Forecasts of expenditure on fixed investment in other industries and services, however, now look to have been insufficiently optimistic; the increase of 7½ per cent between 1958 and 1959 expected in these industries at the beginning of the year now seems likely to be more like 16 per cent, because new building seems likely to have risen by as much as a fifth. The Board of Trade has now, for the first time, begun asking its sample of informants in these service trades how much fixed investment they expect to do next year. Its first answers are incomplete and none too easy to interpret: for what they are worth, they suggest that there may be a levelling off or possibly a slight decline in this kind of investment in 1960, in place of the sizeable increases of the last two years.

The Balance of Investment

Against these businessmen's pessimism, however, one has to set the evidence of the building contractors, who are about as busy as they have ever been on private construction for business, other than factory building, and whose orders for this kind of work in the first half of the year looked healthy enough. Building and works make up a larger proportion of fixed investment by these service trades than they do of manufacturing investment, but orders for industrial building, too, have begun to rise. Another major slice of private investment—new housing—has been rising rapidly since it dropped off late in 1957: in the first half of this year about 45 per cent more private houses were begun than in the same months of 1958.

These increases in private business investment outside manufacturing were mainly what continued to bolster up the rate of private investment as the manufacturing investment boom began to subside during the last two years. To some extent, no doubt, the latter represented arrears of rebuilding in commerce and trade that had been delayed throughout the post-war decade; and though continued change in the pattern of retailing seems likely to prolong the period of heavy investment in new stores and supermarkets, one might fairly soon expect some slackening in the construction of, for example, new London office blocks and petrol stations throughout the country.

One cannot expect cycles of investment in manufacturing and in commerce always to succeed each other as neatly as these seem to have done, without ever going in the same direction at the same time. Public investment, however, can deliberately be used as a contra-cyclical influence in the

economy, despite the inconvenience to some of the individual industries and services in the public sector ; and this year the Government is committed so to use it. The process is not necessarily quick ; in the first quarter of the year public investment had hardly regained the level of early 1958, though there has been a sharp increase in the number of council houses started. Other elements of public investment are no doubt now beginning to build up.

IN THE MARKETS

Reasons for Restraint

PRE-ELECTION exuberance is no longer in evidence on the London Stock Exchange. Investors are still plainly reckoning on a Tory win, but they are not inclined to anticipate it any further. A narrowing in the Tory lead showed by one public opinion poll early this week had its impact, especially on steel shares ; and investors no longer feel able to ignore the weakness of Wall Street. These are likely to remain the two main influences in coming weeks, though the Jasper affair could assume growing importance. So far, its influence has been general rather than concentrated on other property shares.

On Wall Street, the Dow Jones average dipped on Tuesday to 616, nearly 60 points below its peak in early August. Certainly, New York looks more vulnerable than London, the political factor apart. The rise in ordinary shares in London has not carried them extravagantly beyond earlier peaks ; dividend yields have not been pushed unduly low, and London does not at present have to contend with America's peculiar difficulties of government financing. These grounds for confidence are reflected in the fact that equity prices are still well above their level on the eve of the election announcement. But investors are wise to recognise that London cannot remain unaffected by trends across the Atlantic.

Sterling continues to display a remarkable performance in this election September. This week the rate against the US dollar touched $2.80½ ; in the forward market, the

premium on sterling against dollars continues to reflect and roughly offset the interest differential in favour of New York. This week the rate on US Treasury bills fell back a little, to a shade under 4 per cent for three months' maturities.

BANK ADVANCES

A Year's Leap

THE pace and pattern of the rise in bank advances continues pretty much unchanged. The latest classified analysis, for the three months to mid-August, shows a rise of £180 million for all banks in the quarter, bringing the rise in the twelve months since the lifting of the credit squeeze to £767 million, or 36½ per cent. Statements of the individual clearing banks for mid-September show an aggregate further increase, in gross advances, of £42 million.

BRITISH BANKERS' ASSOCIATION

Advances to :	At mid-August, 1959 £ mn.	Increase since May, 1959 £ mn.	Increase since August, 1958 £ mn.	Increase since August, 1958 %
Personal and professional..	543·6	+ 56·2	+207·8	61·9
HP Finance Cos.	100·5	+ 17·7	+ 73·1	266·8
Retail trade....	268·6	+ 13·5	+ 93·1	53·0
Agriculture....	301·7	+ 22·6	+ 71·9	31·3
Indus. borrowers	1,150·2	+ 30·5	+214·8	22·9
Other borrowers	494·7	+ 39·0	+106·5	27·4
Total.....	2,859·3	+179·6	+767·3	36·7

About half of the rise in advances, both in the last year and in the last three months, has gone to three categories of borrowers who previously suffered special restriction. The personal and professional group increased its advances by a further £56 million in the three months, making a rise of £208 million to £544 million on the year. The hire purchase finance houses took another £18 million, carrying their total above £100 million—nearly four times the figure a year ago. And retail trade, against the seasonal trend, borrowed another £14 million, bringing its rise on the year to £93 million ; a good part of this too has been used to finance hire purchase.

Agricultural borrowers took another £23 million in the quarter (a rise of £72 million over the year) and the "other financial group," which includes big City institutions, a further £27 million (£66 million over the year). Among industrial and commercial borrowers, the big engineering group was up another £19 million in the quarter, and there was a substantial repayment, of £25 million, from food, drink and tobacco.

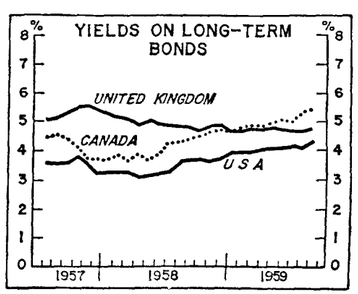
MOTORS

Holidays Cut Output

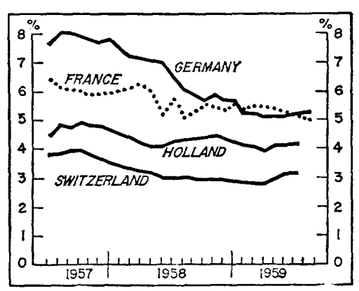
PRODUCTION of passenger cars was affected in August, as it had been in July, by annual holidays and strikes. A total of 66,181 cars was produced, compared with 65,704 in July and 44,612 in August 1958. In addition, several new models were introduced, and it is probable that production of some of these had not reached scheduled levels during the month. Exports of cars totalled 38,147, against 53,561 in July and 34,921 a year earlier ; though exports normally decline in both July and August, the total for the two months this year was about eight per cent higher than in the same period a year earlier. Holidays are now over, and the industry is momentarily free of labour troubles: it is reported that demand for most models is still high and that production is near capacity. There are still waiting lists for some models, and though the prices of used cars have fallen since the beginning of this month, the scarcity of new cars has kept them higher than is usual at this time of year.

Output of commercial vehicles was similarly affected in August: a total of 24,296 goods vehicles, buses and coaches were produced, compared with 22,038 in July and 11,863 in August 1958. Commercial vehicle production and demand are still rising, though less rapidly than is the case for cars ; in the last three months a total of 85,957 commercial vehicles have been produced, against 65,260 in the same period a year earlier.

WORLD INTEREST RATES



The rise in interest rates in the United States and Canada has been less marked in long-dated securities than in bills and short bonds, which now yield significantly more than in Europe. A leading New York firm of brokers this week draws attention to the remarkable bargains in certain sections of the bond market : a 1961 maturity, for example, yields 5 per cent before tax and the equivalent of 6½ per cent to an investor paying Federal tax at 52 per cent. Even in the longer maturities yields in New York are now not far below those in London, and if Congress lifted the interest ceiling of 4¼ per cent and allowed a resumption of long-dated issues, rates would almost certainly rise further. So far this trend has had only a small effect in Europe ; and interest rates in the world's major centres are bunched closely together around 5 per cent.



WE'RE USING WOMEN'S WEEKLIES THIS YEAR, BUT FIRST ON OUR LIST IS THE

RADIO TIMES

Whatever other media we decide to use we always head our list of publications with the RADIO TIMES.

Our product is for the housewife. By advertising in 23 women's weekly publications we can reach, without duplication, approximately 68% of them.

But the Radio Times alone covers 55% of all housewives in the country— a far greater proportion than any other single publication.

Obviously the Radio Times must come first on our list. With Radio Times and even only two women's magazines, we reach 74% of the country's housewives.

Figures based on a special tabulation carried out by the I.P.A. fieldwork period—January-December, 1958.

YES—IT PAYS TO PUT THE

RADIO TIMES FIRST ON THE LIST

CANADA

Defending Dear Money

MR DONALD FLEMING, the Canadian Minister of Finance, deemed it his main duty during this week's visit to London to deny the suggestion that his country's finances are in any way disordered or muddled. He reassured his hearers, both in and out of the conference room, with a success story of Canadian recovery. Gross national product has risen by more than 8 per cent over the past year ; employment is at a record level ; so are wage payments and savings ; the price index has kept within a 1 per cent range of fluctuations and there is no evidence of inflation in the economy. The surge of recovery has been accompanied by an increase in the demand for bank loans, which have risen by about $1,000 million over the year. The Bank of Canada, which is independent, has not been prepared to allow an increase in the total supply of credit ; as a result, the increase in bank loans has had to be financed by reductions of the banks' portfolios of securities.

The Treasury bill rate has risen to 6 per cent, despite a temporary dramatic resistance from the Treasury at one tender when it rejected bids it considered too expensive. The Treasury now seems to have reconciled itself to dear money. Last week it met great success with an issue of one, two and three year bonds with a gross yield of up to 6.6 per cent ; investors are also given an option of conversion before maturity into 16-year bonds at a yield of over 5½ per cent.

Since there is no inflation and since the Canadian dollar is at a premium of more than 5 per cent over the US dollar it is difficult to see the logic of dear money at present. Canadian officials disagree. They point out that the current balance of payments is still running at a deficit, that the premium on the Canadian dollar is due wholly to an inflow of capital from the United States and that inflation, although held back, is potentially "just round the corner." This answer does not strike home with complete conviction. The high level of interest rates may not have checked Canadian recovery but it has certainly encouraged the inflow of capital and borrowing in the New York market. Dear money may look less appropriate when the coming winter brings its customary check to Canadian industrial business expansion and employment. But the main need is for monetary and economic policy in Canada to be co-ordinated.

NEW CARS

A Challenge to Unorthodoxy

AS it did in 1953, Ford has turned its Anglia into a new Popular, marking the initial step in a change of its range of smaller cars. As the Anglia, it has produced some 350,000 of this two-door version of its 100E model, using the same 1,172 cc side-valve engine as the former Popular and the Prefect, selling until this week at £539 including purchase tax. The company is now offering the same vehicle with a few minor modifications, mainly interior, for £494 including tax. This is £3 cheaper than the price of BMC's Austin Seven and Morris Mini-Minor, so that the Popular can still be advertised as the cheapest new car in the British market ; but it is £75 more than the old Popular cost, so that entry to new car ownership in Britain, in spite of new cheap cars from Britain's two biggest manufacturers, must be said to have become rather more costly this summer—though with markedly more modern cars.

Ford made only 155,000 of the former Popular, in six years, following production of 420,000 of the original 1,172 cc models ; suggestions that the company is thinking of 1,000 a week of the new Popular imply that it thinks this one will sell more quickly. The company is offering it as "a full-sized family saloon combining big car performance with modern standards of styling and comfort," no doubt as a deliberate contrast to the small external dimensions and unorthodox engineering layout of the new BMC models. This is a coolly thought-out appeal to reliance upon conventional engineering in a well-established design of good and not noticeably outdated looks, strong on most aspects of performance if relatively heavy on fuel, against the appeal of adventurous design, high performance and economy, and rather controversial appearance. It will be interesting to see how the votes go at this election—though only fair to add that Ford has some other candidates to bring to the hustings in the next few weeks.

Sportive Daimler

DAIMLER, whom one traditionally associates with sedate, luxurious—even Majestic—saloon cars, announced this week that their 2½-litre sports car, of which the prototype first appeared last April, is now in production. Originally called the Dart, the car is now known as the SP250 ; it is powered by a compact V-8 engine, reportedly derived from the Triumph Thunderbird sports motorcycle engine, which develops 140 horsepower at 5,800 rpm. Chassis and suspension design are strictly conventional, with coil springs being used at the front and leaf springs at the rear. Unladen kerb weight is 19¼ cwt ; disc brakes are fitted to all four wheels, as is the case with the company's Majestic saloon. The two-seater body is made of glass fibre reinforced plastic, a fact which would seem to limit production to a level not much higher than the 5,000 a year the company eventually intends to make.

No road tests have yet been published, but a top speed of 120 miles per hour is claimed. The SP250 is priced at £1,395 including purchase tax, which is roughly £350 more than the Triumph TR-3, MGA, and Austin-Healey, and about the same amount less than the Jaguar XK-150 and the AC Ace. Whether it will take any sales away from either of these groups in Britain is another matter ; it seems likely that the greater part of the output is destined for the United States.

MERCHANT BANKS

Schroders Come to Market

MOST of London's merchant banks are still private companies, and investors may be expected to show an enthusiastic response to opportunities for participation. In an offer for sale of 750,000 ordinary shares in Schroders Limited at a price of 32s. 6d. each, investors have the opportunity to obtain an interest not only in one of London's oldest merchant banks but also in its American banking subsidiary. Schroders Limited is a holding company which has recently been formed to acquire the shares of J. Henry Schroder, London, and J. Henry Schroder Banking Corporation, New York. It has a share capital of £5 million in ordinary shares of £1 each, all of which are issued and fully paid.

The London company was formed in 1804 and began as a merchanting firm, gradually moving into financing merchant trade and thence to banking. The United States subsidiary was established in 1923 and is now active in the acceptance field in the United States. It has accumulated resources of $137 million. In the United Kingdom, Schroders has a large business in acceptance credits, foreign exchange and new issues, having been pre-eminent in the old days in overseas issues.

The prospectus shows in commendable detail figures of operations hitherto concealed from the public eye. The combined profit of the London and New York companies, before taxation and transfers to reserves for contingencies, amounted to £1,116,685 in the calendar year 1958. Profits for 1959 are expected to be higher. The directors forecast a dividend for the period September 16th-December 31st at an annual rate of 6 per cent ; they intend to pursue a conservative dividend policy, but in the event of increased profits they envisage "suitable increases" in dividend. In recent years about three-fifths of the combined profits have been earned by the New York companies ; but at end-1958 these accounted for £8½ million of net assets, compared with just under £3 million in London. The group was then very liquid, holding £19 million of cash in the two centres. Deposits and other items totalled £16.3 million in London and £63.7 million in New York.

The brokers to the issue are Cazenove and Company ; dealings are expected to begin on October 5th. The former holding

in the United States companies of Baring Bros. has been converted into a holding of approximately 6 per cent of Schroders Limited's equity.

A Zurich Acquisition

SAMUEL MONTAGU AND COMPANY, the London merchant bankers and dealers of world renown in foreign exchange and bullion, has consolidated its position in Zurich. Its subsidiary, Zurmont A.G., was established two years ago. An evident advantage then was ability to deal in the market in transferable sterling. But Samuel Montagu was anxious too to develop investment banking business in Switzerland. Operating from quiet offices in a residential street, the new bank quickly made its mark; but it experienced the usual difficulties of the newcomer. Some Swiss bankers convinced themselves that they had in their midst the secret agent of the Bank of England.

Now, after a fashion not unknown in the London market, the foreign subsidiary has been merged with a native institution, the Neue Guyerzeller Bank, which is linked with an old-established Zurich banking family. The merged bank will be called the Guyerzeller Zurmont Bank; Samuel Montagu will have a controlling interest and will be represented on the board by Mr Paul Jeanty. The capital will be 7,500,000 Swiss francs, and total resources, on the basis of recent balance sheets, around 45 million Swiss francs. It will thus be among the bigger of the Swiss private banks.

COMMERCIAL TELEVISION

The Golden Goose

THE chairman of Associated-Rediffusion told the company's annual general meeting that while profits to next April are likely to be just as big as the £7 million recorded in the financial year that ended April 30th this year, the company's lucrative agreement with Granada would expire soon afterwards and he would not like to say what would happen beyond that. The company's advertisers have no doubt ruefully noted that it is next autumn that Associated-Rediffusion proposes to make the second promised increase in its advertising rates, raising its charge for a minute of peak time to more than £1,800. Some advertisers now face an 80 per cent increase in the cost of their campaigns.

In thus increasing their rates, the television contractors are trying not to kill the golden goose, but to herd it in directions that it does not want to follow. Commercial television has a rush of customers for peak hours, and too many of those want to book too long a time. This is why Associated Television, Associated-Rediffusion's week-end partner in London, where the television patterns seem to be set, has just increased its charges for a minute and for 45 seconds of peak time advertising by 20 per cent but has left the price of shorter bookings at peak times unchanged. It may need a bigger disincentive than this to prevent a handful of big advertisers from hogging the limited amount of peak time to the exclusion of others. Originally the programme companies themselves encouraged bookings for as long as a minute by offering them at what amounted to a discount.

Chances of increasing the available "advertising space" are few: there are rumours in the industry that the Independent Television Authority has sharply rebuked at least one contractor for allowing too much advertising in its peak time programmes. Associated-Rediffusion is now extending its definition of peak time later into the night. While if the companies cannot find enough peak time to satisfy those who want to advertise in it, they cannot find enough advertisers to take time when audiences are smaller if, according to the companies, more highly specialised. It has proved useless to woo them with cheap rates, useless to cite tales of American companies that have made their fortune by steady cheap, off-peak television advertising. And the provisions of the Television Act have the unforeseen effect of preventing contractors from offering job lots of unsold advertising time cheap—as American broadcasting companies do—by requiring that the published rates shall be charged in all cases.

NEW ENGINES

Rolls' Aluminium V-8

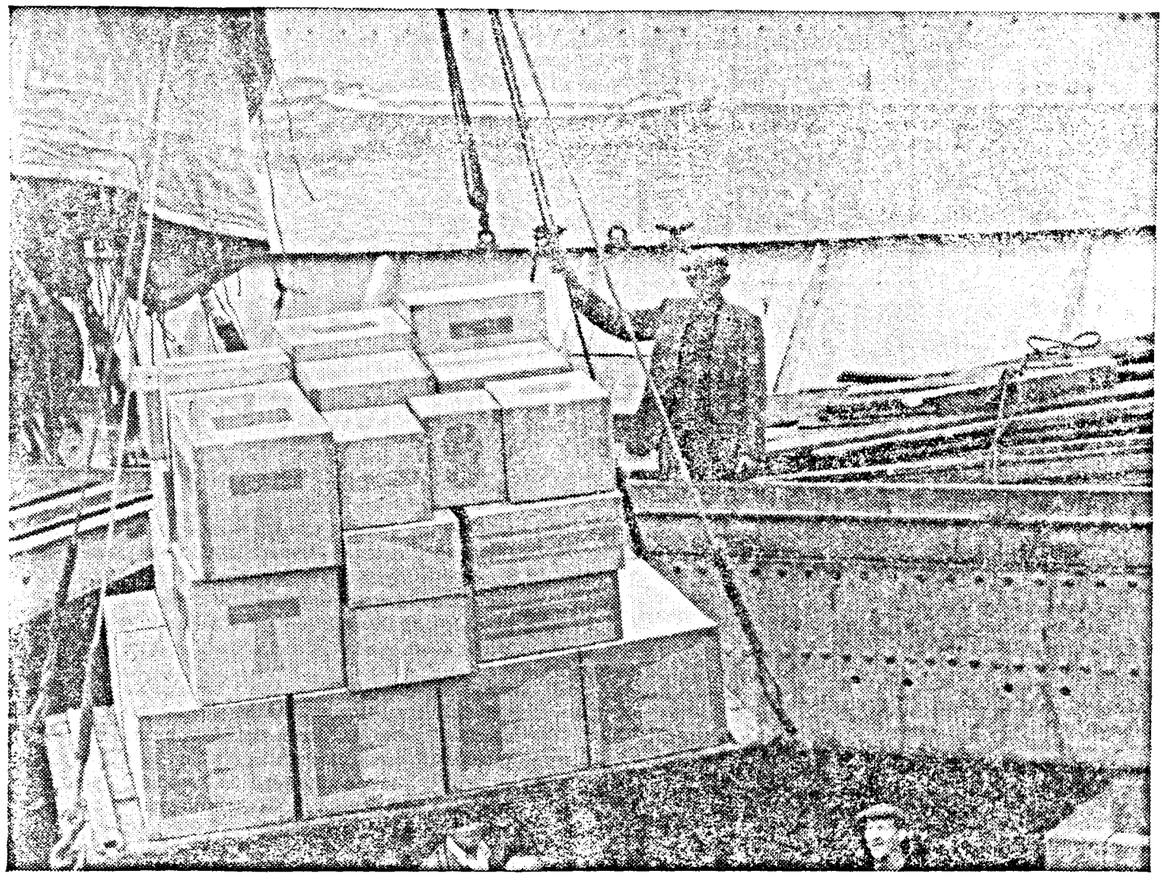
ROLLS-ROYCE and Bentley models for 1960 which will make their first appearance at the Paris Salon next week, will be powered by a new aluminium V-8 engine of higher power—and price—than the six-cylinder engine used in both cars since 1947. The new engine has a bore of 4.1 inches and a stroke of 3.6 inches, these "over-square" dimensions giving a displacement of 6.2 litres, compared with the 4.9 litres of the six. The cylinder block and heads are cast in high silicon content aluminium alloy, and overhead valves are used, operated by hydraulic tappets; the cylinders, placed at an angle of 90 degrees, use cast-iron wet liners. By contrast the six-cylinder engine had a cast-iron block, an aluminium head, and a side exhaust valve. Compression remains a conservative 8 to 1, and it is reported that the new engine reaches its peak horsepower at around 4,000 rpm, somewhat lower than its predecessor. Rolls-Royce have never given horsepower figures for their engines, but it is estimated by one source that the output of the V-8 must be comfortably in excess of 200 bhp.

The company states that the new engine is no heavier than the straight six, owing to the use of aluminium and the compactness of the V-8 design. A considerable improvement in acceleration—especially in the 60-90 mph range—and all-round performance is claimed (though fuel consumption would seem almost certain to be higher). The performance of these two luxurious behemoths was already impressive: despite an all-up weight of some two tons, both were able to accelerate from a standstill to fifty miles per hour in ten seconds or under. Their top speed is now claimed to be in the vicinity of 110 mph. The company is continuing to make its four, six and eight cylinder in-line engines, which have a wide range of both civilian and military uses; though the V-8 was developed for use in the company's passenger cars, it may also receive some subsequent military application. Basic prices of both Rolls-Royce and Bentley have been increased by about £300, though this includes power-assisted steering, formerly an optional extra. The new engine, the first V-8 ever to appear in a Rolls-Royce or Bentley production car, took five years to develop: with all due respect to an undoubtedly fine piece of engineering, might not some of that time and effort have been better spent in producing a quieter clock?

Running Diesels on Petrol

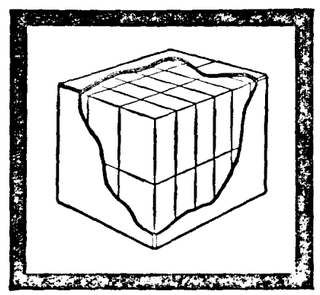
MULTI-FUEL engines—designed to run on petrol, kerosene or fuel oil—are not a new idea; German manufacturers have been experimenting in this field for several years, and one or two reportedly now offer production versions. In Britain, the Ministry of Supply has been experimenting with this type of engine for over three years, at the Fighting Vehicles Research and Development Establishment at Chobham. Now Rootes have announced that the 105 bhp diesel engine which now powers their Commer forward control vehicles is to be made available in the future as a multi-fuel engine, should anyone want it that way. The company state that in its multi-fuel form the three-cylinder, two-stroke engine is intended primarily for military applications, "for installation in vehicles not necessarily of Rootes manufacture"; though Rootes' development was not carried out under the auspices of the Ministry of Supply (and apparently with no specific Government contract in mind), a Commer vehicle running on petrol was tested by the FVRDE earlier this year.

Conversion of a diesel engine to multi-fuel operation is a comparatively simple and inexpensive process: in fact, several models, including the Rootes engine, have been run by FVRDE on lighter petroleum fractions with no modifications whatever. Rootes have added an electric fuel boost pump to raise the pressure to the injection pump and overcome the possibility of vapour lock which might result from more volatile fuels. Normally the injection pump is lubricated by diesel oil, and when running on petrol it is necessary to provide for pump lubrica-



DOCKSIDE STORY

First produced fifty years ago, but as modern as modern methods can make them, "Fiberite" cases show that only by attention to detail can fibreboard packing become "Fiberite" packing.



Goods on the ground, goods in the air, goods in ships. Familiar sight at the docks. Goods off to all parts of the globe. *Your* goods, perhaps, but *not your worry* when they're safely stowed away in "Fiberite" packing cases.
The success story of "Fiberites" can be judged by the millions in use all over the world. All produced and designed by pioneers of modern packaging—Thames Board Mills. Designed with your particular product in mind, constructed to give strength just where it's needed, "Fiberite" packing cases are the economic answer to today's packaging needs.

extensible

EMIDEC—

the computer that grows with your needs

IT CAN BE LESS EXPENSIVE THAN YOU THINK to install a computer, if it is an EMIDEC 1100 – the extensible Data Processing System that grows with your needs. Centred around certain basic equipment, the EMIDEC can be easily extended, by the addition of further units, to handle larger volumes of work and jobs of increased complexity.

EFFICIENT BUDGETARY CONTROL can only be obtained through a modern computer. EMIDEC 1100, the first machine specifically designed for business use, meets the needs of progressive companies of all sizes. You choose only the equipment you can afford and can keep busy – EMIDEC will grow *with* your business and into your business, smoothly and economically.

THE LATEST TECHNICAL FEATURES are incorporated in the EMIDEC 1100 – the only British built all-transistor computer. With an EMIDEC 1100 your initial expenditure can be surprisingly modest, and full utilisation is ensured at all stages. An EMIDEC hiring scheme, on attractive terms, is available as an alternative to outright purchase.

Leading organisations which have chosen EMIDEC include: Air Ministry · Barclays Bank · BEA · Boots B.M.C. · Glaxo · ICI · Kodak · R.A.O.C. · Sainsbury's Ministry of Labour

EE50

tion from the engine lubrication system. These slight modifications can easily be incorporated into existing production lines, or carried out on engines already in service. The thermal efficiency of the engine is about the same on either type of fuel; if a very rich petrol mixture is used, a slight increase in bhp is obtained, at a slight loss in fuel economy. Fuel economy is nonetheless as much as 50 per cent greater than that of a conventional petrol engine, in terms of miles per gallon. The horsepower and torque of diesel engines are normally limited by design to a certain exhaust smoke level, and at the same horsepower output, petrol produces less smoke; while any fuel from JP 3 (kerosene-based jet fuel) upwards can be used, the engine runs more smoothly on low grade petrol than on high octane.

The FVRDE is also testing diesel engines made by Rolls-Royce, Leyland, and Coventry Climax, with other fuels; progress with these three engines was to have been demonstrated at Chobham at the end of this month, but this has been postponed owing to the General Election. It is not known whether any specific commitment has been made by the Ministry for a multi-fuel engine; representatives from Nato countries were to have attended the FVRDE demonstration, however. Rootes state that there is some civilian demand from territories where certain fuels are scarce or intermittent in supply, but admit that multi-fuel operation will have no relevance in the British market, barring some radical change in the relative prices of petrol and diesel fuel.

LUNIK II

Cold Moon

RUSSIA'S announcement that Lunik II found no magnetic field on the moon, nor any radiation belt around it (the one follows on the other) is the weightiest piece of evidence yet produced to support the theory that the moon is a cold dead lump of rock. A magnetic field would have indicated a metallic core; a metallic core would in turn have pointed to the presence of heat; and this would have supported the belief that the craters on the moon were caused by volcanoes. A minority of astronomers have always believed that they were, feeling that the size, shape and distribution of those craters was inconsistent with the alternative theory—that they were hollowed out by meteors. But if the moon has no magnetic field, and no volcanoes, this tips the evidence strongly in favour of the meteors.

These results are much what astronomers have been predicting; the moon looked much too small to most of them to be capable of getting hot in the middle in the same way as the earth does. But the controversy has been so sharp, and the difficulty of making observations through the blanketing atmosphere so great, that they are grateful for any scrap of factual evidence. The Russian data, obtained in the last few moments of flight, is bound to be scanty and the possibility that its instruments may have been faulty cannot not be discounted until the results are confirmed by other moon rockets, preferably ones that stay longer around the moon than Lunik II was able to. The American rocket due to be launched next week-end is planned to orbit the moon, and so give a longer reading, but since this is even more difficult than making a direct hit, too much should not be expected of it. An indirect consequence of Lunik II's flight may be the cancellation of some research programmes. Birmingham University, for example, was attempting to discover whether the moon had a magnetic field by other methods; presumably this may now become unnecessary.

TANKERS

How Long to Equilibrium?

DELIVERIES of new tankers and the volume of idle tanker tonnage both continue to rise. According to the latest six-monthly survey of Messrs. John I. Jacobs and Company, the London tanker brokers, tanker completions totalled 3.6 million deadweight tons during the first half of this year, compared with 3.4 million tons in the preceding six months and 3.2 million tons in the first half of 1958. After deducting 700,000 tons for scrapping, conversion and losses, the net increase in the world fleet was 2.9 million deadweight tons—an increase of over seven per cent, in terms of carrying capacity. On June 30th the world tanker fleet comprised 3,296 ships of 58.6 million deadweight tons; oil companies accounted for well over a third of this total. Freight rates show no sign of improving, and it has been estimated that over eight million tons are now laid up.

Liberia continues to be the leading flag of registry, with 11.2 million deadweight tons, or over 19 per cent; Britain is second and Norway third. But there was a sharp increase in the tonnage registered under the Greek flag during the period: while its total tonnage is still small—541,000 tons—the Greek government is trying to attract owners away from flags of convenience. Tonnage controlled by Greek nationals now amounts to 8.5 million tons, with another two million tons on order.

How long will the present surplus last? Construction and orders have both declined in every quarter since the last quarter of 1957, but are not falling fast enough to stem the flow of launchings: unless there is a massive revival of demand, an increase in scrapping and in cancellations, some authorities believe that the surplus will continue to grow during the next three years. A large part of the fleet consists of new vessels, larger and faster than those built before, during and just after the war, and consequently more efficient. But about seven per cent of existing tonnage is 20 years old or older, and many of these vessels, whose capital cost has by now been completely written off, are still finding employment. In addition, out of the 481 T-2 tankers built during the war, 280 are still in service, though many of the newer and larger vessels cannot find work.

The Sun Oil Company has made a study of the scrappage of tankers during the past 37 years, in its latest annual analysis of the world tank ship fleet, relating the rate of scrappage to the factors influencing tanker demand. The factors it considered were inactive tankers, steel scrap prices, the size of the world fleet, deliveries of new tankers, and charter rates. The present state of these five influences would indicate that a high rate of scrappage is now due, and in fact there was a substantial increase during the first half of the year—41 ships, against 47 in the whole of 1958.

Some Success for Sausages

DRACONES, the flexible sausage containers for liquids that can be towed behind vessels at sea, have had a modest but fairly encouraging first year in business. Following successful demonstrations in the late summer of 1958 of the prototype, 100 ft long by 5 ft in diameter, several others of the same size have been made, with detailed improvements; this size can carry about 10,000 gallons of liquid cargo. Dracone Developments, the company formed to exploit this invention of a group of academic scientists at Cambridge, has now obtained a contract from Esso to deliver petroleum products daily from Fawley across the Solent to the Isle of Wight and Portsmouth, and in August this year, towed behind a small Esso tanker, one took a cargo of aviation kerosene from Southampton to the Channel Islands. Shell-Mex has had a trial delivery of gas oil from Hamble to Newport; earlier this year ICI's Heavy Organic Chemicals division co-operated with the new company in a trial tow from Billingham on Tees-side to Flushing on the Dutch coast. Other Dracones, owned by the Shell-BP Development Company of Nigeria and by Holt's Transport Ltd., have been at work in Africa; one ordered recently is to be used for oil transport in the East Indies.

These containers, which are made of nylon fabric coated with synthetic rubber, weigh far less than their liquid cargo and can therefore be taken out of the water and rolled up for storage or transport; they are kept afloat by the buoyancy of their cargo, and therefore have no air space and no explosion risk. Thin as their skin is (about a sixth of an inch for a 40-tonner and a quarter of an inch for a 350-ton Dracone), it seems to be able to stand a good deal of abrasion, chafing and snagging on rocks or against jetties; the company thinks that in many instances a steel tank barge might be more vulnerable. "We have, as yet," com-

ments the company, "had no opportunity of studying the behaviour of sharks and swordfish when confronted with a Dracone. From the experience gained with inflatable life rafts it seems unlikely that there should be any danger of damage."

More practically, the inventors have been experimenting with various ways of filling the container (at present a hose connection at the stern is used) and have developed a ring stabiliser for the stern of the Dracone to prevent snaking when the long sausage is under tow. They recognise that the emergency conditions after Suez, when this kind of container was first thought of in 10,000-ton sizes to be towed by tankers round the Cape as a way of increasing the capacity of existing tank vessels, are things of the past; but they insist stoutly that "since 1956 no new facts have come to light which show that these larger vessels are either impossible or impracticable."

STEEL EXPORTS

Windfall to USA

THANKS to the steel strike, the United States has become one of Britain's best customers for steel this year. In the first eight months Britain sent 114,630 tons (worth £7.4 million) to that market, more than twice the quantity shipped in the same period of last year. This windfall gain made the United States our fourth largest buyer, ranking after Argentina, Canada and India. Shipments first rose sharply in April, when they amounted to 15,370 tons, twice as much as the average for the first quarter, and in both July and August shipments exceeded 23,000 tons. British exports to all countries in the first eight months amounted to 1,910,000 tons, which was 53,000 tons—or nearly three per cent—higher than a year ago. American steel merchants and consumers treated the strike as a near-certainty a full six months before the labour contracts expired at the end of June. Americans started buying more heavily in Western Europe in January, when export prices were weak and appreciably below British quotations. The big increase in their buying helped to push prices up, and in August reinforcing rods, for example, were quoted at about $102 a ton, $25 higher than in January and February. Belgium-Luxembourg, as usual, has been the biggest single exporter to the United States, followed by Japan, with France and Germany sharing third place. American imports of steel in June alone were a record at 410,000 short tons, and imports for the first half of this year, at over 1.9 million tons, were three times larger than in the first half of 1958, and larger than in any full year except the Korean boom year of 1951. Each month this year the United States has been a net importer of steel. However, the strike threat merely accelerated a trend that started in 1958, when imports of steel into the United States rose by 40 per cent to over 1.8 million tons. Some foreign products, an official report stated recently, were brought in at prices $20 to $40 a ton below American prices. The fear of foreign competition may be one reason why American steel firms are making such a firm stand against the unions' wage claims.

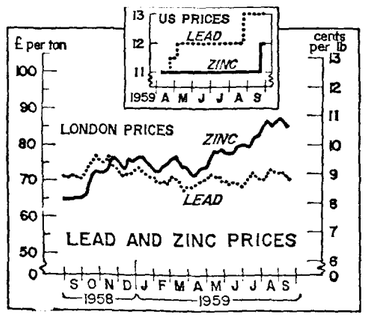
British Steel Exports to USA

	tons
Jan./Mar. average	7,290
April	15,370
May	17,290
June	12,390
July	23,160
August	24,140
Jan./Aug. total	114,630
Jan./Aug., 1958	*52,100*

LEAD AND ZINC

Two Markets

WHEN the United States imposed quotas on imports of lead and zinc late last year it created two markets for these metals. Comparison of the prices fixed by American producers with those quoted daily on the London Metal Exchange shows how remotely connected these two markets are. In the United States lead is still the dearer of the two metals; in London zinc became dearer than lead last January, and has remained so. The American producers' price for lead is now 13 cents a lb, 2¼ cents above the lowest point reached during the recession, and zinc, which was raised by one cent to 12 cents a lb this week, is now two cents above its 1958 trough. In London forward zinc has recently held steady at about £85 a ton, which is £20 more than



a year ago, and prompt metal still commands a premium. Forward lead, in contrast, has weakened this month by over £2 to about £71 a ton, and is only a trifle higher than a year ago. Another sign of weakness is that prompt lead stands at a discount to forward.

The strong recovery in zinc and the comparative stability of lead are due mainly to the restriction of supplies introduced by producers earlier this year. It was estimated that these restrictions would cut the surplus of zinc to an annual rate of only 16,000 tons in the second half of this year, and that the surplus of lead would fall to about 60,000 tons a year. The excess of zinc has turned out to be more apparent than real, as the premium on prompt zinc shows. Lead clearly has remained in surplus, though the open market price in London has been helped appreciably by the decline in offerings of Spanish metal. Many traders think that zinc could go higher after the American steel strike ends, but they are not bullish about lead. Consumption of zinc in die-casting, galvanising and other uses is growing steadily whereas lead is struggling to hold on to its markets in the face of substitutes.

SHORTER NOTES

The London discount market has undertaken a second overseas venture, again in Rhodesia where the authorities are building up an organised money market. The Anglo-American Corporation of South Africa and Smith St Aubyn are together sponsoring British and Rhodesian Discount House, with an initial paid-up capital of £125,000. This follows the participation earlier this year of Gillett Brothers in Discount Company of Rhodesia. It appears however that as a general rule the Bank of England is still anxious that the resources of the discount houses should be kept in the London market.

★

Hambros Bank is offering a new comprehensive service to exporters to Scandinavia to include survey of the market and provision of export credit and credit insurance. The bank is prepared to advance credits up to 100 per cent of the cost of the goods in suitable cases. This is not necessarily a precedent for export credits in general, since risks in Scandinavia are very low.

★

The Swiss Bank Corporation and the Credit Suisse are to sponsor a new unit trust known as Anglo-Valor to invest in shares and fixed interest securities in Britain and the Commonwealth. This is described as the first Continental trust formed to invest exclusively in British stocks.

★

A 100 per cent scrip issue is proposed by the board of Times Furnishing (Holdings) and a total dividend of the equivalent at least 25 per cent is forecast for the current year, against 22½ per cent last year.

COMPANY MEETINGS

GEORGE NEWNES LIMITED

RECORD SALES AND ADVERTISEMENT REVENUE

STATEMENT BY THE CHAIRMAN, MR C. S. MORRIS

The Sixty-second Annual General Meeting of George Newnes Limited, was held on Wednesday, September 23rd, at the head office, Mr C. S. Morris, the Chairman, presiding.

The following is his statement circulated with the report and accounts:

In view of the fact that all the Ordinary Capital of the Company is in the course of being acquired by Odhams Press Limited I do not think the usual type of Chairman's statement is necessary.

However, I feel you would like to have an account of the activities of the Company since the end of the financial year March, 1958, as several important happenings have taken place since that date.

MR H. C. TINGAY

I should first of all like to refer to the retirement of Mr H. C. Tingay on March 31st last after 57 years' service with the Company including 30 years as a Director and the last five years as Chairman. Mr Tingay's service was unique in the Company's history and the Directors wish to take this opportunity of paying tribute to his wonderful record which has been such an important factor in the development of the Company, especially during the last 20 years.

THE ACCOUNTS

The results for the year ended March 31st last are practically the same as the estimate made when the Directors' statement was issued in connection with the offer made for the Ordinary Shares of the Company by The "News of the World" Limited, the acceptance of which we were unable to recommend. It does not seem necessary, therefore, to go into the accounts in any great detail except to point out that the Gross Profit, before Taxation, of the Group after bringing back the £200,000 provision, created last year for use towards the establishment of *Woman's Day*, is £1,545,761 as against £1,631,059. Excluding the £200,000 provision brought back, the Group Profit after Taxation, and after adjusting additional tax recovered on the increased Ordinary Dividend, is £4,500 up on the previous year. In addition a Capital Profit of £142,099 made on the realisation of certain Trade Investments has been transferred to Capital Reserve.

A second interim dividend of 20 per cent, less tax, on the increased capital was announced at the end of July and paid on August 14th.

As previously stated, it was the intention of the Directors to recommend the payment of a final dividend on this basis but as a consequence of the second interim payment it is not now proposed to recommend a final dividend for the year ended March 31, 1959.

ODHAMS PRESS LIMITED

With regard to the merger with Odhams Press Limited the best way of expressing our views upon this is to repeat what was said when we recommended you to accept the Odhams offer.

"The businesses of Odhams and Newnes are to a large extent complementary and the Directors of both Companies expect that considerable economies will result from the proposed merger of the Newnes and Odhams Groups. It is not intended that the merger should prejudice the positions of the staff and employees of the Companies involved.

The Directors of Newnes consider acceptance to be in the best interests of the Newnes Ordinary Shareholders in that they will, in addition to receiving a substantial sum in cash in respect of their shares, be able to participate in the future prosperity of the combined businesses."

As already announced, I am to continue as Chairman and Managing Director of George Newnes Limited and have also joined the board of Odhams Press Limited. Mr H. L. Gibson, ACA, and Mr C. L. Shard, Joint Managing Directors of Odhams Press Limited, have been appointed to the board of George Newnes Limited.

THE PUBLICATIONS

Whilst in common with many other publishers the Group has, during recent years, ceased publication of certain journals which had reached the stage where rising costs, heavy competition and changing trends had eliminated any prospect of a satisfactory economic future, nevertheless, the Group has taken advantage of new opportunities which have arisen, particularly in the more specialised fields, and during the last ten years has successfully launched sixteen new publications and acquired nine others. Of these twenty-five publications many are devoted to technical subjects connected with the most modern developments in industry.

Woman's Own has continued to hold an outstanding position in the women's field. With a sale of over 2,400,000 and read by over 7 million women every week, a record number of advertisers have chosen *Woman's Own* for their campaigns to the women's mass market. So great has been the demand for advertisement space that a large number of 80-page issues has been published, and special arrangements were necessary to accommodate many additional advertisement pages in full colour.

Woman's Day. We have been able to further consolidate the position of this new mass-sale weekly though the competition in this field is still intense. Apart from the £200,000 allocated in last year's accounts for the development of this publication, and which was spent in the year under review, all the additional expenditure has been charged to the year's accounts. Here again production arrangements were made during the year to give increased full colour facilities to advertisers.

Our PRACTICAL publications have continued to do well in spite of increased competition and *Practical Householder*, *Practical Motorist*, *Practical Wireless* and *Practical Television* are all still outstanding in their respective fields and advertising support has been a record.

Amateur Gardening maintains its supreme position among gardening publications, leading both as regards sale and advertising support.

The Smallholder sales show an increase over the previous year and also an increase in advertising, both as regards volume and revenue.

RECORD ADVERTISEMENT AND SALES REVENUE

During the year under review the advertisement revenue of the Group again reached a new record figure; evidence of the very great confidence in which our many publications are held both by advertiser and advertising agent.

The sales revenue also created a record; proof of the growing appeal of periodicals and magazines.

COUNTRY LIFE LIMITED

Mr Frank Whitaker, the Editorial Director of Country Life Limited, retired in May, 1959, after over 30 years of invaluable service to the Group.

He was appointed Editor of *Country Life* in 1940, and joined the board in 1942.

The Country Life Group of publications has had a successful year. *Country Life* has fully held its position as the outstanding periodical in its field. The circulation has been well maintained, and special issues covering Antiques, Farming, Motoring and other relevant interests have proved popular. The advertisement revenue shows a satisfactory increase, thus reflecting not only the confidence of the advertiser but also the influence of *Country Life* on the buying habits of a large and distinguished readership.

Various books covering appropriate subjects have been published during the year. The great interest shown by the public in the increasing number of country houses now open to view augurs well for books of special appeal which are planned for the future.

Our monthly publication *Riding* has prospered, and the circulation has now reached the highest level for many years.

Homes & Gardens has again done well. Both sales and advertisement revenue indicate a healthy state of affairs. The furnishing and household features have aroused considerable interest, and the special colour schemes and services available at the Furniture Exhibition were an outstanding success.

TEMPLE PRESS LIMITED

The leading weekly journals of Temple Press, *The Motor*, *The Commercial Motor* and *Motor Cycling*, have enjoyed increasing advertising support during the year, largely owing to the higher production in the motor and motor cycle industries. The monthly journals have again had a successful year, in particular the specialised journal *The Motor Boat and Yachting* and the Technical journals *The Motor Ship* and *Plastics*, while *Nuclear Engineering*, successfully launched

in 1956, has still further strengthened its international standing in this new and important branch of engineering. Temple Press has recently acquired the entire share capital of The St Bride's Press Limited, which is the proprietor and publisher of *The Surveyor & Municipal & County Engineer*, a long established weekly journal in its sixty-eighth year of publication and a leader in its particular field. The Book and Directory Division of Temple Press continues to expand its publishing activities and is now housed in separate premises; its current list numbers some 150 titles in the technical, scientific and specialist fields and includes trade directories which are established sources of reference to five of the major industries in this country.

THE NATIONAL TRADE PRESS LIMITED

The 22 specialised trade and technical journals of The National Trade Press Limited have had another successful year, and advertisement revenue reached a new record figure. The Company continues to pursue its policy of expansion and during the year launched *Engineering Materials & Design*. This technical journal deals with the applications of established, as well as the many new, materials available to engineers today and has been well received by readers and advertisers.

Another new publication launched during the year was *Drapery & Fashion Weekly*. This, as its title implies, covers the distribution of women's wear, children's wear and household textiles, and is produced in newspaper format, giving important advantages in presentation and speed of publication. It first appeared in January and has made a most promising start.

British Communications & Electronics now in its sixth year, continues its successful progress, and during the year published a buyer's guide to the British electronics and associated industries. This was given a very favourable reception, and its world-wide distribution should play its part in the continuing expansion of the export trade of these industries.

EXHIBITIONS

The international and specialised Exhibitions organised by TRADE FAIRS & PROMOTIONS LIMITED have had another year of steady progress. One of the most successful exhibitions organised by the Company is The Textile Show, held at Earls Court, which this year was honoured by a visit from Her Majesty The Queen; a gratifying tribute to the importance of this exhibition to the British textile industry.

The new Associated Company, Industrial and Trade Fairs Limited, formed jointly towards the end of 1957, by George Newnes Limited, Temple Press Limited and Financial Times Limited has already held its first Exhibition; the Industrial Photographic and Television Exhibition. This proved to be very successful and a similar exhibition is planned for next year. There are also several other exhibitions planned by the new Company.

BOOK INTERESTS

The book publishing interests of the various companies again contribute substantially to the total earnings. In particular, the Subscription Books Division, marketing *Chambers's Encyclopaedia*, *Pictorial Knowledge* and other important volume works has maintained the progress of recent years. The Australian Company, whose activities are devoted solely to Subscription Books, has passed the first ten-year milestone in its history. Its progress has been continuous and the Australian edition of *Pictorial Knowledge*, launched in 1957 and now in its second edition, continues to be praised by scholastic institutions and parents throughout the widespread territory of this important member of the Commonwealth.

DIRECTORS

I am anxious to take this opportunity of placing on record my personal thanks to all my colleagues on the board for the understanding and constructive way they have supported me during the last few months when vital decisions in connection with both shareholders and staff had to be taken.

STAFF

The Directors, and I am sure shareholders also, wish to thank all Executives and staff of the various Companies in the Group who have rendered such loyal and efficient service and have contributed so much to the success of the business.

The acceptance of the Odhams offer has been of considerable benefit to the Group Pension Fund, as the Trustees now hold, on behalf of the Fund, 315,000 Odhams shares, which on 17½ per cent dividend would yield £27,562 10s. annually. In addition this Fund has received payment of £354,375 which will be invested and bring in approximately £20,000 in annual income. As explained previously, the whole of the capital of the Pension Fund is in trust and can only be administered by the Trustees in accordance with the Rules.

The report and accounts were adopted.

COAST LINES LIMITED

The forty-sixth annual general meeting of Coast Lines Limited was held in London on September 22nd. The Chairman, Captain A. R. S. Nutting, OBE, MC, in the course of his speech, said:

The consolidated profit and loss account shows that after providing for depreciation, future surveys and deferred repairs, the trading profit for the year 1958 amounted to £885,603, a fall of £260,205 from the level attained in 1957. Twelve months ago, the worldwide shipping slump was already with us and these adverse conditions continued throughout the year. Fortunately, in spite of the scarcity of cargoes and tonnage available exceeding requirements, our vessels have been fairly constantly employed and only a small number, mainly from those engaged in tramping, were laid up. The shortage of cargo on our trades, together with increased operating costs, made material inroads into gross earnings and voyage profits, and we were obliged to suspend certain services which were uneconomic or for which we could see little future prospect. Our earnings from the carriage of livestock also fell considerably.

The taxation charge for the year fell by £232,134 to £308,693. The investment allowance has relieved the taxation charge against profits by £96,862 as compared with £155,497 in 1957. The net profit of the company and subsidiaries amounts to £662,794, against £742,226 in the previous year, and after deducting amounts retained by subsidiaries to finance their affairs, Coast Lines Limited is left with a net profit for the year of £470,021.

The report and accounts were adopted.

ROMAC INDUSTRIES

The thirty-fourth annual general meeting of Romac Industries Limited was held on September 18th in London, Mr R. D. Boyce (the chairman) presiding.

The following is an extract from his circulated statement:

The net profits which have been attained and the dividend which has been recommended by your directors are the highest since the incorporation of the Company in the year 1924.

If the first four months of the current fiscal year may be taken as a criterion I have every confidence that the results will not be unsatisfactory when I next appear before you.

In the Home market our sales increased in both our General Sales Division and our Contracts Division and this year we look for further Sales expansion from both of them.

In 1958 we introduced several new lines, all of which were well received, and orders are coming in at a most encouraging rate.

In the current year new products and regular lines alike are being supported by a national advertising campaign on a bigger scale than in former years.

In the year under review our Export Trade has suffered setbacks due to the imposition of artificial restrictions in certain markets and generally from increased severity of competition abroad. However, we have dealt energetically with these problems and in the opening months of the present year there are signs of improvement.

The report was adopted and the dividend of 17½ per cent approved.

ASSAM FRONTIER TEA

The seventy-first annual general meeting of The Assam Frontier Tea Company Limited was held on September 16th in London, Sir Charles Miles, OBE (the chairman), presiding.

The following is an extract from his circulated statement:

The profit for the year ended December 31, 1958, after charging Depreciation of £65,500, is £302,896, which compares with £303,711 for the previous year. Our crop showed a substantial increase and although the average price obtained in London was below the 1957 level, the value of sales proceeds rose by some £66,000. This increase, however, was largely offset by the rise in upkeep expenditure resulting mainly from the extra crop produced.

Quality from Northern India was not outstanding in 1958, but our teas have met with a good reception, selling readily and well.

World consumption is rising and if in 1959 producers concentrate on the improvement of their product by maintaining a high plucking standard, the bogey of over-production should be laid for some time.

In the case of this Company great care is being exercised over plucking and manufacture, and satisfactory reports have been received on our early teas. It is in the disposal of its mid-season teas, however, that a Company scores if the standard of its production is above average and since our factories are well found and the estates are in good order, I hope that we shall continue to sell these teas profitably. Our crop to the middle of July is 2,123,760 lb, a decrease of 356,080 lb when compared with the same period last year.

The report was adopted.

EDGAR ALLEN & COMPANY

EFFECT OF TRADE RECESSION

The sixtieth annual general meeting of Edgar Allen & Company Limited was held on September 24th at Sheffield, Mr W. H. Higginbotham, ACA, FSS, chairman, presiding.

The following is an extract from his circulated statement:

The year which ended on March 28th last had as background a trade recession of some severity, widespread in extent, very unequal in its incidence as between one industry and another (and even within those industries chiefly affected) and evidenced by most of the conditions characteristic of trade depression—slackened demand, depleted order books, unemployment (both of men and equipment) or under-employment, reduction of material and work-in-progress stocks, with some measure of financial stringency here and there.

The diversity of products and the variety of interests of the constituent companies of the Edgar Allen group probably minimised the impact of the recession on their activities; nevertheless it has been severe enough to reduce the value of Sales turnover of the group by roughly 13 per cent below that of the previous year (1957-58), and to cause a quite disproportionate fall (of £271,756, or 37 per cent) in the group's untaxed trading profits.

BACKGROUND OF THE YEAR

This setback, though unwelcome, was not unexpected. The Parent and Subsidiary Companies make and supply to both home and foreign markets, directly and indirectly, plant and equipment of specialised character, and also component parts and materials—later embodied into their products by other makers of equipment of various kinds; they are also makers on a large scale of engineers' production tools.

Since the war, re-equipment and fixed asset investment plans have been carried through on a massive scale, both at home and abroad; others were (and still are) in prospect in the so-called under-developed countries overseas. In this country, the development of the motor industry and the activity arising from the national defence programme have also contributed substantially to what has been described as a "boom" in the supply of capital and consumer-durable goods. But in 1955 progress on these lines was halted; foreign re-equipment and capital expansion led to more intense competition in world markets; and increased prices and costs made export business more and more difficult to get.

In export markets there has been a combination of trade recession and severe competition—particularly in the European market. In the Common Market countries of Europe there is already a tendency to organise for inter-trading, to the exclusion of our products.

The Parent Company, contributing some 68 per cent of the total sales output of the group, has naturally suffered most during the year—not merely from reduction in sales, but still more from under-employment of its manufacturing capacity, and the impossibility of reducing overhead expenses to correspond.

NATIONALISATION

I make no apology for mentioning this subject again, because it is so important to the industries in which the group is engaged. So many conflicting statements have been made, and such impredise policy proposals put forward, by its protagonists, that it is almost impossible to know exactly what is proposed—except that, either by open or covert means, there is a determination to subject industry to hampering controls and interference in the name of "the public interest." Your directors still feel it to be their duty, in your interests, to oppose this policy by every legal and practicable means.

Last year there was a spate of industrial disputes, involving over 400,000 workers, and the loss of 3½ million working days—greater than in any year (except 1955) since the war. Many of these disputes and strikes rise from inter-union rivalries and lines of demarcation, rather than from any real conflict with employers; others, being "sympathetic," "token," or unofficial, extend the area of trouble unnecessarily from a mistaken sense of loyalty.

It is surely time—since trade union leaders seem to prefer to "lead from behind"—to bring this state of affairs, harmful to the workers themselves as well as to the nation, to an end.

FUTURE PROSPECTS

These at the moment are almost impossible to forecast. Makers of "capital" and "consumer-durable" goods (including the steel and engineering industries) have had a severe setback. There have recently been signs of improvement, however, in trading conditions generally. The lowered bank rate, the tax reductions of this year, the ending of the recession in the USA and the beginning of trade recovery in Europe are all favourable pointers—as likewise are the improvement in our gold and currency reserves, the low unemployment rate (confounding the professional prophets of woe) the stability of the retail price index, the resumed (though small) improvement in the industrial production rate.

Foreign confidence in the stability of sterling—one of the two great international trading currencies—has also been largely restored. The great danger is a resumption of the inflationary trend of recent years; this must by some means be prevented.

We are still a "nation of shopkeepers" dependent on our export trade for our prosperity and even for our survival. Prices (and profits) of goods and services are not fixed merely by adding something to ascertained cost of production, but by compromise between the needs of buyers and sellers in the face of competition and the availability of alternatives or substitutes.

Since the war we have been trying to reconcile certain incompatible demands—for lower prices, lower profits, for higher wages and salaries, for public expenditure on defence, social services and amenities, and taxation to cover this; for rehabilitation and improvement of industrial equipment, and for reduction of the remuneration of capital investment.

It is surely time to face up to the facts of our situation. What is urgently needed now is a radical change in public opinion, however, rather than the imposition of restrictions and controls (which were not conspicuously successful).

The general picture is one of recovery and progress; and, given determination to make headway, we can look to the future with sober confidence. There is no place, however, for careless optimism; and still less for internal strife.

The report and accounts were adopted.

THE BUDLA BETA TEA COMPANY

The sixty-fourth annual general meeting of The Budla Beta Tea Company, Limited, was held on September 16th in London, Sir Charles Miles, OBE (the chairman), presiding.

The following is an extract from his circulated review: The profit for the year ended December 31, 1958, after charging Depreciation of £25,500, is £118,372, which compares with £94,063 for 1957.

Over-all, the value of our sales proceeds, including the amount received in respect of hail damage, rose by some £40,000, but against this, upkeep expenditure showed an increase of nearly £11,000.

We declared an interim dividend of 20 per cent on August 7, 1959. No further dividend will be paid for the year ended December 31, 1958.

The Company has a programme for the uprooting and replanting of the older tea and during the year a further 44 acres was replanted. This makes a total of approximately 350 acres replanted in the past five years.

During the past cold weather a major operation has been undertaken in the amalgamation of Kanjikoah Estate of 505 acres with Kharjan Estate of 790 acres, making a total of 1,295 acres under tea with a potential crop of well over 1½ million lb. I am confident that we shall benefit considerably in the future as a result of this amalgamation.

Our crop to the middle of July is 1,136,400 lb, an increase of 26,320 lb, when compared with the same period last year.

The report was adopted.

WILLIAMS & WILLIAMS LIMITED

PERIOD OF INTENSIFIED COMPETITION

The Annual General Meeting of Williams & Williams Limited was held on September 17th at Chester. Mr B. A. Williams, CBE, Chairman and a Managing Director, presided and, in the course of his remarks, said:

Since we met a year ago a period followed of serious under-employment of the capacity of the Building and Contracting Industries. This considerably intensified competition in our industry. The period under review has been the most difficult we have experienced for many years not only in the United Kingdom, but also in America where we have large and important interests.

It was, we all regret, a period of disappointment, but we wish to stress our continued confidence in the future, and it is to the future that we must look to reap the fruits of our recently planned programmes and developments, the setback which our present figures register being an episode in our long and continued progress.

In South Africa, Rhodesia and Belgium we have fared better, and I again have pleasure to report that we had satisfactory results, although in these countries competition is now keen and is increasing, and in those countries as indeed in the United Kingdom and America our efforts are constantly directed to the problem of improving our designs and techniques in order to ensure we keep ahead of this competition.

Your Board has for some time past been mindful of the desirability of ensuring continuity of management in the Group and

consequently the Managing Directors have decided and your Board have agreed that the time is appropriate for younger Executive Directors to accept greater responsibilities. This will have the added advantage of enabling the Managing Directors to give effect to plans for their making visits to your extensive overseas interests and other world markets. Your Board is of the opinion that the developments and the re-organisation effected will provide facilities to meet more expeditiously the requirements of our customers throughout the world.

The Report and Accounts were adopted and a dividend of 5 per cent was approved.

KENTAN GOLD AREAS LIMITED

MR C. J. HOLLAND-MARTIN'S REVIEW

The Annual General Meeting of Kentan Gold Areas Limited was held on September 16, 1959, at The Chartered Insurance Institute, EC2. Mr C. J. Holland-Martin, MP (Chairman), presided.

In his printed review, the Chairman recalled the reduction in capital sanctioned in November, 1958, followed by the amalgamation of the company with The Zambesia Exploring Company Limited as a result of the acceptance by more than 90 per cent of the stockholders of the latter company of an offer to acquire their holdings by exchange of shares. He pointed out that in these days the very great risks inherent in developing Central African mining enterprises could not be justified unless means could be found of setting off the losses of the less profitable against the profits of the more successful, and for these reasons the Boards of the two companies had decided that the time had come for a merger of their interests.

The consolidated accounts for the nine months ended March 31, 1959, which included the results of the Zambesia company for the year to that date, showed a profit of £145,793. After bringing forward the previous year's balance, making various adjustments and transferring to Capital Reserve the pre-acquisition profits amounting to £28,097, a balance of £175,930 remained available for distribution. An interim dividend of 1s. 6d. per share (7½ per cent) had been paid on June 19, 1959, and it was proposed to recommend a final dividend of 2s. per share (10 per cent), making a total dividend of 3s. 6d. per share (17½ per cent) for the period. For the years ended March 31, 1957 and March 31, 1958, The Zambesia Exploring Company Limited had paid dividends of 20 per cent per annum out of consolidated profits before taxation of £243,595 and £264,305 respectively. The decrease was due to the reduced dividend from Tanganyika Concessions Limited, which had been forecast last year, and to the fact that the Board had, in the market conditions prevailing, been reluctant to realise profits on sales of investments.

The Chairman emphasised that the company's main interest was now its stake in Tanganyika Concessions Limited, and gave details of this and the other principal holdings, including the subsidiary, Geita Gold Mining Company Limited, and Tanganyika Holdings Limited, in which a 50 per cent participation was held.

The Report and Accounts were adopted, and Special Resolutions providing for amendment of the Company's Articles of Association as regards the Directors' Borrowing Powers and the remuneration of directors were passed.

APPOINTMENTS

NATIONAL COAL BOARD
DURHAM DIVISION

AREA CENTRAL WORKSHOPS MANAGER

Applications are invited for the above post in No. 2 (Mid-East Durham) Area of the Division. The Workshops are situated near Houghton-le-Spring. The appointment will carry a salary within the range £1,250 to £1,850. The starting salary will be in accordance with the qualifications and experience of the successful candidates. The number of men employed is about 600. The Works are engaged mainly on the overhaul and repair of electrical and mechanical coal mining plant and machinery. The post requires a person capable of supervising the overall working and administration of the Shops to achieve and sustain the maximum throughput of planned overhaul and jobbing work and of maintaining the required standards of workmanship and good personnel relationships. Candidates should have a general engineering background and preferably have some knowledge with the repair of wagons to mainline standard. Experience in the heavy repair of steam and diesel locomotives is essential and candidates must have a knowledge of iron and brass foundry technique. The possession of a Higher National Certificate in Mechanical and/or Electrical Engineering or equivalent is essential.—Applicants should reply within seven days, quoting SG/250/8646, and giving full details of age, education, qualifications and experience, to N.C.B., 7 Side, Newcastle upon Tyne.

ECONOMIST. Vacancy for an assistant occurs on the staff of the Cotton Board Economics and Statistics Department. The possession of a good degree in economics or statistics is an essential qualification and some post-graduate experience either in industry or in research would be an advantage. Commencing salary within the scale of £700-£900. Contributory pension scheme.—Replies, stating age, details of education and experience, should be addressed to Director of Statistics, 3 Alberton Street, Manchester, 3.

KODAK LIMITED

wish to employ in the

CENTRAL PLANNING DEPARTMENT

at their Harrow factory, a

YOUNG MAN

of 25-30 years of age, who will assist in co-ordinating the output of the factory departments by compiling production schedules and placing orders.

He must have the necessary intelligence, personality and initiative to modify these programmes with changing circumstances and to ensure their execution. He will be engaged as assistant to a Section Leader embracing similar but broader activities.

Please write to:
Men's Personnel Department,
Kodak Limited (Factories),
Wealdstone, Harrow, Middlesex,
quoting DGD/5.

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for Lectureship in Economics. Salary scales: Assistant Lecturer, £1,200 x £50 — £1,350 per annum; Lecturer Grade II, £1,350 x £50 — £1,500 per annum; Grade I, £1,600 x £50 — £1,900 per annum. Passages to Salisbury for appointee, wife and dependent children on appointment with allowance for transport of effects. Superannuation and Medical Aid Schemes. Unfurnished accommodation at rent of 15 per cent of salary. Assistance given for triennial visits overseas. Detailed applications (six copies), naming three referees, by October 31, 1959, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

TAXATION AND RESEARCH COMMITTEE

A member of the Institute is required for appointment as Assistant Secretary to the Taxation and Research Committee. Age preferably between 28 and 35. A good draftsman is essential. He will be required to undertake, under the supervision of the Secretary to the Committee, research on and drafting of technical memoranda and to assist with the secretarial work and correspondence of the committee and its sub-committees. Commencing salary between £1,250 and £1,750 per annum; non-contributory pension scheme.—Apply, by letter, giving age and details of education, qualifications and experience, to the Secretary of the Institute, Moorgate Place, London, E.C.2. Envelopes should be marked "Personal—T. & R."

UNIVERSITY OF QUEENSLAND

LECTURER IN ECONOMICS

Applications are invited for the above position. Applicants should possess a degree with honours in Economics. The appointee will be required to lecture in the theory of value and distribution, and industrial organisation.
Salary £A1,540-£A2,040 per annum.
Further particulars and application forms are obtainable from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.
Applications close, in Australia and London, on November 14, 1959.

BBC requires Language Supervisor (British subject) for East and Central European Services. Duties consist mainly in checking accuracy, and where possible style, of translations of news bulletins and talks from English into at least two of the languages concerned (Albanian, Bulgarian, Czech and Slovak, Hungarian, Polish, Rumanian, Russian, Serbo-croat and Slovene) and following broadcasts in the studio. Besides first-class knowledge of their foreign languages candidates must possess a command of English of native standard and good general knowledge of European life and affairs. Previous residence in the countries concerned an advantage. Work on shift basis including night duty. Salary £1,230 (possibly higher if qualifications exceptional), rising by five annual increments to £1,583 maximum per annum. Candidates offering exceptional knowledge of one of these languages could be considered for part-time employment on shift basis including night duty.—Requests for application forms (enclosing addressed envelope and quoting reference G/1303/Ec) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

QUALIFIED ACCOUNTANT

Old-established STOCKBROKERS, about to move into new and larger premises, require a Qualified Accountant to take over the management of the office and staff and to advise the Partners on general accountancy matters. Previous experience of stockbrokers office, either actual employment or audit work, essential. The ability to work a detailed knowledge of Stock Exchange procedure is not necessarily required. Applicants must have at least 10 years' experience in accountancy and preference will be given to a sound knowledge of modern office procedure and office machinery.—Please write, in confidence, giving full details, to Box C.783, c/o Streets, 110 Old Broad Street, E.C.2.

INDUSTRIAL AND COMMERCIAL FINANCE CORPORATION LIMITED

ECONOMIST required for position with prospects in the Economic Section.
A good degree in economics is necessary, plus several years' business experience. The work involves watching and reporting on developments and trends in industry, as well as on economic and financial matters. The ability to cope with detailed work and some skill in using statistics will be distinct advantages. Salary according to age and experience.
Apply to the Chairman's Assistant, Industrial & Commercial Finance Corporation Limited, 7 Drapers' Gardens, London, E.C.2, for an application form.

YOUNG ECONOMIST

required for Economic Research Section with main emphasis on commodities. Applicants should be able to express themselves well, to carry out and develop independent studies but should enjoy working in a closely integrated team. A sound knowledge of statistics would be helpful. Salary according to age, experience and qualifications.—For further particulars apply:

Personnel Officer,
Materials Supply Division,
Dunlop Rubber Co. Ltd.,
St. James's House,
23-24 King Street,
St. James's,
London, S.W.1.

For further appointments and other classified advertisements see page 1071

Large Oil Company centred in London requires a

RESEARCH MATHEMATICIAN

for the study of flow of compressible, viscous fluids through porous media. Familiarity with heat transfer theory and boundary value problems desirable. Interest in pure mathematics helpful. Qualifications: preferably Ph.D. but First Class Honours degree might be considered. This is intellectually challenging work with attractive financial prospects.—Write in detail, quoting No. 855, to Box No. 2869, c/o Charles Barker & Sons Ltd., Gateway House, London, E.C.4.

COMPANY AFFAIRS

ASSOCIATED ELECTRICAL INDUSTRIES

At 60s. and on a 15 per cent dividend the £1 ordinary units of AEI yield 5 per cent, about a quarter of a point more than the average return on leading blue-chips. The group's interim statement for the first half of this year does not suggest that the time has come as yet to revise the judgment implied by this yield margin. Sales, profits and orders were all higher than in the first half of 1958, but the latest figures include the results of the Henley Group and the London Electric Wire Company and Smiths Ltd. which were not in last year. A maintained dividend of 15 per cent on the capital as enlarged by the share issues made in connection with these acquisitions seems to be absolutely assured. But an increase in that payment does not seem to be in prospect this year. AEI's results have in the past shown a seasonal pattern and trading results in the second half of this year are likely to be better than those just published (where

SALES AND PROFITS

Profit before tax	4·84	6·23	5·01

* Excludes the Henley Group and the London Electric Wire Company and Smiths, both of which were acquired subsequently.

the boom in consumer durables has presumably made its mark). Indeed, in April, Lord Chandos was looking forward to an improvement in trade in the latter months of this year.

The AEI-John Thompson contract for the Berkeley nuclear power station is, however, being completed at a loss and though its net effect on consolidated profits in the future will be small, as much has already been written off, it must have some dampening effect on earnings. Moreover, AEI (partly in response to the advent of the Restrictive Trade Practices Court) has been in the throes of a big internal reorganisation and any benefits derived from this reorganisation can be expected to emerge only slowly. AEI will have turned the corner only when it has arrested and reversed the decline in profit margins which is still apparent in the latest results.

VICKERS

Vickers £1 ordinary stock units have been weak for some months—in fact, since Lord Knollys told shareholders at the beginning of June that "considerably reduced profits" had to be expected this year. Even so, the group's half yearly report came as a shock and the stock lost another 2s. 7½d. to 27s. 6d. Sales, profits, orders and stocks have all fallen. The setback in net profits is especially marked as £2 million has been written off against aircraft development, compared with £1½ million in the first half and £1 million in the second half of 1958. This must reflect prudent but necessary accounting for the Vanguard (for which as yet orders have not been as big as had been hoped for) and, possibly, for the VC 10 as well.

The fall in profits is due, the directors say, to declining sales of aircraft, continued slackness in certain sections of the English Steel Corporation, lack of recovery in Canadian heavy engineering and shipbuilding as well as the bigger provision for development costs on new aircraft. The group's engineering business and shipyards are still active and there are signs of "some gradual improvement" in its steel and Canadian interests. But the directors say that profits in the second half of the year will be about at the same level as they were in the first half. In that case a 10 per cent dividend, as paid for the last four years, will be only just covered by earnings. The interim dividend has been left unchanged at 2½ per cent, so that on the assumption of a final of 7½ per cent, the £1 units at 27s. 6d. yield just over 7½ per cent. That yield recognises the present slackness in profits. It will require a big increase in orders and production in the group's other divisions to make good any loss of earning power in the aircraft and shipbuilding divisions.

A. C. COSSOR

The sale of A. C. Cossor's radio and television subsidiary to Philips Electrical was described in April by the Marquess of Exeter, Chairman of the Cossor group, as "a surgical operation which will have a very good effect on the health of the group." The latest report and accounts show that while the operation was costly the patient is well on the way to recovery. The estimated loss on the sale is £364,681; it has been met from capital reserves. Part of this has been made good by selling freehold properties and by the capitalisation of profits and redemption fund provisions. The net loss of £52,594 was transformed into a net group profit after tax of £101,545 in the year ended on March 31, 1959. The 1958-59 accounts exclude the trading results of the former radio and television subsidiary, and the change from a loss to a profit has been achieved on a turnover reduced by £1 million to £6.6 million. The chairman reports that "there is . . . still scope for further progress, both in our trading results and in our financial position." Although the bank overdraft had risen from £1,683,498 to £1,944,084 by the end of March it has since been reduced by payments received from Philips. The introduction of fresh capital by EMI into Cossor (Canada) Ltd. will transfer control to EMI and the effect of this will be reflected in next year's accounts. Ordinary dividends have been resumed, with a payment of 5 per cent on the 5s. ordinary shares, which at 8s. yield 3 per cent.

SCRIBBANS-KEMP

Ordinary shareholders in Scribbans-Kemp, the biscuit and cake manufacturers, have seen net equity earnings declining steadily since 1954-55. Once again, for the year to last March, the directors report a further sharp decline in profits and the net profit of £158,239 is now little more than one quarter of the previous record level. This time, however, special circumstances seem to have accounted for much of the decline and it is clearly the biscuit section which has been the weak factor in the business throughout. This section has now been reorganised and manufacture in future will in the main be limited to company's "specialities" which are selling well. The whole cost of this reorganisation has been charged against profits in the year under review. Apart from biscuits, the other products of the group did well and sales rose to the record level of £20 million. The overseas subsidiaries are flourishing and the sales of the export company went up. On the retail side a slight recession in the grocery business was more than offset by an expansion in the trade of retail sweet stores. With these factors in mind, the directors have decided to pay a 10 per cent dividend, in comparison with 11 per cent in 1957-58. This payment is not fully covered by earnings and the decision not to cut the dividend more severely must obviously owe something to the prospect of a good recovery in the current year and to the strength of the group's liquid resources, with net "quick" assets of £524,890.

The £1 ordinary shares fell sharply on these results, but later recovered to 30s. 9d. so that they yield 6½ per cent. The difficult period for Scribbans-Kemp may now be coming to an end and though the fall in profits has been sharp, Mr H. Oliver-King, the chairman, expects the recovery to be "equally sharp."

CANADIAN AND ENGLISH STORES

Canadian and English Stores has been given a new look. The serious troubles of the past now seem to be over; the company's interest in Canada has been sold for a figure little short of £1 million; the company's share capital has been completely

Continued from page 1061

reorganised and the issued capital now totals £575,000—£150,000 in 15 per cent cumulative preference shares now quoted at 14s. and the rest in 2s. 6d. ordinary shares currently standing at 9s. 9d. The loss on trading has been reduced from £931,718 to £24,341 and the loss before tax of £68,317 has arisen almost entirely from the clearing up of the sale of Pooles. A new subsidiary, Walker and Penistans, has been added to Murray Toll and Oxleys department store, all of which are operating satisfactorily. Ordinary shareholders receive no dividend and will not do so until 1961, but the prospects before the group now seem to be brighter. The chairman, Mr S. R. Hogg, is clearly confident of future progress and he remarks that past experience has no bearing on the activities or prospects on the group as it is now constituted.

Following the sale of Pooles the fixed assets of the group have shrunk from £878,545 to £205,585 with trading assets also correspondingly lower. The sale, however, has led to an improvement in liquid resources, which have risen from a little more than £500,000 to £1,425,000; the company is thus well-equipped for expansion. Mr Hogg is convinced that "with patience and care the shareholders can look forward to the building up of a new sound, well-managed and prosperous group."

SOUTH AFRICAN DRUGGISTS

No fewer than ten separate documents are included in a package of papers sent this week to shareholders in the Standard Finance Corporation of South Africa; the South African Druggists Limited; Incorporated Industries Limited; and Banfield Land and Investments Limited. The chairmen of all these companies is Mr Wolf Heller. They refer to offers by Standard Finance to take over Banfield Land and Investments, the cumulative preference shares in S.A. Druggists, and minority holdings of ordinary shares in S.A. Druggists. Standard Finance at present owns 1,021,729 5s. ordinary shares in S.A. Druggists and its bid is for the remaining 959,271. The terms of its offer are interesting: for every ten 5s. ordinary shares in S.A. Druggists Standard Finance will pay 5os. in cash, plus ten "B" ordinary (non-voting) 5s. shares in Standard Finance, plus six Standard Finance 6½ per cent £1 cumulative redeemable preference shares. Shareholders who accept the offer will thus lose their voting rights in the fast-growing Heller group. They will not be paid any dividend declared for S.A. Druggists for the year ending October 31, 1959, nor will they be paid any dividend on their new ordinary shares in Standard Finance for the same period. Giving the proposed new 6½ per cent preference shares a possible market value of 14s., the minority shareholders in S.A. Druggists may realise a capital gain of over £2 on every ten shares under the terms of the offer. After a year they will also be earning higher dividends than they would have earned if they had been paid a dividend this year—which they will not be. The dividend from S.A. Druggists which they will not get is worth, at 22½ per cent, 11s. 3d. on ten shares. This compares with 7s. 9d. from the mooted new preference shares, plus an estimated ten per cent (5s.) on the new non-voting ordinary shares, plus 2s. 9d. on an estimate made in the offer that 5½ per cent would be earned from investing 5os. shareholders will receive in cash. In total that makes 15s. 6d.

INVESTMENT TRUST MERGERS

MERGERS between investment trusts usually take place between members of the same management stable. The benefits to be derived from such mergers are in economies secured by eliminating separate balance sheets and in being able to post single dividend warrants. Where the issued capital of one of the trusts is under £1 million the economies can be particularly marked. Shares in the smaller investment trusts often have very narrow markets and the mergers can help in widening them.

Lake View Investment Trust is to merge with **Northern Stockholders Investment Trust**, both these companies being under the same management. Following the merger Northern Stockholders will be liquidated and its activities absorbed into the Lake View group. Shareholders in Northern Stockholders will be offered 95 5 per cent cumulative preference shares of £1 each for every 100 Northern 4½ per cent cumulative preference shares of £1 each and 225 Lake View 10s. ordinary shares will be offered for every 200 Northern £1 ordinary shares.

As was forecast earlier in the year, **Second Scottish Western Investment Trust** is proposing to acquire all the assets and obligations of **Second Clydesdale Investment Trust** on a share exchange basis. Holders of Second Clydesdale preference shares will receive 21 5 per cent cumulative preference £1 shares in Second Scottish Western for every £20 of preference held. Ordinary shareholders will receive seven Second Scottish 5s. ordinary shares for every six 5s. ordinary units. Debenture holders in Second Clydesdale will receive the same nominal amounts of identical debentures in Second Scottish Western. The newly constituted group will be named the Caledonian Trust.

Imperial Colonial Investment Trust is offering 102 of its 5s. ordinary units for every 100 5s. ordinary units of **Bieckert Investment Trust**. The Biecherts ordinary shares will be purchased ex the dividend of 3¼ per cent if the merger goes through, but the new Imperial shares will not participate in the second interim of 7 per cent which is to be paid by Imperial for the year ending September 30th. If the merger is effective the financial year-end of Imperial will be changed to May 31st. A dividend of 9¼ per cent per annum is forecast, so that for the eight months period to May, 1960, a payment of 6¼ per cent is likely. Existing ordinary shareholders in Imperial are to receive a 25 per cent scrip issue.

London Stock Exchange

FIRST DEALINGS:	Sept. 16	Sept. 30	Oct. 1
LAST DEALINGS:	Sept. 29	Oct. 13	Oct. 27
ACCOUNT DAY:	Oct. 6	Oct. 20	Nov. 3

TRADING has been becoming quieter in the stock market as the date of the general election approaches. Until the end of last week, however, the tone in equity markets was firm, reflecting investors' confidence in the Government's election prospects. This week opened uncertainly, mainly on account of a new election poll which showed that the gap between the two parties was narrowing. The Jasper affair also had its effect and with Wall Street still declining the market became much quieter and the tone more uncertain. On Wednesday, however, with the Wall Street slide halted and with new time dealings beginning for the account which includes the election prices picked up.

The quiet tone of the previous week continued in gilt-edged stocks. At first many small gains were recorded, but on Monday after opening steadily an easier tendency developed, with small selling increasing. Price changes in the week to Wednesday were slight; short-dated stocks tended to fare better than the others and 4½ per cent Conversion 1962, for example, improved ⅞ to 100½. Undated stocks tended to decline slightly, 3½ per cent War Loan slipping from 65 to 64⅞. Corporation and Dominion stocks remained fairly firm. There was increased activity in Canadian dollar stocks, and particularly in Canadian bank shares, Royal Bank of Canada improving from 28⅝ to 30¼.

The Economist Indicator of ordinary shares lost 2.8 points to 289.5 over the week. Steels, not unnaturally, were very active and moved with the forecast fortunes of the Conservative party. Press comment put most leading issues up at the end of last week, but on Monday losses extended to 2s. 6d. Thereafter the individual steel share prices fluctuated widely, though new time buying brought a firmer tone. Over the period United Steel lost 2s. to 40s. 9d. and John Summers 3s. 6d. at 41s. Elsewhere, among industrials, breweries were lower; Watney Mann lost 3s. 9d. to 70s. 6d. Stores shares were quiet with some slight losses. Market leaders generally showed net losses over the period, though ICI managed to score a net rise of 1½d. to 42s. 4½d. in front of the interim dividend. Property shares were subdued under the influence of the Jasper affair, but the better companies stood up remarkably well. Town Investments was a good feature rising from 93s. 6d. to 109s., after touching 112s. on the announcement of the proposals for a share split and scrip issue.

Elsewhere in the market conditions have also been quiet. Oil shares reacted in sympathy with the rest of the market and with the decline on Wall Street, except for Ultramar which once again came under speculative influences and improved from 54s. 3d. to 58s. 3d. With little demand from the Cape, gold shares were dull, FS Geduld, in particular, lost 8s. 9d. to 175s.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended September 19, 1959, there was an "above-line" deficit (after allowing for sinking funds) of £12,744,000 compared with a deficit in the previous week of £18,364,000 and a deficit of £45,322,000 in the corresponding period of last year. There was a net expenditure "below-line" of £20,769,000 leaving a total cumulative deficit to date of £453,929,000 compared with £429,191,000 in 1958–59.

THE MONEY MARKET

THREE separate tenders had to be submitted at last Friday's Treasury bill tender to straddle the Christmas holiday. For 91-day bills the syndicate maintained its bid at £99 2s. 7d. and received a quota of 47 per cent at this price. For 90- and 92-day bills the market got a full allotment; its average allotment was probably about 56 per cent compared with 51 per cent the previous week. The average discount rate on the whole allotment of £290 million was slightly lower at £3 9s. 8.13d.

In New York the discount rate on 91-day bills fell, for the first time in six weeks, from 4.166 per cent to 3.958 per cent: the rate on 182-day bills was also slightly lower at 4.766 per cent.

Some improvement in credit conditions in London took place at the end of last week, but on Monday lack of fresh funds led to difficult credit conditions and the authorities gave a fairly large amount of assistance. Rates for overnight money have ranged up to 3¾ per cent, and bills continue to change hands with the clearing banks at 3 27/64 per cent and elsewhere at 3½ per cent.

(†) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (a) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (b) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (d) Surveys made twice a year; annual figures relate to October survey. (e) Figures relate to April survey. (g) In general males under 21 and females under 18 years of age. (*) Certain changes have been made in the classification and coverage of the Board of Trade's index numbers in this section. (s) The series for "all items" and "other items" have been revised throughout; quotations for Middle East and Venezuelan crude oil now replace the previous quotation for gasoline. Owing to a change in the tea quotation used, some revisions have also been made in the series for "all items" and "food" from June 2, 1959. (s) Revised figures for August 18th: food, 82·6; fibres, 81·3.

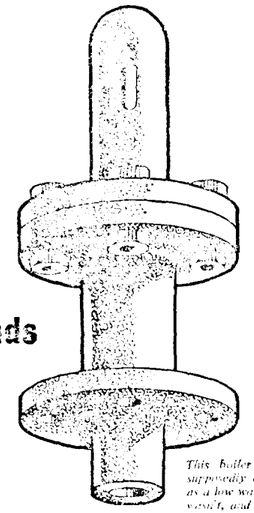
This boiler fitting cost thousands of pounds



This boiler fitting was supposedly doing its job as a low water alarm. It wasn't, and the resultant explosion not only cost the firm a boiler house, but a crippling loss of profits.

—and two people could have prevented the accident

An accident like this, caused by a defect in the working parts of the apparatus, need never happen – if a qualified Engineer Surveyor regularly inspects machinery. But first it is the responsibility of someone at top-level—a director, the secretary or chief engineer—to see that all their industrial machinery is regularly inspected and properly insured by specialists.

1859 1959 **Vulcan inspects and protects**

Vulcan, who this year celebrate a century of experience—and look forward to learning more every day—provide just such a service. It costs no more than insurance and inspection by 'general practitioners'. Our appointment is always welcomed by company engineers and insurance brokers—because they know that if defects are to be found, a Vulcan Engineer Surveyor will find them, and prevent the accident that would have happened.

MAY WE SEND YOU FREE

'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to Dept. 17

APPOINTMENTS

EMI

SENIOR MARKET INFORMATION ASSISTANT

E.M.I. International Ltd. invite applications for the position of Senior Market Information Assistant. The work involves the assimilation, study and presentation of market and marketing information relating to the Company's worldwide activities in the consumer products field. Applicants should be young men with imagination and a wide interest in international affairs. The possession of a University degree, relevant Industrial experience and knowledge of foreign languages would be advantageous. This interesting appointment offers a good starting salary and excellent prospects.

Please write, giving appropriate details and quoting Ref. INT/2, to:

PERSONNEL MANAGER
E.M.I. INTERNATIONAL LTD.
HAYES, MIDDLESEX

CHIEF ORGANISATION AND METHODS OFFICER

We are co-ordinating organisational investigations into a separate Organisation and Methods Group at our Main Works in the Midlands and we require a departmental head to control its activities.

Experience in organisation and methods is essential and preference will be given to applicants in the 30-45 age group. Salary level will depend on qualifications, experience and ability and we are prepared to pay up to £1,500 per annum for the right man.

Applications, giving full details, should be sent to the Personnel Manager, Ericsson Telephones Limited, Beeston, Nottingham, quoting Ref.: OM/EC.

GALLAHER LIMITED

makers of

SENIOR SERVICE CIGARETTES

require an

ECONOMIST

He will be located at Head Office in London and will be required to direct the activities of the Company's Statistical Section, and to interpret its findings to management at all levels. He will be required to report on any and all aspects of the Company's business and, specifically, this will include the co-ordination of the buying policy with sales and stocks. Candidates must be between 26 and 30 years with a good honours degree and at least three years' practical experience in economic analysis and/or market research. A knowledge of sales forecasting techniques and statistical methods would be an added advantage. Salary commensurate with experience. Company Pension Scheme.—Applications in writing to the Personnel Adviser,

GALLAHER LIMITED,
Granite House,
97-101 Cannon Street,
London, E.C.4.

APPLICATIONS are invited for the post of Resident Tutor in the Department of Adult Education, University of Southampton. The tutor is primarily required for developing adult education in the new town of Crawley, Sussex. Candidates should have a good degree, preferably in Economics, Government, or Modern History, and have a lively interest in Social Studies. Candidates with previous experience of arranging and teaching adult classes will be given special consideration. The salary scale applicable ranges from £900 to £1,650, with a merit bar at £1,300. Membership of F.S.S.U. and children's allowances. Commencing salary according to qualifications and experience. Housing accommodation available.—Further particulars from the Secretary and Registrar, University of Southampton, to whom applications (nine copies) should be sent not later than October 22, 1959.

PRESS AND PUBLIC RELATIONS

Assistant required in PR section of the British Standards Institution. We want someone who can write; with knowledge of, or interest in, industry; with a pleasant personality. A man in late twenties with trade and technical or provincial press background might suit; or alternatively a younger graduate who wants to learn the PR ropes.—Brief details, please, to Establishment Officer, 2 Park Street, London, W.1.

UNIVERSITY OF READING

PROFESSORSHIP OF POLITICAL ECONOMY

The Council invites applications for the newly-created Professorship of Political Economy, which will be established in the Session 1959-60.—Further particulars may be obtained from the Registrar (Room 22 O.R.B.), The University, Reading, by whom applications should be received not later than Saturday, October 31, 1959.

A MARKET RESEARCH OFFICER (EXPORT) is required by the PRESTCOLD DIVISION of the PRESSED STEEL COMPANY. Candidates should preferably possess a Degree in Economics or have received a good general education with a mathematical bias. Preference will be given to applicants who possess some knowledge of Export procedures as acquired (for example) by previous employment in a Shipping Agency or in an Export Department. The appointment will be based at the Prestcold Division's new factory at Swansea. Preferred age group 25-30 years. There is ample scope for development in the organisation. Excellent Pension Scheme in operation.—Application should be made in writing, giving full details of age, education, experience and present salary, to the Personnel Manager, Prestcold Division, Pressed Steel Company Limited, Cowley, Oxford. Please quote Ref. No. E/0051.

STATISTICIAN/ECONOMIST, not over age 27, required for Investment Department of an important financial institution at its Head Office in the City of London. Previous investment experience is not necessary but academic or professional qualifications are desirable, though not essential. Excellent prospects.—Replies, which will be treated in strict confidence, should be sent to The Personnel Officer, Box No. 2844, c/o Charles Barker & Sons Ltd., Gateway House, London, E.C.4.

VACANCIES AS

ECONOMIST

IN THE IRISH CIVIL SERVICE

Salary Scales: (A) Women and unmarried men under 30 years of age: £650 by annual increments to £1,324; (B) Married men and unmarried men over 30: £650 by annual increments to £1,526. Higher initial salary depending on qualifications and/or experience. *Maximum age-limit:* 35 years.

Essential: Candidates must—hold a recognised first or second class honours University degree in the final examination for which Economics or Mathematics or Statistics was taken as a major subject and first or second class honours obtained in that subject, *or*
hold a first or second class honours University degree in any faculty and have pursued a recognised post-graduate course in which Economics or Mathematics or Statistics was included, *or*
hold a recognised first or second class honours University degree in Commerce, *or*
hold an equivalent qualification.

Travelling expenses may be refunded to candidates from outside Ireland. Application forms, etc., from Secretary, Civil Service Commission, 45 Upper O'Connell Street, Dublin. *Latest date for receiving completed application forms:* October 15, 1959.

For other appointments see page 1060

THE UNIVERSITY OF LEEDS

DEPARTMENT OF MATHEMATICS

Applications are invited for appointment as Lecturer or Assistant Lecturer in Pure Mathematics at a salary on the scale £900 x £50 — £1,350 (efficiency bar) x £75 — £1,650 a year for a Lecturer, or within the range £700 — £850 a year for an Assistant Lecturer, according to age, qualifications and experience. The appointment will take effect from January 1, 1960, if possible, otherwise from October 1, 1960. —Applications (three copies), stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds, 2 (from whom further particulars may be obtained), not later than October 31, 1959.

THE AGRICULTURAL RESEARCH COUNCIL require a SECRETARY for their Radiobiological Laboratory near Wantage, Berkshire. Duties include general administration, estate management and finance. Age limits 30-45. Salary scale £1,000 x £30 (approx.) — £1,290. Contributory superannuation scheme.—Applications, with names of three referees, to Secretary, Agricultural Research Council, Cunard Building, 15 Regent Street, London, S.W.1, not later than October 5, 1959.

EDUCATION AND COURSES

SUCCESSFUL TUITION FOR THE B.SC.ECON. DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.Econ. (three if entrance is included) at moderate fees. 1,149 Wolsey Hall students passed Lond. Univ. B.Sc.Econ. exams. 1950-58. Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus (mention exam) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P16, WOLSEY HALL, OXFORD.

DAVIES'S Training Course (evening) for prospective TEACHERS OF ENGLISH TO FOREIGNERS. October 12th to December 9th.—Particulars from Davies's, 54 Hyde Park Gate, S.W.7. (KNightsbridge 6833.)

SECRETARIAL TRAINING, especially for university graduates and older students. Six-month and intensive 14-week courses.—Write, Organising Secretary, DAVIUS'S, 2 Addison Road, W.14. PARK 8392.

LEARN GERMAN THE QUICK WAY
LEARN IT AT ASHLEY COLLEGE. GER 8782.

B.SC.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE successfully prepares students for this Degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts.—Prospectus giving details of U.C.C. Courses for other London Degrees, G.C.E., Law Exams., etc., from Registrar, 60 Burlington House, Cambridge.

EXPERT POSTAL TUITION

for Examinations—University Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2),

METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4.

Will Julian help?

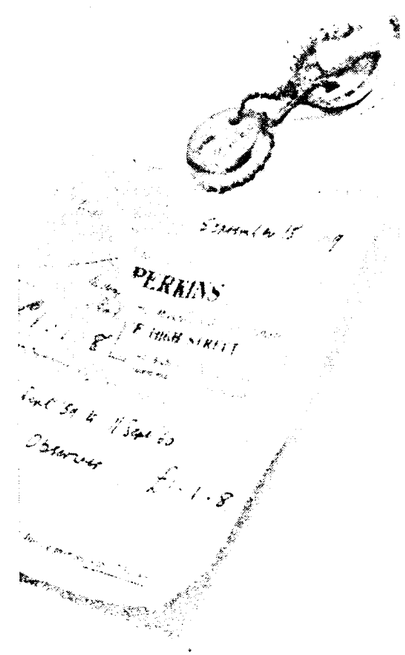
Dear Julian,

Since Mother took to 'understarding' me, you're the only one I can turn to for unwelcome advice. Give me some—or rather, no don't. What I need now is your skilled diplomacy. (Or a ticket to the Belgian Congo. It's long past closing time, and I feel melancholy and muddled.)

One day last week I ran into Lydia again, parking a miniature bubble-car hard by the Rose & Crown.

You must remember Lyddy. She was the one before the one before Polly and permanent respectability. Years ago. I thought I'd forgotten . . . Ah me. I gave her a mild fizzy drink while she told me how happy she is – i.e. bored and frustrated—with some great muscle-bound reactionary called George Bernard, and their seven young. It was mournful yet compelling, like a T.V. housewife describing a synthetic sandwich-spread.

I'm nothing if not intuitive, as you know. I saw her trouble in a flash. So much going on in the world, so little to talk about . . . sheer idea-starvation, lack of mental enzymes! Up to the axles in small beer. *I had to do something* – so the minute she'd waved goodbye I whipped round the corner to the newsagent and ordered her The Observer, free gratis, for a year. Brilliant. Well, wasn't it? Dam thoughtful, too.



Wallop! She writes back at me in such shocked and how-could-you terms, good lord you'd think I'd tried to break into the house at night! My letter torn up, my motives examined . . . Her George B. suspicious and offended, swearing at breakfast, demanding explanations . . . (Seems *he* always orders their frightful newspapers and fobs *her* off with Sunday comics!) Now I jump whenever the phone rings. These violent, jealous characters, you can never tell what they'll do. And I speak from experience . . .

Is it true, Julian, that you actually know him, this Bernard? Lydia said so. Couldn't you get him on one side and point out (tactfully) that I'm saving his marriage for him? It might help. Where would Polly and I be, every Sunday morning, if there wasn't a ring and a thundering crash and

THE OBSERVER

lying clean and glorious on the mat? Well, where?

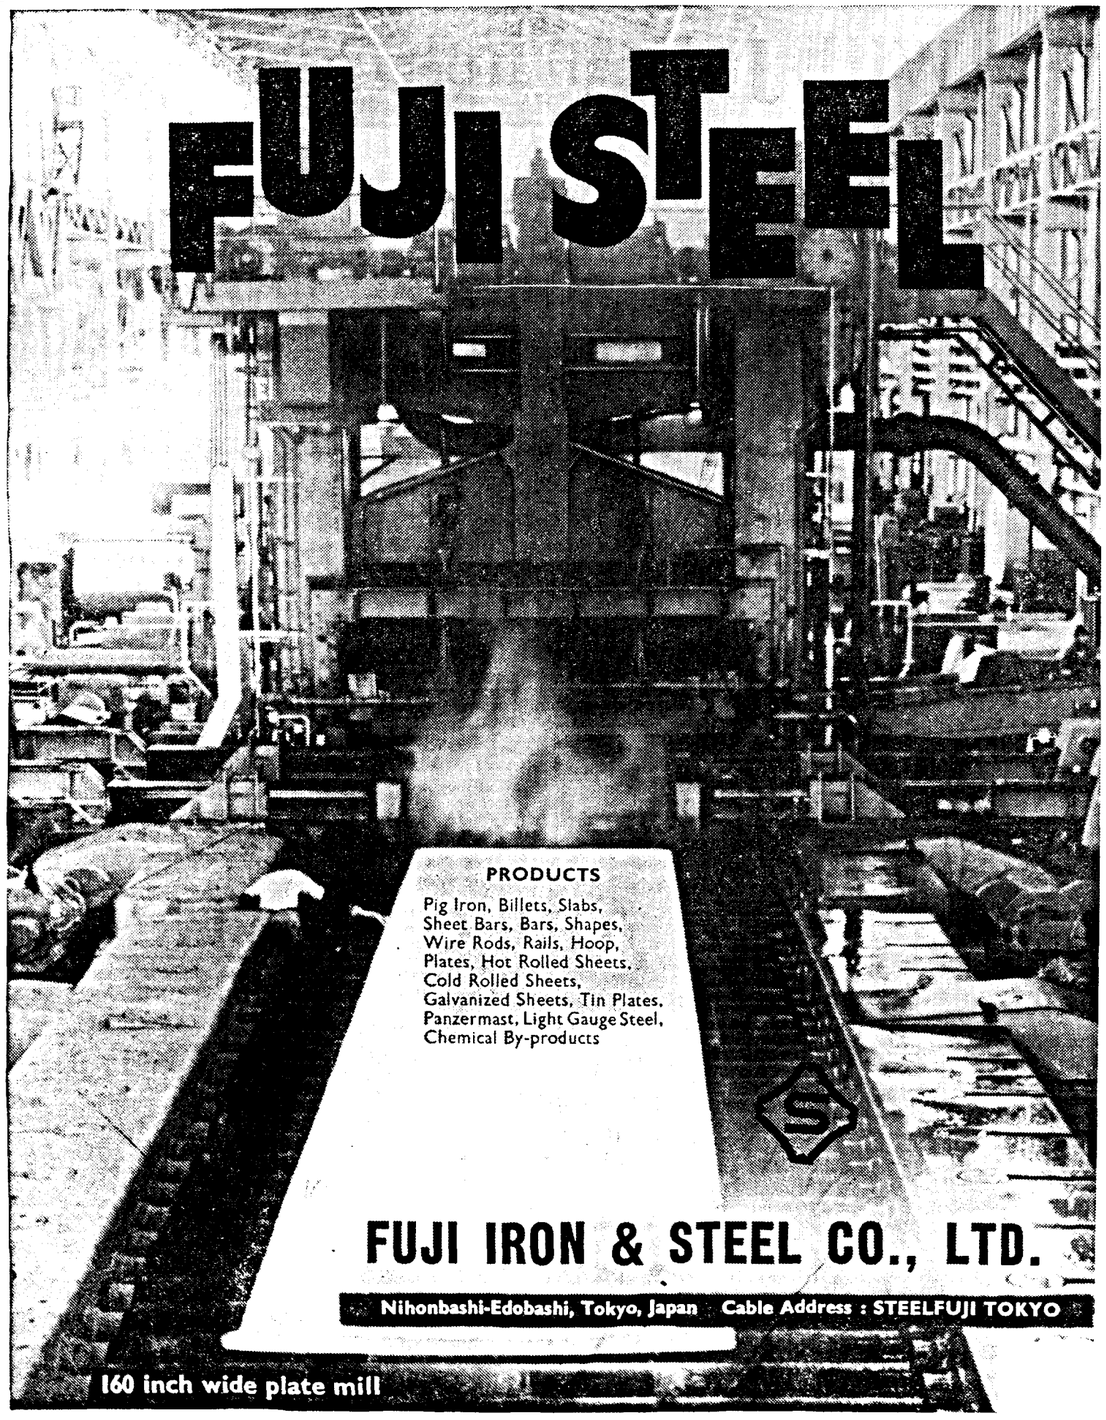
You could develop the theme irresistably – child's play for a Q.C. Say I'm an old family friend of Lyddy's . . . with a weak heart . . . and a wise, generous mind . . . primed by Pendennis, tuned by Tynan, combed by Crankshaw, brushed by Brasher, etc. Tell him it's Independent (the Ob.). Talk about the Election. Say you'll introduce him to the Editor. Tell him Top Thinkers take it. And write to

Your uneasy brother,

James

P.S. *Nearly forgot . . . I did pop a couple of squibs in the Agony (Personal) col. of the Obs. – for good measure. (See last two weeks.) Couldn't be that, could it? The disguise was complete.*

This is No. 3 in "The Observer and Mrs. X", a gripping true-life story. Next week, PISTOLS FOR TWO.



THE ONLY INTERNAL MIXER

The Shaw Intermix is the most versatile internal mixer of rubber, plastics, and allied materials. A high horse-powered drive with high pressure head, gives fast efficient mixing and permits high temperature reclamation of waste rubber.

WITH ALL THESE ADVANTAGES

- ★ Rotors mounted on roller bearings.
- ★ Interlocking rotors for maximum mixing efficiency.
- ★ Bi-metal construction of rotors for strength and wear.
- ★ Effective control of temperature.
- ★ Cooling/heating chambers inside rotor nogs.
- ★ Easily renewable wear plates.

weekends aren't made for work

Your wife is right, you know . . . week-ends are not made for work. So relax. Take in ADDO and take time off. An ADDO adding/listing machine is as good as an hour a day to the busy executive . . . saves time, saves double-checking, saves constant control of staff. It also *proves* its figuring in print. Add, subtract, list, by hand or electrically, with full or simplified keyboard. There are some hundred ADDO models to choose from, so you can standardise on ADDO whatever your work—a big advantage in your expanding business. And that's just the kind of business in which BULMERS are at home. Details of the range are well worth sending for. Ask, too, about ADDO in automatic data processing—the tape control of tomorrow's top management.

WORLD-WIDE RECOGNITION

Wherever the language of Telecommunications is spoken, S.T.C. is recognised and respected. Many engineers think mainly of S.T.C. in terms of large-scale integrated communication systems. Yet the skill and experience of S.T.C. are equally well reflected in the smallest of components—each a masterpiece of manufacture, and each an object lesson in dependability. No wonder that S.T.C. is so often the first name mentioned when discussion turns to telecommunications.

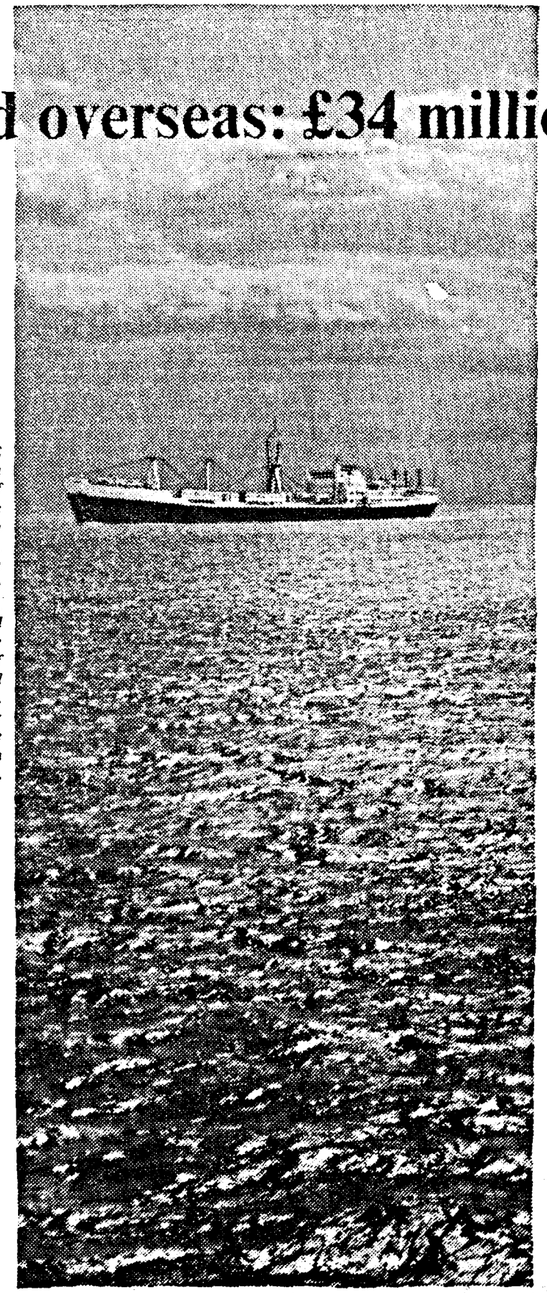
Shipped overseas: £34 millions' worth

IN THE LAST TWELVE MONTHS, no less than £34 millions' worth of tinplate and sheet steel have left the City of Steel in the form of direct exports. But that is not all. Indirect exports, goods like motor-vehicles, tractors, washing-machines and refrigerators that are made from Steel Company of Wales' products, have earned many more millions of pounds. This has been a record year for exports, achieved in the face of increasing competition in world markets.



For the City of Steel it is the end of another financial year's trading.

In due course, the accountants will present their report, and the chairman will make his statement. Without anticipating this, one important fact can be released now: that this one company will have sold over £34 millions in direct exports—£6 millions more than last year.

Most of this considerable figure represents overseas sales of tinplate.

Tinplate is traditionally a product of Wales. The City of Steel, whose various plants lie between the Welsh mountains and the sea, is its largest exporter—not only in Britain, but also in the world. Cans made from our tinplate contain Californian peaches, Jamaican pineapple, Argentine meat, South African jam, Australian plums, Norwegian sild—even Chinese lychees. Many of these cans come back to Britain to be opened.

This is the City of Steel's 1959 export achievement. It is the result of planned salesmanship and painstaking search for new markets, often in the face of intense foreign competition.

THE STEEL COMPANY OF WALES LIMITED

This is Broadsheet No. 16 from the City of Steel

THERMOTANK IN AMERICA

Now they can give of their best

in a Detroit Research Laboratory

In a climate which is often uncomfortably hot in summer and cold in winter, administrative workers and scientists in this Detroit plant now enjoy temperate inside conditions right through the year. Careful control of the atmosphere for the work itself is provided in the cold-vaccine laboratory. This air conditioning installation is one of many important contracts secured in the United States by Thermotank. Others include the supply of 4,800 high velocity units to the New State Department Building in Washington.

Thermotank can plan, design and instal air conditioning equipment for any requirement in any part of the world.

A WORLD OF BETTER CLIMATES WITH THERMOTANK

Here are a few more examples of world-wide service from Thermotank:
UNITED STATES Contracts for Texas Instruments, Standard Oil, American Telephone and Telegraph Company, John Hopkins University, Ford Motor Company and General Motors.
BRITAIN Full conversion of the liner s.s. 'ORCADES' carried out, providing an installation with a capacity of 14,000,000 B.t.u's per hour.
MIDDLE EAST Installations include the Fao Port Control and Wireless Station Building and the Iraq Spinning and Weaving Company's mills near Bagdad.
SOUTH AFRICA Thermotank installation for the new ten-storey headquarters of the United Building Society in Johannesburg, South Africa's largest office building.

ELEMENTARY MATHEMATICS IN ECONOMICS

By W. T. Dowsett, M.Ec.(Syd) University of Western Australia.

Primarily written for the student who must have a good knowledge of mathematics for studying the problems and principles of economics. W. T. Dowsett stresses the important facets of mathematics in economics rather than attempting a mammoth survey of the whole subject. This book has been specially set out to enable the reader to study the course over a maximum period of three years without adversely affecting his other work. Working examples and exercises are included in each chapter, and a special feature is the booklet at the back containing working diagrams of the problems referred to in the text. A must for the economics student. Price 30/- net.

BUSINESS COMPUTER SYMPOSIUM

This book comprises all the papers (with discussions) read at the Business Computer Symposium held during the 1958 Electronic Computer Exhibition at Olympia. At six sessions, executives from concerns of diverse nature and size—both private and State owned—gave an audience of management the benefit of their own practical experience in applying electronic computer techniques to their particular problems. Specific subjects ranged from wages accounting to sales analysis, as well as the latest and most advanced techniques of business mathematics. Every progressive executive should possess this book. Price 75/- net.

How, indeed? Or even choose a career until he has some practical experience of what it involves. How can a man say with certainty "*This is for me*" until he knows what it is all about?

When a man decides on Unilever, he does not choose a career: he chooses a wide area in which to find it. The Unilever Management Development Scheme allows a man to change direction as experience sharpens or develops his ambition. In fact, the diversity of Unilever demands that a man has breadth of outlook rather than a narrow knowledge of a particular job.

But the aim is specific. It is to develop men to the status of professionals in the art of management, men who can move easily from one particular sphere of activity to another with complete confidence in their ability to succeed in any of the 400 separate companies in Unilever. In short, they will be professional managers.

The confidence of a professional, which distinguishes the man trained in management from the man who 'just manages', is obtained in Unilever. The very scope of our organisation enables a man to advance through a variety of experience, instead of merely repeating one experience several times.

Arts man or scientist, the potential manager is the man who accepts the fact that the rewards in industry (and they are many) come to the man who is prepared to become a 'professional' at his job. In Unilever, that job is management.

• • • • •

"Six Men on Business" is a book which describes how the Unilever system of training for management works in practice. Perhaps it could help you decide on the next step towards a career. You are invited to write to the address below for a copy. If you are at a University your Appointments Board or Committee can provide one.

VOLUME CCCIII · NUMBER 6958

Thursday's Child

THE only correct poll of electoral opinion will be taken on October 8th, next Thursday. With a bare week to go, the outcome is still open. Three weeks ago, when the election campaign began, *The Economist* expressed two opinions : that the Tories then looked rather the more likely to win again ; and that they were on the whole the better choice. There is no reason now to retract either of these opinions, though the likelihood of a Tory win has to be still more hedged.

The ebb and flow of the campaign are described and analysed on other pages. It is usual for the gap between the two main parties to narrow as an election campaign goes on ; the division of the British electorate into two large and similarly sized blocks is a fact. But Labour's new-found confidence has two particular causes. One, the more important, is the belief that the Labour voters who stayed away in 1955 will turn out to vote this time, because of better organisation and pension promises. The other is the hope that in this election, because of " Suez, Nyasaland and Hola " and because of their wish to see a change after two Tory terms, many uncommitted voters will come down on Labour's side. To these two factors can be added a third. The Tories did badly in the first half of the campaign precisely because they believed that the tide was with them. Both the chronic smugness of their campaigning and the placatory and promissory contents of their lamentable manifesto were designed not to rock Dr Gallup's boat. In fact, the boat was drifting smartly Labour's way.

By now, no doubt, the Conservative leaders have heard the menacing roar of the weir round the final bend. There will be much vigorous back-paddling and many loud cries from the helmsmen before Thursday. What the result will be can be left to the returning officers. More important is what the result ought to be. What substance is there in the honest qualms of those, committed to no party, who shrink from putting the Tories back ?

What, in other words, is Thursday's choice ? Two and a half years ago, in the bleak aftermath of the Suez lunacy, when Mr Macmillan had just been installed, *The Economist* suggested what the choice before the British people seemed to be then. It was between a Conservative party that sought to wield the authority of 1927 long after it had vanished, and a Labour party that promised to spend the wealth of 1987 long before it had been created. That is what British politics has been about ever since. The question all the time has been simply this: which leader would be the more successful in liquidating his party's past—Mr Macmillan in discarding the false premises of Suez and prestige diplomacy, or Mr Gaitskell in cutting back to sense the false promises of inflationary socialism. On the face of it Mr Gaitskell had the advantage : he knew well enough when economic policy was false arithmetic, whereas Mr Macmillan was himself a trail-blazer of the Suez misadventure.

In the event Mr Macmillan now has the better of it. He has, indispensably, repaired the transatlantic alliance, which Suez broke. He has rebuilt those Commonwealth bridges that were then thrown down. He has made his peace with the United Nations, and he began this year's climb towards the " summit." Mr Gaitskell, it is true, has his successes to notch ; it is remarkable how, when the election started, he became the confident, relaxed and effective leader, whether in the flesh or on television. Moreover, since he took over the leadership of the Labour party, nearly four years ago, he has worked painstakingly not only to

acquire command of the traditional and federal motley that makes up the Labour party but also to wean away his party's policies from the siege egalitarianism of a poverty-ridden community to the expansionist aspiration of a society which is coming to be affluent. There was a moment, indeed, when it seemed that Mr Gaitskell might comfortably be winning the race in party refurbishing with Mr Macmillan.

But now, when the chips are down for the choice, Labour is doggedly committing itself again to the inflationary roundabout. The clinching point is that no sensible policy abroad, whether in foreign relations or the colonies, is possible without a firm home base. " Britain's national strength, like the national strength of any other country, is a domestic product, the resultant of its energies, skills and virtues, and of the institutions through which these things are co-ordinated." Verbally, and eagerly, Mr Gaitskell would agree with this. What, he would ask, is Labour's policy but one of domestic expansion which will, painlessly, not only pay for expensive social reforms at home, but also furnish the foundation for missionary deeds in aid of social and economic growth in the Commonwealth and among the underdeveloped millions of the world ? The entire Labour case, at home and abroad, rests upon this premise. But the brutal fact is that, by every reasonable arithmetical test, it is a false bill. Labour is again falling into the familiar bridge-player's error of " double-counting," of reckoning his high cards two or three times over when making his bid. It is again threatening to inflate demand before the resources to meet it are available, even with the expansion in production that should now be possible ; and it is still, on the face of it, lacking any obvious defence from the inflation of costs through the claims of its own trade union partners.

Much is being said, very rightly, in this election about economic expansion. Under the Tories, as the price of protecting the pound and steadying prices, Britain has fallen too far behind. But it would be nonsensical now to leap out of the frying-pan into the fire. If the price of attempted expansion under a Labour Government looks like being a vulnerable pound again and rising prices and costs once more, it is certainly not worth paying. Labour's leaders now know the danger well enough. A Labour Government elected next week would be more aware, and more genuinely convinced, than any Labour Government before of the need to safeguard the pound and to hold the level of prices. But it would already be saddled with incompatible commitments.

The fine formula of increased expenditure out of higher production without any higher taxes (except on profiteers) is directly contradicted by Labour's row of pledges calculated to make the economy uneconomic, uncompetitive and unenterprising. Controlled rents again ; artificially cheap money ; a dear fuel policy ; subsidies to failing industries ; more farm protection ; and wage settlements amicably arranged with the workers : " a feather bed for all " may, or may not, win votes, but it is certainly not the means to swift expansion. Labour has learned a lot but the old Adam is still too strong.

WHAT about the Tories' old Adam ? This is the doubt that really troubles the uncommitted voter—and the independent newspaper. The Tories, too, have shibboleths, financial and other, that may still hold them back from real economic expansion ; their manifesto, too, contains a fruity collection of uneconomic offers to voters. It is only on balance that one is clearly bound to say that the best available next Government will be Tory: to put it at its lowest—but most fundamental—a Labour Treasury would be more likely to follow a ruinous economic policy than a Tory one.

No doubt even this will not settle the choice, or ease the minds, of many of the troubled non-partisans. There is a lot of ruin in a country, some of them will probably retort, and the Tory old Adam though it may be relatively tamed at home still stalks abroad ; these voters are still deeply disinclined to reward the perpetrators of Suez with a vote of confidence and they lump Cyprus, Nyasaland and the outrage at Hola camp with Suez among Tory crimes against the " lesser breeds." They are disturbed, too, on another count. What will be the effects on the two main parties of a third Tory win in succession ? The leading Tory figures give the air now of running out of ideas, progressive drive and good new men. Labour, on the other hand, if it loses again, could degenerate into a collection of spendthrift pacifist cranks : as one perennial opposition leader in another country once put it, " while power corrupts, being out of power corrupts absolutely."

THESE are all understandable qualms ; *The Economist,* which has done a deal of criticism in most of these matters, must share them, especially where the Tories have failed to deal wisely or fairly with other races. But there is one simple point that cannot be escaped. The vote on Thursday has to choose as well as a new Parliament the next Government. A party cannot be outlawed for its past misdeeds without regard to what will take its place ; the election must be a choice and cannot simply be a purge. Moreover, Suez, Cyprus, Nyasaland and Hola cannot just be lumped together. As far as may be, though no open penance has been paid, Suez has been undone. In Cyprus the Tories have at length got out of the cul-de-sac of repression and are giving self-rule. In Nyasaland, it is disturbingly true, they are still in the cul-de-sac of what the Devlin report described as a " police state " ; but even the report, though it threw into doubt both past and future policies there, definitely accepted the need for firm action against disorder. Only the deaths at Hola seem to lack any mitigation at all.

And it is the Government of 1959, not of 1963, that has to be chosen. Fears of what might happen to the Tories in office or to Labour in opposition again, during the life of the new Parliament, cannot reasonably weigh half as heavily in the choice as the sharper immediate fear of what Labour might do in stopping the enrichment of the country now. Because of the need for independent men and fresh ideas in the new Parliament, there is a strong case for voting Liberal where the vote will not be quixotically wasted and will not be cast for some egregious band-waggoner. But where the effective choice in any constituency is between Conservative and Labour—as it is in all but between one and two dozen constituencies in the country—the real choice cannot be burked.

No side wind, however brisk, should be allowed to distract the free voter from this central choice. There are different opinions, for instance, about the effect on voters of the transactions (which are discussed again on other pages) revealed in the Jasper affair; but what has been most revealing of all, politically, has been the old intransigent attitude of the Labour party towards competitive enterprise. Scenting peculation, some of its spokesmen (less prudent than Mr Gaitskell) have gone on, in effect, to denounce all speculation—by which they mean the whole process of risk-bearing and the flow of credit by which the nation lives and grows. All the parties, like the preacher, are against sin. Whoever wins on Thursday will tighten the law, where this may be needed, against breach of trust, false pretence or fraud. But if Labour wins it will return to office with some at least of its guns unmasked again —at the worst possible moment for it and the country—against the City and all its works.

Thursday's child, the jingle runs, has far to go. That will be true of whichever Government is chosen by next Thursday's vote. Tory or Labour, it will have a long way to go to become the progressive, imaginative, creatively realistic Government this country so much needs to face the great tests and high opportunities of this second half of the twentieth century. The heavy liability of a Labour Government now is that, for the sake of outdated ideas, it could well turn the country back upon its tracks. What the Tories lack is a new forward look. It should be less hard for them to lift their face than for Labour, so suddenly, yet to cast its skin. That is why here and now, in October, 1959, the Tories deserve a vote, if not of confidence, then of hope.

Spring Comes Slowly

Wishful—or electoral—thinking should not blind people to the fact that the road from Camp David will be long and hard

FROM Camp David, the climb to a " summit " conference ought to prove an easy one. Mr Eisenhower, in a sensibly cautious phrase, has said that " many " of his previous objections to such a meeting have now been removed. General de Gaulle's attitude to a summit meeting has suddenly become much more positive ; Dr Adenauer's first reactions to Sunday's communique from Maryland were buoyant, and his praise for Mr Eisenhower's essay in personal diplomacy was warm. With Mr Macmillan and Mr Gaitskell both raring to go (and Mr Khrushchev, of course, available anywhere, anytime, as soon as he gets back from China), the ascent of the summit now seems like a gentle stroll.

This is all very nice, as far as it goes ; and, with a general election only a few days ahead, the Government and its supporters are making it go a long way. It was Mr Macmillan, they insist, who did the trick. But just what does the trick mean ? Ministerial speeches on the hustings now proclaim a famous victory ; the Soviet ultimatum on Berlin last November has been withdrawn, and the super-powers have formally adhered to the Prime Minister's version of *panch shila,* agreeing that all disputes must be settled by negotiation, not by force. Yet little Peterkin's irritating question about the precise consequences of the famous victory is not, in fact, at all easy to answer.

A careful analysis is the more important because British minds are now preoccupied with an election full of competitive co-existentialism, in which many of the rival claims boil down to: " My Daddy's seen more of Mr K than *your* Daddy." One has to bear in mind that in five days' time the voting will be over, but the issues in dispute between the powers will still be there. And in five months' time a summit conference may also have come and gone, perhaps leaving the old intractables again unsolved—as in 1955.

Only one fairly definable item has emerged from the talks between Mr Eisenhower and Mr Khrushchev. After a long verbal tussle last Saturday, the Soviet leader agreed to the President's formula for more negotiation on Berlin—that there should be " no fixed time limit," although the negotiations " should not be prolonged indefinitely." Mr Khrushchev refused to have these words put into the joint communique, but he publicly accepted Mr Eisenhower's formula on Tuesday. The President now feels freed from the stigma of negotiating under duress. This surely has more psychological than real significance. Mr Khrushchev had openly abandoned his six-month time limit for Berlin long before it fell due last May. He claims he never delivered an ultimatum at all. He told his " welcome home " rally in Moscow on Monday that those who had described it as an ultimatum were " obviously guided by the desire to prolong the cold war." (Mr Macmillan, who has just referred to it again as an ultimatum, might challenge this.)

The door to negotiation was, however, pretty wide open before the American-Soviet encounter. The four foreign ministers had spent ten weeks at Geneva grappling with the problems of Germany and Berlin. American, British and Soviet delegations had spent the better part of a year in the same city trying to agree on the monitoring of a suspension of nuclear tests. It had been agreed that a new disarmament committee, representing the Soviet block and the major western allies, should get to work, probably at the New Year. Teams representing the same two groups had also tackled the problem of surprise attack. If these various efforts had bogged down, it was not for lack of direct contact.

Before the Camp David talks, there were hopes in some quarters that these talks might at least narrow the gap on the question of policing a suspension of tests. But, on the available evidence, neither this nor any other gap was closed. It would certainly have been wrong to deduce, from Mr Eisenhower's rather confused remarks on Monday, that the American position in regard to Berlin had weakened. And neither in the conversations between the " top two," nor in those that took place between their foreign ministers and advisers, was any serious progress made toward clarifying the Soviet terms for the crucial part of disarmament—international inspection. The Geneva talks on test suspension have shown that Russia can accept international inspection in principle, yet blandly demand self-inspection in practice.

We now stand, it thus seems, close to the summit but a

long way from the goal. A four-power meeting of heads of government seems already in the offing; a foreign ministers' meeting is also mooted; and Mr Eisenhower and his grandchildren will be off to Moscow in the spring—the rather late Muscovite spring, which may mean late May or even June. But the great men are still quite likely to sit down to tables loaded with the same unresolved disputes, and to leave them unresolved when they get up again. Time was when this would have seemed a chilling prospect. These high-level encounters between contending powers used to be classified, frighteningly, as ultimate weapons, too dangerous to be used except in the last resort; failure to agree at the top, after public opinion had been led to expect a conclusion and a climax, meant an ominous order to have the special trains ready to leave, with a hint of general mobilisation in the air. But diplomacy in the nuclear age has become a different matter; and the public has come to understand this.

Mercifully few people now expect a brief personal confrontation between heads of government to lead to a magical dissolution of the world's difficulties. The generally accepted prospect is of a long series of encounters, at various levels. The perils of summitry are that much the less. It has long been feared that the heads of democratic governments, always having to look over their shoulders at a critical press, an ambitious Opposition and an impatient public, must at these meetings be at a disadvantage in relation to totalitarian rulers, and be sorely tempted to pay a high price for something to show on their return. The summit has made Britons think of Munich; Americans, of Yalta. But in these new conditions that gloomy association of ideas need not apply.

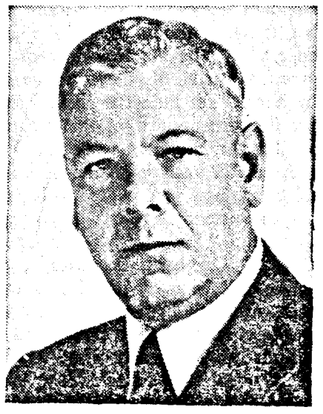
Even inconclusive meetings now serve the purpose of keeping the various balls in the air. And this is not merely a sensible tactic in a world which judges the peaceful intentions of statesmen largely by their relative willingness to forgather; it is also a prudent form of insurance. It seems hardly likely that Mr Khrushchev will precipitate a real crisis over Berlin, for example, while the gardeners at his country seat at Semyonovskoye are making sure of a fine show of spring flowers to please the eyes of the Eisenhower family. Pledges not to resort to force are, unfortunately, disposable; social engagements, fixed on the calendar months in advance, may well prove to have a more inhibiting effect in practice.

One hopes there will not be too much lamentation in the wake of the Khrushchev visit, either by those who may accuse Mr Eisenhower of having "missed the bus" or by other disappointed hopefuls who may have expected the Soviet leader to be converted to understanding of the western way of thought on his first encounter with a supermarket. There will surely be some. Only in a state where the government controls all communications can an inconclusive encounter be convincingly depicted as a triumph. But discussion of the next stages should take account of three things, all of which have their encouraging aspects.

First, Mr Khrushchev has now played his ace of trumps: never again can a Soviet ruler descend upon the stronghold of democracy as a wholly new phenomenon, with the awful mien of a man from (and, incidentally, in occupation of) the moon. Indeed, one of the strongest arguments for letting personal diplomacy have its head is that its returns, in terms of melodramatic impact, diminish so quickly, allowing commonsense to regain its grip. Secondly, the very inconclusiveness of the Camp David talks was one more salutary and needed reminder of the limitations of dramatic confrontations as a substitute for policy. Finally, for all Mr Khrushchev's air of hustling impatience, his actual policies are deeply rooted in the Russian way of life, with its sometimes infuriatingly slow tempo. His objectives are long-term ones; his negotiators are prepared to sweat it out at Geneva by the year if need be; he presides over a system which is slowly, often grudgingly, yet perceptibly evolving in a direction less unfavourable to the survival of liberty in the world. The Russian spring comes slowly; but, for those who have the patience and courage to hold on through the long darkness, it comes all the same.

Dr Verwoerd's Dilemma

The idea of Dr Verwoerd as a champion of the Commonwealth may seem extraordinary—but there are solid political reasons why he does not want to be "kicked out" of it



DR VERWOERD, on the occasion of his unanimous re-election as leader of the National party, again assured English-speaking South Africans that their mother tongue was sacrosanct as well as commercially invaluable, and that the time had not come to cut their link with the British crown. The only proviso was that an incoming Labour government in Britain might force South Africa to rush a process which everyone would prefer to take place naturally and painlessly for English susceptibilities. Dr Verwoerd spoke in English, it was carefully reported—as it is when he does. South Africans know him; it happens that people in Britain, now being subjected to the full force of their own politicians' charm, are primed to look for the calculation behind the mellowness. What is he after?

He stands on a pinnacle of personal power. A few months ago circumstantial stories were circulating about splits in his own party and his cabinet, from which three ministers were said to be on the point of resignation. The Afrikaner intellectuals at Stellenbosch and Pretoria were thinking dangerous thoughts aloud, and Mr Basson in South-West Africa was in schism. Today it is the opposition, the United Party, that has split and humiliated its leader, Sir de Villiers Graaf, while Dr Verwoerd's supporters have unanimously re-elected him, endorsing the rigours of his policy and hugging the discipline of the group of machine politicians who run the party for the leader. The provincial elections are in the offing, in which whites aged 18 to 21 will vote for the first time—and these elections were many months ago scheduled to take the Union's temperature on the republican issue.

Yet Dr Verwoerd has warned everyone, his own Pretorians as well as British Labour politicians, not to rush him on to the republic. His pained reference to British trade unionists who demand that "South Africa should be kicked out of the Commonwealth" is significant. First because it has little to do with a republic; secondly because, as he knows as well as the Labour party, there is no precedent for expelling a member from the Commonwealth (in contrast with the stroke of the pen which would enable the Union to resign). It seems that Dr Verwoerd wants to keep South Africa in the Commonwealth, and does not want to disturb the status quo by declaring a republic now. If he did covet the "mandate" for a republic which he says he must have, what moment could be more propitious to go to the country than this, when the United Party would have to decide whether to fight its dozen Progressive dissidents in their constituencies, or the Progressives would have to jettison both dignity and public life by handing over their seats to right-wing UP candidates?

And there is a further political reason for hitting the opposition when it is down. It could be as much a misfortune for the Nationalists as for the United Party that the Progressives have split off. For, purged of liberalism, professing its faith in unadulterated white supremacy and in social if not economic segregation, and more preponderantly Afrikaner in composition, the UP might become a haven for Nationalists irked beyond bearing by the fanaticism which pursues them in public and private life in Dr Verwoerd's camp. Dr Verwoerd has hurriedly, if improbably, denounced the rump UP as just as liberal as its rebels; this gambit has kept his men in line so far, even though everyone else now regards the UP as more conservative than the Nationalists, since it is just as hidebound on *baasskap* but is unabashedly opportunist on everything else. Nevertheless, the path to apartheid grows thorny, and coalitions are in Afrikaner tradition. The republican issue, if pressed, would open up all the old bitterness between the Nationalists and the men who wore Smuts's mantle in the war. To revive these memories would make assurance doubly sure for Dr Verwoerd.

STILL he insists that the time is not ripe: delicately insisting that it would be inopportune for the republic to coincide with the jubilee of the Union next year. Probably two reasons explain Dr Verwoerd's Hamlet-like hesitations. He sees, more clearly than his extremists, that South Africa is too weak yet to antagonise its English-speaking section. He realises that the real job is not to drive them out, but to Afrikanerise them; and that is taking time. The second reason is that Dr Verwoerd knows that when he has got his republic, and his supporters discover that it has solved nothing, his extremists will cry that the trouble is that true independence has not been won, and can only be won, so that all problems can be solved, by South Africa leaving the Commonwealth.

But Dr Verwoerd does not want it to leave. On the contrary, in the measure that the British have become indifferent to South African threats to quit, the Union has discovered the value of the Commonwealth. This amounts to much more than support by Britain in the United Nations. It is also more than the obvious fact that, once outside the Commonwealth, South Africa will finally lose all hope of absorbing the High Commission territories. It is that South Africa lives isolated in a disapproving world, and almost the only garment to shield it from the chilly wind is membership of the Commonwealth, which provides innumerable unseen bridges to the Asian and to the newly emergent African states, and protects it from many embarrassments.

It is true that the Union may not in practice suffer too much yet from world criticism, trade boycotts or diplomatic isolation. But knowledgeable South African leaders want no more of these than they have got—for, subtly and persistently, they keep the flame of resistance alive among the helots. While the helots feel that South Africa is completely out of tune with world trends, and that they have simply to bide their time, apartheid can never be a solution, but only repression; and repression is only a temporary expedient.

Because apartheid is so little more than mere repression, the force of events drives Dr Verwoerd inexorably towards more totalitarian methods. He will not shrink from these; and he has already begun to try to discipline foreign press representatives. But the process has far to go—and he cannot relish it, whatever handle the press commission report may give him. Meanwhile, the split in the United Party has unleashed a dozen Progressives with seats in parliament, aching to say things which for the party's sake they have bitten back on their tongues for many a long year. They are backed by the economic power represented by Mr Harry Oppenheimer and his companies. Their views will be news, abroad and at home. They are likely to find many common causes with the Liberals, and they have stretched out their hands to the African leaders. Their political programme, it is clear from Mr Harry Lawrence's statement on his resignation from the UP, will be more advanced than Sir Roy Welensky's. Even if this does not go far enough for the African National Congress, it will be a shot in the arm for resistance to apartheid.

This is Dr Verwoerd's dilemma. He cannot sit down under this—but to fight the new surge of protest he must strengthen measures which will make it harder (certainly for internal reasons) to keep South Africa within the Commonwealth. Yet, paradoxically, the only safety for the Afrikaner Republic which is his objective is, in the modern world, to veil itself in Commonwealth membership, to warm its cold thighs with Commonwealth relations. Already Dr Verwoerd is trying to conceal the truth about "Bantustan" by declaring that the African "states" within the Union are being developed just as Britain is developing self-government in Basutoland and Bechuanaland. As a result he has been forced to promise "Bantustan" ultimate independence—a promise (however insincere) which drew a howl of protest from Sir de Villiers Graaf. Thus the man of principle has already become the man of expedients. Great as is his strength, it is less than it appears; the forces which oppose him are stronger than they look.

THE ELECTION OF 1959

Comment upon the course of the election campaign, based mainly upon despatches from correspondents in the constituencies, is presented in this special section of *The Economist*.

Anybody's Election?

WITH a week to go before polling day, there is now a very real possibility that Mr Gaitskell will become Prime Minister of Britain on October 9th. It is not yet a probability. In individual marginal constituencies, at any rate up to the middle of this week, correspondents were still reporting a generally higher degree of optimism on the Labour side than on the Conservatives'; but there is now so much evidence that individual agents and candidates can get so far out of touch with reality that it is more and more necessary to cling to the relative objectivity of the public opinion polls.

Looking at these polls, one's first surface selection at the moment would presumably have to be for the return of a Conservative government with a slightly reduced majority. The *News Chronicle* Gallup poll suggested on Thursday that the Tories were still 1½ points ahead, compared with the Tory lead of 4 points that this poll showed last week and the 2.9 per cent Tory lead in the actual voting in 1955. The *Daily Mail* poll on Monday had shown the Tories with a 2 points lead, while the *Daily Telegraph* poll of marginal constituencies on Wednesday suggested that the Tories now had a lead of 2 per cent in the constituencies it covered, which is exactly the same as they had in those constituencies in the voting in 1955. The most favourable of these polls (from the Conservatives' point of view) therefore points to an election of virtually no change, while the other two point to a swing since 1955 of between ½ and ¾ per cent to Labour. *The Economist's* estimate of the effect of Liberal interventions and of population movements in crucial constituencies (see page 27 below) is that a general swing to Labour of about 1½ per cent compared with 1955 would be liable to bring a situation of deadlock in the Commons, and that Labour would probably need a swing of around or over 2 per cent to achieve a workable overall majority.

But, just below the surface, the underlying trends in the polls are potentially favourable to Labour. The sway towards the left has persisted for two weeks now; if the trend is projected until polling day (allowing for the time lag between interviews and publication) it would be sufficient to bring with it a small Labour majority. A high turnout is indicated. There is some evidence that there may be some surprising regional variations this time (the results of five small but very interesting local council by-elections that took place last week are discussed on page 24 below), but they are not necessarily regional variations that will be unfavourable to Labour. Above all, while polls during previous election campaigns have shown people making up their minds more firmly, and have usually shown Liberals who had no local candidate to vote for veering towards the Conservatives, this time they have shown an unprecedented increase in the don't knows. When the don't knows were pressed by this week's *News Chronicle* Gallup poll to state which party they were inclined to favour, a majority seemed to have a preference for Labour. The standing army of vaguely anti-Conservative doubters could offer a great prize for Labour's more zestful campaigning—provided the party has not over-reached itself.

It is, however, this last proviso that will overhang the last week. It is only during these last few days that the campaign has got into full rhythm. Many agents believe in an effort lasting a mere ten days. Some constituencies did not hold their first meetings until Tuesday or Wednesday. Much therefore remains to happen. If the Labour campaign has got so far in the quiet period, should Tories be speculating gloomily where it may not get when in full thunder? Or should Labour agents be wondering worriedly whether the Conservatives may not have been astute in holding back for the counter-attack which they are now so plainly and belatedly launching?

ONE'S own impression is that there is scope for a sharp Conservative come-back, though it is by no means certain that the central organisation of the party is efficient enough to effect it. Here one must start by stating a controversial view about why Labour has made most of its recovery so far—a view with which nearly all Labour candidates will flatly disagree. Right up to June of this year, it should be remembered, the by-elections in the expiring Parliament were showing a swing to Labour compared with 1955; it was a swing which suggested that Labour might win sufficient seats in a new election to bring the Commons to deadlock, even though the massive potential Labour majority that existed before the bus strike of May, 1958, had plainly evaporated. After June of this year, however, there was a rather illogical reaction against Labour in the public opinion polls; as the realisation sunk home of how great an opportunity the Opposition had thrown away in the preceding eighteen months, people indicated to the pollsters that they rather agreed with the very general newspaper judgment that the party led by Mr Gaitskell was unattractively wet. When the election campaign began, there were therefore many more dissident but traditional Labour voters who had to think again whether they really wanted the Tories to return to power than there were dissident Tories on the other side of the fence. This was a familiar electoral situation, tailor-made for there to be some swing back to the left during the campaign. One thing that might have stopped Labour from winning its waverers back would have been if Mr Gaitskell had made an early impression of irresponsibility; instead, however, his image came over very well.

If this interpretation is correct, its importance lies in the fact that Labour has drawn an entirely different conclusion. Labour propagandists are convinced that they have achieved their "great recovery" because of their pensions offer and other auctioneering; and as their excitement about the recovery has mounted, so has their shouting of their promises—to a point, the Conservatives must hope, of giving too many hostages to fortune. Among the floating voters of Britain there must be a few hundred thousands who do not really believe that Labour can increase spending by the amounts it promises, fulfil Mr Gaitskell's extraordinary pledge that a Labour government would never again increase income tax "under normal peacetime conditions," bring interest rates down, and avoid inflation—all at the same time. It is on this front, with accusations of irresponsibility, that the Conservatives are bound to mount their counter-attack for this last week; perhaps there will be a moral story to tell if they succeed.

Nevertheless, it is far from certain that the Conservatives can carry the hostages away. They are struggling under three disadvantages. First, even if (and it is still an if) Labour has misread the lessons of the last two weeks, the Conservatives certainly misread the lessons of the preceding three months. They believed the public opinion polls, not the by-elections. They decided they were certain to win a quiet campaign, and that a low turn-out would help them most. They found themselves rigidly committed to a dull and vote-shrimping manifesto, and to a low-keyed election. One is irresistibly reminded of the American election of 1948. The difference is that the Conservatives saw their danger this week with ten days to recover in. Governor Dewey never worried until the results began to come in.

Secondly, the Tories have been caught on the hop by the improvements in Labour's organisation. Admittedly the Tories' own canvassing organisations are mostly at least up to 1955 standards and in many cases improved; especially now that the polls suggest there is a danger they may lose, volunteers are beginning to pour in. But the most important of all organisational activities is already over, and it looks as if Labour has stolen a march in it. The last day for registering for postal votes has passed. Lord Poole told a press conference this week that "the detailed returns on the postal votes reaching Conservative Central Office are remarkable, and it would be fair to say that the Conservatives seem to have between 60 and 70 per cent of them." What he did not say was that, in many crucial areas, the Conservatives more usually had between 80 and 90 per cent of postal votes last time.

THIRDLY, even if the volunteers now pour in, it is not at all clear that the Conservatives know what to do with them. They are still wasting a lot of time on indoor evening meetings. One must admire the heroism of those who attend these meetings—sitting on infants' desks or on hard benches without backs, in dark and ill-lit schoolrooms, and listening to rather incompetent chairmen introducing rather dreary speakers. But it is difficult to believe that even the best of schoolroom speeches makes a single convert; the audience is almost entirely composed of party faithfuls and the only effect of these meetings has been to keep them from getting on with the job of canvassing. Labour, of course, has been making some of the same mistakes. But whereas last time the dominating impression of the election campaign was of chaotic incompetence on the Labour side, this time the main impression has been of an amiable muddle remaining on both sides—of failure by the Tories as well as Labour to advance to meet the automation age.

Everywhere in both parties' committee rooms one has found rushed, friendly people consuming innumerable cups of tea, eager to talk about their prospects, massively ill-informed about what the other side is doing and about the scale and impact of television electioneering. Everywhere this week experienced correspondents, talking to agents and candidates, have felt them getting more and more out of touch, increasingly caught up in their own hopes and fears, overworked and talking about the issues to none but their own supporters. More and more the local party organisations clutch at straws. Questions at meetings are taken as representative of a conversion, a snub on a doorstep or an ill-attended meeting is generalised into a broad constituency-wide or nation-wide trend. Agents are particularly prone to idealise their own candidate and to see him as transcending any national tide. Local party organisations are often extraordinarily unaware of what the other side is doing. There are seats which both sides seriously expect to lose, and there are even more seats where both sides are genuinely utterly confident of victory. There are seats where each side claims to have superb organisation itself—and to be honestly bewildered at the almost total inactivity of its opponents. That is why, despite the unprecedented publicity brought to bear upon it, this campaign of 1959 must be called, more than ever, the uncertain election.

Liberals Rise in the West

Our special correspondent who has been enjoying himself on western hustings reports:

FOR the small band of hopeful Liberals, who are the principal aggressors in a strip of Tory territory that runs with a few breaks from the extremities of Cornwall to the fastnesses of Wales, this is a Suez-and-sewage election, with the emphasis on the latter. In many a village hall in Cornwall, Devon and the remoter parts of Hereford, gaslight and Aladdin lamps are still the symbols of Tory prosperity. In Herefordshire, perhaps the hinge of Liberal fate, hard under the Black Mountains, where inbreeding seems excessive and young men seek their fortunes by going east, Radicals are people who look to Liberal Mr Day to bring light (and with it perhaps television) where Tory Mr Watt has failed to deliver electricity.

In a sense, the Celtic fringe has a political pattern as frozen as its ancient amenities. Out of its pre-socialist tradition of politics as a matter to be settled between Tory and Liberal, the Liberals hope to kindle a post-socialist revival. By habit the Tories are inclined to rely on propagating the impression that the south west must rally round its natural leaders to repel the continental nastiness of socialist intrusion. Their candidates represent nicely shaded variations of landed gentility—Mr Watt of Hereford the smoothest, Mr Lindsay of North Devon the simplest and stolidest, Mr Browne of Torrington the most rugged and sporty (he rode Knuckleduster in the Grand National), and Colonel Scott-Hopkins of North Cornwall the most military. They have reacted in different ways to the noisy nuisance of Liberalism. Oddly enough it is Mr Browne, behaving like an incumbent in the face of Mr Bonham Carter's winning margin of 219, and Colonel Scott-Hopkins, with a Liberal breathing down his neck only 1,000 votes behind, who ignore the Liberals totally—and campaign against the last Labour government. North Devonian Tories do go so far as to add a sticker reading "and the Liberals" to the national party's slogan "Don't let the Labour party ruin it," while Mr Watt, a whip, has let himself be drawn into direct battle at Hereford by Liberal reproaches that he is "a mere cog" in a party machine.

But even in the west social patterns change. "In the old days," says the oldest Liberal in a small Devonian village, "you knew which were Tory and which Liberal. But now there are so many foreigners come in, you just can't sum 'em up." Even in the rustic west, such towns as Barnstaple, Bideford and Hereford contain industrial areas which last time turned out solidly to vote for the Labour candidates, who came third. The Liberals' problem, as their realistic candidates understand, is not only to rouse tenantry against squirearchy, but to sell the ironical notion that for progressives of all hues a Labour vote is a wasted vote.

Fundamentally Mr Jeremy Thorpe and Mr Robin Day, the two postwar presidents of the Oxford Union who wear the yellow Liberal rosettes in North Devon and Hereford, are campaigning not against Mr Macmillan and Mr Gaitskell or their local proxies, but against Mr David Butler. The psephologists, with their uniform national swings, are in Mr Day's opinion "the most sinister influence in British politics." Both these Liberal campaigns are exercises in the cult of personality. Mr Day had little option. Despite Mr Frank Owen's achievement in the 1956 by-election in lowering the Tory majority to 2,100, the Liberal organisation in Hereford remained extremely rudimentary until the arrival a fortnight ago of a seasoned agent from London. Indeed, just because Mr Owen's near-miss was attributed entirely to his personal flair the local Liberals expect his successor to show that he is of the same mettle and carry all the burden.

Mr Thorpe, on the other hand, is deliberately conducting an

American style campaign—with "This Time Jeremy" campaign buttons, a blown-up photograph outside the Barnstaple Liberal Club, and huge posters captioned "Jeremy a Thorpe for the Future" (a slogan which has puzzled some unsophisticated Devonians, who point out that Mr Thorpe's middle name does not begin with A). His likeness stares from the hoardings to match every cagey spaniel portrait of Mr Macmillan. But, having nursed the constituency so long that his way with Devonian anecdote now nearly matches his celebrated imitation of Lady Violet Bonham Carter, Mr Thorpe is working to a long thought out plan that gives first priority to thorough organisation. Indeed Liberal organisation in North Cornwall and North Devon—and, since the by-election, in Torrington—resembles more nearly that of at least the Labour party elsewhere than the pitifully improvised arrangements of Liberal interveners in, say, the London boroughs.

Can Mr Bonham Carter hold Torrington? Although his personality contrasts so strikingly with his Liberal neighbours—his increasingly forceful speeches convey the image of scholarship rather than showmanship—his problem is essentially the same. Since he cannot now expect the Tory votes that he received in the by-election, he has to find a way of squeezing the juice out of the Labour orange. He has the advantages of incumbency and of a specially commissioned economic plan for North Devon—and, like Mr Thorpe only more so, the presence of a remarkable mother. If Torrington falls and North Devon falls short, the Liberals might still have a south-western beacon in North Cornwall, where Mr Malindine has statistically the best chance of all Liberal challengers to capture a seat. But his trouble, despite a strong personal following, lengthy nursing and a high state of organisation, is that the Labour orange was squeezed almost dry at the last election.

WHILE Liberal chances can only be described in highly speculative terms, there is absolutely no sign at all in this part of the country of the electoral apathy which is supposed to assist the Tory Ascendancy. Agents are running campaigns in the old-fashioned way with four or five meetings an evening; townsmen and cottagers are deserting the telly to fill the market places and village halls; and questions are being asked about Suez and other aspects of foreign policy.

The most dramatic meetings of all are held every Saturday evening in front of an immaculately restored Jacobean house in High Town, the centre of Hereford. In a town so sleepy and obsessed with petty local personalities that one would expect a parliamentary election to pass it by, a crowd of several hundred collect outside the lorry hustings to hear each of the candidates in turn. Last Saturday a tepid survey after the Macmillan manner by the present young upper crust incumbent dissolved into chaos as the Tories overshot their time and Labour loudspeakers kept up a continuous blare of "Typical Tory Tactics." There followed an awkward proletarian interlude while Labour councillors, looking and sounding rather like Bernard Shaw's idea of the working man, showed by their relentless parochialism why it is that, although usually the strongest group on the city council, the Hereford Labour party never comes near winning a parliamentary election, and a Methodist parson contrasted Suez with the groundnuts scheme to demonstrate that all Labour fiascos were altruistic fiascos.

Finally, as the pubs emptied and the Young Conservatives choir got into voice with its spoiling ditties, a bouncy, duffle-coated Mr Day lashed into everybody in authority, to the huge delight of the mob. His particular targets were party machines as symbolised by his Tory opponent, anybody who alleged (of course, untruthfully) that Liberals would lay a finger on farm subsidies, and the *Hereford Times*, the organ of the local Ascendency, whose editor, Mr Peacock, he linked with the Tory agent, Mr Alcock, in the equation "Alcock plus Peacock equals Poppycock." The meeting concluded at 11.30 p.m. when drunken steel erectors stormed the Liberal lorry shouting "What about the trade unions?"; a sturdy Welshman made as if to strike the Liberal candidate, but seized him instead by the hand to declare that Lloyd George had been born again; and a Tory heckler broke the microphone.

Whether defiance of the psephologist is just a case of biting the thermometer to deny the presence of a fever only election day will tell. But if Liberals go down in the west country, they will certainly go down fighting for . . . well, fighting for something, even if not undiluted Liberalism. As the last word in electioneering enterprise, their shaggy Shetland leader plans next week to descend by helicopter like a prophet out of the clouds to bless the arms of the west country faithful.

The four constituencies discussed in this article are:

(1) **Hereford:** 1956 by-election result: J. D. G. Watt (Con) 12,129; F. Owen (Lib) 9,979; B. C. Stanley (Lab) 5,277. Conservative majority: 2,150.

(2) **North Devon:** 1955 general election result: J. Lindsay (Con) 16,784; J. J. Thorpe (Lib) 11,558; H. Heslop (Lab) 7,272. Conservative majority: 5,226.

(3) **Torrington:** 1958 by-election result: M. Bonham Carter (Lib) 13,408; A. Royle (Nat Lib-Con) 13,189; L. Lamb (Lab) 8,697. Liberal majority: 219.

(4) **North Cornwall:** 1955 general election result: Sir H. Roper (Con) 16,824; E. Malindine (Lib) 15,220; V. E. Cornford (Lab) 3,465. Conservative majority: 1,604.

In the Constituencies

WITH all eyes peeled for straws in the wind that might reveal what is likely to happen to the country next Thursday, some general comment on the course of the national election campaign has this week been switched to Notes of the Week (page 28). On page 27 we publish a scorecard of "sensitive indicators" of the election, listing what seem to be the 63 most marginal Conservative seats and the 59 most marginal Labour seats for next Thursday, judging by the swings required, the pattern of candidacies and housing developments since 1955. In our final notes from the constituencies below the convention is repeated of printing in **bold type** the name of any seat that could change hands as a result of a 3 per cent swing away from the party presently in possession of it.

Straws in the Wind

THERE is some patchy evidence that the general swing across the country may not be as even as usual at this election. Indeed some straws suggest a regional pattern which could give most pre-election analysts quite a shock. Five small but very interesting local council by-elections took place last Thursday. Two of them were in Norwich; they were in wards where direct comparisons could be made with the local election results two weeks before the general election of 1955; and they showed a clear swing to Labour compared with that time. Across the two wards as a whole, with 6,000 people voting, the swing to Labour was about 2 per cent; in one of the wards it was over 3½ per cent. The Tory parliamentary seat of **Norwich South** (2.5 per cent swing needed to overthrow it) is on our table of marginal Tory seats on page 27, and in the same county are at least three other Tory marginals—**Yarmouth** (1.1 per cent swing needed by Labour), **Norfolk South** (2.2 per cent swing needed) and **Kings Lynn** (1.7 per cent swing needed). The Tories' fifth seat in the county is Norfolk Central which Sir Frank Medlicott held by a majority of 5,563 in a straight fight in 1955; but Sir Frank has been disinherited by his local association because he disapproved of the Suez adventure and a Liberal is intervening to fight his would-be successor this time. The results of these Norfolk seats will not come in until Friday morning, and the Tories cannot feel altogether happy about any of the five of them. Their hopes of winning Labour's two marginal seats in **Norfolk North** and **Norfolk South West** must also be wilting.

The other three local council by-elections last Thursday were in Lancashire, and they presented a surprisingly different picture. In Ormskirk, where 6,700 people voted, the Tories marked up a 6 per cent swing towards themselves compared with the local elections in the same ward in May, 1956. In two wards in Preston, they marked up a combined 5 per cent swing compared with May of this year. It should hastily be said that, quite apart from the small samples involved, these results do not indicate an equivalent Tory recovery compared with 1955. Indeed the Tories were doing so badly in the country in May, 1956, that there can be some dispute whether the Ormskirk result represents a net swing compared with the last general election at all; and the Preston results probably do not indicate a swing of more than between 2 and 3 per cent compared with that time. But they have undoubtedly given local Tories a much-needed fillip.

In general, local council by-elections in the last few months seem to have conformed to the pattern of previous parliamentary by-elections rather than of the pre-election campaign Gallup polls. They have suggested that in many parts of the country the Tories are still slightly behind the stage of popularity they had reached in 1955, and are ahead of it only in very few. But perhaps surprisingly, Lancashire has recently been one of the Tories' brighter local government spots. For example, in the local council in the Labour marginal seat of **Accrington** (1.6 per cent swing needed) Labour has recently lost some significant ground.

From Far and Wide

CORRESPONDENCE from north-east England suggests that the campaign there is rather flatter than elsewhere, and there seems to be less bursting Labour enthusiasm. Nevertheless potential Labour gains in order of likelihood are described as: **Darlington, Carlisle, South Sunderland.** If there were a Conservative gain it would probably be for Commander Kerans (of HMS *Amethyst* fame) at **The Hartlepools.**

From Wales a correspondent reports that he does not expect any Welsh seats to change hands. Labour is vulnerable to the Government only in **Swansea West, Cardiff East** and **Pembroke**—and he does not expect a single one of them to go. Merioneth might possibly go from Labour to the Liberals or even to Plaid Cymru. Denbigh might go from the Conservatives to the Liberals—but it is improbable. Labour would have to defeat Mr Thorneycroft to win a new seat—and they won't do that. Plaid Cymru are putting up twenty candidates and look like increasing their vote substantially. Their interventions will not attract Conservative votes at all seriously, but whether they will mainly hurt Labour or the Liberals one cannot make out. The Plaid are a rather charming, highly amateur body of gradualists, who are not anti-English with any bitterness—only anti-anti-Welsh people. They themselves cannot account convincingly for the recent growth in their support—no special *new* grievances have grown up in Wales in recent years.

A special correspondent ending a tour of marginal constituencies in London reports: The Conservatives won **Ealing North** by 246 in 1955, even though there was a Liberal (securing 3,770 votes) in the field. With no Liberal standing now, the Conservatives might be expected to be hopeful, but they are cautious. Since 1955 the electorate has grown by nearly 3,000 at the Labour (Northolt) end of the constituency as the result of steady council building, and has fallen slightly in the Conservative areas of Greenford and Hangar Hill, because of the decline of "doubling up" with in-laws. This, though a tribute to the operation of the Rent Act, will not necessarily ensure a Conservative victory. In 1955 Ealing North was won largely because, at the Northolt end, Labour voters abstained.

Medway Moves

A special correspondent reports:

"THE death knell of Socialism has been sounded in the Medway towns," declared Sir Alfred Bossom after a Conservative dinner at Rochester last month. "We have a master plan." Exactly what this consists of in **Rochester-Chatham** and **Faversham,** two marginal Labour seats in the area, is not at all apparent.

At Rochester, in fact, Labour look safe, even though their agent resigned "for reasons of health" only three weeks ago. A gaggle of bureaucrats from the National Union of Public Employees is running their efficient machine, the traffic chaos in the town (and the slow progress on the by-pass) is on their side, and above all they have the popular Mr Bottomley, who has increased his majority every year since 1945, as their candidate. Threatened redundancies at the Royal dockyard at Chatham have so far made little impact, because private firms and the army have absorbed local unemployment. Conservative hopes are pinned to the handsome Mr Critchley, a public relations expert, sixteen of whose photos grace the outside of the local Conservative headquarters. Perhaps Sir Alfred Bossom merely made a spoonerism at that dinner—and meant plaster man, not master plan?

The campaign at Faversham, the country's most marginal seat which Labour won by only 59 votes in 1955, has started by being almost as colourless as the constituency itself. The Labour slogan "more than 59 in '59" is not an ambitious one and Mrs Olsen, the Conservative challenger, has so far done little better. Sheerness dockyard is in the constituency; two firms described even by Labour as "well-established and with tremendous financial backing," are taking it over next year; but Labour may be able to exploit some uncertainty about redundancies, and to improve the low turnout in Labour strongholds in Sheerness in 1955. Otherwise there are no local issues in a flourishing constituency of large factories (such as Bowaters at Sittingbourne) and good agricultural land. The campaign is on pensions, prosperity, prices, peace but no personalities, *please.*

Actually, only the personalities are of any interest. Mr Wells, the rather stolid Labour incumbent who has held the seat—with a declining majority—every year since 1945, was a Transport and General Workers Union organiser. He has the advantage of being a local man. Mrs Strom-Olsen (she has dropped the Strom for the campaign) is a hard fighter but comes from Essex. She follows Sir Alfred Bossom's son and Lord Woolton's son-in-law in fighting Mr Wells for a seat that should swing with the country as a whole.

Liberals and the Majority

AT the last general election the Conservatives won a majority of 68 seats over Labour and of 60 over all parties combined. The Tories are bound (at least eventually) to gain the two former Sinn Fein seats this time, since the Sinn Feiners opposing the Unionists there again cannot sit because they are convicts currently in prison; on the other hand, Labour won Carmarthen from the Liberals in a by-election in 1957 and almost everybody expects them to retain it. This is the basis for the estimate (see the following page) that Labour will need to win 38 Tory seats to secure an absolute majority, although it will need to win only 35 Tory seats in order to secure a majority over the Tories alone. The latter figure will be reduced if the Liberals gain any seats from the Tories.

The Liberals' best hopes for gains from the Tories seem to be, in probable order: (1) **North Cornwall,** (2) **Torrington,** (3) **Inverness,** (4) **Hereford,** (5) **North Devon,** (6) **Denbigh,** (7) perhaps **Ross and Cromarty.** All these results will not be announced until Friday. A possible earlier pointer to Liberal strength in the west country might be the announcement at Exeter, where the Tories were not absolutely safe last time (6.3 per cent swing needed by Labour to unseat them in a straight fight) and a Liberal is intervening.

Election Scorecard

APPROXIMATELY 116 of the 630 constituencies now being contested could change their allegiance between the two main parties as the result of a 3 per cent swing either way. These seats (57 of them won by the Conservatives in 1955, 59 by Labour) are shown in the table on the opposite page; we have added to them 6 "additional Tory marginals" where correspondents have suggested that local factors give the Conservatives some special reason to be worried. It is in these 122 places that, next Thursday, the course of British history is most likely to be swayed.

On present indications, Labour will need to win 35 of the 63 Tory seats in the table (or of other Tory seats outside it) in order to become the largest party in the House, and it will need to win 38 seats in order to secure an absolute majority over all other parties combined. If the Liberals win some seats from the Tories (see page 25), Labour will have to win less than 35 seats in order to become the largest party, but it will still need 38 seats for an absolute majority.

The names of the seats are set down in the form that the BBC has decided to use in its television and radio announcements of the results, alphabetically in each column. Viewers and listeners who used the equivalent table that we published last time could, we claim, work out what the government's majority was likely to be more quickly than did the programme commentators themselves or than could viewers using any other method.

Most Marginal Tories

THE centre column of the table contains the names of nine seats won by the Tories in 1955 but which we have listed as losable even "without a swing" this time because of a new pattern of candidacies or because of population movements. The notes at the bottom of the table are largely self-explanatory. All seats being contested by Liberals are italicised, and those where no Liberals stood in 1955 carry an asterisk as well. Where there has been a major movement of population since 1955 which is likely to hurt the Tories (e.g. the building of large new council housing estates) the constituency concerned is followed in parentheses by an (A). Where population movements seem likely significantly to hurt the Labour party (e.g. by large slum clearance schemes) the constituency concerned is followed by a (B). The symbol (X) indicates that a constituency has been consigned to a particular column because of special factors affecting the pattern of candidacies. Estimates of the likely effect next Thursday of such changes of population or candidacies are inevitably largely a matter of guesswork, though we have based them on experience in the past.

If, say, Conservative seats that are italicised and marked with an asterisk start falling heavily, while other seats in the same columns are held, that will be a sign that we have underestimated the damage done to the Tories by Liberal interventions; and readers can make allowances for this when looking ahead to whatever other likely Tory losses may be to come. Of the nine very vulnerable Tory seats in the centre column, **Rochdale** (gained by Labour in a by-election in 1958) seems an almost certain Tory loss compared with 1955; and the Tories will also be very hard put to it to hold **Glasgow-Scotstoun, Hitchin** and **Gravesend,** but the other five Tory seats in this column should be savable by relatively small local swings in their favour. We have not marked any Labour seats as being "losable without a swing," but **London-Holborn & St Pancras**—and possibly two of the other Labour seats in the same column which are followed by a (B)—must come very near to this category.

Use of the Table

BY the time that a dozen or so results are in it should be clear whether the country is in fact swinging right or left or nervously standing still. It should thus become clear whether it is on the right hand, left hand or middle columns that the reader should concentrate while awaiting changes in control. A possible method of using the table is to cross off those seats in these columns that do change hands, and to tick those that are held. The advantage of this system is that there are then fewer and fewer names to concentrate on as the night wears on; and that a fair indication should be obtained of the majority towards which the winning party is heading.

In the 1955 election 23 of the 24 seats that changed hands were in the table that we published before the event. That was because there was a fairly even swing of 1½ per cent to the Tories across the country. Obviously, if the swing to either side is greater this time the winning party will start gaining several "less marginal" seats that are not in the table opposite; even if the national swing is again small, there may well be greater local variations which will cause changes in more non-marginal seats than the one outsider that fell last time. It would be a good thing for local democracy if there were.

But it is still overwhelmingly probable that the venues of the majority of the most crucial fights are shown in the table; by the time that a fair number of results are in, and especially if the swing should be carrying the country towards only a small majority for either party, one should be able to pick out from the table which further results one must wait for in order to learn who will form the next government of Britain.

Early Pointers?

THERE are certain boroughs that traditionally try to get their results counted particularly quickly. Seven cases are worth mentioning here, because they may provide the crucial pointers in those first few nervous moments on Thursday night:

(1) **Salford West** and **Salford East** have been among the first dozen results in each of the last three elections. Both are now marginal Labour seats and straight, uncomplicated fights; in Salford West the Tories need almost exactly a 1 per cent swing to overthrow Labour's Mr Royle and in Salford East they need a 2.2 per cent swing to overthrow the very left-wing accountant Mr Allaun. If the Tories fail to capture Salford West it will be a sign that they are unlikely to increase their majority by very much. If they capture both Salfords, Labour will be in a very bad way.

(2) **Watford** was the first constituency to announce its results in 1951, but was held up by a recount last time. It is a very marginal Tory seat, which the Tories gained in a straight fight in 1955 with a majority equivalent to a 2 per cent swing), but which some people think should be marked "losable even without a swing" this time because there is a fairly impressive Liberal intervention. The recent printing strike will be a local issue, but if Labour does not capture Watford it is unlikely to capture the country.

(3) Cheltenham was the first constituency to announce its results last time, and the Tories would need a 9.3 per cent swing to unseat them. There has been industrial development in Cheltenham and a Liberal is intervening, so most people expect the former Tory majority of 7,621 to drop. But if the Tories went so far as to lose this seat it would be a sign of disaster for them.

(4) **Billericay** was won by the Tories last time with a 4.8 per cent swing needed to unseat them. But here again a Liberal is intervening; and the former Tory MP is not standing again. So the seat just qualifies for inclusion in the table opposite, as one of the seats that Labour might win if it is heading for a majority of about 40. But it will be a shock for the Tories if Labour is.

(5) **Accrington** was among the first dozen seats to announce its results last time. It is a marginal Labour seat (1.6 per cent Tory swing needed) and its particular interest is that it is one of the few Labour marginals in which recent local election results give the Tories some cause for optimism.

(6) **London—Barons Court** was won by Labour last time with a majority equal to only 0.3 per cent of the total vote. But an Independent Liberal is intervening, and a Tory victory here might be a sign that the Tories were heading for a majority of between 100 and 150.

SENSITIVE INDICATORS OF THE ELECTION RESULTS

MARGINAL LABOUR SEATS

TO BE WON BY TORIES WOULD REQUIRE RIGHTWARD SWING OF:

Losable without swing cutting Tory majority to about 50	0–1% indicating Tory majority of up to 110	1–2% indicating Tory majority of up to 150	2–3% indicating Tory majority of nearly 200
Epping (A)	Acton	Accrington	Ashton-under-Lyne*
Glasgow Scotstoun (A)	Blackburn	Birmingham All Saints	B'gham.—Northfield
Gravesend (X)	Brierley Hill	Brighouse-Spenbrgh.	*Perry Barr**
*Hitchin** (A)	*Bristol North East* (B)	Bristol North West	"
Hornchurch (A)	Cleveland	Chorley	Bootle
*Kingston-on-Hull Nth.**	Edinburgh Central (B)	Coventry South	Bristol Central (B)
*London—Wandsw'th C.**	Faversham	Dunbartonshire East	*Derbyshire South East**
" *Holbn. & St. Pan(B)*	Glasgow Provan (A)	Dundee West	Dunbartonshire West
*Maldon**	Leek	Hartlepools	Eccles
Manchstr.–Ardwick (B)	Liverpool Edgehill (B)	*London—Barons Ct.**	Edinburgh East (X)
Meriden	London—Clapham	" *Kensington Nth.* (X)	Flintshire East
Norfolk North	" Holbn. & St. Pan(B)	Manchstr.–Ardwick (B)	Huyton
Stirling & Falkirk	Manchester Gorton	Meriden	*Ipswich**
Sunderland North (B)	Newcastle East (B)	Norfolk North	Keighley
Swansea West	Norfolk South West	Stirling & Falkirk	Lowestoft
Wellingborough	Reading	Sunderland North (B)	Nelson & Colne
Widnes	Salford West	Swansea West	Newark
	Stalybridge & Hyde	Wellingborough	Rochester–Chatham
	Willesden East	Widnes	*Romford**
			*Rugby**
	(19 seats)	(19 seats)	Salford East
			*Uxbridge**
(9 seats)			(21 seats)

MARGINAL TORY SEATS

TO BE WON BY LABOUR WOULD REQUIRE LEFTWARD SWING OF:

2–3% indicating Labour majority of 15 to 40	1–2% indicating near deadlock	Under 1% indicating Tory majority of 10 to 20
Bedfordshire (Mid)*	Doncaster	Ayrshire Central
*Billericay**	Ealing North	*Bedfordshire South**
Brentford & Chiswick	Halifax	Bradford North
Chigwell	*Hemel Hempstead** (A)	*Buckingham**
Devizes	*Heywood & Royton**	Carlisle
Dover	Kings Lynn	*Darlington**
Gloucestershire South	*London—Battersea Sth.*	Eastleigh
Grantham	*"Dulwich*	*Eye*
Liverpool–Kirkdale	*"Lewisham North** (X)	Glasgow Craigton
London–Woolwich W.	*"Putney** (A)	Glasgow Kelvgrve. (X)
Norfolk South	Plymouth Devnpt. (B)	Lanark (A)
Norwich South	Plymouth Sutton (A)	Manchester—
Rutherglen	Rushcliffe	Wythenshawe (A)
Walsall South	*Walthamstow East*	Nottingham Cen. (A)
	Yarmouth	*Oldham East*
(14 seats)	(15 seats)	Preston South
ADDITIONAL MARGINALS		Sunderland South (A)
Bolton West		The Wrekin
Chislehurst (A)		*Watford**
Gainsborough		York
Portsmouth West		
Taunton		(19 seats)
*Weston-Super-Mare**		
(6 seats)		

Notes:—Seats where Liberal is standing italicised. * New Liberal intervention, no Liberal in 1955. (A) Housing developments to Tories' disfavour. (B) Housing developments to Labour's disfavour. (X) Special circumstances, due to new pattern of candidacies.

NOTES OF THE WEEK

CHINA AND RUSSIA

Sauce for the Peking Duck

MR KHRUSHCHEV showed on Wednesday that he can be almost as candid in Peking as in Washington. No sooner had he arrived there for the celebrations of the tenth anniversary of the Chinese Communist regime than he set about warning his hosts that there must be no attempt to "test the stability of the capitalist system by force." Without mentioning Tibet, Laos or the McMahon Line—or, one assumes, remembering Hungary—he added:

> Even so noble and progressive a system as socialism cannot be imposed by force or against the will of the people.

The possibility that he might have intended merely to utter platitudes without application to China hardly stands up to examination. For reasons of his own, he is now preaching restraint and tranquillity; in his good world, China's present deeds stand out as naughty ones. The same point emerged last month when Moscow issued its solitary statement on China's border dispute with India, reaffirming Russia's friendship for both parties and calling on them to settle their differences. In Marxist terms, this was a curious lapse into the grievous sin of "objectivism."

True, the Soviet note of September 15th on Laos did meet Chinese requirements in proposing, in effect, a resumption of the Far Eastern conference of 1954 in Geneva, which ended the Indo-China war. This remains the only time that communist China has participated in a conference of the major powers. That Peking should wish to repeat the experience is understandable. But in supporting a standing Chinese demand, Mr Khrushchev must have known that he was making an academic gesture, since the Americans were bound to reject the idea out of hand. It is hard to escape the suspicion that in this matter his support for his Chinese and Vietnamese comrades continues to be lukewarm.

Small wonder, in these circumstances, that the Chinese press neglected to tell the people of Peking of the Soviet leader's time of arrival, so that there were no crowds to greet him. The contrast with Warsaw, whose people so recently turned out *en masse* to greet Mr Nixon although he was similarly unheralded, was striking. But Mr Khrushchev is unlikely to follow the example of the United Arab Republic representatives, who on Sunday withdrew from the Peking celebrations after hearing the Syrian communist, Mr Khalid Bakdash, denounce the UAR as "an American stooge." The Soviet leader is evidently prepared to outface his impassive Chinese hosts as boldly as he confronted franker antagonists in the United States. What is sauce for the American turkey is, to him, sauce for the Peking duck too—and sweet-sour sauce at that.

Marshalling the Generals

FORTUNATELY, perhaps, for Sino-Soviet friendship, the Chinese communists are clearly far more interested, just now, in domestic than in international affairs. Since the party swallowed its pride a few weeks ago and revealed that last year's statistics of economic growth bore little relation to reality, the writers and broadcasters have been working hard to prove that the official economic policy is nevertheless on the right lines. And indeed economic growth, if no longer represented as miraculous, is substantial enough. On the political front, the cabinet has been reshuffled and a partial amnesty for "rightists" has been decreed. Marshal Peng Teh-huai, who fought the UN forces in Korea, has been replaced as defence minister by Marshal Lin Piao, one of the greatest figures in the Chinese civil war. It is difficult to know whether this is a routine change (Lin Piao's long illness had kept him out of public affairs, but he is senior to Peng), or a punishment for Marshal Peng, who is reported to have been one of the advocates of last year's breakneck programme of communisation and industrialisation, now sharply checked.

The other changes suggest harder conclusions. Marshal Lo Jui-ching becomes chief of the general staff after ten years in charge of the political police; and General Hsieh Fu-chih, who takes over from Marshal Lo as minister of public security, is credited with spearheading China's subversive activities in South East Asia during his years as party boss in the southern province of Yunnan. The men displaced are "military" rather than "political" generals, and the changes strongly suggest a strengthening of party and police control over the armed forces. Mr Khrushchev, as the man who fired Marshal Zhukov two years ago, can hardly quarrel with Peking over the principle behind the reshuffle.

ELECTION CAMPAIGN

Mr Gaitskell's Fall from Grace

THE hotting up of the Conservative election campaign at the beginning of this week came none too soon for many worried Conservative candidates and officials in the country. They had been chafing at the muffler which Lord Hailsham's ukase against "mudslinging" put upon their speeches. They were furious at the successful tactics of Mr Morgan Phillips, who waited eagerly to collect any moderately tart Tory campaign statement, and then called a press conference to shout "foul." Above all, they were deeply disturbed at the failure of Mr Macmillan's *persona* to get across, while Mr Gaitskell continued to win golden tributes from Conservatives as well as from the other side. The Opposition leader was probably due to suffer a personal counter-attack this week even if he did nothing to deserve it.

In fact, however, Mr Gaitskell has walked straight into the waiting right hook. Throughout the first furore of the Jasper affair—which, for various delicate reasons, never promised to be nearly such a good Labour campaign issue as the *Daily Herald* thought—he kept his head admirably and himself said nothing that he will later have cause to regret. He did this although his tour was obviously imposing a physical strain upon him; in at least one of his London meetings last week he was already looking very tired, stumbling over words and not showing any special competence in dealing with some rather disagreeable heckling. This strain must presumably be the most charitable explanation, if any charity there can be, for the way in which he then proceeded to devalue himself as a professional economist this week.

There may be some excuse for the ambivalent way in which Mr Gaitskell has exaggerated the likely yield of any capital gains tax, for the hustings are not a lecture room in which one is obliged to enter caveats about periods of capital losses. There can be less excuse for his extraordinary slur upon the inland revenue that "certainly not more than half" of the spending it allows on expense accounts is justifiable. There can be no excuse at all for his resort to the oldest piece of economic nonsense of all, in pretending that the £238 million a year increase in interest payments on the national debt since 1951 would have sufficed "to raise old age pensions by 10s. a week, to have abolished the National Health service charges and to leave the nation something in hand as well." He knows quite well that if one lowers interest rates one does not set free real resources for other forms of spending or for tax reliefs; one lowers one particular guard against inflation, and makes increased spending or tax reductions more difficult. Finally, on Monday, came his extraordinary pledge that a Labour government would never again increase the standard or other rates of income tax "under normal peacetime conditions"; and the country was left with an incompatible balance sheet that the Tories are only too eager to add up.

Next Issue?

THE dominant question of the last week of the election campaign may be whether Mr Gaitskell's fall from a high state of grace has opened the door to the propaganda double that the Tories now urgently need to achieve: to destroy what they call the myth of Mr Gaitskell as a responsible alternative Prime Minister and to spread an image of the whole Labour party as a set of divided and spendthrift cranks. It was into this half-opened door that Mr Macleod leapt on Tuesday, when he atoned for the rest of the Tories' third television programme, another collection of moderately inept film, with the best individual performance yet seen in the contest. It is also in this gap that Mr Macmillan and Lord Hailsham must be expected to thresh about merrily in the next few days. They may be helped by two factors.

The first is that the income tax pledge, which Mr Gaitskell might now like to explain away as a very carefully hedged one, has unfortunately for him been played to the skies two days running by the front-page headlines of his too candid friend the *Daily Herald*. The other is that one has the impression that even the more respectable parts of Labour's expansion doctrine have not in fact got over to the electorate; indeed one of the surprises of the election so far has been the failure of Labour to put across to the country its (partly true) point about the Tories' record of "stagnation" and the equal failure of the Conservatives to put across their (equally true) point about the stability of prices.

Probably, the Tories' chances of a propaganda come-back in this final week will depend on whether Labour can find some new issue on which to set a rival pace. The Tories say happily that Labour has shot its bolt too early, and ask through what medium any new issue could be launched. Labour's television programmes, although technically more and more adept, are probably not well suited to plug any single theme. Mr Morgan Phillips's press conferences have lost their news value. But one potential and powerful source of thunder from the left remains. While the *Daily Herald* has blundered about rather clumsily in the fray, and while the *Daily Mail* and *Daily Express* have been practising their particular propaganda techniques most ruthlessly on the other side, the *Daily Mirror* has in these last ten days returned ominously to the editorial touchlines. This is not because its Labour allegiance is in doubt, but because it is biding its time. Two elections ago it launched the question "Whose Finger on the Trigger?" In 1955 it held off until the last week and then filled its front pages with the very cunning slogan "Vote Labour to keep the Tories Tame." In 1959 . . .? A tremor runs through the whole Conservative party when it remembers that the oracle of Geraldine House, like the people of England, has not spoken yet.

STRIKES

Labour's Tear Gas?

FEW unofficial strikes have ever threatened to snowball, either politically or industrially, quite as fast as that at British Oxygen this week. Only 1,500 tanker drivers and loaders, belonging primarily to Mr Cousins's Transport and General Workers' Union, are directly involved. But British Oxygen supplies almost all the country's oxygen and since many industries—steel, motors and shipbuilding are examples—are completely dependent on oxy-acetylene for welding and keep only minimal stocks of gas on the premises, the impact of the stoppage throughout the economy was sudden and could be severe. This massive vulnerability to unofficial action is an obvious drawback to monopoly. Twenty thousand car workers were sent home almost as soon as the strike started; and, theoretically, a total of 250,000 men could soon be out of work if the strike really does continue.

The stoppage is over a pay claim, to which the management was to have replied in three weeks' time. Therefore, although it has been organised by Mr Green, chairman of the workers' joint committee in the firm and a TGWU official, it is unofficial and conflicts directly with the union rules. For this reason, and because the strike is political dynamite for Labour, both TGWU officials and the TUC have gone out of their way at once to condemn it; "unconstitutional, quite unnecessary, and serving no useful purpose" are only a few of the adjectives already used. On Thursday morning Mr Green still remained unmoved; he even wanted the strike to spread. But the Labour movement as a whole is not unmoved, and it is almost impossible to believe that it will allow itself to be atrophied. A lot of big dogs will presumably move in very quickly to sit down on this little one.

UNITED NATIONS

Sounding Off

AFTER three weeks, the United Nations Assembly is still enduring the introductory speeches of the fifty foreign ministers who turned up this year, and of the other heads of the 82 delegations. Admirable sentiments have been reeled off by the hour, passing unreported into limbo. Familiar claims to disputed territory, and complaints about the treatment of dependent peoples or minorities, have, as usual, had more press coverage, despite their familiarity. Austria made its mark by raising, for the first time in the UN, the old controversy over South Tyrol (further discussed on page 56). Israel's plea for free and fair passage through the Suez Canal had the backing, implicit or explicit, of a dozen other governments which revealed anxiety about arbitrary Egyptian detention of ships and cargo.

On Wednesday the smooth flow of demands for the immediate liberation (or annexation) of dependent territories was abruptly broken. The prime minister and Opposition leader of the southern Cameroons jointly demanded that their people should remain under British tutelage until 1962, instead of sprinting to freedom next year alongside their Nigerian and French Cameroons neighbours. They evidently wish to prolong their deliciously painful uncertainty about which neighbour's sheltering wing is to enfold them.

Walking Out

ON the same day, M. Couve de Murville presented General de Gaulle's plan for Algeria and denied the assembly's right to consider a matter that fell within France's jurisdiction. Earlier, French delegates had walked out of the hall during one of the more violent speeches of Mr Shukairy, the Palestinian who now represents Saudi Arabia in the UN, and who on this occasion claimed to speak for Algeria—though he used very different language about the de Gaulle plan from that of M. Ferhat Abbas.

The Assembly's biggest walk-out yet, however, was staged by the Soviet and satellite delegates, who withdrew, appropriately enough *en bloc*, when the Chinese Nationalist spokesman tackled the question of Tibet. They might have made a more skilful point by taking up the Nationalist argument that Tibet is purely China's business—the one thing on which Taipeh agrees with Peking. More ingenuity has been shown by the Irish and Malayan delegates, who have now dumped Tibet in the assembly's lap and sidestepped the controversy about domestic jurisdiction by presenting Chinese oppression of the Tibetans as a violation of basic human rights—an approach which the assembly has accepted in regard to South Africa and other states.

CEYLON

Local Boy Takes Over

CEYLON'S new prime minister, Mr Wijayananda Dahanayake, is an unusually homespun product among Asia's present leaders. Unlike Mr Bandaranaike (an appreciation of whose policies appears on page 55), unlike Mr Nehru, Mr Chou En-lai, President Ayub Khan, Tengku Abdurrahman, and so many others, he can look back to neither Oxford, Harrow, Paris, Sandhurst nor any other formative western experience. Originally a Buddhist teacher at a Catholic school, he came up through municipal to national politics, passing first through the Bolshevik-Leninist and then the Trotskyist party in his country's really rather mild political spectrum, and emerging, in Mr Bandaranaike's coalition, as a leader of the "rightists" who secured the ejection of the Marxist Gunawardena group last May.

He has expressed his confidence that the minority government can serve out its term of office, continuing (probably with a tilt to the right) the balancing act by which it had kept at bay its opponents on both flanks. This confidence is not widely shared. Mr Dahanayake may have the quite real advantage, in terms of Asian politics today, of being untainted by an upper-class British educational background, unlike most of his antagonists, whether conservative or communist; but he lacks Mr Bandaranaike's stature. Within a few days of his taking office, the closing of ranks that naturally followed the assassination was already beginning to look a little ragged. Mercifully, however, the public responded with disciplined calm to the authorities' appeals for good order, and the formal proclamation of a state of emergency did not have to be followed up with the kind of drastic action taken in last year's fierce communal conflicts.

Under the Robe

LIKE Gandhi and Liaquat Ali Khan, Bandaranaike was murdered by a man of his own faith. The fact that the assassin was a Buddhist was promptly and prudently made known throughout the island, to forestall any rumour-mongers who might have set off communal violence again by suggesting that a Hindu Tamil was the culprit. Inquiry has yet to reveal whether the motive was purely personal, or whether the monkish murderer was in any way influenced by the more fanatical Buddhists' known disappointment with the premier's championship of their demands. But public suspicion was evidently aroused. Buddhist monks found it safer to keep off the streets; a few who ventured out were roughly treated. True devotees of this religion of non-violence were as outraged as anybody by the way the murderer, concealing his gun under his robe, brazenly exploited the premier's respectful reception.

In Ceylon, Burma and elsewhere, Buddhist monks have acquired an unpleasant reputation for a kind of political violence that is in flat contradiction to their nominal creed. They have contributed their share to the generally pernicious effect that religious extremists have had on modern Asian politics. It was a Hindu fanatic who killed Gandhi because the Mahatma had insisted on the brotherhood of all creeds—specifically, between Hindus and Moslems. It was the diehard Moslem mullahs whose demands made it so difficult for Pakistan to devise a constitution, and who have left their retrograde mark firmly stamped on that country's unhappy political record. The murder of Bandaranaike may freshly open Ceylonese and other Asian eyes to this evil. If it makes his fellow countrymen less susceptible to the violent slogans of the fanatic (and this could have its ironic side, in view of his earlier encouragement of Buddhist intransigence) the sacrifice will not have been a vain one.

TRADE UNIONS

Ad Hoc *Agreements*

FOR an employer today to deny the efficacy of joint consultation is to invite branding as a reactionary. Mr Johnson, president of the shipbuilding employers' federation, has nevertheless taken the risk. Last weekend he issued a statement saying that since consultation with the shipbuilding unions—notably Mr Hill's boilermakers' society—tended to go on for ever, "it is essential to get on with the work and deal with the disputes in accordance with a well-defined procedure as they arise." He also reasonably suggested that this well-defined procedure, instead of being (as it tends to be now) a strike, should be arbitration, first at local, then at district, and finally—via the offices of the Ministry of Labour—at national level.

There is something in this, blunt though it sounds. Several recent disputes have shown that no quarter is given by the unions either towards the employers or towards each other. Consultations over innovations just drag on and on. But if when a new process is introduced there is no consultation and a strike follows, the unions do at least have the economic pressures that the strike puts on their members to spur their negotiations forward. The demarcation agreement reached this week between the boilermakers and shipwrights, following the lengthy "chalk-mark" dispute, is a case in point.

Failure to install new machines or use new materials in shipbuilding is not only to be blamed on the intransigence of the unions. But they must take a large share of the blame. In spite of the apparent truce between shipwrights (whose crafts go back largely to the days of wood and sail) and the more advantageously placed boilermakers, several major and damaging demarcation questions remain. The use of stud welding guns and the composition of the labour force in the prefabrication sheds are two instances. The employers would like to give a lead. Now, when demand for shipping is in any case weak, is the moment for them to force the issue and, if necessary, face a stoppage in the short run rather than a restriction of output in the long.

HUNGARY

Mr Kadar and the Writers

FOR Mr Kadar one of the most nagging and irritating failures of his regime must be its apparent inability to come to terms with the great majority of Hungarian writers who have expressed their disapproval simply by refusing to write. After the 1956 revolt, in which the writers, both communist and non-communist, played such an important part, the Writers' Union was banned; its government-sponsored successor fizzled out at the end of 1957. A number of writers, of whom Tibor Dery and Gyula Hay are the best known, were sent to prison for their "counter-revolutionary" activities.

But Mr Kadar seems to realise that to win the writers over to co-operate with the regime would do him far more good than to send them to prison, particularly since most of them belong to the influential "populist" movement. This began before the first world war and is closely associated with Hungarian national independence, social reform, particularly a better deal for the peasants (present-day writers have strongly opposed collectivisation) and a neutral "third road" for Hungary. Throughout last year a strong propaganda campaign was kept up against the writers; it was designed, not only to discredit their beliefs and their staunch advocacy of freedom of expression, but also to provoke them into replies that the regime could then use as a handle against them and thereby force them into submission. But with very few exceptions the writers stuck to their policy of silence.

Last June, however, Mr Gyula Kallai, minister of state, announced that although some writers were still being difficult, the time was ripe to reconstitute the Writers' Union. Last week this was duly done. But it remains doubtful whether the new body will give either regime or writers much satisfaction. Hardly any of the more distinguished populist writers appear on the list of members of the new union's committee; two who do appear, Peter Veres and Pal Szabo, have all along shown an equivocal, or openly favourable, attitude

BE FIRST ON THE ROAD WITH FORD

towards the Kadar regime. Two well-known patriotic writers, Laszlo Nemeth and Aron Tamasi, who were reported to have joined the preparatory commission, do not appear on the committee of the new union—presumably because they cannot accept its allotted role.

Mr Kallai, in his speech at the inaugural meeting, made it quite clear that this role involved strict conformity to the party line. "We shall continue," he said, "to deny a place to literary and artistic activities aimed against our lawful state order." He also said, rather ominously, that "the idea that certain groups of writers can live an independent organised life must be finally discarded."

WEST AFRICA

Mali and Neighbours

THE *year 1960 is throwing its shadow* across Africa. M. Leopold Senghor, president of the Mali assembly and head of the dominant Mali Federation party, referred to the independence of Nigeria, Cameroons and Togoland which will come next year, when he declared last week that Mali, too, would move forward to independence. This is to be achieved by the gradual transfer to Mali of the federal powers over foreign affairs and finance which are now exercised by the French Community, a process equivalent to the last stages of a British-type colonial constitution evolving towards

the status of sovereignty within the Commonwealth. Mali intends to maintain "confederal ties" with Paris—but these will evidently be little more organic in form than those between a Commonwealth country and London. M. Senghor clearly realises, as do M. Mamadou Dia, the premier of Senegal, and M. Modibo Keita, the federal premier, that Mali can no longer afford to lag behind the evolution of independent states in West Africa. What is now at issue is the timetable, the relationship with Europe and the aggregation of former colonial territories into larger or smaller federal states.

Mali's more gradual emancipation would not exclude an eventual rapprochement with its independent neighbour, Guinea (which still maintains unofficially close economic relations with France, is part of the franc zone, and is disappointed with the help it has so far received from the Soviet block). But there is still some illwill between the leaders; what will count in the end is the state of popular feeling. Mali's full independence will also open the way to reconsideration of the relations between the Gambia and Senegal, whose union is one of M. Mamadou Dia's cherished hopes. The new Gambia constitution provides for universal adult suffrage and a clear majority of elected seats in the assembly, so that it will now also become possible to probe the feelings of Gambians on their future and their possible political association with their neighbours. They certainly ought to be probed. It has not proved easy so far to bring British-weaned and French-weaned African states together; but this is partly a matter of time. It is significant that the Gambians have made it clear (with brickbats) to Mr Lennox-Boyd that they wanted this type of constitution; and a week or two ago some violent rioting in Portuguese Guinea suggests that the people of that territory are also not insensible to the prospect of a growing number of independent African states. The rather incongruous map of Mali has not necessarily taken on its final shape. In fact, expansion is probably essential to its viability.

THE PROFESSIONS

Polishing the Brass Plate

THE professions are divided between those that allow their members to advertise their wares and those that do not. Doctors, lawyers, architects and accountants may not; bankers, taxation consultants, engineers (except consultants) advertising and estate agents can and do. Generally the newer professions, often practising in corporate entities, tend to be those that advertise their services, which are not of such direct consequence to life and health as the skills of the learned professions. There is of course a growing amount of surreptitious advertising even by members of the learned professions: architects have their names prominently displayed on hoardings outside the buildings they are supervising, and other professions are not averse to publicity media ranging from articles in the learned press to television appearances. But none of this competes with the commercial advertising undertaken by the "commercial professions."

On the other hand, commercial advertising by bodies that lay claim to professional status may injure the learned professions. It was to this kind of competitive copy that Sir Sydney Littlewood was undoubtedly referring when, in his presidential address to the Law Society a fortnight ago, he raised the question whether the society should not embark on a campaign to remind the public of the services that the legal profession offers them. Banks and insurance companies advertise their trustee and executor services—and indeed aggressively go out to get the work—which are traditionally part of the services offered by solicitors. One measure of the success of this campaign to identify banks with probate and trustee services is the decline in the use being made of the public trustee. The Scottish banks have agreed not to tout for such clients. Institutional advertising by the Law Society (or, say, the Royal Institute of British Architects, or even an organisation representing the remaining private medical practitioners) would be ethically quite different from advertising by individuals—it would presumably inform the public what services could be had, at what cost, and where. The difficulty is that the professional institutions are quite unable to match the resources of big firms. Yet with rising living standards they may reasonably expect to serve many more clients than in the days when they mainly looked after the middle classes. Professional advertising—both institutional and individual—is due for a careful reappraisal.

EDUCATION

The Future of Self-Improvement

THE annual conference of the National Institute of Adult Education this year very sensibly asked itself who are the adults who try to educate themselves, and what should be offered to them. The conference, under the guidance of Mr Richard Hoggart and of Mr Sanderson of the Gulbenkian foundation, quickly had to face the fact that those who have more leisure as the result of the social changes of the last twenty years—the semi-skilled workers—on the whole do not try to improve themselves; those who have on the whole less leisure—the professional classes—are still the principal customers. This is something that

all adult education lecturers know, but it was worth while to clinch it with figures. Some day Part IV of Mr Butler's 1944 Education Act—which prescribes compulsory part-time post-school education up to the age of 18 or 19 at "County Colleges"—may be implemented; and the politicians ought to know that everything points to its being unpopular. The type of working-class person who in the past improved himself in his leisure, by taking courses, now usually stays on to get some variety of subsidised higher education. The experience of adult education suggests that compulsion will be needed if pub time is to be spent studying Shakespearean tragedy or pond life.

The question is: should one try to rope more of them in? Voices were raised at the conference to suggest that adult education should be trimmed to suit its real customers—the five to ten per cent of people who are genuinely interested, who have the educational stamina to benefit, and for whom standards can be kept reasonably high. If the customers for such a service exist it should not be necessary to subsidise it so heavily: at present public money is spent to the tune of £4 per head per year on about 160,000 "students" who themselves pay a shilling or so. A more economic price would quickly show the real, and educable, audience.

Far more dubious is the other proposition: that the adult education establishment, starting with lowish prestige, should put on courses aimed at diverting the tastes of those attuned to commercial entertainment. Such courses, to get recruits, would have to be semi-vocational, and these are available elsewhere. Adult education presupposes a clientele of adults in an intellectual sense: it would seem to be the job of formal education to increase the size of this clientele by getting more young people to believe that education is a process that continues after school and even after university.

THE TUC

Rate for the Job

EIGHTEEN months ago Mr Woodcock, the assistant general secretary of the TUC, gave a broadcast on the BBC in which he pointed out the dangers of underpaying trade union officials. Their job has lost much of its spice as the initiative in local bargaining has passed from the branch to the shop floor; meanwhile, as Mr Woodcock said, "on any reasonable comparison with salaries outside the trade union movement, full-time trade union officials are admittedly overworked and poorly paid." This situation, and the bias against employing professionals in the unions that causes it, remains the same today. Some of the staff at Congress House, the TUC's new headquarters, are getting increasingly restive.

Unions are, in fact, seldom good employers. Whereas in Britain they expect their officers to work for the cause rather than for the money, in America their hire-and-fire tactics have often come close to those of the more reactionary employers whom the unions so vehemently condemn. When the AFL and CIO merged, a hundred or so employees were summarily declared redundant; while even such progressive leaders as Mr Reuther, president of the automobile workers, has consistently opposed—on the grounds that the union machine must be a monolithic one—the right of collective bargaining being given to AFL-CIO headquarters' staff. In Britain, where the unions are notoriously understaffed anyway, the low salaries, as well as being unfair, actually weaken the movement as a whole.

The latest trouble at the TUC is of two sorts. On the one hand, the turnover of staff has reached alarming proportions; two-thirds of the permanent staff serving the economic committee are said to have gone elsewhere in the last eighteen months alone. On the other hand, some of those who have stayed have become increasingly dissatisfied with their position. The strike weapon will not be used here. But there is a real grievance just the same.

THE ARABS

Cairo v Baghdad

THE Middle East has begun to stir once again. In Cairo, Damascus and Beirut the demonstrators were out in the streets last week. After their quietest summer in many a year, the Arabs were taking up their old quarrels with renewed vigour. The demonstrations were whipped up by the Egyptian press and radio as a protest against the execution of thirteen Iraqi officers accused of complicity in the Mosul revolt last May. Four civilian ex-officials of the pre-revolutionary government in Baghdad were also executed; but they were not mourned in Cairo.

Cairo claimed that General Qasim had sold his country's birthright for a mess of communist pottage, and that the Egyptians were only out to save their Iraqi brothers from their own mistakes. President Nasser was probably expending more missionary zeal than was wise. His extravagant propaganda, whatever its effect in Egypt, Syria, Jordan and Saudi Arabia, was not likely to win over many Iraqis. Perhaps he has forgotten that his more virulent attacks against Nuri es-Said in fact increased Nuri's prestige in his own country.

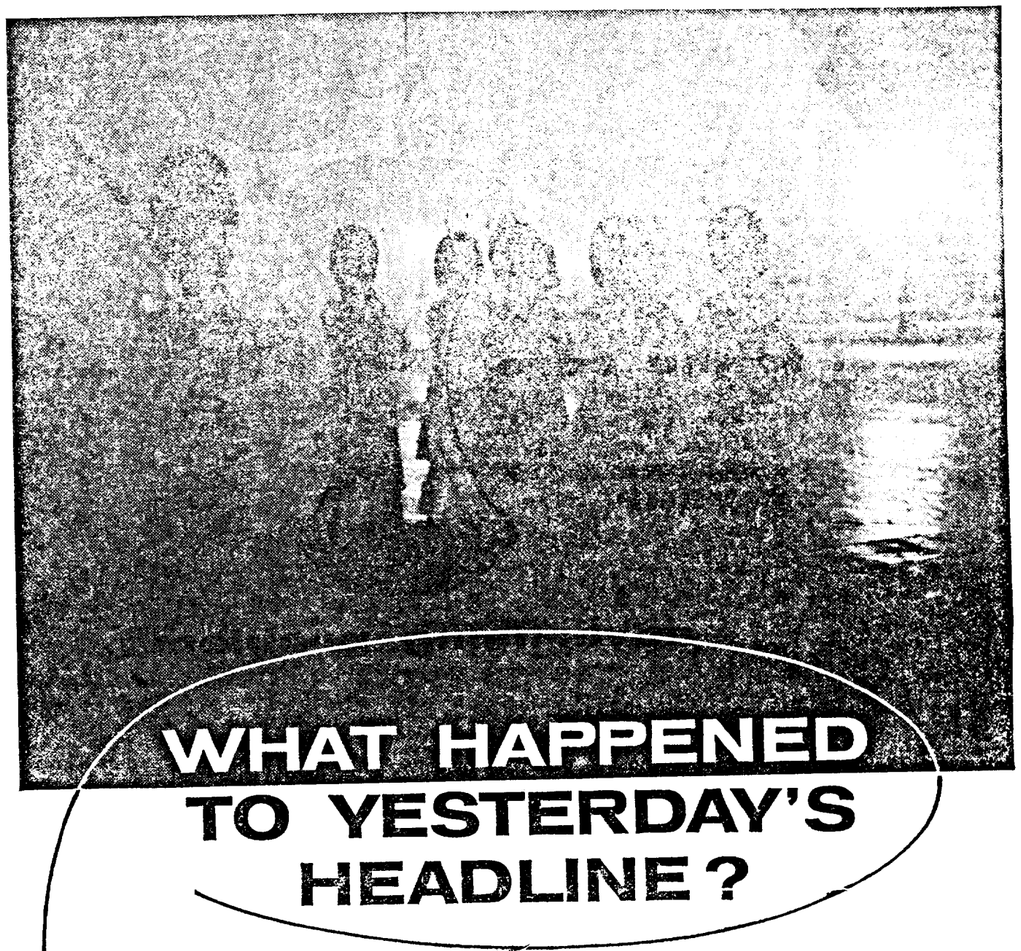
In the eyes of the Iraqi government it is merely a case of everybody being out of step but themselves. The anti-Nasser Lebanese factions and the Tunisians, because of their refusal to let Cairo tell them what to do, are the only Arabs for whom Baghdad has a good word. Colonel Mahdawi has shut up his court and gone for a holiday in Peking, but the Baghdad press is keeping up his running attack against President Nasser. There are certainly many Iraqis who do not approve of their present regime; but the tone of the United Arab Republic's attack against General Qasim is such that they cannot help suspecting it of being more angry because the general rejected its brand of Arab nationalism than because he sought the communists' help. After all, President Nasser himself was the first Middle Eastern ruler to turn in that direction.

The Economist

OCTOBER 1, 1859

HOW TO TREAT THE CHINESE

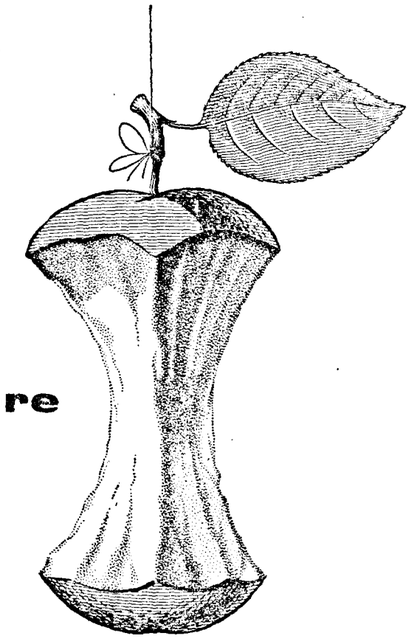
We have much reason to hope that a new war with China is not the inevitable necessity which some of our contemporaries represent it. The more we hear of the circumstances which led to the disaster at the Peiho, the more likely it seems that unjustifiable imprudence and impatience on the part of our own Ambassador are chargeable with at least as much of the disastrous result as any disloyalty on the part of the Chinese. . . . And we think it possible, moreover, that we may gain a permanently useful lesson, as to our treatment of China, from the failure of what, on present appearances, we must call the high-handed and arrogant method of diplomacy which Mr Bruce has adopted. We have no wish to exaggerate the error, if it be, as we believe, an error, which our envoy has made. . . . But we do maintain that the habit of treating the Chinese exceptionally, as a barbarous nation, which ought to be forced into a more gentle demeanour by a little wholesome pressure, is quite inconsistent with the expectation that they will treat us with all the courtesy and candour of Europeans. What we sow, that we must reap. If we think it necessary to provide means of overawing a Government that is at peace with us into a fulfilment of their engagements, we must not complain if they provide means of overawing us into acquiescence in the strict letter of their engagements. If we have so little confidence in them, that we enforce a treaty with a train of gun-boats that were not in the covenant, we must not be surprised if they provide against the uncovenanted gun-boats by well-armed forts that are also not in the covenant. It may be true that we have many excuses for a display of force on such an occasion, which we should not have as against any European nation; but if so, it is to just the same extent true that the Chinese have excuses for military precaution against our display of force, which they would not have against any nation that treated them by a European code of etiquette.



Could you place an accurate interpretation on the events you read about in your morning newspaper? In a befogged world facts loom up, then disappear. Conflicting reports arrive. There's so much to take in: so little time in which to absorb it.

The Scotsman knows the pace at which the mind, today, must absorb radical and sometimes disturbing changes. Its policy as a newspaper is to guide, not merely to emphasise. Its readership is that section of the community that requires lively, intelligent leaders; reliable, corroborated information on world affairs. That is why so many are changing to *The Scotsman*. Not only for this refreshing coherence, but also for its stimulating articles on sport, farming, the arts, women's features, and almost every other topic known to Man.

Make a habit of THE SCOTSMAN



Get to the core of your advertising problems

How many Advertisers there must be, with appropriations of up to £30,000, who know they are not really getting the return that they should! Are you one?

What to do? You must be expertly advised by the *right* Advertising Agency.

To you, RIGHT means the readiness to see and meet *your* needs first . . .

To employ your £10,000, £20,000 or £30,000 with a high sense of responsibility ; to prosper *with you* rather than before you.

You need a medium sized Agency which provides constant, penetrating and personal service—the Agency in which you are an important account.

Gordon & Gotch Advertising may well be your right choice. We have carefully set ourselves out to grasp the problems of the smaller Advertiser; and have often built a small manufacturer into a national success.

We start by asking the complete confidence of the Advertiser. We like to be accepted as part of their Sales Organisation. From then on, our clients receive a very personal service and each account is under the day to day supervision of a Director. We employ all the advertising arts in their logical sequence —market research, marketing, merchandising, public and press relations—all are seen as individual parts which we relate into a programme to achieve results.

We are now ready to give this service to one or two additional Advertisers. If your Promotion is a problem, and you would like us to get our teeth into it, the Managing Director will be pleased to hear from you.

GORDON & GOTCH Advertising Limited

20 St. Bride Street, London, E.C.4. Tel: FLEet Street 4030

LETTERS

A Liberal Vote

SIR—In your article entitled "Third Force Needed?" you discuss "whether and where there is a good case for voting Liberal on October 8th" without any reference to Liberal policy ; this in spite of a favourable reference to the party's manifesto in the preceding article. It seems to me that to do so is as pointless as to discuss the value of a Liberal vote in South Africa without reference to that party's racial policy, for you would agree that a liberal vote in South Africa may be both realistic and right whatever the chances of a candidate being returned. I suggest that the British Liberal party's policy, for instance on defence or industry, may reasonably lead one to vote Liberal whatever the candidate and in whatever electoral circumstances.

Moreover, taking the case on your own terms, were the electorate to take your advice and only vote for Liberals with a good chance of winning a seat, the strength of the party throughout the country would quickly disappear, the remaining MPs would be isolated and eventually vanish as the Independent Member has done.—Yours faithfully, H. L. J. BRUNNER
London, SW1

Australian Fruit

SIR—Your business note of September 5th, called "Sweet Taste of Excess" and surveying prospects in the canned fruit industry—with emphasis on the Commonwealth aspect—sets out clearly what the future may hold if dollar imports are to be further increased. In any average year American fruit canners have a guaranteed home market for over 90 per cent of their production, which is in the region of 60 million cases annually. Commonwealth canners, however, earn their living on the British market. Australia's total production, for example, is about 6 million cases annually—of which 75 per cent is exported, the bulk of it coming to Britain. At present two out of three cans of pears sold in the United Kingdom are Australian.

The big postwar expansion of fruit canning throughout the Commonwealth was, in great measure, due to the encouragement given by the British Ministry of Food at the time when dollar import restrictions made it impossible to obtain supplies from America. Commonwealth countries made a tremendous response to Britain's need. If the United Kingdom is now to buy unlimited amounts of canned fruit from America the threat to the Commonwealth producer is obvious.

In Australia it is a matter of pride that the industry is 100 per cent British ; Britishers on both sides of the world profit by its success. Australian exports of canned fruit are carried in British merchant ships and insured with British underwriters. This alone means about a million pounds' worth of business to the United Kingdom every year.

There is a point in your article which we must contest: you say, "the British housewife is firmly convinced that American fruit is best," and you add that this "is a conviction born before the war." Our trade and consumer research shows that the housewife here has come to regard Australian canned fruits as equal to the best that are produced anywhere in the world—a position directly due to those same high export standards which, as you point out, are so rigidly enforced. Let it be remembered that there is a new generation of housewives now. Like the "conviction" you mention, they too were born before the war—but only just! Hence their memory of the American product is less clear.—Yours faithfully, ROBERT HEANLEY
Australian Canned Fruits Board,
London, EC3

Twelves and Tens

SIR—I have just noticed in *The Economist* for September 5th the extract from a hundred years before concerning decimal coinage and wish to note how valid the point made then is still today and its wider application in counting and measuring.

It is no coincidence that the two most important of our units in common daily use, the foot and the shilling, are split into twelve parts. This is based on a natural and ancient mathematical principle, which is underlined by the extract—the principle—that twelve can be divided by twice as many lower numbers as ten.

As a result calculation, mental or mechanical, for technicians or non-technicians, is easier: fractionals are generally shorter (a third of a foot is four inches, of a metre, 3·333 . . . decimetres); the new multiplication tables more memorable ; divisions simpler. Therefore mathematicians are agreed that twelve is the ideal practical base for counting and measuring systems. Some hesitate to change from base ten as four hundred years ago some hesitated to use the new-fangled Arabic number-signs.

In this age of critical reappraising, we must objectively consider the third R. We would then build on and extend our traditional English dozen principle, unwittingly wise perhaps in its logic, rather than destroy it and rebuild on an inferior alien decimal system.—Yours faithfully, B. R. BISHOP
The Duodecimal Society
of Great Britain, Leigh-on-Sea

The Helpless Majority

SIR—I quite realise, of course, that your leader on this subject was written in lighter vein, but nevertheless it carried a core of some substance. How did the rulers get there ? One of the principal means is by keeping jobs within the family. The average English employer when recruiting staff rarely pays much attention to whether the candidate's name is Jones, MacDonald, O'Brien, or Ramsbottom, but tends to give the job to the best man. If, however, one of the ruling nationals is recruiting, Ramsbottom will have to be astonishingly brilliant to be selected and if the selector is kin to O'Brien poor Ramsbottom would not get a look in anyway.

A couple of typical examples readily come to mind. Trevelyan in his "History of England," writing about the men sent out to govern India in the earlier days of the British connection, states, "many of them were Scottish, for Pitt's friend, Henry Dundas, cannily combined his political jobbery beyond the Border with sending out excellent young Scots to India." In more recent years Lord Reith in his autobiography rather ingenuously mentions drawing attention to his Scots origin when applying for a post at an important stage in his career.

It might not be a bad thing after all if we tried a period of England for the English.—Yours faithfully, H. HOLDEN
Manchester

Votes for Babies?

SIR—If we believe in full democracy (which I am not sure that I do), why should not the right to vote begin at birth ? With proxy voting by parents until the youngest electors reach their mid or late teens, of course ; that would cause politicians to pay more attention to the larger families who have the bigger human stake in the land. It would at last mean one vote per head.

The arguments against allowing young people the vote seem to be (a) that they are less fitted to make judgments, and (b) that the young should be regarded as wards of the state, not arbiters of its destiny. If we accept argument (a)—again I don't say that I do—should we not believe in retiring dotards as well as baring colts? Anybody over 70 on October 8th will be voting about the management of the future of this country, by which he is statistically unlikely to be affected for long. If we accept argument (b)—which brings a real gleam to my own eye—does it not provide a case for the disenfranchisement of all others who accept status as in some sense wards of the state ? Of all old age pensioners who are drawing more out of the insurance fund than they actually contributed to it, most farmers, most council house tenants, and soon (I have just been reading the Conservative manifesto) all shareholders of Cunard ? Yours faithfully, ALASTAIR DUNCAN
London, SW20

BOOKS

Case Histories of Polls

Elections and Party Management:
Politics in the Time of Disraeli and Gladstone
By H. J. Hanham.
Longmans. 485 pages. 50s.

WAS a friendly whisper from the old firm in Downing Street passed down the publishers' grapevine? Or was it merely delay caused by the printing strike? Whatever the explanation, here is a piece of perfect timing. Dr Hanham's good luck is obvious; his feelings, however, are likely to be mixed. For this is a serious work, long prepared, and not something got up for the occasion. If sales are to soar for the wrong reasons, it could be distressing. The frivolous are sternly warned: "nineteenth-century elections bore only a superficial resemblance to their twentieth-century counterparts, with the result that comparisons become not so much odious as meaningless." In the circumstances, this is academic abnegation of a high order, as well as dubious doctrine.

Half the pleasure of elections consists in making comparisons, bogus or real. Scholarly restraint will scarcely prevent people looking for the remains of Eatanswill somewhere near North Kensington, or rummaging here for last-minute tips on how to turn out the vote. Like the old, half-irrelevant ritualism kept alive by the politicians, electoral myths die hard. Dr. Hanham will have to be patient, as he can afford to be. Until the excitement is over and the psephologists return to their caves, this massive case-book will be fair (or unfair) game for anyone capable of making his mark. In Smith Square it should be compulsory bedside reading, as a mixture of entertainment with many horrid warnings.

For those more permanently interested in late Victorian politics, Dr Hanham's study is indispensable. Based on tireless research and divided into three parts, it is an exhaustive examination of the electoral process as seen from the Town Hall and Quarter Sessions rather than from Westminster. The first section describes the various types of constituency, and elaborates the contrast between the old world of the rural counties and smaller boroughs, still deep in Namier country, and the new world of the big cities "with their masses of working-class electors and their penchant for Birmingham Radicalism." The next deals with electioneering and elections, emphasising the emergence of a two-party system and the development of new techniques, notably by Joseph Chamberlain and his friends. Here corruption receives due attention; something is said about the multiplicity of pressure groups, and "the slowness with which working-class politicians grasped their new opportunities." Finally, Dr Hanham looks at the party headquarters, outlines the problems of finance and communication, and assesses "their modest efforts to move with the times."

For this period nothing comparable has been done for over fifty years, and Dr Hanham is better informed and less obviously opinionated than Ostrogorski, first of the stasiologists. So considerable is his achievement, and so invaluable, that it seems churlish to complain; yet in a sense this is a disappointing book. Part of the blame must go to Professor Gash, whose "Politics in the Age of Peel" provides an instructive analogy. Professor Gash's material was slighter, both in quality and quantity, and his modest aims more restricted than Dr Hanham's. He offered what was essentially a series of linked essays, leaving plenty of gaps but always perceptive and adorned by an elegant clarity. This account is more systematic and more comprehensive; but it lacks the illumination and conviction of its predecessor, for all its vigour and learning. Something of the difference lies in style and structure, something more in a blurring of Dr Hanham's intentions, which is due partly at least to the difficulties arising from a wealth of sources.

Dr Hanham, at his best, commands a lively narrative; his analysis can be crisp and clear. But his book is hard reading. Too often there is evidence of hurried compilation from what must be the biggest card-index even in Manchester. Battered by the avalanche of facts, one's vision becomes as opaque as the writing. Dr Hanham makes matters worse by being chary of interpretative generalisation, while remaining ready enough to attack old assumptions and to be assertive over detail. In his haste, he sometimes seems blind to the implications of his survey. For example there is an excellent description of the National Liberal Federation, normally regarded as the prototype of the modern party, which properly throws doubt on that body's scope and efficiency. What also appears, and is not discussed, is the difficulty of explaining the emergence of the monolithic party primarily in organisational terms, then and later.

Dr Hanham's original intention was apparently to produce a "structure of politics" for his period; and he began work when the analysis of what lay behind men's actions and utterances was expected to provide an exclusive key to a reinterpretation of political history. The balance has been swinging back again, and party leaders as well as party managers are beginning to matter once more. The concept of "the image" now so fashionable emphasises this point. Dr Hanham has not ignored the change; but there hangs over this book something of the atmosphere of Hamlet without the Prince of Denmark. The great men of his sub-title put in only a fleeting appearance; parish-pump squabbles dwarf the great parliamentary battles. No doubt to a large extent "general elections were not general"; but national leaders and national issues were assuming a new significance. However, Dr Hanham promises another volume on the politicians themselves, which should help to round out the picture. With all its faults, this is an impressive start.

Penguin Island Politics

The Conservative Case
By Viscount Hailsham.
Penguin. 176 pages. 2s. 6d.

The Labour Case
By Roy Jenkins.
Penguin. 151 pages. 2s. 6d.

The Liberal Case
By Roger Fulford.
Penguin. 176 pages. 2s. 6d.

LORD HAILSHAM is at once the most erudite and the most extravagant of party spokesmen, the philosopher clown of British politics. His book is basically not a new one, but the "Case for Conservatism," which he published in 1946, brought up to date. At that time he was unable to express himself in less than twice the length the publishers had offered to backbenchers of the two main parties, and his offering was therefore published at twice the price of its rival. Mr Peter Goldman of the Conservative Political Centre has now cut Lord Hailsham down in size and price, much to his advantage, and added on chapters mainly derived from the rumbustious speeches despatched during the last two years to an astonished House of Lords. The result is a stimulating and at times far-fetched and over-rhetorical contribution to political thought. Its supreme merit, as must be that of all major writers on politics, is its ability to find suitable imaginative language in which to describe the usually inarticulate premises of a functioning society.

The two liberals, one supposedly in socialist's clothing, who contribute the companion volumes, are historians and biographers who have fallen into the company of politicians. Their aims are at once less ambitious and more pragmatic than Lord Hailsham's. Although Mr Fulford often gives the impression that he would much rather have written a book in the Hailsham category, he struggles gamely on through the minutiae of Liberal party policies. One fact that he does bring out clearly is that Liberals have proposals on European federation and trade union law, two subjects otherwise neglected on the hustings. Mr Fulford's only eccentricity, which reveals him to be of an older generation than Mr Grimond, is his nineteenth century emphasis on constitutional reform. Proportional representation gets first place in the Liberal book and Mr Fulford makes the extraordinarily unscrupulous suggestion for so obviously high-principled a writer that if the Liberals hold the balance of power they should offer to sell their permanent support to whichever party will promise PR, and that only if there are no bidders at this auction will they lay down other conditions about policies. Fortunately this is a course of action which Mr Grimond has explicitly repudiated.

That Mr Jenkins has strong liberal convictions was apparent from his successful advocacy of the Obscene Publications Act, and the emphasis in his book is on such civilised and libertarian objectives as Home Office reform, subsidies for the arts, and general anti-uglyism all round. The word socialism is never mentioned. The disarming admission is made that "the postwar Labour government tilted the balance too much towards the austerity of fair shares and too little towards the incentive of free consumer choice."

There is a certain amount, in a mild, undogmatic tone of voice, about economic planning; but the object apparently is to achieve by planning in Britain the same economic progress which West Germany has achieved without it. Controls are not a universal solution, but a pragmatic cure for British delinquency.

All this sounds very reasonable and, even on Lord Hailsham's own showing, it would seem that, if a Labour government were entirely made up of people like Mr Jenkins, the time to elect it is now.

Of course it would not be made up of people like Mr Jenkins. But then the present Conservative party does contain people like Lord Hailsham, whose superb definition of the moral law as applied to international affairs leads him directly into a defence of British aggression at Suez. The merit of Mr Jenkins's book is that it charts the direction in which the Labour party, if it is ever to be really acceptable to the British public, must go. The merit of Lord Hailsham's is that, although his talent for invective makes him claim an exclusive patent for Conservatism, he has restated principles of universal application. But an additional merit of both is that they reveal more than they intend—Lord Hailsham's that there are no principles so elevated that they cannot be made to serve the most disreputable action, Mr Jenkins's that the stratified remains of socialism are an uneasy legacy for an undogmatically radical man.

Proust Regained

Marcel Proust; *Volume I*
By George D. Painter.
Chatto and Windus. 367 pages. 30s.

THE first thing to be said about this biography is that it can be read and relished, as a fascinating and delightfully written narrative, a vivid picture of an epoch, and a delicate analysis of a fantastically odd character, even by a reader unfamiliar with the "Recherche du Temps Perdu"—though needless to say it is those who know the "Recherche" best who will enjoy it most. This comment is less frivolous than it might seem. The usual course followed by writers on Proust is to work from the "Recherche" to the facts, from Marcel the Narrator to Marcel Proust his creator. Mr Painter works the other way round. What Proust did with his own life-history in creating Marcel and his world is a fact of that life-history, on the same footing, for his biographer, as the other facts revealed in his letters, in the memoirs of his contemporaries, and in those only recently explored mines of information "Jean Santeuil" and "Contre Sainte-Beuve"; overwhelmingly the most important fact, but the consequence, not the substance, of the history itself. Here is that history, or rather its first half, ending before the great creative effort begins: the ingredients later to be selected, fused, transmitted and made significant, described as they presented themselves not to Marcel the Narrator but to Marcel Proust.

There are, of course, few of the one-for-one correspondences of the *roman à clé*. The nearest identification revealed—perhaps significantly—is that of Dr Adrien Proust and the Narrator's father. No one hostess is an Oriane de Guermantes or a Mme. Verdurin, no one notable cocotte is an Odette, no one charming young aristocrat is a St. Loup, no one eccentric tyrant of the Faubourg—not even that Daliesque figure Robert de Montesquiou—is the Baron de Charlus; and the places—Combray, Doncières, Balbec—are as composite as the people. But Mr Painter, moving among them like a surveyor with a Geiger counter registering radioactivity, detects in each the vital element that Proust was to turn to creative use: a profile, a pedigree, a tic, a ruling passion, a temperament, a conversational quirk, a virtue or vice, an association with landscape or décor. Sensibility without industry, industry without sensibility, would not have been enough. Here, both are abundantly present.

Of Proust himself Mr Painter writes with a sympathy always profound and all the more convincing for being salted with detachment and a sense of the absurd. It is not easy to combine the reverence due to a very great artist and the curiosity inspired by a freak. Proust's freakishness was something more than his sexual aberration (Mr Painter adduces evidence that he had much more first-hand experience of normal emotional attachments than he is generally given credit for) or the peculiar rituals by which he propitiated his asthma. In adult life he preserved—not only preserved, but also developed to their own paradoxically adult flowering—the traits that in the normal human life-cycle are shed as infancy and adolescence are left behind. The small child's terrors and passions and sense of magic, beneficent or hostile, inherent in things and places and names and people; the adolescent's unformulated yearnings, obsessive curiosities, propensity for "crushes" and sudden tyrannous crystallisations of emotion around an individual or an aim; these were at once Proust's tragic-ridiculous burden and his equipment for creative triumph. The story of that triumph remains to be told in Mr Painter's second volume. If Mr Painter finishes as he has begun, it is not too much to say that he will be able to claim a rank among literary biographers comparable with Proust's own among novelists.

Satura

I Forgot to Tell You
By L. E. Jones.
Hart-Davis. 234 pages. 21s.

SIR LAWRENCE JONES has rounded off his autobiographical trilogy by a mixed dish of thoughts, stories and experiences, with a strong moral tone. The morality is not didactic: it is directed to himself, as a man who has been happy but not self-satisfied, contented with the society in which he lives, but never with secondhand values or beliefs. The book starts with a series of chapters about his friends, animals he has watched or shot, experiences of war and sport and a dash of parapsychology—in short all those things which make the bones of many dull books, but in Sir Lawrence's hands they are delightful. Everything is seen in an odd and personal way, and usually points an unexpected moral. In its latter half, the book gradually turns into an explicit statement of belief on religion and art, which is a little less enjoyable than picking at his ideas through his

HMSO

comments on experiences; not that it is uninteresting or unintelligent, but it is so personal a viewpoint that few can hope to share it. Sir Lawrence is a humanist. He neither seeks nor accepts any values beyond the best that man can offer. Therefore he finds revealed religion, based as it is on superhuman values, incongruous and repulsive. But he has so religious a regard for the best human ideals that he finds it hard to do without some extra-human sanction for them.

Whether or not one accepts his morality, it is a delight, as always, to become acquainted with his personality. As in his other books, his stories are very funny and his style perfect. This book naturally has less shape and continuity than its predecessors. New readers should not start here, but those who have read his trilogy should certainly go on to its coda.

The New Shape of Trade

Forty Years of Foreign Trade

By P. Lamartine Yates.
Allen and Unwin. 255 pages. 40s.

THIS book, best described by its subtitle: "A statistical handbook with special reference to primary products and under-developed countries," is not what the author intended. He set out to examine the main changes in the direction and composition of world trade during the last few decades; to assess their implications; and in particular to see whether the current policies of the principal underdeveloped countries might significantly influence the character of world trade.

Amid the plethora of official statistics he found a lack of the data he needed, notably of the value of world trade by individual commodities and commodity groups, especially for the early part of his period. So with admirable patience and industry he set about collecting some more serviceable statistical tools. Unfortunately this meant that he had to postpone, in the main, his interpretation of the figures and analysis of current developments and policies, and he hopes that the present handbook will help and encourage other economists to plunge into what is, in his view, a sadly and strangely neglected field of research.

He takes as his two datum points the years 1913 and 1953, and uses 1929 and 1937 as intermediate control points. Between 1913 and 1953 the volume of world trade increased by nearly two-thirds. Almost all of that increase has occurred since the second world war; in these years the rate of growth has been as fast as at any time during the forty years before the first world war, when the volume of world trade trebled. Trade in manufactures has grown faster than trade in primary products and, within those two groups, trade in machinery and petroleum has grown fastest of all, thus helping to make good the decline in textiles and coal. While the primary producing countries are almost as dependent as they were before on a narrow range of exports, their demand for imports—particularly in the Latin American countries—has shifted from consumer to capital goods.

One cannot jib because Mr Yates has had to lower his sights, though in doing so he has inevitably restricted the interest of his present offering—essential stepping-stone though it is. And it is a pity that when he does permit himself to peer into the future his answer is sometimes superficial (an example is the prospect for natural rubber). Admittedly a body with the resources of the Paley Commission is really needed to cope with the questions that his figures raise, though the secretariat of the General Agreement on Tariffs and Trade, with fewer resources, recently made a bold stab in this direction when it estimated the United States' and Western Europe's demand for primary products in 1975. It remains to add that Mr Yates has worked skilfully to make his largely "up and down" writing (exports of *x* have gone up while *y* has gone down) readable.

A Meeting of Minds

Meeting With Japan

By Fosco Maraini.
Hutchinson. 467 pages. 50s.

WE are clearly reaching a high water-mark of *Japonaiserie*. From Japan itself, from the United States, from Switzerland, bigger, better and glossier books on Japan and the Japanese are reaching reviewers' desks. Between the high-class photographic albums come the more sedate and scholarly offerings of British post-graduate research. How refreshing, then, to handle a book that can be read for enlightenment as well as looked at and handled for delight. Signor Maraini has the delicacy to communicate his erudition through the senses, so that the reader realises only slowly that he is becoming wiser as well as happier.

A travel book? Yes, but much more. The author makes Tokyo throb with sound and shimmer with light, strewing its monstrous architecture before the reader's eye, then beckoning him to silent scenes where, in the Japanese tradition, he may savour the beauty that has to be worked for and is the reward of effort. These things other guides have done as well, or almost as well, as Signor Maraini. But he does far more, clarifying the complexities of the Japanese character, throwing light on the more obscure areas where Chinese thought and creative genius merge into forms and modes peculiarly Japanese, crossing the tenuous boundary between religion in the universal sense and emperor-worship in the restricted national sense.

At the lowest evaluation, this book would, roughly, double a layman's enjoyment of, say, a Japanese film like *The Gates of Hell*; at a higher level, it will explain, without condoning, the wartime behaviour of the Japanese. It remains only to add that the author's photographs are of exceptional quality, that the printing is of matching standard and that Eric Mosbacher's translation from the Italian is always easy to read and usually felicitous.

OTHER BOOKS

THE STATE AND ECONOMIC GROWTH. Edited by Hugh G. H. Aitken. *Social Science Research Council, New York.* 382 pages. $3.75.

The papers included in this book are those emerging, after revision, from the seventh conference of the Social Science Research Council. They are linked and unified by an ingenious tripartite classification of natural economies, according to (*a*) the degree to which they could at the beginning of the period under study, draw on unexploited natural resources or were, on the contrary forced to intensify exploitation, (*b*) their degree of dependence on external markets and supplies, (*c*) the degree to which their political and economic decision-making agencies coincided or were separate. Within this framework, the role of the state as a growth inducing force is studied in the history of the United States, Australia, Canada, Russia, Manchuria, Germany, Switzerland, Turkey, and Eastern Europe, over whichever periods seem most relevant; while three more general essays draw together the evidence and present conclusions. It is doubtful whether the triple framework really provides more than a handy common vocabulary for the contributors, and the conclusions (e.g., that a strong sense of common purpose, described as a "goal-achievement situation," elicits governmental activity, while an emphasis on adaptation to consumer needs encourages private enterprise) are neither verifiable nor much of an advance on what common-sense speculation would suggest. Still, there is plenty of factual meat in this book, and, despite a horribly low standard of English style, considerable stimulus to thought.

THE AMERICAN FEDERAL GOVERNMENT. By Max Beloff. *Oxford University Press.* 247 pages. 7s. 6d.

Professor Beloff's contribution to the Home University Library deals only with the institutions of the federal government in the United States that are of paramount importance to non-Americans because they govern the formation of foreign and economic policies. The book is both erudite and up-to-date, though even Professor Beloff, for all his knowledge, could not foresee that President Eisenhower's political power would increase, not diminish, as he reached the last two years of his presidency. The formidable amount of information, theory and good sense compressed into a relatively brief compass makes Mr Beloff's conclusion all the more discouraging. It is that the intense conservatism of Americans, where their political institutions are concerned, is a serious threat to the ability of the United States to solve its own problems and give adequate leadership to the West.

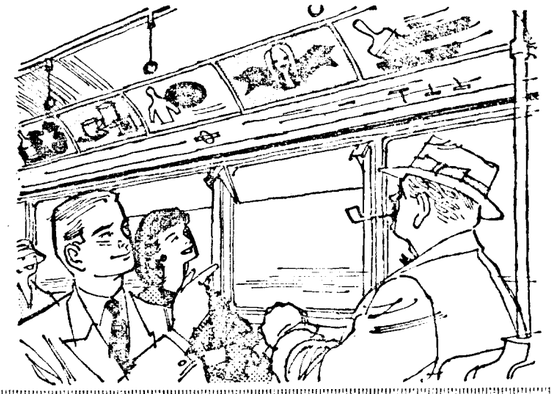
HOW MANY MILLIONS TO TALK TO?

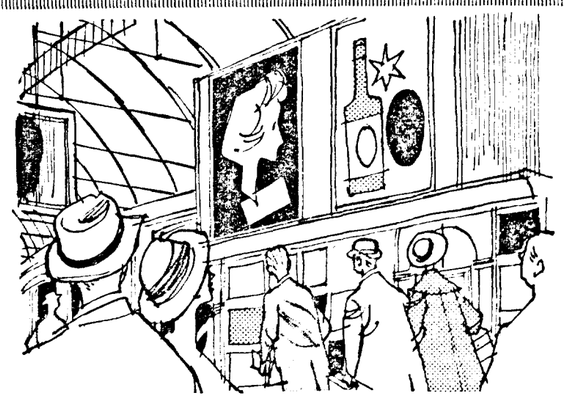


2½ MILLION A DAY

2,500,000 journeys are made every day on London's Underground. Waiting for their trains passengers read posters: en route (the average journey lasts 11 minutes) they read roof card advertisements. What a wonderful opportunity to tell *your* story!

96 MILLION A WEEK

96,000,000 journeys are made every week on British Transport buses in England (including London), Wales and Scotland. Posters on these buses – there are more than 18,000 in operation – are seen not only by passengers but by millions of other people every day, many times a day.



1,000 MILLION A YEAR

Every year more than 1,000,000,000 journeys are made on British Railways trains. And there are many more people, too, who use the stations without travelling. This means that posters on railway sites are seen by millions daily – and day after day.

Facts! Facts! Facts!

British Transport Advertising is one of the best-documented media. For rentals and all the statistics you want, ask British Transport Advertising, Cranbourn Chambers, Leicester Square Station, London, W.C.2 (Temple Bar 3490) or 6-7 Castle Terrace, Edinburgh 1 (Fountainbridge 5222).

DOW CHEMICALS *for industry*

Industry's vital partners in growth are industrial chemicals. Around the globe, industry progresses because of chemicals which help to increase yields, cut processing time and costs, aid in making new and better products. Chemicals from Dow play an important part in this progress.

Dow chemicals lend a powerful hand in wresting metals from raw ore. They help purify water to quench man's thirst, save citrus groves from dying of iron starvation, aid in fractionating rare earths, assist in making textiles stronger and more colorful.

Chemicals from Dow are at work around the globe, assisting industry in every type of processing operation. For more information on how Dow products can aid your operations, contact your Dow representative or the branch office in your area.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Without Horns or Tail

WASHINGTON, DC

AN almost irresistible Mr Khrushchev has met a nearly immovable America, and the force of the impact cannot conceal the fact that neither is likely to be quite the same again. Several hundred journalists, having accompanied Mr Khrushchev on his tour in much the way a good scrum accompanies a rugger ball, are now explaining to their readers what it all meant. Meanwhile, Mr Hagerty, the President's press secretary, is explaining to the journalists what President Eisenhower did not mean at his press conference on Monday. If the President's remarks about Berlin, even as qualified by Mr Hagerty, are taken at their face value, they seem to suggest that the United States is willing to consider a negotiated settlement—as distinct from "unilateral action"—under which some substitute for the West's present rights to keep troops in west Berlin might be devised to continue to protect its freedom. But those experienced in Washington press conferences know that words are slithery things from which to deduce the Administration's policy. This may be just another of the slips that occur between Mr Eisenhower's mind and his lips. If so, the most immediately interesting results of Mr Khrushchev's visit spring not from his talks with the President, but from his confrontation with the American people.

It is almost certain that Mr Khrushchev has changed the ideas that many, if not all, Americans held about him; it is also possible that his ideas about America may have been altered. These changes began half way through his tour. This was not entirely a matter of chance. Mr Khrushchev spent most of the first half of his visit in two cities, New York and Los Angeles, which foreigners often think of as typically American but which are, in fact, only places where certain aspects of American life are found in undiluted (and therefore untypical) form. The frenzied scurry with which the police hustled him through New York, and Hollywood's bizarre notion that he would be beguiled by actresses' posteriors, were a caricature of the United States.

In these shrilly artificial surroundings it is not surprising that Mr Khrushchev reacted with an artificial shrillness of his own whenever his hosts stuck an occasional dialectical pin in him. But things began to change at Santa Barbara, on the Californian coast between Los Angeles and San Francisco, where two developments took place: the security arrangements were relaxed, and the crowds who were thus able to see Mr Khrushchev in the flesh decided that they rather liked what they saw. From then on the mellowing was mutual; the uncanny silence which had greeted him earlier in the tour dissolved into the expected mixture of applause and boos, roughly in dry Martini proportions, five to one.

This growing friendliness was not, of course, unanimous. If one simply added up the list of organisations which have shown that they dislike having Mr Khrushchev in America, it might seem that their members included half the American population. The refugee groups, together with a substantial number of Republicans and a smaller, but militant, group of Democrats, have never made any bones about what they feel; Cardinal Spellman, declaring that America had looked too long on the face of the enemy, gave his blessing to Roman Catholic critics of the visit lower down the hierarchy; the trade union leaders have decided that Mr Khrushchev is worse than Stalin. But a Gallup public opinion poll published on Monday showed that three Americans approve of his visit for every one who disapproves of it. When Mr Khrushchev was touring the Mesta steel works in Pittsburgh towards the end of his stay it was impossible to avoid the conclusion that the faces of the workers he met—relaxed, unmistakably American and neither fulsomely effusive nor frigidly suspicious—represented the way in which most people, on consideration, wanted to treat him.

Under this change of face there lies, perhaps, a deeper change. For most Americans, before his visit, Mr Khrushchev was not merely a dangerous opponent representing a way of life whose beliefs and interests conflicted with those of the United States. As many people have pointed out, Americans like to apply a layer of moral varnish to their political opinions. Thus many of them were tempted to think of him as embodied evil, in the sense that they suspected him of both ill will and chronic insincerity. Now, after his visit, there are a number of not entirely flattering adjectives they would happily apply to him—"pugnacious," "self-assured," "ruthless"—but the number of those who think he is malevolent or hypocritical has been sharply reduced.

Mr Khrushchev has contributed to this change by his conduct. His smile is winning, and even Mr Joseph Alsop finds his manner oddly likeable. He has carefully avoided flattery, and every courtesy has been sandwiched between blunt reminders of the ideological gap that separates the two countries. On the face of it, he has seemed to be the sort of person towards whom Americans instinctively warm: tough-spoken but probably good-hearted, a stranger to diplomatic niceties, a decisive leader who obviously springs from the people he leads. He possesses many of the qualities which the American voters thought they detected in Mr Eisenhower in 1952. The result has been to peel off some of the opprobrium with which Mr Khrushchev was regarded, while leaving the recognition that he is a formidable adversary. He came to the United States as an abstract concept; he leaves as flesh and blood.

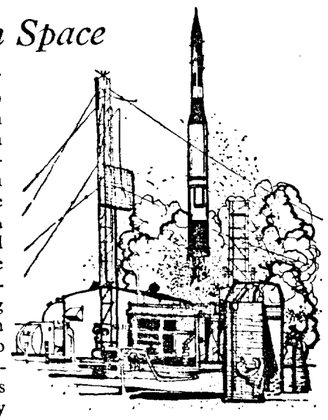
THERE is evidence that Mr Khrushchev, in his turn, has been affected. This is shown not merely by his un-Marxist admission that the American government represents the people and his un-Russian approval, on television on Sunday, of the "strictest comprehensive controls" on disarmament. The way his behaviour changed half way through his visit strongly suggests that he was suspicious of his hosts' intentions when he arrived but that he had been reassured by the time he left. This would explain several things: his tiresome boasting about moon rockets and atomic icebreakers in the first few days, a kind of whistling in the dark which he quickly dropped later on; the nervous tenseness with which he faced his first questioning by journalists, compared with the easy camaraderie of his parting press conference; the way in which, as the tour progressed, his skin grew gradually less sensitive to verbal pin-pricks by local worthies. It is possible, of course, that he was deliberately bullying at the start and deliberately cajoling at the end. An eye-witness can only report that the other explanation seems

the more plausible: that he arrived genuinely worried about the Americans' sincerity and good will, and left relieved of his worries.

Thus the first result of Mr Khrushchev's journey may be to strip the horns and tail from each side's image of the other. This can be both beneficial and dangerous. A study of the cartoons and leading articles in many American newspapers—as well as in most Russian ones—shows the peril of assuming that one's opponent is the devil in thin disguise. It produces too much jumping to conclusions (the conclusion, for instance, that the trouble-makers in the Laotian jungles come straight from the Kremlin). It also means that to the normal and natural dislike of what the other side is doing there is added what the Romans called *saeva indignatio,* that moral wrath which makes the settling of international differences even more complicated than it would otherwise be. If this element could be removed, even partly, diplomacy might become less emotion-laden and more detachedly pragmatic.

But in Washington it is feared that there are at least equal dangers in removing the encrustation of moral bitterness from the problems which keep East and West apart. Even if this is done all the specific conflicts of interest will still exist. So far, there is no sort of assurance that the Berlin quarrel will be resolved, let alone all the other points at issue along the periphery of the Communist world. If the West is to hold its own, it will have to go on providing substantial and sufficient funds for defence and for aid to the poorer nations. Unfortunately, the same moral feelings which sometimes make life difficult for western foreign ministers are often a blessing to those whose job it is to extract such funds from reluctant legislators. This is what the more perceptive sceptics mean when they ask whether the democracies can afford a "relaxation of tensions." Mr Khrushchev has not lulled the Americans into thinking that Russia is no longer a challenge to them; to his credit, he has not even tried to do this. Time alone will tell whether he has blunted their zeal for meeting the challenge.

Take-over in Space



THE visit of Mr Khrushchev, who rode into Washington on the successful Russian rocket to the moon, coincided with a bad patch for American space scientists. In less than a fortnight, they suffered the indignity of three failures, including the explosion, on its launching pad, of the Atlas which had been expected to propel an American satellite round the moon this week. They scored only one success, the final satellite launched by the once ridiculed Vanguard project. The Russian moonshot surprised and impressed American scientists with its proof of a sophisticated guidance system, but it only confirmed that the chief reason why the United States lags in the exploration of space is its lack of powerful first-stage rockets capable of lifting large loads.

For space enthusiasts, the bright side of the Russian moon is that it may revive interest in space and induce Congress to realise that success requires both money and time. At its last session Congress cut $68 million from the budget of the civilian space agency, the National Aeronautics and Space Administration. Last week the Department of Defence reorganised its own military space programme to meet—or at least begin to meet—criticisms that duplication, inter-service rivalry and layer after layer of administration have held back American progress. The Advanced Projects Research Agency which, like NASA, was created in the wake of the first sputnik, is to hand back most of its projects to the services; the lion's share is to go to the Air Force, whose claims to be the "space service" have now been recognised. It is to have sole responsibility for "space transport," that is, for all the rockets that boost satellites or other vehicles into space. This apparently includes control, when it comes into operation, of the Saturn, a rocket with a thrust of 1.5 million pounds, which is being developed by the Army Ballistic Missile Agency.

ARPA will be restricted to projects so advanced that they are not likely to excite envy elsewhere. One of the calculations behind this reshuffle seems to be that the Air Force will be more successful than the unpopular ARPA in winkling out of Congress the rocketing sums which full-scale space exploration will demand. But if the Administration keeps a tight hold on the total which each service may spend, the effect may be instead to force the services themselves to make the painful choices. The President would not find this great cause for regret. Recently he delivered a sharp little homily on the follies of being "obsessed with space" when there is so much left to do on earth.

Puerto Ricans Not Guilty

NEW YORK.

A JUDGE in New York City annoyed all good liberals last week when he suggested to the Senate sub-committee investigating juvenile delinquency that the city's officials should discourage the flow of Puerto Ricans to New York. This suggestion was part of a general call to clean up the slums and included a broadside against slum landlords. But the statistics upon which Judge Leibowitz based his case were much less than fair to the Spanish-speaking community and this gave his remarks an overwhelming flavour of colour prejudice which has been roundly condemned in pulpits and leading articles alike. In claiming that Puerto Ricans account for only 7 per cent of the city's population but 20 per cent (in the first 8 months of this year) of the youths brought before the courts on charges of delinquency, he overlooked the fact that teenagers are unusually numerous among this group. The judge's critics claim that while Puerto Ricans make up 30 per cent of the school children of Manhattan, the island centre of New York City, they commit slightly less than this proportion of juvenile crime; a recent study by the Board of Education came to the same conclusion.

Unlike earlier immigrant groups, Puerto Ricans are American citizens by birth; they can come and go as easily as a New Yorker can cross the state line into New Jersey. Moreover, many of those who immigrate intend neither to settle permanently in the United States nor to abandon their culture and language in favour of the American way of life. But at the heart of the Puerto Rican "problem" is the fact that three quarters of the 850,000 Puerto Ricans now in the country live within the boundaries of New York City. In the borough of Manhattan today one in every six residents is a Puerto Rican. Until a few years ago New York received about 95 per cent of this migration, mainly because it was for several years the only city with a direct and cheap air service to the island. But increasing numbers of Puerto Ricans are finding jobs in Chicago, Philadelphia and other eastern cities and the proportion coming to New York has now dropped to 60 per cent. In the nineteen fifties the number of Puerto Ricans arriving in the United States has exceeded the number going home by an average rate of

man-on-the-spot
in Cairo

This Bank of America financial expert is just one of *many* men-on-the-spot who—in every corner of the world—make up our International Banking Organization.

Each of these specialists *knows* the area he serves. And each is ready to put his skill and experience at your disposal. Whether you need market data from Cairo, credit information from Cologne, or business contacts in Kobe, you can rely on our global facilities to provide you with the right man in the right place at the right time.

To learn how a man-on-the-spot can serve *your* business interests abroad, just give us a call.

the answer to immediate expansion problems . . .

TERRAPIN *PACK BUILDINGS*

FROM SHELF TO SITE DELIVERY
You can order and obtain Terrapin Pack Buildings as easily as any other everyday commodity—they are normally delivered from stock, ready for immediate erection and *occupation*.

SPEEDILY ERECTED YET PERMANENT
Erection can be carried out at the rate of 1,000 square feet a day—yet this is no temporary structure—it's built to last for years and years.

COMPLETELY PREFABRICATED
Delivered in pack form, for single or multi-span construction, complete with lighting installation, glazing, floor covering and interior and exterior decoration. Plumbing and heating systems can be supplied.

SUPERIOR DESIGN
A fine handsome structure of high quality and appearance, yet with low maintenance costs.

ECONOMICAL RE-SITING
Dismantling and re-erection can be carried out easily, rapidly and at incredibly low cost, without fear of damage. You can move Terrapins when you like, where you like and as often as you like.

ALL THIS AT A BASIC COST OF NO MORE THAN 30/- TO 35/- PER SQUARE FOOT OF FLOOR SPACE—ERECTED AND FINISHED.

PREPARE YOUR OWN ESTIMATES

Terrapin Broadsheet No. T.P.3 not only contains full details of this unique service, it also shows you how to estimate your own costs. Write or 'phone for a copy NOW.

46,000 a year ; this net figure reached a peak of 69,000 in 1953 and fell as low as 17,000 last year because of the recession.

As with all new immigrant groups, most Puerto Ricans earn the relatively low wages on which many of the city's industries have traditionally depended ; the New York garment trade employs 45,000 Puerto Ricans. In its average wage rates New York comes well below most other large cities and recently there has been growing support for the view that higher minimum wages—of $1.50 an hour—might prove in the long run the most effective defence against juvenile crime. Whatever steps New York should take to combat its slums, the controversy over Judge Leibowitz's pronouncement has shown that the Puerto Rican is as law abiding as his neighbour and that, in view of the wages he receives and the housing he endures, he does rather better than could reasonably be expected.

Labour Closes its Ranks

FROM A CORRESPONDENT IN SAN FRANCISCO

THE first convention of the reunited American Federation of Labour and Congress of Industrial Organisations, in 1955, marked the healing of a long-standing split in the labour movement. The second, in 1957, was notable for the expulsion of the powerful but corrupt Brotherhood of Teamsters (or lorry-drivers). The third, which took place in San Francisco last week, will be remembered chiefly, if unfairly, for the unexpectedly angry exchanges between Mr Meany, the president of the AFL-CIO, and Mr Randolph, the Negro head of the sleeping car porters, over racial segregation in trade unions. Such quarrels were the exception, not the rule, at a meeting of trade unionists who had become suddenly unsure of themselves. They were shaken by their political failure to prevent the passage of a labour law which they dislike intensely, and on the economic front they face a bitterly contested steel strike. Most of the leaders of the AFL-CIO were determined to close the ranks in order to defeat what they describe as a conspiracy of certain corporate interests and co-operative legislators against organised labour.

Except over race relations Mr Meany and his colleagues were successful in keeping internal conflict to a minimum. Even though the old tensions still exist between the craft unions that made up the AFL and the industry-wide unions of the CIO, these disputes came to the surface seldom. The antagonism between Mr Meany and Mr Walter Reuther, the president of the automobile workers, emerged only at small meetings and the public was given no open proof of its existence. Moreover, the 25 maritime unions which have been organised in their old warring AFL and CIO camps decided to bury the hatchet and form a united front. Finally, the convention approved the outlines of a plan to submit all jurisdictional disputes—over who shall organise whom—to binding arbitration. Feuds between the craft and the industrial unions have been a constant danger to the AFL-CIO but a real sacrifice of trade union autonomy was required to reach this settlement.

Nevertheless, the failures of the AFL-CIO were clearly apparent during the convention. Politically, the passage of restrictive labour legislation by a Congress which included so many members considered to be " friends of labour " has caused some soul-searching among the union leaders. It is unlikely that any real change will be made in the general policy of supporting the Democratic party, but there are obviously some serious doubts about it. In winning new recruits to the ranks of organised labour, the federation has been only moderately successful since it last met. The drive to unionise the South has failed and no real inroads have been made into the growing group of white collar workers. The new members enrolled by trade unions belonging to the AFL-CIO have only just offset those lost when the teamsters were expelled.

The drive to end corruption and gangsterism in the trade unions has also slowed down considerably and may come almost to a halt. A good many union leaders feel that from now on the government, with its new powers, can assume the responsibility. The readmission of the International Longshoremen's Association, the dockers' union which was expelled from the old AFL in 1953, will take place very shortly now that the convention has authorised it. There is no doubt that the ILA is now much less corrupt than it was, but the major share of the credit for this must go to the Tri-State Waterfront Commission, a governmental agency, not the AFL-CIO.

The steel strike poses a most perplexing and expensive problem for the federation. Attempts are being made to secure voluntary contributions for the strike fund of one hour's pay each month from every one of the 14 million members of the AFL-CIO. Individual unions have already made very substahtial contributions. There is a great deal of bitterness over the failure of the Eisenhower Administration to take steps to end the strike ; when Mr Mitchell, the Secretary of Labour, defended the Administration's policy of non-intervention, the convention heard him in cold silence, punctuated only by a few boos.

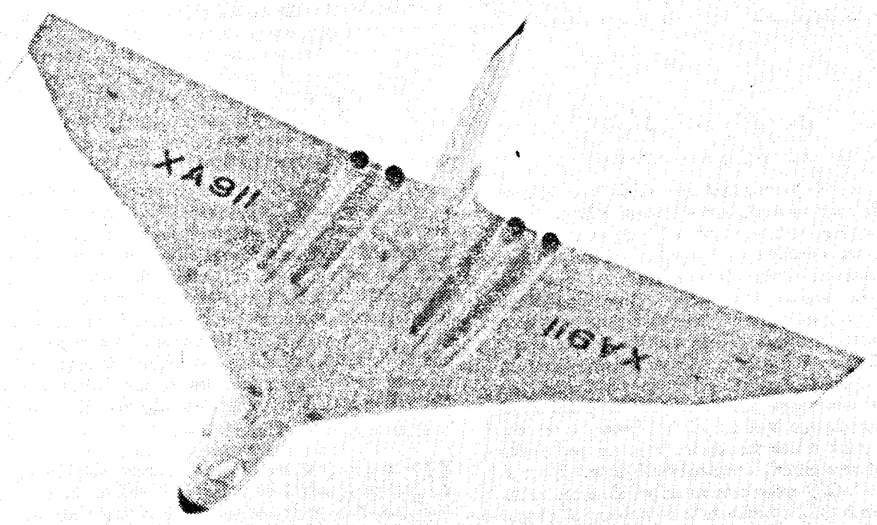
Over race relations Mr Meany engaged in two acrimonious and ugly disputes with Mr Randolph, long an articulate and steadfast foe of segregated or discriminatory unions, who introduced a number of resolutions dealing with these problems in general and with two offending railway unions in particular. Mr Meany at once condemned Mr Randolph bitterly for not bringing this issue to the executive council before raising it on the floor of the convention. He accused Mr Randolph of not being " on the team " and of being unduly influenced by outside organisations—a reference to two Negro organisations, the Urban League and the National Association for the Advancement of Coloured People.

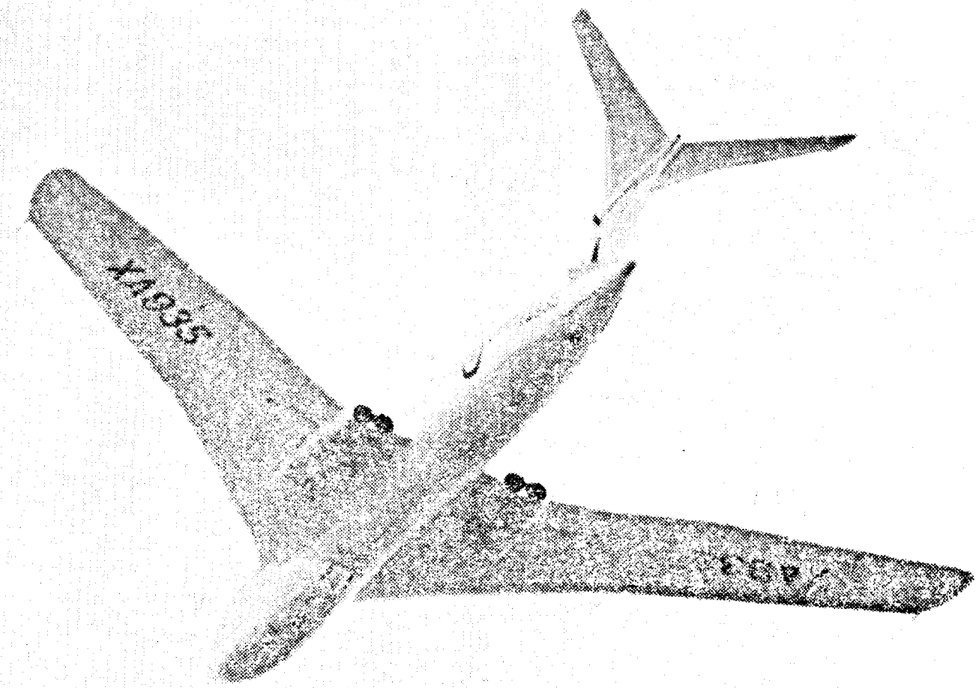
FOR the past year, the NAACP has been attacking racial discrimination practised by unions affiliated to the AFL-CIO, which itself preaches racial equality. Few trade union constitutions exclude Negroes, but many unions find other ways of keeping them out, or else allow them to undertake only unskilled jobs. No Negro mechanic was allowed to work on the new AFL-CIO building in Washington because of the discriminatory rules of the building trades unions. The AFL-CIO has a Civil Rights Committee, which is to be strengthened, but its powers are limited, partly because of the tradition that each affiliated union conducts its own affairs (this is strongest in the former AFL unions where much of the discrimination exists) and partly because the only way for the federation to force unions to comply is to threaten them with expulsion. Faced as it may be with a shrinking membership, the AFL-CIO is not likely to apply this costly sanction.

On the final day of the convention Mr Meany made another intemperate verbal attack upon Mr Randolph demanding " Who in hell appointed you the guardian of Negro members in America ? " No white union leader of any importance, not even Mr Reuther, came to Mr Randolph's defence. He was left to stand alone, partly because of the desire for unity, partly because there are numerous white leaders who favour racial segregation in union branches and, in Mr Reuther's case, probably because he did not wish to antagonise Mr Meany any further. There are no Negro leaders of importance in the AFL-CIO except for Mr Randolph, whose prestige is based on his long history of fighting discrimination rather than on the size of his union.

The truth is that the present difficulties of the trade unions arise at least in part because they have so few effective leaders, either white or Negro. This lack of leadership, coupled with the chasm that seems to separate the top officials from the rank and file, may mean that the AFL-CIO will face even graver problems at its next convention in 1961.

V-bombers fly over 10 miles a minute, over 10 miles up, for over 10 hours...



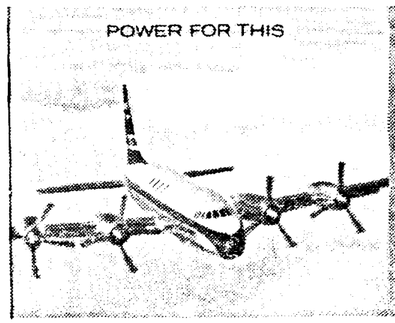


...AND BRISTOL SIDDELEY SUPPLY THE POWER

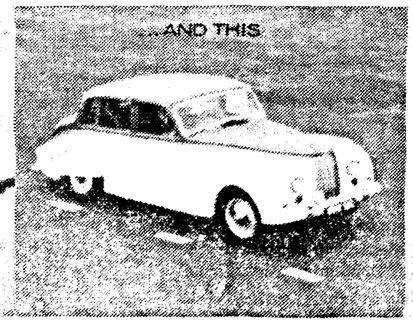
One of the largest manufacturers of motive power units in the world, Bristol Siddeley Engines Limited produce two outstanding high-thrust turbojet engines—the Olympus and the Sapphire.

Between them these two engines power the major part of the RAF's strategic V-bomber fleet. Olympus engines, delivering up to 17,000-lb thrust dry (other versions will produce as much as 33,000 lb), power the Avro Vulcan Mk 1 and 2. Sapphires power the Handley Page Victor Mk 1. These engines give the V-bombers supersonic capability—long range—great altitude—superior performance to any other aircraft of their type in the world.

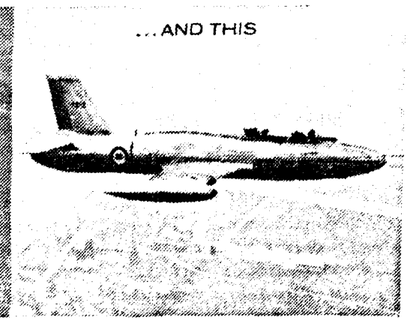
BRISTOL SIDDELEY ENGINES LIMITED



The Bristol Siddeley Proteus powers the Britannia airliner. Four Proteus give this 130-seat aeroplane a speed of over 400 mph—a range of over 5,000 miles. Britannias are in service with twelve airlines and with RAF Transport Command.



The Star Sapphire car is powered by a Bristol Siddeley 4-litre engine. Combining great power with instant response, and exceptional quietness with luxurious comfort, the new Star Sapphire has a top speed of over 100 mph and an outstanding all-round performance.



Bristol Siddeley Viper turbojets range from 1,640-3,000-lb thrust. Various Viper versions power the Australian Jindivik, the Hunting Jet Provost, the Italian Macchi MB 326 (illustrated), and have proved their supersonic capabilities in mixed powerplant fighters.

MILES AND MILES OF BUSINESS

Mr. MAX HYMANS, Chairman of Air France, heads the airline with the longest route mileage of all.

His position makes him particularly aware of the special problems that concern all companies whose market-place is the world—the problems of gaining and retaining business on an international scale.

MAX HYMANS enlists the aid of advertising to help solve these problems . . . *international* advertising . . . in TIME, The Weekly Newsmagazine.

TIME, The Weekly Newsmagazine, 26 Rue de la Pépinère, Paris 8e.

Vanity Fair

EVER since the fashion for international exhibitions was started by Prince Albert in 1851, they have proved troublesome affairs, and the proposed World's Fair to be held in the United States in 1964 is no exception. It has already touched off a fierce struggle between Washington and New York, with Los Angeles as a possible third contender for the honour of sponsoring it. New York got in first with an announcement by Mayor Wagner early in August that a committee to promote the project had been formed with full backing from city authorities. It would be likely to cost about $500 million, three times as much as the New York World's Fair in 1939, but the site would probably be the same, Flushing Meadows in Queens. The theme of the fair would be "Peace Through Understanding," and it would conveniently coincide with the three hundredth anniversary of the city being renamed New York after it was taken from the Dutch.

Mayor Wagner's bombshell was swiftly countered in Washington where, within a few hours, Mr McLaughlin, the president of the District Commissioners, revealed that plans for a Washington Fair had been laid eighteen months earlier and that fifteen firms, including International Business Machines, Standard Oil of New Jersey, and Sears-Roebuck, had pledged their support. The theme of the Washington fair would be "New Horizons in Human Dignity"; its cost $250 to $300 million. The struggle then shifted to Congress. The Senate Foreign Relations Committee succeeded in shelving a resolution naming New York and instead passed one which asked the President to appoint an impartial committee to award this apple of discord. In its turn, this resolution was blocked in Congress's last hours by the two Senators from New York. However, since Congress adjourned it has become known that 51 Senators—a bare majority—favour the claims of the capital as the centre of the free world.

The initiative now rests with the President and the State Department, who are thought to favour both the fair and Washington. They must act soon, because the International Bureau of Expositions meets in Paris in November to approve a site; unless the bureau approves an American application, the twenty-two countries which belong to it will refuse to take part. The United States is not a member, although New York held out the hope that it would join in order to secure the 1939 fair. This price may now have to be paid. At present no other countries are competing. Indeed, past experience with international exhibitions makes the rivalry of the American cities a little perplexing. The World's Fair in 1939 lost nearly $19 million. The "fringe" benefits offer an answer. The fair in 1939 brought New York an extra $1 billion worth of money spent on hotels, restaurants, taxis and other adjuncts to tourism and the hopeful estimate for 1964 is $6 billion for the lucky city.

Competition in Tuna

FROM A CORRESPONDENT IN SAN DIEGO

IN the course of a recent week a tuna clipper, the *Far Famed*, which cost $500,000 to build 14 years ago, was sold at auction for $2,060. Another similar vessel, the *United Victory*, sank off Costa Rica, after springing a leak. These two incidents dramatise, in different ways, the present plight of the tuna fishing industry in southern California. The *Far Famed* was sold by the San Diego County authorities to cover a tax deficiency of $1,700. This, however, was a minor liability. Other unsatisfied obliga-

Balanced on the Boom

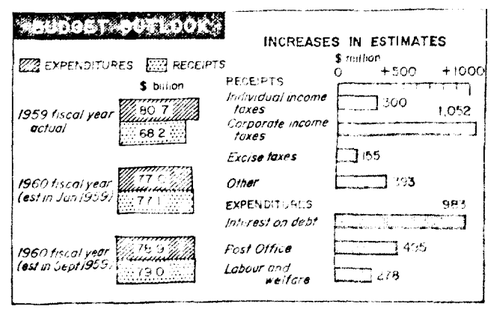
THE Bureau of the Budget traditionally produces its mid-year review after Congress has finished its work and gone home. The estimates made last January for the fiscal year to begin in July (the 1960 fiscal year) could not take account of the great overspending battle between Congress and the President and the bureau's assumptions about the course of business activity have, before now, gone widely astray. The astonishing thing this year is that the Budget surplus, which was estimated last January at $70 million, is still put at almost the same figure: $95 million out of receipts expected to total $79 billion.

But for a return to boom conditions which has been much more rapid than was expected in January, the President could hardly look forward to a balanced Budget in his last full fiscal year of office. Spending is put $1.9 billion higher than it was in January and only corporate profits and personal incomes running at record levels provide the tax revenue to offset this. Even now, if the steel strike is not settled within two or three weeks, falling profits may dislodge the Budget from its precarious balance. The estimate of an increase of over $1 billion in corporate taxes, compared with the estimate in January, is based on the assumption that profits will themselves be $11.5 billion higher in the calendar year 1959 than they were in the calendar year 1958: $48.5 billion compared with $37 billion.

The return of boom times is also partly responsible for the chief increase in spending, that in interest on the national debt. Interest cost the Treasury $7.6 billion in the 1959 fiscal year and in January was expected to total $8 billion in fiscal 1960. But the estimate is now $9 billion; this reflects the rise in interest rates caused by the competition for money between the government and flourishing private business.

Although there is a bitter dispute between Congress, which boasts that it cut £2.5 billion from the President's requests, and the Bureau of the Budget, which charges that Congress increased spending in the present fiscal year by about $600 million, the chief sin of the legislators was to refuse to raise postal rates as the President asked. This accounts for $350 million of the increase in the estimate for the postal deficit, from $109 million to $604 million.

The President's vetoes saved $110 million in the present fiscal year. But the Bureau of the Budget estimates that they prevented authorisations which would have cost $5 billion in years to come. Even so the bureau finds that Congress authorised increases in spending for the years after 1960 of $11.5 billion. This is part of the reason why, even though revenues are expected to rise further in fiscal 1961, no large surplus is likely to be achieved, and no tax relief is likely, even in the election year of 1960.



tions included $78,100 still due on a loan granted to the owner by the Department of the Interior two years ago, in order to help him to stay in business, and a repair bill for $19,000 from the San Diego Marine Construction Company. The owner had no money to pay off these debts, so he lost his boat. So did the owner of the *United Victory*, for a different, but probably related, reason. This 250-ton vessel was abandoned after water flooded the engine room and it looks as if the owner had been trying to cut corners on maintenance for the sake of economy. Both vessels were, in fact, lost because at present tuna fishing is uneconomic for the predominantly Portuguese-speaking masters and crews based on San Diego.

The local explanation is a simple one: Japanese competition. This view is supported by telling statistics from the employers' organisation, the American Tunaboat Association. In the ten years from 1949 to 1958 imports of fresh and frozen tuna fish into the United States have risen from 9.9 million pounds, round weight, to some 234.7 million pounds, an increase of 2,362 per cent. As a result, the contribution made by imports to the total amount of tuna tinned rose from 6.4 per cent to 53.8 per cent; about 80 per cent of these imports came from Japan. This year there has been a further increase, both in total imports and in the Japanese share of them. During the first four months imports went up by more than 80 per cent over the same period of last year, with about 47 million pounds, over two-thirds, coming from Japan. And the Japanese are aiming at exports of 421.8 million pounds, round weight, for the fiscal year ending next March. If this figure is even approached American supplies, set at some 336 million pounds for the calendar year 1959, will be left far behind. Further disquiet is caused by the rise in trans-shipments of tuna fish caught by the Japanese Atlantic fleet, which reach the market through Central American channels.

Well over half of all imported tuna comes into the country through the ports of southern California, the bulk through San Diego. Under the pressure of this competition, the local fleet shrank from 214 to 125 tunaboats between 1952 and the first half of this year. Moreover, the vessels which go on fishing off Central and South America find that the tuna which they bring back is offered a depressed market, or no market at all. The owners of the boats face bankruptcy or the sale of their vessels at a fraction of the price they paid for them. Some have been glad to sell for a song, in order to escape from the burden of taxes. Others, as the foundering of the *United Victory* seems to indicate, have let their clippers deteriorate to the danger point.

THE American Tunaboat Association is trying to induce Congress and the Administration to impose quota restrictions on Japanese imports. So far, little enough encouragement has come from Washington and outright import restriction is not the sole source of relief, although for many San Diego owners it might now be the only salvation. Nearby competitors, based on San Pedro, are using purse seins, or nets, instead of the traditional long-baited poles. This is a more economical way of fishing and some San Diego owners are changing, or considering changing, over to it. They could also follow the example of some of their compatriots and hire foreign crews, from Puerto Rico, Peru and Ecuador, at a fraction of the rates paid to American fishermen. Together the purse seiners and the vessels with foreign crews are expected to land about two-thirds as much as the bait fishermen this year.

The San Diego situation might look rather less hopeless were it not for labour conditions there. Tuna fishermen, like their counterparts all over the world, are paid a share of the catch—on the average, 52 per cent of the net proceeds of each trip. But in 1957 the local trade unions demanded that owners agree to pay their crews $270 a ton for yellowfin and $230 a ton for skipjack, two varieties of tuna, whether or not such minimum prices were fetched by the catch when it was auctioned. Otherwise, crews would not sail. Until May this year prices were still close to these minimum, but in the past few months the market has fallen well below them. Owners will not put to sea if they might have to make up the difference from their own pockets, on top of their other financial problems, and the unions have been unwilling to reduce their terms. Meanwhile the Japanese reap the harvest of the sea.

Priority for Mr Hoffa

MR JAMES HOFFA, the president of the teamsters, America's largest and most powerful trade union, is the first labour leader to feel the teeth of the new labour law which was provoked, in large part, by his own misdeeds. It had been on the statute books for only four days when the Secretary of Labour, Mr Mitchell, ordered Mr Hoffa to report within ten days whether any official of his union fell under the law's ban on union office for men convicted within the past five years of certain major crimes. Any union official knowingly permitting a violation of this section risks a year's imprisonment and a fine of $10,000. Mr Hoffa has now ordered his union to oust ex-convicts whose continuation in office would break the law. But few, if any, of his top officials are likely to be affected, since most of those with criminal records have been convicted of no new offences since 1954.

Mr Hoffa is running into legal difficulties from another quarter. A board of monitors was set up by the courts in 1957 to supervise the teamsters' affairs after dissident members of the union brought a suit to oust Mr Hoffa from his office. Now the monitors have applied to the courts to remove him, on the grounds that he has violated the terms of the settlement by misusing union funds, including those of his own branch, Local 299. The chief charge is that he deposited union funds in interest-free bank accounts and used them as collateral for deals in which he had a personal interest.

It should not, however, be assumed that Mr Hoffa's removal is inevitable. The transactions go back to 1954-56, and the monitors will have to establish that mere inaction in remedying past abuses breached the court settlement. The monitors themselves are under attack in a suit brought by a third party, and the court's power to appoint such officials is to be challenged by Mr Hoffa himself. These legal complications, combined with the resilience which Mr Hoffa has consistently shown when he is attacked, encourage scepticism about the likelihood of his extraordinary career being brought to a close in the near future.

Over 3,000 miles between you and your most promising market could certainly offer plenty of scope for misunderstanding, frustration, and 'unavoidable' delays. That is what you might expect, unless you knew something of the way TCA services link Europe and Canada. Any day, any week, a relaxing over-night flight can place you in the heart of Business Canada. No need to lose any sleep over the competition. TCA has daily services to all Canada—so you can bring the personal touch to developing new territory in next to no time. Goods can get there quickly too, with daily TCA Air Freight to any part of Canada direct. So it's good-bye to distribution problems too.

FLY TCA—DE LUXE CLASS
Relax aboard a giant TCA Super G Constellation. Take it easy on fully reclining seats. Enjoy good food and drink and wonderful service. And it's more than possible that you'll meet some of Canada's many business men who always travel TCA.

THE WORLD OVERSEAS

Algerian Counterpoint

FROM OUR PARIS CORRESPONDENT

THE proof of a plan is in its application. General de Gaulle's plan for Algeria has now been put to its first *major* test by this week's reply from the rebel FLN. The French president outlined his programme in a declaration which specifically excluded any political negotiations with the rebels. Undaunted, however, the Algerian "government-in-exile," after twelve days of reflection, solemnly issued its carefully-worded counter-proposals.

The twelve days of suspense were not merely designed to secure the international limelight for the Algerian "ministers" gathered in Tunis. The FLN is essentially a resistance movement, and its leaders had to decide how much they could tone down their demands without sapping the morale of their troops. If the fighting guerrilla leaders counselled firmness, the King of Morocco and President Bourguiba pleaded for caution and compromise. They did so with particular emphasis since they had been asked by the Americans to do so. Washington, having given some sort of a blessing to the general's plan, is now very interested in its success. It would, therefore, have been unwise for the FLN to reject the French offer outright, as it did last October. Its declaration had to convince both Moslem opinion in Algeria and international opinion in the UN Assembly that the main obstacle to peace lay in Paris.

M. Ferhat Abbas, the leader of the FLN, who read out the official reply in a Tunisian hotel last Tuesday, welcomed the principle of self-determination. The right of the Algerian people to shape their own fate, he argued, was one of the first demands of the insurgents, and it would not have been granted by the French without five years of fighting. M. Abbas, however, went on to criticise some other aspects of the French proposals. Firstly, the right to independence could not be applied in such a way that it involved the partition of the country; nor did the exploitation of the oil resources of the Sahara give the French any property rights there (but the reply foresees "a large and fruitful co-operation"). Secondly, to insist that the verdict of the Algerian people must have the approval of the French electorate was contrary to the spirit of self-determination. Last, but not least, a free vote could not take place under pressure from half a million French soldiers, as many police, and an administrative machine "whose traditions of electoral fraud are known."

But in spite of its strongly expressed reservations, the FLN's reply cannot fairly be described as intransigent. Those French newspapers which describe it as such must have expected a simple surrender. In fact, the insurgents do make some concessions. The French having, in theory, admitted the right to secession, the FLN no longer makes the recognition of Algeria's independence a condition that must be fulfilled before any negotiations. Moreover, the government-in-exile entrusts its fate to the verdict of the people and describes itself, in a vocabulary borrowed from wartime Gaullism, as the "keeper and guardian of the interests of the Algerian people" until the people can express itself freely. To speed up this process, the FLN leaders offer to start talks with the French government on both the political and military conditions for a cease fire and on the terms as well as the guarantees for a referendum. Peace, the statement emphasises, can be restored immediately.

This mutual faith in self-determination may seem to offer wide scope for compromise and agreement. If the French president's pledge to reject any political negotiations were the only obstacle, it could be overcome by all sorts of good offices. But deeper differences are hidden beneath the visible elements of "face" and prestige. General de Gaulle's statement of policy was carefully phrased so as not to clash with the interests and convictions of the army. It is generally assumed that the army officers agreed to swallow the distasteful dish of self-determination only because the date was distant and political talks with the FLN were excluded. For the time being, they could get on with "pacification." But if the offer from Tunis were to be accepted, a completely different perspective would be opened up.

GENERAL DE GAULLE'S reluctance to outrage his army supporters is only one of the major obstacles. The outcome of a poll must depend on the framework within which it is held. In the general's programme, the dice were heavily loaded against independence. The French authorities and the army would have plenty of time in which to guide Algerian opinion so that such a choice would indeed be "most unlikely." They would have ample opportunity to explain to the voters that secession would really be "disastrous": it would mean not only the end of French aid but also the loss of the Sahara oil and of the richer coastal regions. The bogy of partition could thus be used to influence Algerian nationalists in favour of the middle solution of home rule. But the result might be quite different if a referendum were to be held soon, under international supervision, and with the French army no longer in control. The FLN sees self-determination as a sure way to independence; the president probably sees it as a fairly safe route to home rule and association.

So far, he has advanced carefully by stages. It is not thought in Paris that he will now change his tactics and run into an open clash with the army or take the risk of real independence for Algeria. Indeed, most commentators here suggest that he has no need to answer the FLN. The dialogue was unsolicited. The rebels had been simply asked to lay down their arms and ask for the conditions of an amnesty. The terms of the plan were not for discussion.

The government, however, can hardly preserve complete silence. In his statement of September 16th, General de Gaulle put the FLN leaders on the defensive, and suggested that if they do not lay down their arms they will be branded as aspiring dictators, trying to establish their rule by terror. The FLN has now replied with the slogan of immediate peace, which might prove catchy both in Algeria and in the United Nations. By its diplomatic skill, the government-in-exile has partly recovered the initiative. It now remains to be seen whether General de Gaulle is willing to accept alterations to his original proposals and to talk with the FLN leaders either directly or by proxy.

Whose Arab Refugees?

FROM OUR MIDDLE EAST CORRESPONDENT

MR HAMMARSKJÖLD'S "proposals for the continuation of United Nations' assistance to Palestine refugees" will be the main theme for debate when the General Assembly turns its attention to the refugee problem next week. The proposals were put forward in June. Since then, no Arab state has officially defined its attitude; but enough is known of the proceedings of the experts' conference in Sofar, Lebanon, and of the subsequent meeting of foreign ministers in Casablanca, to suggest that the Arabs are looking at the secretary-general's views with jaundiced eyes. Mr Hammarskjöld explains that his report is "limited to the question of UN assistance to the refugees." He disclaims any intention of proposing solutions for "the Palestine problem as a whole" or for "the refugee problem as such." But where Palestine is concerned, the Arabs are as sensitive as Geiger counters, and Mr Hammarskjöld's own remark that "a development along the lines herein discussed might facilitate steps toward a resolution of such problems with justice and equity" suggests that he may have stretched, if not exceeded, his brief.

The secretary-general's report contains a detailed economic analysis of the possibility of integrating the refugees in the countries where they are now living, or in other Arab states. This has aroused deep suspicions. The Arabs have always argued that Palestine and the refugees are two facets of the same problem, and that one cannot be tackled separately from the other. Integration of the refugees outside Palestine would relieve the pressure for solution of the Palestine problem, and is therefore unacceptable. It is likely that the Arab states agree that they shall press for a continuation of the United Nations Relief and Works Agency, with the proviso that it refrains from interfering in the politics of the area. It is extremely unlikely that they are yet prepared to entertain Mr Hammarskjöld's more constructive proposals.

An increasing number of western well-wishers of the Arabs are coming to regard this Arab attitude as unnecessarily sterile. The Palestine problem and the refugee problem, they argue, are in fact separate. The Palestine problem exists because the Arabs resent, and will never accept, the establishment of the state of Israel on what they regard as a part of the "Arab homeland." They regard the creation of Israel as both unjust and illegal, and its future development as a threat to their security. The existence of the refugees is a contributory factor, but only a contributory one. If the refugees disappeared overnight, the Palestine problem would remain in all its intensity.

The argument goes further. The existence of the refugees is a source of weakness, not of strength, to the Arab nation. The psychological effects of keeping nearly 400,000 able-bodied men in a state of quasi-permanent unemployment need not be emphasised. The number is being swollen every year. By the same token, the economic loss embodied in this growing army of unemployed is considerable. Man-hours lost are lost for ever.

The political effects are even worse. The refugees are divided

Ceylon's Murdered Premier

FROM OUR CORRESPONDENT IN COLOMBO

CEYLON has not yet recovered from the sense of numbed shock and disbelief with which it heard the news of the assassination of Mr Bandaranaike. Nobody could accept the fact for what it was; it just could not happen, in a country where it was once said by a governor-general that "nothing happens. The sun shines in the morning, and sometimes it rains in the evening."

It took an assassin's bullet to dramatise the instability of Ceylonese politics today. The semblance of stability which had been restored after the break-up in May of the coalition which Mr Bandaranaike led to power in April, 1956, and the defection of his Marxist ministers, has now been shown as unreal.

Mr Bandaranaike was a personal and political contradiction. The son of enormously wealthy parents, he became a popular champion of the dispossessed; the gifted student of western classics rose to power as the advocate of Sinhalese as the country's official language; the man who cut his oratorical teeth in the Oxford Union became the most fiery of Sinhalese demagogues; the scion of an aristocratic family which consorted with royalty as highly respected local agents of the colonial administration, he severed Ceylon's last colonial ties with Britain by taking over the British air and naval bases.

He was both past and future, a product of what he was fond of calling "a period of transition." As early as the thirties, he saw that the extension of the franchise, the spread of literacy and free education were propelling new classes into the positions of political power. Even as he was shrewd enough to don the simple cloth and banian and reject his Christian faith for Buddhism, he was sufficiently far-sighted to leave the conservative United National party in 1951, and form his own Sri Lanka Freedom party.

But the middle-class Sinhalese-Buddhist intelligentsia which backed him was not strong enough to defeat the well entrenched UNP and, without a genuine socialist movement in the country to depend on, he was compelled to ally himself with Marxist groupings. This alliance just could not work. The internal contradictions were too fundamental, the ideological diversity too large and the personal antagonisms too sharp. Militant communal-religious opinion pushed him further than his well-bred liberalism could stand, and the powerful, though small, Marxist group in his coalition government set too fast a pace on the economic front.

The Bandaranaike government produced many radical measures: the agrarian reforms of the Paddy Lands Act, the nationalisation of transport and the port of Colombo, a far-reaching national provident fund scheme, the enthronement of Sinhalese in the place of English as Ceylon's official language, and several badly needed constitutional reforms. In foreign affairs, modelling himself on Mr Nehru, he followed a neutralist policy. But, though he continued to strengthen his economic and trade ties with communist countries, he had been moving away from the Left, politically, since he broke with his Marxist coalition partners in May.

His successor, the education minister, Mr Dahanayake, is an individualist, the traditional baby-kisser with a few gimmicks of his own. Theatrical, impetuous, he was originally active in left-wing parties, but today talks anti-communism. Ideologies really do not bother him. At the moment, he would make any alliance which would help him keep a job that he has got as a result of a chance combination of events. Mr Bandaranaike's first deputy, Mr C. P. de Silva, was in a London hospital when the premier was shot.

among themselves, and with nothing to do except talk politics, their tempers are apt to flare. Hajj Amin Husseini, the former Grand Mufti and chairman of the Arab higher committee for Palestine, probably still commands the biggest single body of adherents among the refugees. But he has recently fallen out with the inter-ministerial committee for Palestine in Cairo, and faces formidable opposition from that quarter, backed as it is by the prestige of President Nasser. In addition, he is being challenged by the Baath-Socialists and the Communists, as well as by certain newly formed organisations, such as the Palestine Arab Youth which has appeared in Lebanon, financed, so it is said, by the Syrian *Deuxième Bureau*.

Divided among themselves, the refugees also act as a divisive factor among the Arab states. Hajj Amin and the Cairo government are both considering the formation of a provisional government for Palestine, though with different faces. The Jordanian government is resolutely opposed to any such venture. It argues that King Hussein is already in control of half Palestine, and numbers a million Palestinians (including the refugees who have Jordanian citizenship) among his 1½ million subjects. Therefore there is no room, according to Amman, for another government. In such ways the refugees are a drag on the march towards Arab unity at a time when there are too many drags already.

Supposing the Arab states accepted such arguments, what practical possibility is there for absorbing the refugees? It is generally conceded that Jordan could scarcely integrate more than a third of its refugees; the same is probably true of Lebanon. The eye therefore wanders to the more spacious Arab lands such as Syria and Iraq, both of which could support much larger populations than at present. The present trouble is that there is unemployment in both Syria and Iraq, and it is unreasonable to suppose that the authorities in Damascus and Baghdad would facilitate the integration of refugees before they had taken up their own slack. The rate of development should therefore be accelerated fast enough to match the natural increase of population and create conditions of full employment. If the Syrians and Iraqis were confronted with a labour shortage, would their objections to employing Palestinians stand?

It is clearly desirable, both politically and economically, that a proportion of the capital for development should come from the oil-rich Arab lands, several of which should accumulate substantial surpluses in the next decade, if they have not already done so. Unhappily, these states have shown little interest in investment in other Arab countries, preferring either conspicuous consumption or the safer, richer yields to be gained elsewhere. The initial impulse to a quicker rate of capital formation would therefore have to come from another quarter, either from the West or from the Communist block or both.

Mr Hammarskjöld's report considers in detail the capital requirements of the area, and the present rate of capital formation from both domestic savings and capital imports. He concludes that if the aim is to keep pace with the natural increase of population and to provide employment for the Palestinian refugees, the additional capital needed between now and 1965 would be $3,000 million (the corresponding figure for 1970 is $5,100 million). The secretary-general suggests, rather optimistically perhaps, that from one-third to one-half of this need might be met by the oil-rich Arab states, leaving a shortfall, to be covered from elsewhere between now and 1965, of $1,500 million to $2,000 million. It is hoped that the accelerated rate of development would itself make investment in have-not Arab lands more attractive to the oil-rich states, increase the rate of domestic saving, and thus, ultimately, free the area from dependence on capital imports. Meanwhile, both Mr Hammarskjöld and the Arabs agree that Unrwa should continue.

Unrest in the South Tyrol

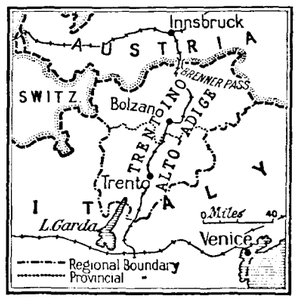
BY A SPECIAL CORRESPONDENT

Conditions for the German-speaking South Tyrolese population in the Italian province of Alto Adige have sensibly, though not sensationally, improved in the last year or so. There seem to be more German-speaking local officials and the South Tyrolese are admittedly playing a larger part in commerce. The Italian authorities, moreover, have recently made several concessions over the use of German: these culminated in the over-riding of a police order on instructions from the prime minister's office in Rome in the middle of last month; in consequence it was announced in Merano that shops, inns or any other concerns, should not be required to describe themselves in Italian. This summer the Italian ministry of instruction has sanctioned three new German secondary schools in smaller towns or country districts.

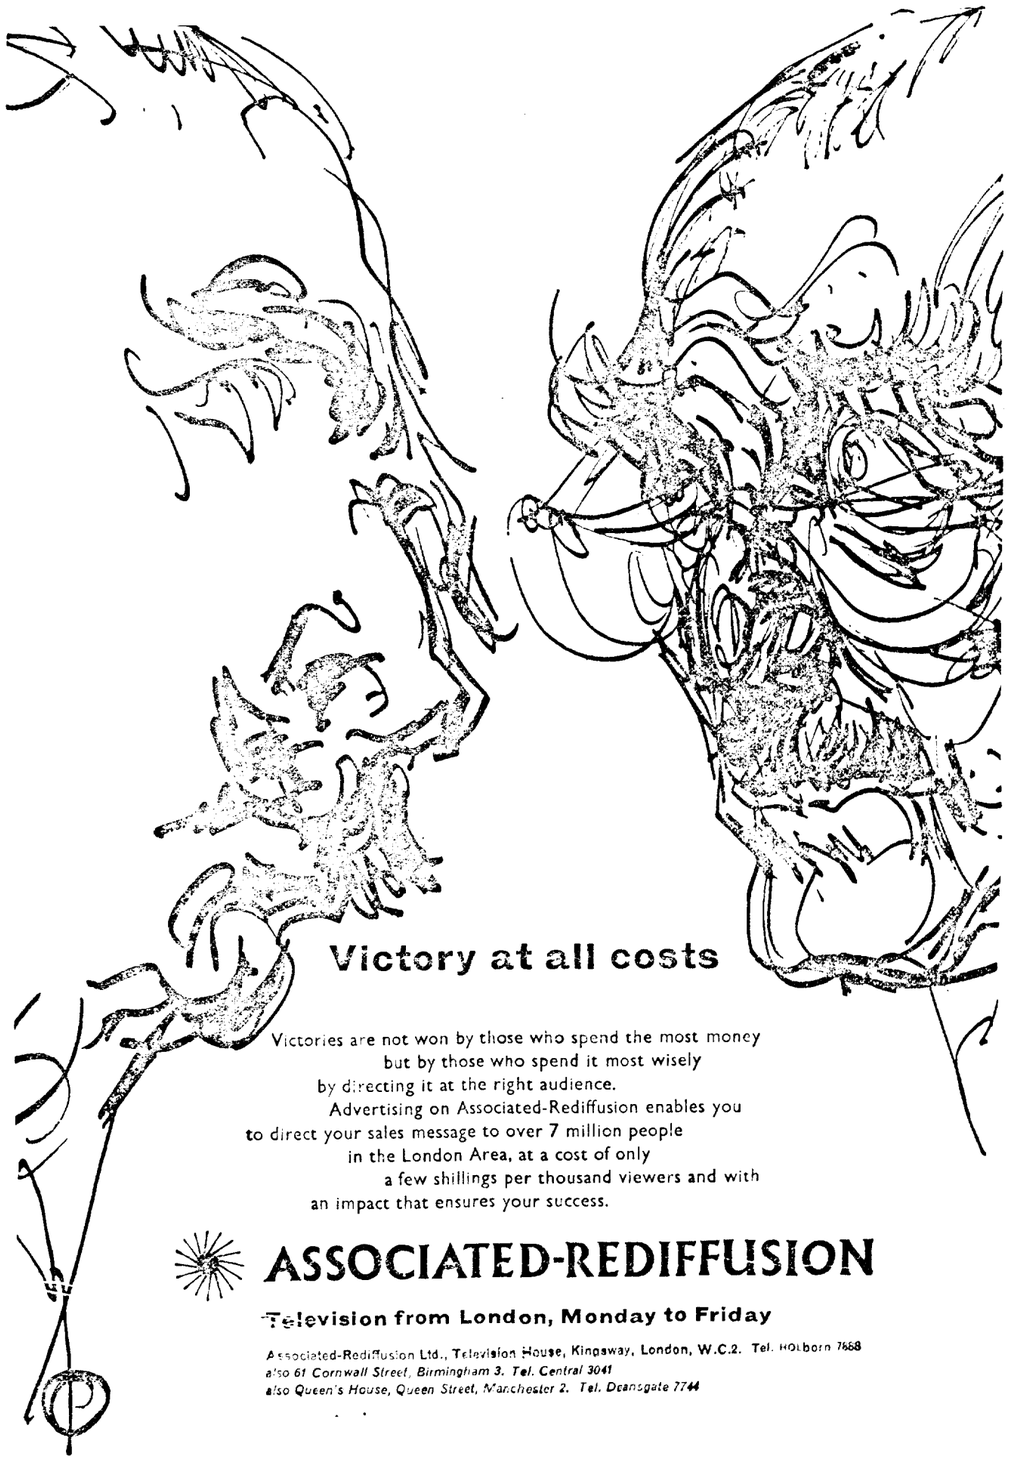
Any observer is bound to ask himself whether these changes are the effect or the cause of the agitation which has been carried on all this year in Austria on behalf of the South Tyrolese. In 1809 the Tyrolese rebelled against the French and their Bavarian allies; the insurgents were led by a South Tyrolese called Andreas Hofer who was later executed by the French. Since the beginning of 1959, the 150th anniversary of Hofer's rising has been celebrated upon every possible occasion. The subject, with its many implications, has penetrated into every national or international conference held in Austria, and demonstrations in Innsbruck on Sunday, September 13th, included the parading of a gigantic crown of thorns as a symbol of the suffering of South Tyrol.

There has been much confused talk this year, both north and south of the Brenner, of "If Cyprus, why not we?" and "If Africans can govern themselves then so should the South Tyrolese." Desperate youths are hiding explosives and dreaming of guerrilla war. While it is true that the South Tyrolese are subjected to constant vexation and certain injustices, particularly in the courts of law, the injustices are probably diminishing; thus it is difficult not to attribute the "desperation" of 1959 at least as much to the Hofer celebrations and the demonstrations in Innsbruck.

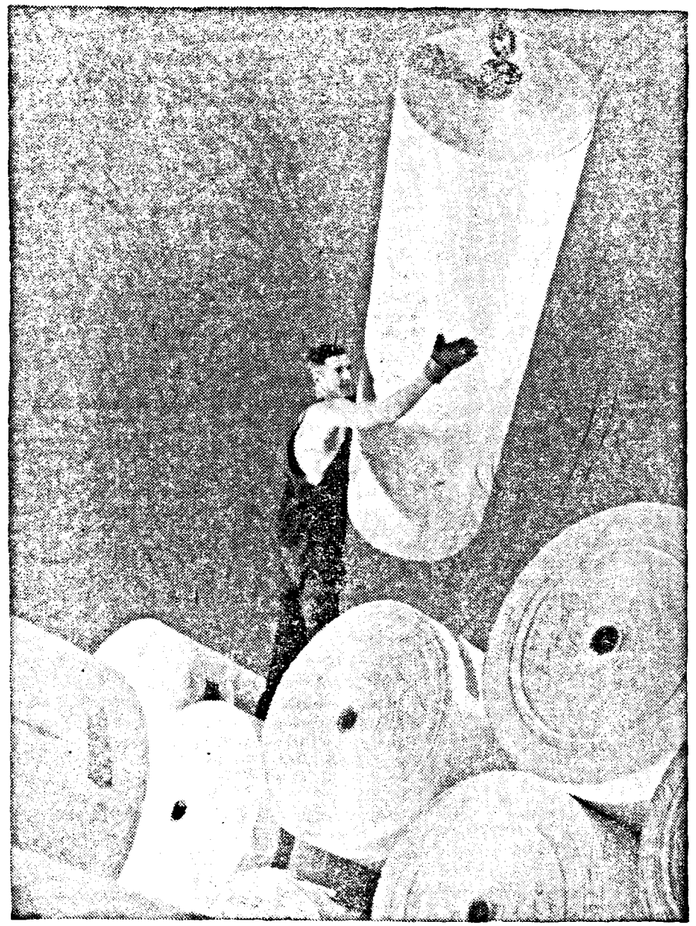
The year 1959 has also, as it happened, seen a general election in Austria, and the unrest among the South Tyrolese has been exploited for their own purposes by the Austrian politicians. The electorate's impatience or boredom with the coalition parties raised the hopes of the opposition *Freiheitliche Partei*, the heir to *grossdeutsch* and even *alldeutsch* notions: this party's vocabulary is rich in ethnic phrases about *deutsche Volksgruppen*. In Innsbruck the *Freiheitliche Partei* is generally described as merely "liberal" in the German sense of anti-clerical, but in Vienna one is more likely to hear it described as neo or near-Nazi. In order to prevent the *Freiheitliche Partei* from gaining votes at their expense, both the conservative *Volkspartei* and the Socialists found it essential to champion the cause of the South Tyrolese against the Italian government. It was particularly important for the Socialists to do this since they were suspected of indifference towards nationalist cries, and they were this year making a point of their national respectability in order to gain votes among the peasants and middle class.



The Socialists' campaign was on the whole successful, and one of the results of the election was the establishment of a separate Foreign Office (which until then had been merely a department in



AUSTRALIA country, continent . . . a world of opportunity

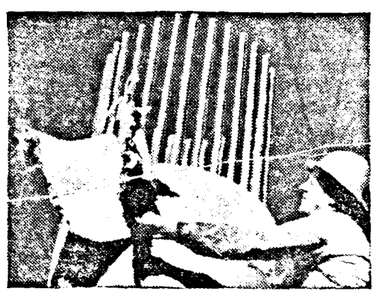


For Melbourne's new £3 million bridge, paperboard moulds 24 feet long are being used to cast the 60 massive steel and concrete columns. Foundations for these columns go as deep as 180 feet. The picture below shows a mould being stripped away.

AUSTRALIA PUTS PROGRESS TO PAPER

Paper production in Australia has almost doubled in less than 7 years. It is a vigorous industry—as is testified by the £A20 million shareholders' funds which have been invested since 1945. Such large-scale expansion is evident throughout the country. Current projects will incur £A14 million expenditure on new mills and plants, and a new £A5 million paperboard mill commenced production last year. Australia is confident of a continuing expansion in her industries. In such ventures she values her long-established partnership with Britain. During the last decade, Australians have attracted £A800 million from British, American and European investors. Australia is devoting 25% of her gross national product to investment in fixed capital.

Representatives of the Australian Government in the United Kingdom will be glad to provide information about opportunities in trade, investment and migration. Further information can be obtained at Australia House and at the Offices of Agents General for the Australian States.



the Chancellor's Office) under the most brilliant of the Socialist leaders, Bruno Kreisky. Herr Kreisky obviously could not let the matter of the South Tyrol drop after becoming the successor of Kaunitz and Metternich. It was probably the most skilful thing he could have done to take Friedl Volgger, a popular South Tyrolese journalist with socialist leanings, with the Austrian delegation to the United Nations, and on September 21st to state the case for the South Tyrolese before the General Assembly. Immediately beforehand it had been suggested in Strasbourg that the dispute might be referred to the International Court at the Hague, a procedure which might be welcome to both Austria and Italy.

The South Tyrolese demand a clear administrative frontier between Bolzano and Trent, which involves a revision of the De Gasperi-Gruber agreement of 1946. Bolzano, with three-quarters of its population now Italian, is the crux of the matter. The industrial zone outside the town was made by Fascists with colonizing designs, but it can scarcely be unmade—certainly no Italian government could contemplate such a thing. And since the management of the industrial zone is Italian, South Tyrolese youths who are willing to leave their fathers' farms are always likely to prefer jobs in the Ruhr, where the management is German and wages good. It seems unjust to put all the blame upon present-day Italy for this exodus, which is stimulated by the very high birthrate of the South Tyrolese.

Scandinavia and the Seven

BY A CORRESPONDENT LATELY IN SCANDINAVIA

"WE do not look on the British as foreigners; we regard them as Norwegians, but a little mad." That, more or less, was the sentiment expressed by the Norwegian foreign minister, Hr Lange, last year, and it must be remembered today when considering Scandinavian thoughts on the seven-nation "little free trade area." By and large, Norwegians, Danes, and (with certain qualifications) Swedes do not think of the British as foreigners; but in the attitudes of both Britain and France towards free trade in Europe they perceive certain hints of madness, certain illusions of a grandeur that is past.

Only in Denmark can the question of the "Outer Seven" be said to be a rousing political issue; no great single interest in Norway or Sweden is touched as the Danish farmers are. But in all three countries a great deal of work has been done by officials and industrial organisations. This work has been largely based on the labours of those who strove for ten years to produce a Nordic common market. It is thus not surprising that thinking on free trade in Scandinavia, particularly in Sweden, seems in some ways more mature than in Britain.

There are certain common strands among the diverse views of the three countries. One, which seems very important, is that if the Seven fail in their role as bridge builders to the common market's Six, then their rules and organisation will have to be made much tighter to allow them to compete with an exclusive and hard-bargaining European Economic Community. The British insistence on reproducing in the organisation of the Seven many of the objectives of the original broad free trade area negotiations, looks to the Scandinavians like a desire to prove that Britain was right after all. This, they feel, has produced in the seven-power Stockholm agreement two sets of concepts which are to a large extent self-cancelling. One aims at demonstrating the infallibility of the British, and the other at making agreement with the Six possible. This attitude was elaborated, by more than one authority, on these lines; the fact that an outline free trade area organisation has been defined in Gatt does not mean that it is graven on tablets of stone, nor even that it is workable. On the contrary, the French were probably right—even if for the wrong reasons—in saying it was unworkable. The Scandinavians supported the British free trade area proposals because they felt that exclusion from the European Economic Community was dangerous, while membership was for them—for a variety of political and economic reasons—impossible, and because they could not find any better solution which Britain was then likely to accept. But they do not see why they should now be bound to concepts which they believe in the long term to be unworkable. Harmonisation of duties, they seem to feel, is the very least that must sooner or later be agreed, and the sooner the better.

On the subject of Finland's membership, too, there was more unanimity than might have been expected. The old Swedish feeling of responsibility for a hard-pressed neighbour now seems to be shared by both Norwegians and Danes. This is perhaps partly a reflection of east-west politics, but it stems also from the sharper focus on Scandinavian co-operation and fellowship which the negotiations for a Nordic customs union, although unsuccessful, have produced. The need for Iceland to join finds chief expression in Norway. The Norwegians feel fellowship with the Icelanders not only for historical reasons but also because of the cod war. They point out firmly that their present government could not afford to present to the Storting an Outer Seven agreement which did not include satisfactory arrangements with Britain about fish.

Apart from the basic matter of fish, Norway's chief worries seem to be the effect of the clauses concerning freedom of establishment, and the problem of organising its scattered small industries for export. Norwegians are impressed with the cost of entering the international market for consumer goods. The little factories scattered in the valleys have neither experience nor resources enough, and in the past it has been difficult to organise them into co-operatives. They expect, of course, their established export industries to do even better than before. As regards governmental interference with industry, things seem to be easier than they were, but Norway still has one of the most regulated economies in Europe today. Even in official circles it is agreed that further relaxations may be necessary to permit industry to compete in a wider market; the purchase of cars, for example, is still subject to licence.

Sweden, with low duties and almost no import licensing, already enjoys many of the conditions of free trade, and has much greater experience in the international market than its neighbours. It therefore looks forward with a general and well-founded optimism to the results of the Outer Seven proposals. Low duties and fierce competition have given the Swede the cheapest motor cars in Europe. Next summer, he thinks, a real dog fight in the Swedish car market will begin, with the Germans bringing down prices to compete with the British preference arising from the first reduction of 20 per cent of tariffs among the Seven. Volvo and Saab, the Swedish car manufacturers, may feel the draught, but Volvo at least is making satisfactory distribution arrangements in Britain. There is, of course, one cloud in the Swedish sky. The new state pension arrangements may quite possibly produce a general increase in costs. If they do, Swedish industrialists may have to think again about their ability to compete.

THE Danes say that they simply do not know what will happen to their industry. The decision about the Outer Seven has been a very painful one for the Danish government, and was not made easier by its initial criticism of the plan. Since the early thirties imports have been regulated by quotas rather than by duties in Denmark. Thus, many Danish industries have, in effect, been without any competitive cost control for a long time, and have little idea of how they stand. The government now intends to replace quotas by tariffs (as permitted by Gatt) and the Danish Federation of Industries are said to be asking for between 22½ per cent and 25 per cent protection on consumer goods. It is clear that the sudden replacement (at the end of this year) of strict quotas by duties of this size will tend to cause some upset both of commercial life and prices.

The picture on the other side of the Scandinavian coin is equally unclear. Some importers and agents, particularly in Sweden, who have German sources of supply, are beginning to look for parallel British suppliers. Some British firms already selling successfully through local agents are said to be considering the establishment of local companies. One very large British chain store specialising in textiles has registered a company in Norway. The likely effect on British car sales in Sweden has already been discussed, and the same principles hold good in Norway and Denmark. Car sales to Scandinavia are extremely important to the west German industry, and it is very unlikely that the German manufacturers will let themselves be squeezed out until the Outer Seven preference has reached considerable dimensions—in Sweden it will take five years to reach 7½ per cent—and hope of a bridge has disappeared. It is, in fact, a cause both of hope and of concern that the Germans will not let their markets in Scandinavia easily slip from their hands.

An Egghead in Russia

FROM A CORRESPONDENT LATELY IN THE SOVIET UNION

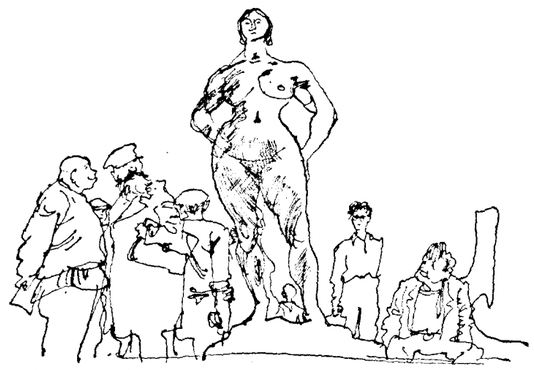
A RUSSIAN crowd surrounding an American tourist in passionate argument is no longer an unfamiliar sight in the streets of Kiev, Leningrad or Moscow. Intourist reports that it issued some 20,000 visas to Americans for the summer months alone and a small stream of hardy souls from across the Atlantic can be found on Gorky Street or in the Hermitage even in the dead of Russian winter. In fact, there are indications that, so far as touristmanship goes, the Soviet Union is somewhat *passé*; the way to bring dinner conversations to a respectful halt in Manhattan, is to remark casually that one has been among the very small group of Americans who spent the past summer in Bulgarian holiday resorts.

Has this increasing measure of personal contact with the West had any influence whatever on the tenor of discussion among Soviet intellectuals or artists? The important point to note is the extraordinary freedom of dialogue, the extent to which long-forbidden and wildly controversial topics can now be debated. Your correspondent discussed with university students in Kiev the entire problem of censorship and control over the arts. In the course of the argument, such delicate matters as the fate of Maiakovsky and other artists who perished under Stalinism were openly and frankly evoked. A similar discussion took place on the steps of a theatre in Leningrad after a performance of Shakespeare's *Anthony and Cleopatra*. As the playbill clearly stated, the translation was by Boris Pasternak.

Recognising a foreigner in the audience, a number of spectators came up to him and proudly claimed that the eminent black sheep was being allowed to continue his literary work. Would this have been possible, they asked, under the czars or under Stalin? In any event, was it not true that *Zhivago* had been much overrated as a novel? Your correspondent allowed that it might have been, but inquired who else among contemporary Soviet writers was producing anything worth reading? He asked this question repeatedly and the answer was usually the same: a moment of silence and a sudden chorus to the effect that "there are important young writers on the way. Just you wait. We have had to rebuild our lives from the rubble of war."

And although public emphasis lies heavily in the direction of science and technology, there can be no doubt that the practice and study of literature are benefiting from the general upsurge in Soviet prosperity. The Lenin Library in Moscow claims a collection of some twenty million volumes. A spot-check of certain authors, subjects and periodicals in the immense card-catalogue suggests that little of value published abroad is being missed. Obviously, there are gaps—for example, in the field of non-orthodox Marxist criticism and philosophy. Here, the Library of Warsaw University seemed more adventurous. But so far as philology, literary history and general *belles lettres* goes, the Lenin collection is probably among the finest in the world.

How far the post-Stalinist revolution has gone in the actual teaching of literature and philosophy is difficult to judge. Foreign books and journals are now more accessible than ever before and such names as Graham Greene, Kingsley Amis and Colin Wilson appear to mean something to a good many Russian students and professors. But on closer scrutiny it turns out that a certain Mr Aldridge is firmly regarded by the majority of Soviet critical and academic opinion as the foremost living English writer. Your



Perplexed visitors at the American Exhibition in Moscow.

correspondent's mild surprise on hearing this assertion was readily accounted for by the fact that "progressive writers still are suppressed in England and the United States." Such assertions mark the inevitable frontier in the process of discussion. One can push just so far before coming up against one of the Big Lies tenaciously rooted in the Russian consciousness. These pass-words to ignorance range from literature to politics—from the firm belief that numerous American radicals are languishing in FBI cells to the ever-repeated statement that the Royal Air Force and the Americans carefully destroyed workers' quarters in German cities while leaving the factories of cartels and "friendly trusts" intact.

To hear nonsense of this kind, from the convinced lips of highly intelligent and educated Russians is obviously distressing. But the effort of encounter is worth making, all the same; the next instant may bring a question about Trotsky's last years, or a covert admission that the "great Chinese allies" are not altogether the most reassuring of neighbours. Indeed, it was in this context that your correspondent heard notes of regret for the passing of Stalin and Molotov. "Here we have been investing years, money and hard work to persuade India of our friendship. It took the Chinese just a few weeks in Tibet to undo it all. Maybe the *Kitai* (Chinese) don't really like the idea of Soviet influence in India. Anyway, neither Stalin nor Molotov would have let them barge in."

The remark was made outside the gates of the American Fair. Inside, some 65,000 Russians went each day to examine American motorcars, file through the "model house," deplore the relative absence of heavy machinery, and laugh at abstract art. Many things struck them as remote or unfamiliar. But other exhibits must have rung a familiar note. The pictures of Nebraska could have been taken in the Ukraine. The account of the westward pioneers was very nearly that of the present Soviet exodus to the virgin lands. And one thing is certain: for all the great differences, the American whom the Russian saw at the Fair and met in the lounge of the Metropole was nearer to his own life than the Chinese delegation advancing down the airplane ramp in its inevitable blue tunics.

Electrical Aids in Industry *Data Sheet* **No.7**

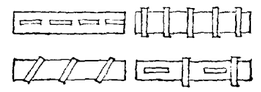
Lighting—2

The general principles of factory lighting have been dealt with in the previous data sheet (No. 6). This one considers briefly certain factors — not always fully appreciated — that influence the lighting for some particular factory applications. The next data sheet will carry the subject further.

Work benches

The most universal application of lighting is to bench work, for there is no branch of manufacturing that does not have its work benches which, of necessity, are used for a great variety of occupations. No single lighting method is suitable for all cases.

The introduction of fluorescent lighting has gone a long way to solving one of the main problems here; for while the high degree of brightness of filament lamps tends to preclude their use for individual lighting owing to the glare, the fluorescent tube with its greater expanse of light source has made localised lighting with a low mounting height more practicable. Moreover, the length of the fluorescent tube makes it possible to control shadows.



With narrow individual benches (not more than 4 ft. wide), there are four basic methods of localised lighting: longitudinal, transverse, diagonal or a combination of longitudinal and transverse. With wider benches it is not advisable to use fittings directly over benches, and fittings should be behind the workers at each edge of the bench. Where particularly high illumination is required, fluorescent fittings may be mounted as local lights — low enough for the skirt of the reflector to conceal the lamps from the eye of the operator.

High-bay shops

Probably the most difficult of all factory lighting problems is that of high-bay lighting. In lofty, long and sometimes necessarily dirty shops such as those which house really large machine tools and overhead cranes, it requires great ingenuity, coupled frequently with high lamp wattage, to provide adequate illumination. From the planer operator to the slinger, the workman is dependent on good lighting if he is to avoid an over-cut or a serious crane mishap.

The major problems associated with the lighting of high and relatively narrow shops, such as heavy machine shops and foundries, are:—

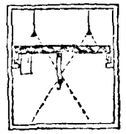
(a) Poor light utilisation caused by excessive light absorption by the large and often dark wall area.

(b) Preponderance of light flux downwards and poor cross lighting causing poor illumination on vertical surfaces, and heavy shadows.

(c) Possibility of heavy light absorption in the atmosphere.

(d) Difficulty of access to high fittings for maintenance.

In high-bay workshops there is a tendency to use concentrating fittings so that the maximum proportion of the light output reaches the working area without spread to the walls, but the saving in wall absorption is obtained only by accepting a depressing environment, poor cross lighting and heavy shadows.



In many cases it is good practice to accept the inevitable reduction in light utilisation by wall absorption and to reduce this by applying light colours to interior surfaces where possible throughout. This approach results in more cheerful conditions and provides equally good illumination values and better cross lighting. Even better is to add angled lighting from the sides below crane level.

In the conditions obtaining in this type of shop, rapid deterioration in light source intensity due to dust must be expected. Facilities should always be provided for easy access to fittings for cleaning and maintenance.

For further information, get in touch with your Electricity Board or write direct to the Electrical Development Association, 2 Savoy Hill, London, W.C.2. Telephone: TEMple Bar 9434.

Excellent reference books on electricity and productivity, 8/6 each, or 9/- post free) are available — "Lighting in Industry" is an example.

E.D.A. also have available on free loan in the United Kingdom a series of films on the industrial uses of electricity, including one on industrial lighting. Ask for a catalogue.

THE BUSINESS WORLD

The Year Europe Caught up

BY OUR SPECIAL CORRESPONDENT VISITING WASHINGTON

TEN years ago the meetings of the international financial institutions in Washington were a prelude to the devaluation of the pound. This year it looks like nothing worse than the Uruguayan peso. Those misguided pundits who earlier in the year were declaring their intention of being eye witnesses of the devaluation of the dollar are now wondering where they went wrong. They have found no echo in this august assembly of the administrators of high finance. Except for Zurich, which sends few representatives to Washington, European observers now seem generally impressed with the financial efforts of the United States Authorities, and they sensibly see that the "problem" of the dollar is as much a problem for them as for the United States.

These Washington meetings have assumed a quiet and sober tone; but there is a feeling that in many important ways the international economy may have reached or passed a major turning point. "In all likelihood," Mr Per Jacobsson told the governors in presenting his annual report of the International Monetary Fund, "world inflation is over." This assertion was widely queried in the corridors. It was not quite clear how far Mr Jacobsson was stating his view of what has happened or of what should happen. To a press conference on the eve of the meetings, after all, he had expressed in a forthright manner his approval of the firm financial policy now adopted by the US Administration and his anxiety that the price of steel should not be increased, citing the importance of the British Government's resistance to the demands of the London bus workers last year. But if there are different views about whether inflation is beaten or no, there is a wider concurrence in Mr Jacobsson's view of a "new situation" in the world economy and one that calls for new ways in world finance.

Financially the starting point of this new situation is that, measured in terms of the movement of gold assets and short-term dollar liabilities, though still not in terms of the current balance of commercial payments, the United States is today a major deficit country. Its transfers of gold and other assets to the rest of the world are running at an annual rate of about $4\frac{1}{2}$ billion, following last year's transfer of $3 billion. America's surplus on commercial account has run down from its quite abnormal level in the years before Europe had fully recovered, while at the same time America's special Government payments have not diminished in total. As aid to industrial Europe tapered off, new commitments were conceded in Asia, from India to Korea. The rich uncle can still compete with the grown-up nephews he has put on their feet, but he is burdened with a new generation of claimants. Not surprisingly, the earlier beneficiaries are now expected to do their stuff.

In practical terms, the European delegates at Washington have been realising, this means two things. It calls for an end of European discrimination against dollar imports and dollar payments in general. And it means, fairly and practically enough, that Europe must take up a bigger share of aid for the poorer countries. Mr Anderson, the secretary of the Treasury, hoped that America's external balance would be corrected by an increase in exports, but he made it clear that if that does not happen, other measures will have to be considered.

Foreign aid is not easy to reduce without major adjustments of military and foreign policy; but more aid could be tied, unsatisfactorily no doubt, to the purchase of United States goods. Alternatively, and more constructively, certain projects could be financed by a new international authority which Europe could help to finance. This is the germ of America's resolution, submitted to the governors this week, that the executive directors of the World Bank should formulate, as a basis for consideration by member countries, articles of agreement for a new International Development Association.

No one takes this proposal as any reflection on the performance of the World Bank. Under the wise and vigorous leadership of Mr Eugene Black, the Bank has been an unqualified success. It has stepped up its own loans to the high annual rate of $700 million, now achieved in two successive years; and its example has done much to bring private bankers and institutional investors back into international investment. Under its own ægis it brought in $148 million of private money in its past year of participation in its loans. And in a number of cases it has linked its loans with issues of the recipient country's own bonds in the market. It has few difficulties in financing itself in the World's capital markets: a recent issue found buyers in thirty-five different countries. In total, about half of its funded debt of some $2 billion or so is held outside the United States—though mainly in dollar bonds.

The World Bank is already supplemented on one flank (should one say the right ?) by the International Finance Corporation, which works together with private industry to deal with small and medium-sized projects. But this type of organisation necessarily starts with a handicap: that it will be offered only the duds. As a result, although the Corporation's activities have quickened in recent months, they are still on a modest scale; its investments since mid-year have amounted to just over $5 million, compared with $9 million in each of the two last full fiscal years.

PRIVATE investment should certainly play a larger part internationally, and in some cases IFC may be able to help. But most people agree that a gap remains on the World Bank's other flank. Some countries that have adopted an ambitious pace of development are approaching a new problem in meeting existing debt commitments. Commercially, however remunerative individual schemes may be, these countries may be "loaned up." Mr Jacobsson pointed to the danger of countries financing development through short-term export credits which merely postpone the reckoning; and United States officials are also worried about some recent transactions in which European sources extended short-term credit and America duly "picked up the check."

The International Monetary Fund itself provides short-term credit, repayable in three to five years. But in the past year, drawings on the fund, mainly by primary producing countries, have totalled no more than $140 million, while repayments, mainly from industrial countries, have reached a record sum of $435 million. In coming months further big repayments will be made, notably by France; and the fund has received big new amounts from the increase in contributions, mostly by 50 per cent. Mr Jacobsson feels that, now the postwar difficulties of European countries are largely over, the facilities of the fund will be more freely available to help to promote general growth.

But these contributions will obviously be limited. To a substantial extent what is needed is straight aid; and since it is unreasonable to expect the United States alone to carry almost the whole burden, with Britain carrying the rest, the time may be ripe for a co-operative venture under the International Development Association. But the project has always had some real dangers, and these have been much in the minds of the Washington delegates. If finance is available on easy terms, borrowing countries have less incentive to meet the requirements for obtaining loans at commercial rates.

There are also some familiar pitfalls in proposals that have been mooted for repayments in local currencies and using IDA money twice over, through manipulation of local currency counterpart funds, which in practice can simply add to inflationary pressures. For these reasons Britain and other countries will look critically at the detailed scheme when it is submitted in the course of the next year. Probably it would be better to accept the fact that certain types of aid take the form of a straight grant. Certainly aid must meet the condition set by Mr Black—that it is given as a "support for the recipients' own efforts rather than a palliative for mismanagement." The proposal that the scheme should be manned by the experienced staff of the World Bank is itself some safeguard against abuse. And the beginnings are to be modest—an initial capital of $1 billion, with one-half paid up, has been proposed by the United States.

Europe's response to this proposal for sharing contributions to international aid has been positive if not enthusiastic. It has reacted a little more warmly, if still not with alacrity, to demands that it should end its discriminatory trade and payments restrictions. "It is my personal conviction," Mr Jacobsson declaimed in his opening speech, "that for the vast majority of countries there are no longer any balance of payments reasons for the maintenance of discrimination." These restrictions are now more clearly seen as protective devices. Mr Jacobsson therefore presses, and naturally he was strongly supported by the United States and Canada, for serious consideration of a move by European countries to implement Article VIII of the IMF agreement—which bans discriminatory restrictions on current payments as well as making new restrictions subject to approval of the Fund. Germany, as was to be expected, is warmly sympathetic; in practice it has established full convertibility already. France sees "no serious difficulty" in ending discrimination, having made a move in this direction on the eve of the meeting. But it and other countries of the common market see a possible conflict of Article VIII with obligations under the common market treaty.

No such difficulties appear in prospect for the proposed outer free trade area, including Britain. Sir Roger Makins accepted the argument for non-discrimination and full convertibility in principle; pointed out the importance of timing; and argued that when the move is made, the provisions of Article VIII should be rigorously followed with the minimum of exceptions. He said nothing of the doubts expressed by the Radcliffe Committee about the adequacy of Article VII, which allows discriminatory restrictions when a currency is declared technically scarce (as the dollar never has been). Presumably, a move to full convertibility will be a joint one, as that to external convertibility was. October 8th may be the critical element in the timing here.

THE past year, as the proceedings at Washington forcefully bring out, has been characterised financially by the growing strength of Europe, at the expense both of the United States and of the primary producing countries. These countries expressed their usual protests against their vulnerability to adverse movements of the terms of trade, but more of them seem now to accept the hard fact that they are more likely to secure aid from outside if they make the necessary adjustments domestically. Countries may feel that Mr Jacobsson's terms are stiff, but most have found that they get more development done by accepting these terms. Europe must now take a hand in financing that development. The wheel has indeed moved far round when we hear the Secretary of the United States' Treasury protesting with indignation that the payments surpluses of other industrial countries have substantially exceeded their long-term financing, and that the resulting addition to their exchange holdings upsets the pattern of world payments. Many people, including high officials in European delegations, are sure that the dollar is still basically the strongest currency; but temporarily it no longer stands pre-eminent.

THE JASPER AFFAIR

Principals and Agents

As the official investigations begin, more evidence has emerged—much of it conflicting

MR NEVILLE FAULKS, QC, who was appointed on the initiative of the Board of Trade to investigate the affairs of H. Jasper and Company, has begun his inquiries. The Registrar of Building Societies, following his normal procedure after the issue of a "stop order," is examining the books and accounts of the State Building Society. The fraud squad of the police has begun its own investigation. Although these investigations are going on, the Jasper affair is still not technically *sub judice*. But, obviously, as any new evidence is introduced it has to be treated with the greatest caution, coming as some of it does in statements from men who are deeply interested in this unpleasant business. As further statements have appeared, the contradictions between certain of them have become more apparent.

No doubt these contradictions will be resolved by Mr Faulks. In particular, his report may throw light where it is most needed—on the question of who at any one moment of time in this affair were the principals and who the agents. But it may be that finally a higher authority than his will have to pronounce upon that tangled question. It is not the purpose of this article to cut that Gordian knot, but to point to the strands which are so entwined. Mr Jasper, speaking in London, said that the bids were made by Harewood and Company (in which Mr Grunwald is a partner) on behalf of H. Jasper and Company, which in turn was acting on behalf of Mr Grunwald in his capacity as a private client. Mr Grunwald, speaking in Israel, has had this to say of the Lintang bid:

> This deal was done by me together with a number of associates, of whom Mr Jasper is one. It is true that the offers to purchase the shares were made in the name of H. Jasper and Company, but they were in fact acting for all the associates, of whom Mr Jasper is one.

In another statement made to reporters Mr Grunwald also brought in the name of Mr Herbert Hugh Murray, the managing director and secretary of the State Building Society. He, said Mr Grunwald, was

> one of my associates long before Lintang. He has been my associate from the very inception of Jasper Investments Ltd.

Later, in another statement, Mr Grunwald said that Mr Murray had said to him:

> Do a deal. The funds coming into the State Building Society are choking us. We must get mortgages.

In London, Mr Murray's comment was:

> Grunwald is trying to implicate me. I am just the associate he tried to borrow money from.

In New York, Mr Noel Cow, the chairman of the State Building Society, added his own comment:

> Some people are saying that Mr Murray was a business associate of Mr Grunwald. They imply that he was in a fifty-fifty deal in the affair. That is absolutely untrue.

In a later statement, Mr Noel Cow also said:

> Well, maybe I am an old fool, but I have not been dishonest. I have just been a little too trusting.

Both Mr Cow and Mr Murray have expressed some hope that part, if not all, of the £3½ million lent by the State Building Society, even though it does not appear to be secured on a property mortgage, may be recovered. The maximum loss that the State Building Society may suffer, it has been suggested, is equivalent to about 20 per cent of its total assets, which are now in the region of £15½ million. This loan by the State Building Society is the hub of the whole affair. On the face of all the statements made so far, there can be only the tiniest sliver of doubt left that this money was in fact used to help to pay the £3½ million to Mr Maxwell Joseph and his associates for their controlling interest of 51 per cent in the Lintang equity at 23s. a share. The principal question is now therefore: upon whose initiative was the money so used ?

The statement from the State Building Society, it will be recalled, said that on July 28th:

> Sums totalling approximately £3,250,000 were forwarded by the society to its solicitors, Messrs. Harewood and Company, pending completion in the normal course of business of various mortgages to be secured on properties owned by subsidiary companies of Lintang Investments, to whom the society had agreed in principle and subject to certain conditions to lend these sums. The money does not, however, appear to have been applied for this purpose.

If the implied contention of this statement, that the money lent was misapplied by Mr Grunwald, can be proved, then the State Building Society may perhaps have some recourse to Mr Grunwald for the return of the money. Even so, it is difficult to see where that money would come from, especially as Mr Grunwald has said that he is now "broke." After all, the Lintang shares were later pledged by Mr Grunwald as collateral against further loans from Mr Joseph and Lloyds Bank.

In Israel, Mr Grunwald gave his views on the course of events. Having said that he had not taken any money with him to Israel or elsewhere out of the Jasper companies, he said of the Lintang bid:

> I will not mention any names, but will only say that some of my associates have not contributed the amounts which they were promised to contribute and we, namely all the associates, were left with the difficult task of finding a large sum of money at very short notice. . . .
>
> The associates, however, were left short of the necessary amount and had to get by way of security, holdings in shares which by far exceeded the loans they obtained. . . .
>
> You have read in the press that the State Building Society contributed £3,250,000 to this deal. This money was used, as it was meant to be used, to effect the purchase.

In view of this statement, it is difficult to see how Mr Grunwald and his associates could possibly mortgage any properties owned by Lintang until control of that company had been obtained by paying cash on the nail to the vendors. Does his statement, in fact, imply that Mr Murray, acting on behalf of the State Building Society, knew to what purpose the £3½ million was going to be put ? If that were to be the case it would be hard to see what recourse the society would have to Mr Grunwald in asking for the return of the money.

Mr Maxwell Joseph and his associates had made it a condition of the sale of the controlling interest in Lintang at the good price of 23s. a share that, subject to a 80 per cent acceptance, an offer should be made at 24s. a share to the minority shareholders in the company. Money to implement that offer had thus to be found. At the same time, money had to be obtained to meet the £1,200,000 bid for Ely Brewery. Neither Martins Bank nor Lloyds Bank seem to have been willing, on the security that Mr Grunwald had to offer, to lend money for the completion of the Ely deal; but, according to Mr Grunwald, Mr Jasper was able to obtain a loan of £600,000, "supported by the delivery of some securities," from Williams Deacon's Bank. That still left £600,000 of the Ely bid uncovered.

To cover the bid for the minority shares in Lintang, Mr Grunwald seems first to have approached Lloyds Bank with some, but far from complete, success. He then turned to Mr Maxwell Joseph from whom he had originally purchased the controlling interest). Mr Joseph was obviously anxious that the Lintang deal should be completed to the satisfaction of all the shareholders, and after some negotiation he lent on August 28th and September 4th the sum of £1½ million. In return he received as collateral 3,300,000 shares in Lintang and 500,000 shares in Reliable Properties. This, it must be emphasised, is Mr Joseph's collateral: the Lintang shares were not again pledged by him in securing a loan from Lloyds Bank. The bank, however, did lend £500,000 to Mr Grunwald. On what collateral it did so is not yet clear; but it would not be surprising if Lloyds now were to hold not less than 750,000 Lintang shares against the loan it made.

If so, more than 4 million shares in Lintang would be accounted for. Another 200,000-odd Lintang shares are held by minority shareholders who accepted the offer but did not receive the cash for it, and another 700,000-odd shares belong to holders of about 12 per cent of the Lintang equity who did not assent to the offer. So there would thus remain about 1,300,000 Lintang shares still to be accounted for. Have these shares, in two or more blocks, also been pledged as collateral securities for other loans? Certainly, the search for cash sounds to have been a desperate one, and substantial security had to be offered to obtain it. Even so, at the end, about £250,000 of the Lintang bid remained uncovered.

Mr Maxwell Joseph possibly feeling remiss that he did not make absolutely sure that the cash was there to meet the bid made to other shareholders after he sold his own interest has said that he will himself pay 24s. a share to those shareholders who accepted the original Lintang bid from the Jasper group but who did not receive their money. (If Mr Joseph has been less than strict in respect of the bankers' guarantee, it may also be noted that Martins Bank let its name appear on the documents making the offer.) In making his loan of £1½ million, Mr Joseph regained the right to vote on the 3,300,000 Lintang shares (amounting in all to a controlling interest of 52 per cent), but he has now waived this right. What Mr Joseph would do, if on default he had to take up his security, is not at the moment a relevant question. It will not be so until this affair has been completely disentangled. Nor is it really pertinent to question what his collateral is worth, for who at the moment can say what the true market value of the Lintang shares is? And who, in circumstances like these, would not have demanded a cast iron security for such a loan?

SOME of the questions posed in these columns a week ago about the Jasper affair now seem to have been answered. Others still remain unanswered. How far are there cross-shareholdings in the Jasper group? The revelation at this week's general meeting of S. Gibson and Sons that it had holdings in Capital and Provincial News Theatres and in Victory Real Estates suggests that these may be substantial. Have, in addition, any cash balances been shifted around? How much in the individual companies is now outstanding on property mortgages? Have any other shares than those of Lintang and Reliable Properties been pledged as collateral on other loans? That must appear unlikely, for the Jasper group of companies was able to obtain ready finance from the State Building Society on property mortgages. In 1958, for instance, the outstanding mortgages of the society rose by £2,330,000; in that year it lent on mortgage about £1,500,000 to accommodation companies. Many, if not all, of these "toy" companies seem to have been subsidiaries of the Jasper group. By the time of the Lintang bid, the State Building Society had £3.9 million outstanding on mortgages in properties belonging to the Jasper group; instalments of capital and interest on certain of these mortgages are now at least two months in arrears. It still remains unclear how central a part the State Building Society played. Whatever it was, it was based on money attracted from the public by high rates of interest publicised in an extensive and expensive advertising campaign.

Whose ambition prompted the growth of the Jasper group is not yet clear. All that can be inferred at the moment is that ambition does seem to have over-reached itself. Throughout the history of the affair, bids were made at high prices. A bridge had been built and, however much its builders tinkered with its construction, it seems to have lacked a keystone. Lintang could have been the keystone which would have held the structure together. It could have become, for instance, a holding company for the property subsidiaries of the group. Its own properties, including Dolphin Square, formed a strong foundation. Its shares—and some of them were left on the market—would, no doubt, have continued to prove popular. But the keystone was not cemented into place, and the safety of the whole fabric seems to have been placed in jeopardy.

The Hotel York

It is now known that the ordinary shares of the Hotel York, which has operated the Berners Hotel for some years and which acquired the Wellcock Palace Hotel in June, 1958, were purchased as to 50 per cent by Honywood Hotels and as to 50 per cent by Great Universal Stores in March, 1957. In December, 1958, both Honywood Hotels and GUS sold their interests in the Hotel York to Associated Union Hotels. The sale was thus completed six months before the Jasper group made its bid for Honywood Hotels.

BUSINESS NOTES

THE ECONOMY

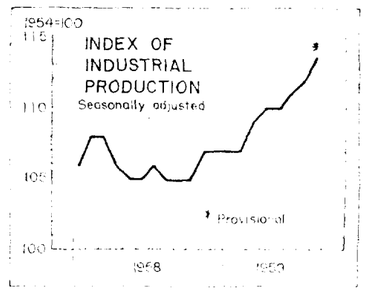
From Recovery towards Boom?

NOT only the record level of output (allowing for seasonal factors) that British industry seems likely to have reached in August, but upward revisions to the production index over the whole summer, as far back as April, made this week's account of recovery from the Central Statistical Office unequivocally impressive. The CSO thinks that industrial production in August will turn out to have been 113-114 (1954 = 100), which compares with peaks of 108 in December, 1955, at the end of the last boom, and of 109 in the short-lived upturn of summer 1957.

For August, this level of output appears likely to have been 7-8 per cent higher than a year ago (August, 1958, recorded an index, seasonally corrected, of 105). The provisional figure of 112 for July, which is rather firmer though on recent experience still liable to considerable revision, was 6 per cent up on July, 1958. Revisions to the earlier summer figures show now an uninterrupted increase in production, at first gradual but now probably accelerating, since October-November last year. The record level of output in August, according to the Treasury, seems to have been fairly generally spread throughout industry. Manufacturing output in July appears to have been about 5-6 per cent above the level of a year before, and at much the same level as during the previous two months; but gathering recovery in steel may have tipped it upward. One substantial but ironical contribution to August's high output appears to have come from a less happy heavy industry, coal; all the efforts of mining management were unable to prevent this industry's production in August from rising 8 per cent above the level of a year before (which alone can add more than half a point to the "all industries" index).

A drop of 22,000, to 405,000, in the number of people unemployed during the four weeks to mid-September, meanwhile, had for the first time brought the number wholly unemployed below the corresponding month of 1958, although the reduction in the total figure denoted mainly industry's digestion of the exceptionally high number of young people leaving school this summer and getting jobs for the first time. There were still in mid-September, the Ministry of Labour says, about 19,000 of these adolescents still looking for their first jobs, which may be (nobody really knows) rather more than is usual at this time of year. There has not been much change during the summer in the number of adults wholly unemployed; but the unemployment percentage for the country is now down to 1.9 per cent, against 2.2 per cent in September, 1958.

A still comparatively soft labour market (three men on the unemployment register for every two vacancies, apart from reserves of married women behind the register); a high level of consumer spending (though the total hire-purchase credit outstanding is no longer growing as fast); and still, probably, substantial margins of capacity in most industries apart from the most booming suppliers of consumer equipment—all these offer the basis for further acceleration of output without much immediate danger of inflation, as the National Institute of Economic and Social Research pointed out in its *Economic Review* this week. Prices have remained



stable; the increase in output is sufficient, if not more, to offset the increase in wages *and profits*; as yet the prices of imports arriving here have not risen. But the institute, like other observers, still sees little likelihood of any rapid revival in manufacturing investment, and notes that investment in other private trades may level off.

IN THE MARKETS

The Sway of Opinion

FOR the first time since the date of the election was announced the London stock market has shown signs of nervousness that the Conservative party might not win. These nerves first unsettled the market on Monday after the publication of a public opinion poll. When another, showing a more favourable trend for the Conservatives, was published the market recovered some of its confidence, and prices began to move ahead again, with the result that *The Economist* indicator rose from 289.5 to 291.9. But on Thursday the market became nervous again on the publication of yet another poll which showed that the Conservative lead had narrowed significantly. Selling was not particularly heavy but it was sufficient to lead to widespread losses in almost all sectors of the industrial market.

There has been little business in the gilt-edged market but on Monday there was some selling of Government bonds by overseas investors, just as there was some selling of sterling. There was, moreover, some buying of American and foreign securities and the dollar premium went up on Monday to 2¼. Until the election is over, investors are unlikely to commit themselves in dealing in Government stock. But, at the same time, it must be noted that their appetite for high coupon industrial loan stocks is still keen. The £3½ million issue of a 6 per cent stock at par by Thorn Electrical attracted applications of £18 million and dealings began at 1¼ premium while the £7½ million issue by Ranks of a 5¼ per cent stock at 98½ attracted applications of £24½ million and dealings began at ¾ premium.

There have been signs of selling of sterling in the foreign exchange market this week. The rate against the US dollar, which stood at $2.80¾ a week ago, has dipped to $2.80⅜. The selling, some of it of Continental origin, has been induced by the recent shortening of the odds on a Conservative victory. But sales have been modest and do not appear to have been offset by official intervention. The Exchange Equalisation Account came to the support of sterling for two days following the announcement of the election date, but it recouped its losses in the following week.

In spite of the coincidence of pre-election tension and the height of the seasonal demand for dollars, sterling has kept remarkably firm through September. Substantial payments have been made to North America for wheat and tobacco and heavy shipments of timber are being paid for. The fact that heavy commercial selling of sterling has had so little effect on the rate is partly due to the interplay of leads and lags. Many commercial purchases of sterling that would normally have been made a few weeks ago were delayed in anticipation of an election. A run on sterling has not occurred and the postponed purchases have now had to be made and these have helped to offset the effects of the seasonal demand for dollars and Continental currencies.

ELECTRICITY

Nationalised Profits

After paying £60 million of interest and setting aside £80 million for depreciation, the nationalised electricity supply industry showed a surplus of £27.3 million for the year ending March 31, 1959, which is the largest surplus that it or any other nationalised industry has ever made. Even so, this represents a return, after depreciation, of no more than 5.4 per cent on capital employed, as against the returns of 15-16 per cent that are common in private industry; and the Electricity Council, Generating Board and Area Boards are not undertaking to reduce the price of electricity, though they do think they can hold it level for a couple of years. for 1958-59 the industry, with this modest margin, has managed to find £119 million from internal resources, or 47.3 per cent, of the £251 million of new capital expenditure that it required, raising the rest by borrowing from the Treasury. It does not expect to be able to manage that percentage again this year, because capital investment is rising to some £304 million —though it is committed to financing from internal resources an average of 48 per cent of its capital requirements over the seven years to March 31, 1965, and reckons that the proportion should rise to rather more than 50 per cent by the end of that period.

This is one of the most heavily capitalised of all industries, nationalised or private, and its present rate of fixed investment represents more than 8 per cent of total fixed investment for the whole country. It is faced with a somewhat perplexing problem of depreciation, in that the price of its conventional power stations, per kilowatt of installed capacity, has recently been coming steadily down, right against the trend of prices for the materials going into them, as bigger and bigger generating sets have been brought into service. There are limits upon the extent to which such a fortunate technical trend can be pursued (often set, oddly enough, by the physical size of major pieces of generating equipment that can be moved around the country as "outsize loads"). Even so, what kind of provision for depreciation ought one to make for equipment when a replacement basis would probably mean providing less than the historical? That conundrum is further befogged by the fact that in spite of this capital-saving trend in the price of this particular conventional station, the one with which such a station may eventually in fact be replaced might (but only might) be a nuclear station, at a capital cost as yet unknown but liable to be of a far higher order.

In the face of these imponderables, the supply industry is playing safe, and trying to provide for as much self-financing as it can without irritating its customers. It is sticking to the historical basis for depreciation; but the Central Electricity Generating Board, with the blessing of the supervisory Council, has been changing the depreciation lives of its assets to a more uniform and generally shorter basis, depreciating the whole of conventional stations over 25 years (instead of different items over different periods) and its nuclear stations over 20 years. It has also effected some economies in forward plant programmes (because it can now reckon on 90 per cent of its plant being available at times of maximum demand, not 88 per cent as before); and it has deferred 250,000 kW of nuclear capacity from 1963 to 1964, making the nuclear buildup in the early sixties rather more gradual.

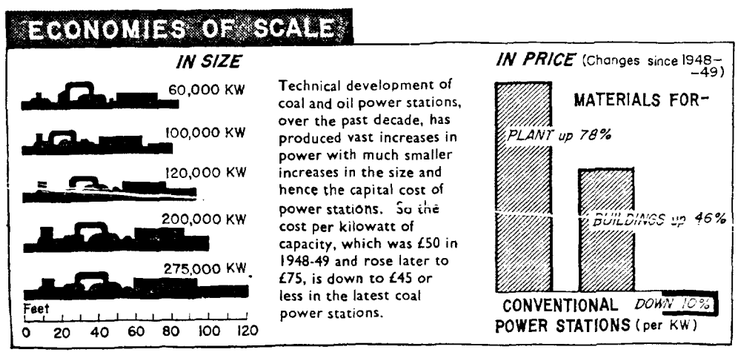
Sir Christopher's Preoccupations

Sir Christopher Hinton, instead of commenting on the first annual report and accounts of the Central Electricity Generating Board, chose to tell the public of the three matters that had been exercising his mind most, as chairman of CEGB, over the past year. His choice of the industry's most demanding problems, and the order in which he put them, are significant. In that order, they were amenity; the "three-fuel economy"; and recruiting the right staff.

Technical and economic students of this industry might be surprised to hear Sir Christopher put the social consideration of amenity before, in particular, the entangled economics of conventional and nuclear power. But it is at public inquiries over siting nuclear stations in remote coastal areas, or stringing transmission lines and pylons across the countryside, that electricity supply as a vast faceless organisation impinges most directly on the public mind; besides, Sir Christopher himself dislikes the ugly business. Nuclear power stations, he feels, are the lesser æsthetic evil; they do not need coal-handling equipment and dumps nor, usually, cooling towers either, so they can be made architecturally, at least, not too offensive. But research so far offers little chance of making overhead power transmission less ugly or less necessary.

Sir Christopher said no more and no less than he has said before about the problem that slight revisions in the forecasts of nuclear power costs, combined with dramatic reductions in the capital cost of conventional power stations (illustrated in "Economies of Scale" below) have set CEGB in planning its generation programmes for the years after 1964 (when work would have to begin on stations to be commissioned after 1966-67, when the 5,000-6,000 MW of nuclear capacity decided on by the Government in 1957 will be complete). He now thinks that nuclear generation costs might break even with those of the best conventional stations by 1970, not by 1965, as he used to think. But the question is whether these could break even, not at the high load factors used in current comparisons, but at the much lower load factors that much of the plant then required may have to work at—simply because the base load may be already filled up by the earlier nuclear stations (which apparently will have to work on base load all their lives, and cannot work shorter hours as they grow older).

The supply industry has belatedly begun a scholarship scheme for boys from grammar and public schools who would join it after taking their degrees, and is paying attention to planning the careers of its younger staff; this was an aspect of its operations sharply criticised by the Herbert Committee three years ago. There are sharp contrasts in this industry, even for technical men of similar quality, between the responsiblity and routine of running a power station mainly in accordance with hour-to-hour central direction, and the less responsible but more imaginative activity of research or development planning; but Sir Christopher says electricity is as rewarding as any industry he has ever encountered.



ATOMIC ENERGY

Then There Were Three

Last week's decision of the General Electric Company to work together on future atomic energy projects with Atomic Power Constructions means that the CEGB will from now on get a maximum of three bids for its new nuclear power stations, instead of the five that it received for its North Wales station. Only a few weeks ago Associated Electrical Industries and the Nuclear Power Plant Company announced that they would in future submit joint tenders, leaving only one of the five original atomic energy consortiums, that headed by English Electric, in its original form.

These companies have been brought together primarily by economic necessity. Sir Christopher Hinton has made it only too plain that he intends to draw out the present atomic programme, concentrating as much new building as possible in the period after 1964 in the hope that atomic energy costs may become more competitive by that date. On his own figures, the five stations now under construction plus those planned at Dungeness, Sizewell and Oldbury-on-Severn will have a capacity of 4 million kilowatts out of the five to six million in the official programme. Since a station of 1 million kilowatts is planned for Oldbury, it is on the cards that the CEGB will place contracts for no more than five more unclear power stations in the next five years, and the most that it is likely to order is seven. With the number of bidders reduced to three, there is a fair chance of securing two orders apiece. If they can then secure one overseas contract every two years, the groups stand some chance of breaking even.

The groups also improve their chances of getting orders by being able to put more men on the job of design and development; the amount of research and development required for each nuclear contract is heavier than anticipated and companies with two contracts apiece already in hand (as the Nuclear Power Plant Company and GEC have) are likely to feel the strain. But submitting joint bids for a station is one thing; deciding who builds the station is another. Each consortia contains its own turbine makers, its own boiler manufacturers and in some cases its own civil engineers. When two consortiums merge, whose boiler blows the steam into whose turbine? If there was some understaffing in the laboratories and drawing offices, there is substantial surplus capacity at the manufacturing end of the atomic energy industry.

COAL

Brave Words

A few weeks ago an increase of 10s. a ton in the price of fuel oil, announced as an increase of a halfpenny a gallon, provoked few lines if any in most newspapers. "Perhaps," sourly commented Mr Thomas of the National Coal Board's marketing department this week, "we ought to announce our price changes in pence per hundredweight." The marketing department, which has been looking coldbloodedly at its prospects for coal sales within general industry, was uttering a few pugnacious if not entirely cheerful words about the chances of really selling its product, an activity quite common in this industry 20 years ago. Mr Thomas had no price changes to announce per ton, per hundredweight, or per pound; he was entitled to recall that coal prices have been stable for something over two years now, and he added somewhat oracularly that it will be possible to hold those prices steady barring any general increase in the level of wages and prices throughout British industry.

The Board is setting up a comprehensive technical and general sales service, to advise professionals such as architects and heating consultants about the latest technical advances in equipment to burn coal (now officially recognised as leaving the air as clean as oil-burning equipment does). It has begun national advertising, and is developing its campaign to combat the idea that coal is a less fashionable fuel than its competitors. These moves are not dramatic, and they lack the edge of price competition; but the board is being sensible in realising that the switch away from its fuel may be going on for other than strictly economic reasons, inside some factories as well as in many homes.

CREDIT EXPANSION

Curve Steepens

The pattern of credit expansion has been changing significantly in recent months. During most of the first half of this year the extraordinary upsurge of bank advances was accommodated without producing any perceptible upward trend in bank deposits. From December to May these showed their normal seasonal contraction, thanks mainly to the fact that the banks were able to run down heavily their portfolios of investments and Treasury bills. Recently, in contrast, the trend of deposits has turned rather sharply upwards, while the expansion of advances has slackened. In the four weeks to the mid-September make-up, the aggregate advances of the clearing banks did, indeed, show a considerably larger increase than in the preceding (five-week) period; this difference now proves, however, to have been more than accounted for by a swing in the nationalised state boards from net repayments to net new borrowings and to changes in the extraneous transit items. If both these elements are excluded, advances to the private sector of the economy are shown to have been rising in the latest period at an average of just under £7½ million a week, compared with £9 million during the preceding five weeks and £18 million in the four weeks to mid-July.

LONDON CLEARING BANKS

* Excluding items in course of collection. † Excluding all transit items. ‡ Excluding all transit items except for changes on year and ratio to gross deposits. § Ratios to gross deposits.

Aggregate net deposits, on the other hand, rose by nearly £86 million, in contrast with their decline by £7½ million in the preceding four weeks and their increase by £63 million in the corresponding period last year. This is the sharpest movement since June; it carries the seasonally-corrected index compiled by Lloyds Bank up by a full point, from 116.2 to 117.2, compared with 113.7 last May and 111.1 in September 1958. Part of the month's rise in advances was again financed by sales of investments; the total investment portfolio showed a decline of £12 million, but the decline in holdings of British Government securities was rather more than £16 million (most of this difference was attributable to a switch in the accounts of Lloyds Bank from investments in subsidiaries to "other trade investments" in consequence of the completion of the merger between the Commercial Bank of Scotland and the National Bank of Scotland). Thanks to these further sales of investments, the month's net increase in risk assets was actually some £10 million less than that shown in the corresponding month last year. The banks' liquid assets, on the other hand, expanded by £60 million, almost three times the expansion shown twelve months previously. The average liquidity ratio was thus strengthened a little further, from 32.9 to 33.2 per cent. The only one of the big banks to show a decline in liquidity was Barclays, which again achieved the biggest increase in advances.

INSURANCE

Another Merger

Yet another big merger between two insurance companies has been proposed. Since the beginning of 1958, the American business of the Sun Insurance, Atlas and the Royal Exchange has been under one management. The Atlas and the Royal Exchange have now merged, leaving Sun Insurance somewhat isolated in the American market. It is now proposed by the directors of both companies that the interests of the Sun Insurance (which is a separate entity from Sun Life Assurance) and those of Alliance Assurance should be merged. The separate identity of each company will be preserved and the merger will be accomplished by the creation of a new holding company.

The merger, the directors say, "will result in an organisation of greatly increased size and strength, enabling the leading position of both companies to be maintained and enhanced in the insurance market at home and overseas." As with

all insurance mergers, economies in administration and operation should eventually result though, as it is important to preserve the separate goodwill of the two companies, they may emerge only slowly. The business of the two companies is to some extent complementary: the Sun underwrites no life business but the Alliance does and while the Alliance has not been particularly active in the United States (where last year it made only a tiny loss on a premium income of $5,465,000) the Sun has been (making a loss of $1,735,000 on a premium income of $21,427,000 last year).

The basis of the merger is that two new £1 shares in the holding company will be exchanged for every £1 share in the Alliance and 21 shares of the holding company will be exchanged for every 5 shares of £1 each in the Sun. The terms were fixed independently by Baring Brothers and accepted as being fair and equitable by the merchant banking advisers of both companies, N. M. Rothschild and Morgan Grenfell. What has come as something of a surprise is the forecast dividend of the new holding company. The interim dividends of both the Alliance and the Sun are to be raised so that, in effect, a full year's distribution from the holding company will be the equivalent of 2s. 6d. a share. Thus the income received by Alliance shareholders will be raised from 4s. 3d. to 5s. on the present capital and that received by Sun shareholders from 7s. to 10s. 6d.

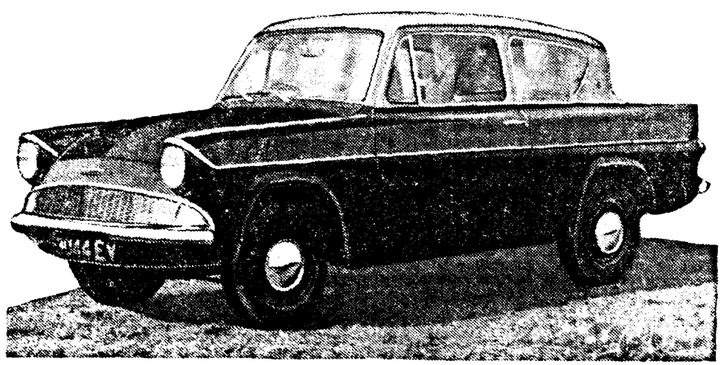
NEW CARS

An Entirely New Anglia

FORD'S newest Anglia, announced this week, is as remarkable a car for what it is not as for what it is. Except for a reversed-sloped rear window, and a bore-stroke ratio well outside the limits hitherto observed in the motor industries of the world, it has no major features that would have been called unorthodox twenty years ago. Most notably, in a car which, if Ford policy follows its usual pattern, will be the basis of the company's most economical car several years hence, the "direct-drive" solution is rejected: the engine is at the front and drives the rear wheels. This is a rejection after the fullest of consideration: Ford has done a great deal of development work on direct-driven cars, both with front-mounted and rear-mounted engines. If all the rumours are to be believed, all sorts of unorthodox solutions, including V4 engines and air cooling, have been explored with quite exceptional thoroughness.

The side-valve engine, fitted until now to all the small Fords, of which the basic design goes back to the early thirties, had all the utilitarian merits except fuel economy. In this matter, Ford's new and exceptionally "over-square" engine seems to be as much ahead of its contemporaries as the old engine fell short. The figures in *The Motor* Road Test published this week show quite remarkably low consumption figures. The light-footed driver should not find it hard to achieve 45 miles to the gallon—though, if he is ever to open the throttle wide, he will not want to use non-premium fuel. The more adventurous driver will find the car a most responsive vehicle—and rejoice that Ford have at last thrown overboard the transatlantic preference for a three speed gear-box. This is a car that will encourage free use of the 4-speed box, in that it is rather high-geared—a factor contributing to good fuel economy, because the engine has a very high compression ratio, with some sacrifice of pulling power at low engine speeds, and also because it is a very easy and pleasant gear-box to use.

Competition between the new Ford and BMC's new small cars will be most interesting to watch. The new BMC small cars constitute a brilliant technical answer to the problem of providing comfortable, and to the enthusiast exciting, transportation for the minimum use of material. Ford gives, in the Anglia, a much more impressive vehicle, with all the real virtues added, but inevitably at higher cost—for the 14½ cwt kerb weight of the Ford makes cost-competition with BMC's 11¾ cwt well-nigh impossible. However the new Popular (practically, the old Anglia renamed) is there to meet the price of BMC.



THE SIX AND THE SEVEN

Free Trade Through the Back Door?

WHILE officials of the Outer Seven* countries are drafting in Stockholm a treaty for their little free trade area, the Commission of the European Economic Community (the Inner Six) has submitted to its member governments proposals to reduce trade barriers against other countries. Speaking to the Community's parliament in Strasbourg last week Professor Hallstein, president of the Commission, said these proposals should materially ease the problem of association between the Six and the Seven, "without compromising the positions of principle" of the Six towards a large European free trade area. The main points are:

1. Quantitative restrictions on imports of manufactures from all countries should gradually be removed. When the Six increase import quotas among themselves by a further 20 per cent on January 1, 1960, members should individually negotiate reciprocal increases with other countries, including the nil or negligible quotas. (Such quotas, among the Six, were opened at, or increased to, a level equivalent to 3 per cent of domestic production of the particular article on January 1st this year, and are to be raised to 4 per cent next January 1st.)

2. The second reduction of 10 per cent in tariffs on July 1st next year should be extended to all Gatt countries, except where this would bring the actual tariff below the eventual common external tariff of the Six (this repeats the procedure adopted on January 1st this year). After the next tariff negotiations within Gatt, which should have the maximum effect, the Six should propose a further substantial round of tariff reductions.

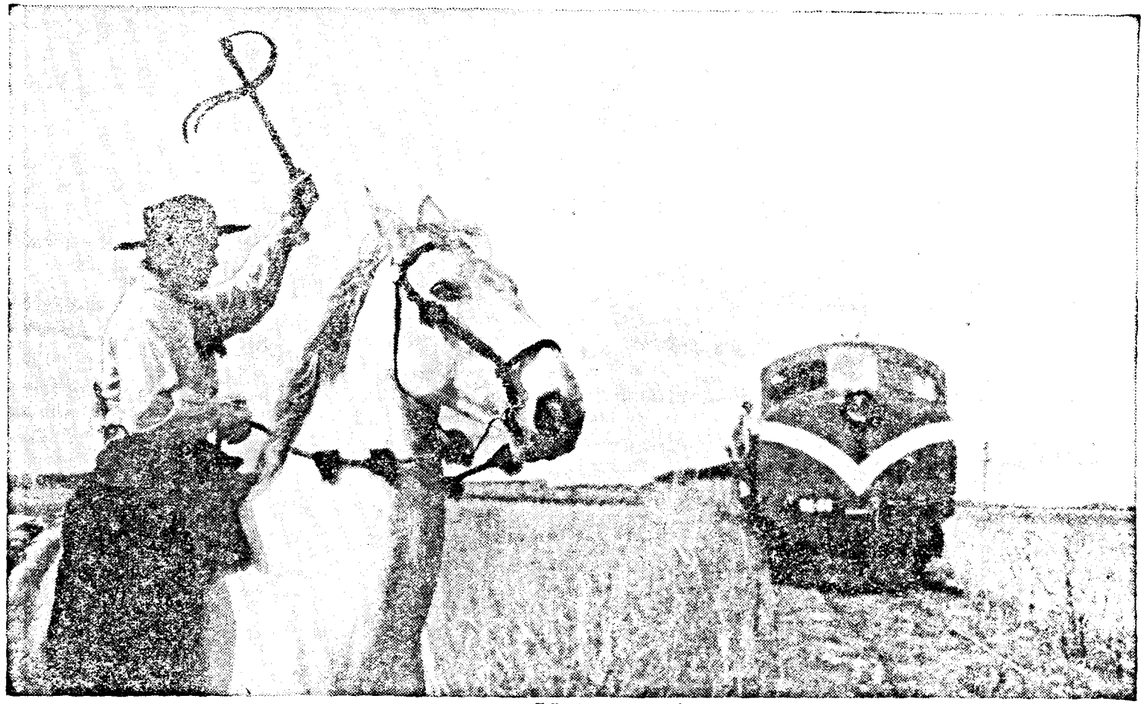
3. Members should co-operate with the United States and Britain in aiding under-developed countries (as the Six are now aiding their associated overseas territories).

4. A liaison committee of the Six and other European countries should be set up.

These proposals are indeed liberal; it remains to be seen how governments, especially France, respond to them. If they are accepted, Britain and France will negotiate as they did earlier this year, when Britain fared remarkably well both on the ordinary quotas and on quotas for some "*three per cent*" items. Supporters of the little free trade area would no doubt then claim much of the credit for bringing the big European free trade area one step nearer. They can have the credit, if they wish; what matters is that European free trade could be opening up through the back door.

*Britain, Sweden, Norway, Denmark, Austria, Switzerland and Portugal.

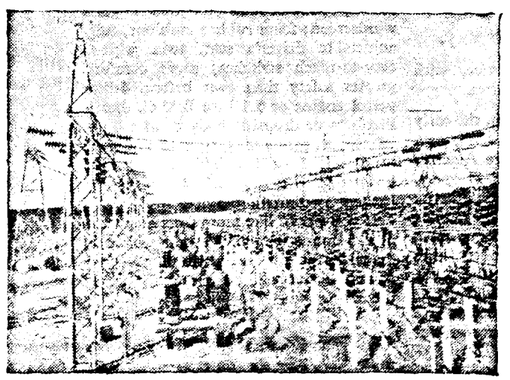
THE WORLD IS CRYING OUT FOR MORE POWER



Following the successful operation of five of these 1,000 h.p. diesel-electric locomotives on the Buenos Aires Provincial Railway, twenty-one similar locomotives are now being delivered for the General Belgrano Railway, Argentina. Thirteen are also in operation in Brazil, where in addition the São Paulo-Jundiaí main line was electrified by English Electric; rolling stock, three sub-stations and overhead lines were supplied.

New British immigrant gets a friendly "¡Bienvenido!"

Why new trains on the pampas can mean more exports from Britain



At Macagua No. 1 power station near the confluence of the Rivers Caroni and Orinoco Venezuela, English Electric installed this 115 kV switching station together with relays, transformers and all the auxiliary switchgear and fusegear for the power station. Equipment was supplied through a member of the English Electric Group—English Electric de Venezuela, C.A.

These days the *gaucho* shares his pampas with some newcomers from Britain—fast, modern diesel-electric locomotives supplied by English Electric to two major Argentine railway systems, and introduced under a big scheme of modernization.

The *gaucho*—and all Argentina—welcomes these "immigrants" because they mean that goods and passengers are going to be transported more quickly and economically. Thus, they will be helping to stimulate the national economy.

The delivery of this new traction equipment is welcome news for us in Britain, too—for three reasons.

FIRST, as it contributes to Argentina's prosperity, so it assists her buying power abroad. And for Britain, as a leading exporter of manufactured goods, Argentina's buying power is of great importance.

SECOND, our own national ability to buy abroad has been considerably assisted by the large sum of overseas currency these locomotives have earned.

THIRD, in supplying these locomotives English Electric has gained further valuable experience. Into Argentina's new locomotives goes English Electric's experience as makers of traction equipment for 30 countries. This fund of experience ensures that English Electric is ready to meet the world's demands for locomotives now and in the future.

Creating the means to *produce*, *distribute* and *use* power is the business of The English Electric Company. Power from coal and oil, power from water, power from the atom. Transformers and switchgear to *distribute* this power. And modern electric trains, industrial motors and domestic appliances to *use* it.

When abundant power is produced, distributed and used throughout the world, everybody will enjoy a richer life. In all of its many activities, English Electric is helping to make that goal a reality.

Power is the business of

ENGLISH ELECTRIC

...bringing you better living

THE ENGLISH ELECTRIC COMPANY LIMITED, MARCONI HOUSE, STRAND, LONDON, W.C.2

Austin and the Atom

THE HEAVY BARRED GATES of the Atomic Energy Research Establishment at Harwell swing open. The policeman on guard steps forward to inspect the driver's pass. All is in order. The Austin can go on its way.

No chances are taken where Britain's atomic secrets are concerned. Twice a day, every day, this Austin is halted at the gates. What has it to do with atomic secrets? It belongs to the Amey Group of Companies and one of their many and varied contracts is to carry gas cylinders to Harwell. The gases, hydrogen, oxygen, nitrogen and others, are used in all kinds of atomic research. The cylinders are delivered daily on a 140-mile round trip from Harwell to Wembley and back.

Many and varied indeed are the jobs done by Ameys of Oxford. Their trucks resurface aerodrome runways, work on new motorways and by-passes, in quarries, on construction sites, pull trailers on long distance haulage. Ameys also operate a storage and distribution service, with 24 hour delivery over 8 counties.

From a horse and cart in the early 1920's, Ameys' transport fleet has grown to about 300 vehicles. 106 are Austins, ranging from ½ ton vans to 7 ton tippers. In 1955 Ameys tried their first Austin. The Chairman, Mr. R. W. Amey, says, "At that time I was searching for a robust oil-engined vehicle, combining high quality and low price, to suit the needs of my 8 Companies. Austins fitted all our various requirements and I decided to standardise on them. I have never regretted that decision."

A word about the new Austin 5 tonner The truck leaving Harwell is the new forward control 5 tonner with the new luxury cab—lined, dust and draught sealed; wrap-around toughened glass windscreen; foam rubber cushions, fully adjustable driver's seat, twin wipers, easy-to-reach switches; more comfort, greater safety than ever before. 4-litre petrol engine or 5.1 litre B.M.C. diesel. Platform or dropside body or as a 4 cu. yd. tipper, prime mover for 15 ton gross train weight, or chassis unit for special bodywork. 12 months' warranty and backed by B.M.C. Service.

If you would like more facts about the new 5 tonner—or any other vehicle in the widest-in-Britain Austin range—your Austin dealer will be happy to supply them.

LONGBRIDGE · BIRMINGHAM

EXCHEQUER ACCOUNTS

Above-line Deficit Reduced

ALTHOUGH half the fiscal year has now elapsed, the big release of resources projected in the budget—by tax reliefs on the one hand and increases in expenditure on the other—has yet to exert its full impact on the Exchequer accounts. Over the full year the "above-line" surplus was expected to run down from £377 million to £102 million and the "overall" deficit (including capital outgoings) to rise from £182 million to £721 million. The quarterly return made up to last Wednesday shows, however, that over the first six months of the year the above-line account was actually rather stronger than in the corresponding period of 1958-59. To some extent this disparity arises from the fact that a large part of the effect of the income tax concession, estimated to cost £192 million in the year, will not be felt until the last quarter; but it is clear that the yield of revenue as a whole, including income tax, has been very buoyant. Income tax has in fact yielded almost the same amount as in the first half of 1958-59; customs revenue, expected to rise by only £24 million in the year, has already risen by £44 million; excise, expected to fall by £65 million, has so far fallen by only £14 million; death duties, expected to rise by £8 million, have risen by £21 million; stamp duties, expected to rise by £2½ million, have risen by six times as much.

These gains have more than offset the rising trend of expenditure. The cost of interest on the national debt is down by £41 million—already two-thirds of the decline expected in the full year—but supply services have expanded by £107 million, so that total ordinary expenditure has risen at fully the rate envisaged over the full year. Even so, the above-line deficit, at £230 million, is actually £26 million smaller than that for the first half of 1958-59. Capital outgoings "below-line," at £350 million net, show an increase of £80 million, a much smaller movement than was implied in the estimated rise of £264 million over the year.

MANAGEMENT

Salvation through Surgery

WHEN a company calls in a management consultant it does not expect to be advised to cut its sales staff by 25 per cent, cut out 25 to 30 per cent of its retail outlets, reduce its advertising outlay, narrow the range of its products and accept a fall in its turnover. Yet this is the advice that Lloyd Attree and Smith received when it consulted a firm of marketing consultants, Sales Audits, two years ago. Lloyd Attree has been established for over a century in men's clothing, specialising in shirts, dressing gowns and ties; in the increasingly competitive state of the clothing industry, with new companies like Rael-Brook and other established companies expanding their sales by advertising nationally and adopting modern methods of display and presentation of their products, the firm felt that it ought to be able to improve its sales too. It first approached an advertising agent about starting a national advertising campaign; but his advice was to consult Sales Audits instead.

The consultants' study of Lloyds' operations revealed that some of its activities were unprofitable, that stocks were unnecessarily large—as is often the case with private companies—and that the selling methods were in need of improvement. The company had been selling under a number of trade marks, and seemed to have been dissipating its efforts by selling in too many fields and through too many retailers. Its "brand image" was old-fashioned, and needed modernising.

The recommendations were that Lloyd Attree should concentrate on its most profitable products and drop the rest, because it lacked the resources to exploit them all fully; it should cut out all those retail outlets that sold less than £100 of their products in a year, because they were not worth the cost of the salesmen's time, so allowing the sales force to be cut from 24 to 18; less should be spent on advertising, but more on product design and presentation, because in the circumstances of the firm and the nature of its market these would provide a higher return on outlay. These recommendations were put into effect at the end of 1958; the effect, as expected, was a fall in turnover that reached over 40 per cent by April, 1959, before beginning to rise again until it showed a fall of only 7 per cent by 31st August. Meanwhile the company feels confident that its profit margin in the first eight months of this year was substantially above the 1958 level.

Sales Audits, founded in 1955, is one of the companies that are extending marketing consultancy into the management field, and which claim to have obtained good results in their work. Sales Audits claim that it is able to measure the efficiency of a company's selling methods quantitatively, against yardsticks that it has evolved; its studies even go so far as to evaluate the efficiency of the individual salesman under 50 heads or more, by studying him in action in the field.

BOAC

Middle East Mix-up

SHEIKH NAJIB ALMUDDIN, chairman and managing director of Middle East Airlines, came to London five weeks ago to tell his controlling shareholder, the British Overseas Airways Corporation, that he would no longer be made the whipping boy for the corporation's massive losses; he was prepared to buy out BOAC's 49 per cent interest in his airline for £5 million which he had raised privately in the Lebanon. The corporation has turned down the cash for reasons that had little to do with the terms attached to the offer and a great deal to do with the fact that Middle East Airlines, small though it is, has an abundance of the one commodity that big airlines go to endless lengths to acquire—traffic rights. The importance of Beirut as an aerial cross-roads means that other countries give concessions to MEA that they would not give to other airlines. The Sheikh knew well that having bought out BOAC, he would be totally unable to carry the cost of running the airline by himself. But he also knew that a number of airlines would almost immediately offer to help him out; Pan American had suspended its negotiations to buy a share in another small Lebanese airline, waiting for the outcome of the London meetings; Air Union was watching in the wings. BOAC knew this too.

If the corporation genuinely wishes to

retain its interest in Middle East Airlines, it could have trod more delicately during the past year while MEA was losing more than £100,000 a month during the Lebanese revolution and BOAC was advancing funds to keep the airline going. During 1958-59, BOAC probably advanced about £1 million in this way, on which it is charging 6 per cent in interest. But in the corporation's own accounts, which will be published towards the end of this month, this loan appears to be treated as a dead loss. Hence sharp criticisms in *The Economist* and elsewhere of the cost of MEA operations and the brusque directive from the Minister of Transport to BOAC to stop the rot or else. . . .

This doublethink has infuriated Middle East Airlines, in whose accounts (published in the Lebanon but not in this country) the sums appear, properly audited by BOAC's own auditors, as loans carrying an irksome rate of interest—nearly twice as high, Sheikh Alamuddin says, as he would have had to pay on the money he intended to raise privately. MEA is quite aware of its commercial value to a big airline: its price is the provision of working capital and technical help. There is no other way in which small operators can raise cash, for no ordinary investor would provide it. With BOAC's encouragement —and cash—MEA has expanded since 1954, when it broke with Pan-American, from three Dakotas to seven Viscounts, and hopes to replace these soon with secondhand Britannias from BOAC. All this the airline regards as a tangible investment from which BOAC draws tangible advantages in the form of interest, and less tangible ones in the form of traffic rights. Why BOAC should choose for its own accounting purposes to regard this as a dead loss will no doubt be explained when its 1958-59 accounts are presented. But since the quarrel is over a form of words and book entries, a little tact and foresight might have prevented it altogether and saved a considerable amount of dirty linen from public washing.

MOTOR BUSINESS

The current issue of this quarterly research bulletin contains the following articles:

A FINANCIAL AND ECONOMIC ANALYSIS OF THE BRITISH MOTOR INDUSTRY:
THE SPECIALIST CAR MANUFACTURERS
THE SPANISH MOTOR INDUSTRY
THE ESTATE CAR

The regular graphical section has been expanded to include a new section analysing world vehicle export markets.

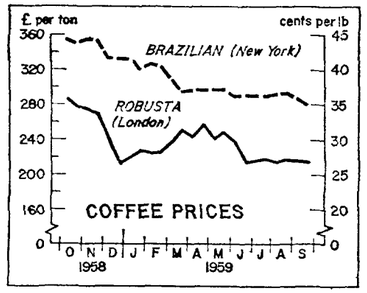
COFFEE MARKETING

Latin America Agrees

A NEW international marketing agreement for coffee was signed in Washington last week, to run for one year from October 1st. As expected, it has not obtained full support from the African countries. Producers in French and Portuguese Africa agreed merely to restrict exports other than to the metropolitan country, their main market, while Kenya, Uganda and Tanganyika said they would restrict exports to 2,262,000 bags (of 132 lb); though this represents a cut of less than 2½ per cent of their exportable production, it compares favourably with the effective reductions in the French and Portuguese territories. The total export quotas for the Latin American producers and French and Portuguese Africa are 32,650,000 bags, of which Brazil's share is 17,431,000 bags and Colombia's is 5,969,000 bags. Exports to



countries that normally buy little coffee are excluded from control. The Latin American signatories agreed to raise a levy of 25 US cents a bag, and the Africans of 15 cents, to finance a campaign to promote coffee consumption. African members of the study group, and some of the Latin Americans too, opposed the proposal for a two-year agreement. They argued that this would accentuate the problem of overproduction, and that any corrective action that might be decided upon next year could more easily be introduced when the present agreement ends, rather than half-way through a two-year agreement.

These negotiations left little time for discussion of the real problem of curbing production. But it seems that preparations may shortly be made for a full meeting of the study group in the spring, when governments will have had time to consider the special report on coffee by the Food and Agricultural Organisation, and to make their own observations on the long-term problems. Some people claimed to detect a more realistic air in Washington on this occasion; a number of producers spoke of the need for "sacrifices"—without, naturally, committing themselves in advance. *The Economist*, incidentally, in a note of September 12th, was guilty of making the world surplus of coffee twice as burdensome as it is, by stating that a bag of coffee weighs 132 kilos (instead of lbs).

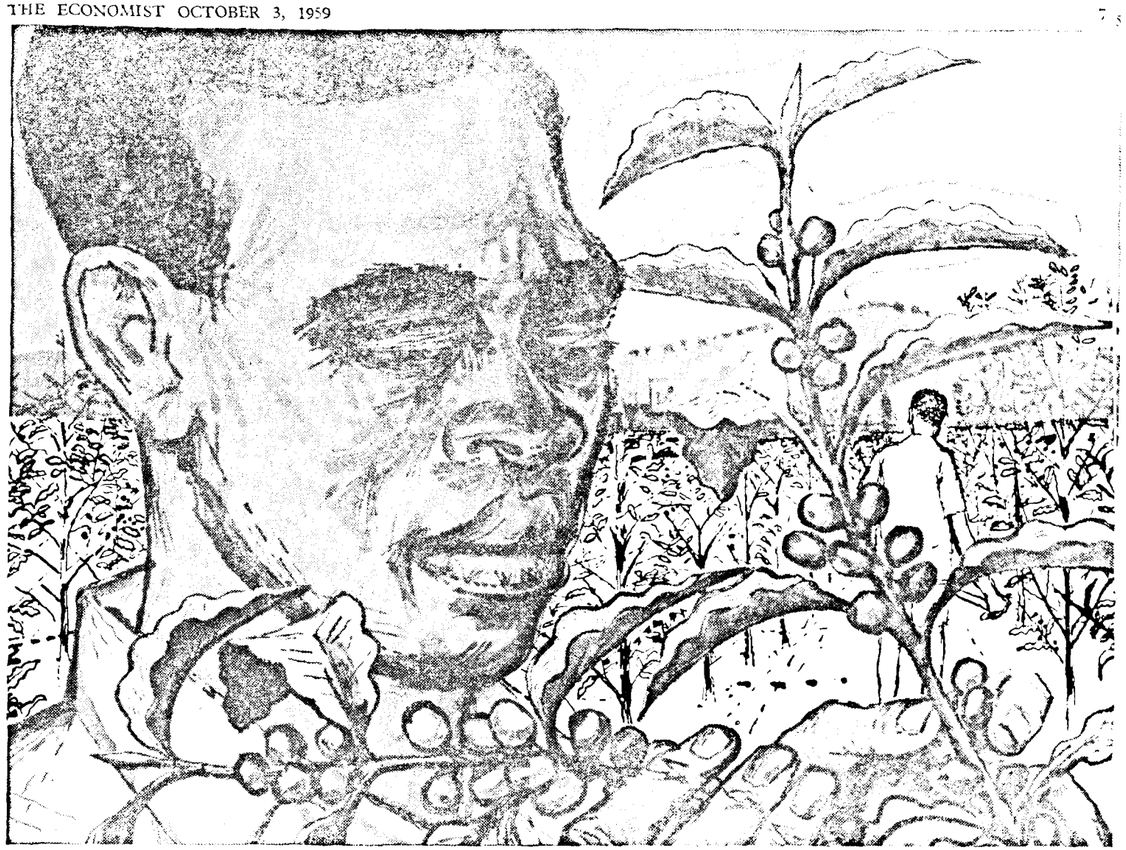
RETAILING

More Food from the Chains

TWO of the biggest retail chains in the country announced last week divergent plans to expand their trade in food. Marks and Spencers is beginning to sell cooked meats, bacon and chickens; Woolworth is cutting the prices of some 25 items of branded goods that they already sell. In the former case sales are being sought by concentration on quality rather than low price; in the latter by matching the temporary price cuts that have become so common in the grocery trade recently by cuts that are comparable in size but permanent. This quality and price competition from such large and powerful sellers will make the position of the independent grocer still weaker, and provide more competition for the supermarkets and other chain stores.

Marks and Spencers sold provisions before the war, but stopped selling those that were rationed at the beginning of the war; others it continued to sell until 1950. Difficulty in controlling the standards of manufacture of generally foreign produce, and the possibility of expanding textile sales with the end of the utility scheme and clothes rationing, were the two factors that decided the group to stop (though it went on selling cakes and confectionery). Now the stores have more space available and the chance of getting food prepared to the standards they desire it becomes possible to re-enter this field. Daily deliveries to the stores of fresh, not frozen, foods pre-packed by English producers are the basis of the group's new food selling scheme. Apart from its obvious sales appeal this means that only chilling cabinets, and not the more expensive deep freezers need be installed in the shops; but it does require a local supplier. Cooked meats and bacon can come from over 100 miles away—all are supplied by one large firm with nation-wide factories—but chickens should come from nearer at hand. So far six stores are selling these foods; about a dozen should be doing so by the end of the year, and 50 by the end of 1960. Expansion thereafter will depend on the success of the venture.

Woolworth's price cuts on branded goods bring the end of resale price maintenance on branded foods one step nearer in this country. Now that so large a company is selling such goods at prices of its own choosing all over the country and on a permanent basis, it will be more difficult than ever to sell them at the manufacturer's price anywhere, and those few companies that insist on the maintenance of their prices will be under stronger pressure to abandon their stand. Some manufacturers who have had the prices of their goods cut by Woolworth's contribute to the cost of



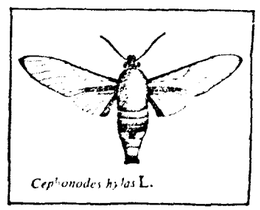
Coffee line

From Bonabéri, on the wide estuary of the Wouri river, the Chemin de Fer du Nord runs just 160 kilometres to its terminus at N'Kongsamba. A short line, in the immensity of Africa, but a picturesque one. Winding first through evergreen rain forest and the humid zone of oil palm and banana, it then climbs steadily into a land of black volcanic earth where, in March, the air is sweetly scented and every tree a foam of blossom. Here, in the Mungo district of Cameroun, is grown the country's biggest tonnage of *Robusta* coffee. And here, an insect pest struck recently with unexpectedly vicious force.

Normally, damage by the coffee clear wing moth (*Cephonodes hylas* L.), known in most of the coffee-growing areas of Africa, is reasonably easy to control, and hand destruction of the big green and white caterpillars is sufficient. In May 1957 however, very heavy infestations caught the planters by surprise; hand picking failed to check the pests, and in some plantations trees were quickly stripped of two-thirds of their foliage. An immediate appeal for aid was made to the N'Kolbisson Entomology Laboratory near Yaoundé.

The answer was swift, effective and based on Shell endrin. A formulation of 19.5% endrin applied at a rate of 3 litres per hectare in 500-1,000 litres of water was recommended, and results were spectacular. Even the largest caterpillars were rapidly killed, and 100% control was achieved within 12 hours—yet another example of the killing-power of this important foliage insecticide developed by Shell. With the aid of endrin the coffee line to Bonabéri carried full loads in 1957; with the aid of endrin many other crops come safely to harvest year by year in many parts of the world.

Shell **endrin**



Cephonodes hylas L.

Endrin is one of six Shell pesticides for world-wide use. Between them, endrin, aldrin, dieldrin, Phosdrin, D-D and Nemagon offer control of virtually every significant pest, both above and below the soil. In addition, dieldrin has important uses in public health. Have you a pest problem in your area? Your Shell Company will gladly advise you on methods of control or eradication.

IN AGRICULTURE...YOU CAN BE SURE OF SHELL CHEMICALS

For further information consult your Shell Company (in the U.K., apply to Shell Chemical Company Limited).

Bright beginnings

Cars without engines need a smooth run to the finishing line. The smoother the flow, the finer the finish. And not only for 'soap-box fliers', but for every car on the production line. Car-proud owners today look for higher-gloss finishes—and more colours to choose from—than ever before, and an answer to this (as any manufacturer of paint will tell you) lies in the quality of the aromatic solvents used. With their evaporation rate chosen for the purpose, together with the highest standard of purity, you get the best 'flow' and gloss on the paint when using these solvents.

By the Shell range of aromatics—benzene, toluene, xylene and the higher boiling-point products—the requirements of many industries are covered. Materials as diverse as synthetic rubber, detergents, plastics, textile fibres and dye stuffs all find a call for aromatics—just as do many surface coatings including paints, lacquers, enamels and printing inks.

Have you a problem concerning finer finishes? If your process includes stoving, 'Shellsol' A is probably the aromatic you need. With an evaporation rate adjusted to the requirements of stoving finishes and brushing paints, and an aromatic content of almost 100%, 'Shellsol' A ensures exceptional 'flow' and gloss and is a product of great potential.

Solvents, resins, intermediates, plastics, base chemicals, additives, detergents, glycols, synthetic rubber . . . Shell chemical production serves every industry. Ask your Shell Company for details.

Shell Aromatic solvents

High aromatic solvents are also necessary to produce agricultural sprays containing high concentrations of chlorinated insecticides. Shell aromatic solvents are frequently employed to produce high quality formulations containing the Shell insecticides aldrin, dieldrin and endrin. Ask your Shell Company also about the range of aliphatic as well as aromatic hydrocarbons. The Shell solvent range covers many industrial and agricultural needs.

Industrial Countries Rely Less on Primary Producers

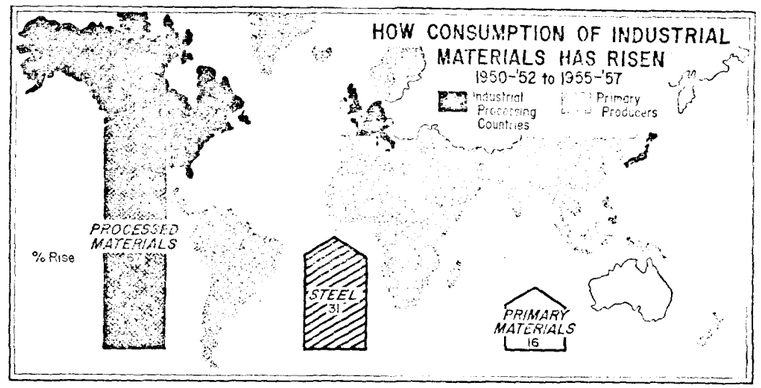
ACCORDING to an expert analysis in the current issue of the National Institute's *Economic Review*, industrial countries are becoming less dependent on materials from primary producing countries. The fears that were expressed some eight or nine years ago of a continued world shortage of many primary products have not been realised, nor have these exporting countries enjoyed the improvement in their terms of trade which was then anticipated. The purchasing power, in terms of manufactured goods, of their total exports (excluding oil) was only 3 per cent higher in 1955-57 than in 1950, although world industrial output had been rising throughout this period at a rate of some 5½ per cent a year.

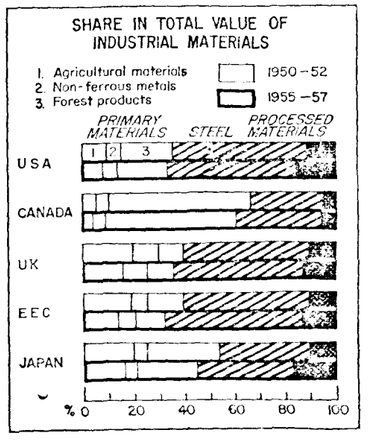
This decline in reliance on imported basic materials throughout western industrialised economies stems partly from the changing pattern of industrial output and the larger share of processing applied to them, and partly from the substitution of processed materials for these traditional ones. This is no new postwar development; indeed the divergence between industrial output and imports of primary products was even more marked before 1948. At that time the major rise in industrial output was occurring in the United States, which depends less on imports than Europe does. Since 1948, the faster economic growth has occurred outside the United States; but nevertheless the same general tendency has developed.

The National Institute has made a detailed study of consumption trends between 1950-52 and 1955-57 in sixteen major materials (excluding fuel) in the principal industrial areas of the west (the United States, Canada, the United Kingdom, Japan, and the European Economic Community countries of Western Germany, France, Italy, Netherlands, and Belgium-Luxemburg; Scandinavia is excluded as a "semi-industrial" area). Over this period the rise in manufacturing output in these areas ranged from 14 per cent in Canada to 93 per cent in Japan, and averaged 28 per cent for the total "industrial area." Consumption of the sixteen industrial materials, taken together, rose by just about the same amount—by 29 per cent—but at very different rates for the different kinds of materials:

	% change 1950-52 to 1955-57
Processed materials (aluminium, rayon, new synthetic fibres, synthetic rubber, plastics) ...	+ 67
Steel	+ 31
Forest products (woodpulp, softwood)	+ 21
Non-ferrous metals (copper, lead, zinc, tin)	+ 16
Agricultural materials (cotton, wool, jute, natural rubber) ...	+ 10

In all five areas, output grew faster than the demand for natural products—with the exception of the consumption of forest products in Britain, which rose by 35 per cent. The EEC countries and Japan were largely responsible for what expansion did occur in the demand for natural products. In America, consumption of these materials hardly rose at all; it remained static for non-ferrous metals, fell for agricultural materials and softwood, and rose only for woodpulp. In Canada and the United Kingdom the demand for agricultural materials also fell.





THE big change in the industrial pattern, which influenced demand in all areas, was the reduced importance of the textile industry; even in Japan, where there was a 78 per cent rise in the output of textiles, the output of metal products rose even faster—by 99 per cent. But there were many further changes in the production pattern within the large industrial groups; for instance, in this period in the United States, production in the electrical engineering and aircraft industries, which use comparatively little steel, grew faster than production of cars, which have a high steel content.

Throughout this period, there was a substantial substitution of processed materials for traditional ones—aluminium for copper and, to a lesser extent, for steel; man-made fibres for cotton and wool; synthetic rubber for natural; and plastic materials for textiles, paper, softwood and metals. Substitution has gone much the furthest in the United States with Japan next on the list; although, if rayon is excluded, Japan ranks below the EEC countries and the United Kingdom. Demand for new materials is not only on a substitution level—they tend to be used in industries that are expanding the most. For instance, an appreciable part of the 68 per cent rise in the consumption of aluminium in the United States in this period can be attributed to the boom in the aircraft industry.

THE important question for primary producers is how far the 1950-57 trends are likely to continue. The period covered by the survey was exceptional in certain respects; it began with the Korean boom in primary products and it ended just before a world recession. As the writers of this survey point out, the Korean price boom may well have encouraged the development of substitute materials; now the prices of traditional materials are more competitive.

Nevertheless few would dispute the Institute's opinion that the process of substitution will continue, although more slowly. Traditional materials must certainly be expected to lose more ground in Europe, since production there is likely to develop on American lines. But it is less certain that the growth in western Europe and Japan will continue to be faster than in the United States; if it does not, then primary producers may have more cause for concern, for the share of primary producers' exports in the input of industrial materials is still three to four times larger in the other industrial areas than it is in the United States. If the rate of growth of industrial areas together remains about the same as in 1950-57, but slows down in Europe and Japan and quickens in the United States, the primary producers will stand to lose.

its advertising of them, showing that they think that they gain from the exercise, as do those who give discounts to the supermarkets or voluntary chains that make special offers of their goods at cut prices for limited periods.

RESEARCH IN INDUSTRY

Getting Down to Fundamentals

FIVE years ago Tube Investments took a step that is still rare in British industry by setting up a laboratory for fundamental research—into solid state physics. A year ago new laboratory buildings for the work were completed; it is now employing 150 people and costing £250,000 a year to run. These are large sums for a company to spend on academic investigations, but where industries are working to increasing exacting specifications, blanks in fundamental knowledge can—to put the matter at its lowest level—lead to an embarrassingly and expensively high rate of scrap. Development of new technology requires a considerable amount of study of the fundamental properties of the little-known materials it intends to use.

This type of work can no longer be done on a shoe-string by dedicated enthusiasts working with a test tube and a bunsen burner. And if industry, which is the main consumer of experimental investigations such as these, is not prepared to pay the bill, it is difficult to see who else can afford to do so.

COTTON INDUSTRY

Tally on Scrapping

AT the final tally last Wednesday the cotton industry had offered to scrap —for a sizeable consideration—12.5 million of its 25.5 million spindles, 573,000 of the 1.5 million doubling spindles and 105,000 of the 248,000 looms. By March 31st, when all this machinery is due to be scrapped, capacity in spinning will have been cut by 49 per cent, in doubling by 38 per cent and in weaving by 42 per cent. The special committee of the Cotton Board, in a somewhat defensive statement made this week, points out that the reduction this will effect in working capacity is much less smaller. Measured by the amount of machinery in use last April, when the government first announced its proposals for subsidising scrapping and re-equipment, capacity in spinning and weaving will fall by roughly one-fifth.

After discussions with all sections the committee is satisfied that there should be no undue interference with supplies during the next six months. The remaining firms should have time enough to prepare for increases in demand by extending shift-working. The committee points out that in June only 7,000 of the 45,500 automatic looms were working three shifts; 20,000 were working two shifts and at least 2,500 were idle; only about 1 million spindles were working more than one shift.

The committee is at pains to answer the charge that the reorganisation scheme is putting up prices of yarn and cloth. It estimates that the levies to finance compensation to redundant mills and displaced workers will cost, on average, less than a farthing per pound of yarn or yard of cloth, without allowing for the reduction in costs brought about by more efficient operation. The committee admits that profit margins have been uneconomic for some time, but fails to admit that one of the objects of the scheme is to make margins economic. The final test of the scrapping and re-equipment schemes is whether they will eventually make Lancashire into an industry that works modern machinery intensively, and is fully competitive with European industries (at least).

By a fortunate coincidence the Cotton Board was able to announce this week a happy outcome to its interminable negotiations with the cotton industries of India and Pakistan. These industries, which have the right of duty-free entry into Britain, have agreed to restrict their shipments of cloth for retention in the British market to 175 million and 38 million square yards respectively each year. Agreement in principle was reached long ago, but when Lancashire was forced to grant Hongkong a much higher quota than it first offered, India claimed that it should have more too—and has now settled for 35 million yards more. In the first eight months of 1959 imports from India and Pakistan were running at the rate of 144 million and 14 million square yards respectively; Hongkong, with cries of pain, has had to refuse British orders in order to keep shipments within its quota of 164 million yards.

COCOA MARKET

In Official Hands

TRADERS in rubber who resent the influence of the American and British officials when they start to sell rubber from strategic stocks (overlooking the much greater influence that official Russian and Chinese buyers have exerted on rubber prices for several years), might spare a thought for their colleagues in cocoa. British West Africa and Brazil, which together

USED CAR PRICES

Lull Before the Show

PRICES obtainable for used cars have been substantially higher throughout this summer than last. Demand for motoring, already freed by the removal of hire purchase restrictions, shot up after purchase tax was reduced in this year's Budget; insufficient supplies of new cars—despite generally high production—produced long waiting lists for new cars and high prices in the second-hand market.

Only within the last month have used car prices fallen appreciably, and they are still well above their usual level for this time of the year. Deliveries of new cars are still delayed for many models and prolonged midsummer weather may have delayed the usual seasonal fall in demand. The Used Car Show which opened last week at Olympia is the first of its kind held since before the war.

The introduction of the Morris Mini-Minor and Austin Seven undoubtedly helped to cut the resale values of the lowest-priced British cars. Ford's decision to reintroduce the former Anglia, however, as the Popular, prior to introducing a completely new Anglia this week, seems likely to have more complex effects. The present owners of Anglias—now become Populars—found their cars marked down in value almost overnight, and may see them fall even further when the market impact of the new Anglia is completely felt; on the other hand, since Ford's name-changing effectively raised the price of the cheapest new conventional car in Britain by some £75, the price of the old-style Populars has risen slightly.

The table, based on figures supplied by Wm. Glass, Ltd., shows the average price obtainable for a year-old car during the past 12 months, expressed as a percentage of its original cost, including purchase tax.

Gunnar Ericson, President of the Facit Group — one of the world's leading business machine manufacturers and exporters.

Why are so many world-known business machines built **by Swedes?**

"I believe the answer to that is — Swedish technique and tradition.

You see, Swedes are mechanically gifted and have an almost reverent respect for quality, precision and craftsmanship.

And as inventors, builders and designers, Swedes — also descendants of Swedes abroad — have made pioneering contributions to quality production of modern business machines.

In relation to her population, Sweden today produces more business machines than any other country in the world.

And Facit, Sweden's leading manufacturer and exporter, which to date has produced more than 2 million business machines, has played a substantial role in this development."

If you would like to read the story of this achievement, your local Facit agent will gladly send you a free copy of our brochure "Why are so many..." — or you may write directly to Aktiebolaget Industrier, Stockholm 7, Sweden.

Factories in Sweden and West Germany. Sales and service offices in 102 countries.

Esso chemicals help you both ways

For car-owning house-painters, yesterday is a thing of the past. Dedicated and fearless investigators of the Esso Chemicals Division have produced new chemicals from oil — products which encourage the car-owner and give new heart to the house-painter.

Take cars. Working from down upwards, we start with the tyres, which contain hard-wearing synthetic rubber, made from Esso's butadiene, and made even more hard-wearing with a dash of carbon black, produced from aromatic tar (major suppliers: Esso). Esso solvents contribute to the glossy bodywork; Esso make the raw material for the plasticiser which softens the PVC which upholsters the car. Then there are the sundry bits of rubber: sealing-strip, axle-bumpers, gaskets, V-belts — made from Esso's butyl rubber.

Still with us? Take a deep breath as we plunge into the paint world. That cobalt naphthenate you can smell is an additive which shortens the drying time; Esso make the naphthenic acid. They also make some di-cyclo-marmalade (or something) which, briefly, improves the quality of the paint. *All* paints, not to mention varnishes and lacquers, are a lot better for the Esso solvents in them. Moving rapidly on to the fillings in the gentleman's teeth . . . but no, Esso Chemicals haven't got that far. Yet.

Note to Manufacturers

The cheers of house-painting car-owners from far and wide have encouraged us, at Esso Chemicals, to make many other chemicals from oil; they are listed below. If YOUR *business uses chemicals, ask your secretary to contact the Esso Chemicals Department, 50 Stratton Street, London, W1 Telephone: Hyde Park 7030*

BUTYL RUBBER / AROMATIC SOLVENTS (SOLVESSO 100 AND 150) ETHYLENE / BUTADIENE PROPYLENE / NAPHTHENIC ACIDS 'C' OIL / POLYISOBUTYLENE OXO ALCHOHOLS / HIGHER OLEFINS DICYCLOPENTADIENE / SULPHUR HEPTENE / AROMATIC TAR

Esso MEANS BUSINESS IN CHEMICALS

account for over half the world production, market all their cocoa through official hands —the West African marketing boards in London and the cocoa marketing agency in Brazil. Unlike his competitor in London Dr Tosta Filho, head of the Brazilian agency, follows an adventurous policy. He decides what his cocoa is worth, and only sells to buyers who will pay that minimum or more. Hence the future of cocoa prices can often turn, as it does now, on the dramatic, if rather familiar, question: "Can Tosta hold out?"

A few months ago Dr Tosta, taking a view from his lofty perch of world production and consumption in the 1959-60 season, declared that he would hold on to his minimum export price "through thick and thin." This price is 32½ cents a lb fob. equivalent to 277s. 6d. cif London. Market prices, after holding steady for most of this year, have now weakened; in London cocoa for current delivery has dropped in the past month by about 19s. to 26ls. a cwt. Brazil therefore is not selling.

Dr Tosta recognised that the new crops in West Africa should be larger this season, but claimed that this would be needed to make up for the fall of 40,000 tons that he expected in the total Brazilian crop. The new crops in West Africa seem generally to be good. The official preliminary estimate of the main crop in Ghana is 247,000 tons, which is over 20,000 tons higher than last season's crop. Some traders believe the crop could exceed 260,000 tons, and they are not so sure that the Brazilian crop will be as low as Brazilian officials expect. But even the most bearish-minded traders cannot entirely dismiss the nagging thought that Dr Tosta has often been right in the past.

AIR CONDITIONING

A Cool Merger

AMERICA'S Carrier Corporation, claimed to be the largest manufacturer of air conditioning plant in the world, and Stone-Platt Ltd have announced their plans for the production of Carrier air-conditioning equipment in Britain. Last March they together formed a marketing company, Carlyle Air Conditioning and Refrigeration, in which Carrier has the controlling interest; and they later jointly purchased a Glasgow firm, Winsor Engineering, that specialised in ship air conditioning and ventilating plant, Stone-Platt in this case taking the controlling interest. One existing subsidiary of Stone-Platt, J. Stone of Deptford, has been making railway carriage air conditioning plant under licence from Carrier for 25 years.

Now Winsor will make the trunking and J. Stone the compressors, as they already do, while a part of the Tweedales and Smalley textile machinery works in Lancashire will make the evaporators and compressors. The objective of Carrier in securing British manufacture for its products is to aid its sales in the sterling area and other countries that do much trade with Britain, and to secure its place in the British market, which it expects will expand considerably. Production will probably be concentrated at first on air conditioning plant for ships, but all Carrier designs, covering all types and sizes of plant, will be available for manufacture in Britain.

TANKER TERMINALS

Oil in the Haven

MILFORD HAVEN is not only one of the finest natural deep water harbours in Britain; it is an outstandingly pretty piece of Pembrokeshire. For the past three years British industries supplied by sea have been making and to some extent fulfilling plans to take advantage of the Haven's economic possibilities: they have been conscious, at least, of the need to preserve its aesthetic amenities. Two of the four major developments originally planned for the area are now well under way, and the calm beauty of the countryside remains relatively unspoilt. There seems some chance that it may stay that way.

The biggest of these projects is the refinery and terminal being built by Esso near the town of Milford Haven, on the north side of the bay. This refinery, work on which was begun in July 1958, will go on stream in November 1960; costing £8 million, it will have an initial throughput of 4½ million tons of crude oil a year. Esso's Fawley refinery—originally the same size - has now grown to a capacity of 10 million tons a year; moreover, Southampton Water cannot accommodate the super-tankers that are now being built. Work on the 350 acre site at Milford Haven is now about half completed. When it is finished it will refine Middle East crude into products that will be shipped out mainly by coastal tankers to Esso distribution points throughout Britain.

Esso has taken great pains to make this about as unobtrusive as an oil refinery can be. The "T" shaped jetty which extends 3,500 feet out into the bay can scarcely be hidden; but the refinery itself is in a valley that will afford some concealment: and trees will be planted to screen some items of plant and storage tanks. These will also be painted sky-blue, which for some reason the company believes will render them virtually invisible. At the suggestion of the National Parks Commission, to whom the original designs were shown, Esso has employed a landscape architect to advise on the layout of the plant. A good deal of costly equipment has been installed to reduce pollution of both air and sea.

Across the water, at Popton Point on the Pembrokeshire side of the Haven, another highly similar jetty is now over half completed; it belongs to the tanker terminal being built at a cost of £5 million by British Petroleum. Scheduled to be completed by next summer, the terminal will be connected by a 59-mile pipeline to British Petroleum's Llandarcy refinery near Swansea. This also will be capable of berthing 100,000-ton tankers and will have an initial capacity of 5 million tons of crude oil a year.

But of the other two projects at one time announced as under way for Milford Haven no trace is yet visible. The first of these is an iron ore unloading terminal planned by Ar/c Ore and Transport, a subsidiary of the Steel Company of South Wales and Guest Keen and Nettlefolds. Planning consent was given over a year ago and authority to purchase a 41½ acre site located at Angle, a little way down the bay from Popton Point, was obtained by a parliamentary private bill though local opposition to the ore terminal on the grounds of amenity was somewhat greater than in the case of either oil industries. But so far the ground has not been broken. The Milford Dock Company proposed to build a new dry dock, five wet repair berths and a new discharging pier at Milford Haven at a cost of £9 million. This sum was later amended to £5-6 million and at the moment the scheme seems to have gone no further. Presumably it would be dependent to some degree on tanker maintenance contracts from BP and Esso, and these have not yet been forthcoming.

SHORTER NOTES

Kaiser Aluminum, the third largest aluminium producer in the United States, is setting up a private company in Britain with a capital of £100 in £1 shares. The Aluminum Company of America is already linked with Imperial Chemical Industries in Britain and Reynolds Metals is in partnership with Tube Investments.

*

S. G. Warburg, the merchant bankers, are to be represented on the board of a new French investment trust to be called France-Investissements. Its portfolio will consist only of French investments and all its capital of some two milliards of francs has already been taken up privately. A quotation is to be sought on the French bourse but there will be no quotation on the London stock exchange.

*

Tootal and William Hollins are not going ahead with the proposed merger between the two groups. The two companies hope, however, to be able to co-operate in directions leading to the maximum utilisation of their plant and machinery and in certain export fields.

COMPANY MEETINGS

ANGLO-CEYLON & GENERAL ESTATES

SECOND HIGHEST NET PROFIT

The Seventy-third annual ordinary general meeting of The Anglo-Ceylon and General Estates Company Limited was held on September 23rd in London.

Mr Francis W. Douse (Chairman and Managing Director), in the course of his speech, said: The directors recommend a final dividend of 1s. 6d. per Unit, less tax, making a total of 2s. less tax for the year out of earnings of 2s. 2.94d. per Unit, less tax. This would appear to savour of distributing profits up to the hilt, but in view of the particular circumstances surrounding operations for the year and considering the strength of the financial position of the company, it was decided that the results well merited the maintenance of the dividend. On the face of it, it would appear that the profits suffered a rather heavy setback, but this fall should not be taken very seriously as the resultant net profit is still the second highest in the history of the company.

PROFIT PERCENTAGES

For our trading year ended March, 1956, I gave the percentages profits of Mauritius and Ceylon and in that year, as well as for 1957, the proportion was Mauritius 64 per cent, Ceylon 36 per cent. In 1958 the percentages altered, due to bad prices from Ceylon teas and the division was then Mauritius 80 per cent, Ceylon 20 per cent and for the past year the proportion is Mauritius 76.4 per cent and Ceylon 23.6 per cent. These figures show that, at any rate for the time being, Mauritius contributes a much bigger part of our earnings than does Ceylon. This, of course, is as it should be in that the value of the estates in Mauritius and the money employed therein is much greater than that invested in Ceylon.

For the past few years I have commented in some detail on the position in Ceylon, both economically and politically, so much so that I feel there is need for me to say no more on the subject except that conditions in Ceylon seem to be getting worse and worse, almost resulting in a situation of chaos.

To sum up, without comment, the following are points which have come to the forefront during last year:

1. The threat of nationalisation, as such, of foreign-owned estates seems to have receded, but other ideas are in mind for creating a situation akin to nationalisation, which might well be just as bad and, in the long run, equally disastrous.

2. There have been political crises all through the year resulting in a state of emergency by Government decree, which did not contribute to a happy atmosphere.

3. There were inter-communal riots following the passage of the Bill proclaiming Sinhalese as the national language, resulting in a large number of deaths and damage to property. In this connection it is much to the credit of the Indian population on estates that they took no part in these disturbances.

4. Operation of the Port of Colombo was again paralysed by frequent strikes of the Port workers.

5. The Ports of Trincomalee and Galle, operating under private, as opposed to public, enterprise, have done splendid work in keeping cargoes of tea on the move.

The Mauritius sugar crop for the 1958/59 season was lower than the two previous years, due to the near passage of cyclones and only amounted to some 525,650 tons as against 561,602 for the previous year. The Company's crop, including Mon Tresor and Mon Desert Limited, reached a figure of 62,710 tons as against 68,074 tons for last year, a reduction of 5,364 tons. The net price realised both for free sugar and that sold under the Commonwealth Sugar Agreement was approximately £34 2s. 6d. per ton as against £35 8s. in the previous year.

CURRENT YEAR'S PROSPECTS

As regards the current year's prospects, the forecast of the sugar crop for Mauritius is brighter than I mentioned last year. Weather conditions have been fairly favourable and there is every prospect that the final outturn should be in excess of that achieved last season. In Ceylon, how tea prices and net receipts will turn out I would prefer not to estimate, but so far the crop at least would appear to be likely to be more or less the same as the previous year, provided weather conditions are suitable.

The report and accounts were adopted.

BRAITHWAITE & COMPANY ENGINEERS LIMITED

ANNUAL GENERAL MEETING

The Thirty-eighth Annual General Meeting of Shareholders of Braithwaite & Company Engineers Limited was held on September 24th at Dorland House, 14-16 Regent Street, London, S.W.1. Mr J. Harvey Humphryes, AssocICE, MIStructE, the Chairman, presided. Copies of his statement had previously been circulated to the Shareholders with the annual Report and Accounts.

The profit on trading of the Group before taxation was £104,922. After charging taxation for the year and crediting £24,000 provision for taxation no longer required, the resulting net profit was £76,222.

Resolutions were unanimously passed for the adoption of the Report and Accounts, the confirmation of preference dividend already paid in respect of the year ended March 31, 1959, the payment of a final dividend of 4 per cent, less tax, making a total of 8 per cent, less tax, for the year on the Ordinary Shares and a capital distribution of 2 per cent on the Ordinary Shares out of the surplus arising on the sale of shares in Braithwaite & Company (India) Limited.

Mr S. J. Harper, LLB, the Director retiring by rotation, was re-elected.

The Directors were authorised to agree the remuneration of the Auditors, Messrs Whitehill Marsh Jackson & Company, and the proceedings terminated with votes of thanks to the Chairman, staff and workpeople.

WM. CORY & SON LIMITED

THE HON. F. A. LEATHERS'S REVIEW

The Honourable F. A. Leathers, the Chairman of the Company, presided on September 24th at the sixty-third Annual General Meeting of Wm. Cory & Son Limited, held at Cory Buildings, Fenchurch Street, London, EC3.

The following is an extract from his circulated statement: The twelve months have been influenced by trading conditions as difficult as in any period since the end of the war.

Industry has required, overall, less fuel. Many manufacturers were feeling the effects of recession which caused these consumers to ask for less new coal in the vital months when normally our coal distribution period would be at its peak. An ever increasing number of important coal users decided to convert from coal to oil. Whenever possible, your company continues to supply the fuel required.

A lower demand for coal has had an effect on the tonnage shipped by your company's vessels, discharged at the wharves on the Thames and lightered in our own craft. Even supplementary tonnage was reduced.

The Oil Bunkering department produced a similar profit compared with last year, which is remarkable with more ships laid up.

On the Inland Oil Distribution side, new road tank wagons and other equipment required more of our cash resources. Happily the quantity of oil distributed for Shell-Mex and BP Limited has also increased. This has resulted in an overall modest improvement in our profit return.

The collier *Corfirth* has been sold. The diesel ships *Corstar* and *Corsea* have been trading regularly to the Mediterranean.

The first tanker, the *Corhaven*, is on charter. The second should be in service in January, 1960. The third, and last, will be trading in about a year's time.

The *Queensgarth* of the St Denis Shipping Company Limited, the first of a quartet of sisters, will be trading under charter to BISC (Ore) Limited towards the end of this year.

Two of the powerful tugs designed for dealing with the largest ships to use Milford Haven have been launched. These tugs, with two more to follow, will be in service during 1960.

A company has been formed to integrate the common activities of James W. Cook & Company Limited, J. Palmer Limited, and Weber, Smith & Hoare Limited, together with their subsidiary concerns. A recent acquisition is Robertson, Buckley & Company Limited, a company having extensive warehousing as well as forwarding and clearing interests. The Bulk Oil Steamship Company Limited's coastal tankers *Pass of Dalveen* and *Pass of Kildrummy* have been successfully trading for some months. As a result it has been possible to sell two of the older tankers.

Cory Sand and Ballast Company Limited, had a not unsatisfactory year. New discharging and ready-mixed concrete plants are in use at Portsmouth, and this Company has extended to Plymouth.

In France and Italy the results have been satisfactory; trade in Southern Africa has not shown any sign of improvement; in South America, the ultimate position has been distorted by the depreciation in the rate of exchange.

The report was adopted.

ALLIANCE ASSURANCE COMPANY, LIMITED AND SUN INSURANCE OFFICE LIMITED

The Boards of Alliance Assurance Company, Limited ("Alliance") and Sun Insurance Office Limited ("Sun") jointly announce that they have agreed upon the terms for a merger of the interests of the two Companies, in a form which preserves the identity of each but which will result in an organisation of greatly increased size and strength, enabling the leading position of both Companies to be maintained and enhanced in the Insurance Market at home and overseas.

The merger is to be effected by means of a new holding Company offering to acquire the issued Share Capital of the two Companies in exchange for its own Shares, on the following basis:—

In exchange for	The new Company will allot
1 Share of £1 of Alliance	2 Shares of £1
5 Shares of £1 of Sun	21 Shares of £1

The formal offer documents are being prepared and will be despatched to Shareholders as soon as possible.

The merger is unanimously recommended by the Boards of Alliance and Sun as being in the best interests of their Shareholders. The terms proposed are those put forward by Baring Brothers & Co., Limited as being fair and equitable to the Shareholders of both Companies whose Boards were independently advised by N. M. Rothschild & Sons and Morgan Grenfell & Co. Limited respectively.

If the offer becomes unconditional, the following dividends would be declared on the existing capital of Alliance and Sun and be paid in January, 1960, in lieu of the usual interim dividends normally payable in that month:—

Alliance	2s. 0d. per share
Sun	4s. 2d. per share

It is anticipated that the new Company should be in a position to pay in July, 1960, a final dividend of 1s. 6d. per share on its issued Share Capital, which, when added to the dividends mentioned above, would represent a distribution in respect of a full year by the Holding Company of 2s. 6d. per share.

30th September, 1959.

SUN LIFE ASSURANCE SOCIETY

TO THE SHAREHOLDERS OF SUN LIFE ASSURANCE SOCIETY:

The Board of Sun Life Assurance Society wish it to be known that that Company is not included in the proposed merger between Alliance Assurance Company, Limited and Sun Insurance Office Limited. Sun Life Assurance Society will remain a separate company without change in its status or the constitution of its Board and Management. Should the merger become effective, it is intended and has been agreed between the Boards concerned that the close co-operation between Sun Life Assurance Society and Sun Insurance Office Limited, extending over a period of 150 years, should be maintained.

30th September, 1959.

THE CALICO PRINTERS' ASSOCIATION LIMITED

SIGNS OF RETURNING CONFIDENCE

MR R. M. LEE'S STATEMENT

The Sixtieth Annual General Meeting of The Calico Printers' Association Limited will be held on October 21st at Manchester.

The following are extracts from the circulated statement by Mr R. M. Lee, the chairman:

ACCOUNTS

The trading profit of the Group, after the provision of £1,342,000 for depreciation, repairs, renewals and upkeep was only £157,000, a decrease of £462,000 compared with the previous year. This decrease was partly offset by an increase of £119,000 in royalty income which produced a total before tax of £816,000. The result of the foregoing changes was that the net profit for the year attributable to Association Stockholders declined by £420,000 to £223,000. Profits of Subsidiary Companies retained by them in earlier years were, however, drawn in dividends to the extent of £287,000 and, after excluding profits of the current year retained by Subsidiary Companies, the net profit available to the Association was £500,000 against £592,000 for the preceding year.

The Association's total stocks fell during the year by £1,183,000 and the release of capital previously held in the form of stocks enabled the Association to complete the purchase of H. & J. Wilson Limited with a reduction of only £374,000 in Investments in Government and other Securities.

COMMISSION PRINTING

The first six months of the year under review saw a very serious decline in the amount of commission printing done by the Association compared with the first half of 1957-58. There was, for example, a fall of almost one-third in the amount of business sent to us by our principal customers and I understand there was a general decline throughout the printing trade. It reflects mainly a continued loss of the cheaper bulk export lines in the traditional shipping markets, the increased incidence of Japanese competition in Australia and the considerable curtailment of activity by Home Trade customers following the disastrous summer of 1958. During the second half of the year there was some recovery and our bookings compared favourably with the corresponding period of 1958, which was, however, by no means a good year in commission printing.

MERCHANTING

Orders booked by the Merchant Group during the year were some 7½ per cent lower than in 1957-58, but until the last few months the shortfall had been double this figure. A lack of buying confidence of a severity unusual even in the textile trade prevailed throughout 1958 and affected virtually all overseas markets as well as the Home Trade. The emergence of Communist China as a major competitor in an already overcrowded textile world, the fall in price of most primary products, tight credit conditions and import restrictions, the uncertain future of raw cotton prices, all these general factors were aggravated at home by uncertainties regarding the outcome of the Restrictive Practices Tribunal inquiry into the Yarn Spinners' arrangements and the prolonged negotiations to secure a voluntary restriction of duty free imports into the United Kingdom from Hong Kong, India and Pakistan while, particularly affecting the print trade, there was yet another cold and even wetter summer than in 1957.

The first signs of returning confidence appeared in March this year with an upturn in export bookings, and recovery has proceeded steadily since then, new orders substantially exceeding last year's figures. Invoicings up to the end of June, however, could only reflect the beginning of this improvement and were, on the year, well down on the high levels achieved in previous years.

ROYALTIES

Revenue derived from the "Terylene" patents has again made a major contribution to the results for the year. The increase in royalties received from sub-licensees producing polyester fibres was more than sufficient to compensate for a decline in royalties on the Association's special finishing processes and sales of "Terylene" by Imperial Chemical Industries Limited from production in this country were nearly as high as last year in spite of the difficult trading conditions recently experienced in the textile industry.

It is satisfactory to know that the Association will continue to derive benefit from ICI's expanding sales during the extended life of the British patents.

PRANG BESAR RUBBER ESTATE LIMITED

MR R. O. JENKINS'S STATEMENT

The thirty-third annual general meeting of Prang Besar Rubber Estate Limited, will be held on October 20th at 1-4 Great Tower Street, London, E.C.

The following is an extract from the statement by the chairman, Mr R. O. Jenkins, MC, circulated with the report and accounts for the year ended March 31, 1959:

After providing £37,138 for taxation in Malaya and the UK—Malaya tax having been increased from 30 per cent to 40 per cent—the net profit at £60,806 was £884 less than in the previous year. From the balance available the directors have transferred £14,697 to Capital General Reserve and £15,258, representing the year's replanting expenditure, to Replacement of Planted Areas Reserve, and propose the payment of a final dividend of 25 per cent, less tax, making 30 per cent for the year.

Our wholly-owned subsidiary Company, Bukit Prang Estate Limited, was placed into voluntary liquidation on December 31, 1958, and its assets and undertaking transferred to Prang Besar on January 1, 1959. For the nine months to December 31, 1958, it earned a profit after taxation of £9,230. The profit from working the estate as a division of Prang Besar for the three months to March 31, 1959, is included in the accounts before you.

In response to our application to Government for 1,000 acres of additional land we have recently been granted 300 acres. It is adjacent to Bukit Prang.

OUTLOOK FOR NATURAL RUBBER

The present strength of the natural rubber market is impressive. One does not look a gift horse in the mouth too critically but any sharp rise in prices tends to generate its own corrective and a selling price of natural in the USA at 50 per cent above that ruling for general purpose styrene-butadiene rubber (SBR) must prove a potent "shot in the arm" to synthetic rubber developments. It is often said that the synthetics are complementary materials to the natural product. This may be true of the special purpose synthetics, such as polychloroprene, butadiene-acrylonitrile and silicone rubbers, but it would be mere wishful thinking to suppose that the general purpose rubbers are anything but ruthlessly competitive. The rapidity with which the synthetic industry is advancing, the variety of its products, the stability if its prices and the emphasis it lays on the provision of technical services conclusively point to the nature of the challenge our industry has to meet. The natural product is still being used over a wide range of conditions with advantage over any synthetic, but it is just this which gives the stimulus for the production of cispolyisoprene—"synthetic natural"—and for the further intensification of synthetic research.

A spectre has long loomed over commodity markets in the shape of the United States' strategic stocks—they include, it is believed, about 1¼ million tons of natural rubber. To them must be added the 100,000 tons in the Board of Trade stockpile. Producers of natural rubber have no control over the rubber market; the prices realised come by way of impersonal

market movements. A continuing very high price for natural in relation to the price of synthetic would not be in the long-term interests of the producer. It is good news therefore that the American and British stockpile Authorities have decided upon a policy under which their accumulations of natural rubber may be run down by stages. With a view to avoiding disruption of the markets the Board of Trade intends to disperse shortly its stock and the United States proposes to release some 470,000 tons over a period of 9 years. A disposal rate of this order may not be of sufficient magnitude to cause the supply of natural to exceed the demand, but it may be expected at least to give pause to the recent steady creep up in the price of natural.

LOYDS RETAILERS

GROUP PROFIT MORE THAN DOUBLED

The twenty-third annual general meeting of Loyds Retailers, Limited, was held on September 30th at Droylsden, Manchester, Mr H. Amelan, chairman and managing director, presiding.

The following is an extract from the chairman's statement circulated with the report and accounts for the twelve months ended March 31, 1959:

The consolidated profit and loss account for the twelve months included in the Directors' Report shows a trading profit for the whole Group of £519,722 compared with £243,559 for the previous twelve months. There is a net balance of £232,604 against £53,194. Your Directors propose to transfer to General Capital Reserve £13,116 and to General Reserve £56,884 and recommend a final dividend of 13¼ per cent less tax plus a capital distribution of 5 per cent free of tax out of the surplus on sale of subsidiary, leaving £313,359 to be carried forward.

Turning to the consolidated balance sheet you will note that our paid up capital and accumulated reserves, including future tax, are now £2,062,472. Current assets are £5,036,476 and current liabilities £2,400,275.

POLICY OF EXPANSION

The easing of restrictions on hire purchase trading which took place during the middle of the year under review enabled your Company to carry out a policy of expansion which is reflected in the increase in hire purchase and instalment accounts, and the reserve for unmatured profit on these accounts. This reserve for unmatured profit amounting to £1,466,956 will fall into profits as the accounts are collected. The development of your Company's other activities in credit and mail order trading continue to expand.

We are constantly on the lookout for additional businesses and at the moment we are examining several propositions and since the end of the financial year we have acquired a retail hire purchase group established over 70 years which is proving a remunerative addition to the Company.

The turnover figures for the first part of this year show a substantial increase over the same period last year. Your Directors intend to pay an interim dividend of 10 per cent less tax in January, 1960.

The report and accounts were adopted.

SIR LINDSAY PARKINSON & COMPANY

WORK IN HAND EXCEEDS £17 MILLION

MR A. E. PARKINSON'S REVIEW

The twenty-second Annual Ordinary General Meeting of Sir Lindsay Parkinson & Co., Ltd., was held on September 29th at the Piccadilly Hotel, London, W.

The following is an extract from the circulated statement of Mr A. E. Parkinson, Chairman:

ACCOUNTS

The Group Profit for 1958 applicable to the Members of the Parent Company before Taxation amounts to £270,500 as compared with £218,428 for 1957. Taxation amounts to £134,997 against the charge of £121,798 for 1957. The Group Profit and Loss Account Balance carried forward amounts to £398,375 compared with £304,235 brought in. The Consolidated Balance Sheet shows a surplus of Current Assets over Current Liabilities and Provisions amounting to £333,300 compared with £401,851 last year.

CONTRACTS

Home: Our work continues to include a wide variety of Building and Civil Engineering contracts. The Building Department has obtained a number of contracts for the Ministry of Works *including Telephone Exchanges*, Post Offices and other public buildings. The War Office have in recent months awarded us a contract for the erection of new Permanent Barracks at Catterick Camp, Yorkshire, the value of which is in excess of one million pounds. During 1958 there was a significant increase in our Speculative Building Department, and that part of our business continues to expand. On the Lancaster Motorway contract, after the deplorable weather throughout 1958, the fine Summer of 1959 has enabled us to make good progress and to recover some of the lost time.

Canada: Our Montreal Subsidiary Company continues to operate profitably.

Cyprus: Apart from the extension works on the Dhekelia Power Station, all our contracts in the Island have now been completed.

British Guiana: This contract is now approaching completion, and is scheduled to be finished before the end of this year.

Nigeria: We have recently been entrusted with a contract for the construction of Television Studios and Transmitter Stations in Western Nigeria for the Government of Western Nigeria in association with Overseas Rediffusion Ltd.

Ghana: Considerable progress has been made on the Tema Harbour contract, which is being carried out by Parkinson Howard Ltd. The main contract is nearing completion, and the final value will exceed £12 million. During the current year the associated Company has secured a contract for a new road in connection with the preliminary part of the Volta River Scheme, at a value of some £400,000.

DIVIDENDS

The final dividend to be recomended on the Ordinary Stock is 12½ per cent (less tax), making a total for the year 1958 of 15 per cent (less tax). It has been decided, to declare a special interim

dividend for 1959 of 6 per cent (less tax), payable together with the final dividend for 1958. The amount of this special interim dividend will not be taken into account when deciding the further distributions to be made or recommended for the year 1959.

CONCLUSION

Subject only to the contraction taking place in opencast coal production, there would now seem to be every prospect of the Company maintaining its present turnover. At the present time the value of the work in hand of our Group amounts to some £17 million.

The report and accounts were adopted.

HECHT, LEVIS & KAHN

(Merchants in Raw Rubber and other Commodities)

SCRIP ISSUE APPROVED

The thirty-fourth annual general meeting of Hecht, Levis & Kahn Ltd., was held on September 25th in London, Sir James Helmore, KCB, KCMG (the chairman) presiding.

The following is an extract from his circulated statement:

The consolidated total profit of the Group for the year ended March 31, 1959, was £422,370, an apparently disappointing result when compared with £696,297 for the previous year. However, the profit, after tax, attributable to members of the Company was £161,246, a drop of only £39,985, while the net assets of the Group rose by £132,104 as compared with a rise of only half that amount in the previous year, after appropriations of approximately the same amount.

Profits were affected mainly by events in France; as I forecast in my statement a year ago, the special restraints which the French Government found it necessary to impose on imports, especially during the second half of 1958, had a considerable impact on SAFIC Alcan & Cie and on SEPPIC.

OPERATING COMPANIES

Once again a substantial contribution to the earnings of SAFIC came from the distribution of synthetic rubber. 1958 ended with the institution by the French Government of far-reaching economic reforms and the substantial recovery of the French economy in 1959 gives us considerable hope (justified by results so far) of increased profits in the current year.

During the year SEPPIC's important investment in manufacturing facilities for irrigation equipment began to come into full production and we have great hopes for a noticeable contribution to SEPPIC's activity from this new development.

As regards the Far East, the rubber dealing and packaging companies continued to experience increased competition and we are gradually reducing emphasis on this activity.

Of our other subsidiaries in Europe, I need only mention Freudenberg & Co., GmbH. Its earnings have increased and are on a satisfactory scale in relation to our investment.

In general, all our operating companies during the year under review (which ended either in December, 1958, or in March, 1959) experienced highly competitive conditions in a somewhat unfavourable economic—and in some cases political—climate.

The outlook for the current year is not unfavourable. The rapid improvement in the French economic situation has brought a corresponding benefit to the French group of companies and, unless some unforeseen development takes place, their profits should be substantially higher than those of last year. The outlook in Malaya is fair and the economic situation less difficult than that which faces the new Government in Singapore. Our subsidiaries in Belgium and Germany should continue to make their usual modest, but welcome, addition to our total profits.

Part of the business of the Annual General Meeting will be to consider resolutions authorising a bonus issue of one new share for each stock unit at present held, thus doubling the ordinary capital. Your Board have for some time been conscious that the issued capital is considerably out of line with the capital invested in the business.

We have recommended a dividend of 25 per cent, but it is no longer necessary to describe part of this as a bonus. We expect that it will be possible at least to maintain the same effective distribution in the future, i.e. at the rate of 12½ per cent on the capital doubled by the proposed bonus issue.

The report was adopted and the proposed scrip issue approved.

C. H. BAILEY LIMITED

(Dry Dock Owners and Ship Repairers)

The thirty-sixth annual general meeting of C. H. Bailey Limited was held on September 25th at Newport, Mon., Group Captain G. B. Bailey, OBE, DFC, DL (chairman and managing director), presiding.

The following is an extract from his circulated address:

No improvement in shipping freights took place during the year, and, as I envisaged in my address last year, profits were reduced, but in the circumstances I feel the result is a satisfactory one.

The Trading Profits fell by £66,767 to £234,866, but after providing £88,500 for taxation (as against £143,000 in the previous year) and making a very slightly increased provision for depreciation, the net profit for the year was down by only £12,620 to £91,340.

The new dry dock at Newport has not yet been started as our discussions with the Development Area Treasury Advisory Committee for a long-term loan at a low interest rate have not yet been completed.

Meantime, we have been progressing the project in Malta. At the beginning of March, a new Maltese company, Bailey (Malta) Limited, was formed. I am satisfied that with willing co-operation there is a tremendous future for this new venture.

The shipping industry continues to be very depressed but, with the very large expansion of your Company, it is to be hoped that we will at least maintain our present trading position, and if all goes well, we should over the years substantially improve the position. There are indeed very great possibilities ahead.

The report was adopted and a total dividend of 12½ per cent approved.

APPOINTMENTS VACANCIES AS

ECONOMIST

IN THE IRISH CIVIL SERVICE

Salary £1,020 (A) Women, and unmarried men under 30 years of age, rising by annual increments to £1,452. (B) Men, and women over 30 years of age, rising by annual increments to £1,926. Higher initial salary depending on qualifications and/or experience. Maximum age limit 45 years.

Essential: Candidates must hold a recognised first or second class honours University degree in the final examination for which Economics or Mathematics or Statistics was taken as a major subject and first or second class honours obtained in that subject, or

Candidates must have a first or second class honours University degree in any faculty and have pursued a recognised post-graduate course in which Economics or Mathematics or Statistics was included or hold a recognised first or second class honours University degree in Commerce, or

hold an equivalent qualification.

Desirable: Experience may be attended to candidates resident outside Ireland. Application forms, obtainable from Secretary, Civil Service Commissioners, 45 Upper Grenville Street, Dublin. *Latest date for receiving completed application forms: October 15, 1959.*

YOUNG ECONOMIST

required for Economic Research Section with main emphasis on commodities. Applicants should be able to express themselves well in survey and desk-top work on short studies but should enjoy working in a closely integrated team. A sound knowledge of statistics would be helpful. Salary according to age, experience and qualifications. For further particulars apply:

Personnel Officer,
Metal Box Co. Ltd.,
Head Office,
Queen's House,
Kingsway,
London, W.C.2.

OXFORD REGIONAL HOSPITAL BOARD

Applications are invited from qualified accountants or university graduates with a degree in Economics or Commerce, with preference to those of hospital training, for the post of SENIOR ACCOUNTANCY ASSISTANT in the Treasurer's Department. Salary scale £1,000 x £50 - £1,250 p.a. Applications, stating age, qualifications and experience, together with names and addresses of two referees, should be forwarded to the Secretary, 45 Banbury Road, Oxford, not later than October 10, 1959.

For further appointments and other classified advertisements see page 95

UNIVERSITY OF DURHAM

KING'S COLLEGE, NEWCASTLE UPON TYNE

The Council of King's College invite applications for the post of ASSISTANT AGRICULTURAL ECONOMIST in the Provincial Agricultural Economics Service.

The appointment will be determined at an appropriate point on the scale £700 x £25 - £900 then £900 x £30 - £1,050, and the post ranks for superannuation under the F.S.S.U.

Candidates must have a degree in Economics or in Agriculture with Economics. They should be familiar with statistical and other analytical techniques used in farm economic investigations. Direct field experience in such work will be an advantage.

The appointment will be a temporary one in the first instance for a period of twelve months, with prospects of a permanency thereafter.

Twelve copies of application, which should include the names and addresses of three referees, should be submitted not later than October 31, 1959, to the Registrar of King's College, from whom further particulars may be obtained.

EDUCATION AND COURSES

RESIDENTIAL COURSES FOR SUPERVISORS

An opportunity to consider, in contact with people of similar rank and experience, the nature and techniques of control in modern industry. All courses take place at weekends (Friday to Monday) in three stages.

1st Course	2nd Course	3rd Course
Oct. 30 - Nov. 2	Jan. 8 - Jan. 11	Feb. 19 - Feb. 22
Nov. 20 - Nov. 23	Jan. 22 - Jan. 25	Mar. 4 - Mar. 7
Dec. 11 - Dec. 14	Feb. 5 - Feb. 8	Mar. 18 - Mar. 21

Further details from Head of Department of Management Studies, Broadstairs County Technical College, Broom Road, Westgate-on-Sea.

DAVIES'S Training Course (evening) for prospective TEACHERS OF ENGLISH TO FOREIGNERS. October 12th to December 9th. Particulars from DAVIES, 55 Baker Street, W.1. (WELbeck 6883.)

LEARN GERMAN THE MODERN WAY

LEARN ITALIAN QUICKLY, EASILY, COR 8982.

SCHOLARSHIP TRAINING, especially for university graduates and other students. Six-month and four-year courses. Write, Organising Secretary, DAVIES'S, 55 Baker Street, W.1. (WEL 6883.)

B.SC.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE

successfully prepares students for this degree. Guide (post-free) with full particulars, which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts. Prospectus gives private details of LL.B., Economics for other Degrees, Law Degrees, C.T., Law Exams., etc., from Registrar, 66 Burlington House, Cambridge.

SUCCESSFUL TUITION FOR THE B.SC.(ECON.) DEGREE

Wolsey Hall (est. 1894) provides Postal Courses in a wide range of subjects for the London Degrees, for London Univ. B.Sc. (Econ.) Preliminary is included at moderate fees. 1,119 Wolsey Hall students passed Lond. Univ. B.Sc.(Econ.) exams. 1959. Tuition also for G.C.E., L.A., Solicitors' and other exams. Prospectus (mention exam) from D. W. Stagg, M.A.(Oxon), C.B.E., LL.B., Director of Studies, David Pike, WOLSEY HALL, OXFORD.

EXPERT POSTAL TUITION

for Examinations, University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, General and Local Government etc. Also many practical home-study courses in Business Subjects. Write today for Free prospectus and/or advice on any examination or subject in which interested, to the Secretary (Dept. 97),

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4.

COMPANY AFFAIRS

IMPERIAL CHEMICAL INDUSTRIES

FROM every point of view the half-yearly results of Imperial Chemical Industries are excellent. Profits had been expected to rise, but the magnitude of the improvement and the increase in the interim dividend from 2¾ per cent to 3¾ per cent came as a surprise to the stock market. The price of the ordinary shares was immediately marked up from 42s. to 45s. The second half of 1958 was a disappointing one for ICI, but even when compared with the first half of 1958, the improvement in profits in the first half of this year was most striking. Sales have risen to £250 million, an improvement of about 8 per cent on both halves of 1958, and the net profit for the six months to June 30th last has risen by more than 50 per cent to £18,966,000 when it is compared with the first six months of 1958, and is more than double the figure for the latter half of last year. It was lower costs as

SALES AND PROFITS

(£'000s)

Six months ended:	June, 30, 1958	Dec., 31, 1958	June, 30, 1959
Sales	232,000	231,000	250,000
Gross income	24,401	20,113	34,847
Taxation	10,810	9,839	14,620
Net income	12,429	9,276	18,966
Gross income/sales %	*10·5*	*8·6*	*13·9*
Net income/sales %	*5·4*	*4·0*	*7·6*

much as the higher sales that brought about bigger profits. Sales rose more by volume than by value, because prices over a wide range of products had been reduced. The capital investment programme of recent years now seems to be paying off. The directors say that sales and net profits are now "more satisfactory in relation to the capital invested."

For shareholders in ICI the immediate question is: what will the final dividend be? If the practice of the past two years is followed once again—the final dividend being double the interim payment—it could be 7½ per cent, bringing the total for the year up to 11¼ per cent. On that dividend the £1 ordinary shares would yield 5 per cent at the current price of 45s. The past, however, cannot be taken as an absolutely sure guide. But the total dividend can hardly be less than 10 per cent.

EMI

As was forecast when Electric and Musical Industries made a 33⅓ per cent scrip issue, the total dividend for the year to June 30th last, is 20 per cent. This payment compares with the equivalent of 11¼ per cent. This dividend is covered about 3⅓ times by earnings. A year ago the directors said that adequate provisions had been made to cover major items of the reorganisation programme and that they would thus in future be able to pursue a more liberal dividend policy. Since then there has been a one for five rights issue (the new shares do not rank for the latest dividend) at 30s. a share, which brought more than £3 million into the group.

Trading profits have, however, risen only slightly—from £6,772,000 to £6,800,000. Depreciation has risen sharply, but after a slightly lower tax charge and smaller payments to minority interests, the net profit has risen from £2,156,000 to £2,232,000. A year ago the chairman of the group, Mr J. F. Lockwood, said that trading conditions might become more difficult for the company. Following the very sharp increase in the sale of gramophone records it was not surprising that competition within the industry grew keener as new firms were attracted into the market. Nevertheless, "Emmies" seems to have at least held its own within the gramophone record market, though it is possible that a larger proportion of profits in the year came from the sale of durable consumer goods. At 52s. 6d. the 10s ordinary shares, which have attracted American investors, yield just under 3⅞ per cent.

CARRERAS

SINCE the Rembrandt Tobacco group of South Africa acquired control of Carreras in November, 1958, the emphasis has been on reorganisation and re-equipment. The benefits of this were not reflected in the preliminary results for the eight months to June 30, 1959. The consolidated trading profit for the period was £856,498, compared with £1,455,347 for the previous twelve months. The net profit after tax, but before deducting exceptional items, was £436,594 for the eight-month period, against £700,148 for the preceding year. The prospective profit on the sale of the Arcadia works property is not reflected in the preliminary figures, which show that £567,493 was credited to capital reserves, compared with £650,001 in the previous twelve months. This represents a surplus on sales of investments less amounts written off and after making a provision for reorganisation expenses. A dividend of 4 per cent on the ordinary and "B" ordinary shares will be paid for the eight months period, which is equivalent to the 6 per cent rate paid in the two preceding years.

TWW

THE profit forecast by the directors of TWW, the independent television contractors for South Wales and the West of England, is—perhaps understandably—on the conservative side. In the year ended December 31, 1957, TWW recorded a loss of £77,314; the following year the profit before tax was £831,025. With 1959 two-thirds over, the directors "in the absence of unforeseen circumstances" expect a profit that will "not be less than for the year ended December 31, 1958."

The dividend forecast of "not less than 60 per cent," divided into an interim in November and a final payment next April, is equally cautious. It compares with the equivalent of 58.6 per cent paid last year. The forecasts have come at the time of an application for an official quotation on the London Stock Exchange. Earlier dealings took place under Rule 163 (2). The fall of 2s. 3d. to 42s. early this week seems to indicate that some investors had expected rather more stirring tidings than last Friday's prospectus actually gave. But the company's advertising revenue is up this year, rates are to be raised, and profits for 1960 will for the first time be affected by broadcasting from Bristol (which, however, is regarded by the directors primarily as a long-term investment). At 42s. 6d. the yield on a 60 per cent dividend is 7 per cent.

TANGANYIKA CONCESSIONS

A YEAR ago the chairman of Tanganyika Concessions warned shareholders that they must "allow caution to qualify optimism." Since then the group has received a dividend of Frs.1,500 per share from its holding in Union Minière du Haut Katanga—the same rate as in the previous year—and with another subsidiary, Benguela Railway, operating on lower profit margins the decline of only 4½ per cent, from £3,446,103 to £3,293,993, in net profits must be regarded as satisfactory. The total dividend has been raised from 3s. 3d. to 3s. 9d. per share, though last year's payment was supplemented by a once for all tax-free payment of 6d. a share from revenue reserves.

The 10s. ordinary stock units of "Tanks" at 45s. 6d. yield 8⅛ per cent. With prospects for its chief source of revenue, Union Minière, better than for some time the yield is not ungenerous. Union Minière's results for the first half of the year are said to have been very satisfactory, and with copper prices substantially higher than a year ago, next year could see a sharp improvement in profits.

CALICO PRINTERS

THE 1958-59 report of Calico Printers Association makes dismal reading. Only in the overseas subsidiaries was trading at all satisfactory and even there profits have still a long way to rise before they produce a really worthwhile return on the capital invested. In the commission printing section of the business, the first half of the year witnessed a serious decline in the amount of business done in comparison with the first half of 1957-58. Though there was some recovery in the second half of the year, with bookings comparing favourably with the same period of the previous year, the chairman recognises that there is "little likelihood of a return to the volume of demand experienced a few years ago" in this side of the business. On the merchanting side, business was very poor in the first half of the year, but since March there has been a steady recovery.

CPA had already started its own reorganisation and re-equipment programme before the Government's redundancy scheme came into operation. The need to do so is all the more pressing in view of the fact that CPA's "Terylene" patents have only a few more years to run. Recently income from these patents has been rising and has helped to keep net earnings up. The life of the patents has recently been extended for a further five years but thereafter the company will have to rely on trading operations alone. The £1 ordinary shares at 45s. yield 10 per cent on the 22½ per cent dividend, which is not fully covered by earnings.

PYE

SINCE 1954-55 when, with the advent of commercial television, Pye's trading profits doubled from £1.4 million to £2.5 million, the group has appeared to be marking time. The sluggishness of profits seems to have been due in part to the directors' pre-occupation with capital investment designed to broaden the group's activities at a time when credit was being squeezed.

Mr C. O. Stanley, the chairman, is well aware that the television side of the business can all too easily be made a shuttlecock by successive governments "as they put purchase tax up or down or impose this or that restriction on hire purchase." The directors have therefore embarked on a policy of diversification in three main fields: by increasing investment in the Commonwealth; by heavy capital expenditure on new forms of electronic development; and by extending the group's interests still further into the instrument field. Mr Stanley now says that the seeds have been sown and the coming years should reap the harvest "unless there is some change in the trading climate during the current financial year."

He adds that the increase in trading profits for 1958-59 from £2.5 million to £2.8 million would have been "substantially greater" if the group had not been forced to curtail production through lack of funds: this meant that the group were unable to increase production sufficiently to take full advantage of the bigger demand for televisions sets which followed the ending of the credit squeeze. The group's overdraft of £3,858,310 will be repaid largely from the proceeds of the £3.75 million "rights" issue made last July. With this burden jettisoned, and with sales of television sets still high, profits will no doubt continue to improve. Announcing a one-for-ten scrip issue at the annual meeting, Mr Stanley said that current profits are "well in advance of last year." Moreover, next year's accounts will include the final dividend of 60 per cent from ATV of £99,000 gross. The 5s. ordinary units now standing at 16s. offer a yield of 3.8 per cent.

WILLIAM DOXFORD

THE advance in trading profits achieved by William Doxford and Sons, the Sunderland shipbuilders, from £1,154,808 to £1,217,005, and the increase in the ordinary dividend from 20 per cent to 25 per cent sent the price of the £1 ordinary units up by 5s. to 82s. 6d. These results from a firm faced with the difficulties which beset all shipbuilders must be judged as satisfactory. But in marking the shares down to 78s. 9d. the market seems to have taken heed of the directors' warning that the present level of profits "is unlikely to be maintained." The group's profit after tax is up from £551,808 to £667,005 thanks to a lower tax charge of £550,000 (against £603,000) which reflects the benefit of increased investment allowances.

Last year the chairman, Mr J. Ramsey Gebbie, said that the group's order book would provide sufficient work for the next two years. Clearly, unless freight rates pick up quite sharply, Doxford like other shipbuilders will not have many orders left on hand. That prospect is discounted to some extent in the yield of 7½ per cent offered by the £1 ordinary units.

FITCH LOVELL

IT is fourteen months since the process of amalgamation which finally resulted in the Fitch Lovell group of food companies began with the merging of Fitch & Son with Lovell & Christmas. This was followed by the absorption of the companies of I. Beer & Sons, West (Butchers), Liptons Catering Services and minority interests in the group's provision companies. The result was that turnover exceeded £80 million in the year to April 25, 1959, and trading profits advanced from £804,747 to £1,449,600.

The annual report of the chairman, Sir Ambrose Keevil, indicates good prospects over a wide range of interests. Higher profits and record sales were recorded in cake-making division; Lovell & Christmas (dairy products, canned foods) had a record year; the wholesale and retail sections did as well. The reduction of the pig subsidy in 1958 led to a fall in pig production and a rise in prices, with a consequent drop in bacon profits. But higher sales by the group's bacon subsidiaries offset this to some extent and this year sales have "advanced considerably."

"Shareholders will be pleased to learn that our first quarter shows an increase both in sales and in profits over last year, but they should remember that the food trade is highly competitive and often affected by changes in Government policy," Sir Ambrose reports. A final dividend of 14 per cent, plus a tax-free 1 per cent capital distribution, will be paid, so that the 2s. 6d. ordinary shares at 9s. 10½d. yield 3.6 per cent and the "B" ordinary shares at 8s. yield 4.5 per cent.

London Stock Exchange

FIRST DEALINGS:	Sept. 16	Sept. 30	Oct. 14
LAST DEALINGS:	Sept. 29	Oct. 13	Oct. 27
ACCOUNT DAY:	Oct. 6	Oct. 20	Nov. 3

MARKETS remained dull under election influences until Tuesday when the outcome of the Eisenhower-Khrushchev talks seem to encourage some optimism; a small amount of investment buying, and a good volume of new-time business combined to give industrial equities a firmer tone. On Wednesday with the opening of the "election account" most industrials moved up on a fairly wide front but business was on a small scale; a fair amount of speculative demand, especially in steels, and some investment buying against only a slight volume of selling led to firmer prices all round. Over the week to Wednesday's close *The Economist* indicator rose 2.4 points to 291.9. But on Thursday with the latest public opinion poll showing a sharp setback in the Conservative lead, markets became distinctly unsettled. Gilt-edged stocks have not shared in the general rally and have continued to drift lower. Among irredeemables 3½ per cent War Loan fell ⅜ to 64¼ and in medium dated stocks 4 per cent Gas (1969-72) also closed ⅞ lower at 88¾. Canadian bank shares recovered from their recent setback and over the period Royal Bank of Canada improved £2⅞ to £32⅛ and Bank of Montreal closed £1⅛ at £21⅞.

In industrial equities steel shares were the main centre of attraction. Until Tuesday most steel prices were slipping, but on that day there was a fair amount of bear covering before the end of the account and this, reinforced by some investment demand, helped most steel shares to close above their worst. United Steel rose from 40s. 9d. to 41s., John Summers closed 9d. better at 41s. 9d. and Colvilles improved 7½d. at 39s. 3d. Dorman, Long closed unchanged over the period at 36s., after touching 35s. 3d. at one time. Among the industrial leaders Philips Lamp and Unilever both made good gains partly as a result of American demand. Philips Lamp put on 5s. 3d. to 123s. 6d. and Unilever improved 1s. to 112s. Unilever NV closed 6d. better at 149s. 9d. In the property market some of the better shares made small gains. Capital and Counties closed 6d. better at 21s. and Land Securities put on 7½d. to 23s. 3d. But City of London fell 6d. to 66s. 9d. and Eron Investments lost 1s. 3d. at 17s. 6d. In electricals Vactric were active and improved 3d. at 42s. 9d. Stores were an active section with Marks and Spencer "A" touching a new peak at 62s. 10½d., a rise of 1s. 4½d. on the week.

Oils have been quiet and were unaffected by the short-lived rally on Wall Street. Shell lost 9d. at 142s. 3d., Burmah closed 1s. down at 44s. and BP fell 1s. 3d. to 51s. 6d. Until Wednesday most gold shares were dull but the downward drift was then partly arrested by renewed buying from the Cape. President Brand gained 3s. 3d. to 78s. 4½d. in front of the monthly returns.

THE MONEY MARKET

At last Friday's Treasury bill tender the syndicate raised its bid by 1d. to £99 2s. 8d., the first change for seven weeks, and its allotment at this price rose from the overall figure of 56 per cent to 64 per cent. The average discount rate on the whole allotment of £290 million was £3 9s. 5.24d., the lowest rate for two months and nearly 3d. below the previous week's rate of £3 9s. 8.13d.

In New York the discount rate on 91 day bills rose from 3.958 per cent to 4.194 per cent, and the rate on 182 day bills was also higher at 4.895 per cent. Both these rates are new peaks for the year.

Official disbursements led to a surplus of funds at the end of last week and the authorities intervened to sell a large amount of bills on Friday and a small amount on Thursday and Saturday. On Monday calling increased and a small amount of official help was given both then and on Wednesday, when there was a keen demand for money. Rates for overnight money have ranged from 3¼ per cent to 1½ per cent and December maturities and "hot" bills have changed hands at 3⅜ per cent.

(1) Retained imports. (2) Owing to changes in classification, 1959 figures are not strictly comparable with those for earlier years. (3) Average for second quarter. (4) Average for third quarter. (5) Annual figures include re-exports of second-hand aircraft and exposed cinematograph film. (6) In 1959, indices for total imports and exports, but not for the classes, are adjusted to include trade with the Channel Islands.

Enquiries relating to FIRE *should be addressed to* ANSBACHER & CO. LTD., *85 Merrion Square, Dublin, Eire.*

Are you looking ahead?

How many times have you seriously thought about the future and what it holds for you and your family?

What have you done about it?

The man who has not only thought, but taken action, can answer confidently. He has provided for the needs of later life. And whatever he tells you about his hopes and fears, the odds are he will mention insurance.

Stop and think now. All may be well at the moment. But isn't it worth the modest cost of a Prudential insurance policy to have a clear and confident view of the future?

An enquiry commits you to nothing, but it is sure to be worth while.

Ask the man from the

PRUDENTIAL

APPOINTMENTS

MALAYAN INDUSTRIAL DEVELOPMENT FINANCE LIMITED

Appointment of a General Manager

Negotiations are now in an advanced stage for the establishment of the above Company, the function of which will be to assist in the establishment and development of private industrial enterprises in the Federation of Malaya. The Company will have an initial capital of Malayan $15,000,000. The principal shareholders in the Company will be the Government of the Federation of Malaya and the leading Banks and Insurance Companies operating in the Federation. It will be registered as a public company under the Companies Ordinance of the Federation of Malaya and will be conducted as a commercial undertaking.

A GENERAL MANAGER is required to undertake the organisation and management of the Company, subject to the directions of the Board. One of his most important functions will be the detailed examination of all applications made to the Company for financial assistance, and the assessment of their soundness. Practical experience in this field would be an advantage, but the essential qualifications are energy, integrity, business ability and sound judgment. In addition to the administrative responsibilities of his post he should be prepared to travel extensively. Remuneration will be fully commensurate with qualifications, experience and responsibilities.

Applications, which should include full career particulars and the names of three referees, should be sent to Dato O. A. Spencer, P.M.N., C.M.G., Chairman Designate of the Company, c/o *The Prime Minister's Department, Kuala Lumpur.*

STATISTICIAN/ECONOMIST, not over age 27, required for Investment Department of an important financial Institution at its Head Office in the City of London. Previous Investment experience is not necessary but academic or professional qualifications are desirable, though not essential. Excellent prospects.—Replies, which will be treated in strict confidence, should be sent to The Personnel Officer, Box No. 2844, c/o Charles Barker & Sons Ltd., Gateway House, London, E.C.4.

APPRAISAL OF NEW PROJECTS

The National Coal Board's recently formed Process Development Department is responsible for the development of new processes for treating coal, particularly those for making smokeless fuels from small coal.

A vacancy arises for the Head of the Assessment Section who will be responsible for the economic and technical appraisal of projects. Besides examining new projects, he will keep development projects under critical review to determine the effects of changes in circumstances or design.

The successful candidate will have had comparable experience in industry and will possess a good degree in mathematics, including mathematical statistics, or in pure or applied science.

There are attractive conditions of service, including superannuation. The salary will fall between £1,900 and £2,850, and will be reviewed annually.

Applications should reach the Headquarters Staff Manager, N.C.B., Hobart House, London, S.W.1, not later than October 14, 1959, and should be marked (X.1529/2D).

EXPERIENCED WORKS MANAGER, aged 30-45, required for factory covering 24,000 square feet in the Old Hill, Birmingham, area, manufacturing motor car accessories and light pressings. Contributory pension scheme and life assurance. Apply in writing, giving full details of experience, and previous places of employment, together with any references available. State salary required. All applications will be treated as confidential.—Box 1209.

For other appointments see page 85

EXECUTIVE

Important American Company seeks business manager for overall European operations. Requires ability to handle all business matters of Industrial Company at top management level; good knowledge of English, Italian and German; administrative experience. Technical background in fields of engineering or physics helpful.

Salary open. Please indicate salary requirements. Send complete curriculum vitae including photo to Box 1211. All replies will be held in strict confidence.

COLLEGE OF ADVANCED TECHNOLOGY, BIRMINGHAM

INDUSTRIAL ADMINISTRATION
APPOINTMENT OF
HEAD OF DEPARTMENT

The department is one of, if not the largest centre of its kind concerned with the teaching of industrial administration, and has powerful support from industry.

Candidates must have had substantial experience of industrial administration at executive level or in consultancy or in research. They must also have a thorough appreciation of the academic disciplines related to the education of potential and existing managers in industrial organisations. Experience in teaching and in educational administration, though desirable, is not an indispensable requirement. The successful candidate will be encouraged to undertake external activities relevant to the Headship of a department concerned to meet the needs of modern industry, including consultancy.

Salary will be in accordance with the recently revised Burnham Scale for a Grade VI Headship—
Men £2,250 x £50 — £2,700
Women £1,800 x £40 — £2,000 (Plus equal pay increment)
In fixing the commencing salary, account may be taken of industrial professional or research experience up to the maximum of the scale.

Further particulars and form of application from the Registrar, College of Advanced Technology, Gosta Green, Birmingham, 4. Applications to be received within 18 days of this advertisement.

K. B. PILLING, Clerk to the Governors.

WORK STUDY APPOINTMENTS IN SCOTTISH HOSPITAL SERVICE

A work study organisation is being set up by each of the Scottish Regional Hospital Boards. Initially a total of eleven new superannuable posts are to be filled.

Region	Base	Chief Work Study Officer	Salary Scale	Work Study Officers	Salary Scale
Western	Glasgow	1	£1,450 — £1,750	2	£1,000 — £1,270
South Eastern	Edinburgh	1		2	
Eastern	Dundee	1	£1,150 — £1,400	1	
North Eastern	Aberdeen	1		1	
Northern	Inverness	1	£1,050 — £1,300		

CHIEF WORK STUDY OFFICERS

Applicants should be over 30 years of age, have substantial practical experience in work study or other appropriate management efficiency technique, and have the personal qualities necessary for introducing work study in this new field. They will be responsible for assignments in particular hospitals and the development of work study in their Region.

WORK STUDY OFFICERS

Previous experience is not essential. Training will be given as necessary. A University degree, or experience of hospital administration, would be an advantage. Some posts are likely to be filled from outside but preference will be given to those engaged in hospital administration who wish to gain experience in work study.

Apply to Hospital Work Study, 64 West Regent Street, Glasgow, C.2, within 14 days, giving full details and the names of two referees. State post(s) applied for and order of preference.

THE MARLEY GROUP

A RAPIDLY EXPANDING INTERNATIONAL ORGANISATION

require in their Export Department an

ASSISTANT SALES MANAGER

Experience of Export business and fluency in at least one continental language is essential. Applicant must be prepared to travel quite extensively and a knowledge of the building industry would be a considerable advantage. Write, giving full details of age, education, career to date and salaries earned, to:—

The Staff Manager,
THE MARLEY TILE COMPANY LIMITED,
Riverhead, Sevenoaks, Kent.

THE PIG INDUSTRY DEVELOPMENT AUTHORITY require an assistant in their Economics and Statistics Section dealing with matters in connection with pig production, processing and marketing. Candidates should have a knowledge of Statistics and Economics, preferably with some reference to Agriculture. Commencing salary according to qualifications and experience in scale £635 x £25 — £1,020 per annum. Contributory Pension Scheme.—Application forms obtainable from the Establishment Officer, 15-17 Ridgmount Street, London, W.C.1, should be completed and returned by October 14, 1959.

LEADING FINANCIAL WEEKLY requires competent young man to answer readers' investment enquiries. Permanent pensionable position with excellent prospects for right man.—Please write, in strict confidence, giving details of age, experience, etc., and stating salary required, to Box C.800, c/o Streets, 110 Old Broad Street, E.C.2.

COUNTY BOROUGH OF EAST HAM EDUCATION COMMITTEE

EAST HAM TECHNICAL COLLEGE

Assistant, Grade "A," required for the Department of Commerce and General Education to help either with general education courses up to G.C.E. "O" level or with commercial courses up to Ordinary National Certificate. Subjects offered should include History or Geography. Good prospects in a developing department.

Salary: £520 by £27 10s. (6) + £30 (1) to £1,000, plus London Allowance of £38 or £81 and appropriate allowances for qualifications, training and previous experience.

Forms of application obtainable by October 16, 1959, and further particulars from Chief Education Officer, Town Hall Annexe, Barking Road, London, E.6.

YOU KNOW YOUR OWN BUSINESS BEST . . .

Modern research techniques can examine customers' reactions and probe markets. Modern advertising can put over sales messages in new and inspired ways. *But all successful publicity campaigns must be based on the Client's unique knowledge of his own business.*

How our advertising agency increases sales by making proper use of the advertiser's "know-how" is explained in straightforward language in our latest booklet entitled "You know your own business best." Copies are available on request to: General Advertising Company of London, 18 Charing Cross Road, London, W.C.2. COVent Garden 2881.

Registered as a Newspaper. Entered as Second Class Mail Matter at New York, N.Y., Post Office. Authorised as Second Class Mail, Post Office Dept., Ottawa. everyone appreciates
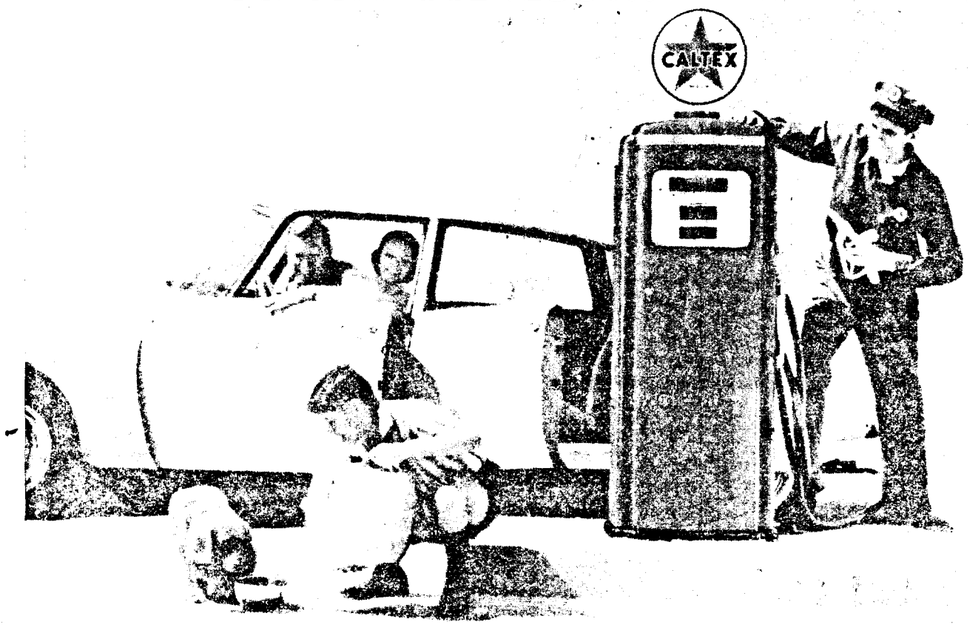
Caltex service...



Scenes like this occur throughout the Eastern Hemisphere, where Caltex is serving the peoples of many lands. Caltex serves not only by marketing high grade fuels and lubricants to motorists through its tens of thousands of service stations...but also in many other ways.

Caltex activities include finding crude oil, refining it into gasoline, kerosene, diesel oil, fuel oil, lubricating oils and asphalt stocks, and transporting this variety of petroleum products in over 70 countries, to where they may be used in local industry, in farming, in construction, and in all forms of transportation.

In these and in other ways Caltex serves not only the public but the economy of many lands.

...in Great Britain, look for the familiar REGENT sign!

Ask yourself, as tomorrow morning you unfold your morning paper: is this the right paper for the man I wish to be?

No newspaper is quite like any other. Men are of all sorts, and so are the newspapers that are written for them. There are pompous papers for pompous people, superficial papers for superficial people.

The Guardian is a lively paper for lively-minded people.

It steers a steady course between sensationalism on the one hand and stuffiness on the other. It is reverent where reverence is due, but thumbs its nose when nose-thumbing is the only eloquent gesture.

If you are proud of your own intelligent attitude to life, you should take a paper you are proud to read.

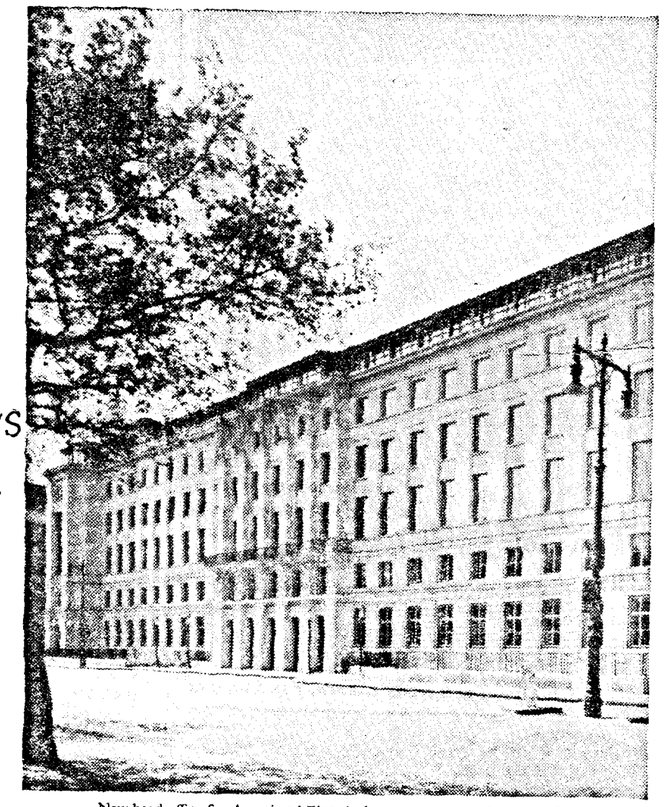
Aluminium windows are my favourite because I don't like painting and they don't need any



New head office for Associated Electrical Industries Ltd., Grosvenor Place, S.W.1.
Architects: Wimperis, Simpson & Fyffe. Consulting Architect: Sir Albert Richardson K.C.V.O., P.P.R.A.

"*The child doesn't like painting?*"

"She's trying to explain that Williams & Williams aluminium windows don't need painting."

"*Williams & Williams?*"

"Come, come, you must have heard of Williams & Williams. No?"

"*No.*"

"I suppose you've heard of Gilbert & Sullivan? Laurel & Hardy? Oxford & Cambridge?"

"*Yes. But they don't make aluminium windows do they?*"

"Forget I ever mentioned them. I'm trying to tell you about Williams & Williams. They make practically everything."

"*Do they make aeroplanes?*"

"All right. You win. They don't make aeroplanes. But they're so well known in building construction that every architect, every builder, knows their name as well as his own. Now you're going to tell me you're not an architect or a builder."

"*Yes.*"

"To resume. These aluminium windows don't need painting. Builders like them because they're light to handle and because plastic strips can be used instead of putty. Customers because they don't rattle. Incidentally, Williams & Williams make most of the aluminium windows used in this country. Clear?"

"*I suppose so.*"

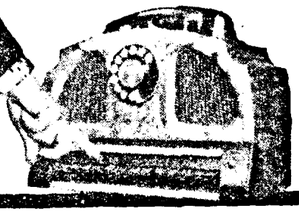
TR SERVICES provide

more than

TIME RECORDERS



TR Services provide more than a range of equipment for doing different kinds of jobs. The really important thing about TR Services is their good effect on a business; on its economy, efficiency and on its whole atmosphere. This effect is achieved simply by making it easier for everybody to do things more quickly, more accurately, more promptly. Such diverse things as finding people and speaking to them; encouraging time discipline; costing work more accurately; or showing up an uneconomical machine—and showing *why* it is uneconomical. The climate of business is altogether different in an organisation where TR Services give staff a proper appreciation of the value of their time, and provide the means to make the utmost use of it.

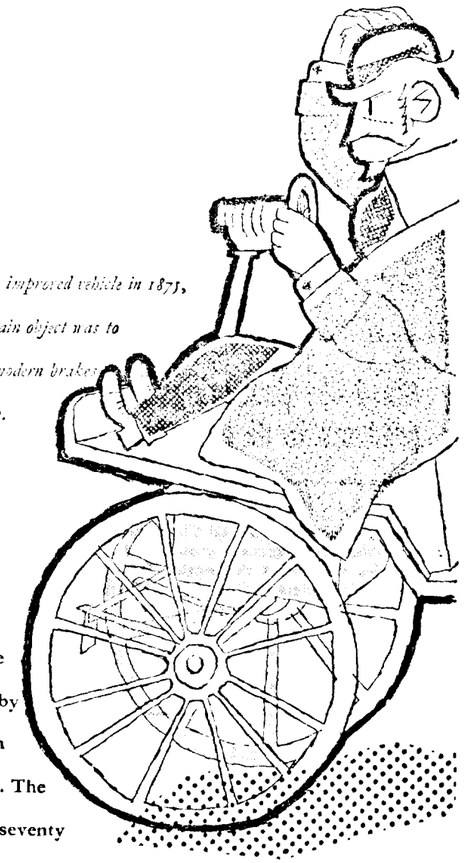
ANNUS MIRABILIS

start....

Siegfried Marcus took the first motor ride in 1865. He built a much improved vehicle in 1875, which is preserved in the Vienna Technical Museum. In those days, the main object was to make the car go. Nowadays it is equally important to make it stop, and modern brakes must be capable of dealing with increased loads, higher speeds, frequent use.



and stop....

Some of the world's most advanced motor vehicle designs use brakes in which the linings or pads are attached to the shoes by Redux adhesives. Longer life, greater efficiency, freedom from chatter and from scoring are a few of the resulting advantages. The same method is used for bonding the structures of more than seventy types of aircraft. Redux, developed by CIBA (A.R.L.) LTD., is one of a range of structural adhesives used throughout industry for bonding metals, glass, ceramics, plastics, wood, rubber and many other materials.

Allied Chemical brings you new products to do new things...chemically

New products from Allied Chemical are offering new opportunities for increased growth and added profits to industries throughout the world. Today, with over 3,000 products, it offers one of the world's most complete lines of basic chemicals from one source.

Here are a few examples of new Allied chemicals in action:

- NEW FOAMING URETHANES based on Allied's raw materials are inspiring functional creativity in cushioning, packaging, vibration and heat insulation.
- NEW, TOUGH PLASKON NYLON RESINS bring the economy and mold-ability of plastics to the heavy-duty machinery field.
- FLUORINATED HYDROCARBONS provide the "push" for aerosol products, cool refrigeration equipment.
- NEW CAPROLAN NYLON is now being used in the manufacture of tires, upholstery, carpets, conveyor and automotive safety belts.
- LOW-MOLECULAR-WEIGHT POLYETHYLENES are the bases for better floor waxes, paper coatings, polishes, printing inks, textile finishes.

For information on how new chemicals from Allied can be used in your industry, contact your nearest Allied Chemical International Office. Also ask for our new illustrated booklet, *"Introducing Allied Chemical International"*, which briefly describes our company and its major products. Write on your company letterhead.

Pistols for two

Dear Sir Julian,

Father brought you to school last Open Day so I expect you know who I am. I think I ought to inform you of certain activities on the part of a Certain Person which have simply got to be Stopped. (Actually it's your brother J*m*s but one can't be too careful.) I only found out by accident and a good thing I did because we don't want the Yard snooping about, anyway they'd be baffled, and if Father knew he'd blow his top. Fortunately I have made some deductions.

It began about a month ago when *The Observer came to us at home* (Sunday it must have been). This may sound nothing special but it is because we never used to have it. So Father said "They've sent us the wrong paper again." And Mother said "Oh no dear it's for me" or some stuff like that but the point is the way she said it. I knew she was covering up like mad for something because she isn't all that struck on newspapers not as a rule.

So I said nothing just hummed a merry bar or two. Mother laughing and talking in a most unnecessary way and Father looking huffed and hipped. So I picked up this Observer and read a bit (this was at breakfast) and Father said "Very good paper" in a voice simply choking with curiosity and things. Then Mother hid it! (That afternoon.) Then next Sunday it came again—and I found the 64,000 dollar answer . . .

*Your brother J*m*s is carrying on a Secret correspondence with my mother in the Personal Column of the Observer!* It seems incredible, because she's well over thirty-three, but there it is (and I'm sure it's him, from certain chance remarks and other subtle clues). Weird stuff, terrifically passionate—well if you look at last week's copy you'll see what I mean. And Mother sending him answers now, simply chronic! But that one from "A Friend," *that's me!* I couldn't afford more than two lines so either he didn't understand or he lost his nerve, because he never turned up. I waited ages.

I thought if I slapped his face he'd have to fight—somewhere private, *obviously we must keep it out of the papers.* We could have a secret rendezvous at dawn and a password . . .

THE OBSERVER

wouldn't be a bad one. Afterwards the winner would have to leave the country, but I wouldn't mind that. You could be his second if you like so please will you tell him as a man of Honour he can't refuse, if he *is* one. I'd better not sign my full name.

Yours sincerely,

Stephen X.

By the way, is it true what Father says you sometimes write for the Observer? The rugger reports are 1st class, also the athletics.

This is No. 4 in "The Observer and Mrs. X", a tense, outspoken epic. Next Week, BRR-BRRR!... BRR-BRRR!

DEFENCE BONDS

pay 5% with 3% tax-free bonus after 7 years

Defence Bonds are a safe and extremely profitable way of saving. As well as the attractive interest of 5% per annum, the Bonds are repayable after 7 years at the rate of £103 for each £100 invested—and this 3% Bonus is U.K. income tax free. The bonds may, of course, be encashed before maturity. The interest, payable half yearly, is not exempt from tax, but tax is not deducted at source. You can have up to £2000 of these Bonds exclusive of holdings of earlier issues. Bonds inherited from a deceased holder or acquired by conversion of earlier issues can be held in addition. *On sale in £5 units. Buy all you can afford.*

IN SEVEN YEARS

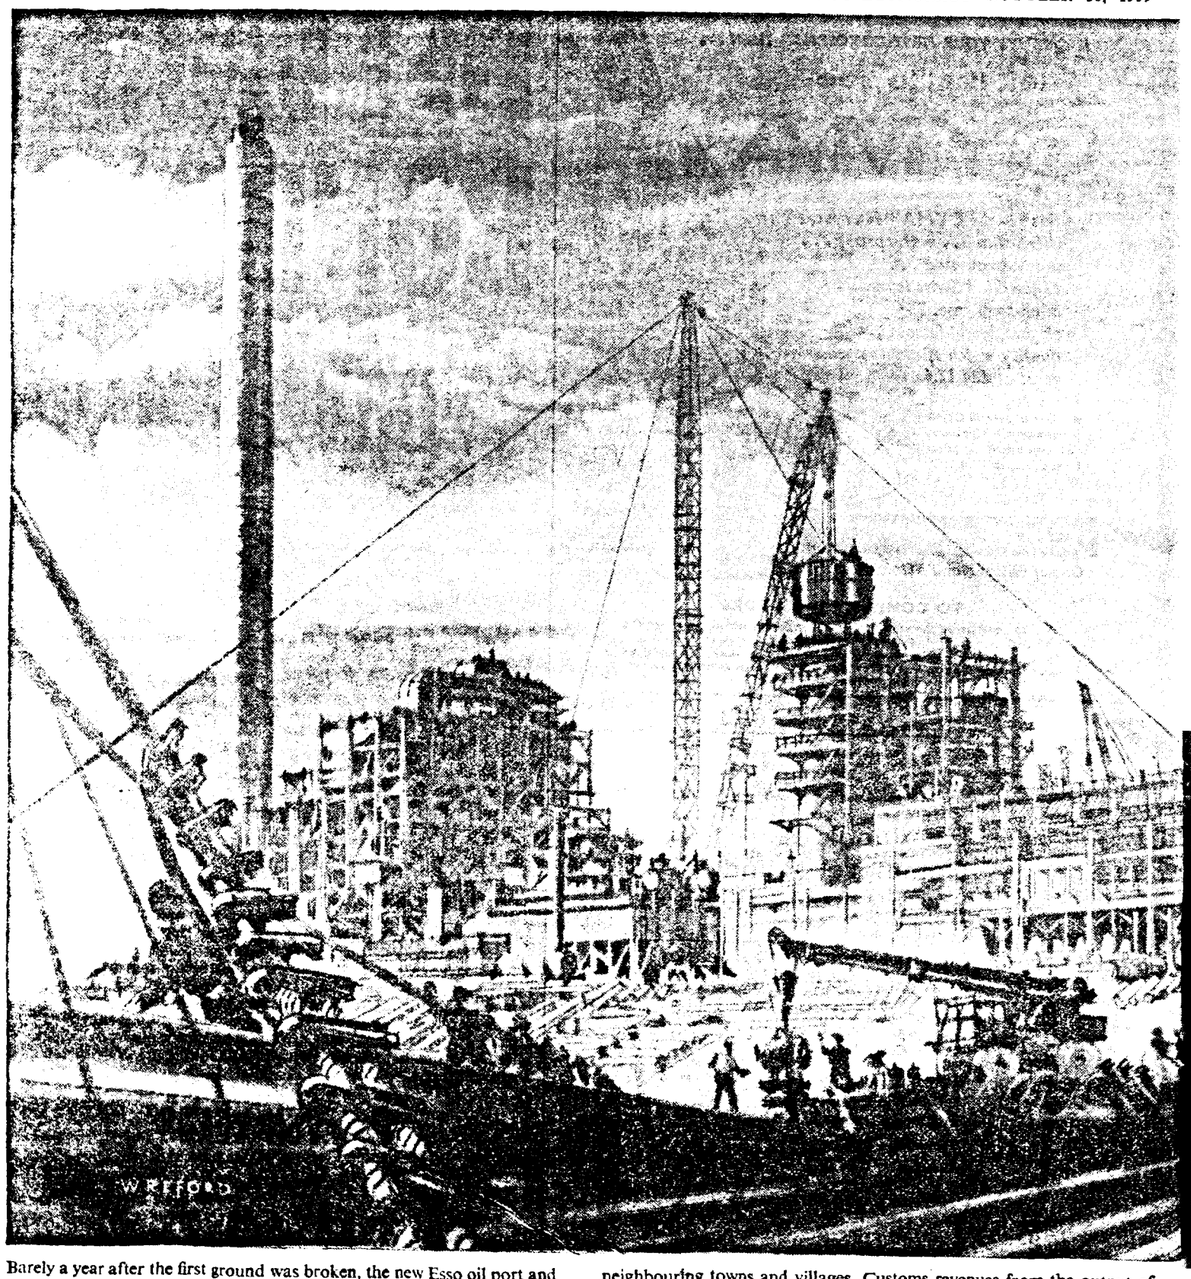
5% Defence Bonds yield the equivalent of

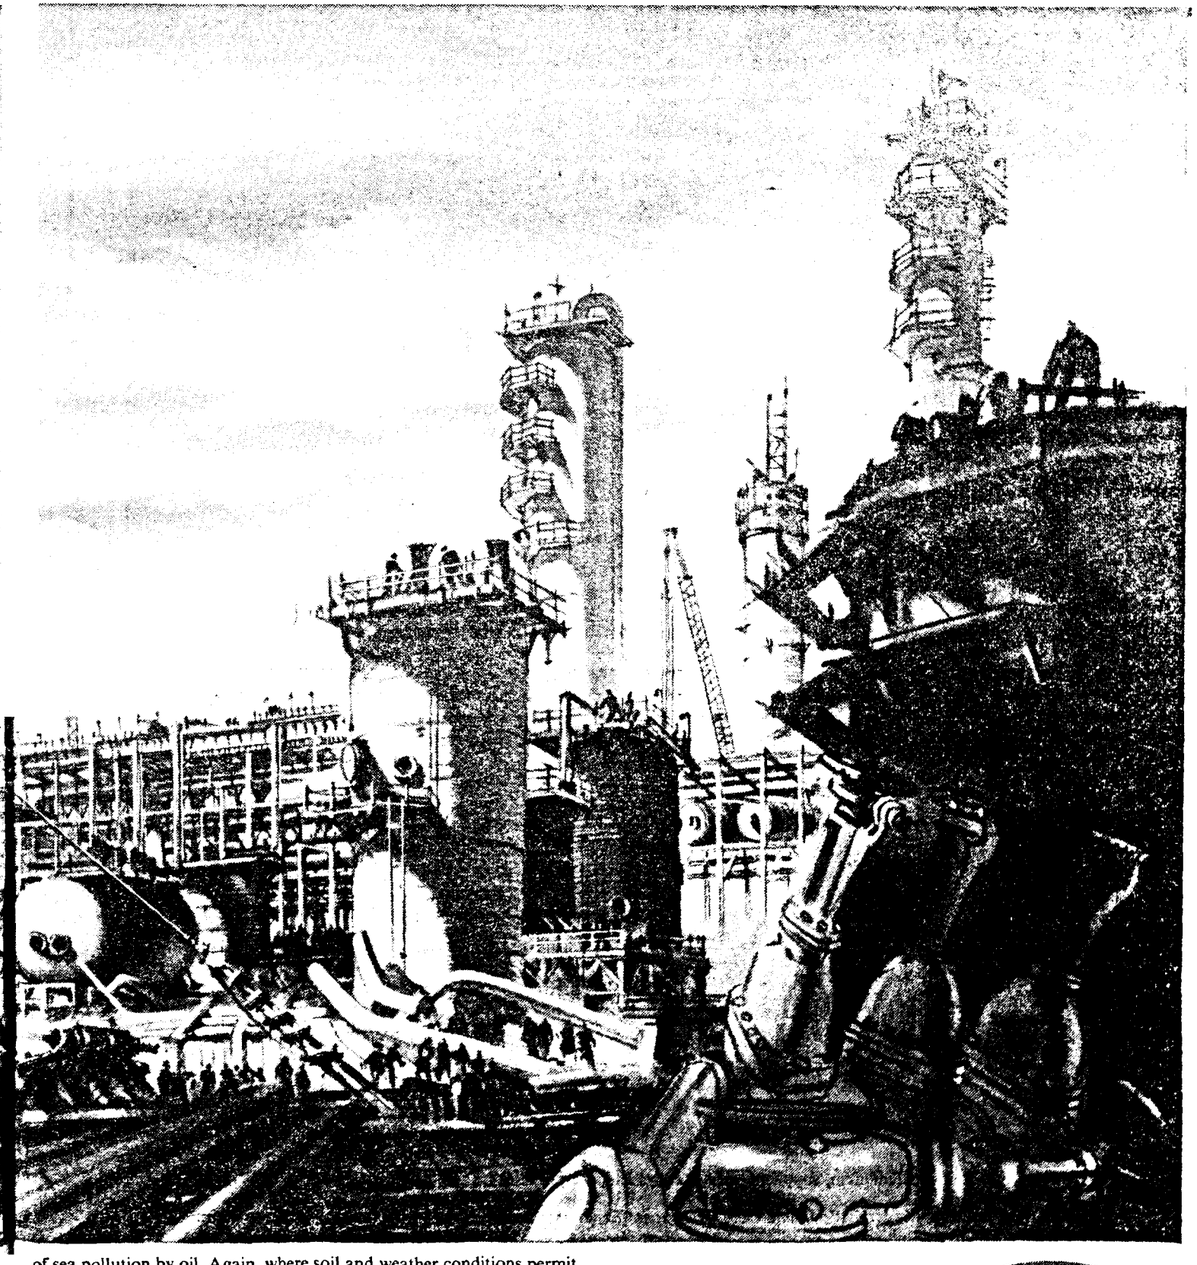
£5.12.6

per cent (gross), per annum if you pay tax at the present standard rate of 7/6.

Full information on Defence Bonds from your stockbroker, banker or other professional adviser, and from your local Savings Committee, Savings Centre, Post Office or Trustee Savings Bank.

Issued by the National Savings Committee, London SW7





Barely a year after the first ground was broken, the new Esso oil port and refinery on Milford Haven have reached the halfway stage of construction. Above is an impression of part of the 350-acre site, by the distinguished artist, Mr Denis Wreford.

£18 million is being invested in this new British oil port which will be capable of berthing tankers of 100,000 tons. Over 2,000 men are now at work on it. 4½ million tons of oil will begin to flow through the labyrinth of pipes, tanks and towers, every year, when the entire project is completed in November 1960. By that date also, regular employment will have been created for 450 people, mostly recruited from the residents of neighbouring towns and villages. Customs revenues from the output of finished products will exceed £30 million annually. Shipping dues on tanker operations, and rates on the refinery itself, will also yield additional revenues for local authorities.

Care has been taken to reduce the impact of this new industrial enterprise upon an open countryside and coastline. For example, from the outset this refinery has been planned and constructed with the advice of a professional landscape architect. It is also the first refinery in Britain to be air-cooled throughout, thus eliminating the need for large quantities of sea-water normally required for cooling, and thereby reducing the dangers of sea pollution by oil. Again, where soil and weather conditions permit, tree plantations are planned to screen unavoidably broken skylines. The marine jetty has been designed in such a manner as to allow local inshore fishing craft to follow their customary passages.

If you are ever in the Milford Haven district, you are warmly invited to view this second complete refinery to be built by Esso in Britain since the war. We believe it represents a welcome advance towards greater prosperity for Wales. A belief which we are happy to find is widely shared by the people of Pembrokeshire. When may we expect you?

VOLUME CXCIII . NUMBER 6059

Her Majesty's Government

THE first results on Thursday suggested that the Conservative Government is returning to power. Never mind the changed majority, or the implications of the campaign and of the voting; those can be discussed next week. That the Tories should return for this third time running with any majority is a sufficiently remarkable achievement. It is one that few people envisaged as remotely probable eighteen months ago. But it is also an achievement which carries some dangers for the future management of this country. If Mr Macmillan is to take up the Queen's commission again, there are certain very specific things that independent well-wishers ought to say.

The first thing that Mr Macmillan ought to do is to shuffle the members of his team about. If we are not, after eight years, to have a new Government in political colour, we need a new Government in personal complexion. This is not because the old team was a failure. It is because most individual senior ministers have been in their departments long enough both to accomplish the things that they most urgently wanted to do, and to think up all sorts of reasons why the things that they have not yet dared to do would be politically or administratively impossible. Only a Prime Minister can know all the complexities involved in cabinet-making, and it would be absurd for an outsider to be importunate in his recommendations. But, for preference (though this may be an unlikely forecast), one would now like to see Mr Amory move to the Foreign Office, Mr Macleod to the Chancellorship, and the Ministry of Labour taken over by a man who should have five qualities: he should be sufficiently outspoken in his oratory and able in his administration to make an impression upon the country, but not sufficiently young or ambitious or prominent to be able to look forward to possible future Prime Ministership, and thus perennially anxious to save himself from becoming "too controversial" in the eyes of one half of the electorate. Among several possible candidates, perhaps Mr Boyd-Carpenter's is the sort of name that most readily comes to mind.

Whoever the incumbent, it is at the Ministry of Labour that the key to the success or failure of this new Tory Government will lie. The country has just passed through an extraordinary election campaign in which almost the sole subject shouted on the hustings was how the parties would spend—in Labour's case greatly overspend—the 3 or 4 per cent increase in annual production which everybody now apparently assumes to be Britain's birthright. What nobody liked to mention, however, was that Britain will not get this 3 or 4 per cent annual increase—and certainly will not be able to spend it on social reforms—if, in the conditions of very full employment which such a sustained rate of expansion would require, trade unions are going to get 5 or 6 per cent annual increases in wages. Everybody knows in his heart that wage inflation on the scale of 1956 or 1957 would compel any British Government to put a check to expansion at least as sharply as the last Macmillan administration then had to do.

The change of policy that is required at the Ministry of Labour does not involve anything so undemocratic as compulsion of the trade unions or anything so simple as mere discussions with them (though by all means let the Minister hold these). The change required is more subtle. For the larger part of the last Parliament the Minister of Labour leapt in with his conciliatory powers whenever he saw a chink of light in an industrial dispute—on the assumption

that his principal concern should be to avoid the continuation of strikes. From the start of the new Parliament he should leap in with his propagandist influence whenever he sees a warning signal in impending industrial settlements—with the recognition that his principal concern should be to avert wage inflation.

If the second Macmillan government would grasp this nettle—of accepting that the Ministry of Labour should have a responsibility to try to keep down costs—it could and should increase industrial production much more rapidly and steadily than did its predecessor; the sights for expansion could be raised up to the same sort of level as Dr Erhard's Germany has attained, and the real resources would become available for great and desirable social reforms. In these, the main concentration during this Parliament should be on large increases in national assistance rates.

One powerful if subsidiary means of keeping costs and prices down, and thus of allowing production and demand to rise, would be by a bold advance towards freer international trade. One of the first acts of the new Government ought to be to lift bodily the remaining import controls on dollar consumer goods, and another should be to make a new trading initiative in Europe. To facilitate this, Mr Maudling should be moved on (and up?) from his present office, and be succeeded by a known European enthusiast; this might be an excellent place at which to bring Mr Thorneycroft back into the Government.

ANOTHER department where a change at the top could make a new start possible is the Colonial Office. For Mr Lennox-Boyd to leave after electoral success (though at the moment of writing it is not known whether he has achieved personal victory in his marginal seat in Mid-Bedfordshire) would not be quitting under fire. He has been personally anxious to go for some time, and there would be a special advantage in his going now; just as his arrival made way for the return of the Kabaka, so his departure ought to lead up to the release of Dr Banda. If the constitutional conference on the Central African Federation is still to be held as early as October, 1960—and that would appear to follow from Conservative victory—not a moment can be lost in starting to make the preparations.

Now that it is known which Prime Minister will make the appointments to Lord Monckton's commission, these should be promptly announced. In making them it is important that the Tories should not misuse their new position of advantage. The Opposition should be given every chance to participate. Sir Roy Welensky must not be allowed to cherish the illusion that, now his "enemies" on the left are defeated, he can relax in his efforts to make Federation (with its declared aim of partnership) properly palatable to British or African opinion. The best outcome would be for the Nyasas to get regional autonomy, under any leaders whom they themselves choose, within a federal framework; and Dr Banda should be given a chance—perhaps, after the Makarios precedent, in the Dorchester Hotel—to show whether he will co-operate in drawing such a constitution up.

In most other colonial areas, a new Tory Colonial Secretary's policy will necessarily and rightly be "more of the same." Mr Lennox Boyd has, on the whole, a good and creditable inheritance to pass on. The important proviso is that there must be no loss of momentum anywhere in the movement towards self-government. In Kenya, it should be accelerated.

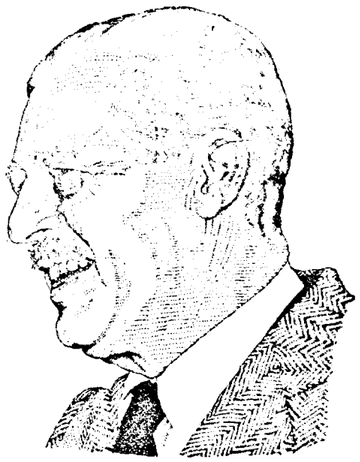
Over at the Defence Ministry, a change is equally desirable—and generally regarded as much more likely. Mr Sandys has fulfilled his function and should now be transferred (perhaps to take care, probably admirably, of science?). It is not necessarily a reproach to him that his successor's problems will seem as formidable as (and not dissimilar from) those which he himself confronted on taking office. The investment in the British contribution to the deterrent, which initially seemed to offer a financial saving or at least a means of stopping defence costs from rising, now looks like getting out of hand. Either the defence budget must go up, or still further drastic pruning of the present vestigial and inadequate conventional forces must be made, or the orders for the Blue-streak missile will have to be cancelled; and, to add to the difficulties, the recruiting rate for the regular forces, which appeared to be vindicating Mr Sandys so remarkably, is now once more heading downwards. Clearly, one of the new Government's first priorities is to make yet one more determined attempt to get a more drastic rationalisation of Britain's defence effort within the framework of the transatlantic alliance and of Nato.

ON the diplomatic front, though one's preference in a new-model administration must be for the simply prudential and firmly diplomatic Mr Amory, a change is in fact less likely. Mr Selwyn Lloyd is generally expected to soldier tenaciously on. To do Mr Lloyd justice, disarmament is the subject he handles most confidently and this looks like being much the most important content of any summit talks. Now that the election is out of the way such talks will no doubt take place very shortly. They are welcome, always provided nobody considers them to be more than they are: they should be recognised as the first preliminaries to an almost indefinitely extended process of negotiation, in which the only hope of arriving at any outcome is to keep a sense of proportion about the part Britain itself is playing and a firm grip on the principle that the real summit is wherever two and not three or more big powers are gathered together.

Domestically, in the light of the promises made by all parties in the desire to appear civilised, up to date and responsive to youth, the next session ought to be a great one for Home Office reforms—and presumably, and deservedly, for Mr Butler. The new Government should be urged to give facilities to—and allow free votes on—an unusually large quota of private members' bills. And, in contriving how we can live more freely ourselves, a Tory Britain should not forget its good manners and its duty to foreigners. Radical revision, if not wholesale repeal, of the aliens laws should rank as high as making it less frustrating to gamble or drink.

Here, then, is the outline of a policy with which the new Conservative Government could begin to set the Thames on fire. Last week *The Economist* said that the Tories deserved a vote, if not of confidence, then of hope. The early results on Thursday suggest that a majority of the electorate has shared the same opinion. The first few months of the new Government will show whether the hope is to be fulfilled by Tory reform or confounded by Tory inertia.

Inquest on the Election



When the general election campaign ended on Thursday, it was already clear that its impact on the way in which the next election is conducted will be far greater than the influence of the 1951 or 1955 contests on their successors. To begin with, nobody will ever believe again that the public opinion polls can show that a contest is an open-and-shut affair before the battle is started. The campaign should also have thrown a new light on the use of modern propaganda media and of local party organisations, and on the need for changes in election law.

THE first casualty of this campaign was complacency among those, especially on the Conservative side, who had thought that the public opinion polls showed a settled state of political alignment in the British people. Hardly any commentators had foreseen that there would be the large increase in "don't knows" during the campaign; but perhaps, looking back, they should have done. It is fairly clear who the "don't knows" who instilled uncertainty into the election were. After eight years of Conservative rule it was inevitable that a large number of people should have accumulated a load of minor or major complaints against the government; in all previous decades they would have swung firmly over to the Opposition party before the campaign started. But the Labour party has had some unusually unattractive albatrosses to haunt it during most of the 1950s—one called nationalisation, another called Mr Cousins, and a third composed of memories of immediate postwar austerity. So Labour was not an automatically attractive magnet for the dissidents against the Government; unusually for an Opposition, Labour even tended to repel some of the former fairly-faithful from its own ranks.

At times during the last Parliament the outward tide of dissidents was stronger away from one party, at times from the other; between June and September of this year the public opinion polls reported that the tide was stronger away from Labour. But it is now clear that the circumstances that evoke unfavourable responses for one party in the public opinion polls are not necessarily the same as the circumstances that evoke deep-seated and settled conversions. When Mr Macmillan announced that the moment for choosing a new Government was at hand, the dissidents from both parties thought again: they revealed themselves, to both canvassers and pollsters, as "don't knows."

The result was that campaigners in the election itself had an opportunity to sway far more votes than in previous contests. This was a development that caught the Conservatives completely unawares, and they have learned a lesson from it that they will never forget. It is unlikely that a major party will ever again go into a contest with as rigid a strategy as the Conservatives started with this time, or that either side will let the other make the news and decide the issues as unimpededly as Labour was allowed to do in the early stages of this campaign. As the campaign wore on, both sides began to realise that media of communication with the public were, after all, important.

THE most discussed—although not necessarily the most crucial—of these media was the party political telecast. Here again the Tories were caught at a disadvantage. The quality of the early Conservative television broadcasts was, from a technical point of view, almost unbelievably bad. The Tories had tied themselves down to an extravagant film effort, using outworn documentary techniques which professional television producers have long since discarded. This film, moreover, was planned too far in advance of the election and helped to contribute to the static and irrelevant feeling about the early part of the Tory campaign. The relative success of the Labour broadcasts was due to their making full use of television experience. A successful television programme can be produced only when there is full contact throughout between the producer and the principal performers. It is a question of men rather than money. The Conservatives took a long time to wake up to this.

But two other media of communication have provided surprises as well. First, the press: one of Labour's major triumphs in this election has been the way in which it secured disproportionate coverage even in Conservative newspapers by providing good, easily written news stories day after day. The Conservatives' belated copying of the Transport House technique of a really newsworthy daily conference shows how important this is. The credit for Labour's good start lies partly with Mr Morgan Phillips for the slick way in which he handled his party's conferences, but even more with the members of Labour's continuously sitting central campaign committee. This committee, an electoral innovation, was composed of Mr Crossman, Mr Driberg and some other

members of Labour's executive who could spare time for tactical planning, mainly because they themselves were candidates in rock-safe parliamentary seats.

The other surprise about media of communication caught Labour, rather than the Tories, on the hop. From the beginning, Labour cut down far more drastically than the Conservatives in the number of speeches its candidates made; the party assumed that television had killed meetings. Not until fairly late in the compaign did everybody discover that instead the so-called idiot box had increased attendances at them enormously. There are, of course, meetings and meetings. One still has doubts about the value of small schoolroom orations in the evening, which are listened to mainly by the party faithful who might be more profitably employed in canvassing. But there is no doubt that this election has shown that mass assemblies addressed by party leaders and open-air meetings are well worth while.

IT is said that this is a sign of greater public involvement in the election. Only when the figures of the turn-out are complete will it be seen whether there really has been less or greater apathy among the one-quarter of the electorate which did not bother to vote in 1955; but what can already be said is that, among the three-quarters who regularly do vote, the small number who are genuinely interested in politics has definitely gone up. Four years of mass television have done for politics what they have done for other televised sports like show jumping; they have increased the number of people who are willing to turn out to watch the most publicised figures in the flesh. Another result of this television-cum-meetings election has been to change the public images of Mr Macmillan and Mr Gaitskell; on the whole, the latter came over more favourably on the television screen, while the former had rather the better of it at most of his addresses on the hustings.

What, next, of this election's lessons about the use of local party organisations? Both major parties have been much more ruthless than ever before in concentrating their efforts in constituencies where the issue was really in doubt; indeed Labour has carried this policy to extreme limits, so that in some safe London seats it has had virtually no party workers on the streets at all, while in neighbouring marginal seats it has deployed an imported army of them. The final results will be closely scrutinised to see what effect this has had; if there is no significant variation between the swing in the marginal seats and that in safe seats, it will suggest that, save in one respect, organisational activity has a virtually nil effect. The exception is the garnering of the postal vote. The Labour party has recovered a bit from its former neglect of this, but the scope for more work on tracing removals and sick people, and securing postal votes for them, remains a continuous challenge to party organisations; during this election the Conservatives have still been administratively equipped to respond to it better. But the difference in the figures for the postal vote between one constituency and another shows how much room for improvement there still is in both parties here. It is a dreary business chasing absent friends, but no government is likely ever to abolish the postal vote or pass the burden of looking for it on to the local authorities.

OTHER changes in election law, however, are obviously necessary; and now is the time to start campaigning for them. In the first place, it is obvious that broadcasting and television are in an absurd position in relation to the Representation of the People Act; the time must come when the different broadcasting services are given the same immunities as the press. Secondly—a delicate point, but one that needs to be brought into the open—there is no doubt that the limit on expenses has been evaded during this election on quite a large scale, legally and illegally. This has happened even down at constituency level, especially in marginal seats—and both sides have been offenders. Moreover, as more and more campaign activity is centralised through regional and national headquarters, more and more money is spent outside the control of the law.

From time to time, some Labour people have hinted darkly that they might have scope after the election for stirring up a massive row about some items of Conservative expenditure. But they are in a singularly bad position to do so. An intriguing question that could always be asked by the other side is for what purpose Labour originally said it wanted a central fund of £750,000. If Transport House had financed every local contest up to the maximum that the law permits, this would still have left it with more than £200,000 to spare for preparing television broadcasts and other centralised expenses. In fact, however, Transport House always finances only a small proportion of constituency expenses, most of which are covered by money raised locally. Most Conservative agents, and some Labour ones, feel that the time is near for some increase in the legal limit, which was set in 1948 before printing costs soared. Now that the election is over, everybody who cares for the repute of British democracy should support this view. Indeed, rather than run into a repetition of some of the sleights of hand that were practised by both sides during this campaign, might it not be a better advertisement for free speech to make the change a radical one? Would it really be so retrograde to abolish the idea of a legal ceiling on expenses in individual constituencies altogether?

MOTOR BUSINESS

The current issue of this quarterly research bulletin contains the following articles:

A FINANCIAL AND ECONOMIC ANALYSIS OF THE BRITISH MOTOR INDUSTRY; THE SPECIALIST CAR MANUFACTURERS

THE SPANISH MOTOR INDUSTRY

THE ESTATE CAR

The regular graphical section has been expanded to include a new section analysing world vehicle export markets.

Reluctant Dragon

China shows little readiness to make Mr Khrushchev's diplomatic efforts easier. Can he induce it to moderate its attitudes towards the West—and towards its Asian neighbours?

"REVOLUTIONARY struggles in the western capitalist countries are developing with each passing day." One can imagine readers of last Thursday's *Izvestia* stopping to scratch their heads over these words. Some, perhaps, looked hastily at the date on the newspaper, to see if they had somehow got hold of a very old back number by mistake. It is a long time since the Soviet press depicted the starving masses of the United States and western Europe as just about to rise against their oppressors. Had not Mr Khrushchev himself, after seeing Iowa's rich farmland, allowed that "the slaves of capitalism live very well"? Was not *Pravda* reporting the British election campaign in terms which implicitly admitted that the people of these islands are free to choose, and to dismiss, their governments? So what was all this old-fashioned revolutionary talk about?

A glance at the signature below the article must, however, have cleared the puzzled reader's brow. The writer was Marshal Chen Yi, the Chinese foreign minister. That explained it. Odd though the Peking government's notions about the world might be, *Izvestia* could hardly refuse to print his piece about its tenth anniversary. The Soviet authorities did the next best thing: they severely censored foreign correspondents' quotations from the article. It may be embarrassing for a government to have to show that it regards what its own official press prints as piffle; but such embarrassments are now inherent in Moscow's relationship with Peking.

All last week, as the lavish celebration of the Chinese anniversary rolled on, speeches at both ends of the Moscow-Peking axis placed the usual emphasis on its solidarity and smooth operation. Madame Sun Yat-sen spoke of "the greatest friendship, the greatest unity, in history." The Chinese leaders praised Mr Khrushchev's expedition to America. He, in turn, assured his allies that Russia was their "faithful friend and brother." And yet the creaking of the axis was too loud to be completely drowned even by this thunder of fraternity.

Any open breach would be too catastrophic for either the Soviet or the Chinese leaders even to contemplate. One may take at full face value their fervent insistence that Sino-Soviet unity is the "chief guarantee," the "invincible stronghold," the "strong core" of the communist cause. A breach could be economically as well as politically and militarily disastrous. Peking has announced that in the first half of 1959 very nearly half of all its foreign trade was done with Russia. About 40,000 Chinese trainees have been sent to work in Soviet factories and other enterprises since 1949; 7,000 Soviet technicians have worked on projects in China. The scanty figures available indicate that Peking pays a stiff price for Russia's "selfless aid"—indeed, India seems to get Soviet credit on easier terms than China—and, at times of food scarcity, the Peking rulers have had to lecture an evidently peeved populace about the historical necessity of exporting eggs and pork in order to buy Soviet steel and machinery (and munitions). Nevertheless, as long as the Chinese communists, fearful of external influences, hug their present insulation from the world at large, they cannot free their country from an economic dependence on Russia which sometimes drives even them to muted expressions of humiliation.

But purse-strings are not apron-strings. Mr Khrushchev can bargain with the Peking leaders, but he cannot make them tamely toe his line. The Chinese communists, like the Jugoslavs, have the self-confidence of men who fought their own way to power, instead of being installed and kept there by the Russian army. They have always paid lip service to Russia's leadership and gone their own way. In the summer of 1956 they added to Mr Khrushchev's troubles by leading a restive Poland to believe that they were siding with it. Then, suddenly alarmed both by the Hungarian revolution and by an outburst of dangerously democratic thought in China itself, they veered sharply round to become the "ultras" of the communist world. Through all of last week's celebrations there still ran a strong vein of violent denunciation of "right-wing opportunists" within their own party's ranks, and of the even more heretical "Jugoslav modern revisionism."

THE Soviet leader may not greatly mind the continuing verbal bombardment of Belgrade by his oddly matched allies, China and Albania. He is visibly more embarrassed by Peking's new series of bull-headed collisions with key nations in the mainly "uncommitted" Asian and African world. Its repression of the Tibetan rising earlier this year made southern Asia uneasy; Malaya has now co-sponsored a condemnatory resolution in the United Nations Assembly. The trouble in Laos caused more unease; Japan and Tunisia have sent representatives there to take part in the Security Council's fact-finding inquiry. China's sudden revival of old claims, about which it had previously been quietly evasive, to huge tracts of Indian and Bhutanese territory, has now apparently been extended to embrace some Pakistani territory, too. Mr Nehru has been goaded into a series of outspoken rebuttals, the latest of which has just reached Peking.

The growing rift between China and the United Arab Republic also came to a head during the Peking celebrations, when the Syrian communist, Khalid Bakdash, delivered a speech in the presence of outraged UAR diplomats, in which he castigated their "dictatorial anarchist regime" (*sic*). (Our correspondent in the Middle East reports on this dispute on page 149.) The Cairo press and radio have accused China of violating the principles of the 1955 Bandung conference of

Asian and African states: warning it that this conduct must lead the Arabs to reconsider their support for Peking's claim to the Chinese seat in the UN; and calling for "Afro-Asian solidarity against Chinese expansionism in Asia."

It is ironic to recall that only last year a permanent Afro-Asian Solidarity organisation was set up in Cairo, with the Chinese and UAR governments as its two most prominent backers. The swift collapse of China's reputation in uncommitted Asia since then is shown by an anxious comment which appeared a week ago in the press of neutralist Indonesia, whose foreign minister was just setting off to China:

> Foreign Minister Subandrio . . . can do much for peace in Asia if he can get it across to his host how perturbed Indonesia has been by Peking's behaviour. . . . How apprehensive we all are at the split between her and India, how anxious we are that China should stop blustering. . . . Subandrio should make this his top priority. . . .

Celestially unaware of the outer barbarians' complaints and fears, Marshal Chen Yi dwelt at length, in his *Izvestia* article, on Peking's success in wooing the uncommitted "new nations." The principles of Bandung and of *panch shila* had, he said, "provided good rules for friendly co-operation." As if to wipe out any lingering trace of Mao's 1949 dictum that "Neutrality is a hoax; the third road does not exist," the marshal went on to give an assurance that:

> China greatly treasures its friendship with the nationalist countries in Asia and Africa, and firmly supports their policy of peace and neutrality.

To be simultaneously at loggerheads with all the leading proponents of neutralism—Mr Nehru, President Nasser and Marshal Tito—seems an odd way of treasuring friendship. But China's friendships are frank ones. (Cairo, noting this, is accusing Peking of waging "a cold war against the neutrals.") Its ambassadors in the east European satellite countries, when invited to broadcast or to write in the local press on the occasion of this anniversary, seized the chance to hammer home their gospel of people's communes—about which Moscow remains unhappily reserved. Teng Hsiao-ping, the Chinese party's general secretary, even broke into the sacred pages of *Pravda* with a long justification of the communes, punctuated with swipes at unidentified doubters "within our own ranks."

WHILE Mr Khrushchev remains firmly in the saddle in Russia, and while China remains so economically dependent on Russia, he need not fear any open criticism of his own policies from Peking. Yet, to the Chinese, his ideas must often sound shamelessly unorthodox. His faith in a quick and easy victory for communism through peaceful competition may not amount to "revisionism"; but in Peking it may seem suspiciously akin to the optimistic heresy of the "economists" whom Lenin fought and vanquished sixty years ago. The Chinese are not likely to carry their slogan, "Let rival schools contend," to the point of publicly challenging his views. They have, however, made their point clearly enough by withholding their endorsement, and by continuing to stress, for instance, the "menace of American imperialism," which the Soviet leader is now playing down even to the extent of omitting it altogether from the newly published slogans for Russia's own revolutionary celebrations. He left Peking without the expected joint communiqué, and there was an almost pleading note in his parting messages.

It might be argued that China's stubbornness could really suit his tactics quite well, by pointing up his relative reasonableness, and by giving him a fulcrum on which to pivot. But the divergence of interest seems too real for that explanation to hold water. China's present plans necessitate rigid internal discipline, and to maintain an atmosphere of external peril is the best way of securing this. Mr Khrushchev, on the other hand, wants a degree—a carefully controlled degree—of relaxation, for two good reasons. First, as long as anything up to a quarter of Russia's whole economic effort has to go into armaments, his aim of catching up with western living standards is imperilled. Second, he relies heavily on his belief that the Afro-Asian world must swing into the communist camp; and here, too, China's aggressive postures make his task more difficult.

The divergence may be easily interpreted in terms of the "stages of growth" analysis which Professor Rostow published in *The Economist* of August 15 and 22. Mr Khrushchev's Russia is mature—with, indeed, many of the symptoms of middle age. Communist China, just passing its tenth anniversary, looks like being a troublesome teenager for some time to come. The relationship between them is now an inherently uneasy one. The fact that a break is out of the question now is not much consolation to Mr Khrushchev, as he vainly struggles to draw his reluctant dragon along the path he now wants to pursue.

The Economist

OCTOBER 8, 1859

WHO SHOULD VOTE?

Q Lord John Russell could not have used an illustration which would have told more against his scheme of a gradual and uniform extension of the franchise according to the growing intelligence of the lower classes, than his appeal to the English "machine" for the administration of justice,—the judge and jury machine. . . . Well, here are two interests represented, the educated intelligence of the legal intellect,—the sturdy judgment on facts of ordinary practical sense. Neither of them is allowed to encroach on the other. The jury are not allowed to encroach on the province of the judge, however acute they may be in law,—nor the judge to decide on the matter of fact, however conversant he may be with practical life. Now, let us apply this analogy. The House of Commons is the assembly which practically rules England. . . . If the House of Commons once becomes the representative of a single class, the nation will be practically ruled by that class. To adopt the plan of gradually extending the franchise to all the "respectable" classes, would be, in reference to the analogy suggested, like constantly increasing the proportionate influence of the jury to the judge,—like allowing the jury an increasing jurisdiction over the whole case in deciding the law as well as the facts of the case, until at length the judge should disappear altogether, submerged beneath the popular element. To keep distinct the boundary between the various interests which properly claim an influence in the Legislature, it is absolutely needful that the new classes admitted to the franchise should be admitted as classes, and so as not to swamp the great interests at present represented in the Legislature. We are tired of repeating and enforcing these very obvious and just principles,—and astonished that Whig statesmen should have no better insight into the true grounds of the distinction between Democracy and Constitutionalism than they appear to evince. . . . The Legislature can never be a "machine" for getting good government, unless it be something more than a machine,—the true organic representative of the whole mind of the nation.

Autumn Thoughts for Democrats

As the afterglow of polling day fades, one may well reflect on what the modern world is doing with the ballot box—and its label

IF these islands are visible from Elysium, the Athenians of 450 BC must have been gratified to observe their pupils dutifully casting their votes this week. Surveying the world, they must likewise be pleased to see democracy, their political invention, held in almost universal esteem—while few people will nowadays speak up for those other Hellenic heirlooms, oligarchy, autocracy, despotism and tyranny. The Athenians would, of course, disown some of the systems that today call themselves democratic; but, as their own *demos* rested unashamedly on the backs of slaves, one cannot be too sure which modern system they would most readily recognise. One thing, however, is certain. Democracy is now the favourite label—whatever brew the bottle may contain—for parties and governments throughout the world; and to have one's democratic character challenged is an intolerable insult.

In party politics, we are familiar by now with Christian Democrats and Social Democrats ("a hell of a name" wrote Engels to Marx when the latter title was adopted in the 1860s); Liberal Democrats, as in Japan, may range to the far right, People's Democrats to the totalitarian left; Democratic Fronts cast their nets widely; a party of Democratic Democrats may yet be formed. Governments—particularly in states where party politics are banned—may use the label less profusely, but their attachment to it is also strong.

Thus the Democratic Republic of (north) Vietnam and the (east) German Democratic Republic, both communist states, share this attachment with President Sukarno, who, having destroyed what was left of democratic government in Indonesia, calls his new system "guided democracy." Neither General Abboud of the Sudan nor General Ayub Khan of Pakistan boasts of having done away with democracy; the latter, indeed, has launched a programme for creating "basic democracies" from the village level upwards, though he has set no date for them to reach the top. General Ne Win may postpone elections to the Burmese kalends, but he insists that they are to be held some time. General Qasim has actually named the date—next January—when Iraqi parties may resume activity. The French Fifth Republic, largely created by men disgusted with party politics, nevertheless permits itself to be "slightly" parliamentary, as *Le Monde* has put it. Guinea, perhaps, provides the most striking example of devotion to the democratic principle. M. Sekou Touré is president, premier and, for good measure, secretary-general of its only legal party—the Democratic Party.

AT present, the shrinkage of Western democracy is both absolute and relative: absolute, because fewer nations practise it now than two years ago; relative, because more and more new nations are achieving independence in conditions that make it unlikely that they will swell the ranks of democracy. This leaves the accepted "hard core" of democratic countries looking more and more outnumbered. True, there are also notable gains to register. In recent years Latin America has shed dictators with gusto. Democracy has got off to a fresh start in Colombia and Venezuela (not, unfortunately, in Cuba); it has struck firmer roots in Brazil, and is struggling vigorously in Argentina. Going back a little further, to the wave of postwar emancipation, India and Ceylon may be numbered among the countries where a new democratic system is still, however precariously, in being. And the prewar authoritarian regimes of Germany, Italy and Japan have been replaced by systems based (except in east Germany) on multi-party elections and personal liberty. But these are cases to be approached with caution. How deep do the roots go?

In west Germany, Italy and Japan, roughly continuous political combinations have held power ever since the ballot box came into use again after the war. These are, indeed, free countries, but even so the real testing time will come only when the electorate calls for a change, and the present holders of power are required to surrender it. And a somewhat similar argument applies, in very different circumstances, to the underdeveloped new nations of Asia and Africa. In most of these, one overwhelmingly strong party emerged at the time of independence, with all the prestige of having won that independence. But each such party was really a coalition, and, from the moment freedom was gained, its unity and prestige were subject to erosion. Pakistan's Muslim League soon foundered. Burma's Anti-Fascist People's Freedom League finally split last year into two factions, the "clean" and the "stable." The internal strains in India's Congress party are evident enough; one symptom was the recent formation of Mr Rajagopalachari's conservative Freedom party. The Chinese wing of Malaya's Alliance party was lately revealing its restiveness; Tungku Abdul Rahman's return to active politics restored a unity which is not, however, likely to prove lasting.

THE dilemma of aspiring democrats in underdeveloped countries is a very real one. The people may well have basically sound instincts, but what if most of them cannot read, and lack any experience in distinguishing between alternative programmes? (Alternatively, what if literacy has outrun economic opportunity, as in Kerala?) What if there is no permanent civil service capable of keeping the wheels of administration turning whatever the shifts of politics? What if a reassuringly stable father figure suddenly vanishes? When Prince Sihanouk's Popular Socialist Community won every seat in independent Cambodia's first elections, he apologised, with royal modesty, for his "too complete success." Everything suggests that at present he has, indeed, his people's solid support; but what would be the outlook if the people changed its mind?

It is of course painfully clear that a country can hardly afford to import democracy if it lacks the social and economic equip-

ment needed to work it—any more than it can afford to buy electric refrigerators for use in areas where there is no electricity. It has also been persuasively argued that the soldiers who have taken over effective power in some Asian countries represent their people's most progressive forces. It is certainly true that political soldiers have not always stood for tyranny, nor even (*pace* Lord Montgomery) for conservatism; many a time they have helped to oust a dictator, or held the ring through times of trouble and then, perhaps with relief, handed responsibility back to the civilians.

But our concern here is with classification. In the rather superficial terms of semantics, should countries like Dr Nkrumah's Ghana or President Diem's south Vietnam be called democracies, or should they not? Should "democracy" be redefined—or should four-fifths of the countries claiming the title be formally disqualified? (and by whom?). And, in more substantial terms, are we really sure what democracy is? Is the title really deserved by the accepted "hard core" of democracies in North America, north-west Europe, southern Asia and Australasia? Finally—the aftermath of polling day being a good moment for heart-searching—how pure is British democracy, and ought we to be striving to make it purer, or, alternatively, thanking our stars for its imperfections?

It may, after all, be argued that France's Fourth Republic, having almost reduced democracy to the ultimate absurdity of each man his own party, collapsed under the weight of its own perfection; or that Australia has gone a bit too far in evolving a system in which, to borrow a phrase from the former editor of one of its newspapers, Jack is not merely as good as his master, but a good deal better. If, on the other hand, we accept the complaint that the British electoral system, with its millions of wasted votes, is not really democratic, do we lament its deficiencies, or do we pride ourselves on a system that works the better because of its theoretical faults?

At this point, fantasy may be allowed to supervene. Perhaps, after all, we have never been democrats. Perhaps, like Andersen's emperor, we have been long and unwittingly naked to others' eyes. In that case, it is high time we acquired suitable raiment. We could start by stopping the salary paid to the Leader of Her Majesty's Opposition; follow up by withdrawing the Opposition's right to contest any more elections; and go on to provide more modern accommodation for the present inmates of Dartmoor, which could then be reserved for "politicals." Editors could be made liable to imprisonment for criticism of foreign heads of state (as in Indonesia), of their own head of state (as in France) or for more various offences (as in Turkey). If we then dismantled our industry and applied for Soviet and American aid, we might even qualify to join the Afro-Asian block.

But, before doing anything so drastic, we might be wise to call for an international commission to define democracy. Such a commission—including, naturally, delegates from the communist states—would, as in the case of the luckless United Nations committee that tried to define aggression, produce a rich variety of minority reports. Each country could then pick the minority report it liked best. That, at least, would be thoroughly democratic.

NOTES OF THE WEEK

THE SUMMIT

Still Cloudy

In the bracing air of East Kilbride, in a marginal Conservative seat, Mr Macmillan made a highly marginal prophecy last week that "within a few days the actual date of the summit talks will be fixed." If Mr Macmillan's vision was clear from where he stood, his words set off a sudden electric storm over Washington (the readings being gratefully recorded in Transport House) which dimmed visibility all round. Mr Hagerty, who can throw a pretty thunderbolt when he chooses, sternly let it be known that, far from the date being imminent, there was no agreement yet to hold a summit at all. Mr Herter, at his press conference on Tuesday, was suitably tactful, but no more helpful to the immediate Conservative cause. The clouds were still down over the peak. The question, Mr Herter said, was still under consultation with other countries. He did not add that one clear cause of his uncertainty was that after Thursday it might have to be taken up with another British government. It was Mr Khrushchev, in the bracing (but not marginal) air of Vladivostock, who was slightly more forthcoming: a summit "this autumn or winter" was his guess.

None of this stubbornly "don't know" caution dampened the general belief that Mr Macmillan was basically right in thinking that the summit was pretty close. Nor did Mr Chou En-lai's habitual bid for Chinese representation at the top, repeated on Tuesday, seem a serious difficulty for Mr Khrushchev or anyone else. The Chinese, although associated with the Warsaw Pact, have never insisted on sitting in on Germany's future; the conference they usually have in mind has a different agenda. But it is clear that China will have to be directly concerned in any global disarmament plans, including a monitoring system for nuclear tests. When the subject is eventually removed from the United Nations political committee, Mr Khrushchev will plainly have to go through the motions on his allies' behalf. The West should take him up. There is everything to be said for taking this chance to show Peking that peaceful coexistence can have something in it for China too.

ELECTION CAMPAIGN

The Final Shots

In a doggedly industrious way, Labour managed to dictate the course of the election campaign nearly up to its end. In the second half of last week it had seemed that the party's leaders had stumbled for the first time. Mr Gaitskell's pledge that he would never raise income tax "under normal peacetime conditions," and Labour's subsequent promise to abolish purchase tax on all essential goods, were widely admitted to be mistakes in propaganda; the central campaign committee at Transport House was caught by surprise by the first statement, and it seems to have made a last minute effort to smother the second. The door was opened to a Tory attack upon Labour's irresponsibility; the new pledges, declared Lord Hailsham, had "turned what had previously been tragedy into farce."

By the beginning of this week, however, Labour's leaders had managed to convert the stumble into a mere change of step. Labour has made some further irresponsible statements in the last week (*vide* Mr Harold Wilson's extraordinary pledge to an audience of miners that a Labour government would lay down a figure for the amount of British coal that was to be produced and used, and arrange imports of oil so that they did not interfere with this); but these have been local irresponsibilities which did not hit the newspaper headlines. By Monday Mr Gaitskell was winding up Labour's television campaign with ably rounded generalities about his party's stand for the traditional British virtues of kindness, tolerance, decency and a sense of fair play; and next night Mr Macmillan felt bound to couch his own final appeal, not in terms of bitter and specific attack, but in high flying phrases about the "trust which you hold for yourselves, your children and your grandchildren."

The *Daily Mirror* launched its expected delayed missile last Friday. After an agonising period of pretending to make up their minds, the verdict of the men who, after all, had drafted much of Labour's manifesto was "The Time has come for the Tories to Go." In sharp contrast to 1955 when their slogan was devised merely to stop a Tory tide ("Vote Labour to keep the Tories Tame"), these able tacticians decided this time to trumpet the advance. On Tuesday the headline was "Labour Now Expects to Win," on Wednesday "Don't Know's Swinging to Labour." Labour leaders went to the voting booths on Thursday with this joyous accompaniment surging in their ears, and determined not to heed the nasty last minute suggestion of the public opinion polls that their tax exaggerations of the week before had after all turned some waverers away from them. They could justly claim that they had had the field in the techniques of propaganda; their only concern by then was lest the electorate might reject their policies.

OXYGEN STRIKE

Silent Pipeline

Perhaps the most significant thing about last week's unofficial strike at British Oxygen was not the disruption that it caused—though a stoppage that put sixty thousand men out of work in less than a week is remarkable by any standard. It was rather the way in which it was prevented from causing more disruption still. There was a quiet and unpublicised agreement between some employers and union officials to allow oxygen to be imported by air from abroad in order to break the strike.

This was a very interesting development—an exceedingly effective way of stopping a strike which union leaders did not like. But it is surprising that there was not more press comment and debate on the device; in usual union terminology, after all, this oxygen was "black." The reason for the muffled conspiracy of silence was that the daily newspapers have a guilty conscience about the circumstances in which the device was first used. During this year's printing strike, there was a period when the stoppage of printing ink workers threatened to stop the daily newspapers' presses too. But after discussions with Natsopa, to quote the deputy-editor of one newspaper:

> the national dailies were able to go on appearing in limited size because ink was being imported from abroad. It was agreed with the union that this solution of a temporary difficulty would be acceptable and the arrangement should be given no publicity in case mischief-making elements tried to interfere with the handling of the ink.

To avoid difficulties and embarrassments, no word was published about the ink imports at the time and letters to editors from knowing outsiders were refused or not even acknowledged.

One can have differing opinions about whether this incident last summer means that Britain has a free press only when freedom is not too awkward. But no service will be done to public understanding of the course of industrial relations if this second incident is passed over in silence. For union officials to have agreed to this type of strike breaking twice in a year is highly significant. Among other things, it is a new way of dealing with an unofficial strike.

DOCKS

Loud Warning

Another way of staving off unofficial action has been tried this week by Mr O'Leary, national secretary of the dockers' section of the Transport and General Workers Union. He deserves every credit for the blunt warning he has issued that "disruptive elements" are planning a dock strike. Mr O'Leary's position is a difficult one. He has been frequently harassed by wildcat strikes in the past, some of them carefully organised by the tough communist and near-communist cliques which are a special feature of dockland political life. These cliques form themselves from time to time into "port-workers' liaison committees"—another way of describing bands of unofficial leaders—and ever since 1954, when the trouble between the TGWU and the National Amalgamated Stevedores and Dockers first flared up, these committees have had especially explosive issues to play on. This inter-union trouble is still simmering and since the revolutionary Socialist Labour League—a much more active group than the communists inside the NASD—has penetrated the docks in force, more trouble almost certainly lies ahead.

The immediate cause of the present agitation has been the "revelation" in the league's *Newsletter* that several amendments are proposed to the Dock Labour scheme. In the main, these amendments follow the recommendations made by the ubiquitous Mr Justice Devlin when he headed a committee of inquiry into the docks just over three years ago; most of them are relatively unimportant. But one, which would allow employers to bring in "black" labour to handle perishable cargoes during a strike, certainly is controversial; it was in fact the very issue that lay behind much of the long dock strike in 1958.

The Socialist Labour League feel that the TGWU has not opposed this amendment strongly enough, and it has been seeking support for a prospective strike in London. Its agents have also been sounding out the ground in the northern ports. But, unlike Mr Kealey at British Oxygen, Mr O'Leary has not been caught napping. He has sent a strongly worded circular about the league to his 400 officials and branches, warning them against being used as "pawns in a political game." Considering the general election and his uncertain influence in the docks, this public statement was a brave and resolute move.

INDO-CHINA

The Fate of Opposition

On the score of tidiness, the new National Assembly in Saigon will be able to give points to the new House at Westminster, for it seems unlikely to be cluttered up with anything resembling an opposition. The new assembly was opened this week by President Ngo Dinh Diem. Of its 123 members, 78 belong to the president's Party of the National Revolution; only two of the remainder oppose his policies, and neither was allowed to take his seat. The more important of the two, Dr Phan Quang Dan, was in fact detained as he attempted to enter the assembly building.

Until then, the surprise of the recent elections had been not only that Dr Dan was allowed to stand, but that he polled 10,000 more votes than the next highest vote-getter in Saigon. The dice had been heavily loaded against him: official permission to register his proposed Free Democrat Party had been withheld, so he was forced to campaign as an independent, under the handicap of being denied the right to address "assemblies" of more than five persons. Since the election, he has been convicted and fined, on charges of having used illegal means of propaganda and bribing voters with offers of free medical attention, on evidence which independent observers have called in question. A fortnight ago, his exiled supporters in Paris correctly forecast that he would not be allowed to take his seat.

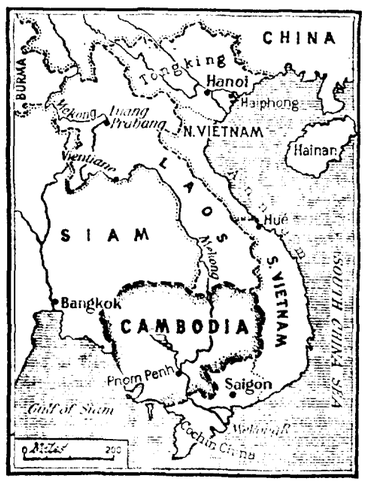
If history had been nudged in his direction instead of Mr Diem's, Dr Dan might well have become south Vietnam's head of state. In 1948, the two men were

jointly agitating for a Vietnamese congress that would be independent of French control. After their joint failure, both went into exile, both spent much of it in the United States, and both acquired the support of American politicians. In 1954, however, Mr Diem's supporters proved more influential than Dr Dan's.

It should be remembered that south Vietnam remains under threat from the communist north, and that communist terrorism in southern towns and villages has increased in recent months. But the suppression of all dissenting opinion, even when it is anti-communist, can do nothing but harm to the republic's standing and long-term stability. It may be hoped that the president will at least stop short of the extreme measures that have marred the record of another half of a divided country, the Republic of Korea.

Supervision in a Vacuum

THE controversy over the fate of the three-nation supervisory commissions set up in Indo-China after the Geneva conference of 1954 has now spread to Cambodia. The commission for Laos was adjourned, though not wound up, last year. The British Government has now suggested to the Cambodians that the commission charged with supervising the



armistice in their country should at least be reduced in numbers, and eventually suspended. This suggestion has aroused suspicion in Moscow which, in a note to London, darkly hinted at a western plot to disband the commissions throughout Indo-China. The truth is, however, more prosaic; Britain contributes £100,000 a year to the commission for Cambodia; there is, on the commission's own evidence, remarkably little for it to supervise; and if its presence retains a symbolic value, a skeleton staff would be as useful a symbol as the multitude of officials and army officers now crowding Pnom Penh's scarce hotel space.

Prince Sihanouk, the Cambodian premier, is, however, among those who find comfort in the commission's presence, although he was crossing swords with it four years ago. Now he has proposed that it should supervise a referendum in which the people will be asked whether they approve his government's neutralist policy. This would certainly provide an occupation for the commission's Canadian, Indian and Polish members. But the referendum itself seems superfluous; and referenda are not what the commission was sent to Cambodia to supervise in the first place.

FRANCE AND ALGERIA

Knocking on the Door

RUMOURS of talks hang heavily in the Paris air. From Tunis, M. Bourguiba has offered his services in bringing France and the Algerian rebels closer together. Although this has not been taken up by either side, M. Habib Bourguiba, junior, who is his father's ambassador in Paris, flew home on Tuesday with the Tunisian foreign minister, Dr Sadok Mokkadem, who was returning after a long discussion with Mr Dillon and Mr Murphy in Washington. At the same time Prince Moulay Hassan was arriving in Paris from Morocco. He denied any mission ("I have come to see my uncle and the motor show"), but the word promptly went out of another attempt to arrange a meeting between General de Gaulle and King Mohammed. This hectic diplomatic round began to look hopeful, but it was still not clear what the general's next move would be or, indeed, whether he would make one at all.

Although General de Gaulle's self-determination pledge and the FLN's cautious reply from Tunis had given the impression that a useful dialogue was going on in public, it was evident that any further progress would depend on more secret and subtle exchanges. M. Bourguiba, whose enthusiastic welcome for the general's offer ("I would have cabled: 'I'm coming to Orly . . .'") was a major French success, plainly believed that the rebels should have seized the main chance and got talks of some kind under way in the belief that, once begun, they could not be stopped short of political questions. Now that this chance has passed, the intermediaries must keep on knocking at the door of the Elysée. General de Gaulle's eventual readiness, or ability, to answer will depend on the development of positive political backing inside France and in the army in Algeria.

All in Line

FIRST reactions have not been unpromising. The anguished appeals for metropolitan sympathy coming from the extremist settler groups in Algiers have fallen on largely deaf ears. The polls show over two-thirds of French opinion favourable to General de Gaulle's Algerian policy so far, but this includes a large section that still believes full integration to be the only desirable, and officially desired, goal. Within the political parties, the non-communist Left has immediately ranged itself on the general's side, while the Independents and the neo-Gaullist UNR, although plainly restless, have not dared to come out in revolt. An extreme right-wing motion, tabled by MM. Lagaillarde and Le Pen, has had to be withdrawn for lack of support. As if to emphasise this seemingly permanent unanimity, the Assembly has abandoned its old voting methods and has now installed a push-button system.

While this political debate has been going on, the social and economic assault on Algeria's problems has got under way in keeping with the Constantine plan. M. Delouvrier, General de Gaulle's representative in Algiers, reported this week that house building had been stepped up and new industrial enterprises introduced. It is apparent, however, that a large proportion of these manufacturers were already operating in Algeria. M. Delouvrier's statistics merely showed that France is at the beginning of a long and costly haul. Perhaps his most promising news was that 100,000 more Moslem children were able to enter school this year.

PRIVATE BILLS

Two-Tier Promotion

LORD READING'S Joint Committee on Promotion of Private Bills has cut a sensible path through a technical parliamentary thicket. Last year the Kent County Council bill, whose 442 clauses and six schedules would have conferred only 98 powers on the council directly and the rest on the other units of local government within the county, practically sank the private bill machinery under its weight; it was finally ditched by the Lord Chairman of Committees and the Chairman of Ways and Means on the grounds that to all intents and purposes it "amounted to a public bill for the government of the county of Kent." Lord Merthyr, the Lord Chairman, whose ruling was upheld by a resolution of the Lords, went so far as to suggest that private bills had got so much out of hand that the precedents of the last fifty-three years should be abandoned and Parliament should go back to the old principle that no council could promote anything that was not of primary interest to itself.

The Reading Committee has rejected this contention. Now there is a two-tier system in local government a certain amount of incipient federalism is unavoidable. It is unfair to expect smaller authorities to bear all the burden of promoting their own bills, while a joint effort at Westminster will be much more economical provided commonsense is

"... the very poor penetrative power of a motor-horn"

Extracts from a 1907 Motoring Guide Book
"Through East Anglia in a Motor Car"
with acknowledgments to
Methuen & Co

Was the other car meeting us or going in the same direction? In the same direction surely, for though the cloud of dust was coming nearer to us, it was not approaching very fast. So we determined to pass as soon as might be, and, "giving her a little more gas", we were very soon "on terms" as a racing man would say, with a two-seated car going along the middle of the road at a fair pace. Once, twice, thrice our horn sounded, but the occupants of that car never heard us. At last, keeping well to the offside of the road, and when our bonnet was level with their rear off-wheel, Mr. Johnson and I gave a simultaneous and stentorian yell; and the two pairs of goggles that were turned upon us, who were then as nearly always, ungoggled, clearly covered four eyes starting with surprise. It was a lesson to them and to us of the very poor penetrative power of a motor-horn in relation to motor-cars in front, and of the necessity of looking behind you now and again, especially if you be in a noisy car.

Over 150 depots throughout the country represent the contribution to the maintenance of road transport by the Kenning Motor Group—identified by the Kenning Shield, a guarantee of an efficient service.

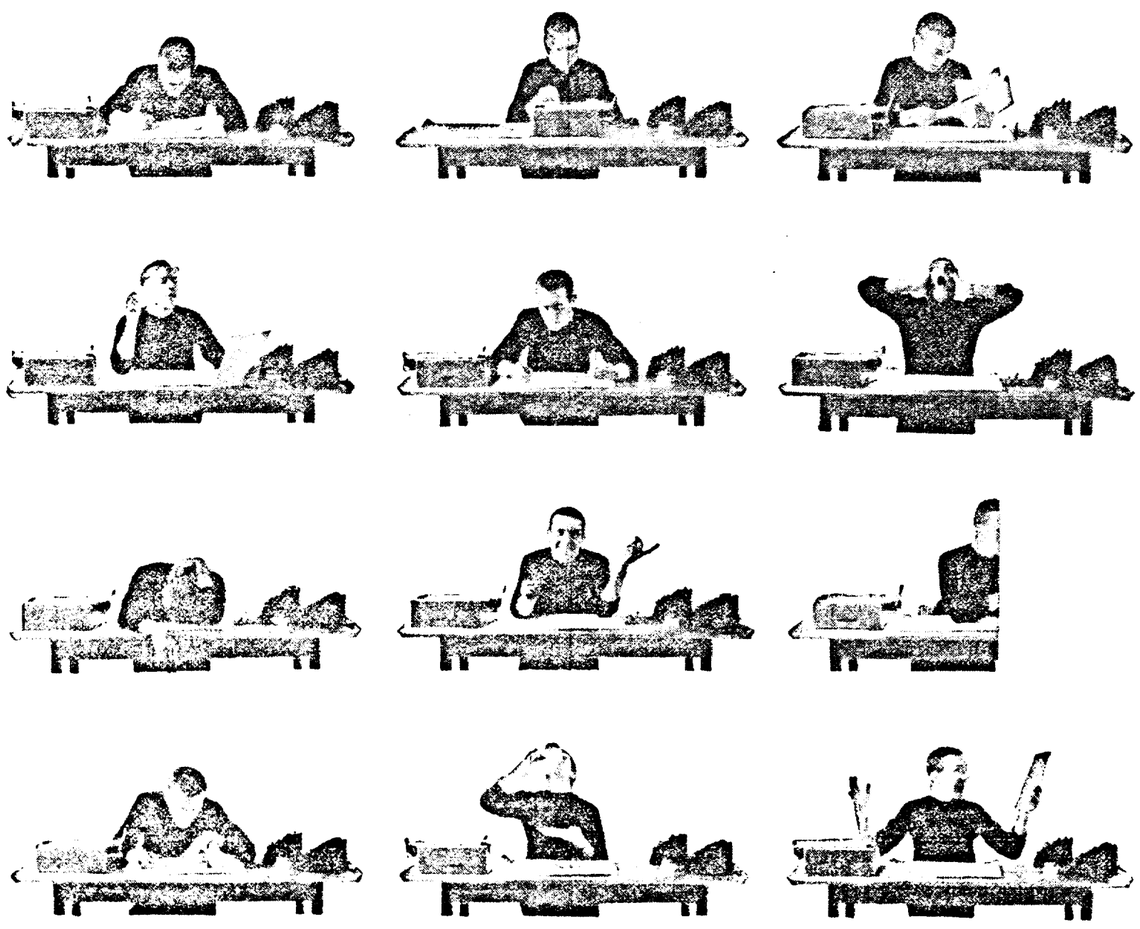
The Facts of Graphis



11.6 new ideas

45 cups of coffee, 76 cigarettes, 4 aspirins and 0.3 sleepless nights are used up by Graphis Publicity on average per advertisement to make sure that the idea finally submitted is a *good* idea. Here are some more vital statistics: Graphis service is second to none; all the designers put head to toe look quite horrible (they look horrible in any position); every fifth director is a psychologist; over 50% of the agency's work is on highly technical products; Graphis actually *likes* looking after medium and smaller accounts.

As a matter of fact, a pretty good advertising agency.

Graphis Publicity Ltd

employed and the system is not overloaded.

The load should be reduced at two ends. There should be more public legislation, enacting for the whole country provisions about, for example, weights and measures which become wastefully repetitive if they are the same in one county bill after another—and frustratingly inconsistent for retailers and salesmen if they are different. At the same time counties should be discouraged from just looking up the list of powers their neighbours have acquired over the years and asking for "the lot." The same safeguarding procedures (with the exception of the useless town polls) should be obeyed within the local districts which are going to use the powers the county is obtaining for them as if they had been promoting separate bills themselves. Otherwise a two-tier promotion becomes a device for avoiding a local airing of the issues, with pointed reference to the likely future burden on the rates and on the interests that may be damaged.

MENTAL HEALTH ACT

Informally to Hospital

THE provisions of the Mental Health Act are coming into force by stages, and a start has been made with the making of an order repealing a dozen or so words of the Lunacy Act of 1890. The words repealed prevented mental hospitals from admitting patients except under the procedures laid down in the Lunacy and Mental Treatment Acts. These procedures meant that even "voluntary" patients, who make up the great majority of new admissions to mental hospitals, have had to sign a form expressing their willingness to enter hospital for treatment.

From last Tuesday, however, this procedure will no longer be necessary. So long as they are not actually unwilling, mental hospital patients can be admitted as informally as if they were entering general hospitals. The old procedures themselves have not yet been repealed, and the two forms of admission—formal and informal—will exist side by side, with most patients entering informally and the old procedure of certification being used for the few that have to be admitted and detained against their will. Existing patients are being reviewed to see which cases can remain in hospital on an informal basis.

The complete abolition of the old procedures, and the substitution of compulsion for certification, have to wait, among other things, for the setting up of mental health review tribunals to hear appeals from "compelled" patients against their enforced detention; this will apparently not happen for some months. In the meantime, until the new compulsory procedure comes into force, a small gap exists in the new arrangements for informal patients—though it will not affect more than a tiny number. The Mental Health Act provides that where such a patient wishes to discharge himself against medical advice, the hospital authorities can detain him for three days on the strength of a report from the doctor in charge of his case. A similar period of grace is provided in the present procedure for voluntary patients, who are supposed to give three days' notice of their intention to leave hospital. This notice is very rarely enforced, but in a few cases it does enable a doctor to try to persuade a patient to stay on voluntarily or at least to get in touch with the relatives and make some arrangements for continuing care and treatment. Until Part IV of the new Act comes into force, however, there is no such provision for informal patients.

PERSIA

Balancing Act

A SOFT answer from Persia has, for the moment, turned away Soviet wrath. The Russian ambassador is returning to Teheran, and Moscow radio has stopped urging Persians to revolt against the Shah. The radio station in East Germany that calls itself the "National Voice of Iran" continues, nevertheless, to exploit the weaknesses of the Persian government. Word of the thaw in relations between Russia and Persia may not, of course, have penetrated the further reaches of the Soviet empire; but it is more likely that the insults are deliberate and designed as an effort to keep the Persians slightly off balance.

When the Shah led his country into the Baghdad Pact (now the Central Treaty Organisation) in 1955, he appeared to have abandoned the age-old policy of neutrality that sought to keep Persia unencumbered by responsibilities to other nations. The Russians and other enemies of the pact were anxious to get Persia out of it and, for a brief period early this year, it looked as if they might succeed. The Shah invited the Russians to Teheran to discuss a non-aggression treaty, but when they discovered that he was not willing to go back on any of his promises to his allies they left town in a huff and a hurry. Since then he has refused to take up arms in the battle of the air waves started by Moscow.

Mr Nehru's visit to Teheran last month led to suggestions that the Shah was once more exploring the advantages of neutrality, but the Shah vigorously denied this. The visit was part of the Persian attempt to be friendly with everybody. The Shah is allied to Pakistan, but he intends to keep on good terms with India as well. He is allied to Britain and the United States, but he said that he would now welcome any Soviet offer of economic aid. If the state of world politics permits him to consolidate the diplomatic achievements of the past year, he will be able to devote more of his energies to the problem of bringing Persia up to date. It is to be hoped that he is as successful in his domestic projects as he has been in his foreign ones.

IRAQ

Whose Finger?

THE tan Chevrolet station wagon was a familiar sight in the main streets of Baghdad—too familiar, as it has turned out, for the safety of General Qasim. Last Wednesday afternoon someone fired three shots into the general's shoulder as he passed through the adoring crowds of Rashid Street on his way home to the modest villa he occupies a few blocks away.

During his fifteen months of dictatorship, General Qasim has made plenty of enemies both at home and abroad. Any group of them might be responsible for trying to kill him. The dispossessed landowners have seen their property disappear as the economy crumbles. The once-powerful religious leaders have lost their influence over masses newly inspired by the promises of communists. The families of imprisoned or executed opponents of the regime might be expected to seek revenge. And there are those who, fifteen months ago, believed that the purpose of the revolution was to allow their country to join the mainstream of Arab nationalism. Outside Iraq, he has incurred the wrath of the Arab world and made his Persian and Turkish neighbours anxious about his intentions. There is, however, another suggestion as to the identity of those who sought to do away with him.

By the time General Qasim had thirteen officers and four civilians executed last month, he had run the gamut of communist demands upon him. Is it possible that they felt he had served his purpose, and that it was time for a change? Because the attempt on his life failed, we shall probably never know the real reason for it. The communists will doubtless find evidence that the shots were fired by a thug, preferably mentally deficient, paid with money provided by the "imperialists" to President Nasser of the United Arab Republic.

It is hard to see how any group except the communists could have hoped to gain by removing General Qasim from the scene. The recrimination that will result from his being wounded will merely weaken the forces opposed to him; his death would have brought the country to civil war.

SUDAN

Nile Valley Neighbours

DURING the past year the Arab capitals from Tunisia to Iraq have probably seen more treason trials than camels. The enthusiasm for trials has, however, abated, and the grisly proceedings of Colonel Mahdawi's court in Baghdad have had a sobering effect on the course of military justice elsewhere. In Khartoum, two former ministers and members of the ruling supreme council were among the six army officers recently sentenced to death for their part in an abortive uprising last May. Their sentences were

promptly commuted to life imprisonment by General Abboud, the president of the supreme council. The Sudanese government, having got through its treason trials without causing any major upheavals, is now prepared to take in hand the important matters which were held in abeyance during the past three months.

This Saturday, a Sudanese delegation of ten, including the minister of information and labour, the minister of commerce, industry and supply, the minister of agriculture and communications, and the minister of finance, will arrive in Cairo to discuss the problems shared by the Sudan and Egypt. Foremost among these is that of the Nile waters.

Last year, when the Sudanese wanted to take a modest sampling of Nile water to test the efficiency of the Managil extension of their Gezira irrigation project, Cairo claimed that thousands of Egyptians would starve because of Sudanese greed. It then looked as if the Egyptian army was looking for an excuse to bring about the unity of the Nile valley that was blocked when, in 1952, the Sudanese chose independence rather than union with Egypt. Recently, however, there has been a change of climate in the Nile valley. Trade between the two countries has been revived, after a short period during which the Egyptians refused to accept Sudanese produce and livestock. The Managil extension has been put into operation; the Sudanese have been using more water than they are allowed by existing agreements; and not a word of complaint has been heard from Cairo.

The Sudanese delegation will arrive in Cairo full of confidence and good will. Their visit may determine whether the waters of the Nile, from its sources to the Mediterranean, are ever to be harnessed for the benefit of all the Africans through whose territory it passes. It is to be hoped that they will be able to leave Cairo as cheerfully as they arrived.

NYASALAND

Malawi Waking Up?

NYASALAND is beginning to stir politically after the stupor which followed the suppression of disorders last March, and the imprisonment of Dr Banda and his supporters. Some of these, wearing the proud cap of prison graduate (at any rate figuratively) are beginning to return, and are already showing that they have made good use of the intensive course in applied political science which internment on political charges in one of Her Majesty's colonial prisons always provides. Mr Orton Chirwa is reported to have been made president of the new Malawi Congress party, which is, of course, the successor to the Nyasaland Congress party, of which Dr Banda was the semi-divine leader. Malawi is Nyasaland—and no doubt in its time was as great an empire as Ghana or Mali. The new party is dedicated to taking Malawi out of the Federation of Rhodesia and Nyasaland, no doubt by strictly legal means. Mr Orton Chirwa is an LIB, as well as a PG. It will be interesting to see if Mr Wellington Chirwa, who, perhaps to his embarrassment, was not "picked up" last March, but who has consistently put forward the Banda line in Dr Banda's unavoidable absence, will join—or be allowed to join—the new party. He is an experienced politician, and would be useful.

It now remains to be seen how the other two parties which have been campaigning for members in Nyasaland will fare—Sir Roy Welensky's United Federal Party and Mr Todd's Central Africa Party, both of which stand for federation, but the latter for a very rapid advance to African territorial autonomy in Nyasaland within it. The UFP has been claiming that not only has it enrolled 2,000 African card-carrying members since the Devlin report appeared, but these are demanding to be given lapel badges to enable them to flaunt their belief that federation is best for Malawi. The CAP is making only vague claims as yet. Meanwhile, four Africans have been newly appointed to the Legislative Council (two in place of Messrs Chipembere and Chiume and two additional ones to raise the total of African unofficial representation to seven in a House of 29.) The new Colonial Secretary—whether he is Conservative or Labour—will have to decide whether Nyasaland is to be represented in London in 1960 by African representatives of all, or only some, of these parties and government unofficial nominees; or whether he will talk to Banda first. In any event Lord Monckton and his colleagues will undoubtedly have to talk to them all.

TELEVISION

Africans Look In

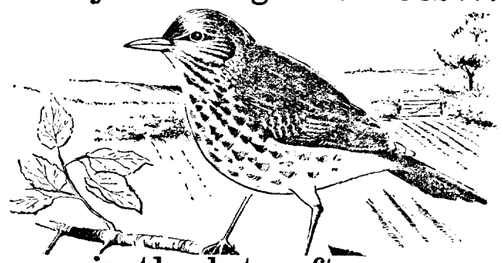
Chief the Hon. Obafemi Awolowo

A FULL public television service will be inaugurated in Western Nigeria on October 31st; transmissions started this week. Thus Western Nigeria will be able to claim that it is the first African state to have not only a sound but also a television service; both are commercial and the profits on radio will have to balance the initial losses to be expected on the screen. It is, however, a landmark when an African government decides that television is practicable, desirable and economic in African conditions. Premier Awolowo has so decided, partly on the grounds of educational expediency, and has brought into existence the Western Nigerian Radiovision Company, owned fifty-fifty by the government and Overseas Rediffusion, Ltd. The government is itself installing 1,000 receivers, and licences have been given to importers who are ready to set up servicing units; they forecast that 15,000 sets will be installed in the next two or three months.

Considering that in many African territories sound broadcasting to the local African audience is still in its infancy—and newspapers are often equally immature—this is a grasshopper jump forward. Western Nigeria is, however, in a favourable position to pioneer television in Africa, for it can serve two large towns, Ibadan and Lagos, with a combined population of 750,000. These conditions are not repeated except in South Africa. Yet a large number of African states are actively investigating the prospect of following Western Nigeria's example. Dr Azikiwe has promised the Eastern Region a television service "soon"; Northern Nigeria feels it cannot be outdone. Liberia, which is only introducing sound commercial broadcasting at the end of this year, is to have an educational television service in 1960. Ghana is making enquiries in America. Kenya has sagely appointed a commission to report. In Central Africa, a British company and the Argus Press group are said to be preparing plans for a service. The economics of African television are based on sharing advertising revenue with sound broadcasting, and on the fact that imported film programmes can be hired at a cost of £20 an hour. The far higher cost of studios and local programmes will require government subventions, to be set against the heads of education and prestige.

TELEVISION has caught the imagination in Africa much as local airlines became the rage in Middle Eastern states. But it may be more significant, because African TV involves the import of culture. It is now a very relevant question whose culture and whose image will be put over to Africans in the years ahead. This, of course, is the key to South Africa's continued abjuration of the goggle-box: television in the Union would have to transmit hours of Western TV film which would not only give the Bantu some wrong non-tribal ideas, but might also develop a taste among the Afrikaner Volk for Anglo-American amusements—and a greater interest in the English language. Yet it may be embarrassing for South Africa to lag behind where black states are so determined to look ahead on the little screen.

Early morning freshness...



...in the late afternoon

Outside it may be sultry, but the overpowering heat and dust-laden city air cannot enter this office. A Temperature Room Air Conditioner maintains a clear, cool flow of air, fresh as morning dew, throughout the work-long day. It filters out the irritating dusts, controls temperature and humidity, is unobtrusive and easily fitted in any room or office.

LIVING FACTS

Experts' opinions secure a quality overseas readership for your advertisements

Photographed by Dominique Berretty

LIFE International presents special reports by world-famous experts, expressing length, breadth, depth of experience and a sense of "history in the making." That is why it has a world-wide audience of over 2,500,000 people; an audience of people who appreciate LIFE's unique photo-journalism, its comprehensive examinations of topical events, its infinite variety of editorial material.

This audience includes your best overseas customers—business executives and consultants, government officials and leading professional men in every field. They are readers who buy for themselves, their families, *and* their firms.

In LIFE International's advertising pages they see industrial products and consumer goods—prominently displayed in large pages, beautifully reproduced on quality paper.

To promote *your* business overseas . . .

BOOKS

From Myth to Reality

Unity 1942-44 : *Volume II of the War Memoirs of General de Gaulle*

Companion volume of documents.
Weidenfeld and Nicolson. 340 pages, 30s. and 424 pages, 42s., respectively.

GENERAL DE GAULLE'S literary gifts are known. They had to guide him in the first volume of these memoirs through the dangerous territory near the frontier between the sublime and the ridiculous. The greatness was in the determination with which this junior general, stripped of almost all power, went on proclaiming from 1940 onwards that France was still at war with Germany. The danger of the ridiculous lay in the contradiction between the claims and postures of the general and the limited means at his disposal. Yet, in this initial position, claims to greatness were probably the only way of hiding the military and political nakedness. In the second volume of his memoirs, the gap between ends and means progressively narrows as first the French empire and then France itself are wrested from Vichy and German control. The crowning is the liberation of Paris. The dream has become reality. The man who was a symbol is turned into a statesman and politician; he must be judged as such.

Throughout this volume General de Gaulle continues to play the part of the self-appointed (or fate-appointed ?) guardian of French prestige and a suspicious keeper of French independence and territorial integrity. He had grounds for suspicion. The bulk of this story is taken up with the period when allied troops occupied North Africa. The Americans, who directed the landing, tried to by-pass the Gaullists and deal directly with the authorities on the spot, first through Admiral Darlan, then through General Giraud. General de Gaulle stuck to his principles, refused to compromise, proved a most awkward and stubborn partner and, finally, won his battle for exclusive representation. But his suspicion sounds sometimes exaggerated. At moments, the entranced reader loses sight of the real purpose of the war and begins to think that America's chief aim was to establish a puppet government in Paris, while the British were mainly concerned with getting rid of the French from the Middle East. Anyone who questioned the identity between de Gaulle and France, who suspected the general's prewar political leanings and wartime *entourage*, looks a knave. And the role of France, actual and potential, is shown through a magnifying glass. At one stage the author suggests that the fate of eastern Europe would have been different had he sat with the Big Three ; at another he consoles the Vatican with the reflection that Soviet influence in Europe will be counter-balanced by a French revival. Modesty was never among the general's vices.

In his squabbles with the allies, General de Gaulle could rely on the support of the resistance movement, which was gathering momentum with the prospect of German defeat. All underground groups agreed with his provisional leadership. They were the more determined to back him since efforts to by-pass him were really aimed at compromise with Vichy, the regime of their torturers. But the unity of the Resistance was temporary and superficial. Even the moment of triumph—the liberation of Paris—was preceded and accompanied by a clash between the hierarchy imposed by the General and predominantly communist underground leaders on the spot (a more detailed description is to be found in Robert Aron's " Histoire de la Libération "). The forthcoming third volume of the memoirs will probably tell the story of the struggle for power with the communists and of the way in which General de Gaulle was set aside once the communist danger had subsided. With the return to real life politics reasserted its rights.

For all the haughty elegance of the style (which does not quite come off in the accurate translation), the memoirs cannot be compared with Churchill's own as a history of the war. They do not deal with the heart of the matter. Only occasionally does the general glance at the main course of the conflict. Much place is taken by questions of protocol and prestige, the reassertion of gaullist authority over, say, Madagascar or the Pacific islands. Rather than a history of the war, it is a story of the French effort, the restatement of the Gaullist legend, which some Frenchmen needed to restore their national pride. It is significant that in the general's version more emphasis seems to be put on the exploits of French army units than on the popular movement of the Resistance.

This book will be read not only because of the light it throws, together with its documents, on important side-issues of the war. Its author has now returned to power, and readers will also seek in these pages clues to his policies and personality. In foreign affairs, General de Gaulle's chief resentment was against the United States and Roosevelt's alleged bid to dominate western Europe through an American peace. His main grudge against the British—besides the Middle East—was their subservience to the United States. Churchill's reported outburst: " . . . each time we have to choose between Europe and the open sea, we shall always choose the open sea. Each time I have to choose between you and Roosevelt, I shall always choose Roosevelt " has left its mark as a statement of policy not a personal slight. Diplomacy, the General admits, recognises only realities.

As to the personality, it is revealed throughout the book. Some will be impressed, others jarred, by that third person singular in which the author writes about General de Gaulle. He undoubtedly considers himself an instrument of destiny. Ever since 1940 he could echo undisturbed, whatever the circumstances, the famous motto *L'Etat c'est Moi*. All collaborators are paid a compliment. But politicians, parliaments and elections are seen as a nuisance hindering the unity between " the people and the leader." Having reduced these " nuisances " to a minimum, General de Gaulle is still trying to perpetuate his legend. But politics, too, recognises only realities.

Land's End to Margate

The English Channel

By J. A. Williamson.
Collins. 381 pages. 25s.

THE English Channel has been generally more valued than loved. We know that it has saved us from Hitler and his less horrible forerunners, but personal memories of seasickness and herded formalities in customs sheds are apt to dim the glow of historical consciousness. The yachtsman and the sailor, of course, view the matter differently. They know, as Dr Williamson knows, that the Channel does not consist of three or four ports served by boat trains but extends from Land's End to the mouth of the Thames. To write the history of so wide and various a stretch of coast from prehistoric times to the present day, to watch the passing ships with the eye of a seaman and the curiosity of an economic historian, to evoke vanished landscapes and to observe existing ones with hard, unsentimental realism are tasks which perhaps no one except Dr Williamson would have undertaken. That he succeeds at every point, that he is always interesting and often brilliant, will come as no surprise to those who know his books. He masters the unwieldiness of his subject by the wholeness of his learning, the force of his intellect and, above all, the sharpness of his vision. What could have easily amounted to no more than the garrulity of an antiquary with a taste for walking and sailing becomes an original insight into the history of England.

To select from a book in which the geological changes of prehistory are handled with the same ease and lucidity as the religious fashions of Victorian seaside resorts takes some thought. Of all the chapters that on the invasion of 1066 perhaps displays at its highest the author's power of reducing obscure and diverse evidence to

an elegantly simple conclusion. William chose to land at Hastings, argues Dr Williamson, because the eleventh-century coastline offered him an easily defensible peninsula, a kind of Torres Vedras, from which he could undermine Harold Godwinson by a combination of political intrigue and destructive raiding in the Viking tradition. The case is so convincingly put, and the alternatives are so fairly examined, that one can hardly doubt the soundness of the verdict.

If this chapter is the most original and powerful piece of historical criticism in the book, it is the chapters on the Elizabethan scene and the war with Spain that show the author's evocative and descriptive powers at their most compelling. Dr Williamson has studied the Tudor seamen so intensively that he has half become one himself. Their way of looking at things has left its mark on his own mind. He scorns to conceal his likes and dislikes beneath an insipid impartiality. The sympathy that animates his picture of Plymouth in the years before the Armada is no mere antiquarian emotion. The later chapters describing the wars and the smuggling of the eighteenth century, the development of the holiday resorts and the coming of the railway are full of good things. Brighton, it seems, specialised in the liverish while Hastings catered for those with weak chests. The present and probable future of the coast is viewed with philosophic distaste. The book is admirably illustrated and handsomely produced and the maps are abundant and clear.

The Roots of Crisis

Consciousness and Society: *The Reorientation of European Social Thought, 1890-1930*

By H. Stuart Hughes.
MacGibbon & Kee. 460 pages. 30s.

MINDS were dangerously confused between the two wars by explanations of the growth of anti-democratic movements in terms of the peacemakers' mistakes and of events after 1918. During the second war it became more fashionable to blame the economic consequences of the war, rather than of the peace. The time has come for historians to show that even this was too foreshortened a view, and that already by the end of the nineteenth century European civilisation had reached a condition of endemic crisis. So much was violence a feature of the twenty years before 1914 that the war itself may be seen as but an extreme manifestation of a nihilistic, destructive trend already apparent in the social and political order that science and technology, industrialism and nationalism, had created during the previous century.

The deeper roots of this crisis can be found in the realm of culture and ideas, and it is the outstanding merit and importance of Professor Hughes's book that it unearths and exposes to analysis these deeper roots. Intellectual innovators in the 1890s attacked "positivism," by which they meant that often arid intellectualism and scientific rationalism of the mid-nineteenth century which had led, whether through dogmatic anti-clericalism (as in France), through Marxism, or through "social Darwinism," to a bleak and dehumanised determinism. While Bernstein and Sorel launched against Marxism critiques of contrary purport, Nietzsche and Freud laid the foundations for a completely new attitude to the role of human nature in society. In philosophy the clash between positivism and idealism was superseded by the ideas of Bergson, of Croce, and of the new sociologists—Durkheim and Max Weber. This remarkable ferment of ideas was taking place before men experienced the upheaval of war; and the thought and culture of the 1920s can be understood only as the impact of this experience upon a culture already in the throes of total reorientation.

Such, in brief, is Professor Hughes's thesis. He illustrates it mainly by studies of Sorel, Croce, Bergson, Weber, and of writers like Proust, Benda and Spengler. He confines himself to France, Germany and Italy, where he finds this "cluster" of genius, with only side-glances at trends of thought in Britain and the United States. The book is avowedly less a history of thought than a study of selected aspects of one theme—the theme of how men strove to reconcile the rationalist traditions of western thought with the discovery that intuition and the unconscious played so large a part in human behaviour. The impulse to displace thought by action, intellect by "inner drives," and civilised behaviour by "direct action" found its theorists before 1914, if it found some of its main practitioners after 1918. This admirable, reflective, provocative book deserves close study by all who would understand the mid-twentieth century.

Prehistoric Art

The Search for the Tassili Frescoes

By Henri Lhote.
Hutchinson. 236 pages. 35s.

HOW savage, after all, were the savages? How simple-minded were they? And what, applied to the art they made and considering the art that we make, can "primitive" be thought to mean?

When all the obvious things are said in answer there will be left, for those who look at this remarkable book, a residue of healthy wonder. Henri Lhote has claimed with good reason that the Central Sahara is the greatest and grandest of all the known galleries of prehistoric art—not only for quantity but for quality as well. Anyone who may still doubt the profound æsthetic virtue of the best of the ancient wall painting and engraving should look at the seated couple of Séfar, in the Tassili, as copied by M. Lhote and his colleagues and presented here for the first time to a wide audience. What is surprising, even breathtaking, is not the skilful naturalism of so much of this prehistoric art—one knows about that from Lascaux and Altamira. Here, for the first time in prehistoric achievement, is the sensitive and realistic portraiture of human beings. And yet this painting is several thousand years old. Those savages were oddly un-savage, curiously sophisticated.

Henri Lhote is something of a French Doughty of modern times. For years he has followed the long Saharan trails, pursuing anthropological inquiries and coming out, from time to time, with essays of scholarly distinction. His copies of wall art from the Tassili mountains were the result of his own individual enterprise together with the financial and other backing that made it possible for him to take a team of copyists to the Central Sahara, maintain them there through sixteen grilling months of work, supply them by parachute, and carry off triumphantly, at the end of it all, a superb collection of copies of ancient masterpieces that were little known before, or not known at all. Here are indications of the oldest negro art, far older than any that was known to exist before (and a good deal farther to the north than many had thought probable); here are fine sketches of the old Cretan-style chariots that crossed the Sahara in pre-Roman times; here are the echoes of Ancient Egypt, gods, spirits, even boats: and all of these moulded and transformed by strong styles native to this desert land that once was green and fertile, teeming with game and cattle. M. Lhote is greatly to be congratulated.

But he is not to be congratulated, greatly, on the kind of book he has chosen to write. He differs from Doughty in point of writing skill. He is not a good narrative writer—nothing to hold against him, indeed, were it not for the fact that he attempts here a kind of book that must stand or fall by its skill in narrative description. Except for the photographs—in monochrome and polychrome—the book is unworthy of its subject. One cannot help wishing that the author had forgone the temptations of a "quickie"—however well translated by Alan Houghton Brodrick—and concentrated on making as readable as possible the serious and discursive work which he will presumably publish later on. As it is, he tends to get the worst of both worlds. His jolly trivialities merely interfere with the matter of the book, or else reduce the reader to frustrated boredom. And where he allows himself to trench on interesting speculation he does it less than justice by sheer skimping of the evidence. Can we really accept—from the sketchy case that he makes out—that the Roman legate, Cornelius Balbus, pushed on from the Fezzán in AD 19 and actually reached the River Niger? And if it is worth introducing the general reader to one of the great attested pre-Roman chariot trails across the Sahara, why not introduce him to the other as well—the trail that came down from what is now Morocco to the Niger above what is now Timbuktu? M. Lhote would have done far better to have given us more of his splendid pictures and less of his chatty text—or else a text that did justice to his subject and to himself.

Scepticism on Population

Social Theories of Fertility and the Malthusian Debate

By D. E. C. Eversley.
Oxford University Press. 322 pages. 35s.

THE subject-matter of this book is at once wider and narrower than its title would suggest. Narrower, because the "Malthusian debate," which serves its author as a pivot or central point of analysis and narrative, is literally the controversy in which Malthus engaged, not the still-continuing and similarly labelled argument about the causes and results of demographic explosion; broader, because around this debate there is organised a survey of practically every theory that has ever been held, from the ancient world to the present day, about the determination of fertility. It includes not only economic ideas, but religious, physiological, sociological, and political ideas as well. Dr Eversley's erudition is solid, his organising ability considerable, and his style, after that of many practitioners in this field, a relief; and if the final impression left by his book is of a certain confusion, this is perhaps rather creditable than otherwise. "Population studies," he says in his final chapter,

> stand at the very centre of the social and moral sciences, in the sense that the numbers of mankind are the result of, and influence, all other movements in society. . . . The movements of population . . . cannot be separated from the totality of human institutions and beliefs, or physical manifestations affecting human beings.

Any single "law" of population is in fact bound to be inadequate. Malthus's subsistence theory, its successor and mirror-image the modern standard-of-living theory, the Marxist labour-demand theory, the theories relating to the status of women, to the law of property, to the degree of urbanisation, to dietary habits, all oversimplify to different and sometimes ludicrous degrees the almost infinitely complex reality. The most that Dr Eversley will concede, exchanging the role of chronicler and analyst momentarily for that of umpire, is that the observations that link rising standards and declining fertility "warrant the assumption of continuous interaction." But the precise mechanism of that interaction remains obscure; and it would be rash to extrapolate its results into the future either for those societies in which it has been historically observed, or for others undergoing similar social and economic changes.

This being so, an exhaustive survey of theories of fertility may seem a waste of time both for author and reader; and indeed "Social Theories of Fertility and the Malthusian Debate" is likely to be consulted for reference by twenty readers for every one who reads it through. The counterpart, however, of Dr Eversley's contention that "the movements of population cannot be separated from the totality of human institutions and beliefs" is the conclusion that in any age leading ideas on population must reflect and illuminate, to varying degrees, current changes in institutions and beliefs. They are pointers to social evolution, symptoms of social stress; and Dr Eversley's book has a value for the historian distinct from its interest to the demographic specialist.

Sociology of Colour

White and Coloured

By Michael Banton.
Cape. 223 pages. 21s.

RACE relations in a country like Britain provide the sociologist with a laboratory for the dissection of living tissue that students in other branches of the social sciences may envy. This book therefore arouses high hopes, which are raised the higher by its exordium noting that "the sociology of race relations has suffered considerably from the idea that all could be explained in terms of economics or psychology." But those who expect the explanation in terms of sociology to come as a revelation will be disappointed. Chapter Ten of Mr Banton's study, entitled "Quod Erat Demonstrandum," sets out a series of propositions to which his—very skilled and interesting—study of the subject leads; but they are devastatingly obvious. Thus "C1":

> *That in any society the network of social relations is maintained by common agreement about the behaviour appropriate to particular relationships. Strangers are people who are unaware of these norms. The coloured man is considered the most distant of all strangers.*

We can all accept this, after a little reflection, as we can all accept the theory of marginal utility—except, perhaps, when we consider that a West Indian might fit better into a suburban cricket club, especially if he was a good change bowler as well as a sound bat, than a Czech refugee. Undoubtedly, if it came to the courtship of the secretary's daughter, their roles might be reversed. That is sociology.

However, it is important that we should have our ideas about the relations of our group with outsiders combed out systematically to its essentials, and this Mr Banton does, even if the systematisation from the evidence is less interesting, or even suggestive, than the evidence itself. It may even be objected that the evidence contains rather little that is new, and can hardly be described as exhaustive; it combines some new measurements derived from further attitude testing in universities and elsewhere with some very general descriptive material, much of it derived from other writers. Nevertheless, we should all readily agree, upon a demonstration that requires rather little formal evidence, that (D2) *Despite the tendency to regard "coloured workers" as one category, group relations are structured by the rights claimed and the obligations observed by the immigrants.*

Mr Banton's findings show that while there is relatively little subjective prejudice against coloured people in Britain, there is still a good deal of discrimination (though he does not clearly and accurately set out how much). In the muddle of difficulties, local conditions, historical attitudes, cross currents of class difference, and competition for scarce goods lie the reasons, which are inevitably complex. As he points out, goodwill and moralising do not banish them; and—though this seems hardly a matter for sociology—he sets out a decalogue for improving inter-group relations. The first is that "the more frequently members of the two groups meet one another in everyday situations, the more friendly will relations between them be." The others enjoin tact, generosity, setting a good example, and so on; but, in stating the duty of loving one's coloured neighbour as one's white self, Mr Banton examines ways in which he can be made a neighbour—by deliberate organisation. This is all very useful. The book should help local authorities, the clergy, youth leaders, and all practising Christians besides encouraging more research into this most urgent question by sociologists. It could have been warmly commended to the voters of North Kensington. But, despite its rather formal approach, it presents a challenge to everyone of goodwill to "think through" his ideas on the problem of race relations.

DISARMAMENT

AN OUTLINE OF THE NEGOTIATIONS
ANTHONY NUTTING

A short guide to the negotiations which have been going on since 1945 between the Western Powers and the Soviet Union on measures to control conventional and atomic armaments. '. . . a valuable, able, and frightening little book.' **The Times Literary Supplement** *8s. 6d. net*

ESSAYS IN WORLD ECONOMICS
J. R. HICKS

The essays included in this volume fall into two groups: one concerned with world trade, and the relations of the British economy to it (including the question of wage inflation) in the years since the war; the other with general (and special) problems of underdeveloped countries. *21s. net*

ECONOMIC FLUCTUATIONS IN ENGLAND 1700-1800
T. S. ASHTON

The chronological account of the oscillations of prosperity and depression offered in this book is based on statistical material and diaries and letters of the period. *21s. net*

THE PROPHET UNARMED TROTSKY 1921-1929
ISAAC DEUTSCHER

'. . . gives the fullest, the most intelligible and most intelligent account of the war leader's eclipse and disgrace that has appeared. Mr Deutscher produces a mass of new information . . . drawn from the Trotsky Archives at Harvard and other voluminous sources. He has woven it all together with the skill and assurance of one who knows the field inside out.' **The Times.** (Illustrated) *36s. net*

LETTERS

Take-Over Bids

SIR—Take-over bids have been a cause of growing concern for some time and the Jasper case will presumably lead to some belated action. There are, however, two quite different issues that have to be distinguished: first, the prevention of fraud and improper speculation; secondly, the case for discouraging mergers in order to prevent too much industrial concentration.

Under the first heading comes the promised review of company law. Attention should also be paid to the powers of the stock exchange council. Even as a casual visitor to the city I have heard rumours over the past couple of years about dubious dealings in some property shares. Why did the council not act sooner or recommend action by a government department? If its powers were inadequate, how can they be increased? Is the real answer an official securities and exchanges commission after the American model? Why, too, was nothing effective done by the Registrar of Friendly Societies? Was it lack of adequate powers? Was any increase in powers proposed? What reforms are now needed?

The second issue is quite different. How will mergers affect economic efficiency and social well-being in the wider sense? The new Restrictive Practices Court has so far been remarkably successful in carrying out the objectives of the act of 1956, but it may be asked whether the last part of the act which deals with the attenuated monopolies commission is likely to be as effective. An overburdened commission has been left to work slowly through the cases referred to it and it is far from clear what the Board of Trade hopes ultimately to do. Is there a case for a drastic revision of this part of the act in order to give a clearer indication of where the public interest is deemed to lie? In order to deal with mergers do we now need something like Article 7 of the Clayton Act, as revised in 1950?

Of course mergers sometimes increase efficiency, but there is no presumption that this will always be the outcome. The hackneyed observation that "cartels are more harmful than trusts" probably exaggerates both the extent to which competition is eliminated within cartels and the probability that trusts bring economies of scale. There are, moreover, some special cases where it should be presumed that further mergers are contrary to the public interest even if technical efficiency is likely to be increased: the newspaper industry is the most outstanding example.

These highly controversial matters are likely to be more important in the long run than the more spectacular aspects of take-over bids.—Yours faithfully,

THOMAS WILSON

The University,
Glasgow, W2

Twelves and Tens

SIR—Whether or not Mr Bishop is right in saying that duodecimal multiplication tables are more memorable than decimal ones it would seem that he has in mind a more basic change than have most proponents of a change to decimal coinage. Surely he is proposing the introduction of a new scale of notation under which two-thirds of 10 would equal 8 and one-tenth of 10 would equal 1.1666. . . .

If such a new scale were to take the place of our present scale it would still be possible for students to remember the ratio of the value of *pi* to the number of degrees in two right angles by remembering the date of the second Jacobite rebellion or vice versa—putting the duodecimal in the right place. But the historians would have to revise all their dates with the exception of 9 BC to AD 9 inclusive.—Yours faithfully,

W. J. COURCOUF

Beckenham, Kent

Restrictions on Motorists

SIR—I read with great interest the article "Red Tape on the Bonnet" in your August 15th issue, to which I can add the following example. For the first time this year I took my French wife to the United Kingdom. We crossed by the Cherbourg/Southampton air ferry, having duly secured before taking off the famous triptych. By mistake the French customs took away folio No 2 instead of folio No 1. We were immediately in deep trouble and it took us an hour and a half to get out. Very kindly, the RAC Intendant agreed to issue a new triptych, for which of course, we had to pay. While this was being done, a long queue of cars built up; it was a complicated business and required a lot of assistance. I did timidly suggest that, as the air ferry kept coming and going, it might be possible to ask the air hostess or any of the officials to arrange with the French side to exchange the folios or even for the British to accept page No 1 instead of page No 2, as obviously only the French customs could own page No 1. All my arguing proved inadequate and you can easily imagine the impression of a French lady landing for the first in our country. My wife swears she will never again spend her holidays in England.—Yours faithfully,

Paris E. L.

'Pier Wharf, half an hour from now!'

An urgent call . . . a waiting load . . . perhaps perishable goods – it happens every day. And the Independent haulier can give prompt, expert service. There's no red-tape to delay his decisions or slow up his performance.

It's one of the advantages of the *personal service* you get when you call in Free Enterprise Road Haulage . . . service that has won many long-standing regular customers in every branch of commerce and industry. They like the close attention the Independent haulier always pays to their special instructions. And they know it's his keen competition that has held down the price of Road Haulage since de-nationalisation.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Slowly into Space

WASHINGTON, DC

AMERICA, like the Soviet Union, has been celebrating a space-age birthday in the past week, but the sounds of revelry have been distinctly more subdued in Washington than in Moscow. While the Russians have been commemorating the second annniversary of their pioneer sputnik by sending a rocket to take a look at the dark side of the moon, the Americans have been taking a look at the dark side of the National Aeronautics and Space Administration. This is the civilian body which was set up a year ago and charged with the chief responsibility for catching up with the Russians. So far it has failed to close the gap to any perceptible degree, and its chances of doing so in the future depend on the rather pious hope that it will get its second wind, in the shape of more powerful rockets, before the Russians do.

A chill caution can be felt in Washington; the mood has changed markedly since last October, when it was popular to think that the battle was half won once the Americans had rolled up their sleeves. Dr Glennan, the head of NASA, recently told his fellow-countrymen that "we are not nearly as advanced in space technology as we had thought or hoped"; on Monday Dr York, who runs research for the Defence Department, said that the United States might have to take second place for the next few years.

It is true that up to now the Americans have hurled twice as many satellites and probes into space as the Russians, although they started four months later. They have put twelve into orbit about the earth, and sent one to toast itself round the fringes of the sun, compared with the Russians' total of three satellites and three shots to the moon or beyond. It is also true that the miniature instruments which the Americans have carefully packed into their smaller vehicles have probably filled the scientists' notebooks more satisfactorily; perhaps the most important discovery in space so far, the finding of the Van Allen radiation belt around the earth, was made by an Explorer satellite weighing less than a hundredth as much as the biggest Soviet monster.

But in space, as in boxing, weight and punch count for most in the long run. The biggest weight the Americans have managed to get into orbit so far, not counting the final stage of the accompanying rocket, is 400 pounds, and the most powerful launching vehicle they have been able to call upon is the Atlas intercontinental missile with an initial thrust of 360,000 pounds. Compared with the Russians, who have been able to get nearly 3,000 pounds of instruments aloft with the aid of rockets which are thought to generate a thrust of anywhere up to 700,000 pounds, this leaves the United States in the unenviable situation of a flyweight squaring up to Joe Louis.

[*A different explanation for the American lag is discussed on page* 164.]

Such improvement as there has been in the last year has been due to the coming into service of bigger military rockets which the scientists have been able to adapt for their own use. The Atlas, which is now available, is powerful enough to launch two spectacular projects which may go part of the way towards restoring the Americans' lost prestige in the next year or so. Oddly enough, it is Russia's latest success which may be imitated first. It is believed that the United States will try to place a satellite in orbit around the moon about the end of November; the 370-pound payload—over half the weight of the one the Russians sent up this week—was ready to fire early this month, but part of the rocket failed in a preliminary test.

The Atlas, that shoulderer of so many of America's problems at the moment, will also provide the vehicle for Project Mercury, the plan to send a man circling around the earth. Most of the difficulties to be resolved before this is done involve, not the launching rocket, but the capsule that will carry the passenger. Although Project Mercury was one of the many schemes about which the experts became less optimistic this summer, progress has been unusually smooth. A test capsule has been fired and recovered, and it has been established that the heat and the acceleration to which the occupant will be subjected are within the range of human tolerance. The unofficial guessers who sprout like mushrooms around NASA's headquarters think that Mercury may possibly be sent winging by the end of 1960.

To overtake the Russians, however, the Americans will have to wait for the new family of launching vehicles which NASA is now preparing. The first two of these, the Vega and the Centaur, will probably be ready for firing in 1961. These will have a comparatively modest thrust—they are both variations on the Atlas theme—but they will overcome the problem of guidance which has so far prevented the United States from hitting the moon. American scientists believe that their guidance systems are basically as good as those of the Russians, but up to now they have had to sacrifice some accuracy in modifying the military rockets which they have been using; with the Vega and Centaur this will no longer be necessary.

It will also be 1961 before the Saturn, a cluster of rockets with a total thrust of up to 1.5 million pounds—the first launching vehicle more powerful than those the Russians have at the moment—is ready for firing. It will probably be 1963 before a single-chamber engine with equal thrust is available. Since the latter will be the first vehicle big enough, when linked in clusters, to carry a man to the moon, American feet are unlikely to disturb the lunar dust for a long time.

THUS the process of catching up with the Russians is likely to take at least two more years; if Soviet rockets do not stay obligingly within the 1.5-million-pound mark in the meantime, it may take a good many more. In this long haul the Americans are liable to encounter three major difficulties. One is financial. This summer's experience with Congress—when the House of Representatives made a sharp cut in NASA's budget, only part of which was subsequently restored—has bruised the faith of those who thought that in this one field at least Congress would keep its purse-strings loose. This year the United States

is spending a little under $1 billion on space, of which NASA accounts for about half and the Department of Defence for most of the rest. Dr Glennan thinks that the total ought to rise to $2 billion a year in the early nineteen-sixties. His experts believe that they detect a close relationship between the frequency of Soviet successes and the enthusiasm of Congress for providing the funds to match them ; thus they find a roundabout consolation in the present machine-gun rattle of Russian shots to the moon. But a runner who puts on a spurt only when the man in front increases his lead is unlikely to find many people betting on him.

The second difficulty lies in the still unresolved relationship between the civilian agency, NASA, and the Defence Department's interest in space. So far there has been relatively little conflict, because anyone who thought he could send something into the void has been welcome to try. But, as the number of projects increases, so will the difficulty of deciding which of them should be controlled by the services. Senator Symington, who conducted an investigation into the problem earlier this year, found that the liaison committee between the two halves of the space programme was not working properly. Although the committee has now been strengthened, it is still confined to making recommendations ; in cases of conflict a final decision can come only from the President, and Mr Eisenhower is notably bad at settling these jurisdictional disputes.

The third difficulty goes deepest. There are signs that America is already running into a shortage of scientists. As Dr Glennan put it recently:

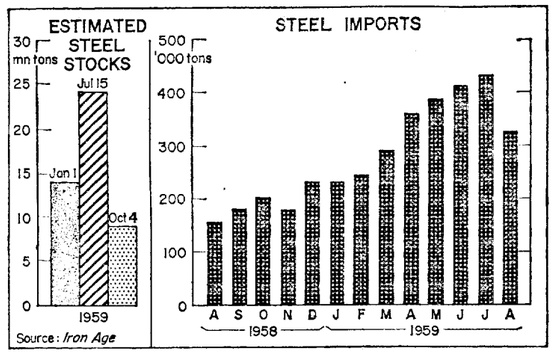
> We have used up much of our missile technology. We have drawn heavily on our capital—the knowledge and experience accumulated . . . over the past ten years or so.

The most pressing need is for more technologists, properly trained in the fundamentals of science, who can convert basic theory into new practices. Already NASA, which is empowered by Congress to pay its scientists more than other government agencies may, has been sucking talent away from other bodies. This is the first field in which the deficiencies of American education have made themselves felt sharply. In the long run the answer may be found in the schemes—on which Congress made a tentative start last year—for giving federal aid to the teaching of science in schools. But this solution is half a generation away ; in the meantime the Russians, pouring out their flood of technologists, may well be able to consolidate their lead.

Strike Suspended

THE dockers' strike which broke out unexpectedly along the Atlantic and Gulf coasts last week, closing ports which handle four-fifths of America's shipping, has been suspended. Mr Eisenhower lost no time in using the machinery provided by the Taft-Hartley Act for such emergencies. Once the fact-finding board which he had appointed made its report, the government applied to the courts for an injunction requiring the 70,000 strikers to return to work for 80 days. If the dispute is not settled after 60 days, the strikers vote to accept or refuse the employers' last offer. At the end of 80 days, whatever they have decided, the injunction is lifted and the men are free to walk out again. In 10 of the 14 cases in which such boards of inquiry have been appointed, a settlement has been reached without any further stoppage of work—though this was not true of the last two dockers' strikes.

Why then has the President been so reluctant to commit himself to the use of the injunction in the 13-week steel strike, giving both sides until last Thursday, October 8th, to reach a voluntary settlement? A dock strike, of course, affects shipments of food and perishables almost at once ; this one also threatened to cut off the imports of foreign steel which have been keeping up a welcome trickle of supplies. But the steel strike has gone on so long that, even if production is resumed next week, many shut-downs are unavoidable. Both strikes hinge, basically, upon the issue of job security ; the employers in both cases want freedom from union rules so that they may cut costs. Both disputes are embittered, the dockers because the New York employers threaten them with a costly damage suit for walking out in sympathy with their southern members in spite of a promise to stay on the job until



October 15th, the steel workers because they feel their jobs are at stake and because the employers' last offer (which was also their first specific one) actually involved a reduction in take-home pay. Only benefits, such as insurance, would be increased in the first year and the scheme involves contributions from the workers. No trade union, after such a costly strike, could accept such an offer except as a last resort.

Even some of the steel companies are now said to fear that use of the Taft-Hartley Act in their industry would create more problems than it would solve and would leave a legacy of bitterness. What the President wants is a settlement, not a suspension, of the strike. If the steel workers walk out again in January production, employment, the balance of the Budget, and prosperity itself will be jeopardised—and 1960 is election year. Moreover, many other negotiations are being held up for lack of a pattern-setting steel agreement. Finally, once the Taft-Hartley Act is invoked, it cannot be used again. But with the collapse of negotiations this week Mr Eisenhower probably has no choice.

Round to du Pont

VICTORIES in the government's ten-year-old battle to sever the ties between two industrial giants, each first in its own field—the General Motors Corporation, the biggest manufacturer of automobiles, and the E. I. du Pont chemical company—have gone first to one side and then to the other. Last week it was the turn of du Pont. Judge LaBuy, who dismissed the case against the company in 1954, only to be over-ruled by the Supreme Court in 1957, has decided that du Pont can comply with the Supreme Court's decision without selling any of the 63 million shares which it holds in General Motors, provided that it does not exercise the voting rights. Under his settlement these would be transferred to du Pont's shareholders, and those received by two du Pont family holding companies would be "sterilised," that is shorn of their voting rights. No officer or director of the du Pont company would be allowed to serve as an officer or director of General Motors (five do so at present) and any preferential trade agreements between the two companies would be cancelled ; du Pont insists that none exist.

Each child born this year in the United States will need, on average, 15 tons of paper during its lifetime.

During the next 20 years this figure, it is estimated, will rise to 25 tons. Certainly the trend is clear. The world is going to need more paper and more things made from paper. Bowaters are deploying their wide-spread and diversified resources in line with this trend.
In North America as well as in Britain, mills and factories are ready, or being made ready, to follow the indicator of rising demand.

facts point to a buoyant future at **Bowaters**

GREAT BRITAIN UNITED STATES OF AMERICA CANADA AUSTRALIA SOUTH AFRICA REPUBLIC OF IRELAND NORWAY SWEDEN

The Department of Justice's case, which the Supreme Court upheld, though only by a 4 to 2 majority, was that du Pont's ownership of 23 per cent of GM's outstanding shares—the largest single holding, worth $3.5 billion—gave it a privileged position as a supplier of fabrics and finishes to GM and therefore was illegal under the Clayton Act because it "tended to create a monopoly." The remedy proposed by the department was that 43 million of the GM shares should be distributed to du Pont's shareholders and the rest, which otherwise would have gone to du Pont holding companies, should be sold over a ten-year period. Instead, the Judge accepted, almost completely, the company's contention that this would injure many innocent people, partly because the value of both du Pont and GM shares would fall and partly because the authorities would treat the distribution as ordinary income for tax purposes.

Congress began, but failed to finish, work on Bills which would have eased the burden of such divestitures upon shareholders. One reason why the Department of Justice is almost certain to appeal is that unless it does so such Bills may die in the next session; this would mean that in other anti-trust cases the fear of injuring the innocent would prevent the courts from prescribing drastic remedies. Moreover, the Department of Justice cannot afford to see established the view that the transfer of voting rights is a satisfactory substitute for the sale of inter-company holdings. It seems certain to try to persuade the Supreme Court that Judge LaBuy overlooked much of its case against du Pont—the fact, for example, that 90 per cent of the company's sales to the automobile industry are made to GM—and that the transfer of voting rights will not end what it regards as an unholy alliance; it fears that this will be strengthened if plastics replace steel in automobile bodies. With 20 per cent of its resources concentrated on trying to split up General Motors, the anti-trust division is not going to admit defeat in this related case, particularly as all the four justices who ruled against the company in 1957 are still sitting on the Supreme Court.

Republicans' New Clothes

LIKE the British Conservatives after 1945, the Republicans, after their trouncing in the congressional elections last year, have been busy refurbishing their house to make it look less like the mansion of big business and the rich and more like the sanctuary of the middle-of-the-road American. The task was given last April to a forty-man group under the chairmanship of a remarkable young industrialist from Chicago, Mr Charles Percy; it has presented its four reports to the Republican National Committee just as the party's stock is beginning to recover. So far the committee has made public only the reports on science and technology and on national security (which are likely to be less controversial than those on economic opportunity and human rights) and a general introduction entitled "Decisions for a Better America."

These show, however, that the committee's thought has not been radical; it bears, instead, a striking and not altogether accidental resemblance to the empiricism of modern British Conservatives. A declaration of faith in the importance of individual freedom and enterprise is matched by a recognition of the duty of government to regulate economic life, where this is necessary, and to set basic standards below which no member of the community need fall. The science report recommends more spending on basic research, but primarily by private organisations stimulated by tax reliefs; it strongly opposes centralisation of control over science in the federal government. In short, the committee seems to be endorsing the principles of the Eisenhower Administration while recommending that they be practised with greater vigour.

The project met with considerable initial opposition from Republican conservatives in Congress, but it was endorsed by the President and by the Vice President, who has the strongest possible personal reasons for seeking an attractive new image for the party. However, his presidential prospects have soared without benefit of the committee's work. Three months ago the Gallup public opinion polls showed him to be lagging 22 points behind Senator Kennedy, the strongest Democratic contender; now he is two points ahead. If this continues, no one will be able to rob Mr Nixon of the Republican presidential nomination with the deadly argument that destroyed Senator Taft: "He can't win."

Mr Nixon's increased popularity dates from his Russian visit. Most commentators feel, moreover, that the postponement of Mr Eisenhower's trip to Moscow until next June is a lucky turn of events for Mr Nixon. It means that the issue of peace will still be dominant and probably untarnished by any renewal of the cold war when the nominating conventions meet. If all goes well Mr Nixon, after the fashion of Mr Macmillan, will be able to present himself as the preliminary ice-breaker who initiated the whole process and who is the natural man to carry it further. One irritating fly in this ointment is the personal dislike for Mr Nixon shown by Mr Khrushchev. But even this may be turned to the Vice President's advantage. Does it not prove, some ask, that he has the toughness necessary to deal with the Russian dictator?

Unprofitable Euratom?

FROM A SPECIAL CORRESPONDENT

THE international airlines seem, so far, to be the principal economic beneficiaries of the joint US-Euratom programme to produce electricity from atomic energy. All through the summer executives of American companies which are bidding for contracts have shuttled to and fro between their offices and those of electricity companies in the Euratom countries. But these nuclear salesmen have become extremely discouraged, for they have found the European firms to be tough bargainers and doubtful customers. With American help, the Euratom community is sponsoring a programme of building American-designed atomic plants with a capacity of 1 million kilowatts; this is regarded as the corner-stone of Euratom's wider goal of 3-4 million kilowatts of generating capacity by 1967. But these plants are to be built, financed and owned by individual firms in the six countries.

Outside the Italian SENN project, which has already been awarded to the General Electric Company and which is financed largely by the World Bank, not one of the four other European firms that filed letters of intent with Euratom on May 28th is considered certain to sign contracts with any of the American nuclear companies. Yet the deadline for concrete proposals by the Europeans to the Brussels commission, October 20th, is nearly here. The weary salesmen took wry pleasure in press reports of a parliamentary committee's complaint that "unfair commercial competition" from America has made it hard for British companies to sell atomic plants in Europe. Even those sales to Euratom that may be made are no longer regarded as harbingers of a growing market for nuclear equipment.

The Americans' gloom is based on two discoveries. The first is that European electricity companies evidently are no more interested than their American counterparts in building atomic power plants with their own money, no matter what kind of American guarantees and loans are thrown in. The second is that Euratom and European manufacturers are determined to import as little as possible from the United States, even for the first plants.

Before M. Hirsch, the president of the Euratom commission, visited the United States in June, talks with executives of the

European electricity companies had created the impression that Euratom would fall far short even of its scaled-down goal of 3-4 million kilowatts of capacity by 1967. This is partly because the loan of $135 million at 4.5 per cent from the Export-Import Bank is no longer compellingly attractive to many European firms; nor are the Atomic Energy Commission's guarantees on fuel costs, because the American private companies are guaranteeing fuel life for a good deal longer than the AEC. M. Hirsch, however, radiated such confidence when he declared that American pessimism over Euratom was "grossly exaggerated" that he convinced most of his hearers that he was more than a match for any obstacles that may arise. The forcefulness with which he laid down the "facts of life" at a closed meeting in Brussels between representatives of the European electricity companies and manufacturing firms is believed, in the United States, to have been responsible for most of the letters of intent submitted in May.

But if M. Hirsch reassured the officials of American nuclear firms that both the basic Euratom and the joint US-Euratom programme would be carried through, he left no one encouraged about the part likely to be played by the American industry in Euratom's future. At one informal session in New York M. Hirsch is said to have answered a query about the kind of American equipment which Euratom wants to import with two words: "Grey matter." None of the American participants was impressed by the probable profits on such exports of know-how and designs. M. Hirsch later added that imports of equipment which require guarantees or warranties, such as reactor cores or fuel elements, may be needed for the first plants until European manufacturers can step in.

M. Hirsch insisted that there are no "buy American" strings on the Export-Import Bank loan of $135 million to Euratom to help finance the 1,000-megawatt joint programme. Normally a loan from the Export-Import Bank has to be spent in the United States, but as far as can be learned the agreement in this instance is much more loosely drawn than usual. One result is that the American nuclear companies are hastening to set up European subsidiaries, joint companies and licensing arrangements. Almost all of the major firms have done or are doing so.

The whole idea behind the joint programme—that atomic power will be competitive in Europe, where conventional fuels cost more, before it is in the United States, and that Europe will therefore offer an interim market for atomic power plants—has been attacked, as a "myth" and "form of economic and political legerdemain," by Dr Chauncey Starr. He is the general manager of the Atomics International Division of North American Aviation Inc., whose designs for organic-cooled reactors have excited some interest in Europe. North American Aviation has formed Interatom with Demag, the German heavy equipment company, and has an arrangement with the English Electric Company. Dr Starr, who is famous for his outspokenness, feels that the cost of producing electricity from Euratom's atomic plants has been underestimated compared with that from conventional plants.

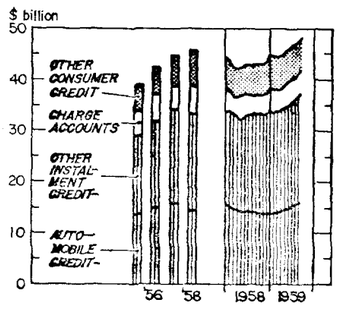
Nevertheless, the winning of Euratom contracts will carry real prestige and all the American firms are doing their best to secure them. For example, three American firms have each made three separate efforts to convince a group of six electricity companies in the Stuttgart area, called AKS, of the superiority of their services and products. "Each time they squeeze a little more information out of us and cut the price a bit," complains one participant in the sessions. Euratom and the Atomic Energy Commission are committing such effort and pressure to the programme that clearly at least three-quarters of the 1 million kilowatt goal should be reached. But the plants may not be completed by 1963 and 1965, the present target dates. There are still some American nuclear experts, however, who will argue that the international airlines will be the only ones, as well as the first ones, to make money on the programme.

Consumers Take the Credit

NEW YORK

While a determined effort is being made to restrict the borrowings of businessmen, American consumers have been accumulating new debt, through their instalment purchases, at a pace unmatched since 1955. After a year of recession in which repayments of old debts exceeded the contraction of new ones, instalment credit started rising sharply in the spring and by the end of August it had reached $37 billion; this is a 9 per cent increase since the begining of the year. At its current rate of expansion it is adding some $5.5 billion a year to the purchasing power of consumers. The Federal Reserve Board recognises that such credit is not responsive to its general curbs, but it is so much under attack already that it is reluctant to ask Congress to revive direct controls over consumer credit—an unpopular step which it would hardly take in an election year.

The prospect, therefore, is that the curve will continue to move sharply upward. The consumer gives little thought to the element of interest charge in his monthly repayments and, in any case, the increasing cost of money is being absorbed, to a great extent, by the lending institutions themselves. It has always been the policy of the banks to keep their charges on personal loans unchanged for years at a stretch, and the finance companies operate at all times at or near the maximum rates allowed under the usury laws. Many New York banks have, it is true, just introduced an increase of ½ per cent in the rates which they charge on personal loans, but this is explained as a permanent move to offset higher operating costs. The direct impact of tight money is being felt only at the margin; in the banks' relaxation of their strenuous efforts to gain new instalment customers; in the slightly higher standards of creditworthiness likely to be required by finance companies; and in the pinch on some of the smaller loan companies, which are being denied fresh funds by the banks and are unable, because of competition, to charge higher rates to their clients.



With automobiles absorbing nearly half of all instalment borrowing, consumer credit and sales of cars move hand in hand. If Detroit sells as many cars over the next twelve months as it hopes to sell, the volume of instalment credit must rise substantially above its present high level. Not all observers are convinced that this further upward surge will happen. Some point out that selling more cars by giving buyers longer to pay—the usual practice—is hardly possible when they are already given three years to discharge the debt. Others have faith that consumers themselves will draw back, now that repayments on all instalment loans are running at 13 per cent of total personal income after tax, a percentage that has never been exceeded in the past. But this argument overlooks the fact that, as a recent survey showed, there are many more instalment buyers today than there were four years ago. Moreover, the somewhat cheaper "compact" car should attract new customers.

Bill of Health—III

Running a Hospital

NEW YORK

To most Americans a hospital means a voluntary hospital. For not only are two-thirds of all admissions to voluntary hospitals, but it is with these institutions that medical research and teaching are mainly associated. In terms of capital assets or numbers of beds the voluntary system is, of course, less dominant; with public authorities carrying the chief responsibility for mental and other long-term patients, less than a third of all hospital beds are in voluntary institutions. In the United States these conform to no standard pattern and bear a strong regional stamp. Some of them were launched long ago by wealthy philanthropists; others were built, and have been supported, by different religious denominations; and in terms of numbers, the majority have come into being through the enterprise of local communities. While there are large hospitals in the metropolitan centres, the emphasis on local initiative has produced a host of small hospitals—many of them too small to operate efficiently. The "average" general voluntary hospital has 124 beds, but 40 per cent of them have fewer than 50 beds. By contrast a state public hospital averages 1,100 beds.

Voluntary hospitals receive no operating subsidies from public funds. They also make no profits and pay no taxes. Their main source of income is the fees paid by patients, either directly or through insurance schemes. For treatment given to the "indigent" (those on public assistance) they are reimbursed by the local authority, though often at rates well below cost. Public collections, private bequests, and in some cases income from endowments, add to their resources.

A voluntary hospital is under the general guidance of a board of trustees, composed of the wealthier and more public-spirited local citizens, and with some medical representation. The trustees concern themselves with general policy, with raising funds and with the appointment of a professional administrator to whom the day-to-day responsibility of running the hospital is delegated. The autocratic matron has long since disappeared, and the days of her successor—the doctor-turned-administrator—are numbered. Only some professional administrators have had a medical training as well. Under the administrator, a Director of Nursing has inherited part of the former powers of the matron.

The American hospital is first and foremost the workshop in which doctors and surgeons, acting as independent agents, carry on their activities. The line of demarcation between the hospital service and the medical profession is drawn with precision. A patient, for instance, will receive separate bills from the hospital and from the physician or surgeon (or both) who has attended him. Apart from the houseman and other resident staff, the voluntary hospital does not (with a few isolated exceptions) employ doctors on either a part or full time basis. Many administrators, disturbed at a situation in which the doctor calls the tune but has not himself any direct financial involvement or responsibility—except to his patient—would like at least a few key posts to become salaried ones.

Also offering private facilities are the proprietary hospitals run to make profits. They provide, in theory at least, the full medical facilities of a hospital. In practice they tend to be a mixed group, with at one extreme the sophisticated hospital offering a high standard of medical care against a rather more luxurious background than can be found in a voluntary hospital, and at the other the small rural hospital operated largely by a single doctor who may live on the premises.

Hospital costs—and charges—have been climbing much faster than have other prices; today a patient costs the average voluntary hospital $27 a day. Unable to replace human beings with machines, the hospitals have felt the full impact of rising wages. Indeed, the ratio of employees to patients has gone up steadily with the greater complexity of medical care and the more rapid turnover of patients. Today the average voluntary general hospital employs between two and three persons for every patient. Wages and salaries account for some two-thirds of all hospital expenditure, and even so an increase in many of these wage scales is long overdue. While there is no doubt room for more efficient administration, the only way to cut costs significantly is to prune the pay-roll. The cost of keeping a mental patient in a state hospital has been kept down to $4 a day, compared with $15 in a voluntary or proprietary hospital, by maintaining a ratio of one employee to three patients and by employing only a handful of trained nurses.

Even so, since the war the voluntary hospitals have delegated much of the work previously done by trained nurses to semi-skilled or unskilled workers. The role of the registered nurse—who is now paid $300 a month for a five-day, forty-hour week—is rapidly becoming that of an administrator in charge of a body of largely unskilled labour. Bed-side care is devolving on to "practical nurses" (with a one-year training) and "nursing aides" who do the more menial tasks for half the wage, or less, of a trained nurse. Student nurses are generally treated strictly as students and they pay for their training. This arrangement is pleasanter for the student, but the patient is certainly the loser. Despite the large and growing army of employees, a frequent complaint in an American hospital is that nursing attention, while efficient, is lacking in tender loving care; this is partly offset by a more free and easy attitude towards visitors. The more affluent patient often engages—through the hospital—a "private duty nurse" at a cost of $18 a shift or $48 a day for round-the-clock attention.

Hospital charges vary between town and country and from one region to another. In a city hospital today's patient may pay a basic charge of $25 to $40 a day for a private room, from $20 to $25 for a semi-private (no more than four in a room) bed, and around $17 for a ward bed. But extra charges—for operating room expenses, laboratory fees, special drugs, anæsthesia, X-rays—add, as a rule, about 50 per cent to the final bill. Private and semi-private patients are expected to pay their respective charges in full. The policy toward ward patients who are not the financial responsibility of the local authority varies enormously. In non-urgent cases an attempt will often be made to divert a patient needing free or subsidised care to a public hospital; where such care is given payment is fixed on the basis of a means test. Most hospital insurance contracts provide for semi-private accommodation and in consequence there has been a major shift away from the wards; today ward beds account for only about a third of the total.

While the hospitals do not always manage to extract from Blue Cross rates of reimbursement that they feel are justified, there is no doubt that these and other insurance schemes have greatly strengthened hospital finances. And with the greater economic prosperity of its patients, the average hospital today is managing to balance its accounts. But this picture of solvency is by no means universal. Last year the 81 New York hospitals ran up a final deficit of $10 million, and many of the hospitals in Boston and Philadelphia are also drawing each year on their capital. Most of the leading hospitals in the east were established and endowed—like their British counterparts—with the express purpose of giving free care to the poor, with teaching and research as a by-product of the good work. Many of them continue to provide a large measure of free care—both for in-patients and through out-patient clinics—but current gifts (which must also finance any capital needs) and income from endowments no longer make up the balance.

Moving westward, the voluntary hospital has always been regarded more as a general public facility than as a charitable institution. Philanthropy plays a part, but it is much less fundamental to the function and finances of the hospitals. In some areas the extension of free care is tailored to fit the budget, and in several western states, including California, the trend has reached its logical conclusion with community hospitals for those who can pay their bills and public facilities for those who cannot. Even in the east the concept of charity is inevitably in retreat, but the voluntary hospitals in the area are clinging hard to their long and worthy tradition.

UPWARDS AND OUTWARDS

The GKN Group is stable but by no means stationary. Its member companies are continually on the move—upwards and outwards. Upwards to higher production, outwards to wider interests. A case in point is that of Guest Keen Iron & Steel Co., Ltd., one of the Group's founder members. First established just two hundred years ago, it owns at Cardiff one of the most modern and efficient steelworks in the world; producing billets, the raw material for many other Group activities, as well as sections, light rails and colliery arches. The cogging mill, originally designed in 1936 for a weekly output of 12,500 tons, has a record production of over 19,000 tons and regularly exceeds 16,000 tons. Capital expenditure at Cardiff has been running at over £1 million a year for the last ten years. At the Dowlais Works, a new ingot mould foundry of advanced design and high efficiency has just been completed at a cost of over £2 million. Other activities, carried out by Guest Keen Iron & Steel subsidiaries, include iron ore mining and steel casting.

Throughout the GKN Group, people too, have every chance to move upwards and outwards. Upwards to greater responsibilities, outwards to as broad an experience of steelmaking, steel working and engineering as can be found anywhere.

FOR ANYTHING AND EVERYTHING IN STEEL

Party Disorganisation

FROM A CORRESPONDENT IN NEW YORK

THE intra-party elections which were expected to decide the control of the Democratic party organisation in New York City and, indirectly, in the entire state were held last month and settled nothing. Mr Carmine DeSapio, the political boss whose prestige was badly shaken last November, when the generally victorious Democrats suffered their only big defeat in New York, won re-election to the county committee and as district leader, but only by the most slender margins. The opposition "reform group" led by Mrs Franklin Roosevelt, former Senator Lehman and Mr Thomas Finletter, once Secretary of the Air Force, has naturally claimed a moral triumph and is forecasting Mr DeSapio's early downfall.

He not only made a weak showing himself in his own district, but he also suffered because a number of his supporters were beaten in other districts, some by the reformers, others by different rebels in Harlem, the Negro neighbourhood. Mr DeSapio had enough votes to ensure his re-election as county leader, but he has been stripped of that aura of success necessary for real political authority. The two minor offices which were at stake in the election are the lowest in the party's complex hierarchy, but they are the indispensable basis of DeSapio's power in the city, the state and in the Democratic party as a whole. There are over 3,000 members of the county committee; their duties are nominal, but the leader is customarily chosen from their ranks. Mr DeSapio was therefore embarrassed because he won election to the committee by only one vote. He won the more important office of district leader by less than 600 votes out of more than 9,000 cast.

The campaign against Mr DeSapio was waged on three issues. He was severely criticised because at last year's state convention he insisted upon the nomination of Mr Frank Hogan, the District Attorney of Manhattan, as the Democratic candidate for the United States Senate over the express opposition of Governor Harriman and Mr Wagner, the Mayor of New York City. This display of arrogant "bossism," it was contended, contributed decisively to the defeat of Mr Harriman by Mr Nelson Rockefeller in the battle for the Governorship. (Mr Hogan also lost, but by a smaller margin.) Secondly, Mr DeSapio has become the symbol of old-fashioned machine politics, with its preoccupation with patronage and contracts rather than with social issues. The third line of attack which the liberal reformers pressed was that he stands for a stodgy, middle-of-the-road orthodoxy rather than for militant liberalism.

If Mr DeSapio had won decisively the revolt would have been quelled. If he had been defeated, a major shake-up in party leadership would have ensued. His narrow victory leaves everything in doubt. The reform group, emboldened by their near-success, intend to continue their efforts, but they will not have another effective opportunity to oust him for two years.

THE man who could resolve the matter if he chose to do so is Mayor Wagner. He has much to lose by leaving his party leaderless and divided, but he is not the kind of politician who believes in mastering events. Patience and caution, along with a stubborn honesty, are his strongest characteristics. Mr DeSapio helped to put him in office in 1953 and the Mayor has co-operated with the party organisation, but he has insisted on preserving his independence. In the past year, relations between the two men have worsened. Indeed the breakdown in communication between them helped to account for the fiasco of last year's state convention.

Mr Wagner has also kept aloof from the Roosevelt-Lehman-Finletter attempt to reform the organisation. He has friends in every faction and covets for himself the role of peacemaker and conciliator. The differences between the two factions appear, however, to be irreconcilable. If he is to win the third term in 1961, which it is expected that he will seek, Mr Wagner may have to cast his lot in with one group or the other, though he will probably defer that decision for as long as possible. The aim of Mr DeSapio, who has survived many setbacks and tight corners in his slow climb to power, is to organise his supporters so tightly that the Mayor will find it impossible to decide against him.

Some time ago the New York Democrats put forward Mr Wagner's name for the vice-presidential nomination next year and pledged the state's delegates to him as a "favourite son." This was a curious manœuvre on two counts. It is somewhat unusual, although not unprecedented, for anyone to admit any ambition for the Vice-Presidency and most unusual to name a favourite son as a candidate for the second rather than the first place. The real purpose was to post a temporary "No Poaching" sign around the big New York delegation to the nominating convention in 1960.

The candidate to suffer from this device is Senator Kennedy of Massachusetts, because he had been hoping to bring the New York delegation under his control. Since he is a Roman Catholic from an eastern state, he obviously cannot purchase New York's support by accepting Mr Wagner, a fellow Catholic and easterner, as his running mate; to widen his appeal, Senator Kennedy must have a Protestant from another region. More likely than not, New York will end up by voting for Mr Kennedy at the convention in the early ballots because he is the heavy favourite of the party's rank-and-file in the state. But by coming out for Mayor Wagner Mr DeSapio and his fellow politicians retain control of the situation for the time being and keep alive the possibility that they will be able to join party bosses in other states in nominating Senator Symington of Missouri. The Mayor, who would not be averse to running for Vice President with Senator Symington, is content to co-operate in this gambit.

SHORTER NOTES

Under a law passed by Congress which the President is thought sure to sign, the United States at last recognises that true works of art may be created from unconventional materials such as glass, nails, or rags. Up to now, a picture by Picasso entered duty-free, but his colleagues' did not. The cost of this concession was only about $10,000 a year, but the nuisance it caused was substantial.

* * *

When the jets wing their way in and out of Washington they will come to rest at Dulles International Airport; by a decision of the President, the new airport, which is in process of construction, will be named in memory of the country's most peripatetic Secretary of State.

AIR SUBSCRIPTIONS TO *THE ECONOMIST* 22, RYDER STREET, LONDON, S.W.1.

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air freight
Australia	£10 6s.	—
Canada	—	$25 or £9
Ceylon	£9 0s.	—
China	£10 6s.	—

Crossing the lines . . .

This is a pleasing picture, for the young lady knows her kerb drill, and the Local Authority knows that 'Epikote' resins will reduce the cost of crossing maintenance.

'Epikote' resins, developed by Shell, are one of the most interesting of modern synthetic materials and are widely used in the surface coating, electrical and engineering industries. Research trials now in progress show that 'Epikote' resin road-surfacing compounds possess excellent adhesion to a variety of substrates, and are unaffected by oil, petrol, water and de-icing fluids. Their hard-wearing properties and good skid resistance make them especially suitable for critical areas such as roundabouts, bus stops and traffic intersections.

Zebra crossings, direction and control marking signs, garage forecourts, bridge surfaces, white surfaces for tunnels, the filling of holes and cracks – for these and similar maintenance problems 'Epikote' resins offer a new cost-cutting approach.

If you are interested in any of these aspects of maintenance, you should get in touch with Shell. In fact, if you have any problems involving the use of resins or plastics – or of industrial or agricultural chemicals – Shell may well be able to help you. It is easy to find out.

Write to the Sales Promotion Manager, Shell Chemical Company Limited, Marlborough House, 15-17 Gt. Marlborough Street, London, W.1.

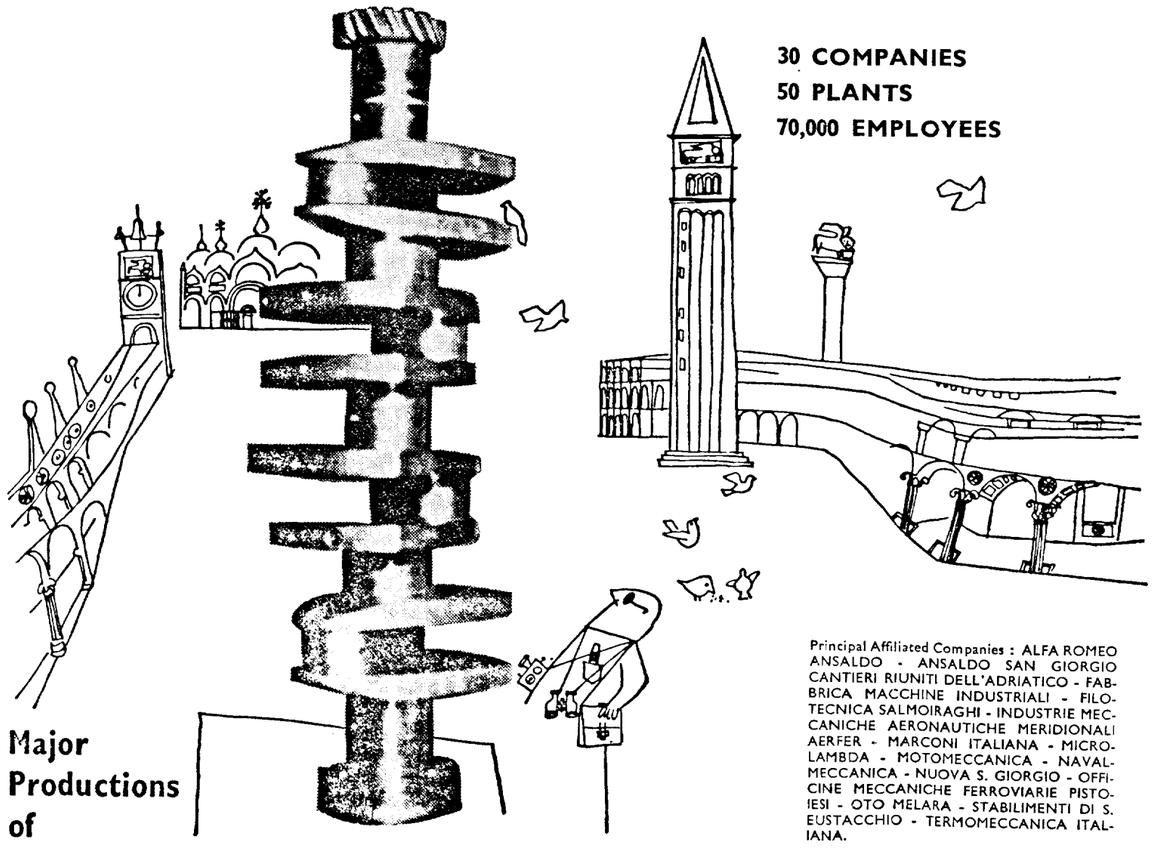
ITALY TODAY

The glorious artistic and cultural traditions of Italy are as well known as are the qualities with which nature has endowed her. Through the medium of her films, music, literature and works of art, she has widely contributed through the centuries to the main stream of thought and progress. Italy's fame in the realms of art and culture has perhaps tended to push into the background her outstanding achievements in other fields, notably in that of industrial development. Over the past ten years her industrial progress has reached new levels—levels that compare favourably with those of highly industrialised countries. And she is now in a position to supply the finest engineering and industrial products.

One of the most significant features of this development of Italian industry during the last decade is shown in the marked expansion of her exports—notably in the sphere of engineering. Since 1948 these exports have increased fourfold, reaching in 1958 a total of $764 million—thirty per cent of her total exports. An essential contribution to these is to be ascribed to the FINMECCANICA GROUP, whose total exports over the years 1957/58 achieved an annual average of $114 million.

Exports of the FINMECCANICA GROUP include a wide variety of products which are now being sold throughout the world. Special emphasis is laid on supplies to countries where industrialisation is in progress. The Group can offer to these areas helpful co-operation by offering its extensive facilities and its wide experience acquired in the installation of big industrial plants both at home and abroad.

The FINMECCANICA GROUP is equipped for the construction of complete industrial plants (refineries, textile mills, cement factories, chemical plants, iron and steel plants, etc.) and can provide complete technical assistance from the planning stage up to the start up of new factories.



30 COMPANIES
50 PLANTS
70,000 EMPLOYEES

Principal Affiliated Companies : ALFA ROMEO ANSALDO - ANSALDO SAN GIORGIO CANTIERI RIUNITI DELL'ADRIATICO - FABBRICA MACCHINE INDUSTRIALI - FILOTECNICA SALMOIRAGHI - INDUSTRIE MECCANICHE AERONAUTICHE MERIDIONALI AERFER - MARCONI ITALIANA - MICROLAMBDA - MOTOMECCANICA - NAVALMECCANICA - NUOVA S. GIORGIO - OFFICINE MECCANICHE FERROVIARIE PISTOIESI - OTO MELARA - STABILIMENTI DI S. EUSTACCHIO - TERMOMECCANICA ITALIANA.

Major Productions of THE FINMECCANICA GROUP:

Shipbuilding ; aircraft ; railroad rolling stock and streetcars ; tractors ; electrical machinery and complete hydroelectric power plants ; thermal machinery ; machine tools ; textile machinery ; complete industrial plants (refineries, chemical plants, cement works, textile plants) ; precision optical and mechanical instruments and machinery ; electronic equipment ; metal structures of all types.

An impressive range of products and a great wealth of technical experience at the disposal of industrialisation plans in underdeveloped countries.

THE WORLD OVERSEAS

Bleak Outlook for Germans

FROM OUR BONN CORRESPONDENT

THE German Democratic Republic's tenth birthday party, and the accompanying proclamation of ambitious plans for the adolescent years—the coming of age is to be celebrated in 1965—have aggravated the uneasiness with which western Germany has been watching for signs of improved relations between Washington and Moscow. President Eisenhower has been sending Dr Adenauer reassuring messages about Berlin. It is suspected, nevertheless, that the president feels in a position to do so chiefly because he has somehow given Mr Khrushchev to understand that the State Department no longer considers there is any possibility of the Democratic Republic being dismantled this side of Armageddon.

But it is not Dr Adenauer who is most troubled by this surmise. Indeed it looks as though the general western policy which the Chancellor advocates will be broadly followed for the time being—no hasty ascent to the summit, and no concessions without counter-concessions equal in value, particularly in the field of disarmament, where Dr Adenauer argues that the major effort to reduce tension should be made. And it so happens that in the course of the past ten days a German-American conference (on the lines of the annual Anglo-German get-together at Koenigswinter) has brought to Bonn such familiarly reassuring American voices as those of Mr Acheson and Mr McCloy. Dr Adenauer has been listening to them. He himself seems to be reconciled to the idea of an interminable haul.

Much more troubled by recent developments than Dr Adenauer are the younger men who, as far as the attainment of national pretensions is concerned, see the hopelessness of the prospect of any change for the better: that is to say, of reunification at least, and at most the restoration of Germany's 1937 frontiers. This autumn the original accident of partition has taken on an even more irreparable look than before. Mr Khrushchev has not given the slightest ground for allowing anyone to suppose that, in the foreseeable future, Russia would permit the dissolution of the Democratic Republic in return for this or that advantage in some other field. Headed by Mr Kozlov, the Soviet delegation to the birthday junketing was strong, and in choosing their representatives the lesser communist countries followed the Russian cue. The festivities have been an assertion of the unwavering communist purpose, reinforced by the marshalling of irrefutable evidence that the Democratic Republic is holding its own economically, and is to be inseparably knit into the grandiose design of overall communist economic planning.

In their franker moments, the generation of west Germans who are going to have to watch over German interests when Dr Adenauer is gone are understandably distressed. They are also utterly at a loss to know what to do to retrieve the opportunities which many believe are lost through Dr Adenauer's policy of immobility. The president of the Bundestag, Dr Gerstenmaier, gave vent to a lamentation this week in which the only action that could be promised was the flying of the Federal Republic's flag from the old Reichstag building in Berlin as from October 7th. Simultaneously, Christian and Social Democrats solemnly deplored the cruel significance of the east German anniversary. On the Social Democrats' insistence, the Bundestag is to hold a full-dress debate on foreign affairs on November 5th. The impotent discontent is notable particularly among the younger members of the foreign office. One manifestation was the recent retirement from the foreign service of Herr von Kessel, the former minister in Washington, who co-ordinated the preparations for this summer's Geneva conference and had been offered the embassy at Oslo. It was a gesture of despair. The negotiating ground lost by Herr von Brentano in successive yieldings to the Chancellor can hardly be recovered. It is now too late to apply the remedies once recommended and rejected. The long-disputed establishment of diplomatic relations with Prague and Warsaw and the renewal of relations with Belgrade would, for instance, no longer arrest the Sovietisation of eastern Germany, nor non-aggression pacts with these countries, nor yet the Bundeswehr's abnegation of nuclear weapons.

These melancholy reflections are aggravated for realists by their awareness of a substantial body of opinion abroad vocally or tacitly in sympathy with Mr Khrushchev's avowed desire to keep Germany divided. Those who think as much in European as in national terms ask what good can come to the West in the long run through conniving at the injustice of compelling 17 million people to live under a political system they detest. During its ten years' existence the Democratic Republic has lost 2,300,000 citizens through flight. Defeat and occupation and, subsequently, unaccustomed material prosperity, as in the west, or a tyrannical regime, as in the east, have hitherto held the restless German soul in check. Circumstances might again arise in which exploitation of plausible national grievances could spur the nation into fresh mischief. There are few Germans who do not suppose that Mr Khrushchev's real aim is not to keep the Germans divided but to unite them sooner or later in a bigger "democratic" republic. Increasing *de facto* recognition of the east German regime, along with its growing strength and confidence, is consequently driving west Germans to look to their defences. There have been several signs lately that the officials responsible for internal security are intensifying their efforts to counter subversion.

Cairo versus Peking

FROM OUR MIDDLE EAST CORRESPONDENT

PRESIDENT NASSER's reactions to provocation are seldom weak or transient, and the brisk quarrel now raging between Cairo and Peking may well be the prelude to a long estrangement. The speech made by Khalid Bakdash, the exiled Syrian communist leader, may or may not have been approved in advance by the Chinese authorities ; it was certainly approved after the event. It was broadcast in full by Peking radio and the subsequent measures of the authorities to "protect" the embassy of the United Arab Republic show that this was no accident.

It is all rather puzzling to the Arabs, since the Cairo government has been pretty consistent in its diplomatic support for communist

China. The explanation generally accepted here is that the communists are playing the Middle Eastern game both ways. They do not want to lose the Arab nationalists as levers to be thrown against the West whenever necessary. At the same time they still hope to bring about a communist takeover of Arab lands. Thus the Russians maintain their economic aid for the UAR and correct, though occasionally strained, relations with it. The role of the Chinese is to push the communists. It calls to mind the situation between the world wars when the Soviet government secretly approved and publicly disavowed the actions of the Comintern.

The Chinese are certainly making a major effort in Iraq. They sent an impressive delegation to the anniversary celebrations of the July revolution in Baghdad, dancing girls and all. In a less resounding manner they also sent Burhan Shahidi, a Muslim communist from Sinkiang, who is said to be one of the main architects of Chinese Middle Eastern policy. The dancing girls have gone home, but Shahidi is still in Baghdad.

Khalid Bakdash's speech was delivered a few days after demonstrations in Egypt, Syria and Lebanon had protested against the execution of Arab nationalist officers in Baghdad. The reaction to it in Cairo is a measure of President Nasser's determination to prevent the spread of communism from Iraq into Syria and to stifle it if possible in Iraq itself. The question which the more thoughtful Arab nationalists, along with most westerners, are now asking themselves is whether President Nasser is tactically wise in pushing his quarrel with General Qasim to such extreme lengths.

It is conceded that attacks on Qasim may strengthen the determination of his supporters to keep him in power ; also that they may drive him further leftward than he himself wants to go. Nevertheless, it is thought that on balance Nasser's campaign against him is necessary. If it is called off, Arab nationalists in Iraq would feel themselves abandoned and, losing all hope, they would turn to the only alternative. In the present circumstances that alternative could only be communism. The possibility that they might look to any other source for comfort, to Amman or Riyadh for instance, is never considered—probably quite rightly.

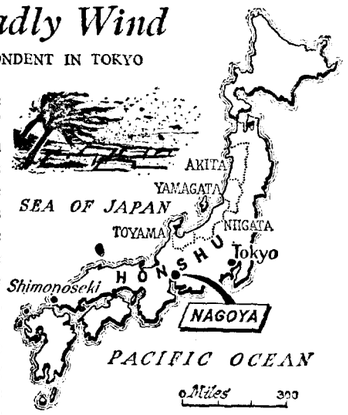
THE two main antagonists on the Arab scene are nationalism and communism. President Nasser's prestige has slipped in recent months. His inability to dent the present regime in Iraq is one reason ; his troubles in Syria are another ; his recent rapprochement with King Hussein and King Saud is yet another. In the words of a serious Arab observer here: "One year he accuses King Saud of plotting his assassination ; the next year he asks him to lunch." The movement away from Nasser has not yet reached significant proportions. The situation here is so fluid that he should have plenty of chances to reassert all his old authority. He is nowhere near desperation.

It would be quite wrong, therefore, to suppose that President Nasser's quarrel with Peking gives the West a chance of winning back its old position in the Middle East. Events have proved, contrary to most western assumptions at the time, that not even the Suez affair nor the Eisenhower doctrine nor the landings of the American Sixth Fleet in Lebanon and the British parachute troops in Jordan drove him into dependence on the communist block. In the same way, disputes with the Soviet Union and China will not drive him into dependence on the West. With due caution, some marginal advantage might be derived from the situation. That is all.

It is now clear beyond reasonable doubt that President Nasser has meant what he said all along. The game of politics in Arab lands must be played according to Arab rules, not according to rules dreamt up in London, Washington, Moscow or Peking. The rules may be unacceptable to some ; they may be changed without warning ; or the referee may cheat. But no other rules are permitted.

Japan's Deadly Wind

FROM OUR CORRESPONDENT IN TOKYO



"WHY didn't someone cry 'Wolf'?" asked a weary American Navy helicopter pilot, as he gulped coffee before climbing back into his "whirlybird" to save some more of the 25,000 people clinging to rooftops in the watery debris of Nagoya, Japan's third largest city. A good many Japanese have been angrily asking the same question, since Nagoya became a shambles after the visit of a typhoon called Vera. But the answer to the question is the same as in the fable. Vera got plenty of advance publicity, from the weathermen and in the newspapers. The weathermen warned five days before the storm struck that it was building into a "super-typhoon" ; and Nagoya received at least twenty-four hours' notice that the city lay directly in Vera's path. But hardly any precautions were taken.

Japan has 15 to 25 typhoons each year, and typhoon warnings are regarded by most of its people as part of an elaborate but stereotyped seasonal ritual. The path of a typhoon is a very difficult thing to predict with accuracy, and the Japanese are accustomed to their typhoons suddenly veering off course and expending themselves harmlessly in the ocean. In the case of the Nagoya tragedy, unfortunately, Vera did not veer.

When disaster struck at them out of the Pacific, the people of Nagoya were busy with preparations for a week of colourful festivities, to celebrate the city's seventieth anniversary. The "twin city" of Los Angeles was to have participated, and there were to have been decorated floats patrolling the streets by day, filled with pretty "flower queens," and impressive fireworks by night. The city's celebrated 350-year-old castle, which was badly damaged by American air raids during the second world war, had been completely restored, and was once again flaunting its golden dolphins on the castle roof. Within a few hours, all this proposed pageantry was submerged in hideous nightmare. Vera struck at Nagoya with 138 mph winds, then went howling across the width of Japan, to the Japan Sea. Lesser winds raged widely on either side of the main blast, as far as Tokyo in one direction and Shimonoseki, at the southern tip of Honshu facing Kyushu, in the other. When Vera reached the Japan Sea she had not yet finished with Japan, for there the storm made a right about turn, and followed the coastline to the northern tip of Honshu, destroying crops and communications throughout the four prefectures of Toyama, Niigata, Yamagata and Akita. But the main area of devastation remained in and around Nagoya.

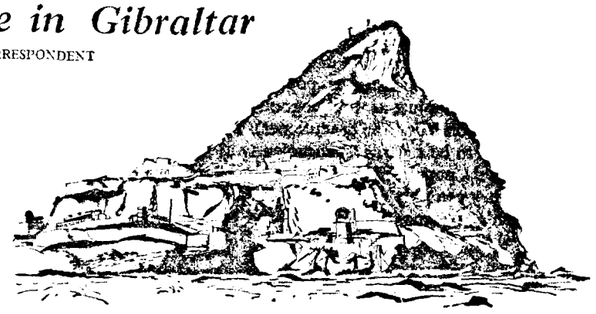
The full extent of this devastation was not fully appreciated in the rest of Japan for two or three days. Once again, the tardy recognition was due to over-familiarity with typhoons. It was apparently assumed that Nagoya would manage to stumble to its feet without too much trouble, and without massive outside aid. There were also great difficulties of communication, for telephone lines were down everywhere, and the Japanese railway system, normally so efficient, had been almost literally cut in pieces. When it became clear than Nagoya and its one and a half million people had suffered almost a knockout blow, the American Navy and the Japanese air force rushed to the scene. What they found there was almost unbelievable.

Much of the city was still under water. Hundreds of thousands were homeless, and there were thousands of dead and missing. Japan this year has had yet another bumper rice crop. But the people of Nagoya had been reduced at one stroke from a fairly high level of prosperity to starvation. Isolated by floods and surrounded by corpses already beginning to decay, the survivors of stricken families were reduced to diving into the filthy water to try to dig out sweet potatoes from the mud. Diseases that included tetanus and gas gangrene as well as dysentery were beginning to take their toll. Thieves were also at work amid the havoc, commandeering rowing-boats and going among the ruined homes in search of loot. Many people, already starving and threatened with drowning as the water continued to rise, actually refused to be rescued by helicopter or boat, because they were afraid to lose sight of their few remaining personal possessions. A special force of eleven hundred police, many of whom had themselves lost homes or families or both, had to be formed to combat the thieves. Meanwhile, the other side of the coin of human nature was also being exhibited: donations of money, clothing, food and medical supplies began to pour in ; the donors included even the wretchedly poor rag-pickers of Tokyo.

Vera has claimed between four and five thousand lives, and has

How They Vote in Gibraltar

FROM A CORRESPONDENT



ONE of the troubles about proportional representation is that it has the reputation of being rather un-British. The recent elections in Gibraltar, which is in some ways more British than the British, are evidence, however, that proportional representation does operate in a British political climate ; and, what's more, that it works.

Gibraltar, with a permanent population of about 25,000 people, has a Legislative Council of twelve members, of which a majority are elected on a basis of universal suffrage. Those who go to the polls are handed a form on which all the candidates for election are listed alphabetically. In the last election there were thirteen names on it. The voter may if he wishes just put "1" against the candidate he favours most: but he is encouraged to mark his other preferences 2, 3, 4, etc., as well. In practice few went right to the bitter end and marked all thirteen candidates; but the majority marked at least four. For the man in the street, therefore, voting is straightforward. Compared with football pools, PR is child's play.

Two parties contested the election with four candidates each, and there were five unrelated independents. The parties naturally encouraged their supporters to vote for their candidates 1, 2, 3, 4 in an order which is determined in advance at party headquarters.

The hard work, and the complications, start when the polling stations are closed. The first thing the returning officer has to do is to work out what is called the quota. This is the number of votes a candidate has to achieve to get elected. He does this by dividing the total number of valid votes by one more than the number of seats to be filled, and by adding one to the answer. If, say 8,000 valid votes have been cast, he divides this by 8, i.e. 7 seats plus 1, and to this figure he adds one. The quota is thus 1,001.

Before he knows the total number of valid votes, the returning officer must go through each paper and decide whether each paper can be accepted or not. If, for example, a paper has a tick or an X against only one name its meaning is clear and it is accepted. But if there are more than one X it has to be rejected. Sometimes, to enliven a tedious task, you get a paper marked "To hell with the lot of them."

The first preferences are then counted up, and any candidate reaching the quota is declared elected. At the recent election three passed on the first count. The quota was actually 1,068. One man got 3,420. The votes of the other candidates ranged from 1,815 to 4.

The next stage, the second count, is to deal with the surplus of the candidate with the largest number of votes, i.e., the amount by which he exceeded the quota. All his votes must of course be scrutinised. If no second choice is shown the votes are called non-transferable, and take no further part in the proceedings. Those which show second choices are then allocated to the candidates concerned and credited to them on a proportional basis, i.e., if the surplus is 2,000 over a quota of 1,000, two-thirds are given to each candidate shown. Mr X, who has 300 of the second choices, therefore has 200 added to his score. If anyone reaches the quota on this count he is declared elected.

The extra votes of each candidate with a surplus are dealt with in turn in this way. In the recent elections six counts were necessary before all the original and consequential surpluses had been disposed of. But still only five of the seven seats had been filled at this stage. The time was 5.45 a.m., and it was clear that neither the returning officer and his staff, nor the other eight candidates and their agents, would get to bed that night.

The next stage is to eliminate those with the least votes; starting at the bottom. These votes are allotted to the remaining candidates in accordance with the second choice shown on them. If the second choice was already in, or had been eliminated, the vote went to the third or fourth choice and so on. It was not until the ninth count, and the dawn, that Gibraltar's first woman candidate found herself elected. She did not actually reach the quota, but she had more votes than anyone else could possibly muster at that stage.

The result was that one party with four candidates and 42 per cent of the first preference votes got three seats. The other party, with 11.5 per cent got one of four nominees in. The other three seats went to various independent candidates, who together took 46.5 per cent of the original votes. Thus the outcome was a very fair representation of what the people wanted. If the British system of voting had been followed and Gibraltar had been divided into wards or constituencies, the odds are that the party which got 42 per cent of the votes would have taken all the seven seats.

A common criticism of proportional representation is that you do not get clear-cut majorities, and that you encourage independent candidates and splinter groups. In Gibraltar, however, it does not matter much, as under current practice all the unofficial members of Legislative Council are given some departmental responsibilities and duties. Thus for their own department they become members of the government; whilst remaining members of the opposition as far as other people's departments or subjects are concerned. This may seem odd, but the small size of Gibraltar merits solutions of its own; and once again this one seems to work.

inflicted about £265 million of damage on Japan's industries, farms, schools, railways, ports and homes. This makes the storm the worst that has struck the country in living memory, and perhaps the worst storm that Japan has ever had in its long history of typhoons.

The point that is now being made by the Japanese themselves is that any other of Japan's great industrial cities would inevitably have suffered in the same way and to the same extent as Nagoya has, had the typhoon struck at them. In the past, the physical damage caused by typhoons was considerably less noticeable. The philosophical farmers simply took to the hills when a storm approached, and returned when it had passed, to rebuild their flimsy wooden homes and to grow another rice crop. This line of least resistance is not open to huge urban populations. There have been times when typhoons were actually hailed as good omens. They twice saved Japan from Mongol invasion, by inflicting on Kublai Khan's fleets the same fate as befell the Spanish Armada; and the Buddhist saint Nichiren is popularly supposed to have been saved by a typhoon just as the Shogun was about to have him beheaded (the typhoon killed the executioner). But future typhoons are highly unlikely to be regarded benevolently as "divine winds." To a small, densely populated, highly industrialised country like modern Japan, they can only come as fearful scourges. Next time, the weather-men's warnings may receive the respectful attention they deserve.

Turtle Bay Talkathon

FROM A SPECIAL CORRESPONDENT AT THE UNITED NATIONS

AFTER three full weeks of unremitting talk, the General Assembly wound up its so-called general debate on Tuesday, after more than fifty foreign ministers had spoken and the press lobby was knee deep in mimeographed versions of their speeches. What had been achieved by this mammoth outpouring of words?

It would be as foolish to underestimate the importance of this "talking shop" as it would be to disregard the one just elected to Westminster. The assembly is not a world parliament, but it is, in Senator Vandenberg's phrase, a town meeting of the world. The mere fact that disputes are brought out into the open (the South Tyrol question between Austria and Italy, the Suez Canal between Arabs and Jews, camel grazing lands between Somalia and Ethiopia) has its value, for once the United Nations are seized of a dispute it becomes more difficult to try and settle it by force. An even greater effect of this prolonged, diffuse and boring debate is that it does give those who care to observe it "the sense of the meeting." No one who has studied this year's outpourings can fail to know that nuclear tests and the cold war are out, disarmament and multilateral economic aid are in. Within the great building at Turtle Bay, the secretariat watch the debate with especial interest because it gives them some indication of the "general will" on which their Secretary-General may have to base his action if another crisis is dumped in his lap.

BUT now the general debate is ended the assembly must get down to detail in its committees. In the first (political) committee disarmament is bound to be not only the first, but the main topic. The small nations wish to make clear that even though the prospects of practical steps towards disarmament may be confined to the Soviet-Nato committee of ten, which is expected to meet in Geneva next January, they are vitally concerned in the outcome. The "big four" are anxious to show that nobody is more sincere than each of them is in achieving real, permanent and general disarmament, so that they may turn their efforts to helping the poorer nations of the world. However, when it comes to practical matters there is rather less sweetness and agreement.

The African nations insist that the most important item on the agenda is to prevent the French from exploding their atom bomb in the Sahara. Undoubtedly they have won a great deal of support, and if France does in fact break the present truce on nuclear tests it will find this world assembly remarkably well organised against it. The rest of the assembly is divided into those who believe that dedication to the ideal of general and complete disarmament is the first step to Utopia, and those who believe that a slow but sure approach by way of controls and inspection is the only road to any real reduction in both tensions and armaments.

WHAT is rather surprising is the extent to which the former position (which means supporting the Khrushchev plan) has gained ground among even the less starry-eyed of the "uncommitted" nations. Mr Selwyn Lloyd's detailed proposals for progress through inspection and controls have received a warmer welcome than seemed likely at first, and the smaller nations are now watching to see which plan will actually result in any move towards disarmament. Neither the western attitude that inspection arrangements must be complete before disarmament begins, nor the Russian idea that disarmament must be virtually complete before inspection goes at all deep, will cut any ice with the assembly, which wants to see a beginning of disarmament, however modest, within the next twelve months.

Simultaneously with the disarmament debate, the economic committee will be discussing how to divert resources to help the underdeveloped countries. Here the non-Soviet world has a decided advantage after last week's meeting of the World Bank governors in Washington, which decided to set up an International Development Association. But inevitably the poor nations are not wholly satisfied. They wish both to increase the amount of aid generally available, and to get more control over its distribution. Voting in the world bank is weighted according to contributions; voting in the UN assembly is on the simple basis of one government, one vote: therefore there is considerable "popular" pressure to get as much aid as possible channelled directly through organs controlled by the assembly. Doubtless this will be supported by the communists, but, unless they are prepared to put up a good deal more money for international aid, they will not succeed in winning much sympathy.

For the UN assembly is not an easy body to fool, even if its actions and resolutions sometimes appear rather naïve. This assembly is unalterably "anti-colonialist," but it seems to have learnt that colonialism is not the prerogative of the West. There has been a notable softening of hostility towards France since President de Gaulle's statement of policy on Algeria. If France plays its hand tactfully and with some signs of "give" in the forthcoming debates, it need not fear an adverse vote, even though most Arab countries wish it to negotiate with the Algerian rebels' "provisional government." On the other hand, if the communist block are not careful they may find their absent big brother, China, severely reprimanded for its actions in Tibet.

Finally, this assembly looks like having one of its old-style knock-down cold war fights over the elections to the Security Council, where Poland and Turkey are competing for a seat. The United States seems determined that on cold war issues the vote in the Security Council shall be 10-1 against Russia and not 9-2: for this they are prepared to ignore the "gentleman's agreement" which gave one seat to eastern Europe, and to alienate the West's closest contact in the Soviet block. To many it seems a poor bargain.

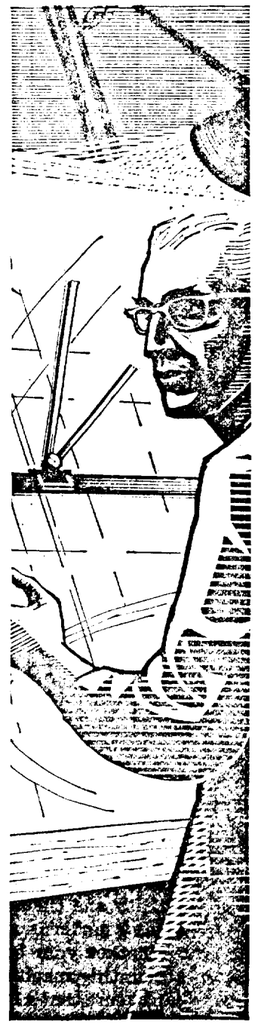
Leading Architect says ...

We pick the locks a burglar can't



My partners and I have our offices in a largish block. Since a porter shuts the whole place up at night, we had never bothered much about possible burglaries.

As so often, the impossible went and happened: through some slight slip-up on the porter's part, a burglar got in. After picking our locks he lit a cigarette, had the safe open in seconds, and removed our cash.

Before he left—as easily as he had entered—our burglar dropped his cigarette end tidily into the drawing-office w.p.b. The plans that were burnt cost us, directly and indirectly, *twenty times* the value of the stolen cash.

So we did what we ought to have done ages ago. We went to Chubb. We chose a handsome set of locks that the burglar can't pick or saw open. Our safe is proof against most knavish tricks and fire-resisting into the bargain, while our precious drawings now lie in a thoroughly practical fire cabinet.

Naturally, all our new clients hear the name of Chubb when we discuss security arrangements. It is a good name to have in mind if you have any worries on that score.

The address is . . .

CHUBB & SON'S LOCK AND SAFE COMPA[illegible]

Burroughs make a full range of business equipment—that's why, whatever the size of your business, there's a Burroughs system exactly fitting your needs.

Burroughs forward-looking design and precision engineering ensure that each machine, in each class, has all the versatility and the advanced automatic features required by today's modern accounting methods.

Whether your business calls for an adding machine, an accounting machine, or a large electronic computer, you can be sure that a Burroughs machine will give you the right answers—faster, easier, and at a big saving in operating cost.

Your local Burroughs man is available now to demonstrate how you can streamline your accounting with Burroughs data processing equipment. Or write to:

Burroughs Adding Machine Ltd.,
Avon House, 356-366 Oxford Street,
London, W.1. Tel: HYDe Park 9661

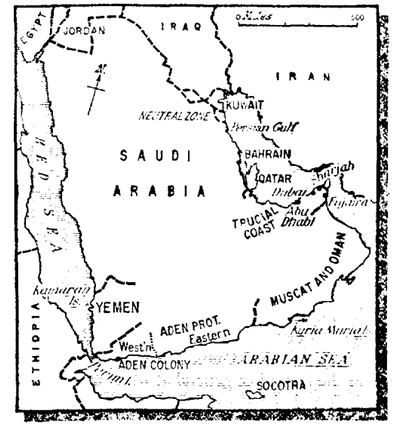
1. **New Burroughs Shuttle-Carriage Adding Machine**—for vertical and shuttle listing work on tape or wide forms—easy, speedy, flexible.
2. **New Burroughs Sensitronic with Automatic Reader**—electronic accounting machine providing ledger-keeping with visible record and magnetic storage. Trial balancing made completely automatic when linked to auto reader with individual form handling.
3. **New Burroughs 220 Electronic Computer System**—the most complete electronic data processing system in production today.

Burroughs

Britain in Arabia

IF the Arabs of the Arabian peninsula ever achieve the unity they bear so much about from their brethren farther north it will solve many problems for the British Government. Britons first became involved in Arabia because it lay across the imperial lifeline. They remained there to suppress piracy, the slave trade and, later the arms traffic. By the time India became independent the pirates had settled down to dream dreams of oil, the slave traffic had come to an end, and Britain had exclusive agreements with all the native rulers along the southern shores and with all but one in the Persian Gulf. In all the years of unfettered imperialism there was never any incentive to add the peninsula to the empire or to give its sparse population the tutelage that made India a great nation. There was never a Government of Arabia, and the British connection there now is what it might be in India if each petty state had been treated individually until, finally, each had gained a precarious independence.

British relations with Arabian Arabs at present range from the broken diplomatic, with Saudi Arabia, to the frankly colonial, with Aden Colony. In between, relations with an imam and assorted shaikhs, sultans and amirs are governed by treaties, letters of understanding, undertakings, engagements, and often, by misconceptions on the part of the Arabs.



Saudi Arabia

Between 1902 and 1934 the late King Abd al-Aziz ibn Saud patched together all the peninsula except the Sultanate of Muscat and Oman, Aden Colony, and the two groups of British protected states which make up the Aden Protectorates and the principalities of the Persian Gulf. In 1934 he even conquered Yemen but wisely gave it back to old Imam Yahya. The king's Saudi ancestors were, during the nineteenth century, largely responsible for the piracy and unrest that first brought British intervention into the affairs of Arabia. In 1915, having thrown in his lot with the British in the war against Turkey, he joined the society of British protected rulers. In return for a subsidy and recognition of his independence he turned over the conduct of his foreign affairs to the British Government and promised that he would not dispose of territories or concessions without its consent. By the time he met British representatives at Jiddah in 1927, however, he was lord of much of Arabia and protector of the Muslim holy places at Mecca and Medina. The arrangements made in 1915 were no longer regarded as being suitable for a king who was obviously able to take care of his own affairs. They were replaced by a treaty which recognised his absolute independence. British relations with Saudi Arabia have for long been strained by a mass of conflicting territorial claims in the hinterlands of the Persian Gulf and the Aden Protectorates. In 1952 the Saudis occupied the Buraimi oasis, claimed in part by the Sultan of Muscat and in part by the Shaikh of Abu Dhabi, and were driven out in 1955 after an international arbitration tribunal broke down. The Saudis complained loudly, but they did not break off diplomatic relations with Britain until nationalist pressure forced the king to do so at the time of the Suez expedition.

Yemen

With the Kingdom of Yemen the course of British relations has hardly ever run smoothly. Until the end of the first world war the country was under the hazy sovereignty of the Turkish sultan in far-off Istanbul. Imam Yahya ruled the highlands from Sana while Turkish troops occupied the coastal regions. By 1919 British troops had briefly replaced the Turks, and a few years later the Saudis arrived for a short stay. The Imam's dreams of expansion led some of his neighbours to ask for British protection, and the treaty of Sana in 1934 was supposed to provide for an Anglo-Yemeni commission to fix the border between the Imam and the protected states. But twenty-five years of the treaty's allotted span of 40 years have passed without bringing a successful conclusion to the border troubles. The Imam contends that the *status quo* provided for in the treaty means that the British should make no changes in any of the protected states, not only along the disputed border area. Diplomatic relations between Britain and Yemen were established in 1951. There has never been a British minister to Yemen, though there is a *chargé d'affaires* at Taiz, and there is a Yemeni *chargé d'affaires* in London who has never been to Yemen.

Muscat and Oman

The Sultan of Muscat and Oman is recognised as being slightly more independent than any of the other protected rulers of Arabia. He has, in the past, signed treaties with France, the Netherlands and the United States. He is bound, however, by exclusive agreements with the British Government for coal and oil concessions, and in 1891 the then sultan bound himself and his heirs never to cede, sell, mortgage or otherwise give up for occupation the dominions of Muscat and Oman except to the British Government. The Sultan's relations with Britain are conducted through a consul-general who is nominally responsible directly to the Foreign Office but who, for practical reasons, more often works through the Persian Gulf Residency at Bahrain. Muscat and Oman is not, like Saudi Arabia and Yemen, a member of the United Nations or the Arab League.

Aden

The governor of Aden is a busy man. He is governor of Aden Colony, commander-in-chief of the armed forces stationed there, governor of Kamaran Island and governor of the Aden Protectorates. In the Western and Eastern Protectorates he is represented by a British agent and resident adviser, at Kamaran by a commissioner and at Perim Island, part of Aden Colony, by the Aden commissioner of police.

There is no one government for the Protectorates. The local rulers were, so long as they kept the peace, left to their own devices until a system of advisory treaties was set up in 1945. Then, in 1956, the Imam of Yemen formally laid claim to Aden and the Protectorates as being parts of his lost patrimony. The Imam's greedy attitude and the encouragement he received from Egypt and elsewhere quickened the desire of the local rulers to form a protective society of their own. The Federation of Arab Amirates of the South was formed in 1959 by six local chiefs who hope, with

British help and advice, to attract more members from among their neighbours. The Sultan of Lahej applied for membership on October 4th. At the laying of the foundation stone of *Ittihad* (Union), the new federal capital city near Aden, on September 29th the president of the federal supreme council said that the object of the federation was to achieve unity and the creation of a democratic sovereign Arab government.

British relations with the Aden rulers began with the occupation of Aden in 1839 as a measure to insure peace on the roads and waters around the colony. As Aden grew in importance strategically and commercially the relations became more complicated. The people of the colony and the protectorates have no longing to exchange British protection for the Imam's harsh rule, but in the colony there is a growing demand for independence.

Persian Gulf

The Political Resident in the Persian Gulf is appointed by the Foreign Office and resides at Bahrain. Political Agencies at Bahrain, Kuwait, Qatar and Dubai are responsible to him and he keeps an eye on the consulate general at Muscat. The British position in the gulf is founded on a series of agreements with the trucial shaikhs which began in 1820 with a general treaty establishing a lasting peace with the Arab tribes and calling for the cessation of plunder and piracy. The slave traffic was forbidden by an agreement signed in 1847. In 1892 the trucial shaikhs promised to deal only through the British Government in matters concerned with foreign affairs and that they would not part with any portion of their territories to other nations; in 1902 they agreed to prohibit the traffic in arms; in 1922 they undertook not to grant any concessions for oil within their territories except with the permission of the British Government.

The rulers of Bahrain, Kuwait and Qatar entered the fold of British protected states long after the system had been set up for their less important neighbours along the southern shores of the Persian Gulf but, one by one, they have made the same agreements with the British Government.

THE loud voices of Arab nationalism outside the Arabian peninsula continually raise the question of why Britain should continue to exercise such power around the coasts of Arabia. There are, occasionally, less strident but equally insistent queries from Americans interested in the area. The answer given by Lord Curzon to the trucial rulers in 1903 was that:

> We found strife and have created order; our commerce as well as your security was threatened and called for protection. . . . We saved you from extinction at the hands of your neighbours. . . . We have not destroyed your independence but have preserved it. . . . The peace of these waters must be upheld; and the influence of the British Government must remain supreme.

There have been many changes in the peninsula since Lord Curzon spoke, but much of what he said remains true today. It is only the statement about the influence of the British Government remaining supreme that does not fit into the pattern of twentieth century politics. When the local rulers are confident that they can face the future alone then the time will have arrived for the making of new arrangements. It should be a time of rejoicing in Whitehall and Great Smith Street.

THE BUSINESS WORLD

America at 5 Per Cent

BY OUR SPECIAL CORRESPONDENT

LAST Thursday evening the ticker on Times Square spelled out, between the World Series and the weather, a message on a less familiar theme: "Treasury Issues New Note At Five Per Cent—Highest Interest In Thirty Years." Next day Federal Reserve Banks were inundated with enquiries from small institutions up and down the country that had never applied for a marketable government security before. Some of the applicants, undoubtedly, were "taking a free ride" (in London jargon, stagging); but the Treasury has plainly attracted some new genuine investment demand. Above all, it has gained the psychological initiative, at a time when investors are already wondering whether equities at their low yields are still the best buy.

Interest rates have been rising sharply for many months in the United States. But, hitherto, the process has been seen simply as a result of the Administration's monetary difficulties. Now, Wall Street is talking of this further small but deliberate rise in rates, in the fashionable Radcliffe language, as "a change of gear"—from middle to high. This bold lead from the United States Treasury deserves to be taken notice of by the monetary authorities in Britain, who hitherto have doubted the possibility of shaking a market out of its weakness by offering gilt-edged above the market rate.

In the United States other steps, notably by Congress, will have to be taken before the Administration has surmounted its financial difficulties. But this initiative helps to set those difficulties in perspective. There has always been a measure of unreality in the solemn comparisons of America's present troubles in government financing with Europe's earlier ones. The central point is that in the United States the market in government securities, including Treasury bills, is a free market. Except at quite rare moments, official funds are not available to act as a cushion or shock absorber; the Treasury has to meet the market's terms all the time. Nor does the size of America's national debt seem so formidable on a European view as it does to many American bankers and security dealers. Federal debt held outside official agencies is well under one half of one year's national income; in Britain, the debt is well above our annual national income.

In this fiscal year, moreover, the Federal budget should be in balance. There are not many countries that meet all capital expenditures by the central government from current revenue (and it would be regrettable if the concept of a balanced budget were restored to its pre-Keynesian status as an unvarying requirement). The American financial problem now is not, as is widely supposed, one of governmental overspending or an excessive burden of debt. It is the much narrower and more technical problem of a lack of balance in the maturity of the debt, which was highlighted and exacerbated in the summer when Congress refused to raise the ceiling of 4¼ per cent on new issues of bonds. (In America, in exact contrast with Britain, bonds are defined as securities with more than five years' life.) This ruled out any new Treasury borrowing at medium term or long term.

Table I
NATIONAL DEBT AND NATIONAL INCOME

	United States $ billion June 30, 1959	United Kingdom £ billion March 31, 1958
Debt held outside public sector:		
Treasury bills	29·9	2·9
Other marketable securities	120·2	14·5
Savings securities, etc.	50·5	6·2
Overseas loans	...	2·3
Total net national debt	200·6	25·9
Gross national product (annual rate)	431·8	20·5

THE concentration in the short-term market of Treasury demands to meet its seasonal needs and refinancing had its predictable effect. The discount rate on three months' Treasury bills shot up from 3 per cent at the beginning of August to 4.17 per cent by mid-September, while rates on six months' bills and on Treasury notes have risen above 4¾ per cent. The movement carried with it the discount rate of the Federal Reserve and the prime lending rate of the big banks, which is now at 5 per cent. This week the issue of $2 billion of 5 per cent notes at a life within two months of the five-year limit has relieved the market in Treasury bills in corresponding measure, and bill rates have duly turned downward.

The huge increase in the supply of Treasury bills—from $22.4 billion in mid-1958 to $37.1 billion at present—has been accompanied by no notable rise in bank deposits, which would be inconceivable in Britain. But in the United States the Treasury bill is not primarily an asset of the banking system; holdings of the commercial banks are only a fraction of those of private and institutional investors. In the past year, increasing pressure by the Federal Reserve has obliged the banks to unload bills and other government securities to finance the surging demand for loans. Corporations and other investors have taken up many more bills at the

increasingly attractive rates; thus reliance by the authorities on bill finance has not, as it would have done in Britain, swollen the credit base and the money supply.

But the Treasury's reliance on short-term finance does build up a potentially dangerous volume of liquidity in the economy. The Treasury's biggest worry is not so much the volume of the very shortest debt, of up to a year's life; these securities meet a real investment demand, and their total has not risen significantly in the past two years (though it is well up on 1955). The alarming increase has been in the group maturing in one to five years, from $39 billion to $57 billion since mid-1957. This is the only group in which the holdings of commercial banks exceed those of other investors. The big rise in the volume of these maturities has led to a hump in the yield curve. Only Congress can remove that hump.

America's present funding problem is to some degree a legacy of the recent recession. Just as the record budget deficit of $12½ billion was incurred in the fiscal year after recovery began, so the monetary consequences of that deficit are still being felt in a year when the budget is planned to be balanced. Monetary management in a recession faces a difficult choice. This is the time when the market is most receptive to offers of long-term bonds; yet this is also the time when, in order to stabilise the economy, the market should be kept liquid and interest rates should come down. Even within the confines of debt management in the narrow sense, there is a conflict; finance through medium-term or long-term securities will ease the problem of refinancing when the recovery comes, but it will intensify the book losses suffered by investors when official policy turns again to restriction and higher rates. Investors burned their fingers badly enough on the seven-year bond issued at 2⅜ per cent in mid-1958, on the eve of the turn. As the Treasury and the Federal Reserve Board point out in their admirable study of this experience, summarised in the Board's August bulletin: "The Treasury's problem of maintaining a debt structure adaptable to changing circumstances without itself contributing to instability of the economy is a formidable one."

The real criticism of the Treasury is its failure to sell long-term securities before the recession began. In 1956 or 1957 they could have been marketed at around 3½ per cent; but the Republican chiefs at the Treasury were still sensitive to

Table II

THE MARKET FOR US "GOVERNMENTS"

Ownership mid-1959 $ billion	Within 1 year	Maturity: 1–5 years	5–10 years	Over 10 years	Total
Government funds...	0·9	1·7	1·4	2·9	7·0
Federal Reserve.....	20·7	3·9	0·4	1·1	26·0
Commercial banks...	10·0	31·3	8·2	3·8	53·4
Mutual savings banks.	0·5	1·4	1·7	2·8	6·3
Insurance companies.	1·1	2·1	1·7	4·2	9·0
Other investors.....	39·7	16·5	5·1	15·0	76·3
Total.....	73·0	56·8	18·5	29·7	178·0

criticisms of their initial essay in 1953 at the "extravagant" rate of 3¼ per cent. As a result, over 70 per cent of the marketable Federal debt outside official hands today matures in less than five years—compared with one third in Britain.

The Treasury now seems prepared to make its long-postponed assault. Its delay, however, has made it dependent on specific action by Congress. The plan the Treasury has in mind is "advance refunding," or the conversion to higher coupons and later maturity dates of securities not yet due for redemption. A massive venture of this kind by Canada in mid-1958 does not provide too happy a precedent; but the grievance of investors there is that the Treasury made its wholesale offer at a time when interest rates were at a low point from which they were shortly to rise very sharply. In the United States market to-day, investors could be attracted to switch only by the offer of yields of 4½ per cent or more; and since the Treasury has agreed to observe the spirit of the law and not to offer securities at big discounts, it can do nothing before Congress lifts the ceiling of 4¼ per cent.

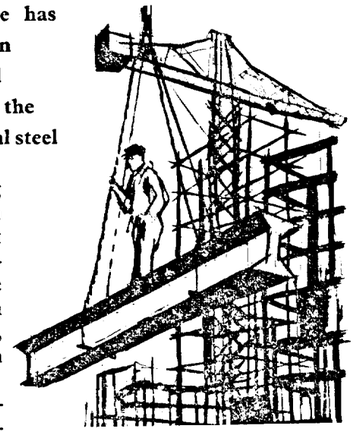
WILL Congress budge? There are important reasons for hoping (few would put it stronger than that) for a change of mind in the session beginning in January. The Federal Reserve has stood firm against the political pleas that it should provide support to the long-term market. Attempts by Congressmen to re-open the old rift in the Federal Reserve between New York and Washington on whether the System should operate in bonds as well as bills have had no impact; "bills only," with the whole effect on the supply of bank reserves, remains the policy. Moreover, Congress can now see with its own eyes that its stand against the monetary tide is costing the taxpayer not less but more. The Treasury has stated explicitly in introducing its present issue that a lower coupon would have been possible for a term of more than five years. The potential of the long-term market may be limited in volume. But the Treasury's basic need is not cash; it is a rearrangement of its existing debts.

What then is the prospect for interest rates in the United States? Obviously if Congress gives the go-ahead, there will be a fall in prices of long-dated securities, yields on which range at present from 4-4·3 per cent. In the same measure, the shorter term market would be relieved. In the first half of 1960, furthermore, the Treasury will be paying off debt from its seasonal surplus of revenue; and some people expect an abatement in demand for bank loans. But if there are reasons for believing that, with the co-operation of Congress, rates in the short market may have reached the top, there are equally impressive reasons for believing that the general monetary pressure will be maintained. Corporations are expected to reduce their large holdings of Government securities next year, as they pay higher taxes on this year's higher profits. If the steel strike continues much longer, the fall in earnings may throw the budget out of balance, and the Federal Reserve might not feel justified in easing its policy to accommodate the additional financing. Once the strike is settled, most people expect a new boost in industrial expansion.

Mr William Martin still has fears of (though he does not predict) an "explosive boom" resulting from an excessive concentration of capital investment. That, he feels, might call for all measures, including the discarded regulation controlling the terms of consumer credit. Mr Martin sees the monetary policy over which he has responsibility as subordinate in importance to debt management and wages policy. But he has always in the past shown great determination in using his instruments as a balancing counter. His actions in coming months will be largely decided by the negotiators of the steel industry and the finance committees of Congress.

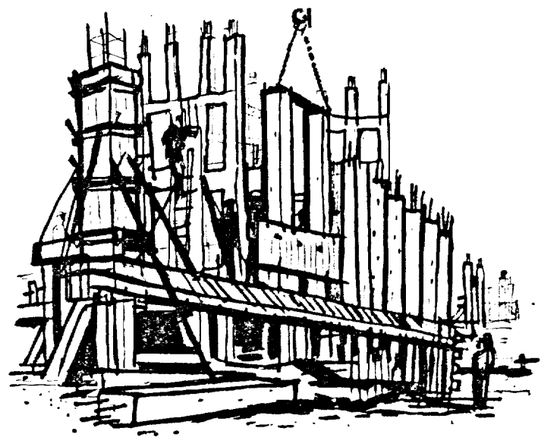
Steel versus Concrete

Reinforced concrete has come into its own in British commercial building—partly at the expense of structural steel



REINFORCED concrete has begun to be used really widely in Britain, mainly in commercial building, only since the war. It was invented in France in 1868, but began to be used widely there and elsewhere only in the twenties. With the thirties, a large proportion of the "modern" architects who made particular use of it fled from Europe. Many settled in the United States; some went farther, and the Latin American countries have become perhaps the most advanced in concrete construction techniques since the war. In Britain, still, these techniques have hardly been used; but concrete has established itself far more firmly in conventionally framed building. Steel structural framework had remained the rule in Britain until the war; but when rebuilding began in the postwar years, the rule was abruptly broken by an acute shortage of steel, the effects of which were not wholly disposed of until quite recently. Under regulations revived during the second period of steel allocation, in 1951-1953, builders were virtually forced to use concrete if they wanted to build at all. In 1952, the Ministry of Works, in conjunction with the Ministry of Supply, the Service departments, and the Building Research Station of the DSIR, issued a series of publications containing recommended ways of economising on steel in building, including the use of reinforced concrete wherever possible; and these only went out of print last February.

There has been no shortage of steel in Britain since 1956. But concrete has remained as a formidable competitor as a building material, particularly for multi-storey office buildings and tall blocks of flats. There are no statistics to show the proportion of building carried out in each material; deliveries of steel beams and rods to the construction industries are available, but delivery figures of cement and aggregate are too generalised to give any real indication of the trend. But the consensus of opinion among builders, architects, engineers, and even—grudgingly—among steel manufacturers is that the use of reinforced concrete is still increasing considerably at the expense of steel, particularly for commercial building.



One large contracting firm in the London area reports that, out of a hundred buildings on which the firm has tendered in the past three years, only four have been steel framed.

Some of the popularity of reinforced-concrete construction as a whole can certainly be attributed to a number of flamboyant—though not always successful—designs both here and abroad. But the shift to concrete framework is based at the same time on the simplest of reasons: in many if not in most cases, it is cheaper than steel for multi-storey commercial buildings. This fact has certainly been uppermost in the minds of the speculative builders who have been responsible for most of the recent office building in London; other building owners and authorities—led by the Ministry of Works—have now also been convinced. The author of a paper* recently presented to the Institute of Civil Engineers bluntly stated that "the issue would appear to be resolved in favour of (concrete) as far as first costs (of multi-storey framework) are concerned." He indicated that the difference in overall building costs may be as much as 25 per cent.

There are no hard and fast rules in the matter. Every building is a different case; each has its most appropriate frame design—and what is economic for one may not be for the other. Furthermore, there is a wide range of opinion within the building industry on the subject of relative costs; some sources put the difference between concrete and steel structures at no more than 5 to 10 per cent of the total building cost. Nevertheless, there is general agreement that for a commercial building of given size and amenity, the best design in concrete is cheaper than the best one in steel.

It is difficult to say when the economic balance tipped in favour of concrete. In combination with a change in the balance of material costs, the extensive use of concrete since the war has brought great improvements in the technique and building methods of British architects, engineers and contractors; these are now much closer to the methods of their Continental counterparts. Lower costs in the future will necessarily depend on the same factors.

Reinforced concrete columns and beams are made by pouring concrete into a mould, built usually of wooden shuttering, erected in position on the framework, which is removed when the concrete has hardened. The concrete is poured around a number of small-diameter steel rods, running the length of the frame member; these reinforcing rods commonly vary in diameter from ¼-inch to 1½ inches, although larger sizes

* "The Economics of Framed Structures," by L. R. Creasy, BSc (Eng.), MICE, Superintending Engineer, Engineering Branch, Ministry of Works.

are occasionally used. The number of rods used naturally varies with the size of the beam or column; but, as an example, a beam 16 inches by 12 inches might use about seven bars of one inch diameter, weighing about 22 lb. of steel per linear foot. Alternatively, pre-stressed concrete beams—poured in advance and then erected into position—can be used; this method compares roughly with concrete poured *in situ*. The structural steel beam most commonly used is of "I" section, and is now available in this country with flange widths up to 16½ inches, and overall depths of up to three feet. For a beam of comparable strength to that quoted above, a 12 inch x 6 inch steel beam, weighing about 44 lb. per linear foot, would be required.

Steel framework, however, cannot be used by itself in multi-storey buildings; to provide adequate fire protection it must be clad in some sort of fire-resisting casing. The most commonly used material for this purpose, paradoxically, is concrete—generally of a slightly cheaper grade than that used in load-carrying frameworks—which is poured into shuttering around the steelwork in much the same manner as in reinforced concrete construction. It is possible that at one time an encased steel beam designed to carry a given load was substantially smaller than its equivalent in reinforced concrete. But this is no longer so; and there is now little difference in the size of frame members in the two media, for a comparable load. Reinforced concrete beams need be no deeper than a cased steel unit, though they will generally be wider; depth is usually the more important dimension.

The amount of concrete used, therefore, varies only slightly; but there is a considerable difference in the amount of steel used. In the beams and columns of an average multi-storey building, the choice of reinforced concrete may mean using only a third as much steel. Weight for weight, reinforcing rods cost much the same delivered on site as steel beams—some £40 a ton. Erected, per ton of building, the difference may come to £70 for reinforced concrete against £100 for steel framing. This makes concrete clearly the cheaper material; perhaps as much as a third can be saved on the cost of the frame, which in turn can mean a saving of as much as a fourth in overall building costs.

Such economies apply to multi-storey buildings in which a steel framework, if used, must be clad in fire-resisting material. Where naked steel can be used, it is usually the cheaper material. Steel is unlikely to meet very powerful competition in the majority of factories and other industrial buildings, most of which, in Britain, are built on a single storey. Traditionally, it has also been argued that faster—and hence cheaper—construction is possible with steel than with concrete; but as the authority quoted above put it, this aspect "would often appear to enter into the realms of philosophy rather than calculation." Certainly it is true that the basic steel framework even of a multi-storey building can be erected in much shorter time than it takes to build a concrete frame. But by the time cladding has been poured around the steel, there is probably very little difference between the two methods.

It is often held, too, that buildings of great height are more easily—and hence perhaps more cheaply—built of steel than of concrete. But while steel may have advantages where very tall buildings—of say, thirty stories and up—are concerned, it seems doubtful whether there is any significant difference in buildings of the heights likely to be built in Britain. It is unlikely, nevertheless, that anything approaching true skyscraper size will ever be built in London; on this score, therefore, concrete yields nothing to steel.

WHAT, then, is the outlook for heavy constructional steel sections in the future? There is no longer any shortage, and prices have come down slightly—although there is no sign of a continued fall, and it is doubtful whether prices would ever fall enough to sufficiently redress steel's competitive balance on their own account. What might help is some improvement in the standards of constructional steel available to the building industry; this, belatedly, is now appearing.

Throughout Europe, new standards for building steel (the IPE series) have now been adopted, aimed at reducing the weight of steel required to support a given load, and increasing the efficiency of steel structures. Some corresponding improvement in British and Commonwealth constructional steel standards is now in train. In practice, the new universal mill at Dorman Long's Lackenby works is now producing universal beams in sizes eight inches deep up to 36 inches deep, with maximum widths of 16½ inches. Previously the largest beams produced in Britain were 24 inches by 12 inches, and it was often sometimes necessary to build up more massive frame members from two or more beams, or to build a wider flange by the addition of plates to a small beam. The larger sizes now available from Lackenby—and eventually also from Appleby-Frodingham, where United Steel is now converting a mill to make universal beams—make this unnecessary, and can thus bring about considerable savings in costs, as well as giving a greater freedom in design.

In addition, British Standard 449, which governs the use of structural steel in building, has recently been revised to permit its more efficient use. Previously the concrete used to encase steel framework for the purpose of fire protection was not allowed to carry any part of the load; under the revised standard, the permissible stresses for all steel members have been slightly increased, and concrete-encased columns are permitted in some cases to carry greater loads than those of naked steel. Finally, there is a possibility that concrete may be replaced as a form of fireproof cladding by other materials, such as gypsum, asbestos board, sprayed asbestos or vermiculite, lighter and perhaps cheaper to build.

Against these improvements, the technology and design of reinforced concrete are continuing to develop. Concrete slab construction, "mushroom" columns, beamless construction, shell structures and other advanced designs have already overcome many of the former limitations of this material. The issue, then, is far from being settled. If constructional steel is to regain its place as an economic competitor with reinforced concrete, the most promising direction appears to be through further advances in building methods and technology—although a further fall in steel prices would help. But it is in terms of design as well as technology and building efficiency that one would like to see the stalwarts of both materials—architects, engineers, contractors and manufacturers—pressing forward adventurous claims. Without this competition, British building will probably suffer in terms of economics as well as æsthetics. With it, the industry may even one day be qualified to educate its customers—the prospective owners who are, or ought to be, the most interested of all in both aspects of large-scale building.

BUSINESS NOTES

IN THE MARKETS

No Doubts in Throgmorton Street

IF one judged by the behaviour of the London stock market on the eve of the election, the investing public had absolute confidence that, whatever the public opinion polls were saying, the Conservatives would win. At first there was a big two-way business in the industrial market but, though the polls showed a definite swing against the Conservatives, buyers outnumbered the sellers and on Wednesday, after the publication of a poll that showed a slight swing-back in favour of the Conservatives, there were hardly any sellers at all. Thus in the week to Wednesday's close the *Financial Times* ordinary index rose by 11.0 points to the new peak of 266.9 (putting on 4.1 points on Wednesday alone) and *The Economist* index went up by 13.7 points to a record level of 305.6 (1953 = 100). On polling day itself the market remained very active—indeed at one time the jobbers were almost swamped with orders—and though there was some selling there were still many buyers and prices continued to move up.

Overseas dealers at first had some reservations and spot sterling weakened; but by Wednesday morning the Continent was a buyer of sterling again and rates improved on all centres. The London premium on dollar stocks at one moment went up to 3¾ per cent but this amounted to no more than a slight hedging of the bet and to a recognition of the fact that American short-term interest rates now look attractive; by Wednesday's close the premium was down to 2⅛ per cent. So confident were the majority of investors that what they wished to be would be that gilt-edged prices remained firm and equity prices roared ahead. This was not simply an expression of the more sophisticated view that, whatever party came to power, this was still the time to buy equities—either for growth or as a hedge against inflation. If the buying had been triggered off by anything more than confidence in a Conservative victory, would steel shares have been marked up so sharply and would dealings in options (especially in call options on steel shares) have been so active? This was an exuberant market that pushed the doubting Thomases into the corner and forgot about them.

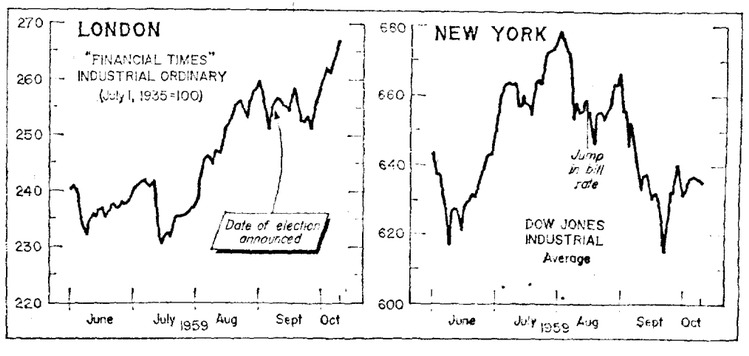
Tug o' War in Wall Street

THE event of the week in the New York market has been the Treasury's issue of $2 billion of 5 per cent notes of four years and ten months' life—already christened the "magic fives." The issue is believed to have been many times over-subscribed and preliminary dealings started at a premium of nearly one point. Many savings banks have reported withdrawals of deposits for subscription to the new issue, which has also, inevitably, attracted the speculators. This is real competition for equities on their present low yield basis, and has added another reason for Wall Street staying in the doldrums.

But there has been no general fall in common stocks this week. The Dow Jones average of industrial stocks has hovered between 630 and 640, well below the peak of 680 reached early in August but some distance from the low point of 615 touched a few weeks ago. The Government's defeat in its anti-trust case against Du Pont and General Motors encouraged increased demand for these two stocks, and some electronics issues have also come back in favour. But by and large trading has been light and prices of most issues have moved in a narrow range.

The New York equity market is clearly nervous, unable to stage a rally of significant proportions, yet resisting further price reductions. The major uncertainty is the steel strike, which having lasted longer than Wall Street expected is now affecting the outlook for profits. At least until a settlement is reached many investors are likely to take advantage of the high yields available in short term and medium term government securities and postpone further commitments in equities.

Nor will the cloud automatically lift if the President orders a return to work under the provisions of the Taft-Hartley Act, which would merely prolong the uncertainty. Once the steel strike is settled and, as is generally expected, the economy enjoys a new surge of expansion, the outlook for equities will be brighter. But even then, if fears of price inflation are kept at bay, the high yields obtainable on government securities might still provide significant competition for low yielding Wall Street favourites.



Sterling's September Strength

THE much dreaded pre-election run on sterling has appeared only in election week itself, and even in the past few days the sales by American and Continental sources do not appear to have been heavy. In September, remarkably, the reserves of gold and convertible currencies rose by £13 million, or $36 million, to reach £1,173 million or $3,284 million. This performance in what is normally the peak month of the year for commercial sales of sterling and at a time when the approach of the election led to some precautionary running down of foreign working balances, reveals the considerable underlying strength of sterling. It is all the more significant as it is known that an appreciable but unspecified payment in gold was made to the International Monetary Fund last month in respect of the subscriptions by a number of sterling area countries to the increased capital of that institution. There may also have been some pressure from transfers of short-term funds to New York, where the bill rate is now well above London; but most of these transactions have been offset by a matching transaction in the forward exchange market.

The strengthening of the reserve last month must, therefore, be attributed to an unusually keen commercial demand for

sterling. This may have been due in part to the incidence of commercial purchases of sterling, which in the normal course would have been made a few weeks earlier but were postponed in anticipation of a weakening of the rate with the advent of the election. The reserves are also being strengthened by the continuing high level of exports from the United Kingdom to dollar countries. In this third quarter as a whole, the reserves have risen by $114 million—compared with $44 million at the same season in 1958.

LUNIK III

Ring Round the Moon

In their most elegant space experiment yet, the Russians have drawn an elliptical ring round the moon; they have been running rings round their American competitors since Sputnik I was launched twenty-four months ago. By a stroke of irony, the Americans had planned precisely the same experiment for precisely the same day as the Russian launching of Lunik III, but were once again frustrated by the unreliability of their rockets—their lunik-launcher destroyed itself during preliminary trials.

While it is fascinating to speculate what might have happened if the rockets from Russia and from Cape Canaveral had headed simultaneously for the moon last Saturday, it is a waste of breath for American spokesmen to complain, as some have, that their space effort is hamstrung by having to muddle through on engines probably half the size of those available in Russia. Each successful Russian space shot, now making use of the ultimate refinement of guidance during flight, confirms Russia's current ability to pin-point any target of importance in the United States with a missile at the first try; each American hold-up merely confirms that country's inability to answer in kind. This cannot be explained away as a difference in engine power; American rocket motors are big enough for the job in hand.

This discrepancy in achievement between the world's two major industrial powers is leading some British scientists with long experience of defence planning to the conclusion that American rocket development is being carried out along the wrong lines. The present generation of American military and space rockets depend on liquid fuels incorporating some of the most unpleasant chemicals known to science. It is asking much of pumps and other components in contact with several tons of these materials to work with the perfect efficiency needed to keep a rocket intact and on course; it is now being argued by these experts that perhaps liquid fuel motors with a high degree of reliability simply cannot be built (though the British defence programme is based on the use of one).

Rockets using solid fuels, by contrast, appear to be extremely reliable while they remain below a certain (quite small) optimum size; beyond that the solid charge burns unevenly—and may explode. Those British scientists who infer that the Russians may have made the best of both worlds by using solid fuel, but breaking down the huge charge of their big motors into small packages for easily controlled combustion, have only the evidence of the apparent reliability of Russian space rockets to support their claim. But it is circumstantial evidence of an increasingly weighty kind. Certainly something more radical than minor differences in engineering now seems needed to explain the difference between Russian and American spacemanship.

BALANCE OF PAYMENTS

You Never Had It So Good

The Hon. Sunthorn Hangladarom, minister of finance and governor of the Bank for Thailand, told in the most entertaining speech of the Washington conference how his government received its first mission from the World Bank. "All my colleagues and the Government in power then were really amazed at the number of questions asked and an infinite variety of statistics required. . . . We managed somehow . . . and we knew very well in our subconscious minds that in order to satisfy the experts we had to collect the statistics in a great hurry and we had a hunch that they were not very correct or complete either."

Not all finance ministers are so frank. At the end of last week in London Her Majesty's Treasury coolly and quietly revised the much vaunted record figure of the current payments surplus for 1958; instead of earning £455 million abroad, it seems, we "identifiably" earned £349 million. Of course, they seem to be saying in Great George Street, this little change is not too significant because it is balanced by a larger balancing item (the euphemism for errors and omissions); anyway, the important thing is the movement in sterling liabilities and gold assets and we know what *they* were.

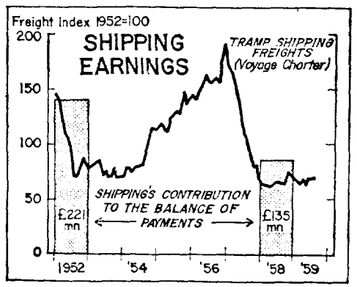
The drastic revision in the estimate of overseas earnings is attributable primarily to revelations in a delayed quinquennial survey of earnings from shipping; this is discussed below. In future, it seems, a sample inquiry is to be taken every year, and new direct inquiries by the government into insurance, investment earnings and capital transactions should increase the "identified" (this qualification is a new if becoming modesty of the statisticians) elements of the payments balance. As it is, Britain's known earnings abroad last year seem to be a good deal smaller than was originally supposed; to the same extent there were unknown receipts, which could have been current earnings or inflows of capital.

The same downward revision has taken place for the identified current surplus in the first quarter of this year, which plummets from £78 million to £35 million. For the second quarter, the surplus is put at £107 million, making £142 million in the half-year, compared with £237 million in the first half of the (presumably still) record year 1958. There was again a surplus on visible trade alone in the second quarter of £35 million on a payments basis (with imports and exports both valued fob).

Britain is shown to have received, net, £54 million in Government loans in the second quarter, but this reflects simply the disposition of German funds in London. At Washington Sir Roger Makins stated that the British government's loans and grants to overseas countries, including payments from the sterling subscription to the World Bank, rose from about £70 million in the year to end-March, 1958, to £100 million in 1958-59, and that assistance in the current fiscal year is likely to show about the same rate of increase.

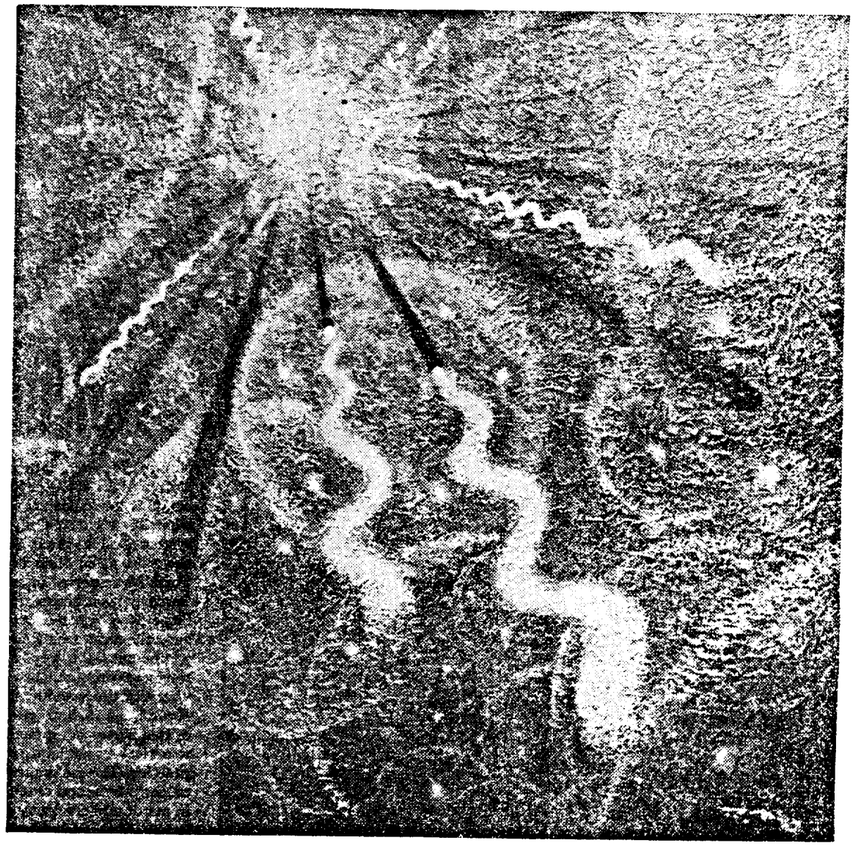
What Shipping Earns

Estimates of British shipping's contribution to the current balance of payments have been made since 1953 by applying "indirect methods" to basic figures obtained from an inquiry by the General Council of British Shipping into shipping earnings in 1952: so the record of payments surpluses in some earlier years as



well as in 1958, may need revision too. The inquiry was to have been repeated last year for 1957, but it was judged that the effects of Suez would have made that an unrepresentative year: so it was left until this year, for 1958.

The General Council's figures showed British shipping's net earnings as £135 million, against £221 million in 1952. The



"X-rays" by Roy Nockolds

The Inquiring Rays

The value of medical X-rays in diagnosis is incalculable. Over 25,000,000 pictures are made every year, each revealing to expert eyes otherwise hidden internal conditions.

Elaborate precautions are taken to ensure that patients and staff suffer no ill effects. Apparatus and X-ray tubes are designed to prevent unwanted radiation exceeding the recommendations of the International Commission on Radiological Protection.

Even so, continuous research is undertaken to widen the safety margin still further. From the Mullard Laboratories there now comes an outstanding development in the shape of two new X-ray tubes which reduce 'off-beam' radiation to only one-tenth of the recommended maximum level. This is far below that of previous tubes, so low, in fact, as to be a quite insignificant component of X-ray dosage.

These 'Guardian' tubes, as they are known, are as efficient as they are safe. They are new and powerful weapons in man's unceasing fight against disease.

From systems to satellites

Man-made satellites orbiting soundlessly in the eternal night of Outer Space . . . Only the most complex calculations reveal their precise whereabouts . . . Only electronic computing systems such as the Remington Univac provide the answers in time to have practical value. For Univac solves in seconds problems which formerly took hours, days . . .

Since Remington introduced, over 80 years ago, the first-ever item of mechanised office equipment—the typewriter—the Company's range of products has expanded to take in virtually the whole field of office automation. Hand in hand, however, with the manufacture of Remington equipment and supplies has gone relentless research into every aspect of business practice. The results, applied by specialists in office systems and machines, are reflected daily in maximum efficiency achieved at lowest cost in routine and administrative operations, large and small.

Times have changed radically since 1873. Remington Rand, more often than not, have been instrumental in changing them—to the lasting benefit of business everywhere.

Accounting, Adding, Calculating, Dictating, Duplicating and Photo-Copying Machines. Univac Electronic Computing Systems. O & M Service. Filing, Visible Record and Charting Systems. Fire Resistant Equipment. Electric, Noiseless and Standard Typewriters. Office Furniture and Supplies.

earlier year was itself one of declining freight rates, but it was a much better year than last year's uninterrupted slump: the Chamber of Shipping's index of tramp voyage rates in 1958 was on average a third below the 1952 level, while tramp time charter rates were 45 per cent lower. The shipping boom came in between these benchmarks.

The shipping industry's figure does not coincide at all directly with the Treasury's estimate of shipping's contribution to the current balance. The Treasury segregates tanker earnings from its shipping figure, including these with other oil items in the invisibles; it credits the balance with the disbursements of foreign ships in British ports, debits fares and freights paid by British residents and goods trading in foreign ships, and, among other detailed differences, leaves out of British shipping costs payments made here in respect of bunkers taken abroad.

AIR FARES

Erosion, Not Cuts

AIRLINE delegates who have spent the past three weeks arguing at Honolulu about next year's air fares are being obliged to give up their hotel rooms by this Saturday to the incoming wave of holiday makers; but for this fact it might have taken several more weeks of hard talking to break the deadlock between the handful of airlines that want to extend third-class fares across the five continents and the majority who do not. When this issue of *The Economist* went to press no agreement had been announced, but there were signs of a compromise settlement with most of the concessions coming from the progressive minority. Although they will certainly win some extension of third-class fares, it will not be to anything like as many routes as they would like. The operators most affected by this decision are Pan American and BOAC, both of whom need the stimulus of third class fares to fill greatly expanded fleets.

British European Airways' complicated proposals for selective fare cuts in Europe have also had a rough passage, particularly those for special concessions at the beginning and end of summer to try to spread holiday traffic over a longer period. The only point on which the airlines appear to be unanimously agreed is the abolition of the ludicrous token surcharge on jet flights over the North Atlantic; and the quiet burial of any plans for fares that discriminate against certain types of aircraft. It looks as if next year's tariffs will contain a number of small erosions rather than the wholesale fare cuts that were being promised before the Honolulu meeting got under way.

THE JASPER AFFAIR

Mr Grunwald Returns

ON the same day that Mr Noel Cow, the chairman of the State Building Society, landed at Southampton from the *Queen Mary* Mr Friedrich Grunwald, the managing director of a number of the Jasper companies, flew back from Israel and landed at London Airport. Both are seeing Mr Neville Faulks, QC, who is investigating the affairs of H. Jasper and Company at the behest of the Board of Trade. Mr Cow had nothing to say to the press, except to indicate that he was not sure what he was going to say at the meeting of the State Building Society where a group of shareholders, headed by Mr John Kirby, are to move a resolution to remove the present directors from office.

Mr Grunwald did hold a press conference at London Airport. No new light was shed on the Jasper affair at this conference; indeed, in the circumstances, it would have been startling if any new evidence had then emerged. But Mr Grunwald did say that Mr Maxwell Joseph was not involved in the deal: "he was only the person who sold the controlling interest in Lintang." Mr Grunwald again referred to unnamed associates who had let him down; he again mentioned the name of Mr Murray, the managing director and secretary of the State Building Society; and he reaffirmed his earlier statement that the £3¼ million borrowed from the State Building Society was used as it was intended to be used.

Later in the evening the solicitors of Mr Murray issued a statement. He, that is Mr Grunwald, said this statement:

> has been reported as saying that the sum of £3,250,000 advanced by the State Building Society was used as intended and that Mr Murray was one of the people who made the take-over bid for Lintang.
>
> As Mr Murray's solicitors, and on his instructions, we wish to state firstly that by two letters dated July 24, 1959, Mr Murray, in his capacity as secretary of the State Building Society, gave Mr Grunwald's firm of Harewood and Company explicit and detailed instructions as to how and on what terms and in respect of what properties the money advanced by the Society for mortgage was to be applied; and secondly, Mr Murray did not make, nor did he help anyone else to make, a take-over bid for Lintang.

Until Mr Faulks completes his investigation, it would be fruitless to comment on these statements, except to repeat what was said in these columns a week ago—that there is an evident contradiction to be resolved.

BUTTER & MARGARINE

Turn in the Market

MARGARINE makers are gleefully watching butter prices rise and their own sales rise too. After the reverses of last year they no doubt feel that it is time that the market turned in their favour. The severe drought has reduced production of milk and butter in Europe. Most European exporters have had less butter to send to Britain, and Sweden, which sent 11,800 tons here last year, has sent nothing this year. Moreover some countries, such as Germany and France, have been buying more butter in Europe, and buying also from Britain's traditional suppliers in the Commonwealth. Though imports into Britain from Australia have risen sharply this year, more than offsetting the decline from New Zealand, and Danish shipments are a little higher, total imports are down. In the first eight months of this year imports into Britain dropped by 14,500 tons to 281,000 tons, and in the last twelve months stocks have dropped by over one-half to about 25,000 tons.

The fall of five per cent in imports has produced a sharp rise in prices. The top grade of New Zealand and Australian butter now costs about 392s. a cwt wholesale, which is 100s. dearer than six months ago and 155s. dearer than a year ago. Danish butter, at 450s. a cwt, shows an even sharper rise of 132s. over the last six months. Some brands of margarine, in contrast, have recently been reduced: Stork and Echo, for example, which are said to account for over half British sales, have been cut by 1d. to 1s. 8d. and 1s. 4d. a lb respectively, which compare with 3s. 11d. to 5s. a lb for butter. It is not surprising that consumption of butter is declining, though the switch to margarine has been

Eugene Black, President of the World Bank

A Washington Notebook

Per Jacobsson, Chairman of the International Monetary Fund

Forty finance ministers, as many governors of central banks, 500 official delegates in all, and visiting chairmen and high executives of the world's leading financial institutions by the hundred—last week's vast assembly in Washington's Sheraton Park Hotel was as usual a clearing house for views about current issues.

Terms for Ida

Most of the discussion on the report of the World Bank, as expected, was on the American proposal for a new International Development Authority to make "soft loans" to poor countries. The main news concerning the World Bank itself was that Britain is releasing the remainder of its sterling subscription, totalling £83.6 million in all, for lending to the sterling Commonwealth, and convertible for spending anywhere; and that Japan is making the whole of its yen subscription (already released) convertible. The general feeling about IDA among bankers was perhaps that it is a regrettable necessity; certainly a number of delegates would not regard it as acceptable under any management other than that of the World Bank. "In order to render the maximum usefulness to a country, the same principles of economic soundness which have been the cornerstones of the Bank's activities should be applied to it [the IDA]"—that statement came from Austria, a borrower at the World Bank. It will obviously be more difficult to apply those principles to supplementary aid than to commercial loans; but the administrators of IDA funds could themselves have a significant influence on domestic policies.

Not surprisingly, the potential borrowing countries felt that the proposed initial capital ($1 billion to be fully paid up over five years) was too small and that their voting power should be larger than their subscriptions. Otherwise there was a surprising degree of agreement. Sir Roger Makins voiced the general feeling when he urged that the subscriptions of industrialised countries should be convertible, untied and additional to existing forms of aid. Mr Dillon, of the US Treasury, asserted that his government did not regard IDA funds as a substitute for bilateral aid; but the fact is that the appropriation for the US Development Loan Fund has been cut by roughly the amount of the United States' initial subscription to IDA. America still envisages the use of local currencies in the new organisation, including those accumulated by the United States, either for repaying outside loans or for making loans. This suggestion has been resisted not only by European countries, which see little point in repayment in local currencies, but by Pakistan, which points out that it cannot be given "aid" in its own resources. The one man who wants local currencies is Mr Robert Garner of the International Finance Corporation.

Nearly everyone agrees that IDA's terms must be flexible, but many would prefer outright grants (as suggested by the Netherlands) or long periods of grace (Britain) to concessionary rates of interest or inconvertible currencies. The Netherlands also suggests that IDA should co-operate with the Special Fund of the United Nations, which is blossoming under Mr Paul Hoffman; Britain has made a big gesture by raising its subscription for next year from $1 million to $5 million. The next step on IDA is for the executive directors of the Bank to formulate draft articles of agreement for circulation to member countries.

International Investors' Institute?

One interesting section of Mr Black's speech has received little attention outside Washington. The president of the World Bank wondered whether "there is not a place now for an entity, made up exclusively of private international investors from all countries," which could publicise what is being done and the conditions that attract investment. The aim would be to bridge the gap between investors and potential borrowers. This proposal has similarities with the various proposals that have been made to formulate a code for foreign investment, though Mr Black's idea seems more modest and more attainable. The great trouble about any code is that it is almost bound to be broken, possibly on political grounds. Germany's loan to Greece a year or two ago still rankled in the minds of a number of Washington delegates. Nonetheless, a distinguished committee in Geneva, including Lord Shawcross and Herr Abs (of the Deutsche Bank), is going ahead with a scheme for a simple set of rules.

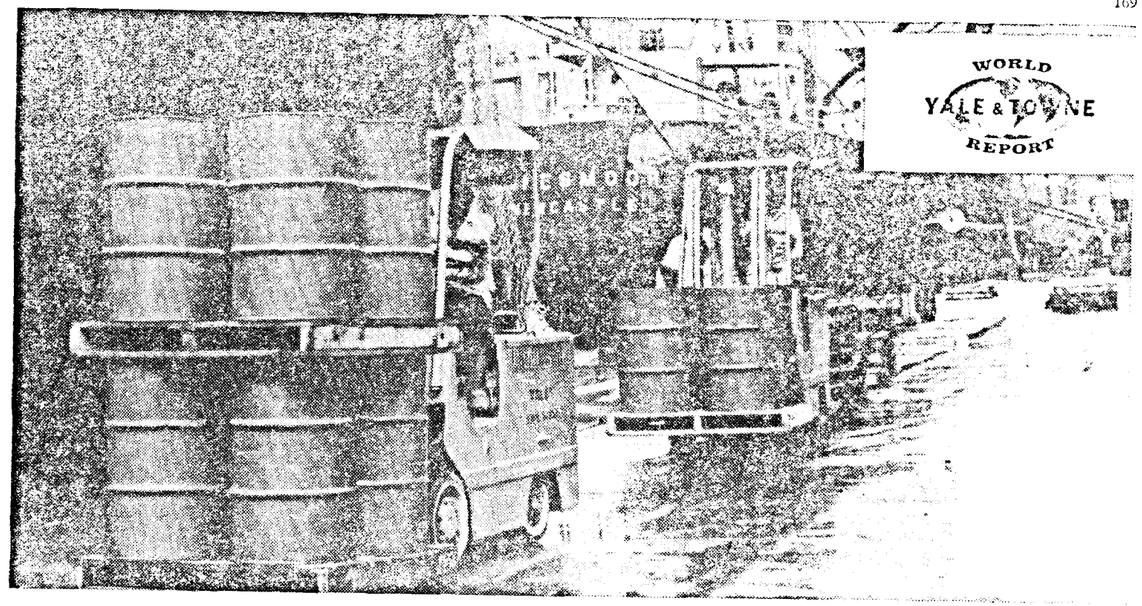
Radcliffe under Fire

In the corridors at Washington one of the biggest talking points was Britain's Radcliffe report. While there is general admiration of the descriptive material and approval of the statistical recommendations (mingled with much shock at the gaps that are to be filled) the general response is still more critical than among similar circles in Britain. As was to be feared, overseas opinion has fastened especially hard on the proposals for closer formal association of the Treasury with the Bank of England. The characteristic English explanation that this is a change of form and not one of substance carries little weight with overseas observers, who never believed this argument when applied to the nationalisation of the Bank.

Few delegates openly matched this week's bitter comment from the First National City Bank of New York—"Perhaps the pound, afflicted by five crises since World War II, could have stood up better if the Bank of England had retained a greater measure of independence." The much more common complaint was, "Whatever this means for you, it brings a new handicap to every central bank fighting against the incursions of a Treasury irked by an independent influence for financial responsibility." And to this there is little answer except a plea for understanding of English institutions.

Many bankers also dislike the central role given by the Radcliffe report to debt management, though this criticism is not shared by some of the more sophisticated. There is general welcome for the recognition of the need for realistic long term interest rates, and general bewilderment about the belittling of Bank rate and the limited role seen for monetary policy as a whole.

Many monetary thinkers welcome the attention paid to liquidity (the Federal Reserve, for example, has for many years kept a close watch on "near cash" assets); few would go so far in dismissing the supply of bank money as unimportant in itself. Some high authorities also deplore the lack of attention to savings and costs: "Keynes would never have done that."



SINGAPORE — These efficient, versatile Yale fork lift trucks quickly move unit loads of goods on pallets from pier warehouse to shipside. In the warehouse, they lift and stack loads of all kinds — bags, crates and cartons. Capacities range all the way from 1,000 to 100,000 lbs.

ECONOMICAL YALE TRUCKS SPEED CARGO ALONG THE QUAY

YALE PETROL TRUCK WITH PNEUMATIC TYRES MOVES TIMBER OVER ROUGH TERRAIN

VANCOUVER, BRITISH COLUMBIA — Heavy duty Yale petrol trucks with pneumatic tyres prove ideal for outdoor handling operations. They move heavy loads over rough terrain easily because of their high degree of stability. All Yale time saving and cost saving petrol trucks have indoor and outdoor uses. Capacities: 2,000 to 20,000 lbs.

LIGHTWEIGHT MANŒUVRABLE YALE TRUCKS STACK PALLET-LOADS OF CASES

COPENHAGEN, DENMARK — Cases of beer are stacked for shipment, quickly, economically, by Yale Worksavers. These lightweight compact Yale electric trucks are ideal for use in cramped areas and on low-load floors. They have unusual manœuvrability and operate with easy finger-tip control. Capacities up to 7,500 pounds.

- Yale makes the world's most complete line of Petrol, LP-Gas, Electric and Hand Lift Trucks.
- All Yale Industrial Lift Trucks are uniformly high in quality, wherever manufactured.
- All Yale equipment available in currencies of the free world.
- For further information contact your Yale Sales and Service Representative — located in principal cities of the world.

My word!
This is a good whisky

There is no mistaking that delicate bouquet. No mistaking such velvet smoothness. No mistaking the heart-warming strengthening glow which has never a trace of fire. No doubt about the "know-how" of those who order it by name. "White Horse – the whisky you can tell blindfold".

WHITE HORSE
Scotch Whisky

Now at last there is more White Horse around. Ask for it by name and show that you too know a good whisky.

delayed, as the switch to butter was delayed last year. It seems that consumers change first to margarine containing 10 per cent of butter (now retailing at 2s. to 2s. 3d. a lb); this, again, confirms last year's experience, when butter's gains were mainly at the expense of the butter-margarine mixtures. Van den Berghs, Unilever's subsidiary, and Kraft, are both trying out in the north-west of the country a new "whipped" (even-easier-to-spread) margarine under the names "Springtime" and "Wonder Whip."

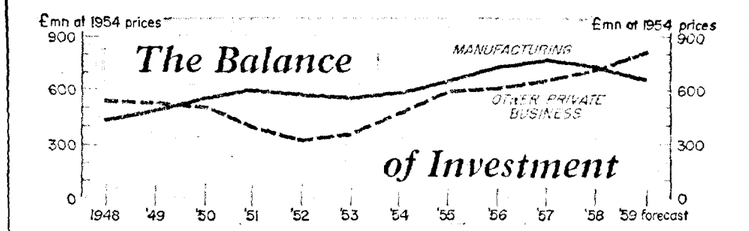
It is difficult to foresee much improvement in supplies of butter until the spring, and the extent of the improvement then is as uncertain as the weather. People who prefer butter must be longing for a return to the early summer of 1958, when European producers obligingly dumped butter in the British market.

PARTLY NEW CARS

Last Minute Revisions

THOUGH one of the Big Five is promising a "new model" next week, most of the entirely new British cars for 1959-60 have now been unveiled: the industry must indeed have introduced more fresh models since the 1958 Motor Show than in any other twelvemonth since the war. Those announced this week are mainly familiar models with cosmetic or internal changes, major and minor. The 2.4 and 3.4 litre Jaguar saloons now have bigger rear and side windows, and more slender pillars, acquiring rather more family resemblance to the Mark IX. The Standard-Triumph group has slightly altered the looks of its Companion, the estate car that is the only version of its former Eight and Ten range still in production. More important is its introduction of the Triumph Herald saloon with, as an optional conversion, the twin carburettor engine and 4:5 rear axle ratio so far fitted only to the Herald coupé. This seems a wise option to offer: BMC's new little cars and Ford's new Anglia, according to published road tests, have better acceleration and top speeds than the normal Herald, which while possessing various special features of its own, is markedly more expensive than other new small British cars.

The Prefect announced this week completes Ford's revision of its range of small cars. It is the same body shell as before, differing from the new Popular (alias former Anglia) mainly in offering four doors; but it uses the new over-square 997 cc engine as the new Anglia brought out last week (of which Ford, with characteristic commercial *nous*, had already managed to get a large number visible on British roads by the weekend). The Prefect has a lower gear ratio than the Anglia and weighs about a hundredweight more, so it does not seem likely to achieve as sparkling a performance



IF the forecasts that they made more than half way through the year turn out right, British businessmen outside manufacturing will spend more on fixed capital investment in 1959 than the manufacturers will. Last year they spent about £833 million, while manufacturers spent £895 million. But this year the manufacturers expect their capital expenditure to come down by about a tenth (as in the first half of the year it did), while businessmen in the distributive and service trades expect their investment to go up by a sixth (which is rather more than theirs did during the first half of 1959). A modest increase in investment in shipping and agriculture would bring the total of "other business investment" well above that of manufacturing investment.

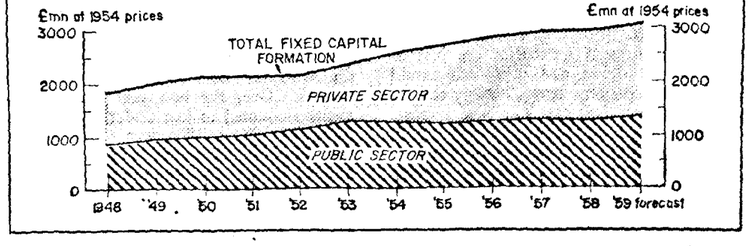
As is shown in the Blue Book on National Income and Expenditure, published last week, this would tip the balance of private investment for the first time since 1949. The main reason seems to have been that in the immediate postwar years manufacturing investment grew if not fast, at least more rapidly than investment in other kinds of business until 1952-53; after a pause came its 1954-58 boom, passing the peak in 1957; and from this peak it appears now to be falling away quite sharply. Investment in other private business began to gather pace in 1954, rose about as fast as manufacturing until 1957, and has not yet turned downward, though businessmen in some trades think that next year their fixed investment may level off or drop slightly.

It is only fair to note that according to the Blue Book's estimates, output too has been rising faster over the last few years in some sectors outside manufacturing than in it. For 1958, the national income statisticians put the gross domestic product as about six per cent higher than in 1954. Manufacturing output, seven per cent up, had more than matched that (providing indeed about a third of the national product); but activity in some other trades and services had been growing much more rapidly. Taking 1954 as the base year, agricultural output was eight per cent up; gas, electricity and water supplies (largely in the public sector) had risen 17 per cent; the output of distribution was up nine per cent, and so was activity in professional and scientific services.

THE other element in fixed investment in the private sector is private house building. This year's expenditure on private houses may be nearly 50 per cent higher than in 1954—whereas expenditure on local authority houses had gone down by a third until early this year, when there was a marked increase in the number of new council houses started.

However, the annual volume of work on building new houses has been slipping downward in 1958 it was £581 million. One might contrast this with expenditure on what may be called another element in "home investment"—i.e. the durable goods that consumers buy. Conventionally these purchases of equipment are not regarded as capital investment; when a company buys a private motor car or a refrigerator for the canteen, this is capital investment, but the same model of car or refrigerator purchased for the domestic home counts as "personal consumption of durable goods." Since 1954 spending on consumer durables has risen by about 40 per cent. In 1958 consumers spent £1,147 million on durable goods; this was one-third as large as the country's total "fixed capital investment."

In 1958, Britain thus spent £1,728 million on new houses and consumers' new "plant and equipment" to go into them (and their garages, or on the kerb outside): this was, coincidentally, precisely the same as fixed capital spending by private business, and about a quarter more than fixed investment in the public sector.



or quite as much fuel economy. The Ford customer for small cars who still wants four doors will also get a better engine and transmission for his unchanged price of £622 including tax: on the other hand, he will be paying £33 more than he would have to for a modern design using that engine to get more performance, or £128 more than he now need pay for the same body with the old insides. It would be fascinating to know the proportions in which Ford now expects to sell its Popular, its Anglia, and its Prefect: but unwise to underestimate the competitive power the trio may exert in the transformed British market for small cars.

DOLLAR IMPORTS

Equality at Little Cost

THERE is no reason why the new British government should not grant American and Canadian requests to end discrimination against imports of dollar goods. The cost to the balance of payments would probably be small, and it happens that this year, for the first time for nearly a century, Britain has a substantial surplus in its trade with the United States. The last measure of liberalisation, in June this year, brought roughly four-fifths of British imports from the dollar area free of restriction. The remaining field of discrimination is small; it covers mainly alcoholic beverages (but not whisky), cheap literature, meat, fish, fruit and fruit products,

Total exports to Canada	*130·5*	*135·9*

machinery and plant for the oil, construction and building industries, certain organic chemicals and pharmaceutical products, most photographic and cinematographic equipment and textiles.

If discriminatory import restrictions on all these items were removed the main result would probably be some switch in buying from Western Europe to North America; as West European currencies are just as hard as the dollar such a switch would not matter. In some items, notably textiles and fruit, any increase in dollar imports might well be at the expense of British and Commonwealth producers, and it may be questioned whether any British government is willing to go that far. Motor cars are a separate case. In June the quota for cars was increased by £900,000 to £1½ million, and the delivered price of Canadian cars (including duty and purchase tax) seems sufficient guarantee that the cost of freeing such imports would be negligible.

NATIONAL SAVINGS

Still Ahead of Target

AN intriguing feature of this period of reflation is that the boom in hire purchase has been proceeded side-by-side with a boom in National savings. In spite of the summer attractions for spenders, the total of National savings has well maintained the lead it established in the first quarter of the fiscal year. In the year to end-March last, it may be recalled, the yield of National savings topped £300 million, and more than doubled the target amount. For the current year, accordingly, the target was raised to £250 million; yet already, at the end of the seasonally less favourable half of the year, almost two-thirds of the target amount has been achieved. In the six months net savings produced £144 million, compared with just under £81 million in the similar period last year, and, after allowing for the excess of accrued interest over interest paid out on encashed savings certificates, the gross accretion amounted to £180 million, compared with £109 million. Some investment in savings securities may have been encouraged by the official hint that a new issue might be on less attractive terms; but the indications are that total personal saving in the economy has been rising too.

The most notable contribution to the improvement in "National" savings was made by deposits in the Post Office Savings Banks, which declined during the half year by only £10 million, in contrast with a decline of £46 and £55 million in the corresponding periods of the two preceding years respectively. The net withdrawal from Post Office banks was, moreover, more than offset by a net increase of £14 million in deposits in Trusee Savings Banks (compared with net withdrawals of £12 million from these banks in 1958). Net sales of Defence Bonds, after allowing for a smaller amount redeemed at maturity provided £35 million more than last year, but those of Savings Certificates £20 million less. There was also a decline, by £7 million, in sales of Premium Bonds, which this year have amounted to £26 million.

An important feature in this year's achievement has unquestionably been the accelerated rate of repayment of post war credits, some part of which can be presumed to have been reinvested in National savings. Over the half year these repayments amounted to just under £51 million (of which £35 million was repaid in the first quarter) compared with nearly £9 million in the corresponding period last year. At end-June, before the start of the main holiday season, net savings were around £68 million ahead of last year. Through the holiday months, therefore, the flow has been maintained at virtually last year's level. In no single week, as Lord Mackintosh has pointed out, have the savings figures been in the red, after allowing for accrued interest. This is the first time for thirteen years that the summer has not involved some net withdrawals.

FARM SPRAYS

No More Arsenic

FRUIT sprays containing a limited proportion of arsenic have been used for many years; a much stronger and far more deadly arsenic compound began to be used by farmers as a substitute for sulphuric acid in 1951, during an acid shortage. The acid had been used to burn off potato haulms before harvesting; when the shortage ended, many farmers decided that they preferred the compound of arsenic because it was much easier to handle. This summer, about 60,000 acres, amounting to an eighth of the main potato crop, were sprayed with arsenic, and on one farm, where the spray equipment was taken up to the well for refilling, the well water was contaminated by the equipment and the farmer's wife died.

This tragedy was preceded by regular reports during the years of cattle poisoned by arsenic sprays. It is neither the only nor the most dangerous chemical used on farms; the phosphorus-based insecticides that kill on contact are a much greater hazard, and so are some weedkillers in routine use on large acreages. But the greatest risk in these other chemicals is to the handler; although several workers died when they first came on the market, there has been only one death, four years ago, since the Ministry of Agriculture introduced new handling regulations in 1952. Arsenic is less of a danger to the sprayer than it is to other people and their animals. The Ministry of Agriculture says it is unsafe for anyone, and especially children, to go into an arsenic-sprayed field for two days after spraying; one of the difficulties in keeping stock out of sprayed fields is that the wilting green-stuff seems to have an irresistible appeal and they will go to considerable lengths to get at it. Such a situation would turn white overnight the hair of any factory inspector.

Last week, after the inquest on the farmer's wife, the British Weed Control Council, an association representing manufacturers, met and advised its members to stop making any more arsenical sprays. Fisons-Pest Control, which supplies about a third of the market, stopped production and called in supplies from its dealers; this company has already replaced a good many toxic chemicals, including organic phosphorus, by non-toxic compounds, but has never found a substitute for arsenic. This week Shell Chemicals, a relatively small supplier of arsenical sprays, announced that it, too,

LIFE'S QUITE RELAXING . . .

Perhaps because in many ways it's so much easier today. Thanks to new materials and better ways of making those already well known, there's more time to spare for everyone. Ten years ago, for example, washing and ironing clothes took up a sizeable part of the housewife's day, and mending nets was a regular time-waster for fishermen. I.C.I.'s 'Terylene' has changed all that. This remarkable synthetic fibre is as happy in easy-to-care-for clothes as in fishing nets and cordage, and its great strength and immunity to rot, sunlight and weathering are finding it new uses in industry every day. 'Alkathene' is another I.C.I. product that makes for easier living. Farmers have been released from the back-breaking task of carrying water to their stock since water could be piped through easily laid tubes of this versatile material, and the same plastic in the form of colourful kitchenware is lightening and brightening housework throughout the world. Wherever you look, the story's the same: new plastics, new dyestuffs, new metals, new chemicals of every kind from I.C.I. are saving time and allowing hard-working people everywhere the opportunity for the occasional, well-earned yawn.

IMPERIAL CHEMICAL INDUSTRIES LTD., LONDON, S.W.1

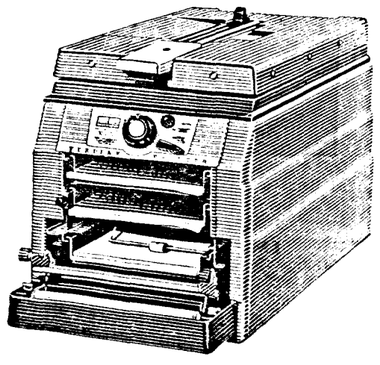
ICI

Pickfords find the 'Verifax' copier a wonderful time-saver

Pickfords use the 'Verifax' copier for a great volume of paperwork and find that it saves hours of office time every day. They use it for a variety of documents – legal agreements, extracts from publications, ticket and travel reservations, conveyances and leases. Indeed, they find the 'Verifax' so useful that they have recently installed a second machine.
Many of the papers to be copied are confidential. With 'Verifax' copying to call on, such documents need never leave the room in which they are kept. As no special training is required to make 'Verifax' copies, an executive can, if need be, copy confidential documents himself.
The 'Verifax' copies anything written, typed, printed or drawn. It leaves nothing out. The copies never need checking and never deteriorate. They are cheap copies, too, because the 'Verifax' uses ordinary, inexpensive paper.

Think how much time and money the 'Verifax' could save in your office

More and more organisations of all kinds and all sizes are using 'Verifax' copiers. Write to-day for full details of this wonderful time and labour saving machine.



THE *Verifax* COPIER

KODAK LTD. · DEPT. 691 · KODAK HOUSE · KINGSWAY · LONDON · WC2.

'Verifax' is a Registered Trade Mark

was stopping production. But even if the production of these sprays ceases altogether, as seems likely, a good many lethal chemicals remain in routine use on farms under conditions that would never for an instant be tolerated in industry.

BUILDING

Limits to Competition

THE practice of competitive tendering for building and civil engineering contracts has often been attacked as inefficient, time-wasting and costly: it has been estimated that more time is taken in planning, designing and tendering for industrial and commercial buildings in Britain than in building them. Some builders attempt to negotiate special contracts with owners, thus bypassing competitive tendering entirely; but these schemes, while often cutting the time before actual building, cannot, by their very nature, ensure that the lowest price is paid for the job. Now the Joint Consultative Committee of Architects, Quantity Surveyors and Builders, which is composed of representatives of the Royal Institute of British Architects, the Royal Institution of Quantity Surveyors and the National Federation of Building Trades Employers, has proposed the wider acceptance of another alternative to unlimited competitive tendering, in the form of a recommended code of procedure for "selective tendering."

In "selective tendering" a short list of from six to twelve contractors is made from all the firms considered, or who ask to be considered, for a particular contract; this list is to be made up on the basis of "established skill, integrity, and responsibility" and proved competence for the work involved, and the selection is to be made by the architect, with the approval of the building owner. "Open tendering," the code adds, "that is, inviting tenders from all that reply to advertisements, is deprecated." The object of the selection is to make a short list of firms, any one of which could successfully carry out the proposed work; in fact, at least for larger works, only such firms usually tender anyway. The committee's argument for this pre-screening is based explicitly on the high cost of abortive tendering, and implicitly, perhaps on the theory that all contractors have to load their prices on successful tenders considerably to cover the cost of unsuccessful ones.

This, by its nature, is not a theory ever likely to be supported by much direct evidence, though profitable contracting firms presumably do cover all their overheads. Nor is there any evidence that architects have a much better idea than building owners of the reputability and competence of contractors. The suggested code has two further shortcomings. It is recommended that the "most convenient" completion date be specified in the tender documents, and that all bidders make offers based on the same

The Meaning of Masers

Another odd piece of electronics does unlikely (but useful) things

A MASER is an electronic component—to be precise, it is a form of Microwave Amplifier using Stimulated Electromagnetic Radiation, hence its name. This is enough to make the average layman consign it immediately to the special mental limbo he reserves for diodes, triodes, spigots, sprockets, for transistor "flip-flop" circuits and other worthy but obscure gadgets. The maser deserves a better fate than this, not because its appearance is any more revealing—it looks like a square, pink fruit-drop—but because it is potentially capable of revolutionising large sections of the electronics industry. It was not discovered until three years ago; the first commercial maser in this country has only just been finished for the Ministry of Supply.

The last big technical innovation in the electronics industry was the transistor. But a transistor does nothing that a valve cannot already do, it merely does it in a smaller space with less power. A maser is not only basically much simpler than a transistor, it does something that no ordinary amplifier can do by detecting microwave signals down to the weakest theoretical strength. It can take a feeble and normally undetectable radio signal, ignoring other, louder signals that would tend to swamp it, and amplify this into something clear and intelligible. Since the electronics industry spends an immense amount of time, money and electric current trying either to boost the power of its radio signals, or to detect weak ones, a device that actually enjoys weak signals has much to commend it.

There are three main sources of this type of weak microwave signal: radar echoes, distant radio stars, and guided weapons. This last needs a word of explanation; a hydrogen warhead travelling through space would send out a great many weak and extremely short microwave signals that would be very difficult to detect by ordinary means and harder still to separate from other "noise" in the ether. It is beginning to look as if the basic requirements for a warning system against missiles analogous to today's early warning radar chains will be a radio telescope to act as aerial and a maser to amplify the signals this picks up from the missile. The more efficient the maser, the smaller the radio-telescope dish required. The giant 260-foot dish at Jodrell Bank, designed in the pre-maser era, is likely to be the first and last telescope of this size ever built.

Understandably therefore, the Ministry of Supply's radar research establishment is closely involved in development of these devices with Mullard Ltd. which, universities apart, appears to have the only laboratory in this country experimenting with masers, although several companies in the United States have prototypes working. So far, the rest of the electronics industry seems to lack interest. But while masers may have a vital defence role, their big market lies in communications and not merely communications with objects with low-power transmitters, like satellites. The crowded short and medium wavebands have driven long-range radio communication into ever higher frequencies, and into complicated devices such as bouncing signals off the troposphere, which involves great difficulty in getting adequate signal strength. Masers appear to offer a simultaneous solution both to the crowded ether and to the difficulties of weak signals.

ONE reason why other companies have hesitated may be the esoteric techniques involved in making a maser. The components are simple, a few atoms of magnetic material (at present chromium) scattered in the ratio of one part in a thousand in a non-magnetic material such as a synthetic ruby; a mild magnetic field to introduce certain energy states in the magnetic particles; a high frequency signal to throw them into dis-equilibrium, setting up oscillations that can amplify microwaves of the same wavelength. It is hardly possible for unwanted signals to be amplified by the maser. But what complicates the device is its disinclination to work at anything but temperatures as near to absolute zero as it is possible to achieve. This involves suspending the maser assembly in a bath of liquid helium and topping up the helium at intervals. Such liquefied gases are still laboratory curiosities.

The first Mullard maser, working at temperatures of minus 271 degrees centigrade, operates on a wavelength of ten centimetres, which is only two-thirds of the way down the microwave band. It should be possible to pick up signals with a wavelength of one centimetre, but losses occur in the leads to and from the maser which make it difficult to reach ideal efficiencies. This early type of "cavity" maser is likely to be succeeded by another type called the "travelling wave" maser, which may exist in prototype form in about eighteen months' time. The final assembly of maser and magnet is no more than the size of a child's hand; the cost, in limited production, may be about £500, the same as a sensitive conventional amplifier.

period of construction, even when the earliest possible completion is wanted by the owner. Only in exceptional cases is the cost of building quicker greater than the value of the time saved by it ; sluggishness is the curse of British building, not high constructional costs. Finally, there is no recommendation that tendering be done on a firm-price basis: this was recommended by the Ministry of Works over a year ago.

PLASTICS

Output—Present and Future

PRODUCTION of plastics—particularly of thermoplastics—has risen steadily this year in Britain, and it is estimated that total sales for the year will have increased by an even greater proportion than in recent years. Demand for thermoplastics—particularly polythene, polyvinyl chloride, and polystyrene—is continuing to increase at an increasing rate throughout the world ; in Britain, a total of 300,000 tons of these materials, a quarter more than in 1958, may be produced this year. Exports of plastics during the first seven months of the year totalled £22 million, an increase of £4 million over the same period last year, despite higher production by most European and American competitors. In the United States, in particular, the rise in output has been spectacular: production of polythene seems likely to increase by over a third, compared with 1958.

Capacity to make these materials continues to grow even faster, however, both in Britain and the United States ; in the latter, the sudden rise in demand for high-density polythene has already been exceeded by new plant, and it is reported that there is surplus capacity in epoxy resins as well. In Britain, several new plastics plants have come on stream in recent months, including British Hydrocarbon Chemicals' 11,000-ton plant at Grangemouth for the production of high-pressure polythene by the Phillips process, and Monsanto Chemicals' 10,000-ton conventional polythene plant at Fawley. In addition, Imperial Chemical Industries recently commissioned their third ethylene plant at Wilton, making it the largest petrochemical installation anywhere outside the United States. Union Carbide's 15,000-ton polythene plant at Grangemouth is to be on stream next year.

Several other new plants are now under construction. But it seems likely that this rate of construction will fall off sharply after next year ; a survey of chemical plant recently made by *Chemical Age* shows that there are few plants scheduled to come on stream after the end of next year, and none as yet planned to be started after that time. Shell Chemicals and ICI have announced plans to build plants to manufacture high-density polythene and polypropylene, and it is expected that these—which will have a total capacity of over 40,000 tons a year between them—will be finished some time in 1961 ; they are the latest announced so far. When all these plants are in production, British capacity in thermoplastics will be of the order of 350-375,000 tons a year ; with any luck, the industry may thus be able to avoid problems of excess capacity, though still meeting increased demand over the next two or three years.

TRADE WITH SWITZERLAND

Good Fortnight, Record Year?

IF the stores' Swiss Fortnight does anything to increase trade between Switzerland and Britain, it could mean a record year for business between the two countries. Trade in both directions is running at a high level. In the eight months to August 31st Britain sold £33½ million worth of goods to the Swiss, and bought slightly more than £25 million worth in return. The comparable figures for 1958 are £21½ million and £23½ million. British exports to Switzerland already exceed the total for last year and if the return traffic keeps up its present pace it will more than equal the 1958 figure.

ANGLO-SWISS TRADE

(£'000s)

	Year 1958	First 8 Months 1958	First 8 Months 1959

Total Imports	**36,212**	**23,527**	**25,397**

* Excludes re-exports

This is trade between two highly developed industrial countries, exchanging some of the few things one or the other does not make plus a large proportion of specialised products in fields where both work. So far this year Britain has sold about £8½ million worth of motor cars and aeroplanes and has bought about £2¾ million worth of instruments and watches. But in chemicals, machinery and metal goods, and yarns and fabrics (where Switzerland leads the world in the new jersey materials), the buying and selling is substantial on both sides: the Swiss have carefully fashioned their own specialised niches in a variety of the world's most exacting and profitable industries, and have no inhibitions about relying on imports for the rest.

AIR TRANSPORT

KLM in Middle Age

THE Dutch airline, KLM, which passed its fortieth anniversary this week, is the only airline to have operated this long without major reorganisation. This continuity of management is one of the secrets of its strength, for in every other way it operates at a disadvantage. KLM is probably the nearest approximation ever reached by an airline to a genuine merchant air service, for with a negligible home market it must live by foreign traffic in the face of the hostility of other national airlines. In spite of this, KLM ranks as the eighth largest airline in the West, with a consistent record of profitable operation. Last year, when many of its competitors were making losses, KLM recorded a net profit of £1.25 millions.

This airline's commercial policy is an object lesson to those managements who try too hard to force the pace. KLM has rarely been known to pioneer a new aircraft ; it took delivery of Viscounts and of Electras only after they had been in service for some considerable time, and it is well down the middle of the order book for new jets. So, although KLM, like every other airline, has had its share of bad aircraft, the worst of their defects have usually been shaken out in service with some other carrier by the time it takes delivery. Equally, although KLM is almost never on the side of airlines working for fare reductions, it is not particularly obstructive when a cut seems inevitable. It left the Air Union talks held earlier this year because it looked as if there was more future for KLM working independently than in co-operation with four other European airlines. With its forty years' experience as a lone wolf, it was probably right.

SHORTER NOTE

France has now surrendered its export quota of 18,750 metric tons under the international sugar agreement, bringing the total quantity surrendered to 269,950 tons. This has now been offered to other exporters, mainly to Cuba (120,390 tons), Dominican Republic and Formosa (32,650 tons apiece), Brazil (27,420 tons) and Peru (24,430 tons).

COMPANY MEETINGS

IRI

ISTITUTO PER LA RICOSTRUZIONE INDUSTRIALE
(Institute for Industrial Reconstruction)
ROME, ITALY

EXPANSION OF INVESTMENTS
ADVANCES IN PRODUCTION
NEW STEEL PLANT AT TARANTO

The following are details of the Annual Report for 1958 of IRI, the Italian State Holding Company for Industry:

The low level of industrial activity which marked the Italian economy during 1958, as it did those of other countries in Europe, did not seriously affect the activities of the companies controlled by IRI, the Italian State Holding Company for Industry. On the contrary, IRI succeeded in expanding considerably the volume of its fixed investments, and thus helped to sustain the internal demand for capital goods and to raise the level of employment.

PRODUCTION AND SALES

The turnover of the IRI companies during 1958 amounted to $1,586m. and thus showed a drop of no more than 2 per cent compared with the figure of the previous year ($1,610m.). This slight fall seems to have been due almost exclusively to the drop in steel prices and to the weakening of the freight market which adversely affected both the receipts of shipping companies and the order-books of shipyards.

There was a slight increase in steel exports during the year. Sales abroad of the engineering and shipbuilding industries showed signs of weakening, however, a development which was also due to the expected gradual reduction in NATO orders. Increases were registered in the turnover achieved by the ALITALIA air transport company, in the receipts of Radio-Televisione Italiana, and in the earnings of the telephone and electric power companies.

Apart from the output of the shipbuilding and steel companies, there were advances in production in almost every sector. The production of electric power in particular rose by 3.3 per cent, the number of telephone subscribers advanced by 11.2 per cent, television viewers increased by 62.8 per cent, and there was a rise of 36.9 per cent in the number of air passengers and of 31.5 per cent in the volume of air cargo carried. Shipping results were less favourable, with an increase of 1.7 per cent in the number of passengers carried and a drop of 0.7 per cent in cargo due to the falling-off of Italian imports. The setback suffered by the iron and steel industry amounted to 4.4 per cent in terms of steel, whereas the shipbuilding industry registered a reduction of 8.4 per cent in invoiced deliveries.

DEVELOPMENT OF INVESTMENTS

The gross figure of fixed investments carried out by the IRI companies during 1958 reached $369m. as compared with $305m. in 1957, an increase of 21.1 per cent.

The most important development in the investment field took place in the public utility sector. In the telephone sector, in particular, investments totalled $88m. as against $75m. in 1957, and in electric power the total reached $94m. against $78m. during the previous year. For radio and television, however, there was a slight drop in capital expenditure ($6m. as against $8m.) and the shipbuilding sector similarly showed a fall from $25m. to $18m. Expenditure in this industry was almost wholly devoted to the transatlantic liner *Leonardo da Vinci* which is now under construction. The largest increase was effected in the road-building sector: $44m. was spent on the Autostrada del Sole (motorway from Milan to Naples), a figure which trebled that of the previous year. There was also a slight increase in the iron and steel sector where investments totalled $62m. as against $60m. in 1957, and in the engineering sector where the capital expenditure incurred amounted to $20m. as against $19m.

THE FOUR-YEAR PLAN

The investments of the IRI Group are expected to reach a new record figure of $456m. during 1959. This target forms part of a Four-Year Plan (1959-1962) which comprises investments exceeding $1,880m. To this figure should be added a further $62m. in respect of capital increases for the banks controlled by IRI, and an unspecified amount for the erection of a new steel plant at Taranto and the modernisation of the Taranto shipyards which will be taken over by IRI in the near future.

This investment programme provides more than $421m. for the telephone system, $482m. for electric power generation, $298m. for the iron and steel industry, $200m. for the building of motorways, $173m. for shipping lines, $160m. for reorganising and restoring financial stability to the engineering and shipbuilding subsidiaries, and $88m. for air transport. It will be financed by the IRI Group itself to the extent of $769m. by way of depreciation on old plants. The balance of $1,110m. forms part of a total of $1,400m., which also includes $229m. in respect of capital charges covering expenditure and losses arising from the restoration of financial stability in a number of companies, $62m. representing the share taken by the Holding Company in the capital increases effected by the national banks (Banca Commerciale Italiana, Credito Italiano, Banco di Roma) and by the Banco di Santo Spirito, credit institutions controlled by IRI.

This total of $1,400m. is expected to be covered to the extent of $669m. by recourse to the market on the part of the constituent companies, the balance of $732m. being supplied by IRI itself. The Italian Government, as in the past, is only expected to provide a small portion of this latter sum. The figures available at the end of 1958 showed that of the total investments effected by the IRI Group by that date, the Government had given support to the extent of 6 per cent only. *In view of the possibility of a recourse to funds from abroad, the Italian Parliament has passed a new law authorising IRI to issue foreign currency bonds.*

FINANCIAL RESULTS

In spite of the fairly considerable increase in gross fixed investments effected by IRI companies, which have been shown to have reached $369m. as against $305m. in 1957, there was no difficulty in providing the necessary funds during 1958 owing to two factors which happened to coincide: the smaller capital increases effected by the Group's constituent companies during the financial year owing to the smaller growth of stocks of finished products and raw materials, and the high degree of liquidity obtaining in the capital market.

The first of these factors operated in the sense that the money provided for use as capital during the year amounted to $48m. only as against $144m. in 1957. The second factor, on the other hand, has permitted the issue of bonds for $147m. as against $74m. in 1957, excluding charges and discounts, and the floating of medium-term and long-term loans for $162m. as against $63m. in 1957.

As a result, IRI and its constituent companies were able substantially to reduce (by $57m.) their short-term indebtedness which had greatly increased in 1957 ($128m.).

IRI BALANCE SHEET

The balance sheet of the IRI concern closed with a profit of $176,000 as against $394,000 in 1957. It is interesting to note in this connection that the average cost of money obtained in the form of short-term and long-term loans remained substantially unchanged during the two years (7.2 per cent), whilst returns on finance provided by the concern, and from participations ($915m. at the end of 1958), showed a noticeable improvement, from 5.4 per cent to 5.8 per cent. Administrative expenditure in relation to the whole of the assets showed a further reduction, from 0.21 per cent to 0.18 per cent.

THE RANK ORGANISATION LIMITED

The following are the salient features from The Lord Rank's Statement for the 52 weeks ended 27th June 1959

The past year has been one of great activity within the Group since it has seen the completion of the important rationalisation plans whereby interests and investments currently held have been re-allocated so that The Rank Organisation holds a 56½% interest and the Gaumont Group a 43½% interest. At the same time the policy of diversification has been accelerated by the acquisition of new interests and the development of new activities.

A firm foundation has now been laid for steady growth in new activities over future years but the results for the past year do not reflect any benefit from these developments.

Group Profits for the year amounted to £2,985,070 as compared with £1,781,499 last year. The net profit attributable to The Rank Organisation amounted to £352,153. The Preference dividend and the proposed Ordinary dividend at 10% compared with 5% absorbed £251,550.

Film Production During the year seventeen feature films were released. Unfortunately the overall financial result has been disappointing. The continued deterioration in attendances has led to the curtailment of our production programme but the studio space which became available has been taken up by other producers and our entry into the production of films made especially for television.

Entertainment Tax The late amendment to the Finance Bill granted a small measure of relief. This makes the refusal to abolish the tax still more difficult to understand especially when one bears in mind that its contribution to the National Budget of some £5,000,000,000 will at most be between £6,000,000 and £7,000,000.

Exhibition has had another difficult year. The serious decline in attendances has continued but the attendances in our cinemas were higher than the National Average. Our rationalisation plans have progressed satisfactorily and are showing increasing benefits. The Group now operates in the United Kingdom 494 theatres compared with 517 last year and 530 in the previous year. The Circuits Management Scheme has been extended for a period of 50 years from June, 1958.

Distribution Our Organisations both at home and overseas have operated efficiently and well, and with the exception of the United States have had a satisfactory year. Unfortunately it became clear that there was no reasonable prospect of achieving a profitable operation in America and it was decided to close down.

Top Rank Records In this country we have made considerable progress. We have set up in business in the U.S.A. and have concluded interchange arrangements with many overseas record distributors.

Commercial Television We have recently increased our investment to 37½% in Southern Television. Steady progress has been made and the Company is operating profitably.

Ballrooms and Dance Studios Our policy of operating dance studios has proved highly satisfactory and our modern ballrooms are making an increasing contribution to our results.

Rank Precision Industries Group Activities outside the cinema industry continue to expand. A prototype Xeronic high speed computer output printer has been publicly shown and well received. The new Autoset 8 m.m. Bell & Howell cine camera is proving to be extremely popular.

Rank Cintel Limited and Bush Radio Limited The turnover of Bush has increased and has been helped by the introduction of Push Button Tuning in Bush television sets.
The work for Government Departments by Rank Cintel has increased in size and importance.

Rank-XeroX Limited has continued to make steady progress and the development of Xerography throughout the world will prove an important facet of our operations.

Line Television We have taken a substantial interest in this activity and are negotiating for further franchises which long term should build up to be a substantial contributor to our profits.

I anticipate a steady growth in our not inconsiderable manufacturing activities and developments in the electronic field. We have interests in Television and are making considerable new investments in Line Audio and Television services. A number of smaller new enterprises are being developed, some of which may become important. We shall not see much return by way of profit from most of our new developments for the next two years, but we have laid the foundation for a diversified undertaking with its mainspring in providing all forms of entertainment both public and in the home. I believe that it will not be too long before our profits from non-cinema interests exceed those from the cinema activities. I hope that the current year will show at least the maintenance of this year's improved results and I look to the future development of the Group with confidence.

★ A copy of the Chairman's full statement and Annual Accounts may be obtained from The Rank Organisation Limited, 38 South Street, London, W.1

WESTERN MINING CORPORATION

The annual general meeting of Western Mining Corporation Limited was held on September 18th in Melbourne.

Mr G. Lindesay Clark, BSc, MME (the Chairman), presided.

(All figures quoted are in Australian currency.)

Net profit for the year of £308,444 was £48,474 greater than for 1957/58. The increase was principally attributable to higher dividends received from our holdings in Central Norseman Gold Corporation No Liability and Gold Mines of Kalgoorlie (Aust.) Limited of 3s. 6d. and 10½d. per share respectively compared with 3s. and 9d. per share last year.

Dividends totalling 1s. per share were paid by the Corporation during the year, and since the close of the year the usual 6d. half-yearly dividend was paid on August 14th.

Reviewing the Corporation's various interests, the Chairman said:

Western Aluminium No Liability. This Company was formed last year to take over bauxite and coal-prospecting reservations from Western Mining Corporation and Champagne Syndicate respectively, and to carry on exploration for bauxite and coal on these reservations in the Darling Ranges.

Drilling of the extensive areas showing bauxite has begun. The drilling is proceeding very satisfactorily but the area to be covered is so large that much time must elapse before any conclusions can be reached.

Geophysical prospecting of the Company's coal reserves has shown that the known Wilga Coal Basin, included in the Company's Reserves, is smaller than had been recognised previously.

Copper Prospect WA. Exploration at Tarraji, north west Western Australia disclosed a number of areas showing some copper mineralisation.

The Western Australian group of companies treated 1,200,063 tons of ore from which 333,500 ounces of fine gold in bullion and concentrates were produced.

After reviewing the results and prospects of the operating companies, the Chairman, in referring to the persistent drain of gold from the United States, stated that this reflected no basic weakness of the dollar, but rather an improvement in monetary conditions elsewhere. That did not lessen the inadequacy of international reserves which would be improved by an increase in gold price.

The Board's policy must be influenced by the outlook for the future of gold. In respect of our gold interests, while we may perhaps hope gradually to improve our standards of performance, we must recognise that our overall economic position will tend to become less favourable with any rise in the cost level. In our operating mines we will endeavour to keep in the forefront of mining progress by bringing into use all suitable modern equipment and by expanding output while maintaining active search for ore-bodies in and around the mines.

To supplement gold mining and gradually replace it if economics so require, exploration is being extended to other metals. To spread risks, share expenditure and increase the prospects of success joint ventures with other mining houses are being entered into where appropriate.

The report and accounts were adopted.

S. HOFFNUNG & CO., LTD.

(Australian Merchants Established 1852 with branches in Sydney, Brisbane, Melbourne and Adelaide)

A CREDITABLE PROFIT

The Fifty-Seventh Annual General Meeting of S. Hoffnung & Co., Ltd., was held on September 30th in London.

The following is summarised from the circulated statement by the Chairman, Mr P. J. A. Lachelin:

RESULTS

Although falling short of the record figures achieved in the previous two years I feel that the profit earned by the Group is very creditable in view of the increasingly competitive conditions prevailing in Australia.

THE ACCOUNTS

After deduction of tax, minority interests and pre-acquisition profits from the Group Profit of £609,503, there remains a Net Profit for the year of £363,812. A taxation adjustment raises the Consolidated Net Profit after tax to £368,512.

In the course of the five previous years the Group has added over £1,100,000 to its resources out of profits retained in the business. When considering the interim dividend on the Ordinary Stock, your Directors decided that in view of this addition to the Group's reserves and the resulting strength of its financial position an increase in the distribution to Stockholders was timely. At the same time your Directors decided to adopt the practice of declaring Ordinary dividends in the "free of tax" form.

In pursuance of these decisions, an interim dividend of 3½ per cent tax free was declared last February and your Board are now recommending a final dividend of 12½ per cent, also tax free. The dividends for 1958/59 will require in all £129,467, leaving to be retained in the business out of the year's operations the net inconsiderable sum of £234,345.

On the Assets side of the Parent Company's balance sheet you will note an increase in the investments in Subsidiaries of £174,047 to £403,902. The increase reflects our investment in New Zealand and in a complementary business operating in Australia which we acquired for cash in October of last year and which is proving a useful member of the Group.

Group Current Assets at £3,996,228 exceed the Group Current Liabilities at £889,173 by £3,107,055.

CAPITALISATION OF RESERVES

To bring the issued capital of your company more into line with the funds permanently invested in its operations, your Directors are recommending the capitalisation of £179,550 of the Company's Revenue Reserves in the form of an issue of 1 new Ordinary Share of 5s. for every £1 of Ordinary Stock. If this recommendation is adopted the Ordinary Capital of your Company will then stand at £897,750. As stated at the time of the Press announcement, this capitalisation of reserves should not be taken to have any implications as to future dividends.

AUSTRALIA AND NEW ZEALAND

In accordance with the project announced at the previous Annual General Meeting I visited our Branches and Subsidiaries in Australia and New Zealand towards the end of last year.

I was greatly impressed by the keenness of your organisation and the abundant vitality and enthusiasm of the Commonwealth and the confidence of Australians, old and "New," in the future of their country.

Our own newly acquired business in New Zealand, to which I referred last year, has been able to maintain its trade at a satisfactory level and the contribution it has made to the Group profits accords fully with our expectations.

PROSPECTS

Within the framework of the Australian economy the most significant facts for our Group are a heavy wool clip and a good wheat harvest which, if wool values are maintained, will increase purchasing power.

We are well equipped to take advantage of any favourable opportunities, and, provided the current trends in the Commonwealth are maintained, your Directors hope that the current year will again produce satisfactory figures.

As Stockholders are already aware, we have within the past eighteen months added two newcomers to the organisation. This will enable Stockholders to appreciate our intention to progress whenever possible by extending the activities and scope of the Hoffnung Group by the acquisition of suitable undertakings.

The report and accounts were unanimously adopted.

BRITISH HOMOPHONE

CURRENT IMPROVEMENT

The annual general meeting of The British Homophone Co., Ltd., was held on September 30th in London.

Mr Jack Lesser, chairman and managing director, in the course of his speech said: The profit for the Group is £23,126, compared with £28,547 for the previous year. The net profit of the company, including the Ebonestos Industries Limited dividend, is £13,991, compared with £12,438. The Consolidated Balance Sheet continues to show a sound financial position.

In the early part of the year to March 31, 1959, Ebonestos Industries experienced brighter trading conditions. These did not persist. However, in the period from April 1st to date the manufacturing profits of the company indicate an improvement.

With regard to the gramophone record manufacturing activity of the British Homophone Co., the profit result was an improvement. It would be unwise to overestimate the near future profit potential of this activity.

The disappointing sudden change-round in trading conditions during the year under review adversely affected our final results. However, in the current period of trading figures indicate an improvement and the order book is much stronger.

Providing we do not encounter a general trade recession before the end of this year we shall be able to look forward to an overall improvement in the Companies' results.

The report and accounts were adopted.

GOLD MINES OF KALGOORLIE (AUST.)

The annual general meeting of Gold Mines of Kalgoorlie (Aust.) Limited was held on September 7th in Melbourne.

Mr G. Lindesay Clark, BSc., MME (the Chairman), presided.

[All figures quoted are in Australian currency.]

Net profit for the year was £248,686 compared with £309,477 for 1957-58, a reduction of £60,971. The previous year's figure, however, included £38,456 Gold Subsidy received on account of 1956-57 production, part of which was in respect of gold locked up in pyritic concentrates stacked at Fremantle at the close of that year realised during 1957-58, and the balance a refund of a reduction in 1956-57 subsidy because of the profit limitation sections of the Gold Mining Industry Assistance Act.

The current year's results are after charging £28,221 cost of repairing the damage caused by the subsidence in the Perseverance Shaft area. After allowing for these two factors, profit earned during the year exceeded that of last year by £5,706.

A dividend of 10½d. per share absorbing £176,107 was paid on December 4, 1958. This was an increase of 1½d. on the previous year's dividend of 9d.

The mill averaged 39,400 tons per four-weekly period and treated a total of 531,959 tons for the year. Gold recovery amounted to 142,584 fine ounces including 9,478 ounces of gold in the concentrates produced and, from the clean-up of shut-down mills, an additional 761 ounces was obtained.

The average costs of mining and treatment of ore from Kalgoorlie and Coolgardie of 73.5s. per ton were the same as those of last year, a reduction of 1.6s. per ton in treatment costs being offset by a similar increase in cost of ore mined. Development redemption at 9.5s. per ton showed a decrease of 0.4s.

Modifications to the arrangements for hoisting ore from underground have resulted, since the closing of the year, in a saving of approximately 1.8s. per ton.

Perseverance Lease. The Perseverance Shaft, reconditioned and converted to skip haulage, was recommissioned in May, 1959. Many old open stopes were filled following the April, 1958, surface subsidence and further filling will be required over the next few years.

Ore reserves at March 31, 1959, were estimated at 1,277,000 tons averaging 5.7 dwt per ton.

Kalgoorlie Development. Last year 23 per cent was in ore averaging 10.5 dwt over 67 inches. This year work to mid August has averaged 21 per cent in ore averaging 10.0 dwt over 66 inches.

Much currently developed ore is from lodes in the quartz dolerite which have been accessible for many years: the future ore potential of this zone is substantial. The longer term potential is from the underlying calc schist in which many known ore shoots exist. In this zone Gold Mines of Kalgoorlie prospecting has so far been limited: current calc schist developments north in the Paringa and deep in the Enterprise sections have been encouraging.

Coolgardie. At Bayleys Mine, Coolgardie, the high grade ore shoot exposed last year in Prices Reef at No. 10 Level is now developed at Nos. 8 and 9 Levels. Two further shoots were exposed

at No. 8 Level, one of which has also been exposed on No. 6 Level. Enriched patches carrying coarse free gold are characteristic of all these shoots.

The report and accounts were adopted.

PYE LIMITED

STEPS TO BROADEN BASE OF ACTIVITIES

The thirtieth annual general meeting of Pye Limited was held on September 30th in London, Mr C. O. Stanley, CBE (the chairman), presiding.

The following is an extract from his circulated statement:

The interruption in the progress of the business due to the credit squeeze has, I am glad to say, not lasted as long as one might have expected.

Your company has always contended that the TV set market would be fickle, seasonal, highly subject to changes in fashion and liable to become a shuttlecock of Governments as they put purchase tax up and down and imposed this or that restriction on hire purchase to suit the policies of the moment. That was why we resolved to broaden our base by such activities as extensive investment in the Commonwealth, by higher pressure in exports, by purchasing established businesses, by heavy investments in many new forms of electronic development and by further extensions in the instrument field. All this was done with long-term benefits in view and at the expense of current profits in the intervening years. Unless there is some change in the trading climate during the remainder of the current financial year, I believe you will be able to see tangible evidence of the rewards to come from this ploughing of new ground.

I am sorry that the authorities have not yet seen fit to inaugurate a 625-line TV transmission, which is the accepted standard throughout the world, apart from the UK and the USA. Without a home market in 625-line TV sets, to bear some of the cost spread, we cannot hope to tackle effectively TV set exports, for the export demand exists only for 625-line receivers.

Our trading profit of £2,834,841 is one with which we are well satisfied. "Profit before Taxation" shows an increase of £191,658 over the previous year, and "Profit after Taxation" an increase of £151,284.

CHAIRMAN'S ADDITIONAL REMARKS

Addressing the meeting, the chairman said:

There is an item I want to refer to which is not on the Agenda.

The trading progress of the Company, since the end of the Financial Year, has given your Directors great encouragement, particularly as, at the time of our large rights issue, it might have seemed rash to assume that we would be able to pay the same dividend on our largely increased capital.

We have now all but completed six months' trading and I am glad to tell you that our profit figures are well in advance of last year and very much better than our estimates. We feel confident that next year we will be able to maintain the dividend on our new capital unless something very extraordinary should happen. In addition, at a Board Meeting held this morning, your Directors decided to recommend to Shareholders a scrip bonus of 1 in 10.

The report and accounts were adopted.

ACROW (ENGINEERS) LIMITED

TWENTY-THREE YEARS OF UNINTERRUPTED PROGRESS

MR W. A. DE VIGIER ON PROGRAMME OF DIVERSIFICATION

The twenty-third annual general meeting of Acrow (Engineers) Limited was held on October 6th in London.

Mr W. A. de Vigier (chairman and managing director), who presided, said:

Gentlemen: From the accounts in front of you, you will have noted that the consolidated trading profit for the year under review amounted to £675,423. A final dividend of 12½ per cent on the Ordinary shares, making 42½ per cent for the year on the increased capital, is recommended by your Directors. At a meeting to be held immediately following this one, your Directors will recommend a bonus issue of one "A" share for every seven Ordinary or "A" Ordinary shares held.

These satisfactory results were achieved thanks to the programme of diversification initiated some time ago. Ever since the Company became public in 1949 it has been our policy not to have all our eggs in one basket. The diversification took two aspects; one country-wise, the other product-wise. As a result of this some 50 per cent of the Company's production is exported, whereas the other half is sold to the Home Trade. The 50 per cent going abroad is, in turn, exported to almost every country in the world which, in itself, spreads the risk as it can usually be found that if one country buys less, another buys more.

Product-wise, diversification took place as follows: whereas in 1949 100 per cent of our production went to the building trade, today less than 50 per cent goes to the building trade and the remainder is spread by the sales of our Hydraulic, Refrigeration, Forestry, and Sheet Metal Divisions. It is this policy which has enabled us to ride over the mild world recession which undoubtedly made itself felt during 1958.

PROGRAMME OF EXTENSION

Your Works are at present working to full capacity. In order to cope with the increasing demand for your Company's products your Directors have decided to embark on a programme of extension which, when completed in April, 1960, should increase the floor area available at three of our United Kingdom Works by some 50 per cent.

Turnover for the first six months of the current year is in excess of last year, and given a continuance of present trading conditions, I believe the current financial year will prove once more to be a record year. We should, therefore, be able to maintain at least the present dividend on the increased capital.

To conclude, I should like to thank my colleagues on the Board, the Staff and Works, who, through their initiative and untiring efforts, made possible the results before you.

The report and accounts were adopted and at a subsequent extraordinary general meeting the proposed scrip issue was duly approved.

CALOR GAS

Holding Company Limited

The following points are taken from the Statement by the Chairman, Commander Colin Buist, to the 11th Annual General Meeting of the Company:

★ For the year ended 31st March, 1959, the consolidated profit after all expenses and depreciation, amounted to £861,526.

★ A Final dividend of 10% is proposed, making with the interim dividend of 5% already paid, 15% for the year. £297,489 has been transferred to General Reserve.

★ A new filling station has been built in County Durham, and the building of a further new filling station is in hand. An increasing demand for delivery of "CALOR" gas in Bulk necessitates additions to our fleet of road tanker vehicles.

★ It is proposed to issue Bonus Shares in the proportion of 1 Share for every 5 held. The Issued Capital will then amount to £2,249,945. The Directors intend to declare an interim Dividend of 5% on the increased Capital in December, 1959.

★ Sales of "CALOR" gas since 31st March, 1959, compare favourably with the corresponding period last year.

THE KETTON PORTLAND CEMENT COMPANY LIMITED

The thirty-first Annual General Meeting of The Ketton Portland Cement Company Limited was held at the Registered office of the Company, Albion Works, Sheffield, on Thursday, October 8, 1959.

Mr H. W. Secker, OBE (Chairman) presided and the following is his statement which had been circulated with the Report and Accounts:

It is with deep regret that I record the death in November, 1958, of Mr Frank R. Stagg. Mr Stagg joined the Board at the inception of the Company in 1928; was appointed managing Director in July, 1941, and Chairman in 1948. He played a leading part in developing the Company to its present successful position. At the invitation of the Directors I joined the Board in January, 1959, as Chairman. Apart from this, there are no other changes in the Board.

I am pleased to report that your Company has had another very successful year. The dispatches total 319,804 tons, showing an improvement of 14,201 tons. This increase is reflected in the profits, for after providing over £11,000 more for depreciation, the profit before taxation at £374,784 shows an increase of £14,612. The charge for taxation is lower by £3,000, so that the profit, after tax, of £168,784 shows an increase of £17,612. In addition, we have brought back £10,000 in respect of an adjustment of tax over-provided in previous years.

INCREASED DIVIDEND

Your Directors are proposing to pay a final dividend of 15 per cent on the ordinary shares, less tax, which, with the interim dividend of 2½ per cent already paid, will make a total dividend for the year of 17½ per cent, less tax, being an increase of 2½ per cent compared with last year. It is also proposed to allocate £75,000 to General Reserve. The amount to be carried forward to next year is £214,682 compared with £189,534 brought forward at the beginning of the year. Additions made to Fixed Assets approximated £97,000. The chief items included the purchase of three diesel locomotives, improvements to our stores buildings, packing dock and laboratories, and additions to our road transport fleet.

The liquid position of the company is very satisfactory, Current Assets exceeding Current Liabilities by approximately £913,000.

The stimulation of national economy and expansion in public works expenditure has resulted in an improved demand for cement, but our plant is operating near maximum capacity, so that any increase in costs may make it difficult to maintain the present level of profits. One example of the increase in costs is the reduction of the derating allowance to industry from April, 1959. This item alone means an additional charge of £5,000 per annum.

STABLE PRICES

The price of Portland Cement, stable for over two years, will not be increased during the period ending June 30, 1960, unless some unexpected circumstances arise.

Ribblesdale Cement Ltd. and its subsidiary, The Horrocksford Lime Co. Ltd. (jointly owned with The Tunnel Portland Cement Co. Ltd.), have operated in a most satisfactory way. The Ribblesdale Company has now commenced extensions involving an additional Kiln of large capacity.

We have been pleased to play a most important part in supplying Ketton Cement to many important contracts, including sections of the London-Yorkshire motorway and the Great North Road.

My thanks are due to my colleagues on the Board, the works management, staff and workpeople and to Thos. W. Ward Ltd., our sole distributors.

The Report and Accounts were approved and adopted and the retiring Directors, Mr H. W. Secker and Mr E. Elmquist were re-elected.

FINANCIAL NOTICE

ROYAL DUTCH PETROLEUM COMPANY

N. M. Rothschild & Sons announce that the Board of Directors and Managing Directors of the Royal Dutch Petroleum Company have decided to declare an interim dividend for the year 1959 of fls. 1.50 per share.

A. On the bearer shares

This dividend will be payable on and after October 23, 1959, against surrender of Coupon No. 118 at the office of N. M. Rothschild & Sons, London, Bank Holidays excepted, between the hours of 11 a.m. and 2 p.m.

Payment will be made in sterling at the buying rate of exchange on Amsterdam current at 2 p.m. on October 16, 1959, in the case of coupons presented on or before that date, or on the day of presentation in the case of coupons presented subsequently. In view of the fact that guilder funds are being provided by the Company for payment of this dividend the usual foreign exchange commission will be deducted from the sterling proceeds.

In the case of shareholders not resident within the Scheduled Territories the paying agent may, at the request of the Authorised Depositary presenting the coupons, pay the dividend in a different currency. Information in this respect will be supplied by the paying agent upon request.

Coupons must be accompanied by a declaration in triplicate signed by an Authorised Depositary reading:

"We declare under our responsibility that sufficient evidence has been submitted to us that the securities from which the coupons enumerated below have been detached: (a) do not belong to residents of the Netherlands; (b) are provided with red export certificates issued by the Nederlandsche Bank."

From the gross dividend the Netherlands dividend tax of 15 per cent will be deducted (i.e. there will be paid on Coupon No. 118 a net amount of fls. 63.75 per certificate for 50 shares and fls. 6.375 per certificate for five shares), except in the case of coupons presented on behalf of: (i) residents in the United Kingdom, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 V.K." in duplicate; (ii) residents in the U.S.A. provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 V.S." in duplicate together with a single affidavit No. 923 V.S.; (iii) residents in Sweden, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 ZWE" duly completed by the Swedish tax authorities; (iv) residents in Finland, provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 FIN" duly completed by the Finnish tax authorities; (v) residents in Denmark provided they lodge a Netherlands declaration "Inkomstenbelasting No. 92 DEN" duly completed by the Danish tax authorities; and (vi) residents in France, in which case either a French declaration model A signed by the shareholder with the certificate on the back duly completed by the appropriate French Inspector of Taxes, or a French declaration model B in duplicate duly completed and signed by an authorised French bank must be provided.

As regards holders resident in France, attention is drawn to the fact that the regulations giving effect to the Franco-Netherlands Tax Convention provide that unless the model A or model B declaration referred to above is lodged when dividends are collected, dividend tax will be deducted and there will be no possibility whatever of reclaiming this tax.

In cases (ii), (iii), (iv), (v) and (vi) above the usual affidavit certifying non-residence in the United Kingdom will also be required if payment is to be made without deduction of United Kingdom income tax.

Coupons must be left for an appropriate period for examination and must be handed in personally. Coupons cannot be paid through the post.

Coupons must be listed *in triplicate* on special forms embodying the declaration referred to above, which can be obtained on application.

B. On the registered shares

As to the shares registered in the United Kingdom Section of the Netherlands Register, N. M. Rothschild & Sons are authorised to announce that the following arrangements have been made for the payment of the interim dividend amounting to fls. 1.50 per registered share (nominal value fls. 20).

On October 21, 1959, the sterling amount of the dividend will be fixed on the basis of the sterling/guilder rate of exchange current in Amsterdam on that date.

October 28, 1959, will be the record date. Shareholders registered at the close of business on that date will be entitled to receive the dividend.

On or before November 19, 1959, dividend warrants will be posted by the transfer agent, Nederlandsche Handel-Maatschappij N.V., to shareholders registered in their books on the record date.

As soon as possible after October 21, 1959, a further announcement will be made giving the rate of exchange, the amount of the dividend in sterling per share and the amount of the 15 per cent Netherlands dividend tax in sterling per share.

New Court, St. Swithin's Lane, London, E.C.4.

October 9, 1959.

BUSINESS AND PERSONAL

WAX CONSULTANTS

The professional services of experts in Wax technology will shortly become available to industry at home and abroad. A limited number of commissions now being reserved.—Reply in first instance to Box 1213.

SECOND-HAND BOOKS.—The Economists' Bookshop, 16/18 Clement's Inn Passage, London, W.C.2, invites you to submit lists of books on Economics, History and Social Sciences you may wish to sell (*periodicals excluded*).

YOU KNOW YOUR OWN BUSINESS BEST . . .

Modern research techniques can examine customers' reactions and probe markets. Modern advertising can put over sales messages in new and inspired ways. *But all successful publicity campaigns must be based on the Client's unique knowledge of his own business.*

How our advertising agency increases sales by making proper use of the advertiser's "know-how" is explained in straightforward language in our latest booklet entitled "You know your own business best." Copies are available on request to: General Advertising Company of London, 18 Charing Cross Road, London, W.C.2. COVent Garden 2881.

APPOINTMENTS

CITY OF LIVERPOOL EDUCATION COMMITTEE

CITY COLLEGE OF COMMERCE.

Tithebarn Street, Liverpool 2.

Principal: T. Gore, M.A., B.Sc.(Econ.), M.B.I.M., Hon. F.I.L., Barrister-at-Law.

Applications are invited for the appointment of LECTURER IN ECONOMICS (full-time) with special reference to BUSINESS ADMINISTRATION.

Salary (Men) £1,370 x £45 to £1,550 per annum.

*(Women) £1,100 x £38 to £1,240 per annum.

*(Plus equal pay increments.) (Burnham Technical Report)

Applicants should have teaching experience, good academic qualifications and responsible professional/industrial experience. Duties will include teaching different aspects of Business Administration to a degree level and establishing contacts with firms in the area. The person appointed will be encouraged to undertake research work.

Further particulars and application form returnable by October 17, 1959, from the Director of Education, 14 Sir Thomas Street, Liverpool, 1.

THOMAS ALKER,

Town Clerk and Clerk to the Local Education Authority.

(J.58543)

UNIVERSITY OF EDINBURGH

DEPARTMENT OF POLITICAL ECONOMY

Applications are invited for Research Fellows (two) in the Department of Political Economy for research in the fields of West African (Ghana) economic planning. Salary in the range £600 to £1,050 per annum, with placement according to qualifications and experience, and with superannuation benefit and family allowance provided where applicable. Candidates should hold a good degree in Economics with Statistics, and some research experience is preferred. The successful candidate will be expected to take up duty in November, 1959, or as soon as possible thereafter.

Applications (six copies), giving the names of two referees, should be lodged with the undersigned not later than October 17, 1959.

CHARLES H. STEWART,

September 1959. Secretary to the University.

AUSTRALIAN NATIONAL UNIVERSITY

CANBERRA

RESEARCH SCHOLARSHIPS

Applications are invited from postgraduate students with capacity for research for scholarships in Anthropology and Sociology including Demography, Economics, Economic History, Geography and Geology (particularly in the fields of Australia and the British Commonwealth), Far Eastern History (China and Japan), Pacific History, International Relations, Law, Political Science including Public Administration, Philosophy, Political and Social Philosophy and Statistics including Mathematical Statistics.

(*A substantial knowledge of the relevant language is a prerequisite.)

The scholarships are tenable for an initial period of two years and may be extended for a third year. Scholars are expected to enrol for a Ph.D. degree.

The present value of a scholarship is £A865 per annum. Married scholars with dependent children may be granted an additional allowance of £A225 per annum in respect of the first child and a further £A75 per annum for each other child.

A grant will be made towards a scholar's fares to and from Canberra at the commencement and expiration of his scholarship.

Application forms and further information may be obtained from the undersigned*, to whom applications should be submitted, or from the Secretary, the Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1. The University regularly considers applications in June and November but special consideration may be given to applications at other times. Scholarships may be taken up at any time after award including vacation periods.

*The A. HOHNEN, Registrar,

Box 4, G.P.O., Canberra, A.C.T.

For other appointments see page 191

COMPANY AFFAIRS

FORD MOTOR

IN an exuberant pre-election market, the £1 ordinary stock units of Ford Motor were marked up to a new peak of 90s. on the eve of the publication of the interim report for the six months to June 30th. There was no doubt that this report would show higher profits or that the interim dividend would be raised. The questions were how much higher and how big the increase. For 1958, the directors paid a total dividend of 12 per cent (including a profits tax interim of 3 per cent). The interim dividend has now been raised from 3½ to 5 per cent. The smallest total dividend that investors can therefore expect is 13½ per cent and, clearly, in pricing the shares at their present level they are hoping for something even higher. Earnings of this American-controlled company would

(£'000s)

Six months ended:	June, 30, 1958	Dec., 31, 1958	June, 30, 1959
Sales	110,200	96,400	117,200
Trading Profit	12,631	12,061	16,161
Net Income	6,894	6,426	9,311
Vehicles sold	*228,773*	*192,799*	*238,982*
Trading profit/sales	*11½%*	*12½%*	*13¾%*

certainly justify a dividend of not less than 15 per cent, especially as the big expansion and modernisation programme is now complete and as the new models have now been launched.

As the table shows sales, both in volume and value, and profits were higher in the first half of this year than they were in either half of 1958. They were so, even though Ford Motor was then establishing production lines for its new models and was running down the production of its cheapest car, the "Popular." The directors say that the increase in profits was "helped by favourable trading conditions": with the production lines fully occupied gross profit margins again went up. The directors also say that the new models which were introduced recently (too late, it may be noted, to bring any profit into the account for the first half of this year) have been "well received" but that the building up of production and the running in of new plant must inevitably result in some measure of increased cost during the latter months of this year.

NEWS OF THE WORLD

THE *News of the World* still enjoys the largest circulation of any newspaper in the world; but since 1950 (when the paper cost 2d.) average weekly net sales have fallen from a record 8,424,067 to 6,555,485, with the paper now costing 4d. In the prospectus issued last March, when some of the ordinary shares were offered to the public, the directors hinted that an early rise in circulation was unlikely. But in spite of this falling off in sales, trading profits have been rising fairly steadily since 1950, when they were £513,880 (compared with £1,770,028 last year). Perhaps, when circulation was at its peak, the point at which marginal costs were decreasing had been passed; the management may now feel that sales are approaching a reasonable optimum. Another factor which has helped the group's earnings is the increased income from the widening of its interests: last year the *News of the World* accounted for 75 per cent of the group's trading profits and the directors showed in their unavailing struggle with Odhams Press for the control of George Newnes that they were willing to spread these interests still wider. Advertising revenue has been mounting and in the first six months of this year a record 1,264 columns of advertising space were sold, yielding a revenue of £1,200,000.

Trading profits for the six months ended June 30th, says Mr William Carr, the chairman, in his half-yearly report, are "in excess" of £800,000 (against £776,000 in the preceding six months). The printing strike, which affected the Bemrose subsidiary (in which the group now has a 92 per cent interest), is not reflected in the latest figures, but Mr Carr says that in spite of the substantial loss of revenue it is hoped that in the full twelve months the trading results of Eric Bemrose will not be "materially different" from 1958.

The group's 17 per cent interest in Television Wales and the West has so far brought in £25,000, representing the final dividend for 1958: last week the directors of TWW forecast a 60 per cent dividend for 1959 with an interim payment in November, so that in the full year the group should receive at least £40,000 from this source. An interim ordinary dividend of 5 per cent was paid on June 5th by the *News of the World* and the directors "are considering the payment of another interim dividend." The £1 ordinary shares at 17s. yield 5.7 per cent and the non-voting "A" shares at 14s. 3d. yield 6.8 per cent.

HORLICKS

IN spite of the fall in trading profits for the year ended March 31st from £1,069,352 to £1,059,489 the directors of Horlicks have decided to raise the ordinary dividend from 20 per cent to 25 per cent. Thanks to a lower tax charge of £528,739 (against £565,676) the group's net profit is slightly higher at £530,750, compared with £503,675.

Last year the chairman, Mr O. P. Horlick, said that 1957-58 was the best year in the group's history, thanks mainly to higher home sales helped by the 'flu epidemic. Increased demand at home helped to offset the fall in overseas sales which were particularly hit by the Indian government's import cuts. India has for a long time been one of Horlicks' best foreign markets and to overcome the import restrictions the directors decided last year to manufacture locally: the chairman estimated in his last report that the Indian factory would start production by the middle of this year. But there have been teething troubles and now it is hoped that production will get under way by early next year. Once the foothold in the Indian market is re-established, profits seem likely to recover and this prospect may have been borne in mind in setting the dividend at 25 per cent. The payment is covered 2.8 times by earnings and the 5s. ordinary units at 29s. 6d. yield 4.4 per cent.

GLAXO LABORATORIES

EVENTS seem to have turned out somewhat better for Glaxo Laboratories in the first half of 1959 than the directors' interim report issued on April 6th suggested they might. Then, the figures for the six months to December 31, 1958, showed a reduction in trading profits compared with the corresponding period of 1957, and turnover was down 3 per cent on the last half of 1957 and 6 per cent on the first half of 1958. The directors then said that "there is little indication of improvement in trading conditions, but the introduction of new products should result in some increase in turnover and profitability during the second half of the current year's trading." The preliminary report for the year to June 30, 1959, now shows a net profit after tax of £3,017,796, compared with £2,610,566 in 1957-58. The amount set aside for taxation has fallen from £3,148,000 to £2,858,000, after crediting an over-provision of £112,000. There was no such credit in 1957-58.

This year the directors propose to place £500,000 to capital reserve, compared with £1½ million last year. A similar amount will go to revenue reserve, and £600,000 to the research and development reserve; amounts were not set aside for these purposes last year. A final dividend of 8½ per cent on the increased capital is proposed, making a total of 14 per cent on the year. This is equivalent to 21 per cent on the former capital, which was increased from £5.5 million to £8.3 million by a fifty per cent scrip issue. The total dividend for the year has thus once again been raised, the payment for 1957-58 being 17½ per cent. At 51s. 6d. the 10s. ordinary units, which for many years now have worn the tag of "growth stocks," yield 2.7 per cent.

WESTERN HOLDINGS

RESULTS from the latest Western Holdings borehole have strengthened the already firmly held belief by many investors in the gold mines of the Orange Free State that there is an extremely rich gold-bearing zone covering the southern part of Free State Geduld and the northern part of Western Holdings. How far the area of enrichment extends is still unknown, and, at the moment, the position of the new F.2 borehole forms the bottom side of a rough rectangle with the Western Holdings No. 1 Shaft, with the top side of the rectangle being formed by the two known rich zones of F. S. Geduld. The new borehole intersected the basal reef at a depth of 3,806 feet, giving a gold value of 184.3 dwts over a width of 13.1 inches, equivalent to 2,414 inch-dwts. This is a high gold value from the previously untried part of the mine, although by no means an exceptional one for the area. But further developments, which amount to an unknown quantity likely to tempt optimistic buyers, look more promising as a result of the new borehole. Certainly the market, in a period of revived interest in Kaffirs, has reacted sharply to the news from Western Holdings: the price of the shares has jumped 9s. in a week to 170s.

GREAT UNIVERSAL STORES

LAST June the hopes of the "A" ordinary shareholders in Great Universal Stores that they might be given a vote were dashed when the directors said that no such action was contemplated. At the same time however they announced their intention to tidy up the preference capital structure of the group. The reorganisation scheme, worked out in association with Helbert Wagg, has now been published. It will involve 26 preference issues (including the parent's own two issues) of the 40 preference issues within the group. The preference issues untouched by the scheme are those of companies which operate overseas or whose unquoted preference shares are still privately owned or whose ordinary capital is not owned in full.

The total amount of preference capital involved is £8.7 million, which will be converted into £3.8 million of a 4½ per cent stock and £5.2 million of a 7 per cent stock. Holders of the parent company's 7 per cent and 5 per cent preference stocks are given the opportunity to convert their holdings and the 7 per cent shareholders are offered a small cash payment of £2 10s. per cent to compensate them for the loss of their existing priority over the 5 per cent preference stock and of their right to vote on any proposed increase in borrowing powers.

As a result of this scheme preference shareholders in most cases will receive a somewhat bigger income and their new stock should enjoy a wider market and therefore possibly a higher market value. The new stocks will be covered 6¾ times by assets and 29 times by earnings. Mr Isaac Wolfson in his statement last month stressed the importance of reducing the ever-growing number of subsidiary companies in order to streamline the managerial structure. The present scheme is an important step in this direction, though it does not eliminate minority interests entirely.

TOOTAL

THE policies of large textile firms today must include plant modernisation, planned and rational shrinkage, greater efficiency, diversification, research, and hard selling overseas. The chairman of Tootal, Mr T. A. Fairclough, indicates in his annual report that nearly all this is being done. His prediction a year ago that the indications for the twelve months to June 30th were not favourable is borne out by the drop in the profit before tax from £443,727 in 1957-58 to £319,294 in 1958-59. More was spent on publicity during the year and stock losses, due to a £64,000 drop in the value of raw materials in hand, were incurred. The reorganisation of productive capacity was paid for in part by profits on the sales of machinery, but even so re-organisation cost the group £42,800 net. The weaving and stitching plants at St. Helens were closed and weaving is now concentrated at Bolton, where the mill is being modernised at a cost of £200,000. Stitching is now concentrated at Newton Heath.

Turnover was maintained in the home market, but exports were lower and sales overseas amounted to only 40 per cent of the total trade. The firm's Australian plant is hard-pressed by Japanese competition and the directors, who have no present intention of abandoning it, may have to change their minds one day.

The firm's glass fabrics subsidiary is not yet making profits, but Thermo-Plastics pushed its sales up by 50 per cent, and, although Mendip (Chemical Engineering) lost money, the combined results of the Tootal plastics businesses were "satisfactory." One organisation will in future control the whole of the firm's plastics interests. Lantor, in non-woven fabrics, is now earning profits and has, in less than 18 months after beginning production, covered development costs. Lantor's profits are not included in the latest accounts. There will in future be branches of this business in Australia and Holland (in co-operation with a Dutch group). The company's cash holdings have gone up, following the reduction in stocks, and in all liquid assets stand at £2,597,696, compared with £1,864,042. But if trade becomes more buoyant and diversification and development policies are taken a stage further, large sums of money will be absorbed. The maintained 7½ per cent dividend is just covered by earnings and the £1 ordinary shares at 26s. 6d. yield 5½ per cent. The proposed merger between Tootal and William Hollins has now been called off and though these two Lancashire groups will co-operate with each other in the future, investors buying the shares at this price are buying on the assumption that Tootal, acting alone, will make a success of its own re-organisation and development schemes.

London Stock Exchange

FIRST DEALINGS:	Sept. 30	Oct. 14	Oct. 28
LAST DEALINGS:	Oct. 13	Oct. 27	Nov. 10
ACCOUNT DAY:	Oct. 20	Nov. 3	Nov. 17

OVER the week to Wednesday's close markets reflected an unshakeable confidence in a Conservative victory at the polls. Prices of leading equities moved up on a broad front and the infectious optimism even spread to gilt-edged stocks. On Monday, when the latest public opinion poll showed the two parties neck and neck, turnover, with 20,822 bargains recorded, was at its highest level since June 1st. *The Economist* ordinary share indicator rose 13.7 points to a new peak of 305.6. At the beginning of the week a certain amount of nervous selling was quickly absorbed by institutional investors and on Tuesday and Wednesday jobbers reported that fair-sized buying orders were coming in from small investors. Gilt-edged stocks shared in the general rise with 3½ per cent War Loan gaining ⅜ to 65⅛ and in long-dated stocks 3½ per cent Electricity (1976-79) closed ⅛ better at 79.

In industrial equities the most spectacular rises were in blue-chip shares, especially those favoured by American investors. In electricals AEI put on 2s. 6d. at 62s. 3d. and GEC improved 2s. to 40s. 9d. Bowater also came in for heavy American buying and closed 4s. 3d. better at 59s. Steel shares suffered a small setback on Monday when a big volume of two-way business left most prices lower. But on Tuesday investment and speculative buying, followed on Wednesday by a flood of small orders, led to gains all round. Over the week to Wednesday's close Dorman Long gained 4s. 3d. to 40s. 3d., Steel Company of Wales put on 1s. 7½d. to 35s. and Colvilles jumped 5s. 1½d. to 44s. 4½d. John Summers closed 1s. 1½d. better at 42s. 10½d. and United Steel were 1s. 10½d. higher at 42s. 10½d. Shipping shares were active with P & O improving 1s. 9d. to 39s. 6d. ahead of the interim dividend and Furness, Withy closed 2s. better at 39s. 3d. Property shares were mixed but again most of the leading companies showed gains over the week. City of London improved 3s. to 69s. 9d. and Eron Investments closed 9d. better at 18s. 3d.

Insurance shares were active following news of the proposed merger of Alliance Assurance and Sun Insurance. The former gained 8s. to 117s 6d. and the latter were £1⅛ better at £12⅞; other insurance shares were strong with Equity and Law gaining 13s. 9d. to 195s.

Oil shares have been affected by American selling but this was to some extent offset by persistent investment buying in London so that over the period most leading oil shares showed net gains. Gold shares show good net gains over the week and on Wednesday the market recovered from Tuesday's setback, which had been brought about by a fair amount of selling in Johannesburg.

THE MONEY MARKET

THE discount market syndicate reduced its bid by 2d. to £99 2s. 6d. at last Friday's tender and consequently the average rate of discount hardened from £3 9s. 5.24d. to £3 9s. 10.48d. The market's allotment at the basic price was reduced from 64 per cent to 54 per cent while total applications for the £280 million of bills offered were £18 million lower at £412 million. This week the tender is raised to £290 million again while maturities will be only £250 million.

By contrast in the United States this week, where the Treasury's new 4¼ year rate enabled it to cut back its bill issue, the discount rate on 91 day bills has fallen from 4.194 per cent to 4.007 per cent and that on the 182 day bills from 4.895 per cent to 4.678 per cent.

Credit in London has continued to be tight and Tuesday was the only day when the authorities gave no help. Rates for overnight money have ranged up to 3⅜ per cent. Bill turnover has been fairly good with the rate at 3 7/16 per cent for December maturities and "hot bills" since last Friday's tender.

ADMINISTERS NATIONAL SAVINGS

APPOINTMENTS

RICHARD THOMAS & BALDWINS LIMITED

DATA PROCESSING MANAGER

A SENIOR ASSISTANT

is required for the

GROUP ORGANISATION & METHODS DEPARTMENT

to study varied and interesting data processing problems in established and new units of the Company in England and Wales.

The essential qualifications are practical experience in systems investigation and in the operation of Hollerith or IBM equipment. An accounting qualification or appropriate University degree would be an advantage.

The work will not be confined to punched card applications but will also cover the general O & M work encountered in a large organisation and computer feasibility studies.

The department is based at the large integrated steel works at Ebbw Vale, Monmouthshire, but some travelling to other Sections will be necessary.

Preferred age is 28-40.

Those interested should write for further particulars and an application form to:—

Management Development Department,
RICHARD THOMAS & BALDWINS LIMITED,
47, Park Street, London, W.1.

COMMERCE LECTURER

Lecturer in Commercial subjects required by large Oil Company for work in Middle East. The selected candidate will be required to prepare Iraqi apprentices and adult employees for the R.S.A. examination at Intermediate and Advanced level and to assist in "on the job" training of accounts apprentices. Applicants should possess a degree in Commerce or equivalent qualification and previous teaching experience in a Technical or Commercial College. Teaching Diploma and business experience essential. Age limit 35. Service, which is recognised as teaching service for pension purposes by the Ministry of Education, is on three year (renewable) contracts with pensionable pay not less than £1,300 per annum, plus large local currency allowances. Annual leave with paid passages. Fully furnished accommodation provided at nominal rental but owing to shortage of married quarters applicants should be prepared for initial separation.—Write in detail, quoting No. 808, to Box No. 2899, c/o Charles Barker & Sons Ltd., Gateway House, London, E.C.4.

RESEARCH DEPARTMENT of Civil Service Trade Union requires young Graduate with good Honours Degree preferably in Economics with associated studies in Statistics) as Assistant Research Officer. Analysis of salary data arising from Civil Service pay research unit reports will form the major part of the work but the normal run of trade union research will also be covered. Contract, subject to probation of six months, for a minimum period of three years and maximum of five years. Starting pay dependent on age and qualifications but not less than £655 per annum. Five-day week. Four weeks' annual leave. Superannuation provision. Canteen available.—Apply to the General Secretary, Institution of Professional Civil Servants, Queen Anne's Chambers, 8 Broadway, London, S.W.1.

EDUCATION AND TRAINING OFFICER

A manufacturing and commercial organisation wish to appoint an EDUCATION AND TRAINING OFFICER to extend and develop the present educational and training facilities within the organisation.

It is desirable that candidates should possess a University Degree but Members of Professional Institutions with experience in industry will be considered.

A commencing salary of between £1,250-£1,500 per annum is envisaged.

Applications should be made in strict confidence, giving full details to Box 1214.

UNIVERSITY OF TASMANIA

LECTURESHIP IN POLITICAL SCIENCE

Applications are invited for the above position. The salary scales for Lecturers are: Grade II, £A1,450 x £50—£A1,650; and Grade I, £A1,650 x £60—£A1,950. Appointment will be offered within either of these grades according to qualifications and experience. Further particulars and information as to the method of application are obtainable from The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London, on November 30, 1959.

ESSO

ESSO WEST AFRICA, INC.

ASSISTANT CHIEF ACCOUNTANT

ESSO WEST AFRICA, INC., requires immediately an Assistant Chief Accountant for their Lagos Office. He will, with the other Assistant Chief Accountant, in a department consisting mainly of Nigerian staff, be responsible for functions including Attending Cashier, Payroll, General Services, Sales Records, Stocks, Financial Accounting, Statistics, and Systems & Methods.

Salary will depend on qualifications and experience. Furnished quarters are available at low rental; leave and relocation allowances are generous. Fares of the successful candidate and his family will be paid to and from Lagos.

Candidates should have supervisory experience of at least some of the functions listed above, and a recognised accounting qualification. An important requirement will be ability to train local staff.

Write or telephone, quoting reference AWA 3 to J. S. Fripp,

ESSO PETROLEUM COMPANY LIMITED,
16, Charles II Street, London, S.W.1. Telephone No.: WHItehall 2134.

EXPERIENCED WORKS MANAGER, aged 30-45, required for factory covering 24,000 square feet in the Old Hill, Birmingham, area, manufacturing motor car accessories and light pressings. Contributory pension scheme and life insurance. Apply in writing, giving full details of experience, and previous places of employment, together with any references available. State salary required. All applications will be treated as confidential.—Box 1209.

QUALIFIED ACCOUNTANT

COURTAULDS requires a QUALIFIED ACCOUNTANT with industrial experience to be the Accountant of a subsidiary company near London. He would be responsible to the Board for all Financial and Costing matters including the installation of a Management Accounting system. Prospects are good and could include future transfers to more senior positions in the Courtaulds Group. Age 30-35.

Candidates should write, giving full details of age, education, qualifications and experience, to the Director of Personnel COURTAULDS LIMITED, 16 St. Martin's-le-Grand, London, E.C.1, quoting reference number G.93.

ROYAL INSTITUTE OF BRITISH ARCHITECTS invites applications for a senior executive post, newly created within the salary range £2,000 — £3,000 per annum. There is a pension scheme.

The task will be to create a better understanding of the function of the architect in all its social, economic and aesthetic aspects and to relate this locally and nationally to the policy of the Institute and its Allied Societies. He will co-ordinate the Institute's existing activities directed to these ends.

Further information and application forms (to be returned not later than October 31st) from the Secretary, Royal Institute of British Architects, 66 Portland Place, London, W.1.

MONSANTO CHEMICALS LIMITED

O. & M. ASSISTANT

Monsanto Chemicals Limited require an assistant to study and develop clerical methods and procedures in their London Administration Department. The job requires keen analytical power and ability to work with others. It offers an ideal opportunity for a man aged about 25-35 years to progress in this field in an expanding company.

Experience or training in commerce, economics or accounting would be an advantage, although full training will be given. Good prospects and salary. Non-contributory pension scheme.

Please send written applications to DL. 107, Personnel Department, Monsanto Chemicals Limited, Monsanto House, 10-18 Victoria Street, London, S.W.1.

For further appointments and other classified advertisements see page 181

UNIVERSITY OF BIRMINGHAM

GRADUATE SCHOOL IN HIGHWAY AND TRAFFIC ENGINEERING

In connection with the expansion of the Graduate School in Highway and Traffic Engineering, applications are invited for the following posts:

LECTURESHIP IN TRAFFIC ENGINEERING—STATISTICS

The person appointed will join the Traffic Engineering section to deal with the analysis of experimental results. A good degree in statistics is essential. Experience in the application of statistics to traffic problems would be an advantage but is not essential as the candidate will receive the appropriate guidance.

LECTURESHIPS IN ROAD MATERIALS
(three vacancies)

(a) Concrete, (b) Bitumens, Tars and Asphalts, (c) Soils. Applicants for any of these three sub-sections should have specialised knowledge in design, laboratory and site work.

These appointments will carry F.S.S.U. and family allowance benefits. Initial stipends, in the scale £900 x £50 to £1,350; £1,350 x £75 to £1,650, will be related to qualifications and experience.

Applications (four copies) with the names of three referees, should be sent before October 19, 1959, to the Deputy Registrar, The University, Edgbaston, Birmingham, 15, from whom further particulars may be obtained.

A LARGE progressive Group of Companies needs a graduate to undertake research development work. The technical side of the Group is expanding rapidly, and promotion prospects are excellent. A degree in Science, Mathematics or Engineering; an ability to work with production staff; and some management potential will be looked for. A very thorough training given to the right man.—Box 1210.

YOUNG ECONOMIST

required for Economic Research Section with main emphasis on commodities. Applicants should be able to express themselves well, to carry out and develop independent studies but should enjoy working in a closely integrated team. A sound knowledge of statistics would be helpful. Salary according to age, experience and qualifications.—For further particulars apply:

Personnel Officer,
Materials Supply Division,
Dunlop Rubber Co. Ltd.,
St. James's House,
23-24 King Street,
St. James's,
London, S.W.1.

HEADMISTRESS'S Personal Secretary required for Independent Boarding School, 25 miles from London. Highly responsible and confidential post; initiative and organising ability essential. Unusual and interesting mixture of work in conjunction with two junior secretaries. Resident or non-resident. Week-ends free. Excellent salary.—Apply Box 1208.

APPOINTMENTS REQUIRED

COMPTROLLER/FINANCE EXECUTIVE

Secretary of £50 million group and former senior management consultant, academically and professionally qualified as economist, chartered secretary and cost accountant, desires fuller employment with a dynamic organisation.

Now receives £3,500 plus. Will justify more by exploitation of his under-used capacity.—Box 1204.

SWISS, 30 years, seeks responsible post in commercial concern for OVERSEAS appointment. Ten years' commercial experience (resident) in the Far East.—Box 1212.

PROPERTY

SAVE INHERITANCE TAXES

Discerning investors avoid inheritance tax by investing in BAHAMAS REAL ESTATE consistently showing high annual appreciation.

Five newly built modern two- to four-bedroom houses in exclusive DICKS POINT area of NASSAU—prize-winning architecture—quality construction—Westinghouse Electric kitchen and laundry equipment—servants' quarters—beautifully landscaped with palms and citrus trees.

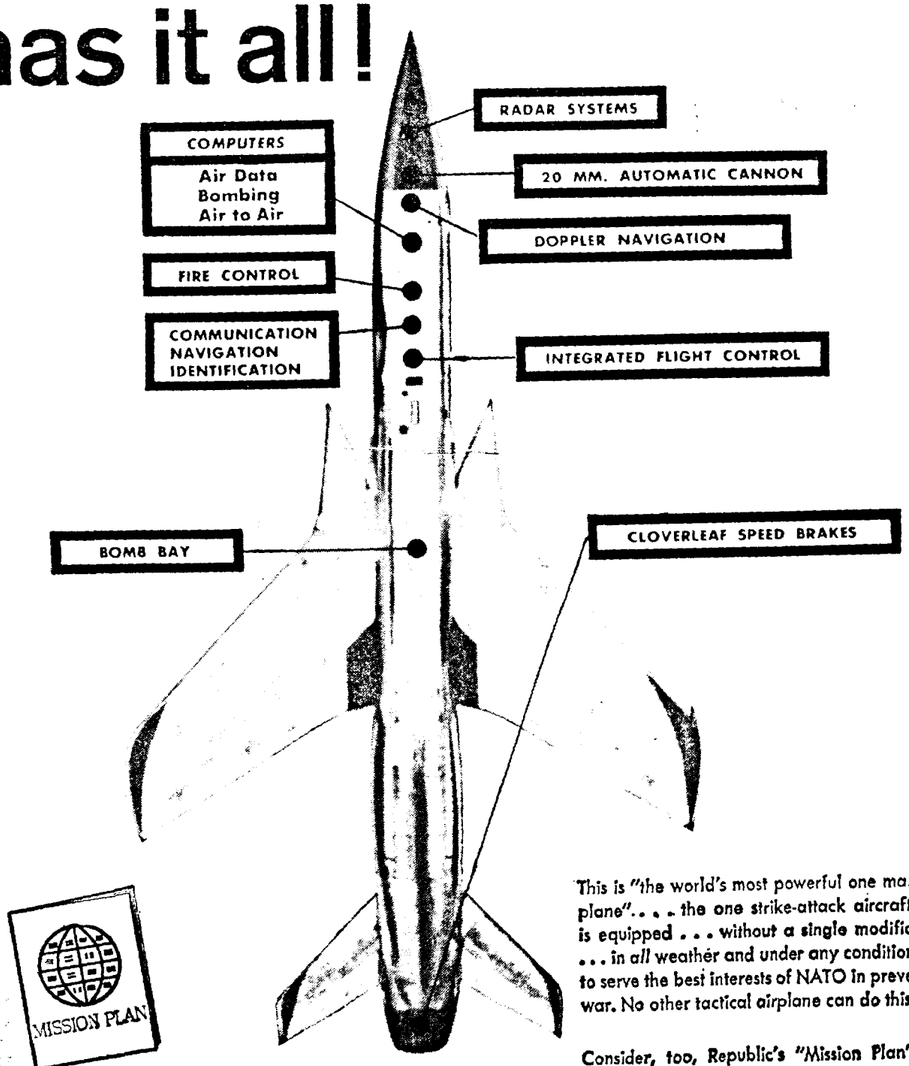
only Republic's F-105 has it all!



MISSION PLAN

We shall be pleased to mail you, upon your request, a copy of 'Mission Plan' which describes the unique capabilities of Republic's F-105 and the economic means of placing 'The world's most powerful one man airplane' in the hands of the NATO countries of Europe.
Write to 12 rue BOISSY d'ANGLAS, PARIS 8e.

This is "the world's most powerful one man airplane"... the one strike-attack aircraft that is equipped ... without a single modification ... in *all* weather and under any conditions ... to serve the best interests of NATO in preventing war. No other tactical airplane can do this.

Consider, too, Republic's "Mission Plan": the establishing of a prime source of supply in Europe for the production of this supersonic, nuclear armed jet by various European industrial firms throughout NATO.

Designers and Builders of the Incomparable THUNDER-CRAFT

Is your Chairman happy?

A Specialist firm took over our catering last month and the food in the Directors' Room has been every bit as good as you'd find in the most recherché restaurant.

This, of course, has had its mellowing effect. But what has made *all* the difference to our Chairman is that the 'ordinary' canteen food has improved so much that productivity's actually gone up!

Calling in John Gardner was the Chairman's own idea. He said that they were just about the largest and best industrial catering outfit in the country. He said their expert buying and skilful administration would transform the food and save the firm a good deal of money and worry. He was right.

May we suggest that a copy of John Gardner's 'Top Management Guide 12 to 2 Planning' finds its way to your Chairman's desk?

Please write to :—

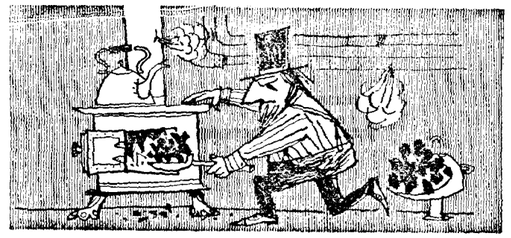
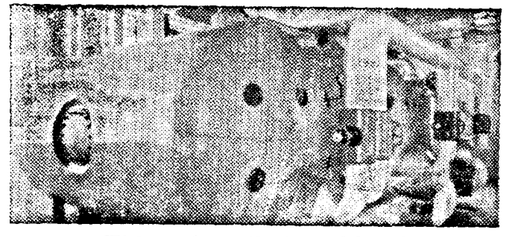
Since man first heated water...

he's been in hot water...



about keeping it hot...



This solves that problem!

Wherever boilers and hot pipes are used on a large scale, a major problem is how to avoid serious loss of heat. The practical and economic solution is insulate them with Fibreglass, the most effective and reliable way of keeping water, air or other fluids piping hot. Fibreglass cuts heat leakage down to almost nothing. It has great resilience, is flexible, easily handled and conforms to awkward shapes. Insulation presents many problems—Fibreglass can solve most of them. Write, stating your particular requirements, and we will advise you.

THE ONLY INTERNAL MIXER

The Shaw Intermix is the most versatile internal mixer of rubber, plastics, and allied materials. A high horse-powered drive with high pressure head, gives fast efficient mixing and permits high temperature reclamation of waste rubber.

WITH ALL THESE ADVANTAGES

- ★ Rotors mounted on roller bearings.
- ★ Interlocking rotors for maximum mixing efficiency.
- ★ Bi-metal contruction of rotors for strength and wear.
- ★ Effective control of temperature.
- ★ Cooling/heating chambers inside rotor nogs.
- ★ Easily renewable wear plates.

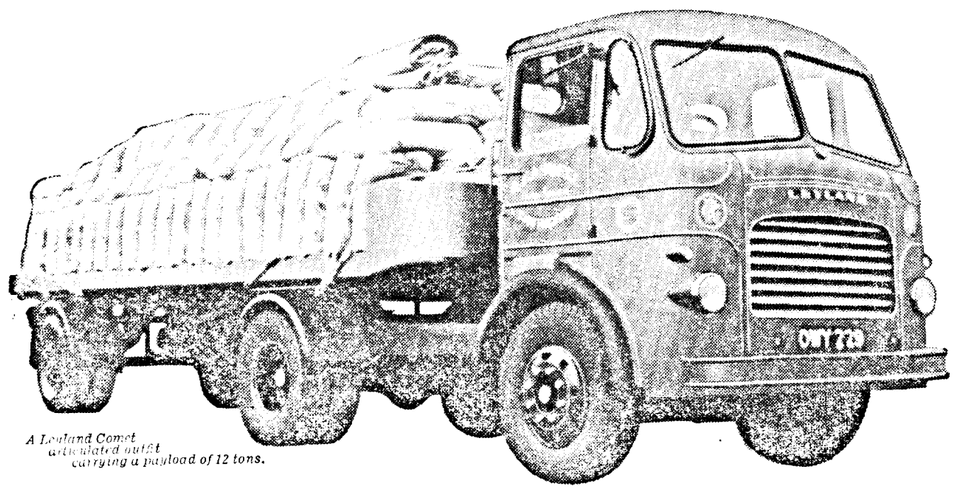
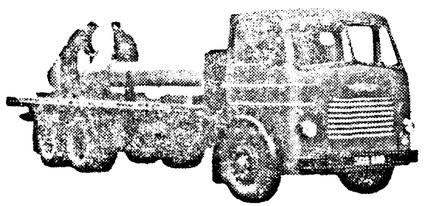
PAN AMERICAN
WORLD'S MOST EXPERIENCED AIRLINE



A Leyland Comet articulated outfit carrying a payload of 12 tons.

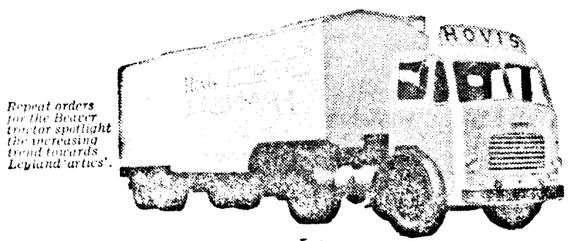
LET'S REPEAT IT...



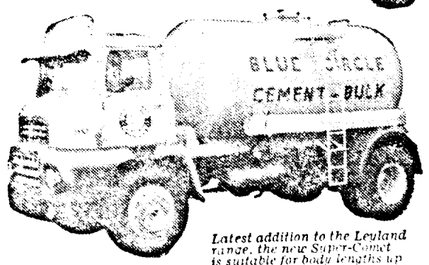
The Leyland 6-wheeled Hippo, with its reputation for high mileages on low fuel consumption, enjoys a world-wide popularity.

That seems to be the slogan of most Leyland operators. Having once bought a Leyland, back they come for more. And no wonder. Experience has taught them that the wide margin of performance which characterises every Leyland ensures reliability, low maintenance cost and a very long trouble-free life... and, in fact, in the long run the Leyland gives greater transport economy than any other truck.

Whether it is in the 12-ton Comet or the big maximum capacity multi-wheelers and tractors, you will find that something extra which has made the Leyland supreme in road haulage transport. Ask the men who own them—or better still prove it for yourself with a demonstration.



Repeat orders for the Beaver tractor spotlight the increasing trend towards Leyland 'artics'.



Latest addition to the Leyland range, the new Super-Comet is suitable for body lengths up to 23' 6" and payloads of 9 tons.

...The Leyland is more popular than ever

weekends aren't made for work

Your wife is right, you know... week-ends are not made for work. So relax. Take in ADDO and take time off. An ADDO adding/listing machine is as good as an hour a day to the busy executive... saves time, saves double-checking, saves constant control of staff. It also *proves* its figuring in print. Add, subtract, list, by hand or electrically, with full or simplified keyboard. There are some hundred ADDO models to choose from, so you can standardise on ADDO whatever your work—a big advantage in your expanding business. And that's just the kind of business in which BULMERS are at home. Details of the range are well worth sending for. Ask, too, about ADDO in automatic data processing—the tape control of tomorrow's top management.

Kellogg's methods of plant design reduce over-all costs

One way in which Kellogg minimises clients' investments in new plants is by using scale models as design tools. Built by Kellogg's designers, these three-dimensional blueprints eliminate planning studies and piping key plans, improve designs, facilitate approval, promote faster construction and lower operating costs. Kellogg has used them in planning and erecting plants for many clients, including those in the petroleum, chemical and metal industries. Designing plants with models has replaced conventional drawings of general layout and piping. Photographs of the models are substituted for drawings. The models themselves are used on the job site to save time in explaining construction details to workers and for operator training. Kellogg International Corporation welcomes the opportunity to work with clients at any stage of development of a new plant from the time the process is first conceived through construction. Inquiries concerning the co-ordinated KIC services of engineering, procurement and construction are cordially invited.

Brr-brrr!..Brr-brrr!..

Hullo. Hullo. Hull . . . oh, is that you, young Stephen?

Yes! Who is it? Father's not . . .

Psst . . . "The Observer".

The . . . the disturber?

"THE OB-SER-VER!"

Minerva? . . . Sorry. The line's a bit faint and crackly.

THE OBSERVER . . .

Don't tell me you've changed our password!

Oh! Oh—Sir Julian! I say did you get my letter?

I did, Stephen. Obviously. And most unsettling it was. Now I'm hanged if I know *what* to do . . .

Oh. I mean I'm awfully sorry. It's not your *fault, of course.*

No! Nor yours. Still, the awkward fact remains that my preposterous, deluded, self-willed . . . that my brother James has been sending your innocent mamma clandestine messages through the, er, Agony Column . . .

. . . of the Observer. And he still is, Sir Julian! Did you see last week's? Frightful rot. I mean somebody's simply got to do something about it.

So you thought you'd fight him? Hm . . . Pistols for two, carriage in attendance under the dank black elms . . . James squirming on the wet grass while the surgeons probe for a bullet in his left calf. I must say, it's rather a pleasing picture.

Well you see I thought . . . I mean . . .

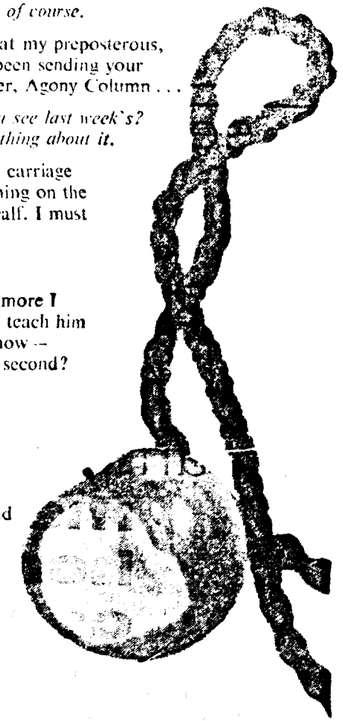
I'll tell you what Steve, let's do it! The more I think about it, more I like it. We can't exactly slaughter him, I suppose, but we *might* teach him a lesson. He's a poor shot. You're almost as big as your father now — look enormous in the grey light of dawn. Terrifying! Who's your second? Somebody large and silent, I'd suggest.

Well I did ask my cousin Peter, but he just laughed. He's nineteen. But of course if he knew you *were . . .*

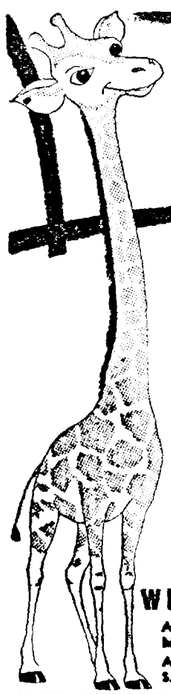
Right. Good. You rope in Peter. I'll work out the details and ring you again tomorrow—same time? Right. Must stop now. Got a Tribunal to chair in twenty minutes. Leave the weapons to me . . . And Steve, mind —don't overdo it. No false moustaches.

Oh no! No honestly. Peter wouldn't like that, he's terribly dignified. I say Sir Julian, afterwards, couldn't we get it sort of reported, sort of mysteriously, "I am informed that two Gentlemen in Surrey . . ." that kind of thing? . . . In the Observer, maybe? Peter says it's the only paper he knows that isn't either all tripe or half fossilised.

Plain-spoken fellow, this Peter! Not that he's totally wrong. Big readership in the universi . . . hullo! Hullo, hullo, hullo! Hull . . . oh, well . . .



This is No. 5 in our dramatic serial story "The Observer and Mrs. X". Next Week THE VERDICT IS YOURS!



Reach out... to upper spaces

Have you ever considered just how much additional valuable storage space you would have if goods could be stacked at twice the height? With a BEV Electric Fork Lift Truck it can be done . . . goods can be transported quickly, safely and efficiently, and stacked to heights unobtainable with normal manpower handling. Our Engineers will be pleased to discuss your problem.

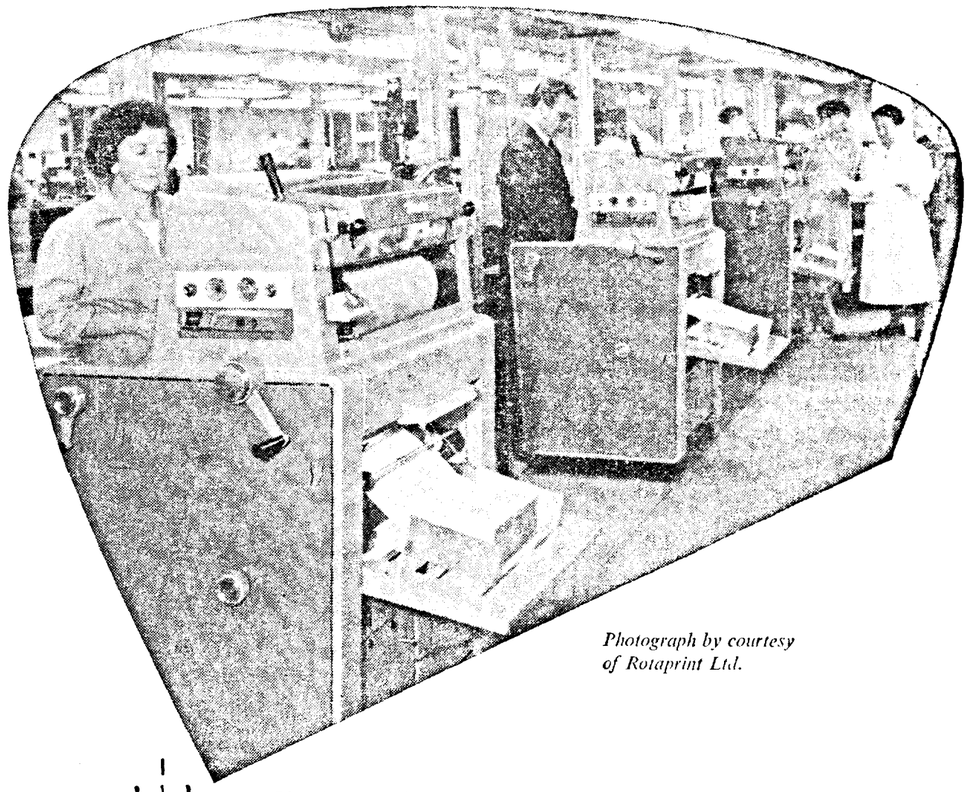
MORGANITE CARBON VANES MEAN CLEAN PAPER



Photograph by courtesy of Rotaprint Ltd.

The air supply for the paper feed of these Rotaprint offset litho machines at Unilever Ltd., is free from oil mist — and the rotary vacuum pumps require no maintenance, thanks to the use of MORGANITE CARBON VANES.

Light as aluminium, non-hygroscopic, readily machineable, highly resistant to wear and requiring no lubrication — these are some of the special properties of MORGANITE CARBON VANES. They are especially suitable for use in rotary pumps and compressors where non-contamination is essential.

MORGANITE CARBON VANES resist chemical atmospheres and corrosive conditions; withstand high temperature; immersion in liquids; are suitable for inaccessible positions and completely eliminate maintenance. They are solving the specific problems of many manufacturers — maybe they will solve yours. Please write or telephone for leaflet SD 69, or for one of our Technical Advisers to call.

Field-work

Advertising is a waste of money, any manufacturer will tell you, unless you know what's going on at the consumer end of the business. And to know that, you've got to organise some field-work.

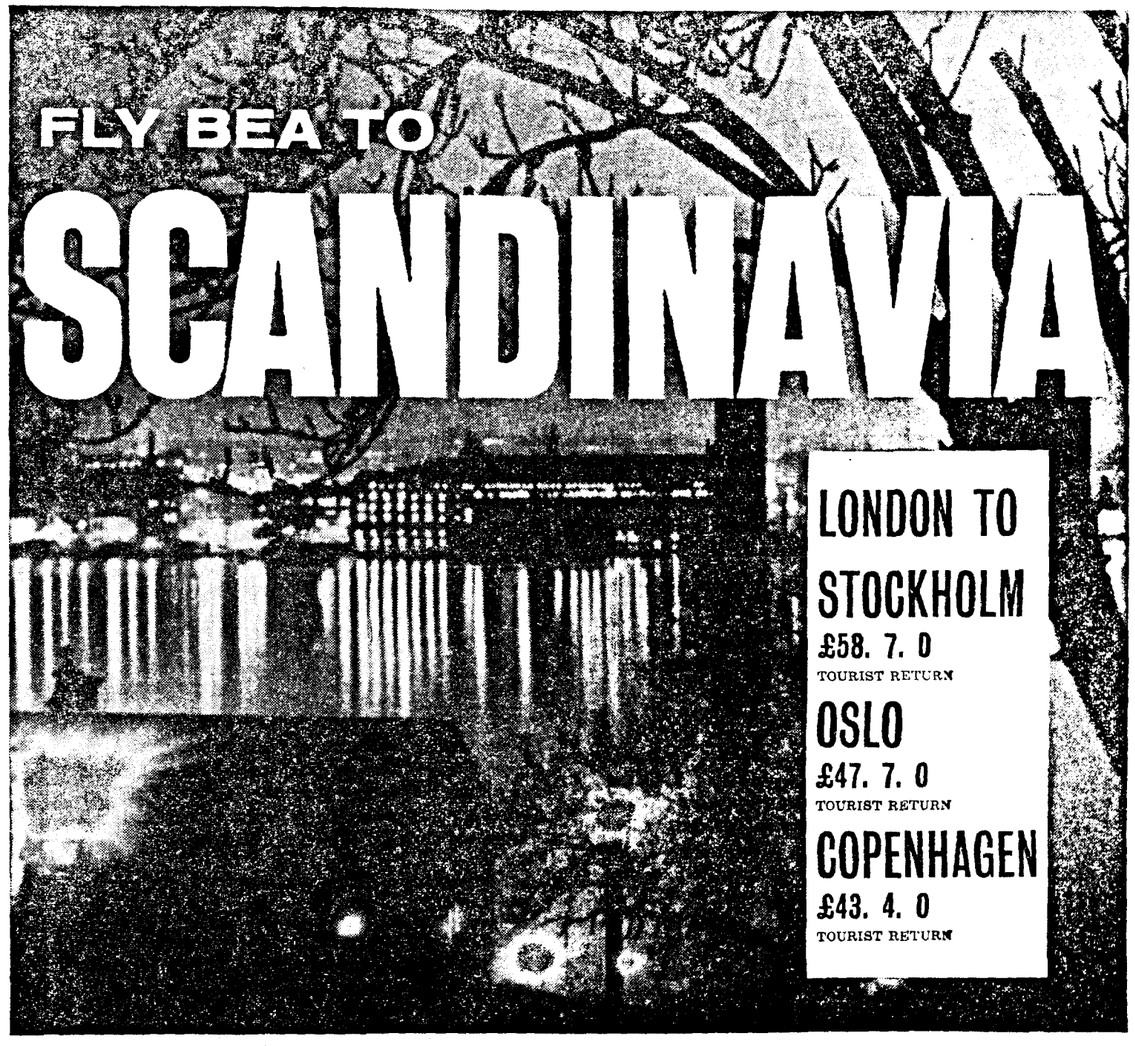
Your man goes into the field and starts asking questions. Such as 'Do you use I.C.I. Silicones?' The other party may be a bit slow and say something like 'No. They seem to do best on Pearlyman's Patent Pig Pellets.' But your man is trained to be persistent and goes on: 'Have you no experience in the use of I.C.I. Silicone Rubber in high-flying aircraft, where its tolerance of both very high and very low temperatures makes it invaluable?' And there are a lot more questions, heavily loaded, about the use of I.C.I. Silicone Fluids as anti-foam agents and as water-repellents for clothing and buildings and about I.C.I. Silicone Resins for non-stick papers, mould-release agents, etc. By this time it's probably getting a bit cold in the field and your man wraps up the interview and goes home.

Next day, he turns in his data and it all has to be reconciled and subjected to weighting factors and you note down the result, whatever that may be. Having done this, you can waste your money on advertising with a perfectly clear conscience. You can even take space in a paper to say . . .

Nearly everyone uses

(whether they know it or not)

IMPERIAL CHEMICAL INDUSTRIES LTD., LONDON, S.W.1

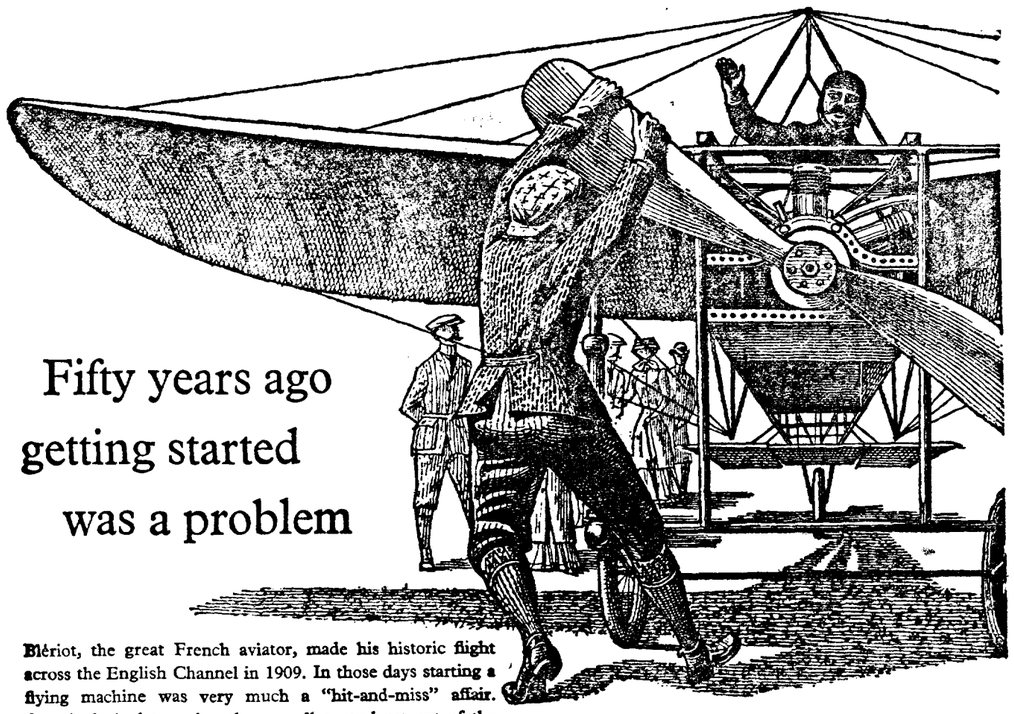


FIRST CLASS AND TOURIST SERVICES

Fly by BEA for an easier, faster and more comfortable trip to Stockholm, Oslo or Copenhagen. Breakfast in London and lunch in Scandinavia — it's as quick as that! Whether you choose the exclusive atmosphere and extra service of Silver Wing First-class travel or the comfort of cheaper Tourist-class accommodation, you'll thoroughly enjoy flying by BEA Viscount.
Ask your travel agent or nearest BEA office for full details of BEA's many First and Tourist Class services to Scandinavia.

BEA Take a **BEA** plane

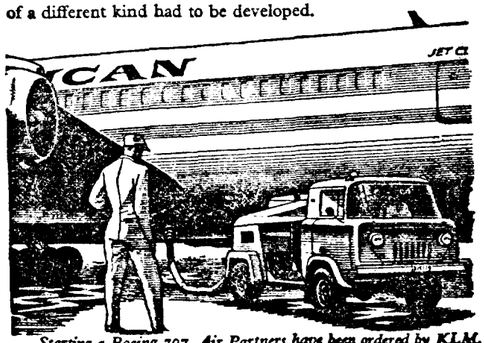
BEA operates to Scandinavia in association with SAS



Fifty years ago getting started was a problem

Blériot, the great French aviator, made his historic flight across the English Channel in 1909. In those days starting a flying machine was very much a "hit-and-miss" affair. Somebody had to swing the propeller—and get out of the way when the engine fired.

The first World War established the importance of the aeroplane beyond all shadow of doubt. As aircraft and engines became bigger and more powerful, the problem of starting them developed into a highly specialised subject; and with the introduction of jet and turbo-jet engines, starting devices of a different kind had to be developed.



Starting a Boeing 707. Air Partners have been ordered by KLM, SAS, Sabena, Air India, Canadair, and Tasman Empire Airlines.

As the world's largest manufacturer of compressed air equipment Atlas Copco designed the Air Partner—a mobile rotary screw compressor—to service the giant jet airliners now coming into service. The Air Partner is both simple and safe and has eliminated all starting difficulties.

HOW THE AIR PARTNER WORKS

With a steady flow of hot air, completely clean and oilfree, the Air Partner starts the main jet engines in a few seconds by way of an air-driven turbine starter. The Air Partner can also be used for air-conditioning the passenger cabin and cockpit, and for de-icing wings and fuselage. Simplicity of design means that airline personnel anywhere in the world can maintain and service this unit. In addition, overhauls are kept to a minimum. With this type of compressor—where the screws which compress the air never touch—10,000 hours is the average running period between overhauls.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

Reading the Result Aright

THE "don't knows" had the last word in the election, and the last laugh. Quantitatively, most prophets, during the campaign at any rate, were proved wrong (the final figures are sorted out and analysed on later pages). Qualitatively, the result was precisely what the non-partisans had foreboded; the electors found they had no option but to return the Tories again. The significant fact is not that the Tories won, but that Labour lost for the third time in a row; and the important need now is for everybody, in all the parties, to draw the right inference from what happened.

The right inference for the returning Tories is that they have been given a new lease of life, a new chance to build upon what they have achieved, with much trial and error, over the past eight years. It is not a mandate merely to stand pat, whether at home or abroad. It is an opportunity for the new vigour which would have been expected from a new Government, if one had been available. That is why the Prime Minister would be quite wrong to limit the changes in his Government to those made necessary by personal departures and the re-drawing of departmental boundaries. Even those he has made probably do not go far enough—or high enough up.

It was the sincere and very sensible view of at least one of Mr Macmillan's topmost colleagues, long before the election date was decided, that the time had come for changes on the front bench, to bring in new blood and to aerate older blood afresh. The electors have sentenced the Tories to another four or five years of office. That will make a dozen or more years in all; this is as likely to be a liability as it is to be an asset, unless much is done now to renew not only men but measures and attitudes as well; the time has arrived both for the period of Tory reform and adventure which the foundering of Mr Butler's brave policies put off four years ago, and for the truly contemporary policy of constructive realism in foreign and colonial dealings which the liquidation of the Suez losses should have made possible.

Mr Macmillan, in less than three years as Prime Minister, has brought off deftly practically everything he has attempted, up to October 8th; now he must raise his sights, not lower them. The choice of Mr Butler, in addition to his reforming duties in the Government, to be chairman of the Conservative party, is a brilliant, hopeful stroke. So, too, is the appointment to the colonies of Mr Macleod, the favourite crown prince. But the key choice is the appointment of Mr Heath to be Minister of Labour; from being chief whip, he becomes, or should become, chief breakwater against inflation.

The question which is being asked by—and, very freely, for—the Labour party is whether it may not now have to change the direction of its sights altogether. Labour lost—once again. The Conservative share of the total vote was very slightly less than in 1955; the big change was the fall in Labour's share, and the rise in the Liberal vote. It is sensible not to be too apocalyptic about the implications. The Labour party was not driven from the field; it still has 258 seats in Parliament and over 12 million voters in the country. And the Liberals' toehold in Parliament is no larger now than it was before.

Nothing new was revealed by the voting. What was shown again, this time blatantly, was what had been shown in at least two earlier elections, and it has been known by Labour's best leaders for years. It is that the Labour party lacks the magnetic force to attract the pendulum when it swings, as it always

does swing, against the Government. The real significance of the election result for labour is that all the efforts which Mr Gaitskell and some of his colleagues, in the less than four years since he became its leader, have not yet re-magnetised the party. It still repels the swinging pendulum. There is still a long way to go before the Labour party becomes a real Opposition and alternative Government again —if indeed it ever has been, except once, in 1945, when it had been fired in the wartime oven of a coalition.

The really wrong inference for Labour, in fact, from last week's defeat would be that Mr Gaitskell has been trying to re-magnetise the party in the wrong way. The only right inference from the defeat—and from the larger Liberal vote as well—is that he and his fellow-minded colleagues (who include all the best brains both in the party leadership and among its younger parliamentarians) have a very great deal still to do on the lines already begun before Labour attracts, instead of repelling, the swinging voter and the progressive, reforming vote. If they can do it, then Labour will be fit and ready, as it should be, to rule in its turn. If not, then the British electorate will continue indefinitely to have no real option when it goes to vote. It would take a very long time indeed, even if it were likely, for the Liberal party literally and bodily to take the Labour party's place; what the Liberals have done by their larger vote is to get hopefully well through a qualifying round. Much more practicable, and more in accord with older British precedents, would be a drawing-together, loose at first and then tighter, of the two, or of sections in them; the Liberal party itself was produced a century ago, and then not quickly, from the amalgam of Whigs, Radicals and Peelite Tories. But the indispensable requirement of this process, too, is to rid Labour finally of the brand image that repels all real radicals, whether progressive-minded voters or those Liberal politicians who are progressive-minded (not all of them are).

LABOUR'S repelling features need no new analysis now. There are the vague threats of nationalisation, which have become all the vaguer and therefore the more threatening as Labour's belief in the nationalisation gimmick has dwindled. There are the boasts about "socialist" planning, which really amount, in a party which in fact rejects outright socialism, to no more than promises to protect particular vested interests and to restrict competition. There is, inevitably and historically, the fact that Labour is tarred with the trade union brush; the trade unions nowadays are not the underdogs, but collectively the nation's most powerful vested interest. There is, finally, the association of Labour in the public mind with arbitrary and dictatorial ways; with the assertion of trade union power over individual trade unionists and, in any crunch, over the community; and with the "we are masters now" attitude of Labour local authorities.

One thing should be made absolutely clear. None of these features is necessary, or really relevant, to the modern Labour party. Labour is not being asked, by Mr Gaitskell or by anybody else, to sacrifice its principles and aims in order to catch more supporters and more votes. Rather is it being asked to return to its original democratic and reforming purposes after frustrating itself on a false trail. Usually the false trail is called "socialism." Actually the Labour party has never been a socialist party in any meaningful sense of the word. What happened was this. The party began as a combination of working men, non-conformists, idealistic reformers and academic thinkers to pursue the interests and the aspirations of the industrial poor; it was based upon the trade unions; and, it should not be forgotten now, was nursed politically, half-a-century ago, by the "Lib-Lab" association with the ruling Liberals. The "socialist society" which its pioneers wrote and talked about, and yearned for, was then very like the New Jerusalem and the City of Zion in the chapelgoers' hymns: there would be justice for all and everybody would be happy. Even when the Fabians and the professors had their way and the New Jerusalem was defined and (as always happens in left-wing parties) turned into a programme—"industry for the people," "nationalisation of the means of production, distribution and trade," and the rest—the simple basis of the Labour party's following was still the old "Lib-Lab" urge towards justice and betterment; it was not the dictatorship of the proletariat that was being sought, but a fair crack of the whip for the working people and a fairer deal for the poor. This, and not "socialism," was the mainspring of Labour's first and only majority at the polls in 1945.

The trouble is that all politicians, and left-wing loyalists and intellectuals more than most, too easily become the creatures of their own slogans, which start being mainly figurative and are then rationalised into the magical means of putting the world to rights. The compulsory task of the 1945 Government was reconstruction after the war, and Labour had to hand the wartime controls. But its necessarily very pragmatic performance of the duties with which it had been entrusted became "a great socialist experiment"; and in the unmagnanimous emotion of electoral victory at last, the work of Mr Attlee's famous Ministry, for all its many real achievements, was distorted and disfigured by the desire to prove that the first "people's government" had a new magic for remoulding society towards a factitious "equality." Now, after that experience and after three electoral defeats, those in the Labour party who think as well as feel know that they have no magical means either of controlling events or of capturing the people's votes. What is more, they have been compelled by facts to re-examine not only their policies but also the premises on which the Labour movement has been established: not only to look again, and askance, at nationalisation and so-called planning, but also to think again about the place in their political reckoning of the trade unions and the working poor.

THE extension of nationalisation, beyond the transport and fuel area, where nobody wants to undo what has been done; the pretence of long-sighted Whitehall planning, beyond the promise (common to all the parties) to shelter, generally unwisely, all shorn lambs: these are for the Labour party just the sludge left over from the false ideology that never really belonged to British Labour. The trade union connection, which was never socialist, is much more real; that is where the party's money comes from, as its founding fathers did. The challenge to Labour is whether, as the Conservatives have done, it can become free from its paymasters in its policies, without losing the pay. Very likely, in the long run, the decision will be made, in the aftermath of this latest defeat, not by the Labour party at all, but by the trade unions themselves—who have all the time the American example of political detachment to measure themselves and their interests by.

But the core of Labour's reappraisal, which is likely to go on for a long time, is evident enough. The trade unions, once fighting for their foothold, are now, in the old Tudor terminology, over-mighty subjects themselves; and the working class, as such, are no longer either poor or, in their instinctive responses, "working class." Labour, whether allied with the Liberals or not, has to cope politically with the social realities of an increasingly affluent society. The poor are still with us; but they are not particularly the working class. Labour began, with Liberal assent, as a party of social reform. Such a party, Labour or Liberal or both, is still very much needed. But the question is no longer whether the solution of poverty and inequity where they appear should be "socialist"; that, indeed, is irrelevant. The question now is whether the social reformers are sincere—and efficient. This is the point where Labour and the Liberals (when they can sort out their own Tories and protectionists from the real radicals) ought in honesty to be able to meet. The old great Liberal party was founded on real freedom of choice, in trade and for individuals; now, with the state's role accepted in helping to bring this about, that may very well be the test, in the new debate on the left, of both Mr Gaitskell and Mr Grimond.

Wanted, A Bridge

Just when the British Government is about to turn its attention to the split in free Europe, the common market is beginning to force the pace

TRADE with Europe has hardly been a subject to set the hustings on fire. Indeed, Europe has been something of a Cinderella in the election. Yet now that it is so comfortably back in power, Mr Macmillan's government cannot avoid taking a fresh look at the uncomfortable issue of Britain's relations with the Six. Since the plan for a little free trade area became government policy earlier this year, the problem of relations with continental western Europe has been deliberately pushed into the background; yet it has remained obvious that those relations will tend to get worse if nothing is done to make them better. There have been indications this week that the Government now intends to address itself to the subject. Industry and both the major parties have supported the Stockholm group on the assumption that it is a first step towards a wider arrangement. The problem of building a bridge between the two groups will not wait for long. Mr Maudling, deservedly promoted to the Board of Trade, now has a second chance.

Part of the trouble is that the position in Europe will not keep still; while thought is being given to the division that exists, forces are at work to widen it further. A new urgency has, indeed, been given to the matter by the unexpectedly dynamic qualities which the common market is beginning to show. For some time the "Europeans" across the channel have been wondering how to give the community a new impulse. *L'Europe des patries* of M. Debré's philosophy is not the banner they would have chosen, and the three communities, especially the parent at Luxemburg, have plainly been handicapped in their operation by the political caution which now inspires the governments. It was in response to this feeling that this week M. Wigny, the Belgian foreign minister, laid before his fellow ministers a series of proposals designed to provide the new impulse.

Not all the ideas recently canvassed in Brussels, it is true, seem likely to be carried out. The idea of a new common body for forming foreign policy, which received some publicity in the summer, and which apparently enjoyed French backing, has so far broken against Dutch opposition. The Dutch cling doggedly to the idea that such political consultation must take place in a broader context, such as Western European Union. Another new idea—that there should be direct elections to the parliament of the Six—is likely to take some time to realise. This is not a plan for federation now. Its inspiration is the more limited feeling that the economic community itself cannot function well unless its institutions, and notably the commission, have the additional backing of a parliament whose members have a direct popular mandate and more time for European affairs. Today the political climate seems unfavourable for even this limited advance. Nor is it at all likely that plans for a common currency will be realised in measurable time, even though they too might be put into effect in modest gradual stages which follow naturally on from convertibility. These are all, at this stage, aspirations.

BUT one major development is definitely on the cards; that is, a shortening of the common market timetable, so that the whole process of evolving a single market takes six to eight years instead of twelve. Final decisions have not yet been taken, but plans drafted by the commission in Brussels envisage the creation of a single market by 1965, instead of 1970. The pace of integration in agriculture, and the whole institutional timetable, would similarly be quickened. The idea has the backing of all six governments.

It hardly needs saying that these plans, if they are carried out, will also hasten the separation of the two groups in Europe, if nothing is done meanwhile to bridge the gap. The Stockholm group can speed up its plans, in turn, to keep pace with the Six, but that in itself will hardly solve the problem. When the European Free Trade Association first saw the light some people hoped that it would quickly prompt the Six to change their minds about the bigger free trade area plan which they had, in effect, rejected. In practice, the first response from Brussels has been a further demonstration of the will to push on alone; perhaps that was to be expected.

It is true that the European Commission has just produced some new proposals on the community's relations with the world at large. The ideas it put forward in March aroused little enthusiasm either inside the community or outside. Now, after six months of internal argument, Professor Hallstein has won considerable support for some new ideas which do represent an advance. In the field of quotas in particular the commission has taken a big step forward. One of M. Monnet's special contributions to the European edifice was the appreciation that its success depended on American backing. Today the dollar is weaker than it was then, and the United States is pressing, very reasonably, for the abolition of discrimination against dollar goods. In March the commission made a first response to the pressure of its critics in Gatt by suggesting some enlargement of quotas on a world-wide basis. Now, with America in mind, it has proposed that quotas be gradually abolished altogether.

The proposal has still to be acted upon; its realisation depends on the governments. But when one recalls the violent theological dispute that raged over quotas at the turn of the year, the commission's new view, that quotas should go altogether, is indeed a welcome change. It is also a good omen for the meeting of the General Agreement on Tariffs and Trade which starts next week in Tokyo, where the United States may perhaps lead the attack on quota discrimination in Europe. One of the crucial trading tasks of European governments in the next two years will be to respond to America's appeals and thus block the danger of an American slide back into protectionism. Here is a first move by the community in the right direction.

Yet within Europe itself the trading problem remains unsolved, and with no solution in sight. That was only too apparent at a recent seminar of editors in Brussels, organised by the International Press Institute. One of the speakers was M. Georges Villiers, President of the French *patronat*, who gave a notable account of the attitudes of French industry today. In a sense he said much that was encouraging. In marked contrast with the views expressed by so many French industrialists as recently as a year ago, he gave warm backing to the common market. French industry today, he explained, was at last competitive. Within the community as well, one hears much to bear out the view that there has been a striking change in French attitudes in the past nine months. Competitive in price at last, French industry can look forward to quota liberalisation with relative equanimity. For the same reason the French employers can afford to accept a shortened timetable for the common market.

Yet the French remain impenitent opponents of the idea of any sort of free trade area. The European Free Trade Association has changed nothing there, M. Villiers remarked, and the commission of the community evidently shares his view. The community may be prepared to get rid of quotas on a world-wide basis, and to talk about tariffs in Gatt as well; but at present those who make its policy show no readiness at all for a multilateral negotiation on a broader European basis. Indeed, the latest proposals seem designed to evade such a negotiation. That the community is determined to disarm its critics by playing a dynamic and liberal part in world trade is good. But it is discouraging, to those who hoped for a free trade area or something like it, that the men who mould community policy appear so fastidious in their desire to avoid contamination by any sort of wider grouping in Europe.

The gulf between the two groups in western Europe, and between the two views of how to close it, thus yawns as wide as ever. In Stockholm the negotiations on the little free trade area are going ahead, and the group has every chance of being set up next year. Once it is set up, there is no reason to believe there will be any clash or crisis—like that of last December—to bring the disagreeable implications of the split in Europe to light and precipitate new thinking. The ill-effects, economic and political, will be felt gradually, though now, it appears, at an accelerated pace. Yet the need for a bridge remains. As one of the Stockholm group committed to work with its six new partners, the British government, when it seeks to settle its own relationship with the European community, must now find an answer that fits all the seven, too. But there is still no reason why all the same terms should apply to all the members of a wider grouping, why Finn and Austrian should necessarily be linked with the European community under exactly the same formulæ as Briton and Dane.

Apparently the Government does now intend to pay more attention to its relations with western Europe than it has in the past, as indeed it should. But good intentions, and a willingness to co-operate on an inter-governmental basis, are probably not enough to do the trick. The political assumptions and aims which are so exciting an inspiration to Europeans inside the community are also a formidable wall against those left outside. It is difficult to see the present or any other British government, so long as it cannot bring itself to share those aims, finding a complete answer to its European problem.

The Economist

OCTOBER 15, 1859

BRIBERY AND REFORM

It is clear that Lord Brougham is more impressed by the need of putting an end to bribery, than by the necessity of extending the franchise. The former he regards as the pressing duty of reforming an evident evil,—the latter as an attempt to obtain a possible, but rather speculative advantage. He clearly thinks it would be wiser to delay lowering our franchise till we have removed the evils which we *know* to exist among the inferior part of those who possess it at present. *First*, he would say, make such laws and regulations as will make bribery impossible, and *then* see if you cannot with propriety extend your franchise system. There is something of the shrewd caution of age in these remarks, but we can by no means agree with them. The claim of the artisan classes to a representation in Parliament has always been that they are pre-eminently an incorruptible class, and this claim is substantially valid. Their means are ample for their wants; their scale of living is moderate; direct taxation does not reach them; they have more money of their own than any but the highest of the middle classes. They are, therefore, less accessible than many other classes to the incentives to corruption, and they are also more accessible to the intellectual considerations which restrain men from being bribed. In many cases, at least, they have political opinions, and experience shows that it is much more rare for a man to take a bribe to vote against a real conviction, than it is for a man who has no opinion at all to vote for the candidate who will give him most. Such being the case, we think Lord Brougham completely wrong in hinting that we ought to refuse, even for an hour, a representation to this comparatively unpurchaseable class, because other classes who are willing to be bought have the franchise now.

Which Way to Disarmament?

The new British and Soviet proposals give the UN Assembly a chance of probing deeply into the real difficulties—and some guidance towards solutions

Confirmed in office, Mr Selwyn Lloyd now faces one sector of the field of diplomacy in which he ranks as a veteran; yet there has been a great change since the days when, as Minister of State, he conducted the British case in the United Nations' disarmament debates. Swinging round a vast orbit, Russian disarmament policy has now reached a point almost exactly opposite to its position of five years ago. From the end of the war until 1954, the many Soviet proposals that were put forward were all variations on a single theme: first of all, the bomb must go. The Khrushchev plan that is now before the United Nations Assembly is distinguished by one outstanding feature: the bomb would be the last thing to go. Only in the third and last phase of the programme, when all the world's armies, navies and air forces had been done away with, would the nuclear stockpiles and the long-range rockets be tackled and production of weapons of mass destruction stopped.

The postwar Soviet tactics were logical enough, if crude and short-sighted. The "Baruch" plan, which would have stopped the nuclear arms race at the very beginning, was rejected outright as being a devilish machination of American big business. It is ironic that this brainchild of Dr Oppenheimer and Mr Lilienthal was so misunderstood; but their plan instantly aroused the familiar Russian suspicion, then at fever pitch, of any prospect of foreigners gaining rights of free movement on Russian soil. Soviet diplomacy then concentrated on a "ban the bomb" demand, which was doubly unacceptable to the western nations, and to most others. First, it would have kept the degree of international supervision down to so low a level that "top-secret" states like Russia would have obvious advantages; secondly, if the bomb went first, Russia would have equally obvious advantages in any "conventional" conflict.

The first of these difficulties has still to be overcome. The second has changed as Russia's own nuclear armoury has expanded. In 1955 the Soviet government ceased to put the elimination of nuclear arms first; its 1956 proposals dropped the point altogether, advocating partial reductions in conventional forces and setting aside the nuclear problem as too difficult for early solution. By then the western governments were already showing more anxiety than the Russians for an early stop to the nuclear arms race. Now, with the new Khrushchev plan, the discrepancy is wider still.

While the Russians have thus, in effect, come round from one extreme to the other, the western negotiators have argued pretty consistently that a balance must be kept between nuclear and conventional factors in any general disarmament plan. The new British outline of proposals, presented to the United Nations assembly by Mr Selwyn Lloyd on September 17th, preserves this balance. Under the British plan, reduction of both kinds of armament would proceed side by side.

> As progress is made in dealing with remaining stocks of nuclear weapons, there would be the final reductions of conventional armaments and military manpower to the levels required for internal security purposes only.

Most members of the United Nations have generally proved sympathetic to the argument for balance. Balance, however, means relative complexity. It is the shining simplicity of the new Soviet proposals—as of earlier ones—that attracts the eye. The day after the Soviet leader's speech, the whole world knew that he had proposed total disarmament. How many people were then aware that the British Foreign Secretary, only a few hours earlier, had also proposed total disarmament—right down to the same level?

Speculation about the sincerity of Mr Khrushchev's speech is irrelevant. He does need disarmament, in order to free the manpower and economic resources which he must have to make good his promises. Equally clearly, he shudders, as his predecessors shuddered, at the idea of an international inspectorate robbing him of the secrecy and insulation which are the strongest weapons in the Soviet military and political armoury. International inspection and control have, of course, been accepted by the Russians ever since 1947, in principle. To translate this acceptance into practice is the problem. The Geneva talks on monitoring a suspension of nuclear tests will celebrate their first birthday in a fortnight's time. Those talks have shown how laborious the translation can be.

For the first five months, Mr Tsarapkin argued that the "international" inspection already agreed in principle meant that all the monitoring done in Russia would be done by Russians; and when the patient Mr Wadsworth and Mr Ormsby-Gore breached that dyke, they still found themselves facing a series of other hastily thrown up defence works. Agreement on monitoring nuclear explosions may yet be reached; but the exercise has already revealed how much spadework has to be done to dig out of the Russians what they really mean when they agree to inspection.

This bears directly on the problem of detecting and destroying stocks of nuclear weapons. A tank division is not easy to hide; nor a plant producing fissionable material for rockets or bombs. But, once a nuclear weapon has been made, it is easily concealed. The new British disarmament plan views this realistically. Like earlier western proposals, it gives priority to the "cut-off"—the relatively easy halting of all manufacture of nuclear weapons. It suggests that the reduction of existing stocks should begin with a supervised transfer of successive quotas of fissionable material to peaceful uses. Clearly, this could proceed without waiting for universal inspection; there is a sizeable concession to the Russians here.

INDEX

The Index to *The Economist* is published quarterly. The subscription rate is 10/- a year; single copies are priced at 2/6 each. The Index to Volume CXCI (April to June 1959) is available from:

The Publisher, 22 Ryder Street, St. James's London, S.W.1

When a fair amount of progress had been made in this direction, the feasibility of detecting and eliminating all remaining nuclear stocks would be re-examined; and an incentive to bring all stocks out into the open would be provided, as Mr Lloyd's words quoted above show.

Mr Khrushchev's proposals, in contrast, skim right over this problem. It has always defeated the Russians, and they have several times contradicted themselves most curiously on the point. Up to 1954 they argued that the total elimination of nuclear stocks was perfectly feasible. In May, 1955, they suddenly declared that no control system could ensure total elimination; but they rejected a British proposal, made three months later, for a joint scientific investigation of the possibilities, and swung back to demanding the very thing they had said was impossible. In June, 1957, Mr Khrushchev himself said publicly that detection of all hidden stocks could not be ensured; in December, 1958, he repeated this to two British MPs, adding that the crucial thing was therefore the production cut-off; but in between these dates, the Soviet delegation had broken off the 1957 London disarmament talks on precisely the opposite argument.

To find out where Mr Khrushchev now stands on this issue should be one of the UN assembly's priority tasks; for unless he can offer some new and foolproof way of detecting hidden stocks, his whole plan could leave a disarmed world at the mercy of whichever government (or military clique) was unscrupulous and secretive enough to keep a few nuclear weapons tucked away up its sleeve.

Mr Lloyd's plan does not involve this risk. As well as gearing the last phase of conventional disarmament to the progress of the ferreting out of nuclear stocks, it calls for the building up of an international control organ which would not be confined to watching over disarmament, but would be given positive functions and responsibilities in the maintenance of international peace. The Khrushchev proposals, as the accompanying table shows, make no provision in this respect. The UN assembly needs to go into this question in some depth. When no nation possesses forces capable of doing anything more than maintain internal order, how is observance of this rule to be enforced?

It will be tricky enough to reach agreement on the size of the forces that each government claims for internal security. The governments of Spain, Iraq, Hungary, South Africa, both Vietnams, and China could presumably make out convincing claims for large forces; those of Canada, Norway, Holland, and other democracies could not. Must the formula work out so that the more unpopular a regime is, the greater its military power?

The British plan seeks to avert this by actually transferring quotas of discarded armaments to the custody of the international control organ, and steadily extending the organ's peace-keeping authority. When Mr Ormsby-Gore enters the UN disarmament debate next week, one hopes he will elaborate. But here again, unfortunately, Soviet hackles are easily raised. *Pravda* has published an attack on

> . . . the so-called Lloyd Plan, in which the British Foreign Secretary proposes the establishment of an international police force, armed to the teeth, and given the task of suppressing peoples who have decided to alter the social system . . . an international police force standing guard over the capitalist order. Let us, however, hope that common sense will prevail. . . .

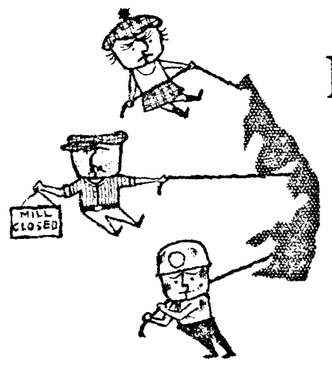
Let us, indeed. Common sense dictates that the world will not disarm until there is some assurance that, disarmed, it will not be at the mercy of the first bunch of trigger-happy thugs who perceive the possibilities of the situation. And a glance at Mr Lloyd's UN speech is enough to show that he provided no basis for *Pravda's* imaginative invention.

It will not be easy to persuade the Russians to discuss in a reasonable and dispassionate way the logical implications of their own ideas about disarmament. But the effort has to be made. And if the UN assembly is not to abdicate its responsibilities altogether, it is there, and now, that the effort should be initiated.

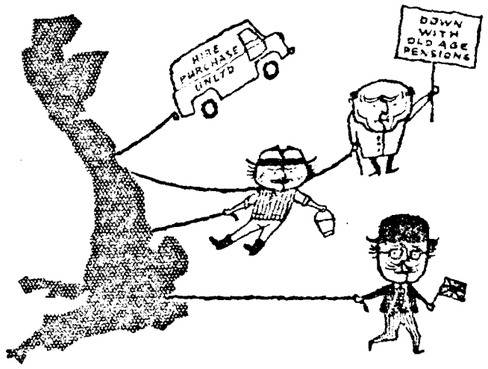
BRITISH AND RUSSIAN DISARMAMENT PROPOSALS

Common Goal: Total disarmament, except for forces needed to maintain internal order.
Common Method: Three phases (Ph.1, Ph.2, Ph.3). The first British phase is, however, mainly one of fresh studies of unresolved problems; these studies are not listed here.

BRITISH	RUSSIAN	BRITISH	RUSSIAN
Nuclear Arms		**Conventional Arms**	
Ph.1: Halt tests, and extend agreement to other nations.	*(Proposal to halt tests is made seperately from main disarmament plan.)*	**Ph.1**: (a) Limit forces of major powers; (b) Find formulae for limiting all arms; (c) Hand over quotas of arms to Control Organ.	**Ph.1**: (a) Limit China, USA, USSR to 1·7 mn. men, France and UK to 650,000; (b) Hold conference to fix limits for others, then apply.
Ph.2: (a) Stop production; (b) Begin disposing of existing stocks.	—	**Ph.2**: Reduce by instalments.	**Ph.2**: Agree on forces needed to maintain internal order, and abolish all others.
Ph.3: Review chances of detecting all remaining stocks, and dispose of as much as possible.	**Ph.3**: (a) Stop production; (b) Dispose of stocks.	**Ph.3**: Abolish all forces, except internal order ones, in step with disposal of remaining nuclear stocks.	—
Inspection and Control		**Keeping International Peace**	
Ph.1: Survey existing military strengths, to obtain formulae for limitation.	**Ph.1**: Inspection only to "appropriate" extent.	**Ph.1**: Hand over quotas of arms to Control Organ.	—
Ph.2: (a) Control Organ to supervise all reductions. (b) Inspection system to avert surprise attacks.	**Ph.2**: Inspection only to "appropriate" extent.	**Ph.2**: Develop Organ's ability to keep the peace.	—
Ph.3: Organ in final form.	**Ph.3**: When disarmament is complete, Organ will have free access to all objects of control.	**Ph.3**: Organ's peace-keeping ability fully developed.	—



How the Country Divided



LAST Thursday 1.1 million more people went to the polls than in 1955, but 201,000 fewer people voted Labour. The Conservatives' vote rose by 452,000 and the Liberals' by 920,000 (partly because there were 107 more constituencies with Liberal candidates), while the vote for nationalists and other oddities declined by 68,000. Per constituency contested the Labour vote fell by 324, the Tory vote rose by 620 and the Liberal vote rose by 1,002.

The historical peculiarity of the 1950s thus stands confirmed: Britain has a principal Opposition party which has gone on losing votes even while out of office. In every other general election since adult suffrage began, save only these last two, the government of the day has lost some seats when it has gone to the country at the end of a full parliamentary term. There is no doubt that the raw material for a swing against the Conservative Government existed in 1959; by the beginning of last week, as both the public opinion polls and the canvassers of all parties suggested, the dissidents against both the Tories and Labour were gathered in the army of the "don't knows." On October 8th these don't knows had to decide which sort of government they would really dislike more. They made their decision in three broad regional groupings:

(1) Across the whole of the south and midlands of England and northwards, through Yorkshire, they came down heavily in favour of the Government. Among the 25 regions in our table, the biggest net swings from Labour to Conservative were in the Black Country (3.15 per cent), Greater London (2.25 per cent), and the Yorkshire woollen district, the East Midlands, the northern home counties, and mid-southern England (all between 1.6 and 1.7 per cent). Within these groupings, the biggest individual swings to Conservative seem to have occured in Labour-held seats rather than in Tory-held ones; Labour members who have studied their voting returns in detail agree that it was in the wards where workers in the motor car or other newer industries were thickest on the ground that the swings against them were heaviest compared with last time. In London it was particularly notable that it was areas where factory workers live that showed the heaviest swings against Labour (Shoreditch 6.4 per cent, Edmonton 6.1 per cent, Dagenham 4.9 per cent), while the Tory suburbs swung much less dramatically (South Croydon 1.2 per cent, Wimbledon 1.3 per cent, even the Prime Minister's Bromley only 1.8 per cent).

(2) In areas of the country less markedly affected by recent industrial change—e.g. Scotland outside the industrial belt, some truly rural parts of England and Wales, watering places and seaside resorts—there was a much smaller net swing to the Tories; indeed sometimes there was a small swing the other way. The two marginal east coast resorts that swung to the Tories—Lowestoft (a Tory gain) and Yarmouth—were not really exceptions to this; the Tories secured these because they picked up the fishing port swing, which Grimsby and Hull also showed. The cod war was presumably a factor here.

(3) In only three broad categories of constituencies were there definite swings to Labour. These were in industrial Scotland, the Lancashire cotton area, and in coal mining districts (passim, but see the figures in our table for the English border counties, south Scotland, and the sharply reduced Tory swings in Durham and the Yorkshire coal and steel districts compared with neighbouring areas). Broadly speaking, Labour picked up extra votes compared with 1955 only where it was thought of as the protectionist party for the dying industries of coal and cotton, which is a queer position for a left-wing party to be in and not a very hopeful augury for its political future. It is now Labour that is showing some signs of being driven back to its Celtic fringes.

The Flowing Tide

BECAUSE of these regional differentiations—which meant that there was a net swing to Labour in 178 seats, against a net swing to Tory in 436—some people have said that this election has killed the myth of the extraordinary homogeneity of the British electorate. But surely the evenness of the swing within regions and as between constituencies of broadly similar prosperity has shown precisely the opposite. Right up to the Thursday morning neither of the parties knew which way the don't knows would turn. What strange telepathy was it that caused waverers as between Bournemouth and Blackpool, as between Darlington and Dorking, or even for that matter as between neighbouring constituencies in London, to divide their allegiance at the final count in almost exactly the same way? So even was the tide, once the regional quirks had been recognised, that the electronic computers which had been fed with figures could consistently prophesy a Tory majority of between 100 and 110 as soon as they had digested the first 15 results; and human brains could attain an even more detailed standard of prediction. For the seats that fell were nearly all in the statistically predictable places.

The Economist's table of the week before last had listed the 59 Labour seats that seemed most vulnerable before the event. At a fairly early stage during the announcement of results it became apparent that one should cross off this table the 15 Lancashire seats, the 7 Scottish seats, probably the 2 Norfolks, and 2 with coal mining areas. That left 10 of the original nineteen Labour seats in the column we had marked as most vulnerable, and 9 of these duly fell; it left 11 of the nineteen seats in the second column marked as only slightly less vulnerable, and 8 of these duly fell; it left 12 of the twenty-one seats in the third column, and 6 of them duly fell. And these accounted for 23 of the 26 Labour losses. Of the 23, seven were in the Midlands, eight in London

and the south, and the other eight comprised two Bristols, three north-eastern seats, Keighley (in Yorkshire), Lowestoft and suburban Swansea.

The other three Tory gains were in one Nottingham and two Birmingham seats, which were outside our table but were victims of the exceptional Midlands swing referred to above. Labour captured from the Tories the 4 most vulnerable Scottish seats and 2 most vulnerable Lancashire seats that had been marked in our table. The statistics of the new Parliament suggest that in the next general election Labour will theoretically need to gain an even swing of less than 3 per cent in order to win; but so many of the Conservatives' newly captured marginals are in the Midlands and south that, if the new Government can keep the industrial revolution round Birmingham and London thrusting forward between now and 1964, it will not be easy to turn it out of power.

The Liberal Advance

THE Liberals have reason to feel pleased with their performance in this election; their average share of the vote in the 217 seats that they contested was just under 16.9 per cent, compared with 15.1 per cent in the 110 seats that they contested in 1955. In the 91 seats that they fought in both 1955 and 1959, their average share of the vote rose from 16.5 to 19.6 per cent; in the 126 seats where they made new appearances in 1959, they piled up the very respectable newcomers' proportion of 14.9 per cent of the vote. Aided by the fact that they contested nearly twice as many constituencies as in 1955, the Liberals picked up in all 3.2 per cent more of the national vote than last time (see table), while the Tories' proportion fell by 0.3 per cent, Labour's proportion fell by 2.6 per cent, and the proportion of Sinn Feiners and others fell by 0.3 per cent. This difference of 2.3 per cent between the fall in the Tories' share of the vote and Labour's share provides the statistical justification for the estimate that there was an overall swing of some 1.1 per cent from Labour to Conservative.

In seats that the Liberals fought both in 1955 and 1959 (and in which they increased their share of the poll), the Labour share of the vote dropped by 3 per cent and the Tories' share by 0.8 per cent; in seats where Liberals made new interventions, Labour's share of the vote dropped by 7.8 per cent and the Tories' share by 7.1 per cent. Some people have deduced from the former statistic that Liberals drew to themselves nearly four former Labour votes for every former Tory vote—and thus damaged Mr Gaitskell much more than Mr Macmillan. This is nonsense. Even in the broad national picture the net swing to the Tories was smaller in seats where Liberals re-appeared than in straight fights, it was much smaller in seats with new Liberal interventions (only 0.35 per cent), and the Tory swing was biggest in seats where Liberals dropped out; when allowance is made for regional variations it becomes even clearer that most Liberal candidacies in this election were more harmful to the Conservatives than to Labour.

The best way of checking up on this point is by sample examination of neighbouring constituencies. Thus in marginal Wandsworth Central (where there was Liberal intervention) the net swing from Labour to Conservative was only 0.9 per cent, while in marginal Wandsworth Clapham (which is practically the same place next door, but where there was no Liberal) the swing from Labour to Conservative was 2.5 per cent. In Birmingham Perry Barr (with Liberal intervention) the swing to Conservative was 2 per cent, in Birmingham Yardley (without a Liberal) it was 5 per cent. In Sowerby (where there was again a Liberal candidate) the net swing to the Tories was 0.9 per cent, in neighbouring Keighley (where the Liberal of 1955 dropped out) it was 4.3 per cent. There were some exceptions to this general trend, including some places in north-east England where Labour did seem to do better in seats without Liberal candidacies than in seats with them; but, on average, and over most of the country, the Conservatives appear to have marked up a one, two or even three per cent larger swing when Liberals did not appear.

The Liberals' own special disappointment was that they still came out of this election holding only six seats; they gained North Devon but lost Torrington. In three of the six Celtic fringe seats which they had seriously hoped to win, their vote was slightly lower than last time, and only in Merioneth did they do really significantly better. Their springboard created by this election, however, is that there are now 27 constituencies in which they have come second to a Conservative or Labour incumbent, compared with only 7 last time. Moreover, Liberals have now reached the stage where their candidates can fairly generally be expected to get between 15 and 20 per cent of the vote in constituencies all over the country; if they can make one more heave, up to a general expectation of getting over 25 per cent of the vote, people are going to begin to ponder the possibility of their winning three-cornered contests in the most surprising places.

New Towns

ONE of the commonest conclusions that has been drawn from this election is that as soon as industrial workers have moved into the cosy atmosphere of brand new council housing estates or the new towns, they have promptly voted Tory. In Billericay, Epping, Hitchin, Hemel Hempstead and Hornchurch it was commonly supposed that the influx of new town tenants would bring Tory majorities sharply down; instead, in all these places, Tory majorities have obstinately gone up. But the proper sum to work out in all these places is surely to apply first the general 2.25 per cent pro-Tory swing in greater London to the old part of the electorate, and to examine how the new town tenants probably voted after making allowance for that.

The conclusion that emerges is that in Epping (Harlow new town) and Billericay (Basildon new town), as well as in most of the suburban areas with large new council housing estates, rather more new entrants still did vote Labour than Tory; in Hemel Hempstead they split about evenly, and in Hitchin (Stevenage new town) and Hornchurch (with new housing, largely for employees at Dagenham motor works) the Tories did unexpectedly well. In all of the new towns the Liberal vote was quite high. About half of the inhabitants of the new towns have come off London's council housing lists (and one would expect them to be preponderantly Labour), but the other half—including young technicians and some young professional people—have followed their firms there and might well be rather more Tory-inclined than workers who stayed behind. Undoubtedly, there has been some tendency for more workers to vote Tory as they have moved into more comfortable surroundings, as indeed there has been a small swing to the right in council housing estates throughout the land. But, so far as one can see, conversions of former Labour men (or probably more usually women) on both existing and new council estates have rarely been greater than about 4 or 5 per hundred; and, on the figures available, one is not prepared to say that the conversions in most of the new towns themselves have been massively greater than that.

People, Polls, Issues

AS the correspondents of *The Economist* went round the country in this election, they were often told by proud Labour agents that their local MP, however obscure nationally, was so well-beloved in his constituency that he would transcend any national tide; in almost every case where this point was cited, it has proved to be quite untrue. Indeed, the two Labour candidates who most tenaciously and successfully held on to marginal constituencies were generally regarded by local informed opinion

Continued on page 218

Votes and Seats of the Parties

In the table below the country has been divided for the purposes of comparison into twenty-five regions, based on social and economic homogeneity, although widely different in size and population.

THE COMPOSITION OF THE REGIONS is generally clear but some details of the boundaries are as follows: *Greater London* includes all boroughs adjacent to County of London. *Northern Home Counties* extends as far as Berks (excluding Abingdon and Newbury), S. Bedford and, in Essex, to Epping, Chelmsford and Southend. *Mid-Southern England* includes the rest of Berks and all Dorset except West Dorset. *South-West England* includes Bristol and S. Gloucester. *Eastern Counties* includes the rest of Bedford, Peterboro', Huntingdon and Isle of Ely. *Black Country* includes Birmingham, Wolverhampton, Coventry and adjacent boros. also Cannock, Solihull, Sutton Coldfield and Nuneaton. *N.W. Midlands* includes Salop, rest of Stafford and Cheshire up to Chester, Runcorn, Knutsford and Macclesfield. *Manchester and District* includes Eccles, Middleton and Prestwich, Oldham, Stalybridge and Hyde, Cheadle, Altrincham and all boros. contained within these. *Merseyside* includes Crosby, Huyton, St. Helens, Widnes and all Wirral constituencies. *Rest of Lancashire* excludes Barrow and Morecambe and Lonsdale. *Yorks Woollen District* includes Sowerby, Keighley, Leeds, Wakefield, Colne Valley and boros. contained within these. *Yorks Coal and Steel District* includes everything in W. Riding south of Penistone, Hemsworth, Normanton, Barnsley and Don Valley. *Durham and Teesside* includes Middlesbrough and Cleveland. *Tyneside* includes all constituencies on the River Tyne as far as Consett on one bank and Newcastle on the other. *Glamorgan and Monmouth* includes Llanelly. *Clydeside* includes Glasgow, Greenock, Dumbarton and all Lanarkshire except Lanark. *Southern Scotland* includes everything else south of Stirling and Fife.

THE PARTIES HAVE BEEN DIVIDED as follows: *Conservative* includes Cons. and Lib., Cons. and Lib-Nat., Unionist and Lib-Nat. *Labour* includes Labour and Co-op. but not Lab. Ind. or ILP. Under *Others* are grouped all candidates who would not accept or would not be accorded the whip of any of the three main parties if returned to Westminster.

Two Conservative unopposed seats in Northern Ireland in 1950 and four in 1951 are excluded.

Swing is marked as "n.a" where pattern of major parties' candidacies has changed.

Continued from page 216

as rather poor fish. This is not quite as surprising as it may sound. In a large majority of the constituencies of Britain a large majority of the electorate turned out last week to vote for candidates of whom they had no personal experience at all.

Where candidates of the two major parties were well known, one can even argue that this fact told against them. The Tories' two successful television personalities (Messrs Chataway and Johnson Smith) both picked up smaller swings than did Tories in neighbouring constituencies with the same pattern of candidacies. Labour's Mr Woodrow Wyatt suffered an above average swing against him at Bosworth; while for a seat where the Liberal candidate had withdrawn, the grandfather of the showmen, Dr Charles Hill, picked up a well below-average swing at Luton (0.5 per cent). Cabinet ministers as a whole did not do better than their regional averages, often indeed slightly worse.

In 1951 and 1955 the swing against Labour was below average in marginal seats with sitting Labour members; because Labour concentrated its organisational effort so heavily on marginal constituencies this time, most people expected this feature of the voting to be even more pronounced in 1959. In fact, it was not. As usual the total turnout in marginal constituencies was higher than in safe ones, but, in London at least, the marginals were not the seats that showed the biggest increase in turnout compared with last time (seats with Liberal candidates did). During the BBC's brilliant television marathon Mr David Butler revealed that he had asked regional organisers of both parties, in confidence, for the names of constituencies where they considered that their parties' organisations had improved notably since 1955; his researches suggested that the difference between a very bad organisation and a very good one might have an effect equivalent to about a ½ or ¾ per cent swing. As a swing of that sort could usually sway about a dozen seats in the country, organisation stands revealed as a reasonably but not excessively significant factor.

Public opinion polls have been very unfairly pasted since the election, especially by newspapers which do not finance polls themselves. On this point we agree with the letter from the director of National opinion polls printed on page 231 of this issue; by any standards save those previously set in Britain itself, the record of the polls was rather good. All the polls pointed correctly to the right eventual winner, although they generally underestimated the swing to the Conservatives by between about ½ and 1½ per cent. The polls deserve congratulations for having noted that there was a Tory recovery in the last week of the campaign, and for having spotted that there had been a swing to the Tories between last June's by-elections and this autumn; when newspaper correspondents got into the field at the beginning of the campaign, most of them did not believe this. Comment during the campaign would have been even more off-key than it was if the polls had not existed. These instruments will deserve to be treated in future with the same degree of interest and caution as they have deserved heretofore.

As regards issues, it is quite wrong to say that steel workers voted particularly strongly against steel nationalisation; in most steel areas the swing against Labour was no higher than the national average (in Sheffield 1.2 per cent). On the other side, it is impossible to trace that the swing to the Tories was any smaller in areas which had been badly affected by the Rent Act than in those which had not; paradoxically, one could even make a statistical case for arguing the opposite. Nor have particular urban constituencies that are supposed to contain an unduly large number of old people resisted the Tory tide; it is probable that an actual majority of old age pensioners again voted Conservative last week, as the public opinion polls suggested that they also did in 1955. So much for the effectiveness of auctioneering.

SUCH then was the election of 1959. It was not, in itself, an election of epoch-making change; its main significance was that it was the fourth election running in which there was some swing against Labour. Some time during the current Parliament it is an almost safe prediction that there will again be a swing against the government of the day, as there was in the middle of the last Parliament, and at the beginning of the preceding one, and before that back through every Parliament in Britain's recorded democratic history. Three questions will then stand out.

The first is whether any swing against the Government in mid-Parliament will again be picked up by the Liberals (where they put up candidates) much more than by Labour; the 1959 election has probably left the Liberals in a stronger position to achieve this.

The second is whether the expected swing against the Government, even if it is picked up mostly by the Liberals, will be strong enough to make it look likely at some period that the Tories will lose the next election; the odds are strongly that some such period will occur, as it has done in every previous Parliament. The third question will be whether, if any such period arrives, the Liberals will be sufficiently me-tooish and Labour sufficiently scarecrowish to buffet the floating vote back to the Tories before the next general election again. That is what happened this time—with most, though not all, the blame attaching to Labour's side.

In the parliament of 1951-55 the swing against the Tories ended abruptly in November, 1952, because Mr Bevan had appeared as the menace of Morecambe; in the Parliament of 1955-59 the swing against the Tories reversed itself even more abruptly at the time of the London bus strike in May, 1958. During the county council elections of mid-April, 1958, the average swing to the Tories compared with 1955 seemed to be around 9 p... in London, and probably not much less elsewhere; at the municipal elections three weeks later, that swing had been cut by three quarters, entirely because the electorate did not like Mr Cousins. The Tory recovery, aided by increasing local prosperity, moved on steadily from that beginning to last week's triumph, with trade union members themselves (and their wives) apparently in the van of the rightward advance. The parliament of 1959-64 starts with Labour's scarecrows still in place. Where is the man who will rid the Opposition of this troublesome incubus, and come forward to save the Left? On that question, in all probability, the political future of this country hangs.

NOTES OF THE WEEK

HER MAJESTY'S GOVERNMENT

The Cabinet Shuffle

THE first thing to say about the new cabinet is that it is a pity that the Prime Minister has not refreshed his Government's thinking by changes at the Exchequer and the Foreign Office. The second is that, given he had decided upon no present change in those two top departmental posts, the extent of the rest of his shuffle is welcome, and most of the particular names in it are a relief. Comment upon cabinet changes is a beguiling but not always very lofty journalistic occupation; it is so easy to descend to the level of gossip column stuff. But when the gossip concerns the men who are to rule the nation, a journal of opinion has a duty to express its views.

Mr Macleod's assumption of the Colonial Office seems to us to have three implications. It throws the most liberal and dynamic of the available Conservatives into a breach where, in these next eighteen months in which the future of Central Africa will be decided, liberalism and dynamism are going to be needed as never before. It makes it more likely that Mr Macleod's next eventual move will be to the Foreign Office, not—as *The Economist* would have preferred—to the Exchequer. And it loads a very ticklish job indeed on to the shoulders of the man who some Tories think is the best next Prime Minister they've got. It implies no change of subject to mention in the next breath that Mr Butler is taking over the chairmanship of the Conservative party from Lord Hailsham, while still retaining the Home Office portfolio and (mistakenly?) the leadership of the House. By the end of this Parliament Mr Macmillan will be approaching his seventieth birthday, while Mr Butler will still be only 61.

Mr Butler takes these three reins into his hands at a time when he has recovered remarkably from the low spirits that assailed him a few years ago. He is by far the best policy rethinker the Tories have had in this century; he is a glutton for what will now be another gargantuan load of work; and he will be ably aided at Conservative central office by a kindred spirit in the new vice-chairman Sir Toby Low. But one of the principal implications of his new responsibility is that he will now have a duty to parade himself more frequently before local Conservative associations up and down the country. One is not quite sure that this is a pleasure one would choose while carrying out the liberal Home Office reforms on which Mr Butler has set his heart, but he is no doubt reflecting that other political leaders in our age—such as Marshal Stalin and Mr Khrushchev—have found control of the party machine to be a useful heir-still-apparent's job.

Mr Butler takes over the desk that Lord Hailsham is leaving, and the latter's departure demands comment. Lord Hailsham was injected into the Conservative central office two years ago at a time when Conservatives feared that the new Prime Minister's image might not get over to the country; when Mr Macmillan turned out to be a vote-winner after all, Lord Hailsham proved to be unnecessary—and indeed an embarrassment. He now departs bell, book and candle into space: to take ministerial charge of science, a job which was puffed up during the election campaign but which nobody is quite sure really exists. It will be a great pity if this is the first step into oblivion for one of the ablest Conservative ministers in the country; if Lord Hailsham had been in the Commons he would have been given far greater departmental responsibilities than these. His case (and that of Mr Wedgwood Benn on the other side) provides an unanswerable argument for constitutional reform: those who inherit titles should be allowed to choose to stand as candidates for the lower House if they wish.

Labour, Trade, Defence

BY far the most important of the other appointments is that of Mr Heath to the Ministry of Labour. This ought to be the key job of the new Conservative administration, an office in which a great deal needs to be done. Mr Heath comes to it having achieved a brilliant reputation for actually winning friends (among all shades of opinion in the party) as well as influencing people while he was Tory Chief Whip. It is extraordinarily difficult to tell whether his incumbency of the whip's office during and after the Suez fiasco was an example of an extraordinary period that was bound to make a man, or of an above-ordinary man who made his mark upon a period. Tories are convinced that Mr Heath did the latter, and they are eternally grateful to him for the way in which their party has convalesced after the Suez strains. It will now be almost—but not quite—as interesting to see what happens in Mr Heath's old office (where Mr Redmayne takes over as Chief Whip) as in his new ministry. Mr Heath is unlikely to be a popularity-seeker, but whether he will at last bring in his ministry as an active participant in the battle against inflation remains to be seen.

The other main ministerial change confirms that Lord Mountbatten is going to run this country's defence, which means that Mr Watkinson has moved in to become his (titular?) political chief while Mr Sandys has stepped down to the new Ministry of Aviation. The latter is another office which probably should not exist; there is an immediate political decision to be taken—whether to give more scope to the private airlines—but after that the new ministry

could too easily become a collecting place for the pleas of special interests who want to spend too much of the taxpayers' money. The rump of the old Ministry of Transport is taken over by that most unconservative of Conservative cards, Mr Ernest Marples; Britain urgently needs to spend more money on its roads, so this appointment should be greeted with some glee. Finally, Sir David Eccles (who has done a much better job at the Board of Trade than his personal detractors allow) goes back to the Ministry of Education, and Mr Maudling moves up in his place; nobody doubts Mr Maudling's ability and right to promotion, but one cannot be entirely happy that the overseeing of trade negotiations with Europe is no longer to be a nearly full-time ministerial job.

THE SUMMIT

This Year, Next Year

SOMEHOW, the London diplomatic correspondents became convinced that the Government wanted an early summit conference on the day before the composition of the new Cabinet (and with it the name of the Foreign Secretary, Mr Selwyn Lloyd) was announced. Even so, they were not the first to make this discovery; the news that, in the Prime Minister's view, the success of Mr Macmillan in the general election had removed the last substantial obstacle to a summit conference received the prominence in Monday's *Die Welt* that that paper delights to give, except at German election times, to news unwelcome to Dr Adenauer.

Indeed, it is probably true that a Labour victory would have held up the preparations for a summit meeting for at least long enough to enable the Americans to get to know the new British government, explore its mind, and generate confidence in its intentions; whereas, with Mr Macmillan still on the bridge and Mr Lloyd still at the wheel, the Americans feel that they know where they are, and are inclined to get the summit meeting over as soon as can decently be. How soon is that? For the British, and possibly for the Americans too, it might be in the first half of December; but if that cannot be managed, the President's New Year commitments to Congress will put the date off until late January.

Exchanges are now going on among the western governments to settle whether, and when, the meeting shall be, what western preparation is necessary—should there, for instance, be a meeting of the American, British, French and German heads of government first?—and what agenda the western side will propose. Probably, with the relative success of Mr Khrushchev's visit to America, the east-west exchanges have generated a sufficient momentum to make it difficult for General de Gaulle or Dr Adenauer to argue effectively at this stage that there had better be no summit meeting at all.

On all the other questions, however, the ball is at their feet. M. Debré on Tuesday was a little more forthcoming than French spokesmen have tended to be about the possibility that a summit meeting might do good; he did, however, insist on the risks of failure and the need for solid and serious diplomatic preparation. In French eyes, there is still no hurry; in Dr Adenauer's eyes, perhaps even less. None of the principal western governments would go so far as the British in holding, as it does, that an interim agreement on Berlin is now possible; and probably none would be quite so definite that a further meeting of the eastern and western foreign ministers, to go over the Berlin ground again before the heads of government meet, would be pointless.

GERMANY

Chink in the Bonn Ice

FROM Dr Adenauer's remarks to the foreign press on Tuesday it seems clear that the crack in the Bonn ice is a small one. The only deadline he mentioned for the summit meeting is next June, when President Eisenhower may pay his return visit to Russia. And he was emphatic that before the east-west encounter takes place the western powers must achieve unity amongst themselves. It is still not clear, after all, whether, and in what form, west Germany will be brought into consultation with the east-west meeting. Not unnaturally, Dr Adenauer is anxious for opportunities to assert his own views in the counsels of the west before the meeting takes place.

Those views have evidently changed little. Dr Adenauer did not expect any concrete results from the summit meeting except an arrangement for further talks, probably between foreign ministers. And he went out of his way to emphasise his dislike of plans for nuclear disengagement, or other limitations of armaments, in central Europe, on the ground that there must be no difference of treatment between western Germany and its allies. It seems almost to have been forgotten that the Federal Republic was rearmed under treaties—the Paris agreements of 1954—which carefully gave it a very special position, within the framework of Western European Union.

Though his views have not changed, Dr Adenauer is evidently anxious to do something to patch up relations with his British ally. He explained that his important differences with the British in questions of security and defence were with the Labour Party, which had supported the Rapacki plan. The idea of visiting London in response to the British Government's invitation is, it seems, once more in his mind. Whether the sources of the Anglo-German differences can be removed is another question. On the subject of the common market and free trade area he gave no sign of a change of mind. There are indications that another meeting with General de Gaulle is in prospect, and none of a loosening of Bonn's close partnership with Paris.

HOUSE OF COMMONS

Easier Times?

IMMEDIATELY after the election result the newspapers were full of obviously inspired stories to the effect that for MPs also life in the new Parliament would be better with the Conservatives. The Prime Minister was said to be in favour of shorter debating hours and longer recesses and to be opposed to "synthetic fury of activity." It is quite in character for a Conservative government with a comfortable majority to wish to damp down the tempo of political activity. It doubtless hopes to profit during the first few months at least from the Labour party's preoccupation with its own chronic ailments. But this is a matter on which both parties should think again hard.

The principal method which the Government seems to have in mind for giving active backbenchers more opportunity to speak, and inactive backbenchers less necessity to listen, is the more frequent use of the two-day second reading, with a vote only at the end of the second day. There are times when this has merits. But far more often it simply leads to the collapse of the first day's debate. If the Government really has not got a large programme it would be much better to make constructive use of the time saved: for example, by staging more debates on non-party issues that end with a free vote or restoring the private members' Wednesday afternoon. Furthermore, is the Government really in a position to ease up and relax about legislation? Official evidence before the Joint Committee on the Promotion of Private Bills, which clearly showed how much time is wasted in private bill committees over local provisions that should have been enacted years ago for the whole country, suggests that it is not.

The Labour party, on its side, should recognise that it is very important that the country, which has shown a surprising amount of interest in politics during the election, should not be encouraged to slip into a state of complacent apathy. If the Government does not give Parliament something worthwhile to do, the Opposition, even though depleted in numbers, should force its hand. For the sake of the necessary vitality of Parliament and the party system, the parliamentary Labour party should learn something from the shock it has received, should bring its best debaters to the forefront, pick its issues with more skill than in the last Parliament, and follow through more effectively on the issues which it has picked. Two moves which Mr Gaitskell could make straightaway are to appoint some of the abler younger men—such as Mr Healey, Mr Jenkins and Mr Wedgwood Benn—to the front bench if they fail to get elected there in the coming vote for the shadow cabinet; and to strengthen the prestige of the Labour Chief Whip's committee, which in the last session provided for the first time a regular liaison between Transport House and the parliamentary party.

Mr Speaker

WHEN it became apparent that the Conservatives had won an increased majority, most people expected that the next Speaker would be their own first choice Sir Harry Hylton-Foster, the Solicitor General. But there is remarkably widespread support among Tory backbenchers for the idea of making a *beau geste* by giving Mr Mitchison the chance of becoming the first Speaker in history to be drawn from the Labour party. Certainly if Sir Harry, who would appear to have most of the qualities that would go to make a good Speaker, feels repelled by the social isolation which the Speakership would bring (or even prefers to keep his eye on the Woolsack), Mr Mitchison may well be approached. Although outsiders might regard him as rather ponderous and heavy-handed after Mr Morrison, he is generally liked and respected in the House. The only argument heard against him there is his age (he is 69) which would prevent him from serving for the usual two or three Parliaments of a Speaker's term.

While all lists of potential Speakers start off with these two names, they become very uncertain after them. Labour's Sir Frank Soskice would be widely accepted, but it is assumed that he will want to wait out this Parliament for more rewarding political things. The last House's chairman of Ways and Means, Sir Charles MacAndrew, has retired along with the Speaker. The case for his deputy, Sir Gordon Touche, is not being widely canvassed. Major Sir William Anstruther-Gray has his supporters, but even some of them wonder whether he is quite quick enough for the chair. On the Opposition side, the name of Mr Diamond was often mentioned when it was thought that the Labour party might win the election (and when Mr Mitchison would presumably have preferred Cabinet office). But while there is some support among Tories for offering him the chairmanship of Ways and Means if there is a Tory Speaker, Mr Diamond does not seem to be considered by them to be quite of Speaker material himself. Other things being equal, it would be a pleasant start to the proceedings of the new House if the man feigning protest as he is propelled into the Speaker's chair on Tuesday morning is a member of the Labour party.

BERLIN

Red Rags to Berliners

ON Tuesday, October 6th, the government of the German Democratic Republic, which was celebrating its tenth birthday in east Berlin that day, chose to spice the occasion by hoisting its new flag on the elevated railway that runs through west Berlin. When Berlin was divided after the war the railway remained in communist hands. The elevated railway traverses both parts of the city, bearing no visible signs of political allegiance, and allowing the Berliner to travel as easily between the Tiergarten and the Friedrichstrasse as the Londoner does between Hammersmith and Green Park. The hoisting of the new east German flag in the west gave a jolt to this settled state of affairs.

West Berlin police were sent to haul the flags down, but they were unable to complete their task, for in a few stations east German employees put up a vigorous resistance. During Tuesday night new flags were put up wherever the west Berliners had been successful in pulling the first lot down, and units of people's police were brought in to guard them. On Wednesday the Berlin senate and the three western commandants considered what to do. The allies decided to send a polite note of protest to the Soviet commandant. Next day the east Germans hauled the flags down for good and the incident was over.

The story carries some instructive lessons. The flag incident, side by side with the celebrations in east Berlin, was a disagreeable reminder to the west Germans of the existence of the east German state. Up to now both German states have used the same flag, the black, red and gold of 1848 and of the Weimar Republic, without adornment; now the east Germans have imposed on the traditional colours their own symbol, the hammer and dividers. This, and the celebrations in east Berlin, are reminders of how far the east German state has come.

The flag incident was no doubt intended to provoke, as the west Germans have pointed out. Probably it reflects a natural anxiety in east Berlin to do what can be done to check the détente between the great powers and keep trouble brewing in Germany. It also serves as a reminder of one more of west Berlin's weaknesses. The east Germans could easily have replied to further attacks by the west Berlin police by bringing the trains to a halt. It would be nice to believe that the provocative flags were in the end brought down on Russian orders. In fact there is no evidence to prove that this is so; the east Germans declared, from the start, that the flags were only going up for the duration of their celebrations. What is clear is that there are plenty of ways in which feelings in Berlin can be set alight in dangerous ways; and that the great powers have a profound interest in preventing this from happening.

CHINA

The Private War

FORMOSA is the immediate Asian test for Mr Khrushchev's ideas of competitive co-existence. When he told the Chinese hierarchy in Peking last month that "even such a noble and progressive system as socialism cannot be imposed by force of arms against the will of the people" he may not have had Formosa in mind. His Chinese hearers could certainly take comfort from his recognition that there were such things as "liberating, just wars." Peking can never envisage its private quarrel with Formosa as a predatory campaign and its resistance to Mr Khrushchev's general sales talk still seems unbroken. Although Marshal Chen Yi felt obliged to join the Indonesian foreign minister, Dr Subandrio, in a formal salute to the Eisenhower-Khrushchev exchanges in a communiqué after Dr Subandrio's visit to Peking last week, the official Chinese line does not appear to have swerved from the deliberately bellicose speeches delivered by the party leaders during their tenth anniversary celebrations. Their internal troubles may leave them no choice but to fulminate against the United States through the winter. Mr Khrushchev's new ambassador to Peking, Mr Chervonenko, may have his hands full. His predecessor seems to have departed under a cloud.

General Chiang Kai-shek, in a speech on October 10th celebrating the Chinese revolution of 1911, also had his eye on Peking's difficulties. He could see the "political phase of the collapse of the communist regime" making such progress that 1960 would prove the year of the mainland's liberation. It emerged that while he accepts the current embargo that American policy places on a direct invasion of the mainland, he does not consider that it would apply once a national uprising against the communists took place. If that happened help would be sent "as quickly as lightening."

So long as Mr Khrushchev does not publicly restrain his allies, the State Department may see no reason why it should incur General Chiang's odium by preaching peaceful co-existence at him. Even so, General Chiang's remarks came only three days after Mr Dillon, the American undersecretary of state, had addressed a serious warning to Peking that "war is war, no matter where or why it may be fought." Chinese celebrations are an occasion for fireworks: the hard part is to ensure that they remain verbal.

UNITED NATIONS

Low Water

IT has been a dispiriting week in the United Nations Assembly. Although the delegates were generally supposed to be panting with impatience to get at the subject of disarmament, the opening of the disarmament debate had to be postponed because nobody had anything to say. A decision to discuss Tibet was taken, but only 43 of the 82 members supported the Malayan and Irish demand for a debate. Indonesia, whose foreign minister has just visited Peking, was the only non-communist country to vote against discussion of Tibet; but there were 25 abstainers, among them being South

Africa, Spain, Portugal, and France, which have their reasons for disliking any UN infringment of domestic privacy, and several of China's smaller Asian neighbours, which no doubt have reasons of their own. India abstained even from abstaining.

After 25 indecisive ballots, there was still deadlock over the filling of the Security Council seat that Japan will vacate at the end of the year, and the assembly agreed to give up for the time being. Poland, enjoying widespread non-communist support, was consistently getting 40-odd votes to Turkey's 30-odd, but neither candidate could muster the two-thirds majority. The handling of this matter did credit neither to the American and associated delegations who seemed bent on slighting and alienating the one independent-minded member of the Soviet block, nor to the UN as a whole, which cannot afford too many of these ridiculous scenes.

Behind these undignified tussles for seats lie not only the specific controversy about east European representation, but also the more general problem of the Security Council's inadequacy as a means of representing the whole UN membership. The enlarging of the council is once again on the assembly's agenda ; it is once again doomed to be frustrated, in spite of American support, because Russia will not contemplate any revision of the Charter. The swollen ranks of the Asian members will once again be represented on the council only thanks to the fortunate fact that Ceylon, which has been elected without demur, is a Commonwealth country, and can slip easily into Canada's seat.

There remains the intriguing question why governments should want a council seat at all. It is a status symbol, with an obvious attraction for new sovereign states ; but it is a burdensome and often embarrassing involvement. Some prudent members, like the Finns, would resist being thrust into this kind of hot seat harder than any Speaker of the House of Commons ; some others, like Israel and South Africa, may at times thank their stars that the UN's little idiosyncracies rule out all possibility of their ever being elected.

KENYA

Multiracial Highlands?

EVER since the Royal Commission on East Africa in 1956 recommended that the use and transfer of land should be freed from tribal restrictions, progressive European leaders in Kenya, such as Mr Michael Blundell, have tried to persuade the white farmers of Kenya that the policy of reserving the "white highlands" to white-skinned settlers, of whom there are in any event only about 5,000, is outdated. This week, the Government of Kenya has produced its long-awaited new land policy, which lifts rigid tribal barriers throughout the country. But it is the provisions for detribalising the settlers' little England between Nairobi and Eldoret which will excite most political comment.

The old system of keeping African and Asian farmers out of the white reserve—through the veto of the European-dominated Highlands Board, which had to approve land transfers—has been abolished ; as a sop to white feelings of insecurity, farmers who hold 999-year leaseholds can convert them to freeholds (except in the significant case of non-agricultural land ripe for development.) A new board composed equally of white, Asian and African members will advise the governor on land transfers ; but local boards will first consider proposed land sales, and only if this is refused will an appeal lie to the governor. In the highlands the local boards will still be white controlled ; but the only grounds on which they can refuse to approve transfers will be if the intending buyer seems unlikely to be able to maintain local agricultural farming standards.

The progress made in land consolidation, registration of title and improved African farming standards in African areas will make Africans suspicious if the boards refuse permission to sell "white" land ; moreover, few Africans will have the money to buy the considerable acreages now in estate agents' hands. Black nationalists will feel that such measures will entrench the Europeans too long ; what they want is for the government to buy the white man out and distribute the land without ado. But Africans are tenacious of their own tribal rights, and the slight weakening of these by the new system in their own areas will draw off criticism from the changes made in the control of the white highlands. The policy is a belated step forward. But it is a pity the government flinched from interfering with existing restrictive covenants designed to keep suburban areas white, and it will be vain to think that the step will take white settlement entirely out of Kenya politics.

NORTHERN IRELAND

Ulster Opportunities

THE election result in Northern Ireland represented a decisive rejection of violence by the Roman Catholic minority. Whereas in 1955 the felons who stood for Sinn Fein in Mid-Ulster and Fermanagh received majorities of 260 and 261 respectively, they were defeated this time by 18,923 and 24,232. In between had come the IRA "war," which fizzled out ignominiously after four locally popular policemen had been killed but which brought down on the border areas the continuing burden of emergency measures. The huge size of the Ulster Unionists' majorities in these two seats must have been primarily due to mass abstention by the Catholic voters. But since Mr Forrest and Colonel Grosvenor, the Unionist candidates, both increased their votes over last time they must have had some actual Catholic support. In the other ten constituencies which Sinn Fein fought, the same swing against it occurred.

Unfortunately both governments in Ireland have fallen over themselves to declare that the results do not mean any evaporation of the partition issue. Lord Brookeborough can now point to Mr Lemass's statement to that effect to excuse himself from making any conciliatory gesture towards his own Roman Catholics in response to their demonstration against Sinn Fein. This would be a pity. Of course there always remains some danger of further futile raids across the border. But would not the demoralisation of the apostles of the "patriot game" (to use Mr Dominic Behan's derisive phrase) be accentuated by some show of generosity ?

There are various forms which this could take, not necessarily all at once or in this order. The detainees could be released, the activities of the special police could be cut back, the country roads criss-crossing the border unspiked, the local government franchise now based on property be brought in line with the parliamentary franchise (giving the Catholics a fairer deal in their majority areas such as Londonderry), and competitive examination be introduced for some jobs in the local government service. If it is argued that some more positive evidence is needed than this election that the Ulster Catholics are willing to behave as citizens of Northern Ireland, then at least the overtures to the Unionists from the Garran Point group of Catholic laymen should, if repeated now, get a less dusty answer than they received last year.

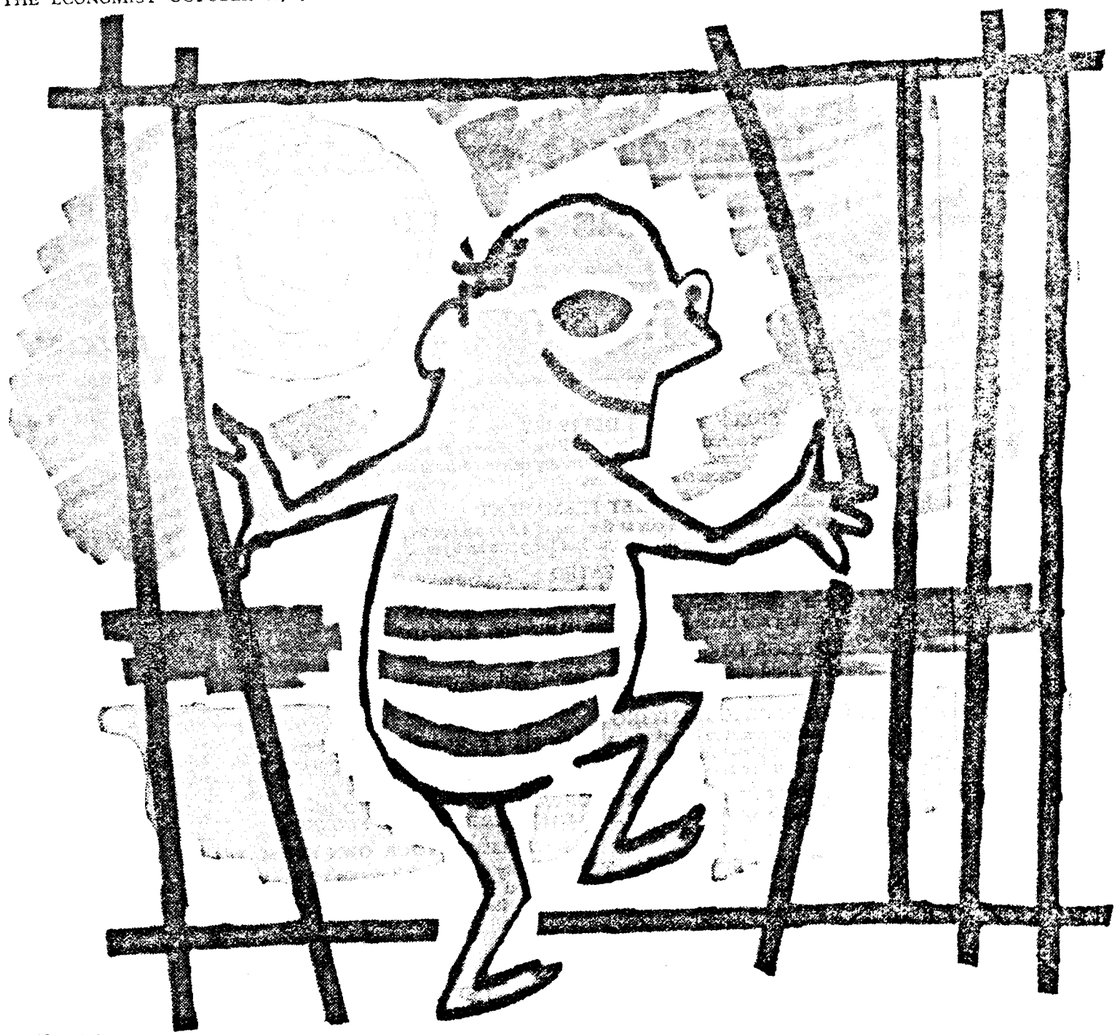
Much, of course, will depend on the effect which last week's results will have on the Nationalist party, which, after being reduced to impotent fury by its own internal contradictions, spent the election huddling unhappily in its tents. The Northern Ireland Labour party on the other hand claims to be pleased at its moderate success in increasing its vote in Belfast East (though in view of the redundancy at Short's it might have been expected to do better) and has announced its intention of fielding a candidate next time in Belfast West.

RESULTS ON TV

Vox Pop

WHILE those who stayed up most of the night to watch the results or found time to stare at the telly during the next day got good service on both channels, the BBC's superior resources and experience put it clearly ahead. Mr Dimbleby, with the expert and perceptive aid of Messrs Butler and McKenzie (who was grotesquely criticised in a London evening paper after an outstanding performance) kept the remarkable marathon in motion quite brilliantly.

But the best viewing of all was out on the streets. Though some of the morning-after comments were of the "well, speaking for myself personally, I should say, yes, definitely," variety, a distinctive pattern



the answer to immediate expansion problems . . .

TERRAPIN *PACK BUILDINGS*

FROM SHELF TO SITE DELIVERY
You can order and obtain Terrapin Pack Buildings as easily as any other everyday commodity—they are normally delivered from stock, ready for immediate erection and *occupation.*

SPEEDILY ERECTED YET PERMANENT
Erection can be carried out at the rate of 1,000 square feet a day—yet this is no temporary structure—it's built to last for years and years.

COMPLETELY PREFABRICATED
Delivered in pack form, for single or multi-span construction, complete with lighting installation, glazing, floor covering and interior and exterior decoration. Plumbing and heating systems can be supplied.

SUPERIOR DESIGN
A fine handsome structure of high quality and appearance, yet with low maintenance costs.

ECONOMICAL RE-SITING
Dismantling and re-erection can be carried out easily, rapidly and at incredibly low cost, without fear of damage. You can move Terrapins when you like, where you like and as often as you like.

ALL THIS AT A BASIC COST OF NO MORE THAN 30/- TO 35/- PER SQUARE FOOT OF FLOOR SPACE—ERECTED AND FINISHED.

PREPARE YOUR OWN ESTIMATES

Terrapin Broadsheet No. T.P.3 not only contains full details of this unique service, it also shows you how to estimate your own costs. Write or 'phone for a copy NOW.

emerged. Leaders of the Labour party who were watching must have been struck with the number of times their own working-class supporters put down the party's failure to its giving the impression of promising too much without "saying where they're going to get it from." "I think they had a golden opportunity in 1951 when they nationalised everything," said a ragged trouser philosopher mending a hole in the road in Leeds, "The working class thought they were going to get something out of it. Instead of which everything went up. They had to pay about ten shilling a bucket for coal. Instead of fresh coal they sent you a bag of muck in, didn't they?"

A worker in Leeds blamed "the way the unions have carried on with strikes and one thing and another" a Southampton docker thought too much attention had been given by Mr Gaitskell to Suez (and when pressed on whether he took any interest himself in foreign affairs replied: "Well, I do and I don't. I say we've got quite enough to do at home, us working people; I don't know about some of the others"), and a lugubrious lady in Exeter, asked what would happen to the Labour party, answered: "Oh, I think it is the finish of them, definitely." A bright young thing in Hammersmith came nearest to a consensus with her explanation of the result: "I think everybody is jolly happy. Everybody's done jolly well in the last five years. It's become fashionable all of a sudden to become Liberal—it's sort of idealistic but it isn't going so far as being Labour and swallowing all that Labour gives you."

There were of course some oddities. Everybody in Wales seems to be a Welsh Nationalist, except when he actually casts his vote. To BBC interviewers all the Welsh expressed supreme indifference to the struggle between the English parties. "A blade of grass doesn't ask whether it's a cow or a horse which is treading it," said one, quoting a Korean peasant. Another described Labour's proposed Secretary of State for Wales as "just a clerk from London to rule a whole nation." But in Southampton a Dickensian gentleman with a courtly manner knew exactly why the voters had kept the Tories in. "For the first time in parliamentary history," he announced, "an unborn royal baby has swung the scale. I am sure that out of affection and love for our Queen many wished to see matters stay as they were rather than put the strain of political change upon Her Majesty."

CENTO

Costly Alliance

At Hamburg in July, Mr Aneurin Bevan said that it was a profound blunder and he hoped it would be wound up. He was speaking of the Baghdad Pact. While the British electorate was deciding that Mr Bevan was not to assume responsibility for such matters, the council of the pact, since renamed the *Central Treaty Organisation,* was meeting in Washington.

The Muslim members of the organisation, Turkey, Persia and Pakistan, having failed to understand the complexities of the American treaty-making machinery, invited themselves to Washington in hope that the United States would consent to become a full member. The Americans patiently pointed out that they had, in recent bilateral agreements with each of the three countries, given assurances that were as strong as those the three had given each other on becoming full members.

There was evidence that the United States was, with good reason, feeling itself pulled two ways between the military and the economic requirements of the organisation. Mr Herter answered pleas for more money by reminding the council members that Turkey, Persia and Pakistan had shared a total of $770 million in economic aid from the United States during the past two years. Turkey and Persia had asked for $55 million to finance construction of a 280-mile railway link between Mus, in eastern Anatolia, and Khoi, in western Persia. Mr Nixon frankly told them that the United States could not underwrite all Cento economic projects. On the military side, the Americans promised to furnish five lieutenant-generals to serve with the new group of military deputies at Cento headquarters in Ankara.

On October 10th, the day after the Cento meetings had finished, it was announced in Washington that negotiations with Turkey, by then again wearing its Nato hat, had been completed for the construction of an intermediate-range ballistic missile base. The other Muslim members of Cento would not question the wisdom of having a missile base in Turkey; but the additional amounts of military and economic aid that would go with it would not make them any happier with their portion of western funds.

BRITISH CAMEROONS

Under Which Flag?

The decision made by the United Nations Trusteeship Council last week will leave the Southern Cameroons awkwardly under British trusteeship for a year at least after both Nigeria and the French Cameroons have become independent states. It has been decided that the Northern Cameroons shall hold a plebiscite in November to decide either to join Nigeria or to wait and see. In fact it seems certain that the people of Northern Cameroons will vote as they told the visiting mixed commission that they would—to join the Nigerian Northern Region. But in the south, after a long wrangle, Mr Foncha, the premier, has secured the greater part of his wish to delay a choice until after Nigeria and (French) Cameroun are independent, though the choice to remain indefinitely with Britain has been disallowed. The Southern Cameroons will prepare for a plebiscite after Nigeria becomes independent, and will meanwhile be severed from it; not until some time in 1961 will the Cameroonians have to choose whether they will "become independent by joining Nigeria or Cameroun." The Trustee Committee, on the concerted pressure of both the Russian and Indian delegates, has ruled out any continuance of British trusteeship beyond that year; but Mr Foncha no doubt calculates that anything can happen in the two formative years which lie ahead for the elbow of Africa. He had hoped to postpone his decision to 1962; but he has gained a lengthy respite.

Dr Endeley, the opposition leader, has failed to persuade the United Nations to force a quick decision, which he believes would—partly in reaction to Mr Foncha's government, which is now losing its post-election popularity—end in the Cameroons joining Nigeria on the very generous terms offered to the territory at the constitutional conference. Rejoining either of the big neighbours may not be so easy, or the terms so favourable, in 1961; meanwhile the territory will require some financial underpinning from the British taxpayer, though Sir Sydney Phillipson is now busy seeing how far it can be made more self-supporting. Thus Mr Foncha's earlier energetic wooing of the French Cameroonians had cooled down almost to a state of platonic friendship. This will give the premier more time for his French lessons, while he and Dr Endeley watch what politicians emerge as rulers on either side of them. Perhaps they will study the history of Monaco. But they must face the fact that the British flag is flying on sufferance and even under protest.

HABEAS CORPUS

For Protectorates Too

The writ of *habeas corpus* is at once the most honoured and the most efficient means afforded by English law for the protection of the liberty of the subject. By invoking it a British subject can secure either immediate release from illegal detention or a speedy trial. This week, the Court of Appeal has come to an important decision of principle, overthrowing the assumption that the writ was automatically excluded from all British protectorates and establishing that it runs in any territory "under the subjection of the Crown." The point was raised by a native of Northern Rhodesia, Mr Andrew Mwenya, who applied for *habeas corpus* to rescind an Order in

Council restricting him to the Mporokoso district of the protectorate. As the Master of the Rolls indicated, to define a "protectorate" is virtually impossible, so great are individual differences. But all protectorates have this in common, that they are foreign countries whose external affairs are subject to control by the protecting state and whose inhabitants are not British subjects.

It should not be assumed that inhabitants of every protectorate now have a right to *habeas corpus*. The point of the Court of Appeal's decision is that in each case a judge must look behind the word "protectorate" and assess the nature and extent of the sovereignty exercised by the Crown. Thus Mr Mwenya must now return to the Queen's Bench Division where the exact relationship set up between the United Kingdom and Northern Rhodesia by the Federation Act of 1953 must be established. The court must further decide whether the jurisdiction of the Queen's Bench has been excluded by the statute; whether Mr Mwenya is in fact a British subject; whether the degree of confinement to which he has been subjected would have been sufficient for him to apply for the writ had he been detained in England; and whether the Order in Council has been validly issued. The decision will clearly be of the highest importance to the future development of the Federation. Meanwhile, one can welcome the liberal approach of the Court of Appeal, which has rejected a narrow semantic application of the law—and echo the well-merited rebuke administered by Lord Justice Romer to the Attorney-General for his seeming lack of concern for any whittling down of individual freedom's most valued safeguard.

FRANCE

Mendès's Choice

THE French Left has been doing its own rethinking. The most striking outcome so far is the adherence of M. Mendès-France to the Independent Socialist Party, a conversion, announced at the end of last month, that led to the formal appearance of M. Mendès-France with his new party secretary, M. Edouard Depreux, in Paris on Wednesday. The Independent Socialists are claiming a steady stream of new members, many of them Mendèsistes: over 100 a day are joining up just now.

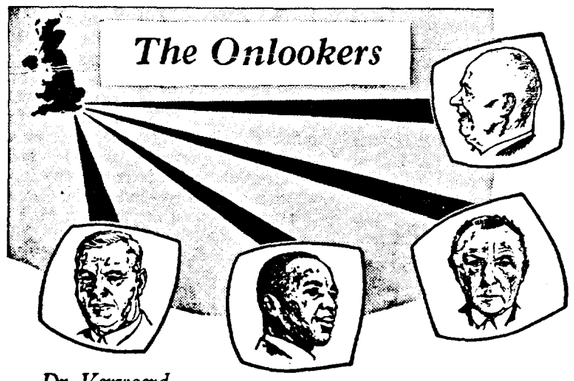
The party has become the largest of the non-communist groups that oppose General de Gaulle and the Fifth Republican system. Its fire-power, initially insignificant beside that of M. Mollet's loyal battalions, has grown with the backing of eleven former Socialist parliamentarians, chief among them M. Tanguy-Prigent, leader of the Socialist federation of Finistère. M. Mendès-France, who was M. Mollet's political ally in the Republican Front government for a time early in 1956, is quite the biggest gun that the Independent Socialists have captured, and the impetus toward cohesion on the non-communist Left is important. It remains to be seen how quickly further adherents can be gained, both from among UDSR members like M. Mitterrand (now a senator) and from the *Union de la gauche socialiste*, which has its most effective spokesman in M. Claude Bourdet. The national council of the UGS is meeting on October 31st.

M. Mendès-France's decision is personally courageous for a Radical leader whose ministerial experience began as long ago as the nineteen-thirties. But it is not surprising; his position in the Radical party had become increasingly isolated, while he could reasonably declare that he had never disagreed with the present Independent Socialist leaders on any major issue since the war. The need to form a united non-communist opposition settled it. It may be pertinent elsewhere that his doubts on modern socialism's undue reliance on the letter of the Marxist law were finally removed by talks with Signor Nenni and Mr Bevan.

WORLD AGRICULTURE

Passed to the Minister

YEAR by year, the annual reports of the Food and Agriculture Organisation register a shift of emphasis and purpose which some of its pioneers may regret but



IF the British electorate did not unduly concern itself with world affairs during the election campaign, the world did not betray undue interest in the result. Had Labour come out on top, things might have been different. But the campaign itself was not thought particularly newsworthy. This may have been because the parties' foreign policies were not, after all, recognisably different to the candid, or casual, eye. But it seemed more likely that the outside world, having digested the early Gallup forecasts, had simply made up its mind that the Tories would win. Those correspondents, particularly the French, who dutifully followed the campaign and got wind of the Labour revival earned the Mother of Parliaments some speculative headlines that she did not really deserve. *Pravda* admitted to no such doubts on the outcome; if the New York *Daily News* had any they were hard to discover in World Series week.

Continuity counts with the diplomats. Most governments are usually content that other governments should not change; when the summit looms ahead this seems all the more desirable. The reactions of Mr Macmillan's likely colleagues at the conference table were thus more than usually heartfelt. The world, with the Russians in the lead, drew the conclusion that the British electorate had voted, above all, for peace and peaceful coexistence. This was comforting. The world was rather slower, outside black Africa, to conclude that the electorate had voted for the Tory record in Cyprus, Nyasaland and Kenya. This was hopeful; but black African doubts should not be lost on Mr Macleod.

The news of Labour's third successive defeat produced some satisfied trumpeting in a Western world that has moved substantially rightward in the past decade. United States Republicans, alert to any word of hope for 1960, sensed that in Mr Macmillan's diplomatic outlook they might have an issue for themselves. In New Zealand, the one country to have brought its Labour party back, precariously, into office, the moral was drawn with a heavy hand. "People," declared Mr Holyoake, the opposition leader, "will not tolerate the restriction, controls and heavy taxation that go with a socialist government." The most distinguished observer of the British hustings, Hr Erlander, the Swedish prime minister, arrived in good time to judge the impact of Labour's pensions policy on the country. His conclusions may be rueful. The west German parties sent experts to study the rival television techniques. Their conclusions are unknown.

NEITHER of the two superpowers felt any cause for dissatisfaction at Supermac's return. Although Mr Khrushchev was twice reported as saying that he would have been a floating voter, possibly leaning to the Tories, Mr Eisenhower was necessarily more discreet. It was felt in Washington that the President had, at any rate, indicated where his preference lay when he appeared with Mr Macmillan on television during his London visit. Although there has never been any secret that some of Mr Macmillan's post-Moscow ideas, particularly on disengagement and a quota system for nuclear test inspections, have given Mr Eisenhower some anxious moments, the ties of their Algiers days have held firm. The State Department was thought to be apprehensive at the possibility of doing business with Mr Bevan, although it had far fewer reservations about Mr Gaitskell himself.

The Soviet dialectic had some minor trouble in getting into gear when the time came to analyse British political behaviour. While Moscow radio could not deny that the summitry included in the Conservative party's programme was "based on the demands of the broad masses of British working people," Mr Nekrassov could be found speculating in *Pravda* on Labour's inexplicable failure to see that "the electoral promises of the Conservatives on foreign policy were vague and could not satisfy many electors." Mr Nekrassov, who claimed to be drawing on "authoritative opinion," further belaboured the ham-handed strategists in Transport House on their home policy. "Repudiation of a programme of large-scale nationalisation . . ., silence on workers' demands for higher wages and the reduction of the working day did not strengthen Labour's position." *Izvestia's* correspondent saw things rather more in terms of power politics. Taking up Mr Macmillan on his television statement that new possibilities were opening in the international arena, *Izvestia* thought the "near future" would show how capable the Tories might prove on the issues "that were at the heart of the British electoral campaign" (namely, lasting peace and the end of the cold war and the arms race).

It was left to the Peking *People's Daily* to round out the full ideological picture. Labour's failure, it concluded smugly, meant "the failure of social democratic reformism in Britain." Keeping its ear close to the quaking ground, the paper could inform its readers that it was believed in Britain "that the results of the election will give impetus to the disintegration of the Labour party." This view, it felt able to say, "is not without grounds."

MR MACMILLAN'S success was generally greeted in Western Europe with mild relief. This does not mean that Mr Macmillan and Mr Selwyn Lloyd will find the going particularly easy when their new initiative gets under way, but it is something. The welcome that the election result received in French government circles was prompted less by actual love for the Conservatives than by dislike of their potential successors. Mr Macmillan's efforts to get to the summit were resented by official Paris, but it was feared that Labour would climb even faster and venture into the dangerous field of disengagement. There are hints of hopes that now Mr Macmillan has won his vote, he will be in rather less of a hurry. The opposition to General de Gaulle's regime might have been buoyed up by the news of a left-wing success across the Channel. As things turned out it had to be content with emphasising the contrast between parliament's importance in Britain and its more strictly decorative role in France.

Dr Adenauer is too canny a politician to let personal antipathy prevent him from commenting graciously on Mr Macmillan's victory. Aghast whenever he contemplates the possible consequences of an incautious settlement with the Soviet Union, the Chancellor was undoubtedly relieved to some extent that the Conservatives would not give way to Labour. His counsellors are not likely now to have much difficulty in prodding him into taking up Mr Macmillan's long-standing invitation to visit London with the object of clearing up misunderstandings about British policy. It seems probable that the visit will take place some time before Christmas—as soon, in fact, as both men are simultaneously free. But, with many other Germans, the Chancellor is openly of the opinion that Mr Macmillan has an exaggerated idea of the importance of Britain's role in shaping the world's destiny. The Conservative victory brought Dr Adenauer comfort chiefly for other reasons. "We can draw strength for our own elections," he reflected, "from the outcome in Britain." The Social Democrats are as subdued as the Christian Democrats are heartened by the rightward swing. The Social Democrats, who have also tasted the bitterness of losing three elections running, had already arranged to hold an extraordinary party conference at Bad Godesberg next month for the purpose of adopting a revised programme designed to win all hearts in 1961. They are now holding an inquest into Labour's failure in the hope that it may throw some timely light on their own problems.

It was in Africa that the Conservatives found their severest critics. The Ghana government press, while admitting that the Tories had been constrained to abandon much of their imperialist past, was generally concerned at the idea that the right wing of the party might increase its influence over colonial policy. Black Africa is plainly not likely to forget, or forgive, the Conservatives' action over the Devlin Report and the Hola deaths, but the *Ghana Times* hoped that the Government would now show magnanimity in the hour of its triumph. The imprisoned Dr Banda in Nyasaland could hope for nothing more. Even so, the Ghana opposition was not exactly displeased by Mr Gaitskell's downfall. His dismissal of the opposition's claims against Dr Nkrumah now earned him the *Ashanti Pioneer's* "out and out admiration for Mr Gaitskell's ability to organise the Labour party to lose so spectacularly."

WHITE Africa kept its satisfaction under a tight rein. Although the Rhodesian newspapers hailed Supermac's walkover victory, Sir Roy Welensky stoutly declared that even if the Labour party had won it would have made no difference to his approach to the 1960 talks. In South Africa, where Dr Verwoerd's government was believed to draw some quiet satisfaction from the Tory return, the election campaign received a wide coverage, but less, it was thought, because of events in Rhodesia than because South African interest in British elections is usually high. South African circles were perhaps rather more phlegmatic about the prospect of a Labour government than many Labour candidates imagined. It was recalled that Mr Attlee's Labour government had preserved good relations with South Africa after Dr Malan's victory in 1948.

This unconcern about the difference between the British parties' colonial policies was perhaps the hardest blow that Labour's prestige suffered. Black Africa seemed to expect a quicker tempo of events under Mr Gaitskell, just as the Greek Cypriots expected Britain to be softer on the question of the bases on the island. But Nigerians could see little difference to their progress, or in their Commonwealth ties, from any change in Downing Street. This disenchanted view seemed to be shared in Delhi and elsewhere. Among the west Africans, who had really hoped for more, Labour's big mistake appeared to have been to take for granted the British people's knowledge of the Commonwealth: its campaign on colonial issues misfired largely—as some Africans thought—because the interest of the potential Labour voter could only be aroused by narrower things like pensions and purchase tax cuts.

which economists must applaud. All the emphasis of its first reports was on global production and global needs ; an emphasis really appropriate only to a Boyd-Orr Welfare World in which food should be produced and distributed as a social service, regardless of profit and loss. Later, this global approach was quietly discarded ; persuasion and policy concentrated rather on getting the right foods produced in the right areas at the right prices. Agriculture and nutrition, however, were still treated as a self-contained field ; there was little attempt to set FAO's particular concerns in the general perspective of economic and social development.

The 1959 report sets out, like its predecessors, the global balance—production up by 4 per cent, gaining nicely on the annual population increase of 1.6 per cent or so. It reveals, less satisfactorily, that the gap between advanced and backward areas is widening again, with stocks accumulating in the one and the Malthusian balance barely held in the other. It departs from precedent, however, with two chapters which would please Professor Rostow.

The first relates certain indices (e.g. proportions of the working population engaged in agriculture or industry ; their respective incomes and standards) to the level of development as measured by national income per head. The other deals—most valuably—with the social and institutional preconditions of agricultural progress in a developing society. Security of tenure ; stability ; marketing facilities ; credit institutions ; all these are needed to trigger individual incentives to betterment. Without them, technical assistance and education are largely wasted. Debt-ridden and discouraged by violent price swings, the cultivator is understandably apt to fight shy of new methods whose failure could ruin him and whose success chiefly benefits landlords, moneylenders and merchants. Recognising this, the FAO lays the responsibility for agricultural progress squarely on the politicians of each national state, and acknowledges the limits of its own competence. Paradoxically, it could do few more useful jobs. Governments, as well as backward cultivators, need educating. This report is a very fine educational instrument.

LIBERALISM

What Liberal Means

In the same week as the Liberals were reappearing as an increased electoral (if not parliamentary) force in Britain, the Liberal International was holding its ninth congress in Italy. This heightens interest in finding out what sort of people other European Liberals are. The first impression to be gained from the congress's final resolution, and from some of its basic discussion, is rather depressing ; all too often Liberal in a European context seems to mean simply "anti-collectivist," if not "ultra-conservative."

More careful study produces a more balanced estimate. The familiar old guard generalities, however firmly restated, get qualified in the end almost out of recognition. The picture of private enterprise as the sole, untouchably sacred guarantee of political freedom is redrawn ; its role is to ensure the dispersal of power, and the performance of that role is compatible with an amount of collective intervention and enterprise to be pragmatically determined in particular circumstances. The corresponding picture of planning as a foredoomed acceleration down the Road to Serfdom is hardly less altered. The case against the all-embracing national plan is, indeed, repeatedly restated ; but in its discussion of the state's role in underdeveloped or depressed areas, in the maintenance and development of public utilities and ultra-large-scale enterprises, and in fiscal and social policy, the congress is, if anything, more remote from Bastiat ("The State—that cancer") than from, say, Mr Nehru. That role may, according to circumstances, be large or small. What is distinctive in the Liberal approach, as envisaged by the congress, is that whatever the scale or the field of collective activity its aim should be to establish, safeguard or complement a healthy and harmonious free-market economy ; not, on the one hand, to replace or circumscribe it, nor, on the other, to frustrate its workings for the benefit of privileged groups.

This is recognisably something more than middle-of-the-roadism. It is a coherent and intellectually respectable set of working standards. Whether, translated into terms of British problems and policies, it would particularly suit a renascent and radical Liberal party is another question. The radicalism is potentially there ; but if European Liberal ideas are to fertilise British political thought as they should, a lot of translation is going to be needed. The translators will do well, when they get down to the job, to leave out the ritual anti-collectivist noises, which are about as relevant to a realistic modern Liberalism as the Red Flag to the policies of Mr Hugh Gaitskell. Of course, at his congresses, Mr Gaitskell still plays the Red Flag too.

NEW TOWNS

Fourteen Grow Up

The New Towns Exhibition at the Royal Academy has illustrated the progress and the character of the fourteen new towns started after the war and a fifteenth (Cumbernauld) begun only recently. The towns were started by a Labour Minister, Lord Silkin ; they have grown up, as Mr Macmillan's message proudly records, under Conservative tutelage ; while (as Mr Macmillan also notes) the moving spirit

behind them has been a voluntary body, the Town and Country Planning Association, which celebrates with this exhibition its diamond jubilee. Voluntary and public effort, pink and blue politics, have all contributed their bits to this success story, which is now widely admired and copied in other countries. All this, and a pronounced swing to the Tories in last week's elections too.

The new towns between them now contain nearly 400 firms in modern factories and 300,000 people living in new houses. They have excellent records in industrial productivity, because of good factory design and lay-out and the proximity of workers' houses. Apart from grumbles about the delays in providing social facilities, residents in the towns seem equally satisfied ; certainly it is rare for anybody to return to London or Glasgow. But if the new towns were not there, most of these industries and their workers would be adding to the congestion and clatter of the big conurbations. Moreover, though the Exchequer has invested over £200 million already in the towns, it has at least a fair chance of getting the capital back with full interest (Harlow is already showing a profit). Thus, while the new towns have not solved the thorny "overspill" problem, they have certainly provided a good environment for people who would otherwise have added to it, without costing the heavy subsidies which other cures may entail.

The new towns have also drawn some fierce criticism. The apostles of Le Corbusier, who deplore them as "prairie towns," deserve little space ; for how could the prolific families who inhabit them be expected to live in tall flats instead of the houses and gardens which they plainly prefer ? But the monotony and repetition of housing designs are a real weakness—one that springs basically from the unwillingness of tenants to pay anything like economic rents and the consequent (and quite correct) need to keep subsidies to a minimum. The next new towns should aim to cater for all income groups and for both private and public development. The result might be a more varied, interesting, and perhaps larger new town than the present series has produced.

Plain talk about data processing

From the time the first man stood on his hind legs and counted on his fingers, he has been using the best data processing system of all, the one in his cranium. He stored up his information and when he was faced with a problem he consulted his records and used them to decide on the right course of action. As his affairs grew more complicated and he turned into a business man he tried very hard to predict things to come. But the cold truth is, as he discovered when his crystal fogged over, the only real way to predict the future is to reconstruct the past and to study it in relation to present facts and future trends. Facts and figures are needed in accessible form, and that's what modern data processing does for him. It also takes a great load of drudgery off his shoulders (and the shoulders of his staff).

Plain talk about I·C·T

You do not have to be a big business to use I·C·T data processing equipment. The range is so wide — computers, electronic calculators, punched cards — that it is being used in businesses of all sizes, from huge undertakings like British Railways to small companies employing less than 20 people.

I·C·T service

I·C·T service begins with your enquiry. Alongside your own executives, I·C·T specialists will study your business to see if I·C·T data processing equipment will help you. If it will they'll give you a detailed report of their recommendations and their economics, specifying equipment to meet your exact needs. I·C·T trains your staff, and special courses ensure your executives gain the background knowledge to make the equipment earn every penny of its keep. The same service sets the installation on its feet and is available to you throughout its life.

This is I·C·T service using all the resources of Hollerith and Powers-Samas, two pioneers of data processing.

Butter

SIR—In reference to your article "Turn in the Market," it is correct that as butter prices rose sharply a number of lower income groups were forced by economic necessity to switch some at least of their purchases to substitutes. But, with respect, we think you have under-estimated the pull which butter has on every purse, well or ill-lined. During the past few months, when world supplies of butter have been stretched to the maximum to meet the demands of drought-bound countries, the market experts here have continually expressed their amazement at the strength of the demand. The fact is, of course, that during the period in 1958 when prices were exceptionally and uneconomically low, housewives switched over to butter and the majority have remained on the butter standard consistently since. The ratio of butter to substitute consumption, despite the present high prices, remains roughly 56 to 44.

Butter is still cheaper here than in all but one or two countries abroad and is only about 2½ times as expensive as it was in September, 1939, thus comparing very favourably with most other commodities. As every pound contains the cream of 18 pints of milk it is not really expensive and it seems that housewives generally are inclined to agree.—Yours faithfully,

ARTHUR FAWCETT

Butter Information Council,
London, SE1

Professional Advertising

SIR—Your note entitled "Polishing the Brass Plate" interested me. Perhaps you might like to have the reaction of an American professional man.

To give you a little grounding, I own and am president of one of the largest consulting chemical market research organisations in the world. We certainly face this problem of what is ethical in advertising and what is not. There is no easy answer.

Suffice it to say that we see nothing wrong with what we call "institutional" advertising. Here you are advertising a profession. Certainly your name goes on the bottom of the "ad," but the point is that if the whole profession benefits, you will too. If no one used chemical market research on a consulting basis, my business would be nothing. But so would that of my competitors.

I cannot see any reason why professional companies cannot and should not advertise so long as they maintain their "copy" on a reasonable level. After all the use of a dentrifice is a medical thing—hence professional—but look at the toothpaste ads. Perhaps I am wrong, but it seems to me the "learned professions" might be better off—and so might the public—if the public knew that these professions exist.—Yours faithfully,

ROGER WILLIAMS, JR.

Princeton, NJ

Polls

SIR—The pollsters must expect to receive a buffeting if their predictions turn out to be inaccurate or if they equivocate about them. It is, however, surprising to receive the same treatment when the prediction turns out to be accurate and the statement of it unequivocal. Our published prediction for Great Britain (and we stated quite clearly that our forecast excluded Northern Ireland was:

Conservative, 44.2 per cent;
Labour, 40.6 per cent;
Liberal and others, 7.3 per cent;
Don't know, 7.9 per cent.

To compare this with the actual way in which votes were cast in Great Britain, one must use the method adopted in the article "Swings and Forecasts" in *The Times Guide to the House of Commons*, 1955, i.e. excluding the "don't knows." One expresses the differences as a percentage of opinion amongst those whose minds were made up. One cannot assess the accuracy of a poll on voting intention by including the "don't knows" whose voting intention, by definition, one does not know.

Using the only valid method of assessing the accuracy of a forecast, the comparison is as follows:

	Actual Votes Great Britain	*NOP Forecast*
	%	%
Con.	48.8	48.0
Lab.	44.5	44.1
Lib. and others ...	6.7	7.9

As one might expect, the Liberal and Others prediction, which forms a small part of the total sample, is the least accurate. Considering that "polls" have been going in this country for some time, it is surprising that there are so many who still "don't know" how to interpret an opinion poll forecast.—Yours faithfully,

R. M. SHIELDS

BOOKS

A Great Journalist

The Spare Chancellor: *The Life of Walter Bagehot*

By Alastair Buchan.
Chatto and Windus. 287 pages. 25s.

EXACTLY a hundred years ago, in October, 1859, James Wilson, editor and owner of *The Economist*, which he had founded 16 years before, went to India to be finance member of the Viceroy's council. While he was away Richard Holt Hutton was to act as editor, but responsibility on Wilson's behalf for all the paper's affairs was given to Hutton's great friend and Wilson's son-in-law, Walter Bagehot. Wilson never came back. He died in India in August, 1860; and in 1861, after Hutton had departed to run the *Spectator*, Bagehot took sole charge of *The Economist*. He was still editor when he died in 1877.

Bagehot was only 51 when he died, but already he was ranked as a great Victorian by the great Victorians themselves. Three short pointed books of his—"The English Constitution," "Lombard Street" and "Physics and Politics"—were prized contributions to contemporary thought and writing. So, too, were his own very personal reflections on writers and politicians, written down for the quarterlies (as two of his famous books were) in an easy, relaxed but incisive and ironical style altogether his own. And he talked at least as well as he wrote. His gift, with the pen and in conversation, was thinking aloud. Even more than his books and his essays his company was prized—by the wide range of friends and acquaintances, whether statesmen or men of letters or scientists or philosophers or bankers or business men, who met him in London or in the West Country, where his roots remained. All this is well told again in Mr Buchan's thoughtful new biography.

Even in those days the question was asked whether Bagehot would not have been a still bigger man, and made a still sharper mark on British thinking, if he had not spread the energies of his brief life so broadcast. Literature, politics, economics, history and sociology, he wrote about them all; and helped to conduct the periodicals where his pieces appeared. He watched over the affairs of a bank while running and largely writing a weekly newspaper. Until his health failed, ten years before his death, he led a vigorous country life, though his work was in the town. This busy many-sidedness was, indeed, very Victorian; but did it not rob us of a greater pundit, in politics or economics or history? The question has been asked ever since.

It is, nevertheless, a false question, founded upon at least two false notions. The first is that Bagehot's broadcast work had no focus; the second is that his thought had no focus, either. In fact, editing *The Economist* every week from 1860 (and, in effect, from 1859) was apt enough and sufficient focus for all that he wanted to write wherever he wrote it; it was the core of his working life. So, too, with what he wanted to write about: his constant concern, week in and week out, was with the behaviour of men and the movement of men's ideas in a shifting social (and economic) setting. That was his job as a journalist dealing with politicians and the markets; that was the core of his thought, whether in *The Economist* itself, in "The English Constitution," in "Lombard Street," or in "Physics and Politics" (where he tried to put his curiosity about social and political behaviour into topical terms of science). Bagehot was, in the scope of what he wrote, in the continuity of what he wrote about, and in the curiosity which inspired all his writings (and all his conversations), a very great journalist; it is hard to see how he could have bettered either himself or posterity in any other role. As Mr Buchan makes very plain, his thought and his work were all of a piece.

IT is, admittedly, not easy for those who have charge of *The Economist* now to write about Bagehot in what he would have called a balancing way. His profile, bright eye and beard look down from the wall. Like *Hamlet*, his writings are full of quotations, and these are earmarked in Ryder Street, though they belong to the English-speaking world, as our own special property. His style of writing (which only one of his successors has come near to making his own) with always fresh effectiveness and without cliché; his detached, undogmatic, cynical but always engrossed and never supercilious approach to both ordinary and extraordinary political behaviour; his untiring and enthusiastic interest, always in down-to-earth, sensible, human terms, in the relations between the men who pretend to rule (whether in politics or in commerce) and the many more who are ruled, and whose opinions require expression; his "quantitative" sense (as Robert Giffen put it) and, though like Lord Northcliffe he could never "add up" with any confidence, his peculiar instinct to test any theory, social and political as well as economic, with the blunt question "How Much?": these are the qualities at which *The Economist* still aims, though falling far short, every week.

More important and less parochially, these are precisely the qualities which the most up-to-date and fashionable studies of politics (including British elections) and of economic processes (including expansion without inflation and the growth of less developed economies) need most of all. Bagehot was, indeed, no prophet. But, though he left behind him no school of thought or body of doctrine, he did not either waste his time or squander his talents. It is not simply for his verbal facility that he is universally quoted; it is because all the time, sitting in his editorial chair, he really wanted to know what was going on around him, and saw it not as disembodied ideas in action but as persons doing things. He had a simple concern for the facts. Of Burke, with whom he had some sympathy, he said, characteristically: "He saw a great idea, but nothing more."

A THIRD false notion is to forget that Bagehot, who saw politics and society alway as affairs of men, was a man himself. He did not sacrifice his possible powers to his family and local ties; rather by them did he balance himself and made his work possible. Underneath the bantering, quizzical detachment which illuminated his style of writing and pointed the process of his argument was a deeply-feeling, always anxious and often uncertain nature. His gay and magnetic, but emotionally and mentally unstable mother; his devoted, patient conscientious, friendly father: these two, Anglican and Unitarian, were the poles of Walter Bagehot's character; he was devoted to both of them. His religion remained undefined, but very real: "the trouble," he once wrote, "is that mysticism is true." But he found his point of equilibrium, as he found his job and his working future, in the Wilson family, in the "tribe" of his wife, his five sisters-in-law and his other relatives. The marvel of Bagehot's life and work, which only ill-health disturbed, was its restraint and its control; that he owed to the families, his own and his wife's, upon whom, for all the lures of public reputation, he rested.

This, surely, is the moral of Mr Buchan's biography, which brings into brighter light than ever before the influence and importance of both Bagehot's personal life and his single-minded curiosity about the realities of the mid-nineteenth century scene. It is not Mr Buchan's fault that he has no new information about Bagehot. Where there is direct evidence, in letters or other records, of Bagehot's personal doings, he tells the tale well. He makes good use of the still scantier evidence, mostly from the testimony of Robert Giffen when Bagehot was dead, of Bagehot's too little told weekly skill and intuition as an editor and journalist. But the evidence, over the whole of Bagehot's working and public life, is surprisingly sparse. He talked with many men and was much esteemed by them; but they set down little about him, from year to year. There, perhaps, he suffered from being no prophet, with no nostrum to retail except a brilliant, ebullient, irreverent, commonsensical running commentary on men and affairs.

So Mr Buchan, like Bagehot's chroniclers before him, falls back, when the family records run dry, on the famous books, the essays, the leading articles. This book is even more about the writings than about the writer. The story of Bagehot's life is, so to say, eked out—and sometimes broken up—by painstaking and comprehending commentaries on Bagehot's own commentaries on politics and politicians, men and letters, the common sense of finance and social evolution. This is, perhaps, as it should be. Journalism need not be altogether ephemeral. Bagehot lives on in what he wrote, in the way he wrote it, and in the things he wrote about. His achievement has been called "common sense raised to the power of genius"; still better, it can be called "journalism raised to the power of political wisdom"—which is uncommon enough for fame.

Daughter-in-Law Elect

Queen Mary: *1867-1953*

By James Pope-Hennessy.
Allen and Unwin. 685 pages. 42s.

MUCH will be written by future would-be Bagehots about the survival and strengthening of the British monarchy through the broad social changes and special personal trials of the twentieth century so far. The simplest explanation is that the "dignified" function of the monarchy, its ceremonial and personally glamorous role, has in fact become more, not less, necessary and popular in modern mass society. But that is merely to say that there has been, in the new democracy, an essential and continuing job for the ruler and the royal family to do. The striking fact is that they have proved so capable of doing it. And it is very largely women that have done it.

The story starts with the old Queen Victoria and ends with the young Queen Elizabeth. In between these, the decisive roles in the adaptation to changes and trials were played by two other women: Queen Mary and Queen Elizabeth the present Queen Mother. Everybody nowadays knows and applauds the contribution made by the latter, one of the great ladies of our times, who did so much with George VI to lift the monarchy to a new esteem and influence after the abdication of Edward VIII threatened to break the image—and is still so indefatigable on the family's business. The central virtue of Mr Pope-Hennessy's long, rambling, lively picturesque and gossipy book is that it displays how large and influential was the part, and how high and tough the character, of Queen Mary.

"I hope we are . . . lucky in our daughters-in-law," George V once wrote rather anxiously to Queen Mary. How lucky he was we all now know. How lucky his father and mother had been in the still narrower lottery of royal marriages in their time, he knew better than anybody else—as the shy notes of gratitude which he sent to his wife throughout their life together so touchingly show.

It was Queen Mary who put George V on his feet. She devoted her life and herself altogether to him. It was she who urged and stimulated him to grow up after his life in the tight home circle of "Motherdear," the beautiful, inconsequent, possessive, affectionate Queen Alexandra, who never wished any of her family to grow up at all. It was Queen Mary's untiring encouragement and practical common sense—without ever overstepping the line into the affairs that were his as king—that steered him through the ordeals that came so thick and fast upon him and puzzled and pained him so much.

To Princess May and to all her family Royalty was a profession—the highest and finest in the world. If we need an analogy, she was like a girl at some minor ballet-school, trained as a dancer from childhood, and now suddenly, unexpectedly, offered the prima ballerina's position at the most famous theatre in the world.

This is Mr Pope-Hennessy's shrewd and brilliantly illuminating explanation of his heroine's engagement, first to the Duke of Clarence, the feckless, weak, attractive Prince Eddy, heir presumptive to the throne, who died tragically a few months later, and then to the Duke of York, who became George V. The gloss on the explanation should be that, while she liked but did not at all love Prince Eddy, she came to love truly the second choice that her destiny brought her. But it also explains very well Queen Mary's later long-lived success as Queen Consort and Queen Mother. She was doing her duty in the station to which she had been called.

Queen Mary was no more modern in her outlook than her husband. She was a traditionalist, deeply attracted—much more, for instance, than Queen Victoria herself—to the pageant of royal families, of the past and in the present. But she was also a very human person, full of fresh curiosity, and dedicated, in her own blunt, honest, determined way, to monarchy's survival. And so, standing straight and seemingly stiff, she could always bend, graciously and sensibly, in the good cause. She was actually more than anyone the agent, at least, of the new-found adaptability of our royal family to novel needs.

All this is made vividly plain in Mr Pope-Hennessy's rich plum pudding of a book, full of fruit and silver coins—with some doughy chunks as well. It is in the present fashion of biography, with the old-style "Life" and "Letters" all mixed-in together, over 600-odd pages, and leavened with a brightly elegant commentary. Its asides on the background of politics and world affairs are not so sophisticated as the rest; but it is the foreground that matters, crowded all the time with colourful human characters. Head and shoulders above the crowd, besides Queen Mary herself, are her large and rollicking mother, the Duchess of Teck, the fabulous (and nearly immortal) Grand Duchess of Mecklenburg-Strelitz—and Queen Victoria, who was so much more up-to-date and down-to-earth about the future of royal persons than anybody else about her.

Inevitably the book leaves questions behind. Not the least is the education and upbringing of children born to be royal. The widowed Queen Victoria, Edward VII and "Motherdear," George V and Queen Mary herself, none of them did well in this. Our latest rulers have plainly done much better, but there is still the question. But the tale of the modern British monarchy so far does not only begin and end with a Queen; it also begins with Prince Albert and ends with Prince Philip. Perhaps, after the contributions which the Queens Consort have made to changing royalty, this is peculiarly the contribution that a modern Prince Consort can make.

The Staff of African Life

The Staple Food Economies of Western Tropical Africa

By Bruce F. Johnston.
Stanford University Press. London: *Oxford University Press.* 316 pages. 48s.

THE most refreshing aspect of American research in Africa is that it is not insular. Mr Johnston sees West Africa south of the Tropic of Cancer as a whole. Unlike many speakers of English, he appears to be able to read French and to be prepared to do so. His angle of vision of the West African scene is wide: it takes in the whole sweep of the coast from Dakar to Brazzaville.

This is a study of the "staff of life" in Africa. The book sets out to answer the question of the probable response of basic food supplies to increasing demand. It is an excellent survey and brings together material from the two sides of the language

frontier in West Africa, which will be material most valuable to students. The author considers these major crops from a number of angles that are perhaps more the province of a geographer than of an economist: physical environment (including rainfall), vegetation zones and population distribution. But he does conclude on the economic plane with an attempt to evaluate the prospects for increasing productivity and enlarging supplies, in which he says "there is nothing inherent in the situation which warrants a pessimistic appraisal of the prospects."

In essence these arguments boil down to the view that an expansion of agricultural output can be achieved without an inflation of prices ("that the expansion of agricultural output . . . will keep pace with the growth of demand"). This view is lent support by the potential increases in yield that would result from the introduction of improved seed in maize, manioc and rice, and from the use of fertilisers. But this still leaves unsolved the central problem: that of evolving a technique of settled cultivation, despite the difficulties of soil and climate and the immense obstacle of the tsetse fly. While improved yields may in time raise output per acre, the immediate response of African agriculture to increased demand is an extension of cultivation. With more roads along which to bring the larger supplies to market, food output will no doubt prove adequate, but, in the medium run at least, it will, *pace* Mr Johnston, also be more expensive, especially in labour.

This is not a pessimistic view but a realistic one. If the production and marketing of foodstuffs are likely to absorb as much manpower as hitherto, if not more, the supply of labour for industrialisation for Africa as a whole will depend upon the natural increase of population, although for any given area migration will be an important factor. Africa is an underpopulated continent, and if it is to industrialise, like Japan, "with unlimited supplies of labour," it must first get closer to solving the agricultural problem.

All in all one may hesitate to agree with Mr Johnston's optimism, but he argues well and his book is well worth reading.

Moscow and Mecca

The Soviet Union and the Middle East

By Walter Z. Laqueur.
Routledge. 376 pages. 35s.

THERE was a time, not so long ago, when Britain was regarded by both friend and foe as being all-powerful and all-knowing in the Middle East. Recently, thanks to the more obvious aspects of communist success in the area, it has become fashionable to attribute these qualities to Russia. In tracing the thread of Soviet attitudes towards the Middle East through the labyrinthine politics of the past forty years, Mr Laqueur reminds us that Russia is no more deserving of such respect now than Britain was in days gone by. Soviet attitudes and western attitudes have been adopted because they conform to attitudes in Moscow, or London or Washington; they have seldom been based on local conditions in the Middle East.

Middle Eastern communists have been more trouble than they have been worth to the world communist movement. There has been more popular enthusiasm for communism in the Middle East than there ever was in eastern Europe, but Soviet armies of occupation have proved more reliable than slippery local communists in setting up durable communist regimes. Middle Easterners, with 5,000 years of trimming behind them, joined the party because they thought it would bring them personal gain or prestige. And when the going got rough they recanted with never a backward glance. It was not enough that President Nasser urged them to believe that communism (bad) had nothing to do with Russia (good). Back home in Moscow the general tendency was to play down rather than magnify communist successes in the area, but local communists could no more resist the temptation to crow when they were winning than the trimmers could resist drifting away when they were losing.

In competing with the West, however, the communists have enjoyed great advantages. They can disregard ordinary commercial considerations. They can undercut the West in offers of aid and absorb gluts of primary produce. They easily take to the idea that industrialisation is a panacea for economic stagnation and overpopulation. They show no particular interest in the sort of agricultural schemes that the western governments love to encourage. They provide numerous scholarships for training technicians. They somehow manage to do all these good works without getting tangled up in the strings they insist do not exist.

While western observers overestimated the political implications of religion in the Middle East, Mr Laqueur shows the communists stepping nimbly around Islam to make their peace with Arab nationalism. While western experts debated the hopes and fears and the intentions of President Nasser and his colleagues, the Soviet experts occupied themselves with the political, social and economic realities of the area.

The Middle East has shown the same resistance to communist missionary efforts as it has to the gospel of western democracy. As Mr Laqueur says, the people of the area are not necessarily pro-communist or anti-communist, they are merely pre-communist. Nevertheless, the lack of immediate success on a grand scale will not put an end to Russian efforts to convert them any more than it has stopped western attempts to keep them on its side. The West cannot afford to be complacent just because the Moscow-trained, Arabic-speaking Russian friends of Arab nationalism are probably feeling as confused and unloved as their mono-lingual British, American and French colleagues across the street.

The Role of Sociology

The Sociological Imagination

By C. Wright Mills.
Oxford University Press. 234 pages. 36s.

IN this book, Professor Mills attacks the bogus philosophical thinking ("cloudy obscurantism") and the shoddy technology ("formal and empty ingenuity") which pass so freely for sociology among his colleagues, to the exclusion of serious attempts to understand and to master the important social problems of our age. These problems can, he thinks, be tackled by sociologists only if they abandon their fruitless attempts to construct "grand theories," and refrain from continuing to absorb themselves in the trivialities of "abstracted empiricism" based on statistical measurement. Sociologists should, he recommends, return to the established objectives and methods of "classic sociology."

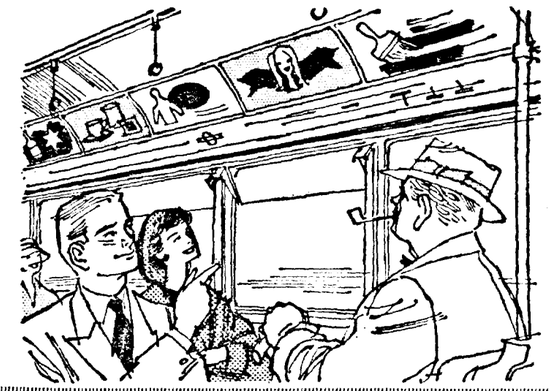
The main value of the book lies in the fact that it provides evidence that some sociologists are still endowed with a sense of purpose, and are sufficiently self-confident not to bother overmuch about whether or not what they are doing can be called "scientific." But the argument is developed destructively, on the whole, and it is at its weakest when it is directed in a more positive way towards the clarification of the nature of sociology, and of the purposes for which it can be used. Professor Mills is deeply concerned by the problem of the "cheerful robot," which symbolises for him the results of applying the work of the Mayo school to industrial practice, and by the consequences of relying on the concept of "adjustment" in social work. In brief, modern trends in "applied" sociology have demonstrated that reason can conflict with freedom. The task he sets himself is to demonstrate that "classic" sociology is a force operating in the contrary direction, and that it can be relied on as a means of preventing man's enslavement, and of protecting his reason from exploitation, in what is becoming a "mass" society.

His conclusion appears to be that as there is no way in which the social scientist can avoid making choices of value and embodying them in his work, sociology can most properly be developed as a vehicle for the promotion of specific values, such as freedom. In his view a sociologist cannot avoid accepting a "political" role, and sociology inescapably possesses a "political meaning"; neither of those conclusions can, his argument implies, be avoided without grave error. This is, of course, a revolutionary conception. Professor Mills's idea that the sociologist's function is to help individuals to become "self-educating" men, and to co-operate in the building of democratic societies in which reason can be freely used, is attractive. But it is far removed from the view prevailing in the United States that sociology is, or should be made, a "science."

HOW MANY MILLIONS TO TALK TO?

2½ MILLION A DAY

2,500,000 journeys are made every day on London's Underground. Waiting for their trains passengers read posters: en route (the average journey lasts 11 minutes) they read roof card advertisements. What a wonderful opportunity to tell *your* story!

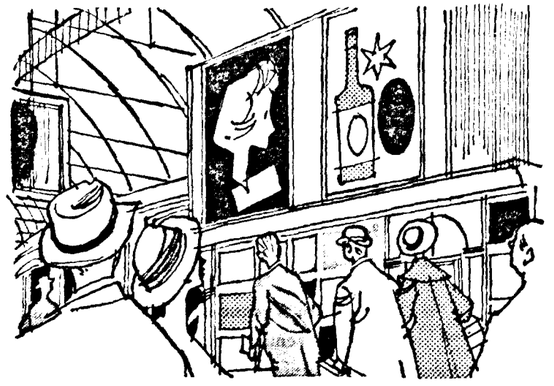


96 MILLION A WEEK

96,000,000 journeys are made every week on British Transport buses in England (including London), Wales and Scotland. Posters on these buses – there are more than 18,000 in operation – are seen not only by passengers but by millions of other people every day, many times a day.

1,000 MILLION A YEAR

Every year more than 1,000,000,000 journeys are made on British Railways trains. And there are many more people, too, who use the stations without travelling. This means that posters on railway sites are seen by millions daily – and day after day.



Facts! Facts! Facts!

British Transport Advertising is one of the best-documented media. For rentals and all the statistics you want, ask British Transport Advertising, Cranbourn Chambers, Leicester Square Station, London, W.C.2 (Temple Bar 3490) or 6-7 Castle Terrace, Edinburgh 1 (Fountainbridge 5222).

Miscalculation in Steel

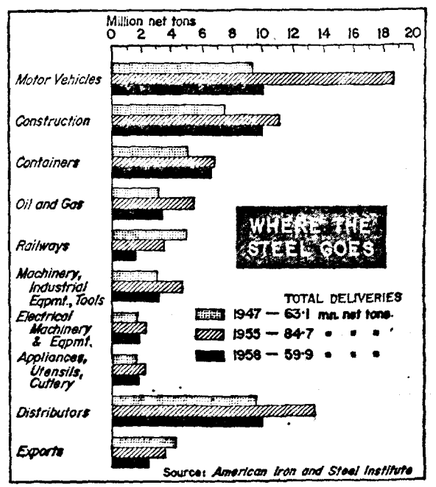
WASHINGTON, DC

THE most interesting conclusion to be drawn from the course of the 1959 steel strike so far is that thirteen weeks without pay is not nearly enough to break the will of a powerful American trade union. Indeed, had the President not invoked the legal procedures of the Taft-Hartley Act which, if his move is successful in the courts, will soon put the men back to work for 80 days, there would have been a good possibility that the companies might have given in before the union did. This is because, eventually, users of steel, whose stocks are becoming seriously depleted, would presumably have insisted on some kind of concession even though until now they have been remarkably firm in backing the steel companies. Meanwhile, there is no sign of serious pressure from the members of the union for capitulation by their leaders.

The conservative Administration has done everything it properly could to bolster, or at least not to undermine, the stand of the steel companies. It refrained from intervening, either publicly or privately, with a demand that the industry increase its niggardly wage offer in order to get the strike settled. It has now invoked the Taft-Hartley Act—obviously because it is convinced that serious trouble for the economy will soon result from the strike; but this procedure will in practice help the companies more than the union, at least in the short run. In brief, the Eisenhower Administration has acted, given the different circumstances, much as the British Government acted in last year's London bus strike. The difference is that "taking a strike" simply has not worked in the United States as it worked in Britain.

This does not mean that the strike has changed nothing on the "cost push" inflation front. The most important change is that the trade union, following the example of the automobile workers last year, is now almost surely willing to settle for far less than it got three years ago—partly, no doubt, because of the shift in public opinion. Another change is that the steel industry is apparently genuinely averse from raising prices yet again; the automobile companies, incidentally, have in fact kept their prices stable this year. Rising imports, the growing use of substitute materials and the hot breath of Senator Kefauver investigating the justification for their price increases have given religion to the steel barons.

Mr Blough, the chairman of the United States Steel Corporation, has stated that, if the companies are not forced by the government into a settlement which they would not accept voluntarily, they will not raise prices. The theorists of "administered prices" and oligopoly cannot believe this, but classical economists and many psychologists can. If the executives of the steel industry had heard the comments of the more sophisticated delegates at the Washington meetings of the World Bank and Monetary Fund on the importance of their maintaining the price line, they would have been reinforced in their determination.



Unfortunately, however, both of these marked changes for the better have been lost in the bitterness and destructiveness of a strike that is now the longest in the history of the industry. This has happened, it appears, mainly because the companies have pressed their advantage a shade too far and have tried to make a revolution all at one blow. This revolution has two parts. The companies insist, first, on an award that is radically less, in terms of cents an hour, than has been usual either in the postwar settlements in this industry or in the settlements in other industries this year. They have offered what they call a package of 15 cents an hour spread over two years, but in fact for many of the individual firms this appears to be nearer 12 cents. The 15 cents, if it were really that much, would be about 2 per cent of present employment costs, or somewhat less than the normal annual increase in the productivity of labour not only in steel but in the economy as a whole.

Secondly, the companies have made an onslaught on working rules in an industry that has not been noted for flagrant feather-bedding, and in which the employers are already entitled to the full benefits of any new processes that may be introduced. It is not that the companies' position is logically untenable, nor that they have been wholly inflexible: they have already dropped some important parts of their demands on working rules, for example. But their position seems to lack the essential minimum of human understanding. The steel companies, relying on logic, have offered Mr McDonald, the union chief, what he calls a "mess of nothing" when he would have settled for only a little something.

For the President and his advisers—who place the blame for most, though not all, of the non-monetary inflation of the recent past on excessive wage gains—this has posed a real dilemma. In the end the choice of evils came down to the Taft-Hartley Act, in the full knowledge that at the end of the 80 days the situation may be as bad as ever. Although it seems doubtful whether the national health and safety would in fact be threatened by a continuation of the strike—the necessary condition permitting an injunction to be issued against it—there is no doubt that a sizeable part of the national economy is facing sustained difficulties almost immediately.

Up to the end of September, secondary layoffs from work as a result of the strike had reached the negligible figure, in economic terms, of 200,000 persons, but this will now rise rapidly. A few bold minds are beginning to speculate that this strike, alone among its postwar fellows, might actually be deflationary—that is, that it might cut incomes in general sufficiently to have a depressing

effect on final demand ; this effect might even be big enough to thwart the surge of business that has always followed the settlement of a major strike. Americans have discovered government securities at 5 per cent and a balance of payments problem ; they may even discover that a strike is not inevitably and inexorably succeeded by a business boom. Retail sales slipped off by a disquieting 3 per cent between July and September and the worst effects of the strike on personal incomes are yet to come. If the strike simply prolongs the upward phase of the business cycle, as most people expect, no harm is done. But at some point a shortage of an important material must, by itself, exert a check of more serious proportions.

Certainly the Taft-Hartley Act is an exceptionally weak reed on which to rely in an industry in which it takes several weeks after starting up before deliveries can be resumed and in which shutting down will begin again a week before the injunction expires, to say nothing of the lack of enthusiasm of the men while they are actually back at work. The President did not want to invoke the law, the companies had no great desire for it, and the union opposed it. Each side, by its own lights, has acted in this dispute according to its conscience and with courage ; yet the odd result may well have been to turn a potentially gratifying move toward economic sanity into the worst of all possible worlds.

Magic Fives

LAST week the Treasury's effort to lift its financing out of the short-term money market had a sensational success which seems to have surprised officials as much as it did almost everyone else. The medium of the success was an issue of $2 billion worth of notes at 5 per cent, the highest interest paid on any government security since 1929, with a duration of four years, ten months, just under the five year period at which the government is limited by Congress to the interest rate of 4¼ per cent which is too low to be attractive today. To encourage small investors, they were promised that subscriptions up to $25,000 would be allotted in full if accompanied by cash. When the Treasury found subscriptions pouring in—the total came to over $11 billion—it increased the amount of the issue to $2.2 billion. Of the 130,000 applicants, 110,000 were private individuals, an unheard-of proportion, and nearly half of the total went to them.

Thus the Treasury found the cash it needed by tapping existing supplies of money without adding, to any important degree, to the inflationary potential which is represented by bank purchases of government securities. But there was a substantial price to pay. The small investors who queued at the bank counters last week were drawing the cash which they lent to the government out of their savings accounts ; some were even selling their government savings bonds, which pay only 3¼ per cent, to reinvest in the more profitable new issue, while few sold ordinary shares to raise the necessary money. Savings banks and loan associations are complaining that $500 million or more, funds accumulated over a long period, were withdrawn overnight and that as a result they will have to reduce their mortgage commitments ; the building industry was already worried about the effect of the present shortage of loanable funds on the supply of money for new houses. The Treasury certainly does not want to dislocate either its savings bond programme or the more general pattern of personal saving any further ; moreover it suspects that it may have drawn off all, or almost all, of the funds which small investors will want to lend the government for some time. For these reasons the Treasury, happy as it is to find itself popular for once, may not try to repeat this particular magic touch either in the refunding of $9 billion of maturing securities which is to be announced shortly or in the raising of $2 or $3 billion of new money which will be needed before the end of the year.

Questions for Quizzes

THE $129,000 question last weekend was: where is Mr Charles Van Doren ? Mr Van Doren is the English instructor at Columbia University, a member of a well-known intellectual family, who became a celebrity in fourteen weeks in 1957 by winning $129,000 on "21," the best known of the television quiz shows which were then the rage. Others have won more, but Mr Van Doren's attractive candour and apparently boundless knowledge (until he stumbled over the name of the King of the Belgians) almost made intelligence popular and respectable. Mr Van Doren also won a $50,000 a year part-time job with the National Broadcasting Company, but he was suspended from it last week when testimony before a congressional investigating group showed, beyond any doubt, that "21" was rigged, as well as "Dotto," "Tic Tac Dough" and others among the fourteen quiz shows which were running a year or so ago. Mr Van Doren sent the committee a telegram denying, as he denied to a New York grand jury last summer, that he had had any assistance of any kind on the programme but, when he was wanted in person, he was not to be found for several days. Now he has agreed to testify early in November, when the subcommittee resumes its hearings, but meanwhile his story that he had no idea that he was wanted invites scepticism.

So do the statements of the networks that they had no idea that the shows were fixed ; their alert and worldly officials might have noticed that unattractive personalities had a way of losing to popular ones and that some contestants (including Mr Van Doren) were given large advances of cash although, if the shows were honest, they could not be certain that they would not lose all that they had won. The originator of a number of the quiz shows has testified that fixing has been the rule for many years. It involved not only revealing questions and answers in advance, by more or less subtle methods, but also coaching contestants in the appropriate grimaces—and even turning off the air conditioning to make them sweat visibly.

Some of the producers feel that this gigantic hoax was simply a legitimate means of heightening entertainment value, but most Americans will agree with the commentator who found it a proof of the hucksters' values which seem to be paramount and with the member of the committee who said that it showed the contempt which the television industry has for the public. Yet the head of the Federal Communications Commission, which licenses stations and sets standards for the radio and television industry, insists that it cannot interfere because it is forbidden to exercise any censorship, both by the Act creating the commission and by the constitutional protection for freedom of speech. The Federal Trade Commission pleads that its powers cover only fraudulent advertising and business practices. The legal difficulty is that no viewer was defrauded for he had paid nothing. Whether the subcommittee recommends new legislation to plug this gap is still uncertain ; Mr Van Doren's testimony may be decisive.

Trade Follows the Talks

EVERY eminent Russian visitor to the United States has dilated on the beauties of trade, but only Mr Khrushchev could resume the negotiations on the Russian lend-lease debt, which is the first, though not the only, obstacle in the way of returning trade to a friendlier footing. These negotiations broke down eight years ago because the Americans refused to reduce their $2.6 billion claim below $800 million and the Russians would offer no more than $300 million for the civilian goods and merchant ships left in the Soviet Union after the war. Settlement of this claim

YOU ARE A ROAD

Children's feet hop, skip and jump across
your zebra crossings. Bigger, more sedate feet
step along and over you. You are ridden upon in cars,
you have white lines on your crown. People ask
silly riddles about why did the chicken cross you
... Bing used to be in films about you. You, my friend,
are a road. The problem (oh yes, you're a problem)
is how to light you. No second best will do,
you are important, every inch of you must be
laid bare from kerb to kerb. Yes, you are a problem,
but one the G.E.C. have the answer to. They have you
sized up, taped, call it how you will — you are lit.
The lights are all revealing ... clear, clean
as an operating theatre. No shadow may lurk on you,
glare is forbidden, no pedestrian may pass unnoticed.
You are well and truly lit ... and, above all, safe
to be on. And it's only a matter of time now before
you'll be lit by a new type of G.E.C. mercury lamp
which bathes you in pure, white light ... that's the
way things are shaping at the G.E.C. these days.

G.E.C.

THE GENERAL ELECTRIC CO. LTD MAGNET HOUSE KINGSWAY LONDON WC2

is desirable, as an act of good faith, and necessary, if the Russians need credits, because the Johnson Act forbids private interests to lend money to any country which has defaulted on its obligations to the United States, Moreover, only Congress can dismantle many of the discriminations against Soviet trade which injure the Russians' feelings as well as their ability to buy and sell in the United States—and Congress is more likely to be co-operative if the lend-lease debt has been discharged.

Mr Khrushchev made no secret of the fact that Russia needs long-term private credits (it is unlikely to get government ones) if it is to buy the machinery and equipment which it wants to increase its output of consumer goods. This is because the Soviet Union has relatively little to sell in the American market. Last year the United States imported $17.3 million worth of goods from Russia, mostly furs and benzene; exports to Russia amounted to only $3.4 million. The Administration can remove the embargo on Russian crabmeat which the Treasury imposed on the insulting ground that it was packed by slave labour. But furs are the Russians' biggest dollar earner, and only Congress can lift the embargo which it imposed on certain kinds of furs in 1951 and which has cut sales in the United States from $41 million in 1947 to about $5 million. At the same time Congress forbade the Administration to give "most-favoured nation" concessions to Soviet goods; this means that duties on their products are two, three, or even four times as great as on the same goods from other countries.

If the Russians continue to be helpful over Berlin, some relaxation may be expected in the licensing of exports to the Soviet Union; apart from goods of strategic value, whose sale to the communist countries is prohibited, most of the things the Russians want to buy require licences. (When Mr Mikoyan was in Detroit, he complained bitterly that all the Russians could buy in the United States was firewood, chewing gum and laxatives.) In return, however, the Russians will need to promise to honour American patents and licensing practices. Businessmen have had unhappy experience of Russian "piracy." No one imagines that dismantling the barriers will bring trade flooding in and for this many Americans will be glad. Mr Rockefeller, in making his first speech on an issue of foreign policy since he became the Governor of New York, argued that trade with the Russians might prove a Trojan horse unless they were required to observe western codes of commercial behaviour—abjuring, for example, dumping and price discrimination. This carried further Mr Rockefeller's attempts to differentiate his Russian policies from those of Mr Nixon, his great rival for the Republican presidential nomination, who is the apostle of the thaw.

Babies Under the Counter

NEW YORK

RECENTLY the New York police rounded up a group of people engaged in the illicit but extensive trade of buying and selling babies. This particular syndicate, complete with its own high-cost money-lenders and strong-arm collectors, was thought to be operating a $1 million a year business; the price of a baby can be as much as $10,000. This is because there are ten sets of eager would-be parents for every white-skinned baby available for adoption. Of the 700,000 couples who consider adoption each year, 95 per cent want a healthy white baby, preferably a girl. But of the 200,000 babies born each year to unmarried mothers, two-thirds are dark-skinned—and for them there are relatively few takers.

Moreover, in a third of the states the adoptive parents must be

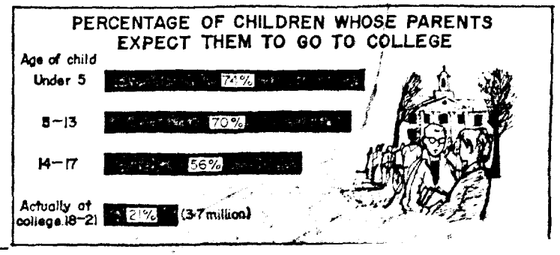
Going to College?

A SURVEY of 5,000 families made for the Ford Foundation shows that the parents of 69 per cent of the children expect them to go to college; the figures for boys and girls are practically identical. Even though the proportion diminishes sharply as the time approaches when the children must satisfy the colleges' educational requirements and when the parents must find the money, it remains strikingly high. The present expectation that college enrolments will rise from 3.7 million today to 6.7 million by 1970 may well prove to be an underestimate. As might be expected, while 97 per cent of the children whose parents are in the highest income brackets and 75 per cent of those with average incomes are expected to go to college, only 44 per cent of those in families with incomes which are below average cherish such ambitions. The survey also showed fairly wide regional variations, with the Pacific and mountain states in the lead and New England lagging behind, perhaps because of the large proportion of comparatively recent immigrants in its Italian, Irish and Polish minorities.

Even so, sending a child to college now seems almost as widespread an aim as sending one to secondary school was a generation ago. But the survey also showed that only a minority of parents are making any financial provision to translate this dream into reality. Parents realise that a four-year course will cost at least $6,000 for each child and those questioned put the median cost of a college education for all their children at $10,000. Few, however, appreciated that such costs, which have risen sharply since the war, may continue to grow, and 60 per cent of those expecting to pay for a college education had no savings plan. The 40 per cent who had such a plan saved only $150, on average, last year.

Parents expected to draw on several sources of money: savings (mentioned by 67 per cent); scholarships (41 per cent); current income (29 per cent); government or college loans (15 per cent); bank loans (4 per cent); children's own earnings (28 per cent). The conclusion of the Ford Foundation is that parents ought to adopt a more systematic approach to the financing of what is, next to the purchase of a house, the largest investment made by the typical American family. Like mortgages for housing, however, loans for a college education may some day be guaranteed by the federal government. Senator Johnson, the Democratic leader in the Senate, introduced a Bill at the last session which he hopes Congress will pass next year; it would authorise the government to insure $100 million of private loans each year; each student could borrow up to $1,000 a year and a total of $4,000. Federal funds for student loans, which are disbursed through the colleges under the Defence Education Act of 1958, amount to $30 million in the present fiscal year. Students repay these loans, with 3 per cent interest, during the ten years after they start to work.

PERCENTAGE OF CHILDREN WHOSE PARENTS EXPECT THEM TO GO TO COLLEGE



of the same religious faith as the natural mother and elsewhere religious "matching," which is strongly backed by the Roman Catholic church, is generally practised. The losers under this system are Jewish families—because few Jewish children come up for adoption—and couples who do not share the same faith. One family had to move from Massachusetts to the more liberal state of Florida to prevent the natural mother of their adopted child reclaiming her on the grounds that the adoption—which involved a difference of religion—was null and void. The black market does not overlook religious refinements ; at one time French Canadian babies were mysteriously equipped with Jewish birth certificates before being smuggled across the border into New York.

There are about 100,000 legal adoptions in a year, a figure that has doubled in a decade, but nearly half of these represent adoptions by relatives. In rather more than half the remaining cases, authorised agencies handle the adoptions ; the rest are placed "privately," often by a doctor or a lawyer with no thought of personal gain. But to curb the black market eight of the states have outlawed private placements. Both law and practice vary widely from state to state ; in South Carolina it was perfectly legal, until 1953, for a parent to sell his child.

In addition to the state adoption agencies there are more than three hundred private ones, many of them run by religious groups. All of these operate under individual state charters, are supported by voluntary contributions and are strictly non-profit making. Many are accredited members of the Child Welfare League of America which lays down its own standards. The cost of placing a child for adoption—from $500 to $1,800—may be met by the agency, but the tendency is to charge a flat fee, which may be under $100 or over $1,000. It also takes rather longer—up to a year—to have a child by adoption than by the more usual method.

Some Americans, particularly those who face a religious barrier at home, have adopted children from Italy, Greece, Germany, Korea and Hongkong, often choosing the country of their own ethnic origin. The Director of the International Social Service puts the number at between 8,000 and 10,000 in a recent four-year period. Many of these deals are innocent, if unwise in by-passing the responsible organisations which handle such cases. But others involve the purchase of children abroad and their resale at a profit. A New York city magistrate will come up for trial shortly on the charge of selling Greek children in the black market.

Right on the Ball

THE Dodgers' victory in the 1959 World Series, making this team champion of the sixteen in the two major baseball leagues, marks the rehabilitation not only of a team which went west in more ways than one when it moved from New York to Los Angeles in 1957 but also of a game which seemed on the way out as a profitable professional sport. Almost automatically at the top of the National League during the early nineteen-fifties, the Dodgers dropped to seventh place last year. Their return to the top in only one season was as unprecedented as was the closeness of the final matches which put them there, with the Milwaukee Braves and the San Francisco Giants, also emigrants from New York, challenging them until the last minute. The publicity attracted unusual numbers of spectators, not only on the Pacific coast, where first-class baseball is still a new form of entertainment, but to games everywhere, even in the minor leagues. Play in the other major league, the American, was also more exciting than usual, since the collapse of the habitual winners, the New York Yankees, meant a real contest for first place here too.

It was won, also at the last minute, by the Chicago White Sox, in eclipse for forty years. As a result of all this the final series, in which the Dodgers beat the White Sox by four games to two, drew a record total attendance for the six games of 420,000 spectators. Admittedly this was helped by the huge size of the temporary, and most unsuitable, stadium in Los Angeles, which seats over 90,000 people. Much of the baseball they saw was not up to the standards of previous World Series, for the White Sox are famous for their defensive playing and the Dodgers owed their extraordinary recovery, in part at least, to having brought in inexperienced, if promising, young players during the season. But this imaginative introduction of new blood, representing, it is said, an investment of $1.5 million, was one of the things which also brought in the gate money. Moreover it suggests that good players are not so hard to find as has been maintained by those who oppose the formation of a third major league.

Partly for this reason, partly because of the new popularity of baseball, but mainly because New York interests are determined that the city must again have two major teams, there is a real possibility that this new group, already christened the Continental League, may come into existence next year. Planning is far advanced, though financing is still uncertain, and the other major leagues are behaving more co-operatively than in the past, goaded by congressional criticism of baseball's monopolistic tendencies.

One Sheep, One Vote

FROM A CORRESPONDENT IN COLORADO

LAST month sheep farmers voted overwhelmingly to continue using part of their wool subsidy to promote sales of wool and of "lamb," as all mutton is called in the United States. The votes were weighted by the number of sheep in each farmer's flock and owners of at least two-thirds of the sheep had to approve the scheme for it to be renewed. In fact, although only 69 per cent of the growers voted in favour, they owned 81 per cent of the sheep—a sign that the programme is most popular among the large ranchers of the West, where four-fifths of the sheep are raised. The approval was even more enthusiastic this year than it was in 1955, when farmers first voted on the scheme, in spite of the strenuous opposition to it of the American Farm Bureau Federation. The federation, the largest general farm organisation, argued in vain that withholding a cent a pound compulsorily from payments to farmers tends to regiment them.

One reason for the Farm Bureau's opposition may be that the whole wool scheme is based on the controversial idea of post-production payments. In this one case the government, instead of supporting market prices, as it does for other commodities, lets the growers sell their wool at the prevailing price and then pays them a subsidy designed to bring the total average return up to a fixed figure. This type of subsidy is the heart of the famous "Brannan plan" which was first proposed in 1949, when Mr Brannan was Mr Truman's Secretary of Agriculture ; it is still regarded by some as a cure for the $9 billion worth of surpluses piled up under the price support schemes. Dr Christenson, of the University of Miami, predicts in a recent book* that the Democrats may even give the Brannan plan a cautious endorsement next year. Ten years ago, however, the Farm Bureau fought it strenuously ; in the election campaign of 1952 Mr Eisenhower denounced its alleged "immoral implications" without ever explaining what these were ; and ever since the Farm Bureau and Mr Benson, the present Secretary of Agriculture, have lost no opportunity of condemning it.

* *The Brannan Plan*, by R. M. Christenson, University of Michigan Press, 55.

LARGEST MAKERS OF V-BELT DRIVES IN THE COMMONWEALTH

Yet in 1954, when the original Wool Act was passed, it was supported by the Eisenhower Administration because, in Senator Dirksen's words, "desperate situations need desperate remedies." The desperate situation was the sharp decline, during the preceding decade, both in the numbers of sheep and in the output of wool—a commodity which the growers, at least, consider to be so essential both in peace and war that its production must be maintained at any cost. The remedy adopted in 1954 and recently renewed for another three years was to authorise the Secretary of Agriculture to use the receipts from the wool tariff to pay growers a subsidy; this was supposed to encourage them to increase production from less than 300 million pounds a year to 360 million. In the four years since the Act went into effect Mr Benson has paid out about $220 million to bring the average total return to growers up to 62 cents a pound; unfortunately costs have risen so much that many of them are not as well off as they were in 1955, although it is estimated that the payments for 1958 alone totalled about $85 million. In that year the market price for wool fell sharply.

Throughout these four years Mr Benson has withheld a cent a pound of the wool payments and five cents on each hundred pounds of sheep sold for slaughter to finance the national promotion campaign run, very ably, by the American Sheep Producers Council of Denver. This levy has produced, in all, about $11.5 million, most of which has been spent to extol the virtues of lamb on the dinner-table. The production of wool, including both that shorn and that pulled from carcases, has ceased falling but at under 300 million pounds a year is still far below the long-term goal.

Sheep farmers have recently been alarmed by the rising imports of live lamb. They were specially concerned in August when 23,500 live animals from New Zealand were landed at San Diego and when they heard reports that producers in New Zealand intend to supply the American market with 200,000 animals a year. The next step may be a demand for an increase in the tariff on such imports, or for the imposition of quotas.

Lady Chatterley's Lovers

FROM A SPECIAL CORRESPONDENT

THE publishers who ventured to produce an unexpurgated edition of D. H. Lawrence's "Lady Chatterley's Lover" were indignant for libertarian reasons when it was barred from the mails by the Postmaster General, Mr Summerfield, but they were outraged for commercial ones when the ban was lifted and other publishers decided to get in on a good thing. It was Grove Press, a small and rather arty New York publishing house, which took the plunge last spring with what was apparently the first above-the-counter edition in any English-speaking country. Dignity was the watchword; there was a preface by Mr Archibald MacLeish, the poet and former Librarian of Congress, and the book sold for $6, almost enough by itself to take it out of the titillating class.

But Mr Summerfield found "Lady Chatterley" "offensive . . . degrading . . . pornographic . . . smutty . . . obscene and filthy" and unfitted for travel by post. However, even arty publishers are not without American know-how: Grove Press delivered about 100,000 copies to bookshops by various other kinds of carriers. When the *New York Times* declined an advertisement because of a law making it a crime to tell readers where they can buy obscene works, Grove Press offered, and the *Times* gravely accepted, an advertisement in large type: The Post Office ban forbids us to tell you where you can buy a copy of "Lady Chatterley's Lover."

The fun ended when a federal judge in New York, Mr Bryan, reversed Mr Summerfield's order, ruling that Lawrence was frank but not obscene. Before Grove Press had finished dictating its victory statement, three other publishers had decided to bring out paperback editions of the novel at 50 cents a copy. Grove Press produced its own paperback and then took an even larger advertisement in the *New York Times* to denounce its fellow publishers as "free loaders" and with impotent fury to warn the readers against inaccuracies in the other editions.

> Only Grove Press has shown any willingness to back up its literary convictions with cash and courage. . . . . Since it took thirty-one years to free "Lady Chatterley's Lover" for American readers, why waste your time on a mangled "quickie" edition?

But the Chatterley affair underlines how little censorship of matter dealing with sex is now tolerated in the United States, how permissive the authorities have become—perhaps more permissive than in any other western country. In part this is because the ultimate decisions are made by judges who are able to ignore pressures from advocates of "clean literature." But in part also it is because tastes, including those of judges, have changed radically. Just eleven years ago a 4-4 division in the Supreme Court upheld a New York State ban on Mr Edmund Wilson's novel, "Memoirs of Hecate County"; it is difficult to believe that there would be a single Justice in favour of the ban today.

SHORTER NOTES

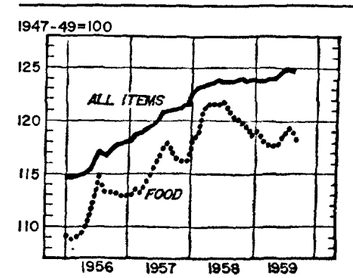
On Wednesday, October 14th, when Mr Eisenhower celebrated his 69th birthday, he became one of only four Presidents to reach such an age in the White House. The others are Mr Truman, Andrew Jackson and James Buchanan. If Mr Eisenhower completes his term in January, 1960, he will be the oldest President in history, as well as the one most widely admired by his contemporaries. The Gallup public opinion poll reports that his popularity has been rising steadily since last November and that 69 per cent of those questioned approve of his handling of the Presidency; on only two other occasions—at the time of the Geneva conference, in 1955, and in January, 1957—has his popularity stood higher.

* * *

The butter surplus has melted away. The Department of Agriculture has just given the school lunch programme the last 20 million lb of a stock which contained nearly 500 million lb five years ago. Butter is not expected to pile up again because demand has increased and the production of milk has failed to keep pace with it.

* * *

Taxes paid in the 1958 fiscal year to federal, state and local governments amounted to $98.3 billion, or about $568 a head; of this $393 went to the federal government and $175 was divided among the rest. All the revenue of all units of government totalled $130 billion and just under 40 per cent of this sum was spent on defence and international programmes, while just over 14 per cent went on education.



CONSUMER PRICES

A fall in the price of food, which was sharper than usual for August, has halted the four month rise in the American cost of living. But most other items cost more and the rise is likely to be resumed when food prices go up in the winter, if not before then.

THE WORLD OVERSEAS

Two Men in Rhodes

FROM OUR SPECIAL CORRESPONDENT IN ATHENS

ANYONE asked to read the signs coming from Rhodes must wish for the skill of the Delphic oracle, who could contrive an answer that covered more than one eventuality. One would like to accept at its face value the reconciliation between General Grivas and Archbishop Makarios ; indeed at the moment, with past misunderstandings apparently cleared out of the way, it may be genuine enough. The trouble is that, although both profess themselves satisfied, there is no evidence that either has genuinely yielded any ground to the other.

General Grivas has publicly acknowledged that the application of the Cyprus agreements is the business of the Cypriot leadership to which he has pledged his "undivided support." Archbishop Makarios, on the other hand, has acknowledged General Grivas's right to be consulted on Cypriot affairs. A protocol which has not been published, and the existence of which Archbishop Makarios denies, is said to define the two men's attitude to the issues—such as the British bases and the vice-president's powers—now under negotiation in London and Cyprus. If Archbishop Makarios finds it necessary to change this agreed attitude, he will consult General Grivas. But whether he will feel himself bound to abide by the general's views is—whatever General Grivas may wishfully think—unclear. Upon this ambiguity much may depend.

What lies behind the public goodwill and the private understandings is as yet uncertain. Although the claims of the Grivas entourage that Archbishop Makarios's political difficulties forced him to seek a reconciliation are most probably exaggerated, it is reasonable to suppose that the archbishop found General Grivas a tiresome thorn in his flesh. He was presumably anxious to persuade the general to keep quiet until after he himself has been safely elected president of the new republic ; after that the general's fulminations will be of much less importance to him. The "decisions" on Edma (the political successor of Eoka) which Archbishop Makarios mentioned at the end of the Rhodes conference, apparently include an agreement to reorganise the party and to allow General Grivas to include his men in the party's lists at the elections for the Cypriot assembly ; this suggests that the archbishop feels to some extent bound to mortgage the future in order to safeguard the present.

The motives of General Grivas are more obscure. He is a more impulsive man, prone to make conflicting statements and surrounded by a shifting collection of unemployed Athenian politicians. The concessions which he believes he has gained from Archbishop Makarios may be a satisfactory sop to his pride and his sense of what is owing to the former leader of Eoka. But if the archbishop is obliged to overstep the general's limitations on his freedom of manoeuvre, what then of their protestations of unity ? General Grivas can either accept the situation or try to disrupt the patient process of negotiation. If he impulsively chooses the second course, his success will depend on the strength of his following in Cyprus ; in any case, he is unlikely to advance his political ambitions in Greece, where most people have had enough of the Cyprus issue, however bitter some may feel about its outcome.

Some people believe that General Grivas realises he can no longer usefully flog the Cyprus horse in Greece, and that he intends to base his campaign on the social and economic failures of the present government. Others, however, maintain that his chances of launching a successful assault on this front are so poor (for one thing, neither he nor those round him have the necessary technical competence) that he must somehow employ his only asset, Cyprus, even though it is a sadly diminishing one.

According to his present plans (which he has not, it seems, changed since his talks with Archbishop Makarios) the general intends to launch his political campaign and his memoirs some time next month or, perhaps, in December. He has always made it clear that he disapproves of the Cyprus agreements, even though he accepts them as a *fait accompli*. Even in the atmosphere of reconciliation at Rhodes he complained publicly that he had been misinformed at the time about the contents of the agreements. His memoirs are known to contain bitter attacks on the Greek government and on particular members of it for their conduct of the Cyprus negotiations. All this induces speculation that the general intends to stir up trouble in Greece, not about the present implementation of the agreements but about the "treachery" of the Greek government in ever concluding them at all.

WHATEVER his war cry, what are the general's chances of riding to victory? Last week, the fourth anniversary of Mr Karamanlis's government was celebrated by the Athenian press in leaders that were either congratulatory or carping according to each paper's outlook. Four years is a very long time for any Greek government. Various social and economic discontents among the different sections of the population (about the price of wheat, for instance) have had plenty of time to accumulate and fester. So have the frustrations of the politicians. Since every Greek politician of any note always wants to be prime minister and nothing less, there are always plenty of frustrated men under any administration ; and Mr Karamanlis, being more reluctant than many Greek premiers to give way to the ambitions and acquisitive instincts of his followers, has his fair share of them to contend with. Less than thirty of his supporters would need to decide that the Grivas bandwagon was worth climbing on to make him lose his parliamentary majority. Clearly, General Grivas will try to bring this about, since it is hard to see how his party, or movement, can exist in the political wilderness for some years until the next elections are due.

This danger, however, does not at present seem very active. The record of this Greek government is, in fact, by no means a bad one as such records go ; and Mr Karamanlis himself is widely regarded as an honest, energetic and well-meaning man. Moreover, the Greeks as a whole are not unaware of the advantages of economic and political stability, of feeling sure that the value of the drachma will be the same tomorrow as it was yesterday. General Grivas might have some success among the unsophisticated country people upon whom his political blunders have made little impact. But most Greeks are disillusioned by his political naivety and would prefer him to stay on his pedestal as a military hero. In any case, as everyone knows, Greek generals who enter politics almost invariably fall victim to the politicians.

Algerian Ray of Hope

FROM OUR PARIS CORRESPONDENT

NOBODY now has illusions about the importance of parliamentary life in France. Everyone knows that the President is the effective head of government. And yet the Palais Bourbon was packed on Tuesday to hear the prime minister's statement on foreign policy and Algeria. There was a slight sadistic streak in this attendance. Some had come to see the painful metamorphosis of M. Debré. As a senator, he had been a virulent censor of "defeatism" and a prophet of French Algeria. In his new function, as General de Gaulle's faithful prime minister, he had to face the deputies as the advocate of Algerian self-determination, a word to which he used to be allergic.

Excitement ran particularly high on Tuesday because that very morning a French illustrated weekly published an alleged interview with M. Ferhat Abbas, in which the Algerian rebel leader forecast that an Algerian military mission would go to Paris to discuss a cease-fire. He was also reported as saying that if the Algerian people voted in the referendum for the intermediate solution of home rule (which apparently has General de Gaulle's preference), this would only be a stage; independence would come a couple of months later. From Tunis came a prompt denial that the interview had ever taken place. But in Paris tempers were rising. In the Assembly, the public galleries were packed. So was the semi-circle in which the deputies sit. Only one empty patch was a reminder that a score of Algerian deputies were absent in protest against a policy that implies that they are *mal-élus* and do not represent the real voice of Algeria.

The attentive audience had to be patient for three-quarters of an hour while M. Debré lectured it on other subjects. He said that, in spite of the economic recovery, severity must remain the budgetary rule for the year to come. On foreign affairs, he argued that an understanding between the two world blocks can only be reached through the recognition of the *status quo* (echoing General de Gaulle, he included the Oder-Neisse frontier among facts which must thus be recognised). M. Debré repeated France's willingness to climb to the summit, but only after careful preparations so that disillusionment and, worse still, hasty concessions be avoided. As to the Atlantic alliance, he saw in recent trends a confirmation of the French thesis that it cannot be limited to the military defence of Europe alone. He revealed that negotiations are to start on co-operation in the Mediterranean, where the French withdrew their fleet from the joint command in March.

When it came, his statement on Algeria brought no fireworks. It was not Debré the Censor, but a faithful lieutenant carefully reading his text (the malicious said someone else's text). From the start he asserted that General de Gaulle's declaration on September 16th offered the only chance to break out of the circle of violence. He made only one new contribution. M. Couve de Murville, the foreign minister, had already said on American television that General de Gaulle's offer of last October ("the peace of the brave") was still valid and the rebel leaders could come to Paris to discuss a cease-fire. M. Debré added that instructions had been given so that conditions for a cease-fire could be discussed at any moment, that rebel representatives would be guaranteed a safe return irrespective of the outcome of any talks, and that "at that moment the government will also make more precise the guarantees that each will have for the future exercise of his freedom." This cryptic sentence could mean that the French are willing to discuss with the rebels the conditions of the referendum and the guarantees for a free vote—a crucial point for any compromise. But, the following morning, it was officially explained that these terms could not, in fact, be discussed with the rebel representatives.

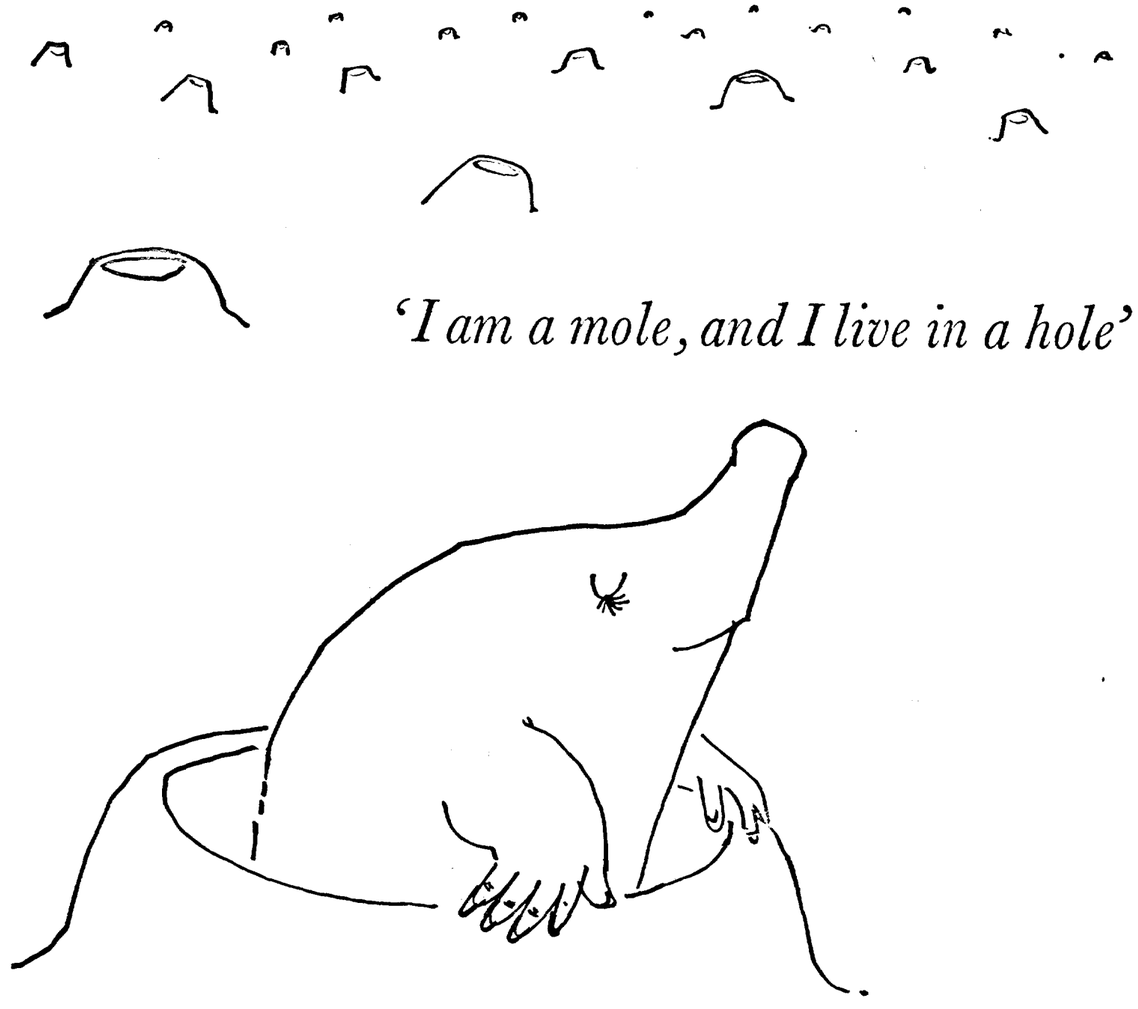
In any case, the cryptic sentence was embedded in more intransigent passages. M. Debré frequently referred to "our Algeria." He emphasised that credits have been earmarked to enable the army to carry out its task of pacification. He repeated that the general's plan provided no scope for discussion or bargaining. To justify his own conversion, he argued that France could now afford certain things because it had strong institutions and a "disciplined army." Finally, asserting that the French presence on the other side of the Mediterranean was indispensable, M. Debré produced the curious argument that the return to the rule of law excludes "secession." The cold silence with which his former conservative associates greeted his speech was a sign that they do not think that Algerian independence is ruled out in the plan, or that General de Gaulle has reached the limit of his concessions.

The debate itself proved disappointing. Baiting the prime minister by questions and quotations from his past speeches—however cruel to M. Debré—has now become monotonous. M. Bidault debated without his usual verve; M. Le Pen, the ex-poujadist, with his usual violence. Most of the speakers were hostile to the new policy. But, though the vote has not yet taken place while these lines are written, its outcome is certain. This Assembly has, in the recent past, voted for "integration" by a massive majority. Now it will vote almost as massively for self-determination. In the middle of the semi-circle sit 200 disciplined neo-Gaullist deputies (only nine of them, including Colonel "Leathernose" Thomazo and M. Delbecque of Algiers fame, left the group after M. Debré's *volte face*). They know that they will never return in such numbers again. They also know that if they went to the country on the platform of continued war in Algeria, their defeat would come close to disaster. Altogether, this Assembly knows that its function is to approve and not to decide, that it is an institution of democratic make-believe.

So attention has turned elsewhere. M. Ferhat Abbas has gone to Rabat to see the King of Morocco. The King's son, Prince Moulay Hassan, has just returned from Paris and is apparently ready to fly here again. There are many other, less official envoys travelling between Paris, Tunis and Rabat. The atmosphere is one of haste, and it is being suggested that the main reason for this is international. France has not succeeded in getting the Algerian issue over in an early debate in the United Nations, while the impact of General de Gaulle's offer of self-determination would still have been strong. If nothing happens between now and the end of November a motion might be passed in the General Assembly advising both sides to negotiate. The talks with the rebels would then no longer appear as a sign of strength in the new regime but as the result of international pressure.

But if General de Gaulle wants to spare the feelings of the army officers in Algeria the procedure for discussion with the rebels will have to be slower. The more intelligent settler leaders in Algeria—knowing that their actions only matter when backed by the army—are telling their followers to wait for the right moment. They argue that when the rebel leaders go to Paris, and the army grasps that it may have to evacuate Algeria, then will be the moment to strike and sabotage the whole attempt. Nobody can guarantee what the officers' reaction will be, but General de Gaulle may prefer to prepare them gradually.

The pressures are thus contradictory. But French liberals are now in a highly optimistic mood. They point out that the general has already gone slightly beyond his original declaration and that the rebels seem to be under President Bourguiba's influence. They expect the rebel leaders to come to Paris shortly. Only then will it be known whether a compromise can be reached about Algeria's future that is acceptable to the rebels, to the general, and to his—to quote M. Debré—"disciplined army."



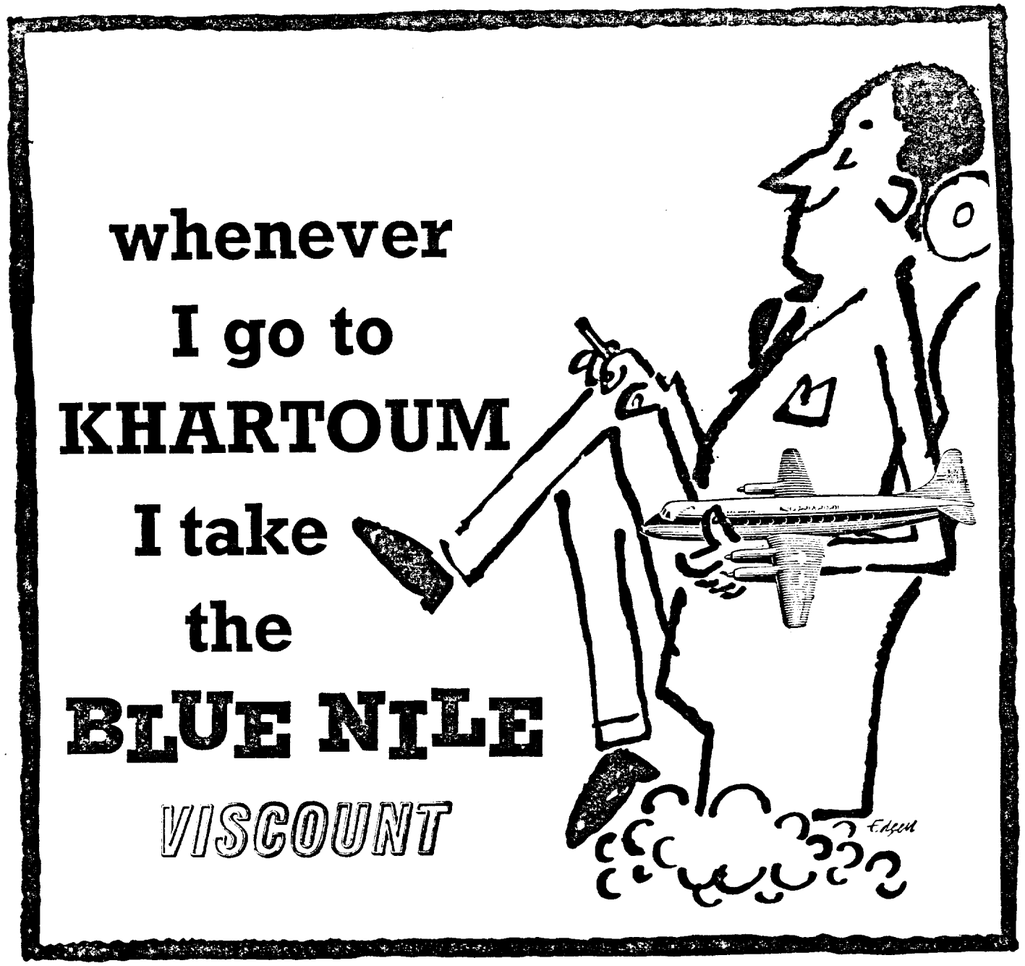
'I am a mole, and I live in a hole'

This is the solemn and melancholy chorus our engineers sing round their drilling rigs. They add that they work longer hours than most moles. Also that mole business is not a risky business, whereas oil-hunting definitely is.

Everything about drilling for oil is a gamble. Our engineers may set up their derricks, their pumps and draw-works eight to ten times in jungle and swamp country. After a few months they might strike a gusher, or not find enough oil to pay for postcards home. Those are the lumps we get in our porridge, and we have to swallow them. So have our competitors, luckily.

However, all these holes drilled all over the world eventually add up to a lot of oil and oil products. Plenty enough petrol to keep the car you'll buy next year on the road. Enough insecticides to keep the world's harvests healthy. Enough polyethylene to wrap everything that needs to be wrapped. On second thoughts, the mole song is a happy song.

YOU CAN BE SURE OF SHELL



Every Monday a Sudan Airways VISCOUNT 831 (maintained and crewed by Airwork) flies from London to the Sudan. **This is the only air service to cater specially for the Sudan.** Passengers who wish to break their journey at Rome, Athens*, or Cairo may do so and continue their journey by the next plane at no extra cost. The return flight from Khartoum will be on Thursdays. **VISCOUNT comfort . . . Rolls-Royce Speed.**
The latest Viscount—the 831—is larger, much faster and even more luxurious than its predecessors. In a perfectly relaxed atmosphere, you can eat and drink, read and talk (nearly everyone on board will have a common interest in the Sudan) or simply sleep, lulled by the soothing hum of the four Rolls-Royce jet-prop engines. An unusual feature of this flight will be a Free Information Service on all matters relating to Sudanese business, political, and social life. This will be very helpful to newcomers and to those returning after a long leave of absence. If you have business in the Sudan, ask your travel agent about the new Blue Nile Viscount.
** Subject to the approval of the Government concerned.*

Mr Khrushchev's Authorised Version

TRUTH, someone has doubtless said, is also indivisible. Utter disregard for truth and contempt for facts makes consistency easier. But an attempt to reconcile fiction, fact and half-truths is a perilous task. Such must have been the conclusion of the 11-man committee which produced the recently published official "History of the Communist Party of the Soviet Union."

The new text-book is the successor of the famous (or notorious) "Short Course" of party history which for fifteen years was the official stalinist breviary. Published in 1938—originally in nine instalments in *Pravda*—it was intended for mass circulation. At first it was assumed that Stalin wrote only the chapter on dialectical materialism. Then it turned out that the whole book, including the many tributes to Stalin, came from his own pen. Stalin had no scruples and within a decade his own version of events and of doctrine was translated into 61 languages and published in 32 million copies. It was compulsory reading not only in the Soviet Union but throughout eastern Europe. It was the *vade mecum* of party members throughout the world. For millions of stalinists it was the revealed truth that provided all the answers.

BUT it barely survived its author. Shortly after Stalin's death, the publication of several original documents—such as Lenin's testament—and the rehabilitation of some military leaders executed by Stalin undermined the whole edifice of falsehood. Mr Khrushchev himself, in his "secret" indictment, delivered a mighty blow. Contrary to Gresham's law, good coin was driving bad currency out. With the falseness of the stalinist version thus revealed to all, there was a danger of awkward questions about the part Stalin's lieutenants had played in the fraud. During the ferment that followed the Hungarian insurrection and in the ensuing struggle against revisionism, Mr Khrushchev decided to call a halt to revelations and even to go into reverse. The various conflicting stories had to be reconciled and a coherent picture pieced together. The new revised version tries to do this.

In its first chapters the new textbook does not differ radically from the old. The change is rather in tone and emphasis. Trotsky is still the evil spirit of the pre-revolutionary period and the first years of the new regime. Hence the real story of the October rising and of the civil war cannot be told. Even such rehabilitated figures as Antonov-Ovseenko or Marshal Tukhachevsky are kept out of the picture. The limelight has to be turned on to third-rate performers.

The treatment of Lenin's testament shows what can be achieved with half-truths. The text is truncated in such a way that the derogatory remarks about Trotsky and Bukharin are left in, while the longer passages of praise are simply cut out. Lenin's request that Stalin should be removed from the secretariat sets the authors another problem. Why did not the party follow this advice? Because, according to the new textbook, it would have been exploited by internal enemies to harm the development of socialism, and so on.

Coming to the purges and trials of the 1930's, the authors do not dare to repeat Stalin's absurd charges against the opposition. Instead, they fall back on euphemism and understatement. It is, for instance, known that Kirov's murder, in 1934, was followed by mass executions. These bloody purges are now reduced to "the control and exchange of party cards and the verification of character of party members." The mass deportations which followed are described as "a violation of the party line towards the cadres." The authors prefer not to get involved in the ghastly story of the Moscow trials. They admit that many innocent people were victims of the repression. The blame is put on the policemen, Yezhov and Beria, who exploited Stalin's weaknesses. And the tale has a moral ending: "Yezhov and Beria met a just punishment."

Stalin's book ended in 1938; the new one is brought up to the present year. In the description of the war some of Khrushchev's "secret" accusations are echoed. Thus, Stalin is blamed for the surprise effect of the German attack. He had dismissed the warning of Sir Stafford Cripps as "a provocation." Coming to the last years of Stalin's rule, it is admitted that his cult did serious harm to the leadership of the party and the state. Nevertheless, as if to justify Mr Khrushchev's behaviour, the policy of the party was right and corresponded to the interests of the nation. Among the evil influences on Stalin, Beria is here joined by Malenkov and other members of the anti-party group. Curiously, however, "the doctors' plot" is not included among the errors of the last Stalinist period.

Stalin's policy towards Jugoslavia is recognised as wrong, but the policy of economic discrimination in eastern Europe and the chain of trials, guided from Moscow, are again dismissed euphemistically as "individual mistakes of a secondary and incidental character."

Mr Khrushchev's own purges also impose a strain on the historians. The part performed by his dismissed opponents has to be played down. Thus, the defence committee which directed the Soviet war effort is ignored, because it included—besides Stalin and Voznessensky—Molotov, Kaganovich and Malenkov. The book prefers to dwell on the activity of individual party envoys, particularly of Mr Khrushchev, who emerges as one of the defenders of Stalingrad. The disgraced Marshal Zhukov is simply mentioned among many commanders of lesser importance.

THE campaign against the cult of Stalin is seen favourably. It has caused "temporary difficulties" but is said to be a safeguard against repetition. The "cult of personality" has disappeared, yet remnants can be detected in the last chapters of the book, where Mr Khrushchev dominates the stage.

It would be easy to list the lies, distortions and discrepancies of this new history. What is significant, however, is that the authors cannot really hope to convince their readers. Soviet citizens can now themselves replace the missing bits from Lenin's testament. John Reed's *Ten Days That Shook the World* has been published in Russia; it shows unmistakably the part played by Stalin's victims in the October revolution. Verbatim reports of party congresses and conferences confirm this picture. The new bowdlerised edition could still make sense if there were one version for the initiated and one for the masses. Yet it is published in only a million copies and as many Russians can consult, say, the 36th volume of Lenin's works, containing his testament.

Stalin knew that his lies could not co-exist with the original documents. Mr Khrushchev would like to contain truth within limits so that it would not show the dirty hands of the leaders of his own generation. He does not seem convinced that this can be done for long. His new authorised version has an ephemeral air. The official historians' tricky task is a reflection of the inner contradictions in the Russian leadership at the present stage of the Soviet transition.

Swiss Socialists in the Toils

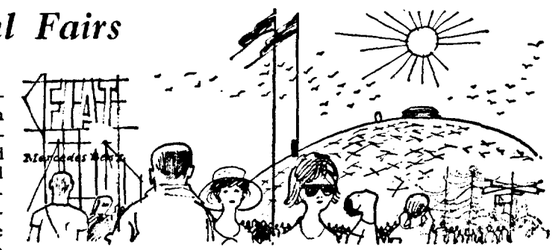
FROM A CORRESPONDENT

EVERY four years, on the last Sunday in October, the Swiss re-elect both their National Council (*Nationalrat*) and Council of Estates (*Ständerat*) ; their general election falls due this year on October 25th. Since the country adopted proportional representation in 1918, a change which greatly increased the number of Social Democrats returned to the National Council, elections to that body have brought only a trifling variation in the strength of the competing parties ; thus a Swiss general election has little of the sporting excitement of a British one. Further, so much voting goes on in Switzerland on federal, cantonal or communal issues that the thing has rather lost its savour, and the proportion of electors who go to the polls tends to be low. Indeed, for many Swiss people, the election of the National Council is more remote and therefore less interesting than voting about a new local school.

In 1955 the Socialists pushed beyond the other two big parties, winning 53 seats in the National Council ; the Radicals won 50 and the Catholic Conservatives 47. The Peasant and Traders' Party had 22 representatives, Herr Duttweiler's Independent Party 10, and there were 5 Liberals (who are very conservative in Switzerland) and 5 Democrats ; there were also 4 Communists who may well disappear in 1959. Through deaths and resignations about a quarter of this Chamber will in any case not reappear.

New Era in International Fairs

BY A CORRESPONDENT



SINCE the war there has been a spectacular expansion of trade fairs as institutions for promoting international commerce. Most of them were established during the inter-war period on the classic model of the Leipzig Fair, and display both capital and consumer goods in great variety. The Milan Fair in 1939, for instance, had 5,088 exhibitors—of whom 1,003 came from abroad—and over two million visitors. Twenty years later, the number of exhibitors had grown to 13,400—of whom 3,229 were non-Italian —and 4,300,000 visitors jammed the grounds.

After the second world war, new international trade fairs were created. Among these, the rise of the German Industries Fair, with British "godfathers," in Hanover provides the most outstanding success story. The first large-scale international trade fair in North America was held at Toronto. Financed and organised by the government, the Canadian International Trade Fair, inaugurated in 1948, was forced to cease operations after a run of several years because of the opposition of an important group of protectionist Canadian industrialists.

In the United States, the movement to establish "import-promoting" fairs was vigorously encouraged by the Department of Commerce as part of its drive to help foreign countries to earn dollars. America is the land of specialised fairs *par excellence*, but the existing fairs had either too little space to accommodate foreign exhibitors or were loth to admit outside competition. In 1950, the first American International Trade Fair was held in Chicago and had a successful two-weeks' run. The United States World Trade Fair made its home in the New York Coliseum, an exhibition hall completed in 1957, and has since become an annual event

Until 1939, most of the important specialised shows were only domestic in scope. Immediately after the war, the need to re-establish international business relations, reinforced by the postwar hunger for commodities, gave in the absence of sufficient specialised international shows, new impetus to the general fair. The demand for more exhibit space rocketed and heavy sums were invested in new exhibition facilities.

But the capital invested in new fair facilities demanded amortisation. A source of income, over and above that accruing from additional space rentals, was needed. It was found in the mounting gate receipts. The fair treasurers turned their attention to the general public. The sober business atmosphere was modified and the infiltration of features with a more popular appeal was allowed. Glamorous national pavilions, often with political overtones, cultural and educational exhibits, luna-park amusements, all helped to widen the appeal of the fairs, with the result that at many general fairs today the proportion of actual business visitors is negligible compared with the number of pure sightseers.

The triumphant progress of the specialised fair in recent years is chiefly caused by the wealth of new articles appearing on the market, together with the much wider and more various consumer demand, stimulated by postwar prosperity. Many general fairs proved too small to display a representative selection of all commodity groups. Moreover, businessmen dealing in the same kind of commodities enjoyed the opportunity to meet and "talk shop" together. The movements toward the economic integration of Western Europe also gave a powerful impetus to the specialised fair.

It is a significant sign of the growing importance of the specialised international trade fair that, for the first time in its nearly forty-year history, one of the oldest, largest and most famous of Continental fairs—to all intents and purposes a national institution—has recently been strongly criticised. Its transformation into an exhibition with a country-fair character was deplored and a clear preference for the specialised or vertical display was indicated. The British Board of Trade, and the working party set up by the Federation of British Industries to examine export trade facilities, also favour participation in specialised overseas fairs. The Board of Trade, for instance, sponsored exhibits by twenty-four British manufacturers at Cologne's International Men's Fashion Week at the end of August ; this was said to be a great success for the British participants. Cologne was among the first of the continental fairs to abandon the formula of the general fair and to adopt the concept of a series of specialised events, held consecutively.

This does not mean that the general international trade fair will disappear. It is true that some horizontal or general fairs are already beset by real difficulties, but most are still going strong. In economically less-developed countries, where supply and demand have not yet reached western levels and the variety of goods is much less, the general fair will prove adequate for some time to come. In a number of European countries, however, there will no doubt be a gradual reorganisation of the Leipzig-type fairs in favour of greater specialisation. Some others will develop more and more into exhibitions whose main appeal is to the consumer ; while certain smaller branches of industry may prefer to remain in the fold of large, well-organised general fairs, rather than staging their own shows. In North America, general import fairs may continue for a while, although the future there already lies with the specialised, international trade fairs.

Gunnar Ericsson, President of the Facit Group — one of the world's leading business machine manufacturers and exporters.

Why are so many world-known business machines built **by Swedes?**

"I believe the answer to that is — Swedish technique and tradition.

You see, Swedes are mechanically gifted and have an almost reverent respect for quality, precision and craftsmanship.

And as inventors, builders and designers, Swedes — also descendants of Swedes abroad — have made pioneering contributions to quality production of modern business machines.

In relation to her population, Sweden today produces more business machines than any other country in the world.

And Facit, Sweden's leading manufacturer and exporter, which to date has produced more than 2 million business machines, has played a substantial role in this development."

If you would like to read the story of this achievement, your local Facit agent will gladly send you a free copy of our brochure "Why are so many..." — or you may write directly to Atvidabergs Industrier, Stockholm 7, Sweden.

FACIT

Factories in Sweden and West Germany. Sales and service offices in 102 countries.

The Socialists, who are the only big party in opposition to the government, are almost certain to lose their lead on October 25th. They have lost seats in the cantonal elections in Zürich, Lucerne, Basle (country), Glarus and Thurgau earlier this year. In spite of the moderation of their programme, the fresh economic boom has worked against them ; so has the news from Britain on October 8th. The main election issue is scarcely inspiring for electioneering orators, for it is financial and largely retrospective at that. In May, 1958, a referendum sanctioned a fiscal plan for six years according to which the income tax or *Wehrsteuer* was reduced upon high incomes as well as on lower ones ; in some cases the tax on high incomes was reduced relatively more. This plan was based upon the assumption that military expenditure would not exceed 800 million Swiss francs annually. But both in 1958 and 1959 it has slightly exceeded 1,000 million (without what is spent on civil defence), and the military authorities are asking for still more for 1960 in spite of the fact that the decision to acquire nuclear arms has been postponed indefinitely. The Socialists opposed the 1958 plan and they are naturally as busy as possible saying " I told you so."

The Swiss trade unions, which co-operate with the Socialists as British trade unions do with the British Labour party, are at present preparing to bring forward an Initiative in favour of a 44-hour working week, but it is unlikely that this will increase support for the Socialists. Their strongest line would seem to be in support of the extension of the social services, which are not very generous in Switzerland.

The second chamber, or Council of Estates, which must always contain two representatives of each of the 22 cantons, must also be chosen on October 25th. Each canton has its own method, usually popular election or election by the cantonal parliament. Last February, Vaud gave cantonal voting rights to women: as this is a canton where popular election to the second Chamber occurs, for the first time in history Swiss women will be voting in a general election. It is curious to think that the Vaudoises will help to choose the more conservative Chamber where the small mountain cantons, which are furiously anti-feminist, have the same weight as the big urban ones.

It is curious, too, that the question of women's suffrage is not an election issue: on the contrary, it is something which each party is careful to ignore. It is true that the Socialist vote in the towns of Neuchâtel, La Chaux-de-Fonds and Le Locle was instrumental in giving the vote to the women of the canton of Neuchâtel only three weeks ago, but the German-Swiss Socialists, or at any rate the rank and file, are not at all in favour of votes for women. Far from fighting the matter out in the open, the partisans of female suffrage, both the men and the women, believe that the less that is said about it the better, and then it will gradually slip through in one canton after another.

At present the Swiss government consists of three Radicals, three Catholics, and one minister who belongs to the Peasant party. The government parties would probably prefer to return to the system which prevailed from 1943 until 1953, when one Socialist held office as Minister of Finance: the Socialists, however, will remain in opposition unless they do well enough in the election to be able to claim two ministerial posts.

The Case of Father Talavera

BY A CORRESPONDENT LATELY IN PARAGUAY

One of the last stable governments in a Latin America racked by political and economic crisis is the Paraguayan regime of General Alfredo Stroessner, South America's last dictator. General Stroessner has kept himself in power for five years, a very long time for a Paraguayan president, by the traditional methods of rigged elections and police brutality. During the last few months, however, there have been increasing signs that he is beginning to lose his grip on the situation. Beset as he is by crippling economic difficulties within the country, the general is also menaced by the example of democratic governments that surround him in Bolivia, Brazil, and Argentina.

General Stroessner is no fool. He knows that caudillos as a class are just now in eclipse throughout Latin America, and he was given vivid proof of this when his friend General Perón sought refuge in Paraguay after his fall from power. But he would like to remain in office until the end of his presidential term, and he has therefore begun to introduce moderate reforms. Last spring (spring by the calendar of the northern hemisphere, that is) he announced that he would permit free parliamentary elections in February next year, and that he did not intend to run for re-election in 1963. At the same time he lifted the state of siege and released a few leaders of the Liberal party from concentration camps in the Chaco.

The results of this policy recall the proverb about the man riding a tiger. General Stroessner's moderation was interpreted as weakness, and people opposed to him made use of a rise in bus fares from 3 to 4 *guaranies* to stage a series of protest meetings and riots against the government, in the course of which they burned a dozen buses and paralysed the capital city of Asunción. The army was called out, and promptly and bloodily repressed the disorders ; the government went back to its old policy of the three *-ierros : encierro* (jail), *destierro* (exile), and *entierro* (the cemetery).

The most recent threat to the regime's stability is the work of Father Ramón Talavera. Father Talavera, who is still in his thirties, comes from a highly respectable family (his father was president of General Stroessner's Colorado party), but gave up ecclesiastical preferment to become a parish priest in the slums of Asunción. He has persistently clashed with the government in its attempt to evict squatters from their wretched shacks in the aptly-named Villa del Diablo, and the loud speakers he installed on the outside of his church were the only public expression critical of the regime.

General Stroessner was anxious to avoid General Perón's blunder of publicly clashing with the Church. He quietly brought pressure to bear on the hierarchy ; Father Talavera was first ordered to stop preaching, and then exiled to Uruguay. In Montevideo, under mysterious circumstances, four physicians declared him insane. Father Talavera then escaped to Buenos Aires, where he set about organising a Patriotic Front among Paraguayan exiles, preaching what he calls " a Christian version of Ghandi's programme of non-violence."

This September, Father Talavera took a steamer upriver to return to Paraguay and inaugurate his programme of one-hour work-stoppages twice a week in protest against the dictatorship. His ship was stopped, and he was forced to return to the Argentine town of Clorinda. Marches and demonstrations followed on both sides of the border, and worried Paraguayan officials closed the frontier to traffic for three days. After a while the tension subsided, and the government declared that it was only trying to protect " unstable elements " in the country from contamination by a paranoid.

The incident, in which a single unarmed priest seriously frightened a government that controls a large, well-disciplined army, demonstrates the hollowness of General Stroessner's power. He has had to suspend his programme of gradually liberalising his regime ; but he cannot expect to rule by terror indefinitely. The crowd of sycophants and soldiers that surround him know how precarious their situation is, and are ready to run in the face of serious trouble. Although Father Talavera's movement apparently has no chance of immediate success, his prediction may well prove true in the long run: " Our liberation must be the work of Paraguay herself. The pressure of the people will be irresistible."

THE BUSINESS WORLD

Equities on a Longer Look

Amid the shouting and tumult of the London Stock Exchange on the day after the election, a number of old-fashioned ideas about ordinary shares were swept away—probably for good. Investors have now to adjust their thinking to a new world.

In one violent, intoxicated day of joy, the London Stock Exchange celebrated the Conservatives' victory. Brokers stampeded into the House with a cheer and the jobbers climbed on to the benches to save their skins. With their backs against the pillars they tried to catch the shouts of brokers, some of them trying to sell for profit-taking American clients, but many more of them shouting to buy at best for British private and institutional investors. Some bargains on the steel pitch were struck for over 100,000 shares. The oldest inhabitants said there had never been anything like it before. It was Throgmorton Street's Purple Friday.

Records were broken in every direction. For the first time, over 25,000 bargains were marked on a single day; but that was only part of the business, for most brokers were too busy to have time to mark the slips. Over 100,000 bargains were marked in a week and those who bought in front of the election turned out to be better than the polls in foreseeing its outcome. The stock exchange indices made their biggest daily gains ever, with the *Financial Times* ordinary index, which had risen by 5.8 points in the two preceding days, jumping by 16.1 points on October 9th to a new, and immediately surmounted, peak of 284.7. *The Economist* indicator in the week that straddled the election soared by 27.6 points (or by nine per cent) to 333.2. The prices of leading equities are over three times what they were in 1953 when the indicator was started and twice what they were at the bottom of the bear market in February, 1958.

The market this week became less excited, with a big two-way business developing. Though there is still purposeful buying and net gains in prices were at first quite enthusiastic, the market is now on a more solid foundation. Jobbers would welcome a technical reaction and a chance to get back some stock; brokers need time to ponder whether the obvious market leaders have moved out of reach and whether shares in the second division have fallen behind in the rush. Friday's exuberant surge had a character all of its own: it was the day the dam broke. In some cases the exuberance certainly ran a little wild. And indeed on purely economic grounds the boom of all time on the stock exchange might be said to sit slightly oddly with a notable lack of boom over fairly wide sectors of British industry that provide capital goods. Consumption is king, but it has not produced any significant impact yet on investment decisions or order books in the capital goods industries. Because of tax cuts, net profits in British industry have already risen and dividends have been more generous but it is only recently, after a long pause, that gross earnings have begun to rise again; gross trading profits of the 570 companies caught in *The Economist's* analysis for the third quarter of this year (whose accounts run largely to end-March) went up by 4½ per cent from £326 million to £340½ million. Profits and dividends should continue to climb, for production is rising, wages have not yet risen excessively and raw material prices have not bounded ahead. Investors may need a pause to digest their heavy meal since October 8th, but they will not yet be losing their appetite for equities.

The election result released thoughts that had been current for a fair time about a new look for equities, and expressed them in buying orders for hard cash. The relations between British equities and gilt-edged stocks have been changing. Will they stay changed? The average yield offered by the ordinary shares included in *The Economist* indicator has come down to 4.2 per cent; that is three-quarters of one per cent below the yield offered by Old Consols. In pushing down equity yields to this new low level, investors have ushered in a new phase in the history of British investment—a result of long months of reappraisal, in which stock exchanges and investment centres outside Britain were involved. For well over a year, the average yield on Continental and American equities has been running at between 3 to 3½ per cent, well below those offered by government securities. Yields on American common stocks fell below the return on long term government bonds as long ago as August, 1958. Even in the more cautious British market the yield gap was

closed this August, weeks before the date of the election was announced.

But not until the election was out of the way was it absolutely certain that a new era in the British market had dawned. In London as in other capital markets, it has long been clear that equities were no longer so vulnerable to the old cyclical risks, now that any government (whatever its political complexion) is bound to concentrate on maintaining full employment and on preventing the advent of a prolonged trade depression, even at the risk of inflation. Equity stocks were seen as providing not only a hedge against inflation (which no fixed interest money stock can do) but also a participation in the fruits of industrial growth and an advancing standard of living. Of course there is the risk of loss on particular shares and a continued need for sensitive selection. But that risk is now much smaller, perhaps smaller than the risk of monetary depreciation on an investment in gilt-edged stocks. These are principles on which the pensions funds and other institutional investors and private investors have been acting for some time. The difference that the election makes is that their political nightmares, however well or ill founded, have been removed for four or five years and conceivably for much longer than that.

THE immediate gain is obvious: a government which is not inimical towards the City (though it ought to regulate its conduct more rigorously) or towards private capital has come to power with an increased majority. Nationalisation is, on the face of it, out for good; anti-capital and anti-City policies have been decisively rejected. The economic and fiscal conditions for broadening the base of a "share-owning democracy" have been confirmed. There are opportunities now for new and less restrictive regulations governing the conduct of unit trusts and for widening the Trustee Act to give the beneficiaries of trusts the chance to enjoy the advantages of equity investment. Philip Hill, Higginson in launching a new unit trust immediately after the election bought advertising space in the *Daily Mirror* and on commercial television. Both cloth-cap and top-hat investors are outmoded; this looks more like the age of the man in the trilby.

The new government, whatever it does to regulate investment and to reform the Companies Act and the Building Societies Act, will certainly do nothing to fetter it; voluntary or compulsory freezing of dividends is out, and so are discriminatory taxes on capital gains or corporate income. This favourable sun must cast its beams across the boardroom tables. Directors cannot now be inhibited from increasing dividends for fear of the politicians. There is no economic excuse for not raising dividends when earnings rise: taxes have been reduced (presumably it will be the aim of the new government to reduce them further) and now that investment programmes have modernised large sectors of British industry the clamant need to rely upon ploughed-back profits has been much reduced. With the government anxious to preserve the strength of the capital market, there should be opportunities in plenty to raise money on new issues rather than by undue self-financing.

The Markets Analysed

IN the bull market which began at the end of February, 1958, and ran almost without pause up to the election, the industrial equity groups that made the biggest advances included motors, steel, breweries, stores and hire purchase finance. Among the groups that did not really share in the boom were oil, engineering, electrical equipment, paper, shipping, aircraft and shipbuilding. In the upsurge that followed the election the groups scoring the biggest gains were steel, radio and television, building, chemicals, banks and motors. The accompanying table sets out these advances in order of size. All these groups had already before the election made bigger gains than the average. Those which had been in the doldrums before the election remained there. There has thus been no marked change of investment views about the particular merits of individual groups. Investors have stuck to their preference for equities in industries which are closely in touch with the consumer, in which the threat of nationalisation has been removed (steel and ICI) and in which profits and earnings have already begun to pick up. They have remained chary of equities in the capital goods industries except the building trades, which continue to thrive. Production in many industries is still some way below the limits of available capacity and investors are probably right in believing that a construction boom to match the one which set British industry back on its feet after the war is not immediately in the making. In the near future earnings and dividends are likely to rise faster in the consumer trades than in the capital goods industries.

GILT-EDGED

TO many people's surprise, gilt-edged and other fixed interest securities have shared in the sunshine of the past week. Often in the past a concentration of interest on equities has left gilt-edged out in the cold. This week, although movements in prices have been small, there has been a marked revival of demand for gilt-edged, from big institutional holders as well as from small investors. The market has been active and firm. This is itself an encouraging sign for equities, as it shows that their upsurge owes little to investors' fears of inflation.

While few people expect long-term interest rates to fall to any marked extent, many expect them to continue for some time on their existing relatively high plateau. Provided that inflation is kept at bay—and a Conservative government with a larger majority probably improves the prospect here too—these high yields may be attractive to an increasing number of investors. Now that many leading equities are yielding much less (in some cases no more than half) the return on fixed interest securities, more cautious investors and those in need of certain income may find more attraction in gilt-edged and industrial debentures. The reversed yield gap, a proper reflection of the new investment climate, can work in the favour of gilt-edged stocks.

STEEL

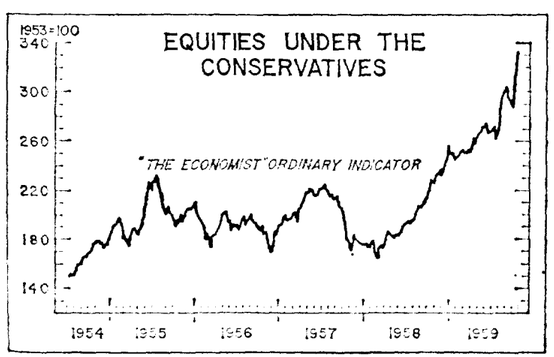
WELL before the election steel shares had been bought in anticipation of a Conservative victory and in the two months or so preceding it dealings in steel options were very heavy. With the Conservative victory ending the threat of nationalisation, these shares involved the biggest adjustments in prices. There were big profits to be taken—and they were taken. But selling was easily absorbed in the rush of buying orders. Dividend yields based on 1957-58 payments have now been brought down to a level comparable with those of leading blue-chips in other industries, but it is earnings yields which have really attracted investors.

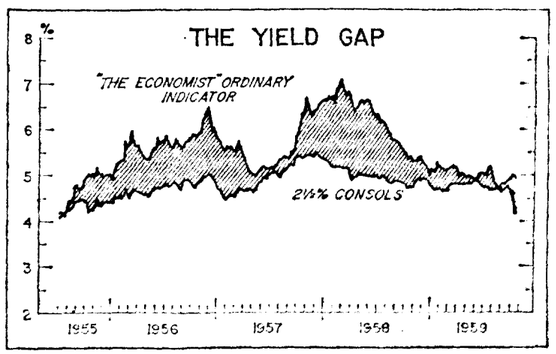
The new season of dividend payments from the steel industry approaches. Though the profit record of the industry will be patchy (with those companies which serve the motor industry, such as Steel of Wales, doing brilliantly and those companies whose fortunes are tied to capital investment doing less well), the earnings cover in practically all the companies is so high that, with the removal of the political threat, there can be far fewer inhibitions in distributing a higher proportion of earnings to shareholders. Shareholders can also expect scrip issues (for issued capital and capital employed in this industry are grossly out of line) and the raising of much new money by rights issues. But there will be limits to steel directors' generosity, for many capital programmes have still to be completed. But the big new fact is the greater freedom to decide whether expansion should be financed from internal resources or by appeals to the capital market.

The Conservative victory also opens up the prospect of the denationalisation of Richard Thomas and Baldwins and raises the question what ISHRA will now do with the mass of debentures and preference shares it owns in the steel companies. And will FCI continue to be a prime source of new finance for the industry?

CAPITAL GOODS

NEITHER before nor after the election were investors especially eager to buy equities in the capital goods industries. The exception was the **building** group (which had already enjoyed a good rise) and where the industry is currently earning good profits. **Machine tools**, which before the election had been rising quite sturdily, did not fully share in the upsurge that followed it: the flow of orders to the industry has still to develop. The **general engineering** group came into slightly more favour than it enjoyed before the election, but this seems simply to represent an awareness of the interests that some of the leading companies, such as GKN, have in steel. **Electrical equipment** manufacturers have been earning good profits on consumer durables, but their margins on items of capital equipment have not improved and the big groups are making losses on their atomic power contracts. Profits in **shipbuilding**, once the present order books are worked off





(and that will be quite soon), will almost certainly fall and another boom in shipbuilding seems a long way off. Equities in this industry did not share in the advance either before or after the election. Nor did **aircraft** shares, where the individual choice must turn on the timing of orders and upon the degree to which diversification has been successfully accomplished. As a whole, these shares seem likely to stay out of favour.

CONSUMER GOODS

THIS is the section, apart from steel shares, where much of the weight of buying was concentrated. In particular, **radio and television** shares made a strong advance after the election; this, in part, is the result of American buying of electronic stocks and of such shares as EMI. All the industries making durable consumer goods have been doing well and profits seem certain to improve. These are fashionable stocks and the danger is that they may become too fashionable. **Motor** shares, which scored the biggest advance of all before the election, remained popular. The results to be announced in the next few weeks will certainly show bigger earnings and higher dividends. Profits should remain high in the months to come. A good deal, however, has already been discounted in current prices, especially as the introduction of new models both in this country and the United States seems to point to a more competitive phase. **Chemical** shares, and in particular ICI, were active and strong after the election, with investors following the lead that the recent batch of good half-yearly reports gave. **Paper** shares, with a surplus of capacity still persisting in the industry, did not win any sharp gain in popularity, for competition remains intense and margins show no sign of expanding. If output, however, does rise, some of the equities in the industry, because they are so highly geared, should benefit—as the recent rise in Bowater Paper suggests.

Some gains were recorded among **cotton** shares. With their high yields (currently covered only thinly by earnings) these are the obvious "mixers" for a portfolio, and their prospects have been changed for the better by the government's reorganisation scheme. The equities of department, chain and multiple **stores** were equally prominent—as, indeed, they had been before the election. This section of the market has always had its "growth stocks" and there seems no reason to reverse the belief that the big units are more attractive than the small ones and the multiple stores more attractive than the department stores. **Brewery** shares, largely as a result of mergers and talk of mergers, had already enjoyed a strong rise. They were marked up quite sharply after the election, with perhaps too little heed being given to the highly competitive nature of the trade.

FINANCE

SHARES of **hire purchase** finance houses have throughout been in the van of the bull market. They received a further post-election boost, carrying them to still dizzier heights. **United Dominions Trust** has risen by nearly threefold since the beginning of 1958, Bowmaker and Mercantile Credit more than fivefold. There have been signs recently of growing competition for business, and service charges have come under pressure. After their remarkable rise, some pause in HP shares would not be surprising—though it must be admitted that practicaly everyone has underestimated their potential hitherto.

Bank shares have figured prominently in the boom, and have consolidated their status as true equities rather than money stocks. But there is still room for debate whether they should be regarded as growth stocks. Notwithstanding the latest round of increased dividends and generous rights issues, there are potent influences tending to keep down the banks' distributions. As businesses, they often find it difficult to look primarily to profit rather than to public service (though such facilities as personal loans meet both tests); and they are not really dependent for expansion on the raising of new capital, so that they are not subject to a direct pressure to raise dividends. At the same time, the recent tendency has been for bank directors to give more attention to their shareholders.

Insurance shares did not really catch the eye of investors until the spring. They then began to move up rapidly, partly on the prospect of growth and of the beginning of the end of the underwriting troubles in North America and partly on the prospect of mergers. They have big capital gains on their equity portfolios (with a consequent benefit to their inner reserves) and the way is open for a growth in income from their equity investments. If equity prices rise, insurance shares should follow.

The cloud that hung over **property** shares was that a Labour government would reintroduce crippling and restrictive legislation on rent control. But yields on property shares are low and it is questionable if the recent pace of property development can be maintained. It is the established companies, administering large blocks of residential property, which may offer growth with safety—but without the fireworks.

GOLD AND COMMODITIES

IF the Labour party had come to power, among the obvious escape routes for private capital would have been Kaffir shares and, to a lesser extent, oil and commodity shares. With the pull of industrial equities so strong, it is difficult to believe that **Kaffir** shares will enjoy the popularity they have had over the last fifteen months or so, or that they will go on rising at the same pace. The Kaffir market may now become more sedate, but with income and dividends from the new mines rising a prolonged bear market does not seem to be in prospect.

Oil is still in surplus and **oil** shares, in which prices are much influenced by the decisions of overseas investors, did not rise all that sharply. Earnings by the giants of the industry will be higher than they were last year (not least because costs have been cut back), but that does not point automatically to bigger dividends.

It will require quite a marked expansion to bring colour back to the cheeks of **shipping** shares. The slump still persists. Where, however, the earnings and asset backing is strong, as it is in P & O or United Molasses, the outlook for the long run is inviting.

Such commodity shares as **rubber** and **tin** have, because of the rise in the price of the commodity, already attracted investors. Current earnings are higher than they were and the yields offered by such shares are high when compared with those on industrial equities and as income stocks (though with the risks of capital losses) they may still prove to be attractive.

Comparative Growth

THE investor who buys an equity with a current yield of 3 per cent in preference to a fixed-interest stock yielding 5 per cent is making an implicit assumption that future growth will more than outweigh immediate loss of income. If his equity dividend return is stepped up steadily to 4 per cent (on his original investment) in the second year, 5 per cent in the third, and so on—and that would be a very good performance indeed—his cumulative investment income will need five years to catch up with the fixed 5 per cent return on a gilt-edged stock. He will then be earning 7 per cent on his original equity investment. If one takes instead a fixed-interest stock of 6 per cent yield, equities on the same growth prospects would need seven years to catch up—and proportionately longer on less ambitious assumptions.

At the break-even point, however, the market value of the equity holding would have appreciated in line with the increase in the return (though in practice market value may not double once the dividend has doubled because investors might by then be discounting less further growth). The institutional investor who re-invests his earnings will therefore face a constantly rising market in equities; the break-even point here comes after six years with gilt-edged at 5 per cent and eight years with gilt-edged at 6 per cent.

CUMULATIVE INCOME FROM

	Ordinary Share Yielding 3%	Fixed Interest Stock Yielding	
ASSUMING rise in yield by 1% on original investment each year		5%	6%

,, VIII	52 (58·52)	40 (47·75)	48 (59·39)

(Figures in brackets show accumulated income with full reinvestment.)

In smiling benevolently upon private enterprise, will the Conservative government really let competition bite? Will it still be protectively paternal to industries which are declining? Its subsidies, after all, failed to win it votes in Lancashire or on Clydeside. Will it be quite so hesitant in its attitude towards freer international trade? If it is pusillanimous, the task of selection in investment is made less worrying. If it is courageous, the investor will have to become more wary in selecting the stocks to put in his portfolio. At any rate a firm start has been made with the Restrictive Trade Practices Court and the free trade area of the Outer Seven would itself involve some British industries in tougher trading. The sensible investor must be prepared for more competitive conditions than existed for some years after the war. He must expect more mergers in British industry, and realise that the bigger units will be stronger and their shares more attractive. And he must always reflect that an economy geared to satisfying the growing wants of consumers may permanently tip the balance of investment attraction away from the manufacturer and towards the distributor.

But it is not simply the assurance of five years' rule by the Conservatives which has brought summer to the hearts of businessmen and shareholders. The debate on how the Labour party has to reshape its programme has already begun. It should go much further than the burial of steel nationalisation or nationalisation of selected victims by the backdoor. The lesson of the election is surely that an alternative Government cannot hoist itself into power by policies that are designed to alter wholesale the character of the British economy. New policies in the future must rest on reform and not on remaking. It now becomes possible for even the radically-minded to contemplate the likelihood of a prolonged period less hostile to private enterprise and equity capitalism.

EQUITY prices, even apart from the possibility of inflation, seem set to rise further. On occasions, that rise will certainly be checked, but if the bogey of the trade cycle has been laid—though no investor should be too complacent about this—the trend cannot be gainsaid. British investors, as investors overseas have already done, will have to accept lower dividend and earnings yields than those to which they have been accustomed in the past. Their habitual caution may prevent them from discounting earnings quite as far ahead as investors do on Wall Street—and there recent experience shows that caution is better than running ahead too fast. The British stock market, moreover, does not yet command the volume of investment support for equity stocks that Wall Street does; even with the Conservatives back in the saddle, economic and social attitudes in this country may remain less favourable to investment than those in the United States.

How far yields on British equities will be brought down towards the levels prevailing abroad will also depend on the willingness of overseas buyers, now that the political hazards have been diminished, to take these stocks into their portfolios. There has been a little Continental and American buying this week, but the extent to which it contributed to the sudden spurt in prices has been small. At current prices and allowing for the weight of British tax, yields on British equities are still attractive by overseas standards. Undoubtedly, overseas investors will gradually come forward and buy, though the big withholding tax will remain a deterrent to buying stocks with very low yields. (The attraction of a British yield to an American is, for instance, less than it nominally seems because British yields are calculated on gross dividend rates, while American yields are calculated on dividends net of corporate taxes.) Since October 8th Throgmorton Street has taken its rightful place among the capital markets of the world: in the short-term, that will bring support to prices; in the long term it points to a livelier—and more volatile—market. Dealers on the London market will have to adjust their thinking to a continuing overseas interest in British securities, just as they will have to think hard about the ways of attracting savings from domestic sources and income levels that they have hardly bothered to tap in the past.

DEALERS and investors alike will also have to grow used to the idea that normally leading equities will yield less than long-term government stocks. With the election out of the way, the Bank rate board will again have to be watched, though there seems to be no reason for a change in the rate either way at the moment. Economic recovery has not spilled over into a runaway boom and it is unlikely to do so unless capital investment picks up very sharply. And, so far, the rise in interest rates in New York has had no really embarrassing effects in London. What investors might now look at more closely are the operations of the authorities at the long end of the gilt-edged market. They might then catch a glimpse of the government's attitude towards long term rates. There is much scope for funding local authority debt, and overseas governments as well as the British government will rely on the long-term market for a good part of their needs. The assumption must be that funding will be accomplished only at reasonably attractive rates. But obviously a point may come where gilt-edged yields could exert a positive counter-attraction to equities—and some institutions must already be wondering whether, on their non-participating insurance business at any rate, the balance is not now swinging in favour of long-term gilt-edged stocks.

Some comparisons bearing on this crucial point are given opposite. Investors were worrying before October 8th when the gap between equity yields and gilt-edged yields had closed; now equity yields are well below those of gilt-edged and they must be worrying even more with each widening of the gap. A new psychological barrier will come, though just where it will check the market still remains unknown. But if, say, the yield on Old Consols was more than a full point above the average yield of leading blue chip equities (and this, after all, is an average yield, with about half the stocks actually yielding less) then investors ought to give thought to the pace at which equity prices are advancing. There is complete consistency, therefore, between the distinctly firmer note in the gilt-edged market and the pause that has now come over the ordinary share market. The fact that good equities are worth holding and adding to is no guarantee that some of them may not occasionally be pushed too high.

BUSINESS NOTES

THE ECONOMY

Optimism Before the Euphoria

WHEN an election date was announced that meant the Federation of British Industries would be sampling its members' confidence in prospects for the economy during the fortnight before the electorate went to the poll, the FBI did consider either advancing its survey a few weeks or postponing it, but it decided not to. Answers to its questionnaire, in fact, were being received right up to polling day. It is anybody's conjecture, therefore, whether hopes or fears have coloured the sample of manufacturers' replies that the FBI published this week to the one question that shows their outlook for the immediate future—whether they feel more or less optimistic about the general business situation in Britain than they did four months ago.

Election or not, they certainly did feel more optimistic already. There were still 46 per cent who felt about the same; but of those whose confidence had altered, the overwhelming majority thought the business situation was looking better. Half of them were working to "a satisfactorily full rate" of capacity again, and of those still below capacity, far more said they had less unused capacity than four months ago than said that they had more of their plant idle.

This shift towards the "Ups" is marked all the way through these 717 manufacturers' answers to the FBI questionnaire. Answers about output and home deliveries show an absolute majority of the businessmen reporting increases; export deliveries on balance sound to have increased, though perhaps less markedly. The rate of new orders looks to have improved from home and from abroad; for a large proportion of the sample these have led to a lengthening in their total order-books, so that orders will have been coming in at a higher rate than deliveries work off the outstanding business. Fairly high proportions report, too, that over the last four months they have been taking on more labour and the hours their labour force works have gone up: this fits in with a preponderance of feeling, among those who distinguish a change, that the labour market is less easy than it was in the early summer. (This did not seem to have tempered their optimism.)

For the first time since these surveys began in early 1958 there was a small preponderance, among manufacturers reporting a change, of those whose stocks of raw materials had gone up. Work in progress seemed to have changed, as would be expected, in line with output; where stocks of finished goods have altered, the balance seems to be downward. These answers are consistent with a more rapid recovery in industry than anyone would confidently have forecast. The answer on raw materials may well be significant. One development in which politics might reasonably be expected to add a touch of emphasis to industry's confident forward look at the economy might be in buying for stock; if so, rebuilding of inventories may well, over the next few months, add speed to the boom.

But Investment still lags

BUT these manufacturers do not offer much joy to the anxious analysts who are looking for that first sign that private industry is beginning to increase its investment again. There is, it is true, a slight preponderance who reckon that they may spend more on plant and machinery in the next twelve months than they did in the last; but the balance is still the other way where placing contracts for industrial buildings is concerned. As the FBI says, "The point has not yet been reached at which there is widespread planning of new capacity." Given the quite substantial number of firms still working below capacity, after a manufacturing investment boom of unprecedented size, there is no logical reason why there should be such widespread planning to expand; what one might be looking for is continued re-equipment with cost-saving in mind, and the still high rate of net investment in manufacturing may imply that this is already happening.

When the preponderance of answers to these questionnaires was "Down," the FBI found that larger firms were more pessimistic than smaller; now the larger firms are increasing output more generally. As between industries the engineering and vehicles group lead the increase in output, while food, drink and tobacco, which have always been more stable, show the lowest increases.

When the FBI's survey last appeared, it was suggested in these columns that it might be worth finding out whether the always substantial number of companies who say that their experience is the same as before tended to be the same firms over and over again—something analogous to a group of permanent "Don't Knows." With abounding patience and flattering courtesy to an ever-carping critic, the FBI has found out; the answer is No, the companies are not the same ones. By looking into answers about output in three inquiries, it was found that 237 companies had reported "Same" on one occasion; 128 on two occasions; and 50 had reported the same on three occasions. Among these 50, there were only eight—little more now than one per cent of the sample—that had said things were the same on all five previous inquiries. The apparently stable percentage of "Sames," therefore, consists of an entirely floating population; the stability is the resultant of normally fluctuating companies who over different, particular periods of four months happen not to have had a change in their output, rather than any solid core of unchanging industry.

MAXIMUM PROTECTION...

for a man's family in the form of capital and income.

MINIMUM COST...

by combining two different contracts in one composite policy. For as little as £2 9s. 3d. per month, a man at age 30 can secure for his dependants a capital sum of £1,000 and, in addition, a maximum income benefit at the outset to the value of £9,000, payable in annual instalments of £300. Full particulars of this Family Protection Scheme and other examples of outstanding value in life assurance will be sent on request.

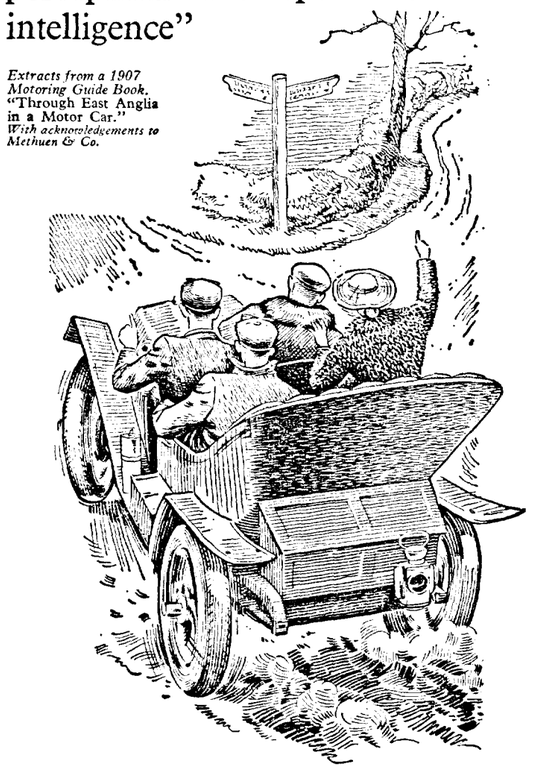
"... motor-cars sharpen the perceptions and spur the intelligence"

Extracts from a 1907 Motoring Guide Book. "Through East Anglia in a Motor Car." *With acknowledgements to Methuen & Co.*



"Which road?" the charioteer would cry - when we were from fifty to seventy yards from a fork or a turn, and hesitation would often be visible in the reply, so that it was necessary to slow down and sometimes, having invaded the wrong road, to back out again. This is not criticism, it is rather a matter of observation and experience. Only recently have the minds of driving and driven men been called upon to excercise their judgement, to choose a line, as a fox-hunter might say, while they are being carried through space much more rapidly than of yore, and the pace puzzles them at first. You are past a familiar turning in a car in less time than is consumed over approaching it in a dog-cart or on horse-back, and the aspect of the turning itself has something strange about it; but you grow accustomed to the new conditions with experience. In fact, motorcars sharpen the perceptions and spur the intelligence.

• Over 150 depots throughout the country represent the contribution to the maintenance of road transport by the Kenning Motor Group—identified by the Kenning Shield, a guarantee of an efficient service.

OVER 150 DEPOTS THROUGHOUT THE COUNTRY

FOREIGN EXCHANGE

Green Light for Sterling

STERLING as well as the stock market enjoyed its election boost. This, plainly, is a time for a further (and as some observers urge, a final) step in freeing the pound. The chief remaining restrictions are on the acquisition of foreign exchange by British residents. Strict regulations remain on transfers of capital; and the personal tourist allowance remains at £100 a year. A decision here is, in any case, due shortly, since the new allowance period runs from November. There will be wide and justifiable disappointment if the general allowance is not raised to at least £250. This has long been allowed for spending in Scandinavia, a concession that has lost all its logic. It should now be made general. Another overdue freeing is of imports from the dollar area. Britain should lose no time in ending discrimination and indeed in freeing virtually all its imports from quantitative restrictions.

In the exchange markets the Tory victory was largely anticipated beforehand, and subsequent buying of sterling was steady rather than massive. The really remarkable thing was how well sterling stood up on the eve of the election. Yet the post-election demand has been strong enough to enable the Bank of England to take in gold and dollars to add to the reserves. The rate on New York touched $2.81, though in mid-week it wilted a little. Rates improved on the Continental centres, and especially Zurich, where the pound strengthened from 12.14 to 12.19.

The Swiss were cautious to commit themselves before the result was known, and some dealers remained short of sterling to meet commercial payments. These positions have been covered this week. At the same time there has been increased buying of London securities. Among the purchasers has been Anglo-Valor, the new unit trust sponsored by two of the big Swiss banks for investment in British and Commonwealth securities. Finally, some demand for sterling as well as other foreign currencies has resulted from the recent spate of foreign issues in Switzerland, most of which are spent outside the country.

German investors appear to have been more prepared to back their judgment of the election outcome and were buyers in Throgmorton Street well before polling day. This week signs of increasing activity have been hard to detect, either in London or Frankfurt, and sterling has hardened only modestly against the D-mark. But given the return of what will be seen from Frankfurt as a business man's administration, the range of demand for British shares will surely widen; many institutions will take some time before their formalities are completed to give effect to this new demand. But German investors and others on the Continent will also be watching the height of London share prices, having recently seen their own prices boil over.

FROM WALL STREET

Reactions to the Election

A Correspondent cables from Wall Street:

SINCE the last minute on Election Day, there has been net selling of British securities on the New York market. Brokers there insist that it was Continental, not American, investors who put in buying orders for British equities on Friday. The principal sellers were dealing firms who were trading on their own account. The institutional investors who bought British steel shares some months ago are holding on to them. Even some of the speculators who took a short-term political gamble have not sold out—as yet.

With Wall Street in the doldrums, British equities still look attractive but interest in them has still to be translated into hard buying orders. Eventually, however, some of the attention previously bestowed upon German and other Continental issues is expected to turn towards British securities. The weight of British tax remains the principal deterrent. In addition, some of the institutions are wondering whether large enough blocks of shares can be traded on Throgmorton Street, and since they are used to a mass of information from the annual and quarterly reports of American companies, they complain of a relative lack of equivalent information about British concerns.

★

From London one is tempted to add that information on Continental companies is usually less than that provided by their British counterparts and on occasions meagre and even misleading. There is certainly plenty of room for improvement in British company statistics (and the revision of the Companies Act will provide an opportunity for bringing that improvement about); equally, American brokers have to get down to a more serious and more searching analysis of British company accounts (which are not all that uninformative) than they have bothered to do up to now.

STEEL

Back Towards Capacity

STEEL output last month was within 3 per cent of the level reached in September 1957, which was the highest on record for that month; but its now accelerating recovery has not saved it from the first complaints of shortage from consumers whose demand has risen even faster. Demand for sheet steel hardly slackened throughout the eighteen months of steel recession, as motors and other consumer durables fared better than the capital goods industries; and these industries have moved, since the spring, into boom. The motor manufacturers have been importing quite large quantities of sheet—Vauxhall, for example, was relying on imports for about half its consumption this year. But the American steel strike has cut off supplies from the world's readiest supplier of flat steel; and teething troubles with new plant at the British strip mills has made it impossible to bring in extra capacity as fast as was hoped. Hence this week's announcement that Vauxhall was having to suspend Saturday working because of arrears in steel deliveries, followed by complaints of difficulties, though less severe, from other car manufacturers.

Period	'000 tons	Per cent change over 1957	Per cent change over 1958
STEEL			
1st qtr., 1959	4,631	−16·3	−15·4
2nd " "	5,030	−10·4	− 0·4
3rd " "	4,761	− 5·9	+12·0
PIG IRON			
1st qtr., 1959	2,908	−16·0	−17·3
2nd " "	3,063	−15·5	− 5·9
3rd " "	3,020	−14·6	+ 2·6

In September the industry produced 426,400 ingot tons of steel a week; this made production in the third quarter 12 per cent higher than in the third quarter of 1958 but still 6 per cent lower than in the third quarter of 1957. Pig iron output has recovered much less; the scrap ratio in steelmaking has gone up in recent months. The September rate, which would represent more than 22 million tons a year, means that the industry must be operating only about 10 per cent below capacity. Indications so far do not suggest that in the third quarter, on balance, steel consumers had yet begun to rebuild their stocks; however, a proportion of consumers must be doing so. The balance is heavily tipped by a few consumers of very large quantities whose holdings of steel, last year, were found to be extraordinarily high.

AIR FARES

Time for Second Thoughts

FOR the wider interests of air transport, the fare negotiations at Honolulu that ended last week were little short of disastrous. Airlines that wanted to extend the successful North Atlantic third-class fares to other routes met with blank refusal. The British Overseas Airways Corporation has retired in dudgeon, muttering darkly about "consulting with the British Government" over the prospect of cutting fares unilaterally inside those British territories where the writ of the International Air Transport Association does not run but many other international airlines do. BOAC's usually vocal partner in the move to cut air fares, Pan American, seems temporarily stunned into silence. The international airlines as a block have set their faces squarely against fare reductions and have ridden roughshod over the minority who want to pass on some of the advantages of their new equipment to their

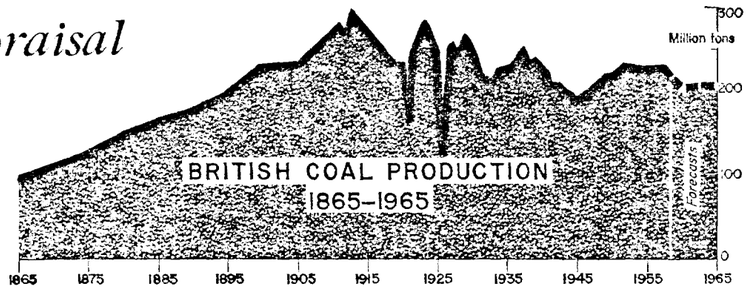
Agonising Reappraisal for Coal

The Board's duty is to make available the coal that the country needs and they must therefore seek to maintain sufficient capacity to meet a demand for coal compatible with the Government's estimate, making reasonable assumptions about the contribution to be made by forms of fuel and power other than coal.

REVISED PLAN FOR COAL



IN spring 1957 Mr Reginald Maudling committed the Ministry of Power to an estimate that by 1965 Britain would need the equivalent of 301 million tons of coal, of which some 223 million tons would actually be coal, which with 14-17 million tons of coal exports and bunkers would use up the 240 million tons that the National Coal Board hoped it would be able to produce.

In July this year Mr Maudling repeated his estimate of "300 million tons as a rough figure for the total energy demand in the middle sixties," though recognising that would require very rapid expansion in industry from now until then. Even Mr Maudling's total figure was thus hedged as to timing (would the Ministry's experts, at any rate, now put 1965 demand so high?). But there was a more significant difference. "The amount which the coal industry will secure will depend on its competitive position." In revising the long-term investment plan which it issued in its third version this week, the Coal Board could obtain no advice from the Ministry of Power about the amount of coal it might be expected to produce and sell. It was on its own, as eventually any competitive business has to be.

On its own, the Board has now revised its guess at the amount of coal it may be able to sell in six years' time: its figure, 190-205 million tons at home and up to 10 million tons abroad, "corresponds reasonably well," it says, with the Government's estimate of total fuel demand. This compares with its original estimates in 1949 that by 1961-65 inland demand might rise to 205-215 million tons with 25-35 million tons of exports; and with the colder calculation in 1956 that whatever demand might be, the best the industry would be able to produce by 1965 would be 230 million tons of coal from deep mines and 10 million tons from opencast.

The Board published its revised figures, in outline, some weeks ago; its *Revised Plan for Coal* this week fills in some of the details. From what it presents as a cold-blooded look at future demand, aided by the best guesses its biggest consumers can now offer, it sets out the demand estimate in more detail.

	Demand in 1958	*Estimate for 1965*
Coke ovens	29·0	35·0
Electricity	46·2	55·0
Gas	24·8	21·5
Railways	10·4	6·0
Miners' coal and collieries	11·6	8·0
Domestic	31·7	27·0
All other inland	49·2	43·5
Total inland	202·9	196·0
Exports	4·8	10·0
Total	207·7	206·0

IN deciding how to produce this much coal, the Board has taken into account four criteria:

1. The types and qualities of coal required;
2. The way to produce these at the lowest delivered cost to the consumer at a fair return on production costs;
3. That proved reserves should not be abandoned without good reason, nor money spent on new capacity without a clear need and the promise of a useful return; and
4. That changes in sources of supply should be regulated so as to mitigate the social consequences.

The third and fourth criteria, it argues, are "in the national interest." The fourth, most clearly, may operate against the second criterion of cost; the board has not revealed how much it has in fact done so in deciding where the coal should be got.

This social criterion has overcome the economic most obviously in opencast, which is to be cut back to 2 million tons a year by 1965 (it was 14 million tons last year). Costs in opencast are lower, and profits higher; but the board is forgoing it "to minimise the effects upon the miners and their families of the need to reduce production." As it is, the reduction in the planned output from the deep mines is expected to reduce manpower from its present 652,000 to 587,000-626,000. This is not as fast a rate of rundown as over the last 12 months; but it too will be concentrated in particular areas, as the areas of efficient mining from new pits and major reconstructions account for more of total coal output. Much of the planned decline can be taken care of by "natural wastage" as men retire and leave the pits; but there will clearly be some redundancy.

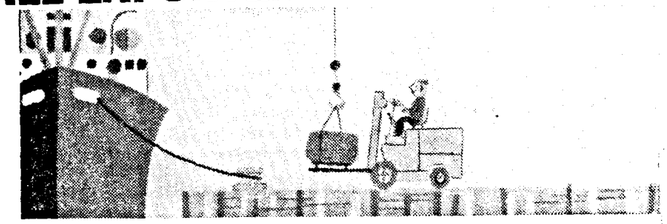
Apart from opencast the pattern of output is not radically changed. The Board expects that by 1956 about 10 million tons more will be consumed in the North Midlands, and about 7½ million tons less will need to come to London and the South. As to production, the Northern, Durham, and North Western divisions will produce less than in 1958; Scotland about the same; and the North-Eastern, East Midlands, West Midlands and South Western divisions will produce more. From 1960 to 1965, about 120 collieries will close as their reserves become exhausted; 20 others, where labour has been kept working as a reservoir for new and reconstructed pits nearby, will go; about 30 collieries will merge with others; and 35 to 70 other uneconomic collieries, depending on demand, will have to be closed because of the poor quality of their coal or because of high costs and heavy losses.

IN capital expenditure, the Board's revisions offer some reductions on the 1956 estimate of £1,000 million between 1956 and 1965; but the rise in prices since 1955, when that estimate was made, have blotted out some of the money saving. Against £1,000 million at 1955 prices, it reckons that (at 1955 prices) it would spend over the period £825 million; but in actual money so far, and reckoning the rest at 1959 prices, its bill will come to perhaps £920 million. From 1960 to 1965 it will spend about another £440 million on colliery development, of which £200 million will be on major schemes now in progress, and £173 million for minor mechanisation and replacement schemes.

Its bill also allots £67 million for capital expenditure on 90 new major schemes to be started between 1960 and 1965; these, due for completion after the end of the period, will later cost another £23 million. The Board is venturing no estimates whatever about demand beyond 1965 (and who would blame it?) Many questions of policy for the next Minister of Power are posed by this plan. But fuel policy in this country will no doubt remain based upon free competition, growing not much less stiff. Whether the Coal Board, over the next five years, should begin spending heavily on major schemes to reinforce the capacity that it will possess by the mid-sixties seems perhaps the biggest question posed by this plan.

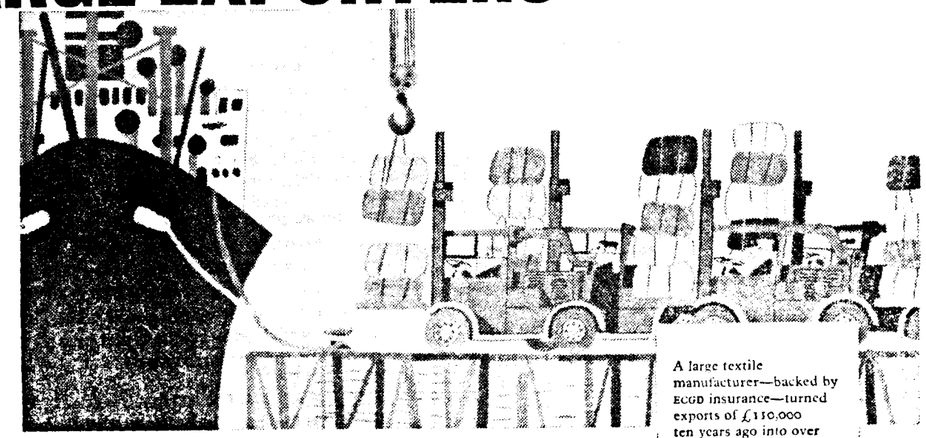
THE ECONOMIST OCTOBER 17, 1959

SMALL EXPORTERS



In their first year of ECGD insurance, a firm making sealing compounds did £1,500 worth of business with France.
Five years later they had 33 markets and a turnover approaching £125,000.

LARGE EXPORTERS



A large textile manufacturer—backed by ECGD insurance—turned exports of £110,000 ten years ago into over £460,000 last year.

There's money—big money—to be made in the export markets. But a few bad debts could bring serious financial loss. With ECGD insurance you can develop and expand overseas free from financial worries. If you're big already, there's still room for expansion. Last year fifteen companies with export turnovers of a *million pounds and more* took out ECGD insurance for the first time. Have a talk with *your* ECGD man.

EXPORT AND EXPAND THROUGH E·C·G·D

ECGD is a Government Department set up to help exporters. Its services are fully explained in the booklet 'Payment Secured'. Write for a free copy.

extensible

EMIDEC-

the computer that grows with your needs

IT CAN BE LESS EXPENSIVE THAN YOU THINK to install a computer, if it is an EMIDEC 1100 – the extensible Data Processing System that grows with your needs. Centred around certain basic equipment, the EMIDEC can be easily extended, by the addition of further units, to handle larger volumes of work and jobs of increased complexity.

EFFICIENT BUDGETARY CONTROL can only be obtained through a modern computer. EMIDEC 1100, the first machine specifically designed for business use, meets the needs of progressive companies of all sizes. You choose only the equipment you can afford and can keep busy – EMIDEC will grow *with* your business and into your business, smoothly and economically.

THE LATEST TECHNICAL FEATURES are incorporated in the EMIDEC 1100 – the only British built all-transistor computer. With an EMIDEC 1100 your initial expenditure can be surprisingly modest, and full utilisation is ensured at all stages. An EMIDEC hiring scheme, on attractive terms, is available as an alternative to outright purchase.

Leading organisations which have chosen EMIDEC include: Air Ministry · Barclays Bank · BEA · Boots B.M.C. · Glaxo · ICI · Kodak · R.A.O.C. · Sainsbury's Ministry of Labour

customers and incidentally to fill their aircraft.

This makes the jumble of concessions allowed to British European Airways all the more remarkable, but it is doubtful how many airlines realise precisely what BEA is doing. The corporation went to the meeting asking, like BOAC and Pan-American, for a flat cut in rates across its routes, but saying at the same time that it did not expect to get these approved. It then put forward an extremely complex series of proposals for piecemeal cuts on different routes at odd times of the day and week. The modern student of Bradshaw can now choose among as many as eight different fares on some of BEA's busiest routes, depending on what class of travel, what time of the day, the week and the year he chooses and how long he stays away. The fare concessions range from 12 to 25 per cent below the "standard" tourist fare and are much the same as those which have been available through travel agents for some time to those who buy a packaged holiday—although not all the purchasers have been aware of the fact.

What BEA won at Honolulu was permission to sell these cheap fares direct to the public. By Trojan horse tactics BEA is undermining the relatively high "standard" fare structure inside Europe. The long-range airlines have no scope for this kind of manœuvre, and BOAC's object in threatening government intervention was to create an atmosphere in which the long-range carriers might be willing to hold a second meeting to discuss fare cuts before next April, when the new fare year begins. A carefully worded statement from IATA which describes the Honolulu meeting as "adjourned" after "reaching only partial agreement" seems to have been drafted with this in mind.

RAIL FARES

Rumoured Increases

It is almost a year since the British Transport Commission first lodged with the Transport Tribunal a scheme giving it greater "headroom" to increase passenger charges on train and London Transport services. In July—after some revisions had been made to the original plan—the Tribunal gave its assent to proposed increases in maximum fares from 2d. to 3d. a mile second class and 3d. to 4½d. first class, and to higher maximum season ticket rates. At that time the Commission stated that it would make no use of its new freedom to try to pay its way until "the end of the summer." It has been a long summer; and this week considerable speculation appeared in London newspapers—with remarkable simultaneity—as to the exact nature of the increases planned. It is believed that the higher fares will come into effect near the beginning of November.

The Commission has said that it does not intend to raise all fares by the maximum amount possible at once; rather, it will make selective increases where competitive conditions warrant. It is thought that, besides raising basic rates, the Commission will attempt to overcome its peak-hour traffic problems by introducing a "two-tier" fares structure that would levy a surcharge on season ticket holders who travel during peak hours—or, as Sir Reginald Wilson put it when testifying before the Tribunal, "give a lower fare to the off-peak traveller." It is difficult to tell just how effective a change of this kind will be in inducing season ticket holders to travel by train outside peak traffic hours. As the Commission is aware, too great an increase might simply result in making some more of these passengers—who are mainly commuters with relatively little freedom in the times at which they must travel—go to work by car instead.

It is also rumoured that a five-day season ticket will be introduced, presumably to supplement the present weekly one; this would soften the blow as far as most commuters are concerned, since few of them come to town regularly at weekends anyway, and hence do not now buy a weekly ticket unless it is cheaper than five return journeys. But if this five-day season ticket is to be surcharged during peak hours, it will surely have to be much cheaper than five return tickets. If not, the peak-hour problem may go unsolved—unless ordinary single and return tickets are surcharged as well.

THE JASPER AFFAIR

Mr Grunwald Arrested

With the arrest of Mr Grunwald any further comment on the Jasper affair is ruled out while the matter remains *sub judice*. Mr Friedrich Grunwald, the managing director of many companies in the Jasper group, was arrested last Friday as he left the chambers of Mr Neville Faulks, QC, who is holding the Board of Trade's inquiry into the affairs of H. Jasper and Company. On Saturday at Guildhall, London, he was remanded on £40,000 bail on the charge:

> that he on July 30 at 72 Lombard Street, being entrusted with certain property, to wit 32 cheques to the value of £3,255,500, in order that he might apply the same for the purpose of taking up certain mortgages on properties of 161 certain companies for and on account of the State Building Society, unlawfully and fraudulently did convert the proceeds of the said cheques to his own use and benefit.

While Mr Grunwald was at the court, over 2,000 shareholders of the State Building Society had gathered inside and outside Church House, Westminster, for the special meeting. As Mr Grunwald had been arrested, Mr Murray, the managing director and secretary of the State Building Society, said that it would not be possible to make any statement at the meeting. In fact, he hoped and expected the meeting to be a short one.

The shareholders thought otherwise and the main meeting and an "overflow" meeting lasted well over two hours. At these noisy meetings—at one stage a policeman was called in—both Mr Noel Cow, the chairman, and Mr David Freeman, a solicitor acting for the Jasper group, tried to reassure shareholders. Mr Freeman declared that "negotiations are in progress which may result in the payment of the moneys to the society." Mr Cow was hopeful that "quite a bit" of the £3¼ million could be recovered and he argued that in any event 80 per cent of the shareholders' money was safe. This week there have been rather imprecise rumours in the City of new moves by a group of "influential people" to help the State Building Society in its attempts to recover, or make good, the £3¼ million it lent.

INSURANCE

General Accident Pays More

Insurance shares still enjoy the sun of investors' favour and this week the advance in their prices was stimulated by the news of a bigger dividend from General Accident Fire and Life Assurance. In announcing a one for five rights issue, at a price still to be fixed, on the ordinary capital of £4½ million in 5s. units, the directors raised the interim dividend from 6d. to 9d. a share and indicated that the final dividend, for which the new shares will rank, will be 1s. 3d. The total payment will thus be raised from 1s. 4½d. (or 27½ per cent) to 2s. (or 40 per cent) and the directors hope to maintain this rate in 1960.

The new capital is required because of the rapid growth of business (in which the increase in premium income has easily outstripped the increase in free reserves) which this non-tariff company has achieved since 1954, and the increased dividend has been prompted by an improvement in trading experience. Last year, General Accident, along with many British insurance companies, made a loss on its underwriting business in the United States and presumably the recent improvement in that market as well as a further growth in business elsewhere explains the bigger payment.

UNIT TRUSTS

Odd Man Out

With the election out of the way and personal savings probably at record levels the unit trusts have been presented with a golden opportunity to expand. The announcement that after nine months of

iscussion an association of unit trust anagers has been formed has therefore o be welcomed. But it must be a matter or regret that the oldest of the unit trust groups, the Municipal and General has iot found itself able to join with other nanagements in what at the moment seems o be no more than a loosely-knit associaion. No rules have so far been drawn up and until they are the chairman of the M & G group, Mr Ian Fairbairn, sees no real point in an association.

But the eleven other unit trust groups in the country think that the association, which will be under the chairmanship of Sir Oscar Hobson, will be able to negotiate more effectively with the Board of Trade about new regulations for the unit trusts. These regulations are now under active revision and further discussions about them will be the first task of the new association. Its other stated aims are to act as a consulting body among its members and to agree upon standards of practice; to act as the representative body of the unit trust movement; and to act in cooperation with other bodies—such as the association of investment trusts—in regard to investment protection.

The association is clearly a step in the right direction. But it is still a limited step. The major differences within the movement, as, for instance, on the subject of agents and principals, have still to be resolved. The block offer, too, has also been under fire from the more conservative managers, although it has proved itself to be an effective way of bringing a new offer, before the investing public.

Newcomer to the Market

IMMEDIATELY after the election, Philip Hill, Higginson, Erlangers, the merchant bankers, launched the British Shareholders International Trust with the help of the most extensive publicity ever employed by a unit trust. Under a recent re-interpretation of the Television Act's regulations relating to financial advertising, commercial television was used for the first time to bring the trust's block offer before the eyes of the public. The offer was of 5 million units of 10s. each, at an estimated yield of 3¼ per cent. The application lists which opened last Monday closed on Thursday. Philip Hill, Higginson launched the British Shareholders Trust last year and that trust now has about 35,000 members holding about 11,000,000 units. Rather than extending this successful unit trust, Philip Hill decided to create a new trust offering a somewhat wider portfolio of shares. The new trust's portfolio, although ostensibly "international" is in fact weighted heavily towards British, Commonwealth and North American stocks. It appears that the managers are waiting for more concrete evidence of the expected benefits to European economies from the common market and free trade area schemes before extending investments in any marked way to Western European equities.

The most novel service offered by the BSIT is to be found in two savings schemes. Both plans offer a form of insurance through Eagle Star and the Guardian Insurance Companies. Under the "regular" savings plan a unit holder undertakes to buy a certain number of units a month over a certain period of years; should he die before the period ends the Eagle Star will buy the outstanding units for his dependants. Under the "executive" scheme the unit holder takes out a life endowment policy (for a minimum premium of £25) which is finally payable in trust units instead of cash. This scheme offers a hedge against inflation and the chance of capital gain. As the premiums payable under this scheme rank for the usual tax relief, the plan should be especially attractive to the wealthy.

OVERSEAS TRADE

The "Gap" Widens

WITH other economic indicators looking so healthy this week, the figures of British overseas trade in September may seem disappointing. Exports fell further by nearly £9 million to £246.7 million fob, while imports recovered by £25 million to £330 million cif. Re-exports rose by £2 million to £11.2 million, and the apparent deficit increased sharply by £32 million to £72.3 million—the biggest recorded so far this year. The deterioration should prove more apparent than real. Holidays in August usually have more effect on exports in September than in August, and a recovery in imports was to be expected. Imports last month were in fact about the same as the average of £329 million in the two previous months, and the average for the third quarter, at £328½ million, was five per cent above the average for the third quarter of 1958.

* Provisional

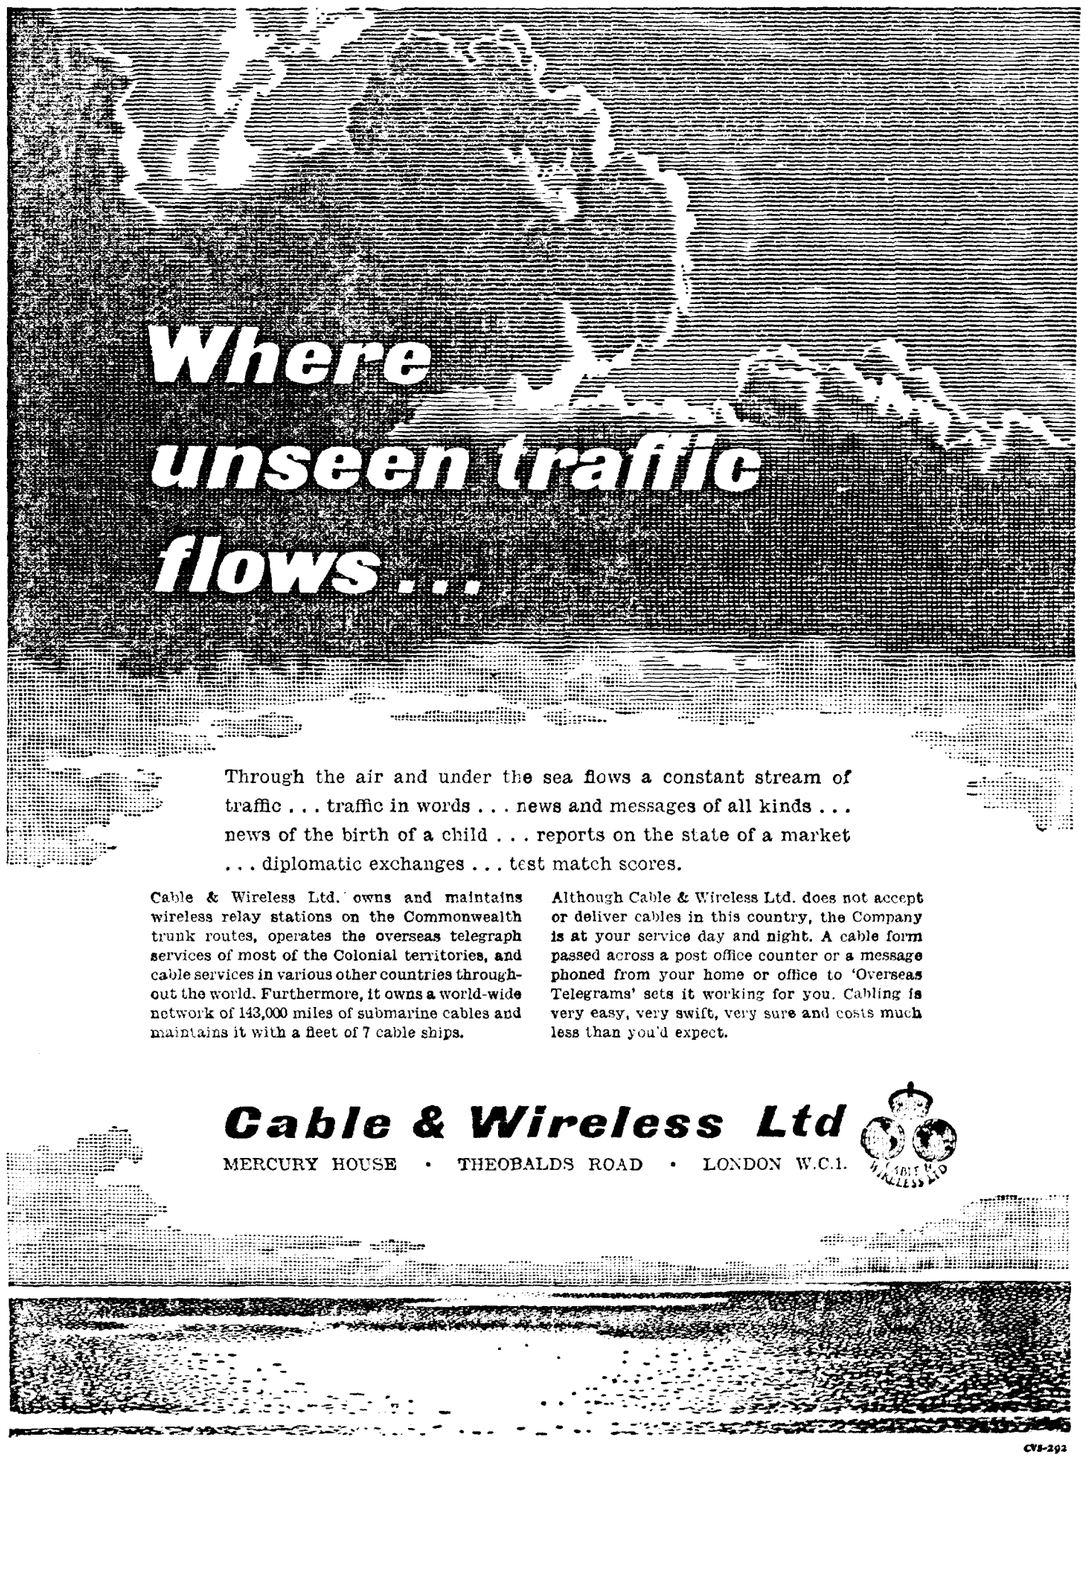
Over the first nine months of the year the rise in the value of exports is fair rather than impressive: it amounts to three per cent, compared with the first nine months of 1958, whereas imports have risen by five per cent. Changes in volume over the same period are even less favourable: exports appear to have gone up by rather less than three per cent, whereas imports have gone up by nearly seven per cent. Yet the real upward trend in exports seems rather better than that. The recovery did not start until the second quarter, and if the second and third quarters are taken together, exports were five per cent higher in value than in the same period of last year, and seven per cent higher in volume. There is reason to hope for a respectable rate of increase in 1959 as a whole.

CODE IN THE CITY

Rules for Take-overs?

THE Bank of England disclosed this week, after one daily newspaper had found out for itself, that the Governor took the initiative last July in inviting leading City associations to formulate a code for take-over bids. These associations include the Issuing Houses Association (which is widely embracing), the Accepting Houses Committee (with a select seventeen), the Committee of London Clearing Bankers, the Council of the Stock Exchange, the Association of Investment Trusts and the Investment Protection Committee of the British Insurance Association. These bodies set up a working party (without any representative of the Bank) which now appears to have produced a draft report. Some people expect that a code of conduct about bids will be circulated throughout the City; if this were so, the code would presumably be published.

The code would need to be given a critical scrutiny. In principle one can see the arguments for setting down a body of rules defining acceptable behaviour, and if this were accompanied by a restatement of the justification of take-over bids in general it might even have a useful educative influence among the lay public and industry. The difficulty is likely to be over what is acceptable—and to whom. Obviously it must not mean acceptable to the sitting board of directors. Nor must there be any danger of prejudice against the bidder who lacks established connections. The code would best be an innocuous one, specifying for example that institutions should make sure that a bid has sufficient funds behind it and that the name of the client should be revealed. If it tries to discriminate between honest bids it will be on much more difficult ground. Nor could such a code necessarily be effectively enforced. A take-over situation often arises, after all, just when the process of negotiation has broken down. These are not circumstances in which a gentleman's code stands the best chance.



Through the air and under the sea flows a constant stream of traffic . . . traffic in words . . . news and messages of all kinds . . . news of the birth of a child . . . reports on the state of a market . . . diplomatic exchanges . . . test match scores.

Cable & Wireless Ltd. owns and maintains wireless relay stations on the Commonwealth trunk routes, operates the overseas telegraph services of most of the Colonial territories, and cable services in various other countries throughout the world. Furthermore, it owns a world-wide network of 143,000 miles of submarine cables and maintains it with a fleet of 7 cable ships.

Although Cable & Wireless Ltd. does not accept or deliver cables in this country, the Company is at your service day and night. A cable form passed across a post office counter or a message phoned from your home or office to 'Overseas Telegrams' sets it working for you. Cabling is very easy, very swift, very sure and costs much less than you'd expect.

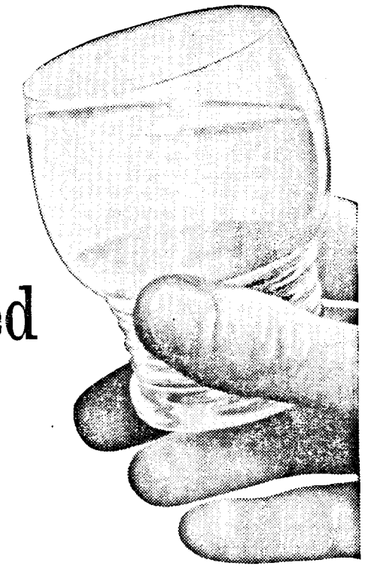
CVS-292



Here's seaweed in your eye!

When you live in a town where every drop of fresh water comes from the sea, when you bath, wash up in and drink sea water, this tag may be the local variant of 'Cheers.' But we doubt it because fresh water made by evaporation from sea water carries no hint of its origin; it is purer and fresher than water obtained from most lakes and rivers. Such a town is no pipe dream. Richardsons Westgarth are building and installing *now* flash evaporators large enough—and economical enough—to supply towns with fresh water from the sea.
The difficulties with deposits and salt accumulation which bedevilled earlier types of evaporators have been eliminated. The new R.W. flash evaporators run continuously with practically no attention and operate on steam at sub-atmospheric pressure. As we are manufacturers also of turbo-alternators, water-tube boilers, etc., and builders of complete generating stations we are particularly well able to plan and carry out integrated schemes for the supply of power and fresh water.

RESTRICTIVE PRACTICES

Are Exports Separate?

An unsuccessful attempt was made this week by the Federation of British Carpet Manufacturers to have certain restrictive practices which it operates excluded from consideration by the Restrictive Practices Court. The federation applied for this exclusion on the grounds that the restrictions in question pertained solely to exports; separate export agreements are not considered by the Court but by the Monopolies Commission, and if the application had been successful the federation would have been able to continue operating its price-fixing arrangements until the commission had these referred to it and reported.

Counsel for the federation stated that the agreement contained restrictions dealing with exports which were easily separable from those dealing with the home trade, and that a minute had been passed to allow a separate export agreement to be made; the Registrar's lawyers claimed that this eleventh-hour change was only a slight variation of the original agreement (a view with which the Board of Trade has agreed). The Court, headed by Mr Justice Upjohn in the absence of Mr Justice Devlin, ruled for the Registrar: all parts of the agreement will be heard by the Court, beginning on November 16th.

In ruling that the federation would have to defend the export restrictions, Mr Justice Upjohn stated that since agreements relating to the home market were claimed to be necessary for the preservation of exports, the exports would have to be studied as well, and it would be unwise to fetter the Court's discretion by excluding export restrictions from the case. The basic question as to whether the federation's last-minute amendment had actually created a new agreement which would be exempt from consideration, or merely a variation on the old one, was not answered; it was suggested that the Registrar should get the High Court to decide this point. Separation of agreements is possible in most cases—say, by forming a new association, with the same members, to deal with exports. Should the High Court rule that the carpet manufacturers' hasty changes have created a new agreement, the parties to a number of other agreements may not be slow to "separate" their home and export restrictions in the same way.

GOLD CERTIFICATES

Hoarding the Modern Way

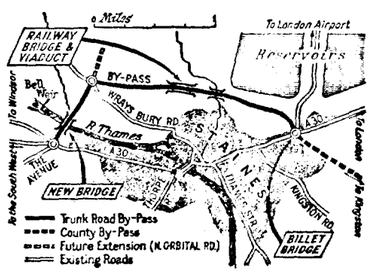
The facility for buying gold certificates provided by Samuel Montagu and Co. and the Bank of Nova Scotia, Toronto, has been extended. Arrangements have been made with the Deutsche Bank in Frankfurt and with Union Acceptances of Johannesburg under which these certificates will be interchangeable with new certificates issued by those houses entitling the holder to delivery of gold in Germany and South Africa, respectively. Holders of certificates will therefore be able to take delivery of gold in four countries.

Since the gold certificates scheme was launched last May a considerable business has been done for international investors. Much of the buying has been for account of United States citizens who, for the most part, have secured their certificates in Canada. The inclusion of Germany in the scheme has not presented any difficulty as there has for several years been a gold market in that country in which German residents have been free to deal. South Africa last April permitted sales of gold to non-residents and storage of such gold in the Union with a guaranteed export permit. In South Africa, as in the United Kingdom, these certificates may not be sold to residents.

ROADS

By-Passing Staines

One of Mr Watkinson's last official acts as Minister of Transport was to announce, this week, that work is to start at once on the construction of a by-pass road round Staines, which when completed will enable motorists to avoid this horribly congested town completely. The by-pass will be about two miles long and will have twin 24-foot carriageways; the total cost of the project will be about £2.1 million, and work is expected to be completed by mid-1961. A new bridge is to be built to carry the road over the Thames at Bell Weir, about one mile west of Staines. This bridge will



retain the form and elevation originally designed for it by Sir Edward Lutyens in 1939, and will be completed at a cost of £460,000 within 21 months; another contractor has recently claimed that it could be built much sooner and at much less cost if a different design, making use of prestressed reinforced concrete, had been adopted. In addition to the Bell Weir bridge, there will be bridges to carry the road over another road, a railway line and two smaller rivers; where the road rejoins highway A30, at Egham roundabout west of Staines, provision will be made for building a flyover in the future.

MOTORS

Rootes in Its Own Class

Although the Rootes group has plans for further expansion that will cost about £10 million, it does not propose to compete in the "mini-car" range, which seems wise. It is devoting these resources to increasing production in the ranges of passenger cars and commercial vehicles that it makes at present. In passenger cars, Rootes accounts for about 10 per cent of total British output. In commercial vehicles its share is probably less; its main strength is in the light van field and the heavier range—about 3 tons carrying capacity—rather than in the medium-weight field.

The decision not to tackle the small car field is natural enough; high volume and very heavy investment are necessary to achieve the low production costs essential for success. With the announcement of particulars of the new Humber cars, Rootes' 1960 range is now clear. The 1960 Hawk will be very similar to 1959 except for a gearbox of closer ratios; the Super-Snipe, which uses the same body panels as the Hawk, will have a larger engine of 2,965 cc and 129 bhp against the present 2,651 cc and 112 bhp, and to match the increased performance the front wheels will have disc brakes.

The group's need for capital no doubt explains the sale of its hire purchase subsidiary, Rootes Acceptances Ltd., to the Astley Industrial Trust for £3¾ million. This will free resources of between £5 million and £6 million in all, allowing for advances by the parent to the subsidiary, but that may be partially offset by some part of the substantial acceptance credits—over £5 million at the end of July, 1958—which may have been related to the hire purchase paper. Rootes was the only major manufacturing group with substantial interests in HP finance. This was no doubt a by-product—and a very advantageous one as it proved—of the substantial interest which the group, unlike its competitors, has always held in the retailing and distribution of cars. It is likely that the group will be planning for an issue of capital for its expansion plans, unless improved earnings for the year to July, 1959, have generated a greater cash flow than would seem likely.

RANK TELEVISION

£1 million in New Money

Rank Television and General Trust is to raise £1 million by the issue of 6½ per cent debenture stock, 1979-84, at 98. The stock is to be placed privately by Robert

Benson Lonsdale and Company. Between the autumn of 1958 and June this year £1.8 million was spent by RTGT in acquiring new interests in television, records and relay television and radio. Of this, £1,275,000 was provided by the sale of the company's holdings of unsecured loan stock in the Rank Organisation. Another £700,000 has been spent, largely in buying further shares in Southern Television and in extending the company's wired television interests. Net profits before tax of RTGT in the year to June 27th were £388,930 and the directors expect the consolidated net profit before tax and before interest on the new debenture issue to amount to not less than £400,000 in the current year. The new money will be used to expand and develop the RTGT group's interests: in other words to extend the diversification of the Rank interests away from the contracting cinema industry and towards the wider field of the entertainment industry as a whole.

COPRA

A Sharp Recovery

COPRA has fluctuated more than any other major commodity this year. From January to the middle of May Philippines copra rose by $50 to $297 a ton cif for prompt shipment; by the beginning of August it had dropped to $212 a ton, but since then it has risen to about $270, recovering three-quarters of the previous fall. The market has defied prediction. Some decline in prices appeared justified in May and June. Output in the Philippines, the largest producer, was due to increase, and the Indonesian government had lifted its ban on exports. The American government had decided to sell its strategic stock of coconut oil, and sales were expected to start soon. Demand for copra had diminished because consumers had switched to less expensive oilseeds and oils.

In the event exports from the Philippines have increased, but exports from Indonesia have not. The American government has not yet offered any coconut oil for sale, so American consumers have had to return to the world market, buying heavily in the Philippines for September shipment. Other consumers started to buy more copra when prices were low, and people who had sold short were forced to cover. Latterly some shippers in the Philippines seem to be finding it difficult to meet their commitments, thus accentuating the tightness of prompt supplies, which now command a premium of about $15 a ton. Once again consumers are turning to substitutes for copra, but since palm kernels, which also produce a hard oil, are seasonally short and prices are high, they are having to switch mainly to soft oils.

"WHO OWNS WHOM"

A Useful Register

FINANCIERS and financial journalists have reason to be thankful to O. W. Roskill and Company (Reports) Ltd. for a new directory. Last year this organisation produced the first volume of "Who Owns Whom," which listed the names of subsidiary companies and set against them the names of their parent companies. That was useful, but, without a great deal of work, it did not enable the reader to see what the size and structure of the company complexes were. Now in the second volume, the parent companies are listed in alphabetical order and the subsidiaries they control or other companies with which they are associated are shown. Thus an impression is given of the range of a company's interests. In the directory, the principal industrial activity of the parent company is shown but not, unfortunately, that of the subsidiaries.

GROUND CUSHION MACHINES

Enter Private Enterprise

A SECOND British ground cushion machine is now under construction, following the success of the prototype Hovercraft. It is being built as a private venture by Britten-Norman Ltd. of Bembridge, Isle of Wight, an associate company of Crop Culture. The first company builds equipment for aerial crop spraying, and the second operates it. The machine will be smaller than the Hovercraft and has a less powerful engine; though the design employs similar principles, Britten-Norman has not as yet had any technical information from Hovercraft Developments, and there are some differences between the two designs. Britten-Norman feels that the development of a small ground cushion machine should be relatively cheap and simple; hence its willingness to find the money itself. Once built, it intends to use the machine to study design problems and the possibilities of using commercial versions for transport in countries that lack roads or regularly navigable rivers, but where the land is flat desert or there are river beds through jungle or other impassable country.

Hovercraft Developments meanwhile is studying the many possible uses before deciding the form of its next machine, a commercial prototype probably weighing 30-40 tons. However, it seems possible that the craft's potentialities as an assault vehicle and for anti-submarine or transport uses may lead to a military development contract; the American Navy is particularly interested in these applications. In any case public, not private, funds may well be used to build the next Hovercraft. American manufacturers of more simple ground cushion machines than the Hovercraft have already offered them for sale to the public; Curtiss-Wright is advertising its air car for delivery in November, carrying three or four people on 300 hp, while Spacetronics, a small company, has also said that it will be producing an "air car" by the end of next year. Britten-Norman is thinking of buying a Curtiss-Wright vehicle for comparison with its own machine; but with so much power in relation to payload it is difficult to see many commercial applications.

FEED GRAINS

Drought Brings Higher Prices

DROUGHT in Britain and other European countries may prove a blessing to sellers of coarse grains and other kinds of feed this season. Because of poor hay crops in some countries and the general lack of pasture, farmers are having to put their cattle on to winter feed rations earlier than usual, thus increasing the demand for feed grains and concentrates. Prices of domestic grains have risen, and importers and compounders are having to pay more for grains and other feed on the world market. Nigerian groundnut cake, for example, has risen by about £2 to £39 5s. a ton cif in the past month. The bigger demand for feed grains appears to have come mainly from Continental, not British, consumers, and there has also been a good deal of speculative buying on the London futures markets. The advance in world prices of barley and maize has also been helped by (and no doubt partly caused) firmer freight rates, and temporarily by the threat, which briefly became a fact, of a dockworkers' strike at American Atlantic ports (the unions are now back at work for the 80-day "cooling-off" period ordered under the Taft-Hartley Act). Canadian barley for prompt shipment has risen by nearly 15s. in the past month to £21 5s. a ton cif. Barley, which for several months was cheaper than maize, now commands a premium of about 10s. a ton, though yellow American maize has also risen in the last month by 15s. to about £20 15s. a ton cif.

Yet few traders have been tempted to buy far ahead. Bumper crops in some European countries are relieving the pressure on supplies; the English barley crop, for example, promises to be a record at nearly 3.6 million tons, which is 700,000 tons bigger than last year's. The severe snowstorms on the Canadian prairies this week do not necessarily mean that crops still in the fields will be lost; everything depends on the weather from now on. And if Europe has an early spring, demand for feedstuffs would decline. In any event supplies of maize are so enormous that it is difficult to see the market running away. With the United States harvesting a record maize crop of 4,430 million bushels, over 600 million bushels larger than last year's, buyers have available an ever-open tap.

COMPANY MEETINGS

JAMES HOWDEN & COMPANY

(Boiler Auxiliary & General Engineers)

A VERY SUCCESSFUL YEAR

MR CRAWFORD W. HUME'S REVIEW OF HOME AND OVERSEAS ACTIVITIES

The Fifty-third Annual General Meeting of James Howden & Company Limited was held on October 14th in Glasgow, Mr J. Howden Hume presiding in the absence of the Chairman, Mr Crawford W. Hume, MINA.

The following is the Chairman's circulated statement:

The Parent Company's profit before taxation is £862,123, an increase of £135,661. The subsidiaries, apart from Canada, have had a good year, but the accounts of the Canadian subsidiary show a loss of £243,311. This was not unexpected and I refer to it again later. After making provision for United Kingdom and Dominions' Taxation, the Group profits are down by £50,949 and, after transferring £150,000 to General Reserve, there remains in the accounts of the Parent Company for allocation a sum of £356,461 as compared with £233,341 last year.

If the recommended Dividend of 20 per cent is approved there will remain a balance to be carried forward in the Parent Company's accounts of £189,248. The Group balance to carry forward will be £83,975.

FACTORIES FULLY EMPLOYED

During the year the factories at home have been fully employed with the pleasing result of the increased profit of the Parent Company which helps to compensate for the development loss in Canada. Reduced profit margins, however, continue to apply, making it extremely important for us to maintain the high volume of output which we have accomplished. This will not be easy as orders became increasingly difficult to obtain during the year and did not keep pace with the output. Last year I referred to the fact that the United Kingdom business of the Parent Company had declined but that its export business to other countries, in addition to the three principal Dominions where our subsidiaries operate, had been good. This tendency has continued during the year under review. As you know, however, there has been in recent months a steadily increasing demand for consumer goods. If this continues it should be followed by increasing demand for capital goods for the generation of more power and this should provide us with an expanding market for our normal products.

NEW PRODUCTS

The state of our order book has been helped by the widening of our range of products. It has been our endeavour to bring into our activities new products associated in some way with those well established in our business. Our newer products, such as electro-precipitators and rotary compressors, are developing satisfactorily. We have booked substantial orders for the former and the latter is in ever increasing demand. With a view to widening our base still farther we are now in a position to manufacture complete sintering equipment for steel works. This departure stems from work which we have been doing for a number of years on special fans for sintering plants. The nature of the manufactures involved links up very closely with that of our other manufactures and the techniques are already well known to us.

In the last year, a substantial part of our fan research has been devoted to nuclear power application. This market is as yet small and unremunerative but it is one which should become valuable in the years ahead and one which we cannot afford to neglect.

OVERSEAS ACTIVITIES

As I have already said, the subsidiary Companies, with the exception of the Canadian Company, have shown satisfactory profits but, as you will recall, I said last year that this subsidiary would require the support of the Group for a year or two until it was properly under way. The establishment of such an organisation is slow and expensive and in the early stages the full recovery of overheads is impossible. It must be remembered that the factory started operating only at the beginning of the year under review and by the end of the year was producing at about two-thirds of its economic load. The position should now improve considerably, but it is not anticipated that the Canadian Company will contribute to the profit of the Group for some time to come. In common with the experience of other heavy engineering concerns in Canada our Company there has found orders more difficult to obtain in the last year as a result of the general recession. There are indications that the Canadian economy is recovering but the effect of such a recovery is felt last in heavy industry. For the reasons I mentioned two years ago I am satisfied there is an excellent potential market for our specialties in Canada and I look forward with confidence to the time when the Canadian Company will prove to be a valuable member of the Group.

The African Companies have had a successful and profitable year. The order position is good and I expect that they will have another good year. The acquisition of the minority shareholding of Safanco Limited, the South African manufacturing subsidiary, has permitted certain adjustments to be made in the African organisations which should allow them to operate more efficiently and economically.

In Australia, too, the results have been good and the Company there is in a healthy condition as was to be expected from the indications last year.

The advance shown in the accounts as having been made to the associated Company was to provide it with further working capital and it is expected that the investment should be profitable.

We have had, on the whole, a very successful year and I have pleasure in thanking the executives, staff and workpeople for their application, hard work and loyalty.

The report and accounts were adopted and the other formal business duly transacted.

STERLING CABLE COMPANY LIMITED

A SATISFACTORY YEAR'S TRADING

HEALTHY CURRENT ORDER BOOK

MR JAMES S. CLARK ON INTENSIFIED PRICE COMPETITION

The eleventh annual general meeting of Sterling Cable Company Limited was held on October 8th in London, Mr James S. Clark (chairman and managing director) presiding.

The following is his circulated address:

Ladies and Gentlemen, I have the pleasure to submit the Report of the Directors and the Accounts of the Company for the year ended March 31, 1959. You will see that these Accounts indicate a satisfactory year's trading and they show the effect of the capital reorganisation which we announced to you on February 14, 1959.

The Ordinary capital, which is now divided into shares of 5s. each, has been increased by £155,000, from £250,000 to £405,000. £100,000 of this represents reserves which we have capitalised and thus retained permanently in the business, £35,000 from capital redemption reserve and £65,000 from accumulated profits. The other £55,000 represents the 220,000 new shares of 5s. each subscribed in cash by our parent company, A. C. Cossor Ltd., at 7s. 6d. per share.

The premium of 2s. 6d. per share on these new shares, or £27,500 in all, has served to replenish our capital reserves, which now stand at £45,388, as against £45,923 last year.

THE YEAR'S RESULTS

The Group profit, before tax, was £105,344, compared with £105,606 last year. Income Tax requires £41,317, but there is no Profits Tax payable this year as, in this respect, the Company is protected by its membership of the Cossor Group. Having thus rather unexpectedly saved some £10,000, we have thought it well to retain this in our undistributed profits of the year, which you will see are £27,369 as against £17,701 last year.

The Group profit, after tax, is £64,027, out of which we have written off the expenses of the increase of capital (£765) and provided £5,394 for Preference share redemption and £6,075 for the Preference dividend (less tax). An Interim Ordinary dividend of 7½ per cent (less tax) was paid last March on the old capital of £250,000, and we now recommend to you a Final Ordinary dividend of 5½ per cent (less tax) on the present capital of £405,000. The total Ordinary dividends for the year (less tax) thus absorb £24,424. The Group balance carried forward is £68,374.

TRADING CONDITIONS

You will remember that last year I drew your attention to the price competition which had already commenced. This has been intensified, and on the home front competition for the business of the big users is extreme. As cable is purchased to a published standard of quality, price is the deciding factor.

The smaller purchaser is not anxious that his sources of supply should be reduced to a very limited number of manufacturers and we are most grateful for the support we are

receiving from this important section of the industry. There is no doubt that these independent members of the electrical contracting industry are strengthening their own position by supporting individual manufacturing concerns.

On the export front we have certainly felt the effect of the considerable number of new plants that have been established in various countries of the world. As was to be expected, these new concerns confine their attentions to the simpler types of cable, and it has so far been possible for us to maintain a healthy export turnover in the more specialised types.

Raw material prices have been more stable in the last few months although the copper market continues to be extremely sensitive to any form of labour unrest in the mining and smelting section of the industry.

CURRENT TURNOVER MAINTAINED

You will want to know how the current year is going. I am happy to tell you that so far we still have a healthy order book and our turnover is being maintained.

Much will be expected of our Staff in every department of the business in these coming months of difficult trading, but I am sure that, as always, they will respond magnificently and, accordingly, can express confidence in a satisfactory outcome to the year's trading.

The report and accounts were adopted.

MODERN ENGINEERING MACHINE TOOLS

"THE FIRST YEAR OF REWARD"

The twenty-fourth annual general meeting of Modern Engineering Machine Tools Limited was held on October 14th in London.

Mr P. R. V. Wheeler (the chairman) presided and, in the course of his speech, said:

The financial results will, I hope, be regarded as satisfactory for the period which I forecast last year "should be the first year of reward." The accounts indicate an increase in net profit from £31,668 to £69,147 and provide considerably increased cover for our ordinary dividend. It is hoped that stockholders will feel that the Board's policy of consolidation and integration has fully justified itself by reason of the results achieved.

Your Board is recommending a final dividend of 12 per cent actual, less Income Tax. In addition it is proposed that part of the share premium reserve be capitalised and an issue of one £1 7½ per cent Cumulative Preference Share be made, credited as fully paid, to ordinary stockholders in the proportion of one £1 Preference for every ten 5s. Ordinary Stock Units held.

If current turnover and profit trends persist for the remaining period of our financial year I feel I can, with some confidence, predict even better results which would justify the designation of the current year as "the second year of reward."

The report was adopted and a resolution changing the name of the Company to "Modern Engineering Developments Limited," was approved.

At a subsequent extraordinary general meeting the proposed scrip issue was also sanctioned.

WILLIAM DOXFORD AND SONS LIMITED

(Shipbuilders and Engineers)

HIGHLY SATISFACTORY RESULTS

The sixty-seventh Annual General Meeting of the Company will be held on October 30th in London. The following is an extract from the circulated statement of the Chairman, Dr J. Ramsay Gebbie, CBE:

The Directors' Report and Accounts covering the year ended June 30th last now submitted show highly satisfactory results.

Group Profit for the year has increased by £62,197 to £1,217,005. The charge for Taxation amounts to £550,000, leaving a Group Profit after Taxation of £667,005.

We are recommending payment of a Final Dividend on the Ordinary Stock of 25 per cent, making 30 per cent for the year, as against 25 per cent last year. You will see from my later remarks that the present high level of Group Profit is unlikely to be maintained.

The Consolidated Balance sheet reveals particularly the strong liquid position with net current assets exceeding £2,300,000, and Revenue Reserves now totalling over £3 million.

During the year both our Shipyard and Engineworks have been fully employed and the output of both has increased.

This last year has seen the reorganisation and expansion of our Technical Department. Your Directors believe that we now have a technical team equal to any. As to organisation, we are now engaged on an exhaustive survey aimed at improving our production techniques in both quality and quantity.

Turning now to the development of the future Doxford Oil Engine, I am pleased to inform you that the prototype is well ahead of its schedule and is of very much increased horse power. We are now about to begin erection and hope to have it actually running on test in a few weeks time.

This prototype is a Two Stroke Cycle Opposed Piston Doxford Engine having six cylinders of 670 mm. bore, and with advanced turbocharging arrangements, it is designed for a maximum output of nearly 12,000 BHP. The full range of what is now known as the "P" type will develop between 3,000 and 7,000 BHP in its normally aspirated form, and between 6,000 and 11,000 BHP when turbocharged. These ratings incidentally are continuous service ratings and not maximum ratings.

We have every confidence in ourselves and in the future, and it is encouraging to be able to tell you that we have already received firm orders for engines of our latest type. Such is the measure of the confidence placed in us by our customers and we are not unhopeful that before long we shall be successful in obtaining further orders for this latest type of engine in various horse powers.

Despite some further cancellations of orders for hulls and engines, we are fortunate in having sufficient orders on our books to keep our works reasonably well employed beyond our next financial year, but profit margins are diminishing and we cannot expect to maintain the peak profit earned in the year under review.

We can only hope that shipping will improve before we begin to run short of the orders necessary for the full employment of our works and employees, and I feel confident that our up-to-date plant and highly skilled personnel will enable us to obtain a good share of any orders which may become available.

CRYSTALATE (HOLDINGS) LIMITED

BETTER OUTLOOK

The annual general meeting of Crystalate (Holdings) Limited, was held on October 14th in London, Mr Jack Lesser, chairman and managing director, presiding.

The following is an extract from his circulated statement for the year to March 31, 1959:

The consolidated accounts show a profit of £55,226 compared with £82,226 and the net profits are £34,910 compared with £39,284. The directors recommend a dividend of 7½ per cent, less tax, on the Ordinary shares, which will, with the 5 per cent interim dividend paid by Crystalate Limited, make a total of 12½ per cent, the same as in the previous year.

In the current period of trading our available internal figures indicate an improvement to date and the order book this year compared with the period last year is much stronger.

It is most hazardous to venture forecasts beyond certain defined periods. Yet, providing we do not encounter a general trade recession before the end of this year we shall be able to look forward to an overall improvement in the group's results.

I have always advocated and advised shareholders that they could retain confidence and justifiable optimism in the ability, conscientiousness and loyalty shown by their employees, staff and executives. These qualities have brought your companies into a reputable position in the Plastics Industry and I am confident this will be maintained.

The report and accounts were adopted.

R. G. SHAW & COMPANY

The eighteenth annual general meeting of R. G. Shaw & Company Limited was held on October 13th in London, Sir Harry Townend (chairman and managing director) presiding.

The following is an extract from his circulated review:

The Group profits before taxation amounted to £208,157 as compared with £208,575 for the previous year, and after deducting the amount required for taxation and expenses on increase of Authorised Capital there remains £112,241 as compared with £104,247 for last year.

Your Board is recommending a dividend of 20 per cent and the transfer of £50,000 to General Reserve.

After commenting on the acquisition of an interest in Sime Darby Holdings Limited and the merging of the Oriental Estates Agency Group with the R. G. Shaw and Sime Darby Groups, the statement continued:

Your Directors have decided, in order to bring the Issued Capital more into line with the value of the capital employed in the company's business, to recommend the issue of a further 200,000 Shares of £1 each, credited as fully paid up, by the capitalisation of £102,000 standing to the credit of Share Premium Account and £98,000 out of the amount standing to the credit of General Revenue Reserves.

If the Resolution is passed Shareholders will be allotted two fully paid shares of £1 each for every five shares of £1 each held by them respectively at the close of business on October 9, 1959.

The report was adopted and the proposed scrip issue approved.

A. C. COSSOR LIMITED

A COMPARATIVELY SUCCESSFUL YEAR

The twenty-first annual general meeting of A. C. Cossor Limited was held on October 13th in London, The Most Honourable The Marquess of Exeter, KCMG, LLD (the Chairman) presiding.

In his circulated address, the Chairman, commenting on the disposal of Cossor Radio & Television Ltd., said: No payment had been made on account of the purchase price at the date of the Accounts, but substantial sums have since been received, so that the Bank Overdraft has now been considerably reduced.

TRADING

After reviewing the financial results, Lord Exeter continued: **Radar & Electronics:** The turnover and profits of **Cossor Radar & Electronics Ltd.** were satisfactory, and roughly the same as in the previous year. Trading for the current year has been satisfactory so far, but conditions are not helped by the recession in the aircraft industry.

Cables: The turnover and profits of **Sterling Cable Co. Ltd.** were also very similar to those of the previous year—no small achievement in a period in which many cable manufacturers had a difficult time.

Communications: Cossor Communications Co. Ltd. continues to make its way into the field, and its order book is developing well.

Instruments: Cossor Instruments Ltd. also had a rather unusual year. Trading was on much the same scale as before, but its profits were reduced to a low figure by heavy expenditure on new developments.

Cabinets: Lea Bridge Cabinet Works Ltd. began the year with a slack period, but recovered strongly in the later part of the year. Business in the current year has so far been brisk.

Domestic Equipment: Best Products Ltd. made further progress in recovery. New products were introduced and less profitable lines reduced. The position is healthier and the prospects better than for some time past.

Outlook: We have cut out, not without cost, the main source of the unsatisfactory position of the Group in recent times. The result has been a comparatively successful year. There is, however, still scope for further progress, both in our trading results and in our financial position, and to this we are bending our energies.

The report was adopted and the dividend of 5 per cent approved.

THE INDUSTRIAL FINANCE CORPORATION OF SOUTH AFRICA LIMITED

NEED FOR STIMULATING FURTHER DEVELOPMENT

The second annual general meeting of The Industrial Finance Corporation of South Africa Limited (IFC) was held on October 12th at Johannesburg.

Commenting on the fact that after two years the IFC had accepted only one proposition, for £500,000, the chairman, Dr H. J. van Eck, indicated that in his view this was simply an indication of the need for stimulating further development in the Union. There were encouraging signs of positive steps being taken to improve the Union's industrial climate and this would help to create the stable conditions required for the natural development of the local market for the products of South African industries. In thinking of the Country's export potential, it had to be remembered that the Union would be able to exploit new market opportunities only if it achieved the most economic production based on the largest possible market for its products.

After referring to local industry's capacity for meeting practically all demands made on it as, for example, in the field of plant fabrication, the chairman urged all Public Authorities as well as other large organisations in the Union to follow the Government lead in buying South African manufactured goods wherever practicable, since it was only through large-scale local purchases that a sufficiently large market could be created to stimulate local manufacturing industry. The demand for further capital arising from this development should, in turn, provide the opportunity for the IFC to play the part visualised for it at its inception.

Expressing his confidence in the future development of the Union and in those entrepreneurs who had now to make their individual decisions as to future development, Dr van Eck emphasised the need for planning now for the future. The fact that the right time for future planning was usually not convenient from the point of view of making fresh capital issues should not militate against manufacturers proceeding with expansion schemes, since an institution such as the IFC was prepared, in approved cases, to subscribe firm for new securities with the object of making at least some of them available to the public when conditions became more propitious.

SCRIBBANS-KEMP

CURRENT TRADING IMPROVEMENT

The thirty-second Annual General Meeting of Scribbans-Kemp Limited was held on October 12th in London, Mr H. Oliver-King (Chairman) presiding.

In his circulated statement the Chairman said that the profit for the year was £416,923 as against £830,938, the fall being due largely to special circumstances and items of a non-recurring nature. Group turnover had reached the record figure of over £20m. and had been achieved despite fierce competition and the downward trend in prices to the public. Overall exports, which showed a healthy increase of 19 per cent, appeared to be steadily mounting.

Referring to the considerable reorganisation in the Biscuit Division, the Chairman stated that examination had revealed that the public was absorbing, and was willing to absorb increasingly, the speciality products made by the company, although there was difficulty in disposing of large quantities of ordinary biscuits. As a result, the organisation was concentrating progressively on specialities, with increasing success.

The question of dividend was difficult, but, bearing in mind the higher current profit earning and strong reserve position of the company, the Board recommended a final dividend of 5 per cent. An interim dividend of 5 per cent would be paid in March and a progress report would be issued to the Shareholders at the same time.

The Company has been undergoing a somewhat difficult period with a sharp drop in profits, but the root difficulty appears to have been overcome and recovery is equally sharp. I have no doubt that in the near future the Company will be able to resume its policy of expansion.

Addressing the Meeting the Chairman said: "The profit made to date is approximately the same as for the whole of last year but of course you will not expect me to anticipate the year's results. However, at the moment the improvement continues and is accelerating."

The report was adopted and the total distribution of 10 per cent approved.

PASOLDS LIMITED

Ladybird

CHILDREN'S WEAR

Extracts from the Accounts and Directors' Report for the year ended March 31, 1959.

During the year we have supplied the record number of 15 million garments to customers in Britain and all over the globe.

The past year has again witnessed good progress. Construction work on the factory extension, so urgently needed for our programme of greater mechanisation, is almost finished.

In spite of the inevitable interruptions caused by moving substantial manufacturing units from their established positions to the new building, our annual production has gone up by £700,000. (Group Sales are now £3.8m.)

Projects on the drawing board are likely to absorb most of the increased financial resources of the Group. The bulk of accumulated profits must go back to the business permanently. It is, therefore, proposed to capitalise £550,000 of reserves by making a bonus issue of one new "A" Share for every "A" Share or "B" Share held.

Increased turnover and greater efficiency of the British Group of Companies has produced a profit before tax of £593,165—a very good result. The Canadian Companies have made a profit before tax of $65,395 (£24,031) which is very satisfactory. Although operations of the German Company are still on a small scale, Ladybird garments have been supplied to some 600 retail stores.

Net Group Profits after taxation amount to £301,164. Dividends of 24 per cent and 6 per cent on the "A" and "B" Ordinary Shares are proposed, leaving £180,939 retained in the business.

UNITED KINGDOM and CANADA

COMPANY AFFAIRS

DUNLOP RUBBER

THE reduction of 7½ per cent in car tyre prices this August, which reflected keener price competition among British tyre manufacturers, and the steady rise in the price of natural rubber (only partly offset by an increased use of synthetic) over the past year did not seem to augur well for the shareholders of Dunlop Rubber, who in the past have been constantly reminded that a booming motor industry does not necessarily spell boundless fortune for the tyre makers. Nor was Mr G. E. Beharrell's remark at the annual meeting in June that trading results in the current year were running at the same level as in the corresponding period last year particularly reassuring. In the event, the group's trading profits in the six months to June 30 rose slightly from £10,130,000 in the preceding six months to £10,520,000; this compares with £9,630,000 in the same period in 1958.

The directors say that "provided trading conditions remain as at present it is anticipated that the level of profit for the first six months of the year will be maintained for the latter half." There seems little doubt that when the pace of the motor industry's boom begins to slacken (although there are no signs of that happening yet) earnings from the group's overseas activities—on whose development over £60 million has been spent in the past ten years—will become crucial. Last year no less than two-thirds of the group's total profit came from its overseas interests. Just what effect the August price cuts will have on the final earnings figures remains to be seen, but it will be surprising if margins are not to some extent narrowed. At the moment trading profits are running at an annual rate of some £21 million, against a little less than £20 million in 1958: this suggests that earnings on the enlarged capital (as increased by the one-for-four scrip issue) will be about 30 per cent, against an equivalent of 28 per cent in 1958. The interim dividend of 4d. per 10s. share is equivalent to last year's interim payment of 5d. a share and the 10s. units, which rose 3d. to 26s. on the half-yearly figures, offer a yield of 5 per cent on the assumption of a final distribution of 13 per cent.

SALES AND PROFITS
(£ million)

	Six months ended			
	Dec. 31, 1957	June 30 1958	Dec. 31, 1958	June, 1959

Net profit/sales	5·8%	4·6%	5·4%	5·0%

DEBENHAMS

AT the time of Debenhams' struggle with the House of Fraser for the control of Harrods the directors forecast a dividend for 1958-59 of "not less than 15 per cent." With a final ordinary dividend of 11¾ per cent, the total 1958-59 dividend is in fact 16¾ per cent, against 13¼ per cent last year. The slight increase in the dividend over the forecast was not unexpected—although some optimists were hoping for a total dividend of 17½ per cent. What did surprise the market was the announcement of the £2,600,000 "rights" issue in the ratio of one-for-ten at 20s. a share. Jobbers lost no time in marking the 10s. ordinary shares up 3s. 9d. to 43s., making the "rights" worth around 2s., and giving a yield on the old shares of 4.2 per cent. Debenhams raised £5 million by a debenture issue last April when the directors indicated that over the next three years their expansion plans would require some £8½ million; and it was then hoped to provide the remaining £3½ million from retained earnings. Whether this latest issue implies a more ambitious expansion programme remains to be seen.

The steady rise in trading profits, which has been a feature of the group's trading performance since Mr J. Bedford became the chairman three and a half years ago, continues. The group's trading profits for the year ended July 31st rose by 10½ per cent, from £5,805,508 to £6,421,485. A slightly lower tax charge of £2,429,193 (against £2,720,323) left the net profit at £3,037,859 (against £2,357,150) after deducting £78,015 (against only £997) for unearned profits on hire purchase contracts. Hire purchase forms only a small proportion of Debenhams' total sales but, clearly, these figures reflect boom conditions in the retail trade.

UNITED DRAPERY STORES

THE group trading profits of United Drapery Stores for the half-year ended August 1, 1959, rose to £4,002,756, compared with £3,438,252 in the corresponding period of 1958. Much of this increase has been due to hire purchase sales which account for a provision of £279,224 made for additional unearned profit on hire purchase debtors, compared with a credit of £3,462 a year ago. The group net profit for the half-year, after tax, is £1,627,248, against £1,415,404. The interim dividend on the ordinary stock as increased by a one-for-ten rights issue last June has been maintained at 12½ per cent and the directors have said that the total for the year will be at least maintained at 35 per cent. The market seems somewhat more optimistic: United Drapery shares stand at a near-record price of 47s. 7½d. to yield 3.7 per cent.

THOMAS W. WARD

THOMAS W. WARD, the general engineering concern, has done reasonably well out of the recovery of the iron and steel industry and the building boom. The company's profits for the year to June 30, 1959, are up from £2,599,158 to £2,775,677, in spite of a pessimistic assessment of future prospects made by the chairman last November. After tax the increase in profits is even more impressive—from £1,173,710 to £1,442,519. The total dividend payment on the company's £1 ordinary shares is raised from 20 per cent (including a 5 per cent bonus) to 25 per cent for the year to June 30, 1959. The directors also propose a 100 per cent scrip issue. This will reduce the heaviness of the price. The shares rose 22s. 6d. this week to 144s., to yield 3.4 per cent.

COMPAGNIE FINANCIÈRE DE SUEZ

A TAX-FREE distribution of Frs. 1,660 for every share held in the Compagnie Financière de Suez, plus one share in Société d'Investissement Mobiliers for every ten Suez shares is recommended by the CFS directors in their report for the year to July 31, 1959. With SIM shares worth Frs. 35,750 on the Paris Bourse, the distribution amounts to about £3 16s. 6d. gross per Suez share. It represents a distribution to shareholders of the first compensation instalment of £E4 million, received from the United Arab Republic on January 1st and unfortunately the Inland Revenue has ruled that it is taxable in the hands of British shareholders. If shareholders approve a compromise agreement between the company and the UAR, further compensation payments will be made, of £7,175,000 sterling on January 1, 1960, and £4,100,000 sterling on January 1, 1961, 1962 and 1963. A dividend of 5 per cent (500 francs) per share is also recommended, payable from the company's net profit for the year of about £414,000.

With the gradual transformation of CFS into a financial concern, means have been found of giving its managers more freedom to invest in Paris, New York and London. In Paris a banking subsidiary which will manage the company's short-term funds has been formed with a capital of Frs. 250 million, under the name of Banque de la Compagnie Financière de Suez. CFS will subscribe for the forthcoming 50 per cent increase in the share capital of the French American Banking Corporation in New York, and in London it has formed the Suez Finance Company (London), with a capital of £50,000.

The book value of the company's holdings, apart from stock held through SIM, rose from £2.7 million to £4.6 million. If the SIM holdings are included, the total book value is £12.7 million. The book value of the company's investment portfolio fell in the year to July 31, 1959, from £22.2 million to £19.7 million, following sales of stock at higher prices. The cash thus realised will be used for re-investment.

REARDON SMITH

LAST year the chairman of Reardon Smith, Mr Douglas Smith, said that the outlook for shipping "gives no cause for encouragement." Since then nothing has happened which could in any way cause Mr Smith to revise that opinion. In fact, whereas last year Reardon Smith's earnings were to a large extent cushioned from the worst knocks of the slump in freight rates by the long-term charters which extended into the first half of the financial year, the group's trading profits for 1958-59 have taken a severe blow, falling from £891,866 to £85,417. Even so, thanks to the conservative policies pursued by the directors in the past, shareholders have not so far suffered. In March a dividend of 2½ per cent was paid to ordinary shareholders out of a distribution received from the parent company from the dividend reserve account of its subsidiary. At the same time a 2½ per cent tax-free payment was made from a capital accretions account and last month the directors paid a 10 per cent tax-free distribution, again from this account. In 1957-58 two interim dividends of 2½ per cent were paid and a 2½ per cent capital distribution was also made.

During the year two steamers of the fleet were sold and the surplus proceeds over the book values of these vessels were used towards the writing down of other vessels; the fleet has in fact been drastically written down and the group's liquid funds of around £5,445,000 amply cover capital commitments of £1,600,000 (against £1,500,000). Perhaps the main comfort to shareholders of Reardon Smith, whose 10s. units now stand at 16s. 6d. (compared with 13s. earlier this year) is that the group's liquid resources are so strong.

BRITISH ALUMINIUM

BRITISH ALUMINIUM, which is now controlled by Tube Investments and Reynolds Metals, is to pay an ordinary dividend of 5 per cent for the seven months ended July 31st, compared with 17½ per cent for the previous full year. This is an effective reduction in the annual payment of 8.9 per cent and it will be recalled that the 1957-58 dividend was raised from 12 per cent to 17½ per cent at the time of the struggle between Tube Investments-Reynolds Metal and Alcoa for control. The group's trading profits for the seven months ended July 31st were £2,004,418, against £3,070,242 for the previous year, and the net profit after tax of £689,388 compares with £1,024,058 for the full year.

BERALT TIN AND WOLFRAM

THIS company, predominantly a producer of wolfram, has had a bad year, but the current one should be better. The average market price for wolfram during the financial year ending March 31st was only 82s. a unit, compared with 120s. for 1957-58, and the company no longer had the benefit of sales under a high fixed price contract. The company incurred a net loss, before tax, of £78,986, compared with a net profit of £218,380 in the previous year. After transferring £17,500 from reserve (less £13,653 provided for development of a subsidiary), and providing £16,720 for UK tax, the net loss amounted to £91,859. With the ordinary dividend cut to 20 per cent, against 50 per cent last year (when a special dividend of 40 per cent was also paid) the carry-forward was reduced to £89,190. Wolfram prices rose sharply recently to 162s.-167s. a unit, though—characteristically—the market has since dropped back to about 127s.-132s. a unit. Still, there is some reason to hope that the current year's average will be somewhat higher than last year's

Production in Portugal was restricted to the quantity needed to meet a long-standing contract, based on the average market price from month to month, and amounted to 1,280 tons of concentrates, 550 tons less than in 1957-58. Labour was therefore switched to the Vale da Ermida section, which contains mainly tin-bearing ores, and production of tin concentrates rose by 246 tons to 642 tons. More extensive workings confirmed the existence of a very large volume of tin-bearing ground in this section, but though tin prices have improved the grade is too low to permit profitable operation by ordinary methods. New methods of mining and milling are being tried, but it is not yet known whether these methods will be successful. Extensive tin deposits have also been established on the Argimela property, which is now almost self-supporting, but here again more experience is required before the directors can decide whether to embark on full-scale operation.

"JOHNNIES"

JOHANNESBURG CONSOLIDATED faces a better year than the one behind it, or so it appears from the company's report and accounts for the twelve months to June 30, 1959. The net profit in that year fell from £2,737,863 to £1,299,352, but most of the drop was due to higher tax charges; its income from investments fell only slightly, from £2,099,960 to £1,929,833. This reduction was due mainly to lower earnings from platinum and other base metals, as predicted in the 1957-58 report. The book value of investments rose from nearly £15 million to £16.8 million and the market value of quoted investments from £18.9 million to £25.2 million. The company's platinum interests were worth more at the end of the financial year than at the beginning: the rise accounts for the "reappreciation" of £452,370 net in the book value of investments, after allowing for depreciation of £277,005 on other investments. This includes a further fall of £134,600 in the market value of its holdings in Freddies Consolidated. Next year's accounts will reflect the resumed dividend payments by Rustenburg Platinum, whose earnings have recovered to some extent since the reduction in Russian selling put the price of platinum up from £17 per oz to £28 10s. per oz in February.

London Stock Exchange

FIRST DEALINGS:	Sept. 30	Oct. 14	Oct. 28
LAST DEALINGS:	Oct. 13	Oct. 27	Nov. 10
ACCOUNT DAY:	Oct. 20	Nov. 3	Nov. 17

AFTER the election, an unprecedented wave of speculative and investment demand combined to give the stock market the busiest period in its history. Bargains recorded reached an all-time peak on Wednesday at 32,655 compared with Monday's previous "high" of 32,517. On Thursday before the election a large volume of buying order from small investors, who appeared to be confident of the election result, was reinforced by a number of institutional investors. On Friday, when the result of the election was known, two-way business was on such a large scale that dealings became chaotic. Profit-taking was quickly absorbed and by the afternoon markets had regained a certain amount of order. Similar conditions prevailed early this week but on Wednesday afternoon profit-taking was not so easily absorbed and most industrial equities, especially steel shares, closed easier. The Conservative victory has been taken as an augury for sound monetary management and gilt-edged stocks have joined in the post election boom. Short-dated stocks were particularly in demand with 4½ per cent Conversion (1964) gaining ⅜ to 100⅝; among the unredeemables, 3½ per cent War Loan put on 1/16 at 66 5/16.

Among industrial equities the most spectacular rises were in steel shares, most of which closed on Wednesday slightly below their best. Dorman Long rose in the week by 13s. 3d. to 53s. 6d. after touching a new peak at 57s. 6d. and United Steel put on 9s. 1½d. at 62s. after being 67s. at one time. Steel Company of Wales jumped from 35s. to 43s. 9d. after touching 45s. and Colvilles gained 8s. 9d. to 54s. Other leading equities shared in the rally with ICI advancing 4s. 3d. to 52s. 9d., British Oxygen gaining 5s. 3d. to 74s. 3d., and among American favourites EMI closed 7s. 6d. better at 58s. while GEC improved 6s. 9d. to 47s. 6d. Among motors, Ford put on 4s. to 94s. after reaching a new "high" at 97s. 6d., while Rootes improved 5s. 6d. to 18s. 1½d. Stores shares were strong with Debenhams up 5s. 6d. at 52s. 9d., following news of the "rights" issue and increased profits; United Drapery put on 3s. 4½d. at 47s. 7½d. on the better profit figures. Shipping shares were again in demand and turnover was on a large scale. Building shares, too, attracted a fair amount of buying.

Oil shares recovered from their recent setback and the leaders made net gains over the period. Shell gained 5s. 9d. at 147s. 6d. after touching 150s. 3d. A revival in the rubber section of the market, set off by the rise in the price of the commodity, helped most rubber shares to show good gains. Some American buying through Johannesburg helped gold shares to close above their worst but most showed net losses.

THE MONEY MARKET

A MODEST gesture to the Conservative victory was made in the discount market last week, where the rate on Treasury bills, after weeks of stability, fell by 1s. 1½d. to £3 8s. 9d. per cent. The discount market raised its bid by 4d. to £99 2s. 10d. and its allotment at this price improved from 54 per cent to 66 per cent. Applications for the £290 million offered rose by £21 million to £433 million. This week the tender is reduced to £270 million while maturities remain at £250 million.

In the United States this week the discount rate on 91 day bills rose to a new peak of 4.262 per cent—exceeding the ceiling of 4¼ per cent on coupons on bonds of over five years' life. The rate on the 182 day bills, in which market interest has been well maintained recently, was fractionally lower at 4.666 per cent.

Credit has continued to be tight in Lombard Street and the authorities have given special assistance on each of the six days. After last week's tender, December maturities and "hot bills" have changed hands with the clearing banks at 3⅞ per cent and with outside institutions at $3\frac{11}{32}$ per cent.

Labour Force to Grow 80%

National Income to Triple

Per Capita Income May Double

We all know just how rapidly Canada is growing, but the Gordon Royal Commission was the first to make any studied forecasts of that development. The growth predicted by 1980 will mean constant changes in Canada's economy. Through our more than 630 branches of the Toronto-Dominion and by our close participation in that economy, we're right at the centre of all Canadian business activity . . . able to assist any manufacturer, planning market expansion in prosperous Canada by supplying such information as:

- **market statistics** • **corporation procedure**
- **information on plant sites** • **advice on customs problems**
- **data on market distribution** • **incorporation procedure**

INCORPORATED IN CANADA WITH LIMITED LIABILITY TD/2/59

APPOINTMENTS

MSL have been retained to advise on the appointment of a

COMPANY SECRETARY—FINANCIAL CONTROLLER

for a public company manufacturing plant and equipment for the chemical, oil, gas and nuclear power industries. The company, which has assets of £4 million and an enviable record of profitable expansion, now requires a successor to the Company Secretary who retires next spring.

Initial remuneration will be about £3,000. The appointment carries prospects of Board membership with appropriate financial advancement, the present Secretary being a Director.

The Secretary is responsible for controlling the accounting, secretarial, and commercial management functions of the company. Candidates must therefore have a background of industrial experience involving responsibility for financial advice on policy and the control of cost and financial accounts in a substantial public company. Experience should have embraced commercial management matters including formulation of contracts. Qualification as a chartered accountant is essential; age range 35-45.

Please send brief details in confidence, quoting reference S.1923, to W. E. Younger. In no circumstances will a candidate's identity be disclosed to our client unless he gives permission after a confidential interview at which he will be given full details of the appointment.

MANAGEMENT SELECTION LIMITED
17, Stratton Street, London, W.1

STATISTICIAN required

for the Central Statistics Office, Dublin. Salary: £589 rising to £1,526 plus children's allowances in some cases. Higher initial salary may also be allowed and there is a special advance in salary after eight years' service. *Maximum Age Limit:* 30 years. *Essential:* (i) First or Second Class Honours Degree (or equivalent) in Mathematics or Mathematical Physics or Mathematical Statistics, or (ii) First or Second Class Honours Degree (or equivalent) and adequate experience in practical statistical work.

Application forms and further particulars from Secretary, Civil Service Commission, 45 Upper O'Connell Street, Dublin. *Latest date for receiving completed application forms: October 29, 1959.*

WANTED GROUP ACCOUNTANT

He will be head of the accountants in a British Group of Companies with wide European connections. This Group is chiefly concerned with research into the marketing of consumer goods.

This top accountant will be responsible only to the Director of Administration of the Group.

The better he is—the better he will be paid.

If you want to know more about this job write with details of yourself to:

ICE-ADMIRAL SIR GUY SAYER,
ATTWOOD GROUP OF COMPANIES LIMITED
CHANTREY HOUSE, ECCLESTON STREET, LONDON, S.W.1.

UNIVERSITY OF MALAYA
(SINGAPORE DIVISION)

Applications are invited for:

CHAIR OF ECONOMICS

Salary between £2,268 and £2,548 per annum, at fixed point determined by qualifications and experience. Allowances: cost-of-living allowance £178 per annum, expatriation £1,178 per annum. Passages for appointee, wife and children under 12 years. Part-furnished quarters at reasonable rent. Provident Fund Scheme.

Detailed applications (eight copies), naming three referees, by November 15, 1959, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

KENYA COLLEGE OF CITIZENSHIP

Applications are invited for the post of Principal of the College which it is proposed to establish near Nairobi in Kenya for the purpose of conducting inter-racial courses of adult education for groups of students of approximately 25 in number. The courses will be partly vocational and will have *the additional aim of achieving a better common understanding* and a sense of common citizenship.

The Principal, who will be responsible to an independent Board of Governors, will be required to launch the College. The Board is anxious to start courses as soon as possible and applicants should therefore state the earliest date by which they would be available.

Salary will be in the range of £2,000 to £2,500 a year with free quarters furnished to a simple standard. The appointment will be initially for a period of two years at the end of which a gratuity equal to 13½ per cent of salary will be payable and overseas leave granted with free air passages (tourist) up to a maximum of three according to requirements.

Interested persons should submit their applications not later than November 15th, giving details of age, qualifications and experience and stating whether married or single. Previous *experience of adult education and of Africa* would be desirable, but the Board of Governors will consider primarily the record, personality and ideals of the candidate.

The College will require both an Administrative Secretary and a Housekeeper. If an applicant for the Principalship is married and his wife is interested in either of these posts the Board would be prepared to consider her.

Further particulars can be obtained from G. Hunter, c/o Royal Commonwealth Society, Northumberland Avenue, London, W.C.2, to whom all applications should be addressed.

MANAGEMENT AUDITOR

A large and rapidly developing Company intends to appoint a man with suitable ability and experience *to advise the Board* continuously on the organisation and procedures needed to meet changing policies and circumstances. He will also be expected to introduce and control appropriate techniques such as operational research and reorganisation and methods, and to maintain a continuous watch on the efficiency of the *organisation as a whole.*

Applicants should have had a wide business experience and a record of successful achievement so that a minimum age of 32 years is considered desirable.

Salary will depend upon the age and experience of the successful applicant but will be in a range of £2,000-£3,000 per annum.

The Company is situated in the South of England and provides a non-contributory pension scheme and other staff benefits.—Write Box 1221.

GOVERNMENT OF THE FEDERATION OF RHODESIA AND NYASALAND

VACANCY: INVESTIGATOR: IRON AND STEEL INDUSTRY
MINISTRY OF COMMERCE AND INDUSTRY

The successful applicant is required to work within the Ministry of Commerce and Industry, particularly on the problems of the expanding Federal steel producing and using industries. His duties will include enquiry into and report on the possibilities of developing new and fostering existing industries. He will examine and report on applications from industry for assistance through the Customs Tariff, in which connection his reports will embrace, amongst other things, an economic and technical appraisal of the efficiency of the industry applying for such assistance. He will also be required to deal with *matters affecting* other branches of industry.

Preference will be given to applicants under 35 years of age, who should be professionally qualified and have some practical experience in the general field of steel producing and using industries. Business experience in the field would be an advantage.

The initial appointment will be on a two year contract basis with a salary of £1,800 for the first year and £1,850 second year. Appointment for an initial two year period on permanent terms with salary progressing to £2,050 is possible.

Application forms and further details from the Secretary (R), Rhodesia House, 429 Strand, London, W.C.2. Closing date November 16th.

LONDON TRANSPORT ECONOMIST

London Transport invites applications from Economists for an appointment in the Economic Advisory Service. This is a special unit responsible for interpreting *economic conditions* and advising top management on the implications for London Transport in relation to the trend of traffics, etc.

Applicants must hold a University degree or an equivalent professional qualification. They should have a knowledge of the main sources of economic statistics and of elementary statistical methods, together with good drafting ability. The post is permanent and offers good prospects of promotion.

Commencing salary for men up to £675 per annum according to age, with additional payments for recognised qualifications up to £75 per annum for first or second class honours degrees. Rates for women slightly lower but will equal men's rate by 1961.

Free travel; medical examination; contributory superannuation scheme.—Please apply within seven days to Staff and Welfare Officer (F/EV.755/1), London Transport, 55 Broadway, Westminster, S.W.1.

INVESTMENT MANAGER required by leading London bank. Applicant will be responsible for the investment and supervision of considerable funds. Must have first-class knowledge and extensive experience of all aspects of investment policy. Age 40 upwards. Starting salary £3,000 per annum. Pension.—Write, giving full details of past experience, to Box 1216.

LEVERHULME RESEARCH AWARDS

FELLOWSHIPS AND GRANTS, 1960

Application is invited for Fellowships and Grants in aid of research. These awards are intended for senior workers of *established position and are limited to British-born subjects* normally resident in the United Kingdom; in exceptional circumstances the Trustees may waive the condition as to residence.

No subject of enquiry is excluded from consideration but preference is given to subjects in which existing provision for research is inadequate.

The duration of the awards does not extend over more than two years or less than three months and the amount depends on the nature of the research and the circumstances of the applicant.

Application must be made on Form "F" obtainable together with further details from the Secretary, Leverhulme Research Awards, St. Bridget's House, Bridewell Place, London, E.C.4.

The closing date is December 31, 1959. Results will be announced in May and the awards will normally date from September 1, 1960.

UNIVERSITY OF ADELAIDE

FACULTY OF ECONOMICS

Applications are invited for the following appointments: (1) SENIOR LECTURER OR LECTURER IN ECONOMICS (2) SENIOR LECTURER OR LECTURER IN BUSINESS STATISTICS.

The Lecturer will be responsible for organising and conducting a course in the applications to business of sampling, statistical decision making, linear programming, etc.

Salary scales: Senior Lecturer, £A2,100 x £A80 — £A2,500; Lecturer, £A1,500 x £A80 — £A2,060. Superannuation on the F.S.S.U. basis.

Copies of the general conditions of appointment and of statements relating to the posts may be had on application to the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1, or to the Registrar. The Calendar of the University may be seen *in the Library of any University which is a member of the* A.U.B.C.; housing help is available and any further information desired will be supplied on request.

It is very desirable, but not essential, that the successful candidates should take up duty by the beginning of the academic year early in March, 1960.

Applications, in duplicate and giving the information listed in the general conditions of appointment, should reach the Registrar, the University of Adelaide, Adelaide, South Australia, not later than November 16, 1959.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Research Assistant required for bibliographical work in the Research Techniques Division. Salary according to age and qualifications on a scale of £450 x £25 — £525 per annum. Acquaintance with statistics desirable.—Applications, with the names of two referees, should be received by the Director of the Research Techniques Division, The London School of Economics and Political Science, Houghton Street, London, W.C.2, not later than October 23rd.

KENT COUNTY COUNCIL requires in the PLANNING DEPARTMENT:

(a) SENIOR ASSISTANTS in Special Grade (£785-£1,070) or if appropriate Grade APT IV (£1,065-£1,220); and
(b) PLANNING ASSISTANTS in Grade APT I-II (£610-£880) or APT I (£610-£765).

The commencing salaries will be fixed according to qualifications and experience and the posts are superannuable.

Several new posts are available for work in connection with the preparation of Town Maps, for limited development control duties and for officers with qualifications in architecture or landscape.

For senior planning posts applications will be considered from corporate members of the Town Planning Institute and for other senior posts corporate membership of either the Royal Institute of British Architects or the Institute of Landscape Architects will be required.

For the other Planning Assistants' posts a University degree or diploma or a recognised intermediate professional examination related to any technical aspect of the work of a planning department will be required.

The National Scheme of Conditions of Service applies and registered disabled persons will be considered.

Applications, with names of two referees, to the County Planning Officer, County Hall, Maidstone, by Monday, November 16, 1959.

MARKETING RESEARCH.—Leading organisation in this field has vacancy for a STATISTICIAN for research rather than routine. Ideally, he or she should be between 24 and 27, be a "mathematical" statistician and interested in market research problems. Experience not essential.—Applications, giving full details education, qualifications, experience, to Box 1220.

A FIRM OF INVESTMENT BANKERS wish to employ an investment actuary; previous experience is desirable, and *due regard will be paid to qualifications*; the applicant will be expected to organise a department and to display initiative and original thought. He will be immediately responsible to the *Board of Directors. Post offered is a permanent and progressive one.* Salary will depend upon qualifications and experience.—Write A. Keyser & Co., Ltd., 31 Throgmorton Street, E.C.2.

UNIVERSITY OF BELFAST

The *Queen's University of Belfast* invites applications for a temporary lectureship or assistant lectureship in Modern British Economic History for six months from January 1, 1960. Applications (two copies) should be received by November 14, 1959.—Further particulars can be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary.

UNIVERSITY COLLEGE OF GHANA

Applications are invited for:

(A) ASSISTANT CHIEF ACCOUNTANT from professionally qualified Accountants with several years' practical experience; candidates with experience in a university institution preferred;
and (B) ASSISTANT REGISTRAR from graduates with financial and other administrative experience.

Salary (A) £G1,925 per annum Fixed. (B) £G1,000 x £G50 — £G1,350 (bar) x £G75 — £G1,800; £G1,850 per annum. Outfit and family allowances, passages for appointee and family on appointment, leave and on proper completion of appointment. F.S.S.U. Part-furnished accommodation at rent *not exceeding 7.5 per cent of salary.*—Detailed applications (six copies) naming three referees by November 10, 1959, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

GRADUATE of two to five years' standing required by *publishing house to produce economic surveys and articles* on other business subjects. Must have good honours degree in economics and statistics, and must be able to produce proof, at interview, of both desire and ability to write.—Write Box 1215.

THE ELECTRICITY COUNCIL

INDUSTRIAL RELATIONS ADVISER

The Electricity Council invite applications for the post of Industrial Relations Adviser to the Council.

The range of functions for which the Officer will be responsible will include the Negotiating Machinery covering wages and conditions of employment throughout the industry, the Joint Consultative Machinery and the Council's functions in the fields of Education, Training, Safety, Health and Welfare.

The appointment, which is superannuable, will carry a salary within the scale £4,750 to £5,250 per annum.

Applications, stating age, present appointment and salary, and supported by full details of qualifications and experience (together with the names and addresses of two persons to whom reference may be made), should be forwarded to R. A. Flim, Secretary, Trafalgar Buildings, Charing Cross, S.W.1, to arrive not later than November 6, 1959. Quote Ref. E/55.

SPECIALIST OFFICER (STATISTICIAN) NORTHERN REGION OF NIGERIA

To advise on design and supervise analysis and presentation of results of experimental work for all sections of Research branch of Northern Region Department of Agriculture, and to take part in development of satisfactory experimental techniques in the field.

Candidates must have a good honours degree, preferably in Agriculture, with at least two years' suitable post-graduate training or experience in statistics.

Appointment on permanent and pensionable terms with pensionable emoluments in range £876-£1,080 or on contract/gratuity terms in scale £1,008-£1,824 with gratuity of £37 10s. for each completed three months of satisfactory service.

Free passages on appointment and leave for officer, wife and children up to three adult passages in all. Outfit and *Touring Equipment* allowances payable on first appointment. Furnished quarters available at moderate rental. Generous leave.

Apply, giving brief particulars, to Director of Recruitment, Colonial Office, London, S.W.1, quoting B/CD.63/408/032/A3.

LONDON COUNTY COUNCIL

City of Westminster College, Francis House, Francis Street, S.W.1, required January 1, 1960, Assistants Grade B (a) to teach Shorthand and Typewriting, mainly to ex-grammar school girls taking full-time Secretarial Course. Graduate preferred but not essential. Ability to offer other subjects a recommendation. (b) Graduate, to teach Economics and allied subjects up to G.C.E. "A" Level; previous teaching experience desirable.

Burnham (F.E.) Salary Scale (men), £700 x £27 10s. to £1,350 plus additions for qualifications and training and London allowance £38 or £51; increments within scale for experience (slightly lower scale for women until 1961).

Application form from Secretary at College, to be returned by October 26, 1959. (2236.)

A LEADING instrument manufacturing group requires an experienced Secretary/Accountant for one of its major units. The position is progressive and the salary attractive. Help on re-housing would be given if necessary. The aim is to fill this vacancy from applicants who have occupied or occupy a corresponding No. 2 position with an existing instrument manufacturer of international renown.—Box 1219.

ECONOMICS GRADUATE

Vacancy occurs at the London, W.1, Headquarters of an internationally known Manufacturing Organisation for a graduate in economics to study and report on financial, economic and commercial trends, particularly in the Vehicle and Aircraft Industries. The position is a progressive one, offering attractive salary and conditions. Applicants should have had a first-class education, and be about 30 years old.—Box 1217.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for the position of Junior Research Officer in the Research Techniques Division. Duties: to participate in studies of research methods in the social sciences. Qualifications: applicants should have studied in the social sciences, should have a knowledge of basic statistical methods and should hold an honours degree. Research experience is desirable. Salary: £650—£900 per annum, plus £60 London Allowance, the starting point depending on ability and experience.—Applications should be sent to the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2.

UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

Applications are invited for the newly established Granada Research Chair in Communication tenable in the first instance for seven years. Maximum salary £2,500 per annum, with S.S.U. membership and children's allowances. The successful candidate should take up his duties early in 1960.

Applications should reach the Registrar, University College of North Staffordshire, Keele, Staffs, from whom forms and other particulars may be obtained, not later than November 30, 1959.

UNIVERSITY OF BRITISH COLUMBIA

VANCOUVER, CANADA

DEPARTMENT OF ANTHROPOLOGY AND SOCIOLOGY

Applications are invited for vacancies for INSTRUCTORS IN SOCIOLOGY. Candidates should have a doctorate degree or be close to completing their Ph.D. requirements in one of the following fields: sociology of religion, political sociology, industrial sociology, the study of immigrant communities, [illegible] Professor would normally occur [illegible] 1960.

[illegible] for Instructor $6,600 for Assistant [illegible] with superannuation, disability income insurance, [illegible] courses would begin in September, 1960.

[illegible] with names of referees, to the Head of the [illegible] ment.

COUNCIL OF EUROPE

COMPETITION IN ADVANCED EUROPEAN RESEARCH

A competition will be held every two years under the auspices of the Council of Europe. Candidates will be required to write a work on a given subject relating to a question of European importance.

The subject of the competition for 1960 is:

"Consequences of the use of nuclear energy for the European mode of life."

Works must be of a high academic standard. They must not have been previously published, and must represent an original contribution on the subject set. They may be written in any one of the following languages: Dutch, English, French, German, Italian, Spanish.

The amount of the prize will be one million francs. The Council of Europe will be responsible, in agreement with author, for the publication of the winning thesis. Candidates should submit six typewritten copies of their work to the Secretariat of the Council of Europe, Strasbourg, France, before December 31, 1960. The Secretariat-General will arrange for the work to be transmitted to an international jury specially appointed to award the prize.

Further information may be obtained from the Secretariat of the Council of Europe.

UNIVERSITY OF HONG KONG

LECTURESHIP IN POLITICAL SCIENCE

Applications are invited for the above newly-established post. Applicants should hold a degree in Political Science and have experience in teaching Western and Far Eastern Political Theories and Constitutions in a British or Commonwealth university. The successful candidate will be expected to assume duties in January 1960.

Annual salary (superannuable) is £1,575 x £50 — £2,175 for a man or £1,500 — £1,600 for a woman. There is also an expatriation allowance of £225 a year if applicable. The combined income tax in the Colony is comparatively low. First-class sea passages are provided for expatriate staff and their families on first appointment and leaves.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Hong Kong and London, on November 30, 1959.

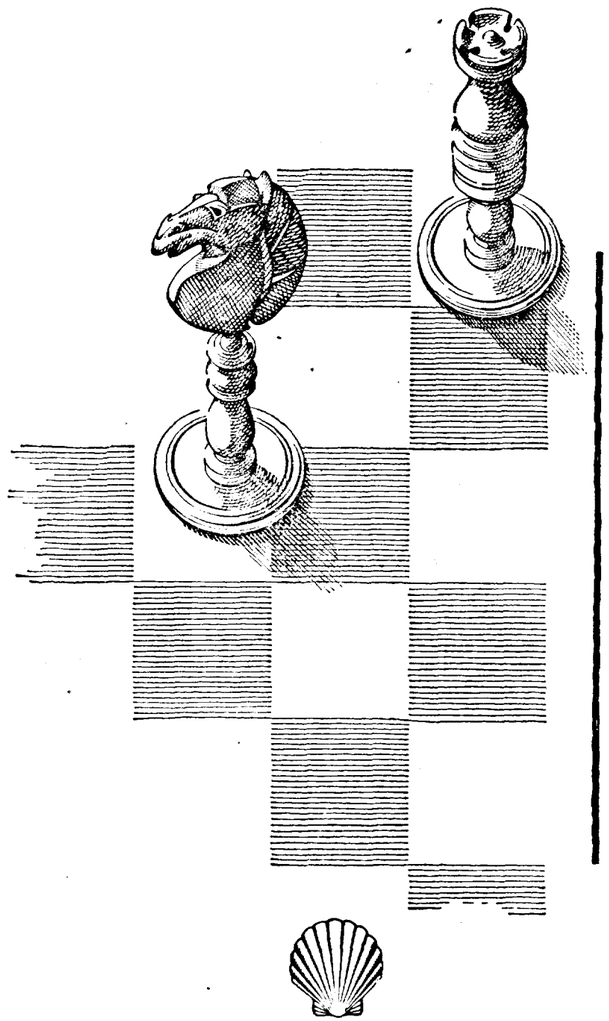
Knight's move, or castle's?



Can Shell be sure? Those who want to make a career in Shell often ask, "Where am I likely to be in 15 years' time?" Geologists, physicists, geophysicists, chemists, engineers, chemical engineers, economists and arts men: they all want to know where they are going to get to.

We may have a pretty shrewd idea, but we cannot always know for certain; partly because things move very fast these days, partly because people change their ideas as they go along.

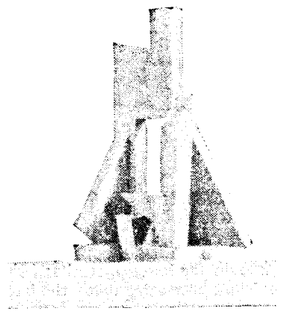
The aim, however, is to plan a man's career several moves ahead. He may move in a direct line like a Castle. Or he may move like a Knight, sideways and forward. For instance, the chemist, engineer or chemical engineer can move from the operational to the commercial square; the geologist or physicist from exploration to production; the arts man from Marketing to Personnel Administration . . . and all towards top management.

And a pawn can always become a Queen.

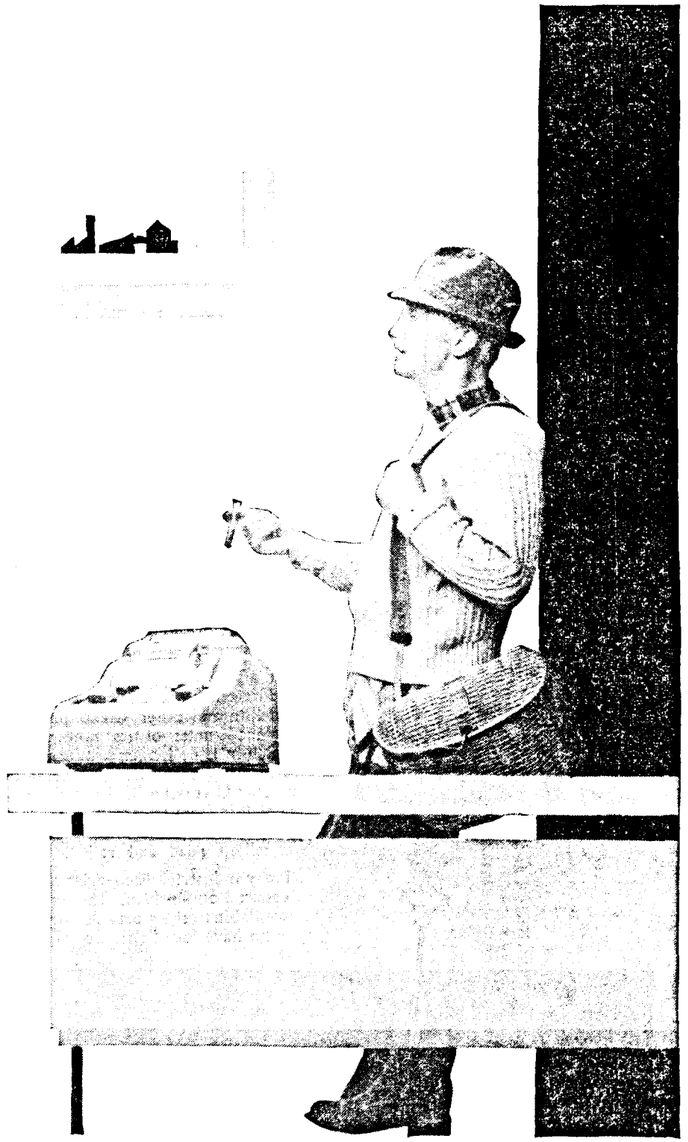
As the oil industry and the chemicals-from-petroleum industry expand, the variety of moves a man can make is constantly increasing.

this is the world of SHELL

SHELL INTERNATIONAL PETROLEUM COMPANY LIMITED · ST HELEN'S COURT · LONDON EC



weekends aren't made for work



Your wife is right, you know . . . week-ends are not made for work. So relax. Take in ADDO and take time off. An ADDO adding/listing machine is as good as an hour a day to the busy executive . . . saves time, saves double-checking, saves constant control of staff. It also *proves* its figuring in print. Add, subtract, list, by hand or electrically, with full or simplified keyboard. There are some hundred ADDO models to choose from, so you can standardise on ADDO whatever your work—a big advantage in your expanding business. And that's just the kind of business in which BULMERS are at home. Details of the range are well worth sending for. Ask, too, about ADDO in automatic data processing—the tape control of tomorrow's top management. Bulmers (Calculators) Limited, Empire House, St. Martins-le-Grand, London, E.C.1. PENICILLIN

FROM COUNTY DURHAM

Yes . . . the county which is probably best known for its coal, steel and ships, provided the base for Britain's first major penicillin producing unit—the factory operated by Glaxo Laboratories Ltd., at Barnard Castle.

This world famous company began operations in Durham in 1945 and found that Barnard Castle had much to offer their industry. The production of drugs like penicillin, involves processes which must be carried out under sterile and aseptic conditions, and it was, therefore, helpful to have clean air. Glaxo also found that local men and women were quick to learn the skills necessary for this new industry—new not only to Durham, but to the world. Today some 600 people are employed by the company and a high proportion of their workers have been with them since they opened at Barnard Castle 13 years ago.

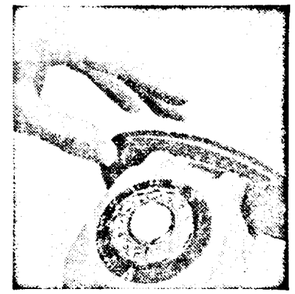
Soon after the opening, extensions were under way, and a secondary production plant was established to handle the packing and filling of penicillin and other Glaxo products. This plant is today one of the most advanced units of its kind, with every operation highly mechanised. Penicillin is no longer produced at Barnard Castle, but the position of the factory had considerable bearing on the siting of Glaxo's new production unit at Ulverston, in Lancashire. Easily reached by road from Durham, penicillin from Ulverston comes to Barnard Castle for packing before being sent on to Glaxo's headquarters at Greenford, Middlesex, using the excellent road and rail links between County Durham and London.

Many industrial discoveries and achievements of past centuries have been centred on Durham. The new discoveries of science are now being made available to the world through companies such as Glaxo Laboratories Ltd., who have found that County Durham still has much to offer.

SITE VACANCIES

The experience of Glaxo Laboratories Ltd., in County Durham, is like that of many companies who have found the county to their liking. Labour is available, transport facilities are excellent, the essential services are plentiful and cheap, while the amenities are second to none. Many first class industrial sites are available and for rent, will be readily supplied by the County complete information, including details on factories Planning Officer, Durham County Council, 10 Church Street, Durham.

Your car is on the phone!



The British Post Office has this week opened in South Lancashire the first public radiotelephone system for motorists. The new service enables motorists to make and receive calls from their cars to telephone subscribers throughout the whole of Britain; with it your car is on the 'phone.
The equipment is manufactured and designed throughout by Pye—the world's largest exporters of mobile radiotelephones who have supplied over 80% of the mobile radiotelephone installations in Britain. For Post Office approved radiotelephones for cars and vans, write or 'phone to:—

Spray type deaerator for 100,000 lb/hr.

Industrial Deaerators

The recirculating deaerator developed by Hick Hargreaves provides a simple and dependable means of preventing corrosion by reducing the oxygen content of the feed water. Effective deaeration is assured under all conditions of flow, no matter how wide or rapid the fluctuations in the feed rate, whilst the absence of floats and spray valves ensures great reliability. Three types are available. The Straight Spray Type is suitable for handling feed water from 130°F (55°C) to 200°F (95°C) and requires no heating steam for its operation. The Direct Contact Heating Deaerator accomplishes the dual purpose of deaerating and heating cold water up to a maximum outlet temperature of 180°F (82°C).

The pressure type deaerator is capable of operation with outlet temperatures up to 240°F (115°C).

Standard designs for all types are available with capacities from 20,000 lb/hour (10,000 kgs/hour) to 450,000 lb/hour (200,000 kgs/hour).

furnaces by the yard?

Here in Chamberlain Square, Birmingham, the statue commemorating Joseph Priestley has in its plinth the standard measurements of a foot, two feet, a yard, and a metre. It is impossible, unfortunately, to buy heat treatment furnaces by the yard. In Birmingham, however, Birlec has designed a range of standard furnaces of various types from which most production requirements can be met.

Birlec standard furnaces for annealing, brazing, carburising, hardening, normalising, tempering, and nitriding.

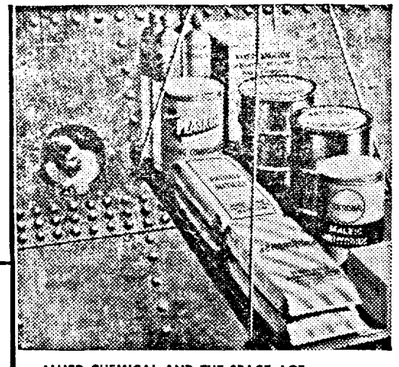
WORLD'S MOST EXPERIENCED AIRLINE

Another "100 Chemical Plants" swing ashore

When you buy from Allied Chemical, it's like having a chemical company in your back yard—over 100 plants turning out more than 3,000 chemicals for world-wide industry and agriculture . . .



It takes a large industrial complex to manufacture one of the most complete chemical lines in the world . . . Allied's seven manufacturing divisions operate over 120 plants, mines, technical service and research laboratories. And these facilities, plus a wealth of technical skill and experience, are as close as your Allied Chemical distributor.

PLASTICS

Allied makes A-C Polyethylene, a low-molecular-weight polymer that adds brilliant color and gloss to molded products; imparts toughness and mar resistance to waxes, paints and coated board. Then there's Allied's new type nylon — PLASKON nylon molding and extrusion compounds based on caprolactam. For other plastic applications, PLASKON provides urea, melamine, alkyd, polyester and other resins.

THROUGHOUT INDUSTRY

Allied's chemicals are basic to most processing needs. Be it tons of SOLVAY soda or custom lots of B & A biochemical reagents, world-famous Allied Chemical quality is in every shipment.

IN AGRICULTURE

For more than 50 years, Allied has been serving agriculture in fields, pastures, orchards and ranches the world over. ARCADIAN fertilizers today are raising the yields of virtually every type of crop. PROCADIAN urea feed supplement builds healthier, meaty cattle. And, ORCHARD BRAND spray materials protect crops and animals from insects and disease.

ALLIED CHEMICAL AND THE SPACE AGE

Allied Chemical offers some 30 products for the space age. A new easy-to-read booklet entitled "Allied Chemical and the Space Age" is available without cost. Just write for one.

You can get more information on Allied in our booklet, "Introducing Allied Chemical International." Ask your Allied Chemical distributor, or write for it on your company letterhead to your nearest Allied Chemical International office.

EXPORTS TO SWEDEN

HAVE you thought about Sweden when it concerns your planning for trading with the Outer Seven? Sweden is a small country with about eight million people, but the buying capacity is big on account of the high living standard. It is, however, a difficult market because the wholesalers and retailers demand, and get, a first class service, and the best results can only be obtained if deliveries are made from stock held in Sweden.

We can offer excellent facilities to anyone wishing to sell in Sweden :—

(1) First class management with plenty of experience of the market.

(2) Our own warehousing and distributing organization (very difficult to get in Sweden).

(3) Our own office, which is well equipped with modern machinery.

This organization is the subsidiary selling Company of a large British Company with a long record of successful selling in the Swedish market.

It is big enough to handle more lines and we would be interested to discuss the marketing of products in Sweden with manufacturers interested in utilizing a first class distributing organization.

Please communicate with Managing Director, Box No. 1225

Who Won the Election?

EVERYBODY knows now who lost the election. In a way Mr Macmillan stole his own thunder by completing the hat-trick so competently ; all the talk ever since has been about the Opposition and its plight. But the really important question now is: Who really won the election ? What sort of Tory men, and what kind of Tory measures, are going to guide the country's political and economic life in the next four or five years ? The verdict, after scrutinising the refurbished list of Ministers and the sensible expectedness of Tuesday's Queen's Speech (which is analysed on page 398) must be Not Proven yet. What is wanted is a new burst of creative imagination (not only, or necessarily, of bills) ; what we may get could be just the mixture as before.

The new Government is not as good, on the face of it, as the old one was when it was new. There are three reasons for thinking this. The first is that too many men at the top are still the same ; with their stint done, and their appetite for innovation dulled, they would do better with a fresh start elsewhere. The second reason is different: it is that some good men have been allowed to go altogether ; one conspicuous case (apart from Mr Lennox-Boyd, who has wanted to go for some long time) is Mr Aubrey Jones. The third reason is that, especially in some key middle posts, the new incumbents do not generally appear to be as good as the best of those who have moved up, on or out ; there are signs that the well may be running dry.

The outsider, of course, should not carp too confidently. Ministry-making is a very personal business. All governments reflect, rightly as well as inevitably, the predilections of the day's Prime Minister ; all are bounded in quality by the material available ; all are the resultant, in greater or less degree, of the personal and political forces inside the ruling party in Parliament. Mr Macmillan's first aim at the top of his Cabinet was, presumably, to hold the personal balance which was established when he became Prime Minister and Mr Butler did not. Even apart from Mr Selwyn Lloyd's doggedly-staked claim to carry on at the Foreign Office (and Mr Macmillan himself said on television not long ago that survival was the politician's first art), the mere thought of moving him on now would have thrown up the clashing claims of Mr Butler himself and the younger aspirants. So a new and characteristically deft concordat is made which gives Mr Butler, already Home Secretary and Leader of the Commons, the extra weight and leverage of party chairman. The younger aspirants do a sideways step: Mr Macleod, still very hopefully, to the challenge of Colonies, and Mr Sandys, pertinaciously but not at all so hopefully, to the new device of Aviation. Mr Selwyn Lloyd and, accordingly, the admirable Mr Amory (who, as Chancellor of the Exchequer, holds a post that Mr Butler has already had) stay where they are. In theory, there could have been a more promising deployment ; in practice, the balance is held ; it is the Macmillan equation.

So, too, lower down in the ranks. The appointments reflect Mr Macmillan's own very personal view of the blend there ought to be in a Tory Government between the different sorts or classes of Tory MP: the soldiers, the aristocrats, the grammar school boys and the women. The range of his choices had already been decided by the constituency committees and the voters. It is certainly very hard to put a finger straightaway on the new Macleods and Maudlings among them. Sir Keith Joseph ? Mr Rippon ? Conceivably Mr Barber, who comes from being the Prime Minister's own PPS to be Economic Secretary at the

Treasury, could be one; equally, he could have had a lucky start. The Treasury, in fact, seems to be plainly weakened by the shuffle. For a second time in well under two years its twin secretaries are changed together. Mr Simon well deserves his elevation to be Solicitor General; and Mr Erroll will be a stout aide to Mr Maudling at the Board of Trade. But these moves left the Chancellor, who is a modest man, lonely on his eminence. No doubt that is why Sir Edward Boyle now comes back again to be Financial Secretary; he is able as well as experienced, but he belongs to the Fabian left of the Tory party, rather than to the liberal left, and the core of his Treasury experience before was the melancholy collapse of Mr Butler's economic expansion into controls to combat inflation. And the task, and test, of the Treasury now (and of the new Minister of Labour, Mr Heath) is precisely to see that this does not happen again.

WHAT the renovated Tory team have to do, in fact, is to ride the new boom with skill enough—and confidence enough—for them not to have to dismount suddenly because it seems to be running away. Mr Gaitskell was, of course, right when he said during the election campaign that the recipe for Britain now is to expand production so rapidly that the resources, physical and financial, will be available for social reforms and for overseas commitments without need for higher taxation. The complaint against his and his friends' electioneering was rather that the fruits of further expansion were being pledged before it was achieved; that policies for industry and the economy were proposed which would make expansion at home (and trust in the pound abroad) much less not more likely; and that, by amicable arrangement, the trade unions were likely to pre-empt too much too soon in wages. It is into just these sins—of economic protectionism and inflationary wage settlements for the sake of industrial peace—that the Tories themselves must above all not fall, if Mr Macmillan's second term is to have wider horizons of opportunity and freedom than his first.

The election campaign confirmed two disturbing facts. One was that all the parties are more or less protectionist in their attitudes to the country's established industries and occupations; the other was that none would really yet face the problem of the premature and inhibiting pressure exerted upon costs by the trade unions whenever expansion gets under way. All of them said, indeed, that expansion must be the goal; but none asserted with blunt enough frankness that expansion can be quickened and sustained (at, say, the rate achieved by West Germany) only by keeping costs down. This is not just the crucial matter of preventing wage awards from out-running the expansion in production; the trade unions are not alone in the pillory. It is true that, in the state of the economy now, the only likely check soon to expansion would be a chain of inflationary wage settlements. That is why, from the start of his new job, Mr Heath must be, not a peacemaker, but a one-man resistance movement. But the problem goes very much wider than this.

Every bit of comfort and aid that is offered by the Government by its proposed new legislation and its new ministerial arrangements, whether to old declining industries or to new struggling ones, to agriculture or horticulture or fishing, to shipping or shipbuilding or air transport—or to science—has to pass the one same test: of comparative costs. Will it improve the competitive position of Britain? Will it help in the adaptive process of positively encouraging the country's resources to be used more efficiently and cheaply in meeting new demands and exploiting new techniques? Or will it help to erect, for reasons of old local interest or national prestige, yet another dam against economical change—and so against economic expansion? On the answers to these simple (but not over-simple) questions will depend the verdict on the kind of "conservatism" that the new Tory Government is going to stand for. The new President of the Board of Trade has a deserved responsibility—and an exciting opportunity.

MR MAUDLING'S responsibility and opportunity cannot possibly stop at our own frontiers. Competitiveness begins at home but ends, and is proved, abroad: "expansion in one country" is, for anybody but a communist committed only to communist means, a myth; for a crowded trading island it is nonsense. Britain's interest is still in the freest trade in the widest area of the world. The time has come for Britain to display this interest in the most demonstrative possible way. The worst way will be to do it in driblets: first to announce, as is surely now inevitable as well as right, the dismantling of the remaining controls on imports of dollar and other consumer goods; and then to say piously, but unspecifically, that Britain is, of course, always ready to receive proposals for freer trading between Europe's "Seven" (to which it belongs), Europe's "Six" (to which it does not), and the Commonwealth (to which it does); or that Britain is prepared, without saying how, to play its part with the United States and Europe, not only in stimulating the capital development of the underdeveloped parts of the world, but also in encouraging the sale of their developing products. What is wanted is a bold "package" proposal saying, in terms, what we are ready to do: a Marshall Plan "in reverse"—perhaps even (with Mr Amory's genial blessing) a Maudling Plan?

This is politics at least as much as it is economics. The need of the new Macmillan Government is to prove not simply that Britain is a good trader but, even more, that it is a good ally. The last flicker of the atavistic wish to "go it alone" has faded with the bad aftertaste of the false reckoning at Suez just three years ago. As in trade and finance, so in diplomacy and defence (which is more needed than ever now the stage of negotiation may be near), the mission of an outward-looking and forward-looking British Government today is to show by its deeds that, with Britain's own house in order and its own resources growing by its own exertions, it can, and will, play its correspondingly full part in (and not apart from) the collective action of its friends across the world.

The prime need, in fact, of the renewed Tory administration is to pursue policies that are all of a piece: which means policies which are (without the capital "L") liberal. This is true for Mr Macleod as he takes on the task, first of restoring political life and the rule of law in Nyasaland, and then of discovering the terms of a partnership in the Rhodesian Federation that will be both viable and just for black—and for white. It is true, at home, for Mr Butler in his extended bailiwick. Can any one man be at once a vigorously reforming

Home Secretary, the vigorously energising chairman of a triumphant political party, and the vigorously free-wheeling leader of the House of Commons? The answer to the question "Who won the election?" will much depend on the mark that Mr Butler (with Mr Macmillan's agreement) can make in all these roles. The reforms sketched in the Queen's Speech are a fair and necessary beginning. But even more will turn on what Mr Butler can do to keep the Tories facing in the right way (which means left)—and, above all possibly (as some ingenious ideas described on page 400 suggest) on the fresh air that he can encourage to blow on all the tired benches of the Mother of Parliaments. The Tories, since they came back eight years ago, have never had it so good as when they were liberal.

Cyprus Confronts Its Future

"My Government welcome the prospect of the establishment of the Republic of Cyprus" (the Queen's Speech, October 27th). Does this bland statement fit the situation in the island as our special correspondent has seen it?

CRITICS of the new Cyprus that is to be established in February maintain that a house built during an earthquake cannot stand. Others, who believe that the Zurich and London agreements can be made to work, maintain that it is just because safeguards against further violence and conflict are so necessary that the foundations are somewhat complicated and unusual in construction. They acknowledge, however, that without a strong cement of mutual Greco-Turkish trust and confidence, the intricate new edifice could easily fall apart. The discovery of a Turkish caique laden with arms off the coast of Cyprus on October 19th, and Archbishop Makarios's suspension of the work of the constitutional commission two days later, demonstrate the present weakness of this cement; inevitably, there is real disquiet in the island about the future of the Cyprus settlement.

Probably none of those committed to the London and Zurich agreements wants to upset them by force. But the Turks—and for that matter the Greeks as well—may feel the urge to prepare against the possibility of violence in case the settlement, for one reason or another, breaks down. The Greek Cypriots already have arms to hand; it is known that Eoka did not surrender anything like all its weapons at the end of the emergency. The Turks, although they were not asked to hand in their arms, are believed to have been much less well equipped than the Greeks. But these considerations naturally did not prevent the Greeks from becoming extremely alarmed by the discovery of the Turkish caique with its cargo of rifles and bren guns, especially when they were told that this was not the first attempt at arms smuggling by the Turks.

The archbishop found himself under very strong pressure, both from his own ministers and from his more extreme right-wing supporters, to react strongly or else see the initiative slip into other hands. The gesture that he chose to make was the suspension of the constitutional commission. It was certainly sufficiently dramatic and forceful; but its effect, as the archbishop might have foreseen, was more likely to put the Turks' backs up than to make them more accommodating over arms smuggling, the constitution or anything else.

The present setback is the more unfortunate since before it happened the general opinion in the island was that relations between the two communities were slowly and steadily improving. Only a few days before the capture of the Turkish caique, Dr Kuchuk, touring some country districts, had been warmly received by Greek villagers. The work of staffing the new administration in the agreed proportions (70 per cent Greeks and 30 per cent Turks) has gone forward without any serious hitch. The archbishop and Dr Kuchuk have been working together in a co-operative spirit; they have worked out solutions for various problems without any prodding from the British, and a recent isolated incident of communal violence brought a strong condemnation from both leaders.

BOTH races do strongly desire to live peacefully side by side as they once used to do; but the mutual suspicions and fears bred of four years of strife are still far too close to the surface. Those responsible for drawing up the Zurich and London agreements were chiefly conscious of the suspicions and fears; if they had not been it is unlikely that they would have got any agreement at all. But the consequence is that in the construction of the new state much more is being done to divide the two communities than to bring them together. The establishment of communal chambers, to deal with purely communal matters like religion and education, is an obvious and comparatively straightforward step. The same cannot be said of the judicial system, where the impartiality of British justice has hitherto prevailed over racial antagonisms. Barristers who have to work within the new framework of separate Greek and Turkish courts and mixed courts when both races are involved fear that it will create problems where none existed before.

On the other hand, the establishment of separate Turkish municipalities in the five largest towns, at any rate for a few years, is in theory a sensible way of dealing with a troubled situation where bad feeling abounds. The Turks are convinced that in municipal affairs they have been getting a raw deal from the Greeks; their conviction may be exaggerated, but it is not unfounded. The Greeks, for their part, resent the extent to which the Turks have already taken matters into their own hands in municipal affairs; it is surprising how much bad feeling can be aroused by a stolen municipal wheelbarrow. But in practice the solution proposed bristles with new sources of dissension. The Turks demand a geographical division of each municipality. The Greeks oppose this, partly for practi-

cal reasons, partly because they fear the Turks may manage to grab too much, and partly because they dislike the whole idea anyway. But their proposals for an administrative division of each municipality fall short of what the Turks want.

No doubt, given goodwill and mutual trust, problems such as these would be amicably solved—many of them already have been. But without goodwill they can easily create more and more fresh problems. Unfortunately, although so much care is rightly being taken, sometimes at considerable risk of further difficulties, to prevent fresh antagonism between Greeks and Turks, very little is being done to foster a corporate sense of belonging to one Cypriot community. Nothing, for instance, is being done to tone down the extreme nationalist bias of the teaching in both Greek and Turkish schools. Nothing seems as yet to be contemplated in this or any other field that would encourage the Cypriots to regard their own flag ("of neutral colour and design") with at least as lively emotion as the Greek or Turkish flags.

PERHAPS it is too soon to expect any real movement towards a sense of corporate unity. At present, indeed, the Turks are reluctant to recognise that the authors of the London and Zurich agreements intended—as the texts certainly suggest—the new republic to be a unitary and not a federal state. It is this reluctance which is at the root of the deadlock in the constitutional commission over the powers of the Turkish vice-president. The Turks ask that the vice-president should have, in addition to his specific powers of veto, a general *droit de regard*, that is, a right to be consulted on all matters that come before the president. The Greeks would accept this; but during the long-drawn-out arguments on this issue they have convinced themselves that, however reasonably the Turks may try to present their case, they are in fact virtually asking for co-equal powers for the vice-president. This the Greeks would never accept.

It would be wrong to give too gloomy a picture of the present state of affairs in Cyprus. The problem of the size of the British bases, which remains outside the present crisis in the island, is still being argued out in London; it is a hard nut to crack. But there is much that is encouraging. The changeover from the British to the Cypriot administration has gone faster and further than anyone expected. In many departments the Cypriot transitional ministers have practically taken over; if the British were all to disappear tomorrow, there is no administrative reason why the new administration should not proceed undisturbed. The negotiations in Athens for a tripartite military alliance between Greece, Turkey and Cyprus have gone smoothly and are said to be almost complete. Archbishop Makarios, although sensitive to criticism from his more extreme nationalist supporters (as the present crisis has shown), commands the support ofthe great majority of Greek Cypriots, probably including (for the time being) the communists; the chances are that the early days of the new republic will not be bedevilled by open political strife.

Above all, there is the strong desire of the majority in both communities to make the settlement work—largely because they fear what will happen if it does not. Both sides are naturally anxious to extract as much benefit as possible for themselves from documents that only too often lend themselves to differing interpretations. But throughout the prolonged negotiations over the implementation of the agreements, both Greeks and Turks have set their faces against any attempt actually to change them; to tamper with any part of them, it is felt, is to endanger the whole.

If this attitude, and the genuine enthusiasm for their new enterprise that exists among the archbishop's young ministers, could be combined with greater trust and confidence between the two races, then the new republic could still get off to a good start. It will be hard to destroy mutual suspicions and foster mutual confidence in the few short months that remain before the new state is established. One essential is to remove as far as possible the fears of both communities that the other might, if things went wrong, resort to arms. How can this be done? One way would be for the British authorities in the island to seek the support of the Greek and Turkish Cypriot leaders and the Greek and Turkish governments for stern and thorough measures to secure the surrender of all illegal arms. This would be difficult, but it would be a big step in the right direction.

The Government's Programme

The worthy legislative programme in the Queen's Speech does not yet foreshadow any new surge in conservative thinking

To fill the last session with bills of any substantial political content the Government had to scrape the bottom of its barrel. Sixteen or seventeen bills (with a promise of others) looks quite a businesslike programme for the session ahead; but there are no surprises, and the departments have evidently been encouraged to bring up legislation of a largely routine and utilitarian kind. The bill of most immediate importance is the new **Local Employment Bill**, which is examined in a leader on page 439; it fulfils election promises and offers some rewards to areas which voted Labour in protest. The *mauvais quart d'heure* which the Jasper affair gave the Conservatives at the beginning of the campaign leaves its mark in the immediate place found in the Speech for early legislation on **building societies**. Mr Leather's speech in the debate on the Address on "scandals" in the City shows that the Government should not be leisurely or narrow in its approach to this or to the revision of the Companies Act.

Nearly a third of the proposed new bills are of interest to the City, investors and the business community in general. The proposed building society reforms are considered in a note in the Business World, on page 443. The proposal to allow payment of wages by cheque is dealt with in a business note on page 444, and a comment on the announcement of an inquiry into the working of the Companies Act will be found on page 443. The bill to improve the arrangements for licensing airline services is unlikely to be published until late in the session; it requires from Mr Sandys the resolving of the almost irreconcilable conflict between the financial problems of BOAC and the claims of the independent airline operators to expand; a brief comment appears in a feature on page 444.

THE most courageous and interesting bill, which could be the start of a new round of measures to free the individual from governessy restrictions on personal conduct complementary to the dismantling of restrictions on economic initiative, is the expected **bill to amend and modernise the law on betting and gaming.** It is now eight years since the Royal Commission on gambling recommended that betting shops should be made legal and bookmakers registered; since then the maintaining of one law for the "rich" gambler with a bank account and another for the "poor" gambler who wants to pay cash has become ever more ludicrous. The dangerous growth of public hostility to the police, which the police attribute to the attempt to enforce increasingly unenforceable laws, has added notable force to the arguments for reform. The debt which the police already owe Mr Butler for his reform of the prostitution laws will be increased if he can make sense of the gaming laws—which should extend not merely to off-the-course betting, but *inter alia* to the fatuous muddle over church and other lotteries and games of chemmy in private parlours.

The aim must be to accept the individual's right to impoverish himself if he insists without opening the door to the wanton stimulation of the gambling appetite. Mr Butler will have his troubles with the puritans who believed that public morals would be destroyed by premium bonds; but outside parliament the climate is ripe for reform. It would be ungrateful to expect the government to promise to reform the licensing laws as well; but its liberal attitude may legitimately be held to imply willingness to look even at that thistle after it has seen how betting reform goes down.

THE programme is fairly free from bills which are suspiciously generous to special interests. But the undefined proposals **to continue the subsidies to the fishing industry** will want watching; they ought to encourage the modernisation of those obsolete operators who are increasingly cut out of inshore or Iceland fisheries by the protective actions of foreigners which the Speech says the government is going to continue to wrestle with, an undertaking that is critically examined in a note on page 407. **Horticulture,** in accordance with pre-election assurances, is to get aid in the form of grants—which are preferable to the higher protection that it has been so vocally demanding. Much depends on how effectively these grants are to be tied to modernisation and cost-reducing practices generally. More depends on the amount of vigour and ruthlessness which the government is prepared to embody in its proposals—under the heading "encouraging the more economic marketing of produce"—for **reorganising and improving Covent Garden Market.** Covent Garden is a tough nut notoriously long overdue for cracking and success here would be an encouraging indication that the general assault on restrictive practices and bottlenecks is to go on. The bill will no doubt follow the general recommendations about redeveloping Covent Garden and the outer fringe markets contained in the Runciman report in 1957.

THE absence from the Speech of any notion of increasing the basic old-age pension under electoral stimulation is welcome. The principle should always be to alleviate hardship where it demonstrably exists, not to help everybody, including all those who do not need it, in the cause of helping those who do. Undoubtedly the government is starting the right way in undertaking to **relax the earnings rules for pensioners and widowed mothers,** which will require no legislation, and should be done as generously as possible, both to alleviate hardship and to keep elderly people in productive work. It may be hoped, too, that the government will look at the anomalies under which retired authors and the self-employed appear to suffer, inasmuch as any late spurt of activity on their part may well deprive them of pension.

Also acceptable is the prospect of legislation to make **legal aid and advice** more widely available, presumably by adopting the Law Society's proposals that the income limit for aid should be raised from £420 to £600 and also, it must very much be hoped, by bringing fully into force sections 5 and 7 of the 1949 Act to provide advice before litigation. This might be done by means of the scheme, already discussed by the Lord Chancellor and the Law Society, to enable those who cannot afford a solicitor to get oral legal advice at half a crown per half-hour.

Among some miscellaneous measures is a new **Mental Health Bill** for Scotland, which in some respects may follow the lines of the one that was enacted in the last session for England and Wales, but which may also incorporate the proposals contained in a Scottish White Paper of 1955. In this case, some of the old procedure may be retained; but it seems probable that patients will be encouraged to enter hospital informally, and medical recommendation will replace judicial certification for many.

The Speech also promised a bill for the statutory registration of **medical auxiliaries**—chiropodists, occupational therapists, speech therapists *et hoc genus omne*. The bill will presumably be based on the recommendations of the various committees whose reports were published over eight years ago. They suggested that there should be set up under the Privy Council a statutory body whose functions would include the maintenance of registers of medical auxiliaries qualified for employment in the health service; the recognition of training schools and courses; and a standing review of manpower and recruitment. Since professionalism is so advanced among the medical auxiliaries, it is advisable to complete the edifice to match those erected for dentists and opticians.

Another measure which takes a white paper out of its pigeonhole is the proposed bill "to bring up to date" the statutes relating to **Charitable Trusts.** This will not deal with the question of trustee investments, but will be based on the government's comments, made in 1955, on the Nathan report of 1952, dealing mainly with the organisation of trusts. The main problem is to enable changes to be made after a defined period in the objectives of out-of-date trusts (whether because of their objective, the nature of the endowment or changes in political frontiers) and to combine trusts with similar objectives, and the tricky question of who shall initiate and watch over such changes.

The promised bill to provide more effective means of dealing with **young offenders** is expected to incorporate the proposals put by the prison commissioners before the Home Secretary's advisory council, whose conclusions were given in *The Economist* last week. Eventually, only young people whose offences merit a sentence of at least three years' imprisonment will go to prison; the others will go either to detention centres or, in more serious cases, be sentenced to an indeterminate period of training for from six months to two years. The bill will also include an extension of compulsory after-care to more categories of prisoners; the lines were suggested by the advisory council in its report published a year ago.

Education figures in the legislative programme only to the extent of **a bill to implement the recommendations of the Commonwealth educational conference** last summer—presumably to enable the government to set up the central committee and secretariat in London, and to provide for the 500 scholarships and the teacher-training aid which was promised then. A comment on other references to education will be found in a note on page 407.

THE reference in the Queen's Speech to a **Nigeria Independence Bill** is a reminder that the face of Africa will be radically changed during 1960, and that Mr Macleod cannot begin too soon to think about changing the Colonial and Commonwealth Offices set-up to keep pace. His hands will, of course, be pretty full with Kenya and getting the Monckton commission going in Central Africa; but if some overdue thinking is not done soon, valuable opportunities for strengthening the Commonwealth will be missed—as they were missed when the provision of a Commonwealth service was first proposed and is now so sorely regretted.

Remodelling Westminster

THE House of Commons is extremely conservative about itself. There is therefore a danger that Mr Bernard Crick's excellent Fabian tract on the *Reform of the Commons* (Fabian Society, 3s. 6d.) might vanish from sight in a mutter of disparaging comment from both sides of the aisle. But Parliament does not now stand so high in the nation's esteem that it can afford to treat constructive remedies offhandedly.

Mr Crick's proposals have four main objectives:

1 *to enable MPs, singly or collectively, to confront the Government departments on somewhat more level terms in the hope of finding out what really is happening.*

2 *to make it possible for them to play a more intelligent part in law-making.*

3 *to equip them to deal adequately with constituency problems, thus removing any excuse for neglecting this essential part of their duties.*

4 *to make the House of Commons a more attractive and worthwhile place for able people to be in and work in.*

"The more power we trust a government with," as Mr Crick writes, "the more need there is for it to operate amid a blaze of publicity and criticism." But in fact the system is so rigged that ministers can usually get away with the appearance of being subject to criticism without effectively being so.

Question time, for example, is supposed to be the minister's great ordeal; and it is true of course that some ministers cannot even cope adequately with that. But, as Mr Crick points out, the MP-questioner is such a complete freelance, with such a lack of research facilities independent of the government he is challenging (unless he has accepted a briefing from some interested party), that he can usually be blinded by a well-briefed and intricate reply. MPs can ask a good initial question but, inevitably, they are weak on the follow-through.

Similarly with legislation, so much elaborate consultation has gone on between the department and the vested interests in private before a bill is ever published that it plainly makes for a quieter life for everybody if no real opportunity is given to the so-called "legislators" to reopen matters in public that have in fact been already sewn up.

MR CRICK'S proposals are designed to upset the cosy arrangements which give the appearance but not the reality of parliamentary control. The five main ones are as follows:

1 An MP would have an office and a secretary provided on the premises. He would also—and this may be even more important—have access to a strong legislative research service, probably attached to the House of Commons Library.

2 Standing Committees would specialise on particular subjects and have specialist staffs to support them, who would be able to "go into" the evidence behind the proposed legislation before them, instead of accepting it at face value.

3 Far more use would be made of Select Committees; and in time these should perhaps be merged with specialised Standing Committees. These would have access to the strengthened research service, thus deliberately creating sources of information independent of Whitehall and compelling ministers to face sustained and well-informed scrutiny. Select Committees should sometimes have power to send for person and papers, but Mr Crick is sensitive enough to charges of "Americanisation" to stipulate that a committee would have to make a specific application for such powers, which would be granted only for a limited purpose.

4 The work of the Select Committee on Estimates would be shared among the specialised committees so that there would be a far closer scrutiny of estimates than happens at present.

5 MPs would have salaries and pension schemes tied to some quite high grade in the Civil Service. In return it would have to be clearly understood that so long as he was in Parliament a member was expected to give his first attention to his parliamentary duties.

These proposals are, of course, far more fundamental than anything that was suggested by the recent Select Committee on Procedure. Apart from sentimental affection for the present historical and accidental way of doing things, the main arguments that are already being heard against the proposals boil down to two. These are that, if MPs really began to learn something about a subject, they would not be so partisan and therefore so easy to discipline; and that, if ministers really confided in MPs who knew something, the ministers would be able to evade responsibility by claiming that the specialist committees acquiesced in their decisions.

THAT these things might happen no one would deny. But that it should be assumed from the outset that whatever difficulties might follow from them would be insuperable is to accuse British politicians of being even feebler people than their critics generally dare to say. And that of course is the third and least openly expressed objection—namely that MPs have nothing really to contribute anyway.

This is a dangerous line of reasoning. After all, ministers, who are the only check on completely private bureaucratic government that we have, are drawn from the parliamentary ranks. One might think that service on a specialised committee would be good training. Furthermore, as Mr Crick hints, this sort of objection does an injustice to the assiduous MPs who already work hard and acquire considerable knowledge in the specialised sub-committees of the parties.

What British policy-making most of all requires is continuous, intellectually rigorous challenge from outside the Government machine. Mr Crick's reforms would not of course change the average politician into a genius; but they might help him to do his best for himself, his constituents and the country.

The Economist

OCTOBER 29, 1859

ATTITUDE TO THE UNIONS

Mr Black, in his able lecture at Edinburgh, illustrated in a very impressive way the evils of Strikes and the abuses of Trades' Unions. If, however, we want to get the full ear of the working classes, we must do something more than this. We must show that we fairly appreciate the uses as well as the abuses of Trades' Unions, and the better class of aims they keep in view. Mr W. E. Foster, we believe, expressed the other day, at Bradford, the convictions not only of the working-men at large, but of independent observers, and even of many of the class of employers (of which he is himself one of the most distinguished), when he freely admitted that the existence, not of strikes, but of combinations of labourers acting in union and prepared to strike if it be necessary, is almost essential for the interests of the labourers in any discussion with their employers as to the regulation of the rate of wages. But this once admitted, the existence of Trades' Unions where these questions can be discussed and common action taken, is justified at once. The strike may be, and is, a fearful evil,—generally accompanied by consequences worse than itself in the animosities it creates, the violent measures to which it encourages resort on the part both of the masters and the men, and the waste of property which it inevitably causes. But though the strike, when it comes, is almost pure evil—the *power* to strike, if properly exercised, which is given by reasonable and peaceful combinations, may be nearly a pure good . . . There is, we believe, a sore feeling among working-men, which, more than any other, induces them to defend manifest abuses, that the middle and other classes of the community are resolutely blind to their real wants and grievances, and determined to look coldly on all their best-considered aims and efforts. We are sure that we can only gain the influence we ought to have with them, in inducing them to reform the manifold tyrannies and follies of what we may call the general code of Trades' Union law and custom, by showing them that we fairly appreciate and approve those of their objects, and those of their instruments for attaining such objects, which are legitimate and natural.

NOTES OF THE WEEK

THE SUMMIT

How Many Days?

MILDLY teased by Mr Gaitskell in the debate on the Address on Tuesday, the Prime Minister did allow himself to imply delicately that a hitch had appeared from across the Channel since he told the electors on September 30th (alas, a month ago) that the "actual" date of the summit talks would be fixed "within a few days." His explanation did not mention France, or General de Gaulle, but it was plainly General de Gaulle he was taking issue with when he said that it would be wrong to envisage a summit meeting like the Congress of Vienna,

> which tried to settle all the outstanding problems between east and west at one great conference.

What the British Government is working for—and the concept would have been much the same if it had been Mr Gaitskell, not Mr Macmillan, supporting the Address—is a series of meetings over a long period; it would not expect spectacular decisions at the start. It follows that the Government does not, like General de Gaulle, want to delay the curtain while the stage is set. It wants to keep up the momentum:

> We would like a summit meeting at the earliest practicable date.

Nobody would care now to say what that date might be. The French statement of October 22nd has set the process back so abruptly that the exchanges among the western powers are no longer directly concerned with anything so ambitious as the east-west meeting itself; efforts are now being bent to get an early meeting of the western heads of governments, at which the Anglo-American case for an early east-west meeting will confront a French, probably a Franco-German, case for avoiding haste.

President Eisenhower indicated on Wednesday that this meeting might well be in mid-December; M. Couve de Murville has mentioned December 15th. Like General de Gaulle, Dr Adenauer is not inclined to hurry, as a message from our Bonn correspondent on page 429 indicates. But it may well seem important to President Eisenhower that the date of his return visit to Mr Khrushchev should not be pushed back too late in election year. A strongly expressed American wish might conceivably persuade Dr Adenauer to change his mind; but General de Gaulle would still hold the key.

A Policy of One's Own

ALTHOUGH M. Debré has not been able to say yet when Mr Khrushchev is expected in Paris, he could announce on Tuesday that Dr Adenauer had been invited for December 1st and 2nd. It remains to be seen why Mr Khrushchev is still dickering over the date (discussions were said to be going on over a week ago), but it is understandable that he should find it tricky to explain to everyone else how Soviet pronouncements can keep plugging at the need for an early summit while he himself falls in with General de Gaulle's fabian tactics. Are there second thoughts in Moscow?

Mr Khrushchev likes travelling, but his timetable is something he arranges to suit his own book, as the Scandinavians learned this summer. He is expected to settle for mid-January, although it could be any time in the first three months of 1960. What General de Gaulle wants to talk to him about is still equally obscure, although there may be some clues at the general's next press conference on November 10th. General de Gaulle cannot hope for much change on either Algeria or the bomb, but it is possible that if Mr Khrushchev persists in the idea of an African safari next year, the head of the French community will want to know what he is up to.

HMG—SECOND INSTALMENT

Gentlemen and Players

IN his second distribution of jobs Mr Macmillan has preserved a nice balance between the claims of noble blood and those of vulgar desert. Two viceroys' sons, Mr Wood and Lord John Hope get the earthy portfolios of Power and Works. Both have great opportunities—Mr Wood to produce a fuel policy that both looks as if it had a clear thought behind it and does not add up to protecting uncompetitive coal mines; and Lord John to insist that raising new public buildings, even or perhaps especially prisons, is not the same thing as restoring ancient monuments. The House of Commons, particularly the miners' members and Mr Nabarro, will welcome the chance of shooting at a Minister of Power. But has the minister got the power? His critics will be sensitive to any hint that, with Lord Mills in the Cabinet and close to the Prime Minister's ear, all the House really has is a Minister of State with less authority than Mr Maudling, who answered for fuel policy in the last Parliament and was a Cabinet Minister.

To help him in gathering fuel Mr Wood will have the Tory coal miner, Mr J. C. George, who before the war worked his way up from coal face to managing directorship of a private colliery. Indeed, this continues to be a good year for the non-U Tory. Mr Bevins, for instance, achieves full ministerial office as Postmaster-General in place of Mr Marples. He will be expected to fulfil all the expectations aroused by his predecessor's flamboyance—and would-be customers who still do not have telephones will not be satisfied with announcements that those who do can have them in pastel shades and use a credit card away from home. But he will also have to tackle the two major tasks of turning the Post Office into a nationalised business and deciding what to do about television.

Juniors and Peers

AMONG the new junior ministerial names those of Mr Geoffrey Rippon, at Aviation, and Sir Keith Joseph, at Housing and Local Government, are particularly welcome. Sir Keith, a Fellow of All Souls with a background in building and in the City, has always shown an intelligent and constructive interest in social problems and is clearly being tried out for higher office. Mr Rippon is very much a Sandys man, having previously been his PPS at the Ministry of Defence. But practically from the moment he left Oxford he has been active for the Conservative party in local government. He was Mayor of Surbiton at 27 and has led the Opposition on the LCC for the past year.

Mr Butler, having taken on three men's jobs instead of only two, has understandably decided he would like two men to help him at the Home Office instead of one man and Miss Hornsby Smith. The latter, who has deserved well for standing up to Tory women and fearlessly investigating social problems, takes a Privy Councillorship over with her to Pensions and bumps Miss Pitt over to Health. Mr Butler's new right hand is a former Minister of Health, Mr Vosper, who had bad luck with his own health and now has to rejoin the ladder on a lower rung. But he was a promising Minister before and there is no reason why he should lose in the long run by having the chance of earning the direct approval and gratitude of Mr Butler.

One of Mr Butler's former protégés, Mr Cuthbert Alport, will now answer for events in Central Africa with more authority as Minister of State. The Commonwealth Relations Office has suffered too long from not having a senior minister in the House of Commons, so that it has seldom appeared in debate—and then as a junior lead to the Colonial Office.

Now that there is little left of the Queen's Navy, nobody notices very much which

peer is for the time being its ruler. Lord Carrington, who comes back from Australia to take over the bridge from Lord Selkirk, who has been posted to Singapore (both political High Commissionerships, which illustrates the Commonwealth Relations Office's weakness at the higher level) heads a branch of the financial Smiths. He cut his political teeth on Crichel Down. He was the junior minister who actually inspected the farm and came back, according to the report of the inquiry, none the wiser. Lord Chesham, who gets junior office at the Ministry of Transport, has been an able and resourceful ministerial spokesman in the Lords and deserves a departmental job.

HOUSE OF COMMONS

Backbenchers Revolt

As one might expect immediately after a same-again election and a workaday legislative programme the exchanges between the front benches in the debate on the Address have been unremarkable. Mr Macmillan did contribute a fairly candid account of his metaphysical differences with President Eisenhower about the nature of a summit. But Mr Wilson was at his old joke book again and Mr Maudling was throwing out his old unanswered challenges about the exact controls which Mr Wilson would now be using if he were Chancellor of the Exchequer.

But two developments in the House are worth comment. Mr Nigel Fisher's first-rate speech from the Tory backbenches in favour of a relaxation of the Government's grip on parliamentary time, his threat to abstain if there was a vote on the standard motion to steal private members' Wednesdays, and his even darker threat to vote against the Government if it did not mend its ways in planning the following session, obviously reflected strong feeling on both sides, to which Mr Butler was very wise to show deference. In fact there was not a vote. But this was only because Mr Butler promised to come back after Christmas with a suggestion to meet the private members' legitimate demand to be able to call the shots in some general debates in the middle of the week when they are likely to command an audience. Of course, ouside commentators have been urging this kind of revolt for years. It is a pleasant surprise to find that some people have been listening after all.

The second development, which gives the Labour party food for rethought, was Mr Leather's speech on City "scandals," and in particular his taunting reproach to the Opposition for missing all the constructive opportunities for criticising the City's weaknesses, while covering it with a blanket denigration. The Labour party really must start learning something about the way Britain's financial and commercial life is conducted before its competence either to criticise vigilantly or to govern responsibly will be taken seriously.

IRAQ

Adrift

The question whose finger was on the trigger when General Qasim was wounded is no longer the most urgent one being asked in Bagdad. No would-be assassin has been produced, and the divided Iraqis have been left to choose their culprit according to the tenets of their political faiths. If the regime weathers the storms of the next few weeks then there will be a round of trials. Justice in the republic, however, has not been noted for impartiality under the heavy hand of Colonel Mahdawi, whose methods have created almost as many heroes as villains. If the regime falls, then the assassination attempt can be conveniently forgotten.

More important to Iraqis, and to their friends abroad, is the question whose hand is now guiding the affairs of the nation. The government answered claims that General Qasim was dead by publishing pictures of him in hospital. He appears to be as alive as ever and still capable of displaying the familiar frozen smile ; but a picture does not answer the question. It is not likely that Iraq is being governed from a hospital bed by a wounded prime minister, with General Abdi sitting in one bedside chair and Colonel Mahdawi in the other. The nationalists pin their hopes on General Abdi, the military governor of Iraq, while the communists rely on Colonel Mahdawi who has served them well in the past.

There are Iraqis among his detractors as well as among his admirers who believe that General Qasim runs the country and is capable of continuing to do so. Even the nationalists, who have been kept on the run by his henchmen, do not, publicly at least, offer General Abdi as a possible substitute for the prime minister. They believe that, if anybody can, the military governor will be able to keep General Qasim and Iraq out of communist hands. But while nobody is quite sure who is in charge or what he is in charge of, the only country in the Middle East that should be able to face the future with confidence will continue to drift deeper and deeper into shabby chaos and anarchy.

CUBA

Havana's Pearl Harbour

Latin America's anti-*Yanqui* complex is being blown into an explosively gassy balloon by Señor Fidel Castro. In a series of oratorical television performances he has accused the United States of countenancing a bombardment of Cuba from airfields in Florida, an action "graver than Pearl Harbour." The bombing has so far consisted of two attacks on sugar mills a few weeks ago, and what his own police chief described as a leaflet-dropping raid by a couple of aircraft over Havana on October 21st. The Havana raid coincided with terrorist action on the ground ; two people were killed and about 45 wounded.

Señor Castro's rash words have provoked the State Department to an indignant, and remarkably lengthy, note of protest. Among other things, Señor Castro is reminded that ex-President Batista used to make the similar complaint that United States vigilance did not prevent the rebel forces getting a regular supply of arms from Florida. The explanation is simple if odd: there are more than 100 airfields around Miami, and no radar.

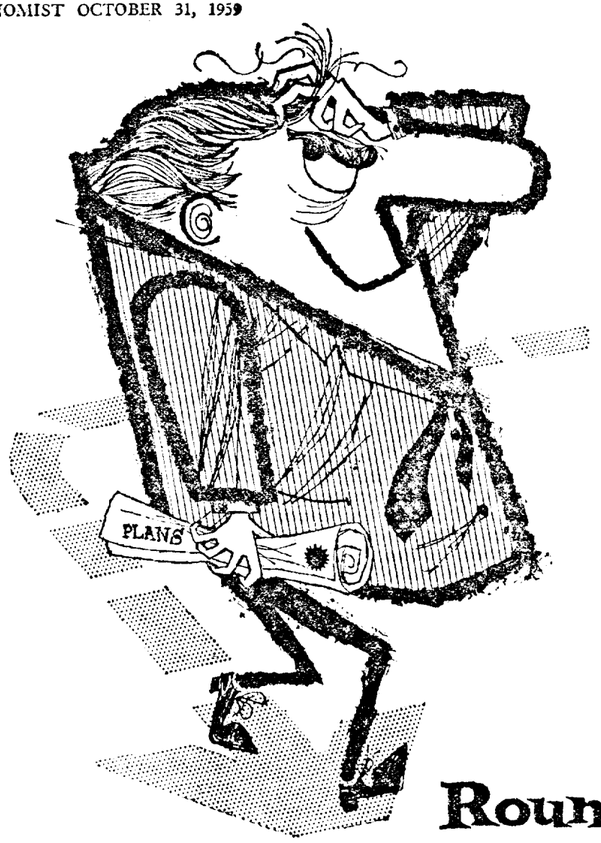
Señor Castro is talking in a foolishly provocative way ; still, the State Department has something to regret in having allowed the bubble of ill-will between the two disparate countries to swell so monstrously. This is particularly unfortunate when the United States is feeling its way towards a warmer relationship with its southern neighbours. However disillusioned many Latin American liberals may be feeling about the Cuban revolution, the American attitude of disapproval, accompanied by a submerged mutter about a punitive cutting of the Cuban sugar quota, wins no friends.

Against this background, the British Government is having to decide whether to agree to the Cuban request to replace the 17 piston-engined Sea Furies sold to General Batista with an equal number of Hawker Hunter jets. The State Department, which is trying without much success to prevent more arms filtering through to the Caribbean, has protested orally against the deal ; on the other hand the Cubans would certainly present a British refusal as an example of Anglo-American discrimination. The Government, having made one blunder, can now hardly do right whatever it decides.

TRADE UNIONS

A Load of Trouble

The trade union leaders represented on the TUC's general council have this week taken two hesitant steps towards putting their house in order. The first, decided strictly in the normal course of business, was to set up a broadly based committee (including representatives from both craft and general unions) to investigate the activities of shop stewards and their connection with unofficial strikes. The decision is timely. In the last week, unofficial strikes have broken out on the railway dining cars, the Sheffield buses, the Liverpool tugs, the Renault works at Acton, the Glowworm Boiler works, the Bankside power station and the General Electric's refrigerator factory. This is a disturbingly long tally, which indicates either a high degree of irresponsibility among union members or—



Round the bend ?

The most abominable growing pains can afflict even the most beautiful new building. Costs get hammered out of recognition, time schedules rendered senseless. Round and round you go (meanwhile wondering what the Board will say!). Unless—as a man of vision—you take that lovely by-pass direct to Costain. Costain's skills, experience and resources can short-circuit every sort of building problem. Efficiently and economically. Without aspirins. *Call in Costain at the start!*

For example, here are a few projects recently completed by Costain:
TRANSISTOR FACTORY, SWINDON · THE KARIBA TOWNSHIP
BEA WEST LONDON TERMINAL · IBADAN TEACHING HOSPITAL
BP RESEARCH STATION · CIBA PROCESS BUILDING

It's never too soon to call in Richard COSTAIN Limited

BUILDING & CIVIL ENGINEERING CONTRACTORS, LONDON, ENGLAND

Home Branches : Bristol · Canterbury · Grays · Newcastle · Plymouth · MIDDLE EAST · RHODESIA · NIGERIA · CANADA · WEST INDIES · SOUTH AMERICA

more likely—a union hierarchy so bureaucratic as to insulate the union leaders from the activities of their rank and file. In either case a TUC investigation, with the impetus which that gives to individual unions to look into their affairs before the TUC comes along, is clearly desirable.

The trouble is that the present vogue amongst trade union officials to blame all their difficulties on communists and Trotskyists may hide the real issues at stake. These are really two. The first is that trade unionism today has often become so negative that it lays itself wide open to the professional nihilism of the Communist party. Socialism in the unions is no more of a moving force today than "C of E" is in the country as a whole. The second cause of trouble is the tortured and outdated structure of some of the major unions. The Amalgamated Engineering Union in particular, with its deserted branches and lively, but largely disenfranchised works committees and shop stewards, is a case in point. There is a break in communications when the upward flow of grievances reaches the steward and the downward flow of authority reaches the branches. Until the two are brought closer together unofficial action by stewards will be the result.

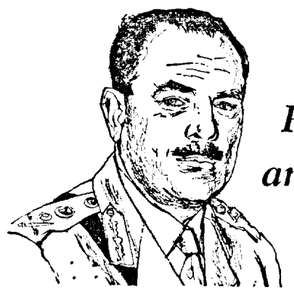
Hence one must have qualms about the ban imposed by the AEU's president, Mr Carron, on next month's national conference of shop stewards. The conference arrangements are dominated by communists; but they represent a real centre of power in the union and their views might as well be heard.

Stripping Off the Veil?

THE second halting step towards creating a more attractive union image was the General Council's decision to ask the communist leaders of the Electrical Trades Union to meet them next month. Their long-drawn quarrel, which has so far only led to an exchange of loaded letters, is coming to the boil again. But not a great deal is likely to happen at the November meeting. In the current series of union elections Mr Foulkes, the union's general secretary, has been confirmed in office for another five years (though by an undisclosed, and so presumably smaller, majority) and the other leading communist officials in the union do not seem to have fared any worse. Whatever the means of re-election—and on past history, some of them can be seamy—the results cannot help the TUC to get up courage to order a full-scale enquiry.

The members of the General Council are in a quandary. They know quite well that the ETU's activities cause disquiet to the public; yet two difficulties, quite apart from their fundamental timorousness, hold their investigation back. The first is that the professionally anti-communist element in the union is far from being composed of the

(*Continued on page* 407)



India, Pakistan and China

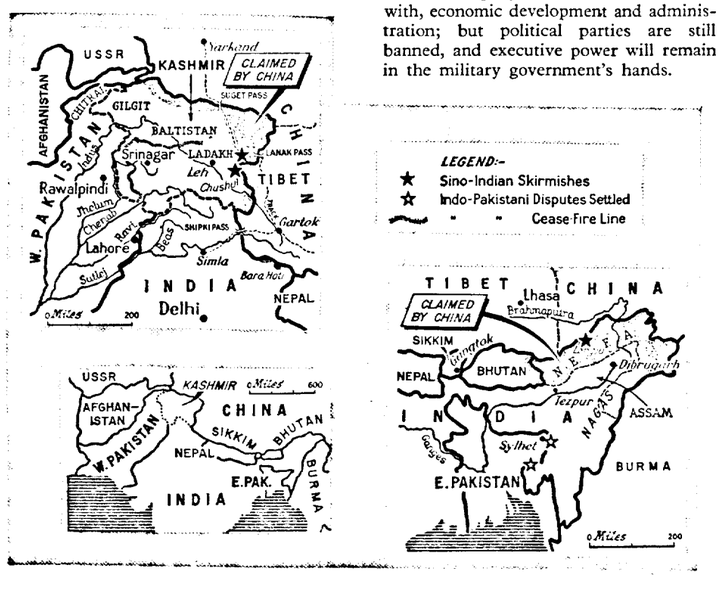
PAKISTAN celebrated the first anniversary of its military revolution on Tuesday. On the same day, Mr Nehru and the governors of all India's states discussed China's seizure of border areas against a background of rising public anger. It is natural to trace connections between these events and the simultaneous progress toward settlement of old disputes between India and Pakistan.

A year ago, the Indian forces were almost completely absorbed in confronting Pakistan, particularly in Kashmir, but also along other border sectors bedevilled by petty disputes and incidents. India was inevitably perturbed when the soldiers seized power in Pakistan. Today, it is still hostile to its neighbour's western alliances and resentful of the American military aid it has received; but now there is China to think about too. Speculation about an early Kashmir settlement is premature, and Indians have reacted coldly to President Ayub Khan's suggestions about joint defence plans. But they have not only become increasingly alarmed by China's aggressiveness; they have also been reassured by some of the new Pakistan government's actions.

In the past, settlement of Indo-Pakistani disputes has been made more difficult by the swift succession of weak governments at Karachi, which dared not risk being accused of conceding anything to India, and often could not carry out such agreements as they did reach. The present military government, however, has silenced criticism, dispersed all the political factions, and shown that it means to retain power for a long time.

Pakistan's Year of Innovation

President Ayub Khan marked this week's anniversary with two gestures; both had long term implications. He moved to Rawalpindi in north Punjab, with 1,500 officials from Karachi, to inaugurate the creation of a new capital near the army HQ. He also promulgated his programme of "basic democracies," a five-tier system of partly elected councils, at village, tehsil (or thana), district, divisional and provincial levels. This is intended to educate the people in, and associate them with, economic development and administration; but political parties are still banned, and executive power will remain in the military government's hands.



Over 3,000 officials have now been dismissed or punished in the course of the army's attack on corruption. (One argument given for moving the capital is the need to get away from the corrupting commercial influences of Karachi.) Prices have been kept steady, partly by severe measures against smugglers and profiteers; 20,000 evaders of income tax have been brought to light, untaxed income totalling £100 million has been revealed, and about £12 million of arrears has been collected. Maximum land holdings in West Pakistan have been cut to 1,000 acres, 2 million acres thus being expropriated; the great political power formerly enjoyed, and abused, by big landowners has thereby been curtailed. The new budget makes boldly unpopular bids to encourage new enterprises, domestic or foreign or mixed; their profits will pay no tax at all for the first two years.

The military government, in short, remains confident, vigorous, and bent on getting results without worrying about how many internal enemies it makes. It can afford to be more practical about co-existence with India than its wobbly predecessors. At the same time China has been giving India more incentive to be practical about co-existence with Pakistan.

China on the Himalayas

ONLY now that China has goaded Mr Nehru into publishing the record of earlier border disputes has it emerged that these began almost as soon as India thought it had regulated them by its 1954 agreement with Peking.

In 1955 and 1956 Chinese troops crossed at Bara Hoti, at Shipki pass, which leads to Simla, and other points.

In 1957 they built a military road, linking Gartok with Yarkand, through the Aksai Chin area in north-east Kashmir. This is an uninhabited area, 17,000 feet high, and not easily reached from the Indian side. An Indian party sent to investigate in 1958 was taken prisoner by the Chinese, who met Delhi's complaints by saying that the area was theirs.

This year, the Chinese have grown more aggressive along the border. To subdue the still restive Tibetans, they have had to bring in more troops and seal the border more tightly. Indian sympathy for Tibet, and the giving of asylum to the Dalai Lama and 13,000 Tibetan refugees, have aroused Chinese resentment.

In July, six Indian policemen were taken prisoner in Ladakh. On August 7th, 200 Chinese soldiers forced a police post back two miles from the border of the North East Frontier Agency, near the Bhutan end.

On August 25th another Chinese force attacked a post north of Longju and took 11 prisoners; next day it attacked the little Longju garrison and forced it to withdraw, leaving three dead.

Last week, in the worst incident yet, an Indian patrol 40 miles west of Lanak pass was attacked, losing 17 men. Chinese soldiers simultaneously approached India's main airstrip in this area, at Chushul, east of Leh.

The Chinese retort to all Indian complaints is that the areas concerned are Chinese and that the Indians must not trespass. But until 1958 Indian inquiries about maps that showed these areas (totalling 40,000 sq. miles) as Chinese had met with polite evasiveness in Peking, which repeatedly said that the maps were old ones and had not yet been revised. Now that the Chinese are on the border in force, they are stating their claims openly.

These claims now extend to parts of northern Kashmir that lie on the Pakistan side of the 1949 Indo-Pakistani cease-fire line. Thus three nations—India, Pakistan and China—now control parts of Kashmir.

Indo-Pakistani Progress

ON SEPTEMBER 1st Mr Nehru and President Ayub Khan had a brief but unusually cordial meeting, which gave fresh impetus to current efforts to settle their outstanding differences. Mr Nehru said afterwards that the talks had created a better atmosphere between the two countries. The President said: "There is need for forgetting and forgiving; the time has come when we should be thinking of having a more rational, neighbourly relationship with each other."

Their finance ministers had met in August to discuss the old question of debts unsettled since the 1947 partition. On October 15th a conference of officials got down to the details again. Fair progress is reported.

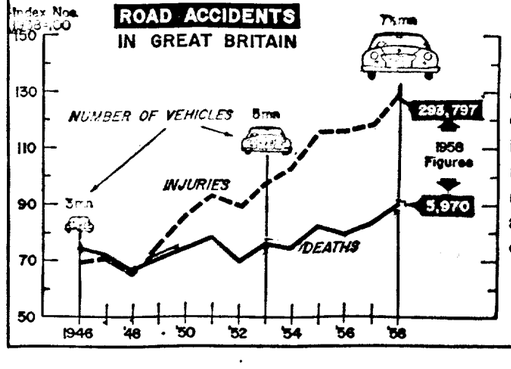
Ministerial talks about East Pakistan border disputes opened on October 15th and ended on the 22nd with an agreement that seemed to satisfy both parties. Pakistan is to withdraw from one area near Sylhet, India gives up its claim to another further south; new arrangements to prevent incidents leading to violence have been agreed; demarcation is to be speeded up. In principle, arbitration is now accepted, if negotiation fails, over disputes along West Pakistan borders as well as eastern ones.

The bitter dispute over the irrigation water of the Punjab rivers is not yet resolved; but at the World Bank and Fund meeting a month ago, Mr Dillon, the US under-secretary of state, said that "success now appears to be in sight." On October 12th, President Ayub Khan said that the Bank and "friendly governments" (did this include India?) were ready to contribute $1,000 million to the latest plan prepared by the Bank and now broadly accepted by both countries.

The complex record of this decade-old dispute was summarised in *The Economist* of July 12, 1958, page 115. The new plan is in fact understood to involve a cost of not quite $1,000 million over 11 to 15 years—about $460 million from America, $340 million from India, $110 million from the Bank and $70 million from Britain, Canada and Australia. One 5 million acre-feet reservoir would be built on the Beas in India, and two, totalling 7 million, on the Jhelum in Pakistan; a dozen new canals from the Indus and Jhelum would bring water eastward to Pakistan areas hitherto dependent on the Ravi, Sutlej and Beas —whose waters would then be freed for use in India's great new irrigation plans.

Even if all this goes well, India and Pakistan will still have bones to pick—especially over Kashmir. But the conjuncture of Chinese threats, a stable government in Pakistan, and western readiness to finance the Punjab waters plan suggests that the two countries now have the best chance they are ever likely to get of liquidating their cold war and achieving the friendship which both need so badly. This opportunity, if lost, may never come again.

The Menace of Motoring



According to *Road Accidents, 1958* (HMSO), 22 per cent of the vehicles involved in accidents last year were motor cycles, scooters or mopeds, although these accounted for only 7 per cent of all vehicle mileage.

sort of men on whom one would want to put even one's oldest shirt ; while the strong group of rightish-wing members in the union (*vide* Mr Mawby, ETU official and Conservative MP for Totnes) are generally not prepared to help an investigation that would destroy their union's autonomy. The second difficulty is that the members may be far from dissatisfied with the present leadership. Mr Foulkes is an able bargainer and Mr Haxell, the union's chief theorist, is an unattractive but perfectly effective man. It may be that the average member does not want much more than this. An investigation in the United States, in fact, showed that the American coalminer had no regrets at having to accept a totalitarian union machine as a price for the first-class bargaining ability of Mr John L. Lewis ; British electricians may feel the same way.

The General Council thus fears that an investigation will cause resentment among the ETU's members, at the same time showing up the creaking election procedures that exist, both in the ETU and throughout the movement. The long-run cure for this is to get more people to vote ; the 2 per cent of communists in the unions can only get elected because at many elections less than 4 per cent of members bother—or get a chance—to vote. But, in the short run, drastic measures are still needed to satisfy the public that a few of the more idiotic veils of brotherly secrecy in the unions are being stripped off. Pragmatism as well as principle indicate that the union leaders should thoroughly investigate the ETU.

FRANCE

Day of Dupes?

In the aftermath of the conspiracy scare in Paris, all concerned are running true to form. The authorities have smothered undue interest in unravelling the political plot against the government by concentrating on the convenient mysteries of M. François Mitterrand's affair. All the same, they still maintain that a plot of some kind existed, and the police raids on right-wing organisations (which were serious enough) may have thrown up some evidence ; it is, of course, unlikely ever to be published. Two other official reactions must be noted: the readiness to discredit the left-wing opposition to General de Gaulle by playing up the Mitterrand affair, and the desire to stop penetrating comment altogether by confiscating the two papers that published the most illuminating discussions of the conspiracy, *L'Express* and *France Observateur*, last week. By forcing these left-of-centre papers to expunge all references to senior military officers (including photographs of Generals Massu and Lecomte) the government may have felt that it had done its duty by the army, too. However, the army had its own ideas and the censored versions were promptly seized when they arrived in Algeria. To round off this nonsense, the original, unexpurgated editions were available in London all the time ; apparently only foreigners may read about dirty politics.

General de Gaulle's personal concern at the army's political ambitions prompted an official circular to officers and civil servants in Algeria on Wednesday, insisting on discipline and warning them against being "distracted" by any other consideration. Marshal Juin, who published a newspaper article on Monday severely criticising General de Gaulle's Algerian plan, is now under presidential displeasure and has been officially admonished. These are encouraging signs that General de Gaulle has no mind to let his authority in Algeria go by default.

FISH AND FREE TRADE

A Chance for Partnership

As so often happens in a negotiation, the Stockholm talks on a European Free Trade Association have run into a hitch just when most people supposed that a conclusion was in sight. Just as the Danes have insisted on getting some outlet for their farm products in return for opening their frontiers to industrial goods, so the Norwegians, a fifth of whose exports are fish, have always demanded free trade in fish. In July, the British representatives agreed to remove the barriers against fresh and canned fish. But unlike Norway's Scandinavian neighbours they were not prepared to open the door to frozen fillets—much the fastest-growing sector of the market nowadays. Earlier this month a Norwegian minister visited London for exploratory talks, but he got no change. The Norwegian Minister of Trade then declared in parliament that if it did not get its way, Norway might have to reconsider its intention of joining the new association. The British Government has tried to link the issue with that of the fishing limits, suggesting that Britain cannot accept free trade in fish unless Norway drops its demand for the twelve-mile line ; this has roused Norwegian fishing interests to indignant protests.

As in the Iceland dispute, the position of the British trawler-owners in all this is not hard to understand. But sooner or later the British industry will have to face up to the competition of fish frozen in Iceland and Norway, as well as to accepting the twelve-mile line. Norwegian exports cause the British trawlermen such anxiety because it is cheaper to catch fish off Norway, freeze it there and send it to London in a cargo boat while the fishermen go out for more, than to bring a trawler all the way to Grimsby with every catch. The Icelanders, banned from landing their catches direct in British ports, have already learnt how much more profitable it is to build up their own freezing industry. The future for British deep sea fishermen might well lie in developing a fleet of big trawlers which land their catches for freezing in plants in Iceland and northern Norway. Iceland could do with some more British capital in its plants. Norway already has abundant capacity to spare. And such a partnership might, for a change, give the neglected consumer a look in.

EDUCATION

Priorities and Research

The Queen's speech generally promised everything in education—more opportunities in schools, technical colleges, and universities ; smaller classes, more teachers and youth leaders, better use of leisure. Before he starts trying to meet this bill, Sir David Eccles might profitably take note of the point made by Dr Wall, Director of the National Foundation for Educational Research, that educational decisions involving hundreds of millions of pounds are often taken on the basis of propaganda slogans which (for want of both will and a few hundred pounds) have never been critically examined. Why, Sir David might begin his regime by asking himself, should we lengthen the period of compulsory schooling at one end rather than the other ? Why train *all* teachers for three years *consecutively ?* What solid evidence is there for or against large schools or co-education ?

If he does, he will certainly find that most of these questions are begged ; but he will almost certainly find also that, when any research has been done, it is ignored because it does not support convictions held passionately by educationists. The speech, for example, genuflects to the dogma of the need for smaller classes, so sedulously built up by pressure groups and politicians. Long before classes can be brought down to the levels set in 1945 the Labour party had committed itself to going further and abolishing classes of over 30 in primary as well as secondary schools. Nobody in all the excitement has bothered to find out, or mention, that last February Dr Fleming, of the London University Institute of Education, concluded that all the available research findings on optimum class size point to the conclusion that class size is *not* significant in the attainment of efficient teaching and learning ; indeed some of the researchers found that large teaching groups did better than small ones. Yet the demand for smaller classes has to compete with arguments for a further raising of the school-leaving age, or the improvement of the quality of teachers. Sir David will now find himself having to choose between these alternatives. He might find it useful to enquire just exactly how much real knowledge lies behind any of them, use for his own guidance what there is of it, and set about collecting some more.

CAPITAL PUNISHMENT

The Podola Case

THE Government is considering transferring from the Attorney-General to the courts the right to decide whether an appeal can be made to the House of Lords from a judgment of the Court of Criminal Appeal. No promise of the necessary legislation appears in the Queen's Speech, but the issue has again sprung to prominence because of the Attorney-General's refusal to allow such an appeal to be made on behalf of Guenther Podola.

Since the Homicide Act of 1957 there have been three *causes célèbres* that have aroused last minute efforts to obtain a reprieve. One was the case of Vickers, who murdered in the course of committing theft. Here the question at issue was whether the judges had interpreted too strictly the clause of the Act abolishing the doctrine of constructive malice ; but the Attorney-General refused to allow an appeal to the Lords, and Vickers was hanged. Earlier this year, there was the case of Marwood, who was executed for the murder of a policeman against a background of extraordinary public emotion and hysteria. And now comes the case of Podola, under sentence of death also for the murder of a policeman ; Podola's name, according to the trial judge, "is foresured of a place in the legal history of this country," even though his plea that he was not fit to be tried because of his amnesia was rejected.

There will be no outburst of public emotion on Podola's behalf, and in any case no Home Secretary can be moved by such outbursts when considering whether to grant a reprieve. But by no means everybody feels that the whole of this case has been satisfactorily disposed of, and many people will dislike the thought of executing someone who has made no answer to the charge against him. There are strong reasons for reprieving Podola ; and these strengthen still more the arguments for abolishing the rump of capital punishment, without which cases such as his would never arise.

SOVIET UNION

Air of Confidence

ON Tuesday, the Supreme Soviet met in the Kremlin Grand Hall for one of its brief, infrequent sessions. It was presented with a preliminary estimate of this year's industrial production and with the government's budget and investment proposals for 1960. Mr Kosygin, the chief planner, claimed an increase of 12 per cent in the production of capital goods, and of 10.5 per cent of consumer goods this year; Mr Garbuzov, the Deputy Minister of Finance, outlined the government's plans for next year. There will be a surplus, in the biggest peace-time budget, of 15,500 million roubles: the state will receive 772,100 million in revenue, and spend 707,600 million. The same amount as this year—96,100 million roubles—will be spent on the armed forces; expenditure on science will go up by 15.4 per cent. The budget proposed heavily increased investment in the engineering, chemical and oil industries ; more will also go into housing and the food and consumer goods industries will also benefit. The workers are promised a share in prosperity: they will work seven hours a day (six days a week) for slightly increased wages.

In the brooding presence of Lenin in marble and Mr Khrushchev in person, there was little serious discussion of the plans presented by the government. Most speakers simply complimented the premier, while some indulged in incongruous, but safe, diversions: one deputy complained about the weight of metal beds, and another criticised the offices of the ministry of culture for being over-furnished ; there were several mild requests for more expenditure on local projects.

The Soviet Union has increased industrial production, during the first year of the current seven-year plan, faster than the planners had envisaged ; they are likely to be tempted now to telescope seven into six, or even five, years. Only oblique references have been made to agriculture, where the picture is not so bright. Agriculture in Russia, as in China and Poland, suffered set-backs in the past summer ; agricultural problems will probably be reserved for later consideration by the central committee.

ANOTHER SUMMIT

The Six or the Seven?

THE next summit conference will not be held before October, 1960. This is now definite. It is the problem of how big the conference should be that is the one major question to be resolved. The Four have finally recognised that they must become Six; there is no other way of doing business on the basic issues. So the observer system for the disputed Two that applied at the last meeting has been sensibly abandoned. Here is a major step forward. But as the summit becomes more populated, pressure is growing to make it positively crowded. Already, despite opposition, it may be impossible not to recognise the claims of at least one further power (thus increasing the Commonwealth interest in the meeting), but this extension must inevitably lead to others. It is clear that the next summit is destined to bring together countries of vastly different resources and influence; how far this will hamper its work remains to be seen, although the point has been hotly argued. It is nothing less than a testing time for international common sense.

Andorra is, of course, an admirable choice for next year's meeting-place. And that Andorra, Liechtenstein, Monaco and San Marino should now have invited Luxembourg and the Vatican to join as full members of their club seems a sound idea. (It will certainly lessen the responsibilities of their respective observers at the Vaduz conference of the Little Four last week, Monaco's commissioner-general for tourism and Liechtenstein's inspector-general of Roman Catholic schools.) The island of Sark deserves to join the Six next time, but there must be sympathy for the complaint by Baron von Falz-Fein (Liechtenstein) that Luxembourg "as a member of Nato and the European common market is out of our class." Even so, this problem should not unduly deter the Little Six from their serious endeavours to help the cause of peace "by working for more tourism." That we all want to see.

THE THEATRE

Provincial Crisis

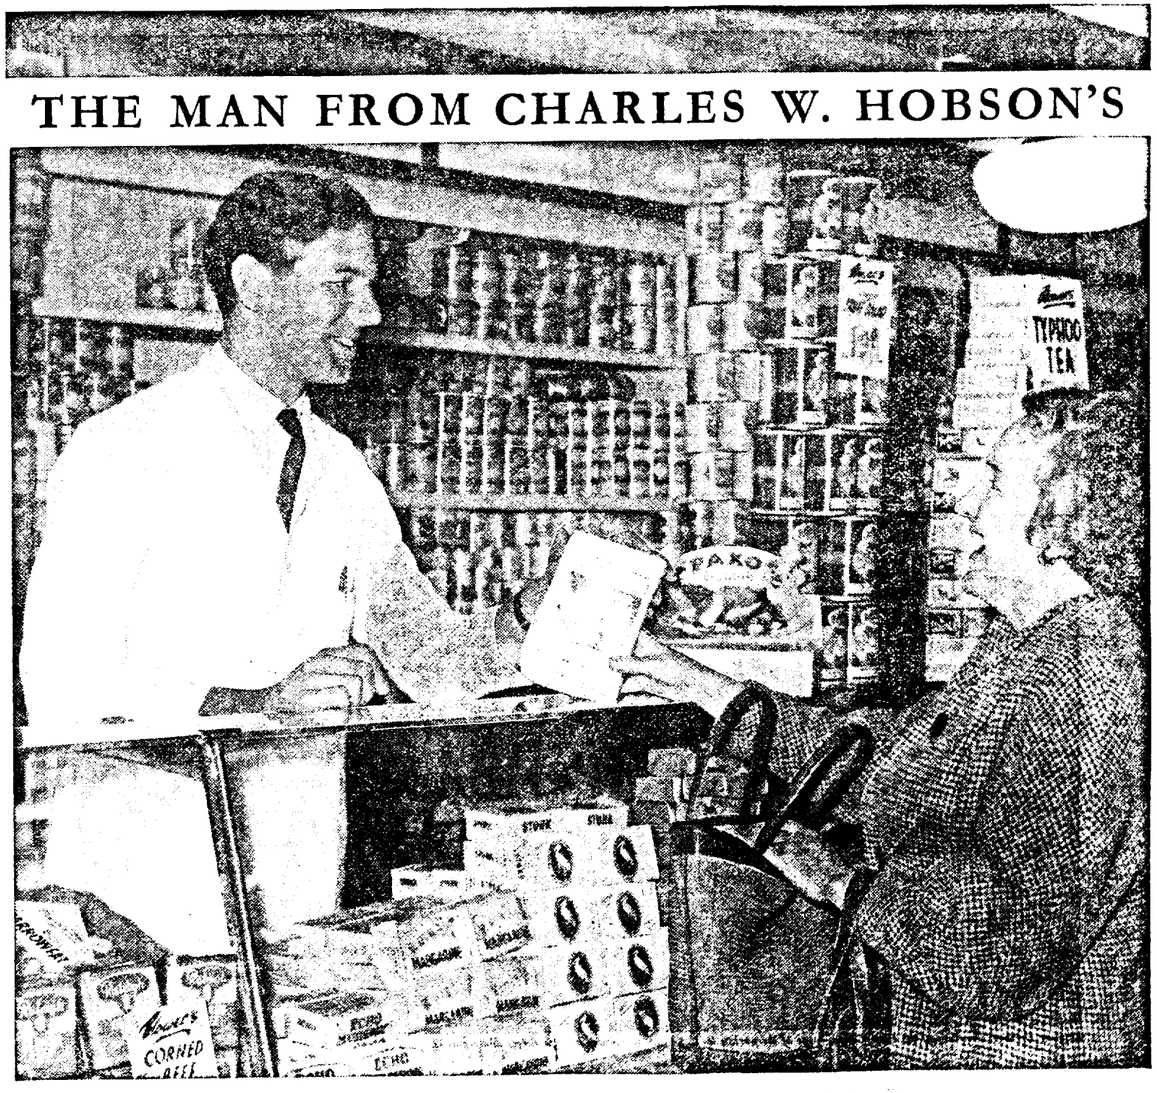
PROVINCIAL theatres are mostly in a bad way ; on the average they are not more than half full. "The people who are staying away from them in increasing numbers," states the Arts Council in its latest annual report, "are the 'steadies': the ones who could formerly be counted upon to visit every new production." And among the hardest hit playhouses are "half a dozen theatres of exemplary quality."

The fine weather this year has not helped, but undoubtedly television is now making its impact on the theatre, more belatedly than on the cinema. The third programmers' snobbish resistance to television is eroding; with a highish standard of drama available in the home, a drab comfortless little theatre has small chance of success. In the West End, where auditoriums are more attractive, visitors numerous, and the bright lights and restaurant world still make a night out seem worthwhile, the theatre continues to flourish. But even there, as one recent failure shows, it seems no longer enough to offer a well-acted, well-written play with an understandable message. The formula is to offer something the "telly" cannot, or only rarely—such as large-scale musicals, top stars, angry young men, a Shelagh Delaney or a Brendan Behan.

If television's attraction is to be expected to wear thin, the provincial theatres should get increased financial support to see them through the crisis. But if their loss of audience is permanent the only sensible course is to have fewer theatres but better ones. The Arts Council at present provides 27 provincial repertory theatres, including the Bristol Old Vic and the Birmingham Rep, with a total subsidy of £60,500, to which local authorities add an extra £31,000, independent television companies (as conscience money) some £10,000 and firms and private patrons about £3,250.

(*Continued on page 411*)

THE MAN FROM CHARLES W. HOBSON'S



Every year Charles Hobson executives and copywriters work hundreds of hours at the point of sale. They meet housewives across the counter. They learn about their outlook and shopping habits. They help to keep the thinking of our advertising in touch with the realities of selling.

Our photograph shows account executive James Bruxner serving a customer in a South Shore, Blackpool shop last month. The story of what he and other Charles Hobson executives learned first-hand about housewives and their shopping is contained in their reports. These are a valuable source of reference for all our work.

CHARLES W. HOBSON LIMITED, 12/13 CONDUIT STREET, LONDON W.1.

Gunnar Ericson, President of the Facit Group — one of the world's leading business machine manufacturers and exporters.

Why are so many world-known business machines built **by Swedes?**

"I believe the answer to that is — Swedish technique and tradition.

You see, Swedes are mechanically gifted and have an almost reverent respect for quality, precision and craftsmanship.

And as inventors, builders and designers, Swedes — also descendants of Swedes abroad — have made pioneering contributions to quality production of modern business machines.

In relation to her population, Sweden today produces more business machines than any other country in the world.

And Facit, Sweden's leading manufacturer and exporter, which to date has produced more than 2 million business machines, has played a substantial role in this development."

If you would like to read the story of this achievement, your local Facit agent will gladly send you a free copy of our brochure "Why are so many..." — or you may write directly to Åtvidabergs Industrier, Stockholm 7, Sweden.

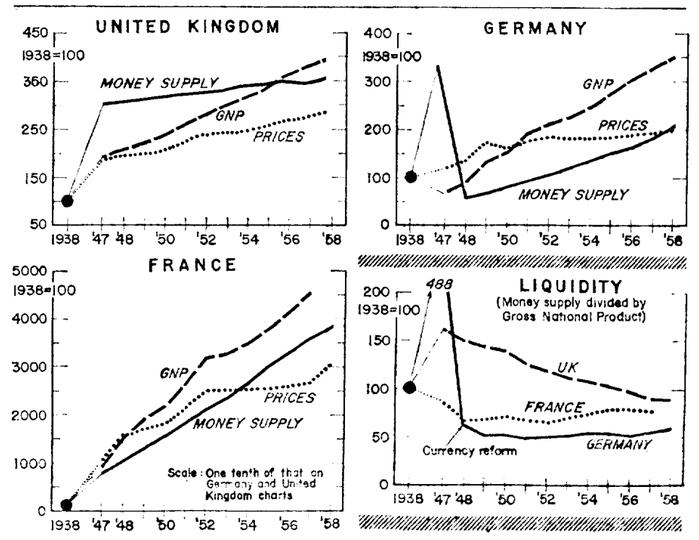
Liquidity: Europe's Postwar Bulge

FOR some time cost and price inflation has been at the centre of fashionable discussion of the inflationary problem. But the Radcliffe committee has drawn attention to another aspect of it: "liquidity" and the cruder "size of money supply"; in particular, it notes *en passant* that the wartime expansion of "liquidity," as it calls it, was a major source of inflation in the postwar years. In the immediate postwar years prices in Britain were held down by controls. But "suppressed" monetary inflation remained. Even the devaluation of 1949 in a sense dealt only with one of the symptoms, shifting the British price level in relation to the outside world. Excessive liquidity —the source of the trouble—remained, and with it payments difficulties. It was not until around 1955 that the wartime legacy was got rid of.

This postwar malady was not confined to Britain; the problem was analysed for Europe as a whole in 1957 by Professor Triffin in his book "Europe and the Money Muddle." But the continental countries tended to cope with the problem in different ways and this has had a profound effect on the course of postwar economic history. The Germans, Belgians, Italians and Dutch, for example, all wiped out the monetary legacy of war by currency reforms which cut back the money supply. And in west Germany, in particular, the monetary stringency imposed as a result has been largely responsible for the remarkable stability of prices since. It provided the ideal context for the dynamic forces—expanding population and huge investment needs—to make themselves felt without inflation. The lack of liquidity in west Germany helps to explain the apparent paradox that the mark has been strong and the pound weak for long periods when prices in Germany were not significantly lower, or not lower at all, than in Britain.

In France, by contrast, General de Gaulle did not follow the advice of M. Mendès-France in 1945 and impose a currency reform. Runaway price inflation followed and with it the postwar devaluations. By contrast with Britain, where there was "suppressed" inflation for so long, prices in France rose so fast that there was soon little "suppressed" inflation or excess money about. Inflation was overt, and the rise in prices itself went on to become the main source of inflation.

The three charts for France, Britain and Germany show how money supply (shown as an index) expanded, and prices rose in each country. Gross national product is shown at *current* prices on these charts to provide a basis for the fourth chart, which relates money supply to GNP at current prices, thus giving a suggestive indication of the trend of liquidity in each economy. Such a chart has limitations. It takes no account of the velocity with which money circulates, or of other forms of liquidity. But it does show the difference of trend in the three countries, how Britain had to squeeze hard between 1950 and 1958 to get rid of the excess wartime money, and how Germany has enjoyed the benefits of past monetary stringency. In France price inflation was the motor of liquidity inflation until, last January, a new leaf was turned.



Continued from page 408.

It is estimated that £100,000 would be needed to re-furbish these theatres and give them a new look. But, modest though the list and the sums involved are, not all these theatres seem to have equal claims to survival. Unpleasant though the task of culling is, the Arts Council should concentrate its patronage on the drama to an even greater degree.

SUICIDE

Five Thousand a Year

EVERY year, 5,000 people commit suicide in England, and a further 5,000 cases of attempted suicide become known to the police; the latter figure is only a small fraction of suicide attempts, and even of these only about a tenth are prosecuted. The Church of England has done a valuable service by publishing a humane, though incomplete, report on suicide—the work of a five man commission, which included a theologian, a psychiatrist and a lawyer, appointed by the Archbishop of Canterbury in March, 1958.

The committee recommends that "consideration" should be given to abolishing the felony of suicide, and that attempted suicide should cease to be a crime. In reaching this conclusion, the members explicitly reject the notion that suicide is a purely private act, an exercise of personal choice in which the community is not concerned. The state, they argue, should continue to condemn suicide and to punish those who encourage or assist it, but the suicide himself is clearly beyond the reach of the courts, and the attempted suicide is more in need of medical attention than punishment. To invoke the criminal law for this end is, however, unnecessary. Adequate provision for compulsory medical care, if compulsion is necessary, already exists; it does not, as the commission seems to think, have to wait on the new Mental Health Act. Thus, the only social reason for retaining the present law is its deterrent effect—which is extremely hypothetical.

But the commission was, of course, mainly concerned with the Christian attitude to suicide, and it suggests an alternative burial service for certain suicides, a form of which is printed as an appendix to the report. This would obviate the indiscriminate use by coroners of such phrases as "while the balance of the mind was disturbed," which are at present incorporated in their verdicts for no other purpose than to ensure that the suicide will be given a burial service. The drawback of this proposal is that it would, as the commission admits, lead to anomalies. The whole story of a suicide may never be revealed, even to a coroner's court; some that appear "voluntary and selfish" may in reality be the result of mental illness.

In conclusion, the report emphasises that the price paid for legal reform is an added burden of moral responsibility. This will

fall partly on relatives and friends, but mainly on doctors and clergy, to ensure that the attempted suicide receives the appropriate advice and treatment, and the more co-operation there is between them the better will both forms of professional help be able to discharge their task adequately.

LONDON

Design for Metropolitan Government

AFTER getting a surfeit of special pleading from local councils, the Royal Commission on Local Government in Greater London has at last been handed a more objective set of proposals by a group of teachers at the London School of Economics, whose chairman is Professor Robson. Their document contains at least three radical suggestions.

(a) *An elected authority for the whole of Greater London.* Foremost among its functions would be town planning, main highways (including, it is hoped, trunk roads), traffic control, and the "overspill" of housing and industry. The dismal state of London's highways lends obvious weight to this proposal. Its chief limitation, which the group recognises, is that the critical zone of London's growth lies beyond the present built-up area—and hence, most regrettably, outside the Commission's terms of reference.

(b) *A new local authority covering the central area of London.* On one suggestion this would extend from Camden Town to the Elephant and Castle and from Aldgate to the Kensington museums. The idea—and it is obviously a good one—is to place all the problems relating to this vital but choked central zone under a single roof ; and also, equally importantly, to provide elbow room for its future growth and for some radical transport-planning within this area. This plan would eliminate as separate units not only Holborn and Westminster, but also the City of London. It would, however, be not merely tactful but completely appropriate to transfer the title and dignities (though not the method of election) of the City of London to the new unit.

(c) *Other Bodies.* These first two ideas would still leave the bulk of local services (education, health, welfare, etc.) to be run by other bodies. Of two plans put forward, that for six "London Counties" is the more appealing. These counties would surround the new central area like the spokes of a wheel. They would be quite large in population (over a million each), though fairly compact in area. The hope is that they would combine efficiency with a measure of mutual competition, and that the integration in each county of Labour strongholds with Conservative suburbs would be politically healthy.

LETTERS

Labour's Future Policy

SIR—You issued a challenge to Labour supporters last week to suggest points for a future programme for Labour. Here are three points of mine.

The first is a social one. It is now the rapidly growing numbers of the new bourgeoisie (the clerks, typists, sales people, technicians, telephonists, advertising personnel, etc.) who hold the political balance between the businessman and the worker. Many of these people live in the bright new life where advertising has its greatest effect (why not some harder hitting Labour posters, issued not only at the next election but spread over the next five years?) and where the sober—even depressing—atmosphere that now surrounds trade unionism has little place. This bourgeoisie is composed primarily of women whose conservative values are increased by reading the security conscious mass women's magazines. Labour must capture these people's interest. More time and money should be spent on Labour's women's features (a real campaign on consumer protection perhaps?); more, and younger, women should be put on the party executive; and devices like fashion shows, of the sort now used as a recruiting weapon by the National Union of Bank Employees, should be freely used.

The two other points are more brief. You are right in saying that the Labour youth movement needs strengthening. Why should not teachers, the majority of whom, when they are politically conscious at all, are Labour, play a larger part. The National Union of Teachers might arrange discussion groups and Trotskyites need only be feared if the meetings are made so dull that only zealots will attend. Discussion must range widely and Labour needs to remove at once the disciplinary straitjacket in which its youth movement is now imprisoned.

The third suggestion concerns the unions. Labour intellectuals should think seriously of how they can improve the unions' image as well as their own. Full-time public relations officers in the unions—of whom at present there are virtually none—would help, since the public dislike more than anything the niggling secrecy with which trade union affairs are surrounded. In truth, the unions often have a much better case than they ever allow the public to realise.

These considerations of home policy must come first. Foreign policy, vital though it is, does not win votes.—Yours faithfully,
London, N.W.3 G. R. HOGAN

SIR—Surely the Labour Party has not to search very far to find a 1960 edition of its traditional policies. It has been said that when a handful of Labour MP's entered Parliament in 1906 the "conditions of the people burst upon Parliament." For the first part of this century this meant creating a public opinion which refused to accept the poverty and inequalities in the living conditions of many people and so built up the welfare state.

The problems of the conditions of the people in 1960 are obviously different to those of 1906. Mass poverty and gross inequalities have been reduced but, in raising the standard of living, we all seek more living space and means to travel about and so we have the problems of urbanisation. The large towns are sprawling out and many of us have to travel a longer distance to work. Can we really expect people, in London for example, who have to undergo the horrors of rush hour travelling in the tube to be clamouring for more nationalisation? Perhaps advocates of nationalisation while waiting in a bus queue on a wet evening find great comfort that they are waiting for the benefits of a service which has all the advantages of common ownership. If so they have an excellent opportunity to pass on their enthusiasm to the other people in the queue and so get more converts.

We are a nation of town dwellers and therefore a fight against the monotony and ugliness in our urban surroundings would be the next step in improving the conditions of the people. At the same time it is important that we face up to the implications of the motor car age and ensure that people can travel about in comfort with reasonable speed. Tories boast that the increase in the number of private cars is a sure sign of prosperity and appear to assume that it can go on for ever, or at least for twenty five years. Socialists should insist that the increase in private prosperity has not spread to the public sector where there are still inadequate social services, drabness and inadequate amenities for civilised living conditions. We have public poverty in the midst of private prosperity.

If the economy goes on expanding our surroundings will be considerably changed. The Labour party has a great task in insisting that these changes shall produce not the frustration of the present uncontrolled sprawl but pleasant and agreeable living conditions for everyone. Why should not we all have equal opportunities for gracious living ? —Yours faithfully, L. G. STONE

SIR—Although one must agree with your view that the time has come to stop exaggerating or generalising about the Labour defeat, you have failed to stress one major cause of Labour's failure to attract the electorate. As the standard of the nation continues to rise, so the electorate looks for an alternative government which in their eyes represents the communities' interests. This is the image that the Labour party has failed to put across to the nation.

Can one assume that therein lies the hope for the Liberal alternative?—Yours faithfully, D. FISHMAN
London, NW11

Labour's Local Problem

SIR—It seems to be common form now to condemn those "tight-knit bodies . . . the caucus meeting of Labour groups of local councillors." Yet they are equivalent not to the "outside" party you wish to reform but to the Parliamentary Party to which you wish to assign greater responsibility.

Caucus is an emotive word. It implies dictation, usually by stupid or extreme elements. But in Labour groups the process of discussion is entirely democratic, guidance and leadership are willingly accepted, wisdom and responsibility are as influential as numbers and one seldom feels frustrated as a member of the minority (usually very small). Would decisions be any better if the caucus never met? In nine years I recall only two occasions of profound disagreement with a group decision. Both were on relatively minor points and acquiescence seemed a small price to pay for unity on essentials.

Responsibility to electors must be clearly fixed somewhere. Where else but in the majority party? Its meetings decide policy, exercise ultimate control over administrative decisions and provide the only means —above official level, where it is not always effective—of co-ordination of the work of numerous committees.

Nor, in Leeds, at least, are the Conservatives less disciplined. I remember only one occasion on which a minority view was expressed—by Catholics against a grant to the Family Planning Association. Labour members enjoyed the same freedom. On the occasion of a "free vote" the Conservatives voted to a man for one scheme to improve City Square in preference to another. Astonishing agreement upon an æsthetic matter—if no discipline were imposed! As for Independents (in most cases a grossly misleading description and one condemned in 1948 by Lord Woolton) it is common knowledge that in councils controlled by them a small "caucus" takes most decisions in private and finds little difficulty in avoiding open disagreement.

I would not defend every decision of every Labour controlled council. But to substitute anarchy (or "hidden persuasion") for party discipline is no cure for (allegedly) wrong policies.—Yours faithfully, H. VICTOR WISEMAN
Deputy-Leader, Leeds City Council
Leeds

Motor Cars

SIR—It is stated in your article on mini-motoring, "Cars for the Greatest Number," that if the engine is at the rear, the superfluous front space can hardly be used. I disagree with this and would invite your attention to another sort of mini-vehicle, in which the front space is used.

I refer to the Volkswagen Mini-bus and the Fiat 600 Multipla. It may be objected that a mini-bus is not a car, but the Fiat Multipla most certainly is. It has six passenger seats within an overall length of 11 ft. 7½ in. and use is made of the front space by seating the driver and the front passenger on top of the front wheel arches, with their feet in front of the arches.

The driving position is good. One is seated in much the same position as on a dining chair. One seldom hears of people complaining of fatigue at table and yet most people spend a long time sitting there, probably a longer time each day than most drivers spend at the wheels of their cars. Visibility from the driver's seat of a Multipla is excellent, while being right at the front of the car makes the judging of close distances easier and so lessens fatigue.

The design may have some disadvantages, especially from the point of view of protection in the event of head-on collision, but in my opinion these are more than offset by the possibility of greater safety due to more precise and less fatiguing control. In particular, the steering wheel is directly in front of the driver and is not set skew to the centre-line of the car, while the pedals are set more symetrically in relation to the driver's body than in a great many cars—of all sizes—where the front wheel arch interferes with the convenient position of the pedals.

I speak with experience, having now driven a Multipla more than 53,000 miles and having on one occasion driven it 648 route-miles in a single day.—Yours faithfully, GEOFFREY INNES
London, SW10

SIR—I must spring to the defence of my much-beloved Anglia (now Popular), which you criticised for its fuel consumption last week. You have missed the point that it runs perfectly well on 4s. 3d. petrol at the same consumption rate as given in your table. I am sure that this price factor must invalidate a good many fuel consumption figures for other motors in the table.

Incidentally, the new Anglia has one great disadvantage over the old model for tall people in that the driving position is now almost impossible for them.—Yours faithfully, DAVID BETT
London, SW5

Soviet History

SIR—In your tendentious account of the new "History of the Communist Party of the Soviet Union," you say (to take one example) that "the defence committee which directed the Soviet war effort is ignored."

In reality, the book refers to the formation of the State Defence Committee, headed by J. V. Stalin. It continues: "In the hands of the State Defence Committee was concentrated *the whole totality of power* (their italics) in the Soviet State. It united the activity of all State institutions, Party, YCI and trade union organisations, directed the creative initiative of the workers, collective farmers and Soviet intelligentsia for the defeat of Fascist Germany."

In addition, the book states that "the resources and reserves of the country were redistributed to assure to the front all it required by directives of the Central Committee of the Party and the State Defence Committee," that universal compulsory military training was introduced "by a resolution of the State Defence Committee on September 18, 1941," that on its instructions new power stations were built in the Urals and Siberia, and measures taken to increase coal output in the Chelyabinsk and Kizel coalfields, that together with the Central Committee of the CPSU and the Central Council of Trade Unions it instituted challenge banners for the wartime Socialist emulation.

Wasn't this a strange way to "ignore" the work of the Committee?

You say the book "prefers to dwell on the activity of individual party envoys, particularly of Mr Khrushchev, who emerges as one of the defenders of Stalingrad."

In reality, Khrushchev is mentioned exactly once in the 75 pages devoted to the war period—say 27,000 words—and then in a list of other prominent people appointed by the Party to responsible war work: and *not* in connection with Stalingrad at all. Moreover, the section in the main dwells very little on "individual party envoys": what it does dwell on—so far as organising the war is concerned—is the CPSU and its Central Committee.

You say that Marshal Zhukov "is simply mentioned among many commanders of lesser importance." It would be interesting to know why you consider Rokossovsky, Konev, Malinovsky, Tolbakhin, Valutin and others mentioned with Zhukov in the list on p. 575 as "of lesser importance," although they too are simply mentioned with him as "outstanding military com-

manders"—and were so mentioned often enough during the war itself.—Yours faithfully, ANDREW ROTHSTEIN
London, N6

Mr Rothstein makes the most of one slip, for which we apologise (the reference to Stalingrad), and two debateable points: the way the new History plays down both Marshal Zhukov and the State Defence Committee (whose members, such as Molotov, Malenkov and Beria, are not even named) is obvious and revealing.

No Par Shares

SIR—Now that we have the general election behind us and a government in office which is pledged to a review of the Companies Act, may I seek this opportunity, through your columns, of reminding the new President of the Board of Trade of the recommendations of the Gedge committee in favour of the permissive issue of shares with no par value.

We are on the verge of the era of the "trilby hat" investor (to borrow your own phrase) and this is surely a propitious moment to take a small step forward towards the production of more intelligible accounts which he and his employees can readily understand. Enlightened legislation of this nature could be a contributory factor in improving industrial relations between the employers and the unions and, who knows, even the politicians might cease to regard a major portion of the nation's economy as a shuttlecock to be tossed to and fro at five-yearly intervals.—Yours faithfully, D. F. GOCH
Stevenage, Herts

English Nationalism

SIR—Returning from a few weeks in a part of the world which even *The Economist* scarcely penetrates I am interested in your readers' reaction to your article on "The Helpless Majority"—the English in their own rich, comfortable country.

It is an amusing article whose reaction to the odd names of people from other parts of these islands belongs to a tradition as old as John Milton's day. It would be a pity, however, if it tended to conceal from English readers a fact which is well-recognised in every part of the world outside England—the fact that the nationalism of Englishmen is something deeper, more effective and more self-confident than the patriotic feeling of any other nation whatever. English nationalism has had no need to be self-conscious. It is part of the air which Englishmen have breathed for centuries past. To them civilised living seems impossible without it.

Unfortunately, perhaps, it is something which other civilised peoples—Scots, Irish and Welsh as well as those outside these islands—cannot be expected to share. International understanding would be easier for all of us if Englishmen were a little more aware that their national self-confidence is something quite extraordinary and quite unusual in the world. Yours faithfully, J. M. REID
Glasgow, S1

BOOKS

Making Sense of History

The Sense of History: *Secular and Sacred*
By M. C. D'Arcy.
Faber. 301 pages. 30s.

On the Philosophy of History
By Jacques Maritain.
Geoffrey Bles. 141 pages. 15s.

HERE are two Roman Catholic philosophers trying to make sense of history. Father D'Arcy's is a rambling and ill-constructed book. Sentences swerve aside to snap up errant ideas; paragraphs begin and end without relation to the development of the theme; every statement of a case is balanced at once by its antithesis, with constant repetition; articles are discussed for several pages, without the reader being told where they appeared; there are innumerable quotations, and a maddening absence of references. It might have been a better book as a collection of essays on individual writers: Vico and Newman, Toynbee and Tillich, Marrou and Teilhard de Chardin, Gerald Heard and Butterfield, Collingwood and Croce. Nevertheless, it is rich in historical, philosophical and literary allusion, full of sudden shafts of penetration and imaginative courage, and kindling here and there into eloquence. It begins with an excellently balanced and perceptive chapter on the nature of historical knowledge. And it is notable above all for clarifying and justifying the activity we call "philosophy of history." This is different from scientific or historical inquiry; it is an epic or gnomic interpretation; "it answers an undying desire to have some intimation about how human life proceeds." The philosopher of history "is not bound to accept the rules laid down by Geyl."

The meaning of history can be looked for in two different directions. Either history can be seen as a spiral ascent of the successive generations, a march of mankind towards a goal, a field of collective human achievement. Or it can be seen as a testing-ground for individuals, the continuous present of personal experience. This is the traditional Christian view—that history is the arena of salvation. In his central chapter Father D'Arcy restates it with freshness and cogency. But for most of the book he is trying to distil a Christian theory of progress in this world, out of the mysterious Pauline language about the reconciliation of all things in Christ and Vico's doctrine of Providence.

> History is not to be a waste product, and we carry our sheaves with us into the kingdom of God.

"History" here becomes very imprecise. It seems to be both the sum of human achievements in time and the historical process itself. It becomes a modern transcription of what St. Paul, a pre-Hegelian thinker, called "all things" or "the whole creation." Much of Father D'Arcy's argument raises the same kind of disquiet as the organic theory of the state. Perhaps it would not be improper for Christians to imagine that collective artistic achievements, like Chartres Cathedral or the Sistine Chapel, may be preserved, transfigured, in the New Jerusalem beyond the end of history. But it is difficult to see how collective social achievements, like the abolition of slavery or the welfare state (which Father D'Arcy will mention in the same breath), can be thought of in similar terms. One expects him to argue that the Last Judgment will be a judgment not on individuals only, but also, like the Nuremberg Tribunal, on groups and communities.

M. Maritain sees the philosophy of history as part of moral philosophy, and his book, which is a quarter the length of Father D'Arcy's, has more intellectual discipline. He derives the meaning of history from the parable of the tares. This illustrates "the law of two-fold contrasting progress": that good and evil grow together, that history has two immanent movements constantly intersecting, so that (to give crude examples) totalitarianism has marched in step with a growing concern for human rights, and there is always a Hitler to stand over against a Roosevelt or a Gandhi. This is a more satisfactory picture, whether tested by consistency with the premises that M. Maritain and Father D'Arcy share or by correspondence with historical experience. Round this central law M. Maritain groups various other suggestive generalisations about the tendency of history, roughly divided into "axiomatic formulas or functional laws" and "typological formulas or vectorial laws."

The layman will probably like the rich confusion and poetical texture of Father D'Arcy's book, as well as its endearing modesty. The social scientist, if he is in the market for this kind of writing at all, may prefer M. Maritain's concision and mandarin manner.

Map with Augmentation

The Trade Cycle
By R. C. O. Matthews.
Nisbet: Cambridge University Press. 315 pages. 12s. 6d.

EXPLORERS do not always make successful settlers, and conversely. Similarly, the speculative *avant-garde* among economists—as among other scientists—do not always shine as consolidators, interpreters, and establishers of permanent communications with the rear or between one another. Yet just as the pioneer must share something of the explorer's qualities, so the consolidator and *rapporteur* of new ideas must himself have a gift and taste for intellectual adventure. The outstanding quality of the Cambridge Economic Handbooks, to which Mr Matthews's "The Trade Cycle" is the latest addition, is that they demonstrate just this dual gift; their writers have, in varying proportions, both the pioneer's curiosity and intellectual drive and the *rapporteur's* gift for establishing liaison. "The Trade Cycle" is emphatically a case in point. This is "the new map with the augmentation of the Indies," setting the territory esoterically explored during the last dozen or so years in a comprehensible relation to the main continent.

Less metaphorically, Mr Matthews has written the first comprehensive version of the new, post-Keynesian, predominantly "real" rather than monetary, theory of the trade cycle. It is rather tougher than most of the Cambridge series; but that is the fault of its intrinsically very tough subject, and no kindlier introduction to the fundamental equations that provide its theoretical skeleton can be imagined. (Shocking as it may seem to mathematicians, quite a lot of quite intelligent people do not know the difference between a linear and a non-linear function. Mr Matthews explains these and similar terms as he goes.) A nice balance is kept throughout between rigorous *a priori* reasoning, commonsense judgment, and historical evidence (Mr Matthews has himself written "A Study in Trade-Cycle History.") The argument moves logically from formal model-building through the study of investment (considered both as an aggregate and as a process of sectoral interplay), of consumption and of the monetary factor, to the question of upper and lower turning points, international interactions, periodicity, the relation between cycle and trend, and, finally, policy. On policy, the conclusions are cautious but, provided one is not expecting the impossible, optimistic. Some fluctuation is bound to subsist if only because of "genuine variations in the need to add to the nation's capital stock"—let alone sectoral overshooting, "echoes" of past fluctuations in the form of bunched replacement needs, and the uneven pace of innovation. But a compensatory government policy which, by fiscal and other measures, keeps national income, as distinct from private investment, reasonably steady can prevent these irreducible elements from cumulating.

In the longest run and the widest sense, Mr Matthews follows Keynes in foreseeing a need to guard against stagnation rather than inflation. One cannot safely take a line through the postwar years and assume that the forces militating against full employment have permanently lost their effectiveness. It is indeed possible, he concedes, that there has been some permanent change; but this has yet to be proved. Set against his account of the inflationary pressure exercised, in a state of full employment or near it, by trade unions and price-fixing organisations generally, this conclusion seems not so much shaky in itself as derived from a different and irreconcilable analysis. But it is perhaps just as well that the reader should not be left with the impression that he—or even Mr Matthews—has all the answers.

Ministers and Dictators

Documents on German Foreign Policy 1918-1945: *Series C, Vol. III.*
The Third Reich: First Phase
Her Majesty's Stationery Office. 1229 pages. 60s.

THIS volume begins with the first meeting of Mussolini and Hitler in the middle of June 1934 and closes with the visit of Simon and Eden to Berlin at the end of March 1935. It was a savage period, embracing the German massacre of June 30th and the assassination of both Dollfuss and Alexander of Jugoslavia. In January 1935 the plebiscite in the Saar was carried through without major disturbance but without any real diminution of tension. Just before it took place Laval went to Rome and came to terms with Mussolini; the latter, far from being won over by his encounter with Hitler, appeared to be organising what German diplomacy denounced as encirclement. "The foundations for an encirclement of Germany have thus already been laid," wrote Hoesch, the German ambassador in London, to Berlin on March 19, 1935 "and only Britain's attitude will decide whether it will come to encirclement or not." Whether Hitler shared the anxieties of men like Hoesch is doubtful, and there is reason to suppose that, when Mussolini received Laval, he was more concerned to buy off French opposition to an Italian attack upon Abyssinia than to save Austria. It remains true, nevertheless, that the British visit to Berlin in March seemed to Europe to be a perfidious selling of the pass, which was later recorded in the naval agreement made between Britain and Germany in June.

Simon, together with Eden, had repeated conversations with Hitler on March 25 and 26, 1935; we are here provided with the lengthy records made by the German interpreter, Paul Schmidt. These are in some ways the most interesting material in this volume. Simon, according to the German account, showed more stamina than his critics at home believed at the time; like all Britain's rulers in that period he hoped that Germany could be soothed and contained, but he expressed clear disappointment at the end of his interviews with the Fuehrer in spite of Hitler's incessant insistence upon the lamb-like innocence of Nazi Germany.

If the Germans were afraid in 1934 and 1935, this was also due to their financial predicament. On June 18, 1934, the Reichsbank informed the Reichswirtschaftsminister that, in spite of the restrictive measures that had so far been taken, "the daily withdrawals from the Reichsbank are larger than the receipts." The Wilhelmstrasse, as shown, for instance, in a note to the Reichsfinanzministerium on October 15th, was much disturbed by the whole situation; foreign irritation over Germany's failure to pay for goods already delivered led to "a paralysis of our freedom of action in all spheres of foreign policy." The financial situation was, it appears, as critical as German emigrés declared at the time.

Judgment on Creation

The Novel of Violence in America
By W. M. Frohock.
Arthur Barker. 249 pages. 25s.

NO body of current literature is subject to more serious or voluminous criticism than American fiction. At times the quality of judgment surpasses that of actual creation. This may not be a good thing, but it makes for brisk reading. Thus Mr Frohock's book positively crackles with intelligence. Primarily an expert on French literature, he brings to the discussion of the masters of the American novel the lucid urbanity of the *feuilleton*. Matters are taken seriously but not too much so, and the result is a refreshing change from some of the ponderous solemnities put forward by academic critics.

Mr Frohock is at his best when he deals with writers not absolutely of the first rank. Robert Penn Warren is probably the most interesting novelist at present working in America. But even his best work is, in some central respect, unsatisfactory. The essential vision is oddly blurred, and the intense and sumptuous style seems to move in excess of the author's actual purpose. Mr Frohock acutely suggests that Mr Penn Warren's vision of the South, his lyric regionalism, is simply not adequate to portray existing realities. Warren himself may be aware of this margin of deception and the consequence is a persistent unsteadiness in his characters. Similarly, Erskine Caldwell should be a greater writer than he is. His technical equipment is superb and he commands a unique range of ferocious humour. But his attitude towards his personages and the grim setting of their lives is ambiguous. He is not certain whether to laugh or weep at the human condition along Tobacco Road. And this uncertainty gradually infects the response of the reader. Mr Frohock's closing chapter on the late James Agee is equally perceptive. Agee's fragmented career is a parable of the dangers besetting the man of letters in the American market. Immensely gifted in diverse directions, Agee scattered his life and work between bouts of serious writing, brilliant journalism for Mr Luce and stages in Hollywood. He wrote a little too well for *Fortune* and not quite well enough for literature. Yet there are pages in his work

to support Mr Frohock's theory that "our major novelists may be going . . . elsewhere."

On the giants—Dos Passos, Wolfe, Faulkner, Hemingway—Mr Frohock has intelligent things to say, but the mass of existing criticism is so great that he brings little new. Faulkner's genius for imposing on the rebellious reader his own wild view of language and action and the essential paucity of Hemingway's range (his root unwillingness to take risks) are stock themes in contemporary scholarship and criticism. One would like to hear Mr Frohock on fresher ground—on Cozzens for example: not the Cozzens of a recent shoddy best-seller but the author of "Guard of Honour," the subtlest and most mature novel of American postwar fiction.

Even so, this is an excellent piece of work, and the reader should not be put off by a title wholly inadequate to its range of interest.

Publisher and Author

An Occupation For Gentlemen

By Fredric Warburg.
Hutchinson. 288 pages. 21s.

After a childhood passed in a Jewish family mansion in Bayswater, and a period at Westminster, the army, and at Oxford, Fredric Warburg passed at once into his chosen vocation as a publisher. The essentials of the trade were learnt under his "master," Mr William Swann Stallybrass, chairman of the conservative and long established firm of Routledge. When Mr Stallybrass died in the early thirties, Mr Warburg tried valiantly to bring Routledge up to date, a metamorphosis stoutly resisted by the board, and which led to only one tangible result, the dismissal of the author. Undismayed, Mr Warburg decided to set up as a publisher on his own account and with a sum of £3,100, most of which was provided by his partner Mr Roger Senhouse, purchased the bankrupt but distinguished firm of Martin Secker.

In Roger Senhouse, the author gained a partner with both outstanding literary ability and judgment, and an extraordinary talent for raising money when the firm ran into difficulties. Without Mr Senhouse, the firm would rapidly have returned to the bankruptcy court, but of this Mr Warburg is happily unaware, blaming him for the consistent lack of commercial success in the early years, and presenting him as an amiable eccentric dominated by his astrologer. The real reason for the firm's perennial losses was the abandonment of Martin Secker's tradition of literary publishing for a policy of left wing political publication. The field had been pre-empted by Mr Victor Gollancz, and Mr Warburg's books, admirably radical and anti-communist as they were, never had a chance. With the exception of André Gide's "Return from the USSR" — obtained incidentally by Mr Senhouse — and George Orwell's "Homage," they also seem to have been extremely dull. Other books published by the firm in the three years before the war, were Gabriell Chevalier's "Clochmerle," Erskine Caldwell's "Tobacco Road," and Thomas Mann's "Stories of Three Decades," all inherited from Martin Secker, and "The Fate of Homo Sapiens," by H. G. Wells.

When Mr Warburg sticks to publishing he is interesting, but the strictly autobiographical parts of the book are less satisfying. His relations with his first wife are discreetly passed over, save for the revelation that she sent him to be psychoanalysed. Those with his second wife are described at inordinate length. More sagacious than the first Mrs Warburg she supported her husband without reservation of any kind, and the marriage has been ideally happy. "Partisanship," reflects the author, "is one of the greatest gifts from a wife to her husband." It certainly appears to have been fully employed, since the author quarrelled with almost everyone with whom he had business dealings, dismissing even his devoted secretary, Tanya Benkendorff, who had obtained H. G. Wells for his list.

To this uneven book we are promised a sequel, which will doubtless describe the rise of the firm to its present prosperity, and may even answer the question suggested by the title. Meanwhile one may conclude that whether or not publishing is an occupation for gentlemen, writing is possibly not the best employment for the talents of publishers.

Anthropology and Minorities

Minorities in the New World

By C. Wagley and M. Harris. *Columbia University Press.* London: *Oxford University Press.* 336 pages. 48s.

This book is mainly based on Unesco reports comprising "a critical inventory of the methods and techniques employed for facilitating the social integration of groups which do not participate fully in the life of the national community by reason of their ethnical or cultural characteristics." It deals with Central and South American Indians; Negroes in the United States and in Martinique; the French in Canada; and Jews in the United States. In addition to studies of the historical conditions that have affected these minority groups, the various policies and methods followed in solving their problems, and how they find themselves today, the authors claim to make "at least a beginning toward applying the comparative approach of social anthropology to minority problems."

The reader is left in some doubt whether these problems are those of policy on the part of the majority, interests on the part of the minority or analysis by the anthropologist. The abstracts of the reports, which are clear summaries of the historical backgrounds of the minorities, suggest that it is the first two problems that the authors have in mind. We turn in vain to the conclusion—"An anthropological view of minority groups"—for an attempt to solve the third problem. We are told here that minority groups need to be seen in the general picture of the long-term development of human societies, and are treated to a brief discussion of the dogma of the national state as a formative influence. The second anthropological approach, it is claimed, is that a knowledge of the pre-minority past of a group, of the conditions surrounding its genesis as a minority group, and of its subsequent historical relations with the dominant majority is crucial to understanding its contemporary position. This is the book's strongest card, but not, one would have thought, specifically anthropological, unless you assert with the authors that anthropology is an historical discipline.

The third anthropological approach is that, given this frame of reference, it is necessary to know the functional relations of the minority to the dominant majority, and to other groups. This receives some treatment in the reports, but only in the most generalised form. The final anthropological approach, we are told, is to compare these situations with similar ones involving other cultural traditions and other social arrangements—legitimate, but not attempted. The "anthropological" view concludes by bringing us full circle to a liberal (but not anthropological) view of the problems of pluralism and assimilation.

RETAIL BUSINESS

A monthly Bulletin for Retailers, Wholesalers and Manufacturers.

In each issue:

An Analysis of the Economic, Social and Regional Factors affecting Consumer Spending.

In the current issue:

The Market and Prospects for
PET FOODS
PHOTOGRAPHIC GOODS

Further details from:

THE ECONOMIST
INTELLIGENCE UNIT LTD.
22 Ryder Street, London, S.W.1.
Whitehall 0353 Ext. 40.

You may already be doing reasonably well in Canadian markets. But could you do better? Are you getting your share of the new business that's lined up for British firms in Canada? Or could you somehow tighten up your marketing operations? It might help if you and your executives were to make a few reconnoitres into the business heart of Canada. You needn't lose any time or sleep. It's easy enough to fly overnight, *any night*, by TCA—Canada's own international airline—and get down to business the very next morning. And you'll find your bargaining power is increased when you know that TCA Air Freight can help you by-pass any distribution problem . . . *with the only daily direct-delivery service to all Canada.*

FLY TCA—DE LUXE CLASS
You can really relax aboard a giant TCA Super G Constellation. You'll like the fully reclining seats: good food and drink: attentive service. And the chances are you'll meet some of the many Canadian business men who always fly TCA.

Your Travel Agent is the man to see

TRANS-CANADA AIR LINES

27 Pall Mall, London, S.W.1. WHitehall 0851. And at Glasgow, Shannon, Manchester, Birmingham
SERVING EUROPE, ALL CANADA, THE U.S.A., BERMUDA, NASSAU AND THE CARIBBEAN

What are they carrying... petrol or gasoline?

Differences in language and customs, however small or subtle, can be important to people in Britain doing business with America.

As a U.S. bank with branches in London, Chase Manhattan knows the differences and similarities, can do much to make your dealings with the States more pleasant and more profitable. Chase Manhattan knows, too, the differences in customs and trade practices *within* the states... for its network of correspondent banks is the largest in America.

In fact, almost anywhere you do business, Chase Manhattan's network of more than 51,000 correspondent banks and branches around the world can get up-to-the-minute information for you, and provide you with every type of modern banking service—promptly, efficiently, and on a personal, *localized* basis that practically puts you on-the-scene yourself.

Why don't you talk to the people at Chase Manhattan... in either of the London branches.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Candidates Sharpen their Issues

WASHINGTON, DC

THE parallel campaigns for the presidential nominations of the two major parties—nominations which will not be made until next July for an election to be fought next November—have not only become more intense in recent weeks but have also begun, rather surprisingly, to generate real conflicts over issues. The leading contenders appear to have made in common the discovery that charm alone is not enough.

Governor Nelson Rockefeller, who rescued New York Republicans a year ago from what was elsewhere a dark hour for his party and who would now gladly captain its defence of the White House, has learned the hard way that it will not be easy to wrest the succession from Vice President Nixon. On a visit to Chicago earlier this month, his first avowedly political trip outside New York since his victory there, Mr Rockefeller addressed a group of editors, conferred with numerous midwestern politicians, attended two receptions, and dined with the leaders of the Chicago business community. In the informal meetings and receptions, his genial personality made a favourable impression on even Mr Nixon's staunchest supporters; in his appearance before the editors, however, Mr Rockefeller was obviously sensitive about his reputation for being a political "charm boy" who gets by on his personality and glamour. He was dignified and serious to the point of solemnity. These variations in style are not, of course, unusual in an accomplished public man. What was new, for Mr Rockefeller, was the realisation that they were much less effective in making converts from the Nixon camp in the midwest than they had been in routing his rivals for the New York Governorship last year. The midwesterners responded favourably to the blend of charm and seriousness, but they made it clear that they still preferred Mr Nixon.

Mr Rockefeller has now decided that he must enter as many state primary elections against Mr Nixon as possible and woo the Republican rank-and-file in these contests which give party members a chance to show which potential candidate they prefer. His much-publicised "invasion" (actually a two-day speaking tour) of California, his rival's home state, in November, is part of the development of this aggressive strategy. Previously, Mr Rockefeller had hoped to limit his confrontations of Mr Nixon and to depend on what was expected to be the latter's poor showing in the public opinion polls to demonstrate that "Nixon can't win," and on his own missionary work among influential businessmen and politicians to bring the party apparatus under his control. But the Vice President has done very well in the polls since his trip to Russia and Poland and therefore most of the powers-that-be in the party seem content to gamble on making him the Republican candidate.

Governor Rockefeller's need to bring the battle aggressively into the open and force the pace requires him to develop some clear-cut differences between himself and Mr Nixon. This is not a synthetic process because the two men have important disagreements on policy but until recently the Governor has minimised them. On domestic affairs, he believes strongly that the federal government should play a positive role in promoting economic growth and expanding programmes for social welfare; Mr Nixon is a conservative who does not dissent from the Eisenhower Administration's position that the government's part should be minimal. However, it would be surprising if Mr Rockefeller developed these particular differences very far because he rightly suspects that he is in advance of the majority of his party on such domestic issues.

Foreign affairs appear a more promising front on which to join battle. Mr Rockefeller is a wholehearted supporter of the basic tenets of the late Mr Dulles. He believes that the cold war is a global struggle likely to continue for many decades and that the West's position has a moral basis on which no compromise is possible. He is no believer in the value of summit meetings. He goes beyond Mr Dulles in that he thinks that much more can be done to wage the cold war effectively on the propaganda and economic fronts. When he was an aide to Mr Eisenhower in the White House in 1955-56, he argued consistently for larger schemes for foreign economic aid and psychological warfare. It is not easy to define Mr Nixon's views on foreign affairs, since he has appeared more frequently in the guise of a publicist than in that of a policy-maker, advocating and defending the Administration's concepts such as "massive retaliation" without making clear how far he is committed personally. There is no doubt, however, that at present he has fully identified himself with, and staked his hopes on, the latest Eisenhower policy of relaxing the cold war by personal meetings between the heads of state.

In recent weeks Mr Rockefeller has opened a discreet, impersonal attack on this Eisenhower line. He has let it be known that he warned the President against the pitfalls of an exchange of visits with Mr Khrushchev. He has protested publicly against relaxing trade barriers before the Russians adopt normal capitalist practices in international trade. He has placed heavy emphasis on the building of shelters to protect the civilian population from attack as part of a plan to strengthen America's psychological defences against nuclear blackmail by the Soviet Union. He has urged that underground atomic tests should be resumed so that the West does not fall behind in the development of weapons. If he presses these proposals, Mr Rockefeller will make it possible for there to be a public debate on questions of foreign affairs and military policy; this the Democratic opposition, badly divided as it is on the subject, has failed to provide.

WHILE there is nothing in the Democratic scramble for the Presidency which resembles the grand confrontation now developing between Vice President Nixon and Governor Rockefeller, the announcement by the Speaker of the House, Mr Rayburn, that he and other Texans intend to put up Mr Lyndon Johnson, the Texan leader in the Senate, as their state's "favourite son" for the nomination, makes probable a showdown at next year's convention between liberals and conservatives for control of the Democratic party.

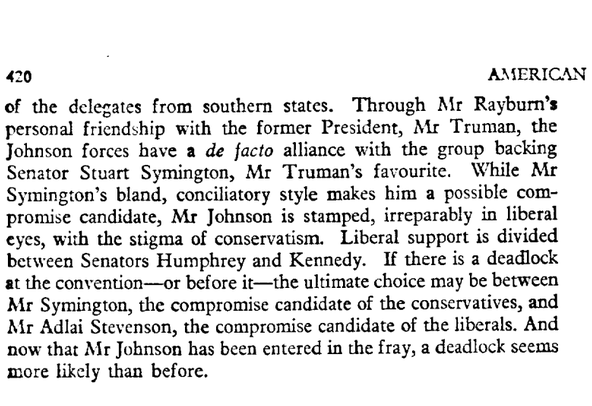
Although Mr Johnson has refused to make any formal avowal of his candidacy, he seems fairly certain to have the support of most

of the delegates from southern states. Through Mr Rayburn's personal friendship with the former President, Mr Truman, the Johnson forces have a *de facto* alliance with the group backing Senator Stuart Symington, Mr Truman's favourite. While Mr Symington's bland, conciliatory style makes him a possible compromise candidate, Mr Johnson is stamped, irreparably in liberal eyes, with the stigma of conservatism. Liberal support is divided between Senators Humphrey and Kennedy. If there is a deadlock at the convention—or before it—the ultimate choice may be between Mr Symington, the compromise candidate of the conservatives, and Mr Adlai Stevenson, the compromise candidate of the liberals. And now that Mr Johnson has been entered in the fray, a deadlock seems more likely than before.

Defending the Dollar

THE announcement that the Development Loan Fund is to require most of its new loans to be spent in the United States is the opening shot in a broad effort to reduce the American deficit on its international payments and to remove any doubts about the future of the dollar. Within a week Mr Dillon, the Under Secretary of State, was urging signatories of the General Agreement on Tariffs and Trade, meeting in Tokyo, to sweep away the remaining discriminations against dollar goods, which the International Monetary Fund has declared to be justified no longer, and to end quantitative restrictions of all kinds. At home American businessmen are being exhorted by the government to become more aggressive exporters.

The United States has a trading surplus of about $3.5 billion a year; the payments deficit arises from a net outflow of government grants and loans amounting to $2.5 billion a year, private capital movements of about $2 billion, and military spending abroad of a further $3 billion. Even Mr Anderson, the influential Secretary



of the Treasury, who is leading the attack on the deficit, does not hope to eliminate it, but only to halve it, partly by putting pressure on America's now prosperous allies to shoulder more of the burden of foreign aid and of the common defence. Roughly half of the economic aid provided by the United States is spent, by the recipients, outside the United States. To Mr Anderson and many members of Congress it is intolerable, when the United States is losing gold, that it should create a risk to its remaining gold by pouring dollars into the pockets of countries such as Western Germany and Japan which are not doing their share. Unless Congress is convinced that changes are on the way, the foreign aid programme and the liberal trading policies of recent years stand in real danger.

Many Americans deplore the "Buy American" method of hastening such changes for it is inconsistent with those very policies; it will cut the purchasing power of foreign aid funds and slow up development programmes; and it will strengthen the suspicion, already assiduously fostered by the Russians, that American aid is purely self-serving. It is also doubted whether sacrificing principle will pay many dividends. The $800 million in loans committed but not actually disbursed by the Development Loan Fund is exempt from the new order which, consequently, will have little effect for two years. This, however, is not true of the $1 billion or so a year in grants disbursed by the International Co-operation Administration, which Mr Anderson is fighting—with some success, judging from the President's latest press conference—to bring under the "Buy American" doctrine. Mr Anderson is also demanding that military spending abroad should be reduced. This does not refer to military assistance, which is largely in the form of American weapons, but to the cost of maintaining America's own troops, bases, communications and the whole infra-structure of defence. The Defence Department can itself reduce its present liberal provision for servicemen's families, non-military personnel and so on. But unless progress toward disarmament is rapid, the prosperous members of the North Atlantic alliance (which means all but Greece and Turkey) may soon be called upon to make a larger contribution.

Steel Cracks

THERE is now a possibility that, by the time the courts decide whether or not the steel workers should be ordered back to the mills under the Taft-Hartley Act, the order may no longer be necessary. The unexpected refusal of the judges to be hurried by the government has provided an opportunity for what seems at last to be some fairly constructive bargaining between the managers and the trade union. And one company, the Kaiser Steel Corporation, always independent and progressive in its labour relations, has used this opportunity to reach a separate agreement with the steel workers. According to the union this should make an acceptable pattern for the whole industry but only one other minor firm has taken the hint so far. President Eisenhower was not prepared to endorse the details of the Kaiser agreement, but he did recommend this conciliatory attitude to the other companies.

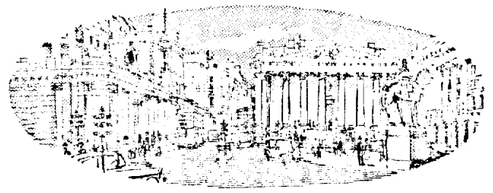
The point on which the managers have been most obstinate, their insistence on changes in working rules to enable labour to be used more efficiently, is referred under the Kaiser agreement to a labour-management committee with authority to make immediate short-term changes in plant practices and to another committee, including outside experts, which will draw up a long-range plan for sharing the benefits of automation and other improvements. Such a local approach seems the only feasible way of dealing with these questions since variations are great from plant to plant. It depends on the success of these committees whether or not the Kaiser agreement will mean an increase in steel prices, but the management hopes that it will not.

The actual settlement will cost the company about 10 cents an hour a worker during the first year, when there will be improvements in welfare benefits but no wage increase, and probably 12½ cents an hour altogether in the second year when wage rates will go up by 7 cents an hour. Kaiser operations are exceptionally up-to-date and efficient, and the other companies claim that a similar settlement would not only cost them at least 10 cents an hour more but would also make unavoidable an inflationary price increase.

The Kaiser plants account for only 2 per cent of the country's steel-producing capacity, so that even when they are working

business in the east?

we can help you here!



18 BRANCHES IN KEY CENTRES—
IN CONSTANT TOUCH WITH LONDON

Do you have business interests in the Middle or Far East? If so, The First National City Bank of New York can give you important help *right here in London.*

In either of our two London branches, in the City and the West End, we can bring you up to date on the latest business developments, not only in the Middle and Far East but all over the world as well. We have a vast network of branches spread across the globe—including 18 in the East—and in addition we can call upon many thousands of experienced banking correspondents in all the important centres of commerce. The invaluable local knowledge of these men might save you an expensive business trip!

Should you decide to make the trip, however, we will provide you with introductions to as many of our Branches and correspondents as you wish.

Let us show you how much we can help you—whether in the Middle and Far East or in countries nearer home.

Is he the greatest living Frenchman?

Rebel and patriot in defeat: commander and statesman in victory—is he France's greatest man since Clemenceau? Or even since Napoleon? Certainly he is the most famous, yet the least known, Frenchman of our time. In the third and final volume of his memoirs, General de Gaulle paints a vivid, and sometimes violent, picture of France, from the liberation to his abdication of power, astonishing both to France and to the world in 1946. Of the post-war upheaval he describes:

The restoration of a bankrupt country.
How he quashed the resistance riots in 3 minutes.
What he planned for Petain.
Why he took the Communists into his Government.

This is both a contribution to contemporary history and a revealing personal document.

Extracts from this third and final volume of

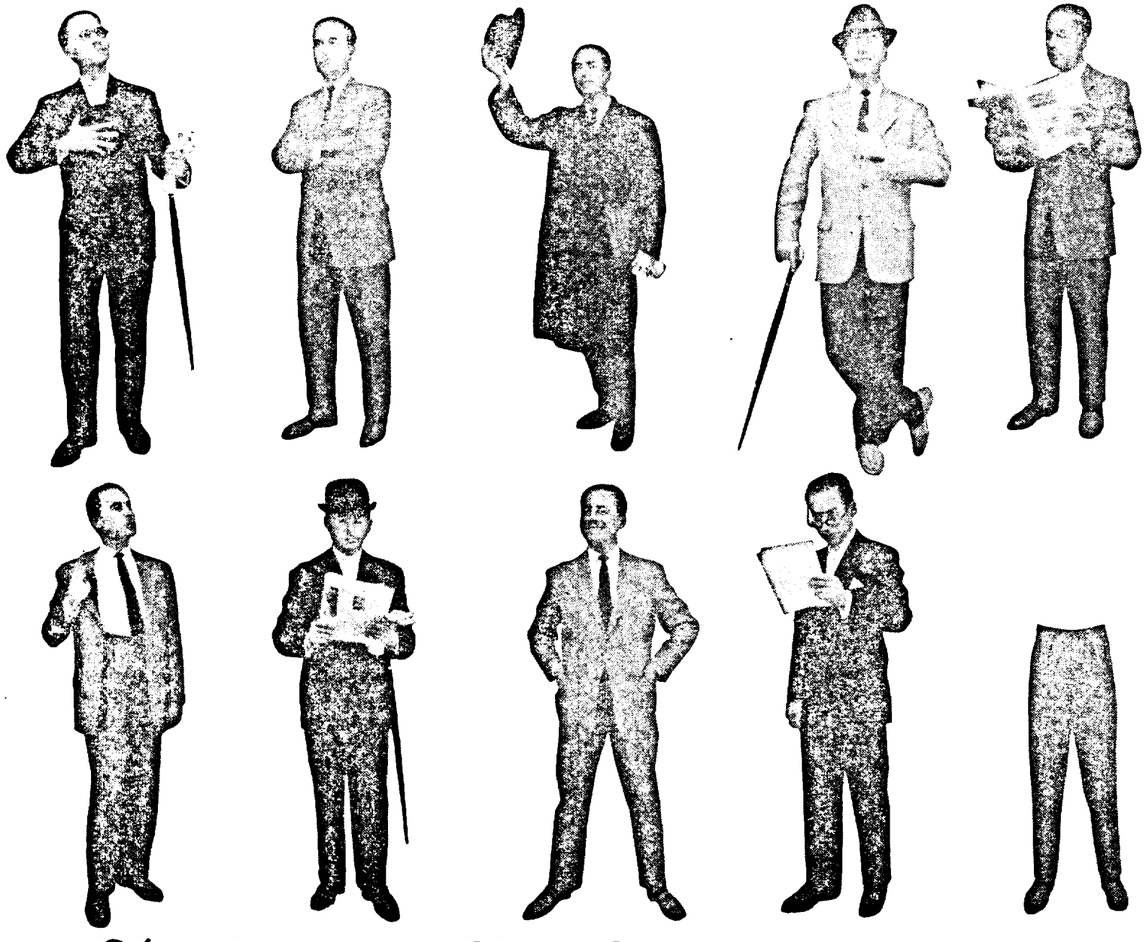
THE MEMOIRS OF GENERAL DE GAULLE

WILL APPEAR EXCLUSIVELY IN

The Daily Telegraph

FROM NEXT MONDAY, NOVEMBER 2nd

The Facts of Graphis



96% of our clients

are very happy about the work Graphis Publicity is doing for them. (The other 4% doesn't care, but his wife just loves Graphis advertisements.) Graphis Publicity is young and very precocious. Graphis does not look down its nose at a small appropriation and starts squinting only when things get positively sub-liminal. Graphis looks after advertising in all media, public relations, merchandising, exhibitions. Graphis is at home with consumers and on easy speaking terms with technicians. Creatively imaginative; factually very sound. Clients are happy; turnovers going up.
As a matter of fact, a pretty good advertising agency.

Graphis Publicity Ltd

again they will do little to alleviate the shortage which, the government contends, is now endangering the national health and safety in general and the output of missiles and other atomic weapons in particular. But this 2 per cent crack in the industry's united front will strengthen the union's argument that the 15—now 17—per cent of steel capacity which is still working in spite of the strike can easily satisfy all essential needs for both civilian and defence purposes. The union's lawyer maintains that since there is thus no national emergency the invocation of the Taft-Hartley Act is an unjustified interference with the right to strike and that in any case this provision of the Act is unconstitutional. The Supreme Court is presumably about to be asked to rule on both these points but it will not necessarily agree to do so.

Saturn out of Uniform

FROM A SPECIAL CORRESPONDENT

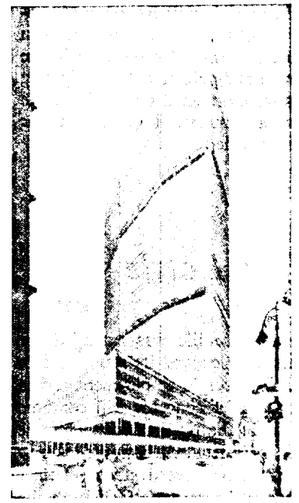
MOUNTING dissatisfaction with American achievements in space, compared with those of Russia, prompted President Eisenhower's plan for transferring the Army's entire group of space scientists to the National Aeronautics and Space Administration, the agency entrusted with scientific, as opposed to military, space projects. Under the law, the proposal must lie before Congress for sixty days and is subject to veto by either House. But, critical as the Democrats are of the Eisenhower Administration's alleged parsimony and lack of drive where space is concerned, the transfer itself is not expected to run into congressional trouble.

In principle, entrusting civilians with the work on "super-boosters," such as the Saturn, which have no immediate military value, is fully justified. The Saturn, which is absorbing most of the energies of Dr von Braun and his men at the Army Ballistic Missile Agency, is expected to develop a 1.5 million-pound thrust and ultimately to place a payload of 20 tons in orbit ; it is the chief hope of catching up with the Russians. Originally the 4,300 scientists and technologists at the Redstone Arsenal in Huntsville, Alabama, were assembled to work on weapons, but they stepped into space when nobody else was able to launch a satellite to answer the first Russian sputnik. General Medaris, Dr von Braun's superior at Huntsville, who has just announced his retirement, found it almost impossible, however, to secure prompt decisions from the Defence Department and welcomes any change that "will get people to work."

Unfortunately the President's statement was vague about the future of the military missiles being developed at Huntsville. Dr von Braun and the other German-born rocket experts who were brought to the United States in 1945 have been told that they will remain where they are and that the Army will be able to consult them. Nevertheless Congress is expected to insist that defence shall not suffer when the scientists' allegiance is transferred to the civilian agency. Why did the Department of Defence acquiesce in the loss of this valuable asset? Apparently the civilian science chiefs in the department, who outrank the military, were convinced that the Space Administration can squeeze more money out of the President's Budget than the Army can and that defence will benefit some day. The Space Administration promptly announced that it will indeed ask for more money next year for the Saturn and the President says that he will approve a civilian space budget larger than this year's $500 million ; whether the increase will be big enough is one of the questions to which Congress will want an answer. But in any case the Saturn needs time as well as money ; stationary testing of the booster engine, with its cluster of eight rockets, will take place late this winter, but it will be fully four years before the Saturn will be ready for ambitious space projects. Dr von Braun's acid jest is that when the Americans get to the moon they will have to pass through Russian customs.

Anglo-American City

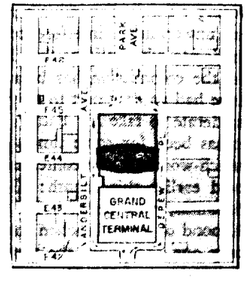
NEW YORK



ANY remaining doubts about the vigour of British enterprise under a Conservative government were dispelled last week when City Centre Properties, Ltd., of London, announced that it would put up $25 million towards the construction of New York's most ambitious real estate project, Grand Central City. However, it is understood that the money involved is "switch" dollars, bought on the London market ; if so, the direct benefit of the deal to the American balance of payments is being somewhat exaggerated by the sponsors —and in the long run, of course, the earnings of the enterprise should bring a substantial flow of dollars to Britain. Nevertheless the investment represents one of the biggest postwar commitments of any British company in the United States ; moreover, it is the first time for many years that British capital has participated directly in a large American property deal.

The new building will cost $100 million altogether and will rise 700 feet, to a height of 57 storeys, immediately behind the New York Central Railroad's main station, on land now used for its own more modest office building. The new octagonal structure will fall short, by several hundred feet, of the Empire State Building, New York's highest, but it will more than make up for this in breadth and, with 2,400,000 square feet of office space, will be exceeded in size by only the Pentagon in Washington and the Chicago Merchandise Mart. The building's supporting columns will pierce the railway lines and platforms below and must be put in place without disrupting the traffic of a very busy terminus. Nor must the traffic of Park Avenue be blocked ; this already passes through existing buildings on ramps which must be continued round, and connected with, the new skyscraper. If all goes well construction will start next March and will finish during 1961.

This scheme is the last of several considered by the New York Central Railroad to ease the burden of the heavy taxes which it must pay on its huge main station. While the railway company will still own the land, it will lease the air over it at more than $1 million a year ; against this the sponsors hope that rents will bring them $100 million a year. After 80 years the building will revert to the railway ; meanwhile the equity, or ownership of it, will be shared on a fifty-fifty basis between the American and British promoters. But of the $25 million offered by Mr Jack Cotton, the British sponsor, only a fraction will represent equity financing ; the remainder will be repaid over a period of 23 years. To cover the rest of the cost, short-term credit must be arranged through New York banks ; institutional investors will be offered long-term mortgages once the building is finished.



The initiative on this deal is said to have come from London, but the New York group was clearly glad of British capital. Not only is money tight at present in the United States, but the sponsors would have had to line up an even more impressive array of prospective tenants to secure the backing of the banks. Now they can go straight ahead with the construction work. On the British side it appears that, apart from the glamour and publicity of participating in this bold project, the promoters were attracted by the American law which allows depreciation on a commercial building to be deducted from income before taxes are levied.

Ballots after Battle

THE Civil Rights Commission, whose life was extended for another two years by Congress, may expand its activities into the fields of discrimination against Negroes in employment and in the administration of justice, but its chief concerns will continue to be education, housing, and denial of the right to vote; of these three voting takes first place. It has decided, however, not to investigate any more complaints from Negroes deprived of their voting rights until the Supreme Court hears the appeal from the decision of a federal court in Louisiana that the commission's procedures are invalid because it does not allow state officials accused of disfranchising Negroes to confront their accusers and cross-examine them. To permit this would expose the Negroes to such risk of retaliation that few would come forward. Moreover, the commission feels that procedures appropriate to a criminal trial are not required for its own informal fact-finding sessions.

Meanwhile another court ruling, which has just been upheld by the Supreme Court, is putting pressure on the southern states from quite another quarter. A Negro in Mississippi, who has been convicted of murder, will go free in eight months unless the state retries him before a "constitutionally constituted jury"—that is, one from which Negroes are not systematically excluded. Mississippi chooses its jurors from citizens on the registration lists for voters; in Carroll County, where the Negro was convicted, and in thirteen others, there are no Negroes registered to vote although half the population is Negro. It is well established that convictions of Negroes are void if members of their race are excluded from juries. Mississippi, however, may prefer to change the way juries are chosen rather than to extend voting rights to Negroes.

A general blow to the Civil Rights Commission, as it takes up its task once more, is the resignation of Mr Battle, one of its three southern members (there are also three northern ones) and a former Governor of Virginia. Mr Battle was the only member to vote against the commission's recommendation that temporary federal registrars should be appointed where it could be shown that state voting officials discriminate against Negroes; he felt that this was an unwarranted interference with states' rights. But he is a moderate who believes that Negroes should vote and his presence on the commission has been most useful, although he could not have had an easy part to play. Finding another respected southern moderate to take Mr Battle's place should be easier this year than it has been for some time. Moderation and "realism" were the watch-words at the conference of Southern Governors which was held earlier this month: Governor Faubus, the firebrand from Arkansas, was deliberately passed over in favour of Governor Almond of Virginia when the new chairman was chosen and, with only one exception, the Governors deplored talk of the South's walking out of the Democratic Party next year over civil rights.

Lessons without Teacher

FROM A CORRESPONDENT IN LOS ANGELES

AT Compton Junior College in the suburbs of Los Angeles a visitor nowadays can find as many as six classes of 40 students each receiving instruction without a single live teacher; only a supervisor looks in from time to time to see that order is being maintained as, on the whole, it is. Most students are glued to the television screens from which they are being taught; there are two of these in each classroom, in opposite corners, with the class divided between them. This Compton Concept of educational television has aroused in California all the controversy that has sprung from automation in industry; latter-day Luddites have even damaged the television control room.

The Compton system was inaugurated in January of last year when instructors were filmed delivering lectures which were then televised to classes by a closed circuit. So far English, algebra and psychology courses have been presented in this way and about 1,500 students, mostly between 17 and 20 years old, are attending them. But last summer the students staged a mass demonstration against TV classes, even burning the college president, Dr Martin, in effigy. This protest, according to him, was fomented by dissident members of his teaching staff; behind them stands the California Teachers' Association, which is said to have influenced the State Department of Education to rule last January that the college be deprived of funds for these classes. The department accused Dr Martin of breaking the law by running several classes with only one supervisor when he was supposed to have a teacher in every room. However, the Attorney General over-ruled the department.

Dr Martin himself recognises that automation is involved; in fact, he thinks that it is as necessary in college as it is in industry, to ease the shortage of skilled labour and to increase productivity. Television, he says, enables him to make more efficient use of his present inadequate teaching staff and it will enable the college to handle the 100 per cent increase in its present enrolment of 2,000 students, which it expects during the next ten years, with an increase of only 25 per cent in the number of instructors. Some redundancy has admittedly been created: one teacher who retired last year has not been replaced and two others have been assigned to tutorial work, an innovation at Compton.

Televised lessons certainly seem to increase the teaching output per man-hour. Filmed lectures run straight through without interruption; students have to follow closely, with the help of a text prepared in advance, so as not to miss anything; lectures are televised to more than one class at a time and can be re-run for revision work; teachers have found that on film they need up to 50 per cent more material than they normally use with a live class. Live sessions are held afterwards so that students may ask questions; nevertheless they complain about the lack of contact and of opportunity for further discussion with the teachers.

The teachers' opposition runs deeper and is based mainly on professional, not to say trade, considerations. The staff has also objected to the absence of personal contact with classes and has shown concern because some members have more attractive TV personalities than others. If teaching by television were to end the shortage of live teachers, then the wage bargaining position of those employed at present would be weakened. Above all teachers are alarmed lest they work themselves out of jobs. The teacher who produces a library of film courses may find himself competing one day with re-runs of his old lectures; worse still, he may be replaced by a brilliant outsider whose courses are being syndicated by a film library.

the answer to immediate expansion problems . . .

TERRAPIN PACK BUILDINGS

FROM SHELF TO SITE DELIVERY
You can order and obtain Terrapin Pack Buildings as easily as any other everyday commodity—they are normally delivered from stock, ready for immediate erection and *occupation.*

SPEEDILY ERECTED YET PERMANENT
Erection can be carried out at the rate of 1,000 square feet a day—yet this is no temporary structure—it's built to last for years and years.

COMPLETELY PREFABRICATED
Delivered in pack form, for single or multi-span construction, complete with lighting installation, glazing, floor covering and interior and exterior decoration. Plumbing and heating systems can be supplied.

SUPERIOR DESIGN
A fine handsome structure of high quality and appearance, yet with low maintenance costs.

ECONOMICAL RE-SITING
Dismantling and re-erection can be carried out easily, rapidly and at incredibly low cost, without fear of damage. You can move Terrapins when you like, where you like and as often as you like.

ALL THIS AT A BASIC COST OF NO MORE THAN 30/- TO 35/- PER SQUARE FOOT OF FLOOR SPACE—ERECTED AND FINISHED.

PREPARE YOUR OWN ESTIMATES

Terrapin Broadsheet No. T.P.3 not only contains full details of this unique service, it also shows you how to estimate your own costs. Write or 'phone for a copy NOW.

Municipal Boom

NEW YORK

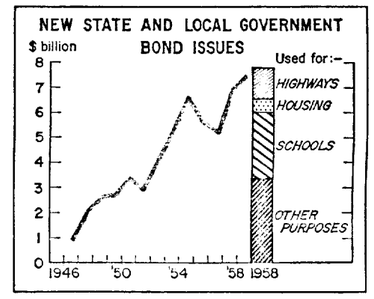
LAST week investors were called upon to supply $200 million in new capital to finance public housing in New York and in Washington, DC, new schools in Hawaii and in Salt Lake City, harbour improvements for San Francisco, water works in Atlanta, and many smaller projects. Throughout the long boom in the stock market, weekly offerings such as these have usually been absorbed without undue strain. But to attract the necessary buyers, yields on these state and local government bonds have moved steadily upward and by the end of September they hit their highest point in a quarter of a century.

To any traveller in the United States there is abundant evidence of continuous investment in the public sector even though many Americans argue that there is nothing like enough. The needs of the motor car have been particularly well served, with scores of spectacular bridges and multi-lane throughways which run hundreds of miles at a stretch without a cross road. Most communities can claim either a new school, a new hospital, or both, and the acres of new housing developments suggest a heavy need for water and drains. It is scarcely surprising then to find that new long-term borrowing by state and local governments has been growing. It is expected to exceed $8 billion this year compared with $1.2 billion in 1946, and during that period the amount of indebtedness outstanding has quadrupled.

The increase in the population, and with it the move from city to suburb, has prompted much of this new investment. For instance, a suburb of New York which had 88 schoolchildren ten years ago must now provide facilities for 7,300 pupils. Indeed schools form by far the largest single item of expenditure ; last year public utilities, mainly for water and sewers, came next, accounting for 19 per cent, and road and bridge projects took 16 per cent. Housing is a relatively small item ; government activity in this field has taken the form mainly of federal guarantees on mortgages for the purchase of privately-built homes rather than of extensive public housing programmes.

State and local government obligations—or "municipals" as they are commonly called—are exempt from federal taxation, and this is why there have been buyers for the heavy offerings of recent years. Buying comes mainly from individuals who pay a high rate of income tax, and from corporations and commercial banks subject to the 52 per cent tax on profits. By the same token municipals have little appeal for the less well-off investor ; for pension and charitable funds which enjoy a tax-exempt status ; for the mutual funds which do not themselves pay taxes ; nor for insurance companies which have had, in the past, to pay relatively low taxes. The yield today on tax-exempt bonds averages 3.6 per cent and runs as high as 4.75 per cent ; with the average yield on equities little more than 3 per cent, and that on high-grade corporate bonds over 5 per cent, the return on municipals is attractive, particularly to heavy tax payers. To an unmarried investor with taxable earnings of $18,000 a year, for example, it is equivalent to an 8 or 9 per cent return on a taxable investment.

THERE are some 102,000 units of local government in the United States, consisting variously of states, municipalities, school, water and sewer, and electricity districts, toll road and bridge authorities, and so on. Most of these units of government have the power to issue their own debt obligations. Their tax-exempt status is based on a legal interpretation of the Constitution which has been challenged from time to time by the Treasury and by Congress. There have been some suggestions that, with the current weakness of federal government borrowing, this privilege should be withdrawn, but such a move would be so politically unpopular that it is not considered a serious threat.



The borrowing power of local authorities is subject only to state regulations on the one hand and to the approval of local voters on the other. For many authorities the state imposes a ceiling on the amount they can borrow, and in some cases on the interest rates they can pay. Despite the impact on property and other taxes, the public accepts more often than not the projects presented to it in referenda at election time ; approvals have recently been running at about 80 per cent of all proposals.

State and local government bonds come in two major forms: the general obligation bond which is secured by the full taxing power of the issuing authority ; and the revenue bond which is backed by the earnings—as in a toll road issue—of the project. Tax-secured bonds account for some two-thirds of all outstanding debt, but revenue bonds appear to be gaining in popularity. In a novel move, the state of New Jersey is seeking permission next week from its citizens to convert its turnpike bonds from a revenue to a tax basis so that it can use the unexpected and large profits earned by the toll road, now reserved for servicing the bonds, to prop up the state's flagging railways. Some states face self-imposed limitations on their power to issue bonds against their taxing authority and must rely heavily on different types of revenue bond. Thus, Florida has pledged the revenue from its petrol tax to service its school construction bonds. Because of a chequered past, higher interest has to be paid on revenue bonds, but recently their record has improved and so has their favour with investors.

TODAY the underwriting and selling of municipals is a big business, and there is a fairly active secondary market, particularly in issues with early maturities. Some 100 large banks and more than 1,000 investment banking firms make up the highly specialised underwriting fraternity that deals in these issues, while the secondary market is shared by an even larger group. For the guidance of investors, services such as Moody's and Standard and Poor's rate municipal bonds for credit-worthiness on a scale that slides from Aaa to C and lower. The ratings of these agencies tend to carry quasi-official authority and influence considerably the interest rates and saleability of individual issues.

The public's appetite for new government projects remains strong and, while individual authorities have been deterred by today's high cost of borrowing, there has as yet been no marked decline in new offerings. In the current scramble for new capital, state and local governments have been outborrowing business corporations but, if interest rates rise further, or even remain at present levels, it seems likely that their demand for funds will slacken—as it did in the tight money period of 1957. Corporations can more easily ignore higher rates because interest payments on their bonds are tax deductible ; as borrowers, municipalities have no tax advantage and are faced with the full brunt of any increase in interest charges. At the moment, though, municipalities continue to add to their debt and November 3rd, which is election day, will see further authorisations.

Resigned to Good Fortune

FROM OUR BONN CORRESPONDENT

HOWEVER much some Germans may try politely to conceal it, the old conviction remains in the German breast that British foreign policy is guided solely by considerations of a national self-interest unique in its tweedy insularity and dinner-jacket unscrupulousness. The caricature has not been invalidated by this week's reports of the apologetic readiness of British European Airways, after consultation with Whitehall, to adjust the frontiers on its maps in order to placate Polish customers. The German Foreign Office has been asking questions. It has also used the occasion to try to still the current speculation provoked by Dr Adenauer's reminder to his countrymen on October 18th that there were still some bills to pay for defeat. The German government, the foreign ministry spokesman observed a shade tartly, was sticking to its guns: as the Potsdam agreement laid down, the future of the former German territories east of the rivers Oder and Neisse would be determined when the time came to make a peace treaty, and not before.

To the confusion of both officialdom and public, the Chancellor has of late been more than usually cryptic, even with those entitled by virtue of their office to know more clearly what he is thinking and proposing to do. Tall—or, at least, tallish—stories about the humiliations he is inflicting on ministers and state secretaries, and unkind insinuations concerning the ravages of age, are increasingly going the rounds. If he ever hears of them (the faithful Herr von Eckardt is generally credited with getting through an occasional home truth) the Chancellor probably does not much mind. He is fit physically and mentally, and is obviously enjoying his work. There are interesting encounters ahead; and nothing has happened yet to shake his conviction that he has been assessing men and nations soundly, including the now impetuously boyish, now coldly calculating British.

At the time of writing, the one hard date on the calendar of leading statesmen's comings and goings is the arrival of Dr Adenauer in London on November 17th. The professed objects of this visit are an improvement in the atmosphere of Anglo-German relations in general, and in particular a discussion of European economic co-operation and of the limits within which the future of Germany and disarmament can be safely negotiated with Mr Khrushchev. The differences of environment, character, and outlook between Dr Adenauer and Mr Macmillan are so great that it would be being over-sanguine to expect that this brief meeting could lead quickly to a marriage of minds.

Dr Adenauer is still not persuaded of the wisdom of holding an early summit conference, and the Prime Minister will hardly convert him. This reason alone is enough to make Dr Adenauer feel more at home with General de Gaulle when they meet in Paris not long after the Chancellor's return from London. But, on the other outstanding issues as well, Dr Adenauer is much more closely in tune with General de Gaulle than he is ever likely to be with Mr Macmillan. Both German and Frenchman consider themselves to have a special awareness of and responsibility for European problems, and they see in much of British policy an insular complacency which they brand as dangerous. It seems probable that Dr Adenauer will go to London intending to rub in the perils of giving ground in Berlin and the necessity for Britain to undertake greater economic commitments in Europe. In Paris he will find General de Gaulle in full agreement with him on Berlin, and largely in agreement about European integration, political and economic. If only there were not that little matter of French contentment with things as they are on Germany's eastern frontier, and, apparently, with everlasting partition.

All in all, Dr Adenauer seems to be acting in the confident belief that in the sorting out of western ideas before the summit conference everything—well, nearly everything—is going his way, and at his pace. This permits him to affect a proper modesty and resignation, and to counsel his perplexed countrymen to do the same.

Christian Democrat Struggle

FROM OUR ROME CORRESPONDENT

Florence

FIVE days of ferocious quarrelling in Florence have brought the Christian Democrats no nearer to solving their dilemma, but the spectacle of such bitter and indecorous strife is making many Italians—some of them, surely, among the eleven million non-members who voted for the party last year—ask themselves whether it is still possible and useful to the cause of Italian democracy that this great party should remain formally united in spite of its implacable internal conflict. Charges of treachery and corruption and cries of "fascist" were hurled across the floor of the Pergola. In three centuries the little theatre can never have witnessed such an uproar. One speaker accused the Prime Minister, Signor Segni, of having wished to send Italian troops against Nasser during the Suez crisis. A message from President Gronchi became the signal for a prolonged demonstration of enthusiasm directed aggressively against the party's right wing. No political congress in Italy since the liberation, not even the one that saw the Socialist party split in 1947, has been the scene of such turmoil.

The conservative press deplores the bad manners of the delegates—one paper describes them as teddy boy politicians—but claims to interpret the conflict as an outbreak of personal rivalry, a mere struggle for places destined to subside when the congress is over. There is a brilliantly cynical school of journalism here which tends to suggest that it is good for Catholics to let off social steam so long as order is restored in the end. The Vatican, it suggests, will see to this by curbing the turbulent left-wing leaders as it curbed Dossetti and La Pira in the past. According to these writers Signor Fanfani, the last member of that celebrated trio, is about to make his last bow.

This is a superficial assessment of the situation and an unfair appraisal of some, at least, of the men concerned. Signor Aldo Moro, the party secretary, who has become the unhappy leader

of an anti-Fanfani coalition, is as sincere and single-minded as Signor Fanfani. More than any other man in the party he is caught on the horns of the Catholic dilemma: how to put across a socialist policy without the help of the Socialist and Communist parties and under pressure from the conservative interests which have a powerful hold on the Christian Democrats. Signor Moro spoke for four hours and was often choked by emotion, but his speech was a passionate declaration of Catholic social doctrine, not a statement of policy. The party secretary could not bring himself to choose the only political ally with whom the Catholics might make this doctrine come to life. Should the party accept, perhaps seek, the parliamentary support of the Socialists? Should it pledge itself to a policy of direct state intervention to industrialise the South? This is the crux of the whole matter.

The domestic quandary is aggravated by the new turn in international affairs. For eleven years the Catholic party has dominated Italian politics through the belief that communism was at the gates and it was acting as the advance guard of an international anti-communist crusade. If the crusade is relaxed the basic assumption on which Catholic power in Italy rests is weakened. How should the party react? By adapting itself to the change, says Signor Fanfani, whose supporters applauded President Gronchi in approval of his projected visit to the Soviet Union. By resisting to the last ditch, says the Catholic Right, which carries along with it the unhappy foreign minister, Signor Pella. Between these two opposite theses the party looks in vain to the Church for guidance. The Vatican has as yet taken up no public attitude to the diplomatic détente. Yet it is this change in the international situation that has precipitated the crisis among the Christian Democrats. The party is not strong enough to meet the challenge.

THERE is also a new factor at home. For nearly fourteen years the Christian Democrat party has been given the main credit for the improvement in economic conditions. Reconstruction was followed by a rapid expansion of Italian industry, with a widespread and substantial rise in living standards. But today public opinion knows—the fact has been brilliantly and widely illustrated by the economists—that the depressed part of Italy is not getting its share of increased prosperity, that the gap between rich and poor, between industry and agriculture, between North and South, remains constant and is not likely to diminish in the natural course of events. Signor Moro himself pointed out the need to bridge this gap as the main problem that the party has to tackle in the immediate future. But to solve it implies a choice—partially planned economy for the South—and the mere prospect of such a choice let loose the pandemonium in Florence.

The Christian Democrats came to this congress divided in a dozen factions and sub-factions, but the realisation of their dilemma has cleft the party in two. On the one side Signor Fanfani with the faithful part of his old group, Iniziativa Democratica, the trade unionists and the party's extreme left wing. On the other side Signor Segni and the government (with the exception of three or four ministers), the party secretary and his followers drawn from the dissident half of Iniziativa, the "notables," and the party's extreme right wing. Behind this right-wing coalition one assumes the presence of the traditional pressure groups: the Vatican (but is the hierarchy unanimously for the Right?); the Confederation of Industries; American diplomacy (not so active as in the days of Mr Dulles and Mrs Luce); Common Market finance. At the eleventh hour the president of the Freehold Farmers' Association, Signor Bonomi, who is a Christian Democrat grand elector, sided with the Right. Another grand elector, Signor Enrico Mattei of the state hydrocarbons concern, ENI, was believed to support Signor Fanfani.

Unofficial results of the voting on Wednesday night show that of the 90 elective seats on the party's national council 52 have gone to a list presented by Signor Moro and Signor Segni and 36 to Signor Fanfani. In addition, Signor Moro controls 16 other seats on the council and Signor Fanfani 10. The split which seemed imminent at the outset of the congress has once again been avoided, but the issue has been handed over unsolved from the congress to the party council. At an early stage of the proceedings Signor Fanfani told your correspondent that if he were beaten he would bide his time until events proved him to have been right. The first event that is likely to occur is a request from the Liberal party to Signor Segni to define the government's attitude in view of Signor Moro's declaration that Liberal economic policy is incompatible with Christian Democracy.

Bolivia Faces East

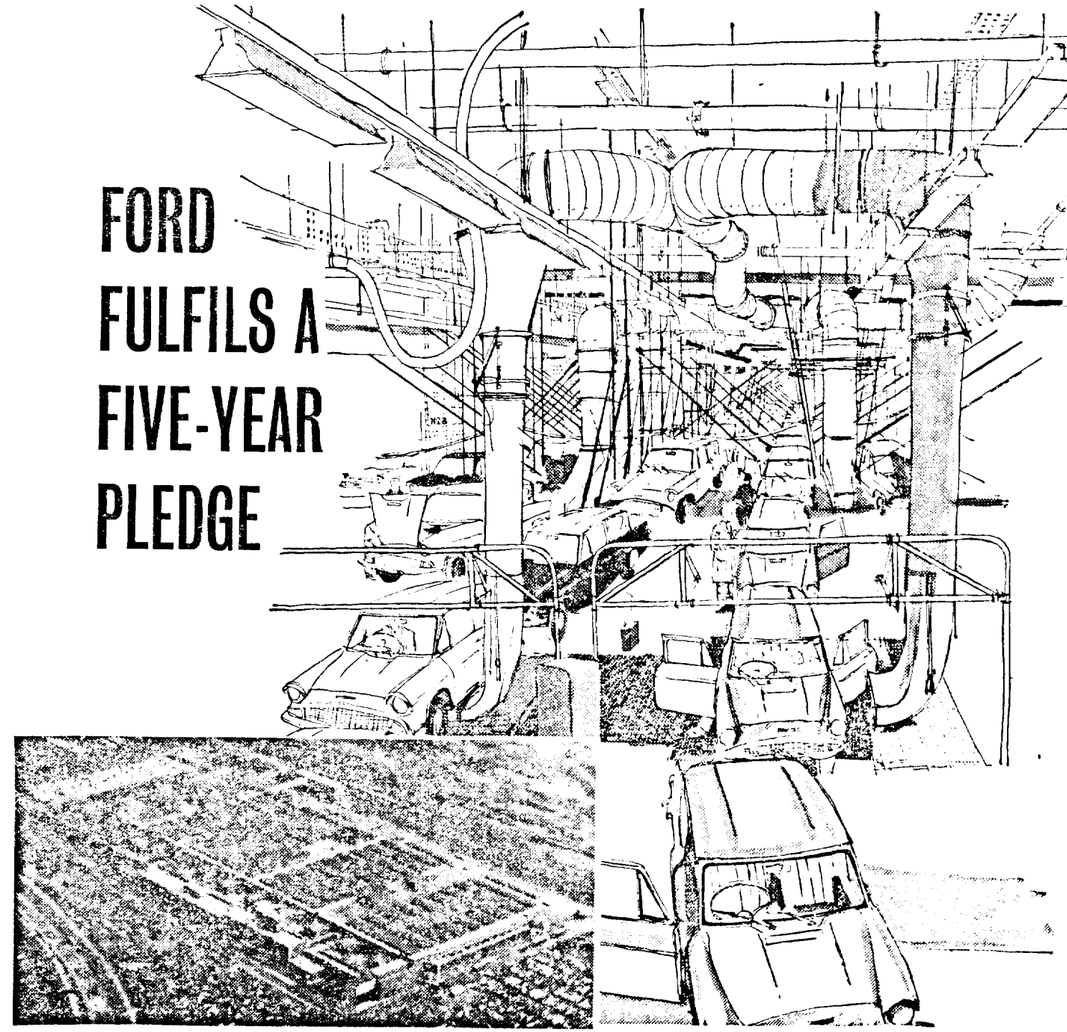
FROM A CORRESPONDENT LATELY IN LA PAZ

WHEN the *conquistadores* arrived 400 years ago in what is now Bolivia, they found most of the natives living in the western *altiplano* region. Here, with the help of extensive irrigation schemes, the Aymara Indians cultivated crops suitable for the dry, cool highlands and produced a surplus that went to feed the Inca empire further north. The Spanish colonial system, organised round the exploitation of the great silver mines at Potosí, further concentrated the population; Indians were brought in from the lowlands to work the mines, and the area became dependent on imports from other regions for much of its food supply. When the silver veins were exhausted in the late 19th century, their place in the economy was taken by tin, which regularly produced 90 per cent of the country's foreign exchange. Bolivia's tin barons and military dictators saw no profit in developing the tropical lowlands; four-fifths of the population continued to live in the bleak uplands and make a meagre living by mining and subsistence agriculture.

The nationalist revolution of 1952, headed by President Victor Paz Estenssoro and Vice-President Hernán Siles Zuazo, brought about the first significant change in the country's social and geographic structure since the conquest. With an ideology borrowed from the Mexican revolution, the Bolivian National Revolutionary Movement (MNR) nationalised the tin mines, initiated a comprehensive system of labour legislation, and began to distribute land to Indians who had been serfs for generations. To consolidate its position, the movement abolished the old army with its fondness for coups, and replaced it with an armed militia of peasants and miners.

The immediate economic results of the revolution were unfortunate. The families controlling the great tin fortunes had, understandably, shipped their liquid capital abroad; the best tin veins were worked out and the mines in a run-down condition. Productivity, now that the miners had guns and the will to use them, dropped steadily, while the world price of tin fell from $1.91 a lb to less than 75 cents. Comibol, the government mining monopoly; could produce the 17,000 ton export quota of tin with less than half its labour force of 30,000 men, but did not dare to discharge the excess workers. At the same time, difficulties

FORD FULFILS A FIVE-YEAR PLEDGE



With the completion of its new Paint, Trim and Assembly Building at Dagenham, Ford fulfils a five-year-old pledge. Well over £65,000,000 have been spent on the expansion programme launched by the Company in 1954—and millions more will be spent in the next few years.

This latest plant, which alone cost over £10,000,000, is the most modern of its kind in the world. Completed earlier, and already at work, are the new Parts Depot at Aveley, the new Basildon Machine Shop, the new Foundry and Body Press Shop at Dagenham. These mighty cash contributions to Britain's future are Ford's pledge, translated into steel and concrete, that British skills shall continue to lead the world in providing quality vehicles at the lowest possible cost.

arising out of the transfer of land caused a severe drop in agricultural production. The *boliviano*, pegged at 200 to the dollar in 1952, had by 1958 spiralled disastrously down to 12,000 to the dollar. Only an annual subsidy of $25 million from the United States (most of it in surplus farm products) has prevented catastrophe.

President Zuazo, who was peacefully elected in 1956, believes that the long-term solution to his country's economic problems is to turn away from tin. Many of Bolivia's mines yield ores with a tin content of less than 1 per cent; fuel shortages and transport problems bring the cost of production up to $1.50 or $2 a ton, which is more than double the current world price. Some industries that formerly used tin have turned to other metals, or to plastics, and competition from Malaya, the Belgian Congo, and, recently, the Soviet Union has driven Bolivia out of many of its former markets. To take tin's place in the national economy and to provide employment for discharged miners, the government is now energetically developing the long-neglected tropical lowlands.

IRONICALLY, the area to benefit most from this plan is the department of Santa Cruz, where the only real opposition to the MNR has crystallised. The European settlers, who dominate the area, dislike the party's pro-Indian bias and have fought its land distribution scheme. Nevertheless, this low-lying, well-watered, and extremely fertile area, more than half as big again as Great Britain but with less than 400,000 inhabitants, holds the key to the nation's economic future, and most of the money available for capital development has been channelled into it.

The chief need of the Santa Cruz department has long been for better transportation facilities. There are great stands of valuable tropical hardwoods, promising cattle country along the Brazilian border, and producing oilfields on both sides of the Pilcomayo, all of which have gone unexploited for lack of connecting links with Bolivia's neighbours and with the plateau. A great deal is now being done to close these gaps. An asphalt, all-weather highway from Cochabamba to Santa Cruz was finished in 1955, and a northern extension into what was formerly wilderness is under construction. In 1955 Santa Cruz was linked by rail to Corumba, and in 1957 to the Argentine frontier town of Yacuiba. To the west, the department is connected by railway with Brazil, and when the Cochabamba-Santa Cruz section of track is completed some time in the next decade it will be possible to travel by rail from the Pacific to the Atlantic. Oil pipelines run from the Camira and Tarija fields in several directions, and the department already exports a considerable amount of crude oil to Chile, Argentina and Brazil.

Agricultural development has followed the expansion of the transport network. The sugar factory at Guabirá, completed in 1956 with Point Four funds, is the most modern in South America; and in another year or two Bolivia will be independent of sugar imports for the first time in its history. A colony of 500 Japanese families settled at Ichilos three years ago is now producing four rice crops a year, and small quantities are already available for export. Another Japanese colony is expected to arrive early next year, the government is negotiating to bring in Italian farmers from southern Italy, and two military colonies of a thousand men each have taken firm root.

President Zuazo's movement has so far managed to avoid the extremes of class warfare or xenophobia. Bolivia is on excellent

New South Wales's Lost Leader

FROM OUR CORRESPONDENT IN AUSTRALIA

THE disarray of the Australian Labour party will not be improved by the sudden death of the Premier of New South Wales, Mr J. J. Cahill, on October 22nd. He was one of the best Labour leaders—an astute politician with a rational and well-ordered mind.

A railwayman at 15, he had educated himself through the Workers' Educational Association—an effort that is rare in the Australian Labour movement. At premiers' conferences he was outstanding in the way that he marshalled his arguments and in the sweet reasonableness of his approach. He could be friends with his political opponents, even with Mr Menzies. He could think for Australia as well as for New South Wales and that again is a rarer attribute than readers outside Australia might suppose. But he was also identified with his state and on such occasions could speak for all parties.

He had a talent for political compromise and many of his compromises were with the left wing of his own party, he himself being on the right. Thus New South Wales led the field in introducing such egalitarian measures as three weeks' holiday with pay and equal pay for women; and when the Commonwealth Government, in its fight against inflation, stopped the automatic adjustment of Federal wages to the cost of living, New South Wales refused to follow its lead. Recently Mr Cahill agreed to the abolition of many of the penal clauses in the State's arbitration legislation. All this was deplored by some as discouraging the overseas investment that Mr Cahill went to the United States last year to obtain.

His most successful compromise was in holding the New South Wales Labour party together while other State parties were tearing themselves to pieces. The story goes back to 1954 when Dr Evatt blamed his defeat in the Federal elections on Santa Maris, the Catholic social movement. The movement had started "industrial groups," mainly of Roman Catholics, to defeat the communists in one trade union after another by using the communists' own methods such as mass attendance and concerted voting at meetings. But its success had begun to produce a reaction, which grew apace when the "groupers" began to develop their own policies. Dr. Evatt's denunciation plunged his party into the sectarian strife that is never far below the surface in Australian life. "Groupers" who were ousted from state executives led wholesale secessions that later crystallised into the Democratic Labour party, and the governments of Victoria and Queensland fell. Not so the government of New South Wales, where Mr Cahill had been premier since 1952. The "groupers" were pushed off the party executive in due course, but Mr Cahill held his team together. Some would say he did so at the expense of his principles as a Roman Catholic and an anti-communist. But he saw that it was better to keep the majority of Roman Catholics in the party than to fight a losing battle for a few of them.

Will his successor be able to keep the loyalty of the Roman Catholic section of the party? The DLP threat has faded away. But this week the *Sydney Morning Herald* has reported the birth of a new Roman Catholic lay organisation, quaintly called the Knights of the Southern Cross and bent in Sydney on getting communists out of public life. This may bring new sectarian strife; and the new premier, Mr R. J. Heffron, though pledged to the same policies as Mr Cahill, is a protestant.

terms with all its neighbours, even with its traditional enemies. Relations with the United States and Great Britain, the customary whipping boys of South American demagogues, are genuinely good. Despite its financial difficulties, the government has resumed payment on its external debt, and foreign oil companies, afraid to risk their money in Bolivia under the previous regime, have now invested in Santa Cruz and elsewhere. The nation's tragic past has left it with a heavy legacy of poverty and ignorance, but for the first time in 400 years it seems possible to be cautiously optimistic about the future.

Church and State in Poland

Most of the ninety thousand people living in Nova Huta, a new industrial town in south-eastern Poland, are of peasant origin and are still practising Catholics. The strength of their faith was demonstrated by their determination to have a church of their own: when the official building permit was withdrawn, the people built a provisional place of worship themselves. In July, the church was demolished by a bulldozer. This is by no means an isolated example of the conflict between the church and the state on the local level; there have been many such cases during the past few months. Their outcome is determined by the strength of the respective party organisations, and, as in Nova Huta, a lot depends on the technical qualifications, such as the ability to drive a bulldozer, of the local comrades.

The Polish communists are alone, among all the countries in the Soviet block, in facing a religious problem of such magnitude and of such anachronistic features. While local trouble breaks out frequently, and often becomes violent, on a higher level the struggle is conducted with more circumspection and according to a different set of rules. For some five months after the election of Pope John XXIII, there was a lull on the church-state front; the first shot rang out at the end of February this year. The minister of finance signed a directive suspending a number of tax concessions to the church that had been in force for nearly two years. The tax payable on ecclesiastical income employed for welfare and building was raised to sixty per cent; church collections for the same purposes became taxable. Soon after the appearance of this directive, Mr Sroko, the minister for communal economy, began to re-examine the status of church property in the territories acquired from Germany after the war. Although in 1946 the Warsaw government had decreed that former German ecclesiastical property would pass automatically under the administration of the church, Mr Sroko declared, on April 23rd this year, that all such property belonged to the state and that, subject to negotiations, the church could only lease it. In the same month, the clergy was informed that it could no longer enjoy the privilege of exemption from military service; more restrictions were placed on the teaching of catechism in schools; bishops and heads of monastic orders began to find it increasingly difficult to get permissions for their customary visits to the Holy See. The audience Mr Gomulka granted to Mr Piasecki, the leader of the "Pax" organisation of the Catholic fellow-travellers (mentioned in *The Economist* of June 20th, page 1090), concluded this series of threatening moves against the church.

The Polish churchmen, on the other hand, were clearly disturbed by the vigorous renewal of the campaign against their rights. There were several meetings of the episcopate in April, where a letter to the government, containing a long list of the bishops' complaints, was drafted; and on May 28th Cardinal Wyszynski, for the first time since his release from prison in November, 1956, attacked and denounced the communist regime in a sermon. Both the episcopal letter, which took exception to Mr Gomulka's warning remarks about the church at the last party congress, and the primate's sermon were couched in strong terms. The cardinal's sermon derived an added significance from its historical associations; he had protested against the arrest of Bishop Kaczmarek and the government's decree on ecclesiastical appointments from the same pulpit of St. Anne's Church, Warsaw, in the dark days of 1953, when he was himself arrested a few days later. Once more, in 1959, there is a Kaczmarek case and an investiture contest.

Since the beginning of June, Kaczmarek, the bishop of Kielce, has been prevented from carrying out his pastoral duties by the civil authorities, and the government has been pressing for his deposition. The exchange of correspondence between the state secretary for ecclesiastical affairs on the one hand, and Bishop Kaczmarek and the secretary of the episcopate on the other, has recently become available: it bears witness to the gravity of the current breach between the state and the church.

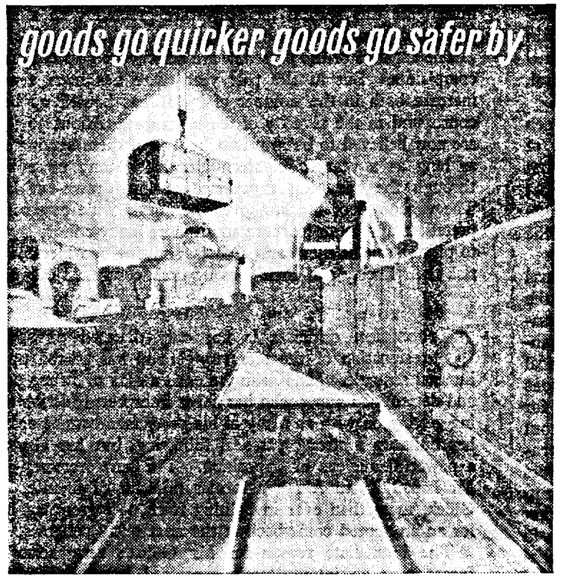
The Kaczmarek affair was sparked by a letter to the episcopate from Mr Sztachelski, in charge of ecclesiastical affairs: the bishop was accused of hostility to the state, and his suspension was announced. The letter included quotations from a number of Kaczmarek's sermons, delivered in the years 1957 and 1958, in which Poland was described as a "country which gets drunk and lives in debauchery," and which warned the believers that "there can be no compromise. One has to choose between Christ and death." The bishop was also accused of persecuting clergy loyal to the state, and arousing the fanaticism of people against those holding different beliefs; and the old charges against the bishop of collaboration with the Germans were dug up from 1953. In a letter to Cardinal Wyszynski, Kaczmarek defended himself against these charges; the episcopate rallied to his support. On June 16th, the bishops' secretary wrote to Mr Sztachelski, arguing that neither the episcopate nor the primate could depose or judge a bishop; such powers could be exercised by the Holy See only, and Bishop Kaczmarek's case was no exception to the rule. Later correspondence differed only in that it contained a higher vitriolic charge; the positions appeared irreconcilable, and an inevitable deadlock ensued. Bishop Kaczmarek is still at Kielce; he lives in seclusion, without exercising any public pastoral functions.

At the beginning of June, there was some hope of an understanding; the government decrees of February and April remained largely unimplemented, and negotiations between the state and church authorities were on the way. But the Kaczmarek affair again widened the breach, and the episcopate, which usually shows signs of internal divisions, remained united. The churchmen were aware of the importance of the issue at stake; the question of the right to investiture and dismissal of ecclesiastical personnel had been raised. The affair renewed the fears of the clergy that Mr Gomulka may be seeking, by harassing and dividing them, to establish a docile national church. This week's reshuffle of the government can have brought them no comfort. Mr Bienkowski, who has gone from the ministry of education, was Mr Gomulka's friend and had a reputation for moderation in state dealings with the church. His replacement, Mr Tulodziecki, is active on the board of the Association of Atheists.

Turkey's Perpetual Emotion

FROM OUR SPECIAL CORRESPONDENT

It is the deceptive custom of Turkish politicians to behave as if elections were just round the corner. In fact, general elections are not due until 1961; so that the Democrat party can, if it wants, stay comfortably in power for another couple of years. But the political bustle in Ankara and Istanbul is stimulated not



BRITISH RAILWAYS

DOOR TO DOOR
container service
to and from
NORTHERN IRELAND

Nightly sailings in both directions connect with scheduled express freight trains to and from all parts of Great Britain.

Containers to meet every need include:

1 Insulated or ventilated for meat and other perishable foods.
2 Highly insulated for ice cream and quick-frozen foods.
3 Covered containers for general merchandise in capacities ranging from 70-700 cubic feet.
4 Fitted containers for special traffics.
5 Covered containers and flats for unpacked articles.
6 Demountable tanks for bulk liquids.

only by resentment at each new evidence of official high-handedness, but also by the struggles now going on within the main opposition group, the Republican People's party. These reached a climax last month with the resignation of the secretary-general, Mr Kasim Gülek.

The opposition insist that they cannot afford a calm between elections. They have harsh things to say about the honesty of the 1957 elections, and they have no great faith in the way that the next ones will be run. In this context they claim that they need a majority sweeping enough to overwhelm any possible electoral trickery, and have to go all-out to take at its flood the tide of revolt against the government's despotic tendencies.

Turks will often boast of their country's function as a natural link between East and West; fairly enough they claim to be the only logical member of both the North Atlantic Treaty Organisation and the Central Treaty Organisation. Their form of democracy also has a half-way look about it. But at least for political ends, the opposition leaders judge the government's defections by rigorous western standards. The Democrats are criticised for interpreting democracy as the simple rule of the majority without regard for minority rights. Corruption, nepotism and government interference with the judiciary, the universities and the press are all obvious targets. Opposition members sit in parliament, but have difficulty in making themselves heard; a more significant criticism is that the prime minister, Mr Adnan Menderes, sits in Istanbul and pays very little heed to the opinions of the parliamentarians of either side.

An odour of semi-sanctity was conferred on Mr Menderes when he miraculously escaped death in the Gatwick air crash last February. His naughtier critics have countered this inconvenient bonus for the government by spreading wild tales of the prime minister's neurotic behaviour since the accident. A favourite *canard* is that Mr Menderes has shut himself up in his Istanbul hotel, where he is concerned obsessively and exclusively with his pet schemes for restoring the city's antiquities and refurbishing it with new roads and buildings. Most of these rumours crumble fairly easily; they are undoubtedly supported by the fact that the prime minister has not bothered to make any public statements in Turkey since his crash, and clearly goes very much his own way regardless of the criticism of his enemies and the advice of his friends.

THE government's failure to start comprehensive industrial planning leaves it open to criticism; Turkey is one of the few under-developed countries that even in theory has not got an overall development plan. Attracted by the construction programmes, great floods of country people are pouring into Ankara and Istanbul, and nobody, least of all the city authorities, has much idea how they will be employed when the building tempo drops. But the opposition, who are themselves none too strong on economic planning, are keener on criticising the government for its restrictions on political and press liberty, and, above all, for its reputed back-pedalling from the dynamism and spirit of Kemal Atatürk's revolution.

One of the results of the political scandal-mongering is that it has encouraged the government to be heavy-handed in the application of its restrictive powers. The law that demands a week's notice for public meetings has been used arbitrarily to prevent opposition members from travelling about the country; a speaker may be caught breaking the law even when he is met on arrival by a few of his supporters. Sometimes the methods are even cruder. Within the last few months there have been a number of unpleasant incidents. The leader of the People's party, Mr Ismet Inönü, had his tour to Izmir abruptly stopped by a stone-throwing crowd; Mr Kasim Gülek was not allowed to hold a meeting at Geyikli and two opposition members who went to investigate this second incident were greeted with a shower of powdered glass.

The vagaries of the press law are among the opposition's regular complaints. But in the past year there has been a noticeable increase both in the number of journalists hauled up before the courts and in the severity of the sentences. About 30 journalists are now believed to be in prison, several of them serving sentences as long as a year or eighteen months. Many more are going through the harassing experience of long-drawn-out law suits. The vagueness of the law gives the courts wide powers of interpretation, and in an insecure atmosphere many editors are tempted to play as safe as they can. Others, showing considerable courage, risk their liberty and their jobs by their continued outspokenness.

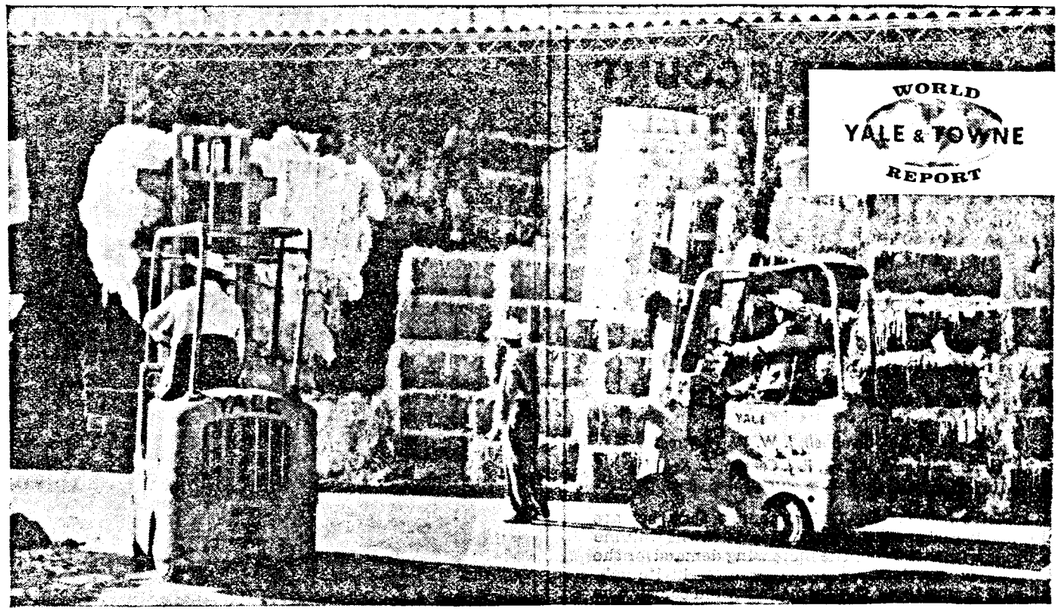
OPPOSITION criticism is not only directed outwards. The resignation of the secretary-general has stirred up a fierce internal struggle. Mr Kasim Gülek is a man of strong personality and determined views who has never interpreted his job as involving getting on with as many of his party members as possible; he has built up a strong personal following, but has also alienated a powerful nucleus of opposition. The new secretary-general is Mr Ismail Rüstü Aksal, a former minister of finance. But Mr Gülek, more than ever in fighting form, is regrouping his forces for an attempted come-back at the next party congress.

The immediate reason for Mr Gülek's resignation was the furore over an intemperately expressed letter he sent to Nato headquarters about the selection of the only opposition representative in the Turkish delegation to the Atlantic congress in London last June. The letter became public, and Mr Gülek slipped into even hotter water by denying his authorship.

The inadequacy for which the Turkish opposition is justifiably criticised is its failure to offer an alternative policy. While its cupboard is packed with bones of contention, it is almost bare of constructive ideas. The party's rather lame defence has been that since it has so little say in administering the country, there is not much point in going through the rigmarole of a shadow government or even in producing a comprehensive economic and social policy (on foreign policy the government and opposition are roughly in agreement). Instead, Mr Kasim Gülek has been the instigator and star turn in a vote-gathering policy of going out and meeting the people, rather on American patterns of whistle-stop electioneering. Some of his opponents hold that between elections it might be more intelligent for the party's organisers to concentrate on planning rather than showing their faces; in particular they object to the extent to which Mr Gülek showed his own face.

The opposition is most vulnerable when challenged over its own record in office before 1950, when it was guilty of many of the undemocratic practices that it now complains of so lustily. The cynical interpretation of political change in Turkey is *plus ça change* or, put more crudely, just another set of pockets to line. The answer to this is perhaps that many of the more active and thoughtful members of the People's party were in 1950 strong supporters of the Democrats. Their disillusion came gradually as they watched events repeat themselves. Some of them formed small left-wing parties, most of which rapidly came within the very broad range of the government's anti-communist guns; the liberal-minded Freedom party, for instance, is now merged with the People's party.

The crux of the problem is who gets effective control. In this teething stage of Turkish democracy, the more idealistic may inevitably drift into opposition whichever party is in power. But they are trying for higher stakes. This makes the internal struggle for influence within the opposition as significant and as intense as its long-standing and often monotonous clash with the government.



YALE TRUCKS SPEED HANDLING, CUT COSTS COMING AND GOING

SANTA CLARA, MEXICO—One Yale petrol truck speeds raw pulp into this paper plant, another speeds finished paper to market. Operations are performed at great saving in cost, time, space and labour. These lowered production costs take place in all types of industry using Yale Industrial Lift Trucks. Capacities of Yale petrol trucks range from 2,000 to 20,000 lbs.

NARROW AISLE TRUCK SHOWS AGILITY IN HANDLING STORAGE CONTAINERS

ENGLAND – Special containers of chocolates are stacked in rows 3 high by this straddle type Yale Warehouser. These Yale narrow aisle trucks manœuvre with ease in areas only 6′ wide. They permit the greatest possible use of floor and air space. They handle loads of 2,000, 3,000 and 4,000 lbs. with unusual speed and the economy of electric truck operation. Complete Yale Warehouser line includes fork, platform, pallet and tractor models.

- **Yale makes the world's most complete line of Petrol, LP-Gas, Electric and Hand Lift Trucks.**
- **All Yale Industrial Lift Trucks are uniformly high in quality, wherever manufactured.**
- **All Yale equipment available in currencies of the free world.**
- **For further information contact your Yale Sales and Service Representative – located in principal cities of the world.**

CAMPBELL DISCOUNT COMPANY LIMITED

INDUSTRIAL BANKERS

Paid up Capital **£544,000**
Assets exceed **£3,000,000**

Directors: J. B. Campbell, J. W. W. Huntrods
P. H. Russell Smith, A.C.A., P. J. Cannon, G. Keighley

Campbell Discount Co. Ltd. announce that they are able safely and profitably to employ a growing volume of money in satisfying the increasing demand for the Company's services. They, therefore, invite substantial deposits on the terms indicated below. The Company's banking business is conducted in conformity with the strictest canons of banking liquidity, and the proportion of liquid assets to deposits is maintained at 10 per cent, or 30 per cent of funds at less than one month's maturity, whichever is the greater. The Company is one of the most substantial independent industrial banking houses in the United Kingdom, and is conducting a diversified business over an area stretching from Newcastle-on-Tyne to the south coast.

Funds may be deposited on the following terms :

Money at 1 month's call,
4% per annum, maximum £5,000
Money at 3 months' call,
5½% per annum, maximum £25,000
Money at 6 months' call,
6½% per annum, maximum £50,000

You are invited to write to The Manager, Banking Dept., Campbell Discount Co. Ltd., who will be pleased to send you an Audited Balance Sheet and booklet No. NC6 explaining our mode of operation.

THE BUSINESS WORLD

Help Where Needed ?

By abolishing the nine development areas fourteen years after they were first set up (more strictly, twenty years for the four that were created in 1945 as enlarged versions of the pre-war special areas) the government's new Local Employment Bill will achieve what no President of the Board of Trade has previously had the courage to do—to take an area out of the list when it no longer needed special help. The wider spread of prosperity and the emergence of areas newly affected by economic change have made the complicated processes of amendment far too unwieldy. So recent presidents have, instead, contented themselves with a kind of administrative or *de facto* de-scheduling of areas or parts of them, as their circumstances have improved, simply by not applying in these areas the powers that they could still use if they wished.

In large measure, therefore, the new bill is a piece of administrative tidying up. Hitherto different powers have been available for different places: there were development areas in which the government could erect factories and offer loans and grants to any firm, industrial or otherwise ; there were other development areas in which it could do both these things but did not in fact do either ; and there were places outside these areas where the government could offer financial help to attract new industry but had no power to put up buildings to house any newcomers. Now there is to be a single list of places in which all means of assistance, both new and retained, are to be available and all the powers of administering them will be concentrated in the Board of Trade. The bill defines the new "localities of persistently heavy unemployment," and specifies the help to be offered them ; this will expire after seven years unless parliament decides otherwise. Finally, three new management corporations, one each for England, Wales and Scotland, are to take over the five companies that have been running industrial estates set up just before and after the last war and will be responsible for any new estates that may be built in the new "localities."

Though the government's powers have been greatly simplified as well as somewhat extended, the new policy will depend even more than the old upon wise administration. The new definition of localities eligible for aid positively invites pressure upon a President of the Board of Trade from backbenchers, local interests, and industry advancing the claims of virtually any town with almost any kind of enterprise that has closed or is threatened with closure or with the need to lay off a number of workmen. A company that finds itself in difficulties will not be short of voices urging that it should have a government grant or loan. The bill defines the new places as localities in which the Board of Trade decides a "high rate of unemployment exists or is imminent, and is likely to persist (whether seasonally or generally)." These places are to include, as they should, fringe areas to which people could travel to work and others to which they might move as part of an "overspill" scheme. If it is accepted that a government should do more to take jobs to workers, then it is only reasonable to be able to move on the threat of heavy local unemployment instead of having to wait for it to arrive, as under last year's Act, and then perhaps wait another eighteen months until new industry could be brought in and opened up.

But the success of this new policy of having a single list of relatively smaller areas will turn upon how well ministers concentrate their efforts, and the as yet unspecified sum of money they are prepared to commit (nearly £14 million was spent in the last three years of rather more frugal assistance) upon a limited number of places in which this kind of help has a real chance of fostering permanent economic improvement that would otherwise not occur. Seaside towns are already eagerly eyeing the reference to seasonal unemployment. And the chances are that whenever the country goes through a mild spell of recession, a host of places will want to join in the distribution of public money: they must not be allowed to get it at the cost, for example, of reducing the help towards diversifying the cotton towns. No doubt the government will have this point very much in mind.

Most places that have been suffering from persistent above-average unemployment while industry elsewhere has been urgently seeking extra labour must be presumed to suffer from deep-seated economic malaise. It is something that the government has not attempted a Nelson act, turning a blind eye on the stark fact of economic exhaustion and social detritus in some of these areas and compelling industry to go to them. This is an old policy and it has a sentimental appeal—but it has not worked with much success. The present policy remains one of reinforced persuasion. The financial carrot is to be rather more luscious. Since the end of building licences, the only stick that could be wielded has been the

granting of industrial development certificates for any new industrial construction of more than 5,000 square feet. That stick, for what it is worth, remains. Certificates are now to be granted having regard for the need to provide appropriate employment in the new localities instead of for the "proper distribution of industry."

THE principal addition to the armoury of powers to assist firms setting up and carrying on a business in the new localities is a provision for making grants of 85 per cent of the excess of the cost of putting up a new building or extension over its open market value. This, apparently, is designed for industrialists—and other developers as well—who prefer their own custom-built premises to renting a factory put up by the Board of Trade, invariably at less than the economic value. Provided it is prudently used, this power could mean a smaller direct outlay of public money than by erecting government factories and subsidising them, or conversely it could stimulate more construction for the same expenditure of exchequer funds. Treasury consent will be needed for each grant and "consultation" with a new advisory committee; this is to be set up in place of the Development Areas Treasury Advisory Committee to advise on these grants and also on the power introduced last year of making general loans and grants to any business that has "good prospects" of ultimately being viable. The passage of the bill will no doubt reveal how the government contemplates the exercise of these widely drafted financial powers. Industrialists lucky enough to get one of these new capital grants—which could well run up to 30 per cent of the initial cost of a new factory—will be doing well, with the further help, too, of normal tax allowances.

It would be wise to avoid dogmatism about this revision of the policy of moving jobs to workers who prefer to remain in these areas until more is known about how it works out in practice. The government now commands an impressive range of powers. It can establish industrial estates; erect buildings and "other works" on its own or (by agreement) on other people's land, including, it appears, canteens and workers' houses; it has wider powers to get rid of eyesores and put derelict land to use, by itself or by paying local authorities to do it; it can arrange for adequate "basic" services to be installed; it can subsidise yet further the cost of erecting privately-owned premises, make loans and grants to any business in "temporary" difficulties, and meet part of the cost of shifting key workers and their dependants to a new branch of a firm in one of the new "localities." There is perhaps some room for government help to assist the bringing of new industries to places where technological change or a shrinking of world markets create the prospect of persistent and heavy unemployment; where suitable labour exists for new enterprises; where there is already the social capital that is costly to develop anew elsewhere; and to mitigate the wasteful processes of over-extension of areas like London. But it may be difficult for the government to distinguish between areas where new industry can be planted without inordinately raising its own costs and those other areas where, even in a country as small and compact as Britain, no industry could seriously hope to compete. Perhaps the one omission in this bill that is to be regretted is that the government will still be unable to assist the retraining and resettlement of workers that could be moved from areas of abnormally heavy unemployment to those remaining places that are not yet heavily congested and where new labour is greatly needed.

Queensberry Rules for Bids

MORE rubbish than wisdom has been talked about take-over bids. In a sensible, concise and well-written document, the leading representatives of the City's institutions have now set down some rules of conduct for these offers. The City can be infuriating and conservative; but its business is concerned with distinguishing sense from nonsense and it knows that the take-over bid is one means of inducing necessary change and of fostering economic growth. Its misgivings are not about changing that mechanism but of ensuring its rational use.

"Notes on Amalgamations of British Businesses" are the deliberations of a committee set up in July at the suggestion of the Governor of the Bank of England. He has been well served, and the Government, about to set up an inquiry into company law, should welcome a document that clears the air of so many misconceptions and falsehoods about take-overs. On the committee sat the top brass of the Issuing Houses Association, the Accepting Houses Committee, the Association of Investment Trusts, the British Insurance Association, the Committee of London Clearing Bankers and the London Stock Exchange. Copies of the notes have gone out to the members of these bodies this weekend and they can be purchased at 6d. a time—a good investment by any company director or financial adviser.

The notes get off to a good start: amalgamations, they show, have been a feature of commerce from its earliest beginnings and most big British companies have grown to their present size as a result of them. Some of the reasons which have led to mergers, the committee suggests, are:

(a) The desire to achieve the economies of optimum size or to put to better use the physical assets and personnel available.
(b) The need to rationalise, particularly in times of depression or of acute competition.
(c) The desire of owners of private businesses to provide in their lifetime for funds to meet the estate duties payable on their death.

Since the war, the committee notes, amalgamations have been stimulated by the rapid fall in the value of money, the high level of taxation and the distortion of normal economic factors through Government action. These influences have attracted the bidders since share prices have often failed, especially where properties figure prominently among the assets, to reflect the real value of a company's underlying assets.

What the notes do not say is that as a result of the war and of Government controls, business was for many years

not particularly strenuous or competitive. Some boards of directors thought that they could relax and let matters take their course. Their unconcern about shareholders was strengthened by the pressure on them from successive governments to exercise restraint in dividends. The return to more competitive conditions and to healthier conceptions of company finance has left many of the complacently managed companies as natural targets for bidders who knew what they wanted and how to get it. What the notes emphasise is that the process of amalgamation, aimed at the best utilisation of physical capacity, managerial experience and the availability of labour, is one without which an industrial community cannot thrive and is one that "should continue and should not be artificially impeded." The Government in framing new corporate legislation should take note and should not be deflected from its course of giving the economy freedom to grow because of an occasional rascal or discreditable episode.

No comprehensive code governing all sizes and shapes of take-over bids could possibly be drawn up. The committee sets down a general body of principles and legitimate practices which should be borne in mind whether a merger is agreed on by two sets of directors, whether the bid is made over the heads of the sitting board, or whether competing offers are made. The principles, the committee says, are:

(i) There should be no interference with the free market in shares and securities of companies.
(ii) It is for a shareholder to decide for himself whether to sell or retain his shares.
(iii) To enable him to come to a considered decision, the shareholder should have in suitable form and at the right time all relevant information, and it is the duty of the board of his company to make every effort to ensure that such information is provided and to give him their advice.
(iv) Every effort should be made to avoid disturbance in the normal price level of shares until the relevant information has been made available.

The committee cannot be said to flinch from its task on the ground that it has not set down the detailed procedures to give effect to these estimable principles. The emphasis throughout the notes is upon the responsibility that directors must bear in ensuring that the shareholders have full freedom of reasonable choice in coming to a decision for themselves. The interest of shareholders is, in fact, recognised as the only criterion.

Although the bidder is seeking to make a bargain with shareholders, "their board is normally the best channel of approach and also the best source of advice for shareholders." An offer naming the principal should therefore usually be made to the directors of the company in question. The directors are entitled to be given sufficient time to consider the offer, and "as soon as reasonably possible" they should inform shareholders of it and proffer advice to them on whether it should be accepted. The directors should also be entitled to ask for evidence that the bidder can obtain the resources necessary to satisfy full acceptance of the offer.

Whether the directors recommend acceptance or not, they should make every effort to see that shareholders are given all requisite information on which to make up their own minds, including information about the resources backing the offer and about the general intentions of the bidder for the future conduct of the company and the possible effects on employees of the results of a successful bid. Where the bidder is already a shareholder of the company (as he usually is, having bought shares at a lower price than that at which he finally makes the bid) it is "desirable" that this should be disclosed, with particulars of his shareholding. A cash offer is a matter of "absolute" and a share offer one of "relative" values in assessing the merits of an offer; hence, where the offer is in the form of a share exchange, shareholders should be given "the fullest possible information on the future commercial prospects of the combined companies." Though the committee does not specifically say so, that points to an earnings and dividend forecast.

IN two key paragraphs, the committee shows that it is not among those who believe that the only good mergers are those brought about by cosy agreements among friends:

If a board decides to recommend that an offer made to its shareholders should not be accepted, the offeror is still free to communicate direct with the shareholders without the recommendation of the board, and in such a case the board should be ready to facilitate this direct approach (at the expense of the offeror) whilst at the same time explaining to its shareholders why it does not recommend the offer.

A board should be wary of refusing to put to its shareholders any serious and responsible offer. The well-being of the shareholders as a whole must prevail over that of particular shareholders who may be directors.

Even in the special case the committee offers a helpful view:

Where a Stock Exchange quotation has been obtained for a company's shares and only a minority of the shares has been sold to the general public, the investors who have acquired these shares must appreciate that their attitude towards any future offer may differ from that of the original proprietors.

Secrecy while talks are going on which may lead to an offer should be maintained, though "if there are signs of a false market arising in the shares concerned," a preliminary announcement is allowable. This, however, is subject to the more important suggestion that "it is normally unwise to make any announcement until it seems certain that an offer will in fact be forthcoming." Once the offer is made, details should be communicated as quickly as is reasonably possible to shareholders and they should be given adequate time (the committee suggests three weeks) in which to decide. Once the offer is declared unconditional, a further period should normally be allowed for acceptances from late-comers.

It is desirable that an offer should be for the whole of the share capital of a company or of the class of shares concerned:

If, in some very exceptional case, a partial offer is justified, this should be on a *pro rata* basis, and if acceptances exceed the amount required, they should be proportionately scaled down.

The partial bid—such as was made a year ago by Illingworth Morris for part of the equity of Salts (Saltaire)—has run up against a good deal of criticism and so has the bid which is made in non-voting ordinary stock—as almost all the bids by Great Universal Stores have been. On this point, choosing its words with care, the committee says:

The device of dividing the equities of companies into voting and non-voting shares has had relevance in some offers made in recent years. While it may be justified in some conditions, it is not generally desirable.

Pointed and justified criticisms have also been levelled at the fancy compensation directors have received on leaving com-

panies they had served—sometimes none too well. The committee has some wise things to say here:

> The question of compensation for redundant employees, including directors, always needs careful consideration. In the case of directors, shareholders should be given the fullest information as to the manner in which any proposed compensation payments have been worked out. In this connection the existence of service agreements may or may not be relevant. If re-employment in a different capacity is proposed, this should be disclosed.

In all, the suggestions by the committee put directors firmly in their place—as servants of the shareholders as well as servants of the company. But it has omitted to say anything specific about the actions of a sitting board of directors which wants to stay tight in office and decides to beat off a take-over bid. In their complacency (for no director is going to admit he deserves the sack) and in their own selfish interest (for most directors enjoy the powers and emoluments of office) some directors have on such occasions behaved irresponsibly—for instance, by raising the dividend out of line with what the earnings would justify and often after earlier protestations that the company would be ruined if they paid out another penny. But the general drift of the committee's suggestions is that such directors should watch out. The committee, equally, does not set down any specific rules that should govern the decisions of a board when competing bids are made. The tenor of these notes is, however, that while the board has the right to recommend one bid rather than another, it should inform shareholders of the competing bid and leave it to the shareholders to make the final decision.

The suggestions that the committee has made can easily be applied in retrospect to take-over struggles in the past. Indeed, the setting up of the committee must stem in part from the battle for British Aluminium and from Mr Clore's bid for Watney Mann. When they are so applied, not all directors and bidders can swear they are free from blame. But what is needed is not contrition but the resolution to do better when take-over bids come up in the future. These notes emphasise the right of any bidder to bid, the right of any board to accept or to reject that bid, and the right of shareholders to be the final arbiters. These are rules of conduct which have been followed by sensible and responsible people in industry and in the City for most of the time. They do not deny businessmen the right to fight out an issue, but they do establish Queensberry rules against low hitting and butting with the head.

BUSINESS NOTES

IN THE MARKETS

Search for Yields

INVESTORS have searched busily this week for more attractive yields than those offered by blue chip equities. Some of them have taken their profits and re-invested the money in gilt-edged stocks. Some have combed the list of second flight equities, again looking for yields better than 3 or 4 per cent. Some have bought the long neglected oil shares and others have gone into the copper and rubber markets. It is not therefore surprising that in the week to Wednesday's close *The Economist* indicator, in which the most active market leaders are deliberately chosen as constituents, gained only 0.9 points to 346.3. Indeed, it is an indication of the general firmness of the equity market that this index made any gain at all after its great upsurge and touched yet another new peak. Daily movements continue to be unusually large, the *Financial Times* index rising by 3 full points on the first day of the new account.

Gilt-edged continue their steady climb. This has now reached impressive proportions. The £10 million issue by Middlesex County Council, yielding £5 9s. per cent. to 1080, looked attractive at the end of last week; it had become overwhelmingly so by Tuesday, and the issue was oversubscribed about 16 times. The market expected a substantial premium when dealings opened on Friday—though the brokers, Pember & Boyle, favoured the small investor and the small stag in the awesome task of

NET GILT-EDGED PRICES	Oct. 7	Oct. 29
Short bonds		
Funding 2½% 1956-61 ...	97 8	98 13/32
Conversion 4½% 1962 ...	100 7/16	101
Medium and long		
Savings 3% 1960-70	80 13/16	83 1/2
Conversion 5¼% 1974 ...	100 9/16	101 7/8
Funding 5½% 1982-84 ...	101 15/16	105 7/16
Treasury 5% 1986-89	97 11/16	97 11/16
Gas 3% 1990-95	65 1/2	69 1/8
Funding 3½% 1999-2004 .	70 3/16	73 7/8
Irredeemables		
War Loan 3½%	63 7/8	68 5/16
Consols 2½%	49 3/8	52 1/8

allotment, granting the first £100 in full, no more for applications up to £2,000 and only 5¼ per cent for allotments over £10,000. Issuing brokers have a constant problem in deterring the stags, and one of their few effective measures is to vary drastically the basis of allotment. The £3½ million issue by Rootes Motors of a 5½ per cent debenture (1984-89) at 98 was also heavily oversubscribed on Thursday.

In the three weeks since the eve of the election, as the table shows, gilt-edged prices net of interest have risen by up to three points and more; yields have fallen by up to 7s., and Old Consols now yield only a shade over 4¼ per cent. The notable exception is Treasury 5 per cent 1986-89, which the government broker has kept steady just below its issue price of 98, so that its yield has now become decidedly attractive. Sales have been substantial.

The biggest rise has been in 3½ per cent War Loan, up from 63⅜ to 68¼. War Loan has also been the subject of the biggest aberration in market comment—the fatuous suggestion that the authorities might change the terms by giving it a final date of redemption. Why they should do this, having had since 1952 a one-way option to repay the stock, is far from clear. And talk of "a swindle" in connection with the terms on which War Loan was issued is wildly irresponsible. The reasons why sensible people prefer other gilt-edged stocks to War Loan are well known—and they always have been.

Preference Preferred

THE search for more attractive yields than those offered by many leading equities has brought investors back into the market for preference shares. This market, more perhaps than any other, is one where shares are firmly held and day-to-day prices turn largely on the amount of stock which comes on offer. In the last few days the

turnover in this market has gone up and some brokers have reported that blocks of preference shares have been readily snapped up. But the lists of preference shares on offer still show fair supplies of the second flight issues, giving a return of something over 6¾ per cent. The accompanying table shows that the good quality preference shares are now on a yield basis well below 6 per cent. Shares such as these cannot be purchased at all freely, but shares can be attracted out of quite firm hands by paying an extra sixpence or so.

PREFERENCE SHARES	Rate %	Prices Oct. 8	Oct. 22	Oct. 29	Latest Yield %
Assoc. Electrical 'B'..	4½	14/10½	15/3	15/6	5¾
British Motor	5	16/4½	16/6	17/3	5¾
British Petroleum 2nd.	9	27/9	28/3	29/–	6
Courtaulds	5	17/11½	17/4½	18/3	5½
Distillers	6	20/3	21/–	22/–	5½
Dunlop	5½	17/4½*	18/11½	19/4½	5¾
I.C.I.	5	16/9	17/9	18/6	5½
Imperial Tobacco	10	29/9	31/–	34/4½	5¾
"Shell" Transport 1st.	5½	18/6	19/6	21/–	5¼
Unilever	7	22/9	24/1½	25/–	5½
Vickers	5†	21/3	22/3	22/9	6¼
Whitbread 1st.....	4½	14/9*	15/–	16/–	5½

* Ex dividend. † Tax free up to 6s. in the pound.

For institutions such as charities and pension funds whose income is exempt from tax the search has to be not merely for a good yield but also for a high net rate of British tax on the dividend. For example the net dividend received from a holding of £1,000 of Harrisons and Crosfield 6 per cent cumulative preference, paying a net UK rate of 4s., is £36 15s. after deducting £23 5s. in tax. Of the latter only 4s. in the pound can be reclaimed, so that for a gross fund the total income from the holding cannot be more than £48 15s. The net dividend on a similar amount of Distillers 6 per cent cumulative preference, paying a net UK rate of 7s. 8d., will again be £36 15s., but practically all the £23 5s. deducted in tax can be recovered so that for an exempt fund the total income will not be less than £59 15s. The renewed interest in preference shares on yield considerations may help to persuade directors, now that profits tax is levied at a flat rate, that preference issues are not an outmoded way of raising new money.

Rally on Wall Street

A Correspondent cables from Wall Street:

ON Wall Street, too, some institutional investors are talking of lightening the weight of equities in their portfolios in favour of high yielding Government bonds. But so far there has been little significant desertion of the industrial market. Indeed, prices of common stocks have rallied this week, pushing up the Dow Jones average in five days' trading from 625.59 to 643.60 at the close on Wednesday. The rally reflected the prospect of further talks between the steel companies and the union and the separate agreement signed this week by Kaiser Steel. The steel strike continues to overshadow the market but investors have gained some comfort from the resilience of corporate profits in the third quarter of the year, which spans the strike. Earnings are patchy but total profits promise to be close to those of the third quarter, when they were running at a record annual rate of $53 billion. Even United States Steel, which has reported a loss of $31 million in the strike-bound third quarter, has been able to report higher earnings in the nine months to September 30th than in the corresponding period of last year. Before the strike, US Steel was earning very high profits indeed and it is not surprising that it has not cut its dividends.

COMPANIES ACT

A New Inquiry

SIXTEEN years have passed since the Cohen Committee began its inquiry into company law reform. After sitting for two years it produced the fruitful and far-reaching report that resulted in the 1948 Companies Act. This was a gigantic stride forward, giving investors adequate prospectuses and company accounts on which to base their decisions. But sixteen years is time enough for another inquiry and another bill. This is not because of any major shortcomings in the 1948 Act but because business practices and the views of the public about them do not go on unchanged. The Government has promised an inquiry and that will almost certainly result in a new Act. Like the Cohen Committee sixteen years ago, the inquiry will presumably be conducted by a committee appointed by the President of the Board of Trade.

During the election campaign, Mr Macmillan made it clear that the Government was especially concerned with take-over bids. That no doubt was an immediate political reaction to the Jasper affair; the terms of reference of the new inquiry are likely to range far wider than bids and mergers (on these the latest views of the City organisations, reviewed on page 440, deserve serious consideration). Everyone has his own list of reforms: the financial journalist would like more informative company accounts; the small investor ought to welcome greater safeguards in prospectuses and advertisements for deposits; stock exchange dealers and company secretaries see the need for a quicker and less costly system of share registration and transfer. The list can easily be extended to cover non-voting ordinary shares and nominee shareholdings. And there are still the recommendations of the Gedge committee on no par value shares to be implemented.

One broad stratum of reform must surely lie in greater accountability by the servants of a company to shareholders. The dual duty of directors towards the interests of shareholders as well as the interests of the company is the toughest problem—part of it lying in the borderland between the law and good business behaviour, and accordingly most difficult to define. But a Companies Act which made it more apparent that shareholders matter and that when their interests are disregarded directors can be made to suffer would be of benefit not only to investors but also to the working of the economy.

BUILDING SOCIETIES

A New Act

FIRST to welcome the news that the Government intends to strengthen the law governing the conduct of building societies will surely be the building societies themselves and the Building Societies Association. Reform is well overdue. Under the protection of the Friendly Societies Acts, a concern which was a property finance organisation in all but name can attract funds from the public with as much ease as a building society which limits all but a small proportion of its mortgages to owner-occupiers. The 1874 Act and the 1894 Act, which tightened up regulations after the Liberator crash, are completely out of date.

The new Act needs to establish that the name building society (better still it would be called a "house purchase society") can be used to attract money from investors only when a strict limit is imposed on mortgage advances other than to owner-occupiers. Where funds are used for financing property development and speculation investors must be fully informed to what purpose their monies are being put; the building society is the wrong institution to use for this purpose. The difficulty will be to draw a firm line. Many societies will be reluctant to give up completely the higher rates they earn on advances made to builders when new housing estates are being erected or on advances on shops and commercial properties. Within limits such advances may be permissible; the only principle is that the limit should be a low one and plainly specified. In return for enjoying the status of "building society" every society ought to disclose, in full, the nature of these advances; and a stop must be put to the use of accommodation companies to hide the name of the real borrower. Here the new mortgage schedules introduced this year by the Registrar of Friendly Societies will do much to tear down the veil of deceit.

Powers conferred on the Registrar by the Prevention of Fraud (Investments) Act to issue a "stop order" on building society advertisements are already strong and in recent years they have been used more severely. But they need strengthening still more by giving the Registrar more supervisory staff. He may also need greater power to control the content of advertisements and he should at least be able, as the Registrar of Companies is, to disallow the use of certain words in naming a society. Four people, paying a registration fee of £20, can form a new society and it is easy to resurrect a moribund one. Here, too, the discretionary powers of the Registrar need to be augmented.

THE TRUCK ACTS

Wages by Cheque

THE Government's proposal for a bill later this session to permit payment of wages through a bank "to any employee who so requests" is in line with moves made before the election. A year ago the National Joint Advisory Council, with representatives from both sides of industry, instructed its sub-committee to consider the need for amending the Truck Acts, the nineteenth century legislation designed to protect the "artificer" by decreeing that his remuneration must be in "coin of the realm," defined to include cheques, but only those of note-issuing banks. The committee reported in April that revision of the Acts as a whole involved many complex issues and recommended that a small independent committee should be set up by the Minister of Labour: this committee is now sitting. But the NJAC itself recommended the limited reform on which legislation is now foreshadowed. This will at last permit payment by cheque or bank credit to any worker who specifically requests or sanctions it. It will remove an absurd anomaly, but will be unlikely itself to do much to extend the banking habit. The banks and the public have a bigger part to play in this than the law. But if the Government wants to give a lead it should include in its bill (as did Mr Graham Page in his abortive private bill) powers for the Minister to permit by order, when he thinks fit, general payment of wages by cheque—even though the real economies come from payments direct to bank accounts.

THE ECONOMY

Still Booming?

ONCE August and its holidays are out of the way industrial output usually makes a quick rebound and normally goes on rising until about Christmas time. Unemployment, however, which is a more sensitive indication of what is happening to the more marginal business activities, starts slowly to grow as autumn sets in and as the more seasonal trades begin to lay people off. The latest calculations of the index of industrial production and the most recent unemployment figures both show the expected increase. The production index number for September is provisionally estimated at 114-115 (based on 100 in 1954), following 98 in August and 102 in July. Adjusting the seasonal influences, however, which include holidays, the official statisticians place the figure for September at 112-113, against 113 in August and 112 in July. Thus, on the basis of just these three months, it would seem that the boom may be beginning to slow down, though there is no sign yet from some of the major manufacturing industries that this has been happening this month. Even so, industrial output in the third quarter of this year was running about 2 per cent higher than in the second, about 4 to 5 per cent more than in the first quarter, and about 7 per cent above that a year ago. It was also about 4 per cent more than in the short-lived upturn of late summer 1957.

Registered unemployment on October 12th totalled 419,000, some 14,000 more than in mid-September. The record number of school leavers this year swelled the number seeking jobs. But most of these adolescents now appear to have found work: unemployment among boys and girls fell by a further 12,000 while among adults it increased by 26,000. Unemployment rose in most parts of the country except for the Midlands and Yorkshire: in London and the south-east it rose by 5,000. But the number wholly unemployed is now below the corresponding month of 1958 for the second month running.

BOAC and the New Bill

THE Government's new bill on the licensing of air services will certainly not appear within the next few days—it may not even get into this session of Parliament. The last Minister of Transport, Mr Watkinson, often said that new legislation was required to produce a workable system of competition between the nationalised corporations and the independent airlines. But the shape of this legislation goes far beyond the administrative question of licensing airlines to fly certain services on certain routes. The new Minister of Aviation, Mr Duncan Sandys, has to decide first what the government's policy is to be for the British Overseas Airways Corporation.

When BOAC's accounts for the year to March 31st were at length published last week they were, if anything, worse than had been expected. Using resources of nearly £160 million and getting a revenue not far short of £60 million, the corporation lost more than £5 million on the year's operations and had to write nearly £6½ million off the value of its assets. In the result its accumulated deficit has been increased by the staggering sum of £11,635,779. It is not easy to explain why this should have happened in a time of rising traffic and expanding fleets. BOAC's operating results were rather better than the year before, yet it has never lost more money since the black days of 1949.

The corporation lost £2½ million on the operation of its subsidiary companies and another £1¼ million during its engineers' strike. The clue to where the balance went may lie in these figures:

	1957–58	1958–59
Passengers	480,000	495,000
Revenue	£53·5 mn.	£58·4 mn.
Operating costs (per ton mile)	38·7d.	36·2d.
Output per head (ton miles per year)	17,088	19,583
Engineering costs (per ton mile)	10½d.	9d.
Capacity on sale (ton miles)	330 mn.	377 mn.
Proportion sold (per cent)	60½	57
Proportion needed to break even (per cent)	63	60

If this were the end of the story, the outlook would not be unpromising. The revolution in the Lebanon obliged BOAC to advance no less than £1.7 million (the lion's share of its foreign losses) to Middle East Airlines. Administration in other subsidiaries is being tightened up and BOAC is rightly reducing its shareholding in them wherever possible. Engineering costs are genuinely falling, although it now looks as if BOAC over-estimated the scope for staff cutting. Traffic is rising and with reasonable luck the corporation should just break even in this current year.

BUT the underlying weakness of BOAC, which Mr Sandys must take into account in his new bill, is that its traffic is too small for the route network it supports. Its overheads are too high. This is shown up sharply by drastic writings down, totalling more than £6 million, on a range of assets, and in particular on its fleets of Britannia and DC 7C aircraft. These cannot compete on trunk routes against jet aircraft, yet if BOAC sells them now it will incur still heavier losses. The commercial solution is to crowd them with seats and run them on cut-price services, holiday flights, charter flights, freight, trooping, or any job where BOAC can find a customer for them. But these operations have so far been reserved for independent airlines and BOAC has repeatedly been refused permission to compete for them, just as the independent airlines have been barred from BOAC's trunk routes.

The independent airlines cannot build up a solid business unless they are allowed room for expansion. If they get this under the new bill, what will happen to BOAC? It is very doubtful indeed whether the corporation has much chance of making regular money during the coming years unless it is allowed to get some of the bread-and-dripping traffic that now forms the staple diet of the independents. The idea of reserving certain types of traffic for certain operators has now been proved not to work No airline can get the optimum utilisation of its fleet unless it can cover the whole range of operations. Another course would be to reserve certain parts of the world for different operators just as BOAC is excluded now from the European market of BEA (though not quite vice versa). The third possibility, a free-for-all between BOAC and the independents, may appeal to sporting instincts and it would be good fun for the traveller while it lasted. When it finished no capital would be left in the business, independently or publicly owned.

WORLD TRADE

Discrimination Must End

ON the eve of this week's conference in Tokyo of the General Agreement on Tariffs and Trade, the International Monetary Fund announced the unanimous decision of its executive directors that trade discrimination should end. "There is no longer any balance of payments justification for discrimination by member countries whose current receipts are largely in convertible currencies." This formal ruling of the Fund is a logical consequence of Europe's move to external convertibility at the end of last year. Now the Fund urges that discrimination, except against Communist countries, should be abolished with all possible speed.

This declaration provides welcome support to similar calls being made in Tokyo for proper implementation of the Gatt agreement. Mr Dillon, of the US State Department, urged the ending of special restrictions not only against the United States but also against Japan. Fourteen countries, including Britain, still deny Japan full benefits under Gatt. The Japanese authorities are apparently arranging tours of factories for this week's delegates to bring them up to date on Japanese working conditions. The other main topics at the meeting have been renewed complaints by agricultural producers against restrictions on farm products maintained by countries such as Germany, and fears expressed by non-European countries about the harmful effects on them of the European common market, and to a smaller extent of the outer free trade area.

BALANCE OF PAYMENTS

Taking It Seriously

THE more regular flow of statistical information from the Treasury nowadays anticipates the main information in its yearly and six monthly white papers. This week's paper on the balance of payments fills in the details of the recent quarterly estimates, and it shows the importance of shipping in the drastic downward revisions of estimated surpluses in current payments in recent years. For 1958, the figure of the current surplus is down from £455 million to £349 million and the net credit from shipping from £167 million to £88 million.

The Treasury points out that the removal of exchange controls is increasing its difficulties in obtaining information. It will henceforth have to lean more heavily on direct inquiries from industry, and the Board of Trade has made a start with such inquiries for insurance, investment income and capital transactions, figures of which have been notoriously inadequate. The Treasury is also hoping to avoid repetition of the latest episode by an annual sample of what shipping is earning. All these steps are welcome. The Treasury was bound to be left with inadequate figures while it relied for their collection on a by-product of exchange control. It is now a little late to belittle the significance of concepts such as the current balance. It is important on many counts to know what one is earning abroad, what capital assets are being built up abroad and what liabilities being incurred at home.

The most striking feature of the detailed payments figures is the recent contrast between the sterling and the non-sterling sector. The first half of 1959 saw the extraordinary phenomenon of a deficit (instead of the usual big surplus) in Britain's visible trade with other sterling countries and a surplus (instead of the customary deficit) in trade with non-sterling countries. After allowing for invisibles (or should it be identified invisibles?) there was a sterling surplus of £92 million (compared with £242 million in the first half of 1958) and a non-sterling surplus of £50 million (compared with a deficit of £5 million). Much of the improvement was with North America. Exact regional comparisons with past periods are not possible, as the Treasury has recognised the logic of external convertibility and made its subdivisions geographical instead of by currency area. Thus the dollar countries of the Caribbean are now grouped under Latin America rather than the dollar area.

The bare figures of the net movement of private long-term capital show a slackening in the outflow to £70 million, compared with a recent half yearly average of near £100 million. A net outflow of £90 million to other sterling countries was offset by a net inflow of £20 million from non-sterling countries.

BANK OF ENGLAND

Central Banking Information

THE Bank of England announced on Thursday that a Central Banking Information Department is to be established, which will absorb the existing Overseas Department and Statistics Office. This move has been under consideration for some time; as it is plainly in line with the recommendations of the Radcliffe committee, the Bank has now gone ahead. The new department will bring under one wing the home and overseas sections. The Bank is anxious that its overseas intelligence will continue to be fed by direct personal contacts with overseas central banks and international institutions. For this reason it prefers to avoid the appellation "Economic Intelligence," which might carry overtones of ferreting or even espionage in the minds of some central banks. The head of the new department is Mr G. M. Watson, hitherto chief of the overseas department; Mr Maurice Allen continues in his capacity as an (economic) adviser to the Governors, with no formal relationship to the new department. The deputy chiefs in that department are Mr J. B. Selwyn (from the Statistics Office), Mr J. S. Fforde (assistant to Mr Allen), and Mr R. E. Heasman (from the overseas department).

Plainly the Bank has it in mind to expand as well as to reorganise its information department; it seems in sympathy with certain of the Radcliffe recommendations in this sphere, but wants more time to come to a firm decision. The Bank seems to be considering, for example, the desirability of recruiting trained economists for the information department; hitherto it has taken on specialist staff only in rare instances. On the other hand, the Bank does not seem to favour the Radcliffe suggestion for the appointment of a fifth executive director as head of the information department. The existing executive directors are not in fact departmental heads. The information department will continue to come under the general purview of Mr J. M. Stevens, one of the executive directors.

The other Radcliffe recommendations are still under consideration. The Bank has already promised more information in its annual report. Its evidence to the Radcliffe committee, due to be published soon, will provide a sample of what may be expected: the main question to be resolved is how soon after the event market information can properly be made public. The possibility of quarterly and occasional bulletins is being considered: the Bank does not seem to have set its face against either. Other Radcliffe issues—the question of ending the old distinction between "affairs of the Bank" and its agency functions on behalf of Treasury; the proposal for a new standing committee with representation from the Bank and Whitehall; and the suggestion that Bank rate should be announced by the Chancellor—all these are matters primarily for the Government. But the Bank, like outside observers, may remain sceptical of the last two suggestions which have already led to much unfortunate misinterpretation overseas.

CABLES

Rationalisation and Prospect

THE closing of the Liverpool Electric Cable Company by Associated Electrical Industries shows that AEI is continuing to rationalise in a branch of its business where efficiency is essential to

survival. Fierce price competition broke out as soon as the price-fixing agreements previously maintained by the Cable Makers' Association on mains and domestic cables were ended—at the wish of their members, who included AEI and British Insulated Callender's Cables—on May 1st. A cut of about 5 per cent in the prices charged by the members of the price-fixing agreements was then made, but competition in the discounts offered to contractors and wholesalers soon brought prices well below this level. On June 1st BICC issued a new price list showing average reductions of about 10 per cent; AEI matched this at the beginning of July. There have been no further broad cuts in list prices, though the prices of some types have been cut. Most of the smaller companies charge slightly less than BICC and AEI, though there is one exception. The cuts have varied a good deal between different types of cables; compared with the CMA's prices they range from over 20 per cent on mains cables to 10 per cent on domestic cables. The latter are most affected by surplus capacity; even the CMA prices left most makers little profit margin and prices now for these cables (and perhaps for others) must be near or below cost.

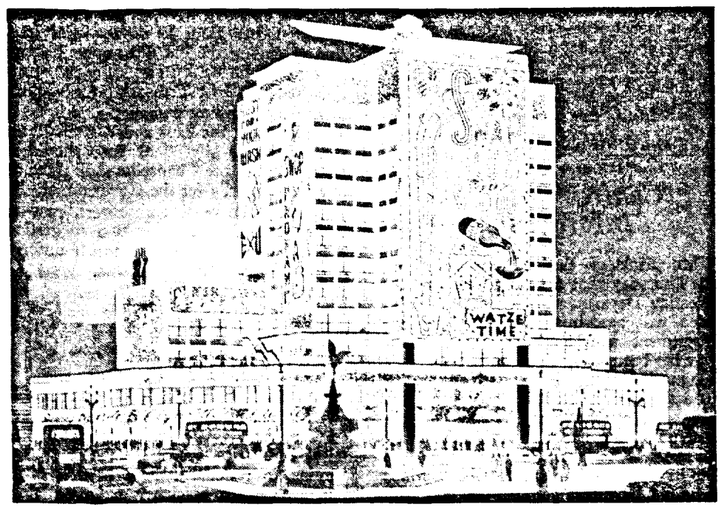
Demand for cables has improved a little in the last few months. Increased capital expenditure by the electricity boards and the high rate of house building are helping here. But many of the smaller companies in the industry must be selling with little profit and at worst at a loss. Even the larger firms cannot be happy about the present situation; they are believed to have raised their production to 85 per cent of capacity but cannot be making much profit. The future pattern for this industry seems to be further "rationalisation" by the absorption of the smaller companies into the larger. BICC already have perhaps 40 per cent of the market and AEI 25 per cent; the cable industry seems bound towards an even stronger oligopolistic structure—to be followed perhaps by higher prices?

PICCADILLY CIRCUS

Poor Eros

ANY hopes that the long-planned redevelopment of Piccadilly Circus would bring a signal improvement over its present collection of dismal architecture and garish neon seem to be out. The new building on the Monico site, on the north-east corner of the Circus, bounded by Shaftesbury Avenue and Denman, Sherwood and Glasshouse Streets, is to be of 13 storeys containing offices, shops and exhibition space, and a sizeable part of its wall space will be covered with electric advertising signs—20,000 square feet of them all told. The project is to cost £7 million, including the site; this is being put up by the Legal & General Assurance Society. The promoter of the scheme is Mr Jack Cotton, the head of City Centre Properties, who is also concerned in the Grand Central scheme in New York, discussed on page 423.

Work will begin on January 1st, and the building should be completed by the summer of 1962. It will be 172 feet high, and surmounted by a rotating crane on the roof, giving access to any external part of the building, which will be used for placing advertising signs. Of the 200,000 square feet of space in the new building, about a quarter will be available for offices. Advertising revenue—at roughly £2 a square foot—will be a big element in the economics of the new building; many owners on this site now find it more profitable to lease exterior walls for advertising than to lease the premises behind them.



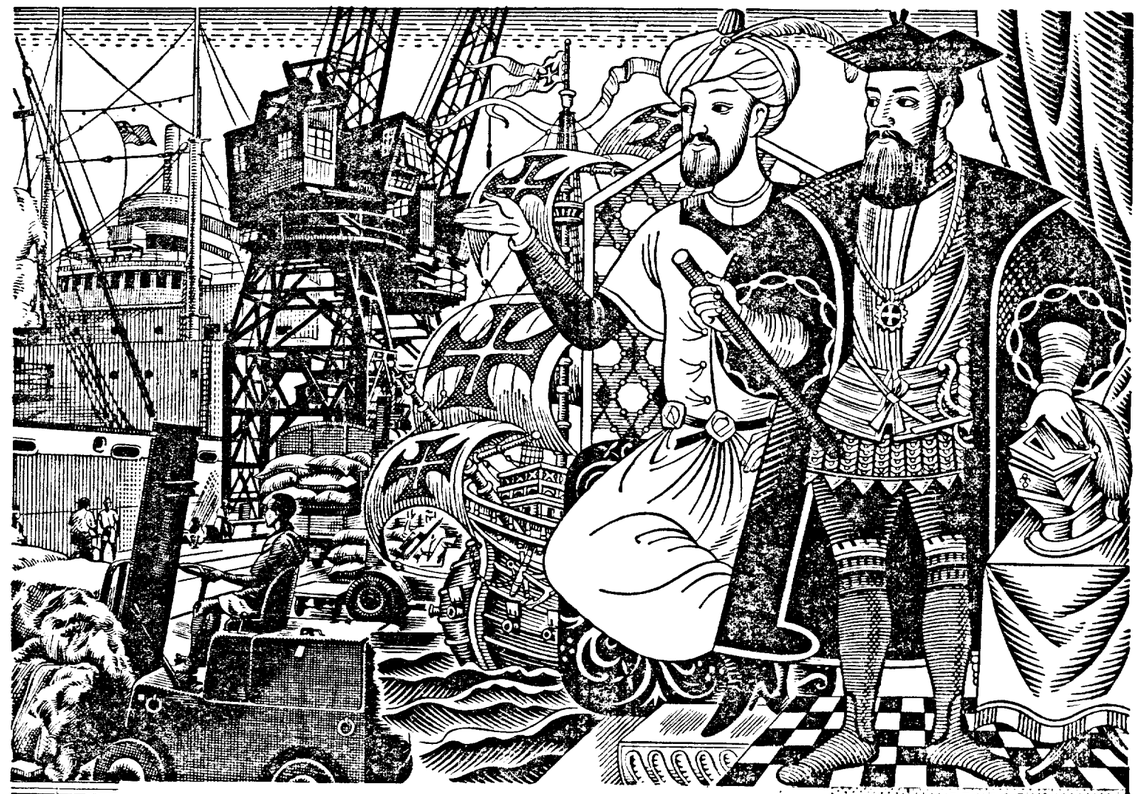
HOME APPLIANCES

Some Price Cuts

PRICES are rarely cut while sales are rising rapidly and household appliances have not hitherto been particularly exposed to competitive price cutting. So the reductions in the prices of five Hoover appliances do not appear to presage a heavy bout of pricing cutting in household durables. Of all of the goods sold to the private consumer in this past year of easier hire purchase and lower purchase tax, household durables have been enjoying the biggest boom in sales. Hoover has marked down by an average of £6 15s. the prices of four wringer-type washing machines (the £45 15s. model now sells at £38 10s.) and has cut by a third the price of its restyled Constellation cleaner. It explains that these cuts have been made possible by a combination of improved production methods and greatly increased volume of output. But the price cuts relate to the company's older models of washing machines; there is no change in the price of the Hoovermatic combined washing machine and dryer, which appears to have been selling extremely well. The new price of the Constellation cleaner (which in effect is being relaunched) has been set at £18 against £27 8s. 6d., and is more than £6 cheaper than the Morphy-Richards suction cleaner, its only direct competitor.

Since the sizeable purchase tax reductions last April there have been few changes of consequence in the prices of cookers, washers, refrigerators and similar household goods, though some new and better models have appeared at the same prices as the old. Nor is there any imminent end to the boom in sales, though manufacturers are perceptibly more cautious now in their forward guesses. Total hire purchase debt is no longer growing as fast, and imported appliances, at most competitive prices, are becoming more significant.

In the marketing of television sets, tubes and valves, things are rather different. Since the price ring was ended by the Restrictive Trade Practices Court in April (when purchase tax was also cut) there has been a succession of sizeable price reductions by one maker after another. Mullard has now announced a cut of £2 to £16 in the price of its 21 in. radiant screen tubes, after earlier reductions in the prices of its 17 in. and 14 in. tubes and radio valves. Television sets and tubes have been slowly coming down in price more or less ever since TV reopened after the war: this summer the pace has become somewhat faster.



MOMBASA: Legend records that when one Hassan-Bin-Ali set sail from Shiraz with six sons in seven ships in 975 A.D., he founded seven settlements, one of which was called Mombasa. Whatever the actual date of its foundation, by 1331, when visited by Ibn Batuta—greatest of Moslem adventurers—Mombasa was a thriving city, and Vasco da Gama, in 1498, wrote of it as being "the seat of considerable commerce". Though progress lapsed through almost four centuries of intermittent upheaval, Mombasa is now again a prosperous city, rapidly developing, with a cosmopolitan population of some 127,000. The chief port of Kenya, it has probably the finest harbour on Africa's east coast, with modern and extensive equipment. It is also the terminus of an important railway system that extends across Uganda towards the Congo border. The Bank has four branches in Mombasa and there are over fifty offices throughout Kenya.

Business men who require information on current commercial conditions in East Africa are invited to get into touch with our Intelligence Department, 54, Lombard Street, London, E.C.3. Up-to-date reports from our branches in Mombasa and elsewhere are readily obtainable on request.

"... it is always best and safest to take stupidity for granted ..."

Extracts from a 1907 *Motoring Guide Book*
"Through East Anglia in a Motor Car"
With acknowledgments to Methuen & Co.

To touch a human being, another vehicle, or even a dog, with a motor-car, even in circumstances involving no culpability or legal responsibility in the driver of the motor-car, is in the vast majority of cases still not to his credit. The best drivers know it to be their duty never to expect that any other user of the road except a motorist has himself or his vehicle under absolute control. The good driver looks out for the signs of alarm in horses, realizes that cyclists, especially those of the female sex, "wobble" in their course when they hear the horn, knows that dogs will try to commit hari-kari, is aware that some men are blind, some deaf, some obstinate, and some drunk, feels that it is always best and safest to take stupidity for granted, and to give as wide a berth as possible to every living object on the high road.

ENGINEERING SALARIES

What Signs of Shortage?

A SAMPLE survey of the earnings of professional engineers published recently by the Engineers' Guild shows that in 1956 the middle-range salary for all professional engineers in Britain amounted to only £1,181 a year. This, the Guild concludes, shows that engineers are underpaid as a profession. It represents less than twice their estimated average earnings in 1939.

Considering the length of their training and the importance of their work, the Guild argues that engineers should earn more. Though accurate comparisons between the salaries of engineers and other professional people must await the report of the Royal Commission on Doctors' and Dentists' Remuneration, for whose purposes this survey was made, generally available figures show that engineers were comparable in salary to Higher Executive Officers in the Civil Service and Assistant Medical Officers in the School Health Service—the former normally not university graduates, the latter young men. The Guild says that the engineers' salary position in terms of comparative salaries has not improved significantly since 1956. Administrative jobs would appear to have been paid more than engineering ones, in that the salaries were higher for engineers "in salaried employment but not as engineers."

These figures are certainly surprising in view of the firmly held belief that there is a "shortage" of engineers in Britain. If such a shortage existed, engineers would be expected to have salaries higher than those of other professional employees, not apparently lower than some considered by no means highly paid. Two possible deductions stand out. The first is that no overall shortage of engineers may have existed in this country before 1956, and if the Guild is right when it says that salaries have not increased since, none may exist now. An alternative is that if there has been any "shortage" it has been of specially qualified or able engineers, and that the generality of the professional engineers in this country have been unaffected by this because they are unable to meet the required standards. Aircraft engineers were not included in the Guild's sample; nor were chemical engineers, one of the most fashionable recent additions to the profession with one of the most highly publicised, but now largely forgotten, shortages.

MANAGEMENT

Surveying the Directors

THERE should be two golden rules in using the poll or questionnaire: do not ask questions on which people have no real opinion, and do not ask questions which for any reason they might not answer truthfully. The whole technique, obviously, is ill-adapted to many kinds of survey. How far does it serve the investigation by the Institute of Directors to determine the occupational hazards of executive life? This week the Institute has published preliminary results from questionnaires sent to a random sample of one-sixth of its 32,000 members. The picture that emerges is to say the least a generalised one. Some 64 per cent named business experience as their only professional qualification; 14 per cent admitted having a University degree. Three-fourths of them resolutely drive themselves to work, a fifth use public transport and six per cent have chauffeurs. Once in the office (two-thirds of them are there by 9.30 a.m.) most spend three-quarters of their time in executive work outside the board room. Only 16 per cent of those questioned were directors of more than four companies; more than half were concerned with one company and its main subsidiaries.

More than half the directors replying to these questions say that they regularly work late at the office, and 40 per cent customarily take work home, both during the week and at weekends. Nearly half work most Saturdays; last year, three-quarters took holidays lasting "three weeks or less." Only 10 per cent have never smoked, but 15 per cent have recently stopped smoking. About one-third lunch at work (how many in directors' dining rooms?); about 60 per cent have a business lunch twice a week or less. A full report will be published later in the year, and will provide the Institute's medical research unit with a basis for further study. The stresses and strains—both physical and psychological—under which directors may work are indeed an important subject, about which too little is known: but are surveys of this sort much help?

INTEREST RATES

A Notch Up in Germany

THE German monetary authorities, as has become their habit, have acted smartly to curb any excesses in economic expansion. They describe their increase in Bank rate from 3 to 4 per cent, accompanied by an increase of 10 per cent in minimum reserve ratios of the banks, as prompted by tensions in the labour market and elsewhere. It is designed to avoid the necessity for disruptive measures at a later stage. At the same time, the Bundesbank has shown some resistance to pressures from German bankers for a steep increase in long-term interest rates. The market expected that the forthcoming loan by the government, which itself is a notable event since the government has hitherto financed itself entirely from revenue and there has consequently been virtually no market in government paper, would be at 6 per cent. In fact the issue of DM 300 million is to have a coupon of 5½ per cent, but issued at a discount of 3½ points, giving a yield of 6.12 per cent to maturity after twelve years. The Bundesbank, which worked hard to reduce the rate from 8 per cent only two years ago to 5 per cent for a brief period this spring, now feels that it may be easier in future to pare discounts than it would have been to cut the coupon on new issues.

The rise in money rates in Frankfurt and the pressure on bank liquidity has induced some repatriation of short-term funds that had left Germany in large volume earlier this year; the market also expects some inflow of Swiss funds. These inflows are in marked contrast to the movements of funds in 1957, for exchange speculation. Significantly, while the mark has strengthened against all currencies including sterling, the forward premium on sterling has narrowed, to ⅛-⅝ pfennigs for three months' delivery.

EXPORT FINANCE

A Market Consortium?

IN a valuable and sober appraisal of facilities for finance of exports, the Credit Insurance Association is at pains to stress the great strides that have been made by the banks and the Export Credits Guarantee Department in the past few years; and it adds its own warning about vocal complaints from industry that their competitors are better served. It recommends no unnatural extension of export credit insurance. But it does recommend new facilities for medium term export finance.

It is estimated by the Association that at the end of 1958 the amount of British capital goods delivered and not yet paid for lay between £200 and £300 million. This figure was expected to rise sharply in 1959 and 1960 because of the substantial increase during the last two years in the amount of new, medium term export credit business insured by the ECGD, which will not be reflected in deliveries for some months to come. The special problem which British exporters have to face is the growing demand for credit in excess of the five years, which ECGD will not normally cover. The view put forward by the Credit Insurance Association is that if the proposal for re-discount facilities at the Bank of England is rejected, an adequate private market for the financing of exports should be created in the United Kingdom by the establishment of export finance companies. These would raise money by the issue of preference shares or notes to institutions such as insurance companies, and secure their capital from the banks, insurance companies and large exporting firms. The insurance companies could thereby be given investments of up to 15 years; hitherto they have been kept out of this field by the lack of investments of the necessary length.

If market institutions themselves decide there is scope for such collaboration, on a profit-making basis, that would be a different matter from a similar body using

Pay for the Parson

A good man was ther of religioun
And was a poure persoun of a toun.

FINANCIALLY, the parson seems to have improved his status little since Chaucer. A committee of the Church Assembly has lately reported that "the financial situation of many of the clergy verges on the desperate and they are subject to continual anxiety." It would have been worse still had not the Church Commissioners decided some years ago to switch out of gilt-edged stocks into equities; the policy has brought substantial increases in income and made possible higher stipends and pensions. The aim of the Church Commissioners is to raise current income and it is not concerned with capital appreciation. Recently much has been made of the paper profit on the Commission's holdings of steel shares; parsons' wives have even appealed for a "good Christmas box." The important thing for incumbents is not the capital profit (which is not being realised) but the handsome yield on the steel portfolio based on original buying prices.

Income of the Church Commissioners in the year to March 31st last rose by £843,052 to £13,217,000, bearing further witness to the effectiveness of their investment policy. Switching of investments was more active than in the previous year—some industrial holdings were increased and others reduced and most rights issues were taken up. Further bank shares were bought, but the Commissioners sold the remaining £700,000 of insurance ordinary stock that they held. This is not a decision that everyone would be inclined to follow; two years ago, ordinary investors may note, the Commissioners' holdings of insurance shares were £2¼ million by book value. Monies awaiting property purchases were put temporarily in treasury bills and short term government bonds, and income from this source rose substantially. At March 31st the market value of all investments was £15.7 million greater than their book value and the boom since then will have given the portfolio another big boost in value. In the property field, the Church Commissioners continued to sell long leases of commercial properties—the bulk of it in London, both in the City and the West End. Sales of residential property amounted to almost £4,500,000, and the Commissioners intend to consolidate their five residential London estates.

Following the further rise in investment income, an extra £250,000 is to be allocated annually from next April to step up stipends and a further £50,000 per annum is to be given to the clergy to help them to repay capital instalments and interest due on mortgages secured to the Commissioners. From the general reserve £1 million is to be spent in building new vicarages and making radical alterations to old ones; the report claims that this is "the greatest need at the moment."

At present the minimum stipend of a vicar is £600 a year (plus the taxable Easter offerings of up to £50); in no diocese is the stipend above £700, unless more than one living is held. But the Church Commissioners argue that all official stipend figures are without much meaning, for most clergymen have to pay substantial expenses out of them and the balance is subject to tax. Targets for future stipends have been set in the last week by the Archbishop of Canterbury, who being a former schoolmaster himself compared them with the salaries of school teachers, and by the outspoken Bishop of Southwark, who has put the figure at least at £1,000 a year.

Further improvements in stipends and in Church finances generally cannot be brought about solely by the efforts of the Church Commissioners and the laity must play their part. Last April the Central Board of Finance published "The Christian Stewardship of Money" as part of a campaign to encourage congregations in the habit of regular giving and in setting aside part of their income specifically for church purposes both at home and overseas. In this way churches are hoping to raise their regular income and at the same time to obviate the need for so many special efforts.

official funds, or official insurance of credits up to ten or fifteen years, as recently suggested by the Federation of British Industries. A private venture might work best if it were limited to a particular industry—on the lines, for example, of Air Finance.

For special cases there will always be an export financing gap. In Britain it can be met by what are virtually government loans given by the ECGD under section 3 of the Export Guarantees Act. Undoubtedly more development loans will be needed; and the British Government might unfortunately follow others and tie such loans to its own exports. The main need is to keep this finance in the form of the development loan, extended selectively to the borrower. In that way the Government retains some influence in its overseas investment. A lost contract in a Latin American country is better than a bad debt.

EXHIBITION FACILITIES

An Exceptional Project

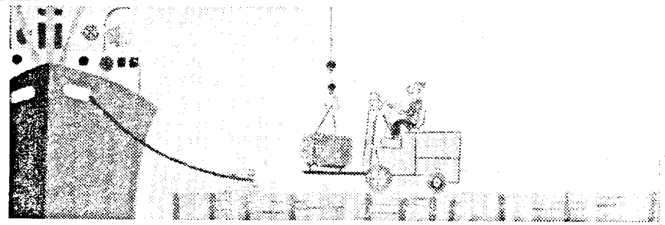
IN 1957 the Federation of British Industries was asked by the President of the Board of Trade to advise him on the view held by British industry about future policy on industrial and trade exhibitions in Britain. At that time several trade associations indicated dissatisfaction with facilities for exhibitions in Britain, which prompted the FBI to set up a committee of inquiry to consider these facilities and, if necessary, to recommend plans for extending them: and this committee has now published its report to the President of the Board of Trade.

Briefly, the committee concludes that there is an urgent need for a new exhibition building in central London, having at least 500,000 square feet of floor space and extensive modern amenities; it has estimated that the cost of such a building, including acquisition of the site, would not be less than £10 million, and that the revenue that one could count upon from lettings, in the first few years at least, would be insufficient to cover costs. It would clearly not be a commercial proposition; and the committee found itself forced to the conclusion that the capital cost and anticipated deficits in the early years should be met from public funds. The report adds:

> As you well know, the policy of the FBI is against recommending projects involving assistance from public funds. Indeed, we believe that we have an enviable record in this respect. This project is, however, exceptional.

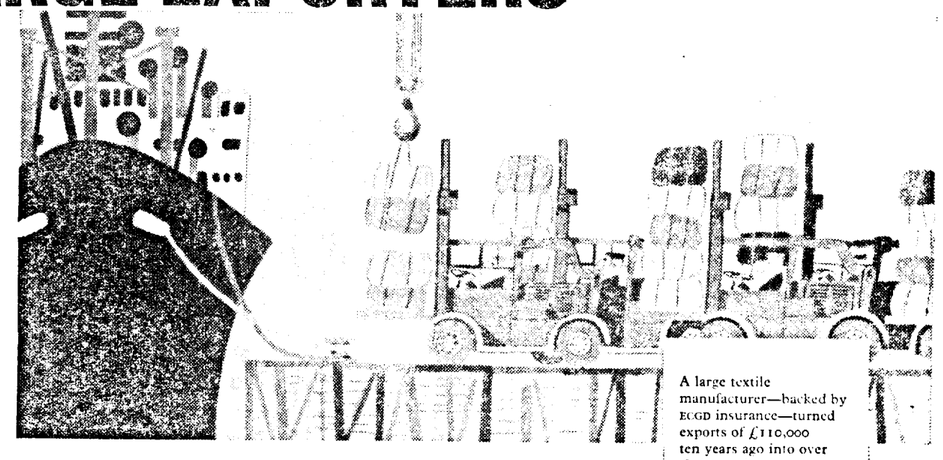
The principal complaints were that there was not now enough space available for certain exhibitions, that it was difficult if not impossible to book a hall at the desired time, and that the character and amenities of existing halls were out of date. Olympia has a total of 445,000 square feet of floor space, of which 203,750 is solid floor, and Earls Court has 450,000 square feet—but the heavy engineering industries

SMALL EXPORTERS



In their first year of ECGD insurance, a firm making sealing compounds did £1,500 worth of business with France.
Five years later they had 33 markets and a turnover approaching £125,000.

LARGE EXPORTERS



A large textile manufacturer—backed by ECGD insurance—turned exports of £110,000 ten years ago into over £460,000 last year.

There's money—big money—to be made in the export markets. But a few bad debts could bring serious financial loss. With ECGD insurance you can develop and expand overseas free from financial worries. If you're big already, there's still room for expansion. Last year fifteen companies with export turnovers of a *million pounds and more* took out ECGD insurance for the first time. Have a talk with *your* ECGD man.

EXPORT AND EXPAND THROUGH E·C·G·D

Think of a Conference...

...add one of the world's most luxurious hotels... multiply by all the magnificent facilities available... add a chef of international repute... take away anything less than the best... and

... the answer is the May Fair

HOTEL

Facilities Include:-

The Empire Suite Accommodating from 50 to 550 guests—which now has a unique display turn-table for the presentation of products of all shapes and sizes.

The Crystal Suite up to 300 guests.

The Lansdowne Suite up to 60 guests.

The Devon Suite up to 30 guests

The Cinema and Oak Room Suite a fully-equipped, modern cinema including closed circuit television with sound, and a complete bar and restaurant service on the spot.

Ballroom for full-scale receptions and dances.

Smaller Suites for more intimate functions.

Public Relations and Photographic Services.

THE GROSVENOR HOTEL, LONDON, S.W.1 *Tel: VIC 9494*
Ideally located—adjacent to main Air, Rail and Road Services. Full conference facilities.

HOTEL METROPOLE BRIGHTON, *Tel: Brighton 24041*
The South Coast's finest hotel. Ideal for functions of every kind. Excellent sea front position.

For further information consult our Sales Director, Mr. Churchill at VICtoria 7511 or the Resident Manager at each hotel.

consider Earls Court unsuitable, since the suspended floor cannot take heavy loads, such as giant machinery (though not all the heavy engineering associations were dissatisfied with facilities in London, and some of them have exhibitions only once in eight years). Most consumer goods industries, on the other hand, are satisfied with Olympia and Earls Court. These two exhibition buildings, being privately owned, would continue to compete with any new hall built: the public, if not the FBI, may well object to paying for the building of large, prestigious, uneconomic structures that industry is not prepared to finance itself.

SUGAR

Too, too Sweet

SUGAR on the world market has recovered slightly in recent months, but its almost continual decline since the beginning of 1957 meant a loss to the Sugar Board of £22.9 million in the year to June 30, 1959. In all the board purchased at a fixed price 1,600,000 tons of Commonwealth sugar for £70½ million, and resold the sugar in this country at lower prices. Another £10,100,000 was paid to the British Sugar Corporation, of which £8,200,000 was used to cover the corporation's deficit on home-grown beet sugar (of which a record 722,538 tons were produced) and the remainder to encourage farmers to grow still more. The surcharge on all sugar was raised in January by ½d. to 1½d. per lb, and this realised £34,200,000 over the year, to give the board a net surplus, after administration costs and interest, of £717,000. This was deducted from what the board calls its "accumulated under-recovery" of £7,600,000, leaving the net deficit at £6,900,000.

The Sugar Act requires the board to balance its books "taking one year with another," which means that in effect the "under-recovery" represents a loan to the board by the Treasury to tide it over until future "over-recoveries" enable it to repay the loan. The board in the meantime keeps Commonwealth and home sugar producers happy by buying their sugar at more than the world market prices. The current improvement in the world price of sugar, with the New York price rising from 2.55c a lb in late July to 3.11c last week, should go some way towards reducing the board's deficit.

CREDIT FOR FARMERS

Guarantees for Banks

IN its evidence to the Radcliffe Committee, the National Farmers Union proposed the setting up of an institution to give guarantees on bank loans to farmers, which it hoped would encourage the banks to charge a lower rate of interest. The Radcliffe committee did not warm to the idea. It found that the main obstacle to increased use of the banks by farmers was their own distrust of formal inquiries into creditworthiness and formal commitments to repay on demand. Soon after publication of the report the Midland Bank announced a new facility for lending to farmers for up to twenty years. The NFU, however, has gone ahead and has set up its own Agricultural Credit Corporation. This will provide guarantees for bank advances to farmers who can show that they are competently following an acceptable farm programme. There will be a charge of a minimum of ½ per cent per year on the whole of the farmer's bank borrowing.

There is no sign that the banks will give special advances rates to the many farmers who already get a good rate—1 per cent over Bank rate. For these farmers therefore the guarantee would increase borrowing costs. On the other hand, less creditworthy farmers now paying over the odds may find the guarantee worth while. There is an obvious danger that the scheme will attract the more doubtful risks; but the farmers' union will presumably have this in mind in vetting applications. It has re-insured itself in the market up to a maximum loss of £500,000 a year—a rate of loss it would never expect to approach. The scheme is an interesting one, and no public money is involved.

SHORTER NOTES

Sir James Bowman, the chairman of the National Coal Board, this week disclosed to the Executive of the National Union of Mineworkers the cuts in coal production to be made beginning next January 1st: in all 46 pits are to close, of which six are uneconomic; production will be cut by eleven million tons, of which four million tons will be opencast. A total of 17,660 miners will be affected; miners aged 65 and over who are compulsorily retired will receive as compensation, in addition to their normal pensions, lump sums of £203 for underground workers and £197 for surface workers.

★

The directors of the Automatic Telephone and Electric Company propose to simplify the existing capital structure by abolishing the special voting rights enjoyed by the holders of the £100,000 of "A" deferred stock and by conferring equal voting rights on the holders of the £260,000 of "B" deferred stock. Both classes of deferred stock will thus be coverted into ordinary stock, of which £3,440,000 is now in issue. Hitherto, holders of the £100,000 "A" stock (all of which is owned by British Insulated Callender's Cables) enjoyed the right to 50 per cent of the total votes irrespective of the nominal amount of ordinary stock issued. To compensate BICC for the loss of this "valuable right" the directors propose to capitalise £190,000 from reserves, of which £100,000 nominal of ordinary shares will go to BICC and the remaining £90,000 will go to ordinary stockholders. No scrip will be issued to holders of the "B" stock.

★

An advanced school of automobile engineering is to be established at Cranfield, Beds, by the Society of Motor Manufacturers and Traders, the Automotive Division of the Institute of Mechanical Engineers and the Ministry of Education, to give postgraduate training in engineering in relation to the needs of the motor industry.

The Standard Ensign saloon is now available with a 1.6 litre diesel engine, made by F. Perkins of Peterborough. The engine is claimed to give about 50 miles per gallon, and develops 43 bhp at 4,000 rpm, compared with 60 bhp for the petrol engine normally available.

★

Work is now more than half completed on the two tanker landing stages being built by the Mersey Docks and Harbour Board and Shell Refining Company at Tranmere, on the Cheshire side of the Mersey, nine miles northwest of Shell's refinery at Stanlow. When completed next spring these stages will be capable of accommodating a fully loaded tanker of up to 65,000 tons deadweight.

★

Harrisons & Crosfield is to pay a final dividend of 10 per cent together with a bonus of 5 per cent to make a total for the year of 20 per cent, compared with 17½ per cent. The group's net profit has risen from £539,912 to £624,248. A two for three scrip issue is to be made, involving the capitalisation of £1 million from capital reserves. On this announcement the price of the £1 deferred ordinary shares rose by 9s. 4½d. to 82s. 6d.

COMPANY MEETINGS

CITY CENTRE PROPERTIES LIMITED

GROUP'S CONTINUING PROGRESS

The Seventy-seventh Annual General Meeting of City Centre Properties Limited was held on October 26th in London, Mr Jack Cotton, the Chairman, presided.

The following is an extract from his statement which has been circulated with the report and accounts for the year ended March 25, 1959:

I have pleasure in presenting the Accounts for the year ended March 25, 1959, which show the continuing progress of the Group and fulfil the expectations indicated by your Chairman in his statement last year.

BOARD CHANGES

I was appointed Chairman of your Company at last year's Annual General Meeting, and my predecessor in that office, Mr F. W. Lindgren, was appointed Deputy Chairman.

Since the end of the year under review, Mr G. W. Bridge, Executive Vice-Chairman of the Legal and General Assurance Society Limited, has accepted the invitation, gladly extended to him, to join the Board of your Company.

Mr R. D. Smith, who was General Manager of Barclays Bank, DCO, until his retirement in January, 1959, has joined the Board of City Centre Properties (Overseas) Limited.

CAPITAL AND DIVIDENDS

In May, 1959, the nominal share capital of the Company was increased by £1,200,000 to £3 million. At the same time £673,084 was transferred to capital from the Share Premium Account and applied for the payment in full of a bonus issue in the proportion of one new Ordinary Share for every two Ordinary Stock units held.

The Gross Income of the Group has increased by £209,305 to £1,174,989 while the Net Revenue for the year, after Taxation, has increased by £57,647 to £185,382.

On the total issued capital, as now increased to £2,143,507 10s., your Directors propose a final dividend of 8 per cent, thus making a total equivalent of 20 per cent (as against the forecast of 16⅔ per cent) on the capital as at March 25, 1958.

DEVELOPMENTS IN PROGRESS

LONDON. Piccadilly Circus, Monico Site. The development of this site has been undertaken by this Company in association with the Legal and General Assurance Society Limited who are providing the whole of the necessary finance; and the new building, rising some 172 feet above the ground level, will comprise about 200,000 sq. ft. of floor space, which will be available for shops, showrooms, exhibition halls and offices.

Bow Bells House, Cheapside. This new building standing adjacent to the famous St. Mary le Bow Church is nearing completion.

Notting Hill Gate: Raventop (London) Limited. This development has been undertaken by the Group in conjunction with Ravenscft Properties Limited, a subsidiary of Land Securities Investment Trust Limited. Three major sites in the immediate vicinity of Notting Hill Gate are involved.

BIRMINGHAM. Big Top Site. This development, which is also being carried out by a Company owned jointly by ourselves and Land Securities Investment Trust Limited, has now reached the stage where the main building has been completed and the bulk of the available space occupied. The development will be completed during the current year.

City of Birmingham Real Property Company Limited. T. I. House, Birmingham, is nearing completion and will be occupied shortly by T. I. (Group Services) Limited, a wholly owned subsidiary of Tube Investments Limited.

SOUTH WALES. The completion of the purchase of the Tredegar Town Estate in Newport, Monmouthshire, is proceeding along the lines envisaged and the position shows promise, in the final result, of greater benefit to the Group than was originally considered.

CENTRAL COMMERCIAL PROPERTIES LIMITED. This Company owns approximately 450 carefully selected shop properties throughout the country. In the last four years, over £80,000 per annum has been added to this subsidiary's rent roll.

OVERSEAS. The Group's main interests overseas are represented by their Company, City Centre Properties (Overseas) Limited. Development projects are proceeding in Durban, Natal, and Cape Town, Cape Province, South Africa; Port of Spain, Trinidad; Bridgetown, Barbados; Kingston and Montego Bay, Jamaica; Georgetown, British Guiana; Freeport, Grand Bahama, and Charlestown, Nevis in the Leeward Islands. A number of further propositions are under consideration.

Barclays Bank, DCO, are the principal tenants in the above developments and have acquired a substantial interest in the equity of this Company, and we are happy to express our pleasure at the association which has thus been established.

GROUP ACQUISITIONS DURING THE YEAR

WHITE HOUSE (REGENT'S PARK) LIMITED (name now changed to C.C.P. (White House) Ltd.). This Company, controlling "White House," a residential block near Regent's Park, comprises some 750 flats. The property was subsequently leased.

BARRANQUILLA INVESTMENTS LIMITED. Your Group acquired, in conjunction with Pearl Assurance Company Limited, a controlling interest in this Company, which includes among its principal assets the new BP House, in Ropemaker Street, E.C.2, and other important developments in the City.

L. & P. ESTATES LIMITED. This Company owns well-known properties in London, including Piccadilly House (at the corner of Piccadilly and Lower Regent Street); Golden Cross House, Strand; Maddox House, Regent Street, and other important properties in the provinces.

NEW LONDON PROPERTIES LIMITED. This Company, in which your company

acquired 75 per cent of the ordinary shares, owns various freehold and long leasehold, residential and shop properties, mainly situated in the West End of London.

The foregoing review of our activities extends to the period ending March 25, 1959. Since that date important acquisitions have been made which should prove of substantial benefit to your Company, property and developments to the value of approximately £10 million being involved.

THE FUTURE

The various Companies mentioned under the heading "Group Acquisitions" should provide a considerable addition to your Group's revenue.

Your Board have before them opportunities for important acquisitions and developments both in the USA and Canada. Active consideration is being given to these proposals which, if undertaken, will hold considerable promise for the future.

A joint Company has been formed with the Friends' Provident and Century Life Office. We look forward to furthering an active association with this Group. The first development we are undertaking is in Bulawayo, Rhodesia.

Your Board continues to work happily with Pearl Assurance Company Limited, which owns a considerable holding of your Company's Ordinary Stock.

Our satisfactory relationship continues with the Legal and General Assurance Society Limited.

The report and accounts were adopted.

KEPONG (MALAY) RUBBER ESTATES

LARGER CROP

The Fifty-fourth Annual General Meeting of Kepong (Malay) Rubber Estates Limited, was held on October 22nd in London, Mr L. I. Simpson, ACA, Chairman, presiding.

The following is an extract from his circulated statement for 1958:

During the year under review the price of rubber was lower than in the previous one. The group profit amounted to £212,384. We are recommending a final dividend of 15 per cent, making 20 per cent for the year. This dividend is the same as that for the previous two years, but on the increased Capital.

Our crop was 10,143,500 lb, an increase on the previous year. Our earlier replantings are now beginning to come into bearing and all being well our crops should continue to increase year by year as the new areas mature.

It has been our policy in recent years to diversify our interests into other countries and other investments, and we now have considerable interests outside our estates in Malaya. Having in mind that this Company no longer owns any rubber estates except through its wholly owned subsidiaries and other investments, and also has substantial interests in Companies other than plantation Companies, it has been decided to recommend stockholders to change the name.

At the meeting it was stated that it was now proposed to change the name of the Company to Kepong Investments Limited and in order to adopt this name an Extraordinary General Meeting would be convened.

The report and accounts were adopted.

THE GREAT UNIVERSAL STORES LIMITED

A YEAR OF CONSOLIDATION AND ADVANCE

MR ISAAC WOLFSON'S STATEMENT

The Forty-first Ordinary General Meeting of The Great Universal Stores Limited was held on October 27th in London, Mr Isaac Wolfson, chairman and managing director, presiding. The following is an extract from his statement which had been circulated with the report and accounts for the year ended March 31, 1959:

RECORD SALES

For the year under review, record sales were again achieved. They were 11 per cent up on the previous year. This included a good rise in hire purchase sales in the second half of the year. There was an increase in trading profit for the year of £1,375,438 to give a record figure of £24,569,202. Before arriving at this profit, £3,379,253 has been set aside for increased provision required for unrealised profit on hire purchase debtors due to larger sales during the year. This compares with an increased provision of £326,366 in the previous year.

The year has been one of consolidation and development of existing interests at home and overseas. This is reflected by the fact that only some £200,000 in respect of new subsidiaries has been brought into profit and loss account for the first time as against some £2,100,000 in the previous year.

DIVIDENDS AND APPROPRIATION OF PROFITS

The net distributable revenue is £9,713,549 as compared with £8,786,847 for the previous year. The total dividend paid and recommended on the Ordinary and "A" Ordinary stock of the parent company is 35 per cent, less tax, amounting to £4,441,339. This is an effective increase of 2½ per cent on the previous year. The profit retained in the business amounts to £5,206,614 so that the above dividend is covered 2.2 times by net earnings.

It is proposed that a scrip issue be made to Ordinary and "A" Ordinary stockholders of one new "A" Ordinary stock unit of 5s. credited as fully paid for every ten Ordinary or "A" Ordinary stock units of 5s. held. This will involve the transfer of £2,099,304 from share premium account.

CONSOLIDATED BALANCE SHEET

Current assets amount to £112,474,278 as against current liabilities of £53,749,552 so that the net liquid position of the Group has been well maintained.

The Issued "A" Ordinary stock of the Company has been increased during the year to £19,632,524, the result of a scrip issue made on June 9, 1958, of one for one and the issue of £56,340 stock in part purchase consideration of two small acquisitions.

Retained profits and net capital reserves, etc., arising during the year amount to £6,061,985 which increases the capital and revenue reserves and amount set aside for future income tax to £58,407,055. Out of this a sum of £2,099,304 will have to be subsequently deducted to cover the scrip issue it is proposed to make.

Under the heading of minority shareholders of subsidiaries there is an amount of £11,071,942 for Preference shares held by shareholders of subsidiary companies. It is proposed to create two new issues of Preference shares of the parent company, namely 4½ per cent shares and 7 per cent shares of £1 each. These shares will then be offered to minority Preference shareholders of subsidiaries in exchange for their present holdings. Holders of the existing 5 and 7 per cent Preference stock of the parent company will also be invited to exchange into the two new classes of stock. This will enable various subsidiary companies to be merged with others conducting similar classes of trade and generally to streamline the working of various units of the organisation.

TRADING DIVISIONS

Mail Order Division.—Sales and profits have again shown a satisfactory increase despite ever growing competition in this method of retailing.

Plans have been made for a further large new warehouse building to be erected.

Multiple Stores and Shops Division.—Considerable improvements are continually being made to all of our shops which must bring increased success in the future. On the whole this division had a successful year and profits earned are considered as very encouraging.

Salesman Collector Division.—This division again achieved an increase in sales. I am pleased to state that profits were again very good.

Household Stores Division.—The sales of this important division have benefited as the result of the cancellation of restrictions upon hire purchase trading in the second half of the financial year and as a result its turnover materially increased in relation to the previous year. The outlook continues to be bright. The profits earned were substantially the same as for the previous year but this was after providing a large sum in respect of unrealised profit on hire purchase sales.

Overseas Division.—Trading in Canada during the year was difficult and sales and profits declined somewhat. It now seems that conditions are beginning to improve and that results will resume their upward trend. The long-term outlook is as bright as ever.

Sales in South Africa showed a further increase, and aggregate profits were maintained

TRADING PROFITS, 1950-1959	
1950	£5,896,913
1951	£8,161,150
1952	£10,007,555
1953	£11,443,390
1954	£15,541,292
1955	£18,923,479
1956	£20,273,185
1957	£21,630,137
1958	£23,193,764
1959	£24,569,202

which I consider to be highly satisfactory under prevailing conditions.

Wholesale Division.—This division which is one of the smaller ones has achieved satisfactory results. Last year I mentioned that we had completed a reorganisation of our then newly-acquired subsidiary The Houndsditch Warehouse Company Limited. I am pleased to state that our hopes have been realised and the company has had record sales and profits.

Manufacturing and Service Division.—We have curtailed some of our smaller manufacturing activities during the year. Other undertakings were merged with a view to increasing efficiency. This division provides a small but most useful service to our retail divisions.

CONCLUSION

The Group has again been successful and a new record has been established both for sales and trading profit.

With the expert management which we have I see no reason why the progress of the Group should not continue and I personally look to the future with confidence. As to the current year sales to date are in excess of the same period last year. I am of the opinion that, subject to unforeseen circumstances, results will be no less satisfactory than those now placed before you.

The report and accounts were adopted and the payment of dividends, as recommended, was approved. Resolutions were passed approving the Scrip issue to Ordinary and "A" Ordinary stockholders.

GROUP PROFIT, APPROPRIATIONS AND CAPITAL FOR THE YEAR ENDED 31st MARCH, 1959

	£
Group Trading Profit ... ...

THE SUNDERLAND SHIPBUILDING DRY DOCKS AND ENGINEERING COMPANY

PROGRESS OF CAPITAL DEVELOPMENT SCHEMES

IMPACT OF SHIPPING CONDITIONS ON FORWARD OUTLOOK

The fifth annual general meeting of The Sunderland Shipbuilding Dry Docks and Engineering Company Limited was held on October 27th at Sunderland, Sir Henry Wilson Smith, KCB, KBE (the chairman), presiding.

The following is his circulated statement:

In 1958-59 the Group's Trading Surplus fell by approximately £210,000—from £890,000 to £680,000. On the other hand, investment income increased by some £20,000 and, helped by the lower rates of tax, the reduction in the final net profit was limited to £70,000.

The general position in the shipping and shipbuilding industries is too well known to need much elaboration. It is all the more satisfactory to be able to report that our shipyards were fully occupied throughout the year and were able to show an improvement in their results. The fall in trading profit was indeed entirely due to the less favourable results from ship-repairing and engineering. The large tonnage of idle or underemployed shipping obviously has an immediate effect on the amount of repair work on offer which then becomes much more competitive in character. Equally, our engineering Companies, with their preponderance of marine work, suffered both from a reduced flow of continuing business and from lower profit margins.

During the year we have pressed ahead with our major schemes of capital development, as represented by the new berth and related facilities at Thompson's North Sands shipyard and by the North Dock scheme for Greenwell's, our ship-repairing company. Helped by the weather, good progress has been made with both schemes, and they should be in operation well before the end of the current financial year. Whether in good or bad times, the result should be a significant improvement in the Group's efficiency and competitive strength.

THE FUTURE

As regards the future, it is impossible to speak with any degree of certainty. The shipyards' order books still represent a satisfactory forward volume of work, but in recent times no new orders have been received, and unless that flow is resumed we, like other Shipbuilding Groups, will inevitably face a serious situation. One can only hope that the upturn in business will not be too long delayed. The same comments apply, with even greater short-term significance, to our ship-repairing and engineering Companies which are so very much affected by the day-to-day impact of shipping conditions.

In spite of the uncertainty of the forward outlook, it is essential to continue our policy of carefully planned capital expenditure. While the total of such commitments is noticeably lower than it was twelve months ago, that is essentially due to the progress made on the two major schemes to which I have referred. In a Group such as ours this must be a continuing process, in order to maintain and indeed improve our competitive efficiency.

The report and accounts were adopted.

COWBURNS & SCOTTS (BEVERAGES), LIMITED

A SCRIP ISSUE

The twenty-third annual general meeting of this company was held on October 27th at Stratford-on-Avon, Mr W. H. Whitaker, FID, Chairman, presiding.

The following is an extract from his circulated statement for the year to March 31, 1959:

Trading profit of the Group before taxation is £21,569 as compared with £27,056 last year. Notwithstanding this fall, after allowing for the proposed increased dividend, the final total profits of the Group to be carried forward to next year at £75,654 show an increase of £2,605.

In my report last year I mentioned the awful weather we had experienced in 1956 and 1957, but in 1958 it was astoundingly worse—probably one of the worst summers I can recall. With that in mind your Directors are pleased to be able to present to you the above accounts and are very thankful that all your interests are not vulnerable to weather conditions. Nevertheless, it has some bearing, as for instance our Mineral Water trade, which is always better in good weather. During the present summer the weather as a whole has been beyond complaint.

Your Directors have always thought that when the time was propitious they would distribute part of the reserves by means of a free issue of shares. It is now proposed to issue one free fully paid share for every three held, and to do this the nominal capital of your Company will have to be increased by £20,000.

The report was adopted and the scrip issue approved.

ARMSTRONG SHOCK ABSORBERS

The twenty-fourth annual general meeting of Armstrong Shock Absorbers Limited was held on October 26th in London, Mr William Armstrong, BSc, AMIMechE (Chairman and Managing Director), presiding. The following is an extract from his circulated statement:

It is a great pleasure to put before you Accounts showing yet another record both as regards profit and volume of business. We are obtaining considerable benefit from the Overseas Companies which we formed some years ago and also from the new products which we have introduced into the Organisation.

The production factories at Beverley and York are working at record output and in view of the general optimism in the Motor Industry we can reasonably expect a continuation of the high level of activity. Our projects at the Fulford Development Establishment continue to progress and we believe that we are keeping well in step with general developments.

The Consolidated Accounts for the year ended June 30, 1959, show a Group Profit before Taxation of £560,000 compared with £470,000 for the previous year. After Taxation of £282,000 there is a Group Profit of £278,000, which is an increase of £45,000 on the figure for last year. Your Directors recommend a Dividend of 35 per cent and in addition are proposing the capitalisation of £300,000 of the General Reserve by means of a one-for-one Ordinary Share Bonus.

The report was adopted, and at the subsequent extraordinary general meeting the capitalisation and scrip issue proposals were approved.

ALEX: LAWRIE & COMPANY

GROUP RESULTS SUBSTANTIALLY IMPROVED

The thirty-fifth annual general meeting of Alex: Lawrie and Company, Limited was held on October 28th in London, Mr G. W. Gemmell (the chairman) presiding.

The following is an extract from his circulated statement:

The year under review has shown a slightly better result for the Parent Company compared with 1958, the profit earned being £100,568, after Tax, as against £94,542 for the previous year.

Your Board has therefore put to reserve the sum of £40,000, as against £35,000 last year and again recommend a final dividend of 7½ per cent on the Ordinary Capital of the Company, making a total of 12½ per cent for the year. This leaves £55,814 to be carried forward, as against £53,894 brought in.

The Consolidated Accounts reveal a substantial improvement. This is largely due to the fact that Kettles-Roy & Tysons Ltd's earnings in East Africa almost reached the expense level. The final Group result, therefore, is considerably higher at £96,968 compared with £53,920 for the previous year.

THE YEAR'S ACTIVITIES

I am also glad to report that the steps taken to arrest the losses incurred in East Africa by Kettles-Roy & Tysons Ltd. are proving effective and the net comparative loss has been reduced by over £53,000 to £5,660. Trading conditions in East Africa, however, continue to be difficult and the year started off somewhat discouragingly, but during the past few months there have been welcome signs of slow improvement.

Our associates in India, Balmer Lawrie & Co. Ltd., had a very satisfactory year and were able to increase their dividend by an additional 5 per cent to 20 per cent, at the same time putting substantial amounts to reserve.

Horace Hickling & Co. Ltd. continues to expand and as a result are able to double their issued capital, at the same time maintaining the rate of dividend.

In Nyasaland considerable progress is being made in developing the Tea Estates and after the disastrous drought in 1957-58 conditions have greatly improved, the crop manufactured now showing a record total. General trading in this part of the Federation, however, passed through a lean time due to a number of causes, including the credit squeeze and the political disturbances, but conditions, we believe, are now improving.

Stewart, Holl & Co. Ltd. continues to progress satisfactorily.

Stone Valley Tea Estate Ltd. in Tanganyika and Kumadzi Tea Estate in Nyasaland are being developed as planned, but as yet, they are not in a position to make profits. During the year Alex: Lawrie & Co. Ltd. purchased the balance interest in Stone Valley Tea Estate Ltd. which, therefore, now becomes a wholly-owned subsidiary.

In conclusion I would like again to express the Board's sincere recognition of all the work put in by our Staff in London and in our Associated and Subsidiary Companies abroad.

The report was adopted.

FAIRBAIRN LAWSON COMBE BARBOUR LIMITED

CONCENTRATION SCHEME COMPLETED

The Sixtieth Annual General Meeting was held in Leeds on October 22, 1959.

The following are extracts from the Directors' Report and the Statement circulated by the Chairman, Mr W. Walker:

The Reports deal shortly but effectively with the results of the concentration scheme described in considerable detail in two reports issued last year. The special nature of the transactions in last year, complete closing of the Dundee Works, transfer of plant, stock, etc., to Leeds, plant and machinery being out of action for many weeks and training of new labour with substantial financial transactions taking place makes it almost impossible either effectively to compare results with the preceding year or to show the real progress and trading position of the Group.

As was inevitable, a heavy trading loss was incurred last year until the concentration became effective. There were no further provisions which could be brought into credit as against £38,750 available in 1958. The accounts also show expenditure on concentration and losses on stock made redundant by the closing in Dundee. On the other hand, the accounts include special non-trading profits towards those expected losses. The profit on Dundee assets contracted to be sold was £65,211. The purchase of two investment companies enabled claims for repayment of tax against past losses of £121,781.

After allowing for profits earned in February and March, and the special non-trading profits already agreed, the net deficiency on all transactions was £63,534 against £156,039 in the preceding year. It is expected there will be further credits when the final transactions have been completed.

The process of gradually clearing long term unprofitable contracts and the realisation of redundant assets during a severe slump in the trade and a credit squeeze was difficult but has been done. The position is steadily improving but Members must not expect spectacular overnight results. A period of consolidation is now needed.

The Company earned profits in February, March and April and a break-even in May and June of this year. There will be insufficient production in July, August and September as a repercussion of delays during the concentration. It is hoped for reasons given in the Reports to turn into profit making again from October or November.

I should be reasonably satisfied, in the current year, as a year of consolidation, to arrive at the end of the year with sufficient profit to cover all interest charges.

Opportunity has been taken to describe the rather complicated respective rights of the providers of loan capital. The amount already received from realisations as shown by the Balance Sheet was £352,000. It now exceeds £400,000 with further moneys to come when the remaining properties are sold. Bank Loans of £875,000 are now reduced to £820,000.

As from June 1st, two new subsidiary companies commenced to operate for the purposes of strengthening the selling organisations, giving closer contact at director level with the Company's customers and promotion to some of the full time executives.

I am satisfied that there has now been created a good organisation to consolidate the position in this year and then move forward. Little is now required on the trading side but a good order book.

The report and accounts were adopted and Mr E. F. Robson re-elected.

VITAMINS LIMITED

A YEAR OF CONSOLIDATION

At the Annual General Meeting the Chairman, Mr H. C. H. Graves, said that net Group profit (after taxation) was £177,129 (£146,161). Ordinary dividend was 25 per cent (20 per cent).

The year had been one of consolidation, a year in which the Company had improved the productivity of existing processes rather than starting new ones; cemented relations with old friends rather than wooing new ones.

The £100,000 of Notes issued in 1949 were repaid on October 1, 1959.

They had recently acquired the freehold of their Hammersmith premises and a further 150 acres at Walton Oaks. The Keynsham and Chester premises were already their own freehold property. The Crawley factory was held on a 99 year lease with 91 years unexpired.

They had pioneered in both research into fundamental knowledge and its practical application. They were actively developing overseas branches, some in "under-developed" areas of the world, where the need for specialised knowledge of human and animal nutrition was great and where opportunities for growth over the next quarter of a century might well be considerable.

For the reasons indicated, further finance was required and shareholders were about to be offered the right to subscribe for 455,200 new ordinary shares at 20s. each in the proportion of one for every five held.

It was gratifying that great as were the advances in the knowledge of scientific nutrition the role of Bemax as the best-known vitamin-mineral-protein food in the world continued to be appreciated and taken advantage of by doctors and dieticians, by nurses and mothers as it had been for over thirty years.

The Report and Accounts were adopted.

REX TRUEFORM CLOTHING LIMITED

The twenty-second annual general meeting of Rex Trueform Clothing Company Limited was held on October 21st at Cape Town, Mr Bernard J. Shub, chairman, presiding.

The following is an extract from his circulated statement:

The financial accounts for the year ended June 30, 1959, reflect improved results and a further strengthening of the overall position. The Group's trading profit of £206,861 represents an increase of more than 45 per cent over the previous year. The Directors propose an increase in the dividend on the Ordinary and "A" Ordinary shares, and have recommended a dividend at the rate of 10 per cent for the year, as compared with 7½ per cent.

Despite continued difficult trading conditions, the demand for the Company's 'Balance-line' model and other products has steadily increased. The development of efficient manufacturing techniques and the consistent improvement on quality standards have contributed to the successful year.

The Company's products have for many years been marketed in countries outside the Union of South Africa, and it has been our policy to develop additional export trade. It is, therefore, most gratifying that this Company has been the first in the history of our clothing industry to establish a substantial export market in the United States of America. Regular shipments commenced during the last few months of the financial year.

At the beginning of 1959 the Company purchased, at par, the entire shareholding of Nicholson & Company of England (South Africa) Limited and Alligator Rainwear (S.A.) Limited. The results of the first six months' trading have been satisfactory.

The report was adopted.

BRITISH OVERSEAS STORES, LIMITED

BRIGHTER PROSPECTS

The thirty-eighth annual general meeting of British Overseas Stores, Limited was held on October 27th in London, Mr R. J. Blackadder, MC, CA, chairman, presiding.

The following is an extract from his circulated statement for the year ended March 31, 1959:

It is disappointing that I cannot open my review with an account of progress and achievement as in recent years. Last year I said that I was not disturbed about the probable results of the then current year. I drew attention to the falling turnover of our Jamaican companies, and the trade recession in the Rhodesias which subsequently spread to South Africa. Apart from the companies operating in the territories concerned, these factors also influenced our London subsidiaries. Unfortunately, these conditions persisted throughout the year now under review.

Trading conditions are still difficult, but the outlook is now more reassuring—import restrictions have been relaxed to some extent and credit facilities are on the whole more readily obtainable, but traders still find that in many cases turnover can only be maintained at the expense of a steadily increasing demand from their customers for extended credit.

The accounts show a consolidated profit before tax of £100,701 compared with £215,245 last year—a reduction of £114,544.

We have overcome many difficulties arising out of matters with regard to which we had no control and, having met the situation in an extremely uncomfortable year, I feel that our organisation has sufficient resilience to take every advantage of the brighter prospects which I believe lie ahead.

The report and accounts were adopted.

SOLAR INDUSTRIES LIMITED

RESUMPTION OF ORDINARY DIVIDENDS

The Fifty-third Annual General Meeting of Solar Industries Limited was held on October 23rd at Glasgow, Mr R. K. Calder, chairman and managing director, presiding.

The following are extracts from his statement:

Canadian losses again impinge heavily on the Group profits and mar what would otherwise have been a record year.

Despite the further substantial Canadian loss, the United Kingdom subsidiaries made such good progress that the Group trading profit, less the Canadian loss, advanced from £358,477 to £476,723, an increase of over 30 per cent on the year.

As there is no allowance for the Canadian losses the provision for taxation is abnormally high at £166,600. After the tax charge there is a final net profit for the year of £121,169, as compared with £45,291, a result which, in all the circumstances, is deemed satisfactory and has justified the directors in fulfilling the promise of last year to resume payment of dividends on the Ordinary share capital.

An interim dividend of 5 per cent less tax was paid on March 27th last and your directors now recommend a final dividend of 10 per cent, less tax.

While there is still much to be done to remedy the position, I am now more hopeful as to the future of the Canadian companies. I am bound to say, however, that a further but, I hope, much reduced loss is almost certain to be incurred in the current year.

SUBSIDIARIES' ACTIVITIES

Aluminium Bronze Co. Ltd. showed a small decline in both turnover and earnings, but this was largely attributable to reductions in monetary values, with the physical volume showing further expansion. The current year is running at record levels.

Atkinsons Agricultural Appliances Ltd. lived up to the hopes which I expressed last year and output and earnings advanced sharply. I look with confidence to a record result in the current year.

The Draftex Group—which is so closely linked with the motor trade—maintained its position and showed a reasonable increase.

Burnley Aircraft Products Ltd.—the activities of which now cover a much wider field than jet aero engine components—again recorded both increased sales and earnings. Since the close of the year the Burnley company has established a close technical association with Soudure Electrique Languepin, one of the leading French manufacturers of welding machines and specialists in the design and development of large multi-head machines for the welding of motor car bodies, and of the associated transfer machines and other automation equipment.

In order to further the proposed collaboration in these developments and in the production of spark erosion machines, we have set up a joint company with our French associates under the name of Solar Weld Languepin Ltd.

The misfortunes of our Canadian companies, Renfrew Aircraft & Engineering Company Ltd. and Norpoint Ltd., have already been referred to above. While losses are still being incurred the reports now reaching us inspire me with confidence that the build up of the commercial output will bring a satisfactory and profitable level of output.

At Scottish Aluminium Ware Ltd. the redeployment of resources was completed during the year, and the necessary changes effected in the management. I am glad to say that, as I forecast last year, while output fell by some 30 per cent a reasonable profit was earned, as opposed to the losses of recent years. The current year is seeing output and earnings markedly increased.

Trent Foundries Ltd., like so many of the sand casting foundries, has had to meet difficult times. The current year has seen some improvement in turnover, but operating margins are much reduced.

The Varichrome Plating Companies both show increases in turnover and profits and in the current year both companies are showing further substantial progress.

As you will have gathered from the foregoing brief review, the current year is seeing further progress made in most divisions of the Group and there is so far a satisfactory all round increase in both output and profits. If—and it is always dangerous to prophesy—this is maintained, then the current year should see further records achieved.

The increased level of trading in the current year, coupled with heavier capital expenditure and the need further to support the Canadian companies, has increased the demands on the Company's liquid resources, and your directors are accordingly giving active consideration to the need for further permanent capital.

The report and accounts were adopted and the dividend, as recommended, was approved.

APPOINTMENTS

CITY AND GUILDS OF LONDON INSTITUTE

ADMINISTRATIVE OFFICERS

The City and Guilds of London Institute invites applications for permanent posts as Administrative Officers to be concerned with the Institute's extending work for the advancement of technical education and training.

Successful candidates, who should be within the age range 25 to 35, will be appointed on salary scales within the range £1,100 to £1,250, with opportunities for advancement.

Applicants (men or women) should possess appropriate qualifications (graduate or equivalent) and work in these need not be of a technical nature. A general interest in technical education is essential.

Those wishing to apply should write for further particulars to the Deputy Director, City and Guilds of London Institute, 76, Portland Place, London, W.1, marking their envelopes "A.O.I."

Large Oil Company

centred in London requires a

RESEARCH MATHEMATICIAN

for the study of flow of compressible, viscous fluids through porous media. Familiarity with heat transfer theory and boundary value problems desirable. Interest in pure mathematics helpful. Qualifications: preferably Ph.D. but First Class Honours degree might be considered. This is intellectually challenging work with attractive financial prospects. Write in detail, quoting No. 8553, to Box No. 2018, c/o Charles Barker & Sons Ltd., Gateway House, London, E.C.4.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited from graduates in the social sciences for appointment as a Research Assistant in the Government Research Division. The appointment would be for six months in the first instance. Starting salary according to age and qualifications within the range £450 — £525 a year. Applications should be received by the Secretary, Government Research Division, The London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2, not later than November 4 (first).

NEW ZEALAND—
MINISTRY OF WORKS

Investigating Officers, Town and Country Planning Branch, Wellington.
SALARY: Up to £1,100 a year.
QUALIFICATIONS DESIRED: M.A. or M.Sc., B.A. or B.Sc. preferably in Geography but applicants with these degrees in allied subjects such as Geology, Political Science, etc., would be considered.
DUTIES: Assisting in the compilation of the National Resources Survey. This Survey is intended to give a comprehensive analysis of New Zealand's resources region by region, and the duties include research on physical, cultural and economic aspects in the various regions and the compiling of reports suitable for publication. Appointees would also be required to assist in the preparation of background material for town and country planning purposes and other investigations in relation to national, regional and local development.
Inquiries, mentioning this publication, and quoting Reference No. B11 of 18, should be addressed to The High Commissioner for New Zealand, 415 Strand, London, W.C.2, who will furnish further details and application forms. Completed applications to be lodged in London not later than December 7, 1959.

OPERATIONS RESEARCH

J. LYONS & COMPANY LIMITED

have recently developed their Operations Research unit. There is a vacancy for a YOUNG STATISTICIAN interested in applying Mathematical Statistics to a variety of intriguing business problems. Please reply, giving details of age, education and experience, if any, to Operations Research Manager, Cadby Hall, London, W.14.

AUSTRALIA—
UNIVERSITY OF NEW SOUTH WALES

The University of New South Wales invites applications for appointment to the undermentioned positions. In each case the salary range is:
Senior Lecturer, £A2,218 range £A2,568 per annum.
Lecturer, £A1,518 rather £A2,118 per annum.
Commencing salary according to qualifications and experience. Appointees will be eligible for 12 months' study leave on full salary after six years of service. Subject to passing a medical examination the appointees will be eligible to contribute to the State Superannuation Fund.
First class ship fares to Sydney of appointees and family will be paid.
SENIOR LECTURER/LECTURER IN ECONOMICS, NEWCASTLE UNIVERSITY COLLEGE.
Applicants for position of Lecturer must possess a degree, preferably with honours or equivalent qualifications, for appointment as Senior Lecturer, applicants must possess a higher degree or equivalent qualifications.
Closing date for applications is December 12, 1959.
Four copies of applications, together with the names of two referees, should be lodged with the Agent General for New South Wales, 56-57 Strand, London, W.C.2, and a copy forwarded by airmail in an envelope marked "University Appointment" to the Bursar, The University of New South Wales, P.O. Box 1, Post Office Kensington, New South Wales, Australia, before the closest date mentioned above.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

Applications are invited for the post of RESEARCH ASSISTANT in the Department of INDUSTRIAL RELATIONS. The successful applicant will be required to study trade union organisation and staffing at district and regional level. Salary £675 per annum. The post is tenable for one year in the first instance with a possibility of renewal for a further two years.—Applications (3 copies of applications should be sent not later than December 1, 1959, to the Registrar, University College, Cathays Park, Cardiff.

THE COURTAULDS ORGANISATION seeks applications from CHARTERED ACCOUNTANTS, not exceeding 30 years of age, for training at Spondon, Derbyshire, in factory and management accountancy with a view to taking up responsible positions in the organisation. A good salary will be offered based on qualifications, age and experience. A pension scheme is in operation.
Candidates should write, giving full personal particulars, including details of education and experience, to the Director of Personnel, Courtaulds Limited, 16, St. Martin's-le-Grand, London, E.C.1, quoting reference number M.13.

For further appointments and other classified advertisements see pages 468 and 469

CIVIL SERVICE COMMISSION

Competitions will be held in 1960 for the following:—
ADMINISTRATIVE CLASS, Home Civil Service and Administrative Class, Northern Ireland Civil Service (METHODS I and II); Third Class Clerkships in the House of Commons Clerkship may be filled through this competition.
FOREIGN SERVICE, SENIOR BRANCH, Age 20 (METHODS I and II).
SPECIAL DEPARTMENTAL CLASSES, H.M. Inspectors of Taxes; Cadet Grade, Ministry of Labour; Assistant Postal Controllers, Post Office (METHODS I and II).
STATISTICIAN CLASS (METHOD I only). Age 21.
METHODS OF SELECTION: Method I consists of examination at honours degree level plus preliminary and final interview. Method II consists of short examination (English and general paper) followed by interview for selected candidates, by specialists and interview by Final Selection Board. Candidates for Method II must have, or obtain in 1960, a university degree. For Administrative Class, Foreign Service (Senior Branch) and House of Commons Clerkships it must be with first or second class honours.
AGE LIMITS: At least 20½ and under 24 on August 1, 1960, with extension for service in Forces or Overseas Civil Service. In addition for Statistician Class (21-26) extension up to three years for approved post-graduate experience.
Write for application forms to Civil Service Commission, 6 Burlington Gardens, London, W.1 (quoting appropriate number: Course 4,661; Method II, September 30; Method I, January 29, 1960).

COMPANY AFFAIRS

SCHWEPPES

WITHIN a week of making a bid for the ordinary shares of William P. Hartley, the directors of Schweppes have announced another acquisition in the preserves industry. The company this time is William Moorhouse and Sons. At March 31, 1959, the assets of this private company amounted to £940,101. A recent independent revaluation of the fixed assets revealed a surplus of £365,928 on book values and the assets attributable to the ordinary shares now being acquired by Schweppes thus amount to about £1 million. The total purchase price is just over £1,600,000 and is to be paid for by the issue of Schweppes 5s. ordinary shares at a value of 26s. each. With Schweppes shares now standing in the market at 30s. the Moorhouse shareholders could already secure a useful premium on the purchase price.

The chairman of Schweppes, Mr R. Hanning Philipps, is confident that the integration of Chivers, Hartley and Moorhouse will make possible an expansion of trade. The preserves industry has become highly competitive and Mr Philipps refers to the "long term economies" by integration. Schweppes with a thrustful management and a wealth of experience in advertising and research will be a formidable competitor in an industry which is not so very alien from its established interests in fruit cordials and soft drinks.

Clearly, though they lost the battle for Thomas and Evans to the Beecham Group, the Schweppes directors are intent on growth and expansion. Announcing this new acquisition, they say that the dividend for the current year will be not less than 20 per cent, compared with 15 per cent last year. They add that they are able to give this early forecast because results for the first nine months of the year have shown a "notable increase." The 5s. shares were marked up to 30s. on this news and yield 3⅓ per cent on the prospective dividend.

BABCOCK AND WILCOX

IN spite of Mr Lionel Fraser's warning last May that Babcock and Wilcox's trading profit was unlikely to be maintained, the cut in the company's interim ordinary dividend from 6 per cent to 4½ per cent came as a shock. The £1 ordinary stock units were marked down 5s. 3d. to 45s. 3d. but improved to 46s. 6d. The group's unhappy experience over the past six months points to the sluggishness of the capital goods trades in shaking off the recession which hit them in 1957-58. In that year the boiler-making industry suffered a blow from the cut in the Central Electricity Generating Board's power station programme. Last year, Mr Fraser referred to the trend towards bigger units in the industry; it is now stated that "the design and manufacture of nuclear and large boiler plant have necessitated a considerably greater amount of development work than was anticipated."

In January, 1958, the group raised £3.8 million for expansion. A comparison of the rates of return on the capital employed by the group before and after this injection of new money underlines the difficulties now facing manufacturers in the heavy engineering field. In 1956-57 the gross rate of return on the capital employed was 22.3 per cent. It was 17.3 per cent in the following year. The rate of equity return (that is net earnings shown as a proportion of net equity assets) declined from 9.2 per cent in 1956-57 to no more than 5.9 per cent in 1957-58.

Whether the "encouraging volume" of new orders received in recent months is the first sign of recovery remains to be seen, but shareholders may be over-optimistic if they expect a total dividend of more than 10 per cent this year. It would put the £1 ordinary units on a yield of just over 4 per cent.

ROLLS-ROYCE

FROM Rolls-Royce there are no shocks, for the interim dividend of 2½ per cent on the capital as increased by the 100 per cent scrip issue is equivalent to 5 per cent paid last year. Sales for the first half of 1959 have dropped by £1 million to £44 million and those for the year are not expected to equal the 1958 figure of £96 million. The directors attribute the fall largely to the disruption caused by the fire at the Mountsorrel factory in May. They emphasise again that the results for 1959 will continue to "reflect continuation of a high rate of expenditure on research and development." In 1958 the charge borne by the company under this head amounted to £5.8 million. At the end of September the group had £105 million of orders—£8 million fewer than at the beginning of the year, but plenty to ensure that its factories will not be short of work.

The shares are not participating in the present boom and are now some 7s. lower than at the beginning of the year. At 45s. they yield 4.4 per cent.

ROOTES MOTORS

IN his annual statement Lord Rootes, the chairman of the Rootes group, says that there is no reason for complacency in the motor industry. Investors should equally beware of complacency. The boom in the motor trade, which lifted the trading profits of Rootes Motors by more than 50 per cent, from £3,478,664 to £5,338,811, still shows no signs of slackening. But it would be foolhardy to ignore a few clouds on the horizon. In the first place Rootes exports 50 per cent of its products: and although total car exports reached a new peak in the first nine months of this year the share of British manufacturers in total world exports of motor vehicles fell by some 2 per cent; this was so even in the United States, where total sales went on rising. This slight weakening of the British motor industry's grip on overseas markets is doubtless due to what Lord Rootes calls "the considerable increase in competition from American and European producers in both the United States and overseas markets." At the same time he points out that with the introduction by American makers of their new smaller models competition is bound to intensify.

To enable the Rootes group to maintain its foothold at home and overseas a £10 million programme to expand production and to "increase general competitiveness" has been set in train. The scheme is to be financed partly by retained earnings and the £3 million brought in by the sale of Rootes Acceptances, and partly by the issue, heavily oversubscribed on Thursday, of £3,500,000 of 5½ per cent debenture stock.

SPICERS AND WIGGINS, TEAPE

THE Restrictive Practices Act has robbed Spicers and Wiggins, Teape from going through with their original plans to amalgamate Spicers' wholly-owned subsidiary, British Waxed Wrappings, with Griffith and Diggins and Waxed Papers, two recently acquired subsidiaries of Wiggins, Teape. Under the act the resulting combine would have constituted a trade association and would therefore have needed registration with the Registrar of Restrictive Trading Agreements. Counsel advised the directors that it was by no means certain that the Court would sanction the merger, so it was decided that British Waxed Wrappings should be sold outright to Wiggins, Teape for £3 million.

Spicers' directors say that the sale price "considerably exceeds the estimated eventual value to the group of BWW" and exceeds by £1,700,000 the book value as shown in the group's balance sheet. Shareholders of Spicers will now be particularly concerned about the use of the £3 million proceeds, for it cannot be said that BWW was a burden on the group's resources. Spicers' estimated profits before tax this year are around £715,000, of which no less than £315,000 (or 44 per cent) comes from British Waxed Wrappings. But the directors point out that other units of the group have been badly affected by the printing strike. They estimate that "profits for 1960 will almost certainly be less than for 1959" since it will be too early to see any profitable return on any new investments made possible by the use of the sale proceeds. Profits of £400,000 before tax (that is

without BWW's contribution) will cover only about 85 per cent of the forecast dividend of 8 per cent, so that the possibility of a tax-free distribution to shareholders out of the sale seems remote; since next year's earnings are expected to be lower, the sooner the directors tell shareholders of their future plans the better.

Wiggins, Teape propose to finance the new purchase by an issue of shares. The £1 ordinary shares at 67s. 6d. yield 5.1 per cent and are on a 9 per cent earnings yield basis. Wiggins, Teape is the principal supplier of raw materials to BWW, so that the most obvious advantage to the group will be economies arising from vertical integration.

BROOKE BOND

TRADING results of Brooke Bond for the year to June 30, 1959, are very much up to market expectations. But the big increase in turnover from around £80 million, the level of the previous four years, to £91.1 million is surprising. About £3 million of this increase came from bigger sales of packet teas and the remainder from a rise in the bulk tea trade, especially in Australia. This suggests that overseas markets offer the greatest scope for expansion. While turnover has risen by 14 per cent, trading profits at £4,488,222 have risen by only 5¼ per cent and gross profit margins have fallen from 5.3 per cent to 4.9 per cent. Lower charges for taxes levied both in this country and in the producing countries where Brooke Bond has its own plantations have, however, led to a sharp increase in net profits from £1,758,399 to £2,231,006. The ordinary dividend has been raised from the equivalent of 4¼ per cent tax free to 6¼ per cent tax free. This is a big increase, but the new payment is still covered about 3¾ times by earnings. On this announcement, the "B" shares rose to 13s. 10½d., to yield just over 3¼ per cent.

FISONS

AS forecast by the directors last June, the final dividend of Fisons, the chemical and fertiliser manufacturers, is 8 per cent, making 12 per cent for the year to June 30, 1959. This compares with the equivalent of 10 per cent for 1957-58. Last February, the ordinary capital was raised by a one-for-two scrip issue and now another £3,869,908 is to be capitalised in making a one-for-three scrip issue. The group's trading profits and investment income have risen from £3,142,478 to £3,641,360 and after higher tax and slightly higher depreciation charges net profits have gone up from £1,594,970 to £1,800,527, so that the dividend is covered about twice. During the year the fixed assets of the parent company and its United Kingdom subsidiaries were revalued and a surplus of £6,981,367 was added to capital reserves, from which £2,558,567 has been written off goodwill. The revaluation, the scrip issues, and, most important of all, the bigger dividends, suggest that the new look in Fisons, which became really discernible only a year ago, is not a passing fashion. Over the last year or so investors have re-assessed the merits of the £1 ordinary shares which at 70s. 3d. yield 3.4 per cent.

ASSOCIATED PORTLAND CEMENT

AT long last, Associated Portland Cement, with the assistance of Baring Brothers, is preparing a scheme to tidy up the capital structure of the group. At the moment APC holds 82.3 per cent of the equity of British Portland Cement and all the ordinary capital of Alpha Cement. The preference stocks of both these companies, amounting to about £2,500,000, and £340,000 of Alpha Cement's debenture stock are held almost entirely by the public.

The first step has been taken in an offer by APC to buy up the minority ordinary shareholding in British Portland Cement. The second step will be taken when proposals to simplify the fixed interest capital structure of the subsidiaries are finally worked out. Ordinary stockholders of British Portland are to be offered four £1 Ordinary shares in the parent company for every five £1 BPC ordinary units they hold. With APC ordinary at 70s. 9d. this puts a value of 56s. 7½d. on the British Portland units, which is almost double their "low" for the year and is 3s. 3d. above their pre-offer price. The exchange offers BPC ordinary shareholders a wider market, superior earnings cover (3.3 times, compared with 2.2 times) and on the basis of APC's dividend forecast a slightly higher income. The APC directors intend to pay a final dividend for the current year of "not less than 6 per cent"—making 10 per cent for the year, against the equivalent of 9.6 per cent. A dividend of 10 per cent is not particularly generous and with the APC shares now yielding under 3 per cent investors are clearly hoping that the directors will pay more.

COURTAULDS

FORMATION of two new companies in North America by Courtaulds and its Canadian and US subsidiaries is an earnest of the group's intentions to extend its policy of diversification to that continent. So far Courtaulds' interests in the United States have been confined to rayon, and in Canada to plastics and viscose staple. One of the new companies, to be known as Courtaulds North America Inc., will be based in New York, and the other, Courtaulds North America, will be based in Montreal. Their task (similar to that of Group Developments in this country) will be to extend the group's interests in industries outside textiles.

The directors have also announced that by early 1961 the new plant at their Calais subsidiary will be manufacturing "Courtelle." This will help the group to leap the high tariff barrier on imports of textile fibres into France, and it will also give Courtaulds one more foothold in the common market.

At the time of the announcement of Courtaulds' Swaziland pulp-mill project last July, Sir John Hanbury-Williams referred to the "strong liquid position" of the group, represented in the last balance sheet by some £19 million in gilt-edged securities and £3½ million in cash. Clearly, the directors are losing no time in utilising these resources to expand and to diversify the group's interests.

AMALGAMATED DENTAL

AMALGAMATED DENTAL'S announcement of the sale of part of its large holding in the Dentists' Supply Company of New York follows the recent rise in the price of Amalgamated Dental's shares from around 60s. to 73s. The directors are also proposing to sell a further substantial portion of this American investment and they say that arrangements are in hand to ensure that the sale will not have an adverse effect on the company's trading or manufacturing. Of the gross profit of £907,118 for the year to December 31, 1958, dividends from Associated companies amounted to £180,000, or approximately 20 per cent. The price obtained from the first sale was "substantially in excess of book value" and the remainder of the holding has been revalued on the same price basis. This has resulted in an increase of over £1 million in the book value of the assets, which is equivalent to a rise of from 51s. to 63s. 6d. in the asset value per share. The board has the capital structure of the company "under review" and a scrip issue or a capital distribution or both seems likely.

At the moment several important questions remain unanswered. What percentage of the holding in the American company has already been sold and how much was received for it? At December 31st last investments amounted to £1,950,000, almost a quarter of the balance sheet total; how much of this relates to the Dentists' Supply Company and what are these investments worth now?

RANSOMES AND MARLES

DESPITE the fall in the group's trading profits from £1,423,755 to £1,182,056 the directors of Ransomes and Marles, makers of roller and ball bearings, have decided to maintain the total ordinary distribution at 15 per cent plus a special interim of 2½ per cent (compared with a bonus in 1957-58 of 2¼ per cent). A lower tax charge of £563,771 (against £756,400) leaves the net profit at £609,396, compared with £666,581.

In 1957-58 the completion of the expansion and modernisation programme enabled the group to take full advantage of the boom in the motor industry—its main customer. In that year trading profits and turnover were at record levels. It is therefore surprising that the results of Ransomes and Marles have fallen while the boom in the motor trade has gone merrily on. It may be that sales to the motor industry at home fell off this year because motor manufacturers were able to build up big stocks in 1957-58. If so, there may be some chance of a recovery in earnings in the current financial year. The ordinary dividend is covered nearly three times by earnings and the 5s. ordinary shares at 24s. 6d. yield 3.6 per cent.

HAWTHORN, LESLIE

IT seems to have been the long order book, which is still "substantial," that encouraged the directors of Hawthorn, Leslie, the Tyneside shipbuilders and engineers, to leave the ordinary dividend unchanged at 25 per cent for the year to June 30th, even though the group's trading profits fell from £1,448,290 to £1,249,704 and net profits from £753,110 to £696,988. Mr Robin Rowell, the chairman, says that output from the Hebburn shipyard was only slightly reduced in 1958-59, while the ship repairs department has been "well employed" despite the sharp reduction in the volume of work coming in.

The group's balance sheet shows that capital commitments have fallen from £980,000 to £270,000 and these are amply covered by liquid resources of some £3.4 million. The ordinary dividend is covered 3.4 times by earnings and the 10s. ordinary shares now yield 6.0 per cent. With the group's financial resources strong and with at least two or three years' work left on the order book, Hawthorn, Leslie must be recognised as one of the stronger shares in the weak market in shipbuilding equities.

LEEDS PERMANENT

THE big flow of money into building societies early this year when the recommended rate on shares stayed put at 3½ per cent, net, and the modest total of withdrawals after that rate was reduced to 3¾ per cent, net, has given the societies greater freedom to lend on mortgage than they have enjoyed for a number of years. Thus the Leeds Permanent Building Society in the year to September 30th advanced on mortgage a record £20,092,543, virtually the whole of it to borrowers for owner-occupation of private dwelling houses. The society's total assets rose to a new peak of £129,227,841. The net increase in the amount invested in shares and on deposits was £12,537,662.

	1958 £'000	1959 £'000
Received from shareholders	21,019	29,971
Withdrawn by shareholders	15,667	17,434
Mortgage advances	13,525	20,093
Liquid assets	18,781	22,930
Liquidity ratio	*16·17%*	*17·74%*
Reserves	6,084	7,400
Reserve ratio	*5·24%*	*5·7%*
Total Assets	116,127	129,227

The liquidity ratio was held throughout the trying period of the 7 per cent Bank rate and the credit squeeze close to 16.2 per cent of total assets—partly by rationing of potential borrowers. The ratio at the end of September was as high as 17.7 per cent. Total reserves after writing down gilt-edged securities to market value have risen from £6,084,000 to £7,400,000, and the reserve ratio is 5.73 per cent, more than double the figure to qualify for trustee status.

ALVIS

FOR a firm so closely connected to the aircraft industry as Alvis the advance in trading profits from £449,264 to £462,937, the increase in the ordinary dividend from 10 per cent to 15 per cent and the one-for-five scrip issue make good news indeed. Nor is the explanation of this satisfactory performance that the group also makes motor cars. It can fairly be said that the more expensive and exclusive the model (and the two Alvis models cost around £3,000 each), the less the makers are likely to benefit from the current boom in the motor industry.

Evidently, a sizeable contribution to the group's increased earnings came from the manufacture of Leonides aero-engines which are now used in the Westland "Whirlwind" helicopter. At the same time, as the chairman, Mr J. J. Parkes pointed out last year, orders for the Saladin armoured car are sufficient to keep that production line busy until next year. The 15 per cent dividend is covered just over three times by earnings and the 5s. stock units at 14s. 6d. yield 5.2 per cent.

"CHARTERED"

BIGGER royalty payments from the Northern Rhodesian copper producers, based on the price of the metal, have produced a substantially higher income for British South Africa Company this year. Its gross revenue from mineral royalties, rents and fees in the year to September 30, 1959, has risen by 54 per cent, from £6,003,000 to £9,262,000. The revenue for the September quarter at £2,544,000 is nearly double that of £1,307,000 earned in the same period last year, although it is slightly lower than the £2,729,000 earned in the June quarter.

The policy of the "Chartered" directors is to build up and to widen the investment portfolio against the time, in 1986, when its mineral rights will be ceded to the Northern Rhodesian Government. About a third of its portfolio is in shares in Rhodesian mining companies and nearly two-thirds of its investments is in mining concerns. Bigger dividends from the copper producers and from the OFS gold mines should have added to its investment income this year, and there is no obvious apparent reason why the income it earns from its industrial share holdings in Rhodesia and from its other investments (including those of Rhodesia Railway Trust in dollar securities) should not also be higher. A month ago "Chartered" shares stood at 90s., to offer a yield of 5.8 per cent on a 35 per cent dividend. This week they were up to 110s. 9d. to yield 4.7 per cent. This is a better yield than that offered by the leading South African finance house, Anglo American, whose 10s. shares yield 3.8 per cent at 209s. 6d., but it is lower than the yields offered by the equities of most of the other Rhodesian mining and South African holding companies.

London Stock Exchange

FIRST DEALINGS:	Oct. 14	Oct. 28	Nov. 11
LAST DEALINGS:	Oct. 27	Nov. 10	Nov. 20
ACCOUNT DAY	Nov. 3	Nov. 17	Dec. 1

MARKETS have been buoyant throughout the period with unit trusts, institutions and small investors constantly coming into the market to take any advantage of the small setbacks caused by profit-taking. On Friday, for example, the sharp fall on Wall Street and some depressing company news combined to dampen most sections in the morning, but later buyers came back and markets closed on a firm note before the week-end. On Tuesday a stream of small selling at the end of the account was quickly absorbed and a general shortage of stock helped most prices to harden. The start of the new Account on Wednesday resulted in the biggest rise in prices of the week with continued investment demand reinforced by some speculative buying. Over the week to Wednesday's close *The Economist* indicator rose 0.9 points to a new "high" of 346.3.

Gilt edged stocks have again been in demand on yield considerations with the undated stocks showing particularly big gains. 3½ per cent War Loan gained ½ to 68¼ while in short-dated 3 per cent Exchequer (1962-63) put on ¼ to 96⅛. Home Corporation loans were heavily bought following the success of the Middlesex issue; 5 per cent LCC (1980-83) improved ¼ to 97¾.

Industrial equities advanced on a broad front throughout the week although on Wednesday profit-taking caused some of the leaders to close below their best. Typically, ICI fell 3d. to 54s. 9d. and EMI—recently bought heavily from America—lost 6d. at 58s. 6d. Steel shares, which were somewhat erratic at the end of last week, all closed on Wednesday showing good gains: United Steel improved 3s. 6d. to 68s. John Summers put on 1s. 7½d. to 62s. and Steel Company of Wales closed 3d. better at 44s. Stores shares were another active section with Marks "A" improving 1s. 7½d. to 72s. 4½d., and Woolworth gaining 2s. 3d. to 61s. GUS ordinary gained 2s. 3d. to 59s. 3d. and the "A" shares improved 2s. 7½d. to 56s. 6d. Building shares were in demand and British Portland Cement put on 4s. to 57s. while Associated Cement lost 1s. 9d. on the proposed share exchange scheme. In textiles Courtaulds put on 6d. to 50s. 7½d. following news of their plans to diversify in North America. Beechams gained 1s. 7½d. to 45s. 3d. on their latest penicillin developments.

Oil shares have been mixed but most of the leaders show net gains over the period Shell improved 3s. 6d. to 149s. and BP put on 3d. to 56s. 6d. Copper shares have been a bright section partly reflecting the higher price of the metal. Rhokana, which recently announced an increased interim dividend, gained £6 to £42. Gold shares were mixed with Central Mining 8s. 9d. better at 94s. 9d., but Western Holdings declined 2s. 10½d. to 162s. 9d.

EXCHEQUER RETURNS

For the week ended October 24, 1959, there was an "above-line" deficit (after allowing for sinking funds) of £19,029,000 compared with a deficit of £4,308,000 in the previous week and a deficit of £18,153,000 in the corresponding period of last year. There was a net receipt "below-line" of £3,957,000 leaving a total cumulative deficit to date of £628,435,000 compared with £584,804,000 in 1958–59.

THE MONEY MARKET

THE syndicate maintained its bid at £99 2s. 10d. at last Friday's Treasury bill tender and slightly increased the allotted share of its bid at this price from 34 per cent to 37 per cent. The average discount rate on the whole allotment of £260 million rose by nearly 2d. to £3 8s. 6.74d. per cent. Total applications rose by £12 million to £456 million, a peak for the year. At yesterday's tender the offer included £50 million of 63-day bills together with £220 million of the normal 13-week maturities. The Treasury is thus following the precedent in recent years of offering these shorter bills in the last two months of the year to help put the market in funds at the peak tax paying season.

In New York the average rate of discount on 91-day bills fell from 4.099 per cent to 4.022 per cent; the rate on 182-day bills was fractionally higher at 4.499 per cent.

Credit has again been tight in the London market. On Tuesday one or two houses were "in the Bank" for a very small amount. The authorities had given special assistance on several days, partly in purchases of January maturities at $3\frac{3}{8}$ per cent.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) Surveys made twice a year; annual figures relate to October survey. (5) Figures relate to April survey. (6) In general males under 21 and females under 18 years of age. (7) Certain changes have been made in the classification and coverage of the Board of Trade's index numbers in this section. (8) The series for "all items" and "other items" have been revised throughout; quotations for Middle East and Venezuelan crude oil now replace the previous quotation for gasoline. Owing to a change in the tea quotation used, some revisions have also been made in the series for "all items" and "food" from June 2, 1959. (9) Revised figures for September 22nd: food, 86·0; fibres, 79·3.

LET CANADA'S FIRST BANK ACT AS YOUR

GUIDE TO CANADA

You are invited to make use of the Bank of Montreal's facilities and knowledge of Canadian industry and people if you are contemplating entering the Canadian market.

Calcutta Representative Office :
Mookerjee House, 17 Brabourne Road, Calcutta-1

What if it had happened to you?

Another street accident! It's a sickening thought: "A minute ago it hadn't happened, might not have happened at all!"

But when it *has* happened, it may mean being off work for at least a couple of months. In the meantime those hard-earned savings dwindle. No holiday, no new suit . . .

Unless, of course, you take precautions. The Prudential can cover a lot of misfortunes that can happen to you. A Prudential personal accident policy means money coming in regularly. Get in touch with the Prudential now.

PEOPLE LIKE JACK AND JACK AND JACK ARE WORTH MILLIONS

They have added something like £500 million to the nation's net savings in twelve years through industrial life assurance. Ten million families save in this way, with the help of the Home Service Insurance Man. Together, they form a great thrift movement that helps people to help the *nation* by helping themselves.

Issued by The Industrial Life Offices Association

APPOINTMENTS

ESSO PETROLEUM COMPANY LIMITED

have the following immediate vacancies in their Head Offices in London.

ASSISTANT TO HEAD OF EDUCATION SECTION, PUBLIC RELATIONS DEPARTMENT

A university graduate, between 25 to 35, with proved administrative ability, is required to assist the Head of Education Section in Esso's public relations activities in the field of education, with particular emphasis on Public and Grammar Schools, Technical Colleges and Universities. Some experience of teaching or educational work and public speaking would be an advantage.

SUPPLY ASSISTANT, SUPPLY DEPARTMENT

A university graduate, between 21 and 28, with a bent for work in the economic or statistical fields, is required for Supply Department, which is concerned with the supply and distribution of crude oil and finished products. Duties would include programming and the arranging of day-to-day operations, as well as long term planning. Training will be given to fit the successful candidate for the job.

SALES ASSISTANT, MARKETING RESEARCH AND STATISTICS DEPARTMENT

A university graduate, between 21 and 28, with an aptitude for statistics and economics, is required for the Volume Estimates Section. The work involves the assessment, by a mathematical approach, of the oil industry's potential and the estimation of future national oil consumption. Some experience of similar market research work would be an advantage, but is not essential.

Salary in each case according to age, experience and qualifications. The Company operates a generous contributory Pension Plan and there are other ancillary benefits.

Write, quoting Ref. H.O.4, to Manager,

RECRUITMENT AND TRAINING,
16 CHARLES II STREET,
HAYMARKET, S.W.1.

IBM UNITED KINGDOM LIMITED

DATA PROCESSING DIVISION

On January 4, 1960, a new group of Student/Trainees will commence a comprehensive training course of up to two years' duration covering IBM Punched Card and Computer Equipment, Systems Applications, Organisation and Method, Investigation and Reporting, Workflow, Card Design and Selling Techniques. During training these men will be paid a more than adequate salary according to present earnings. Thereafter, an excellent basic salary, plus various commissions and bonuses, should mean an income of over £2,000.

These highly responsible posts comprise detailed investigation, preparation of new methods of recording, accounting and computing. Basically re-shaping whole groups of departmental routines in these fields. *Therefore the opportunities are exciting and the work absorbing and very rewarding from all points of view.*

Applications will be welcome from men age 22-33 of good educational background (preferably university level) who have experience in the indicated fields, preferably with qualifications or specific experience. Applications will also be considered from those in the younger age brackets who have no experience but have a real interest in mechanised accounting and control.

Applications, giving full details, to the Personnel Manager, IBM United Kingdom Limited, 101 Wigmore Street, London, W.1, quoting reference DP/6L.

Young men (age 30 to 35) who welcome hard work and responsibility are invited to apply for training for top executive positions with British Industrial Group with world wide interests.

University degree is helpful but not essential; qualifications which are essential are first-class character, proved ability, loyalty, good educational standard and experience of industry.

Selected applicants will operate initially as personal assistants to Directors and will be expected, if successful, to qualify within a few years for appointment as Directors of Subsidiary Companies.

Remuneration offered will match qualifications required.

If interested, please write, giving full details of education and industrial experience and asking for initial interview with a Director, Box 1222.

YOUNG ECONOMIST required for economic research department, with emphasis particularly on banking and international payments. Previous experience and knowledge of European languages useful but not essential. Salary according to age, experience and qualifications.—Apply in writing only to the Secretary, Moscow Narodny Bank Limited, 325-339 Salisbury House, Finsbury Circus, London, E.C.2.

STATISTICIAN

If you have a good honours degree in Economics with Statistics as a special subject and would like to join the central information and statistics department of the Commonwealth's largest glass manufacturing organisation, you are invited to write about yourself to the Personnel Officer (Graduate Recruitment), Pilkington Brothers Limited, St. Helens, Lancs. Initially, you would be required to assist in the collection of market data and the preparation of forecasts. It is hoped that later there will be an opportunity to lead a section engaged on this work.
