence in the leading non-communist champion in the union in particular. A solid vote expressing support for the Labour party followed (with only "derisory" opposition) and the day finished with a resolution, which was carried, calling on the general council to investigate itself in order to make its 35 members more representative of trade unionism as a whole. This difficult job will fall to Mr Bartlett, of the Confederation of Health Service Employees, the TUC's chairman for the next year.

NIGERIA AND THE BOMB

Dusty Answer?

THE Prime Minister of Nigeria, Alhaji Abubakar Tafawa Balewa, and four of his ministers arrived in Britain this week to ask Britain to make representations to France not to detonate its atomic device in

the Sahara. The British Government can be in no doubt of the seriousness of this mission; indeed, it is embarrassed. This is an all-party mission, and it aligns the Northern People's Congress, the emirs' party, with the two more radically-minded parties of the South. Thus as the Nigerian election campaign gathers in heat, the parties are demonstrating that in the matter of atomic bomb tests in the Sahara they are at one with Ghana and the other independent African states in their protest against the French. The British Government had not looked for such solidarity with the other African states even before Nigerian independence; but now it cannot be explained away, even if remarks are made, *sotto voce,* that for electoral reasons the NPC could not lag behind the other parties on this issue.

What is worse, the delegation's plea that Britain should do something to stop France kicking up radioactive dust in the Sahara is certain to receive a dusty answer. The Nigerians are perfectly aware that Britain cannot bring direct pressure on France. But they will not be taken in by the red herring that France has the right to explode a device. They are asking that France should not explode it in the Sahara against the organised protest of so many African governments, and that Britain should not side with France now that Morocco has raised the issue in the United Nations. But Britain may already be so far committed to support France in North Africa in the UN assembly that it would be impossible to make an exception over the bomb. This would mean turning Nigeria down flat just when the Colonial Office is straining every nerve to ensure Nigerian goodwill on the eve of independence—and the drawing up of a defence treaty between Britain and Nigeria. The role which was cast for Nigerian independence, and the accession of Nigeria as the biggest state since Pakistan to the Commonwealth, next year was to draw attention from the unpleasantnesses which seem probable elsewhere in British Africa.

If the Nigerians are snubbed, they will have an incentive to work more closely with Ghana and the Bandung block than seemed at all likely at the time of the Accra conference of African states. The British government has been counting on Nigeria being a counterpoise to Ghana and Guinea. But if the future Nigerian foreign minister wants to commit Nigeria to a more African nationalist line, the Northern Peoples Party and the emirs may now have a good excuse to shrug their shoulders and let him.

FRANCE AND THE VATICAN

No Overalls for Priests

THE boldest social experiment of the Roman Catholic Church since the war is coming to an end. The Vatican has now decided to put a stop to the activities of the French movement of worker-priests. The Mission of France, to give it its full title, was set up in 1943 by members of the French clergy who thought that preaching in dark Africa or distant Asia was not the only outlet for a missionary's zeal. There was much to be done nearer home. The divorce between the Church and the industrial workers made it imperative, in their view, to send priests as missionaries to the big industrial centres of France. And if their preaching was to be effective, it was felt that they would have to share the work and the living conditions of those whom they wished to convert. Such was the origin of the worker-priests.

The venture had its risks. The preachers could themselves be converted. Sharing the hardships of their fellow-workers, they could be influenced by their political and social opinions. Worker-priests took part in strikes and some were even arrested in communist-sponsored demonstrations. A conservative campaign against "red priests" and strictures from the Vatican led the French Catholic authorities to restrict the scope of the movement. In 1953 a revised statute prevented priests from devoting more than three hours a day to manual labour. But the French clergy still thought this mission worth the risks involved and asked the Vatican's blessing for extending the movement again. Last June it received a negative reply, which has now leaked into French newspapers.

CARDINAL PIZZARDO, writing on behalf of the Holy See, tries at first to minimise the issue. He queries the assertion that the mass of French workers is "un-Christian" on the rather Jesuitical ground that many of them have been baptised. He then restates the traditional definition of a priest's duties which is incompatible with factory life. But his main argument is couched in almost Marxist terms: "the priest at work . . . is led, in spite of himself, to think like his fellow-workers on trade union and social subjects, to share in their actions; this is a dangerous entanglement which brings him rapidly to take part in class war." The pill is sweetened. The worker-priests are to be disbanded gradually and laymen trained in special institutes directed by priests will be allowed to preach among industrial workers. But the end of this venture is undoubtedly a victory for the conservative wing in the Vatican over the more modern French cardinals.

SAN MARINO

Polling on Monte Titano

THE people of San Marino have declined to confer upon themselves once again the distinction of having the only communist-dominated government in western Europe. The tiny republic in the Apennines was governed by a coalition of Communists and Socialists from the end of the war until October, 1957, when the defection of a handful of Socialist councillors gave the Christian Democrat-Social Democrat opposition a tiny majority; with the aid of a little constitutional sharp practice and some beating of drums by the Italian government off-stage, the Christian Democrats were able to take over the government. They refused, however, to submit immediately to the verdict of the 7,500-odd electors of San Marino, more than half of whom live abroad—presumably because they doubted how they would fare.

But when the ordinary general elections came due—last Sunday—the Christian Democrats found, like their Communist *opponents* before them, that it is often easier to win elections when in power than when in the wilderness. The Christian Democrats and their Social Democrat allies between them gained 3,826 votes, just over 60 per cent of those cast, and can therefore count on an absolute majority of the sixty seats in the new General Council. The Christian Democrats will probably get 27 seats and the Social Democrats 9; the Opposition will probably consist of 16 Communists and 8 Socialists.

The effect of the female vote on political fortunes in San Marino remains an unknown quantity; women have at last been enfranchised, but for rather obscure reasons they cannot exercise their new rights until next year. On the other hand, the new electoral law does not seem to have had such a decisively unfavourable effect on the fortunes of the Communists as they maintained it might; under this law the 900-odd *Sammarinesi* living in North and South America, most of whom are anti-Communist, were allowed, unlike their compatriots in Western Europe, to exercise a postal vote. Perhaps one of the biggest factors in the Christian Democrats' victory was a shrewd assessment by the electors of which side their bread is buttered on; with a Christian Democrat government firmly (barring accidents) in power until 1963, they may reasonably hope for an increased flow of financial benefits from Rome to the heights of Monte Titano.

EDUCATION

Proposals for the Schools

THE two unofficial kite-flying clubs attached to the main political parties have recently published tracts on education—the Tory Bow Group, on schools,* this week and the Fabian Society, on universities,† last week. They have only a general bearing on the parties' electoral educational wares, but will add shot and shell to the educational controversy. The Bow Group follows the party line on improving

* The Bow Group: *Willingly to School,* published by the Conservative Political Centre. 2s. 6d.

† *The Universities: A Royal Commission?* by Graeme C. Moodie. The Fabian Society. 5s.

Meaning that Britain *(L'intrépide Albion)* now has a foothold *(assiette de pied)* in the motor vehicle components side of the European Common Market *(marché vulgaire, mais fort commode)*.

Vive la reine! Vive le commerce et la science des mécanismes! Vive la France! Vive la joie! Et long vive Wilmot Breeden whose locks, handles, window-winders, bumpers, over-riders, etc., virtually every British car roads today, etc., now whizzing about all over Europe etc.

WILMOT BREEDEN are at Birmingham: *also at London, Manchester, Bridgwater, Glasgow, Melbourne, Toronto.*

secondary modern schools in order to retain the inherited educational capital represented by the gra. imar schools, but is uneasy lest the Conservatives be driven into supporting the eleven-plus (in all its varieties) when, so the Bow Group believes, there are other ways out of the dilemma of selection of ability. They find the comprehensive school far less of a bogy than do most middle class parents, but, like Mr Geoffrey Lloyd, they place their hopes in such an improvement of secondary modern education that ultimately parents and pupils will happily sort themselves out, over a period of adjustment, into the two streams, academic and practical. Their substantial suggestion to ease this transition (apart from spending the millions more on schools, teachers, and teachers of teachers which everyone hopes may become available) is to provide two new levels of GCE pass—the "S" level (for university scholarships) and the "N" level for those who can hope at best for a pass or two at "O" level. This would enable secondary modern schools to get a school certificate for a substantial number of their pupils. Whether this would really help employers to select staff thereafter may be questioned, but it is possible that in the age of examinations it would underpin the egos of children with no more than average IQs, and perhaps this would be a good thing—until there arises a robust non-academic generation that can do without such crutches.

The Bow Group rightly want more of everything for the schools, including more teachers, smaller classes, better equipment and more educational experiment (including some in optimum class sizes, please). But almost their only idea for finding the extra finance is to offload the payment of the teachers' basic scale from the ratepayer to the Treasury. At the same time they are —again rightly—critical of the way local authority control over schools, teachers and parents is exercised. But do they not see that the whole tendency of such arguments is towards a national educational system in which the local educational committees would have a much less authoritarian say either as paymasters or parents' representatives? The Bow Group do not throw this cat among the educational chickens—surprisingly, seeing what fun they generally have with the establishment.

And Questions from Universities

MR MOODIE, for the Fabian Society, is concerned to put up a comprehensive brief for the Royal Commission on the universities which Labour, if it comes to power, has promised—or threatened—to appoint. In collecting eighty-eight questions to which he would like a commission to extract answers from the dubious dons he has ranged over the whole field of current university argument. His questions range from whether university expansion is really limited by availability of qualified staff to

the (almost *lèse majesté*) query whether the University Grants Committee does an adequate job. Mr Moodie has naturally not shirked the formulation of questions about the position of Oxford and Cambridge, and their *droit de seigneur* in the matter of skimming the cream of student intelligence and the best of university staff. It is a question which, among others, ought to be faced; though to turn them into post-graduate institutions seems a solution only one degree worse than that of further raising their entry standards in order to leave more good seconds for other universities.

Some of Mr Moodie's questions are loaded with question-begging terms, but his university readers will soon frisk him of these, and the exercise was worth while. Nowhere, however, does he himself seem to face the question whether a Royal Commission is suited to an inquiry on such a scale. However eminent the commissioners, the dons would understandably think they knew better; where they agreed with recommendations, they would put them into practice in any event, and where they did not agree, it would take government pressure to force their hands. This puts national policy for university education back where it must ultimately lie, which is (behind the UGC veil) the government. The problem is for the government to grasp the really prickly thistles—such as the distorting effect of Oxbridge's superior esteem and resources compared to Redbrick, or the indenting for more scientists than dons think healthy to university life. A Royal Commission report would hardly help here—the mere facts can be less cumbrously called for. The eighty-ninth question, to be added to Mr Moodie's list is: which minister or department of state is primarily charged with university policy?

LONDON

Exploding Metropolis

How big is London? According to Mr Powell, of the Ministry of Housing and Local Government, in a paper read to the British Association, it is (or soon will be) something like 100 miles long and *100 miles wide*. That, at any rate, is the area now covered by rapid economic and population growth. In the last six years this London region has spawned 400,000 new jobs—over 40 per cent of the total national increase. Most of these jobs are in London proper (particularly in new offices in the centre), though manufacturing employment has grown considerably in new towns and other places on the perimeter. But though London has become more and more a place to work in, it has become less and less a place to live in. Built-up London (Harrow to Croydon, Dagenham to Heston) has lost 245,000 inhabitants since 1951, and the outer parts of the London region have gained 660,000.

The problems that such vigorous growth and development produce should be obvious. As a new and more distant exurbia spreads around the capital, the strain

The Economist

SEPTEMBER 17, 1859

THE TYRANNY OF THE STRIKE

¶ For some weeks past we have witnessed a scene in London at once novel and painful. On the road from Belgravia to St. James's Park and Birdcage Walk, and immediately facing the back of Buckingham Palace, the old buildings of the street . . . were some months ago removed in order to widen the road, and an open space for building was left. About a month ago, fresh buildings began to spring up, forming a new line of street. But in connection with these buildings a singular appearance has presented itself to the passer-by. The boarding which enclosed the scene of *building operations has been protected by policemen* placed there specially on duty. The hodman who carried the mortar, the bricklayer who laid the bricks, the carpenter who added the woodwork, have all been working under the special protection of a body of policemen. . . . The excesses of which the Trades' Union, or at least members of it, are becoming guilty, cannot fail, if persevered in much longer, to produce a very serious revulsion of feeling on the part of the public against these combinations. We have been always ready to support the fair claims of labour to all the advantages to which increased demand entitled it. . . . But in the case of *labour, as in the case of wheat and sugar*, the fluctuations of price must rest upon natural causes, upon variations in the relation of supply and demand, and not upon the will and caprice of those who have to supply the demand. There is no error so *great in commerce*, nor one which is so quickly punished by failure, as when the dealers in an article combine to keep up its price against the natural tendency of an increased supply, to a decline. But when this effort is extended from inanimate to animate objects, from wheat or sugar to the labour of man, and when, in addition, man is to be treated not as if he were a rational being, capable of judging for himself, but *as if he were an inanimate object* to be sold or kept as best suited the speculative notions of a dealer, then it becomes a matter of tyranny of the grossest and worst character. Such is the tyranny which the turn-outs *in the building trade are exercising over their fellow-men*. . . . It is really too much to know that the whole course of legislation for many years past has been to destroy the monopolies of capital and property . . . and then to find that this is the class, which more than any other is disposed not only to impose a monopoly upon society, but in order to gain that end, to exert a severe tyranny upon fellow-workmen.

on the transport and highway systems grows alarmingly. The result may be to drive more industries, and offices too, to new and satellite towns—a healthy development in itself, but one that could easily choke radial communications. Urban sprawl and litter meanwhile threaten the green belt and remaining Southern England countryside. The growth of London is occurring at the expense of other, less developed regions of Britain. If this was judged wrong before the war, can it be right now?

Answers to these urgent questions can never be easy, but two points surely stand out. One is that the problems of the London region would be enormously helped by the designation of more new towns—not as gigantic public housing projects, but as places to which industries as well as people would be encouraged to move from the capital itself. This would simplify communications, particularly if the new and satellite towns were linked by expressways with no intervening stops; it would reduce commuting, minimise sprawl, and provide the housing sites that are urgently needed without involving too many conflicts over beauty spots and rural amenities. The second point is that to encourage greater economic growth in other regions besides London would require a broader and different use of subsidies for transport and industrial location. The political parties' present promises to mop up little local pockets of unemployment are quite unhelpful in this respect; they may well, if the sites are intrinsically poor or out-dated, actually discourage new regional development.

SWISS AND CZECHS

Milk Chocolate Menace

SWITZERLAND'S "war hysteria" and piling up of armaments have, according to *Rude Pravo*, the Czech *Pravda*, cast dark clouds over its relations with the communist states. This is pretty alarming news, whichever way you look at it.

Armed to their milk teeth, these warmongering watchmakers have evidently projected their provocative shadow at least as far as Prague, if not to Peking. Europe, and no doubt Asia, Africa and the Americas, must tremble at the rattling of Swiss sabres. The reckless imperialists of Berne have already reduced gallant little Lichtenstein to the status of a helpless satellite. Where will their rabid *revanchiste* ambitions stop?

Using the now fashionable reasoning of linguistic nationalism, the Swiss could easily stake out claims to France, Germany and Italy (not to mention Austria, Quebec and a good bit of New York City). There are Swiss pastry shops in the very Himalayas; in that region of disputed frontiers, these might constitute a better territorial claim than, say, the landing of a rocket. Not that the legal niceties matter much once the frenzied and heavily armed Swiss are on the march.

Terrified of giving the wild men of the Alps the slightest provocation, spineless, appeasement-minded journalists have hitherto hushed up this looming threat to peace. Now, with the cuckoo clocks standing at five minutes to midnight, *Rude Pravo* has fearlessly exposed it in the nick of time. The brave journalists of Prague have not even been silenced by Moscow's stern warnings to "rabid inciters of conflicts" not to try to disturb international harmony at this time of top-level comings together. They have done their painful duty, and told the world the awful truth. They deserve our thanks—that is, unless (a horrid doubt creeps in) they may possibly just have been misled by exaggerated reports about the recent passage of an elephant, in Hannibal's tracks, across the Alps.

COSTUME

Pride and Puggarees

MANCHESTER'S City Council and Transport Department, the Secretary of State for Scotland and Glasgow Corporation recently got involved in a tale of two turbans and two cities that promised well for the silly season. One Sikh was turned away from a dance hall and another turned down a job as a bus conductor; the impediment in each case was the neatly wound puggaree which, together with a beard untouched by any blade, is the badge of a pious Sikh.

Gents are definitely required to remove their hats in any self-respecting palais de danse (are the managements aware, by the way, that a Sikh is also obliged to carry a knife?); and bus conductors are usually issued with uniform caps, which they may or may not wear. Does this amount to religious intolerance? So said the indignant writers in correspondence columns who correctly pointed out that the Sikh soldiers of the British Raj were a fine body of puggareed men. But there is a bit more in these cunningly wound turbans than meets the eye.

If an ex-Grenadier goes to work for London Transport, must he be allowed to wear his honoured bearskin? If so, buses will have to be scaled upward, and there will be trouble with low bridges. Our tourist trade might well boom if the public transport services were ablaze with Masonic aprons and Nigerian togas, Salvationists' bonnets, sarongs, kilts and sporrans. But before the last dykes yield to a flood of rather confusing splendour, might not a compromise be found in the fact that the Sikh religion, strictly speaking, enjoins the wearing not of the turban itself but only of the uncut hair beneath it; and this might be tucked away under a peaked cap just as, in battle, it used to vanish under a regulation steel helmet.

THE ELECTION OF 1959

For the next few weeks comment upon the course of the election campaign, based partly upon despatches from correspondents in the constituencies, will be presented in this special section of *The Economist*.

Into Battle

BY A ROVING CORRESPONDENT

IF the latest *News Chronicle* Gallup poll is correct, there has been a swing of public opinion in this country since 1955 which must at present make the Conservatives favourites to win the election with a majority of over 100. Labour's hopes of coming back to power in the face of these odds must presumably rest on a combination of three factors.

First, there is their hope that the polls are not correct; this point, and the evidence of the by-elections, is discussed in the next article. Secondly, there is the argument of some optimistic Labour agents that any swing in public opinion since 1955 will be more than compensated for by the improvement in their organisation; the polls show only how people think they will vote if they go to the booths, they do not show what changes there will be in the numbers who will be induced to turn out to do so. Thirdly, many of Labour's most intelligent people express a surprisingly confident hope that there will be a pronounced swing from Conservative to Labour during the campaign itself.

It is very difficult to swallow the argument that Labour's disabilities are likely to be overshadowed by relative changes of efficiency in the two main parties' organisations. So far as one can see, the Conservatives are probably about as well off for party workers as they were in 1955. They have no shortage of funds. Although they are fairly well organised, they admit that they are far from achieving their goals of 100 per cent canvasses and comprehensive street warden systems. But the Labour party is not even within distant sight of these objectives. Labour's organisation has probably improved a bit on 1955, and it looks like having a larger number of volunteer workers than last time. But the implementation of the Wilson report in its "penny-farthing" organisation has been exceedingly patchy. There are plenty of marginal seats where Labour still has not got even a full-time agent. This is quite largely due to the shortage of competent men. In some cases incompetents have been appointed and, after a year or two of mess, the full-time agency has been abandoned.

From past experience, garnering of the postal vote is by far the most important organisational activity. The Conservatives expect to get only "as many or a few more" postal votes as in 1955. The Labour party has done quite well in organising this vote in a few seats, but its efficiency has been sporadic. The best guess one can make is that the Conservatives will not score quite the same overwhelming victory in postal votes as they did in 1955; but that they will still be ahead in this field almost everywhere—and usually quite substantially. Moreover as the electoral register dates from February there will be more emigrants from each constituency to track down in 1959's October election than there were in 1955's May one.

One other influence on the turn-out may, however, work to the Conservatives' disadvantage. Last time anything up to one and a half million normal Labour voters stayed away from the polls, largely because they no longer felt sufficiently horrified at the prospect of another Conservative government to bestir themselves. Even more of Labour's normal voters may, of course, feel even less horrified this time. But this time the Conservatives are almost equally worried about the possibility of lazy abstentions on their side; this fear grows every time that the public opinion pollsters suggest that a Conservative victory with a large majority looks like being in the bag.

It is these worries about the turn-out that have thrown both parties into a troubled behind-the-scenes controversy about what sort of a campaign they should wage. The problem for each is whether a loud and calumnious election campaign would do more good by frightening its own sleeping supporters out to vote, or whether it would do more harm by indignantly arousing the sleeping giants on the other side. Lord Hailsham and Mr Gaitskell each seems to have decided that the ideal solution would be for the other side to be very loud-mouthed and his own side to be very soft-spoken. Within limits both are probably right. But there are already some signs that the Tories may be in danger of carrying this cautious soft-speaking too far, and that Mr Gaitskell may be impeded from carrying it as far as he wisely would like.

Mr Gaitskell's difficulties are obvious: they are to control his militants. Down among the grassroots in the constituency organisations one has the feeling that Labour emotions are rising earlier than they did in 1955. This does not mean that anything specifically dirty is being planned, even at the lowest levels. The Tories' present cries of anguish are partly propagandist, partly prophylactic and partly inspired by a perhaps unnecessarily guilty conscience (and apprehension) about Dr Hill's loud-mouthed telecast before Lord Hailsham's edict to be gentler went out.

The Tories' danger may be less obvious. But if Mr Gaitskell does manage to curb his wild men, if soft-speaking does continue to be the order of the day on both sides, if everything goes as now, one's impression is that there may indeed be some net swing to Labour during the campaign. In propaganda so far the first rounds seem, on the whole, to have gone to Labour on points. Labour has had a singularly good press, all things considered, for everything except Mr Greenwood's broadcast. Mr Gaitskell's touch on TV and at the TUC has been unexpectedly good. The Conservatives have countered with nothing except a very dull and unimaginatively "safety first" election manifesto. Looking at the public opinion polls, one must still expect the Conservatives to win, and probably by an increased majority. But this first battle report from the constituencies must end with a tinge of surprise that the Tories have not made more of the running so far.

The Swings Required

IN the general election of 1955, the Conservatives won a majority of 68 over Labour, with six Liberals and two Sinn Fein convicts (who were promptly disbarred) also gaining election to the House. In the election of 1959 Labour would therefore need to win 34 former Conservative-held seats in order to gain parity with the Conservatives in the House; and it would need to win 39 seats

in order to secure an absolute majority. Both these figures ignore the four seats which Labour has won in by-elections since 1955; in a general election Labour would need to win them over again.

It so happens that if there was a straight swing from Tory to Labour of 2½ per cent right across the country compared with 1955—that is to say, if 2½ per cent of the electorate which voted Conservative last time this time voted Labour in every constituency—Labour would gain exactly 40 seats. A straight 3 per cent swing to Labour would gain it 48 Tory seats. It is a reasonable rough-and-ready opening gambit for the electoral arithmetic of 1959 to say that as three-quarters of these 48 seats go, so goes the nation.

The 48 seats concerned are set out in Table I. The convention adopted there is to set in italics the seats in which the Liberals are expected to put up candidates this time; seats in which the Liberal interventions are new—that is to say, where no Liberal candidate stood last time—have an asterisk as well as being italicised. It will be seen that in eight of the 48 seats, the Liberals are expected to make "new interventions"; in seven they are making "reappearances" as in 1955; and in 33 there are at present expected to be straight fights (including two, Devonport and Ealing North, where Liberal candidates stood last time, but are not expected this time). Necessarily this tabulation can be based only on the provisional list of Liberal candidacies, which is always apt to be amended just before nominations day.

TABLE I

THE CONSERVATIVE MARGINALS

(Figures in brackets show swing Labour requires)

18 seats requiring under 1 per cent swing: Gravesend (see note A), Bradford North (0.1), Plymouth Devonport† (0.1), Ayrshire Central (0.2), Glasgow Craigton (0.3), Ealing North† (0.3), Carlisle (0.5), *Oldham East* (0.5), Preston South (0.6), *Hull North** (0.6), Glasgow Scotstoun (0.6), Maldon (0.7), The Wrekin (0.7), Eastleigh (0.7), York (0.9), *Eye* (0.9), Nottingham Central (0.9), *Hitchin** (0.9).

14 seats requiring 1 to 2 per cent swing: *Wandsworth Central** (1.1), Yarmouth (1.1), *Hornchurch* (1.1), Lanark (1.1), *Battersea South* (1.1), *Buckingham** (1.3), Halifax (1.4), *Walthamstow East* (1.5), *Rochdale** (1.6), King's Lynn (1.7), *Dulwich* (1.8), Doncaster (1.8), Rushcliffe (1.8), Sunderland South (1.9).

16 seats requiring 2 to 3 per cent swing: *Watford** (2.0), Woolwich West (2.1), Norfolk South (2.1), Gloucestershire South (2.1), Liverpool Kirkdale (2.1), Norwich South (2.5), *Grantham* (2.5), Chigwell (2.5), *Darlington** (2.7), Walsall South (2.7), Devizes (2.7), *Bedfordshire South** (2.8), Rutherglen (2.9), Dover (2.9), Manchester Wythenshawe (2.9), Brentford and Chiswick (3.0).

Note A: Gravesend included because Labour vote was split by Sir Richard Acland in 1955.

Note B: Italicised seats are expected to have Liberal candidates. * New Liberal intervention, no Liberal in 1955; † Liberal in 1955, but not expected in 1959.

The importance or unimportance of the pattern of Liberal candidacies is always a matter of controversy. Very broadly, however, when there have been "new Liberal interventions" in by-elections during this Parliament the average swing from Tory to Labour has been between 2 and 3 per cent greater than it has been in straight fights; when Liberals have "re-appeared," the extra damage done to the Tories has usually been rather smaller, on the average it has been equivalent to the damage done by a swing of between 1 and 2 per cent to Labour. For those who are uncertain of the method of arithmetic here, an example may help: if an intervening Liberal picks up 20 per cent of the vote, of which 18 per cent comes from the Tory and 2 per cent from Labour, this widened gap of 16 per cent between Tory and Labour has the same effect on the relationship between the major parties as an 8 per cent swing from Tory to Labour would have in a straight fight. In the Tories' worst period, between mid-1956 and their sudden recovery at the time of the London bus strike in May, 1958, the average net swing from Tory to Labour was just over 6 per cent in by-elections where no Liberal intervened and just under 9 per cent where one did. Since the bus strike the average net swing from Tory to Labour has been 2½ per cent where there was not a Liberal and just under 5 per cent where there was.

If these trends are repeated on October 8th, then Labour would probably need a general swing towards it of only about 1½ per cent compared with 1955 in order to topple the Tories out of power; without the succour given by a Liberal revival, Labour would need an average swing of rather over 2 per cent to win. The major part of the basis for this calculation can be read off from Table I. It will be seen that 26 of the 48 Tory seats listed in Table I would be vulnerable to a 1½ per cent swing (nine of them being doubly jeopardised by Liberal candidacies), and that six of the remaining 22 would be rendered vulnerable by Liberal candidacies if the trends discussed in the preceding paragraph are repeated. Just outside the scope of Table I, the latest Liberal list of candidacies suggests that only two of the next 18 Tory marginals (i.e. those vulnerable to swings to Labour of between 3 and 4½ per cent) will be affected by new Liberal interventions, although the Colonial Secretary faces a Liberal intervention in mid-Bedfordshire (4.7 per cent swing needed by Labour to dislodge him) in a seat that falls only just outside this margin.

Add to these 34 vulnerable Tory seats the half a dozen Tory seats that the Liberals now have some hope of winning themselves—Inverness, North Cornwall, North Devon, Hereford, Denbigh, and Mr Bonham Carter's captured citadel of Torrington. Add the two Conservative seats of 1955 not in Table I—Glasgow Kelvingrove (5.4 per cent swing needed) and North Lewisham (4 per cent swing)—which Labour has since won in by-elections and where the new sitting members might be expected to have laid up some fund of personal loyalty. Add Carmarthen which Labour captured from the Liberals in 1957 and looks like retaining. Grant that one or both of the Sinn Fein seats of 1955 might well be recaptured by the Tories this time. Grant that there are bound to be some supranormal and subnormal swings in particular seats in any general election, and that up to a dozen formerly safe seats could conceivably be swung this time simply as a result of large population movements; but assume that the effects of these aberrations will broadly cancel out as between Tory and Labour. The picture that emerges, in so far as the inexact science of the electoral statistician can help to point the way, is that Labour would probably need an average swing of 1½ per cent compared with 1955 in order to turn out the Tories.

TABLE II

THE LABOUR MARGINALS

(Figures in brackets show per cent swing Conservatives require)

16 seats requiring under 1 per cent swing: Faversham (0.1), Barons Court (0.2), Cleveland (0.2), Stalybridge and Hyde (0.3), Reading (0.3), Clapham (0.3), South West Norfolk (0.3), Glasgow Provan (0.3), Manchester Gorton (0.3), Blackburn (0.5), Acton (0.7), Willesden East (0.7), *Gloucester** (0.9), *Bristol North East* (0.9), Leek (1.0), Brierley Hill (1.0).

27 seats requiring 1 to 2 per cent swing: Salford West (1.0), *Uxbridge** (1.0), Swansea West (1.2), Dunbartonshire East (1.2), Wellingborough (1.2), Meriden (1.3), Falmouth-Camborne (1.3), Greenock (1.4), Chorley (1.4), *Holborn-St Pancras* (1.4), Stirling and Falkirk (1.5), Liverpool Edgehill (1.5), Edinburgh Central (1.5), Norfolk North (1.6), Accrington (1.6), Coventry South (1.6), Derbyshire South East (1.6), Hartlepools (1.7), Brighouse-Spenborough (1.8), Birmingham All Saints (1.8), *Dundee West* (1.8), Rugby (1.8), Bristol North West (1.9), Widnes (1.9), Ashton under Lyne (2.0), Bootle (2.0).

17 seats requiring 2 to 3 per cent swing: Newcastle East (2.1), Lowestoft (2.1), Salford East (2.2), Birmingham Perry Bar (2.3), Dunbartonshire West (2.4), Manchester Ardwick (2.4), Eccles (2.4), Rochester-Chatham (2.4), Newark (2.5), Romford (2.5), Edinburgh East (2.5), East Flint (2.6), Huyton (2.7), Nelson and Colne (2.8), Birmingham Northfield (2.8), Northampton (2.8), *Ipswich* (3.0).

Note: Italicised seats are expected to have Liberal candidates. * New Liberal intervention, no Liberal in 1955.

How forlorn are Labour's chances of achieving this? Up to the middle of this year forecasters had three pointers to go by:

(1) In all the seven **by-elections** this year there has still been some net swing to Labour, although the strength of that swing in straight fights has diminished since the heady Labour days of a year ago. Ignoring the Belfast East by-election in March (where Labour was helped to an 8 per cent swing by very special factors), the record this year has been a 2 per cent net swing to Labour at South West Norfolk, 4 per cent to it at Southend (Liberal reappearance), 1 per cent at Harrow, 3¼ per cent at Galloway (new Liberal intervention), 1¾ per cent at Penistone, ½ per cent at Whitehaven. The Penistone and Whitehaven by-elections took place as recently as June. Obviously, they suggested that a general election might still be a very close thing.

(2) The **local elections** in May appeared to suggest a net swing to Labour averaging only about ½ per cent compared with the local elections in 1955.

(3) Last June the *News Chronicle* **Gallup poll** suggested that the Tories had a 1½ per cent lead over Labour, compared with the 2.9 per cent lead that they had in the actual voting in 1955. At this time, therefore, the polls themselves suggested that there was still a net swing to Labour compared with 1955, although only one of rather over ½ per cent.

Since June the Tories' lead on the Gallup poll has gone up to 5½ points, implying a swing to them of about 2 per cent since June and a net swing of between 1 and 1½ per cent since 1955. It is fair to remark here that in the summer of last year the public opinion polls reported a Tory recovery which by-elections in November subsequently suggested was not as strong as they had thought; but in general the record of the Gallup poll and other public opinion polls in this country has been astonishingly good.

If the Tories did achieve a net swing of 1½ per cent in every constituency on October 8th compared with 1955, they could, as Table II shows, expect to gain 30 Labour seats, increasing their majority over Labour to 128. If the Tories achieved a 3 per cent swing, their majority would reach a landslide level of 188. Among the Labour notables endangered by any Tory tide are Mr Mikardo at Reading (0.3 per cent swing needed to unseat him), Mrs Castle at Blackburn (0.5 per cent), Mr Strachey at Dundee West (1.8), and even Mr Harold Wilson at Huyton (2.7).

In the Constituencies

ONLY about 180 of the 630 constituencies of Britain are likely to be really interesting places in the next three weeks. The other 450 seats can probably be written down as nearly 200 safe Labour seats, nearly 250 safe Tory seats, and three safe Liberal seats before we start. Correspondents from *The Economist* have started to visit as many marginal seats as is conveniently possible; our aim will be to report from them and from other available material what special influences seem to be at work in some of the most critical areas. As a convenient means of reference back to the tables in the preceding article, we will pick out the most marginal seats by printing in **bold type** the names of any seats that would change hands as a result of a 3 per cent or smaller swing away from the sitting member.

In London's South West

"REALLY Bright Young People are Joining the Labour Party" is the slogan outside Putney Labour party's door and there alongside is the picture of a Really Bright Young Person, who turns out to be Labour's supremely photogenic candidate, Mr Dick Taverne. Since Mr Taverne looks younger than his thirty years and has a first in Greats, he presumably fits the bill, although it is a little disconcerting to find that the sole policy item that is then picked out for display is the undertaking to do away with the nominal fee for prescriptions at the chemists.

Yet this typifies the dilemma of the Opposition in the clump of marginal seats south of the Thames, where London edges into suburbia and the LCC has plonked great clusters of housing estates in the middle of residential districts which agents always used to mark Tory on the map. There is general agreement that the voter is not much interested in foreign or colonial affairs or in anything which does not affect his pocket. The problem then is to scrape around to find some grievance that has a down-to-earth ring about it. Almost always these self-conscious exercises in not being airy-fairy end up at the Rent Act. Significantly local Tories declare the issue is a dud and supporters of the Labour party say rather desperately that it is a fiercely burning one. After all, they have to say something.

Putney is the prize exhibit of a sophisticated marginal of a kind which might statistically appear fairly safe. Sir Hugh Linstead's Tory majority was 7,195 in 1955, and a swing of over 7 per cent would be required to dislodge him. But since 1955, 10,000 new inhabitants have moved into Putney, most of them to the lofty, colourful blocks of workers' flats whose inspiring skyline dominates Roehampton; and another 4,000 people have left the constituency, the majority of them thought to be Tories getting away from it all. Also, a blind physiotherapist, Mr Burns, is standing as a Liberal where no Liberal stood before. But in the light of the national mood it is hard to see how even this combination of factors can do the trick for Labour this year. Labour won Putney in last year's LCC elections, but its vote did not improve significantly relatively to Labour votes elsewhere, as it should have done if the new housing estates were making a dramatic difference. On the whole Mr Taverne will be lucky to trim the Tory majority down to 3,000.

Wandsworth, Clapham and Battersea

IN the more traditionally marginal Wandsworth seats a sitting Labour member, Mr Gibson, is defending a 225 majority in **Clapham** and a sitting Tory, Mr Hughes-Young, an assistant whip, is seeking to repel a second assault from Mrs Llewelyn Davies, whom he beat by 1,093 in 1955 in order to take **Central Wandsworth** from Labour. Both constituencies have lost population in the last four years and the Tories are hoping to score with their superior organisation of the postal voter. But Central Wandsworth has one of the few local Labour parties whose organisation displays visible benefits from the Wilson reforms. Like Putney, it also has a Liberal candidate, whereas there was not one in 1955. If Mrs Davies cannot win this seat, it is hard to see how Labour can possibly have a chance of winning the election.

Mr Gibson's chances of clinging to his toehold at Clapham may be slightly diminished by the fact that the Tory candidate, Dr Alan Glyn, has a local educational issue to fight on. Dr Glyn is a member of the governing body of Henry Thornton Grammar School and has been fighting the LCC's attempt to absorb it into one of its comprehensive schools. There is a small West Indian community in Clapham, but fortunately no racial issue.

Caught like a wedge between Clapham, Wandsworth Central and Putney lies **Battersea South,** which actually includes Clap-

ham Junction. There the Tories, who elsewhere seem inclined to harp on peace and prosperity, are clearly poised to launch a thumping campaign against nationalisation, municipalisation, comprehensivisation and and any other manifestation of the menace of Gaitskellism that comes to mind in defence of Mr Partridge's 679 majority. There have never been a thousand votes in it in this constituency since 1950. The Tories are not in the least fazed by the presence of a Liberal, Mr Mattinson, because they faced a Liberal in 1955 too. The local Labour party says that its canvass assures it that it will get a massive majority; but there are signs that its canvass must have been rather odd.

Squatters' Rights?

THERE are some statistical similarities between Labour's marginal London seat of **Holborn-St Pancras** and the Tories' marginal suburban seat of **Walthamstow East.** Both would be vulnerable to a 1½ per cent swing to the other side, and in both a Liberal is reappearing as in 1955. A visit to both of them showed that present possession breeds surprising confidence. Statistically, most things must seem to be against Labour's Mrs Jeger in Holborn. She won the seat by only 931 votes in 1955, and since then her position has suffered both from the rehousing outside the constituency of 4,600 predominantly Labour voters and from the publicity given to the red-flag-flying antics of the former Labour local councillors. The large Cypriot population in the constituency is less angry with Mr Macmillan nowadays, and her new Tory opponent is a television personality, Mr Geoffrey Johnson Smith. But the Rent Act probably still is a live issue in Holborn. At the 1958 LCC elections (before the red flag incidents) the constituency showed a swing to Labour compared with 1955 that was 2 per cent above the London average. Mrs Jeger is a good candidate, and your correspondent's impression was that unless there is a general anti-Labour tide she may surprise her party's pessimists by holding on.

By contrast, it was the Tories who seemed supremely confident at Walthamstow East, where their Mr John Harvey marked up a new Tory gain with a 1,129 majority in 1955. Labour's most vocal local issue seems to be disarmament; there are some new housing estates in the constituency which ought to help them, but they seem ill-equipped to take advantage of this. An ILP candidate is thinking of standing, and will presumably finally ditch Labour if he does; even if he withdraws the area is thought to be too prosperous to want a change.

New Towns' Tide

PERHAPS the unluckiest Conservative MPs in the country are the members for a number of formerly almost rural constituencies in the home counties whose traditionally Tory background is now threatened by the growth of the new towns. Such constituencies are Epping (which takes in Harlow New Town), Hitchin (which includes Stevenage), Hertford (which includes Hatfield New Town), Hemel Hempstead and **Hornchurch.** In each case the register of voters has increased markedly since 1955; and in each case this increase has been predominantly of Labour voters.

Thus in Epping in 1955 Mr Finlay had a 3,523 Conservative majority. But since then the population of Harlow New Town has risen from 9,000 to 24,000, and the vote there may now more than balance that of the Tory stockbrokers in the older part of the constituency. The arithmetic of such an invasion must presumably start from the assumption that about a fifth of the 15,000 newcomers will not vote. The 12,000 who do vote would then have to split about 8,000 to 4,000 in order to destroy Mr Finlay's majority. Unfortunately for Mr Finlay, recent local election results have suggested that at least 8,000 Harlowites normally should be expected to vote Labour; moreover, many of the rest may vote not for the Tory but for the reappearing Liberal candidate, the well-known broadcaster Mr John Arlott. Mr Arlott, of course, may also siphon off some votes from Labour. But Labour's Mr Ford, an able candidate, is making a big issue of the Tories' failure to build a hospital in Harlow; he is confident that he will win, and he may well do so.

Hitchin looks like the other reasonably likely Labour gain. The Conservative majority here in 1955 was only 965 and in the last five years 11,000 new residents have come from London to Stevenage New Town. Moreover, a Liberal is standing at this election, whereas in 1955 it was a straight fight. But the Labour party headquarters are less confident than one might expect. Unemployment in the area is nonexistent and the local nuclear disarmament campaign is unpopular because a large proportion of the factory workers in the constituency make armaments, including ones designed for a nuclear war. Labour now has the task of persuading hostile electors that it is not the party of unemployment.

Hornchurch had a Conservative majority of 1,372 in a three-cornered fight in 1955, and a Liberal is standing again. Since 1955 the council estates have been growing and 10,000 new voters are now on the register. This would indicate a gain for Labour but for two things. The first is that many of the new voters are highly paid workers at Ford's and often tend to be more Tory than the average member of a new town; the second is that the local Tory machine is in particularly good shape.

Hertford looks a tougher nut for Labour to crack in what will again be a straight fight. The Conservatives won here by 5,984 in 1955, but since then the population of Hatfield New Town has risen by 11,000 and, the register being an old one, some of the Tories on it are suspected to be defunct. Redundancy at De Havillands is Labour's principal issue, but this seat, though now undeniably marginal, will probably only go to Labour if there is a general swing against the Tories in all industrial areas.

Hemel Hempstead should stay Tory. A majority of the 10,000 new residents since 1955 are likely to vote Labour, but it is difficult to envisage them splitting in such a way as to wipe out the Tories' lead of 6,136 last time, even though, then as now, there is a Liberal in the field. The decision of the Tory incumbent, the popular Lady Davidson, not to stand again may help Labour slightly, as may the usual new town grumbles over the facilities. But there seems to be little local steam behind these.

Very Marginal Tories

AT first sight the two most vulnerable Conservative seats in the country should be **Gravesend** and **Hull North.** At Gravesend in 1955 the Tories' Mr Kirk beat Labour's Mr Victor Mishcon by 2,909 votes, but only because Labour's former MP for the constituency, Sir Richard Acland, intervened as an independent opposing the H-bomb and siphoned off 6,514 votes. It will be surprising if Mr Mishcon does not win the seat this time, and with his experience of the chairmanship of the London County Council he might easily gain fairly early promotion to Labour's front bench. As Table I on page 916 shows, Hull North (Labour swing required 0.6 per cent) is now the most marginal Tory seat where a new Liberal intervention is expected.

Logically, everything should be against the Tories in Hull North. Their sitting member is retiring and their candidate is an unknown newcomer; unemployment is above the national average; the local Labour organisation is said to have improved since 1955 (it certainly cannot have deteriorated). But one must never underestimate Labour's capacity to muff its best chances. Its candidate at Hull North, Mr Foord, is a left-winger, likely to talk a lot about nationalisation and the need for nuclear disarmament. There has been a grandmother of a trade union row at Hull docks, where TGWU officers have been accused of victimising dockers belonging to the disaffiliated stevedores' union. The Liberals' intervening Mr Butcher is a nuclear disarmer too. Some slum clearance since 1955 means that a few Labour supporters have moved out, and it is possible that the Tories may gain from the Icelandic cod war. Here in short, in what some might regard as the most marginal constituency in England, is a microcosm of almost all the good and bad reasons—the unpopularity of left-wing socialism, trade union troubles, radical disaffection, slum clearance, and the occasional popularity of "Tory toughness" abroad—why even the ripest Conservative fruit still may not fall off its bough.

LETTERS

Election Issues

SIR—The balance will be fairly struck when you weigh the attitudes of the two big parties, you say in your last issue; but in your later totting up of the points on the economic issues your arithmetic is only all right as far as it goes.

If the Tories have had "some very good luck" in 1958 should you not have mentioned that Labour had some very bad luck in 1951—a gigantic restocking boom, set off by the Korean war? If Labour ran us into a series of balance of payments crises in 1945-51, should you not mention the series of balance of payments crises in 1955, 1956 and 1957?

If Labour has been obstinately extravagant in its promises to the domestic electorate, should you not have mentioned that the Tories have been as obstinately extravagant in their promises to their nationalist supporters? Which is more costly in economic terms—promises of new hospitals (badly needed in all conscience), higher pensions and municipalised housing or Mr Macmillan's backing of the Suez adventure when he knew the effect on the gold reserves might be disastrous, or the unnecessary prolongation of the crisis in Cyprus, or the faint but real risk of a colonial war in Africa, or the obstinate maintenance of a British nuclear deterrent which is unnecessary as a supplement to America's deterrent and unusable separately? And as for promises to the domestic electorate, what about the Tories' 300,000 houses, which were one of the prime causes of our troubles in 1955 and 1956?

You may be right in thinking that foreign bankers will always suspect that Labour will be a less effective and stern guardian of the value of the pound than the Tories, but at least if you claim to be striking the balance fairly, you should mention some of the arguments for thinking that in practice there will be little to choose between them. After all, the foreign bankers may read *The Economist.* If *The Economist* says that Labour is more likely to make a mess of the pound than the Tories without mentioning all the arguments on the other side, are you not in fact helping to ensure that the pound will be in trouble when Labour does get back to power—however sensibly Labour behaves?—Yours faithfully, FRANCIS RICHARDSON
London, SE13.

SIR—I am not concerned with assessing the record of one party as against the other, but I am surprised that your article in your issue of September 12th skated around the capacity of any government to introduce direct restraint into the wage level.

It is a live issue, because all postwar governments, Conservative and Labour, have with varying degrees of success sought some accommodation from the unions. As the latest Cohen report showed, there is no reason to believe that governments will not continue to do so. Your article avoided the point that use of the bludgeon may perpetuate that series of annual wage strikes which have characterised the past three years. The real question to ask is whether either of the major contesting parties is prepared to tackle the dilemma, or to produce a suitable plan.

On this point, individuals must resolve for themselves if one party's extremely vague hints about a self-restraint by the unions that is more than likely to break down are any worse, or better, than another party's implicit acceptance of a likely series of large-scale annual strikes. That is the choice and only the electorate knows the answer.—Yours faithfully, JOHN CORINA
Nuffield College, Oxford

Local Government

SIR—I refer to your recent comment on the next phase of the Local Government Boundary Commission's work and the impending switch to the Yorkshire area. You suggest that there is in this case a tailor-made body—the West Riding County Council—ready to take over the top tier functions from the county boroughs. Presumably therefore in your opinion the current problems can be solved by a drastic addition to the WRCC's empire.

This, if I may say so, is a classic example of the purist's approach to problems of many facets. I seem to recall that you took a contrary view not long ago when discussing the future of the London County Council.

There is quite certainly a substantial view in the West Riding that the county authority is far too large to deal adequately with its existing responsibilities, but you apparently face with equanimity the possibility of the transfer of some of the "personal" functions such as housing from the districts to the county. Are you not in danger of failing to see the wood for the trees? Do you not overlook the very *raison d'être* for local authorities? As examples—electoral apathy can be at its extreme nadir when county elections are held. Figures like 20 per cent polls are common, as against 50-60 per cent in the districts, despite the relative disparities in powers. Wakefield is some 30 miles distant from the fringes of the WRCC area. County council members are faced with such masses of papers for the full council meetings that in some cases it is beyond the powers of ordinary mortals to digest the contents. Of necessity members are drawn largely from the ranks of retired business men, of trade union officials, or from housewives. Much valiant and painstaking work is put in, but the fact remains that it is regrettable that it is almost impossible for those actively engaged in careers to take up membership, since all meetings are held in working hours.

In large bodies such as the WRCC political control is unavoidable, and the few independents have little chance of breaking the powers of the caucuses. In fact also, much of the real control is in the hands of the officials. Notorious delays in completion of executive action are far too common and there are too many instances of quite distressing blunders arising which appear to spring from the very size of the organisation and from the age-old game of "passing the buck" amongst officials.—Yours faithfully, LIONEL F. COCKCROFT
Todmorden

Argentina's Sugar

SIR—While not even the most enthusiastic "Tucumano" would pretend that the sugar industry here is in the vanguard of modern technical progress I feel your correspondent is a little hard on us in his article on page 651 of your issue of August 29th. As an instance, his statement that "there is no output of any by-products" is far from being the case. In the year from June 1, 1958 to May 31, 1959 the sugar mills in this province also distilled no fewer than 95,329,306 litres of alcohol. This was in addition to the record crop of sugar in the 1958 harvest.

Your correspondent is unfortunately also in error in his claim that the recent strike was settled on the terms Señor Alsogaray had insisted on from the beginning. Although claims for increased prices by planters were also involved the main issue was between workers, who claimed an increase of 100 per cent over previous crop wages, and the refinery owners, who offered 50 per cent. Settlement was finally reached on the basis of 70 per cent but the National Government, their spokesman being Señor Alsogaray, refused to homologate the agreement on the grounds that it went much beyond their wishes. Lastly, the two days general strike became almost general after demonstrators seriously damaged many shops on the afternoon of the first day. Banks and public offices that were provided with police guards opened as usual.

With these reservations on points of fact I fully join your correspondent in his expressed hope that the policies of Señor Alsogaray may soon bear fruit.—Yours faithfully, W. D. SCOTLAND
Tucuman, Argentina

BOOKS

Memories of War

Journey with a Pistol
By Neil McCallum.
Gollancz. 160 pages. 16s.

The Marauders
By Charlton Ogburn.
Harper. 307 pages. $4.50.

Not long before he was killed on the Sambre Canal on November 4, 1918, Wilfred Owen had begun to rough out a preface for a collected edition of his poems. He wrote:

> Above all I am not concerned with Poetry.
> My subject is War, and the pity of War.
> The Poetry is in the pity.
> Yet these elegies are to this generation in no sense consolatory. They may be to the next. All a poet can do today is warn.

His was the poetry of instant protest against the folly and beastliness of the trenches. A decade later the survivors—Sassoon, Graves and Blunden among them—returned to the indictment, this time in their memoirs. They had had time to ponder. But on re-examination they found the scars of war as terrible as the bleeding wounds of their youth. There was cause for pity and reason for denunciation. The second world war has not given birth to a comparable literature, either in tone or quality.

It was not because of a dearth of talent. The achievements of the "new writers" in the thirties seemed in 1939 to hold out the promise of a literature of the war. Had they not found inspiration in the Spanish Civil War? And the war with Germany was, after all, the conflict for which they had been preparing themselves and their audience. It was a war they had already judged as just. But when the war came, they failed to find it an identifiable and concrete theme of inspiration. That, perhaps, was through no fault of their own. The reason seems to lie rather in the differing nature and atmosphere of the two wars.

The trenches on the Western Front provided a symbol of suffering, common to all who had served. The long agonies of siege warfare, the appalling and unnecessary casualties, the stupidities of high command, the filthy burrows in the earth, lice, trenchfeet, shell-shock and the fear of going over the top were shared by a whole generation of young men. But they were shared by that generation alone: Blighty and Passchendaele were two different worlds. The battles in 1939-45 did not produce a common symbol, other than the perils of death and wounds. The war was diffuse in time and space. The tank-gunner in Normandy was not simply in a different hemisphere to the prisoner working on the Bangkok-Rangoon railway: he was in a different war. The war, in becoming more universal, was less concentrated in its impact. The casualties, at least as far as the British forces were concerned, were fewer; the professionals were more competent in their management; and the dangers and fret of battle were far less long-drawn-out. Nor did one generation alone carry the burden for the rest: the civilian in the bombing raid was as much in peril as the soldier up on the line. There was far less to protest about.

There was less reason for protest. In 1914 it was still possible to be romantic. Other men besides Rupert Brooke had dreams of glory and visions of derring-do. After the Somme there were only nightmares and the Dead were no longer rich. The poetry and the protests were born from disillusionment. The poet in 1917 could denounce the vile cruelties of war. There was no ideal, whether patriotism or political necessity, to make them bearable. It was still possible in 1943 to seek support in an ideal: the concentration camp had given point to the war. The war was a job to be done, a job that had to be done. There was so much to pity that individual suffering was no longer an adequate symbol. There was nothing romantic in the acceptance of war; it was a business that happened to be more horrible than most. There was no disillusionment, because there had never been any illusion. The generations that followed Owen had taken note of his syllogism and heeded his warning: they went to war prepared for its terrors and in the event found them less terrible. The shock to the sensibilities was less, the literature the poorer.

Through his personal experience the writer of the first world war could dramatise a moral attitude towards war and could question its justification. The question had no meaning for the writer of the second world war. He was forced to seek inspiration in the broader theme of an individual's reaction to danger. He could be more specific about the morality of killing and less about the morality of war. This made his writing less intense. "Journey's End" is an indictment of war in terms of the reality of the German offensive in March, 1918; "The Long and the Short and the Tall" is a morality about race and the justification of killing which, despite all its incidentals, has little to do with the war in Malaya. "Nine Rivers to Jordan" brilliantly analyses the brutal and corrupting influence of war upon the individual; "The Naked and the Dead," for all its naïveties, describes the hysterics of violent action; and even that best-selling piece of journalistic fiction, "The Cruel Sea," reports horrors. In none of these, however, is the necessity of the war, or of war, questioned. There is a lament for suffering but no protest at its cause. Mr Neil McCallum, patching a book together from diaries, letters and notes written at the time, goes back to the model of the earlier generation. Like theirs, his theme is futility and despair. Yet, unlike theirs, his protests seem to be irrelevant.

Mr Charlton Ogburn, on the other hand, looks back on the war from the viewpoint of a mature middle-aged man. It is perhaps because of this perspective that he has been able to write a book that is specifically of the second world war and which captures the atmosphere of that war accurately and truthfully. His book about Merrill's Marauders in Burma has not yet been published in this country. It deserves to be. It is something more than an account of one "side show" which is well-written, fair and honest. It is a successful attempt to describe what war is like, what it was like for those who fought between 1939 and 1945. It says: this happens. It does not ask whether it should happen. Instead it examines the problem of how men face war, how they keep going "all those miles, all those weeks, those months." That is a question that is always relevant.

Popular Science

The Thirteen Steps to the Atom
By Charles-Noël Martin.
Harrap. 255 pages. 25s.

New Chemistry: *A "Scientific American" Book.*
Bell. 217 pages. 13s. 6d.

Big Molecules
By Harry Melville.
Bell. 180 pages. 15s.

An Approach to Modern Physics
By E. N. da C. Andrade.
Bell. 254 pages. 27s. 6d.

Popular science writing is more highly developed in the United States than it is on this side of the Atlantic where deep in the grass roots runs the feeling that science, like alchemy, ought not to be easy to understand lest it lose its magic powers. Ideally, good science writing, which can be very good indeed, should be intelligible to the layman without insulting the intelligence of scientists, who may want to keep themselves informed about what their colleagues are doing. In practice authors usually have to decide whether they are trying to communicate scientific ideas to complete tyros or to readers with at least a nodding acquaintance with elementary scientific concepts. These four books, one French, one American and two British, are a representative cross section of the type of popular science writing published within the last year; M. Martin's is the only one of the four which could be read for pleasure alone.

It is a remarkable achievement in its way. The 117 exceptionally well reproduced photographs, all of them of objects not visible to the naked eye and all chosen, if M. Martin is to be believed, because he likes their pretty shapes, provide, together with the commentaries on them, a solid introduction to the structure of matter, an annotation on such abstruse scientific tools as electron microscopes and cloud chambers, a side kick at textbook theories of chromosomes and genes as well as photographs of individual atoms arranging themselves into wallpaper patterns, all without the slightest mental effort from the reader and with a good deal of incidental enjoyment. This is a good bedside book.

The same cannot be said of the other three, other than for insomnia victims. Here seekers after knowledge must expect to work for it. Sir Harry Melville's "Big Molecules," based on his Royal Institution lectures for children, is a good and clear description of an extremely important new branch of science, but the layman really wants to read M. Martin first so that he can recognise a big molecule and its place in the structure of matter. Then he is ready for Sir Harry, who is easy to follow because he has the luxury of a whole book at his disposal. Given enough words, the most abstruse scientific subject can be made clear to the least technically minded reader and Sir Harry takes 180 pages to say much of what the *Scientific American* reprints compress into fifty.

The *Scientific American* is unique in being a long-established popular science journal with a high standing among scientists. But it achieves condensation at the cost of some loss of clarity. Its authors must make the big assumption that their readers already understand such phrases as infra-red spectrum, alpha decay, and fast chlorination, which the ordinary arts-educated layman in this country does not—without a good deal of toil and sweat.

Professor Andrade is less exacting, if only because he is dealing with more familiar subjects such as vibration, the quantum theory and the structure of atoms and not with scientific novelties like chelation, fluorcarbons and rare earths. This is the second edition of a book that genuinely lives up to its title. It is literally an approach to physics, an old-fashioned didactic approach that is accurate, superficial, straightforward and unprovocative. Few popular science writers know how to be stimulating as well as instructive; those who do can lift the subject, like the best types of science fiction, from the reference book category into the ranks of genuine literature.

A Jesuit View of Marxism

Dialectical Materialism.
By Gustav A. Wetter.
Routledge. 609 pages. 52s. 6d.

The author, a Jesuit, is professor at the Papal Oriental Institute in Rome; the book is something like a monument to Jesuit scholarship and its traditions. No other similarly massive and conscientious survey of trends in Soviet philosophy has so far appeared in any language, including the Russian. The work was first published in Italy and Germany; the present English edition is an expanded version of the original. Written concisely and lucidly, it is divided into two parts, one recapitulating the fortunes of dialectical materialism, the other analysing "notions and categories."

The value of the book lies chiefly in its historical section where the author has amassed an impressive amount of information about trends, crucial philosophical debates in Soviet Russia, and the works of many philosophers, some long banned or forgotten. The writer's objectivity in summarising Marxist views should be especially underlined: it makes his work into an indispensable reference book; and it contrasts favourably with much of Western writing on the same subject. Father Wetter, of course, views Marxism from the angle of Thomist philosophy and his purpose is "to provide an ordered selection of documentary evidence sufficient for an intellectual showdown with Soviet Communism." But "if such a showdown is not to degenerate into a futile babble of conflicting monologues, the first endeavour of both parties must be to understand the other. This calls . . . for strict objectivity . . . and readiness to acknowledge positive merits wherever they are to be found." Phenomenologist or logical positivist critics of Soviet philosophy, would do well to heed this caveat: unfortunately, their argumentation against Marxism does all too often degenerate into "a futile babble of conflicting monologues."

However, the Jesuit approach and understanding have their own limitations, which eventually come to light with rather comical effect. The author's survey is most useful when he deals with the Stalin era; he is much weaker when he discusses pre-Stalinist and post-Stalinist trends. He is of the opinion that "in present-day Soviet philosophy there is very little left of real dialectics." This is largely true; but precisely this, the non-dialectical, dogmatic and quasi-ecclesiastical style of Soviet philosophy makes that philosophy far more congenial to the Jesuit critic than classical dialectics could ever be. He feels a kindred spirit in the Soviet philosopher of the Stalin era; and rather disarmingly he acknowledges the kinship when he says that both the Catholic theologian and the Stalinist theorist ask "not whether a proposition is true or false in itself, but whether it figures in the corpus of revealed truth issuing from a demonstrably infallible source of dogmatic authority." Moreover, he sees "a very wide-ranging correspondence between certain fundamental categories . . in Soviet philosophy . . . and . . . even Thomism." If Stalin had only accepted the "dogmatic authority" to which Father Wetter bows, his "philosophical" writings might have obtained the *Nihil Obstat* and the *Imprimatur* that adorn the front of Father Wetter's book. Soviet philosophy, as it sheds the Stalinist fetters, may yet surprise the author. In the latest issues of *Voprosy Filosofii* Russian writers already discuss the philosophical implications of Einstein's theory without referring to any "corpus of revealed truth" and without quoting even once the dogmatic authority of Khrushchev or Lenin, or even Marx and Engels. They just "ask which proposition is true and which is not." One suspects that if and when this freedom of inquiry spreads over the whole field of Soviet philosophy, Father Wetter may find himself out of his depth and lose his usefulness as a guide.

The Institutionalist View

Fact and Theory in Economics
By Morris A. Copeland.
Cornell University Press. London: *Oxford University Press.* 350 pages. 48s.

With few exceptions, these collected papers deal less with economic problems whether of theory or of policy (what are the logical relations between these concepts or quantities; or what should be done in this economic situation?) than with the problems of economics itself (with what sort of knowledge is the economist properly concerned; what are his proper tools; what are their shortcomings and possibilities?). Their appeal is accordingly a specialist one, particularly as they are written with an austere disregard for the arts of persuasion that their undoubted intellectual distinction does not entirely redeem.

They are subtitled "The Testament of an Institutionalist," and Professor Copeland derives some justifiable satisfaction from the advance towards respectability, from the 1930s on, of the institutional approach which he championed in the 1920s under the banner of Wesley Mitchell. His attitude to economic affairs is uncompromisingly that of the natural scientist, and his definition of natural science has a nineteenth-century starkness ill-adapted to any kind of social analysis, being deterministic, mechanical and based on assumptions of uniformity which would shock a modern physicist, let alone biologist. Yet the insistence, derived from this view, on hard facts objectively observed, on strictly operational concepts, on constant awareness of that legal framework within which economic events actually occur, on the social-accountancy side of economics in general, provided in its time and indeed still provides today a needed counterpoise to the deductive logical structure of neoclassical theory. It is only fair to add that Professor Copeland displays none of that arrogant hostility towards pure theory which characterised his intellectual ancestors of the Historical School—let alone of those contemporaries who, in Schumpeter's words, "condemned professional theory without bothering to master it."

The eighteen essays in this volume, ranging in time from 1924 to 1955, fall into four groups. The first amounts to a natural science manifesto, most uncompromisingly expressed in the long paper (1930) Psychology and the Natural Science Point of View. The second group deals, from a variety of aspects, with measurem

THE ECONOMIST SEPTEMBER 19, 1959

though it includes, in Authority and Reason as Instruments of Co-ordination in the United States, what is really a piece of political theory. The third shrewdly examines the conceptual content of certain statistical evidence ; in the fourth, Professor Copeland turns from discussing economic theory to using it—notably in formulating a stabilisation plan (1944) whose ingenuity is matched by an optimism, concerning administrative limitations, surprising in a natural historian of institutions.

On the whole, "Fact and Theory in Economics" confirms the view that the institutionalist's role is rather to remind the public, like the singer in *Porgy and Bess*, that what the sacred texts assert "ain't necessarily so" than to build a positive and self-sufficient science.

The Dissenting Interest

The Politics of English Dissent

By Raymond G. Cowherd.
The Epworth Press. 242 pages. 21s.

THIS is a disappointing book about an important and neglected subject: It is not so much an analysis of the social and political structure of dissent between 1815 and 1848, the period with which it is concerned, as a concise account of social and political movements in which nonconformists took a prominent part. Little attempt is made to penetrate beneath the surface of events or to examine the relative importance of religious and non-religious factors in radicalism, the Anti-Corn Law League, or the Ten Hours movement. English history is seen in one piece, and the fascinating problems of local divergence are completely ignored.

Even the dissenters themselves are too neatly and tidily sorted out into convenient bundles. The subtlety goes out of Unitarianism, for example, and the Primitive Methodists never get their fair share of attention. The "enemy" of the militant dissenters—the Church of England and the whole apparatus of the Establishment—remains blurred and often unreal, although there were at least as many changes in the position of the Church of England as of the dissenting interest in the period under review. On the answer to the biggest question posed—why Britain avoided a revolution in a century of revolutions—there is far too little rigorous thinking. This big question has unfortunately become a stock question, and most of the answers are stock answers. It would be better for authors to avoid the question completely until they have understood many different aspects of British social history during a period of unprecedented change.

Professor Cowherd's book was first published in the United States in 1956. None of the criticisms of the American edition has been allowed to influence the shape and presentation of the British edition. Most of the 242 pages in this [illegible] railway; [illegible] are devoted to notes, bibliography and index. These are useful but not exhaustive. They may perhaps lead other scholars to go beyond the narrative to many of the problems which still remain unexplored.

Short and Simple Annals

Maryannery : *Mrs Lincoln and Mrs Disraeli*

By D. H. Elletson.
Murray. 176 pages. 18s.

THIS book will bring a lot of pleasure to those who know little about last century's history, and would like to know a little more. It contains two essays, one on Mary Ann Todd who married Abraham Lincoln, the other on Mary Anne Evans, first the wife of Wyndham Lewis, but better known as Mrs Benjamin Disraeli and Viscountess Beaconsfield. The two heroines had hardly anything in common ; Mrs Disraeli was nearly thirty years the older, and they never met. True, each of them married a man of undoubted genius: but there was no more resemblance between their husbands than between themselves. Yet putting them side by side has a certain piquancy, which the author has enjoyed. All four of his principal characters had a vein of eccentricity, and two of them were masters of English prose. There are plenty of good stories and good remarks by and about them, and Mr Elletson hates to let a good story pass untold. Some of them appear indeed more than once ; and two and a half lines of Disraeli's please him so much that he prints them in the same context, on two facing pages.

For a book of its kind, "Maryannery" is refreshingly accurate. Yet its writer's tendency to look on the bright side of everything goes rather beyond the fact in the assurance that "there was no real ill will on either side" between Disraeli and Gladstone ; and to say that "The question of Lincoln's beliefs is one which has given rise to some controversy" is a marked understatement. There is a faint tone of shown-to-the-children in the style and though the book is entertaining, it is curiously lacking in dignity or respect.

Man of Letters

Edward Johnston

By Priscilla Johnston.
Faber. 316 pages. 28s.

NOBODY should be deterred from enjoying this delightful book by any fear that it is too largely concerned with technicalities of calligraphy and letter-design, crafts in which Edward Johnston (1872-1944) was seen as a creative genius. The youngest of his three daughters writes amusingly, with objective humour, of her father's memorable oddities, but she also gives an excellent account of Johnston's achievement: his revival of calligraphy and its profound influence on modern typography. Johnston's craft is fundamental to civilisation. As his friend, T. J. Cobden-Sanderson, bookbinder and printer, wrote: "Handwriting and hand decoration of letter and page are at the root of the Book Beautiful, are at the root of Typography and of woodcut or engraved decoration." The subject is inevitably interesting to any educated person. Moreover, there is a sad dearth of biographical literature devoted to eminent craftsmen, and here is an admirable contribution to it.

Benvenuto Cellini and Thomas Bewick, the latter pre-eminent among wood-engravers, wrote autobiographies. J. W. Mackail's "William Morris" is a fine performance in the monumental style, but Morris was much more than a craftsman, although his vast energy impelled him to revive and to practise several crafts. Johnston is to be regarded as a later child of the Morris movement.

Although he was actually born in Uruguay, coming to England as a child Johnston's life was otherwise uneventful. He belonged to that unfortunate human category, the congenitally tired. Physical delicacy obstructed a normal education and always hampered his career. A clue to his patient pursuit of perfection may be found in his ancestry. He was descended from the Gurneys of Earlham and Elizabeth Fry was his great grand-aunt.

The man to whom the world owes its best self-instructional book, "Writing and Illuminating, and Lettering," as well as the fine block letter alphabets used for London's underground railways and buses, the teacher to whom Eric Gill owed the inspiration of his own lettering and typography, was himself greatly indebted to three men: W. R. Lethaby (1857-1931), that insufficiently known great man, first principal of the Central School of Arts and Crafts and later first Professor of Design at the Royal College of Art (Johnston taught at both), Sir Sydney Cockerell, and the benevolently broad-minded "Uncle Johnston," MP and company director, who actually encouraged his nephew's beginnings as a self-taught calligrapher.

OTHER BOOKS

HEALTH INSURANCE. By O. D. Dickerson. *Richard D. Irwin, Inc., Illinois.* 500 pages. $6.00.

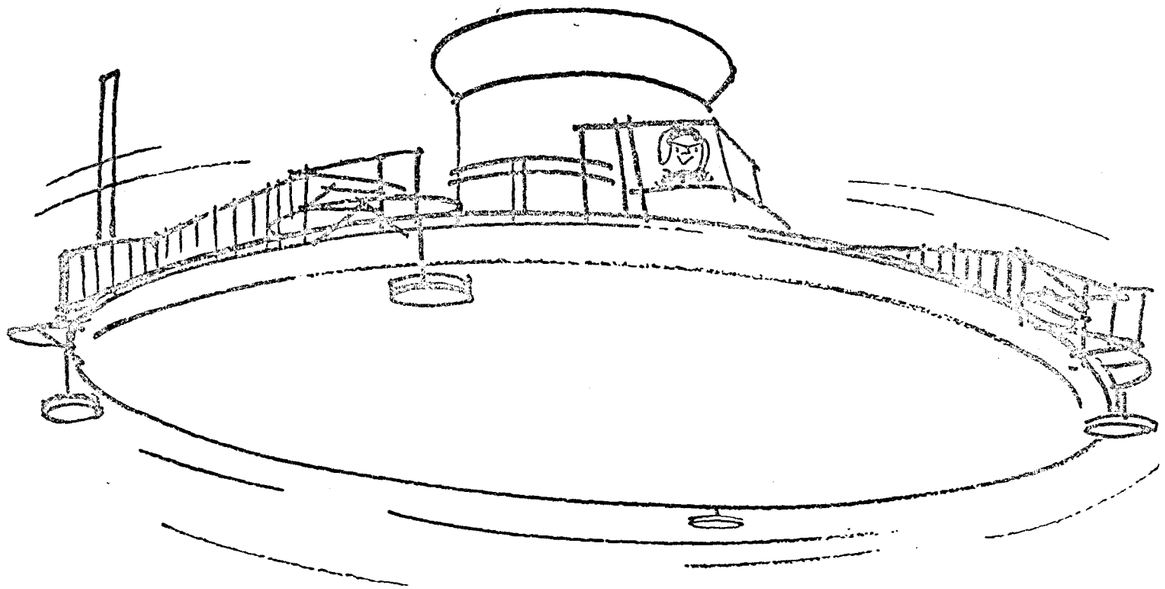
Specialists intersted in a detailed examination of health insurance coverage in the United States will find plentiful facts and figures in this book, although the statistical series are already and inevitably out-dated.

BRITISH NOVELS OF THE TWENTIETH CENTURY. By James Anderson. *Cambridge University Press* for *The National Book League.* 32 pages. 3s.

In this Reader's Guide, according to the introduction, selection has been restricted for the most part to novels dealing with contemporary life, with a small section of "fantasy and allegory." American authors are not included. There is a brief comment on each novel listed.

PICTURE BOOK OF LONDON IN COLOUR. *Country Life.* 110 pages. 25s.

We fuel the world's first flying cup and saucer



Let's establish one essential fact first. Mere flying saucers never really stirred us tea-drinking British. But the British-built prototype Hovercraft SRN1 does, because it's very properly shaped like a tea-cup and saucer.

What of the Hovercraft's future? Enthusiasts predict that it will bring about a revolution in transportation. The Hovercraft makes and rises on its own cushion of air, and then skims on it over the surface of land and sea.

The possibilities of the Hovercraft stretch the imagination. It needs no ports or airfields. And its efficiency increases with its size. The makers are already thinking in terms of a large Hovercraft ferry weighing a thousand tons and up, skimming at a speed of a hundred knots.

The prototype SRN1 is fuelled and lubricated by Shell. Which is what you might expect, since we have always looked after, fussed over, and generally mothered the pioneers of air transportation.

YOU CAN BE SURE OF SHELL

CHEMICAL CORN EXCHANGE BANK

THE NEW YORK TRUST COMPANY

MERGED to form . . .

CHEMICAL BANK NEW YORK TRUST COMPANY

Founded 1824

TWO outstanding banks have joined forces under a new name—Chemical Bank New York Trust Company.

With the experience and skill of our combined staffs, resources of more than $4 billion and capital funds of more than $390 million, our aim is to serve you even better in the future.

This merger results in a branch banking system of 102 offices in New York City. It strengthens close ties with correspondent banks throughout the United States and abroad. It also unites and enhances the fiduciary facilities of both institutions.

With deep roots in America and time-honored relationships around the globe, Chemical Bank New York Trust Company pledges its best efforts toward the furtherance of world commerce and international good will.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

A Paradoxical Congress

WASHINGTON, DC

CONGRESS ended its longest session for eight years at the crack of dawn on Tuesday, having once again shown that it works like a space rocket. At the beginning of a session it rises imperceptibly from the launching pad, thundering and belching fire, but at the end it accelerates towards adjournment as swiftly and relentlessly as a Lunik heading for the moon. This year's flight is likely to be remembered as the session of paradoxes. A Congress dominated by the Democrats more fully than any Congress since 1938 has itself been dominated by a Republican President in the twilight of his official life. The chief work of the men elected last November, in what was thought to be a liberal-labour triumph at the polls, is a highly conservative piece of legislation constraining the trade unions.

Nothing has been done to give federal aid to schools, to protect Negroes against discrimination or to revive the economy of the depressed areas, despite confident forecasts that Congress would act in all three fields. President Eisenhower has cut the amount of money provided for housing by successive vetoes, as if by a bacon-slicer, and the funds for airport construction were saved from the same fate only because the Democrats decided to do his cutting for him. In the one field where the President wanted to be comparatively generous—foreign aid—a sulky Congress has pared his request more deeply than in any of the past half-dozen years.

These seven measures were the test of how liberal this Congress would be. It is not surprising that the cynics, a thriving breed nowadays, are saying that the session's achievements consist of letting Hawaii into the Union, throwing Mr Lewis Strauss out of the Administration, over-riding one veto and leaving Washington by the back door as Mr Khrushchev came in at the front. If the liberals confined themselves to saying that the session had been a disappointment to those who hoped for social reform, it would be hard to argue with them. It is when they accuse the Democratic leaders in Congress of cowardice in the face of the enemy that they are less persuasive. In fact, three developments this year make it probable that the session would have ended roughly the way it did whatever these leaders—Senator Lyndon Johnson and Mr Sam Rayburn—had done.

The first is the emergence of the character who might be called Ike-the-Knife: a President with a positive liking for plunging a veto between a Bill's shoulder-blades. Either Mr Eisenhower or his political guardian angel—a role which many people think is now filled by his speech-writer, Mr Malcolm Moos—has shown great skill in knowing precisely where and when to use the veto. The President has missed his target only once, in his second veto of the public works Bill. In this case 20 Republicans in the House of Representatives found their loyalty to Mr Eisenhower less compelling than their duty to local interests which welcome construction projects financed with federal funds.

By the arithmetic of the Constitution, the judgment of one man in the White House equals that of two-thirds of Congress, which is the majority needed to over-ride a presidential veto. Two other developments have made it almost impossible to obtain that two-thirds. Mr Charles Halleck, who succeeded the ailing Mr Joe Martin as leader of the Republicans in the House of Representatives at the start of the session, has proved a most efficient sheep-dog. At the cost of some sharply-nipped legs, he has kept his flock together for a series of votes during which, in Mr Martin's gentler days, more of them might have strayed into the Democratic fold. Mr Halleck, in turn, has been aided by the apparent popularity of President Eisenhower's appeal for a balanced Budget and a stringent labour reform Bill. It is necessary to say "apparent": there is evidence that much of the popular pressure on Congress has been organised by groups like the National Association of Manufacturers and the National Small Business Men's Association. One or two Democrats who have analysed their mail have found that it comes predominantly from known Republicans. But, whether the public really agrees with the President or not, a good many nervous Congressmen have undoubtedly voted with the conservatives just in case it does.

THUS the old centres of conservative power in Congress have conspicuously survived the threat which they faced after last November's election. The alliance between the Republicans and the southern Democrats, which hesitated to try its strength in the first third of the session, decisively shaped the legislation produced in the last third. In the House of Representatives, where traditionally the emphasis on local interests gives the conservatives greater power, the alliance passed the labour reform measure which it wanted and upheld the President's first veto of the public works Bill.

But many issues never reached the floor of the House. In January Mr Rayburn promised the liberals that he would extract as much legislation as he could from the Rules Committee, that procedural bottleneck where Representative Smith and five fellow-conservatives decide what the House may vote upon. The main test of Mr Rayburn's extractive powers came over the civil rights measure and the Bills providing for federal aid to housing, education and the depressed areas. Only the housing Bill eventually got past Mr Smith, that enviable Ancient Mariner who stoppeth three in four. Mr Rayburn admits that he made no serious attempt to get the other Bills out of the committee; even if he had, they would almost certainly have been killed either by the massed ranks of the conservatives or by the President's veto.

In these circumstances, the criticism that can fairly be made of Senator Johnson and Mr Rayburn is that they might have met their inevitable defeat more gloriously. Senator Johnson has been a little too eager to show that no one can compromise better than he can. Having persuaded Congress to make a substantial voluntary cut in the housing Bill, he must have found it embarrassing to have two further cuts forced on him by Mr Eisenhower's veto. After his gallant assertion last January that Congress had "an obligation to lead," it is odd to find that his claim to have seized the initiative depends largely on the fact that Congress appropriated some $1.75 billion less than the President's undersized Budget called for. It is true that the American system depends on the ability of the Executive and the Legislature to reach a compromise on their differences. But the two sides need to show equal resolution if the

compromise is not to shade off into surrender. Mr Johnson would have earned more honour, in the liberals' eyes at least, if he had held fast to his ideas of what Congress ought to do, and then had let the vetoes fall where they might.

The President's victory has not been merely a negative one, not simply a triumphant cry of *ils ne passeront pas* hurled at the liberals who began to advance on his fiscal entrenchments last November. He has also had some positive successes. In two fields—the passage of a stern labour reform law, and the raising of the tax on petrol—Congress has enacted legislation, under pressure from him, different from that which might have been enacted if he had kept silent. But this does not alter the chief lesson of the past session. Mr Eisenhower has shown that a determined President, even with a reduced band of allies on Capitol Hill, can make Congress behave far more conservatively than comes naturally to it; this includes stopping it from doing things it wants to do as well as prodding it into doing things it once seemed unlikely to do.

The liberals, breathing hard, are now waiting to see if they can fare any better in the second half of the Eighty-sixth Congress which begins next January. In the House of Representatives 50 or 60 members have recently set up a "ginger group" to stimulate Mr Rayburn's appetite for battle next session—if his taste-buds still respond to ginger. Their rather hopeful theory is that, if a blooming economy produces a surplus in the Budget next year, the Democrats will find it easier to spend money on the social reforms which they failed to enact this year. This is rather optimistic. Mr Eisenhower will still be brandishing his veto with all the ferocity of a mild man who suddenly finds that he enjoys using cold steel. The business organisations which have been whipping up support for "thrift in government" will have no reason to abandon their campaign. The sad refrain with which reformers conclude their discussion on so many subjects seems to be true in this instance also: any major changes will have to wait on a new President.

Snapshots of Mr Khrushchev

WASHINGTON, DC, *Wednesday night*

Of the twelve days of Mr Khrushchev two have now elapsed. So far the heir of Karl Marx has been to dinner with Mr Eisenhower (white tie except for Mr Khrushchev), given a dinner for the President in return (black tie, the journalists having waited in a jammed lobby for an hour), handled pigs and turkeys on an experimental farm familiarly and microphones everywhere lovingly, seen Washington twice from a car and once from a helicopter and put out of business the cartoonists in a large number of American newspapers who draw him as a gap-toothed scowling thug. If he has brought any new proposals with him for settling Soviet-American differences they have not yet become public. In these circumstances all a correspondent can do is to reproduce some snapshots of the interaction between Mr Khrushchev and his host. Here are a few. . . .

Mr Eisenhower minus his grin: If the President shook hands with Mr Khrushchev on greeting him—and thus with murder according to a substantial number of Americans—it was behind the monstrous bulk of the Russian TU 114. Mr Eisenhower, troubled either by the sun or by the disapproving advertisements that have studded the newspapers in the past week, was sternly distant throughout Tuesday's meeting. His glumness was established during the minute and a half it took the two men to cover the distance from the airliner to the point where the supply of red carpet that was supposed to lead out to it had ended. It continued as if the drive into Washington was a funeral while, sandwiched tightly between two solid Khrushchevs, he left gracious waves almost entirely to his guests.

The silent crowds: There was some scattered clapping from the thickly-lined pavements (rather more outside the White House for the police horses than for the great men), a very occasional boo and some incomprehensible shouts in East European languages. Some signs of hostility were also evident: a cross painted in smoke on the sky, a few timidly-raised skull and crossbone flags, some tolling from church bells or, rather, the nearest to tolling that America's melodious carillons can achieve (St John's opposite the White House played a hymn with the same tune as *Deutschland Uber Alles*). Mr James Reston of the *New York Times* thinks that the crowds took their cue from the President in being restrained. The other possibility is that, torn between the desire to cheer Mr Eisenhower, which they did happily as soon as he was alone, and their different feeling about Mr Khrushchev, they compromised by staying mute.

Mr Khrushchev the Pickwickian: It is still possible that Mr Khrushchev will charm the Americans. His slightly impish smile began to evoke some response from the bystanders on Wednesday and it has even kept the photographers, those infighters of the press, in tolerable order. At lunch at the National Press Club, beaming, paunchy, with arc-lights glinting on his rimless spectacles and gold tooth, Mr Khrushchev looked surprisingly like Mr Pickwick. The illusion was spoiled by only one show of temper when he was asked a question about his failure to oppose Stalin which had the same built-in unfairness as "Have you stopped beating your wife?" Otherwise he treated the press as serious men of affairs, which is not the case with all speakers at the National Press Club. He seemed to leave his listeners with the impression of a man terribly rigid in his beliefs but not (as many Americans have supposed) either hypocritical or malevolent.

Mr Khrushchev the moonshooter: Perhaps the one mistake Mr Khrushchev has made so far is to rub in too hard the fact that Russia has got a rocket to the moon before the United States. The first reaction of most Americans to the news of the moonshot was no more than a depressed realisation that the Russians' rockets must be quite as far ahead in thrust and guidance systems as had been feared. Vice President Nixon's sour remarks that there was no proof that the rocket had really landed on the moon was quickly contradicted by a number of scientists. Otherwise the only qualification came from experts who said that it would probably be harder for the Russians to hit Washington than the moon.

But America's pride has been hurt ever since the first sputnik; if Mr Khrushchev flexes his scientific muscles too grandiosely he may well provoke a hostile reaction. Indeed this is symbolic of the basic problem of his visit. Americans may have steeled themselves to accept him in their country as an equal but if he uses condescension or threats their politeness may snap.

Discounted Rise

LAST week the discount rate—the rate which the Federal Reserve Banks charge on loans to commercial banks—was raised from 3.5 to 4 per cent. In itself, this recognition of the increase in short-term rates for money is not expected to have much effect upon business. But hardly had the Federal Reserve System made this move before the Treasury bill rate, reflecting on the one hand the soaring demand for money and on the other the refusal of the central bank to make the supply of money any easier, shot up again to 4.166 per cent—the highest since the bank shut-down of 1933. Such an attractive return will bring new funds into the market. But the competition for money between business and the Treasury is now approaching its seasonal peak and will be further sharpened when the steel and copper strikes are settled. Another rise in the discount rate cannot be ruled out.

Continued from page 926

Still tighter money would be very disagreeable to the Treasury, which has $85 billion of financing and refinancing to do during the coming twelve months. But a " money panic " like those experienced before the creation of a central banking system is unlikely, unless Americans talk themselves into one. The high yields on government bonds are beginning to attract investors. Moreover, although Congress refused to raise the 4.25 per cent limit on the interest which may be paid on new long-term government bonds, it did take two steps which should ease the Treasury's present reliance on short-term financing. By increasing from 3.26 to 4.25 per cent the interest which may be paid on savings bonds, it enabled the Treasury to fix a new return of 3.75 per cent, which should reduce, even if it does not eliminate, the excess of redemptions over new sales. And Congress approved a technical change which may allow the Treasury to launch an important new experiment in debt management known as " advance refunding."

In the present state of the government bond market, it would not be possible to float more than occasional small issues of long-term securities in the open market, no matter what the Treasury paid. But holders of the low-interest bonds issued during and just after the war, which will mature within the next five years or so, may be willing to exchange them for new, longer-term securities carrying a substantially higher rate of interest if—as Congress has just provided—any gain or (as at present) loss on this exchange can be disregarded for accounting and tax purposes, until the new security is sold. Just now, more than 4.25 per cent would probably have to be offered to tempt investors. But if the bond market improves, or Congress has second thoughts about raising the ceiling on interest payments, the Treasury may be able, in time, to relieve the congestion of bonds coming due within the next five years and to issue new medium-term securities which are not hard to sell.

All Quiet in the Schools

LAST week schools and colleges began to receive over 46 million students, one in every four Americans. With an increase of nearly 2 million over last year, and still no federal aid for schools, classrooms remain crowded ; Mr Flemming, the Secretary of Health, Education and Welfare, estimates that the education of about 10 million children will suffer from inadequate buildings and classes containing more than 30 pupils. What is new and welcome is the absence of violence at the opening of the thirteen schools in Virginia and Arkansas which were closed last September to avoid receiving any Negro children and which have now been compelled to take them. The only untoward incident took place at Little Rock, where three bombs were exploded, but injured no one. In Virginia relatively few white parents are applying for the state grants now available to send white children to fee-paying institutions and white enrolment at the state schools which have had to accept Negroes has been hearteningly high. Southerners seem to be getting used to the idea of a little racial integration. In 1960, however, there will be some harder nuts to crack—in Atlanta, for example.

Prince Edward County, in Virginia, falls into this category, as a federal judge recognised when he gave the authorities there until 1965 to begin to conform. Prince Edward was the defendant in one of the original suits to outlaw racial segregation in schools, and its Negro children slightly outnumber the white ones. Last spring an appeals court decided that integration must begin at once and the county responded, not just by shutting the affected schools, but by refusing to vote any taxes at all for public education. Instead white parents were urged to donate the money to a system of fee-paying schools which has been established for the 1,500 white children. No provision has been made for the 1,700 Negro ones.

In New York City, the great melting-pot, legal segregation is unthinkable, but it exists in practice because Negroes and Puerto Ricans are forced to huddle together in slum areas ; here both the physical equipment and the teachers—for understandable reasons—tend to be of poor quality. Negro parents in Harlem, the oldest and largest Negro quarter, recently withdrew a threat to boycott the city schools only when the Board of Education promised to satisfy their grievances. The boycott is an efficient weapon because the city receives $2 a day from the state for each child attending school. But it was also used by white parents this week when the board transferred some Negro children from schools in Brooklyn to those in a predominantly white area of the neighbouring borough of Queens. It is no wonder that some Negro parents send their children to church schools or, if they can afford it—as few can—to fee-paying ones.

New Departure for Cars

FROM A CORRESPONDENT IN DETROIT

AFTER four years of trying to sell Americans still bigger and more powerful cars the managers of the automobile industry have set off in new directions which promise the most exciting and profitable year since 1955. Before then, the industry's best year was 1950, when it sold nearly 6 million motor cars. The fondly remembered 1955 total was 7 million. In 1959—if the last quarter comes up to expectations—sales of new cars will amount to 6 million or more. The catch is that over 500,000 of this year's new cars will have been imported, so that sales of domestic vehicles will be considerably below 6 million.

As they start sounding the trumpets for their 1960 models which will begin to go on sale at the end of September, the executives of the automobile industry are predicting that they will sell around 6.4 million cars next year. Since they concede that imports will still amount to about half a million, this means total sales of 6.9 million—more new cars than Americans have bought in any year except 1955. There are several reasons for this optimism. The economy is stronger than it has ever been before, with the gross national product and personal incomes at record levels. The recession is over and consumers seem very confident of the future. But what really makes 1960 look so promising for Detroit is the revolutionary smaller (compact) car, designed to meet the demands of a growing share of the market which has been neglected up to now by the three biggest companies in the industry.

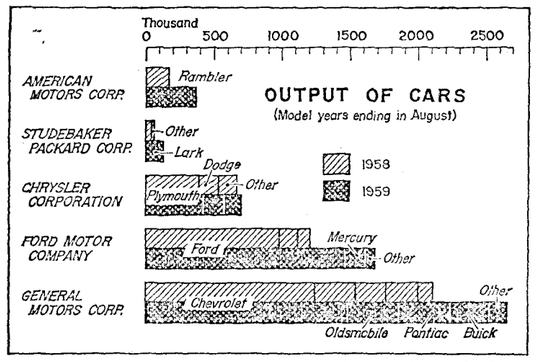
The Corvair of the General Motors Corporation and the Falcon of the Ford Motor Company will go on sale in October and the Chrysler Corporation will follow in November with its Valiant. Each of these cars has a total length of around 180 inches. They are low-powered for American cars (100 h.p. and less) but they have room for six passengers, and can be fitted with the labour saving devices of which the American buyer has become so fond, such as automatic transmission. They are completely new cars, not scaled-down versions of existing models ; and the Corvair even has its engine in the rear. The basic prices will be a shade under $2,000. This is higher than the cost of the imported small cars which provoked this revolution, but the compact American cars will be considerably cheaper to run than anything that the Big Three of the American motor world have been selling.

Whether or not the compact cars increase the sales of automobiles as soon, or as much, as predicted, the decision to make them will have far-reaching effects on the industry and on the economy as a whole. During the early and middle nineteen-fifties, automobiles (along with building) were the bell wethers

of the boom. In 1955 producing, selling and servicing them accounted for more than 10 per cent of the gross national product. When sales fell to 5.9 million in 1956, to 5.8 million in 1957 and then plummeted to 4.2 million in 1958, it was not surprising that the general economic recession of 1957-58 was blamed on Detroit's stubborn preference for large, ornate models. That charge would be difficult to substantiate, but certainly the industry failed conspicuously to take part in the recovery last year. The compact cars will, it is hoped, correct that failure and wipe out most of the unemployment which has been higher in the automobile industry than in any other part of the economy.

Inside the industry the compact cars will bring big changes. A few years ago General Motors, Ford and Chrysler made over 90 per cent of the new cars sold in the United States. When the rise in imported cars showed that there was a market for smaller models, the American Motors Corporation launched its Rambler and then the Studebaker-Packard Corporation followed with its Lark. Once the two companies began to concentrate on these smaller models, they struck gold. The sales of American Motors in 1958 were twice what they had been in 1957 and are expected to rise to 350,000 this year, a further increase of 75 per cent. Studebaker-Packard is likely to sell 150,000 cars this year compared with about 50,000 in 1958.

What will happen to these two pioneers now that the Big Three, with all their resources and strong distributive arms, are joining the fray? Mr Romney, American Motors' able and energetic president, does not seem to be worried. He points out that his market is well-cultivated, while the Big Three have yet to find theirs.



Source: *Automotive News*

In addition, he and Mr Churchill, the president of Studebaker-Packard, sell only small cars. The Big Three must also sell larger cars—Chevrolets, Fords and Plymouths—in the same showrooms as their Corvairs, Falcons and Valiants. Mr Romney believes this is going to cause salesmen to divide their efforts.

Even in this year, when the imported models are selling so famously, nearly 60 per cent of the cars sold are Chevrolets, Fords and Plymouths. Sales of those makes must be pressed with vigour because they are the companies' greatest money-earners. Next year will these three makes begin to displace the only slightly larger and more expensive Buicks, Pontiacs, Dodges, Oldsmobiles and Mercuries as the "medium-price" automobiles? This question dampens Detroit's optimism, but only mildly.

One reason why this is so was given by Mr Henry Ford when he presented his new Falcon to the press. He regards the elimination of nearly three-quarters of a ton in weight, with consequent savings in cost and without, he says, any sacrifice of the riding qualities of the car, as the American industry's answer to the much lower costs of foreign producers. He predicts that what has been learned in the development of the Falcon will be applied to the larger American cars, and may make it easier for them to compete with the new small ones.

Some of the larger makes may be driven to the wall, but not even the most enthusiastic proponent of small cars thinks that the day of big cars is done. Mr Romney, for example, believes that in five years compact cars will hold 60 per cent of the market, leaving a healthy 40 per cent for the larger ones. The Big Three ran into difficulties by offering only one kind of car. The customer who wanted something different had to buy an imported car or one made by the two smaller American manufacturers. Now the Big Three intend to sell all sorts and sizes of cars. There has not been such an about turn in Detroit since the nineteen-twenties, when Americans turned away from the original Henry Ford's single kind of car.

Tammany's Narrow Squeak

NEW YORK

In this week's election within the political parties in New York City Mr De Sapio, the boss for ten years of Tammany Hall (the Democratic political machine in Manhattan), barely kept his political balance when he retained, by a mere 568 votes, a footing in the district he represents. Elections for district leaders, which recur every two years, took place on Tuesday in twenty of the thirty-three districts of Manhattan; in the remaining thirteen the incumbents went unchallenged. In Greenwich Village, his home district, Mr De Sapio and his running mate were opposed by a group of independent Democrats. On their first showing two years ago their candidates startled the old guard by carrying off 38 per cent of the votes and, although the Tammany machine went into top gear for this week's contest, the insurgents raised their share of the poll to 46 per cent. The cry for reform rang loud enough to persuade the leading local newspaper, *The Villager*, to take a stand after twenty-six years of political neutrality. Even so the results were surprising; the large Italian-American population in the district was expected to ensure a more comfortable margin for Mr De Sapio.

Elsewhere Mr De Sapio's friends fared badly against local reform groups. His candidates in three other districts in New York County—including the chairman of Tammany's executive committee—were ousted and none of the ground lost to the insurgents in 1957 was reclaimed. In fact, Mr De Sapio lost more allies than the reformists gained. Harlem's volatile Representative, Mr Powell, won for himself and his friends four of the five districts in the area. Far from being allied to the reformers Mr Powell's campaign was inspired largely by a personal vendetta against Tammany, which had tried unsuccessfully to prevent his renomination to Congress last year. In Queens County, too, the De Sapio star declined when his main henchman lost the post of Borough President.

The reform groups in New York City have concentrated on a single issue: that Mr De Sapio is an old style autocratic political boss interested only in patronage and paternalism, whose machine has become moribund as a national political force. The fact that he is a considerable improvement on his predecessors in office has done him little good. In the contest this year many of the reformers were supported both morally and financially by the New York Committee for Democratic Voters, a group set up by Mrs Roosevelt and Messrs Lehman, Finletter and others who were angered by Mr De Sapio's high-handed tactics at last summer's state Democratic convention, which did much to assure the victory of Governor Rockefeller, a Republican, in November.

Mr De Sapio's opponents in Greenwich Village have not yet con-

Burroughs make a full range of business equipment—that's why, whatever the size of your business, there's a Burroughs system exactly fitting your needs.

Burroughs forward-looking design and precision engineering ensure that each machine, in each class, has all the versatility and the advanced automatic features required by today's modern accounting methods.

Whether your business calls for an adding machine, an accounting machine, or a large electronic computer, you can be sure that a Burroughs machine will give you the right answers—faster, easier, and at a big saving in operating cost.

Your local Burroughs man is available now to demonstrate how you can streamline your accounting with Burroughs data processing equipment. Or write to:

Burroughs Adding Machine Ltd.,
Avon House, 356-366 Oxford Street,
London, W.1. Tel: HYDE Park 9861

Burroughs

1. New Burroughs Shuttle-Carriage Adding Machine—for vertical and shuttle listing work on tape or wide forms—easy, speedy, flexible.
2. New Burroughs Sensitronic with Automatic Reader—electronic accounting machine providing ledger-keeping with visible record and magnetic storage. Trial balancing made completely automatic when linked to auto reader with individual form handling.
3. New Burroughs 220 Electronic Computer System—the most complete electronic data processing system in production today.

BILL OF HEALTH—II

Who Pays for Medical Care?

NEW YORK

IN its pursuit of good health the American public spent, in the course of 1957, an estimated sum of $20 billion. Three-quarters of this total, or $15 billion, was paid—either directly or through insurance—by private individuals, and the remainder was the cost of government services. Over the last few years, personal expenditure on medical care has risen by leaps and bounds; it has doubled since 1948. The population has grown by 16 per cent over this decade and prices have risen considerably but, even if full allowance is made for these factors, it is clear that the average American is spending considerably more in "real" terms—perhaps a third more—on his health. The costs of medical care now absorb about 5 per cent of all personal expenditure.

Of the $15 billion spent by private individuals in 1957, by far the greater part—$11 billion—was in the form of direct payments in cash. Only $3½ billion was financed through insurance benefits. This figure seems low in relation to the large numbers insured, but it presents considerable progress since 1948 when benefits covered only 8 per cent of the cost of personal medical care. Insurance, of course, involves its own overhead costs, which came in 1957 to $670 million—a sum equal to nearly one-fifth of the benefits paid out. On the other side of the account, hospitals now receive the largest share of the medical dollar, but it is only in the last three years that they have outstripped the doctors. Indeed, in 1929, hospitals took fourth place after doctors, medicines and dentists.

The vigorous campaign to keep health services safe for private enterprise tends to obscure the extent to which government is already involved in the provision of health facilities. Not only did the estimated $5 billion spent in 1957 by different government agencies represent one quarter of combined public and personal expenditure in this field, but it exceeded by a large margin the $3.5 billion financed through the voluntary insurance schemes. Government action in this sector is both complex and fragmentary, ranging as it does through three levels—federal, state and local—and embracing a host of special programmes.

Public health is primarily the concern of the state and local authorities, although the federal government is a source of funds for a few particular programmes. But, having once decided that "socialised medicine," while unsuitable for the civilian population, is yet fit for heroes, the federal government has become increasingly involved in the direct provision of health facilities. Its responsibilities towards ex-servicemen are only vaguely circumscribed by law; anyone who has been a member of the armed forces can receive free treatment, if he is of the opinion that he cannot afford to pay, provided that facilities are available. The government automatically accepts responsibility for all those with "service-connected" disabilities, for tuberculous cases, and for those suffering from mental illnesses; 40 per cent of all beds in veterans' hospitals are reserved for this latter group. In the field of general medical and surgical treatment, however, the government inclines to a more minimal view of its role.

A liberal interpretation would imbue the programme with an almost unlimited potential for expansion since old soldiers do not in fact seem to fade away; they already number some 23 million. The ex-servicemen's groups, despite their habitually conservative instincts, would like to see these public facilities expanded. The present members of the armed forces equally come under the federal wing, and the two programmes together cost the government well over $1¼ billion a year, with the ex-servicemen taking substantially the larger share.

The federal government is thus largely concerned with special groups—the American Indians also come within its province—and with passing down general encouragement, and some grants, to other governmental bodies. Well over half of all public expenditure on health is financed at the state and local level. On the principle that government picks up only those services which the private system will not or cannot handle, the states—with help in some cases from city authorities—bear virtually the whole responsibility for people in public institutions. In the case of mental hospitals, public authorities provide more than nine-tenths of all beds.

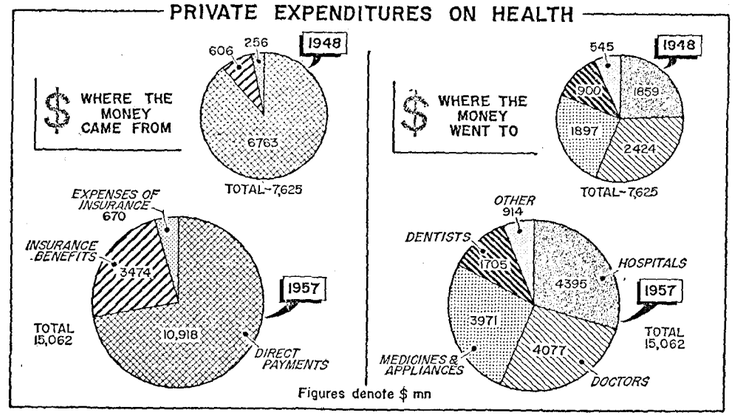
The health requirements of the indigent—those receiving public assistance—are primarily the responsibility of city and other local authorities. These services are provided either through the direct operation of public hospitals, or through payments to voluntary hospitals which provide this care, or both. The extent of public provision for the poor, and the definition of who is and who is not eligible for free treatment, varies widely. Public hospitals are invariably overcrowded and understaffed, and they operate in most cases under the constant shadow of insufficient funds.

ESTIMATED CAPITAL EXPENDITURES: 1948-57

Sources of Funds	*$ million*
All hospitals:—	
Direct federal expenditure	950
Federal grants under Hill-Burton Act	740
State and local authority expenditure	3,225
Private financing	3,565
Total for all hospitals	8,480
Voluntary hospitals:—	
Private financing	3,565
Federal grants	390
State and local grants	35
Total for voluntary hospitals	3,990

The cost of providing new hospital facilities is borne—in roughly equal proportions—by the taxpayer and the philanthropists. Since the war federal grants have been made, for the first time, under the provisions of the Hill-Burton Act, towards new construction in both the public and private sector. While the actual sums involved have not been large in relation to the total, the availability of federal money, on a matching funds basis, has undoubtedly encouraged a burst of hospital building. Between 1948 and the end of 1957 a total of $8½ billion was invested in new construction and in modernisation. Apart from federal grants, the two main sources of this new capital were charitable gifts on the one hand and state and local funds on the other. The former went up sharply in 1956 when the Ford Foundation contributed $200 million for hospital construction. Over the ten-year period, new investment in voluntary hospitals has equalled nearly half the total; many of them are financing at least part of their new construction by means of mortgages.

PRIVATE EXPENDITURES ON HEALTH



Continued from page 930

ceded him his meagre victory; they hope to unearth a sufficient number of electoral irregularities to invalidate the result. In spite of what has happened he should still find enough friends among the district leaders to get himself re-elected as leader of New York County. But his influence at next year's Democratic convention is bound to decline as the grass roots (or rather the city pavements) slip from beneath his feet—a fact that has not escaped those whose eyes are on the 1960 presidential nomination.

Sorting Out the Stockpile

WITH the help of Congress the Administration is at last able to make a start on getting rid of some of the surplus items which have accumulated in its strategic stockpile to ensure adequate reserves in time of war. This year the $50 million, less than half the amount requested by the Administration, appropriated for the operation of the stockpile allowed only $17 million for the rotation of perishable commodities and provided that any receipts from the sales of such commodities should be returned directly to the Treasury. Furthermore, it was understood that the $17 million was to be spent only on fibres and vegetable oils, not on rubber, the most important of the perishables. The General Services Administration, which manages the stockpile, is therefore unable, to its own satisfaction, to replace with new supplies the 40 or 50,000 long tons of natural rubber which must be sold during the coming year to avoid deterioration. Moreover the appropriation Act permits it to be sold without any further authority from Congress, normally needed before sales can be made from the stockpile and normally hard, if not impossible, to get.

Unless next year's appropriations follow the same pattern, such authority will, however, be required before the GSA can get rid of the rest of the 470,000 tons of rubber which it wants to sell during the coming nine years because changed military and technological requirements have made it surplus. But during the next session of Congress the Administration is also expected to ask for a complete revision of stockpile legislation. It would like to amalgamate all the various types of reserve and to be allowed to sell off surpluses with only a minimum of formality. Congress will presumably still be given some opportunity to disapprove of such sales; it can also be taken for granted that sales would be conducted in an orderly way.

Meanwhile it is uncertain what the surplus commodities will in fact amount to by the time the new system comes into effect—if it ever does. The present estimate of the value, $4 billion, is based on a survey made last year of the effect which recent defence developments, especially missiles and nuclear weapons, had had on the need for strategic reserves for military purposes. But now a new survey, expected to take a year, is being made of the probable destruction of private industrial supplies during a future war and of whether the stockpiles should provide for these losses and for the subsequent rehabilitation of the civilian economy. If the answer is in the affirmative, many of the commodities which are now in excess would again become essential for the reserve.

Spoiling the Judiciary

DURING this year a major disadvantage of a system which rewards party supporters by appointing them to judgeships in the federal courts has become so glaringly apparent that something may be done to remedy it. Federal judges, life appointees, are nominated by the President, but must also be approved by the Senate Judiciary Committee and confirmed by the Senate itself. For months the Judiciary Committee, controlled by reactionary Democrats, has refused to act on many of the President's nominations to vacant judgeships; early this month 22 were pending, many of them since the beginning of the year, out of 36 nominations submitted during the current session of Congress. But the log-jam broke with dramatic suddenness on September 8th, when thirteen nominees were approved by the committee in the record time of ten minutes and confirmed by the Senate almost immediately.

A political change of front was responsible for this: last February the President nominated Mr John Tucker, an inactive Republican, to a Texas court but, after languishing for five months without so much as a hearing from the committee, Mr Tucker withdrew in order to get on with his law practice. The President then substituted Mr Joe Fisher, a Democrat chosen from a list supplied by Senator Lyndon Johnson, who is the leading Democrat in Texas as well as being his party's leader in the Senate. The President's compromise with the facts of political life brought speedy confirmation not only to Judge Fisher but to 12 other nominees as well.

Probably just as helpful as the President's action was the undertaking given by his Attorney General at the American Bar Association's convention at the end of August that in future half of all new judicial appointments would be given to Democrats. This concession is especially welcome since the shortage of judges has led to appalling delays which are more reminiscent of Bleak House than of a contemporary legal system. In Brooklyn, for example, civil suits have been held up for as long as four years and the situation is paralleled in other populous city districts. Progress should now be possible on the Bill creating 25 additional federal judgeships which has got nowhere in Congress for three years. The Republican Administration can hardly be blamed for its past use of a time-honoured method of political patronage, especially as in 1953 it inherited a judiciary dominated by Democrats. The balance has now been evened out and it is to be hoped that some informal agreement can be reached between the parties on the future division of judicial spoils, so as to avoid a recurrence of a situation from which the public suffers more than anyone else.

SHORTER NOTES

The Metropolitan Museum of Art in New York, open seven days a week for nearly seventy years, is now to close on Mondays to facilitate cleaning and maintenance. This has become difficult to deal with while the museum is open because of the great increase in attendances. Those who have enjoyed the relative quiet on Mondays, the least popular day, point out that it would only cost $35,000 a year to keep the museum open on that day as well.

* * *

According to the Department of Commerce the number of businesses in the United States reached 4,645,000 by the middle of this year, an increase of 2 per cent on the 1958 figure.

* * *

For certain public offices in the state of Maryland atheists need not apply. On a reading of the Maryland Declaration of Rights, the state's attorney general has denied a commission as a public notary to the office manager of a building firm who felt unable to subscribe honestly to a belief in the existence of God. It is being suggested, however, that this is contrary to the separation of church and state guaranteed by the federal constitution.

"Had to ride hard to meet the boss . . .

took me three days to do it. Took him only one night from Europe to Buenos Aires. He flew Swissair—*that* means a lot for he's a very tough man to please!" Yes-men of experience know that smoothness, speed and service-plus distinguish each Swissair flight!
Swissair offer every week thirteen flights to the Middle East—including new destinations Ankara and Teheran . . . twelve flights to North America . . . services to South America every Sunday and Thursday . . . to the Far East every Tuesday and Friday. LARGEST MAKERS OF V-BELT DRIVES IN THE COMMONWEALTH

Get to the core

of your

advertising problems

How many Advertisers there must be, with appropriations of up to £30,000, who know they are not really getting the return that they should! Are you one?

What to do? You must be expertly advised by the *right* Advertising Agency.

To you, RIGHT means the readiness to see and meet *your* needs first . . .

To employ your £10,000, £20,000 or £30,000 with a high sense of responsibility ; to prosper *with you* rather than before you.

You need a medium sized Agency which provides constant, penetrating and personal service—the Agency in which you are an important account.

Gordon & Gotch Advertising may well be your right choice. We have carefully set ourselves out to grasp the problems of the smaller Advertiser; and have often built a small manufacturer into a national success.

We start by asking the complete confidence of the Advertiser. We like to be accepted as part of their Sales Organisation. From then on, our clients receive a very personal service and each account is under the day to day supervision of a Director. We employ all the advertising arts in their logical sequence —market research, marketing, merchandising, public and press relations—all are seen as individual parts which we relate into a programme to achieve results.

We are now ready to give this service to one or two additional Advertisers. If your Promotion is a problem, and you would like us to get our teeth into it, the Managing Director will be pleased to hear from you.

THE WORLD OVERSEAS

Greek Cypriots Divided

FROM OUR CORRESPONDENT IN NICOSIA

THE events of the past week have provided another disturbing example of the unpredictability of Cypriot politics. It had seemed that the unrest in the island was easing—Archbishop Makarios seemed to be in control of his own community: the wave of Turkish terrorist incidents had halted: the Turkish campaign of "apartheid" was abating after directives had been sent from Ankara ; and a solution of the protracted constitutional deadlock was in sight. But suddenly a storm in a teacup over a relatively unknown Edma party official erupted into a political hurricane that has already wrecked any remaining chances of unity in the Greek Cypriot camp.

To make sense of the whole affair, the events need to be seen in chronological sequence. A few weeks ago, Archbishop Makarios decided that the time had come to dismiss a known Grivas supporter, Mr Photis Papaphotis, the Famagusta representative on the Edma party executive and a former Eoka leader in the turbulent north-eastern peninsula of Cyprus, where some of the grimmest clashes with the security forces took place. The archbishop did so in a terse twenty-word letter which Mr Papaphotis and his supporters considered to be dictatorial. The extreme right wing paper *Ethniki* then rallied to Mr Papaphotis's side and accused the Edma party (and Archbishop Makarios by implication) of being totalitarian in methods—whereupon the editor was brutally beaten up by an armed gang, who were unquestionably Edma party members or supporters.

This incident brought matters to a head ; a wave of anti-Edma feeling swept through the old town of Nicosia and all the Greek journalists went on protest strike. Archbishop Makarios was shocked and dismayed by the whole affair. He deplored the assault on the editor—but decided to hit back at the extremists, whose intrigues in recent weeks have been patently provocative. Accordingly, he let it be known that a plot of some kind existed, hinted that this might mean assassinations and alleged firmly that Mr Papaphotis was a leading conspirator.

What exactly the archbishop said at certain private meetings seems likely to be for ever in dispute. What is clear is that an anti-Makarios intrigue—some may call it a conspiracy—exists in which General Grivas has been actively involved, along with the Bishop of Kyrenia. But intrigue is one thing and "assassination plot" is another ; so far the documents published clearly reveal the former, but no evidence has been produced of the latter. Edma party sources declare that it exists and that only patriotic motives —fear of the alarm and conflict that would be stirred up—are preventing the archbishop from revealing it. Meanwhile General Grivas has entered into the controversy directly with his invitation (issued more in the style of a *pronunciamento*) to Archbishop Makarios to come to Greece for talks. Last week-end all the indications were that the archbishop would go, but subsequent statements by Grivas have once more thrown everything into confusion.

Certain interim conclusions clearly emerge. One is that the mass of the Greek Cypriot community passionately and pathetically want a meeting between their two leaders ; already 27 former Eoka men in Limassol district have threatened to go on hunger strike if it does not take place. This is a consideration which Archbishop Makarios must realistically face whatever private misgivings he may have about a meeting. Although the archbishop and the moderates are still clearly in the ascendancy, it is evident that Makarios has lost some ground as a result of the Papaphotis affair. There is a general stirring of reaction against "Edma party bosses" and their methods, though not a considered swing of opinion to the extremist views of the Bishop of Kyrenia and General Grivas. Moreover, until Archbishop Makarios publishes more evidence, there will be widespread suspicion that for political reasons his allegations about a plot may have been consciously exaggerated.

The affair is also seriously retarding the work of the constitutional transition ; for instead of getting on with the job, Archbishop Makarios and his ministers are spending an inordinate amount of time playing petty politics. The split between the two factions, which seems now complete and final, is also playing gloriously into the hands of the left wing, who have watched recent events with unalloyed delight.

What is imperative is that in this confused situation the Cypriots should not lose sight of the wood for the trees. The archbishop's handling of Papaphotis and the extremists may be open to censure on certain points, but on balance over the past six months he has displayed a singularly statesmanlike approach to the major political issues facing the island. It is his determination to carry out the Zurich and London agreements which is the island's main hope.

The Stuart Case

FROM OUR CORRESPONDENT IN AUSTRALIA

RUPERT MAX STUART, who was condemned for rape and murder of a nine year old girl, would probably be dead today if he had not been seven-eighths black. That probability has been forgotten in the world-wide hullabaloo which is at least partly based on an erroneous impression that this—like a lynching in the deep south of the United States—is a case of a man getting less than justice because of his colour. On the contrary, it is because of his colour that there is such concern to see that justice is done ; and this is as true of the government and judiciary of South Australia as of those who have given money, time and millions of words in the fight for his life.

The penniless circus hand who could not have bought the red tape with which his counsel's brief was tied has had his case taken from the original trial to the South Australian Court of Appeal, to the High Court of Australia and thence to the Judicial Committee of the Privy Council. The higher courts refused leave to appeal, but the Judicial Committee of the Privy Council at the same time drew attention to a claim that new evidence had come to light since the original trial. The South Australian government then appointed a Royal Commission (it probably would have done

so anyway) in order, as the premier, Sir Thomas Playford, said, to get the matter "sifted to the ground" and to decide whether the new evidence was such that the jury would have returned a different verdict if they had heard it.

From the procedural point of view at least there was not much wrong with that. But the composition of the commission was immediately under fire, both in the South Australian parliament and in the press. Of the three judges appointed, two had been concerned in the earlier proceedings: Mr Justice Reed was the trial judge and Sir Mellis Napier, Chief Justice of South Australia, presided over the full Court of Criminal Appeal. If the royal commission's terms of reference had been merely to examine the new evidence and decide on its validity it would certainly have been logical to appoint judges who were familiar with the proceedings so far—just as if the new evidence had been presented in the trial and appeal over which they respectively presided. But the terms of reference were wider, permitting the reopening of the whole case, and thus seeming to lend force to the arguments of those who thought that completely new judges should have been appointed to the commission. Moreover, critics in the South Australian parliament and in the press pointed out that the chairman, Sir Mellis Napier, had already in the appeal court dismissed as "rubbish" the very allegations of police violence that he was now to investigate.

Nor have the proceedings of the commission reassured the public about its ability to do any sifting to the ground because, for various reasons, those proceedings have been so confusing and the evidence so contradictory. Stuart's advisers have sought to show, firstly, that he could not have made the confession because his English is too poor and he cannot tell the time, let alone describe his movements hour by hour. But other witnesses disagreed, and a language expert who had talked with him in his tribal language admitted under cross examination that he would probably have understood the statement which he signed if it had been put to him interrogatively, sentence by sentence, in a manner not unusual when taking statements from uneducated or inarticulate people. Secondly, Stuart's advisers have produced some hearsay evidence that he was beaten up by the police, but this again was contradicted by another witness. Thirdly, they have tried to establish that at the hour when (in the opinion of one young woman doctor) the little girl met her horrible death Stuart was at the circus. It is not for your correspondent to express an opinion on this evidence while the case is *sub judice*—although some newspapers and journals seem to be doing just that; but the chairman of the commission has said that unless yet more evidence is forthcoming the result of the inquiry is more or less a foregone conclusion; and he suggested that any such evidence ought to come from Stuart himself.

HERE lies the most confusing part of the whole affair. Stuart's counsel, Mr Shand, QC, from New South Wales, walked out of the inquiry in the early stages claiming that he was hindered in cross examination. Since then Stuart has not been represented and sent word that he did not wish to be. He himself has never taken the witness stand nor has the commission called him—to put a poor black fellow among the lawyers without a lawyer to represent him would be Star Chamber stuff, indeed. Did Stuart's lawyers think that they could best serve him by discrediting the inquiry, and best discredit the inquiry by leaving him silent in his cell and unrepresented before the commission? Did they play for delay, believing that time was on his side? Did they think that his appearance would do his case more harm than good? Anyway, when Sir Mellis talked about a foregone conclusion a search began for a new counsel. The leader of the South Australian bar (by courtesy of an unknown benefactor) wanted to take the brief if the inquiry could have been adjourned for a few weeks while he handled another brief. But the commission, much to his annoyance, but surely reasonably, refused such a long adjournment. The latest news is that Stuart will have a lawyer from Victoria, Mr John Erskine Starke, the inquiry is adjourned until October 5th, and the execution again postponed.

A few conclusions may be pulled out of the melting pot. No action can be expected of the South Australian government until it receives the commission's report. It can hardly scrap its royal commission or get the sentence varied because it is told to by *The Adelaide News*, or even by Lord Attlee. It could do those things if the commission suggested them. The commission is unlikely to recommend a new trial, whatever it feels about Stuart's guilt or otherwise, because the government cannot order one; it could suggest that Stuart's sentence be commuted or that he be pardoned. If, on the other hand, they reaffirm Stuart's guilt, justice may be done by hanging him. But as matters stand, it may not be seen to be done. This may no longer be true, however, when Stuart is again represented and if the commission is then able to probe deeper.

The issue is broader than the life or death of this aborigine. The Stuart case lends support to those who, like *The Economist*, are opposed to capital punishment. Whether or not the new evidence overthrows the original verdict, it shows up the disastrous finality of the death sentence. As it happens, the doubts have arisen while Stuart is still alive. They might well have done so after his execution.

Syrians Blame the Baath

FROM OUR MIDDLE EAST CORRESPONDENT

A SIGNIFICANT swing in Syrian political opinion has been gathering strength in recent months, and now threatens to sweep the once powerful Baath-Socialist party into limbo. This is evident from the briefest of contacts with political circles in Damascus. (My contacts on this occasion were necessarily brief, as my visit was abruptly terminated after twenty-four hours by the Syrian security authorities. They gave me three hours to leave the country, and, as usual in such cases, no cause was shown.)

The eclipse of the Baath-Socialists became evident from their miserable showing at the local elections for the Nationalist Union on July 8th. They are still reeling under the shock. Former sympathisers are edging away from the movement, and speak openly of disagreements between President Nasser and Vice-President Akram Haurani, the most dynamic of the Baath-Socialist leaders. Although in Syria at the time, Haurani stayed away from the opening of the International Fair at Damascus; he is now reported to be convalescing. Whatever the state of his health, he is certainly sulking in his tent, and everyone in Syria knows it.

The Baath-Socialists have brought down on their heads all the disappointments of the union with Egypt. Landowners are discontented with the application of the land reform, and many peasants now realise that government decrees do not bring the millennium overnight. Merchants are concerned by the disturbance of time-honoured patterns of trade with the West, and by the increase of government to government trade deals. Many intellectuals regret the disappearance of political activity. General discontent has been fanned by two bad harvests in successive years.

The blame for all this cannot fairly be laid at the door of the Baath-Socialists. They cannot bring rain; and it was the Suez affair, not union with Egypt, which disturbed traditional trade patterns. (The degree of this disturbance, incidentally, should not be exaggerated. British exports to Syria, for instance, are back to pre-Suez level.) But the failure of the Baath-Socialists was a

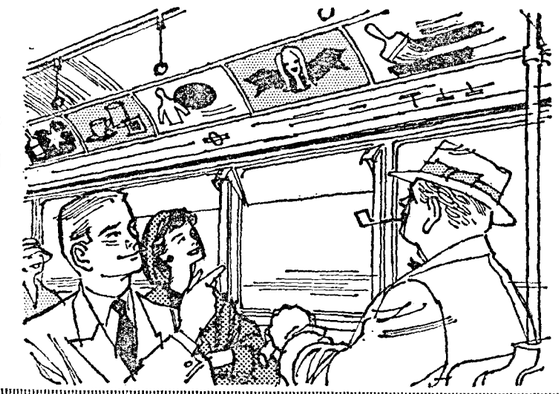
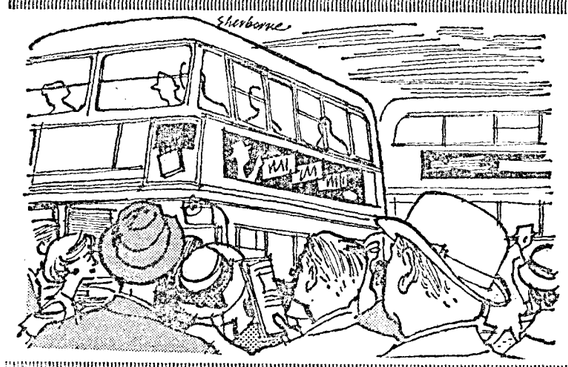
HOW MANY MILLIONS TO TALK TO?

2½ MILLION A DAY

2,500,000 journeys are made every day on London's Underground. Waiting for their trains passengers read posters: en route (the average journey lasts 11 minutes) they read roof card advertisements. What a wonderful opportunity to tell *your* story!



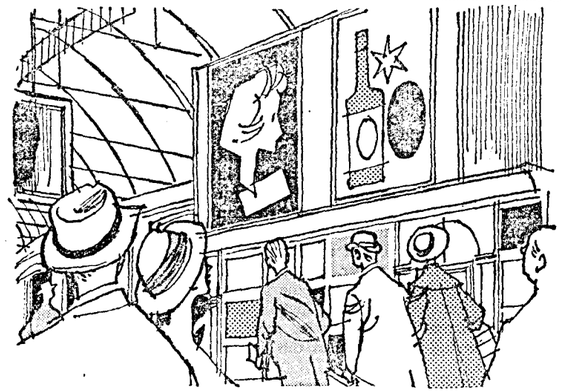


96 MILLION A WEEK

96,000,000 journeys are made every week on British Transport buses in England (including London), Wales and Scotland. Posters on these buses – there are more than 18,000 in operation – are seen not only by passengers but by millions of other people every day, many times a day.

1,000 MILLION A YEAR

Every year more than 1,000,000,000 journeys are made on British Railways trains. And there are many more people, too, who use the stations without travelling. This means that posters on railway sites are seen by millions daily – and day after day.



Facts! Facts! Facts!

British Transport Advertising is one of the best-documented media. For rentals and all the statistics you want, ask British Transport Advertising, Cranbourn Chambers, Leicester Square Station, London, W.C.2 (Temple Bar 3490) or 6-7 Castle Terrace, Edinburgh 1 (Fountainbridge 5222).

BRITISH TRANSPORT ADVERTISING

Simplicissimus.

A German Distressed Area

FROM OUR BONN CORRESPONDENT

THE young man in the cartoon is standing in a travel agent's office plastered with the usual invitations to sample a wide and glamorous world. "Haven't you," he inquires at the counter, "any place where tram bells clang all night—one of those places with through lorry traffic and jet fighters? You see, I'm a school teacher from the Bayrischer Wald."

The Bayrischer Wald—an appellation used rather loosely nowadays to denote the hilly area running to a depth of 25 miles along some 500 miles of Bavaria's frontier with Czechoslovakia—is refreshingly or deadly quiet according to taste. Its southerly stretch, roughly from Weiden down to Passau, is, with Berlin and Wilhelmshaven, one of the three *Notstandsgebiete*, or distressed areas, of western Germany.

NOT that the region was ever strikingly well-to-do. The austere, solidly built houses and villages (which are made friendlier in summer by the ubiquitous local custom of competition in window boxes) and the snow ploughs parked by the hedges tell of harsh winters and a care for pence that seldom become pounds. More than half the population of 750,000 is engaged in agriculture or forestry, and the soil is for the most part higher and tougher than Scotland's. The distress that has evoked government aid is one of the infinite by-products of the last war. In 1945 and 1946 the area had to take in some 150,000 of the Sudeten Germans who were expelled from Czechoslovakia, most of them bringing no more than the skill of their craft.

At the same time the considerable business of one sort and another that used to connect the Bayrischer Wald with Czechoslovakia and what is now the German Democratic Republic was brought to a standstill by the drop of the Iron Curtain. It is saddening and a shade uncanny to see grass and moss growing on the last two miles before the frontier of what used to be the busy road from Frankfurt and Nuremberg to Prague. The old signs are still there. "Pilsen Km 76." One used to be able to do it in under an hour. At 2.30 every afternoon a diesel railcar sets off with modest ceremony from Furth-im-Wald for Czechoslovakia, just over a mile away. According to the timetable the passengers —if there were any—could be in Prague snail-like by 8.39. But Furth-im-Wald's sidings have a slightly more cheerful tale to tell: in July, 114 goods trains, totalling more than 4,000 loaded trucks, rolled in each direction along the single line that crosses the frontier here. The westbound trains carried, along with more prosaic freight, scores of tons of Polish bilberries and camomile.

IT is reckoned that 120,000 of the Sudeten Germans have since moved farther west and are no longer either an asset or a liability. (Many of the economically most useful have settled in new colonies such as that at Kaufbeuren, in southern Bavaria, where they have successfully resumed their old Bohemian crafts of making decorative glass and costume jewellery.) During the past five years one in every six of the population of the Bayrischer Wald has left the district in search of a better living, and most of those who have gone are young. The rate of unemployment is higher than in any other part of western Germany. It is obviously a long time since most shops and houses received a coat of paint. The children are shabbier and grubbier than elsewhere in Germany. A few weeks ago it was announced that 115 of the smaller goods stations in the area were to be closed down for want of traffic.

The Federal and the Bavarian State authorities estimate that it will take another five years of subsidy and nursing to make the Bayrischer Wald a region where the modestly ambitious are content to stay—or, in other terms, a worthily robust eastern march. (The arterial highway running north and south parallel with the frontier is called the *Ostmarkstrasse*.) In the meantime they are advising the restless not to hurry away but to await the development of various short and long term projects. As many as 130,000 new jobs, they point out, have lately been created, and orders worth millions of marks placed by government departments.

The ministry of transport announced recently that in the second half of 1958 alone its contracts for building and supplies amounted to DM 226.5 million (compared with orders worth DM 61.6 million placed in West Berlin and DM 4.3 million in Wilhelmshaven). The ministry of defence has come to the rescue with barrack building at Roding, Cham, Schwandorf and Amberg, as well as with an order for several million shoulder straps that can be made fairly quickly in small tailors' workrooms, or even at home in return for 44 pfennigs a pair.

PRIVATE enterprise is also playing its part, though doubtless with a patriotism at which La Rochefoucauld would have looked askance. Taking advantage of the cheap labour and timber, a Westphalian furniture manufacturer has established a branch factory near Regen, which claims to be turning out 200 cupboards daily. At Pleystein, four miles from the Bohemian border, a Berlin woman has 200 needleworkers embroidering clothes and gewgaws that sell profitably in Paris, London and New York.

Long-term projects include extensive electrification (though power will always be dearer in Bavaria than in the Ruhr so long as it is derived from coal) and the promotion of a summer and winter tourist industry through the building of hotels, swimming pools, and ski lifts. It is also hoped that the eventual completion of the long-awaited Rhine-Main-Danube canal and ancillary waterways will, by cheapening transport, attract new industries to the area.

Continued from page 938

failure of political manœuvre. By their arrogance and complacency in the months immediately following the union, they caused a general ganging up against themselves. Conservative politicians, such as Nazim al Qudsi and Rushdi Kekhia, who discredited themselves by their passivity in face of the Baath-Socialist advance two years ago, are beginning to stir again.

It is certain that the Baath-Socialists received no help at all from President Nasser. For more than a year, he has been showing impatience with Haurani's personal ambitions, and he suspects, with some reason, the sincerity of the Baath-Socialists' renunciation of political activity. Colonel Abdul Hamid Sarraj, who still stands like a rock at the heart of the Syrian scene, has also thrown his weight against the Baath-Socialists. Like President Nasser himself, he leans towards the monolithic state, with a minimum of political nonsense. Thus from all sides the once dominant party, which spearheaded the movement towards union, is being made the scapegoat for the failures of union. It is doubtful whether it will ever recover.

Although all sober Syrians admit that the union has fallen short of expectations, there is still no thought of a breakaway. President Nasser's prestige is virtually untouched, and it is characteristic that all the opponents of the Baath-Socialists, except the Communists, are appealing to him to curb their influence. In this respect, political considerations will probably always outweigh questions of material benefit. The fact of union, hasty and improvised as it was, is of such central importance in Arab political opinion that its dissolution is unthinkable. Turning back the clock, even it if it were possible, would be rated a disaster comparable with the loss of the Palestine war. It would certainly kill all thought of Arab unity for a generation, and seriously weaken the Arab nationalist front against communism.

The question of diplomatic relations with Britain stirs little interest in Syria. Such issues are now decided in Cairo with little reference, one suspects, to Syrian views, if any. In that respect, Damascus is now a mere provincial capital; in others, it is the same well laid-out and well administered city that it was before the union. One sees reason to believe that the Syrians learnt from the French the secret of carrying on with the day to day business of government, irrespective of storms in the political stratosphere.

IRISH NOTEBOOK—I

The Irish Look Abroad

BY OUR SPECIAL CORRESPONDENT

ACCORDING to one eminent authority on Irish politics, the only difference between Fianna Fail and Fine Gael, the government and principal opposition parties in the Dail, is that the leaders of Fianna Fail turned up at the funeral of Henry Harrison, the last surviving member of Parnell's immediate entourage, a few years ago, while the leaders of Fine Gael did not. As with most Irish funerals, there was more to this than met the eye. Parnell, a Protestant, died under the ban of the Catholic Church, having been an adulterer. Only Fianna Fail felt it could afford to put his services to Irish nationalism first.

Without wanting to make too much of a merit of an independence of the Church which is only a matter of degree, it is also true to say that under the present De Valera-Lemass regime there has been no episode to resemble the repudiation by his colleagues of Dr Noel Browne, a minister in the previous inter-party government, at the command of the Hierarchy. But then Fianna Fail's skirmishing with the Church has not been over social policy but in the somewhat safer field of foreign affairs.

During the first of the three United Nations General Assemblies which Eire has so far attended since its belated admittance, the Fine Gael minister for external affairs in the inter-party government took Cardinal Spellman's Catholic whip without a murmur. Great was the consternation in American Catholic circles when his Fianna Fail successor, Proinsias Mac Aogáin (known to outsiders as Mr Frank Aiken), came to New York with ideas.

His was the original plan for a non-nuclear club. He expounded a European disengagement plan of his own, and, blackest of all crimes in Cardinal Spellman's political calendar, he voted against the United States in favour of discussing the admission of Red China. Through the medium of the Oriel Society, which circulates articles in American Catholic journals abroad, the Irish church received and reproduced the transatlantic party line. The political opposition was a little slow in fixing on this Catholic sense of outrage as a political issue, but in the recent session of the Dail Mr James Dillon, the Republic's finest practising orator who was formerly an independent but has now joined Fine Gael (much to its advantage), worked himself up into a fine froth. Celt for Celt, Mr Dillon outdoes, in his vituperative assaults on Irish foreign policy from the right, anything Mr Bevan can manage in attacking British foreign policy from the left. "It is the cracked obsession of our minister that he has perennially to give a demonstration of his independence at the UN headquarters at New York," Mr Dillon proclaimed, "that betrays him into some of the foolish activities in which he is engaged . . . . I think he is inept, vain and stupid and this thing is becoming a gross abuse . . . . I am asking who is going to be left whose face we have not slapped?"

Completely unabashed, Mr Aiken is planning to go to New York with a much more fully worked out plan than before for a non-nuclear club. The nuclear powers (among whom Mr Aiken appears to number France) would undertake not to impart their guilty knowledge to those at present innocent, who would in turn promise not to receive it or to seek to acquire it on their own.

Under Mr Aiken's tenancy, the elegant house on Stephen's Green given to the ministry of external affairs by the head of the Guinness family has become a centre for the fermentation of ideas by some of Eire's ablest intellectuals; they, not having very much day-to-day diplomacy to handle, have the time to think about the larger questions.

But there is of course one very pressing practical diplomatic problem. What is Eire to do about the "inner six" and the "outer seven" of Western Europe? In the metaphor of Mr Norton, who is leader of the Irish Labour party and one of the Republic's top company directors, this is the iceberg that threatens to catch Eire in a pincer movement. Joining the common market without Britain is out of the question. In a good year the tourist traffic and other invisibles enable Eire to balance its sterling and dollar accounts. But, as the recent abortive trade negotiations with France brought home, common market countries are not prepared to buy from Eire goods to the value of a quarter of what they sell there. What, then, about the outer seven? The Irish understandably hesitate to join a system that will remove the massive props that just hold up their fragile, painfully constructed wisps of industry. There only remains the present desperate hope that a third way out can be found in a special side-deal with Britain.

(To be concluded)

Japan in the Thaw

FROM OUR CORRESPONDENT IN TOKYO

EVEN the hint of a thaw sent conservative Japanese politicians scurrying for communist visas. True, Mr Kono had revealed his itch to visit Mr Khrushchev in the Kremlin, and Messrs Ishibashi and Matsumura had accepted Chou En-lai's invitation

to Peking, before Laos and Ladakh entered the big headlines. Nevertheless the way in which they succumbed to summiteering fever is perhaps not a bad sign of the political turbulences that might follow a real melting of cold war ice-caps—not only in Japan.

Mr Ishibashi, during his short premiership that preceded Mr Kishi's regime, showed lively interest in Japan kissing and making up with China. Now he says he wants to discover if a deal can be worked out on the basis of the acceptance of both the Russo-Chinese security treaty and the United States-Japan security treaty "in the interests of Asian and world peace." Eleven other Liberal-Democrats, led by Mr Kenzo Matsumura, will follow in Mr Ishibashi's footsteps in October, which is also the month during which Mr Kono proposes to proceed to Moscow to buttonhole Mr Khrushchev. If Mr Khrushchev should ask Mr Mikoyan who Mr Kono is, Mr Mikoyan will now be able to reply that he is the leading Japanese politician who has gone on record that ten years is far too long for a revised United States-Japan treaty and that three years would be quite enough. In a real thaw, it seems, Mr Kono would be capable of fast footwork.

Mr Kishi and his foreign minister, Mr Fujiyama, have politely opposed no obstacles to these pilgrimages. But their real feelings are not in doubt. Despite what seemed to the Japanese to be an official British disclaimer, Mr Kishi still believes Mr Macmillan gave him an approving nod with regard to his attitude towards China. This is to wait for the Chinese to display genuine friendliness before Japan makes further overtures for improved relations. As the Chinese propaganda machine is at present attacking the Kishi administration as "the most reactionary in Japan's entire history," Mr Kishi feels he may have to wait a long time. In any case he believes that Japan will be in a better position to talk to China after and not before a revised United States-Japan security treaty has been signed and ratified, and that the same applies to any talking with Russia. The visits of Messrs Ishibashi, Matsumura and Kono are therefore judged to be ill-timed indeed, since the treaty negotiations are still in a delicate stage.

The Socialists, who are opposing treaty revision, have also been affected by the thaw. They are demanding that the treaty should be abrogated, but their more responsible leaders are well aware that simple abrogation, even if it could be achieved, would leave an awkward vacuum. Therefore they have been arguing vaguely that abrogation should coincide with a non-aggression pact embracing Russia, China, Japan and the United States. This suggestion of a conditional abrogation greatly annoyed Japan's powerful left wing labour federation, Sohyo, which is rather heavily infiltrated by Communists and had already been irritated by the Socialists' refusal to make common cause with the Japanese Communist party. The "thaw" prompted Sohyo to pass from mere verbal criticism of the Socialists to punitive measures. Why should the Socialists attach any conditions whatever to abrogating the treaty with America, when Mr Khrushchev had just explained that abolishing American bases abroad was the sole requirement for ushering in universal brotherhood? In high dudgeon, Sohyo withdrew its traditional financial backing from the Socialist party (though it managed to stop short of switching its funds to the Communist party, whose membership is miniscule). The Socialists in consequence have been thrown into even more confusion than usual, with the right wing attacking Sohyo as communist-dominated, and the left wing threatening to purge the right wing for having sabotaged peace by offending Sohyo.

Mr Kishi may thus take some consolation for the disarray in his own ranks by contemplating the greater disarray in the ranks of the Opposition. But the revision of the security treaty still confronts him with a formidable job of salesmanship. About half the Japanese people are completely apathetic on the issue and the other half are fairly evenly divided for and against revision. The government is clearly anxious not to throw the apathetic half into the ranks of the anti-revisionists, which would probably happen if Japan appeared, as a result of revision, to have taken an unambiguous stand as an ally of the United States in the Far East, with corresponding military obligations. The government therefore is trying to sell the treaty revisions by explaining what they will *not* do rather than by indicating what they will do. But these negatives have themselves to be qualified. Nuclear weapons will not be introduced into Japan—without Japan's consent. Japan will not be involved in a war because of the treaty—unless an enemy of the United States attacks American bases in Japan, which the government says it would regard as an attack on Japan.

EVEN right wing Socialists agree that to abrogate the treaty without making other arrangements would mean going backward; but to revise it means going forward to what? No one seems quite to know. The Japanese government wants to send 500 young men to the United States in the next two years, for training in the use of Nike and Hawk missiles. By 1965, it is planned to increase the strength of the army by 30,000 men, to 190,000, and to have a stronger air force, including jets. The Japanese navy is to concentrate on submarine-hunting, and keeping an eye on Vladivostock. The role of the army apparently would be to hold Hokkaido against a Soviet attack, until American help arrived. The Socialists view these proposals as getting the worst of both worlds, as calculated to attract communist lightning, possibly nuclear, without adequate means of defence against it. This leads them to suspect that the government does not really intend to linger at such an unsatisfactory halfway house, but is plotting to push on despite all official denials with a missile programme that would be non-nuclear only at the start. The Socialists are also alarmed by a government plan to jump the army reserve from 15,000 to 80,000 men, claiming that such a big increase is being made so that the government can get tough with dissenters while it proceeds to tear up Japan's anti-military constitution. One army unit has already clashed with farmers protesting against the building of a jet base: it is the first time that Japanese soldiers have clashed with civilians since the war ended. Any continuation of thaw weather looks like being good for appeasers but bad for base-builders.

Mackenzie and Company Limited, whom our correspondent described in the article "The Bodegas and the British" (*The Economist*, August 29, 1959, page 652) as operating "both in Spain as producers [of sherry] and in London as agents," point out that in fact they operate as principals both in Jerez and in London.

A tale of Twenty-two Cities

From Tunisia to India, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today. Tunisia, Libya, Lebanon, The United Arab Republic, Syrian Region, Abu Dhabi, Iraq, Jordan, Saudi Arabia, Kuwait, Bahrain, Qatar, Muscat and Oman, Dubai and Sharjah, Aden and India: these are the territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, *The British Bank of the Middle East* can give you the reliable help and advice you need.

THE BUSINESS WORLD

Lombard Street after Radcliffe

This is the first of several articles reviewing at greater distance the consequences of the Radcliffe report on financial institutions and on the technique of monetary control. A reconsideration of the report as a whole will be published after the three volumes of evidence, expected in October or November.

THE London discount market has emerged from the scrutiny of the Radcliffe committee with its colours still flying and with only a minor reservation entered against its record. If in market circles this achievement has been greeted with relief, in some others it has evoked mild surprise. Any intermediary organisation having highly specialised functions in the world of finance is liable to present a target for ill-informed (and sometimes ideological) criticism. The discount market in recent years has not only had its full share of attacks of this kind, but has also been assailed from time to time by technical arguments which have questioned its whole *raison d'etre* in the modern world.

In the days when London was beyond question the world's premier financial centre, it used often to be said that virtually the only unique part of its financial equipment consisted of the specialised discount houses, acting as intermediaries between the commercial banks and the sellers of bills, and between the banks and the monetary authorities, and making a highly sensitive market in short-term funds. It was upon this unique contribution, so the argument commonly ran, that the technical superiority of the whole financial centre largely depended. In more recent times some commentators have turned this argument inside out, citing the uniqueness of the discount market as evidence that it is expendable. Why should London, no longer demonstrably supreme, need a specialised discount market that other major centres lack?

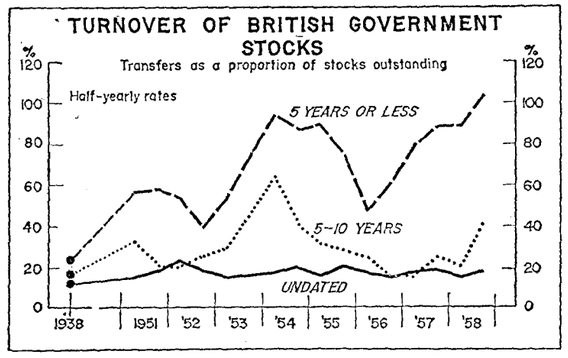
An obvious weakness in that line of argument is the fact that many other centres, in the Commonwealth and in Europe, have lately been assiduously and energetically copying this part of London's equipment. But that development, the more dogged critics have in effect replied, merely proves how uncritically (and perhaps how unwisely) the responsible authorities in these other centres have accepted the London tradition. The system of specialised intermediaries, they concede, played a major, indeed an indispensable, role in Britain's banking mechanism when banks were relatively small and localised and when a large proportion of domestic trade was financed by bills of exchange. They recognise, too, that even in the age of nation-wide banks and finance by bank overdraft the discount mechanism was vital to the strength of London's international equipment so long as the "bill on London" played a key part in the finance of international trade. But why, they ask, is this sort of mechanism deemed essential now, when the function of the commercial bill is greatly diminished and short-term government paper instead provides the basis for most of the liquid assets of the banking system and of the market's dealings?

Obviously, there is need to look again at practices and mechanisms that were created solely to meet the peculiarities of London's evolution, now that the special circumstances have passed away. For example, though there was justification for interposing a discount house between the lending banker and the seller of a commercial bill (whether the borrower or another banker), what is the case for putting a third party between the Treasury and the ultimate purchasers of its bills? How, in particular, can such a system be justified now that the twelve houses which comprise the discount market act in concert in their tendering for Treasury bills, and agree a uniform price for the bulk of their applications? Similarly, is it right to retain the unique access of the discount market to the central bank? It is through the discount houses alone that the Bank of England acts as "lender of the last resort" to make additional cash available to the banking system. Is there any good reason why the big deposit banks should not deal one with another in the short loan market, and have direct access to the Bank of England at last resort?

ALL these questions, and some more technical ones, lay behind the sense of uneasiness felt in Lombard Street in face of the Radcliffe inquiry. However firm the market's own belief that its functions are essential and its practices reasonable, it could not be sure that no radical proposal would emerge from the committee's investigations. Now these doubts are set at rest. The committee has not, indeed, accepted the traditional view of the role of the market nor does it endorse the arguments of the market's more enthusiastic advocates. But after what was clearly a penetrating and critical inquiry, it has said plainly enough that, save at one minor point, it does not wish to suggest any change.

This conclusion, it may be noted, was reached in spite of, rather than because of, a glowing tribute to the market from

the monetary authorities. The Bank of England, according to the committeee, combines a "paternalistic supervision" of the discount houses with a "conviction that the discount market operates with a smoothness and efficiency which no alternative mechanism could provide, and which is indispensable for the financing of the Government and for London's position as an international financial centre." For its part, however, the committee could not agree that the market is indispensable. "It would not," it said, "be beyond human ingenuity to replace the work of the discount houses"; but that work, it recognised, is essential work and if not done by them would have to be done by others. In its function as an ancillary to the domestic banking system the discount



market smoothes out irregularities in the ebb and flow of funds, simplifying the working of the banks and enabling them, "free from the embarrassment of temporary disturbances in their liquidity, to concentrate on their major task. . . ."

Similarly, the committee rejected the discount houses' contention that they are "virtually indispensable in covering the Government's temporary financial needs"; since total liquid assets rather than cash comprise the effective credit base, no inflation of credit would result from temporary Ways and Means advances from the Bank of England. The present importance of the discount houses, the committee reasonably points out, is rather in making "a highly efficient market in instruments which are very convenient to the Exchequer." As for the discount houses' newest function, that of providing jobbing facilities and a shock-absorber in short bonds, the committee emphasised that it is not true, as is sometimes supposed, that they succeed in maintaining an active bond market at all times; there have been moments, notably when the big banks have been heavy sellers, when the bond market has shown a tendency to "freeze up." But, the committee finds, the discount houses are unquestionably a "very important element" in the short bond market, adding materially to the marketability and (almost equally important) the "switchability" of bonds, and making banks and other institutions glad to hold them. Like the authorities and others who recognise the value of flexibility in the bond market, the commitee evidently feels that the discount houses might try to act more continuously as jobbers; but it is virtually admitted that they could not be expected to maintain a free market in all conditions. In adverse circumstances, or when the banks are heavy sellers, the ultimate shock absorbing mechanism has to be provided by the authorities themselves, via the operations of the Government broker.

On the value of the work of the discount houses in the international sphere the Radcliffe report has no reservations. It recognises, in particular, the importance of the flexible call loan market, which the discount houses provide, to the overseas banks in London. This "is indeed one of the attractions which have brought many overseas and foreign banks to London and keep them there." Hence "if" there is a national advantage in London's internationalism, there is "certainly advantage in having a small body of expert technical operators" functioning as do the discount houses—"at a trifling cost in terms of labour and other real resources."

THE Radcliffe committee's general approval, however, does not extend to the discount market's "restrictive practice" in tendering for Treasury bills (the phrase has no legal significance for the discount houses since financial institutions are exempt from the provisions of the 1956 Act). Even so, the committee is prepared to tolerate this practice—with the reservation that it should not be used to produce an "unwarranted fluctuation" in rates with the object of discouraging "outside" competition for the bills. Both the toleration and the reservation are a little surprising. Under the syndication system the discount houses tender separately for Treasury bills, but mostly at an agreed price and in amounts roughly determined by an agreed scale based on their several capital resources. The original purpose of this arrangement was to save the market from suffering irreparable damage (as distinct from marked contraction) in the abnormal conditions of the nineteen-thirties. The effects of the slump in its commercial business were then being aggravated by the rate-agreements of the clearing banks, which kept short loan rates artificially above bill rates.

Any conceivable justification for the syndicate on these grounds naturally disappeared as soon as the revival of "flexible" money in the 'fifties restored a rational margin between the two sets of rates. But by that time the syndication had become part of the system of "orderly" markets

that had been started after World War I (chiefly through the rate agreements of the clearing banks) and was consolidated during and after World War II. The discount houses had accepted responsibility for "covering the tender" by ensuring that their aggregate applications each week are roughly equal to the amount offered, thus relieving the authorities of any uncertainties in the placing of the bills.

In the absence of this system the authorities might find that, when Bank rate was expected to rise, they were themselves obliged to take up part of the issue—thus glutting the market with credit at the very time that the bill rate had been forced close up to Bank rate. The only way of avoiding such ambiguous tactics might be to raise Bank rate immediately to whatever extent was needed to convince the market that there would be no early need for a further rise. The syndication system can thus be regarded as a cushioning device that saves the authorities from compulsions of this kind, giving them more time to consider whether an increase is needed, and permitting more gradual adjustments of rates. A few years ago, when public opinion seemed opposed to the idea of abrupt movements, and very high rates seemed likely to be regarded as "unconscionable," there was therefore some case, in expediency, for the syndicated tender. But that argument now wears very thin. The lesson of the past few years surely is that monetary action needs to be swift and vigorous if it is to be effective. Official policy might well be better without the cushion.

The Radcliffe committee, oddly enough, does not make this point—possibly because it does not really attach much importance to short-term interest rates in any event. It does say that it would not be worried if the apparatus of cartelisation (including that of the clearing banks in their agreements on deposit rates and short loan rates) broke down, and it does not share the official fear that the resultant wider fluctuations in bill rates would damage the bond market. But at no point does it advocate more forthright use of Bank rate. Hence the syndicate, by a rather confused process of reasoning, gets a pass certificate. It "does work satisfactorily for the authorities"; there is "no ground for supposing that it provides, at Government expense, unreasonably high profits for market institutions"; and there is "no case for deliberately disrupting it." Presumably it can now be accepted as an established part of the market machinery. But the discount houses are left with no guidance on how to satisfy the committee's wish that the system should not be administered to the disadvantage of "outside" applicants for bills. The implication that the market may have to justify each change in its tactics is liable to make the system not less but more rigid. This would be hard to square with the committee's concern to keep it as flexible as possible.

The Anti-Dumping Game

Two years' experience neither proves nor disproves the need for this legislation, but it does suggest one weakness.

TWO years ago the British Government took powers in the Customs Duties (Dumping and Subsidies) Act to protect home producers against dumping and subsidised imports. Since then thirty-six applications for protection have been made and on only two occasions have special duties been imposed. The government said during the passage of the bill that it hoped the threat of action would often persuade offending exporters to mend their ways, and so it has done. Applications on French and Greek new potatoes, on butter and Russian aluminium have been settled without resort to duties. Indeed, the threat may have been used more often than official statements reveal, for the Board of Trade is obliged neither to advertise applications, nor to announce its findings or the action taken—unless it actually imposes an anti-dumping duty.

Of the other applications, the President of the Board of Trade recently said that those concerning lighter flints and lithopone were subsequently withdrawn, and applications against piperazine (a worm-killer) and maize starch were rejected because a case was not made out. Eleven applications were settled by agreement or rejected because of lack of evidence, and sixteen are still being considered. Four applications, on pentaery-thrithol (a chemical used in making paints) tartaric acid, sulphate of ammonia and sheepskins (from Hungary), have been advertised and the views of interested parties invited.

Firm conclusions about the efficiency of the Act, or the need for it, can hardly be drawn from the experience of the first two years. Whilst the record certainly does not point to a crying need for it, these were relatively prosperous years for world trade, unlikely to provoke much dumping or make British industry hyper-sensitive to it. This Act, when passed, was said to be part of the price British industry exacted for supporting the free trade area and tolerating the Restrictive Practices Act. So far, therefore, it can at any rate be said to have been half worth while.

IT is instructive, nevertheless, to look at the ways in which particular cases have been handled. The investigation of pearled barley from Germany and Holland revealed a classic example of dumping, of a kind that agricultural policy in some countries positively provokes. When German millers buy barley on the world market for processing into pearled barley for re-export, they are left with a high proportion of by-products that can be sold at home at prices which reflect the high fixed price for domestic barley. The windfall profits made on these transactions allow the miller to offer pearled barley abroad at a correspondingly cheaper price.

The Board of Trade found that dumping was being practised, and that it was causing "material injury" to British

millers. An anti-dumping duty of 12s. a cwt (in addition to the *ad valorem* duty of 20 per cent) was therefore imposed on German barley in May this year. The Dutch millers said that they were compelled to dump to keep a share of the British market, but they preferred to stop it rather than have an anti-dumping duty imposed.

Greek potatoes are sold at home at a high price, which enables the Greek marketing organisation to sell cheaply abroad. The Potato Marketing Board and the National Farmers' Union heard that Greece intended to send more new potatoes to Britain this season than last, and filed an application for protection though shipments had only just begun. The Board of Trade found that material injury was threatened. But before imposing an anti-dumping duty it asked Greece to restrict its shipments to 10,000 tons, with not more than 7,000 tons to arrive before the end of June, and the rest during July. The Greek government agreed, and no duty was imposed. Such requests are more effective on agricultural than industrial products, because agricultural exports are usually centrally controlled.

THIS same technique had been used successfully on a much broader front in May, 1958. An abnormal surplus of butter in Europe had depressed prices in the British market to a level that brought cries of pain from New Zealand, the main supplier. The government found that Sweden, Finland and Eire were guilty of subsidisation, but it did not find that British farmers were suffering, or threatened with, material injury (the fixed support price for liquid milk largely cushions a fall in prices of milk for manufacturing). And British housewives were not heard to complain about cut-throat competition in butter.

Nevertheless the government was sensitive to the decline in the purchasing power of one of Britain's best customers (and no doubt sensitive to political pressure as well); it chose to protect New Zealand's interests, as against the British consumer's. Apparently it paid little attention to the displacement of margarine by butter, and consequently to demand and prices for oilseeds from Nigeria and other Commonwealth countries. As it would not have been helpful to impose an anti-dumping duty, Britain asked the offending exporters to restrict their shipments to Britain. This step was embarrassingly effective: by December last year the restrictions had to be lifted to stop butter from becoming too dear here.

Shipments of Russian aluminium to Britain were also restricted in this way. In 1957/58 Russia was selling substantial quantities here at prices £10 a ton or more below the price fixed by the Aluminium Company of Canada, Britain's principal supplier, and the company applied for protection against the Russian agency Raznoimport. It cannot be easy to establish how a Communist country could be said to dump, but the Board of Trade apparently did so to its own (and certainly to Alcan's) satisfaction. Russia then undertook to restrict its shipments to 15,000 tons during the year ending September 30th this year, obviously to avoid an anti-dumping duty.

Applicants for this protection have often claimed that official investigation is too slow; for example, it took five months to collect and consider the evidence on pearl barley and lay the Order before Parliament. But it is clearly desirable that investigations should be thorough, and that these duties should be used only as a last resort. Britain is a leading exporter as well as a major importer, and if the government were to use these duties widely other governments, faced with applications alleging the dumping of British goods, might well be tempted to play tit-for-tat. Moreover, under this Act the British government must find material injury, not mere injury, and when it does so it must act in the broad national interest and conform to its obligations under Gatt.

The rules of Gatt require a finding of dumping to satisfy the test of "material injury," though the legislation of some countries, including the United States, does not yet bind their governments to find more than "injury." American authorities also have the power to suspend determination of the prevailing duty pending the outcome of an application. Suspension tends to disrupt trade in the commodity, just as the knowledge that an application has been filed is apt to do. The British government has no power of suspension, and it postpones advertising an application until it believes that a *prima facie* case exists. Nor can Britain make an anti-dumping duty retroactive. Overseas suppliers can therefore forestall an anti-dumping duty to some extent by speeding up their shipments to Britain.

WITH industries and indeed whole economies more and more tied into and influenced by government policy, dumping is not an imaginary evil, though industries affected by strong foreign competition are always liable to sense it more often than it really occurs. When it does, industries now have a right to protection; but so does the public, which fairly often suffers, as consumer, though it rarely has the opportunity to weigh the merits of an application. In the case of butter, exceptionally, the facts were well known beforehand, and as it happens the government's decision in that case was well short of impeccable. In general the evidence for and against an application is revealed only to the Board of Trade, which does not publish it: neither the public nor Parliament are told much of the facts, even afterwards. Labour, if anything, tends to be even more tender towards protecting industry at home than the Conservatives: so far the opposition has seldom tried to elicit all the facts on anti-dumping action that ministers might have been willing to reveal.

It is seldom easy to obtain detailed evidence and the Board would no doubt claim that if it had to publish, little evidence would be forthcoming. British manufacturers would certainly be chary of revealing details of their costs and other operating information that might benefit their competitors, as Americans have to in seeking protection from the US Tariff Commission. There is no reason to believe that the administrative decisions made in the Board of Trade will generally be unduly soft towards industries here and in the Commonwealth at the expense of the consumer; but as a rule few people will be in a position to know. Two years of anti-dumping legislation cannot be said, on examination, to have injured the British consumer much. But they have not removed the strong case for making public both sides of each argument about dumping, if not always of the government's reasons for its decision. And if more publicity made manufacturers wait for a more conclusive case before complaining it would be all to the good.

BUSINESS NOTES

THE CONSERVATIVES AND INDUSTRY

Filling Unemployment Pockets

THOUGH the Conservatives are proposing to repeal all existing Distribution of Industry legislation and replace it by a single new statute affording "stronger, swifter, and simpler" powers to persuade industry to move into places where unemployment is or seems likely to become high, the changes in effect that they seem to have in mind are mainly matters of detail. Power to deal with local unemployment wherever it happens to occur already exists under the 1957 Act, though the single statute outlined by Sir David Eccles this week would presumably remove the now largely meaningless distinction between the development areas and "development places" assisted outside them. Industrial development certificates would continue to be required for building all new factories and significant extensions to existing ones, which would maintain the Government's negative power to stop industry going where whitehall does not want it to go. The Government would publish a single list of places (presumably including whole areas as well as smaller pockets of unemployment) into which it would like industrialists planning new factories to move. As well as building factories for rent to industrial tenants cajoled or pushed towards these places, the Government would take power to make capital grants amounting to 75 per cent of the difference between the cost of building a new factory there and the open market value when completed. The Government would take more power than it now has to clear sites and demolish buildings to make these places more attractive to new industry. And all aid for factories, plant and machinery offered in these places would be brought under one administration within the Board of Trade.

These changes seem to be mainly matters of tidying up, some of them derived no doubt from suggestions made this summer by Mr Douglas Jay (who is however predictably and emphatically dissatisfied with this Conservative gloss). They make no difference to the principle underlying such Government aid, and would indeed here and there enable it to be administered more flexibly. The principle that work should be taken to the workers when the social cost of moving capital is significantly less than the cost of moving labour is generally accepted; it is the difficulty of identifying and measuring social costs, and the readiness of both political parties to vie with each other in finding places that might like help, that make particular acts of persuasion or subvention based upon it often questionable. But this is not the only kind of assistance to industry that the Conservatives have in mind. They undertake to "play their part in assisting the aircraft industry to expand its sales," and have committed themselves in principle, while seeking independent advice on the details, to see that trans-Atlantic liners shall be built to replace the Queens.

Crossing the Atlantic's Palm

SELDOM, perhaps, can the election manifesto of any party have promised financial aid to a particular private firm, in the confidence that this firm's activities lie so close to the electorate's heart that assisting it can actually attract votes. The Conservatives have however pledged themselves to see that two new Cunarders shall be built to replace the Queen Mary and the Queen Elizabeth, which the Cunard Steamship Company has already explained would need financial assistance in building if not also in operating the new ships. Lord Chandos and two other distinguished men, however, have in the meantime been appointed as a committee to examine Cunard's proposals, their advice being presumably concerned mainly with details of how the promised finance should be forthcoming.

On the principle that what is good for an Edwardian is good for the secondary modern boy, the aircraft industry was not long in publishing its own claims for government aid. These had been submitted to the Government in mid-summer, but the summary of those claims recently circulated by the Society of British Aircraft Constructors to its members and now made public shows that they extend well beyond the provision of the risk capital that the private market is reluctant to supply. The industry says that governments, through political and defence policies, have frightened private risk capital away from the aircraft industry; *ergo* it is up to governments to make good the deficiency. The SBAC is deliberately vague about whether its members want to go back to the conditions of the early 1950s, when the Government provided all money for all civil development; whether they merely want to be able to borrow from the Government when necessary on much the same terms as the nationalised industries; or whether they feel aid should be confined to commercially unremunerative projects such as supersonic airliners. But it is more explicit about the kind of after-sales service that the government should provide once it has put up the money.

This appears to include a measure of direction to the air corporations and the services about the type of aircraft they should invite the industry to develop, measures (unspecified) to expand the home market, and active steps to turn the airlines and the services into a proving ground for new civil aircraft. All this, in the industry's view, will require changes in government organisation and the creation of something suspiciously like the frequently mooted "Lord Air," to co-ordinate matters dealing with aviation—the SBAC calls him a "focus of authority." If this is in fact what the SBAC has in mind, then it must be prepared for people, if not parties, to say that this is too high a price to pay for the possession of an aircraft industry.

FINANCE MINISTERS CONFER

Preparing for Washington

THE annual meetings of the International Monetary Fund and the World Bank which open in Washington on Monday week have had their expected auspicious prelude. Sufficient member countries have approved the proposed increases in their subscriptions for these to become effective. Authorised capital of the World Bank has been increased from $10 billion to $21 billion; increased subscriptions amounting to $8.8 billion had been received by September 15th. All but a small part remains uncalled; the purpose has been to provide the basis for a continuation of the Bank's borrowing on its own bonds, designated for the most part in US dollars and therefore requiring an increase in America's guarantee. No announcement from the Fund has yet been received in London.

The meetings will this year be preceded, instead of followed, by a gathering of Commonwealth finance ministers. This will take place in London at Lancaster House early next week. The Chancellor of the Exchequer, Mr Heathcoat Amory, will take the chair; but the pull of the general election will prevent him from going to Washington for the Bank and Fund meetings. The United Kingdom delegation will be led by Sir Roger Makins.

The Commonwealth gathering will be

the first meeting of ministers of the Commonwealth Economic Consultative Council, which was set up after last year's Montreal conference. Four main questions are likely to dominate the present discussions: the prospects of world trade, the balance of payments of the sterling area, the present state of Europe's free trade negotiations and, inevitably, capital investment in the underdeveloped countries. These talks should lead logically to the discussions at the Bank and Fund meetings, where the formation of an International Development Association and the acceptance by member countries of the obligations of convertibility under Article VIII of the Fund, will probably be the major topics.

The Commonwealth ministers ought certainly to be prepared for requests to be made in Washington to a number of member governments, including the United Kingdom, for a final abandonment of the shelter of discriminatory restrictions under the transitional Article XIV. This request is likely to be made to all member countries which last December made their currencies freely convertible for non-residents. If Britain pays for German or Italian cars or textiles in sterling which can be freely converted into dollars, what justification can there be for maintaining discriminatory restrictions on imports of such articles from dollar countries?

IN THE MARKETS

Ticking Over

SINCE the beginning of August prices of common stocks on Wall Street have fallen by 6¾ per cent from their peak; an already vulnerable market could not shrug off the rise in interest rates. But for the political factor, the London market might have found it more difficult to ignore the weakness of the New York market. With all hopes focused on October 8th, however, equity prices in London are still less than 1¼ per cent below the peak they reached at the beginning of September. After last week's excitement it was only natural that some investors took their profits, especially in steel shares, but there were buyers ready to absorb the stock on the first day of the new account when the public opinion polls showed that the Conservative lead was not being narrowed. Investors remained cheerful, though without committing themselves too deeply, and sterling remained firm, in spite of the further rise in the United States Treasury bill rate.

Investors have been bombarded by appeals for new money by companies obviously anxious to get their new issues and placings out of the way in case the opinion polls turn out to be false prophets. The hire-purchase finance houses are among those who have reason to fear a squeeze on their resources if a Labour Government came to power. Mercantile Credit has raised £2½ million by an issue of 6½ per cent preference shares and Astley Investment Trust is to raise just under £800,000 by placing privately 800,000 preference shares, also with a coupon of 6½ per cent, at 19s. 3d. each. Banks have an equity interest in both these houses and it would seem to be in their interests to keep the ratio of ordinary capital to borrowings as low as possible. On the other hand, Bowmaker, in which Lloyds Bank has a shareholding, has taken the decision to raise £2 million of new money by a rights issue of ordinary shares. But its hire-purchase business has practically doubled over the last twelve months, from £22½ million to over £40 million, and the terms of the issue are so generous that Lloyds Bank and other shareholders should have no hesitation in applying for the 1,614,000 new ordinary shares of 5s. each offered in the ratio of one for ten at 25s. Profits before tax have more than doubled, from just over £1 million to £2¼ million, and through the payment of a final dividend of 17½ per cent (for which the new shares will rank) the total distribution has been raised from the equivalent of 13¾ per cent to 25 per cent. The old shares were immediately marked up 38s. ex rights, to offer a yield of 3.3 per cent. The right to subscribe, politicians as well as investors will note, lapses on October 7th.

If Labour Wins . . .

A Job's Comforter

PRECIOUS few investors, at home or abroad, expect Labour to win. The traditional bolt-holes such as Kaffirs and dollar securities are having no special attraction; forward sterling is at a premium. But investors ought still to be prepared, even as an outside chance, lest their judgment and that of the pollsters proves to be wrong. No one, indeed, can predict with certainty what the impact of a Labour government on the markets would be. Experience in 1945-51 has limitations as a guide for the 1960s.

Ordinary shares as a whole would presumably be subject to two contrary influences. More inflation would drive them up, at least in the medium term before a major crisis necessitated drastic action; and they would presumably be driven up, too, by buying of shares for a State insurance fund. Equities would be depressed, on the other hand, by a generally less sympathetic attitude to business. Discrimination against profits and dividends would have an immediate impact; and at the best, a Labour government would be less likely than a Tory government to continue the process of easing the tax burden on middle and upper incomes. A capital gains tax would certainly discourage profit-taking, but in doing so it would cut into an important section of the demand for equities. The effect of physical controls is uncertain; if they were a substitute for higher interest rates their general effect on equities would not necessarily be harmful. On balance, Labour would probably be bad for equities if it were both tough on general policy and nasty to investors, but if it were only nasty, equity prices might rise.

Obviously the effect on ordinary shares would be uneven. Most openly vulnerable would be *steel* shares, some of which are now more than twice their price of issue on denationalisation. But *property* shares might also be very badly hit, by renewed rent restriction and possibly by building controls. The same would apply to other fast-growing companies that would fall under Labour's castigation of "spec. finance." Capital issues control would probably return. *Insurance* shares might lose some of their recent shine, as a result of a much more formidable State scheme, and a less favourable climate for investing their funds. *Banks* might be hit by curtailment of their newly won freedom. The same might be true of *investment trusts* and *unit trusts*. *Hire purchase* finance might also be subject to renewed restriction; and the finance houses would suffer too from any slackening in the *consumer goods* trades.

A Labour government would try to put more emphasis on investment; and while it might have difficulty in coaxing private firms to venture their money, public investment will almost certainly rise. The effect of this would presumably be to favour the *heavy industries*, especially those supplying the public industries, at the expense of consumer goods. Other possible beneficiaries might be industries in such difficulties as *aircraft* and *textiles*, which might extract even more money from a Labour government than a Tory one (though with more onerous conditions).

Gilt-edged would presumably fall immediately in the event of a Labour victory; their subsequent course would depend closely on the fate of *sterling*. The basic question would be whether the Labour Chancellor was tough enough to *maintain* financial stability. If he was, gilt-edged might be steady at not far off present levels, and the short-dated bonds might even rise if Bank rate were kept low. But it is difficult to see a Labour Chancellor engineering a general rise in the market, which would have to absorb heavy demands for new money.

PROPERTY SHARES

A Scare in the Market

WIDE diversity in the yields on property shares shows that investors who are closely in touch with this volatile and speculative market have been sorting the geese from the swans. Property empires, strong on paper, have been built up. The ultimate security of these empires depends on the ability of the financiers to let fully at economic rents the properties they have bought and developed at high—and possibly in some cases inflated—prices. The danger is that ambition can stretch the financial backing to the limit—and beyond. The share market is therefore vulnerable to the sly word and the rumour.

Some eyebrows were raised a few weeks ago when City Centre Properties (which this week raised its ordinary dividend from 6⅔ to 13⅓ per cent, putting its 5s. shares at 6os. on a yield basis of 1⅛ per cent) acquired Eron Investments, with which Mr Felix Fenston is associated. But the property share market remained on an even keel and it gave a thundering welcome to the issue by City and Central Investments of 5s. ordinary shares at 25s. each. The magic of the name of Mr Charles Clore and the fact that the properties the company is developing will be fully let prompted an over subscription of almost 35 times. Dealings began at 28s. 6d. and selling by the stags was easily absorbed.

On Wednesday afternoon, however, the market was shaken by rumours of trouble in the property companies controlled by H. Jasper and Company, a concern that has been extraordinarily active in acquiring property companies for cash. Lintang, which owns the flats in Dolphin Square, was one of its purchases and more recently it made a cash bid for Ely Brewery. The jobbers quoted only nominal prices. At one moment on Thursday Lintang shares, which had been quoted on Tuesday at 24s. 3d., were priced at 15s. nominal. A statement was expected from Mr Jasper on Thursday morning but it had not been published when *The Economist* went to press on Thursday afternoon. Before the market closed the jobbers indicated some willingness to resume dealing, quoting Lintang at 18s. and Palmerston at 37s. 6d. The property share market had had a bad scare; it is too early to judge whether it faces anything worse.

OVERSEAS TRADE

Summer Slackness

AUGUST is a slack month for British overseas trade; it is the seaside, not the ports and the factories, that works full time. With this big seasonal variation, the recorded trade figures lose much of their significance. Last month British imports dropped even more sharply than exports, and the apparent trade deficit narrowed by over £15 million to £40½ million. Imports were £305 million cif, nearly £48 million smaller than in July. Comparison with a year ago is not helpful, because the 1958 figures, particularly for exports, were distorted by a dock strike. A more useful guide is given by taking the April-August period: during these months average imports were 4½ per cent higher than in the first quarter of 1959, and the average for the first eight months, at £322½ million, was five per cent higher than a year ago. Exports in August fell by £32½ million to £255½ million fob. The monthly rate for April-August was 5½ per cent higher than in the first quarter of 1959, but the average for the first eight months—£272.3 million—was only three per cent higher than a year ago. Re-exports were £9.3 million, the same as in July.

Exports to the United States remain buoyant. Shipments in August dropped slightly by £1.8 million to £29.8 million, and the average for the first eight months, at £29.8 million, was no less than 40 per cent higher than a year ago. Beside this expansion the growth in exports to Canada looks trivial. Shipments to Canada in August fell sharply by £5.4 million to £14.6 million, and the average for the first eight months, at £16½ million, was only four per cent bigger than in the same period of 1958.

BUILDING

Work in Progress

IN the second quarter of this year building contractors in Britain obtained orders totalling £381 million, as compared with £386 million in the first quarter, according to the Ministry of Works. In both 1957 and 1958 there was a fall in contractors' new orders between the first and second quarters of about 10 per cent; the fact that orders remained virtually unchanged throughout the first half of this year may well mean that constructional work will be maintained at a high level during the third quarter, and possibly longer. At first sight this does not square with the reported drop of 10,000 in building and contracting employment during July; one possible explanation advanced by the Ministry of Works is that, though building workers are theoretically counted as employed during their holidays, many employers do not record them as such—especially when they take their holidays between jobs.

Orders for new houses amounted to £165 million, a drop of £18 million compared with the first quarter which was shared equally between public authorities and private developers. This figure is nevertheless higher than in any other quarter in the previous two years; roughly three-fifths of the total is accounted for by private developers' orders. The Ministry notes that the figure for housing orders includes the estimated value of all the houses to be erected on sites where development started during the quarter; some of this (possibly an increasing part) is speculative building which may never materialise.

Orders for public authorities' work other than housing continued to rise, by £6 million, to £103 million. Private industrial building orders also increased, to £57 million, compared with £51 million in the first quarter and £46 million in the second quarter of 1958. Other orders in the private sector were virtually unchanged, at £56 million. The Ministry notes that a number of large contracts are included in the figures for the second quarter; it is thus possible that "non-housing" orders in the present quarter will fall slightly, though the actual volume of work in progress would not be affected.

A Record Year Overseas

IN the year ended last March, British contractors completed construction work overseas valued at more than £120 million—an increase of some £6 million over the previous year and the highest value since the Ministry of Works began estimating the turnover of overseas contracting five years ago. New contracts obtained overseas during the year totalled £115 million, a drop of £4 million from 1957-58; but the value of work outstanding at the end of March was nearly £124 million, slightly more than it had been a year earlier. The slight fall in new contracts obtained may be in part the result of fewer very large contracts being placed during the period, and thus may be made up in next year's figures; a similar fall occurred in 1956-57, the Ministry states, which was compensated for in the following year. Very large contracts play a substantial part in overseas contracting, which is necessarily concentrated among about 60 large firms; these firms were active, during 1958-59, in 65 different countries.

The geographical composition of contractors' overseas order books changed considerably during the year: the value of new work obtained in both the sterling and dollar areas fell by a total of £17 million. Contracts obtained in non-sterling OEEC

countries remained unchanged in value, and the only rise in the value of new orders came in other non-sterling countries—virtually all of it accounted for by Iran and Brazil. Within the Commonwealth the amount of new construction work done during the year generally rose slightly; but with the exception of Fiji and Pakistan, the only increases in new orders came from Commonwealth countries in Africa, the largest being in Nigeria. In Canada, which accounts for almost all of the dollar area construction work, there was a slight drop in new contracts and an even smaller rise in work completed—to a total of £31 million—resulting in a fall in Canadian work outstanding on contractors' books of about a sixth, to a total of £20 million.

NATURAL RUBBER

Anglo-American Sales

After months of uncertainty the rubber market learned on Tuesday that the United States government has 470,000 long tons of natural rubber to spare in its strategic stock, and is to sell it over the next nine years. In the afternoon, for good measure, the market learned that the British government is to sell all the rubber in its strategic stock—about 100,000 tons—over a period of years. The American decision had been largely discounted; the British one apparently came as more of a surprise than it should. But the reaction was moderate: prices in London fell by about 1d. to 30d. a lb. for October-December delivery, and by Thursday, when the news had been more fully digested, prices closed at 30½d. a lb., showing a fall of ¾d. over the week.

The average rate of disposal by the United States is roughly 50,000 tons a year. The government now has authority to sell some old rubber without giving the six months' notice of intent required by the stockpiling law, and is offering 40,000 to 50,000 tons before June 30th. Disposal of the remaining 420,000 tons requires Congressional approval, and notice has already been given. Britain's arrangements will be completed after the governments of Malaya and other producing countries, and the trade, have been consulted. Sales are unlikely to start before the latter part of next month, because the rules of Gatt require 45 days' notice to be given. If the British government follows America's example and spreads its sales over nine years, it would sell at an average rate of roughly 10,000 tons a year; the combined offering would thus be 60,000 to 65,000 tons a year, which is equivalent to only three per cent of world consumption of natural rubber, and to less than two per cent of total consumption of natural and synthetic rubber. This year the world will use at least 65,000 tons more natural rubber than it produces.

Actual rates of disposal cannot be fixed. Both governments are pledged to avoid undue disruption of markets, which may well mean offering at an above-average rate when prices are high as well as a below-average rate when prices are low. Britain, and perhaps the United States too, may set a floor price to their sales; if they do, it ought to be announced. Though traders will not feel entirely happy about the discretion that officials will have, some discretion, carefully exercised, is preferable to a rigid sales programme. The sales should help to keep rubber prices within a narrower, and somewhat lower, range, and that should be in the rubber growers' real interest. The big premium that natural rubber has been commanding over synthetic will hardly help them in the long run.

ALUMINIUM FOIL

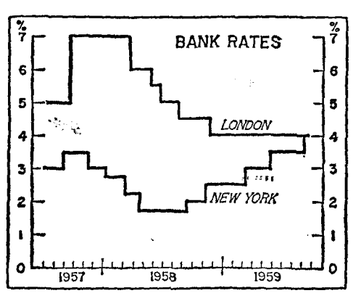
Venesta Sells Out

Confidence that Europe, a decade or more behind the United States, may be on the verge of a similarly rapid growth in consumption of aluminium seems to have been the main reason why the American producing groups began to consolidate their positions in Britain last year; the process is still going on. Through Northern Aluminum the Canadian producer, Aluminium Limited, had already established itself; Reynolds Metals in partnership with Tube Investments won control of British Aluminium early this year; and less than six months later ICI and ALCOA became partners in Imperial Aluminium. The shape of the British aluminium industry has been radically altered and to keep a firm grip on profit margins at all stages of production in the competitive struggle that lies ahead, integration has become the order of the day. The balance within the industry has now been tilted again by the decision of Reynolds-TI to purchase for £5 million the whole of the aluminium foil division of Venesta.

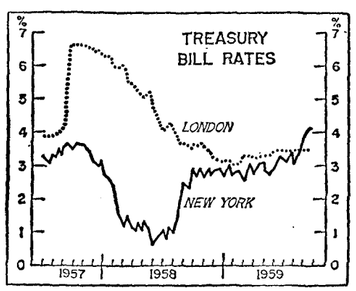
Having acquired the small aluminium foil producer, Acme Tea Chest, late in 1956, Venesta is responsible for about 40 per cent of the total output of aluminium foil in this country (which is currently running slightly above the 22,000 tons produced last year). The bulk of the remaining output is split between Star Foil, a subsidiary of the Swiss Aluminium Union, and Fishers Foil, an independent, family controlled concern. Venesta, in addition, is the sole producer of aluminium foil in India and it has a small factory in Ceylon as well. Recently it has been adding to its capacity in anticipation of a substantial increase in the demand for light gauge foil for packaging purposes; it has drastically reorganised the foil business of Acme Tea Chest (which is now earning a small profit); and it has reorganised its own sales department with the purpose of promoting new products and new outlets.

Reynolds Metals is already, through its promotion drive in the American market, the biggest producer of aluminium foil in the world and in association with Tube Investments it was anxious to integrate this side of the business completely with its other aluminium activities in this country, where it believes that the use of aluminium foil in packaging has been far from fully exploited. Reynolds-TI already had a 26 per cent holding in the equity of Venesta, but that was simply an investment with no managerial ties and integration without full control was impossible. Reynolds-TI was thus a willing buyer. Venesta at the same time was willing to sell—at a good price—for two reasons. First, without the backing of a primary producer the days of the indepen-

NEW YORK ABOVE EUROPE



The Federal Reserve made its expected increase in the discount rate from 3½ to 4 per cent last week, and immediately afterwards the rate on three months Treasury bills topped it, at 4.17 per cent; 26-week bills were sold at 4.80 per cent. As a result of the larger differential over money rates in Europe, the discount on the forward dollar has widened, to ⅜–½ cent against three months sterling. The forward margin has for some months remained close to its interest parity, a sign that dealers are taking no speculative positions either way.



British Banking in Asia

These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. An effective credit information service and skilled assistance and advice are available to United Kingdom merchants and manufacturers seeking new business connexions in Asian markets.

New airports depend on TeamWork

New developments in aircraft, and the rapidly expanding volume of air traffic, demand new and ever larger airports. The Taylor Woodrow organisation has many years experience in this field of construction and has been able to make its own specialised contribution to the development of modern air travel. Not only in the successful completion of world famous projects as London Airport Central but also in its work for the Service Departments and for countries overseas. Among its current contracts, Taylor Woodrow (in association with D. B. Waite Ltd. of Auckland) is engaged upon the reconstruction of Nandi International Airport, Fiji, for the New Zealand Government. This includes the construction of runways, aprons and taxiways; the building of administrative offices and the new control tower and the installation of water supply and sewage systems. Taylor Woodrow's world-wide reputation for meeting the standards all clients require—in quality, economy and speed, is firmly based on the spirit of teamwork that inspires the entire organisation.

lent re-roller of aluminium stock into foil seemed to be numbered, for one way or another the big producers were prepared to tuck the aluminium foil business in Britain under their wing. Secondly, with the advent of the Restrictive Trades Practices Court the power of the British Aluminium Foil Rollers Association to peg prices and to protect the small producers had been diminished.

Without Foil

BRITAIN is the only significant aluminium-producing country in which the foil industry is not owned or controlled by the primary producers and the directors of Venesta were quick to spot where the logic of the changes in the structure in British aluminium industry was pointing. There had been rumours in the stock market for some time that Reynolds-TI was interested in Venesta and its £1 ordinary shares had been bid up to 79s. 6d. It came as a disappointment to some speculators that the whole of Venesta was not being taken over and the price fell at one moment to 76s. 3d. But the indications of how Venesta was likely to shape without its foil interests were such that the price immediately recovered to 79s. Of the £5 million received from the sale of the aluminium foil division, £1,625,000 will be distributed in a tax free distribution of 20s. on each ordinary share.

Venesta's profits have made a good recovery this year and its ordinary dividend is to be raised from an annual rate of 12 to 15 per cent so that ex-foil, which in the past has produced about half the net profit, the dividend will be covered nearly twice by earnings. The surplus cash arising from the sale and the unissued shares of the company will be used to acquire new enterprises, not too violently divorced from Venesta's established interests in plywood, tea chests, collapsible tubes and metal-faced plywood and containers. Once Reynolds-TI has control of the aluminium foil division, it will sell its ordinary shareholding in Venesta; the orderly marketing of this line of shares could take the form of direct sales to institutions and individuals or perhaps more likely a rights issue to all ordinary shareholders.

MOON ROCKET

On Target

RUSSIA'S Lunik made a far smaller disturbance among the dust layers of the moon than it did in the breasts of Western scientists. V-2 designer von Braun's caustic comment that the Americans, when they got into space, would be met by Russian customs officials is fairly typical of the reaction provoked among rocket engineers by this now conclusive evidence of the standard of reliability of rocket components that the Russians have achieved. This is by no means the first attempt that the Russians have made to hit the moon—there are stories about five earlier attempts. Two near misses by the Russians and the Americans are on the record. But this time the Russians were dead on target, indicating that every valve and switch and gyro, every rectifier and condenser were working properly. This is still sufficiently unusual in rocket engineering to arouse considerable envy even among engineers whose main job is to make a rocket hit Moscow, not the moon (in terms of power required and payload, the two are much the same). It is components, not the basic design, that bring so many rockets to grief.

It would be a pity if jealous admiration for Russian rocketry were allowed to obscure the genuine scientific interest of the flight. For the past year, the moon has been the centre of acrimonious controversy between the majority of astronomers who regarded it as a dead lump of rock and an unrewarding object of study, and a minority who remained convinced that it was not wholly inert. Russian reports of a volcano seen erupting on the moon shortly before Christmas revived the old controversy and the moon rockets, with their instruments for recording the presence of a magnetic field on the moon, provide the one means for finding out.

The various instruments that have been launched into space in the past two years have shown that a good many of the predictions made about space and the atmosphere have been wrong or at least inaccurate, proving that in science there is no substitute for direct observation and experiment—even if it has to be by proxy. But rockets, especially Russian ones, still carry a very small number of instruments on each flight and the telemetered results take a long time to work out. Virtually nothing is known about the scientific findings of earlier Russian moon shots, and Western scientists may have to wait a long time before they know what this latest package discovered on the last few miles of its journey. The next American shot is due in a fortnight; if it succeeds in orbiting round the moon as planned it will put the Americans level in moonmarksmanship in time for the President's visit to Russia. And science may discover what lies on the dark side of the moon. In their present mood, American rocket engineers would not be surprised to discover a colony of kulaks.

ATOMIC ICEBREAKER

Another Soviet First

THE atomic-powered icebreaker Lenin which left on its maiden voyage in the Baltic this week is the first surface ship to be driven by atomic power and the only one to date in which the application of atomic power could be justified on "commercial" grounds. Nuclear power for shipping shows no prospect of becoming economic without a radical advance in reactor design to evolve types that do not exist yet even in prototype form. The Russians have never claimed that the reactors in the Lenin would be competitive with ordinary marine power units in normal shipping operations. What they have said is that atomic power, applied to a highly specialised ship like an icebreaker, has advantages that to them outweigh the extra costs of motive power by giving it substantial operating advantages over a conventionally-powered vessel. Bunkering icebreakers in the Arctic is a hazardous and expensive business. The need for frequent bunkering restricts the operation of icebreakers to a narrow coastal strip, and because captains are afraid of running out of fuel and getting stuck in the ice, they tend to use the icebreakers well below their capacity. This fear of losing power and becoming iced in has left its marked on the Lenin, which carries three reactors, one held as a spare. On this basis, the Russions claim that it can cruise for a year without returning to port, and with it they hope to be able to keep a sea route to Siberia and the North open all the year round.

Construction of the Lenin began in the Leningrad shipyards in 1956 and it was launched at the end of 1957. Displacement is 16,000 tons; with 44,000 horse power, or 2.57 horse power per ton of displacement (this works out, on Russian figuring, to 1½ times greater than the "specific capacity" of other icebreakers) the Lenin is the most powerful ship of its type and its beak-shaped bow is designed to be 15 per cent better at breaking ice than other ships in the Soviet fleet. There is nothing novel about the ship's reactors themselves; they are cooled and moderated by ordinary water, using uranium in ceramic form enriched to the high degree of 5 per cent. The designers say frankly that the phenomenal cost of bunkering conventional icebreakers has enabled them to be thoroughly extravagant in their use of nuclear fuel and still come out with a credit. There is no indication of what the Lenin cost to build, and if American experience with nuclear submarines is any guide, the price must have been a high one. But the ship is described as the forerunner of a fleet of nuclear icebreakers that will be able to keep open the sea lanes far into the Arctic and this, for any ice-bound nation and not only for the Soviet Union, is an achievement of considerable practical importance.

ELECTRIC LAMPS

Light Bulbs are Cheaper

LED by the General Electric Company, British lighting manufacturers this week announced price cuts ranging from nine up to 26 per cent on a wide range of electric lamps. As a result of the latest reductions, a 100-watt tungsten-filament bulb formerly

costing 2s. 2d. will now sell for 1s. 8d., and a 150-watt bulb for 2s. 3d. instead of 3s., including purchase tax. The announcement by GEC—the largest single firm in the industry—was followed almost immediately by Philips and Crompton Parkinson; AEI, Stella Lamp, Siemens-Edison Swan, Atlas, and Ekco-Ensign all followed within a day. Atlas is owned by, and Ekco-Ensign is an associate of, Thorn Electrical Industries. A much smaller group of price cuts was announced by the industry last February, and a month ago the prices of certain sizes of fluorescent tubes was also brought down, though by smaller amounts. The latest reductions—coming at the beginning of the industry's peak selling season—cover a much wider range of lamps than is normally the case, from 25-watt up to 500-watt sizes.

The proportionate reductions on 100-watt and 150-watt bulbs are almost certainly the biggest price reductions made anywhere this year. In announcing them, GEC was entitled to mention the recent pleas of the Chancellor of the Exchequer and the Cohen Committee for lower retail prices. Improved production methods, following the installation of new equipment at GEC's Wembley works, where its "Osram" bulbs are made, were also cited. The average of the reductions announced is about fifteen per cent; but demand has increased substantially in recent years for the 100-watt and 150-watt sizes, thus presumably making possible greater economies of scale and hence greater cuts in their prices.

SCOTTISH BANKS

The National Commercial

THE merger of the National and the Commercial Bank of Scotland became effective this week; and a number of branches will shortly be closed. The new bank, under the dynamic chairmanship of Mr Ian Macdonald, will be a strong power in Scotland, accounting for perhaps 30 per cent of banking business there. Together with Lloyds Bank, it also has a large stake in hire purchase, including important interests in South Africa and other parts of the Commonwealth. Mr Macdonald expresses his anxiety to get wage earners into the bank. A small special survey made by the bank showed that wage earners were put off mainly by a feeling they were not wanted and by inconvenient banking hours; surprisingly few were worried about the cost of maintaining an account—but perhaps still fewer realised what that cost is. The bank hopes to see some move on hours, such as opening on one evening a week, "within a measurable period"; but it would move only in concert with the other banks in Scotland.

The merged bank is proudly issuing some new bank notes; though customers of the Commercial Bank, to whose £1 notes Bank of England fivers bore such a startling resemblance, will not be deprived of their opportunities south of the border. The Scottish banks are hurt by the Radcliffe report's reference to their note issues as an "oddity." More detached observers in Scotland find it difficult to see why the committee was prepared to see the oddity continue. The committee's recommendation that the Scottish banks should publish their monthly figures is likely to be met soon, at least on a collective basis for the Scottish banks together.

FROZEN FOODS

Price Cuts in the Freezer

THE reductions in the prices of quick-frozen peas, broad beans and spinach that took effect this week were primarily the result of bumper crops of very high quality, though lower production costs and some measure of competition also played their part. Birds Eye Foods, which accounts for about three-quarters of the estimated £36 million worth of quick-frozen foods which will be sold in Britain this year, was the first to announce lower prices, and the few manufacturers who also produce these vegetables quickly followed suit: quick-frozen peas are reduced from 2s 2d to 1s 11d for a 10-ounce package and 1s 3d to 1s for a five-ounce package; broad beans come down from 2s 8d to 2s 5d and 1s 6d to 1s 4d, and chopped spinach falls from 1s 1d to 1s for a five-ounce package. Peas and broad beans together account for over a third of all sales of quick-frozen foods; the present prices are the lowest at which these vegetables have ever been sold.

This year's excellent harvest, besides lowering "raw material" costs to the industry, made lower prices desirable on other grounds that are perhaps more compelling: the desire to avoid carrying over any of this year's crop until next year. Quick-frozen foods must be stored at zero Fahrenheit, and carrying over large quantities is expensive; accurate forecasting and steadily rising demand have in recent years kept this to a minimum, however. Birds Eye expect that their sales will rise by as much as 40 per cent this year. Total sales of quick-frozen foods in Britain now account for only about three-quarters of one per cent of total food sales, compared with about four per cent in the United States.

The process of quick freezing foods in 1½ hours, against 7-8 hours by earlier methods, was first developed by Clarence Birdseye in the United States in 1929. In 1943 Unilever obtained the rights to process and sell quick-frozen foods under the Birds Eye name in Britain; production of six items began in Yarmouth in 1946. Now the company sells forty items, including fruit, poultry, meat and pastries in addition to vegetables; it is expected that more than 64,000 shops will stock the company's products by the end of the year. Foods such as peas, broad beans and fish, in which the "wastage" factor—the amount of inedible shells, bones and so forth accompanying the raw product—is 50 per cent or more are naturally the most popular with housewives; these items probably cost little more frozen than fresh. A lack of refrigeration in both homes and shops has hindered the growth of sales in the past, but this has become a smaller problem each year.

Besides Birds Eye there are about half-a-dozen British companies of moderate size in the industry, including Eskimo, Smedley, Frood (a division of Lyons) and Fropax, as well as the Swedish firm, Findus; there are also a large number—perhaps as many as one hundred—smaller companies, most of whom produce only one or two different "speciality" foods, such as chicken or meat pies or shell fish, which they sell through wholesalers, usually only in their own area.

PACKAGING

Sawdust and Tinsel

THE Sixth International Packaging Exhibition, held last week and this at Olympia, gives a good indication of the continued steady growth and changing shape of this industry in Britain, rather than revealing any substantial or surprising technical or economic developments. The investment and annual turnover of the packaging industry are difficult even to estimate; the number of exhibitors however has increased by half since the 1957 show, and the display of packaging materials, methods and machinery has grown—in area—at an even greater rate. Every branch of the industry is represented, from heavy steel drums and giant corrugating machines to toothpaste tubes and pill-bottles (and pill-bottle capping machines); what is immediately noticeable about this year's exhibition is the increased emphasis on elaborate packages, for all kinds of goods, incorporating some degree of point-of-sale advertising. This has naturally increased cost in many cases to the point where a talcum-powder can, for instance, may now cost three times as much as its contents; there appears to be little indication, however, that demand for

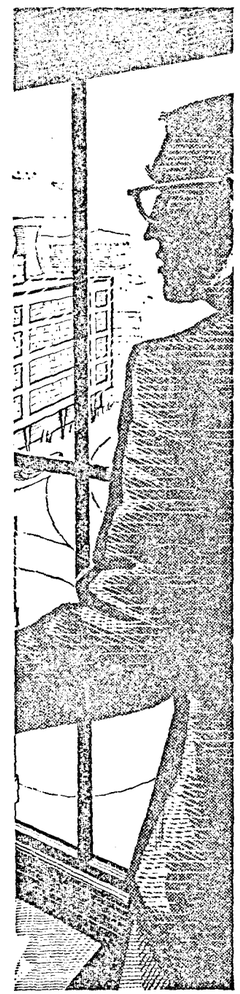
An industrialist tells . . .

How I looked the place over with a burglar's eyes



Some months ago, my brother's house was burgled. Although he lost nothing, the thieves made a thorough mess of his wife's bedroom.

More recently still, a small fire broke out in the works. Nothing serious, but some work-tickets were burnt. And they caused more disruption than the fire itself.

That set us thinking. One's insurance takes care of stolen silver or burnt-out machinery, but it can't cover effects like these. Multiply them to a larger scale fire or burglary, and you're in trouble.

So we took a hint from our insurance people and sent for the Chubb Survey Service. And, my word, they showed us about twenty places where a burglar could enter blindfold. It was almost easier to open some of our safes illegally than with the keys!

Chubb also went over our fire precautions for documents and records, and they turned in a first-class report on the whole fire and burglary state of the firm.

Since they make special equipment in that line for almost any purpose you can think of, we're well protected now. But are you? A Chubb survey won't cost anything . . . but, believe me, it stands to save you a lot.

Write for a Chubb Survey to:

Every Monday a Sudan Airways VISCOUNT 831 (maintained and crewed by Airwork) will fly from London to the Sudan. **This is the only air service to cater specially for the Sudan.** Passengers who wish to break their journey at Rome, Athens, or Cairo may do so* and continue their journey by the next plane at no extra cost. The return flight from Khartoum will be on Thursdays. **VISCOUNT comfort . . . Rolls-Royce Speed.**
The latest Viscount—the 831—is larger, much faster and even more luxurious than its predecessors. In a perfectly relaxed atmosphere, you can eat and drink, read and talk (nearly everyone on board will have a common interest in the Sudan) or simply sleep, lulled by the soothing hum of the four Rolls-Royce jet-prop engines. An unusual feature of this flight will be a Free Information Service on all matters relating to Sudanese business, political, and social life. This will be very helpful to newcomers and to those returning after a long leave of absence. If you have business in the Sudan, ask your travel agent about the new Blue Nile Viscount.

such containers is anything but increasing.

Plastics continue to play an increasing role in packaging of all kinds. This is especially true in the case of food—where the majority of all goods bought are still not pre-packaged—and there is a wider range of plastic-wrapped frozen food (packaged by the manufacturer or processor, as distinct from the wrapping of fresh food done in supermarkets).

In the field of rigid and semi-rigid containers, plastics seem chiefly to have replaced glass, although in some cases they have taken the place of cardboard or even metal containers. Polyethylene is the most widely used plastic, though both polystyrene and polyvinyl chloride are becoming increasingly common. The growing use of plastics—with its corollary, the replacement of returnable containers by throw-away packages—clearly will become even more widespread in the future. So far there has been little mention of one potential problem which this trend poses—the difficulty of destroying plastic packaging materials, some of which resist all but the strongest acids and will only burn completely with great difficulty.

WOOL & WOOL TEXTILES

Advance Peters Out

THE latest advance in wool prices has quickly petered out. The new selling season opened strongly last month, with prices at the Australian auctions about 12½ per cent above the previous season's close. But by the end of the first week prices had eased, and they finished about 10 per cent up. Since then the market has fluctuated within a narrow range, neither rising enough to encourage a big volume of buying, nor falling enough to frighten buyers away. Nearly all the wool offered has been sold, and this week, with sales in Australia, South Africa and London, there was plenty to be had. Continental countries and Japan appear to have been the most prominent buyers, with Eastern Europe active at times and Bradford, normally the biggest buyer, content to bide its time. In Yorkshire, and to some extent on the Continent too, manufactures are well sold forward and well covered with purchases of raw wool or products, and so can afford to buy sparingly for some time. But people are never short of reasons for not buying, and "'tis the election," Bradford says now, that is partly to blame.

Whatever the result of the election, the British wool industry may feel kindly disposed towards Mr Macmillan for one piece of good news this week. After repeated British protests, and the Prime Minister's personal plea to President Eisenhower during their recent appearance on television, the American government has announced that it will re-negotiate the tariff-quota on wool textiles. This restricts imports of wool fabrics at normal rates of duty to five per cent of United States domestic production, and imposes a duty of 45 per cent on imports in excess of it. This year the quota was set at only 13½ million lb and was filled on May 18. Britain argues that it discriminates against its speciality fabrics, because these must be delivered to meet the fashions of the season, whereas the "bread-and-butter" lines of Japan and other countries can be shipped at any time. But though the American government evidently thinks now that Britain has a case, it may be at least a year before a less objectionable form of protection is adopted.

CLIVE DISCOUNT

Last of the Line

DEALINGS began on Friday in the 1,200,000 £1 ordinary shares of Clive Discount Company, the youngest member of the Discount Market Association, and until the end of last month was the only remaining private discount company. David A. Bevan Simpson and Company, the brokers, have purchased 300,000 of the shares and have placed them privately at 34s. The remaining shares have been made available to the market at 34s. 3d. a share. In line with other bill brokers, Clive Discount's profits have recovered sharply from the 1956-57 setback; from £64,000 before tax they shot up to £281,000 last year. In making comparisons with other discount houses, it should be remembered that many of these show only a portion of their profits in the shop window.

Clive's average profit before tax over the past eight years of £178,000 compares with an annual average of £87,000 in the period 1949-54. The directors say that earnings since March 31st have been "satisfactory," but it is too early to give a reliable forecast for the whole of the current year. On the basis of the expected 10 per cent dividend the £1 ordinary shares at 34s. 3d. yield 5.8 per cent—a higher yield than is offered by any of the other eleven discount houses. This company has still some way to go before it has built up a strong reserve position comparable to that of the other members of the discount market.

RAW SUGAR

Recovery at Last

SUGAR, a sickly commodity for most of this year, has recovered at last. Between January and July the spot price fell by a quarter to 2.55 cents a lb; since then it has been rising at an accelerating rate. This week it touched 3.17 cents a lb, thus just re-entering the range set by the international sugar agreement. Several factors have helped to push prices up. Russia took some of the pressure off Cuba by buying 170,000 tons from that country, and the Sugar Council did its bit by letting exporters carry forward into 1960 up to 10 per cent of their current quotas. Then traders, particularly in the United States, started to pay more attention to the growing prospect of a smaller European beet crop this year. Finally buyers began to feel more confident about Cuba's selling policy.

Once begun, the recovery fed on itself. The volume of business has increased, especially this week. France alone has bought 250,000 tons of raw and refined sugar to offset the drop in home production; Japan has been buying again and Russia has taken up its option to buy another 40,000 tons from Cuba at the attractive price of 2.71 cents a lb. By now Cuba may have less than 250,000 tons of its 1959 export quota to sell and by the end of the year should have no need to carry forward any sugar from its 1959 quota (though it will still have a large stock). The Sugar Council, after repeatedly protesting that world prices bore no relation to the real balance between supply and demand, must be delighted to see its view vindicated at last.

AIR FARES

The Next Cut

AIRLINES converging on Honolulu this weekend for their annual tug-of-war on fares have to decide whether the 20 per cent fare cut that has proved such an outstanding success on the North Atlantic is to be extended to other routes next spring—and if so, where. Since third-class fares were introduced on the North Atlantic in 1958, all but eight airlines have ceased to fly tourist on this route. Not many passengers are prepared to pay £4 an inch for the five extra inches of legroom that makes up the only material difference between tourist and third-class standards. The long-range airlines have to balance the drop in revenue per head that would follow an extension of these third-class fares against their stimulating effect on traffic and the fact that under the "economy" label they can squeeze more passengers into the same space.

The airlines' anxiety to make the cut depends on whether they expect a big increase in capacity next year. Thus BOAC and the American airlines that pioneered the third-class cuts on the North Atlantic are going to press vigorously at Honolulu for their extension; BOAC in particular wants to introduce them on the African and Far Eastern services to employ aircraft, including Comets, that will be displaced from the North Atlantic by the arrival of the corporation's Boeings. And hanging over the corporation, like the sword of Damocles, is the request submitted by the independent airlines last spring to run services to several points in Asia and Africa at fares 50 per cent lower than present tourist rates. Airlines with fewer empty seats to fill are expected to put up stiff opposition to the proposed fare cuts but may agree to

the decent burial of the token surcharge now imposed on jet flights over the North Atlantic.

On short flights, and especially inside Europe, there is virtually no prospect of introducing third-class services this coming year. There is already little material difference between the standard provided on tourist flights now, and that prescribed for the cheaper flights. Thus the airlines would have great difficulty in packing any more seats into their short and medium-range aircraft and the introduction of third-class flights, for which BEA is asking at Honolulu, means in effect a straight fare cut of 20 per cent without any compensating increase in seats carried. Even BEA could not face an overall fare cut of this order and the corporation has, surprisingly, shown its hand in advance by describing the selective cuts on certain difficult routes for which it is prepared to settle. For such experienced poker players as BEA's Honolulu delegates, these unusual tactics suggest a desire to keep fare reductions this year down to the minimum needed to encourage lagging traffic. Next summer should be a good one for bargain hunters.

OFS DIVIDENDS

Little Interest in Kaffirs

THE prolonged boom in the Kaffir market came to an end about three weeks ago. There is now very little activity in the London market nor, indeed, in Paris and the other Continental bourses. Even in the Cape interest has been sporadic and this week it was largely confined to the finance houses. In London one reason for this is to be seen in the preference for industrial equities, which has been stimulated by hopes of a Conservative victory. The Kaffir market was so neglected that it did not really cheer up even though there were no disappointments and a number of agreeable surprises in the dividends announced by the OFS producers. Most of the increases had been discounted by the market, although, for example, St. Helena's 1s. 9d. was better than the expectation of 1s. 6d.

OFS DIVIDENDS

	Mar., 1958	Sept., 1958	Mar., 1959	Sept., 1959
F. S. Geduld 5/- ..	2/-	3/-	3/6	4/6
Pres. Brand 5/- ..	2/6	2/6	2/6	3/-
Pres. Steyn 5/- ..	1/3	1/3	1/3	1/3
W. Holdings 5/- ..	3/-	4/-	3/6	5/-
Welkom 5/-	3d.	3d.	3d.	3d.
Harmony 5/-	1/-	1/-	1/11½	1/3
St. Helena 10/- ..	1/-	1/1	1/3	1/9
Blinkpoort 5/- ..	1/3	1/7½	2/-	2/4½

Among the leading mines, production at Western Holdings and Free State Geduld is consistently improving and President Brand (which has not yet reached its full tonnage) continues to make exceptional profits. But buying of Kaffir shares, which was not matched by big sales by the finance houses over the last twelve months or so, has brought yields down to a point where they are no better than those offered by stocks which carry smaller political risks. A Labour victory at the polls would revive interest in the Kaffir market while a Conservative victory might leave it still in the doldrums.

RAW COTTON

A Better Season

COTTON growers are looking forward to a better season, and they may well be right: it could hardly be worse than the one that ended on July 31st. Prices fell to the lowest levels for several years, with long-staple cotton suffering most of all. Consumption in Europe and Japan declined, though this was nearly offset by a rise in the United States. World exports dropped sharply, though here again some countries fared better than others. The United States was priced out of the market, its exports dropping by a half to only 2.8 million bales. But some exporters, particularly Mexico, Egypt and the Sudan, sold more cotton abroad, thus helping to maintain their earnings. As American exports sagged, buyers held off, anticipating an increase in the United States subsidy on raw cotton. An increase of 1½ cents to 8 cents a lb was duly announced, though it did not take effect until August 1st.

Before the season ended prices had recovered some ground, and they have recently held steady. Consumption of cotton is now increasing, and importing countries are likely to build up stocks. Buyers no longer expect the American export subsidy to be increased further; indeed many believe that towards the end of the season it may be reduced. Prices on the Liverpool futures market illustrate this confidence. American middling inch cotton for December-January delivery, which was quoted early this year at 18.6d. a lb, has since risen to 21¾d. a lb, and cotton for delivery in May, 1960 commands a premium. Yet Liverpool is still below parity with the theoretical American minimum export price, mainly because some American shippers are still offering cotton below that minimum.

But though the outlook is brighter, one cloud looms ahead. World output and consumption were in balance last season, so stocks remained low. This season American farmers have been allowed to increase output, raising about 14½ million bales, three million more than before. Output in other countries as a whole may decline, but not by enough to offset this increase. Even if United States exports rebound to five million bales, as officials now confidently predict, its carryover at the end of the season may rise by nearly a million bales to about 9¾ million. As no one expects American output to be cut back in 1960, it looks as if cotton is once more heading towards surplus.

WATER SUPPLIES

The Long Hot Summer

UNLESS there is substantial rainfall in the near future—in some cases within a few days—both domestic and industrial consumers in several areas in Britain will face a serious shortage of water. The two areas most seriously affected so far are Lancashire and North Devon; all water supplies to industry in several Lancashire towns have been cut. To date, only 15 of the 970 water undertakings in Britain have applied to the Minister of Housing and Local Government for "drought orders," or emergency extensions of their statutory powers of controlling water supplies; five of these applications have been granted, allowing the authorities involved to reduce the amount of "compensation water" that they normally supply to users downstream of their reservoirs. But several other undertakings have already notified the Minister that they are considering asking for emergency powers to deal with shortages; and an even larger group have imposed stringent restrictions on consumers or sought help from neighbouring undertakings with water to spare.

One of the greatest potential dangers to industry appears to be in the Tees Valley; at Middlesbrough, both Dorman Long and ICI's Wilton works face shutdowns if rain does not come soon. After October 5th industries in the area will receive an allowance of ten per cent of their normal demands for plant maintenance, and it is expected that this will last until November 13th; after that, unless there is ample rain, there will be no water available for industry. Elsewhere in the North farmers and domestic users are beginning to feel the effects of the drought; it is unlikely, however, that London will experience any shortage at all.

SHORTER NOTE

The World Bank has made its first loan for the development of nuclear power. It is lending $40 million to the Italian consortium building a nuclear power plant between Rome and Naples; fuel is to be obtained from the United States through Euratom. The total cost of the project is estimated at $66 million.

Searching for the right answer

Data processing continues to play an increasingly important role in the conduct of modern business. Punched card equipment, electronic calculators and computers provide more business information in less time than any other form of office machinery. Users of these methods have always known most about their business soonest.

The widened range of equipment of I·C·T, and its integrated technical development, is rapidly opening up new fields of application. Choice of I·C·T equipment ranges through punched card machines using 21, 40, 80 and 160 column cards—to small, medium and large electronic computers, employing combinations of punched cards, paper tapes and magnetic tapes.

Determining the optimum method of employing data processing equipment is a highly skilled task. I·C·T staff are experienced in these matters; their knowledge and experience have proved valuable to enterprises of widely divergent character and size, from firms employing under 20 people to corporations of international repute, local authorities and nationalised industries. They can help you.

If you think your research, production, marketing or financial affairs are capable of improvement there are well established reasons for believing that the combination of I·C·T staff, equipment and training will provide you with the right answer. We suggest you get in touch with us.

COMPANY MEETINGS

POWELL DUFFRYN LIMITED

A CREDITABLE PERFORMANCE IN FACE OF DIFFICULT CONDITIONS

The annual general meeting of Powell Duffryn Limited was held on September 16th in London, W1, Sir Henry Wilson Smith, KCB, KBE (the Chairman), presiding.

The following is an extract from his circulated statement:

In my Statement twelve months ago I emphasised some of the difficulties which were likely to affect our 1958-59 results, and as the Accounts disclose trading profits in 1958-59, after depreciation but before tax, were £1,513,000, a reduction of £318,000 on the figures for the previous year.

The Group's net profit after tax is very much the same as in the year before (excluding last year's special transfer of £150,000 from Taxation Reserves)—£1,076,000 compared with £1,064,000 in 1957-58.

Although there were certain special factors affecting particular companies in the Group the general background to the fall in trading profits is to be found in the unfavourable conditions which have affected coal and shipping activities throughout the year. Coal and shipping, taken together, still account for more than half of Group profits, so that we remain vitally concerned in their state of health.

STEPHENSON CLARKE COMPANIES

STEPHENSON CLARKE itself was much affected by the fall in seaborne coal tonnage and especially by the changing pattern of supplies for the electricity and gas industries.

A number of our coal carrying ships that have reached the end of normal economic service have been disposed of and the Company is now equipped with a fleet that is generally of the most modern and efficient design, a factor of the greatest importance in times of highly competitive trading conditions.

An event of major interest was provided by the first importation into this country of liquid methane for the Gas Industry, thus implementing plans laid and carried through by that industry in co-operation with American partners. The ship in question, the "Methane Pioneer," is being managed and operated, on behalf of its owners, by Stephenson Clarke.

ASSOCIATED COAL AND WHARF COMPANIES LIMITED, in which the Group holds a controlling interest, once again had a good year.

CORY BROTHERS' COMPANIES

The results of this part of the Group present a chequered pattern but do include some bright spots.

Despite current difficulties, earnings from shipping activities—as agents, charterers and brokers—still produce a useful income for the Group. I have no doubt at all that, as and when there is an upward movement in shipping business and freights, this side of our business will once more forge ahead.

Oil storage activities continue to develop satisfactorily. At home, the total operational tankage at Barry and Ipswich is now nearly 240,000 tons and we are already probing possibilities for carrying still further the development of this side of our business.

A year ago I mentioned the expansion of our agricultural equipment interests in South Wales. Further expansion has since taken place. In 1958, we purchased the agricultural machinery businesses of Moxhams (Newport) Limited and Western Motors Limited of Carmarthen. 1958 was a good year both for turnover and profit, and we look forward with confidence to even better results in the future.

Our world-wide selling agency for inflatable life rafts and other products of Elliot Equipment Limited, a member of the P. B. Cow Group, was much affected by the shipping depression and, at home, by the unwillingness of the Government to press for the immediate implementation of compulsory requirements for certain categories of ships. Even so, by now sales of Elliot life rafts, at home and abroad, by Cory Brothers have reached a substantial figure.

After reviewing the group's overseas interests, the statement continued:

TIMBER COMPANIES

The timber interests of the Group have been consolidated under PD TIMBER INDUSTRIES LIMITED as a direct subsidiary of Powell Duffryn. A year ago, I said that 1957 was not an easy year for the timber business. 1958 was even more difficult. Yet our home Companies importing timber and our overseas Companies exporting timber, and more particularly PD Scandinavian Timber Company Limited, succeeded in making reasonable profits.

At home, J. R. Gordon Limited, aided by a substantial reorganisation, has shown definite signs of improvement in its business. On the other hand, its principal investment—the insulation board mill at Queensferry, North Wales—has continued to be disappointing. We are now consistently producing a good quality and wide range of board. With the end of the credit squeeze and with many signs of a revival in building and constructional investment, I am hopeful that we are on the verge of better things.

Shortly after the end of the financial year, we extended our home interest in the importation and sale of timber by the purchase of Meggitt & Jones Limited, a firm of high standing long established in South Wales.

ENGINEERING COMPANIES

That CAMBRIAN WAGON & ENGINEERING COMPANY LIMITED failed to equal its record results of 1957-58 was entirely due to the policy and practice of the British Transport Commission. The repairing of railway wagons, at points other than the Commission's own workshops, has been severely cut, and the building of new wagons is almost at a standstill.

Faced with the present situation Cambrian has accelerated its non-railway activities and to mark the alteration in the pattern of its trading its name has been changed to "POWELL DUFFRYN ENGINEERING COMPANY LIMITED."

POWELL DUFFRYN CARBON PRODUCTS has had an interesting and encouraging year on the preparatory stages of its programme for machining Nuclear Graphite. It has received new orders for work in connection with the atomic power programme in addition to the work already entrusted to it by the General Electric Company for the Hunterston Station in Scotland. These contracts will keep the Company occupied well into 1961.

WEATHERFOIL HEATING SYSTEMS—pioneers in this country in Warm Air heating—has, since it became a member of the Powell Duffryn Group some years ago, greatly widened its activities.

RHYMNEY ENGINEERING LIMITED, owned jointly by International Combustion and Powell Duffryn, has found it difficult to expand its main business, which is with the National Coal Board. The current order book is, however, in reasonable shape.

POWELL DUFFRYN TECHNICAL SERVICES LIMITED has maintained its high reputation both in this country and overseas.

Commenting on the future, the statement concluded:

The Group continues to possess great financial strength. The development and expansion of activities which are appropriate both to us as a Group and to the unfolding pattern of industrial and commercial progress remains the main plank of your Board's policy and is well within our compass.

The report and accounts were adopted and the other business duly transacted.

CREPS AND TRAPSA

CREPS and its subsidiary TRAPSA, are issuing with the guarantee of their chief shareholders, Régie Autonome des Pétroles and Royal Dutch, a joint loan to finance the completion of the construction work on the pipe-line and the exploitation of oil deposits discovered in the eastern part of the French Sahara.

Taking into account the enormous difficulties caused by climatic conditions and the problems of transport and supplies in the remoter parts of the concessions, the achievements of CREPS constitute a record. The first oil to arrive at Edjeleh was on 6th January, 1956, i.e. two years after the beginning of geological research in this sector. Since then, several other fields have been discovered, the main one being Zarzaitine; which will start to produce at the same time as the Edjeleh field.

The reserves of petroleum which can be tapped are put at 150,000,000 tons and permit a forecast for 1961 of an annual output of 8,000,000 tons which will be raised in 1962 and 1963 to 10 and 12,000,000 tons respectively.

More than half of the wells necessary for this production have already been sunk: 131 out of the total of 243 envisaged.

TRAPSA has started work on the 24 in. pipeline which, with a length of 780 km, will connect the field and port terminal.

The work is expected to be finished by the summer of 1960 and 125,000 million francs will have been invested, of which nearly 50,000 million will be for the pipe-line and the remainder divided almost equally between the expenses of exploration and development.

"An enterprise firmly based in two of the greatest markets of the world – the British Commonwealth and the Common Market"

Mr. John Oldham, O.B.E.

IN his Annual Statement for the year ended March 31st, 1959, Mr. John Oldham, O.B.E., Chairman of Oldham & Son Ltd. – the battery, electrical, and mining equipment engineers, whose Annual General Meeting was held at Denton on September 16th – reports that "the year just ended has been characterised by a falling off in profits of the parent Company though our trading overseas has been substantially maintained".

Net profit of the parent Company for the year, before taxation, was £53,833 (against £164,295). As against this, the aggregate net profits of the overseas and other subsidiary Companies amounted to £234,177 (against £247,297). Final dividend maintained at 10%.

Board changes Mr. Oldham announces the retirement of Mr. S. J. Wrigglesworth, O.B.E., Deputy Managing Director, after 39 years' service with the Company, and the appointment of Mr. Orlando Oldham, M.A., M.B.A., as Assistant Managing Director. "Mr. Orlando Oldham first joined the Company at bench level in 1947 . . . I feel my son is well qualified to fulfil the responsibilities of Assistant Managing Director and to maintain the traditions of the firm." It is proposed that Mr. J. Dowse and Dr. C. D. J. Statham shall also be appointed to the Board.

Results Mr. Oldham attributes the setback in profits to factors "which have coincided and have reduced – temporarily, I believe – the demand for the Company's products in the home and export sections of the Mining Division and in the export section of the Battery Division".

Mining Mr. Oldham says that "the present position of the Mining Industry is well known", but points out that "Mining is still one of the largest staple industries in the world. Out of its long experience . . . the Company is well qualified to adapt and develop that side of its business".

Export business coming back Dealing with the reduction in the Company's automobile battery exports – "always a highly competitive business". Mr. Oldham says that action being taken . . . "will, I believe with reasonable confidence, be instrumental in recapturing the business".

Overseas Potentialities Mr. Oldham describes a round-the-world fact-finding tour which he made during the year, and reports that "I was once again most strongly impressed by the potentialities of these vigorous and thriving nations. I could not but be impressed and stimulated by the fact that the parent Company now heads an enterprise so firmly based in two of the greatest markets of the world – the British Commonwealth, and the Common Market. . . . This I regard as a real and stimulating responsibility".

Diversification by geography "It is by no means fortuitous that the overseas Companies have made so considerable a contribution to the Group's results at a time when in the Home Market we had new problems to face. It was indeed to meet exactly such eventualities as and when they might arise, that your Directors embarked 12 years ago upon a policy of investment and development abroad. Such a policy of diversification by geography, should in future play an increasing part in cushioning the results of the Group".

The Future — Confidence I regard the future with confidence . . . . I have no doubt that with the right men in the right places, with excellent products tailored to modern needs and with the latest administrative, technical and production techniques to support them both, our enterprise will continue to move from strength to strength as it has done in its past 90-odd years of trading".

OLDHAM AND SON LTD, DENTON, MANCHESTER
France · South Africa · Central Africa · India · Australia

SALTS (SALTAIRE) LIMITED

RECENT SIGNS OF IMPROVEMENT

The Thirty-sixth Annual General Meeting of Salts (Saltaire) Limited was held on September 16th at Saltaire, The Right Honourable Lord Wilmot of Selmeston, PC, JP, chairman, presiding.

The following is an extract from his Statement circulated with the report and accounts for the year ended March 31, 1959:

During the year under review we have been faced with many difficulties. Although the variation in wool values has been narrowed throughout the year, the price continued to fall, and at March, 1959, showed a decrease of 15 per cent for both Botany and Crossbred wool compared with March, 1958. This caused a lack of confidence on the part of our consumers, who based their requirements on a short-term policy, resulting in our machinery not being fully employed.

TRADING RESULTS

Profit on Trading of the Group for the year ended March 31, 1959, amounts to £656,539. After charging £317,000 for Taxation, the Net Profit of the Group amounts to £355,220.

Appropriations and Dividends.—The Board recommends a final dividend of 3½ per cent on the 7 per cent Non-Cumulative Preference Shares and a final dividend of 8 per cent on the Ordinary Shares. After charging also the Special Interim Dividend of 4 per cent on the Ordinary Shares for the preceding year there remains £66,386 to add to the amount to carry forward.

Consolidated Balance Sheet.—We have been advised that as your Company owns 75 per cent of the equity of Salts (Ireland) Limited of Tullamore, Co. Offaly, Ireland, it is technically a subsidiary although your Company does not have control. In these circumstances your Board consider that the accounts of Salts (Ireland) Limited should not be consolidated with those of the holding company and therefore a statement of the reserves and profits and losses attributable to the interests of the holding company is included in the Notes on the Accounts.

Concentration.—Your board decided on a policy of concentration, to enable the Group to attain greater efficiency in production. Under this policy, three mills have recently been closed and much of the machinery transferred to other mills, where it is now running.

FUTURE PROSPECTS

In view of the present unsettled conditions throughout the world and the prohibition or restriction of imports by foreign countries, it is perhaps unwise to forecast the future. Since the end of our financial year in March, there have, however, been signs of improvement. The advance in the price of wool since the lowest point has created greater confidence on the part of our customers, with the result that our machinery will be employed for some months ahead and running overtime, and the later prospects are encouraging.

Directors.—In October, 1958, a majority of the Ordinary Shares of your Company was acquired by Illingworth, Morris & Company Limited of Bradford, and on November 10, 1958, Mr G. R. Mackay and myself were appointed to the Board, and on December 17, 1958, Mr Maurice Ostrer joined us.

The report and accounts were adopted.

HANDLEY PAGE LIMITED

FIFTY YEARS OF AVIATION PROGRESS

The annual general meeting of Handley Page Ltd. was held on the 17th September in London. The following are extracts from the circulated review by *Sir Frederick Handley Page*:

Fifty years after Handley Page Ltd.—Britain's oldest aircraft company—was formed, it finds itself in a unique position among the country's aircraft constructors. With continued activity in our company's factories, an increased labour force has been required, and to this end a nationwide recruiting campaign for skilled personnel has been undertaken.

Production of our crescent-winged Victors for the Royal Air Force has been the primary activity of our Cricklewood and Radlett works. In service with Bomber Command squadrons, the Victor B1 is one of the principal instruments of Britain's deterrent policy. It is the Victor B1 that is still the largest aeroplane in the world to have exceeded the speed of sound. In parallel production, in response to substantial orders placed some time ago, is the even more powerful and refined Victor B2.

The private-venture Dart Herald—designed and produced at our subsidiary company's Woodley works—has shown its sturdy qualities in a series of world-wide demonstrations. All were carried out to schedule, a tribute to the reliability of both the aircraft and its Rolls-Royce Dart engines. These tours so far have taken the Herald to the Middle East, India, Pakistan, Ceylon and through the Caribbean and the various countries of South America. The Herald's quality has received official recognition by the placing of an order for these aircraft to operate on some of British European Airway's Scottish routes. Herald production is accordingly proceeding at Woodley.

In addition to Victor and Herald construction, our company has modified and reconditioned Hermes airliners for British independent operators and Hastings transports for the RAF. Under a new programme we are also converting Hastings for the training of RAF bomber crews.

As to the future, our company's research has been directed not only into the supersonic sphere but also towards the practical production of laminar-flow aircraft.

In conjunction with several other British constructors and establishments, we have investigated designs for supersonic airliners. A report containing our conclusions and recommendations is now with the Ministry of Supply.

Our research over the past years has shown that laminar-flow airliners will give hitherto unrealisable increases in range and load-carrying capacity with corresponding reductions in operating cost and noise.

These laminar-flow techniques are embodied in the H.P.113, a small jetliner for the transport of executives over very long distances at high speed. A comparison between this aircraft in conventional and laminarised forms shows to good advantage the substantial range benefit from the elimination of a turbulent boundary-layer airflow. It increases the maximum range from 3,800 to over 6,300 miles.

Our newly-formed commercial division—an insurance against possible future vicissitudes—has shown that our company's technological and engineering talents may be directed into rewarding channels if the demands upon its aircraft-producing capacity become fewer than at present.

NOTICE.

PROPOSED MERGER
OF
UNITED CORPORATIONS LIMITED

(incorporated under the Companies Act, Canada, on 6th May, 1933),

AND
LONDON CANADIAN INVESTMENT CORPORATION

(incorporated under the Quebec Companies Act on 8th May, 1928).

Particulars of the above proposed merger were mailed to Shareholders of all classes of stock of both corporations affected thereby under date of 31st August, 1959. The relevant material includes notices of meetings, to be held in Montreal, and relative proxy forms. The proposals require the approval of not less than three fourths of United Corporations Class "B" shares, not less than two thirds of United Corporations Class "A" shares, and not less than three fourths of each class of London Canadian Investment Corporation share capital represented and voted at such meetings.

Meetings of both Class "A" and Class "B" shareholders of United Corporations Limited, will be held on 14th October, 1959, and meetings of shareholders of all classes of London Canadian Investment Corporation on 15th October, 1959.

The proposals are recommended by the directors of the respective corporations. **Particular attention is drawn to the fact that certain meetings of London Canadian Investment Corporation require at least a majority of the relative issued share capital to be represented at the respective meetings. In the circumstances it is important that the relative proxy forms are completed and mailed promptly.** They may be lodged c/o Montreal Trust Company, at 67, Bishopsgate, London, E.C.2, as well as at 511, Place d'Armes, Montreal, Canada. To ensure arrival in Montreal in time for the meetings proxies should be lodged in London as soon as possible.

Additional copies of the material may be obtained from Montreal Trust Company, 67, Bishopsgate, London, E.C.2.

VENESTA LIMITED

As notified in the Annual Report for the year ended June 30, 1958, the Company's current financial period is for 18 months to December 31, 1959.

The Directors have declared a second interim dividend of 12 per cent, making 15 per cent for the twelve months ended June 30, 1959. They are expecting to make a final payment of 7½ per cent in respect of the last six months of the 18 months' period.

The net profit before tax shown by interim accounts for the twelve months ended June 30, 1959, was £825,000 compared with £583,092 for the year ended June 30, 1958. With the exception of an increase of approximately £100,000 in fixed assets, the Balance Sheet at June 30, 1959, was not materially different from that published for the previous year. Without taking into consideration the plans outlined in the succeeding paragraphs, profits are currently running at a rate of about £1 million per annum. In addition, changes in the accounting dates of overseas subsidiaries will bring into the 18 months' period non-recurring profits of about £150,000.

Following the Group reorganisation referred to in the Chairman's statement last year, it is proposed to reconstruct Venesta as a holding company carrying on business through operating subsidiaries.

One of these subsidiaries will take over the whole of the Company's foil business in the United Kingdom, India and Ceylon. Negotiations have been taking place with Reynolds TI Aluminium Ltd as a result of which they have signified their intention of making an offer to acquire the whole of the share capital of this new foil subsidiary for £5 million. The Directors of Venesta Ltd propose to accept this offer, subject to the consent of the debenture stockholders. They have thought it right to make their acceptance subject also to confirmation by the shareholders in General Meeting.

It will be part of any agreement between Reynolds TI Aluminium and Venesta that the conditions of employment of any Venesta management, staff and other employees in the United Kingdom and abroad who transfer their services will be fully maintained.

In reaching their decision to sell the foil business the Directors of Venesta were mindful that it is natural for the primary aluminium producers to wish to ensure an outlet for their production by closer control of the separate units of the foil industry. The United Kingdom is the only major aluminium consuming country in which most of the foil industry is not owned or controlled by primary producers.

The Directors believe that the foil industry will share fully in the prospective growth of flexible packaging, but in view of the world alignment of aluminium interests that is rapidly taking place, they are of the opinion that the full benefits can best be obtained by integration with a primary producer.

Throughout the negotiations the Directors have been advised by Mr Henry Benson of Cooper Brothers and Company.

Work is continuing on matters of detail and to satisfy legal and accounting requirements. This will take some weeks to complete, after which a full statement will be circulated to the shareholders calling the necessary meetings and outlining the Directors' plans for the future of the Company.

Tube Investments Ltd. and Reynolds International Inc, who together hold approximately 26 per cent of the ordinary capital of Venesta, have agreed with the Directors of Venesta not to exercise voting rights in respect of these holdings on the resolution approving the sale and that in due course, after all the arrangements have been completed, these holdings will be disposed of under arrangements to be agreed with Venesta.

The Directors' plans will include the payment to Ordinary shareholders of 20s. per share tax free.

The net assets involved in the sale of the foil operations are approximately 60 per cent of the consolidated net assets of Venesta and produce approximately 50 per cent of the consolidated net profits. The remaining business of Venesta will comprise plywood and tea chest trading and the manufacture of collapsible tubes, metal-faced plywood and containers in the United Kingdom and plywood manufacture in France and Finland.

After providing the management for the foil operations, Venesta will have a full management structure with a seasoned team of executives and staff. These will be required for the direction of the continuing business but will have the capacity to manage other substantial operations at home and overseas. It is planned to use this capacity, and the material resources of cash and unissued shares, in the acquisition and establishment of other industrial enterprises.

S. A. FIELD, Chairman

VOKES LIMITED

(Specialists in Filtration & Silencing Equipment and other Specialised Engineering Products)

INCREASED GROUP SALES

The Twenty-Second Annual General Meeting of Vokes Limited was held on September 16th at the Albion Hotel, Woking, Sir Ian Stewart Richardson, Bt. (Chairman of the Company), presiding.

In his statement covering the nine months trading period to 31st March, 1959, circulated to the Members, the Chairman made the following comments:

An important matter was the change in the accounting date, thus releasing those UK Companies in the Group from maintaining a Reserve for Future Income Tax equivalent to twenty-one months' taxation, based on twelve months' profits of the financial year and nine months' profits of the previous year. The Future Tax Reserve is therefore now confined to tax on twelve months' profits on one financial year.

RESULTS

Considering the difference in trading periods, Group profits before taxation for nine months are slightly lower than for the preceding twelve months, although total Group sales, excluding inter-Company transactions, increased. Nett Profits after taxation are higher, but are not comparable with those of the previous period owing to the Tax Reserve adjustments arising from the change in the accounting date. Monetary restrictions in late 1957 and the fall in commodity prices, which affected many of the Group's important customers, together with a wage award which was absorbed by the Company, contributed to the reduced profits.

Whilst certain "soft spots" exist the parent Company and most Members of the Group are working to full capacity. The payment of a final dividend, with the interim dividend already paid, gives shareholders a total distribution for the nine months, equivalent to that paid for the preceding twelve months. The final dividend is on the Ordinary Share Capital as doubled by the capitalisation issue made on 22nd May last.

Profit margins are likely to diminish further owing to many branches of industry meeting increased competition at home and abroad particularly in the Common Market countries. This can only be countered by continuing to give every priority to design and development of new products, to improved methods of production, to lower costs, and to higher quality.

Due appreciation was paid to all concerned for the good team spirit which is responsible for the Group's growth and success.

The Report and Accounts were adopted.

AIR SUBSCRIPTIONS TO *THE ECONOMIST*
22, Ryder St., London, S.W.1

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

COMPANY AFFAIRS

THE RANK ORGANISATION

PROFITS earned by the Rank Organisation should be higher in the current financial year than the £4 million earned in the year which ended on June 27th. First, the losses on film production and distribution are likely to be still further reduced, because the production programme has again been trimmed and because the terminal loss which arose on the closing down of the distribution organisation in the United States (after it had been running for only eighteen months) will not occur again. Secondly, the Organisation should begin to earn a dividend on its interest in Southern Television which Lord Rank describes as "a highly profitable investment" even though its earning capacity does not compare with that of the major commercial stations. Thirdly, the closing down of unprofitable cinemas will be carried yet another stage further, the problem for the directors being not the decision to close the cinema but to find a buyer for it or its site (especially in suburban areas).

Cinema attendances, having fallen last year to 755 million are expected to fall to 625 million this year and Lord Rank sees "no indication as yet that this decline has been arrested." His deputy chairman and managing director, Mr John Davis, has had to revise his earlier prediction that attendances would level off around the 600 million mark. The decline in profits from cinema exhibition may therefore be momentarily arrested by the closing of cinemas but the trend cannot be reversed for good. This is why the Rank Organisation is trimming its interests in the film industry radically and why it is concentrating its attention on other fields of entertainment. Over the last five years 35 per cent of its profits have been earned by its manufacturing companies and by activities outside the cinemas, and Lord Rank believes that "it will not be too long before profits from non-cinema interests exceed those from the cinema activities." Quite how long a period he has in mind is not clear but it will take at least three or four years before its interests in gramophone records (which made a loss in 1958-59) and in relay and rental television can possibly produce a worthwhile return. The dance halls and studios which the Organisation now runs are already earnings profits and its venture in Xerography is, apparently, breaking even at the moment. The emphasis in the manufacturing division (which, partly because it includes the radio and television manufacturing business of Bush Radio, has always been profitable and which contributed about £300,000 to the increase of £1,000,000 in profits in 1958-59) is being shifted away from the making of equipment for the film industry towards wider markets.

The yield of 4.4 per cent offered by the 5s. shares in the Rank Organisation now standing at 11s. 3½d. is slender, especially as the 10 per cent dividend was not covered by earnings but was effectively paid out of tax provisions written back (reflecting cautious accounting in the past) and out of the small profit made on the sale of cinemas (which had been heavily written down in the books). The yield, in fact, is assuming that the Organisation will be able to cut its commitments in the film industry in step with the decline in attendances and at the same time replace them with profitable investments in other forms of entertainment. The Organisation has certainly taken some steps along this road but it has not finished its journey yet.

NEW EUROPEAN AND GENERAL INVESTMENT TRUST

NEW European and General Investment Trust launched last May by M. Samuel, the merchant bankers, in order to give investors an opportunity to widen their interests in European equities, is to make a call of 5s. a share on each of its £1 shares. The proceeds of the original application money (10s. a share) have now been invested and until December, when the 5s. call is due, the trust managers will finance any investments by borrowing from the banks. The authorised capital of the trust is £3 million and so far most of its shares have been placed with British investment trusts and insurance companies. The trust's investments were valued on September 1st and showed an appreciation of some 12 per cent over their book value—the greatest increase being recorded in West German equities. Most of the investments so far made have been in common market countries, but the directors are also interested in investing in companies in the proposed European Free Trade Association. The first signs of this interest can be discerned in the holding of 1,150 "B" shares in Electrolux of Sweden.

COTTON RESULTS

PROFITS in the cotton textile industry are still falling. But in recent months the prices of cotton textile shares have been rising in anticipation of the aid which the Government has now given to the industry. **Calico Printers** has maintained its total ordinary dividend at 22½ per cent for the year to June 30th, even though this payment is not covered by earnings. Perhaps as a warning to shareholders the directors have changed the character of the distribution, raising the bonus element in it from 12½ to 15 per cent and reducing the actual dividend to 7½ per cent. Royalty earnings on the "Terylene" patents (which in July were extended for another five years) have risen from £300,000 to £418,000, but the consolidated net income has fallen from £643,673 to £223,430. Clearly the low level of activity in commission printing and merchanting throughout much of the financial year offset the increase in the group's royalty income. The £1 ordinary shares at 47s. 9d. yield 9.4 per cent.

The £1 ordinary shares of **Tootal**, on the other hand, still yield under 6 per cent at their current price of 27s., even in the face of the disappointing preliminary results for the year to June 30th. Though the tax charge has come down from £191,522 to £133,609 the group's net profits have fallen sharply, from £252,205 to £185,685. The maintained dividend of 7½ per cent is thus barely covered by earnings. The Tootal shares have been active since the announcement of the possible merger with William Hollins, but the present price puts a big discount on the prospects of the merger, on the possibilities of diversification outside the cotton industry and on hopes that the industry will be stronger once the reorganisation schemes within it have been carried through.

ASSOCIATED BRITISH ENGINEERING

SHAREHOLDERS of Associated British Engineering will find the full report for the year ended March 31, 1959 even more depressing than its predecessor. The group made a trading loss of £98,823, compared with a net profit after tax of £63,737 (which included some £30,000 of pre-acquisition profits of the two McKay companies acquired during 1957-58). A

transfer from reserves of £310,000 and an estimated tax relief of £61,000 on promotion and development expenditure relating to the group's free piston engine project have been brought into the final net surplus so that after paying £17,250 in preference dividends the balance carried forward has been increased from £83,305 to £194,059. In 1957-58, an interim dividend of 2½ per cent was paid but no ordinary dividend has been declared for 1958-59.

Mr Lawrence Robson, the chairman, now details the reasons for the failure of the group to arrest the declining trend in earnings. First, Henry Meadows, the principal subsidiary in the automotive and industrial section, is still suffering from the cessation of orders by the Ministry of Supply for power generating plant. This left the company for the first time in 20 years without a Government contract and so far all efforts to secure civil orders to keep the plant working to full capacity have been unsuccessful. Secondly, the consolidated trading loss includes a terminal loss of £49,000 incurred by the subsidiary, H. Widdop, following the closing down of its works at Keighley. Finally, the difficulties of the shipbuilding industry have led to sharper competition and smaller profit margins in the manufacture of marine engines.

The 5s. ordinary shares now stand at 3s. 4½d. Mr Robson says he is "heartened" by the fact that General Motors and Chrysler Dodge are to install Meadows engines in the trucks they make in India. But this is certainly one swallow which does make a summer. Mr Robson's further comment that, if further efforts to obtain orders for the group's automotive and diesel engines are unsuccessful, the directors will be prepared to face the major problems of reorganisation, is welcome—but that statement suggests that ABE's troubles are deep-seated ones.

FURNESS, WITHY

MR FRANK CHARLTON, the chairman of Furness, Withy, says in his annual statement that "the depressed state of the shipping industry shows little prospect of any early improvement." It is something that the results in the first quarter of the current financial year have been maintained at the previous year's level. In 1958-59 Furness, Withy's earnings did not suffer as much as might have been expected. Net profits actually rose from £1,453,243 to £1,535,750, thanks to a reduction in the tax charge from £700,000 to £417,600, reflecting investment allowances on the group's £14 million building programme. As a member of the Liner Conferences, the group has escaped from the very worst knocks of the shipping slump. But Mr Charlton refers to the "continued and substantial increase in operating costs in this country and other parts of the world, which it is not possible to match by increased earnings."

The group's New York—Bermuda service has done well, but the rise in operating costs has narrowed margins. On the Pacific coast routes earnings have been maintained despite rising wage rates (which are being steadily pushed up by the American longshoremen's union). In the Mediterranean, the earnings of the Prince Line—one of the group's principal subsidiaries—have been affected by political disturbances and for the first time in many years this company has paid no dividend to the parent. The group's aircraft subsidiary, Airwork, is still expanding, acquiring during the year two aircraft companies and adding three Vickers Viscounts and two Bristol Britannias to its air fleet. Whether the recent rally in some shipping shares, with Furness, Withy's £1 ordinary units at 38s. 3d. now yielding 5.1 per cent, compared with 6.1 per cent a month ago, has any really strong base must be doubted. But shareholders in Furness, Withy and those investors who look for a strong asset backing to the equity will welcome the chairman's remark that the Board is giving "careful consideration" to suggestions that the group's accounts should be made more informative.

EASTWOODS

THE revival in the building trade which got under way in the Spring seems to have come too late to encourage the directors of Eastwoods (which makes bricks, cement and tiles), to restore the ordinary dividend to 17½ per cent from which it was cut to 15 per cent in 1957-58. In that year the credit squeeze and the Government's revision of the airfield building programme caused the first setback in the group's earnings for some years and in 1958-59 the directors say that certain of the company's works were still operating somewhat below capacity. But turnover reached a new record and the group's trading profits rose from £972,480 to £1,078,501; a slightly higher tax charge of £344,605 (against £338,744) left a net profit of £286,990, compared with £183,369. Shareholders will note that the maintained dividend of 15 per cent (which was barely covered by earnings in 1957-58) is now covered 1½ times. The £1 ordinary units at 58s. yield 5.2 per cent.

DE BEERS

THE long-awaited increase in the dividend payment by De Beers Consolidated has come at a time of substantially higher dividends from the Free State gold producers, in which De Beers has a big stake. For the last eight years De Beers has paid 10s. a year on its 5s. deferred shares. Now the interim payment has been raised from 4s to 5s. and there have been estimates in the stock market of a final payment of up to 7s., which would make the total for the year 12s. The higher income from the Free State mines, coupled with record sales of diamonds this year, have been the base for these hopes. On a dividend of 12s. the yield on the 5s. shares at 175s. would be 6.9 per cent.

London Stock Exchange

FIRST DEALINGS:	Sept. 2	Sept. 16	Sept. 30
LAST DEALINGS:	Sept. 15	Sept. 29	Oct. 13
ACCOUNT DAY:	Sept. 22	Oct. 6	Oct. 20

UNTIL the end of the account on Tuesday markets were moving rather cautiously. Industrial equities were irregular and began to slip from their peaks reached during the boomlet set off last week by the announcement of the election date. End-account profit-taking (especially in steel shares), the persistent rise in US interest rates and the continued setback on Wall Street, combined to outweigh confidence in the market of a Conservative victory at the polls. But with the opening of the new account on Wednesday after the latest public opinion poll had predicted a Conservative victory most prices improved and there was a fair amount of investment buying by institutions. But business was not on a large scale over the week. *The Economist* indicator fell 0.8 to 292.3. Gilt-edged stocks shared in the general rally on Wednesday but over the week most of them still showed net losses. 3½ per cent War Loan fell ⅛ to 65. But high coupon short dated stocks were in demand with 4½ per cent Conversion (1964) rising from 99$\frac{19}{32}$ to 99⅞.

The weakest section of the market was in Canadian bank shares where the fall on Wall Street and the Canadian government's credit squeeze seem to have induced most investors to cut their losses. National Bank of Canada declined £3 to £28¾ and Bank of Montreal closed £1¼ down at £19$\frac{7}{16}$.

In industrial equities the most volatile section has been the steel section. The latest opinion poll helped most steel shares to close above their worst on Wednesday with Colvilles improving 1s. to 39s. 4½d. and Dorman Long gaining 1s. 1½d. to 37s. Exceptionally, Steel Company of Wales fell from 34s. 6d. to 33s. 9d. and, despite quite heavy buying from the United States, John Summers showed a net loss of 1½d. at 43s. 7½d. In motors, the weakness on Wall Street caused some selling of Ford and after touching 77s. on Tuesday the shares finally closed 7½d. down at 78s. 4½d.

On Monday dealings began in the property share market in Mr Clore's City and Central Investments The 5s. shares were issued at 25s. and opened in the market at 28s. 6d., and later touched 28s. 9d; but on Wednesday profit-taking put them back again to 28s. 6d. The property share market, however, was disturbed on Wednesday by rumours about the companies with which Mr Jasper is associated. Textile shares were active, but despite the maintained dividend Tootals fell 1s. 6d. to 27s.; Calico Printers which also announced an unchanged dividend closed 9d. down at 47s. 9d. Oil shares were affected by the fall on Wall Street: Shell declined 1s. 3d. to 145s., Burmah fell 8s. 6d. to 43s. 6d. and BP closed 3s. down at 52s.

THE MONEY MARKET

DESPITE the rise in the Federal Reserve discount rate from 3½ per cent to 4 per cent, the Treasury bill rate in London again remained almost unchanged at last Friday's tender, the average rate edging down 1d. to £3 9s. 8.47d. For the sixth successive week the syndicate maintained its bid at £99 2s. 7d. but its allotment at this price fell from 80 per cent to 51 per cent. In contrast to recent weeks total applications rose sharply, from *£396 million to £454 million*, a new peak for the year. This week the tender is again for £290 million while maturities remain at *£260 million*.

Credit became tighter towards the end of last week and on Saturday the authorities gave a moderate amount of special assistance. Widespread and large withdrawals of funds led to still more difficult credit conditions on Monday, and the authorities gave a fairly large amount of help. Rates for overnight money have ranged up to 3¼ per cent and even to 3⅜ per cent. Bill turnover has been generally small, with the rate at 3 27/64 per cent.

(7) Excluding all screening losses normally amounting to around 5,000 tons a week. (8) Average for second quarter. (9) Average for third quarter.

Forest industry production will double by 1980
Aluminium production five times present output
Uranium production will double

Now that some authoritative estimates of Canada's future growth have been established by the Gordon Royal Commission, it is obvious that the country will be undergoing constant economic changes during the next 22 years. Any period of change demands constant attention. And with our hundreds of branches in Canada maintaining close association with all phases of Canada's economic life, we are in an excellent position to offer any manufacturer with market expansion plans in Canada accurate and valuable information such as:

- **market statistics** • **corporation procedure**
- **information on plant sites** • **advice on customs problems**
- **data on market distribution** • **incorporation procedure**

One Shilling and Sixpence

CENTRAL SECRETARIAT LIBRARY
5 OCT 1959
GOVT. REVIEW T OF MADRAS

Arms and the Russian

What do Mr Khrushchev's American tour and his disarmament proposals add up to so far? (page 995). Reports from New York and California (page 1021), and the United Nations (page 1031).

The Election Auction

The Labour manifesto offers the earth (page 997). "Whose Enterprise?" (page 1039) shows how ready the Tories, too, are to take industry under their wing. When, where and why might it be sensible to vote Liberal? (page 998).

A Labour Recovery?

This week's special election survey (page 1000) looks at the signs of a Labour come-back in the campaign.

The Jasper Affair

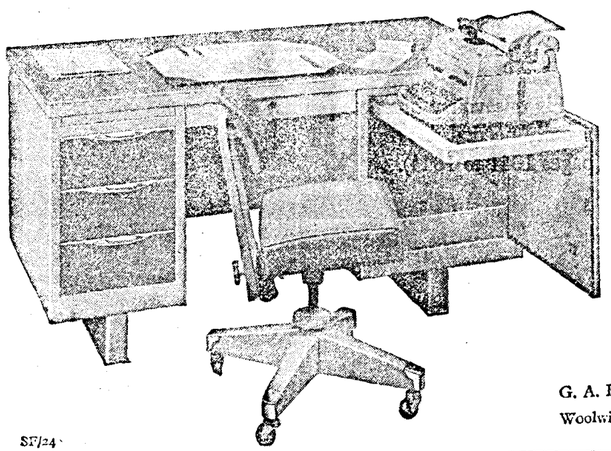
A dissection of this unsavoury business points to urgently needed reforms (pages 1041 to 1044).

World Politics and Business

"My boss is very understanding!"

"I'm his secretary. He's found the ideal desk for my job—plenty of desk space, with a delightful glare-free working surface.
"And when I want to type, my machine comes up from its cupboard at the touch of a finger—even when using an electric model. It is stowed away just as easily.
"The drawers simply glide; three small, or one small and one large, with suspended filing in the latter if desired, and trays for pins and things in the centre drawer.
"Lovely finish, like a new car, in colours to tone with my office."

To get the best out of your *secretary, you really should get her a*



HARVEY

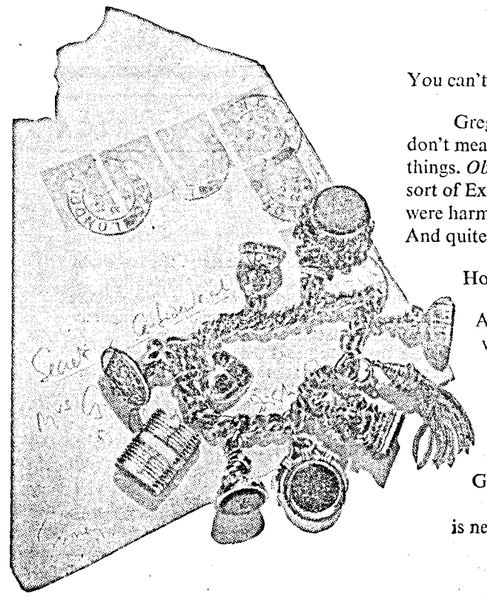
Does Gregory know?



My dear James —

I really am furious with you. I really am. *Not* for ordering The Observer for me, but for the awful way you set about it. *You haven't changed a bit*—and it would do you no harm to think what I mean by that.

I don't want to write you a *stiff* letter, but if bits of stiffness creep in you'll just have to put up with it. First of all there was that idiotic envelope of yours, all SECRET and CONFIDENTIAL and h..lfpenny stamps. *Obviously* if Gregory saw that he'd have opened it, especially as it was addressed to me. It just wasn't the sort of letter, inside or out, that he would have thought funny at Breakfast.

Then how could I explain? About the Observer, I mean? Gregory always buys our newspapers, so how could I suddenly pretend I'd gone out *secretly* and ordered the Observer? Oh James you are a Fool. (I'm sorry, but I'm not going to cross that out.) So on Sunday there it was, with

THE OBSERVER

right across the top, like a sort of *challenge*. You can't *hide* a thing like that.

Gregory is a pet, and you've no right to say things about him even if you don't mean them. He's *not* huge *or* red faced, he's rather sensitive, and thinks about things. *Obviously* he's upset, this Observer coming *every Sunday* now, from sore sort of Ex of mine he's hardly even heard of. I did my best to explain you were harmless (I suppose you *are?*) but it all sounded so *improbable*. And quite *disloyal* to read it.

However, I did. So thank you.

Actually I enjoyed it awfully, I can't pretend I didn't. I don't know why, but I'd sort of got out of the way of having a newspaper you really *read*, like I used to. (G. says I *prefer* Sensational *rubbish* and of course I *don't* really but it can be quite fun too, sometimes, though I suppose *you* wouldn't think so.) But anyway it was lovely to see the Observer again—that "Inside America" article by Patrick O'Donovan was awfully good . . . and C. A. Lejeune (do you know *her?*) and Alison Settle and Gardening and oh lots of things.

I've torn up your letter. 4 children *not* six, 2 b. 2 g. Stephen is nearly fifteen now!

Yours sincerely,
Lydia.

P.S.—*I've just seen the Personal Column, and really! It's absolutely mean and disreputable of you, and simply reckless. I daren't think what would happen if Gregory knew. Perhaps he does . . . I don't ever want to hear from you again.*

This is No. 2 in "The Observer and Mrs. X", a powerful new serial. Next Week, WILL JULIAN HELP?

expanding in CANADA?

If your immediate or long range plans include a new Canadian plant you will be interested in the attractions of

Bramalea

CANADA'S FIRST SATELLITE CITY

now under development on a nine square-mile site, 16 miles from Toronto, in the heart of the nation's richest market.

To industrialists selecting a site for Canadian operations Bramalea offers:

- **A dependable low tax rate**
- **A plentiful supply of skilled labour**
- **Proximity to St. Lawrence Seaway harbours and an international air terminal**
- **Location in a planned and integrated community—Canada's first "New Town"**

The services of Bramalea Consolidated Developments Limited's Industrial Division will include if needed:

1. **Selecting a planned site**
2. **Designing or assisting your engineering department in design and layout**
3. **Financing the whole building operation**
4. **Building your factory and leasing the property**

THERMOTANK IN SOUTH AFRICA

Now they can give of their best

at a Johannesburg Building Society

Staff in the new headquarters of the United Building Society, the largest in South Africa, are continents away from the heat or chill of the nearby Johannesburg streets. Thermotank air conditioning provides perfect comfort in this ten-storey building, one of a series of the Society's offices throughout the Union which have Thermotank installations. Other Thermotank contracts in South Africa include the head office of the national power authority, the Electricity Supply Commission; the air conditioning of seven department stores; brewery plant, hospitals, and fan equipment for gold mines.

Thermotank can plan, design and install air conditioning equipment for any requirement in any part of the world.

A WORLD OF BETTER CLIMATES WITH THERMOTANK

Here are a few more examples of world-wide service from Thermotank:
BRITAIN Conversion of the liner s.s. 'ORCADES' carried out, providing an installation with a capacity of 14,000,000 B.t.u's per hour.
UNITED STATES Contracts for Texas Instruments, Standard Oil, American Telephone and Telegraph Company, John Hopkins University, Ford Motor Company and General Motors.
MIDDLE EAST Installations include the Fao Port Control and Wireless Station Building on the Persian Gulf and the Iraq Spinning and Weaving Company's mills near Baghdad.
AUSTRALIA Full air conditioning for the Melbourne office of Bank of Australia and New Zealand. Also hospitals, hotels, schools, laboratories and current shipping including two 19,000-ton vessels.

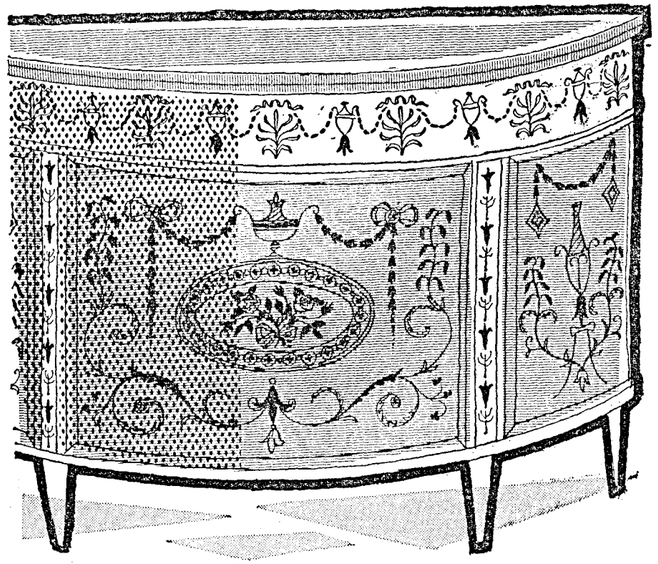
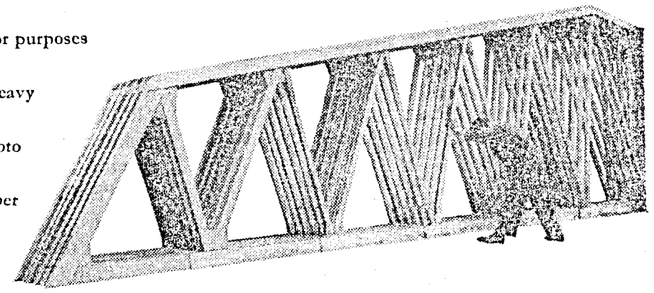
ANNUS MIRABILIS



The ancients—and the great 18th century craftsmen, too—knew the advantages of layered wood. But until recently, plywood was suspect because of the inadequacy of the glues used. New adhesives were developed for aircraft manufacture during the war, so that today the glue line becomes the strongest part of the structures.

Line of Life

Aero Research Ltd., now CIBA (A.R.L.) Ltd., made the first urea-formaldehyde and resorcinol-formaldehyde glues produced in Great Britain. Aerolite is the most widely used synthetic resin adhesive in this country, and is employed for purposes ranging from the construction of heavy timber roof members (as in the photo of a lattice truss by Rainham Timber Engineering Co. Ltd.) to miscellaneous repairs in the home.



Aerolite & Aerodux glues for wood

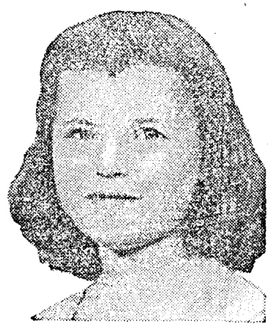
patent glazing is like windows ONLY BIGGER and often it's IN THE ROOF And it doesn't Have PUTTY



ALUMINEX Vertical Patent Glazing at H. J. Heinz new factory, Kitt Green, Lancashire.
Architects: J. Douglass Mathews & Partners, London, in association with Skidmore, Owings & Merrill, New York.

"I imagine the child is referring to 'skylights' when she says 'often in the roof'?"

"That's right. Skylights, but it is also used to make whole walls of glass."

"If putty isn't used how is the glass attached to the frames?"

"ALUMINEX is another Williams & Williams device, consisting of aluminium glazing bars in which glass is held by special spring clips."

"I see. What's wrong with putty?"

"Alright for chaps like you Fishbone—tones with your complexion—but putty ages, crumbles, falls out. This ALUMINEX is weatherproof, resists corrosion—no painting—use it for anything."

"Any thing? Bet they don't use it for Atomic power stations!"

"And you would lose your bet—they do—miles and miles of it. They also use it in other power stations, factories, hospitals. Sometimes they make vast sections of ALUMINEX open and close like giant windows."

"What happens if a classic product of our modern educational system heaves a brick through them?"

"Somebody calls a copper I expect."

"No, I mean what happens to the ALUMINEX PATENT GLAZING *by Williams & Williams?"*

"Oh that. Replace the glass in minutes. Look Fishbone—I'm busy. Go home there's a good chap."

forward looking building products WILLIAMS & WILLIAMS

Williams & Williams make steel windows of every description. ALOMEGA and other aluminium windows, movable steel and glass partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products.

TRANSISTORISED Stenorette

Talk your way out of paperwork; dictate on to magnetic tape, erase errors automatically by simply re-recording over the words to be corrected. Backspace with a flick of the thumb, play back the second you want to, enjoy fast, accurate, dictation and trouble-free, rapid transcription.

READY FOR ACTION The fact is, you can clear correspondence quicker than ever before with the new Stenorette T. Ready immediately you switch on, no 'warming-up', you can dictate, transcribe, start again after an interruption, review a sentence or a whole report ... all with a push-button! *And*, even better value than ever, the new tape cassettes take 34 minutes of dictation and can be used repeatedly thousands of times over. There's *none* of the expense that's involved with belts, discs or cylinders. Your new Stenorette T and a few cassettes of tape are your last and only cost.

VALUE FOR MONEY The brilliant new Stenorette T is yours for only 61½ guineas! Yet, despite its amazingly low price, it is a precision business machine giving you every time-saving convenience you could think of—plus other advantages you can't get elsewhere at *any* price. You dictate and transcribe with the same machine.

SAVE TIME : SAVE MONEY
INSTALL THE TRANSISTORISED Stenorette

Please send a copy of your free brochure explaining how the Stenorette T can make office work go faster, more efficiently, and accurately.

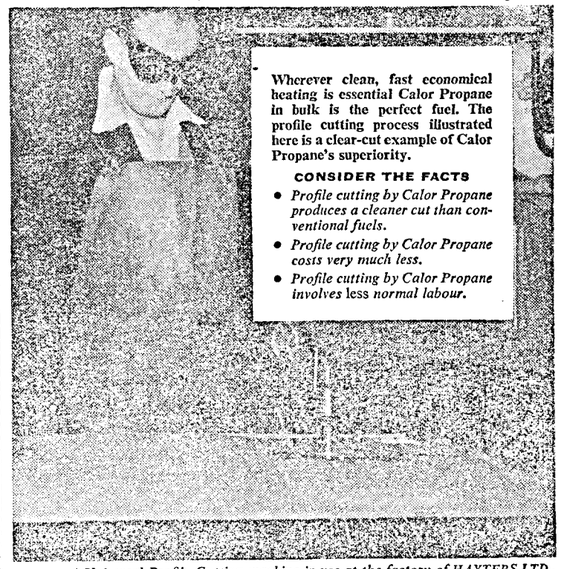
In factories throughout Britain 'Calor' Propane does the job faster... cleaner... cheaper



Wherever clean, fast economical heating is essential Calor Propane in bulk is the perfect fuel. The profile cutting process illustrated here is a clear-cut example of Calor Propane's superiority.

CONSIDER THE FACTS

- *Profile cutting by Calor Propane produces a cleaner cut than conventional fuels.*
- *Profile cutting by Calor Propane costs very much less.*
- *Profile cutting by Calor Propane involves* less *normal labour.*

A Universal Profile Cutting machine in use at the factory of HAYTERS LTD., of Bishop's Stortford. Two Calor Propane bulk storage tanks supply heat to the works canteen and for degreasing, in addition to the profile-cutting machinery.

'Calor' Propane
SERVES INDUSTRY BEST

DELIVERED IN BULK The largest Propane tanker fleet in Britain maintains a never failing service delivering Calor Propane *in bulk* to storage tanks erected anywhere in the factory or on your site. You carry an ample fuel reserve because storage tanks are available in capacities to suit any consumption rate. And Calor Propane is the only modern fuel universally available throughout the British Isles —wherever your site is you can enjoy the benefits of Britain's newest industrial fuel.

HEAT ON TAP Calor Propane can be used just like mains gas... piped from bulk storage containers to outlet points where you need them. Calor Propane is already supplying clean, economical trouble-free heating for hundreds of different appliances all over the country. Qualified advice on using Calor Propane is yours for the asking—write to the address below.

EXPERT SERVICE Once you become a Calor Propane user an expert 24-hour maintenance service is at your disposal—Calor serves you best!

There is only one really modern, really efficient fuel that can be used on any site in Britain —CALOR PROPANE

House to house

Advertisers used to be content with very little — or rather a lot, depending on which way you look at it. They'd publish newspaper advertisements saying something like ☞ I.C.I. Silicones ☜ and leave it at that. Which of course was very naïve of them, because you can't make these wild claims without some support. The question is, how do you get this support?

One way is to make a house-to-house survey. You send out an interviewer to knock at doors and ask people about your product. Rat-tat-tat. 'Good morning, madam, I'd like to ask you some questions about I.C.I. Silicones.' 'I.C.I. *what?*' 'I.C.I. Silicones —for instance, do you find the unique dielectric properties of silicones at high temperatures of assistance in the manufacture of electric motors?' If she doesn't know what dielectric properties are, he will have to try her with an easier one: 'Have you noticed that your electric iron's coated with a heat-resistant paint made from I.C.I. Silicone Resins?' And if she can't answer that one he can go on to the stuff about I.C.I. Silicone water-repellents for textiles and building surfaces, I.C.I. Silicone anti-foam and anti-stick agents and so forth.

Once the interviewer has turned in his notes and you've had them analysed, you can make as many claims as you like. You can even take advertising space in a paper to say...

Nearly everyone uses

(whether they know it or not)

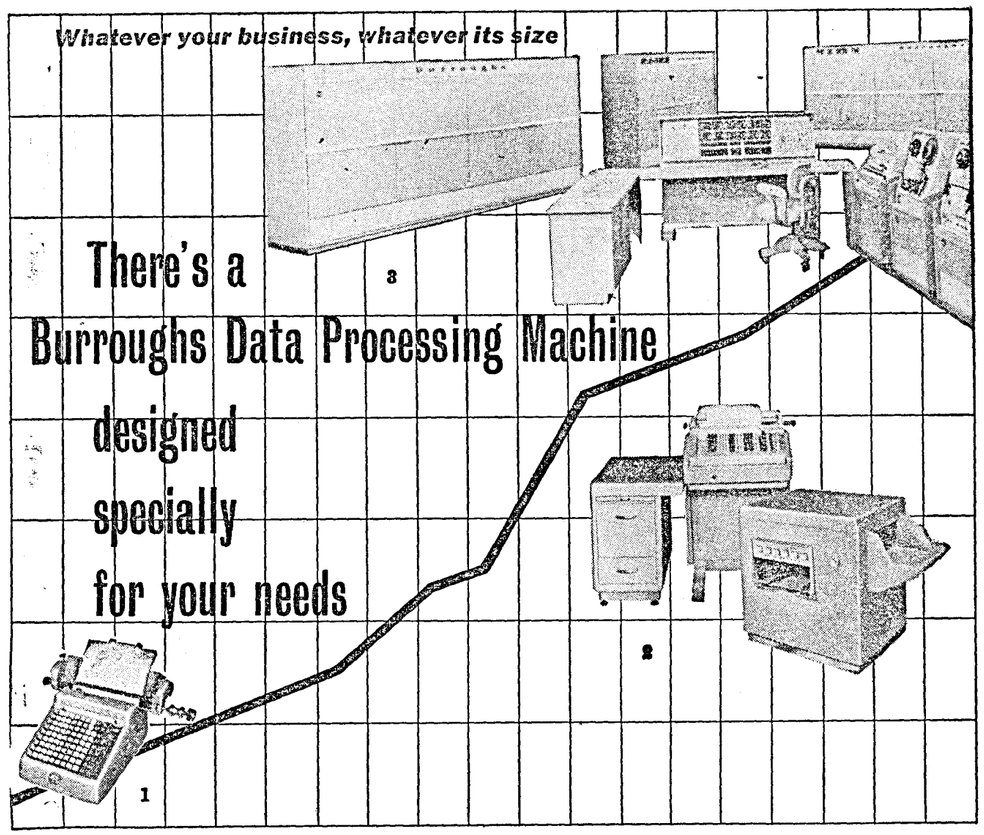
Whatever your business, whatever its size

There's a Burroughs Data Processing Machine designed specially for your needs



Burroughs make a full range of business equipment—that's why, whatever the size of your business, there's a Burroughs system exactly fitting your needs.

Burroughs forward-looking design and precision engineering ensure that each machine, in each class, has all the versatility and the advanced automatic features required by today's modern accounting methods.

Whether your business calls for an adding machine, an accounting machine, or a large electronic computer, you can be sure that a Burroughs machine will give you the right answers—faster, easier, and at a big saving in operating cost.

Your local Burroughs man is available now to demonstrate how you can streamline your accounting with Burroughs data processing equipment. Or write to:

Burroughs Adding Machine Ltd.,
Avon House, 356-366 Oxford Street,
London, W.1. Tel: HYDe Park 9861

1. **New Burroughs Shuttle-Carriage Adding Machine**—for vertical and shuttle listing work on tape or wide forms—easy, speedy, flexible.
2. **New Burroughs Sensitronic with Automatic Reader**—electronic accounting machine providing ledger-keeping with visible record and magnetic storage. Trial balancing made completely automatic when linked to auto reader with individual form handling.
3. **New Burroughs 220 Electronic Computer System**—the most complete electronic data processing system in production today.

Burroughs

A small plant...

The Kellogg organisation has earned a world-wide reputation for the speed, economy and over-all efficiency with which it tackles the smaller engineering and construction projects as well as the more spectacular ones. A recent example is the fume absorption plant, part of a major uranium processing operation, at the Springfield Works of the United Kingdom Atomic Energy Authority. Kellogg International Corporation undertook the entire responsibility for engineering and building this small but vital project, and applied to it all of the experience and knowledge gained in the firm's largest undertakings.

Kellogg International Corporation welcomes small projects, and handles them all in a big way. Inquiries are cordially invited concerning the co-ordinated engineering, procurement, and construction service KIC provides for plant investments of *any* size.

Resilience

s one of the virtues of

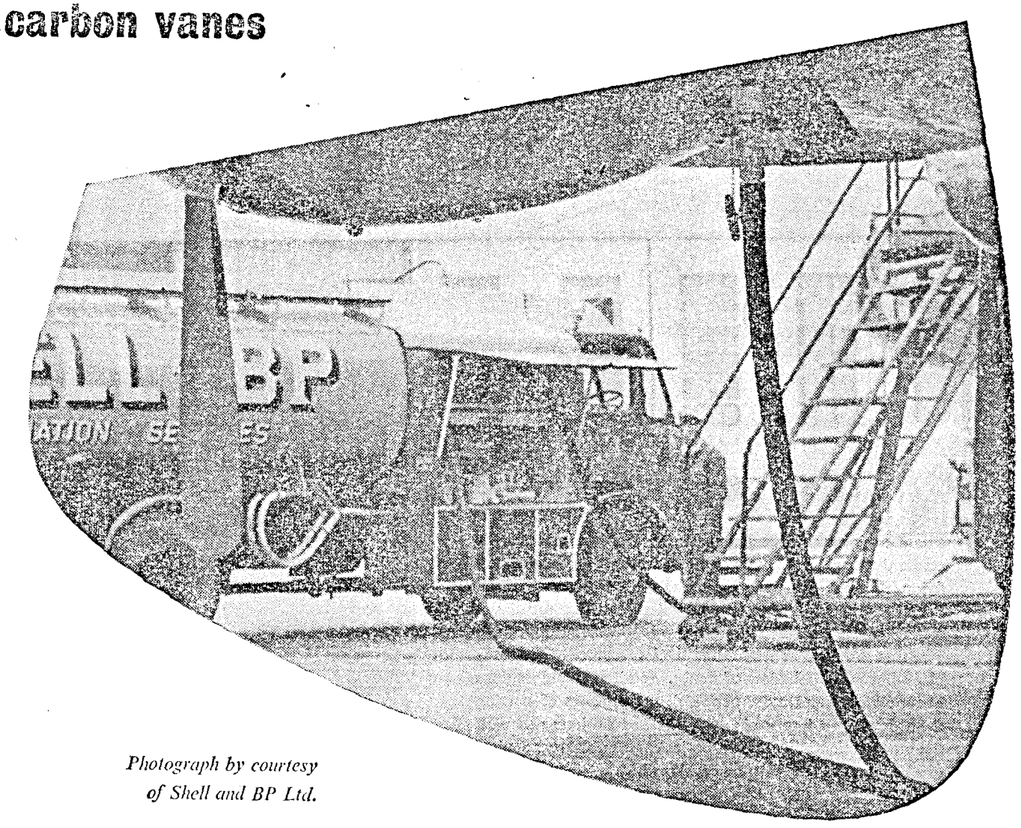
FIBREGLASS CROWN

FIBREGLASS CROWN is the new thermal and sound insulation material. Because it is so highly resilient it can be compression packed. This cuts storage space by half and takes a very welcome slice off delivery and handling costs. Yet Fibreglass Crown recovers completely when unwrapped and gives its full insulation value. How *full*? Well, not to overstate the *case*, Fibreglass Crown is the finest insulation material yet devised. By anyone. Including us. There are other advantages to Fibreglass Crown—a whole list of them. At the drop of a hint, we will tell you all about them. We will also detail the applications for which Fibreglass Crow is available now and those for *which it will* be ready soon. If you are concerned in any way r better insulation, please ask us.

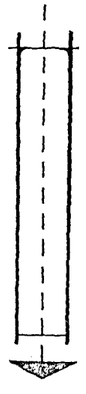
Fibreglass Limited, St. Helens, Lancs. S'

SUSTAINED ACCURACY

with carbon vanes



Photograph by courtesy of Shell and BP Ltd.



The refuelling of B.O.A.C.'s Britannia is a routine job for the 4,000 gallon "fuellers" of Shell and BP Aviation Services, and one which demands reliable and accurate equipment. The supply is metered by Avery-Hardoll Bulkmeters, using MORGANITE CARBON VANES.

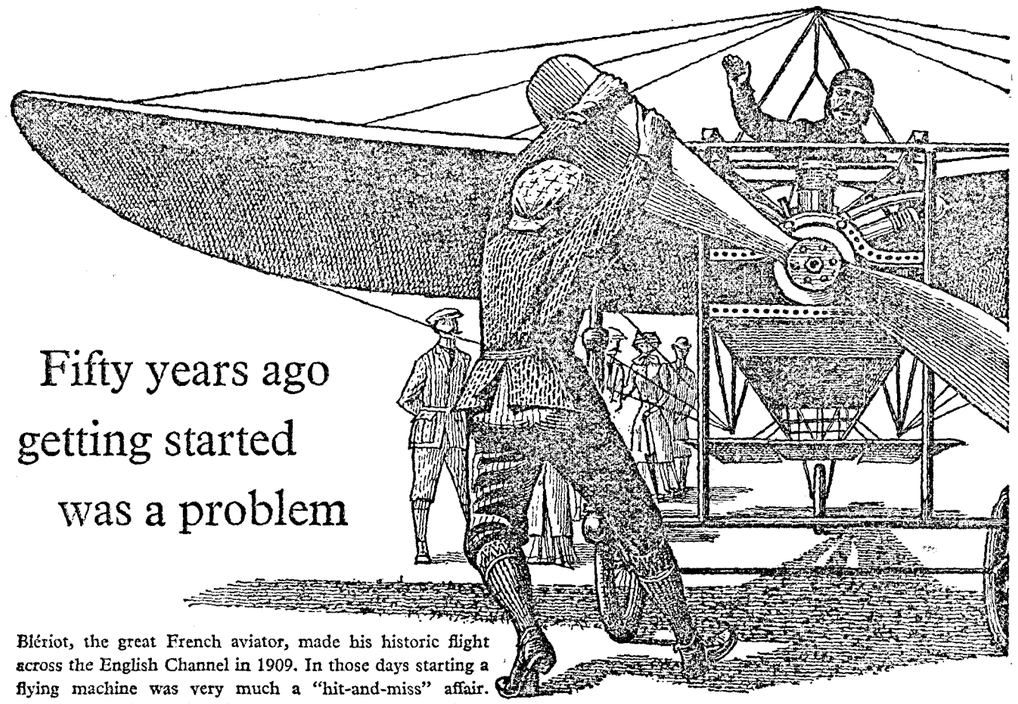
Impervious to chemical action, strong and highly resistant to wear, MORGANITE CARBON VANES have proved their reliability in action; after many millions of gallons, the accuracy of metering has not varied at all! MORGANITE CARBON VANES solved the problem for Avery-Hardoll Ltd.,—perhaps they will solve yours. Please write or telephone for leaflet SD 69, or for one of our Technical Advisers to call.

MORGANITE CARBON VANES resist chemical atmospheres and corrosive conditions; withstand high temperatures, immersion in liquids; are non-contaminating; need no lubricating; are suitable for inaccessible positions and completely eliminate maintenance.

MORGANITE VANES

THE MORGAN CRUCIBLE COMPANY LIMITED, BATTERSEA CHURCH ROAD, LONDON, S.W.11. Telephone: BATtersea 8822

C69A



Fifty years ago getting started was a problem

Blériot, the great French aviator, made his historic flight across the English Channel in 1909. In those days starting a flying machine was very much a "hit-and-miss" affair. Somebody had to swing the propeller—and get out of the way when the engine fired.

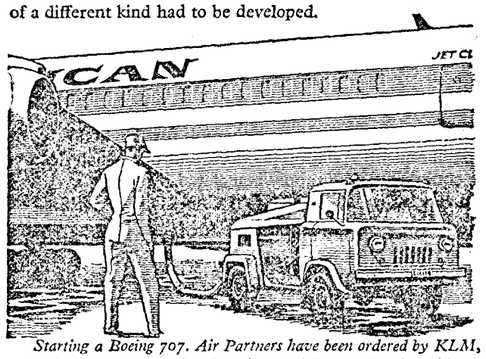
The first World War established the importance of the aeroplane beyond all shadow of doubt. As aircraft and engines became bigger and more powerful, the problem of starting them developed into a highly specialised subject; and with the introduction of jet and turbo-jet engines, starting devices of a different kind had to be developed.

As the world's largest manufacturer of compressed air equipment Atlas Copco designed the Air Partner—a mobile rotary screw compressor—to service the giant jet airliners now coming into service. The Air Partner is both simple and safe and has eliminated all starting difficulties.

HOW THE AIR PARTNER WORKS

With a steady flow of hot air, completely clean and oilfree, the Air Partner starts the main jet engines in a few seconds by way of an air-driven turbine starter. The Air Partner can also be used for air-conditioning the passenger cabin and cockpit, and for de-icing wings and fuselage. Simplicity of design means that airline personnel anywhere in the world can maintain and service this unit. In addition, overhauls are kept to a minimum. With this type of compressor—where the screws which compress the air never touch—10,000 hours is the average running period between overhauls.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.



Starting a Boeing 707. Air Partners have been ordered by KLM, SAS, Sabena, Air India, Canadair, and Tasman Empire Airlines.

Atlas Copco puts compressed air to work for the world

Arms and the Russian

"GOD is not mocked," wrote Paul of Tarsus to the hesitant congregations of Galatia nineteen hundred years ago, "As a man sows, so shall he reap." The latter part of this impassioned warning was presented to the United Nations Assembly last week by Mr Khrushchev, at the end of his speech, as "a Russian saying." The incident was rich in meaning. The Soviet leader has strewn his path across America with as generous a scattering from his seed-bag as a latter-day Johnny Appleseed. Much of it (to borrow another old Russian saying) has fallen on stony ground ; but, at least in California's bounteous valleys and the Iowa corn country, some intriguing products of the ensuing cross-fertilisation may yet spring up.

Venturing out like Paul among the Gentiles, Mr Khrushchev, however burning his faith, has not felt the same urge to convert them one and all. In his cosy chats with millionaires and his speeches to businessmen, he has relaxed, telling them that he does not expect them to renounce capitalism, content merely to point out that its doom is written in the book of the prophet Marx. His real wrath is reserved for (and at time spills out over) those whom he regards as real enemies: labour leaders who ask sharp questions about the impotence of Soviet trade unions, or about the liquidation of socialists in eastern Europe (there is an echo here of his dinner-table brush with the British Labour party in 1956) ; other questioners who press him about Hungary or who, implicitly challenging his slogan for economic competition—"let the people judge"—worry away at Soviet censorship and the false picture of the West presented to the Russian people. He seems to see the American capitalist much as the frontiersman used to look upon the American buffalo ; he admires the animal's proud strength, and takes its rapid extinction for granted. But anybody who questions his right to speak in the name of the peace-loving masses is an irreconcilable foe—a redskin, to be shown no mercy.

At Camp David this weekend, with Mr Eisenhower and Mr Khrushchev in discreet seclusion for a day and a half, there is a chance of achieving at least a brief meeting of minds. It is a pity that more of the Soviet leader's visit has not been devoted to quiet talk of this kind ; when Mr Macmillan went to Russia in February, he successfully induced his hosts to spend the greater part of the time talking turkey instead of showing him round farms. But the Khrushchev visit has taken shape as a lavishly publicised travelling circus, complete with bear-baiting, all-in wrestling, and touches of sheer fantasy—such as Hollywood's costly interruption of its weekend rest so that the visitor could watch the making of a film scene which left him nauseated.

There has been precious little sign of any meeting of minds during this coast to coast riot. There have been gratuitous lunges from both sides ; there has been some more sensible but no less unyielding restatement of familiar themes ; and there have been moments of sudden bonhomie, which came as a relief after the big rows. There has been scarcely any level-headed, reasoned, enlightening debate. A hundred opportunities of putting Mr Khrushchev into clearer perspective in America's eyes, and vice versa, have been lost in an ocean of words.

It is better that he should have gone to America than that he should not have gone. Mr Eisenhower's invitation was a wise move, and it is not the President's fault if the natural ebullience of his country and of his guest have jointly made the whole thing get out of hand. Mr Eisenhower himself kept his

head admirably while the tumult raged. Apart from appealing for a decent restraint, he gave a model answer when asked if he thought that Americans might be "psychologically disarmed" by Mr Khrushchev's visible conviction and warmth of personality:

> . . . our whole civilisation, the whole theory of free government, is based on the right of anyone to present his views in any way he pleases to the American public. I think the American public is strong enough to see and hear this man or any other man. . . . And I do not believe that master debaters or great appearances of sincerity or anything else are going to fool the American people long.

This confident echo of the greatest of Republican presidents has not evoked a matching confidence among all American politicians; but fortunately the American system is not designed, like the Soviet one, to shield the public from the disturbing sound of foreigners' "bad voices," and despite cries of alarm from some quarters, the American people has had ample opportunity to learn what Mr Khrushchev has to say. Most reports suggest that they are vastly entertained, but hardly inclined to revise their existing ideas drastically either one way or the other.

Some of them will have been irritated, and some pleased, by the pugnacious questions and challenges that have aroused spasms of his own pugnacity. Some of these jousts were needed. Nothing would have been achieved if he had been wafted round the United States in a cocoon of platitudes. But the common enthusiasm for his maxim, "Eat the bread and salt, but speak your mind," has been carried too far. If there had not been so many irate exchanges, there might have been more opportunity for systematic cross-examination. And one particular opportunity has not been fully taken yet. Mr Khrushchev has spent a whole week among Americans just after giving the United Nations Assembly his latest proposals on disarmament; and only Mr Adlai Stevenson (and Mr Garst, the maize expert) seem to have made any serious attempt to find out what he really means.

THE general reaction of the United States government, as of its allies, to his disarmament proposals has been one of disappointment but not of negation. That is to the good. The disappointment arose mainly from his own advance publicity; when he gave notice that he had an important new disarmament plan to present to the assembly, hope kindled that he might at last be going to moderate the Soviet stonewalling on international supervision, which has long been the main obstacle to agreement. Instead, he presented his proposal for total disarmament in terms which once again left the vital question of inspection in uncertainty; and he offered, as an alternative, a familiar list of Soviet proposals for partial disarmament—proposals which the western governments have previously declared to be tilted to Russia's advantage to an unacceptable extent. But the western governments have wisely resisted the temptation to dismiss this performance as mere propaganda. It would indeed have been very effective propaganda for Russia if they had dismissed it. Instead, it has been readily agreed to discuss all the Khrushchev proposals at the assembly.

This is simple commonsense. Mr Khrushchev's plan for total disarmament may be breathtaking in its sweeping disregard of the snags that have fouled the path of weary negotiators for a decade and more; but he cannot just be left to hog the limelight in the heroic pose of the man who proposed to disarm the world and was rebuffed. Painful past experience suggests that, by the time his plan has been taken to pieces and properly examined, it may be found to contain all the familiar Russian hamstringing reservations. In his speech to the assembly, he spelt out the secretive Soviet leadership's revulsion from the idea that a fully-fledged inspection system should watch over the process of disarmament (that is, over "military secrets," as he put it) from the very beginning. But only a thorough cross-examination, during the coming debates in the assembly and in the new ten-power disarmament committee, can reveal whether the Soviet position is still completely rigid. If even a slight shift is detected, the effort will have been worthwhile.

IT is unfortunate that Mr Khrushchev's speech followed so closely upon the one in which Mr Selwyn Lloyd put forward a new outline of British proposals for disarmament which takes into account some of the difficulties that the Soviet leader blithely glossed over. Mr Lloyd's speech was sober, reasoned, and necessarily complex and dull. Its fate was that of an honest working cart-horse trampled from behind by a circus elephant making a dazzling entry to a fanfare of trumpets. But, as the blare of the trumpets fades, and snap reactions give place to calmer reflection, one central thought about the whole question of disarmament should be kept in mind.

A heavy burden of armaments is an unnatural state of affairs in the world's most highly developed countries—and nowhere more so than in the United States. Americans are profoundly civilian people. Inheriting a long tradition of British distaste for standing armies as being a threat to liberty at home, and enjoying a century of freedom from any serious external threat, during which they worked their way up to an unrivalled prosperity, they have accepted the prospect of large-scale military effort—in 1917, in 1941, and again in these postwar years—with a deep and natural reluctance. It has been accepted because it was, and is still, necessary. But it is certainly not regarded as a means of maintaining prosperity; the burden or arms, for all the democracies, measures so much prosperity foregone.

The notion that general disarmament would fatally disrupt the economies of the free societies, often canvassed both by communists and by their fiercest opponents, was dismissed as unfounded last week by none other than Mr Khrushchev. It is certainly high time that this bogy was laid, and it is good to have support in the laying of it from such an unusual quarter. The western nations are right to insist that general disarmament, like justice, must not merely be done but must be seen to be done; as Sir Winston Churchill pointed out on Wednesday, they would court mortal danger if they let down their defences now while their possible foes, behind their shield of top-secrecy, did not. But this resolve must not lead the democracies entirely to deny their own natural instincts. In a genuinely disarmed world, as in a world freed to the interplay of human influences across frontiers, it would not be those states whose governments rest upon the consent of the governed that had reason to fear.

Auctioneering

The Labour manifesto is even worse than the Tories', while the Liberals' is only a little better

WHILE the Tory manifesto for this election fell well below what might have been hoped, the Labour manifesto has risen only a little above what had been feared. This still leaves the Tories' document rather the less frightening of the two. The Tories decided not to say the things that need to be said about the British economy, for fear of losing votes; clearly the Labour party never even thought of saying them. It is now taken as axiomatic at Transport House that the object of a manifesto is simply to win votes.

As this is the first election manifesto in British history to appear above the signature of an aspiring Prime Minister who is also a professional economist, this attitude towards electioneering is especially disappointing. Given that it exists, however, presumably the first thing that an anxious and honest citizen must look for is whether the manifesto contains any signs of at least negative statesmanship: whether Labour has at least managed to avoid tying any new tin cans to its tail.

As an economist Mr Gaitskell must have two principal apprehensions in his mind as he looks beyond the possibility that he may take office on October 9th. The first concerns the immediate situation this autumn if a Labour government comes back and has to ride over some initial flight by frightened foreigners from the pound. Everybody knows that this flight is a real possibility, especially in view of the rise in American interest rates and the fact that a large number of new wage claims will then be coming forward. It is therefore desperately important that Labour should not commit itself to undertake in its first few months any schemes that would involve additional inflationary expenditure.

Early last week it seemed that Labour might be going to take on, precisely for this most dangerous period, a very massive pledged commitment indeed; an official document from Tranport House declared specifically that "one of the first acts of the Labour Government will be an emergency Pensions Bill," costing around £200 million a year. In the manifesto the proposal to raise pensions "at once" is again given pride of place; indeed the measure will now cost more than £200 million a year, for all other national insurance benefits are to be raised as well and Labour has added the vote-catching absurdity of a promise to give £1 a week to the so-called "ten-shilling widow" (see page 1006). Fortunately, however, when pressed at their conference to say whether this pensions bill really was a commitment for the first session of a new Parliament, Mr Gaitskell and Mr Griffiths hedged; the measure will merely be "one of the first priorities" of a Labour government. Presumably this means that the bill would not be introduced this autumn if the external pressure on sterling made it apparent that such a step would be financial madness; it is tremendously important for the whole future of a Labour government, which would have to play itself in gently before a suspicious world, that its likely leaders should not say anything more specific than this during the campaign.

Mr Gaitskell's second main economic apprehension must concern the longer term. His grand promises of increased expenditure and higher production mean that he is staking any Labour government's future, and the country's, on a general philosophy of expansion whose chances of success will be reduced by every measure that encourages or perpetuates an uneconomic use of resources. In these last few years his economist's soul must have fought many a battle with the protectionist parts of his party's programme; the tragedy of last week's manifesto is that it suggests that on this front the economist in him has lost all down the line.

THIS is conspicuously true of the two major promises that most Labour candidates are now putting in the forefront of their election addresses: the promise to increase pensions indiscriminately instead of only for those in real need, and the promise to "repeal the Rent Act [and] restore security of tenure to decontrolled houses." The intention behind this last statement is not to put rents down again (although a lot of simple people are to be misled into supposing that it is), but Labour does propose to stop private rents rising again to the market level, however fast general inflation proceeds. This major promised distortion is merely the bellwether of Labour's flock of minor promises to whittle away a competitive economy in Britain.

These minor promises stretch across the manifesto in mounting profusion. "Labour will bring interest rates down," chiefly in order to help house purchasers and to provide farmers with special loans "at reasonable and stable rates." The bargain with the trade unions to introduce that restrictive shop hours act is reiterated in black and white. Labour favours "an overall national fuel policy," which means obliging British industry to use expensive British coal instead of cheaper foreign oil. It will make British Railways buy its equipment from "publicly owned railway workshops" even if private firms can supply it more economically; in order to right this wrong by another one, Mr Gaitskell indicated that the railways may be given a monopoly over some freight that could more economically be carried by road. "One of our first tasks," says the manifesto, "will be to help industries at present suffering depression and contraction"; specific beneficiaries of this policy of investing in failures will be cotton, shipbuilding and ship-repairing, and no doubt any other contracting industry in a marginal seat. It is specifically promised that the policy of carrying "work to the workers" will be pushed still further under a Labour government than under a Tory one, even if the workers live in places which industries consider to be uneconomic. Farmers will be given greater protection "against unfair foreign competition," and any "whittling away" of agricultural protection which has taken place under the Tories will be reversed; tenant farmers will have their rents frozen again, and "Labour will introduce measures to improve agricultural and horticultural marketing" (which means to give marketing boards greater monopoly

powers). Every shorn lamb is to have every unkind wind tempered for it, every lame duck is to be promised a feather-bed and asked for its vote.

After this, the Labour manifesto goes on to say some quite reasonably sensible things about foreign and colonial policy. But for the ordinarily discriminating voter the damage has already been done.

THE Liberals' manifesto is much better than the Labour one, and in most respects it is better than the Tories', too. It is true that it climbs on to the pensioneering band-wagon with that eager clerkly meticulousness which is one of the modern Liberal party's most aggravating characteristics; it wants to raise the pension for a married couple to £4 16s. a week. But the manifesto does grasp one controversial nettle which the other parties markedly shun: it says that trade unions should "be registered with the Registrar of Friendly Societies in such a way as to ensure fair elections and prevent victimisation." And, although it performs its expected soft shoe shuffle over agricultural protection, and although individual Liberal candidates are again fighting some local campaigns on quite illiberal platforms, there is a slightly less pervasive aroma from the pork barrel in this manifesto than in either of the other two parties' efforts. But it remains matter for astonishment that even the Liberals, who have so much to gain and so little to lose by looking different from the other two parties, should still not dare to cross the real dividing line back to their historic faith: that they will not take the risk of assuming that there might still be a greater premium for politicians to gain from an appearance of all-round efficiency than from an appearance of all-round generosity.

What is this corrosive myth that it has become electorally all-important to placate pressure groups in twentieth century England? Why has auctioneering taken the place of electioneering? It really will not do to say that British politicians were ever thus. In the nineteenth century there was no doubt plenty of straight, petty Eatanswill bribery of individual electors with private or party funds. But before this last war no party would ever have dreamed of offering taxpayers' money to vested interests on the vast scale that the Conservative and Labour manifestos now both adopt.

Nor, although a Rip Van Winkle who read the manifestos would suppose this, is the real explanation that a more corrupt sort of politician has now reached the top of political life; in point of happy fact the leaderships of all three parties in 1959 are at the moment in the hands of unusually moderate and intelligent and pleasant men. And it is just not true that the modern scientific approach to electoral statistics has shown that the votes of pressure groups are important; by drawing attention to the fantastically even tenor of the average national swing, in and between regions with very different industrial and age structures, it has shown precisely the opposite. Election manifestos have been corrupted into expensive shrimping nets for farmers', pensioners', tenants', cotton workers', shipbuilders', shipworkers' and cinema interests' votes—just at a time when massed calculating machines have shown that these votes, as significantly swingable separate entities, simply do not exist.

What seems to have happened is that the vast increase in government expenditure during the war has bred the impression that part of any money released by subsequent growth in civilian income can justly be regarded as a political propagandists' perk; and professional propagandists have always assumed that local protectionism is more important than it is. Whichever party is returned next month will be committed to this false philosophy, though with Labour leading as the worst offender by a fairly long neck.

Third Force Needed?

A discussion of whether and where there is a good case for voting Liberal on October 8th.

MANY people who vote Liberal next month will do so because they want to snub the other two parties; unless one happens to be an anarchist by temperament, or unless one thinks that both the major parties are unusually below the normal standards of British politics (which they aren't), that does not seem a very sensible thing to do. If one wants to vote Liberal and still be logical, one should have a purpose in view.

That purpose seems fairly easy to define. Presumably one should satisfy oneself: (a) that there would be advantages in building up a third force in Parliament, in opposition to whichever government comes to power; (b) that one would be making a practical contribution towards advancing that possibility, either immediately or eventually, by casting a Liberal vote in one's constituency.

In the circumstances of 1959, there is a strong intellectual case for the first of these propositions. There would be great advantages, if the prospect is at all practical, in building up a third force in Parliament—even one, perhaps especially one, whose members have no memory of power and no conceivable early prospect of it.

The collapse of stout socialist party in full debating flow, pricked by a perfunctory reminder that the indefensible action now being defended by a Tory minister had a precedent between 1945 and 1951, was one of the more sickening sounds of the expiring Parliament. Granted, there is merit in the parliamentary tradition that, in the normal course of alternation in office, the level of responsibility of debate is heightened by the leading protagonists' shared experience of high office. Granted, opposition leaders who have absorbed at first hand the subtle relationship between political master and civil servant, and who have been at the receiving end of crises as they occurred, have a function to perform in communicating to their less seasoned followers a draught of reality. But that this should be the sum and substance of the matter, that the clarities of controversy should be for ever mushed over by the dim half-memories of ancient responsibility, that what might be described as the permanent case of Opposition against Government should be repeatedly vacated on the grounds of a spurious consistency, cannot be in the public interest. Instead, one of the prime objects of parliamentary debate should be to supply a corrective to the tendency of all men in power to become too much conditioned by what Stalin called "the permanent operating factors."

It does no service to public understanding to create the impression that the dialogue between the two sides of the House is a shadow fight between men who are, or ought to be, at one in treating the performance of government as an arcane mystery. The Labour party, which is anxious to show that it knows how to behave, is perhaps still rather more susceptible to this subtle emasculation of the opposition's role than the Tories who, being the gentleman's party, are under fewer inhibitions in expressing their affront at not being permanently entrusted with the country's government. The case for a variegated opposition therefore becomes stronger if the Conservatives are going to get in again—so that in 1963 we shall still have a Colonial Secretary in a spot taunting poor Mr Creech Jones with a number of Africans he locked up in 1949.

THAT is the substance of the case for a third force in Parliament. How to achieve it? It may in the century of even swings appear quixotic to appeal to the electors of different specific constituencies to be discriminating. But there is one respect in which precedent favours the view that some discrimination should be shown. In the 1955 election, when there was a general swing to the Tories, certain individual Liberal candidates forced themselves into second position, largely at the expense of Tory incumbents, in such constituencies as Inverness, Hereford and North Devon. There are now about a half-dozen places in which Liberals have a chance of actually gaining new seats this time.

The chief cause for doubting whether we shall see Messrs Bannerman, Day and Thorpe filling out the Asquith family pew in Westminster is that the pendulum may have stuck for the quite different reason that the country is grateful to Mr Macmillan for bringing the hot weather, inventing Anglo-American relations (which was the general impression that his election broadcast with President Eisenhower was intended to convey) and generally making everyone feel good. But another obstacle they have to overcome is the persistent conviction that elections are only and exclusively for choosing governments and nothing else. "The English claim they are free," said Rousseau, "but they are only free once every seven years (there were septennial parliaments in his day) and judging from the way they use their liberty then, they deserve to lose it."

In fact Parliament fulfils two functions. The first, and the most immediately necessary, is to sustain a government and supply the setting for a ritual struggle for power between it and a challenger. The second, qualitatively as important, is to enable the individual to be spoken for against government by any party, against bureaucratic inflexibility, against *raison d'état*. Because the principal opposition party is usually thinking back to its last taste of power, looking forward to its next, and has an interest in avoiding the gift of hostages to fortune, these dual functions are not adequately combined within a closed two-party system. The citizen, whether in Britain or the colonies, is not always right when he creates a fuss, but scepticism about the aura of government is one of the biases which it would do good to have more fully represented in the next Parliament to offset all the biases which lean the other way.

Of course there are a few backbenchers, mainly but not exclusively in the Labour party, who presently fulfil this function. The names of Messrs Hale, Paget, Silverman on the left and Mr Nabarro and Sir David Robertson on the right come to mind. Even those who disagree fundamentally with some of the extraordinary things that some of these gentlemen so frequently say should welcome the fact that they are so frequently ready to say them. But outspoken Liberals, with the machinery and status of a separate political group behind them, ought to be in an especially good position to perform this function. In general, Mr Grimond undoubtedly receives from the Speaker far more facilities and opportunities than the spokesman of a mere half-dozen backbenchers within one of the major parties could look for. This is the basis of the Liberals' most appealing thesis: that another four or five Liberal MPs of forceful personality and resolute temperament might make a wholly disproportionate difference to the atmosphere of the House.

THE Liberal leaders, of course, go further. They hope to be able to look back on this election as the first section of a multistage rocket taking them to power. One does not necessarily have to share this faith to see the value of voting Liberal, in certain constituencies. It is to the second function of Parliament, to stand no nonsense from authority, that the attention of the voters of Inverness, Denbigh, Hereford, North Devon and North Cornwall (and Torrington, since Mr Bonham-Carter is by no means secure) deserves to be directed. A discriminating voter in Hereford today would surely be contributing more to Parliament by helping to send Mr Robin Day to adapt his television questioning technique to the precincts of Westminster than by helping to return an assistant Tory Whip (unpaid).

This is not an endorsement of all the two hundred or so Liberal party candidates. Cross though the Liberals get when one says this, no radical newspaper can give any such thing. Where the real choice in a constituency is between Conservative and Labour it seems a rather wanton gesture for a thoughtful, independent-minded voter to help produce a capricious result by throwing his vote elsewhere. Nor is this article even an automatic endorsement of any Liberals who have a chance of getting in; their attitudes and utterances should be scrutinised carefully during the campaign. Since the whole point of electing such candidates would be the hope that they might be exceptionally independent and outspoken in the Commons, they should be allowed less than the usual indulgences for compromises offered on the hustings. Scrutiny should be even more severe for the many other Liberals, few of them well known and some of pretty indifferent material, who are trying to push into second place. The voter in these constituencies is in effect being asked to forgo a direct and explicit impact on the result of the present election as an investment in determining the result of the next. This kind of confidence should not easily be bestowed. But it would be healthy for Britain if it could conscientiously be given to outspoken Liberal candidates in various parts of the country—and especially healthy if, in the end, we are really going to have the Tories again for another round.

THE ELECTION OF 1959

For the next few weeks comment upon the course of the election campaign, based partly upon despatches from correspondents in the constituencies, will be presented in this special section of *The Economist*.

A Labour Recovery?

BY A ROVING CORRESPONDENT

THE further one penetrates into the battlefield, the more insistently the impression grows that Labour is so far making a come-back in this election. To some extent, this is borne out by the public opinion polls. The *News Chronicle* Gallup poll on Thursday reported that the Tory lead over Labour appeared to have been cut from 5½ points last week to 4 points this week, compared with the lead of 2.9 per cent that the Tories had in the actual voting in 1955. But the feeling of a leftward swing is even more dramatically borne out by visits to the constituencies.

Down among the grassroots, this is a much less stagnant election than one had anticipated. It is certainly exciting more interest among the faithful than the 1955 contest, and one's guess at present is that it will probably lead to a bigger turnout among the indifferent as well. In part, this can be explained by the contrast between electioneering in May and in September. In 1955 the Labour party was dispirited by its internal feuding. The efforts of many partisans had been concentrated on the municipal contests early in the month—and many had exhausted their energies in the triennial county council elections in April. Gardens had to be tended and, after a bleak winter, summer had its other distractions. Now, after a splendid summer and good holidays, people are ready for the fray—and the weather has been just right for canvassing.

All this, however, is not an adequate explanation of the entirely new atmosphere one finds in local Labour parties' headquarters. At least in the Midlands, which your correspondent visited most extensively this week, everyone on the Labour side speaks of a great increase in enthusiasm compared with 1955—and there is tangible evidence for this in well-filled committee rooms and in general hustle. Extraordinarily impressive Labour canvass returns are quoted. Admittedly, when one probes them, one often finds that they are in part misleadingly impressive, because some of the promises of Labour votes that have been collected refer to a period up to eighteen months ago, when everybody agrees that Labour was temporarily well in the lead in the country. Nevertheless, there is no doubt that the scale of the Labour canvass in progress now is vastly greater than that in 1955. A particularly noticeable feature in Birmingham is that Labour is using the trade unions as instruments of propaganda to an almost unprecedented degree. On the factory floor shop stewards are really active, and a fair number of full-time union officials are devoting themselves entirely to the campaign. On the Conservative side, most agents claim that the level of their local party activity is equal to or above that of 1955, but, perhaps because they start from a much higher plateau, the improvement is much less startling.

IN spite of this greater excitement, it is very hard to find anyone with views on what this election is about. On the whole, foreign and colonial affairs seem to cut little ice. Pensions and, to a smaller extent, rents are said to have some importance. Contrary to the expectations of intellectuals and the press, many Labour agents claim that their pamphlet on "The Tory Swindle" is going down well. The Conservatives expect to be returned on the cry of "prosperity." Nationalisation does not seem to be important to either side, even in a steel town like Corby. Local issues are almost non-existent. Even in Nottingham the general expectation was that the results in two local marginal seats, one with a Tory majority of 758 and Sir Tom O'Brien's with a Labour majority of 3,908, would depend almost entirely on the national swing, not on the Popkess affair.

If it is not issues that count in this election, is it leaders? Once again the answer, perhaps mysteriously, seems to be "No." It is astonishing how few local stalwarts on either side mention the names of Mr Macmillan or Mr Gaitskell. The two men are plainly not really unpopular in any quarter; both sides are fairly happy with the leaders under whom they are going to battle, but real hero worship is lacking. In not one of the Labour committee rooms which your correspondent visited this week was a picture or poster of Mr Gaitskell to be seen. Mr Macmillan was more widely on view on the other side, but usually in the new poster which falls far below normal Conservative advertising standards. In a way, all agents have a contempt for politicians, but it is striking how in most Tory committee rooms the "super-Mac" emotion is either dead or has never come alive. Many Tories are muttering worriedly that Mr Gaitskell has so far shown a surer touch on television than Mr Macmillan; for the first time one finds neutral observers suggesting that perhaps the Opposition leader will eventually emerge as the more popular man.

Neither side complains of a shortage of money. In all the marginal seats returns of expenses are likely to press close to the maximum permitted amount—and, in some cases at least, substantial disingenuousness will be required to keep within the legal limit. The only substantial change in electoral law since 1955 is the abolition of the limit on uses of cars. Although some Labour people still complain bitterly about this, there is no evidence that it is going to help the Conservatives much—even in rural constituencies, and even if October 8th should be a wet day. Certainly Tory agents are not gleefully supposing that there will be many new votes from this; it is more usual to find them complaining bureaucratically about the administrative problems of dealing with unlimited cars and about the possibilities of ill-directed private enterprise in giving lifts. Everybody agrees that the postal vote is likely to be higher than in 1955—partly because an October election means that the register is four months older and that more removals have therefore taken place, partly because the public (aided by an informative ITV telecast last week) has become more aware of its rights, and partly because party organisation (especially on the Labour side) has grown more efficient in harvesting this vote. This Labour effort has not yet caught up with the Conservatives' strictly relative efficiency in this field, but one has the impression that in marginal seats the postal vote may this tme divide only about 70 to 30 or 60 to 40 in the Conservatives' favour, against the 80 to 20 or 90 to 10 proportion that was more usual last time.

In one respect, however, the Labour organisation may prove to be more progressive than the Conservatives. Few Conservative agents admit to any decline in the number of meetings they will hold. Despite television, they dutifully say, a candidate must show himself, even if attendances fall off. The Labour party has accepted the changing times much more brutally. In most constituencies the number of meetings has been substantially cut, and the emphasis transferred to loudspeaker work and personal canvassing by the candidate. This is partly because abandoning indoor meetings saves enormously in time and organisational effort, as well as making much smaller savings in money. The Tories say that the price of abandoning meetings may be a loss of local publicity, but a few Labour agents are adroit enough to supply good news stories to their local newspapers in lieu. Once again, however, this adroitness is a strictly limited quality; in general, both parties seem to have much to learn in the handling of both the local and national press.

WHAT, then, as the campaign enters its last fortnight, can be called one's outstanding impression? Down among the men who have studied canvassing returns, the Conservatives are surprisingly unambitious in their claims about likely gains; they are at present concentrating on convincing themselves—usually successfully—that they are unlikely to lose many seats. Labour is much more aggressively hopeful than one might have anticipated; their agents in nearly all the marginal seats give the impression that they are attacking, not defending. Often they are attacking with undeniable local optimism—even those who, when asked for their guesses about the wider national scene, obviously do not feel, in their heart of hearts, that Labour is really likely to win the whole election. But, after all, it is the sum of the local contests that will decide the issue. In 1955 when one made a tour of these same committee rooms the opening impression was of a smoothly efficient hum on the Conservative side and of chaotic disarray on the Labour one; in most areas—admittedly, there are some exceptions—that was certainly not one's impression this time.

After the last election, Labour made the exhaustive Wilson inquiry into its admittedly inefficient organisation. After this election, one already has a burgeoning feeling that the Conservatives ought to make a similar inquiry into their admittedly relatively more efficient one. This inquiry should concern itself particularly with the function of Conservative agents. These busy, competent, friendly men seem to be oddly out of touch with reality. None of those whom your correspondent questioned this week had really made a hard-headed assessment of how far it was worth co-operating with television programmes such as those sponsored by Granada. None had any ideas about the effect of large-scale television coverage on the turnout. None had much idea about what the issues of the election would be. None made predictions about individual results except in terms of the quality of the candidate and the organisation and the effect of population changes. These men are wholly concerned with swaying the electorate—but they seem to be wholly ignorant about what really moves it. Aren't we all? But the rest of us are not supposed to be full-time professionals.

The Course of Battle

"IF it were not for the public opinion polls, I would now be awfully tempted to tip a Labour victory in the light of my observations in the constituencies. As it is, I still think the Conservatives will win, but it is going to be a much more exciting election than seemed likely a week or two ago." This comment, from a very experienced election observer, is typical of the reports *The Economist* has been getting from others of its special correspondents in the field—except, possibly, in London. The general impression is definitely that the election is running surprisingly well for Labour. In the first two notes below we discuss some of the ways and means by which this Labour recovery seems to be coming about. In the correspondents' reports from marginal constituencies that follow we have adopted the same printing convention as last week: the name of a constituency is printed in **bold type** wherever it is one of the 48 Conservative seats or 60 Labour seats which would be captured by the other side as a result of a 3 per cent or smaller swing away from the sitting member.

Whence the Images?

IT is still very difficult to judge how the image of the two parties is getting over to the ordinary man in this campaign. The newspapers are definitely devoting more space to the election than at the equivalent period in 1955, with a clear gain in press support to Labour. Both *The Observer* and *The Guardian* seem much more anti-Tory than last time, and the *Daily Herald* and the *Daily Mirror* are hitting out harder and earlier. The provincial press remains predominantly Conservative, but here, too, the Tory front is perhaps not quite as solid as before.

Until the two party leaders' tours began on Tuesday, perhaps the best propaganda the Tories were getting in the press were snippets from the speeches of Cabinet ministers who had got out early on the hustings. Labour was less well served in this respect; the speeches of Messrs Macleod, Maudling and Boyd Carpenter are generally easier to milk for pungent *bon mots* than the oratory of, say, Mr Griffiths or Mr Gordon Walker. From now on, however, the "election speeches" pages of the newspapers will presumably be surfeited with lengthier extracts from the discourses of Mr Macmillan, Mr Gaitskell and Lord Attlee. It is difficult to guess what effect this will have. Our correspondent who was at Manchester on Tuesday describes Mr Macmillan's opening to the Conservative campaign as "a clear, worthy, confident speech, which, perhaps because of the Lancashire temperament, failed to set the audience on fire. It was particularly interesting to see how sourly the candidates for the cotton constituencies sitting on the platform behind the Prime Minister received his remarks about the cotton problem. The meeting was a good but not wildly exciting send-off to the campaign." We had no correspondent at Mr Gaitskell's opening meeting in Bristol, but the effect of reading it in the newspapers was equally soporific.

It is ironical that these discourses of the leaders should receive so much more newspaper space than the party political telecasts, all of which must have been heard by more than a thousand times as many people as any speech. The Tories' programme last week, their ministerial causerie on Saturday, surely cannot have won many votes, but it probably had the negative virtue of not losing any either; Mr Butler's programme on Wednesday was perhaps a few points better. On Labour's telecast on Monday, Mr Gaitskell again showed the remarkable sureness of his touch, but the effect of the rest of their show is frankly controversial.

Some experienced television technicians have praised it as far and away the best and most imaginative use of the medium for political broadcasting that has yet been attempted, and many middle-class viewers seem to have been impressed with the show. Nevertheless, in humbler homes, one has a lurking suspicion that Labour's entirely middle-class television studio team may have looked as if it was patronising all those splendid old gentlemen on the pension, and that the best way of showing that Labour speaks up for the "ordinary housewife" is not by producing that obvious Oxford graduate, Mrs White, in a dirty apron.

The main point of interest of the Liberals' programme on Tuesday was that it was

much more anti-Tory than anti-Labour. Elsewhere on the widening television front, the new freedom for news cameras to stray into party headquarters probably brings an advantage to the Conservatives, because Lord Hailsham is decidedly more telegenic than either Mr Morgan Phillips or Mr Harris.

Whither the Issues?

MOST correspondents in the field agree that the Labour party has seized the initiative about two issues, the major one being pensions and the minor one rents, and is finding it profitable to keep on talking about them. One Labour candidate prominent in the campaign for nuclear disarmament wistfully reported this week that he had not had a single question on the H-bomb. Some Conservative candidates and agents are seriously worried at the impact of the Labour promise to raise pensions by 10s. a week, and many Labour candidates and agents say that this is exciting much more interest than anything else.

There is no doubt of the zest and enthusiasm in the Labour committee rooms, but, apart from the pensions issue, it is far from clear what they are enthusiastic about. Some Labour speakers were eager to raise one other main topic this week, by exploiting the current troubles in the property share market for an attack on high finance, but Transport House must have flagged desperately to them to shut up ; the nasty fact is that the snide remarks aroused in the pubs by the current celebrated case are more usually anti-Semitic than anti-capitalist. The Tories, to their discredit, again have very few Jewish candidates on their hustings, while it is one of the coincidences of this election that six Labour MPs of that faith are defending particularly marginal seats.

Tory propaganda in this campaign has so far seemed to be strangely sleepy. Here and there one gets the impression that Lord Hailsham has caught his party in a cleft stick by his high-minded utterances against mudslinging in this election ; he cannot easily escape from the cleft now because he has talked as if his attitude is specifically supported by God, and it has certainly been specifically supported by bishops. The result has been rather to impede Tory comparisons with the days of Labour's austerity and rationing, a form of propaganda that could be very effective ; Labour, on its side, has been impeded only from saying that the Tories are deliberately eager to create grinding poverty, which nobody would believe anyway.

Labour's Scottish Hopes

Our special correspondent in Scotland reports :

SCOTLAND has a political pattern of its own, and this time few, if any, of the Scottish peculiarities are favouring the Unionists (the Conservative title north of the border). National swings usually peter out in central Scotland's stubbornly marginal seats, as Labour discovered even in 1945. The significant shifts since 1951 have been those of Labour's city battalions into housing estates in Unionist marginals round Glasgow. Liberal nostalgia, occasionally associated with Nationalism (and even more purposefully with Gaelicism in Inverness), lingers in the Highlands and Islands. Marginal Unionists are being hurt by patches of high unemployment, touching 7 per cent in north Lanarkshire and over 4 per cent in Glasgow and Dundee. They are also in some trouble where a Church of Scotland presbytery has been particularly upset over Nyasaland. This all means that, even if there still is a national swing to the government, the Unionists may have to poll their full strength even to stand still in Scotland. If there is a vestige of a swing the other way, Labour could pick up the 6-8 seats that Mr William Marshall, its Scottish secretary, has his eyes on.

The big Unionist headaches are in the west of Scotland. Three of the Glasgow seats that they won in 1955 are in obvious danger. One Unionist loss seems quite certain. The 10,000 new housing estate voters on the register in **Glasgow Scotstoun** must wipe out the Unionist majority of 428 which Sir James Hutchinson (who is not standing this time) clung to in 1955. Strategically, the Unionists ought to recapture Glasgow Kelvingrove, which the late Walter Elliot first won in 1924, held in 1955 with a 2,688 majority (5.4 per cent swing needed to dislodge him), but which the Unionists then lost to Labour by 1,360 in a by-election after his death in March, 1958. There are 1,622 unattached votes which an Independent picked up in the by-election, and the Rent Act has lost much (though not all) of its effect since the Tories' darkest days last year. Nevertheless local opinion obstinately forecasts that Labour's Mrs Mary McAlister, a douce but doughty Glasgow councillor, will manage to stay at Westminster. The Unionists' third fear is **Glasgow Craigton,** where Mr Jack Nixon Browne was only 210 votes to the good last time, and where there has been another housing estate influx (though much smaller than in Scotstoun).

Elsewhere in Scotland, the Unionists seem very likely to lose the seat at **Lanark,** where the maverick Mr Patrick Maitland has a majority of 958, and now faces Labour strength in the new town of East Kilbride ; many of the industrial estate workers are pretty well paid, but their appearance at the polls should more than offset the miners' steady exodus from the constituency. The Unionists probably have less to fear in **Rutherglen** (Unionist majority 2,101), where the electorate should know what steel nationalisation is all about. **Central Ayrshire,** which the Unionists captured by 167 in 1955 is anyone's guess. The Unionist organisation is strong on the ground and showed its teeth in local elections this year, but there is some local unemployment.

The Unionist Counters

IF the swing in Scotland does go towards the Government there are, on the face of it, five Labour marginals that could conceivably fall. In **Glasgow Provan,** the best of a young crop of Unionist challengers, Mr Robert Kernohan, starts only 180 votes behind the ailing Mr William Reid, and with a much more active organisation. But—once again—there are 8,000 new voters who are expected to divide five to three for Labour. Out in **West Dumbartonshire,** where residential Helensburgh and industrial Dumbarton confront each other, the Unionists have a more restrained (and therefore better) candidate than last time ; but they need a 2.4 per cent swing to unseat Mr Thomas Steele (majority 1,952).

The Unionists are mounting a stronger offensive in Edinburgh and the east of Scotland. Here at last they can mark up a likely gain, to offset probable losses in Scotstoun and Lanark. They should finally roll over Mr Tom Oswald's majority of 939 in **Central Edinburgh,** where 5,000 mainly Labour voters have moved out and Unionist canvassing reports are good. There is a bare chance of a surprise in **East Edinburgh,** where Labour's Mr Willis, with a majority of 2,042, faces the Earl (and, even more, the Countess) of Dalkeith—but with 1,000 new voters on the register. Labour is positive that it will hold Edinburgh Leith once more, thanks to Sir Andrew Murray's habitual Liberal intervention. It is much less sure in **West Dundee,** where Mr John Strachey has long fought the Housewives' League on one flank, and the Communists on the other, but was pulled down to 1,874 votes last time, and now needs only a 1.8 per cent swing to be toppled. The Unionists have a sound candidate ; their preliminary poster campaign has been on a lavish, "almost English," scale—and the Tay road bridge is in the Conservative party manifesto.

The extent of Liberal activity in Scotland has been pruned from 30 to only 15 constituencies ; this includes the Nationalist leader, Dr J. M. MacCormick, who has been rather negligently carrying the Liberal banner in Roxburgh, Selkirk and Peebles. The great Liberal hope is **Inverness,** where Mr Bannerman needs only a 1.4 per cent swing from Unionist to Liberal to win. Your correspondent has not visited the area, but the Scottish political grapevine suggests that a young and punchy Labour candidate Mr Ian Coulter, although he will finish third, might take enough votes from Mr Bannerman to save Colonel Neil McLean's Unionist majority of 966. Nevertheless, the Unionists are worried here, and they may have at least equal reason to be worried about the lesser known Liberal challenge in Ross and Cromarty. But they are retaliating with a croft-to-croft campaign, led by a Mr Robert Bruce, against the Liberal heartland in Orkney and Shetland. They say that Mr Grimond (majority nearly 8,000) may get a real fright—in five years' time.

Pink Glow in the North

A correspondent who has been touring the North of England reports ;

ANYBODY who has read the public opinion polls must feel mystified by this election. The polls still say that there has been a swing to the Conservatives since 1955. But up here in the north the Labour party seems genuinely confident that it will have no losses, and it is exceedingly buoyant. The Conservatives one interviews still generally expect to win the election as a whole, but they are certainly not counting on many gains.

In Yorkshire the Conservatives admit that they are in obvious danger at **Hull North** (Labour swing needed 0.6 per cent, and with new Liberal intervention) and they are not very optimistic about gaining **Cleveland,** although they need only a 0.2 per cent swing and the constituency is full of potentially nationalisable workers. **Brighouse and Spenborough** (1.8 per cent Tory swing needed) is listed as the likeliest Conservative gain from Labour in Yorkshire—and it is not very likely. The Tory marginals of **York** (0.9 per cent Labour swing needed) and **Doncaster** (1.8 per cent swing) are widely said to be good bets for Labour gains ; railway reorganisation has not helped Conservative prospects. In Lancashire both sides declare that cotton will cost the Conservatives some votes. Local opinion alleges that it makes a Labour victory in **Oldham East** almost certain, and there is much more Conservative pessimism about possible Labour gains in the two Bolton seats (one held by a Liberal) than might be expected from the figures last time. In **Heywood and Royton,** which the Tories held by 3,210 last time, people are talking of the possibility of the newly intervening Liberal getting 10,000 votes and giving Labour the seat.

The Mosley Intervention

NORTH of the Thames, straggling out from London's heartland to the subtopia of factories on its western fringe, in an area of great social change, of road works and of varying coloured immigration, lie five marginal constituencies—one with a Tory incumbent, and four with Labour defending. One of these is North Kensington (Labour's majority last time 2,943, with a 3.9 per cent swing needed to dislodge it), which many people regard as the most interesting electoral contest in the country. The constituency begins in the chaos that will be the new Notting Hill Gate, a Conservative ward of shopkeepers and professional folk, and extends northwards through a jungle of streets beyond Ladbroke Grove and Notting Dale where Mosley's tom-toms throb ominously, and where it is strange to recall that the writ (some say, dead hand) of the Royal Borough still runs from its Boma far to the south, by the elegances of Derry and Toms and Barkers. About 9,000 people enter and leave the electorate yearly; it is London's great caravanserai, a congerie of bed-sits.

The special electoral interest of North Kensington is that not only are the Liberals intervening in the mêlée this time with plenty to say about anti-African atrocities and the colour bar, but Sir Oswald Mosley is also a candidate on the twin slogan of Keeping Britain White, and creating a Euro-African power block in which the whites will inhabit Europe and the highlands of Africa, while the blacks will be happy and lowly in the lowlands. On Wednesday a fifth candidate, an Indian restaurant keeper, Mr Nandanwar, dramatically appeared in the field.

Everyone admits that Mosley is an entertaining speaker ; his intervention makes excitement certain, and provides not inconsiderable prospects of violence during the campaign. In previous straight fights, the Conservative working-class candidate—their famous "romantic gasworker," Mr Bob Bulbrooke—has steadily pared down the majority of the sitting Labour member, Mr Rogers. For Mr Rogers, the race disturbances were an embarrassment, and he made equivocal noises last year which satisfied none of his supporters. His organisation seems once again to be below par. In streets where whites and coloured live as neighbours the touring Labour candidate is received with a sullen "Up Mosley," and the Conservative candidate with a cheery greeting of the same kind.

The Conservatives think that all three of the new interventions will hurt Mr Rogers far more than they will hurt them. One's own impression is that Mosley will indeed rob Labour of some of the poor whites' vote, and that many of the coloureds (7,000 of whom are eligible to vote), who in most other constituencies would vote Labour, here may either vote for the admirably liberal Liberal, or for Mr Nandanwar, or (more usually) not go to the polls at all. "Now's my chance," says Mr Bulbrooke—and here indeed is one Tory who may never have it so good again. Perhaps nowhere else would one expect a Labour seat to fall which requires a 3.9 per cent net swing for its overthrow, but North Kensington may be the exception.

Western Approaches

THE other four West London marginals are all expected to be straight fights. Labour's three are **Barons Court** (Labour majority 125 last time, 0.2 per cent swing needed by the Tories), **Acton** (Labour majority 525 last time, 0.7 per cent needed), and **Willesden East** (659 majority, also needs 0.7 per cent swing). The Tories' marginal is **Brentford-Chiswick** (Tory majority 2,105 in 1955, a full 3 per cent swing needed by Labour to win, but the popular Tory incumbent Mr P. B. Lucas, wartime fighter ace and international golfer, is not standing again this time).

Barons Court and Brentford-Chiswick form a continuous territory from Fulham to the Great West Road, and are now linked and bisected by the Cromwell Road extension ; it is a matter of heartburning by the respective agents whether the demolition and rehousing entailed by this piece of go-slow road engineering has cost them more votes than the other side since 1955. Baron's Court electorate has fallen (for this and other reasons) by 5,000, Chiswick by over 2,000. The Tories think that the thinning out helps them and report a marked drop in housing complaints ; Labour considers that the Rent Act has left as deep a scar as has the road, and points out triumphantly that it won both the Brentford-Chiswick seats in the Middlesex county council elections last year. One's own impression is that the Tories will hold Brentford-Chiswick this time. Barons Court is a greater problem—partly because of the massive uncertainty about population movements (the constituency now has a fair number of Labour-inclined coloured voters), and partly because it was a brand new seat in 1955 and the Labour organisation then was not as quick as the Tories off the mark. The two organisations are better matched now and accustomed to fight both local and parliamentary elections to a photo-finish, which the locals think is more exciting than the annual boat race that is staged on their part of the river. Nurses are being pursued from the constituency's five hospitals to the ends of the earth for postal votes, and even Rowton House is picketed by canvassers.

Acton and Willesden, with their factories, are much more settled areas ; even the Indian and Pakistani colonies are old-established and relatively stable, but there, too, agents cannot ignore immigration—white and coloured. In both constituencies the local Tory organisations are strong, but Labour headquarters declare that volunteers are pouring in "now that they've smelt powder." The trade unions are working very actively for both Labour MPs, Mr Sparks and Mr Orbach. Again housing is inscribed on Labour's banners, but life in the outer suburbs is lived largely on hire purchase and great Labour efforts are having to be made (as one agent put it) to tell them that "even if they've never had it so good they've not had it as good as they could have had." If—but only if—the Tories are to increase their parliamentary majority anywhere, Acton and Willesden East are seats that they will need to capture.

Two Lewishams and a Woolwich

IN the dormitories to the south-east of London, housing estates and older residential property interleave to make three marginals which were all won by the Tories in 1955, **West Woolwich,** the doubtful half of the borough (the rest of which is in Mr Christopher Mayhew's pocket), and West Lewisham are two places where one will not find penny-farthing bicycles in a jet

age, to adopt Mr Harold Wilson's expressive characterisation of many local Labour party organisations. West Woolwich has never been that way. The fact that the Labour agent works from a temporary wooden hut a few hundred yards from the mansion that accommodates the headquarters of the new Tory candidate, with room after room of ladies sorting out the postal vote, could be a misleading symbol. The hut is just an outpost of the Woolwich Borough Labour Party, the largest in the country and with its main headquarters near the arsenal. It exploits the safety of the eastern division to devote the full resources of two constituencies to demolishing an 1,880 (2.2 per cent swing needed) Tory majority in the west.

Confidently the Labour agent claims that he starts the election with a fully marked register and that he is level with his Tory rival in rustling up the postal vote. While Mr William Hamling, the local schoolmaster who was the Labour candidate last time, is having a second try, the Tories have reason to wonder about the value of a candidate's personality. Sir William Steward, the Tory member for the past 14 years and former chairman of the House of Commons Kitchen Committee, has retired and young Mr Colin Turner, an "international media representative and marketing consultant" and not a local man, was adopted only last February. The third man in the race, a pacifist lay preacher is expected to be slightly helpful to the Tories, since his "Fellowship" platform includes "common ownership" and unilateral disarmament.

The factor of personality is being even more actively canvassed in **Lewisham North,** where Mr Christopher Chataway, of television, the four-minute mile and the Bow Group, is seeking to recapture the Tory seat which was held by 3,236 votes (4 per cent swing needed) in 1955, but afterwards lost in the Suez-and-Rent-Act by-election. Mr Chataway's supporters are liable to hold up their hands in horror at the very suggestion that his television and athletic attributes are being so much as hinted at during the campaign, though they permit themselves to purr with pride at their man's part in suggesting the World Refugee Year. The fact is, of course, that this contest, together with those at Hereford (Mr Robin Day), Rochdale (Mr Ludovic Kennedy) and Holborn and St Pancras (Mr Geoffrey Johnson-Smith) will be a fascinating test of whether a candidate who regularly comes down most of his constituent's television aerials is an exception to the rule of thumb that even the best personality is worth only 500 votes. The difference, if any, between the change in the Tory vote in North Lewisham and in the rest of the country should give the answer in Mr Chataway's case; and the experiment is all the more intriguing in that Mr Niall MacDermot, the Labour victor of the by-election, is universally recognised to have had an excellent record in his two and a half years in Parliament.

Mr Chataway's agent claims that he has torn up his previously marked register because canvassing returns showed so many voters previously marked red for hostile coming over to his side. There will be no Independent Loyalist as in the by-election to split the Tory vote, but a rather unimpressive Liberal is bidding to collect any anti-personality votes with his clichés. Mr MacDermot's organisation, on the other hand, has a somewhat improvised air. The local Labour party wavered a long time about appointing a full time agent and after turning down all the outside applicants finally put its own honorary secretary on the payroll. It is claimed that local experience will prove superior on the day to Wilson reforms.

In Lewisham West, which is Lady Lewisham's Lewisham and takes in Sydenham and Forest Hill, what look like the Wilson reforms have been very energetically implemented in the Labour organisation since the 1955 election, although it is understandably claimed to be all due to local initiative. The agent's full pre-election canvass prompts him to claim that he now has the votes to put Alderman Dick Edmonds in, provided he can lead them all to the poll. This would be a considerable achievement since the present Tory member, Mr H. A. Price, a trained baritone, had a 4,325 majority in a straight fight in 1955, and the alderman's supporters are only calculating that this year's Liberal, Mr Smith, will take votes equally from either side.

Ulster Variations

A correspondent who has recently toured Northern Ireland writes:

THE decision of Sinn Fein to contest all twelve Ulster seats could mean a clean sweep for the Tories' Irish cousins the Ulster Unionists. Last time the Tories won ten seats at the polls, but picked up **Fermanagh** (original Sinn Fein majority 261) and **Mid Ulster** (Sinn Fein majority 260) only after the convicted gunmen who had been elected were declared ineligible to sit. This time in Fermanagh Colonel Grosvenor, a scion of the property-owning Westminsters and Mr Selwyn Lloyd's PPS, has very high hopes of victory outright on October 8th. Privately many local Catholics concede that he has an excellent chance, since the feebleness of the IRA raids in the last couple of years and the inconvenience of the reprisals—especially the spiking of the country roads which crisscross the border many times while linking neighbouring villages—have taken much of the heroics out of violence. Moreover—a potent point—there are now fewer Catholics on Fermanagh's register.

Mid-Ulster, however, may be a harder nut for the Unionists to crack, largely because of their own feebleness. The constituency is admittedly difficult to organise since it consists for the most part of small villages separated by high mountains. In 1955 the Unionist organisation collapsed under the strain of fighting two successive elections, after the second of which its candidate found that he, too, was ineligible to sit in the Commons (because he held an office of profit under the crown). The third election was then won by an Independent Unionist, Mr Forrest, because the Nationalists decided to try conclusions with the Sinn Feiners, and thereby proceeded to lose their deposit, but also to split the Catholic vote. If the Nationalists intervene again, Mr Forrest and Mr Grosvenor will no doubt both win; if, as is more probable, the Nationalists keep away, Mr Forrest will face a tough straight fight. He will have no organisation to help him, unless the Unionists make a last-minute effort to pull themselves together.

The Northern Ireland Labour party, which has been gathering some momentum since it came down off the fence in support of partition, says it has hopes of capturing the East Belfast seat. The same rather unimpressive candidate, who reduced the Unionist majority to 5,260 in last March's by-election, is trying again. He should be helped by the recent redundancy at Short Brothers' aircraft plant. But, whereas his last fight was a straight one, he already has an Eire Labour candidate, who objects to the Labour party's abandonment of United Ireland, in the field to split his vote; and there will presumably now be a Sinn Feiner as well to take away some Catholic working-class votes and send their Protestant comrades hurrying back to Unionist cover.

In North Belfast the Labour party has a wistful but not very convincing hope of exploiting the divisions in the Unionist ranks which caused the sitting member, Mr Montgomery Hyde, to be dropped in favour of an inexperienced young solicitor. But significantly the Labour party has not even thought it worth entering a candidate in the City's western division, which from 1951-55 has sent a socialist of sorts to Westminster. Here the working class is predominantly Catholic and resentful of the Labour party's stand on partition. The sitting Unionist, Mrs Pat McLaughlin, is thought to have consolidated her seat, and her opposition is expected to be split between three anti-partitionist candidates.

NOTES OF THE WEEK

CYPRUS

Grivas Rebuffed

ALLEGATIONS of somewhat improbable plots against General Grivas were flying about in Nicosia and Athens last weekend. He himself claimed that the Greek government was planning to arrest him on the pretext of a fictitious pro-Grivas conspiracy in the Greek army; and an Athenian opposition newspaper announced that there was a plot afoot in Cyprus to murder a minister in the provisional government and throw the blame on Grivas. Both allegations look like defensive counterploys to Archbishop Makarios's announcement that he had evidence of a plot by the general's supporters in Cyprus to overthrow him.

The Greek government, at any rate, reacted with refreshing and crushing frankness. If General Grivas is not a liar, it said, he must be suffering from a persecution mania; having honoured him "to an exaggerated degree," the Greek government is no longer concerned either with him or his political plans. This is not the only rebuff administered to Grivas by his former adherents. Ten days ago Archbishop Makarios stated categorically that he considered himself responsible "only to the sovereign people of Cyprus and not to the general."

It would, however, be rash to conclude that General Grivas's mischief-making powers have been seriously weakened either in Nicosia or Athens. His behaviour may have caused him to be snubbed; but it has also divided the Greek Cypriots. Moreover, his repeated allegations of secret agreements and concessions made outside the terms of the London agreements, although denied by both the archbishop and the Greek government, will not facilitate the present negotiations on the transfer of power to the new republic. Archbishop Makarios has so far refused to go to Athens to see Grivas without a proper personal invitation, although one of his colleagues has this week gone there on a presumably mediatory mission. The archbishop has been right to stand on his dignity. But sooner or later a meeting will probably become both inevitable and in the best interests of Cyprus. On their present form, the general has far more cause than has the archbishop to fear the outcome of such a confrontation.

FRANCE AND ALGERIA

Uneasy Interlude

GENERAL DE GAULLE'S statement of policy on Algeria last week was bound to create an immediate stir in French politics. On both sides of the Mediterranean the advocates of "integration" loudly proclaimed that of the three choices offered by the president, *francisation* was the only acceptable one. Settlers' organisations in Algiers swore that they would defend this principle "together with the army." In Paris the traditional prophets of integration, like M. Duchet and M. Bidault, flocked into a new group whose name, the Rally for French Algeria, is itself a programme. The party most divided by this issue is the neo-Gaullist UNR, whose deputies were elected on a ticket of dual loyalty—to de Gaulle and to the spirit of May 13, 1958. Men like M. Soustelle and M. Delbecque wanted their party to fly the flag of *francisation*. But the leadership, while ruling out Algerian independence, refused to try to tie the general's hands any tighter than that.

All these stirrings will not amount to a storm as long as the army keeps out of the controversy. And it was to reassure the army, and the settlers, that General Challe, the commander-in-chief in Algeria, issued a message to the troops on Tuesday, asserting that the fight against the FLN rebels will be intensified and "pacification" carried to its bitter end. The intransigent character of this message should please officers and settlers; it is likely to have the opposite effect on the FLN. As to the mass of Algerians, they apparently wonder whether all this brings peace any nearer, and will judge the de Gaulle plan by its results.

There would be a risk of the army commanders losing patience if the president embarked on talks with the FLN. If any such talks are barred, the officers have nothing to worry about and can get on with their job. This is why it is generally assumed in Paris that General de Gaulle will stick to the letter of his statement and refuse to enter into any political negotiations or any bargaining about his plan. Nevertheless, a lot must inevitably depend on the reaction of the FLN leaders. Throughout this week both Paris and Algiers had their eyes fixed on Tunis.

Suspense in Tunis

SILENCE can also be a diplomatic weapon. The FLN leaders were much criticised because last October they had rejected promptly and flatly General de Gaulle's offer of "the peace of the brave." This time they did not commit the same mistake. The rebel "government-in-exile" went on deliberating in Tunis, and thereby kept up the suspense. Journalists flocked to Tunis from all over the world and, reduced to speculation, spread rumour after rumour. By a week of silence the FLN at least proved the point that it holds one of the keys to peace in Algeria.

Tactics of this kind were not, however, the only reason for delay. The FLN had to consult its friends. Most members of the Arab League behaved as had been expected, and simply reaffirmed in general terms their support for the Algerian struggle for independence. The attitude of Algeria's immediate neighbours was more important. One may well believe that President Bourguiba preached caution and advised the rebel leaders to follow Tunisia's example by accepting a first offer and then asking for more. The King of Morocco, too, is in favour of compromise; but his scope for action is limited by the more intransigent attitude of his government and public opinion. Nevertheless, it was apparently on the king's advice that the FLN put off its statement till next week in order to revise some of its terms.

The advocates of compromise have another argument. The insurgents had pinned great hopes on a vote condemning France being passed by this year's United Nations assembly. M. Yazid, their observer freshly returned from New York, could tell the leaders gathered in Tunis that these hopes have dwindled after General de Gaulle's declaration. Mr Herter's statement on Tuesday confirmed the change in the American attitude. The more conciliatory members of the Algerian rebel leadership can now argue that, having shown its power by imposing a period of suspense, the FLN can seize the initiative again only by making carefully worded counter-proposals.

LAOS

Quenching by Firepower

THE American military establishment in the Far East appears to be trying to repeat, in land-locked Laos, its success of a year ago on the waters off China. Last

year the power of the reinforcements sent to the Seventh Fleet, the quality of the aircraft supplied to the Chinese Nationalists, and the evident urgency put into the entire operation, forced the communists to ease off their bombardment of Quemoy and eat an unpalatable brew of their own words. Now the Americans have rushed equipment to Laos and are taking over the training of the Laotian army; and Admiral Felt, arriving in Bangkok for this week's meeting of military advisers of the South East Asia Treaty Organisation (Seato), declared that his west Pacific forces could be active in "a very short time" if ordered into action.

Since then, Admiral Felt has indicated to his colleagues and allies that the firepower of the American forces in the Pacific would be used, if necessary, to quench whatever fire may be burning in the jungles of northern Laos. From some accounts, this vigorous line startled the delegates of France, Australia and New Zealand, who had been more inclined to look ahead to the permanent benefits—to almost everybody—of a neutralised Laos. In present circumstances, however, talk of a neutral Laos is somewhat idle. It is more relevant to wonder whether and in what way the mainly naval and air forces at the disposal of Seato could be used in a country of roadless jungle and mountain without an outlet to the sea. Parachute drops from Siam? Bombardment of the presumed aggressor, north Vietnam?

It need not come to that, and almost certainly will not. The Security Council's sub-committee, now in Vientiane, has begun to collect whatever facts may be distinguished from fiction in a singularly confused situation. Russia's suggestion, in its note of September 15th, that the Geneva conference of 1954—which ended the Indo-China war—should be reconvened, is clearly a non-starter. On Tuesday, a British reply said neither yes nor no, but exposed some of the fallacies in the Soviet note.

These developments leave things more or less where they were. While the sub-committee is gathering facts, there is clearly a good case for making the Laotian army strong enough to meet invaders or insurgents in the north. But what happens if the job proves too big for it? More important, what happens if the Laotian government inconsiderately appeals to Seato for help before the situation has had a chance to quieten down?

ELECTION CAMPAIGN

Pensioneering

As our election notes on other pages report, the Labour promise to raise old age pensions by 10s. a week seems so far to be the most noisy election issue. At the moment the Conservatives' only reply to the challenge seems to be to say that the British people, especially in whatever district they are standing for, are too hard-headed to think that they can get something for nothing; in many constituencies, at any rate, the Conservative aim seems to be to sail through ignoring the opposition, leaving the election as two separate manœuvres against shadow armies instead of making it a pitched battle.

This is almost certainly a serious Tory mistake. The pensions issue is one on which it would be much easier than Conservatives realise for them to counter-attack. They could emphasize to those who have only the pension to rely on how much more they have to gain from the Tory policy of concentrating increases on national assistance benefits. They could drive home to that majority of old people who have other fixed incomes in addition to the pension that a quite moderate increase in the pace of inflation will whittle away more from the value of that other fixed income than Labour says it would add to the basic pension rate. And, above all, on this issue the Tories could make a much greater effort to capture the humanitarian vote. Labour's national insurance proposals would cost some £200 million a year immediately, and considerably more in a few years' time. If this sum really is available, and if it were devoted to raising the rates for the one million strong, but growing, army of national assistance recipients, it would be possible to double the minimum standard of living for the poorest section of the community within a measurably short time.

The Widows' Vote

Part of the Labour party's manifesto that can fairly be called shrimping for votes is the section on widows. All widows' pensions are to be reviewed, particular attention being paid to the earnings rule, and the basic pension of the "10s. widow" is to be raised to £1.

In fact, widows' benefits were reviewed by the national insurance advisory committee about three and a half years ago. About the same time the same body reviewed the earnings rule as it applied to all benefits; and modifications of widows' benefits and of the earnings limit have since been made. Obviously, when prices start to rise again, or if the country can afford it, the case for a further adjustment of widows' benefits will need to be looked at again. But does the Labour party's proposed review mean that it intends to go back on the principle stated in the Beveridge report, endorsed by the Coalition government and embodied in the Labour government's own National Insurance Act of 1946?

This principle is that widowhood of itself should not be a contingency for which a national insurance benefit should be provided other than a resettlement benefit known as a widow's allowance. It was widows with young children and widows whose age or infirmity precluded them from taking up employment that were deemed eligible for long-term benefits. The exceptions to this rule are the "10s. widows," officially known as widow basic pensioners. These consist (a) of women already widowed by July 5, 1948, whose husbands had belonged to the old contributory pensions scheme, and who were not entitled to the long-term benefits of the new scheme; and (b) of women widowed after that date but who married before it men insured under the old scheme. In 1948 these 10s. widows numbered about 300,000. As they have reached the age of 60, and their widows' basic pensions have been converted into retirement pensions, their numbers have fallen off, in spite of new awards, and today there are about 109,000 of them. Since they have no young children and are under 60, one would not expect them to be singled out as hardship cases. Indeed, of the 150,000 who were drawing the 10s. at the time of the advisory committee's report, about 115,000 of them were either employed or self-employed—or at least were insured as such. About 20,000 were receiving national assistance; but since then most of these, as a result of the committee's recommendations, have been given insurance cover and qualify for unemployment or sickness benefit instead. Turning the ten shilling widow into a pound one may or may not win a few votes; but it contravenes an important principle of Labour's own insurance scheme.

PUBLIC OPINION

Polls under Fire

It is always easy to mobilise an attack upon the public opinion polls; they are naturally disliked by whichever political party happens to be falling behind in the rating. It is also a good thing to damp down overreliance on these temperature-reading devices; most analysts of political trends pay too much attention to them and too little to by-election and (especially) local election statistics. But it is a great pity when an attack upon the polls gives a false impression. The *Observer's* front page story last week "Four Polls from One Source" was guilty of this. The story was based on the "revelation" that "the *News Chronicle*, the *Daily Telegraph*, the *Daily Mail* and London *Evening News* all collect the information on which they interpret the state of political opinion from a single firm in Regent Street"; the impression given was that this reduced their value as an independent check on each other.

This impression is almost the exact reverse of the truth. The *Daily Telegraph* and *News Chronicle* polls, with both of which the ubiquitous Dr Henry Durant is associated, are utterly different in structure, operation and treatment; indeed some outsiders have sometimes felt that Dr Durant has devised the new *Daily Telegraph* method, which has different teams of interviewers using different sampling techniques in different sorts of constituencies, with an enthusiastic experimenter's eye on providing the most independent possible check on his older and more tested *News Chronicle* poll's method. The Durant organisation does not process or prepare or present the *Daily Mail* or *Evening News* polls. It hires out some of its special calculating machines and other facilities to National Opinion Polls Ltd. (the *Daily Mail* people), but that is all. To equate the two organisations for this reason would be as sensible as to say that *The Economist* and *The British Racehorse* are the same publication because we are customers of the same printing house and because our separate words of wisdom (like the poll organisations' separate questionnaires and answers) therefore go on to the same printing machines in the end. One can pay one's 2½d. and take one's choice between these polls, and the *Daily Express's* as well, but it really just is not true to suggest that there are any organisational links or smoothed out similarities of questioning techniques which make it more likely that mistakes appearing in any one morning newspaper's poll will appear also in any other.

WEST INDIES

Fateful Conference

Next week the West Indian premiers will confer in Trinidad with the federal prime minister on the future of the federation. They are certain to ask for some alterations to the existing federal constitution before independence, and this will mean changes by British order in council, if not legislation. But the important question which overhangs this fateful conference is whether agreement will be reached at all. If it is not, the whole edifice of the federation, built up with such difficulty, may crash.

Mr Manley, the premier of Jamaica, is putting in some demands which both the federal prime minister, Sir Grantley Adams, and the other islands' leaders will find hard to stomach. He demands that representation in the federal parliament be brought more into line with population, instead of being weighted to prevent Jamaica dominating the house. Jamaica now has 18 out of 45 members; Mr Manley's demands would mean 22 or 23 of 45. At the same time Mr Manley wants the completion of a customs union to be delayed *sine die;* on the date for achievement of independence he is vehemently equivocal. But Mr Eric Williams, premier of Trinidad, demands independence at 11 a.m. on April 22, 1960. Sir Grantley Adams is unwilling to proceed to independence at all until the customs union is a fact. Here is fruitful ground for a clash. If one comes, "British delaying tactics" will be the scapegoat.

The right answer seems to be to give Mr Manley 23 members out of 50, not changing anyone else's representation and yielding to Jamaica, most separatist of the units, a position like the North in the Nigerian Federation; and then to agree to something like Mr Williams's timetable in return for his wholehearted backing of the federation on Trinidadian issues. As for the customs union, the most practicable plan would be to concede Jamaica the protection its existing industries possess—but to urge that the opening up of the West Indies market to Jamaican enterprise is adequate compensation for going no further. But this is the critical moment; it is vital that federation should not break down now. The Colonial Office should press Sir Grantley to take risks, if need be, and back him with money and prestige.

UN FORCE

Paying for Peace

One of the more comforting sights in the troubled Middle East is that of soldiers in sky-blue berets. They are members of the United Nations Emergency Force who are engaged in keeping the peace along the border between Egypt and Israel. There are 5,334 of them, in detachments from Brazil, Canada, Denmark, India, Norway, Sweden and Jugoslavia. They spend most of their time at remote desert posts on a line between the Mediterranean and the Red Sea, but, unlike other soldiers who have been confined to small areas of sandy wastes, they are given opportunities to find out what the Middle East is like. On well-deserved holidays they are taken to see the antique remains at Baalbek, Cairo and elsewhere; they have rest camps in the mountains of Lebanon and on the beaches at Alexandria. When they finish their tours of duty they will know something about the area in which they have served. They are a new kind of soldier.

As a practical exercise in international co-operation, Unef has been a success; as an example for the future it has endless possibilities. Yet the force has been under a threat of dissolution owing to lack of funds for much of the time since it was created by the UN Assembly on November 4, 1956. Only a few members of the United Nations seem aware of its value. On September 15th, Mr Hammarskjöld announced that 61 member countries had yet to pay their assessments for 1959, and that there would be a cash deficit of $6.2 million by the end of the year if this were not paid by then. The force is not likely to fade away altogether for lack of money; Mr Francis Wilcox, an assistant secretary of state, told the American Association for the United Nations on September 13th that the United States would, if need be, give it further financial support. It would be a pity, however, if two-thirds of the member countries were content to allow the other third to bear the expenses of the UN's only troops. The reluctance of member nations to furnish funds suggests a lack of understanding and responsibility that is far more serious than the failure to pay up in hard cash.

IRAQ

Ci-devants Die

General Qasim has done it again. Flexing their muscles after the Mosul revolt last March, the Iraqi communists demanded that Iraq withdraw from the Baghdad Pact, that political party activity should be allowed, that the death sentences passed on former officials should be carried out, and that the Popular Resistance Forces should be armed. Iraq withdrew from the Baghdad Pact on March 24th; on July 14th the general promised that party activity would be revived next January; the execution of political prisoners began last Sunday. Meanwhile, the Popular Resistance Forces, having outlasted their period of usefulness and become a threat to the army itself, were disbanded. This was the communists' only defeat, and one of little importance, but they hastened to accuse each other of deviation and other Marxist sins while the rest of the world waited to see if the tide had turned in Iraq. There is no sign that it has.

Sayyid Said al-Qazzaz, a minister of the interior before last year's revolution, and Brigadier Nadim Tabaqchali, commander of the army division at Kirkuk at the time of the Mosul revolt, were among seventeen Iraqis executed for treason at Baghdad on Sunday. Al-Qazzaz was the brave old man who, last January, became the first of the accused former officials to make an attempt to defend himself before Colonel Mahdawi's rigged court. At the time, the colonel said that he was lying in wait for al-Qazzaz, and the defence counsel said that he was defending one of the lackeys of the extinct monarchy who had issued orders to fire on political demonstrators. Brigadier Tabaqchali, who might have been better off if he had actually taken a leading part in the Mosul revolt, was convicted after witnesses said testimony against him had been obtained by torture, and after he had put up the strongest defence of any of the accused since the trials began.

General Qasim has publicly approved the methods used by Colonel Mahdawi in court. He claims that the two of them planned the whole affair fifteen years ago. The general may still be the ruler of Iraq, but the colonel is the man to watch. General Qasim's position is more likely to be threatened by a source close to home than by wicked imperialists or by President Nasser.

WAGES

Wage Claims on the Move

After almost a year's standstill, several wage claims are now on the move again. The Confederation of Shipbuilding and Engineering unions presented a vast wages and hours demand to the employers this week (the employers say it would cost them £210 million a year all told); the workers in electricity supply have already put in their bid; the printers have met to co-ordinate their policy towards the Newspaper Proprietors' Association when their agreement with the national dailies runs out in November; and the London busmen have asked for another £1 a week. These are stirrings that will gather momentum only slowly—the engineering discussions, for instance, will take several months. They will face whatever government is then in power with a major challenge early in the new year.

The key claim is that for the 3 million engineering workers. Both because the employers here are generally prosperous and because the electricity boards, being a nationalised industry, do not wish to lead, bargaining on the engineering claim should set the pattern. The union leader, Mr Carron, has no doubt that his task will be a hard one. The engineering employers, as their recent booklet showed, are not in a conciliatory mood; the cost of living is stable; and union strike funds are in as unsatisfactory a state as ever. This is not a propitious background for what may turn out to be a tough struggle.

The Economist

SEPTEMBER 24, 1859

STUDIES FOR POLITICIANS

Some may say that political education is, after all, only education in the art of self-control or self-government,—is, therefore, entirely practical, and can only be attained in the actual exercise of political functions. But this is really to assert that experience has no influence on the conduct of societies at all. Will any sensible man deny that those who have studied,—even in the mere outline of school histories,—the working of democracy, for instance, in Athens,—of both aristocracy and democracy, their gradual rise, corruption, and decline in Rome,—the working of the English constitution under the Tudors and Stuarts,—the working of the French constitution under the Bourbons and the revolution,—the working of the American constitution,—will come to the task of self-government in a very different spirit, and with very much calmer wisdom, than is likely with those who only learn to understand conservatism from the viewy harangues of Mr Disraeli,—constitutionalism from the occasional apophthegms of Lord John Russell, not always very consistently applied,—and democracy from the violent orations of Mr Bright? We do not for a moment suppose that any mere *studies* can really form sound politicians. We know such a notion to be chimerical. But they will sow many fruitful germs in the minds of young politicians likely to bear fruit when the first vehemence of youthful politics is past. They will supply their minds with a wider range of political ideas, and prevent them from helplessly falling a prey to every ingenious *doctrinaire* theorist whom they meet. They will give dignity and breadth to men's political convictions, and save them from the mistake, so common among such politicians as Mr Bright, of attributing all differences of political faith to the bias of selfish motives. . . . If the political life of England should ever become rotten, there can be no doubt that all our practical life will decay with it,—our commerce, our science, our arts, our manufactures, our laws. And the political life of England must become rotten, if the masses of England do not learn in time, and before the whole government becomes vested in them,—the fatal effects of confounding *power*,—whether in monarchs, aristocracies, or numerical majorities,—with political *right*.

THE CHURCH OF ENGLAND

Facts to Face

The public relations of the Church of England have recently been severely criticised, and it is not easy to acquire information about the Church. A step towards remedying this deficiency has now been taken with the publication by the Church Information Office of a useful booklet.* What is the membership of the Anglican Church? Theologically, Church membership is conferred by baptism, and of the 40,218,000 persons born and resident in the provinces of Canterbury and York in 1956, no less than 26,771,000, or 66 per cent, had been baptised in the Church of England. Of these, however, only 9,691,000 were confirmed. If one calculates the number of active Church members taking Easter communion as the criterion of a practising Anglican, the figure falls dramatically to 2,348,354, or 6 per cent of the population.

Clearly the Church has a challenging task ahead of it if it does not want to decline from the status of church of the nation to a congregational sect, ranking second in practising members to the Roman Catholic communion. It may be encouraged by the increase of 470,000 in Easter communicants since 1947. And out of every 1,000 marriages in 1957 496 were solemnised according to Church of England rites, while civil marriages declined from 306 per 1,000 in 1950 to 280.

Anglicans are generously supplied with places of worship, 20,289 in all, although these are not as rationally distributed in post-feudal Britain as might be wished. Less satisfactory is the number of clergymen, amounting to only 14,454 full-time workers, averaging 56 years of age. The clergy, like the churches, are unevenly distributed; for example, one priest for every 2,919 inhabitants in the Canterbury province, but only one for 4,155 in York. A country diocese such as Hereford has one cleric for every 1,054 of the population; in Birmingham the figure is one to 7,264. A crumb of comfort may be garnered from the increase in ordination of deacons from 441 in 1954 to 505 in 1958.

Church of England schools in 1957 numbered 7,794 with a total of 932,988 pupils or 14.7 per cent of the school population of England and Wales. This figure looks impressive until one discovers that it represents a decline of Anglican schoolchildren from 17.2 per cent of the total school population in 1950, and compares it with the Roman Catholic school enrolment figure of 478,833, a new peak. Of one category of church workers there seems to be no shortage, bell ringers. In 1956, 4,979 paid and 41,869 unpaid were registered.

SOVIET UNION

What the Russians Heard

The first impression of Mr Khrushchev's visit to America that the Russians gleaned from their newspapers and radio was that he had been greeted with terrific enthusiasm. On September 16th, *Pravda* painted it all in bright colours: "Everywhere smiles, hands raised in admiration . . . Washington has seen nothing of the kind . . . applause turns into a stormy ovation on the central avenue." Next day, according to *Pravda*, everything in the garden was still lovely. After that, however, reality began to creep in here and there.

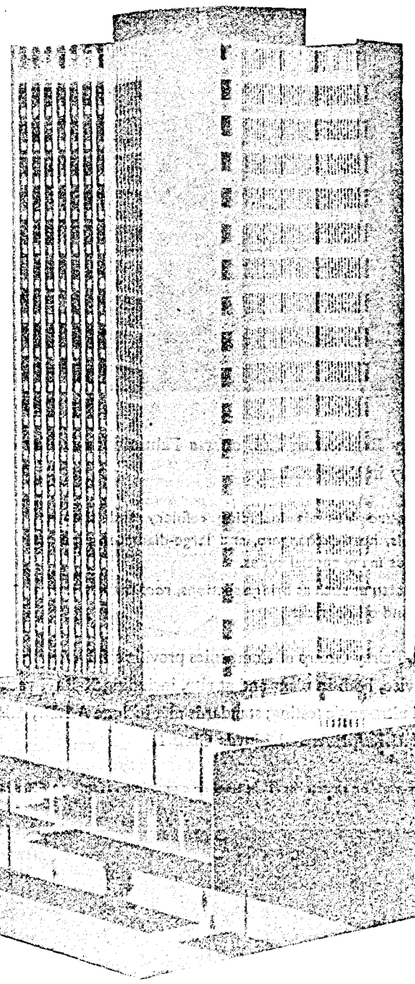
In *Literaturnaya Gazeta*, Mr Leontev wrote of repeated attempts to "throw dead cats and rats under his (Khrushchev's) feet." A Tass report on the talks with trade union leaders at San Francisco admitted that they had at times been "heated." The first question put at the National Press Club in Washington, which referred to a famous alleged incident during the 1956 party congress and threw Mr Khrushchev into one of his rages, was dismissed in the Soviet press with the simple but revealing formula, "the first question was of a clearly provocative nature." (Incidentally, Moscow radio's Hungarian service broadcast most of the remarks that Mr Khrushchev made about Hungary on this occasion, but omitted his opening sentences about Hungary being a "dead rat" that stuck in some people's throats.)

Since the *Voice of America* was not jammed during the first three days of the visit (after that, selective jamming was resumed) the gap between fact and fantasy could hardly be allowed to yawn too wide. Much was made by all commentators of alleged efforts to prevent Mr Khrushchev from making contact with ordinary Ameri-

TWENTY-THREE STOREY OFFICE BLOCK

Central Africa's highest multi-storey building

will be COSTAIN built



The new 170,000 sq. ft. office block for London County Properties of Rhodesia (Pvt) Ltd. in Jameson Avenue, Salisbury, is being built by Richard Costain (Africa) Ltd. With its twenty-three storeys, including above-ground parking on the first and second floors, the building will be the highest multi-storey block in Central Africa. It will be serviced by four high-speed lifts. Cost of the contract is approximately £600,000 and on completion the offices will be occupied by Rhodesian Selection Trust Secretariat Ltd.

It's never too soon to call in

cans "in a calm and friendly atmosphere." One *Pravda* dispatch, for instance, maintained that the local authorities in Los Angeles had "concealed" the route he took. Much, too, has been said about enthusiastic American support for his disarmament proposals. According to Moscow radio, his speech to the UN Assembly "literally stunned millions of Americans" who had previously imagined that the Soviet people had "horns and tails." On a less hyperbolic plane, the Soviet press has been soberly insisting that the Russian disarmament proposals must impress all peoples, including the Americans.

Earthly Harvest

RUSSIA'S peoples are not giving all their attention to Mr Khrushchev's peregrinations and to their spectacular shot at the harvest moon. This is the season when they are usually preoccupied with the earthly harvest, and Nature has now given them cause for concern: Crops have been affected by drought in Ukraine, Byelorussia, the northern Caucasus and the Volga region. In Kazakhstan, where the yield is reported as excellent, and in Siberia heavy rains have delayed harvesting; the final results will not be known until October, but it is already evident that this year's harvest will not be particularly good.

Soviet grain output showed a big advance in 1956, when it reached 125 million tons. Production dropped in the following year, but in 1958 it climbed to a figure claimed to be 137 million tons. It is doubtful whether that level can be exceeded this year. All this is still quite a long way from the official target of 165 to 180 million tons by 1965. It may be recalled that this elusive objective had been set previously for both 1955 and 1960.

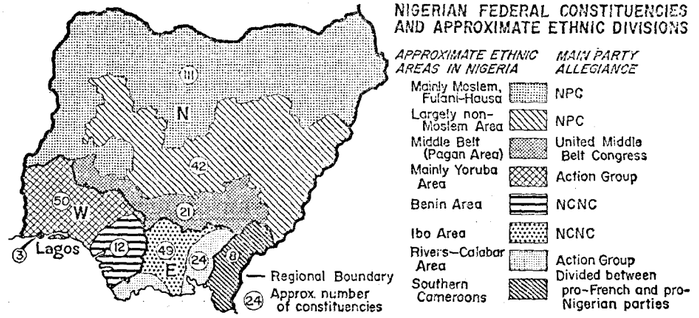
Admittedly, Soviet harvest figures are

NIGERIA'S ELECTION

Without Benefit of Psephology

THE Nigerian federal election campaign started about the same time as the British election but will take much longer; polling day will be in December. The premiers of the three regions have issued a joint appeal to the electorate to refrain from violence, and gone severally into action. The issue is who shall control the federal assembly when independence is declared in September, 1960. Five parties, and some splinter groups, are putting up candidates in the 320 constituencies. Of these 320 constituencies, 174 are located in the northern region, 73 in the East and 62 in the West, with 8 in the UN trust territory of the southern Cameroons—where, however, the government proposes to secede from Nigeria.

The three main parties are the three dominant parties of the regions which control the regional governments. They are (*a*) the Northern Peoples' party, led by Sir Ahmadu Bello, the Sardauna of Sokoto, which rules the North, has the emirs' support and provides Nigeria's present prime minister, Alhaji Abubakar Tafawa Balewa; (*b*) the National Council of Nigeria and the Cameroons, which controls the Eastern government and is led by its premier, Dr Azikiwe; and (*c*) the Action Group, which controls the West and is led by Premier Awolowo. The NCNC is putting up federal candidates in the West as well as the East; but only the Action Group is putting up candidates in all three regions. Of the two minor parties, the United Middle Belt Congress will fight between 30 and 50 seats in the North's southern and non-moslem areas, known as the middle belt (see map), while the Northern Elements Progressive Union will fight a number of constituencies in the "Holy North," above the middle belt areas. The complication of the election comes from the system of alliances between these parties, which is based on regional loyalties and disloyalties. The Action Group is closely allied with the UMBC; but though the NPC and the NEPU are fighting each other in the Northern Region, the NCNC contrives to be associated with them both. Thus:—



(1) *If the NPC sweeps every seat in the North, it could alone control the federal house.*

(2) *If the Action Group wins enough seats in both North and East it could control, with the UMBC, the federal house.*

(3) *If no party emerges with a clear majority the most likely coalition would be between the NPC and the NCNC.*

There are no public opinion polls in Nigeria to provide a guide to the probable result. This will be the first election fought on manhood suffrage in the North. Using past regional elections as a guide, it seems likely that the Action Group will pick up 50 or more seats in the West, and 20 to 24 in the East, while the NCNC hopes to get at least 12 in the West and 49 or more in the East. But as the Action Group's organisation is superior to Dr Azikiwe's, and as Zik faces a dissident group campaigning against him under his former lieutenant, Dr Mbadiwe, the NCNC may come off worse than this.

But in the North, everything is guesswork. The Action Group is supporting the UMBC, but has no link with the NEPU, and has lost ground in Bornu Province. Its appeal is twofold. To the middle-belters, fearful of Fulani oppression, it offers a separate middle belt state; in the rest of the area its candidates offer material welfare, and are—like NEPU—generally opposed to the power of the emirs. In theory, the Action Group could, with UMBC, win 20 to 60 seats; it considers that at least 90 seats are winnable. But NEPU will win at least a few. Everything depends on (1) whether the Middle Belt votes heavily for the UMBC, a poorly organised party and (2) how the anti-emir appeal fares. The NPC think both these appeals will fail. It concedes a handful of seats to NEPU and less than ten to UMBC—but it is hoping to win 165 northern constituencies out of 174.

This is the riddle—how will the Northern people respond? Will they, as both Mr Awolowo and Amino Kano (the NEPU leader) claim, vote as newly free men against tradition and authority; or will they, as the NPC expects, vote loyally for the emirs and chiefs who lead the NPC? If they vote strongly against "feudalism," either the Action Group will win an overall majority in the federation, or other patterns of coalition governments will be opened up; the NPC, diminished in power, might appear a less desirable partner to Dr Azikiwe than at present. If the Northerners vote the Northern ticket, will they give the Sardauna and his colleagues overwhelming federal power—or will they leave him heavily dependent on an alliance with a large—and demanding—southern party, like the NCNC?

now given in terms of the actual barn crop instead of as highly inflated "biological yields." Nor is the agricultural situation as critical as it was six years ago. The Russians claim to have achieved substantial progress in meat and dairy farming. But to provide fodder for this expansion of livestock and to keep some surpluses for export, grain production will have to be stepped up considerably. The party's central committee, which is to hold a special session devoted to agriculture next month or in November, will have plenty to talk about. Mr Khrushchev's report on the American corn belt will not be the only item on the agenda.

LOCAL GOVERNMENT

Bad Advice

LOCAL authorities which pay their officers more than the national minimum salary scale are very naughty and ought to mend their ways; thus the admonition, circulated last week, of the Local Authorities Conditions of Service Advisory Board. Such salary offers make life difficult for the conforming authorities, lead to a vicious spiral of extravagance, and "do not increase the total number of available officers."

This sort of pronouncement is symptomatic of a great deal that is wrong with the local authority service and perhaps with all public services. National minima have their uses. National maxima, rigidly enforced, are a guarantee of exactly the kind of results which can be observed not only in local administration but in the hospital service, the police, teaching and medicine; they lead to chaotic maldistribution of manpower and ability between more and less attractive places and jobs. With this goes a chronic insufficiency of suitable recruits or a failure to hold them through a normal career. The assertion that the existence of a limited number of highly paid jobs does nothing to "increase the total number of available officers" is indeed so towering a piece of economic ineptitude, so flat a contradiction of the experience of every profession, as almost to defy comment. But even if local government service was unique in that no officer ever left it because he was dissatisfied with his salary ceiling, and no one could be attracted to it by the hope of such moderately glittering prizes as the Board condemns, the advice would remain bad.

The authority that is handicapped in its efforts to attract staff by remoteness, housing difficulties or unattractive surroundings must either offer some compensating advantage by way of salary or remain understaffed in terms both of quantity and quality. The authority with a specially sticky, important and exacting job to be done has no other means of attracting a specially good man to do it. Those authorities that have been realistic enough to recognise this deserve applause; and the Advisory Board should look up, in any elementary textbook of economics, first the theory of supply and demand and then, with special concentration, the theory of net advantages.

LOCAL UNEMPLOYMENT

Industrial Blight

ONE result of the election auction is going to be that the next Government, whichever its colour, will be committed to do more to "mop up pools of local unemployment." The dangers of this are obvious, but there is room for one positive plea as well: it is that more use should be made of the powers to grant Exchequer aid for the cleaning up and general civilising of derelict areas, for the removal of stinking slag-heaps and rusting dumps, as distinct from the making of grants to specific new ventures. Some of the local unemployment which governments are going to set out to relieve will almost certainly arise, on occasion, from an essentially temporary decline in a dominant local industry—fortuitous or cyclical rather than secular. If the principle of special aid for special local troubles is accepted, such aid is surely better used for financing a clean-up during the slack period, when resources are available, than for subsidising new industrial ventures which local recovery will later make superfluous to local employment needs—and correspondingly costly to operate.

There would be a long-term as well as a short-term advantage in this policy. Industrial blight exerts a repulsive influence on new ventures. The businessman planning a new works may be completely hardened to squalor and stenches and happily convinced that "where there's muck there's money"; but he may not—and he certainly cannot count either on the total indifference to amenity of any executives whom he may recruit from outside, or on being able to do his recruiting entirely from the disamenity-hardened products of the blighted areas themselves. Where there is economically little to choose between the Home Counties and Bolton, the Home Counties have an economically irrelevant pull. To the extent that this influence is at work, the genuine economic advantages of older industrial areas are obscured and made ineffective; to the extent that that blight can be cleared up, their attractions can become fully effective—doing away, *pro tanto*, with the need to subsidise new enterprise in order to keep them alive. For once, some measure of harmony can be detected between hard-headed economists and the Anti-Uglies.

JUGOSLAVIA

Balkan Brickbats

LAST weekend President Tito, on tour in Montenegro, broke a three month long abstinence from public speaking. His speech at Niksic included a warm welcome for the Eisenhower-Khrushchev exchange of visits, tempered by a realistic caution and a repetition of the familiar Jugoslav warning that talks between the few must never be at the expense of the many.

Jugoslavia has a particularly close interest in the outcome of the Russo-American exchanges. Any worsening of east-west relations is liable to bring in its train both verbal onslaughts and economic blackmail by the Sino-Soviet block. Conversely, any chance of bringing Jugoslavia's relations with other communist countries up to the present satisfactory level of its relations with most western and Afro-Asian countries must, it seems, wait for a real east-west détente.

Marshal Tito declared at Niksic that "matters stand well with the USSR" and that with many other communist countries "the situation is more or less similar." Yet he is clearly not altogether easy about his relations with his communist neighbours. Except for Albania, they have muted their propaganda campaigns against Jugoslavia throughout the summer. But recent Albanian attacks provoked an outburst of indignation from the marshal at Niksic, although he had, as he said, decided to exercise the maximum restraint. (On the same day, Enver Hoxha was delivering yet another strong attack against the Jugoslav "revisionists," the "servants of the imperialists.")

Marshal Tito indicated that he suspected these attacks by the Albanians were not "only their own affair." He is probably right. What is more difficult to determine is whether it is really the Chinese, those sticklers for ideological conformity, who are pressing the Russians to pursue, by proxy, the campaign against the Jugoslav heretics. Some light may be thrown on this by the behaviour of the east European press and radio after Mr Khrushchev's visit to Peking next week. Marshal Tito, for his part, has given advance warning that if the campaign against him is stepped up again, it will not get anywhere.

"... him who asks of the rustic the name of his native village."

Extracts from a 1907 *Motoring Guide Book*
"Through East Anglia in a Motor Car"
With acknowledgements to Methuen & Co.

"It is not always possible to identify on a map the village through which the car is passing, nor always easy to consult the map even when travelling at moderate speed. Blessed be the villages that proclaim their titles, even by modest boards on the post-offices, as many do in East Anglia, for by such boards is the traveller saved from the scorn poured upon him who asks of the rustic the name of his native village. This is an almost universal phenomenon, so frequent in occurrence that one is tempted to speculate as to its origin; and that may be that the normal rustic, painfully conscious of the narrow limits of his own knowledge, feels that he has encountered a fool indeed when he meets anybody who is more ignorant than himself, although it be but as to a single and quite trivial point."

LETTERS

Foreign Policy

SIR—In your first leading article in last week's issue entitled "Which Voice in the World?" you refer to "the record of unsuccessful Tory violence in Suez, Cyprus and Nyasaland." I think that this remarkable phrase requires further explanation and I hope that this will be forthcoming.

Your views on the Suez incident are well-known and in your eyes it certainly was a piece of "unsuccessful Tory violence." But what of Cyprus and Nyasaland? Why do you place them in the same "galère" as Suez?

In Cyprus what alternative was there between reacting violently to violence and surrendering to terrorism? And how can you dismiss as "unsuccessful" a policy which to say the least of it certainly prevented a war between Greece and Turkey and has culminated in the Zurich and London agreements?

As regards Nyasaland there may well have been in places and at times displays of unnecessary violence, but must the Conservative party be condemned for the misdeeds of a few of the servants of a colonial regime under their control?

On the general point of the success or otherwise of what was done in Nyasaland you appear to put yourself amongst those who always refrain from action until terrorism has exploded. The writer of this letter was a senior official of the Government of the federation of Malaya between 1948 and 1953 and has had more than a nodding acquaintance with armed terrorism. He realizes only too poignantly the tragedies which occur out of failure to react to thuggery until it has started on its path of outrage.—Yours faithfully,

London, SW1. W. C. S. CORRY

A Design for the Sixties

SIR—How rightly you describe the production plans of the new British Motor Corporation's small car as "disappointingly modest."

Within an hour of reading a newspaper advertisement on the evening the advertising campaign was launched I contacted a leading agent to order a car for export next January. The delay in delivery was already "five months for home delivery" and "doubtful" for export. In search of fuller information, when the agent did not phone me as promised on the next day, I contacted the main distributors. The delay on home delivery had already risen to "seven months," and for export to Africa (even taking delivery at the factory myself and driving across Europe) "no date can be quoted."

'For myself this model has now become "A Design for the Seventies" and I shall regretfully buy a well-known Continental small car whose salesman—backed by a production programme of over 2,000 units daily—offers early delivery and a highly competitive export price.—Yours faithfully,

O. S. KNOWLES

London, W8

The Helpless Majority

SIR—Your list of non-English Heads of Departments was unduly restricted. Offhand I can think of Johnston (Inland Revenue), Fraser (War Damage Commission) and Crambie (Customs and Excise). Moreover in almost all of the departments headed by these gentlemen you will find a man of their own nationality as second or third in command.—Yours faithfully,

LEONARD SHORT

London, SW1

Vietnam

SIR—In the article "The United Nations Look at Laos," we have noted with utter disbelief the following opinion of your correspondent: "It is hard to say how anyone can establish that a prisoner is a genuine North Vietnamese communist and not merely a masquerading South Vietnamese officer."

The implication therein, of the presence of Vietnamese army officers in Laos, masquerading or otherwise, can only be explained by two hypotheses:

(1) It is wholly inconceivable that we should commit procurative aggression against Laos by camouflaging officers of the Vietnamese army into Vietminh and further sending them off into Laos, via the communist north army and Dien Bien Phu.

(2) It is equally unlikely that we should have loaned those officers to the Laotians for this hypothetic masquerade. We do not, by principle and necessity, have any intention of interfering in the internal affairs of Laos or of any other country.

The irresponsible hypothesis of your correspondent is dangerous. It would offer the communists a ready justification of their invasion of Laos if credit should be accorded to it and thus tend to reject the responsibility of the present situation in Laos on the free world.—Yours faithfully,

PHAN VAN THINH

Embassy of Vietnam, London, W8.

Restrictions on Motorists

SIR—May I add an even further Eastern voice to this correspondence and recall that while in Berlin some years ago—but post war—I successfully persuaded a courteous German garage owner to hire me a car on the strength of an out-dated and borrowed English provisional driving licence. Neither of us was ashamed to admit his inability to read the other's language, but the visual effect of my inadequate document was greatly strengthened by the number of rubber stamps (including one showing the swastika and eagle) with which I had obliterated most of the relevant data.

The Berlin streets were already pretty dangerous.—Yours faithfully, MEDWAY

Kuching, Sarawak.

Beauty Contests

SIR—As the organiser of the "Miss Great Britain" national bathing beauty contest, I was particularly interested to read your special article on "The Business of Beauty Contests."

Your publication is, of course, well known for its accuracy, and it was, therefore, something of a shock to read of our "Miss Great Britain" contest being described as "largely a local competition which has now declined in importance." I do not know from what source your writer gained his information, but the true facts regarding this contest are as follows.

The "Miss Great Britain" national bathing beauty contest has now been held at Morecambe for fifteen years. It is the oldest established bathing beauty competition and still carries the highest prize list of any beauty competition. The total value of prizes is in the region of £4,250—a staggering sum which is far in excess of that offered by any other competition organisers. The first prize of £1,000 is, for instance, more than three times the first prize offered for the "Miss United Kingdom" competition.

Our contest is organised entirely by the Morecambe and Heysham Corporation, but we do have the co-operation of such commercial enterprises as Messrs. Goya, Ltd., who present some of their products as prizes to our heat winners, and British European Airways who, this year, flew the winner on a triumphal tour of the British Isles. I am sure that you will agree that an organisation of this stature would hardly be interested in flying the winner of a local contest around the country.

Qualifying heats for the contest are held at between 25 and 30 different towns in Great Britain, including such widely separated spots as Belfast, Glasgow, Dundee, Brighton, Bournemouth, London, South Wales, and, indeed, almost every area in Great Britain. I fail to see, therefore, how the contest could possibly be described as "largely a local competition held at Morecambe."

I think the above information will be sufficient to show your writer how completely our competition has been misjudged.—Yours faithfully, R. S. BATTERSBY

Miss Great Britain Contest, Morecambe

BOOKS

Revolutionary Tragedy

The Prophet Unarmed: *Trotsky 1921-1929*

By Isaac Deutscher.
Oxford University Press. 502 pages. 38s.

THE fall of a revolutionary Titan could be the sub-title of this story. When the second volume of Mr Deutscher's trilogy opens, in 1921, Trotsky, the organiser of the Red Army, is the unquestioned hero of the civil war, whose name is automatically associated with Lenin's whenever the October revolution is mentioned. At the book's close, eight years later, the banished Trotsky leaves Russia never to return; the opposition is broken and Stalin is gathering in his hands all the reins of autocratic rule. How was a man so popular and of such striking talents—an original thinker, a spell-binding orator, a brilliant writer, a most efficient organiser and administrator—defeated by a ruthless, yet so much cruder and greyer, opponent?

In answering this question Mr Deutscher has written his best book so far, in style, in pattern and in human truth, and the most revealing yet of Mr Deutscher himself. Obviously Trotsky's colourful personality is more rewarding than Stalin's to a biographer. But what seems to have stimulated the author is the figure of this prophet unarmed, the tragedy of a man fighting against his environment, against his times; a revolutionary hero doomed and yet unbroken, defeated and yet convinced of the ultimate right of his struggle. Sympathy does not mean apology. This is a critical assessment in which Trotsky's errors of judgment as well as his tactical mistakes are shown. At moments (for instance, when failing to use Lenin's testament against Stalin) Trotsky recalls the Baudelaireian albatross, whose giant wings prevented him from walking. He could not stoop to Stalin's level. He was fighting for principles and according to rules, admittedly communist rules, of revolutionary behaviour. Stalin had no scruples. One year he would frighten a communist assembly with a picture of Trotsky as the "super-industrialiser" and enemy of peasants. Next year he would borrow Trotskyist arguments (about primitive socialist accumulation) to advocate similar policies before applying them with a ruthlessness that made the original authors shudder.

The outcome of the struggle, however, was not determined by tactical mistakes. The quality of Greek drama that invests this book derives from the thread of inevitability running throughout the story. From the first, Mr Deutscher strikes the contrast between the bolshevik dream and the reality of post-revolutionary Russia, bled, tired, isolated, socially disrupted. After the civil war the proletariat had almost vanished. To cling to power the bolsheviks gradually had to abandon some of their principles. The dictatorship of the proletariat had to be replaced by that of the party, then of its old guard. And the process led almost inexorably to the rule of the stalinist faction and finally to Stalin's personal rule. When Trotsky tried to arrest this trend, and to appeal against the stalinist party machine to the rank-and-file, he obtained only a faint echo. The workers, in many cases peasants turned workers, were exhausted. Trotsky appeared to the masses as a glorious but too exacting a figure, who belonged to the heroic times of the revolution. Stalin, strange as it may seem, was associated with peace and quiet. World revolution, which the bolsheviks expected to extricate Russia from its backward isolation, failed to materialise. Stalin offered the masses the prospect of a Russian solution. It is against this setting that the contradictions, hesitations and the successive defeats of the opposition acquire their meaning.

Trotsky was conscious that his struggle was largely against Russia's backwardness and, in interludes between party battles, he also wrote on cultural subjects. We thus get a glimpse of the essayist drawing up, in 1926, vistas of the atomic age or trying to reconcile Pavlov and Freud. We also see the Marxist critic whose pages on the place of literature in Soviet society should be compulsory reading for Mr Khrushchev. Mr Deutscher also draws vivid pen-sketches of other protagonists: Zinoviev, Kamenev, Bukharin. Among the many international subjects that loomed large in the inner-party controversies, Stalin's relations with the Chinese Kuomintang are probably the most interesting and the most topical as they show Moscow's dilemma when dealing with revolutionary movements in backward countries.

Future Soviet generations will learn their history from these pages. Mr Deutscher, also, as he aptly points out with a quotation from Carlyle, had to drag out Trotsky "from under a mountain of dead dogs, a huge load of calumny and oblivion." The picture that emerges will not satisfy sectaries of Trotskyism for whom their hero could not go wrong. Yet it is here that Trotsky is restored to his real stature set against his time. One is finally left with the impression that his personal fate was a symbol of the contradiction between Marxist ideas designed for a modern industrialised state and the conditions in the country where they were first applied. Since this contradiction has diminished, most of the issues raised in his struggle are now more alive than ever.

To draw this balanced portrait and its background Mr Deutscher has used a wealth of original documents, particularly from Trotsky's own, so far unknown, archives at Harvard. He has woven this material into a closely knit narrative; it is historical analysis of the most telling sort. The result is a fascinating revolutionary tragedy; it is at the same time an indispensable book for anyone who wants to understand Russia of yesterday, today and tomorrow.

Not New Enough Edition

The Oxford History of England: *The Reign of Elizabeth, 1558-1603* (Second Edition)

By J. B. Black.
Oxford University Press. 565 pages. 35s.

THE second edition of Professor Black's "The Reign of Elizabeth" in the *Oxford History of England* appears twenty-three years after the original publication. During the intervening period a great deal of work has been done by scholars on the Elizabethan period, much of it of major importance and some of it vigorously controversial. A new edition of this volume was therefore particularly needed. The publishers claim that it is "in some respects at least a new book"; and Professor Black quickens expectation by referring to "expansions of the matter, corrections of error, modifications of emphasis." But the hopes thus aroused are soon disappointed. Sir John Neale subjected the first edition to searching criticism, both on the grounds of its plan and on numerous points of detail. The insertion of analytical chapters on religion and the constitution at an early point deprived the later narrative chapters of much of their interest; and only a brief postscript was allowed to the period after the Armada. This plan is retained in the new edition. Professor Black's claim that the balance of the book has been altered by the addition of 25 pages to the chapter on the later years of the reign is highly exaggerated. Almost all Sir John Neale's criticisms of detail are ignored. Professor Black still says that the queen never attended council meetings and that the council only occasionally met as a body; that star chamber procedure was informal; and that the Puritan "classical movement" developed shortly after Whitgift's appointment to Canterbury.

Since making these criticisms Sir John Neale has published his own great trilogy on Elizabethan parliaments. Professor Black remarks in his preface that "Sir John Neale will doubtless recognise references and quotations drawn from his invaluable volumes," though indicating that his own interpretation is often different. But it is easier to identify the difference than the debt. In the new edition the section on parliament remains virtually unchanged. Peter Wentworth's speech of 1576 is again attributed to 1575. No use is made of Sir John Neale's work on Puritan activities in parliament; and Professor Black's judgment that "the Brownists and Barrowists formed the spearhead of Elizabethan puritanism" reads more oddly in 1959 than it did in 1936. And despite the evidence adduced by Sir John Neale to support his view that Townshend's diary has given a false notoriety to the parliament of 1601 and distorted the general picture of the reign, Professor Black repeats the old view without even indicating that there is a new.

The chief aim and justification of the *Oxford History* as planned in the 1930s was to provide an adequate treatment of the social, economic and cultural factors, as well as of the political and constitutional. Since then our knowledge of the economic and social structure of Elizabethan England has been greatly extended, and at points transformed. Yet the political structure of "clientage" is ignored by Professor Black; new work on the Court of Wards is unmentioned even in the bibliography; and new material on the economic problems of the Church is passed over in silence. It is interesting to notice that Professor Black has inserted into his economic chapter two paragraphs on the controversy over the gentry and peerage during this period. But he comments only that the controversy "is by no means easy to follow," and finds its tone disturbing. While concluding cautiously that "the subject still awaits clarification," he repeats the remark, itself highly controversial, that the period produced "a new race of landlords, more enterprising than their predecessors."

There are, however, considerable changes and expansions of the old text. Anglo-Scottish relations (prominent before) are described at greater length, while both Mary Stuart and Essex receive fuller and more favourable treatment. The handling of foreign policy is lively and robust. But this second edition is primarily an amplified narrative, stronger in the summary of evidence than in its assessment and almost completely indifferent to the work of scholars in the past and very productive twenty-three years.

Sordid Bargain

The Chief

By Robert Jackson.
Harrap. 349 pages. 21s.

THE success story of Gordon Hewart, the son of an obscure Lancashire draper, who became Lord Chief Justice of England, is competently told by Mr Jackson. Hewart started life as a journalist before taking to the law and entered Parliament as a Liberal in 1913. His rise was rapid, but, preferring a legal to a political career, he refused Cabinet office, contenting himself with the posts of Solicitor and then Attorney General. Mr Jackson tells for the first time the sordid story of the bargain struck between Hewart and Lloyd George over the succession to the Chief Justiceship. In 1920, Lord Reading, then Lord Chief Justice, wished to go to India as Viceroy, and Hewart asserted what was then considered his "right" to succeed him. Lloyd George, however, needed Hewart's services in the Commons, and persuaded him to forgo the succession on condition that a pliant judge could be found as a stop-gap, who would resign before the end of the Administration, when the place would revert to Hewart. Such a bargain was highly improper, if not unconstitutional, since judges hold office during good behaviour and not the Prime Minister's pleasure. A. T. Lawrence, a seventy-four year old judge, nevertheless accepted Lloyd George's offer, and had the humiliation two years later of reading of his own resignation in *The Times*, when Hewart succeeded him.

As Lord Chief Justice, Hewart was not remarkable. Autocratic and irascible, he was often partial in his judgments; personal squabbles with the Lord Chancellor's Department held up necessary law reforms; his book "The New Despotism" proved little more than a nine-day wonder and he later regretted having written it. As a personality Lord Hewart was not of intrinsically high interest, so that this book is often dull, and the author has made the going heavier by the lengthy accounts of famous trials with which it is overloaded.

Only a Fraud?

Madame Blavatsky

By John Symonds.
Odhams. 254 pages. 21s.

"WE think," reported the Society for Psychical Research in 1885, "that Madame Blavatsky has achieved a title to permanent remembrance as one of the most accomplished, ingenious, and interesting imposters of history," a verdict shared by her latest biographer, Mr John Symonds, whose sustained semi-ironic tone precludes him from investigating whether there was more to Madame Blavatsky than an ingenious trickster. HPB, as she was known to her friends, was certainly strikingly eccentric. In appearance she was absurdly spherical with an immense parchment coloured face, lit by great turquoise eyes and surmounted by a mat of crinkly hair. Emerging from an obscure Russian past into the New York of the seventies, she at once acquired fame as a medium, founded the Theosophical Society, and finally settled in India, where she established a devoted following and gained international renown.

For a spiritual leader she had some curious tastes, including a passion for gigantic meals and an unlimited capacity for cigarettes. Her temper was somewhat uncertain and on one occasion she hurled a butter dish at an offending fellow diner with the imprecation that it might grease his soul to Hell. Wherever she went, she was pursued by extraordinary phenomena and Mr Symonds has made the most of them. Teacups, books and brooches embodied themselves from the atmosphere at her command, spirits manifested themselves in droves, astral bells chimed, and letters from the Tibetan Mahatmas, with whom she was in constant celestial communication, fell through the ceiling.

To maintain this perpetual spiritual circus, Madame Blavatsky undoubtedly resorted to fraud, but to dismiss her as only a fraud is to do her very much less than justice. Her two major works, "Isis Unveiled" and "The Secret Doctrine," are outstanding treatises of learning and religious insight. Even if we make the maximum allowance for human gullibility, we cannot explain her extensive influence by trickery alone. How for example did she convert the rationalist Annie Besant? Mr Symonds might also have investigated why Theosophy, essentially a new form of gnosticism, should have made such headway in the predominately rationalist nineteenth century, and assessed its part in fostering Indian nationalism. Unhappily he is too busy chronicling minutiæ, such as the behaviour of the machineless cuckoo clock which hooted at Yeats on his first visit to the prophet, to attend to these more general questions or to sift out what, if anything, was genuinely clairvoyant in Madame Blavatsky's powers.

The Decipherers

Lost Languages

By P. E. Cleator.
Robert Hale. 192 pages. 21s.

WHEN that subtle operator, Sir Charles Snow, wanted to depict an admirable Crichton, at once glamorous and scholarly, brilliant and withdrawn, wide-ranging in spirit and yet firmly held to Cambridge by the author's grip, he very sensibly cast him as the first decipherer of Sogdian. The mind thrills at once to the thought; base thoughts of the novelette are banished; and one suspends disbelief at Sir Charles's behest. On the arts side at least, no achievement is more fascinating than the decipherment of a language that has stood blankly to be stared at by the centuries without yielding its secret, and the wresting from it of the picture of an ancient but unknown civilisation. This is the theme of Mr Cleator's book, which tells the story of the main decipherments of ancient alphabets and languages whose key had been lost over the ages.

He gives pride of place to hieroglyphics and cuneiform, which take up nearly two-thirds of his text. He illumines his theme rather too strongly by hindsight. He stresses the triumph of those who succeed, but is inclined to jeer at those who guessed wrong. One should not do both: the contrast, at the time, is rarely so strong. But, with or without this chiaroscuro, the stories are fascinating. The rest of his book is composed of a shorter account of Hittite, Ugaritic and Mycenean Linear B, curiously grouped under the heading "some subsidiary systems," and a short account of the main undeciphered alphabets. One rather wishes that Mr Cleator had given more space to his subsidiary systems. The first two are un-

familiar stories, compared with the tremendous but well-known triumphs of Champollion and Rawlinson; and the last, though familiar and only recently described at length for the general reader by Mr Chadwick, is surely one of the greatest achievements, in this field, of cryptographic technique.

This is a work of vulgarisation: Mr Cleator does not claim to rely on any but secondary sources. But it is readable and clear. It is padded out by thumbnail sketches of the history and literature of the civilisations concerned. The former are sometimes useful as background to the decipherment, but the latter are too sketchy to be worth much and are hardly part of the author's theme. The line-drawings are clear and good; the plates are attractive, but show too little detail to help the text. For a book on this particular subject, there are too many misprints and some consistent misspellings of names; it seems clear that Mr Cleator has never had to work seriously on a puzzling text.

Thomism and Knowledge

The Degrees of Knowledge

By Jacques Maritain.
Bles. 495 pages. 50s.

JACQUES MARITAIN is, if not supreme among Neo-Thomists, one of the leading exponents of that brand of Catholic philosophy which is derived from St. Thomas Aquinas. He first wrote this work in 1932. It was translated into English in 1937, but the translation was acknowledged to be unsatisfactory. The English edition also omitted a number of appendices to the original work. A new translation from the fourth French edition, which includes the appendices, has now been prepared by Fr G. B. Phelan and others at the Pontifical Institute of Mediaeval Studies at Toronto. It has clearly been a labour of love.

M. Maritain's style is not easy, and the translation retains many awkwardnesses. There are words like "effectuable" and there is a great proliferation of ugly technical terms after the fashion of continental philosophy. The book remains, nevertheless, a monumental work both in size and ambitions. M. Maritain has set out to give an account of all claims to knowledge, from those of the empirical sciences to the claims for mystical knowledge of and union with God. This in itself would be a large task, but in the present case the vast subject-matter has in addition to be squeezed into the straitjacket of Thomist philosophy.

Because of its connection with Aristotle and its own theological background, Thomism is best suited to the provision of a systematic framework for metaphysical theology and philosophy of nature. Neither the strictly empirical sciences nor mysticism fit easily within it, and there is an evident sense of strain in M. Maritain's account of these matters. He shows a certain reluctance to go into details. But the work is also subject to some general limitations. It contains a wealth of scholarship, but this is all drawn from a very limited field. There is little recognition of points of view other than those peculiar to scholasticism. Thomism is exceedingly self-contained.

It is also uncompromising. Like an octopus it has to draw in everything within reach of its tentacles, even if the prey becomes rather mangled in the process. M. Maritain is fond of producing little diagrams in which the hierarchy of forms of knowledge is represented. These are neat in outline, but their import is not perspicuous. The book in general is somewhat like them. The picture presented is relatively neat and elegant, but one is left uncertain how it applies to reality. Nevertheless, for those prepared to accept the framework the book provides an admirable source for knowledge about scholastic philosophy.

Precarious Creation

Canadians in the Making

By A. R. M. Lower.
Longmans. 499 pages. 50s.

AN astringent antidote to easy optimism about Canada's future greatness, this book, by an outstanding Canadian historian, analyses the difficulties that have beset its growth. Canadians have come to believe or, at least, to hope that in this generation they have won, at last, not only a unified political structure, but also a national identity. This still "precarious creation" has been achieved through the slow growth of a loyalty to Canada that transcends both local loyalties and communal loyalties. Being a Canadian has come to mean more than being a Nova Scotian or British Columbian, than being a French Canadian or an English Canadian. This feeling for Canada has had to struggle up through both internal sectionalisms and outside loyalties, with loyalty to England or the Empire, with loyalty to Rome. It has had an unremitting rival in the sometimes almost overwhelming influence of the United States. Even now, Professor Lower contends, "Civilisation is something the Canadian expects to come from outside."

This is a fascinating study of the character of the society that has gradually emerged over the three and a half centuries since Europe was first transplanted to that part of North America which is now Canada. The discussion of the role of religion—and denomination—in moulding Canadian character is particularly interesting, as is that of the significance of class. Useful chapters on New Canadians do not seem entirely to bear out the uncompromising assertion that the "melting pot" is as real in Canada as it is south of the Border. Nor, indeed, does the conclusion: "The new tensions that have been introduced into our activity by mass immigration are often painfully obvious but it can at least be said that these lead us unwillingly in the same direction to which every other large factor in Canadian life impels us—to compromise." There are Canadians of Celtic stock, of Icelandic stock, of German stock or Polish stock, as well as of French and Anglo-Saxon stock who still cherish their own traditions, though they are none the less good Canadians.

The final chapters on modern Canada are provocative but, lacking the perspective of time, less satisfying that the historical analysis. Professor Lower feels that the contemporary scene is most sadly out of joint. He sees the hardy pioneer and the independent yeoman farmer superseded by soft city dwellers, tied to the wheels of their great god "CAR"—the symbol and apotheosis of the whole complex of modern mechanical living. He sees dire symptoms that democracy is sliding down into that abyss of "simpleton democracy" from which dictatorship inevitably emerges. He sees little to check the decline in a community that has so often looked on education as a "vocational can-opener" and in which the pressure to conform to a featureless and meaningless average grinds out any spark of individuality or greatness, leaving a society bereft alike of stability and of distinction. One disturbing aspect of this trend is

> a new variant of imperialism, American predominance in Canada and Canadian co-operation in American dominance elsewhere, which in 1957 was just reaching the initial stages of its political phase.

There could hardly be better evidence to offset the gloom of this conclusion than Professor Lower's book itself. Witty, stimulating, richly informed and wise, it encourages hope that Canada, still in the making, will not end as just "a blurred tag-end" of the United States but will contribute something distinctive and great to the comity of nations.

OTHER BOOKS

ENGLISH THEORIES OF ECONOMIC FLUCTUATIONS, 1815-1848. By Robert G. Link. *Columbia University Press.* London: *Oxford University Press.* 234 pages. 40s.

This thorough and competent study strengthens a weak patch in the history of economic thought by assembling and comparing the ideas on economic fluctuations expressed—in a wide variety of contexts and with little common terminology—by certain English economists of the classical period. Malthus and, later, John Stuart Mill are the most important of the six economists here examined; but potentially important contributions came from Joplin, Tooke, Attwood and James Wilson. The last named is here to be found uttering, in the 1830s, a tart warning to would-be planners for stability (in this case the drafters of the 1828 Corn Law with its sliding scale) which would need only a little change in phraseology to pass for the words of another editor of *The Economist* in the 1940s or 1950s.

'YES SIR, I said, YOU'RE THE BOSS!'

You're the boss, you give the orders . . .
and the Independent haulier carries them out. There's no red-tape
to stand in his way. He makes his own decisions swiftly . . . executes them
promptly. And he puts *you*, the customer, first.

Personal service—that's the reason why so many firms are regular customers—
have been for a long time—of Independent hauliers. They like the scrupulous attention paid
to their special demands. They know how Free Enterprise competition
has held down prices since de-nationalisation. And, of course, they like the prompt service
given equally to the heaviest freight and the smallest load,
to the local delivery and the long cross-country haul.

The Free Enterprise Haulier puts *you* first

Are they making tyres...or tires?

Differences in language and customs, however small or subtle, can be important to people in Britain doing business with America.

As a U.S. bank with branches in London, Chase Manhattan knows the differences and similarities, can do much to make your dealings with the States more pleasant and more profitable. Chase Manhattan knows, too, the differences in customs and trade practices *within* the states... for its network of correspondent banks is the largest in America.

In fact, almost anywhere you do business, Chase Manhattan's network of more than 51,000 correspondent banks and branches around the world can get up-to-the-minute information for you, and provide you with every type of modern banking service—promptly, efficiently, and on a personal, *localized* basis that practically puts you on-the-scene yourself.

Why don't you talk to the people at Chase Manhattan ... in either of the London branches.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Communist's Progress

Mr K. Dimly Seen

NEW YORK, *Saturday*

UNREALITY hangs over New York as smog hangs over other cities; no visitor, not even Mr Khrushchev, escapes the faint unbelievability that floats among those man-made buttes and knife-cut canyons. Mr Khrushchev's two days in New York began with Mephistophelean undertones at Pennsylvania station; he was carried in a goods lift from his train to a reception in a subterranean baggage vault, a twilit anteroom to Hades, where the camera flashes lit up secret service men lurking among the steam pipes. Thereafter he can have heard little except the clatter of internal combustion engines, and smelt little except exhaust fumes, as his escort of 65 motor-cyclists—bringing a clutch to the heart of spectators who remembered Cocteau's *Orphée*—swept terribly through the streets. He may have caught a blurred sight of silent rows of policemen, truncheons drawn, facing silent rows of onlookers. If he was very sharp-sighted he may have seen distant clumps of refugees demonstrating into the teeth of television cameras. He has been stuck in a lift at the Waldorf-Astoria hotel and been tuned into the wrong translation at the United Nations. At the latest count, he has talked to more people who are millionaires than are not. If it were left to the local police to say what he did in New York, they would triumphantly reply, "He survived."

It is not easy to say what impact Mr Khrushchev made on New York or it made on him when contact between the two was so tenuous. The crowds lining the streets proved that the silence with which he was greeted in Washington was not simply a local phenomenon due to the restraining presence of President Eisenhower. The New Yorkers showed the same surprising, rather un-American, reticence. Reporters, in their search for the right word to describe it, have run through a Roget's Thesaurus of adjectives: cool, chilly, restrained, reserved, aloof. Perhaps the best word is "undecided." Mr Khrushchev comes to the United States as the emissary of a way of life so remote from the Americans that in the comic strips of the newspapers communists go cheek-by-jowl with spacemen; so far, because the police have hustled him through New York like a suspect with a newspaper over his head, Mr Khrushchev has not been able to establish himself as a human being whom the Americans can either like or dislike. It is notable that people have responded far more positively to him when he has met small groups in private. The guests at Mayor Wagner's lunch applauded him warmly and frequently, and he was heckled at the dinner given by the Economic Club for dodging a question about the jamming of broadcasts to Russia. Both reactions are more clearcut than the blank impassivity of the watchers who have seen no more than a nose-tip flashing past behind bullet-proof glass.

It is not surprising that the American press has found it hard to look on Mr Khrushchev with new eyes. The *New York Times*, speaking for the cautious majority, says that it will wait until the end of his trip before it makes up its mind; but it seems to be half-convinced already that he came to America solely for propaganda purposes and is unwilling "to come to grips with any major issues." The *New York Daily News*, less hampered by open-mindedness, recognised him at once as "a hard-bitten, merciless and agile-minded thug" who has "scowled, mugged and grimaced" (though he worried the leader-writer by his "oily friendliness"). Most newspapers follow one or the other of these patterns: either they have already made up their minds that Mr Khrushchev's protestations about peace are nothing but a ruse, or they are going to do so unless he says something startlingly new.

In fact, from what has happened so far it is not quite safe to conclude that there is no sincerity in this Khrushchev. True, he has not given an inch so far on the specific points at issue with the United States, and he has shown distinct signs of pugnacity, petulance and a hair-trigger temper. But at least two of his hosts—the chairman of the National Press Club lunch in Washington and the Mayor of Los Angeles—have gone out of their way to tread on his corns; and if he came simply to lull America into defencelessness he should surely have been a good deal suaver.

An observer listening at first hand to what Mr Khrushchev says, and watching the way he says it, is confronted with a possible alternative to the theory that his talk of peace is merely a hoax. This is that Mr Khrushchev is as hard set in his beliefs as if they were concrete, and will be the toughest of men to negotiate with, but that he is nevertheless genuinely worried about a number of things: about a resurgent Germany, about the way American newspapers report his doings (the *New York Daily News* seems determined to justify his worries) and about the danger of a gradual slide into war. So far the most interesting possibility—it is no more—raised by his visit is that he is really as suspicious of the Americans' motives and sincerity as they are of his. It remains to be seen whether, by the time he leaves, each side will at least have a little more respect for the other's honesty.

Western Reproaches

SAN FRANCISCO, *Tuesday*

AT the public level, Mr Khrushchev's visit to San Francisco has plainly been the high point of his trip through the United States. After a disagreeable experience in Los Angeles, where he exchanged extremely angry words with the Mayor, the trip by train up the lovely California coast was obviously a welcome relief from tension for both the Soviet group and the American officials accompanying them. When the train stopped at Santa Barbara, home to more millionaires than any other city in the West, Mr Khrushchev got off, breaking through the security that has thus far surrounded him, to shake hands and talk with the friendly throng waiting on the station platform to catch a glimpse of him.

These greetings, the first warm and spontaneous ones he had yet received in America, were followed by a hospitable welcome—conspicuously different from that of Los Angeles—from the Mayor of San Francisco and from a large cheering crowd that waited at

the entrance to Mr Khrushchev's hotel, high on Nob Hill. Once again he disregarded the security arrangements and stood in the hotel driveway, grinning broadly, waving and, to the crowd's delight, giving full play to the ham actor in him. There were no hostile demonstrations and only a few anti-communist banners were seen in the streets, although two days earlier monarchist and anti-Soviet groups had paraded through the city.

However, the public warmth with which Mr Khrushchev was greeted gave way to private heat in the evening when he dined, at his own request, with a group of trade union presidents attending the convention of the American Federation of Labour and Congress of Industrial Organisations in San Francisco. The dinner was extremely controversial even before it was held; Mr George Meany, the President of the AFL-CIO, openly disapproved of it and refused to attend. Indeed, for a time it was not clear who would dine with the Russians as first one and then another of the union leaders who had accepted invitations withdrew from the affair. The hosts, headed by Mr Walter Reuther, the president of the automobile workers' union, finally consisted of six former CIO leaders and one from the old AFL.

After the dinner Mr Reuther held an extraordinary midnight press and television conference which at times gave the appearance of a pre-arranged mass meeting. Bursts of applause from the audience forced reporters to shout to gain his attention. He reported that as long as the discussion remained general it was fairly amiable, but that when the Americans raised specific questions concerning Hungary, Eastern Germany, the part played by unions in Russia, and so on, the Soviet leader responded bellicosely or not at all, and the dinner frequently became "unruly."

THE trade union leaders, whose vigorous defence of American policy led Mr Khrushchev to call them "capitalist lackeys, were prepared for such a charge, for they had asked the hotel not to use the elaborate silver and gold service or special china and linen usual on such occasions. Nevertheless, Mr Reuther and the officials who accompanied him had some hopes that their experience with Mr Mikoyan a few months earlier would not be repeated; at that time neither side made any concessions. Mr Reuther, the most internationally minded of American trade union leaders, while feeling that Mr Khrushchev should be reminded of the deep opposition American workers have for the Soviet system, sought to explore possible areas of practical agreement to ease the tensions of the cold war. But because Mr Meany and other powerful trade union figures are so hostile to the Soviet Union, it was imperative for Mr Reuther to make it quite clear that supping with Mr Khrushchev did not mean he sympathised with Soviet views. The real puzzle is why Mr Khrushchev requested a meeting which was bound to be stormy.

He had a much friendlier reception, which could also have been predicted, the next day, when he paid a surprise visit to a branch of the dockers' union headed by Mr Harry Bridges, which was expelled long ago by the CIO for its close support of the Communist party line. At the very time that Mr Meany was denouncing him to the AFL-CIO convention, Mr Khrushchev, accompanied by the head of the Waterfront Employers' Association, was being welcomed cordially by Mr Bridges, was happily exchanging hats with a dock worker and was being loudly cheered by hundreds of dockers before continuing with the remainder of his sight-seeing schedule in San Francisco. Fortunately Mr Khrushchev's only formal speech, on the evening before he left for Iowa, went off without any angry incident. This enabled him to pay willingly the tribute to San Francisco's charm required of every visitor and also drew a heart-felt tribute to the city from the nervous Americans responsible for Mr Khrushchev's trip.

Goliath at Camp David

MR HENRY CABOT LODGE, the American representative at the United Nations, and Mr Khrushchev's official companion, has seen his own script go west as he travelled about the country. Originally Mr Lodge was expected to act as a verbal sparring partner for his Russian guest; the Vice President, out of his own experience with Mr Khrushchev, insisted that it was a case of "argue back or perish." But too many local dignitaries seized this cue. The State Department had to ask Mr Lodge to do what he could to restrain them and to avoid giving the impression that it was official policy to talk back to Mr Khrushchev at every opportunity.

The State Department did not take very seriously Mr Khrushchev's threats to go home, but it has been anxious that nothing should be done to put him in an unreceptive frame of mind for the talks which he is having this weekend with the President at Camp David in Maryland. This is where the real achievements of the visit, if there are to be any, will take place. This consideration, however, has not prevented the State Department from itself denying, with great force, the Russian charges that wider cultural exchanges would be possible but for American obstruction.

This weekend's talks apparently will range over any subject which either Mr Khrushchev or the President chooses to bring up: disarmament, trade, Berlin, the unification of Germany, the nuclear talks, and Laos. Mr Eisenhower's primary objective, however, is said to be to convince the Russian leader that unless the threat of military force—primarily against Berlin—is lifted, no progress toward removing other frictions is likely to succeed. It is still hoped that in private Mr Khrushchev may be more conciliatory than he has been in public, although it is recognised that he may wish to reserve any real concessions for the second round of the talks which will take place in Moscow.

Mr Charles Bohlen, whose appointment to the new job of adviser on Soviet affairs to the Secretary of State has just been announced, will not take up his post until next month. But it is assumed that, even if he does not accompany Mr Eisenhower to Russia, Mr Bohlen's great knowledge and experience of the Soviet Union will be available to help plan the trip. His recall from the Philippines, to which he was in effect exiled by Mr Dulles, suggests that the Administration, as well as the American people, now recognise Mr Khrushchev for the formidable opponent that he is. Mr Bohlen's insistence, when he was Ambassador in Moscow from 1953 to 1957, that the Russians should not be underestimated ran counter to Mr Dulles's own views; this is why Mr Bohlen's special talents and knowledge have been wasted for the past two years. Fortunately his new appointment does not require confirmation by the Senate, which still contains men who regard a healthy respect for the Soviet Union as tantamount to softness toward communism.

Uncertain Wall Street

NEW YORK, *Wednesday*

A SHARP mid-week rally has halted the downward drift on Wall Street at least temporarily, but in its present uncertain mood few are prepared to hail the return of a bull market. Losses in the last seven weeks have erased the gains of the preceding three months and the Dow Jones industrial average, which hit a peak of 680 in the first week of August, had fallen back to 615 before Wednesday's rally—a drop of 9 per cent. Losses were heaviest among defence, electronic and railway shares, with many falling by 25 per cent and more from their 1958-59 peaks.

A few shares have managed to resist the downward trend. American Motors reached a new high this week because the public responded favourably to pictures of the 1960 Rambler and to the firm's announcement that it will increase its capacity by 20 per cent; its supporters appear undeterred by the imminent invasion of the "compact" car field by the three big automobile companies. Steel shares have remained strong, due perhaps to the old adage about not selling during a strike. And the shares of many large multiple shops have reflected their current prosperity.

The gloom on Wall Street has been variously blamed on Mr Khrushchev's visit, on the prolonged steel strike and on the tight money policy being pursued by the Federal Reserve Board. On the importance of the last factor opinions differ: while some emphasise the impact of the central bank's policy, others point out that investors have funds at their disposal but are holding back because the future, which a few months ago seemed rosy with profits, is now somewhat clouded. Certainly the large institutional buyers—the market's pace setters—are waiting on the side lines. They are not buying equities in any volume nor are they purchasing the fixed income obligations which now offer such attractive yields. Instead, most of their ready cash is finding its way into high-yielding short term paper.

Until this summer's setback, the stock market had been rising since April 1958 with little interruption. A sizeable "correction" to skim the froth from the boom had been widely expected and, although the current drop is rather sharper than many had bargained for, it is regarded as being well within the bounds of what is termed a "normal intermediate decline." A few pessimists can be found, but professional opinion remains optimistic on balance. Confidence in the fairly near future is based largely on a belief that once business is released from the bonds of the steel strike, it will bound forward. Much depends, of course, upon when the steel strike ends and on the terms of the settlement. This is the question responsible for the "wait and see" policy of institutional investors. Until they return in strength the market is likely to remain in the doldrums.

Sins of Omission

THE PRESIDENT, who won most of his battles with Congress, has sent a parting shot after it in the shape of a searching and candid review of its work. He has special regrets for two things which Congress failed to do. One was to increase the rate of interest which the government may pay on long-term bonds (the President called this failure one of the most serious things to have happened in his time); the other was to provide adequate funds for the mutual security programme. The President debated whether to call Congress back for a special session, to deal with these sins of omission, but he dismissed the idea; it is, after all, only three months until Congress will reassemble in any case. To recall weary members before then would bring them back in a fractious frame of mind, predisposed to say no a second time. Moreover, the President's trip to the Soviet Union will take him out of Washington in November.

But Mr Eisenhower openly invited the public to "educate" members to do better next year: to forswear the "pork" barrel (the Bill for coveted local improvements), to practice economy except where foreign aid is concerned, and to make the management of the public debt easier. In the session just concluded, the first two aims proved incompatible. Foreign aid was nipped in the bitter battle over spending, particularly on housing, where Congress had to accept defeat and over the "pork" barrel which, in the end, Congress trundled triumphantly past the President's guard. Members found it hard to understand why they should vote money for projects in foreign countries which they were told that they must deny to their own constituents. This year the Senate, which usually restores the cuts made by the House in appropriations for foreign aid, hardly lifted a finger. The final Bill, the last to be passed at this session, approved spending of $3.2 billion, a trifle less than last year's total, compared with the $4.4 billion which the President requested. The sums for the main programmes are as follows:

	President's Request	*Authorised*	*Appropriated*
		$ millions	
Military Assistance	1,600	1,400	1,300
Defence Support	835	751	695
Development Loan Fund ...	700	700	550
Technical Co-operation ...	180	179	151
Special Assistance	272	247	245
President's Contingency Fund	200	155	155

If the President still believes, as he said in July, that $1.6 billion for military assistance is the minimum needed "to prevent serious deterioration in our collective defence system" he is likely to ask for a supplementary appropriation in January. It is surprising that military aid was cut at all in view of the testimony of the Draper Committee, which was created to assess the foreign aid programme, that at least $2 billion is needed. Defence support—economic assistance to countries with which the United States has treaties—was also cut sharply. But the chief regret must be that the Development Loan Fund lost what may have been its last chance to be placed on a generous, long-term footing. The President maintained, however, his personal right to withhold information about aid programmes from Congress, although lesser figures will do so in future only at the risk of having all funds for economic aid cut off.

The Dollar Besieged?

WASHINGTON, DC

IF the finance ministers and central bankers gathering here for next week's meetings of the International Bank and Monetary Fund experience one of those rare sensations of a major shift in the wind, their intuition will be right. Mr Khrushchev's visit has given Americans in general a feeling that something strange and new is happening. So, for the economically sophisticated, has the decision of the American government to take seriously the country's chronic deficit in its international balance of payments. The problem itself has been familiar to a few people in all parts of the world for a year. What is new is not only the heightened sense of concern within the American government, but also the fact that the subject is being mentioned openly for the first time. Comments in public have been few and cautious, but they have begun to be made, and comments in private are more blunt. Continued large deficits in the balance of payments, it is said, simply cannot be tolerated.

It is only two years since sterling was going through another crisis, the franc was in a state of collapse, gold was flowing into the United States, and Sir Donald McDougall was forecasting a chronic dollar gap. Suddenly though the change has come, the Secretary of the Treasury, Mr Anderson, does not believe that the present payments deficit is only a temporary aberration. He is convinced that there is a fundamentally new situation to be faced. Given his enormous influence inside the government, the importance of his views cannot be exaggerated, and they are supported by the fact that there has been at least a small deficit in every year but one in the present decade.

But while Mr Anderson's sense of concern, if not alarm, is obviously genuine, it should be pointed out that a number of other experts inside and outside the government do not share it. It is entirely possible to estimate conservatively that American com-

Monsanto

Through creative chemistry, Monsanto turns yesterday's dreams into present-day realities

Chemicals take to the woods for fine furniture

Industrial designer Robin Day, R.D.I., with furniture designed for Hillé.

MONSANTO CHEMICALS *bring a beter future closer*

Monsanto Regd.

FROM the moment most trees are felled until the time seasoning is complete, they are open to attack by fungi which cause sapstain. This ugly discolouration makes the timber unsuitable in, for example, furniture-making and cabinet work.

The most effective chemical for preventing sapstain is Santobrite, Monsanto's sodium pentachlorophenate —used by the world's major timber-producing countries.

Directly after felling, the ends of logs are treated with a sealer containing Santobrite. This stops immediate attack. At the sawmill, the sawn timber is dipped in Santobrite solution. This gives complete protection against sapstain.

Materials which originate from timber, such as insulating board, hardboard and chipboard, are also treated with Santobrite to protect against attack by fungi and termites.

The paper industry, too, finds Santobrite invaluable: it keeps the mills free from fungal and bacterial slimes; and it plays a vital part in the manufacture of mould-proof wrapping paper.

Santobrite has numerous other uses. It serves as a micro-biocide in paints and adhesives. It acts as a preservative for drilling muds used in the search for oil. It prevents the growth of slime and algae in water-cooling systems. And it checks the formation of micro-organisms in textile sizes.

Santobrite is one of the most powerful preservatives in commercial use. Together with its sister-product Penta, it helps many countries make the most of their natural resources, and preserves and protects many varied products. It's yet another way Monsanto brings a better future closer.

If you, as a manufacturer, are interested in chemicals or plastics, it will pay you to get in touch with Monsanto.

Santobrite is a Registered Trade Mark

Representatives in the world's principal cities.

Continued from page 1023

mercial exports next year will reach the $20 billion level; at this point the payments deficit would probably be so small as to be negligible. Already seasonally adjusted exports for July have reached an annual rate of nearly $18 billion, and this is without any help from the surge of shipments of cotton and commercial aircraft that are known to be coming, and with only modest help, presumably, from the decisive recovery of business in Europe. One month's figures prove nothing. But great problems sometimes just go away, and America's latest and greatest embarrassment may well do so too.

The key lies in the answer to one question: has the American structure of costs become non-competitive? For in spite of some rather desperate groping for devices to minimise the government payments that create the deficit, the real solution must lie in increasing the surplus in commercial trade. There are sensible Americans, quite apart from the protectionists, who are thoroughly convinced that the balance of trade is undergoing profound structural changes. They are convinced that exports will remain indefinitely sluggish and that imports will rise inexorably, and perhaps even rapidly. So far, the figures are hopelessly inconclusive. No one can affirm (or deny) with any certainty that American goods are "pricing themselves out of world markets" or that there have been sufficient increases in the imports competing for domestic markets to change affairs basically. If, as seems reasonably likely, both America and the other developed countries are prosperous during 1960, it should begin to be possible to answer this question.

In the meanwhile, however, Mr Anderson and his assistants are determined not to take any chances. Apparently they are not simply afraid that further deficits may lead to a run on gold; in fact, they do not expect this to happen. But they do not like the prospect of an increase without foreseeable end, in foreign short-term claims in New York. International liquidity is all very well, according to this school of thought, but there comes a point beyond which the dollar cannot reasonably be expected to bear the entire burden of it. There remains the question of who is to provide the liquidity. The ghost of Keynes's international monetary unit and credit-creating central agency is not yet stalking the corridors of the Treasury in Washington, but officials must occasionally look over their shoulders to make sure of this. In a world that finds the dollar a currency in oversupply, nothing is quite impossible.

As might be expected, the icy glance of the man who feels that something must be done falls initially on foreign aid. The first blossom to wither in the resulting frost was Senator Fulbright's plan for a greatly expanded Development Loan Fund to provide funds, on easy terms, for backward countries and which was to be financed on a long-term basis—a plan that the President had backed in nearly every detail only two years earlier and that Mr Dillon, the Under-secretary of State, was backing publicly as recently as last winter. The Administration knifed the plan without so much as an apology for being inconsistent. Senator Fulbright promptly lost heart and the Senate, as a result, did a less heroic job than usual of restoring cuts made by the House in other items. There is a strong possibility that next year the Admistration's request for the Development Loan Fund, far from reaching the $1 billion a year spoken of by Mr Dillon and backed by Senator Fulbright, will be cut to only $500 million, compared with the $700 million asked this year and the $550 million appropriated by Congress.

In inter-agency conferences and elsewhere the search for other helpful devices goes on. The Treasury finds the new International Development Association more than ever desirable, as a means of diverting demands for bigger development loans and as a means of underlining the concept that Europe must now assume a far larger share of the burden of aid to the underdeveloped countries. Payments-minded officials look eagerly at the possibility of tying more foreign aid to domestic purchases—particularly development loans, which apparently are producing few orders for Americans and many for the factories of Europe and Japan. It will be a pity if this means that the foreign aid dollars buy less and if the basic principle of non-discrimination is violated, but continued international respect for the dollar has greater priority in Washington. The pressure on Europe to abandon the remaining discrimination against the dollar is being intensified, and there are even hints of something more forceful than words. While there is no talk inside the Administration about restricting imports—and this issue will probably be quiescent except for individual cases until 1962, when the Trade Agreements Act must be renewed—the protectionist rumblings from outside the government are growing stronger.

For the foreign finance minister, all this poses a difficult problem. He can, if he wishes, charge the Americans with being needlessly alarmed and complain about what seems likely to happen to his engineering exports or capital imports, as the case may be. He can haughtily charge that the Americans, if they tie their aid to domestic purchases, will be going back on their own principles. But if he does, he will almost surely do his cause harm with Mr Anderson. This firm and reasonable man is certain that the one thing the world needs most is a stable dollar and that this is the rock on which international finance rests. It is an impressive case. The finance minister who lets Mr Anderson know that he understands and agrees is the one whose country, presumably, will do best when the shoe is on the other foot.

Primary Interest

EVEN at this very preliminary stage of next year's election campaign, attention is beginning to be attracted to the primaries; these are the state elections in which voters express their views on potential presidential candidates and choose delegates to the national nominating conventions of the parties. Fifteen states as well as the District of Columbia have scheduled primaries for 1960, three fewer than in 1956, but interest for the moment is centred on two: on March 8th in New Hampshire, the first of the series, and on May 20th in Oregon, where a new primary law has raised some intriguing problems.

Recently an influential group of New Hampshire Republicans invited Governor Rockefeller to run in their primary; his reply was firmly non-committal but his name will probably be entered, nevertheless, since his consent is not necessary. General Eisenhower's name was entered in a similar way in 1952 and his victory in New Hampshire was the beginning of his serious presidential campaign. It should not be assumed that New Hampshire will prove an equally ideal testing ground for Mr Rockefeller, since Mr Nixon, who will certainly oppose him there, commands widespread and influential support in the state. On the Democratic side, New Hampshire will offer Senator Kennedy, from neighbouring Massachusetts, a magnificent opportunity of starting the landslide which many believe will be necessary if he is to secure the presidential nomination.

Meanwhile in Oregon, the State Secretary of State, Mr Howell Appling, is obliged by the new law to place the name of any presidential or vice-presidential candidate on the ballot

> when he shall have determined in his sole discretion that such a candidate's candidacy is generally advocated or recognised in national news media throughout the United States.

An entrant can remove his name only by swearing an unqualified affidavit that he is not and does not intend to become a candidate. In addition a petition signed by one thousand eligible voters can place a candidate's name on the list; in this case no withdrawal is possible. The idea is that the primary should give the voters a genuine opportunity of stating which of all their party's presidential candidates they prefer; usually they are forced to choose only between those who find it expedient to enter. This may mean that they have no chance to vote for the real man of their choice.

But the new law may prove very embarrassing to men who want to stay on the fence until they are "drafted," perhaps by a deadlocked convention. Mr Adlai Stevenson is a prime example. Were his name to appear on the Oregon ballot, he would have either to disavow his candidature categorically or become an open contender. At least Mr Appling has recently thrown some light on how he will exercise his sweeping discretion. "Generally" apparently means "not local, pertaining to many persons, places and occasions"; applying this canonical definition he has stated that he will include Governor Rockefeller, Mr Nixon, Mr Stevenson, Senator Kennedy and Senator Humphrey, but will exclude the "favourite sons," usually the governors, of particular states and will leave Senators Symington and Lyndon Johnson suspended in the doubtful category, for the present.

Negro Wrongs to Right

SLOW as it was to get down to work, the Civil Rights Commission has more than justified its creation two years ago under the Civil Rights Act. The report which it was required to submit early this month sets out a fully documented account of the discrimination practised against the Negro, particularly in the field of voting in the South. But its remarkable achievement is the degree of unanimity reached by the three northern and three southern members on the next steps which are necessary.

In spite of angry protests from the southerners, Congress in its last hours voted by big majorities to extend for two years the life of the commission (which would otherwise have expired in November) and granted it a further appropriation of $500,000. Liberals from both parties demanded, and received, assurances that a comprehensive civil rights Bill will be taken up in February, shortly after Congress resumes its session. Many of the commission's recommendations require congressional action.

Voting

This section is the heart of the report. The commission found that although 62 per cent of the whites of voting age in the South are registered to vote, only 25 per cent of the nearly 5 million southern Negroes are registered, partly because of their own apathy but largely because of intimidation, economic pressure, manipulation of legal requirements such as literacy and the evasive tactics of registrars who may resign or refuse to meet when Negroes are likely to apply.

The Civil Rights Act of 1957 has proved completely ineffective, not a single person having been registered to vote as a result of the power it gave the Department of Justice to seek injunctions to protect the right to vote. The northern members of the commission favour a constitutional amendment limiting state regulation of voting rights to non-discriminatory requirements on age and residence, but the three southern members unanimously rejected this solution.

The commission agreed unanimously, however, to recommend amendment of the Civil Rights Act to forbid any person, under the colour of state law, to deprive, or threaten to deprive, anyone of the right to vote. But litigation is too slow and unsatisfactory to enfranchise many Negroes in time for the election in 1960. Therefore, with only one member, Mr Battle, a former Governor of Virginia, dissenting, the commission proposed that the President be authorised to appoint temporary federal registrars to register voters for national elections in any area where it is established that citizens are being excluded from the voting rolls because of their race.

Other minor suggestions, unanimously adopted and designed to facilitate the commission's work, include a national census to compile statistics on voting and registration by race, beginning in 1960 if possible, and the preservation of voting and registration records; one state has authorised their destruction to frustrate the commission when it seeks to inspect them.

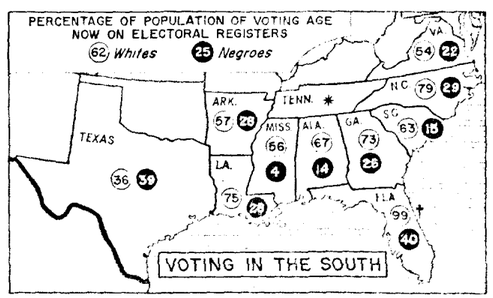
Education

To hasten the pace of racial integration in education and because they do not believe that the gradual adjustment which may be necessary in the schools is required in institutions of higher education, the northern members of the commission proposed that the federal funds supplied to public and private colleges and universities should be withheld from those which ban students on grounds of race. The three southern members rejected this sanction.

Agreement was reached, however, on proposals to use the commission as a clearing house for information on programmes of racial integration (this is needed because many school districts are confused by apparent inconsistencies in decisions of the lower courts); to extend the commission's work as an agency of conciliation and advice; and to hold an annual census, by race, of all students in the tax-supported schools.

Housing

The commission stresses that many Americans are denied adequate housing because of their race, but it argues that the need is for equal opportunity to secure decent housing, and for more houses for all those in the lower income groups, not for a policy of forcing the races to live side by side. To achieve this limited aim, bi-racial commissions should be set up in every city and state with a large Negro population. Although the federal government plays a big part in housing, through its participation in slum clearance and its guarantee of mortgages, the commission did not recommend that federal aid should be withheld from discriminatory projects. But it urged the federal housing agencies to take more care to see that the few state and city laws against racial discrimination are observed by builders and asked the President to issue an executive order stating the constitutional objective of equal opportunity in housing and directing federal agencies to work to this end.



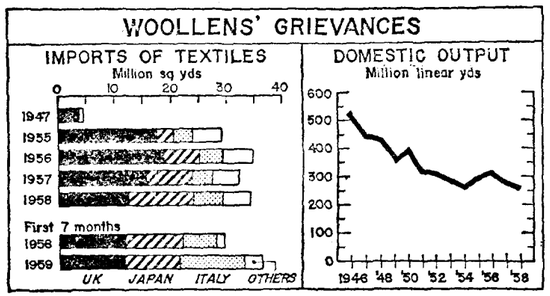
* Figures not available.
† Because the latest population totals are those for 1950, and because Florida's population is growing rapidly, this figure overestimates the proportion of Whites registered to vote.

Salt in Wool's Wounds

NEW YORK

WITH Mr Macmillan's request on British television that Mr Eisenhower "do something for us on woollens" and last week's affirmative rejoinder from the State Department, British manufacturers of woollen textiles may hope to increase their sales in the United States. But the domestic woollen industry is equally determined to preserve its own position. In 1947, when the duty on imported woollen goods was lowered to a flat 25 per cent, it was with a reservation. This was that, if in any year imports exceeded 5 per cent of domestic production (measured over the three preceding years), the President could raise the duty to 45 per cent for the remainder of that year. At that time, imports represented less than one per cent of domestic production, but since 1956 this proviso has been invoked every year. With importers racing to beat the deadline, the cut off date this year came on May 19th.

The domestic industry feels that it deserves a good deal more sympathy from the government than it has yet received. Output has dropped by 50 per cent from its postwar peak, with a corresponding cut in plant capacity. And with the large number of mills opened in the South, the contraction in New England, the



industry's historic home, has been far more drastic. Unemployment has made the Textile Workers' Union, rather than the manufacturers, the most effective champion of protection.

In New England, the industry is paying for its age. Many of the mills are antiquated; labour is subject to union work rules based on outdated methods of production; and in many cases management has proved too conservative to save itself. In addition, the manufacturers feel that they have not received their rightful share of the consumers' dollar during the last decade; Americans have shown more interest in cars than in clothes. After a modest postwar increase, purchases a head of textiles turned down in 1956, and it is only in the current year that this trend has been reversed. On the other hand, the domestic producers claim they are reconciled to synthetic fibres since they are now widely blended with wool.

Imports of woollen and worsted fabrics have risen to an annual level of between 30 and 35 million square yards for the last three years. The devaluation of sterling in 1949 gave British exporters their first chance to break into the market for medium priced fabrics, and imports from Britain rose from 4 million square yards in 1947 to 19 million in 1956; by last year they had dropped back to 13 million square yards. Within the last twelve months Italy has joined Japan as a major competitor, and replaced Japan as a supplier of cheap textiles.

The domestic industry bases its case for more protection on the familiar arguments of higher wage rates and the needs of defence. Moreover, workers and management feel that it would be cruel to allow foreign producers to increase their share of sales at the first moment that there is a glimmer of prosperity for this long-depressed industry. If the present combination of quota and tariff is to be eliminated, the domestic manufacturers will press for a higher tariff to protect them against European suppliers, combined with some form of quota arrangement to stem the flood of Japanese goods. Unlike the British exporter, who would like to see the duty bear more lightly on higher priced fabrics, the domestic industry would like the duty to rise with the price in order to offset the heavier labour costs of the better quality producer, who is particularly vulnerable to foreign competition. In any event, the negotiations to revise the tariff structure, under the provisions of the General Agreement on Trade and Tariffs, will inevitably be protracted; they are unlikely to prevent a new quota being fixed for 1960.

Steel Strikes Home

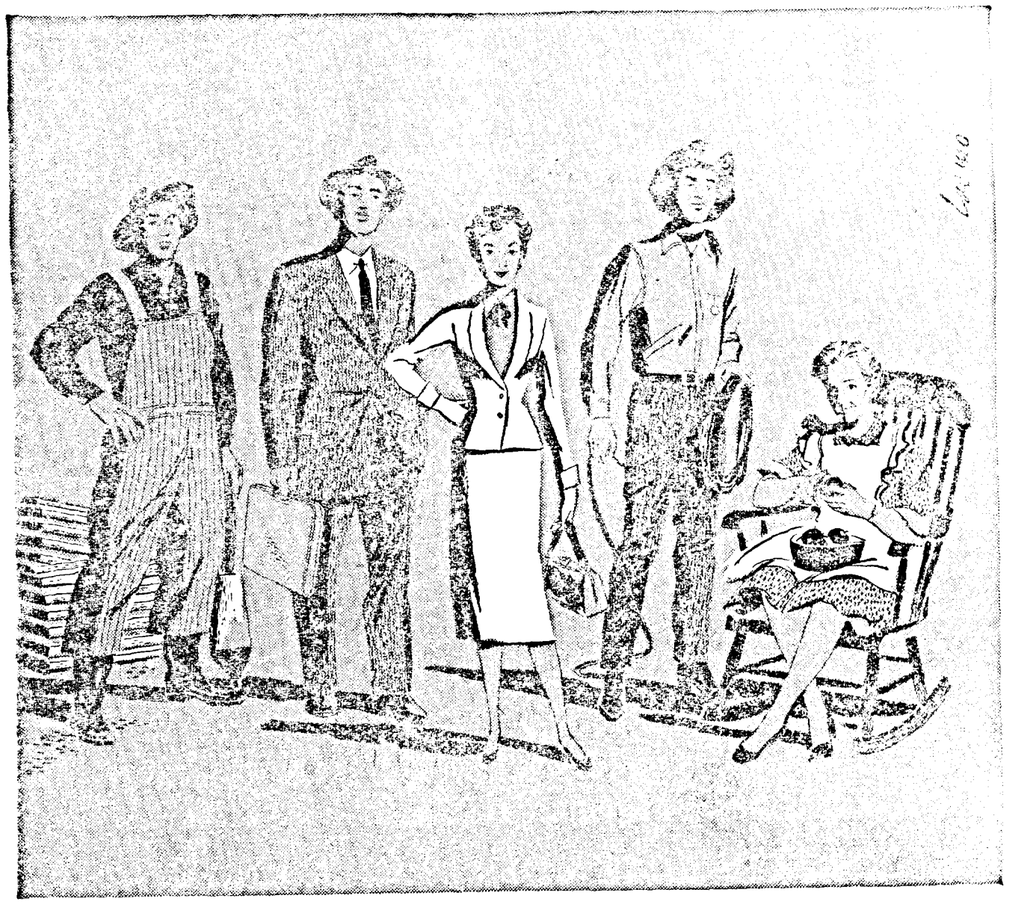
THE news that the automobile companies are beginning to lay off workers, just as the 1960 models are beginning to come off the production lines, shows how close the steel strike has come to creating a national emergency. By the end of next week the Chevrolet division of the General Motors Corporation may have to close, and if the strike is not called off within four weeks, its other divisions will have to shut too. Fortunately, though not for General Motors, the other automobile companies are not so short of steel. Up to now lay-offs have been few and the effect of the strike has been to prevent unemployment from falling rather than forcing it to rise. But because unemployment usually recedes in August, the percentage of the labour force out of work has risen from 5.1 to 5.5. The steel workers on the picket line are not counted as being out of work, but about 125,000 men in other industries have lost their jobs.

Mr Mitchell, the Secretary of Labour, has reported that about $500 million in wages had been lost because of the strike by the second half of August. This was the chief factor in the $2.6 billion reduction (at seasonally adjusted annual rates) in personal incomes during August, the first full month of the steel strike. Retail sales have fallen slightly from their earlier peaks and industrial production has slipped back—though only to the level reached at the height of the 1957 boom.

That things are not worse is a tribute to the vitality of the economy, as well as to industry's foresight in stocking steel last spring. But although real trouble is now just round the corner, neither the steel companies nor the trade union show any sign of beginning the hard bargaining for which the President appealed once more this week. The industry is plainly counting on the President invoking the Taft-Hartley Act within the next fortnight or so; this would bring the workers back to the mills for 80 days. When the President offered, rather grudgingly, to create a special commission, outside the Act, to seek a settlement if both sides requested it, the steel companies refused. If the union is forced to order a return to work, it seems increasingly possible that the strike may be resumed in the new year; the American Federation of Labour and Congress of Industrial Organisations has just laid a levy on all of its members to support the steel strike; this may bring in as much as $15 million a month.

SHORTER NOTE

From the beginning of the shipping season in April to the end of August, 11 million tons of cargo passed through the St Lawrence canals, 59 per cent more than passed through the old channels in the same period last year. Traffic through the Welland Canal increased by only 23 per cent; the costly delays at this bottleneck are seriously prejudicing the attractions of the waterway to shippers.



WHICH OF THESE AMERICANS
IS A CUSTOMER FOR EUROPE?

A Texas cowboy, a Maine lobsterman, an Iowa farmer's wife, a Chicago corporation lawyer, a New York department store buyer. These are but a few of the incredibly varied types who are classified as Americans and comprise the American market. They differ radically from each other and other Americans in tastes, desires, needs and ways of life, and, naturally, in the kind of merchandise they buy.

Banks abroad desiring to obtain a favorable position for their customers in U. S. markets are invited to use the facilities of Manufacturers Trust Company. Through our complete branch coverage in New York City and our thousands of correspondent banks throughout the United States, we are exceptionally well equipped to obtain data on local market conditions in the United States and to handle all types of banking transactions.

THE WORLD OVERSEAS

Wooing "The Fifth Great Power"

FROM A SPECIAL CORRESPONDENT AT THE UNITED NATIONS

EACH General Assembly of the United Nations, like each newly elected parliament, has a character and theme of its own. In both cases they are formed and set more by the backbenchers than by the leaders, more by the seventy-eight smaller nations than by the Big Four. This year the fourteenth General Assembly is quite clearly determined to discuss disarmament and the diversion of resources from tanks to tractors. It is also very bored by the cold war, and an old-fashioned Dullesian (or Molotovian) cold war speech will empty the chamber as fast as Welsh affairs do at Westminster.

Since the foreign ministers are reasonably well informed about the state of Assembly opinion, they have all turned up with at least decent little tributes to the desirability of disarmament and the need for aid to underdeveloped countries. Even in the middle of an election campaign Britain was able to increase its contributions to aid programmes quite substantially. Mr Selwyn Lloyd's speech was unfortunately buried by Mr Khrushchev's more publicised oration, but it deserved some attention for its painstaking attempt to get somewhere on disarmament.

The British proposals are a technician's solution for technical difficulties in the way of further negotiations about disarming. They look forward to a three stage programme culminating in a general arms reduction, but they concentrate on the central problem of a *balanced* reduction of both conventional and nuclear weapons and on controls.

For those who really understand the technicalities of disarmament (there must be nearly a hundred such in the world, and all except Mr Anthony Nutting are at the United Nations) Mr Lloyd's speech was highly significant, and it may yet be the basis on which further negotiations are carried on at the forthcoming ten-power disarmament talks. But it failed to make any impact on the public or even on the average small-power foreign minister (there are some fifty here).

Next day, Mr Khrushchev came up with a speech designed to tickle the ears of these groundlings. How far did he succeed and how far did he overplay his hand? His suggestions for total disarmament within four years and his somewhat casual references to the problems of inspection and control made all the technicians and all the western leaders gasp with incredulous dismay. The British delegation in particular, who would not like to see the Russo-American talks break down in the middle of the election campaign, hastily reassured the Americans that this terrible lapse did not mean that Mr Khrushchev was unprepared for serious talk and only interested in propaganda.

It was as a result of this first impression that Mr Khrushchev's speech got some extremely critical press notices. Second thoughts are showing that his proposals cannot be so summarily dismissed. On the propaganda front, in spite of their naïvety, they did have an appeal to a large section of the Assembly—not simply because the small powers are against war (at least amongst great powers) but also because there appeared to be some logic in the thesis that if nuclear weapons make war too horrible to contemplate, it is war which must be abolished, not just nuclear weapons. Consequently, the Russian plan will certainly be debated at the Assembly, where it will have the great merit of putting Russia on the side of the angels—idealist, extremist perhaps, but extremist for peace.

Secondly, a more careful reading of the speech has shown that in fact it was not all propaganda. In a brief paragraph or two Mr Khrushchev outlined a second Russian proposal for *partial* disarmament. This proposal, which contains ideas about a nuclear-free zone in Europe as well as the usual demand for abolition of overseas bases, is presumably what Mr Khrushchev intends to raise with President Eisenhower this weekend. For that reason he did not present it in great detail to the Assembly.

The Chinese seat was the one other topic on which Mr Khrushchev spoke at length ; and it has now been debated at length in plenary session. Mr Khrushchev was vitriolic in his denunciation of the "corpse" of the Kuomintang which, he said, held the seat lawfully belonging to the Peoples' Republic of China. After the weekend, his peasant vigour was fully matched by the patrician fulmination of the American representative, Mr Walter Robertson (replacing Mr. Lodge, who was away acting as travelling companion to Mao's ally, Mr Khrushchev) who called the Peking regime a murderous tyranny holding down 600 million people by force.

Inevitably the Indian and Nepalese motions to admit the Peking government, or even discuss it, were lost by votes of 29 to 44. The whole debate left both a sour taste of the cold war and a sense of utter unreality. Many western delegates said privately, as they have done year after year, that this must be the last time this farce is played out. But doubtless it will not be the last time, for the United Nations has a strong sense of ritual.

In the next few weeks the ritual dances of Algeria and South Africa will be staged. They may seem wholly pointless, yet it is a fact that the opinions of the General Assembly have played about an equal part with the opinions of the French army in making up General de Gaulle's mind. In its own way, the Assembly remains a fifth great power, wooed by the other four.

Green Dragons and Gorillas

FROM A CORRESPONDENT IN ARGENTINA

THE significance of the democratic revolution that has swept through Latin America in the past five years has been somewhat obscured because it has occurred in fragments instead of in one massive wave. Argentina's Juan D. Perón was thrown out of power in 1955, and one dictator has disappeared every year since then —Peru's Manuel Odria in 1956, Colombia's Rojas Pinilla in 1957, Venezuela's Pérez Jiménez in 1958, and Cuba's Fulgencio Batista early this year. General Stroessner, the last South American *caudillo*, is visibly tottering on his precarious Paraguayan pedestal. Put together, this steady swing away from authoritarian rule adds up to a continent-wide movement.

The Argentine uprising that touched off these explosions took a peculiar course. Elsewhere, the armed forces were usually the

dictatorship's chief support, and the successful revolutions left the professional soldier with little prestige or power. In Cuba, for example, the long battle of the regular army against Fidel Castro's forces disgusted the population of the island ; few of the officers who remained after Batista fled escaped demotion, dismissal, or the firing squad. In Argentina, however, it was a small group of generals within the army itself who thrust the revolution upon a nation where Perón was still quite popular. The army thus retained its traditional role as the ultimate arbiter in Argentine politics.

The handful of senior officers who successfully conspired against the dictatorship were organised in a secret lodge known to its members as "*los Gorilas*." Such organisations are common in Argentine history ; the first "logia" was founded in London in 1808 to promote the independence of Spanish America, and Perón himself came to power with the aid of a secret lodge in 1943. It was Gorilla officers who suddenly sent waves of bombers against the presidential palace in June, 1955, and who headed the uprising of the Córdoba garrison that overthrew the regime in September of the same year. From 1955 to 1958 they ran Argentina by decree.

Although many of the Gorillas were disturbed by newly-elected President Arturo Frondizi's political dealings with Perónists, they permitted him to take office, as scheduled, in May, 1958. The army by this time had been thoroughly purged of Peronist influence, and a new officer's lodge, "*los Dragones Verdes*," was forming. Headed by an obscure colonel, Manuel Raimundez, the Green Dragons favoured unconditional obedience to civil authority and the withdrawal of the army from all participation in politics. Last May, the secretary of war, Hector Solanas Pacheco, a Green Dragon, transferred or dismissed numerous rebellious officers, and arrested the entire command at Córdoba, the stronghold of the Gorillas. The result was a wave of insubordination and mutiny in the upper ranks. In midsummer President Frondizi was forced, much against his will, to dismiss Pacheco, Raimundez, the secretary of the navy, and four quasi-Peronist members of the cabinet. The new secretary of war, seventy-one year old General Elbio Anaya, was brought out of retirement with the promise that the army would continue its war against Peronism in the government.

EARLY in September, it became apparent that the neo-Gorillas were not satisfied with General Anaya's performance. Their policy was one of "conditional legalism" ; they would obey orders, but reserved the right to intervene in civilian affairs if necessary. The secretary of war, exasperated by such insubordination, thereupon dismissed the head Gorilla, the chief of staff, General Carlos Severo Toranzo Montero ; when fourteen generals telegraphed the news to their Gorilla lodges, General Anaya had them arrested and threatened a widespread crackdown.

His plan backfired. Commanders of garrisons throughout the country wired back that they "would not accept the unjustified dismissal" of the chief of staff. Early on September 5th, General Toranzo "reassumed command," and barricaded himself in the Army Mechanics' School in Buenos Aires. When summoned to meet the president he was able to produce such strong evidence of military support that Sr Frondizi had no alternative but to submit; General Anaya was dismissed and General Toranzo reinstated.

It is still too early to be sure what use General Toranzo means to make of the power he has so visibly demonstrated. He comes of an old liberal family (his father, also a general, was an intimate friend of the Radical president Irrigoyen, and was tortured and exiled by the military dictatorship of 1930). He has none of Perón's lust for personal power and glorification, and no wish at all to become a dictator. His only immediate moves after his triumph were to put a personal friend into office as secretary of war and to transfer or dismiss the nine generals (out of Argentina's total of one hundred and ten) who had failed to support him. The Green Dragons, with their doctrine of military abstinence from politics, were completely routed. With the neo-Gorillas in complete control, the army, for good or ill, will continue to have the last word in its country's politics.

Japan's New Capitalism

FROM OUR CORRESPONDENT IN TOKYO

ABOUT a third of Japan's 10 million shareholders are housewives, shopkeepers and clerks. Very few of them own more than about £100 worth of stock. Most of them do their share-buying through investment trusts. The assets of the twelve leading investment trusts have bounded from £100 million to well over £300 million in the past two years. These enterprising concerns have built their fortunes on the widow's mite and the shopkeeper's savings. They have opened consultation offices in such unlikely places as department stores and railway stations, and their small clients are urged to feel free to drop in at any time—the workers' lunch-hour is the most usual—for the latest stock exchange tips. They do not even have to wait to catch an investment clerk's eye, if they are in a hurry: large boards, electrically controlled, tell the state of the market at a glance. The information thus conveyed has recently been almost uniformly encouraging, with electrical, oil and motor-car shares bounding up between thirty and fifty per cent. On the Tokyo Stock Exchange, the average price of 225 selected share issues now hovers near 900 yen, compared with 650 yen a year ago, and 450 yen two years ago.

Before the war, there were only about a million and a half shareholders in Japan, and most of these were not individual speculators, but represented the big corporations, or *zaibatsu*. Not that the *zaibatsu* bothered to raise much capital through the stock exchange. They did so from their own reserves, and by borrowing from the banks they themselves controlled. The stock exchange was merely a useful but hardly indispensable adjunct, whereby the *zaibatsu* fought battles among themselves for greater or lesser control of subsidiaries and affiliates. The ordinary Japanese would no more have dreamed of entering the stock market than of strolling into the Imperial Palace.

Today, the investment trusts, with understandable enthusiasm, praise the American Occupation's liquidation of the *zaibatsu*, and the consequent participation by the general public in shareholding, as "the most wonderful thing that ever happened in Japan." In fact, Japanese companies still raise only about ten per cent of their capital needs through issuing shares, getting the remainder either out of retained profits or by borrowing from the banks. Also, the *zaibatsu* have reappeared, and have re-established at least partial control over the banks.

What the "democratisation of the stock exchange" has apparently succeeded in doing is to vest virtual control over the stock exchange in the ebullient investment trusts. For instance, the largest of these, Nomura Securities, alone is said to handle about 26 per cent of the total turnover of shares on the Tokyo Stock Exchange (whose daily turnover of shares averages between 100 million and 140 million). This year, Nomura was reported to have "beared" the market single-handed, by unloading about 10 million shares in one day. The investment trusts, in their alternate role of securities companies, appear to buy and sell on margin with considerable frequency. They are helped to do so by the Japan Securities Finance Company, which under the benevolent umbrella of the Bank of Japan is reported to supply some £22 million on loan for marginal share-dealing.

Nevertheless the investment trusts could scarcely continue to exist if they were not so singularly successful in attracting the

Whisky for Johnny Canuck

FROM OUR OTTAWA CORRESPONDENT

TWO new and overdue passenger terminals are nearing completion at Uplands Airport, Ottawa, and at Dorval, the airport of Montreal. They are part of a major Transport Department plan to renew all Canada's major airports: the first new building to be opened was Gander, Newfoundland. The opening of the Ottawa building was set back recently when a Lockheed Starfighter showed off its paces over the Uplands runway with such enthusiasm that it blew in all the windows in the structure.

This incidental mishap, however, was trifling beside the maddening mystery that embitters public expectations about the new building. In the original design of the Ottawa, as of the Dorval, terminal, space was provided for a dining room, and next door to it for a "cocktail lounge" or "beverage room." These are the periphrastic appellations given by the genteel to the homely and comforting facilities known more generally as "bar." The Uplands bar has actually had its picture in the local newspaper, and a cosy place it looks with seven well padded stools before the proper kind of counter and suitable shelves, suitably stocked, behind it. The only serious criticism was that it looked a bit small; but perhaps the photograph did not do it full justice. What is worrying is that we may never know. Early this summer a go-ahead restaurateur was given a concession for the dining room. He promptly sent his Swiss chef to tour all the best airport restaurants in the United States, started planning menus to be printed in English, French and Spanish, designed his room with great care, and resolved that Ottawa was going to have an airport dining room second to none.

IT was all very encouraging—but for the blight of the misanthrope's mystery. The bar—that nice little cocktail lounge or beverage room—was reported to have been walled up, just like some mediæval nun discovered in revel. The reports went further, and alleged that her sister bar in the Dorval terminal building had suffered a like fate. Mr Lionel Chevrier, a French-Canadian Liberal who was formerly minister of transport, attacked the mystery when the Transport Department's estimates were before the House of Commons. "What is the situation in the airport at Montreal?" he asked. "Provision was made for a liquor and beverage area." (Of course it was: he was minister when the plans were drawn up, the sensible fellow.) The new minister, Mr George Hees of Toronto, an ex-footballer who does not belong to any Band of Hope, replied: "No decision has been taken to make liquor available there." But Mr Chevrier stuck to it: "That has not answered my question," he said. "Is the area in the Montreal airport which was provided as a liquor outlet still in existence?" "Yes," said Mr Hees. But no policy has been decided "with regard to the sale of liquor at airports." That was in June, and so far as is known policy on this grave political matter is still "under consideration."

"Temperance," a term misused to mean abstinence, is regarded by the politicians as a dangerous thing to monkey with. The prevailing legend is that a great mass of voters will generate a charge of indignation strong enough to defeat any candidate who approves of the sale of liquor. Only Newfoundland, and in somewhat smaller degree Quebec, are exempt from this. The new Gander airport has a bar; the federal government holds the license for it. Gander indeed has had a bar for twenty years; it is open right round the clock, and many a weary trans-Atlantic traveller of sober habits has been glad to restore himself there at the most improbable hours. Probably more pre-breakfast drinking is done there—any time between four and eight a.m. local time—than anywhere else in the British Isles or North America, for this is when westbound planes from Britain and Europe are apt to arrive loaded with sleepless passengers who have been told that breakfast will be served "after we leave Gander." Such wicked habits were fortunately not allowed to stand in the way of Newfoundland's union with Canada, any more than the famous "Newfie screech," a particularly ferocious brand of rum. Liquor control is, after all, a provincial matter.

THE provincial governments, indeed, have a vested interest in the sale of spirits, wines and beer. Everyone of them exercises a monopoly of these sales, as do many of the American states; and a very nice thing they make of it. (The only exception is that some provinces let local brewers and "wineries" sell direct to the public.) Total sales in 1958 came to $819,500,000, out of which the net revenue to the ten provincial governments, the Yukon and the Northwest Territories was $208,363,000. Most of this is straight profit, but an item of $40,500,000 for licenses and permits will not be overlooked by provincial treasurers. Sales of liquor destined to pass down Canadian gullets amounted to 225 million gallons of beer, 13,500,000 gallons of spirits, and a mere 6,750,000 gallons of wine.

Until the last few years Canadians, except in Newfoundland and Quebec, were forbidden to indulge their alcoholic tastes in public. The Ontario law, which still applies to every bottle bought by a licensed consumer (license: a dollar a year), stipulates the places where he may consume its guilty contents. The stuff may be drunk only in the private home of the "permittee," (that is, the adult who has paid his dollar and got his license); in the hotel room or a room in a club where he is registered as a *bona fide* guest; in the bedroom of the permittee in a boarding house; or, so that no vagabond or fresh air fiend may be penalised, "the tent erected by the permittee as a temporary abode." All this is meant to placate the blue noses, and evidently it succeeds. More far-seeing moralists were always a little disturbed by the close association inevitably established by these laws between whisky and bedrooms. The association lingers, partly from habit, and partly because there has not been time to forget how much more stimulation can be got for a dollar by taking a bottle to your bedroom than by sitting in public and buying a glass at a time.

BUT attitudes have changed drastically, and in most provinces they continue to improve. In most of the larger places the better restaurants at least are now licensed to serve any kind of drinks with meals. Cocktail lounges, nightclubs and even bars are open, usually from 12 to 12. Local option often decides the liquidity of each neighbourhood, and many smaller places still insist on purchase by the bottle at government stores. But the association with beds is fading, to be succeeded by an equally silly insistence on the posture of sitting. In many places it is very difficult to get a drink standing up; but then, you cannot do that in Washington, DC, either. Sabbatarianism also remains a serious hazard. Sundays will be dry in most places for the man who forgets to take a bottle overnight to his bedroom—or tent. Sundays at least come regularly. But elections do not. No traveller can reasonably be expected to foresee every local election. But if he stumbles on one of these he will find that no one may buy a drink lest the electors excite themselves or impair their judgment with alcohol. If he be optimistic enough to expect refreshment after the polls have closed, he will soon learn that these public duties are not to be dismissed so casually. After a day of unrelenting austerity, the citizens shall remain abstinent, says the law, until every man, woman and child has taken himself, herself or itself uncontaminated to a pure couch of temperance.

Continued from page 1032

spare funds of the small investors, nearly all of whom declare with the utmost solemnity, when asked, that they abhor all forms of speculation and regard the stock exchange as a legitimate and reliable means of saving (with of course the enhanced attraction that capital gains are not taxable). For most of them, it has so far proved to be just that. They stay with their investments, leaving the chasing of short-term profits to the professional speculators, and displaying a strong preference (advised to do so by the investment trusts) for companies with good growth potential. And their confidence in the investment trusts and in the stock exchange would seem to reflect quite accurately the sound condition of Japan's economy as a whole.

Japan has come through the "shallow depression" with flying colours. Consumption, both urban and rural, remained high, and the country's innumerable small businesses have recovered very rapidly from what proved to be only a slight setback. Last year, real wages gained six per cent, slightly less than the year before; but the average Japanese food-bill is now 48 per cent of the household budget compared with 53 per cent three years ago, and the higher consumption of other articles reflects the difference. (The other articles include share-buying.) The government has cut taxes—a £100 million income tax cut was the Ishibashi cabinet's parting gift to its successor, the present Kishi regime—but still has a comfortable revenue surplus as big as the tax cut. In the first six months of this year, Japan actually sold more goods to the United States than it imported, thus making the $370 million spent by the American forces in Japan a clear gain. Sales to the United States this year are expected to exceed $800 million; and Japan has over one billion dollars of foreign exchange already in its kitty. Continued economic growth, estimated at eight per cent this year, is not expected to lead to over-importation, because, as an example, Japan's own steel production is now regarded as "adequate." Indeed, fears are now being expressed that other countries, especially the United States, will regard Japan's import controls as no longer necessary, and powerful objections are being raised in Japan itself to what is called "nurturing industries forever in a hothouse of exchange controls and import quotas."

Scanning the picture in quest of blemishes that will justify their own moans, the professional pessimists, of whom Japan has at least as many as other countries, have been pointing out that Japan's admittedly "astounding headway" is all very well, but that meanwhile "social capital" is being neglected, in the form of deteriorating roads, poor harbours, insufficient housing, and overcrowded public transport. But these strictures are unlikely to damp the confidence of the fast-growing army of small investors in the virtues of the new capitalism.

IRISH NOTEBOOK—II

Realism at Home?

BY OUR SPECIAL CORRESPONDENT

MR SEAN LEMASS, the new Taoiseach (Prime Minister), is described as "a realist" so often that one might suppose he was the sole exemplar of an otherwise extinct species. He certainly talks both publicly and privately in a refreshingly candid manner, and he has admitted the essential truth in the devastatingly frank analysis of the Irish economy that Mr John Cahan, the deputy secretary-general of the Organisation for European Economic Co-operation, gave in Dublin in July. Declaring that "Ireland needs a jolt," Mr Cahan administered it by telling his audience: "You have two possibilities. The first is to raise protection of your industries to astronomical heights, or get rid of protection and make your industries fully efficient. You have no terribly bright picture in front of you." Subsequently the Taoiseach told the Dail: "It is better that badly run industry should fail. . . . I know probably better than most deputies that in practice it is hard for any minister to be as ruthless as all that, but it may be well to state the right policy even if we cannot always apply it."

It is clear that Mr Lemass is thoroughly disillusioned with Irish private enterprise. Although Eire is a country in which socialism is an exceptionally bad word, the only industries that are normally mentioned with pride are those which are state run; sugar, electricity, the airline, and Bord na Mona, which is a method of turning old Irish bog into new electric energy. Dr Noel Browne, who is back in the Dail as one of two self-proclaimed socialists, concludes from this that it is only necessary for Eire to nationalise all its inefficient industries to be able to afford to double all the social services. Mr Lemass has decided rather more sensibly to let inefficient industries stew and devote the state's resources to starting fresh ones, which, if they prosper, can subsequently sell stock on the market.

This new approach will of course be just as good and no better than its two premises—the Taoiseach's repeated assertion that Eire is not short of capital but only of ideas of how to use it, and his assumption that the government has got good ideas. One overriding test of Mr Lemass's realism is whether he will devote more of the country's investment to improving the efficiency of its agriculture. The relative neglect of the country's basic industry has always been the strongest point in the Fine Gael's case. It is just as well that Eire should scale its economic ambitions down to size, but there is no earthly reason beyond poor planning and poorer execution why the Irish should not be able to compete effectively with the Danes in preparing and marketing their agricultural produce abroad, especially as they are so near to the British market.

THIS has been a particularly bad year for selling cattle on the hoof to Britain, partly because the hot weather has cut down on British farmers' grazing, partly because the Irish have fallen behind in their tubercular testing programme. But even in a normal year the Irish are none too confident of being able to match the Danish effort now that Denmark has secured a tariff reduction on bacon as its price for joining the Outer Seven. Following Mr Lemass's visit to London, an Anglo-Irish trade committee has been set up at civil service level. There is no question what the Irish would like: the economic equivalent of rejoining the United Kingdom, combined with the emotional satisfaction of remaining politically independent. In other words, they are angling for the same farm subsidies from the British Treasury as the British farmer.

At the same time, Mr Lemass has made an approach to Northern Ireland to seek co-operation on economic issues. He has picked on a small legitimate grievance that the Northern Irish have against their Southern neighbours—that a few sticks of Southern Irish furniture now take advantage of Eire's right of duty-free entry into the United Kingdom's markets to seek an easy market north of the border, while because of Eire's high tariffs Ulstermen have no reciprocal privilege—and has held out the prospect of a remedy as a bait for all-Irish economic talks. But the northerners are not biting. They suspect that Mr Lemass's motive is to get in on Northern Ireland's farm subsidies by establishing an all-Irish line-up against the British Treasury. Probably the Taoiseach, seeing that economic rather than political union is becoming fashionable in the world, is seeking to cover by economic talks his practical abandonment of any hope of ending political partition.

The absence of any serious expectation that the border can be abolished is, indeed, one of the most remarkable features of the Republic's present mood. Of course, the *United Irishman* and other nationalist organs still resort to the vocabulary of the Civil War. But with Mr De Valera's evaporation to the Presidency,

the verbal currency of his generation is seeming unreal even to Irishmen. There is even an occasional article, as in the August issue of *Hibernia*, suggesting that the Catholic minority should take a full and loyal part in the public life of Northern Ireland. The word "failure" is ubiquitous: failure to stem emigration, failure to achieve self-sufficiency, failure in industry, failure in agriculture, failure in education, the failure of Mr Patrick Kavanagh, said to be the best conversationalist in Ireland and therefore in the world, to find anyone worth talking to, failure to make the Irish language universal. The last fiasco permeates the whole. In the Gaeltacht, where Irish really is a live language, the people cannot shed it soon enough because it is a handicap to getting employment in Boston or Birmingham, and recruitment to the Irish army is particularly high as this is the only feasible way of becoming proficient in English. Dublin never was Irish-speaking and, to judge from the shop signs, the books and newspapers (even the *United Irishman* is almost all printed in English) and the overwhelming impact of British and American newspapers, paperbacks and television, it never will be. Even many Gaelic enthusiasts now admit that the two languages perform separate functions. Irish is for patriotism, English is for communication.

For a nation traditionally given over to fantasy, Eire is remarkably full of ruthless self-criticism. The question is whether this is only penitential self-indulgence or whether it constitutes the kind of clarity that leads to sensible action. Mr Lemass has repeatedly warned his fellow-countrymen against their inveterate habit of looking for an Anglo-Irish trade agreement or something else as a panacea which will enable them to sit back and lead easier lives. But Mr Lemass himself has made these realistic speeches before. It will be interesting to see whether he can achieve the detachment as prime minister to pass an uncompromising judgment on his own record as minister of trade and commerce.

A VISIT TO BRNO—II

The Conformists

FROM OUR SPECIAL CORRESPONDENT

ECONOMICALLY advancing ; politically conservative. That is the usual western verdict on the Czechoslovak scene. The shops in Prague are full. Versions of new consumer goods appear not so very long after their appearance in the west. But the statue of Stalin still towers above the Vltava, impossible to hide. In a way the mixture works. The Czechs do not go in for the free speech of the Poles ; there is no uneasy feeling of suppressed revolt, as in eastern Germany. Instead there is conformity, and a certain stability. The visitor will meet plenty of critics of the present regime, but few who believe that there is any future in trying to overthrow it. The practical alternative—to take things as they are but hope for a gradual improvement—is widely accepted.

Perhaps three hundred years of alien rule have helped to mould these attitudes. But they have their origin in more recent events, too. Except on the land, the most painful economic features of revolution are past. The Czechs, it seems, have no wish to return to the unpleasantness of the early fifties. Both government and critics appear to avoid being too irksome to each other and to acquiesce in a sort of truce.

Behind Czechoslovakia's stable conformity, there lies a simple political fact—the proximity of Germany. Munich stands in the background of Czech life, a reproach to the western powers, a well-used advertisement for Russia. The Russians, too, can claim with more justice than in many other places that they came as liberators in 1945. No bitter experiences, like the Warsaw rising or the sack of eastern Germany, embitter the unobtrusive relationship with the Soviet protector. Many Czechs talk with disquieting exaggeration of the *revanchistes* in western Germany. The loose talk and the claims of the refugees there give the government the opportunity to rub the sentiment in. Anti-German feelings as such do not seem widespread. Many of the few remaining Germans in the country have high positions. Close ties with eastern Germany have official support. But it is difficult to answer the oft-repeated theme: no German unity until the frontiers and military status of Germany are settled by a peace treaty. The reliance on Russia provides the basis for the Czech *status quo*.

Germany is not the only subject that is clouded by misconceptions, and where certain western policies give the government opportunities to muster support. The Czech press is as sternly conformist as the press in eastern Germany. The western radio is more effectively jammed and westward travel is far rarer. The room for a gradual growth of misconceptions about the west is large ; even the leaven of influence from the less conformist east European countries has been considerably curtailed. As a result distorted Marxist views about the capitalist world subsist side by side with unreal images of a golden west. Western colonial misbehaviour—in Algeria or Central Africa—still provides the main focus for plausible attacks upon the western powers.

DESPITE the outward signs of orthodoxy, there has been a real, if very cautious internal change in climate since the early 1950's. Talk with foreigners is still discreet. The rules and limits are there. But in the law and practice of justice there has been a slight increase in safeguards for personal liberty, perhaps a waning of fear. By English standards all this is no great shakes, and political control—over press and education, jobs and housing—still quite obviously goes on. But on the surface of life, at any rate, the watchword seems to be to relax carefully—enough to make life more bearable, though not to blow the system up. In the arts the Brno fairground can follow the conventions of western abstract art. But in literature—where politics make it difficult to write with conviction—by all reports little worthwhile stuff appears. There is a good deal more travel into communist countries than there was a few years back, but travel to the west is a very different cup of tea. Excellent bands play western hit tunes ; yet in the small towns the police still break up a party, on occasion, if rock 'n roll gets out of hand. In economic management, a real measure of liberty has been given to factory management, so that small shifts in plant planning can at least go forward without central approval; but the overriding financial control of the planners remains intact.

Today, therefore, Czechoslovakia presents a picture of considerable calm. A good many features of the present regime are evidently here to stay. Yet major questions about the future have still to be answered. Will the process of change in Russia, together with a relaxation of tension between east and west, in time edge Czechoslovakia off its careful course ? Internally the system has its own inherent weaknesses, apart from the obvious lack of personal liberties. A general political apathy, a retreat into the sanctuary of private life—these are common reactions to the pressures from the state. A new generation of young technicians and managers has been produced. Only too evidently the result has sometimes been to throw people of poor quality into responsible posts. The system, with its emphasis on conformity and the premium it sometimes places on indecision and keeping out of trouble, does not always provide the remedy. Further ahead, no one knows the answer to the crucial question—how much these weaknesses, and the curtailment of liberty, are inherent in the system. But both past history and the present climate suggest that the Czechs will meet these problems through evolution, rather than upheaval.

THE BUSINESS WORLD

Whose Enterprise?

WHICHEVER party is returned on October 8th, the next government with which British industry will have to deal with will be one committed to more interference in its affairs. Labour's formula frankly horrifies most industrialists: the interference that the Conservatives propose, however, is of a kind that some industrialists would like very much, providing they themselves can manage to get interfered with (as they sing in the City, "When does the ravishing begin?"). One may cite as witness that staunchest defender of business against the socialists, the Institute of Directors:

> . . . If the Cunard Steam-Ship Company succeeds in obtaining from the Government a big subsidy—possibly of £40 million—which it wants towards the replacement of the ageing Queens, such a decision ought not to be politically contentious. On the North Atlantic 'prestige' run, it is Government finance that matters. . . .
>
> (*The Director, June* 1959)

> Even the United States has found that the aircraft industry requires a merger between the flexibility of private enterprise and the support of large Government orders. There is no way of avoiding it here.
>
> (*Ibid, July* 1959)

Any government of whatever political colour, in the institute's view, has its part to play. That part, in deserving cases, is to hand over the (public) money.

It is one that the Conservative party, by example as well as precept, has affirmed that it is ready to fulfil. Its undertaking, in its election manifesto, to give whatever financial assistance may be necessary to have two new Cunarders may be compared with its promise, a year ago, to lend up to £50 million to Colvilles Ltd. to build a new steel strip mill on the outskirts of Glasgow. That loan, certainly, was at the time explained partly in terms of the "social" location of industry, about which the Government put through a new Act last year. In their manifesto, the Conservatives return to that legislation, promising a new consolidating Act that will tidy up and at odd points extend government powers to persuade industry to locate itself partly on social rather than purely on commercial grounds. They undertake "to assist the aircraft industry to increase its sales," though without promising as much as the Society of British Aircraft Constructors appears to want.

There is nothing in the manifesto resembling the "focus of authority empowered to formulate positive, forward-looking national policies and programmes and provided with the means of securing their execution" that the SBAC would like for aircraft. But it does pledge the Conservatives to create a Ministry of Science with responsibility for the Department of Scientific and Industrial Research, medical and agricultural research, "the atomic energy programme" (does that mean the Atomic Energy Authority and the Central Electricity Generating Board, too?) and any space research Britain decides to engage in. The party has committed itself also to pressing forward nuclear power development for peaceful purposes; to calling a conference on automation; and to encouraging new inventions and the development of new techniques. Not all of this need involve any significant Government intervention in private business decisions: but much of it may.

THERE is nothing new about this penumbra of selective public assistance between full state ownership in the public sector and full commercial independence in the private sector. The total of public money involved is not immense, though in some sectors of industrial activity it is strategically important; but the extent to which this Government assistance-cum-influence is distributed is perhaps wider than is generally recognised. Subsidies to build and perhaps to operate new Cunarders would be no more than an extension of the special subsidy for building new ships represented by the discriminatorily high investment allowance that has been allowed to the British shipping industry since 1956. All private business, certainly, has received from time to time, and does now, a smaller subsidy to new fixed investment from the general investment allowance, but shipping, fuel-saving equipment and capital facilities for research and development have been receiving this as a special favour for some years.

The steel industry, again, has enjoyed various peculiar special relationships with British Governments since the thirties; during the last few years its development has been subject to final veto or interference by the Government, its equity ownership and its power to raise new capital subject to threat from the Opposition, its prices subject to control by a public board. The lending of public money to finance steel development, in these circumstances, was not surprising; what was significant was how the loan to Colvilles was used to impose a largely political decision about industrial location.

This loan was eventually offered under powers in the Iron and Steel Act, not the Distribution of Industry (Industrial Finance) Act of 1958. The Conservative party is now not satisfied with the powers that the Government obtained under that Act; but the Treasury has already used those powers to

step up its rate of lending to businessmen to settle in "unemployment places" where they would not otherwise have chosen to locate their enterprise. In the twelve years from the passing of the original Distribution of Industry Act of 1945 to the second reading debate on last year's Act, just under £7 million had been lent to 79 companies, generally at much lower than current commercial rates of interest. Since then, the Treasury has lent a further £3 million to five more companies in development areas under the 1945 Act; and in the first thirteen months after the 1958 Act was passed, the Treasury arranged to lend just over £5 million to 83 companies elsewhere. That Act made it possible to lend to companies in services and distribution as well as in industry, which was logical enough given the principle of taking employment to the workers; but it did retain the condition that the Treasury must not lend when companies could have obtained the money from ordinary commercial sources.

That condition is one that the Conservatives, according to Sir David Eccles, now find irksome and would like removed. This direct assistance to companies is not, however, the only or even the main inducement that the Government offers industry to move to where unemployment is high. Since the war the Board of Trade, under Labour as well as Conservative governments, has built factories costing some £70 million (up to 1957) to be let to companies at low rents. It obtained geographically wider powers to do this in last year's Act. Whether it has in fact built more remains to be seen; both parties would probably argue that during a period of relatively higher general unemployment it should have done.

Assistance to the aircraft industry to expand its markets, again, would be offered to an industry which if not nationalised can hardly be classed as fully private enterprise. Throughout most of its history the Government has been the main customer and support of the aircraft industry, because its main business has been defence; state corporations are its biggest single customers for civil aircraft; and Coalition, Labour and Conservative governments have accepted financial responsibility, until very recently, for the development of most of its civil aircraft as well as of the weapons it makes. The aircraft industry makes no attempt to conceal its anxiety that public money, rather than its own, should continue to be risked on the development of its more advanced civil projects.

Aircraft, moreover, brings us to the centre of the sphere in which Government money plays the most significant and perhaps the most strategic role in industrial affairs: research. The Government, according to the only fairly comprehensive accounting of research and development expenditure ever carried out in this country, was in 1955-56 paying about £120 million a year for roughly 60 per cent of all the research and development work done inside private industry in Britain, as well as about £100 million for all the research done elsewhere. In all, it was financing some 70 per cent of Britain's research, and about the same proportion of scientists in research were employed on its affairs. There is nothing surprising about this: defence makes perhaps the most exacting demands of all upon industrial technique, almost without regard to cost, and it is perhaps "natural" that it should engender the most research and development (half of all that done in British industry, in 1955-56, was in aircraft). But it remains the point at which public money exerts perhaps its strongest influence upon private industry; for it did not so much pre-empt existing research resources within industry as bring the resources into being, and a great deal of "by-product know-how" flowed into industrial technique from this defence work.

Defence demand upon those research resources is in principle now being reduced; certainly it is altering in pattern, leaving some of the resources that it created free (or idle). It is no secret that there has been anxiety within the Government, and in the Conservative party, whether private enterprise will be anxious to make full use of all these resources if it has to pay for them (and to make them pay). The Conservatives' Minister of Science, as so far outlined, would merely collect together some existing powers over Government research; for the future, his writ might run wider.

THESE are the main spheres of private industry (if one deliberately excludes agriculture and counts cotton as a single *ad hoc* arrangement) in which a new Conservative government would be committed to exert more selective financial influence. Most people, of any party or none, would approve of some of the ends it seeks. Politically, there is not the least likelihood that Labour would do less in any of these directions, as well as in its own less industrially palatable ones; nor are the Liberals, in all these matters, particularly liberal. One can distinguish various social motives at work in this general political readiness to accede to special pleas or to exert special pressures in the name of the national interest or security. Britain's prestige in the world may be the main reason for financing new Cunarders (as it is for financing exports of cheap pocket books and the production, among others, of horror films). Genuine anxiety to ease the loss of the less lucky in this richening society, and to maintain community values that cannot be measured as readily as the individual advantages of factory location, underlie distribution of industry policy. Fears which few people can quite banish (*pace* Professor Jewkes) about whether Britain is taking enough advantage of the technical progress that organised research may help to bring about, mingled again, with feelings about prestige, partly cause the accent on science. But this last is also a reaction to a real dilemma. Nobody, in government or in business, yet knows how to reckon the return on research and development, which has been defined as "investment in the creation of opportunities for further investment." Government may be as able to judge as industry, or at least no less so, how much science an economy can afford and may find worth while.

Britain's is a mixed economy, getting more so every day; if the facts do not suit what the doctrinaires profess, that is no reason for other people to lose their realism. If these widening areas of mixture involve distortions and waste in the British economy, some would argue that it is affluent enough to afford a few more fringes of economic inefficiency. But that is not the prescription upon which we are being offered the mixture. Upon the Conservatives' plans for private industry—as how much more upon their opponents'—one might quote some words of the wisest of students of British industries and their organisation: "But the execution of a policy of this sort calls for great wisdom on the part of politicians and officials, whose decisions, it has to be recognised, are liable to be determined by considerations other than those of economic efficiency."

The Jasper Affair

RUMOUR always speaks with malicious tongues. What makes the Jasper affair different is that each statement of fact has substantiated the rumours. What began as talk of a hitch in the arrangements for completing the bid for Ely Brewery has grown to the proportions of a sizeable scandal. The Stock Exchange Council has taken the drastic step of suspending dealings in the shares of sixteen companies associated with H. Jasper and Company. It is now certain (again confirming an earlier rumour) that the State Building Society is heavily implicated in the affair. The Registrar of Building Societies has ordered the society to stop advertising for subscriptions and has advised the directors to limit withdrawals by shareholders to a nominal shilling a month. To catch the City bending gives the Opposition an opportunity to ply the birch more vigorously on its favourite whipping boy.

But whatever political capital lies in this affair, the débris cannot be swept under the carpet. A firm of accountants, Messrs W. H. Cork Gully and Company, has been asked by Mr Jasper to investigate the affairs of the Jasper group of companies. It may be that this investigation will not be the only one. The Registrar of Building Societies is inspecting the books, accounts and documents of the State Building Society. It may well be that his conclusions will point towards the radical reform of building society practice and law that many people independent of this movement have long thought desirable. The story is still unfolding and it sounds no better with each instalment.

The Jasper group of companies is analysed in detail in a separate section of this article. It is a creation of less than three years. Acting as a kind of merchant bank, H. Jasper and Company has made a series of bids in cash for a number of public companies. Out of this an empire concerned largely but not exclusively with residential property has been created. On paper it looks impressive; in fact it threatens to be a pyramid with a weak base. The ramifications and cross-shareholdings of these companies and the extent to which the properties they own have been pledged have yet to be established. But the story is of rapid acquisition of properties soon after the companies were bought by the Jasper group. From 1958, at any rate, these acquisitions of freehold and leasehold properties were financed in considerable part from mortgages granted by the State Building Society. And more often than not these mortgages were given to accommodation companies with nominal issued capitals; there are several hundred of such companies, of which Snowfleck (see page 1043) is an example. All the evidence shows that this great number of "toy" companies has been created solely to raise money from the State Building Society in such a way that it would not be necessary to disclose the facts to the shareholders and depositors.

The practice in bids by the Jasper group has been to leave enough shares in the hands of minority shareholders to maintain a market and a stock exchange quotation. With the market practically, though not completely, swept clear, these shares were capable of galloping ahead after the bids had been made unconditional. The winning bids by the Jasper group came sometimes after a lengthy tussle with other bidders; the price often looked high, even given the fever of the property share market; sometimes it was an overbid. The Temperance Billiard Halls case is instructive. Having had the properties of that company expertly and carefully valued, Peachey Property were prepared to offer 48s. a share. Then in competition with Alliance Property, H. Jasper and Company finally secured control at 60s. a share. At this sort of price some shrewd judges were not prepared to compete. Where did the money to complete this bid and the others come from? Was it from the private fortunes of Mr. Grunwald and Mr Jasper? There has been talk of the vaguest kind about Continental backing. The only clear fact is that the

DIARY OF EVENTS

SEPTEMBER 16

Rumours of a hitch in the completion of the Lintang and Ely Brewery deals; falls in shares associated with H. Jasper and Co.

SEPTEMBER 17

Mr H. Jasper admits problem about payment to shareholders who had accepted the bid made to Ely Brewery by H. Jasper and Co.; all shares in the Jasper group marked down sharply.

SEPTEMBER 18

Statement from Mr Jasper refers to "certain difficulties which have arisen due to the absence of the managing director of the companies in funding the purchase of shares in the Ely Brewery Company."

SEPTEMBER 20

Mr Jasper states:

(a) The offers for Lintang Investments and Ely Brewery were not made on behalf of the Jasper Group of companies but by H. Jasper and Co. (a private firm of merchant bankers) "on behalf of a private client, Mr F. Grunwald."

(b) Mr Grunwald had made funds available for the completion of the purchase of Lintang Investments (approximately £7 million) except for just under £250,000.

(c) "No moneys were forthcoming from Mr Grunwald" to complete the Ely Brewery purchase; negotiations still in progress "to endeavour to implement the completion of this purchase."

SEPTEMBER 21

The Stock Exchange Council suspend dealings in the securities of the Jasper group of fifteen companies, "pending clarification of the position of each company."

After a board meeting of Ely Brewery, Mr Jasper announces that Mr Grunwald had been removed from his position of managing director.

The State Building Society says that the board are consulting their legal advisers and that a statement would be issued on September 22nd.

SEPTEMBER 22

Messrs. W. H. Cork Gully and Co., accountants, appointed by Mr Jasper to report on the affairs of the companies of which he is chairman or director.

The State Building Society's directors disclose that of sums lent to the Jasper group and secured by first mortgages on freehold and leasehold properties £3,900,000 is outstanding. Capital and interest payments on certain of these mortgages is over two months in arrears. Sums amounting to £3,250,000 had been forwarded to Messrs. Harewood and Co. on July 28th pending completion of various mortgages to be secured on properties of various subsidiaries of Lintang Investments, but it did not appear to the State Building Society's board that this money had been used for that purpose.

The Registrar of Building Societies issues a "stop order" on the State Building Society and the board accepts his advice to restrict withdrawals by shareholders to the nominal sum of 1s. per share per month; this limitation not to apply to depositors.

The Jasper Group

Mr H. O. Jasper and Mr F. Grunwald were or are on the boards of all the companies mentioned below; Messrs W. Brueckmann, J. Waller, E. A. Rhodes and P. Rose were or are directors of many of them, with the latter usually acting as secretary. Many of these companies have acquired freehold and leasehold properties, mainly flats and houses, and sell them to sitting tenants. Acquisitions financed largely by mortgages to numerous subsidiary companies to which the properties have been transferred.

C.O.P. INVESTMENTS

Capital: £249,675 in 2s. ordinary

A bid by H. Jasper and Co. of 5s. per share in Cotton Plantations Ltd. made in December, 1956. The company owned land in Swaziland which was sold. Properties acquired in London and southern England of approximately £250,000. October, 1958, name of the company changed and 10s. shares divided into 2s. shares.

CAPITAL AND PROVINCIAL NEWS THEATRES

Capital: £234,000 in 5s. ordinary

An 85 per cent interest acquired in March, 1957, on basis of 6s. per share. Owns news theatres at Victoria and Waterloo stations and various cinemas including the Classic circuit in London and the South. Flats and houses to the value of over £500,000 acquired in 1957/58; most of the cinemas and properties were transferred to subsidiaries to facilitate the raising of mortgages.

NATIONAL MODEL DWELLINGS

Capital: £6,000 in 4½ per cent £1 cum. pref.
£89,155 in 2s. ordinary

After take over in April, 1957, the whole of the company's estate (Queens Buildings, Southwark) was transferred to 12 subsidiary companies and numerous other properties acquired. Altogether 22 subsidiaries control properties which are almost all residential.

S. GIBSON AND SONS

Capital: £20,000 in 7 per cent £1 cum. pref.
£150,000 in 2s. 6d. ordinary

In October, 1957, H. Jasper and Co. obtained an 80 per cent holding at 7s. 6d. per share. The company are tanners and leather manufacturers, but a number of property subsidiaries were formed, financed by mortgages; land and buildings have also been sold and leased back. Final dividend of 20 per cent (making 50 per cent for the year) is payable on September 30th.

VICTORY REAL ESTATE

Capital: £188,574 in 1s. ordinary

A bid of 3s. per share was made in September, 1957, equivalent to 2s. on the present capital.

The accounts to September 30, 1958, published last month, show properties at book values of almost £1 million and mortgages of £900,000. Quoted investments at that date in associated companies exceeded £300,000.

TEMPERANCE BILLIARD HALLS

Capital: £225,000 in 2s. ordinary

In a counter-bid to offers by Peachey Property and Alliance Property a controlling interest was acquired in December, 1958, at 6os. per share equivalent to 6s. after share split. After the take over Mr Jasper said that the board intended to extend business in the billiard halls. In July two blocks of 150 luxury flats were bought in Brixton at a price understood to be around £250,000.

BIGNELLS

Capital: £75,000 in 6 per cent. 10s. cum. pref.
£103,750 in 2s. ordinary

An offer of 3s. per share was made by H. Jasper and Co. in November, 1958, for the shares in this company of boot and shoe distributors and manufacturers. Company has poor trading record; before take over paid out only one dividend (of 2½ per cent) in the previous four years. Interim of 5 per cent has been paid in the current year.

BLINDELLS

Capital: £200,000 in 5 per cent Unsecured Notes
£200,000 in 5½ per cent £1 cum. pref.
£243,500 in £1 ordinary

Manufacturers and distributors of footwear; sold almost all factories in 1958 and ceased manufacturing. In January of this year H. Jasper and Co. contracted to acquire the ordinary capital of the company, privately held.

PALMERSTON INVESTMENT

Capital: £136,009 6s. 8d. in 13s. 4d. ordinary

Bid of 25s. per share by H. Jasper and Co. in March countered by one of 26s. by Lintang Investments, whose offer subsequently became unconditional. In May, however, a controlling interest in Palmerston acquired by H. Jasper and Co. by private treaty. In June flats in St. John's Wood and Herne Hill purchased for around £500,000.

RUBENS-REMBRANDT ASSOCIATED HOTELS

Capital: £180,000 in 8s. ordinary

After months of negotiations a bid of 22s. 6d. for the 8s. ordinary units and at par for the £250,000 of bonds and debentures made on behalf of H. Jasper and Co. and declared unconditional in June.

HONYWOOD HOTELS

Capital: £125,000 in 5s. ordinary

In June the directors recommended acceptance of a bid of 20s. per share from H. Jasper and Co. During 1958 a substantial part of the company's funds was invested in ordinary shares of Hotel York Ltd. which has operated the Berners Hotel for many years and in June, 1958, acquired the Welbeck Palace Hotel. Honywood holds a 50 per cent interest in Hotel York, the remaining 50 per cent being held by Great Universal Stores. In 1958, freehold and leasehold properties acquired by subsidiary companies amounted to over £400,000.

RELIABLE PROPERTIES

Capital: £600,000 in 5s. ordinary

Formerly Anglo French Phosphate Company in which Unilever had a 55.9 per cent holding. In August, 1958, Robert Benson and Lonsdale secured control of the company by offering 15s. 3d. per share and in the following April the shares were sold to H. Jasper and Co. at 18s. 9d. Following this the name of the company was changed, an 11 for 5 scrip issue was made and a fresh Stock Exchange quotation was sought. In July 480,000 shares were offered to the public at 7s. 6d. per share. The company owns over 500 flats in the London area.

R. E. JONES

Capital: £772,994 in 10s. ordinary

Contanglo Banking made a first offer of 27s. 6d. per share in June and this was soon followed by other bids from Mr Maxwell Joseph and H. Jasper and Co. with, finally, Tildit Investments, a subsidiary of Lintang Investments, making the highest offer of 38s. 6d. per share. Before this offer became unconditional, a controlling interest in Lintang had been purchased by H. Jasper and Co. which thus took over R. E. Jones. Owns hotels mainly in Wales and also the Piccadilly Hotel in London.

LINTANG INVESTMENTS

Capital: £1,575,000 in 5s. ordinary

Formerly Bukit Lintang Rubber Estates. The estates were sold and the proceeds used to buy properties. In May, 1958, the company changed its name and in October purchased for £500,001 Hyde Park North Estate, comprising 680 properties in area between Lancaster Gate and Paddington Station. The deeds of this estate were deposited with the company's bankers as security for advances totalling nearly £350,000 at the end of February, when the property was valued at £1,200,000.

In March Dolphin Square (comprising 1,200 flats) was acquired from Mr Maxwell Joseph for 3,500,000 shares in Lintang. The £1,000,000 3¾ per cent first mortgage debenture issued by Dolphin Square is secured by a first charge on the property, valued in the prospectus at £3,100,000.

The placing of 1,575,000 shares received a good deal of publicity in March; when dealings began they shot up from 16s. to 22s., almost double the price of 11s. 9d. at which they had been placed privately.

In July it was announced that H. Jasper and Co. had bought a 51 per cent holding in Lintang from the directors and would offer 24s. per share to other shareholders conditional upon an 80 per cent acceptance.

ELY BREWERY

Capital: £431,852 in 4 per cent first Debenture
£524,271 in 5 per cent 10s. cum. pref.
£346,501 in 7 per cent 5s. cum. second pref.
£1,236,500 in 3s. 6d. ordinary (including partly paid shares resulting from rights issue)

On August 6th H. Jasper and Co. offered to pay 5s. for each 3s. 6d. stock unit and 2s. for each partly paid share. The offer was recommended by the chairman, Mr. L. Nidditch, who with his family held about 16 per cent of the capital. The offer was conditional upon an 80 per cent acceptance but on August 18th it was announced that acceptances totalled about 70 per cent and that the time would not be extended. Besides owning about 250 public houses, Ely Brewery has a 34 per cent interest in Cardiff Malting Company. The bid has now been withdrawn.

State Building Society was lending money on mortgage to the Jasper group last year. It is impossible from this society's balance sheet on December 31st last to discover how much. Its Part IV schedule, which sets out particulars in respect of any *one* borrower where there is *more than one* mortgage *and* the total debt exceeds £25,000, contained only four entries on which total advances came to £131,000. By a lavish use of accommodation companies, borrowing less than £25,000 and mortgaging for less than £5,000 in every case, the reality of these deals has been completely obscured.

It seems that the State Building Society stepped up its loans to the Jasper group of companies to a very high rate at the very moment when the group was making its biggest bids. In the four weeks ended August 7th, the State Building Society completed loans of over £700,000 to 54 palpable accommodation companies, with such synthetic names as Pansel and Snowfleck. These had been all registered by Harewood and Company, the firm of solicitors which has on occasions acted both for the State Building Society and also for the Jasper group, and of which Mr F. Grunwald is a partner. He is also managing director of many of the companies and their accommodation companies that form the Jasper group. His position in this affair, and as revealed by the statements of Mr H. Jasper, is equivocal.

But these loans make up only a small sample of the money that the State Building Society has lent, as its directors reveal:

> Over a period considerable sums have been lent and are secured on first mortgages on freehold and leasehold properties owned by companies in the group associated with H. Jasper and Company and of the amounts loaned approximately £3.9 million is outstanding. Instalments of capital and interest payable in respect of certain of these mortgages are over two months in arrears.

This is not enough. What is this period? What has been the role of the society in the Jasper transactions? Who decided to make these loans and were they at arm's length? What are the arrears?

To what purpose was this money put? On July 9th H. Jasper and Company acquired a 51 per cent of the equity of Lintang Investments by a private deal with Mr Maxwell Joseph and his associates, at a price still not made explicit. On July 21st the solicitors, Harewood and Company, acting "on behalf of H. Jasper and Company," made an offer of 24s. per 5s. ordinary share to other shareholders in Lintang, open until August 4th and conditional upon a 80 per cent acceptance, or such later date or such smaller percentage as H. Jasper and Company might agree. In fact the bid was declared unconditional upon July 31st.

But three days earlier, on July 28th, as the statement by the directors of the State Building Society reveals:

> Sums totalling approximately £3,250,000 were forwarded by the society to its solicitors, Messrs Harewood and Company, pending completion in the normal course of business of various mortgages to be secured on properties owned by subsidiary companies of Lintang Investments to whom the society had agreed in principle and subject to certain conditions to lend these sums. The money does not, however, appear to have been applied for this purpose.

Who, then, got this money and to what purpose was it applied? Was it used in an attempt to complete the Lintang purchase? Mr Jasper has stated that the sum required to complete the Lintang purchase in the offer made by H. Jasper and Company (which he describes as being "on behalf of a client, Mr F. Grunwald, in his personal capacity") was about £7 million. It may be noted that 80 per cent of the ordinary capital of Lintang if valued at 24s. a share would involve about £6 million. His statement went on:

> Mr Grunwald has made available the funds for the completion of this matter with the exception of an amount of just less than £250,000.

FAILURE to complete the Lintang bid is the central point of this affair. This is where the arch began to crumble. Yet it was not the last of the bids. On August 6th, an offer was made for the ordinary shares of Ely Brewery and it was declared unconditional on August 18th. The offer, Mr Jasper has again said, was made by H. Jasper and Company on behalf

THE STATE BUILDING SOCIETY

The Society was incorporated in 1931 and its directors are:

	End 1957	ASSETS	End 1958
	£	Mortgages	£
Noel Cow (Chairman)	659,491	Under £500	1,018,008
Herbert Hugh Murray (Managing director and secretary)	1,045,289	£500—£1000	1,887,408
	3,278,705	£1,000—£3,000	4,308,616
Arthur Wyatt	422,581	£3,000—£5,000	527,261

The growth in total assets has been rapid:

1945	£221,213
1952	£560,176
1953	£1,077,494
1954	£1,928,246
1955	£3,156,663
1956	£4,548,587
1957	£6,375,634
1958	£10,445,663

SNOWFLECK INVESTMENT COMPANY

This company is one of many subsidiaries linking the finance provided by the State Building Society to the Jasper group. The file at Bush House shows that it was registered on March 3rd this year with a capital of £100 in £1 shares. These were allotted on June 12, 1959, to Mrs C. Jacobs (99 shares) and Mrs R. Duffy (1 share).

New directors were appointed on June 24th:

Friedrich Grunwald
Wolf Brueckmann
Harry Oscar Jasper
Joseph Waller
Edward Emanuel Sander

The file of Snowfleck shows that Messrs. Grunwald and Brueckmann are directors of over 400 companies and Mr Jasper is a director of over 600 companies.

On June 24, 1959, a mortgage of £20,000 was registered charged on properties in Green Lanes, Alexander Grove, Gloucester Drive, Seven Sisters Road and various other parts of North London.

This mortgage is registered in favour of the State Building Society.

of Mr Grunwald in his personal capacity. Mr Jasper's statement continued:

> No moneys were forthcoming from Mr. Grunwald to enable this matter to be completed.

The question of who controls Ely Brewery for which the bid has now been withdrawn is doubtless intriguing, but it must give way to more important questions about Lintang. First, what security has the State Building Society upon the £3¼ million it says it forwarded to Harewood and Company? That sum is over and above the £3.9 million already lent on mortgage. The State Building Society, whose total assets amounted to £10.4 million at the end of last year, has thus lent over £7 million to a single group of companies. Secondly, did the directors of Lintang and Ely Brewery seek from H. Jasper and Company or from Mr Grunwald a banker's guarantee, as is the responsible practice in any take-over, that the money was available to complete the purchase? If a guarantee was given, was it later withdrawn? If Mr Joseph and his associates were at all remiss in this respect, then Mr Joseph's promise to purchase any Lintang shares which assented to but which were not covered by the bid was the least he could do.

Mr Grunwald, it is reported, is in Israel. Mr Jasper is in London. In all the statements he has made so far he has carefully disassociated himself (and H. Jasper and Company, except in so far as it was acting as an agent) from Mr Grunwald. Yet Mr Jasper and Mr Grunwald appear to have worked closely together for a number of years with Mr Grunwald often as managing director of the companies of which Mr Jasper is the chairman. Mr Jasper's account of the affair is that Mr Grunwald acting in the capacity as a solicitor in the firm of Harewood and Company made the Lintang and Ely bids on behalf of H. Jasper and Company, which in turn as merchant bankers were acting on behalf of Mr Grunwald as a private client. This is just conceivable, but it would be remarkably convoluted for the diverse interests of principals and agents to get as mixed up as this. And gyrations do not even end there, for Harewood and Company were also acting as solicitors for the State Building Society in respect of the loans that the society was making on the security of properties owned by Lintang.

IN due time all will doubtless be made clear. But even before the questions are answered, so serious an aspect has this affair already assumed that the City and the investing public must consider some of its possible repercussions. This affair ought to make investors wary of all property shares except the best. Speculators and stags have had a fine time in that market and they can be thankful that so far the suspension of dealings in the Jasper group of companies has not led to big falls in other property shares. But now the property prospectus where assets are valued at the full price at which they have recently been purchased and the bait is a vague promise of further property developments surely will not continue to attract investors. Investors must distinguish between these "toppy" shares and the shares of the office property developers (where the sites and the quality of management have to be judged with the utmost care) and the shares of established companies which administer large blocks of residential property. The property share market has received a slap that ought to cure its hysterical fit.

The Jasper affair, however, does not come to the point of crisis solely because of property speculation but also because the technique of take-over bidding has here been stretched to the limit—and beyond. Arguments justifying take-over bids have been arrayed many times in these columns and they stand quite as firm as ever. But there is, in finance as in poetry, a distinction to be plainly drawn between use and abuse: this affair must drive home to directors who agree to recommend a bid their responsibilities and duties to their shareholders. If money is offered, it must be there. If shares are offered, they must be of sound, worthwhile paper. From now on, directors and shareholders alike will be mad if they do not scrutinise with the utmost diligence the quality of those making bids.

LAST, and perhaps most important, the transactions in the Jasper business have pointed to the close tie that can exist between certain kinds of building societies and property companies. How close these ties were between the Jasper group, Harewood and Company and the State Building Society has yet to be revealed. The hard fact is that while depositors in that society can still withdraw their money, the shareholders can for the time being get only 1s. each month. That is bound to shake the confidence of investors across the whole building society field and particularly for societies that have concerned themselves not so much with house purchase as with property speculation. There are a number of these and they are well known. Warnings about them have come from the Building Societies Association (of which they are not and never would be members) and from the Registrar of Friendly Societies. These warnings have been ignored by these investors who have fallen for promises of an "over the odds" return on their money. "Building society" implies to many investors a gilt-edged security and some of them do not discriminate between those societies (which make up the great bulk of the movement) where the security is strong and those where it is not. It must be hoped that the good ones will not suffer from this affair. But they ought to lose their inhibitions over a reform of building society law. Why "building society" any more? Why not "house purchase society" with strict limits on investments for any other purpose? Why should the protection of the Friendly Societies Acts be extended any longer to dubious enterprises that dare not expose themselves to the rigours of the Companies Act and the Sharepushing Act? The building society movement must realise its peril and reform its own house.

The final lesson of this imbroglio is that it is just too easy to get money from the gullible. They put their money into the Mias group; the directors of that group now stand arraigned on charges of fraud. They were attracted by offers of high rates and put their money into the shares of the State Building Society; they now have been confronted with admissions of dubious management and their savings are now effectively out of their reach. They have unthinkingly stagged property issues giving no indication whatsoever of future income and dividends. Serious investors must look to their own interests. But they are entitled to demand that the Jasper affair must lead to tighter regulations on prospectuses and on the designations and activities of institutions that borrow from the public.

Back view of big business man coming back with big business

Sensible fellow. He had travelled *out* to the Cape the hard way: now he's coming *back*: Union-Castle! Re-charging his batteries, making up for lost time. Sunshine and smooth seas, four swims on deck a day most days, cinema shows and dances most evenings and meals that remind him (but pleasantly) of City banquets. His office radio-telephoned him yesterday from London, and he took the call dressed in a towel, slippers and sun-glasses. He was pretty short with them for interrupting his conference at the swimming pool.

BUSINESS NOTES

COMMONWEALTH MEETING

Financing India

No major decisions appear to have been reached at this week's meeting of Commonwealth finance ministers in London on the eve of the world financial conferences that take place in Washington next week. The Commonwealth discussions revealed a generally bright picture of the sterling area's external payments at present.

Discussions on the International Development Association that will be proposed at Washington next week produced much criticism about certain details, notably the provisions for use of "counterpart funds." Last year's proposal for a new Commonwealth Bank is, happily, being kept in cold storage. The other main issues discussed in London were familiar ones. Britain informed overseas ministers of the progress of the negotiations on free trade in Europe; Canada urged Britain to end dollar discrimination in trade; and India stressed its coming need for further external aid on a grand scale. Financing India is likely to dominate Commonwealth finance and world finance still more in the 'sixties than it has done in the past few years—though because India has now spent all its surplus sterling balances, Britain itself may now have somewhat more choice in the matter.

Mr Morarji Desai, the Indian Finance Minister, broke his journey to London for talks with Swiss bankers on the possibility of a long-term export credit. The proposal is that a syndicated credit shall be opened by a group of Swiss banks, covered by partial guarantee from the Federal Government. Some differences of view remain on the size and the term of the credit. The Swiss bankers envisage 9 or 10 years; the Indians have asked for 12 years. It seems that the credit has been agreed in principle; India's negotiators may regard this as no mean achievement. Through its representative, Mr B. K. Nehru, India has also recently signed an agreement with Russia for a loan of 1,500 million roubles (£135 million at the official rate of exchange) to finance the export of capital goods to India during the third five-year plan—including among other items plant and equipment for an oil refinery in Bihar.

In the London talks there have been no further detailed discussions on borrowing operations for India. Plans for meeting India's requirements up to March, 1961, have been completed and now await implementation. When the Governors of the World Bank meet in Washington next week, and in particular when more detailed consideration is given to the establishment of an International Development Association, more is likely to be heard of India's capital requirements in the third five-year plan period beginning on April 1, 1961.

India has decided on a "bold" approach to the plan, with a prospective investment expenditure equivalent to £7,550 million, of which £4,900 million will be in the public sector. Of the total capital needs it has been conservatively estimated that about half will have to be met in foreign currency; allowing for normal earnings, this may involve a shortfall of some £1,500 million—a figure much the same as the shortfall in the second five-year plan. But almost one-third of that was covered by the drawing down of sterling balances; in the coming period, India starts with a bare minimum of sterling and faces an accelerating burden of repayment of debt. Making no allowance for that, the annual requirements of external aid over the five years will be ambitious.

THE ECONOMY

Manufacturers Still Cautious

In spite of this year's rapid recovery from recession, manufacturing businessmen still apparently expect that their fixed capital expenditure this year will turn out to have been 10 per cent lower than in 1958; moreover, they now tell the Board of Trade that they expect a further dip of 5 per cent next year. With the change in the economic climate, there has been a tendency among analysts to assume that the forecasts of the 10 per cent drop, which were made about a year ago, would turn out to have been too pessimistic; engineering orders, for example, have been improving in the capital goods industries. However, estimates of actual spending on fixed investment in manufacturing this year have suggested that it was down 12 per cent in the first quarter of 1959 and 10 per cent in the second quarter. One precondition of recovery, after all, was sufficient slack in manufacturing capacity to enable a rapid increase in output; the slack plainly existed, and it is perhaps only in cars and consumer goods that industry is now back to full capacity. Another surge of manufacturing investment comparable to that of 1954-58 will take time to generate.
