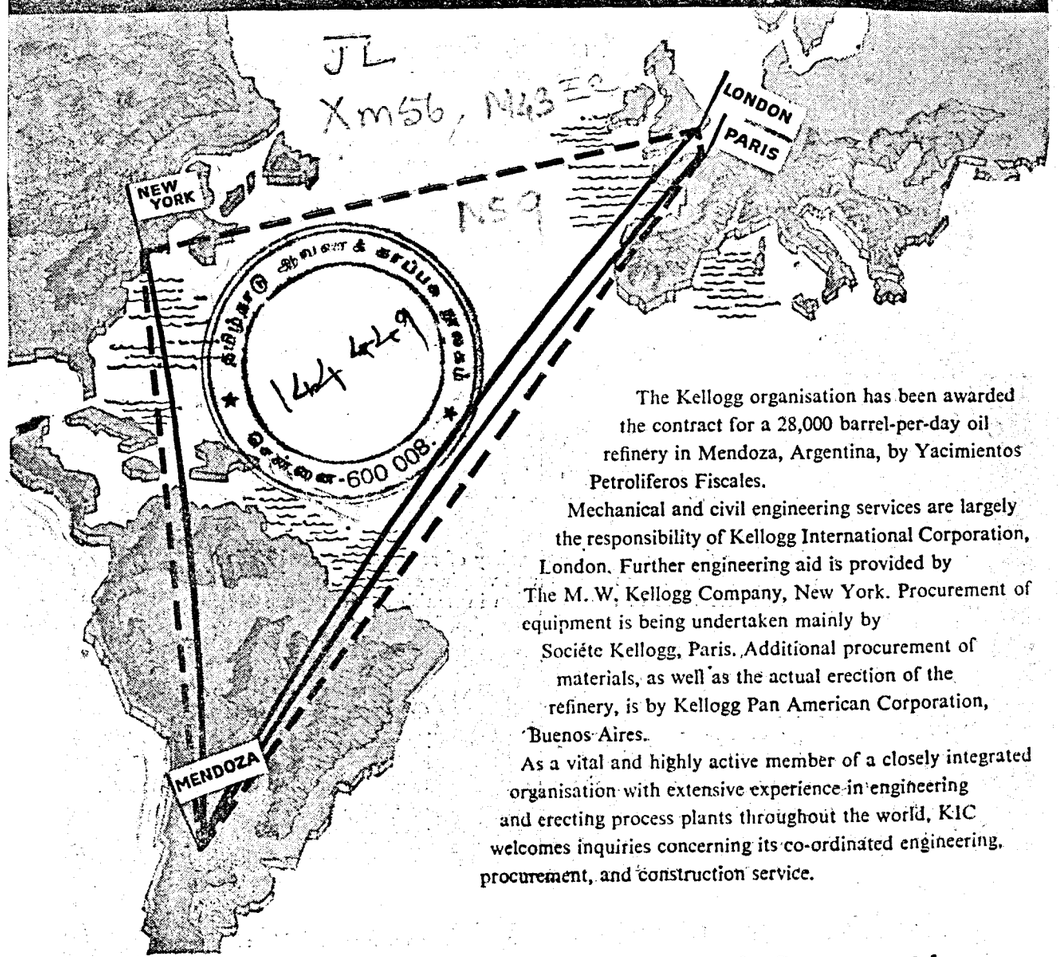
A MAJOR BRITISH CONTRIBUTION

to an international operation



The Kellogg organisation has been awarded the contract for a 28,000 barrel-per-day oil refinery in Mendoza, Argentina, by Yacimientos Petroliferos Fiscales.

Mechanical and civil engineering services are largely the responsibility of Kellogg International Corporation, London. Further engineering aid is provided by The M. W. Kellogg Company, New York. Procurement of equipment is being undertaken mainly by Société Kellogg, Paris. Additional procurement of materials, as well as the actual erection of the refinery, is by Kellogg Pan American Corporation, Buenos Aires.

As a vital and highly active member of a closely integrated organisation with extensive experience in engineering and erecting process plants throughout the world, KIC welcomes inquiries concerning its co-ordinated engineering, procurement, and construction service.

AIR POWER
A NEW SOURCE OF COMPRESSED AIR FOR INDUSTRY, MINING AND CONSTRUCTION PROVED ON WORLD PROJECTS NOW MADE IN BRITAIN

Developed from advance designs perfected by the parent American company, an organisation with a century of experience in compressed air equipment, the new range of stationary reciprocating compressors by Joy-Sullivan comes to Britain with a ready-made reputation for RELIABILITY. Compact, durable, power-packed Joy-Sullivan compressors already have the respect of engineers in many of the world's important industries.

Available initially in capacities from 400 to 835 cfm, with skid-mounting and in oil-free versions, Joy-Sullivan industrial compressors can now be specified to improve air power supply at reduced operating and maintenance cost. All interested in industrial air power are invited to write for publication AD/6 for full information on WN.112 compressors or publication AD/7 for WN.102 semi-portable compressors.

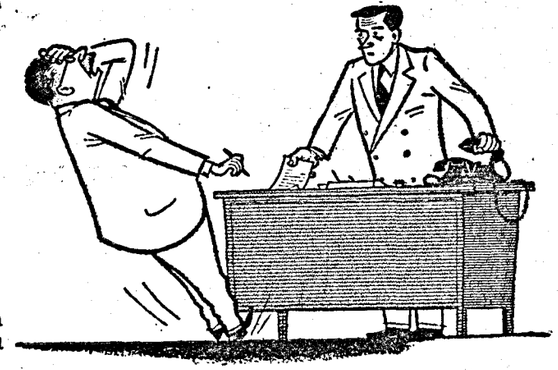
Can you call yourself an E-PLUS* EXECUTIVE?



Question: You have almost clinched a valuable contract with a client. He is about to sign when he sees your quotation and falls into a dead faint.

Should you

1. Rush out to borrow your secretary's smelling salts?
2. Hurriedly delete an "O" from the figure in the contract?
3. Call up on your intercom the First Aid Team which you have standing by for such emergencies?
4. Sign the cheque for him while he is still cold?

Answer 3 gains full marks. You have organising ability and an efficient intercom system. If you haven't the latter, get in touch with Communication Systems Ltd *immediately*. They are the acknowledged experts in this field and their quotations have never been known to cause fainting fits.

* E-plus stands for Efficiency Plus. You can only call yourself an E-plus executive if you can call up any member of your staff without leaving your desk. Otherwise it's time you called in

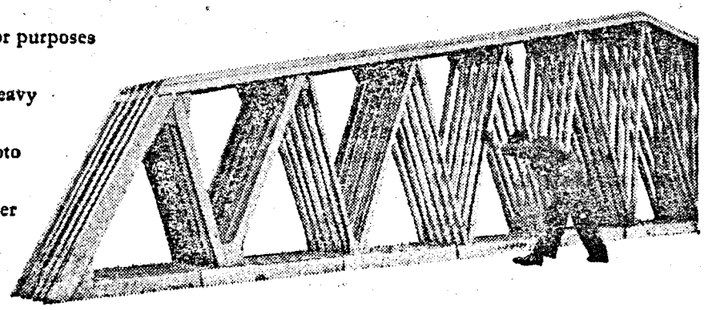
The ancients—and the great 18th century craftsmen, too—knew the advantages of layered wood. But until recently, plywood was suspect because of the inadequacy of the glues used. New adhesives were developed for aircraft manufacture during the war, so that today the glue line becomes the strongest part of the structures.

Line of Life

Aero Research Ltd., now CIBA (A.R.L.) Ltd., made the first urea-formaldehyde and resorcinol-formaldehyde glues produced in Great Britain. Aerolite is the most widely used synthetic resin adhesive in this country, and is employed for purposes ranging from the construction of heavy timber roof members (as in the photo of a lattice truss by Rainham Timber Engineering Co. Ltd.) to miscellaneous repairs in the home.



Aerolite & Aerodux glues for wood

Aerolite and Aerodux are registered trade names.

Company Affairs 51

Private Eyes

AN exceedingly interesting white paper on control of the public pursestrings was issued by the Treasury last week. Briefly, it reveals that the Government has turned down the proposal by some MPs last year that an outside committee should inquire into the principles and practice which govern Treasury control of government expenditure. That refusal was to be expected. What was not so generally expected is that an internal inquiry, under the general authority of the Chancellor of the Exchequer, is now to be set in hand instead. The civil servants on it will seek subsidiary advice from people with "appropriate knowledge" who are not in government service; the recommendations emerging from the inquiry will not be published; but the conclusions drawn by the Government after reading them will be reported to Parliament in due course.

This could be the beginning of some very important developments, for good or for ill. The decision deserves to be debated. Probably, there are three fields that an inquiry of this sort should explore. First, there is the question whether amendments are needed in the mechanism whereby the Treasury and the spending departments should jointly strive to save candle-ends: whether, for example, there ought to be some central body of cost accountants and technical experts to check the wide disparities in the costs incurred by different departments in doing apparently very similar things (differences in the costs of erecting and heating buildings, of providing hostel accommodation, the apparently varying incidence of Parkinson's Law, and so forth). If the Government is seriously ready to tread on more toes in these matters, an internal committee of appropriately bloody-minded civil servants would probably be as good as any other body at suggesting the best mechanistic reforms. If the Government is not prepared to tread on toes, then suggestions put forward by any outside committee would not be accepted anyway.

Secondly, there is the awkward fact, as last week's white paper notes, that "much of what the Treasury does in exercising financial control is dictated by the need for complying with the practices of Parliament itself". This is a polite way of saying that the present system of annual financial estimates presented to Parliament often helps to swell expenditure much more than to check it. Unhappily, the white paper specifically shunts any inquiry away from this field by saying that it would be "inappropriate for the Government to ask for recommendations on Parliamentary practice from a body independent of Parliament". With this statement outside observers should flatly disagree. Nobody denies that Parliament must be sovereign in deciding what recommendations should be acted upon, but that is very different from giving it a veto over what recommendations should be put up.

Thirdly, and possibly most dangerously, the white paper frankly recognises that the Government's internal inquiry is likely to find itself making a review of the "Chancellor's conception of his own responsibilities" in personally checking expenditure. One's apprehension here is that the majority view of an internal government committee, heartily supported by the Chancellor himself, might well be that the Chancellor should be allowed to duck out of some of them. There is a growing feeling in some parts of Whitehall that the idea of the Chancellor as supreme financial watchdog is a bit of a farce, because decisions involving major increases in expenditure are necessarily taken by ministers collectively, and because departmental ministers are bound to know more about the case for particular spending plans than a busy Chancellor can ever do.

But, in any outside committee, there would be at least a strong minority group which would draw precisely the opposite conclusion from this; they would support what might be called the Thorneycroft conception of Treasury responsibility, and seek to make suggestions about how it could be made more effective in modern conditions. If it is true that political pressures for increased spending are likely to weigh more heavily nowadays upon the traditional constable of the national finances, they would say this seems to provide a better case for strengthening the powers of the constable than for weakening them. If a modern Chancellor is too busy with his new job of running the economy to perform his old job of watching public expenditure, that is not necessarily an argument for letting parts of the old job lapse; perhaps, rather, it is an argument for appointing a second Treasury minister either junior or equal to the first minister whose task would not be to busy himself with economic policy, but to run something broadly equivalent to foreign Bureau of the Budget? Surely it is a grave contingent disadvantage of a secret internal inquiry, drawing up a secret internal report, that decisions may be steamrollered through without any opportunity being offered for detailed minority views of this sort to be published, for informed outside opinion to start thinking and talking about?

A Summit for Arabs

The Arabs cannot live for ever on fancied imperialist and Israeli plots. One day they will have to face the responsibilities of being independent

LAST summer it took a revolt in Lebanon, a revolution in Iraq and the American and British landings to make the Arabs agree on something. At the United Nations they jointly introduced a resolution reaffirming the principles of non-aggression, non-interference and co-operation to which they had subscribed twelve years before. But once the immediate problems were settled, they fell back into the habit of quarrelling. Arab unity, removed farther than ever from complete political realisation, no longer even means the ability to make common cause. Baghdad and Cairo are enemies; the border between Damascus and Amman has been closed; insults are regularly exchanged between Cairo and Tunis and Cairo and Amman; Beirut's transit trade has been strangled by Damascene stubbornness. If President Nasser is for a cause then General Qasim must be against it; if King Hussein offers a peace-making proposal he is said to be in league with Mr Ben-Gurion. Relations between Egypt and Sudan are delicately balanced over the question, vital to both countries, of the Nile waters. When all else fails, President Nasser turns on those Arab rulers who, in one way or another, are beholden to Britain — the Trucial Sheikhs, the Sultan of Muscat, the petty rulers of south Arabia. The Yemenis are encouraged to keep up the trouble on their southern borders — though they seem to have troubles enough of their own.

The Arab leaders are entangled in their own words. They do not appear to notice it themselves, but surely the Arab people are beginning to ask questions. In one breath the leaders claim that imperialism is dead and that every vestige of it has been destroyed by what they call Arab nationalism; in the next, they blame imperialism for all the troubles that beset and divide them today. By now President Nasser has realised that imperialists are not necessarily pale people who come in ships from the west; but this discovery has only made imperialism easier to serve up as a mess of poisoned porridge. The squabble between Cairo and Baghdad is not of imperialist making. It is an Arab fight, picked and carried on by Arabs. When the Iraqi army overthrew the pro-western monarchy, one of the few good things that western politicians could say about the revolution was that it ought to heal the breach between Cairo and Baghdad; but it did not.

Israel presents a more obvious target for Arabs in search of enemies. But, if we are to believe what their leaders say every day, the Arabs have been no better at resisting Israeli intrigues than at resisting imperialism. The Israelis have almost always had their way against Arabs. They carved their state out of Arab territory, they defended it successfully against a gaggle of Arab armies in 1948, they humiliated Egypt's armed forces in 1956, and despite Egyptian attempts to keep them from using the Suez Canal, they have burst through the Arab economic blockade to find trade and friends in Africa and Asia. Their prime minister recently proposed that the four foreign ministers at Geneva should turn aside from the business of Berlin to consider a plan to neutralise the Middle East. There was no hint of what such a move would do to the already bruised *amour propre* of the Arabs; there was no pretence of taking them into consideration at all. Any proposal by Mr Ben-Gurion could be expected to annoy them; but, by offering a sweeping plan to settle the Middle East he committed the same error that the great powers have made in the past with their pacts and doctrines. The foreign ministers apparently took no note of his suggestion — but the Arabs should consider its implications. It means not only that Israel has little respect for the Arabs' ability to do anything for themselves, but also that it has cause to believe that the great powers feel the same way.

So far, the Arabs have failed all the tests of unity offered them. The Arab League has never been effective because the Egyptians and their friends tried to make it into an exclusive club and left the other Arabs pouting in the corridors. The Arabs could not put aside their differences long enough to fight together in the 1948 war. They have not accepted President Nasser as their sole unifier. He tried to bring them unity just by talking about it, and he still talks about it as if it existed beyond the borders of Egypt; but his insistence that his is the only true way to unity has left them divided as never before.

If the rest of the world regards the Arabs as a contentious and ridiculous lot of people, it is not the fault of the rest of the world. It is not the fault of imperialist plots in the Middle East, of the cold war elsewhere in the world, of communist intrigues, or of Israeli enmity. If the Arabs expect to be treated as adults, they will have to accept the responsibilities of adults.

Westerners newly arrived in the less sophisticated parts of the Arab world often complain that difficult language and rigid social barriers prevent them meeting many local people. The rival Arab leaders have manoeuvred themselves into the same kind of isolation with regard to each other. They have even created an artificial language barrier. If a word means one thing in Cairo it is likely to mean something else in Baghdad.

PERHAPS the only way out of the Arab leaders' difficulties is for them to get together and talk frankly to each other. If they could meet somewhere well removed from their own street mobs and propaganda machines, they might yet discover that they had much in common. True, it would not be easy to find a meeting place. Cairo would not do, because it would look as if the others were paying homage to President Nasser. Baghdad would not be acceptable to him, for the Iraqis have undertaken to drag him through its streets at the end of a rope. Amman would be regarded as too insignificant and, anyway, it lacks suitable accommodation. In their present mood the Saudis are probably not anxious to issue invitations to Riyadh. Beirut's pretentions to neutrality and ample supply of outsize hotel suites would make it the logical choice, if it were not for the danger of exposing the meeting to the wayward Lebanese press. But if there is no place in the Arab world for the Arab leaders to lay their heads, then let them assemble somewhere else. Cyprus lies conveniently adjacent to the fringes of the Arab world: if a British connection has to be avoided, there is Rhodes, or even the Greek mainland.

It would be well to invite every Arab ruler, whatever external connections he may have. The kings of Saudi Arabia, Jordan, Libya, Morocco and Yemen; the presidents of the United Arab Republic, Tunisia and Lebanon; the prime ministers of Iraq and Sudan; the sheikhs of Kuwait, Bahrain and Qatar; the sheikhs of the Trucial Coast; the Sultan of Muscat; even the assorted amirs, sultans and sharifs of south Arabia should be there. But who would invite them, and who would accept? Only one Arab could be considered impartial enough to play host, Mr Abd al-Khaliq al-Hassounah, the secretaty general of the Arab League. For all its past ineffectiveness and close connection with the foreign ministry of the United Arab Republic, the league secretariat has been carefully steered between the reefs. If Mr al-Hassounah could perform the miracle of persuading President Nasser and General Qassim to attend, he could be sure of a general acceptance; if they refused, there would be no point in having the meeting. King Hussein's recent suggestion of an Arab "summit" meeting went unheeded because it came from the wrong source; none of his fellow rulers could afford to admit publicly that he ever had a sound idea.

Whenever Arabs meet they are in the habit of quarrelling violently and then issuing a joint statement deploring French action in Algeria and promising that the refugees will be returned to Palestine. But the world already knows how the Arabs feel about Algeria and Palestine. What they now need to show the world is that they can handle their own affairs, and that they are not really so foolish as they look.

The Conference Game

An eminent academic correspondent suggests a cure for the ennui of listening to the pompous irrelevancies of one's opponents and, still worse, of one's friends—at committee meetings and conferences

IN Government, business or academic life modern man spends an increasing part of his time in conferences and committees. This is an arduous burden. Sitting in interminable conference sessions and endless committees exhausts the mind and harrows the soul. There are two ways of dealing with this ever growing problem. I dismiss the possibility of revolutionary action to destroy the conference and committee system, for that is beyond the capacities of modern man, and we must learn to live with it. My first solution is to become a detached observer and use the rich material that is provided by these occasions as a basis for the study of administration. That is to reach for the ideal. The second solution is not quite so worthy; it is to play the Conference Game. This is much better fun.

I did not invent the game. I first came across it when I worked as a civil servant during the war. The department of which I had charge was mainly staffed by academics. Some of these took to bureaucratic life as does modern youth to space travel, but others found it uncongenial and irksome. Such a one was "X", now an eminent Professor at Oxbridge. He was incapable of carrying out his task according to the rules of the bureaucratic game. At the weekly staff meeting he contributed nothing to our discussions, and wore the air of a lost and remote figure. Then one week I was struck by a strange liveliness in his outlook. He appeared anxious to contribute to the argument, and put in a sentence or two on every conceivable occasion. This went on for two or three weeks, when I noticed that at a certain stage his loquacity would stop suddenly, as a road hog meeting a red traffic light, and he would lapse into his silent and remote mood. The following week I noticed that at this moment af change, "X" winked to a colleague who winked in return.

It was about the fifth week that I spotted the secret. On this occasion, in the last sentence he spoke before lapsing into silence, "X" used the word 'hermaphrodite." It did not altogether fit in with the flow of the discussion. When I tackled him afterwards, he admitted, without shame, that through over-confidence he had played carelessly. He explained, as I had now myself realised, that he and his colleague were in league to relieve the boredom of the weekly staff meeting. An hour or so before the meeting they agreed on some unusual word; the game was to see which could first introduce the word in the proceedings. The condition of winning was that no one else at the meeting should notice what was going on. "Hermaphrodite" had been to much to get away with.

AT a recent conference I attended on the application of the social sciences to business management and training, the sessions were so boring, frustrating and irritating that I was reminded of the game. One evening at dinner I was lamenting the waste of so much effort to a charmingly exuberant Italian and a sensibly sceptical American and I explained to them how "X" had dealt with a similar situation during the war. The Italian immediately saw the essential beauty and fascination of the game. He would give me a word, and challenge me to introduce it into a speech at the final session without anyone but us noticing it. Being a novice he first chose easy words, such as "duck" and "port" and I had to show him that such words provided no real challenge, and so missed the essential element of distraction and excitement. With further thought and more wine the Italian suggested progressively more difficult words until he hit on two that were worthy of an advanced player—"Unicorn" or "Tropic of Cancer." I accepted the challenge of "Unicorn."

The final session of the conference came in the afternoon. A rapporteur was to sum up the proceedings in forty-five minutes; this meant that in fact he spoke for well over an hour and a quarter. When at last he finished, the chairman asked, in an appropriately discouraging tone, whether anyone wanted to comment. Too obvious, if I get up now, I thought with a sinking sense of loss. But a Dutchman sprang to his feet, said how important it was that social scientists should make themselves understandable and useful to business, etc., etc. Here was my chance. On this issue I felt deeply and passionately, and I rose to say so:

> Mr Chairman, I had not intended speaking, but, view of the comments of the last speaker, I cannot contain myself. I disagree with him fundamentally, and my disagreement has been reinforced by the discussion and argument that I have heard during this conference as chairman of the economics group. If I had to chose a coat of arms for my group it would be a bull rampant, for as economists we have been tossed on the horns of a dilemma. On the one hand, if we deal with problems in the theoretical terms with which we are familiar, we are accused by business of being remote and impractical; on the other hand if we go out as economists into business we are tempted to deceive businessmen into thinking that we have some magic solution to their problems, and are despised for this by our more honest academic colleagues. Why should we be concerned with our usefulness to business? I would much prefer my coat of arms to be a unicorn, and to be impaled, if I must, on the single horn of truth! For me the true scientific tradition can best on this occasion be expressed in French, and execrable though my accent may be, I will proclaim it: "A bas la utilité, vive la verité."

I sat down to great applause, especially from the Italian and the American. I had won, I had said what I wanted to say, and yet got in the word "Unicorn," without anyone, exept my two friends privy to the game, noticing.

I hope I have convinced you what a fascinating game this is, and how it can be played to relieve the boredom of conference and committee life. Do try to play, and if there is enough support we might form a Unicorn Club to codify the rules of the game and adjudicate disputes.

NOTES OF THE WEEK

LABOUR AND THE BOMB

Saving Nuclear Face

When a Labour politician knows he may be hanged by union delegates in a fortnight, it concentrates his mind wonderfully. It would be easy to make fun, as Lord Hailsham instantly demonstrated, of the way in which the notion of a non-nuclear club, cold-shouldered by the Labour Party when Lord Simon of Wythenshawe advocated it in the House of Lords six months ago, became the bright new policy of the party's National Executive and the TUC's General Council last week. But what is far more to the point is to notice the care with which Mr Gaitskell, in responding in double quick time to the demand in his party for a new statement once its noisiness had become apparent to him, has safeguarded the prerogatives of the office of Prime Minister to which he aspires.

There are three firm promises in the course of the party's long statement, which will need treating by somebody from the *Daily Mirror* if they are to seem significant to the electorate. A Labour Government would lay a new stage-by-stage plan for complete all-round disarmament and abolition of nuclear weapons before the United Nations. If anyone broke the nuclear test truce a Labour Britain would not follow suit but would call an international conference to try to renew it. Britain would cease the manufacture of nuclear weapons and deprive herself of their possession if she could persuade all other nations except the United States and Russia to sign an agreement, preferably under the auspices of the United Nations, saying that they would do the same.

These all try to get other countries to do generally desirable things which it is singularly unlikely that they will do. They can be lampooned as meaningless doubletalk; they cannot fairly be condemned as dangerous commitments. Mr Gaitskell may have managed to make himself look a bit absurd; but he has also – and this is the important thing – remained personally and dauntlessly free to carry on the main theme of defence policy in which he believes, which is loyalty to the Nato alliance.

STRIKES

The Opposition's Chill

In his fighting speech to the striking printing workers at an Albert Hall meeting last week Mr Willis declared that he had not expected the employers "to be so tough". He opined that the reason for their unexpected stand was that employers in other industries had encouraged them not to set off a new spiral of wage inflation by giving way; if employers in outside industry had decided to lift the printing dispute to a national issue, he said, they must take the responsibility if it became one. By these words Mr Willis has managed to strike something of a chill into the hearts of both the Opposition and the Government — for very different reasons.

The Labour party is terrified because the last thing it wants is for strikes to become a national issue at this time; there is nothing that would lose it more votes. It was presumably for this reason that the Trades Union Congress, of which Mr Willis is this year's chairman, unexpectedly temporised last week by not yet issuing a conventional statement of support for the printing workers; officially, therefore, it has so far done even less for Mr Willis than it did for Mr Cousins last year. The Labour party leaders cannot be at all pleased at the unfavourable publicity given to the printers' picketing methods in Kent last week, nor at the unions' threats to spread the strike against official printing of government papers and their vaguer hints that the national daily press, too, may eventually be stopped. (These last hints are designed mainly to try to steamroller the *Daily Mirror* into accepting the unions' terms for its strikebound weekly subsidiaries). Meanwhile Labour's political cup is being made bitterer still by a new twist in the troubled motor industry, for which orthodox trade unionism cannot fairly be blamed; the communist leaders of the Electrical Trades Union are seeking to strengthen their show of militancy, in this period of their campaigning

for re-election to office, by bringing to a head some peculiarly nasty pieces of closed shop victimisation which the other unions wish to avoid. And the Merseyside boilermakers, who are also a law unto themselves, came back from their latest demarcation strike last week, only to walk out on another one a few hours later.

The Government's Apprehension

Politically, the Government is not at all averse to strikes becoming a national issue. But, economically, it certainly does not want the settlement at the end of the printing dispute to become a national standard for this year's wages round. Obviously, the printers are going to get some wage rise and some reduction in hours in their new wage contract; the employers offered them this before the strike began. As the printers traditionally make wage contracts for three years at a time, any rise they get this year should logically be about three times as much as unions that make annual wage claims can expect to get. But the Confederation of Shipbuilding and Engineering Unions, which is now formulating its annual clain for higher wages and shorter hours, is likely to slur this point when its own negotiations come to their crunch; and the shadow of the approaching independent review of railway wages must be very much in the Ministry of Labour's mind. It is no doubt partly for these reasons that the Ministry has not this time reacted to the printing dispute by setting up a court of inquiry, with the old familiar tacit orders to jostle the employers into a little more show of surrender. For this forbearance, the Government was indignantly accused by Mr Willis last week of abandoning its tradition of impartiality; it was, he said with magnificent Irishism, "interfering by doing nothing".

Meanwhile *The Economist*, as a stricken bystander of this dispute, with no animus of its own against either side, and only the desire to serve its readers by coming out as best it may, appears for the third week running in a third different sort of dress. Once again we apologise to everybody, advertisers and all, for imperfections in this emergency product.

AIR CORPORATIONS

Could Do Better...

Both of Britain's nationalised air corporations have received a sharp dressing down from the Select Committee on Nationalised Industries, which spent the twelve months to last March looking into their working methods, and has come out this week with the report "Could do better (in the case of BOAC, much better) if they tried." This committee has felt hampered in past investigations by the lack of a yardstick by which to measure the efficiency of nationalised industries; this time it certainly had plenty of opportunities for comparing the performance of the British corporations with foreign airlines, and has seized them with both hands. Even these comparisons are not particularly severe, for by ordinary commercial standards most of the world's airlines show up none too well; they are, as the select committee recognises, intentionally or unwittingly the instruments of national prestige. However, the comparisons did permit the committee to press witnesses from both corporations a good deal harder on purely technical grounds than they might otherwise have found it possible to do.

This was particularly true of BEA. The corporation put forward several plausible reasons why its aircraft utilisation, the amount of work done by its staff and its general level of costs all compared more or less unfavourably with those of other airlines. But the committee refused to accept these arguments where they ran counter to the evidence of the figures and retorted that from the evidence of BEA themselves there was room for improvement. This was nothing like as great, however, as the room for improvement it discerned in the affairs of BOAC. Whereas the committee seemed to feel that BEA needed merely an occasional gingering up to prevent complacency, it reserved its heavy artillery for BOAC.

BOAC comes under heavy fire on two counts, both of which have been common knowledge for several years; its excessively high maintenance costs and the continued heavy losses made by its large network of subsidiary companies. The committee has ferreted out from an unwilling corporation just how large those losses have grown, for example £100,000 this year on Bahamas Airways, £900,000 on Middle East Airways, £150,000 on Kuwait Airways; and perhaps £700,000 on British West Indian Airways. It has elicited figures showing that maintenance costs account for more than one quarter of the corporation's direct operating costs and are twice as high as those of Pan-American. It has also wrung from BOAC the admission that for some years now the corporation has not been setting aside enough for aircraft depreciation so that when the figures are eventually properly adjusted, its financial out-turn in past years will look worse than they seemed at the time.

The Airlines and the Minister

This is no sudden calamity that has hit BOAC but a slow cancer of which the management has been aware for several years without, apparently, ever having been able to screw itself to the point of facing the drastic surgery required to cure it. What the Select Committee finds difficult to forgive, as may readers of its report, is the fact that its management has known that the corporation's engineering costs were growing further and further out of line with those of other airlines for the past seven years, since 1952; yet it does not expect to have completed the re-organisation of the engineering shops before mid—1960 at the ealiest. The labour negotiating machinery that was wished on the corporation may be slow and cumbersome, but the committee appears to feel with some reason that a more vigorous management could have got it to work rather faster than this.

Implicit in the pages of the report is the feeling that BOAC's management is too easily subject to pressure, whether it comes from the trade unions at the bottom, or from the Minister at the top. The committee has once again, with a nationalised industry, its finger on a form of pressure that it takes an exceptionally strong management to resist, namely informal, non-statutory interference by a Minister who can, according to the committee "when he wishes prove very persuasive." Airlines, including the independents, may be surprised to find how little statutory authority the Minister in fact possesses for the variety of controls that he exercises over British operators. The committee lists seven functions, including capital expenditure, fares, and charter activities, over which the Minister has no authority from Parliament to exercise any authority at all, but which the airlines all accord him as a matter of custam. The committee does not necessarily object to the Minister's control in these matters of high policy; what it wants in these nationalised industries, as in others, is a clear-cut division of responsibility between the management and the minister. To exert these controls by clear directive, which would certainly be preferable, the minister would need to seek from Parliament considerably greater powers than he has ever yet been required to justify.

GHANA

Defending the State

The Ghana government published last week the report of the three-man commission, headed by Mr Justice Granville Sharpe, that has been investigating whether there was a conspiracy to assassinate the prime minister, and whether two opposition MPs, Mr Amponsah and Mr Apaloo, together with Captain Awaitey, were involved in it. In brief, the commission unanimously found that the two MPs were engaged in a conspiracy to carry out "an unlawful act" at some future date. But while two members found that the MPs intended to persist in this, in association with the captain, the chairman argued that they had not conspired with the captain, and did not intend to assassinate Dr Nkrumah when he left for India in December.

The government has accepted the unanimous report; but in a white paper, also published last week, it goes further and frames a general indictment against the opposition as a whole. While saying that it intends to maintain a democratic constitution in Ghana, it alleges that since the opposition has always sought to overthrow it by unconstitional means, it must now bring in fresh laws to protect the state. Under the laws of sedition and treason inherited from the colonial government, it can neither prefer criminal charges successfully against persons who act l ke Messrs Apaloo and Amponsah, nor detain them on suspicion in prison; nor can it proceed against, for example, Dr Busia, the opposition leader, for making allegedly untrue statements abroad.

The laws it now intends to introduce to remedy these deficiencies should pretty well complete the machinery of control. It is all very well for it to declare that it must have these powers when the opposition fails to behave with the law-abiding propriety and decorum of British oppositions; but neither does the government or the ruling Convention People's party behave with the restraint of a British party in power — as is demonstrated by the legislation that has been passed since independence to ensure the government's control. Possibly it was inevitable that Ghana would end up with an authoritarian government. But it cannot at the same time complain if the opposition sometimes toys with dangerous ideas; this is the usual sequence, whether in Africa, South America, or even in Europe.

IRISH REPUBLIC

Mr Lemass's Inheritance

Our Dublin Correspondent writes: In his last campaign Mr de Valera secured what Dublin has since defined as a PR-ic victory. He won the presidential election; but by a narrow majority of, 34,000 in the referendum the voters rejected his advice to change the republic's constitution. They have decided to retain the present method of Proportional Representation instead. Even in the presidential election Mr MacEoin did much better than most people expected, by getting 44 per cent of just under a million votes. It was not a heavy poll, but its pattern was interesting. It was a matter of Dublin against the rest of the country. In the city constituencies Mr MacEoin secured a narrow majority, offset by Mr de Valera's lead elsewhere. All the Dublin city and county constituencies voted heavily to retain PR; elsewwhere there was a majority for abolition.

And so almost everybody is pleased. Mr de Valera is presumably gratified by his election. The voters are congratulating themselves on the maturity of judgment shown by voting for him and against his proposals to abolish PR. To judge by her letters to the Irish newspapers, Miss Enid Lakeman is very pleased indeed. The decision in the referendum reflects both the temperamental conservatism of the Irish electorate and their readines to show a government, even one to which they gave a large majority only two years ago, that it must not push advantages too far. On balance it does seem that the voters made the right decision.

It will now be possible to get back to a consideration of economic affairs. Nothing has been more typical of Mr. de Valera's political career than the manner in which he ended it: politics have been centred for the last nine months on a purely constitutional issue at the expense of more urgent affairs. His successor as head of the government, Mr Lemass, may be relied on to restore the balance. He is possibly the one person who is not pleased. The Dublin voting may be a portent, and all recent elections have been decided in the Dublin constituencies.

Mr Lemass has, however, an apparently safe parliamentary majority, and he need not call the next general election until 1962. He has time to give a new look to his party. The last couple of years have witnessed a surprisingly general reconsideration of policies that had previously been held sacrosanct ever since Mr de Valera first came into office in 1932. The change at the top may accelerate the process. Mr Lemass has been principally interested in increasing industrial production. In many respects, this has been thoroughly unfortunate: Ireland would be a more thriving country if half as much energy had been devoted to the improvement of agriculture. But the new Taoiseach is known to be interested in the new international trade groupings that are energing, and this may involve a reshaping of policies in many directions. Any party that evolves a programme suited to contemporary needs will deserve to do well in 1962, or earlier. It remains to be seen if Mr Lemass can persuade his party to do so.

FRANCE AND ITALY

Gaul in Italy

General de Gaulle's visit to Italy, his first trip abroad as president of the Fifth Republic, was a colourful as well as a crowded affair. It began with a sentimental journey to the battlefields of northern Italy, where, a hundred years ago French and Italian forces fought the Austrians. It ended with a visit to the Vatican, where the general was received with great magnificence. Whether the lengthy private talks between the French visitors and their Italian hosts were as satisfactory to General de Gaulle as the public occasions presumably were, is a matter for speculation.

The statement issued at the end of the visit is not illuminating. Its most concrete point is a suggestion that the British, French, Italian and American (but, curiously enough, not apparently the West German) foreign ministers should meet in Geneva before the east-west conference resumes on July 13th. This is evidently an attempt to give a more formal air to consultations of the kind Signor Pella held with his western colleagues informally, over the lunch table, before the Geneva conference originally began. General de Gaulle may well be disappointed that this is the only specific outcome of a visit which he himself took the initiative in transforming from a purely commemorative visit to the 1859 battlefields to a full-scale state affair. But although Italy's links with France are in many ways close, and are likely to remain so, it is hardly surprising if he failed to get much Italian support for his efforts to exalt France's standing in Europe and in the Atlantic alliance. The present Italian government, which recently agreed to the installation of rocket-launching sites on its territory, is a strong supporter of Nato and of close cooperation with the Americans; it, too, would like to have a bigger say in western policymaking; but having put its money on Nato, it is hardly likely to feel that the best way to secure this is to support General de Gaulle's aspirations — especially when he is at the same time whittling away France's effective contribution to the Nato alliance. Similarly, Italy's desire to remain on good terms with the Arab countries presumably prevents it from openly supporting present French policies in Algeria. General de Gaulle was received with great cordiality in Italy; but the cordiality evidently did not extend to jeopardising what are considered to be Italy's best interests.

BOOK EXPORTS

Looking at a Gift Horse

Dr Charles Hill has received wide acclaim for his five-point scheme to publish about two million cheap British paperback books for distribution in poorer countries, and to try to push the readership and sales of British books and periodicals in these and other difficult markets overseas on aid-plus-trade terms. As *The Economist* itself might, in some circumstances, hope to benefit under one part of the scheme, it may seem ungrateful to carp. But a hidden subsidy to us would be as two-edged a weapon as a hidden subsidy to anybody else; and it would be dishonest not to point to the disadvantages.

Dr Hill will have to watch the effects of his negotiations on countries which do not yet restrict the use of foreign exchange for imports of British books and periodicals; if they see their more restrictive neighbours getting books on favoured terms, they may decide that book imports are a profitable thing for them to ban when next they run into a currency crisis. Dr Hill showed how large was the purely commercial export market for British books; it would be a pity if his scheme made this any smaller, even while maintaining or expanding the volume of books shipped. The political fact had better be faced that many poor countries will bless Russia's cheap book scheme for forcing western countries to these socialist expedients. Such criticisms cannot be levelled against the proposed expansion of libraries, book vans and book boxes — though they, like the British Council's English courses, are gifts to the country in question. They are also beguilingly easy to mismanage.

Dr Hill showed himself alive to the delicacy of the question of what titles would be selected for subsidisation in any of the forms proposed (this will extend to periodicals too). It is to be feared that even his proposed advisory body will save him from streams of parliamentary questions; "Dr Hill's book-list" is bound to be criticised by everybody who is excluded from it. It is hard to believe that ministers will be able to defend themselves on the grounds that these are the books the customer really wants. The back-stairs lobbying — perhaps especially on technical books — may be great. Wartime experience with the book scheme may not prove a good guide. The extra £500,000 a year, which Dr Hill proposes to spend from 1960 on, would be a small price to pay for any scheme that played a successful part in spreading British thought and British ideas among the poorer countries of Asia and Africa. But may not the Government be setting foot on a much more slippery slope than it realises?

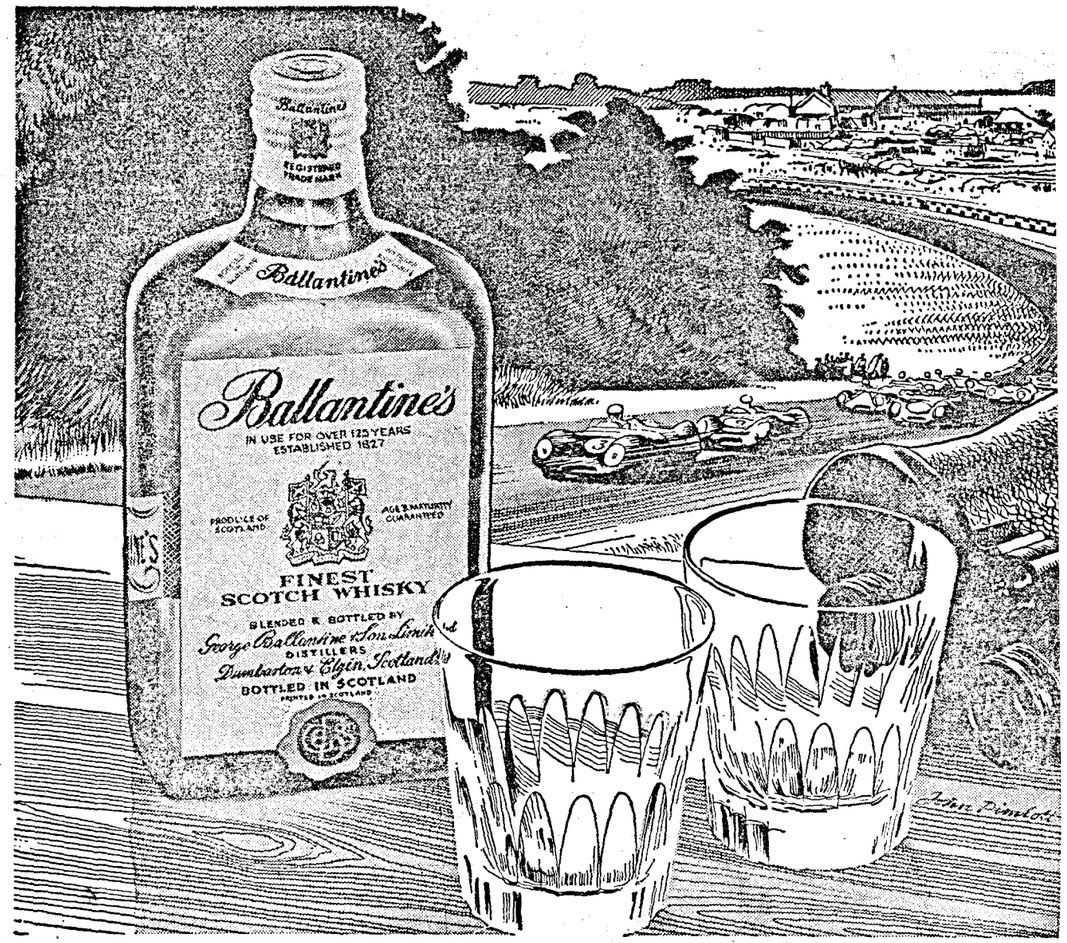
UNITED ARAB REPUBLIC

Beginning From the Bottom

Now that Middle Easterners have a choice of revolutionary regimes, President Nasser is on his mettle to keep the dust from settling. Next week he begins a second attempt to graft at least some of the appurtenances of democracy on to his government. He first experimented a couple of years ago with the creation of a National Assembly, and a rather woolly non-party popular front organisation, the National Union. But all this never amounted to much, and it came to an abrupt end when Egypt and Syria joined forces in March 1958.

This time he is beginning from the bottom upwards. On July 8th, both regions of the United Arab Republic are to elect members for the local committees of the National Union. These committees will then elect councils for the 33 provinces of the UAR, which in turn will elect a general congress. Then, if all goes well, the President will himself select from the general congress a new National Assembly in time for a first sitting in November.

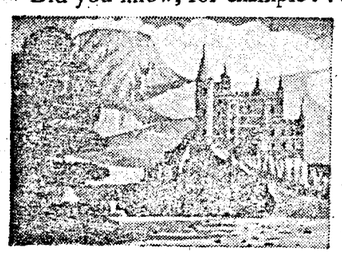
An entirely nominated assembly with only advisory powers will hardly set the Nile on fire. Under the 1958 constitution at least half the new assembly is to be drawn from members of the dissolved Egyptian and Syrian par-



The more you know about Scotch, the more you like Ballantine's

THE SUPERB SCOTCH

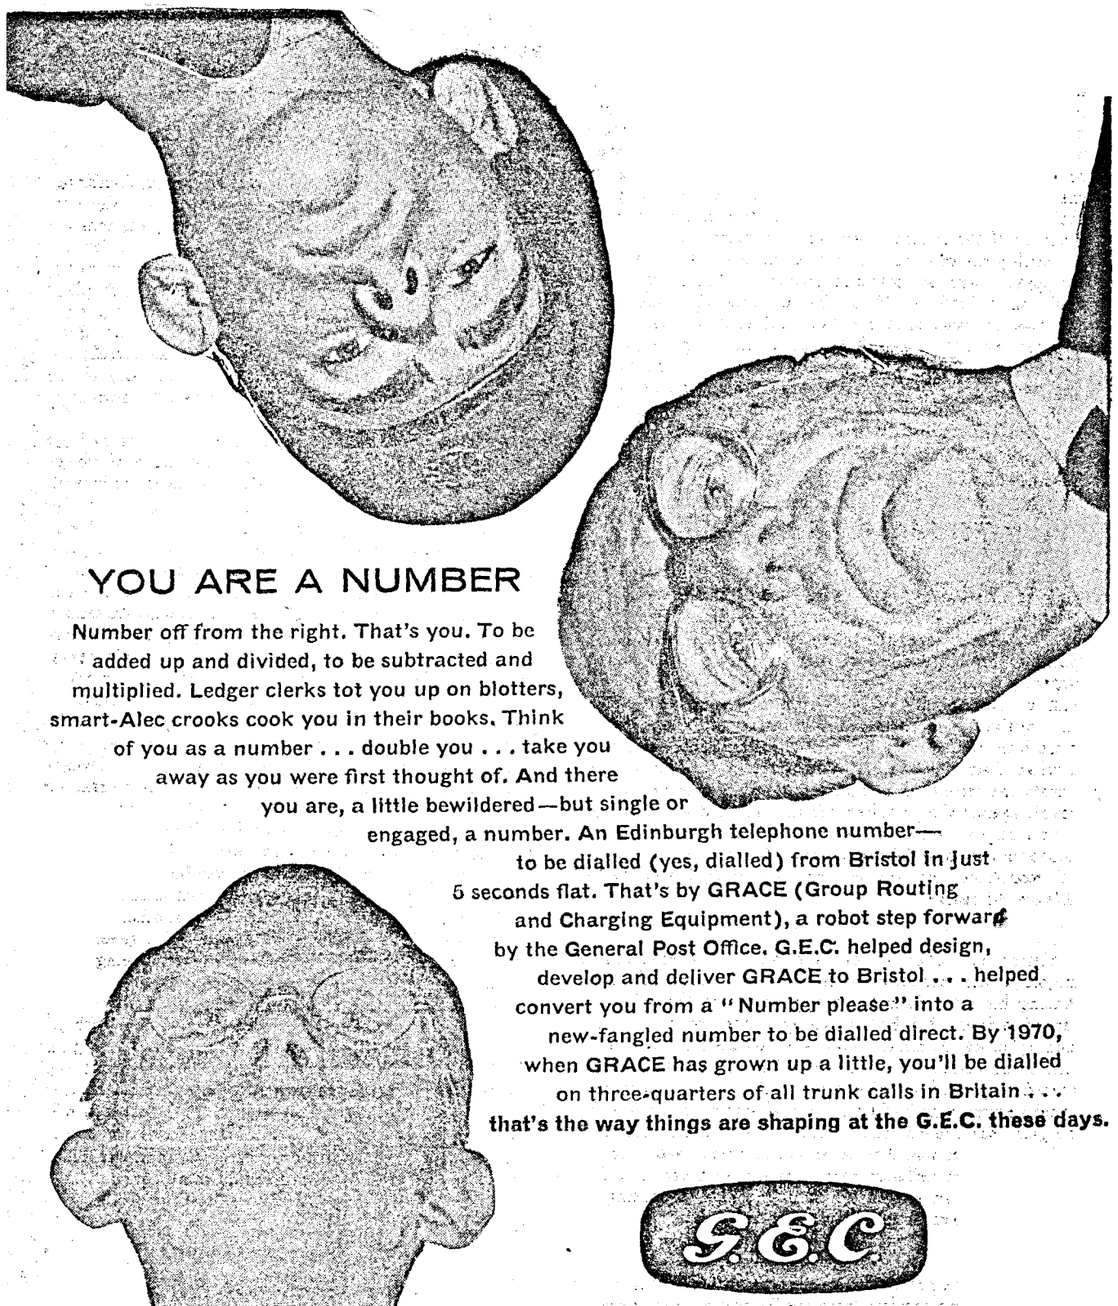
Did you know, for example?...



that in homes like this, Ballantine's was first drunk over a century ago. The knowledge and appreciation of really good Scotch has been handed down with the family escutcheon — the same famous names appear in the order books of to-day.

that sparkling streams bubbling down the heather-clad hills are used in the making of Ballantine's. Their crystal-clear waters impart their own unique character to the flavour of this fine Scotch.

that Ballantine's is one of the best liked Scotches in the world. In the United States, Sweden, France and many other countries, it is a top seller. The world over, when friends meet together, they naturally prefer the superb Scotch.



YOU ARE A NUMBER

Number off from the right. That's you. To be added up and divided, to be subtracted and multiplied. Ledger clerks tot you up on blotters, smart-Alec crooks cook you in their books. Think of you as a number . . . double you . . . take you away as you were first thought of. And there you are, a little bewildered—but single or engaged, a number. An Edinburgh telephone number—to be dialled (yes, dialled) from Bristol in just 5 seconds flat. That's by GRACE (Group Routing and Charging Equipment), a robot step forward by the General Post Office. G.E.C. helped design, develop and deliver GRACE to Bristol . . . helped convert you from a "Number please" into a new-fangled number to be dialled direct. By 1970, when GRACE has grown up a little, you'll be dialled on three-quarters of all trunk calls in Britain . . . **that's the way things are shaping at the G.E.C. these days.**

G.E.C.

liaments, and it will be easy enough for the president to exclude the more tiresomely outspoken. But the last Egyptian essay at democracy, in which the assembly members were elected by general vote from a carefully sieved group of applicants, showed that even after screening several of the parliamentarians were prepared on occasion to speak their minds — although, admittedly, some of their fiercest criticism of the executive was inspired from above.

Possibly the most useful part of the new scheme will be the spider's web of local and provincial committees, especially since President Nasser has unexpectedly ruled that the lists of candidates for the local elections are to go forward as they are without any official screening. The various councils look like having rather vague functions, and they will certainly have only slight powers; their importance will be as links between the central government in Cairo and the villages.

ARGENTINA

President Under Pressure

Having finessed his way through a critical upheaval, President Frondizi is still in control but with even narrower support than before. His reliance on military backing for pushing through the economic reforms that Argentina so urgently needs, but so stubbornly fights against, had put him in the horribly exposed position of depending on the loyalty of the armed forces, many of whose leaders were from the start suspicious and resentful of a left-wing civilian. Last week an eruption of arrests and resignations within the armed services looked like developing into open revolt against the president. He has survived — or at least won a respite — but only by dint of throwing out his old economics team and bringing into the cabinet, as minister of economics and labour, the right-wing leader, Señor Alvaro Alsogaray.

Elected just over a year ago with an overwhelming majority, the president is now pressed from all sides. Among his most formidable opponents are the group of retired officers, led by the vice-president of the revolutionary junta, Admiral Rojas, who accuse him harshly of still being tarred by the Peronist brush. In May, he was forced to get rid of Señor Rogelio Frigerio, his close personal adviser, who had been given damaging credit for the bargain that brought the Peronistas over to Dr Frondizi's side at the election. And a couple of weeks ago, General Perón dosed an inflammatory situation with yet more fuel by publishing an alleged electoral agreement promising his party a return to political life in return for its vote.

Whatever the pre-elction manipulations, President Frondizi now gets no comfort from the Peronistas. His attempts to make sense out of the economic mess he inherited have alienated the workers and trade unions, who now discredit him as a traitor to left-wing causes. The evils of Perón's regime live on, and industrial workers who have come to expect good living, and as much or as little work as they feel like, deeply resent a rocketing cost of living. Every man is out for himself, and most are against the president.

BRITISH CARIBBEAN ASSOCIATION

Bipartisanship on Race

MPs of all three parties who founded the British Caribbean Association last year to strengthen relations with the new West Indies Federation deserve warm congratulations on their agreement to co-sponsor a modified version of Mr Fenner Brockway's private member's bill against racial discrimination, which failed to win a high enough place on the ballot this session. When the Home Secretary recently he promised to look sympathetically at any draft measure which commanded wide support. Undoubtedly the bill's chances will be greatly increased, especially if the Tories win the election, by its attraction of Conservative sponsors.

Race relations in Britain should never be a party issue either in the sense of being exploited on election platforms or in the sense of becoming by default a subject of interest to only one political party. But they are very much a political issue in the complimentary sense that the special skills acquired by political experience are indispensable in planning effective action. With all possible respect to those Labour and Liberal members who have an excellent record in working for the good of coloured people who are seldom their own constituents, the most encouraging feature of the British Caribbean Association is the number of Conservative backbenchers who are taking an interest in its work.

Terribly late in the day, and perhaps as the result of several years' prodding by the Bow Group, some Tories have realised the folly of allowing the impression to go abroad that only Mr Fenner Brockway and his devoted group of fellow workers on the left are willing to take up coloured people's causes. It is not intended as any reflection at all on Mr Brockway, who is a living refutation of the foolish notion that a backbencher's life need be a useless one, to say frankly that, because he is type-cast as a leftwing Socialist, a Conservative government tends to bristle instinctively at the approach of another "Fenner Brockway case". While there is a Conservative government some of these cases would undoubtedly gain by being handled through the Conservative Party's channels.

The emergence of Mr Nigel Fisher as the hard-working co-chairman of the British Caribbean Association (with Mr Charles Royle, for the Labour members) is a big step in the right direction. But it is to be hoped that Mr Butler will be more forthcoming wich suggestions from within his own party than his colleague the Minister of Education, who has given a dusty answer to Mr Fisher's plea for special instruction in the schools about race relations. Mr Fisher is on the right track. Mr Lloyd should think again.

CHINA

Hard School of Life

Man cannot live by statistics alone. This year, the Peking government has been finding that out the hard way. Its official figures have recorded sensational harvests that have supposedly almost doubled the country's food supplies; but its official instructions to local communist authorities have been full of advice on how to mitigate severe and

widespread food shortages, or at least, failing anything better, how to explain them away.

Ironically, only last year the leaders in Peking ordered many thousands of intellectuals from the universities and other centres of urban disaffection to enrol in the hard school of real life, by going to help the peasants work the land or to provide building labour on construction sites in the remote and rugged interior. Some reversal of this policy has now been reported; students and professors alike are trickling back to their lecture rooms, and courses in the liberal arts, which had been virtually abolished, seem to be reviving. Perhaps the government thinks the intellectuals have been sufficiently humbled; perhaps some of them were less help than hindrance on the land; perhaps it has been realised that China actually needs to keep graduates flowing from its universities.

The recent drying up of this flow has been vividly described by an Indian visitor, Sripati Chandrasekhar, the director of the Indian Institute for Population Studies, in articles in *The Reporter* and elsewhere. The head of Wuhan university proudly told his guest that there were now 3,700 students, nearly four times the pre-revolution figure, and added, equally proudly, that they were manning several farms, an ironworks, and scores of small industrial enterprises. In Shanghai, at the former St. John's university, the buildings seemed almost deserted. The puzzled visitor slowly induced a deputy director to reveal that, out of the 4,600 students enrolled, 2,000 were away working on farms, 2,000 were working full time in factories and coming to the university only once a eek, 200 were melting down steel scrap and 200 were assigned to the militia on the Fukien »front«.

SOVIET UNION

Shorter Week

For the six million Soviet engineering workers, it is now announced, October will mark the beginning of a shift to a shorter working week. A 42 hour week — six working days of seven hours — is soon to be the rule; the changeover is to be completed next year. The engineers will thus follow the one million coal miners, who have been the first beneficiaries of the drive to reduce hours of labour which was the most tantalising promise uttered at this year's party congress. The plan is ambitious. It provides that by the end of 1960 all Soviet workers and civil servants should work 42 hours a week, that two years later the 40 hour week should be universal, and that by 1964 the switch to 35 hours should begin. If things go according to schedule this will be completed by 1966—68, when underground workers should have an even shorter week.

To-day, the official average is six working days of 7.5 hours. Assuming that the authorities keep their pledge, the reduction in labour hours will offset more than half of the expected 21 per cent increase in the total labour force in the current seven year plan (1959—1965). Thus the bulk of the planned rise in output — 80 per cent in seven years —is to be reached through increased productivity. Hence the importance of the conference concerned with automation and other problems of management or technology which was opened in Moscow on Wednesday under the auspices of the party's central committee. The task is the more urgent since Mr Khrushchev has now confirmed that the Russians are trying to fulfil their plan ahead of schedule, in six or possibly five years.

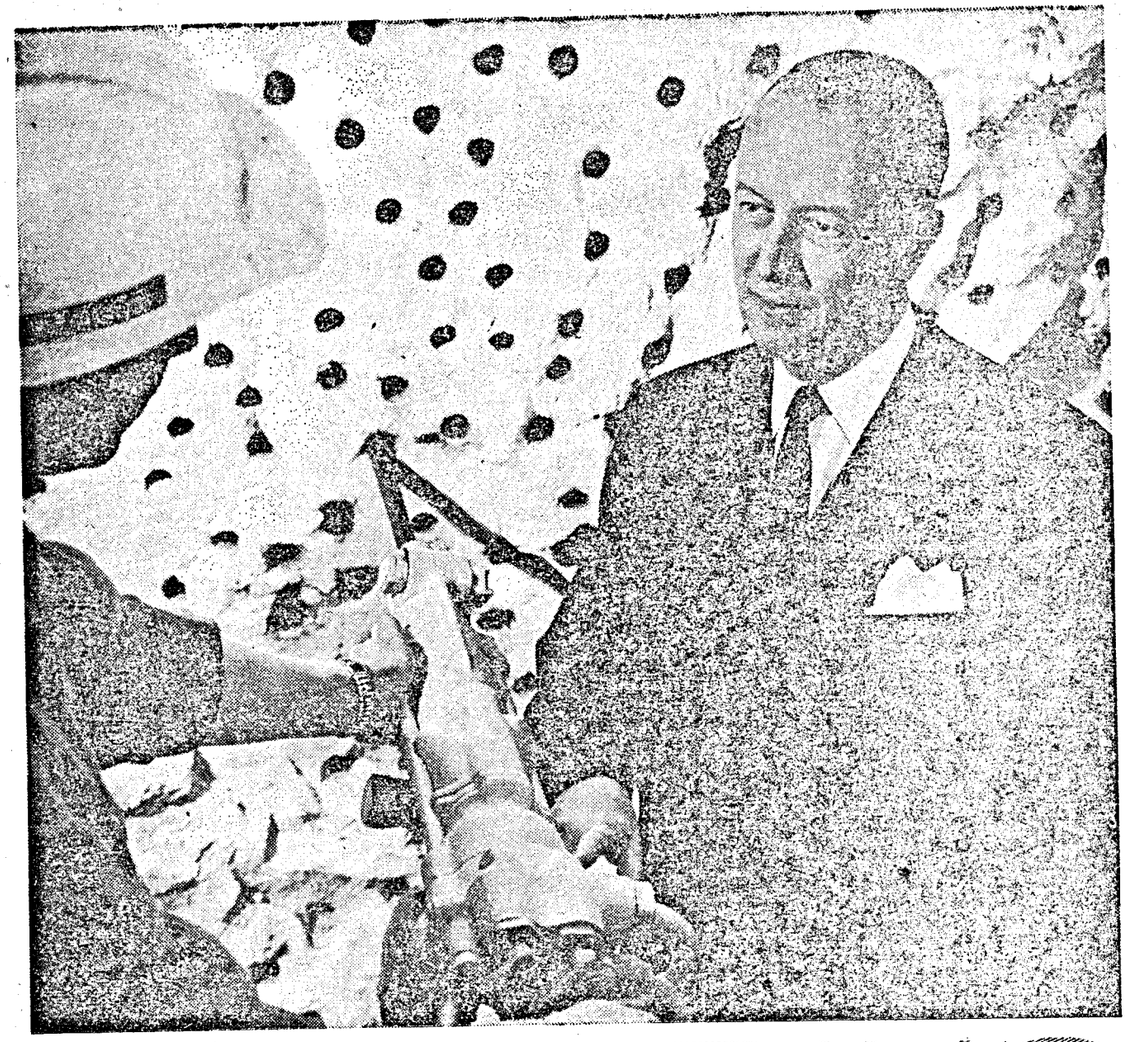
GRIEVANCES OF THE INDIVIDUAL

A British Ombudsman?

Both the Prime Minister and Mr Gaitskell have been edging very warily round the suggestion—put forward by the Conservative MP for Carlisle in the Commons recently—that Britain should assist the individual against the state by adopting the Scandinavian institution of a Parliamentary Grievance Man *(Ombudsman)*. Understandably Mr Macmillan expressed doubts whether it would be "altogether appropriate to our constitutional practice." But what is that practice? Mr Reginald Paget expounded it accurately when he enquired whether it was not "the traditional function of the Member of Parliament to bring forward the grievances of the individual against the Crown and to secure a remedy before supply is granted." And has Mr. Paget ever heard of one instance of supply being refused in modern times because a remedy had not been secured? The British constitution has proved flexible enough to remove the reality of this sanction—why should it not be flexible enough to accommodate an alternative safeguard?

Support for a British Ombudsman has been slowly building up since Professor Hurwitz, the first Danish holder of the office which was created four years ago in imitation of what the Swedes first practised in 1809, gave a lecture in London last autumn under the auspices of Lord Shawcross. If the Danish model were followed, a Parliamentary Commissioner would be elected by the House of Commons. Like the Comptroller General he would be independent of the Government and would have access to official persons and papers. His job would be to investigate citizens' grievances against public authorities, including the nationalised industries, and also himself to initiate such investigations when he noticed instances of arbitrary or unreasonable decisions or mistaken procedure. His reports would be made publicly to Parliament — perhaps in the first instance to a Select Committee. Up to a point it can be argued that it is an MP's own job to follow up cases where people feel that they have not been treated squarely. But an MP cannot see internal government memoranda; and, since he has to deal with a political minister, he cannot discover which civil servant is responsible for the decision he is questioning or whether he has followed reasonable procedures.

It is the extent to which such information could properly be included in the Ombudsman's public report that creates a genuine constitutional difficulty. Others that are mentioned, such as intrusion into the proper sphere of the judiciary, are by comparison artificial—the courts are not investigatory agencies. The question is suitable, as Mr Gaitskell suggests, for an all-party committee, provided all its members are not professional sceptics or panglossian admirers of present constitutional practice.

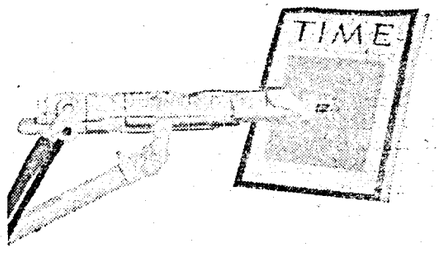


EXPANDING

THE COMPRESSED AIR BUSINESS

Mr. K. ALLAN BELFRAGE is Managing Director of Atlas Copco A.B., Stockholm—a company that has already expanded to become the world's largest organisation dealing exclusively with compressed air equipment.

With factories, distribution and service centres in 90 countries, Mr. BELFRAGE naturally enlists the powerful aid of international advertising. And he uses TIME, The Weekly Newsmagazine–not only to get business for his organisation's world-wide branches, but also to unify them into a corporate whole.



TIME, The Weekly Newsmagazine, New Bond Street, London W.1

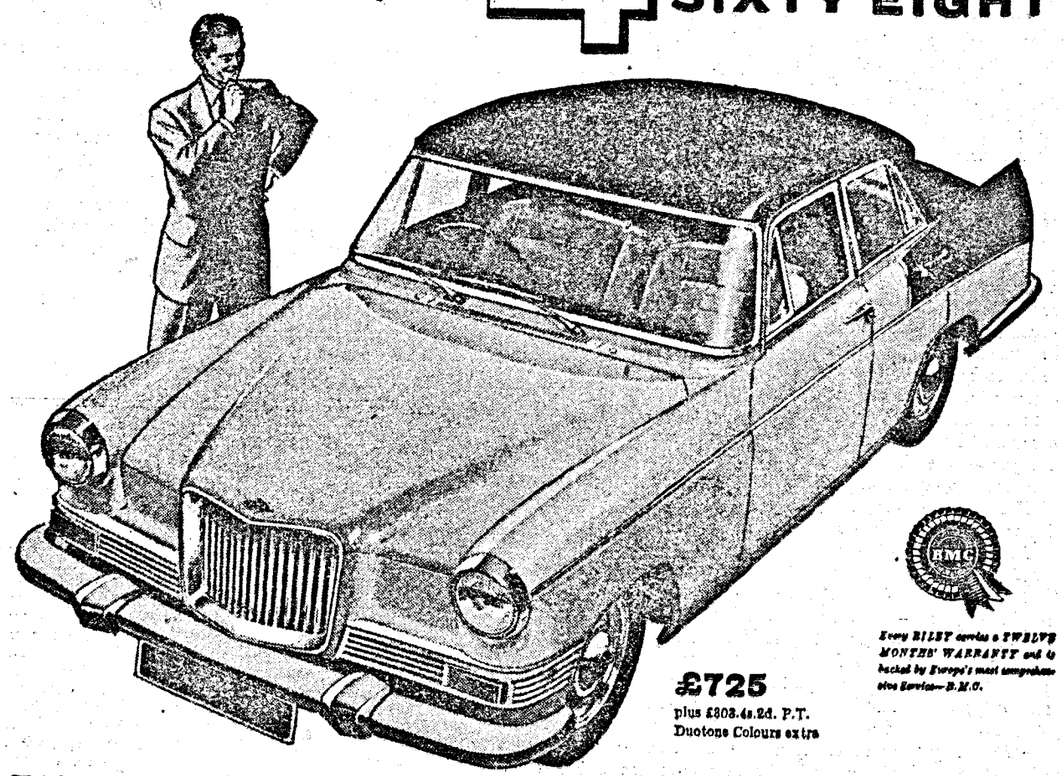
FIVE SEPARATE WEEKLY EDITIONS EXPANDING SALES IN MARKETS AROUND THE WORLD

For the man who really cares

–the new Riley 4 SIXTY EIGHT



Every RILEY carries a TWELVE MONTHS' WARRANTY and is backed by Europe's most comprehensive Service—B.M.C.

£725
plus £303.4s.2d. P.T.
Duotone Colours extra

Here's news for the man who really cares about motoring! A superb new Riley with the long, low, elegant lines of a new era in body design. Spacious, luxurious. With instant surging power from the sports tuned twin carburetter 1½ litre engine. Effortless high cruising speeds—yet running costs that are remarkably low. There's finger-tip gear control through the short, stubby floor mounted gear shift. And suspension, steering, brakes—all are designed and built to the traditional standard of Riley perfection.

Just look at the new Riley 4 Sixty Eight. Explore its score of features. Drive it. This car has been created for the man who really cares!

COMMUNIST PSYCHE

Lunatic Fringe

The causes of lunacy have been eradicated in the Soviet Union. So professor Zhdanov, deputy minister of health, has claimed in a talk on Moscow radio. Mental disorders are frequent in capitalist countries, he explained because of the "oppression of man by man, unemployment and anxiety about the future," but no such stresses can exist under a communist government. Although he admitted that much work remains to be done in this field, especially in the prevention and treatment of schizophrenia, he now regards lunacy, like alcoholism, as a sinister and tiresome relic of the *ancien régime*.

Professor Zhdanov did not explain who uses the services of the "psychiatrist on duty," so prominently advertised in the Moscow classified directory: there are presumably other potential patients apart from western journalists. Nor did he touch on what type of strains produce nervous disorders under a communist system. Since this question impinges on politics, Soviet psychiatrists maintain a respectfull silence on the subject. The underlying presumption seems to be that it is as shameful for a party man to go crazy as it would be inadmissible for a member of some religious orders to seek the advice of a psychoanalyst. Not everyone, however, can command the same amount of phlegm as the Russian lady, who, after her escape to America, could remark in her autobiography: "As the NKVD broke into my room at four o'clock in the morning, I thought it was only a routine check."

There are, indeed, a number of indications even in the current slang of the communist countries, as to which way true madness lies. One Hungarian word can be translated as "bell-fright" — that unpleasant feeling Hungarian citizens get when their door bell suddenly rings in the early hours of the morning. People who suffer from this complaint can purchase a tranquilliser now on sale at chemists in Budapest. The Czech communist party has its "radishes" — red outside and white inside — a neat popular symbol for a schizophrenic mind. There are, of course, two ways of dealing with the mental disorders produced under a communist system: the government has its jails; the populace, its sense of humour.

TRANSPORT

£34 Million Worse

About £ 55 million of the £ 89 million deficit that the British Transport Commission showed on its operations during 1958 had been deliberately allowed for in advance, in the plan for temporary deficit financing that the commission put forward and the Government accepted in 1956. The remaining £ 34 million, the commission reported last week, was mainly the result of recession in Britain's heavy industries as reflected in their demands for freight; but the loss of London passenger traffic during and after the bus strike had some part in it too. Railway receipts fell about £ 30 million, and costs were cut back by less than £ 10 million; this increased British Railways' working deficit to £ 48 million, and interest and other central charges rose to £ 42 million. On its activities outside Britain Railways the commission's working surpluses barely covered the interest payable, leaving just over £ 1 million. The commission has therefore transferred the deficit of £ 90 million on railway operations to the "special account" against which such deficits are allowed to be charged under the Transport (Railway Finances) Act of 1957.

Recovery in steel — though not yet in coal — will presumably be helping freight traffic somewhat this year; but beyond the effects of a temporary and mild recission, the commission has to compete with the growing attractions of private transport both for freight and for passengers. There has been little slackening in the growth of the "C" licensed fleet in which manufacturers send their own goods, and the passenger car population has continued to rise rapidly; the capacity of freight vehicles owned by public carriers, on rail or road, has changed little, while passenger carrying capacity in railway carriages and buses remains stable. It is against this growing public taste for going in its own vehicles that the commission's massive investment — £ 148 million in 1958 — will eventually have to prove its worth.

The Economist

July 2, 1859

Mr Disraeli is chiefly remarkable for the unusual combination which his mind presents of individual tenacity of purpose, with a flexibility and pliancy of intellect rarely found in men of so much audacity and strength. There never was a statesman of eminence who, when he entered on public life, was so strangely in need of the lessons of experience. There never was one who was so apt a learner. There never was one who was more resolute to turn that ready faculty to the best account. From the day of his maiden speech, now more than twenty-one years ago, when he appealed in vain to the House of Commons for a cheer, and sat down with the warning, "I am not at all surprised at the reception I have experienced. I have begun several times several things, and I have often succeeded at last. I will sit down now, but the time will come when you will listen to me," up to the day when, amid the breathless attention of the House, he delivered his gallant, eloquent, and adroit defence of the late Government, Mr Disraeli has never quailed beneath the difficulties of his arduous career, and never failed in that self-possession, which knows how to turn every error, every false step into the materials of a future success. Beginning without rank, without connection, without wealth,—with every difficulty in his path which the prejudices of race could conjure up,—without entering into the convictions or understanding the political traditions either of the party he was to defend or of the party he was to assail,—wholly destitute of the kind of practical sagacity which most easily inspires Englishmen with confidence,—with an ill-regulated literary ambition and a false melodramatic taste that were well calculated to increase tenfold the existing prejudices against him, it is difficult to conceive a greater marvel than the brilliant success which Mr Disraeli has achieved, singlehanded, in a sphere of life usually thought singularly exclusive and inaccessible to unassisted adventurers.

BOOKS

The Marvellous Boy

Northcliffe.
By R. Pound and G. Harmsworth.
Cassell. 949 pages. 42s.

All good journalism has the same purpose: to satisfy readers' curiosity, to answer the questions in their minds. This is as true of *The Times*, which Northcliffe bought when he was 43, as of *Answers* itself, which he founded when he was 23. The real hero of this big untidy book is not Northcliffe the press potentate, increasingly islanded in his own illusions; it is Alfred Harmsworth the journalist, quick himself with the curiosity of the young people of his own swift times and bent on getting and giving the answers. The crown of his achievement was the *Daily Mail*, which he started in 1896 when he was only 31; and its prime aim was precisely to stimulate, and to gratify, the curiosity of the many who now could read.

None of this, perhaps, went very deep. The trap of the popular press, which this great journalist helped to invent, is always to make the trivial important and the important trivial. But mass information, shallow or less so, was the diet in both *Answers* and the *Daily Mail;* not merely mass entertainment, which was kept in those days for *Comic Cuts* and *Chips*. And Northcliffe's famous daily notes on the gaps in what his papers were telling their readers —the running comments which have been too much imitated by poorer journalists—were as much to the point on *The Times* as on the others.

The trouble about this book, which resembles nothing so much as a huge unfinished building site, full of fascinating holes and corners, is that it does not try to pick out and put together the right questions and answers about Northcliffe. What he lacked, what many good journalists have lacked, was the power to think. That is, he observed keenly, and felt deeply and warmly, but did not reason consecutively; he reached the conclusions of thought, it was said of him kindly, without going through the process. Shrewd as a monkey every morning, he was the easiest prey to self-deception over longer periods and deeper questions. In his ragingest tearingest, weightiest campaigns, whether over the German menace or the British shell shortage, he never knew how to start or when to stop. He had nothing to keep him together as a consistent person—or even, in his later years, as a tolerable person—except his professional touch and his impulsive affection(beyond everything for his mother).

The truth is that the years of vanity and valetudinarianism when he was a public figure, walking near but never in the seats of the mighty, are in retrospect very sad and not really very important. Alfred Harmsworth was a prodigy—of a journalist. Worth perhaps £100,000 in his mid-twenties and earning £80,000 a year before he was 35, he was nevertheless in no sense a financial prodigy. He never could count. By the test of money he could have as many bad ideas as good ones. The point is that he had ideas. He was, in his trade and calling, the innovator who brought it off. Little that is good in the popular press and the newspaper industry nowadays was not of his beginning; little that is bad would he own. And the *folie de grandeur* which he had, and many toadies had for him, was not part of the impulsive prodigy; it was a melancholy falling-away from the "marvellous boy," who soared to his best some score of years before, only 57, he died so pitifully.

The Other Churchill's Eden

The Rise and Fall of Sir Anthony Eden
By Randolph S. Churchill.
MacGibbon and Kee. 327 pages. 25s.

Just as Mr Randolph Churchill can shout louder than anyone else lacking a powerful voice, so he coins more pungent and quotable phrases than any other writer without a developed literary style. He is at his best in this long-awaited biography of Sir Anthony Eden in the waspish footnote and the welcome but rare bursts of Churchillian rhetoric.

It must be a handicap to a biographer to regard his subject as a bore. In the perfunctory chapters on Sir Anthony's early career, which are padded out with long quotations from Sir Timothy Eden, Sir Alan Herbert, Earl Winterton, Lord Snowden and anybody else who comes to hand, Mr Churchill makes his lack of interest abundantly clear. He only really hits his stride when he reaches the thirties and, abandoning any serious pretence of chronicling Eden's life, launches into his own variations on the theme of "the guilty men." Once a page Eden's name is dragged in as the final entry on the author's personal dishonours list of appeasers which is repeated in a periodic litany of malediction.

Having pointed the contemporary moral of his cautionary tale, Mr Churchill hustles through the years of war and Labour Government to reach the meat of his book, the celebrated chapters on Suez that have already been serialised in the press. Ingenious and plausible though his version is, much of it, as he himself acknowledges in a postscript, only tends to confirm Mr Paul Johnson's account in *The Suez War*, brought out as early as January 1957 by the same publisher (who is presumably responsible for both authors making the same mistake over the Christian name of Mr Henry Byroade). But Mr Johnson had an advantage over Mr Churchill—he was not labouring under the memory of having been one of the right wing Tory writers and orators who bullied poor Sir Anthony, who had developed a persecution complex about his bad press, into trying to show himself to be a man. Mr Churchill is commendably honest with the reader in admitting himself to have been completely wrong at the time in beating the drums for the Suez expedition. But he has not thought out the implications of recantation in interpreting the pre-Suez years.

This shortcoming illustrates Mr Churchill's larger failure as a biographer. In the circumstances it is understandable that he should not have had access to Sir Anthony's private papers. But as compensation one might have expected from an author who had grown up in a privileged social circle in which Eden's personality and attributes were matters of everyday observation and comment some special insight which would help resolve the riddles of his character and fate. How was it that a man so futile as Mr Churchill makes Sir Anthony out to be in his early years blossomed into the decisive War Minister of 1940 and the outstanding diplomat of the second Churchill Ministry whom the author unstintingly praises and then collapsed so ignominiously as Premier? Although he quotes generously from his own accurate prognostications in print, Mr Churchill edges diffidently around this central biographical question as if he had always been an outsider.

The truth is that reticence is the most noticeable feature of Mr Randolph Churchill's book. There are two unidentified villains implicit in the piece: Sir Winston Churchill and Mr Harold Macmillan. Who was it but Sir Winston who, regarding Eden's resignation in 1938 as entirely purging him of his responsibility for appeasement, began wishing him on to the British people as his successor as early as 1942? Who was it but Mr Macmillan who was personally responsible for the two cardinal errors which Mr Churchill identifies in the political execution of the Suez expedition—the misjudgment of likely American reaction and the failure to notice until the last moment that the currency reserves were too shaky for so risky an undertaking?

Twenty five years ago Mr Churchill wrote (in an article which he reprints as a sample of his contemporary foresight):

> "I would be the last person to wish to see a man so astute, resolute, tough and formidable as Mr Baldwin replaced by anyone of the hundred or more mediocre young men who are in the House of Commons today."

One trembles to think what an elderly Mr Churchill will be writing, a quarter century hence, about Mr Harold Macmillan.

Revolutionary Failure

China's Early Industrialisation
By Albert Feuerwerker.
Harvard University Press.
London: *Oxford University Press.*
348 pages. 52s.

Recent studies of the role of Westerners in the economic development of China have called attention to our ignorance, except in broadest outline, of how China's internal economy was affected by the foreign impact. Mr Feuerwerker's book illuminates some of these dark places. He has examined the efforts made by the Chinese themselves to introduce modern industries during the later years of the Empire, and he has explained why these efforts met with such limited success. He has approached the problem by considering, in elaborate detail, the career of one of the men who took a prominent part in this attempt at modernisation—Sheng Hsuan-huai, the henchman and associate of the great provincial governor, Li Hung-chang. His case-study reveals how the enterprises were initiated, capitalised and managed, the extent to which they were accommodated to the traditional social and political organisation, and why, to the last, they remained peripheral to Chinese society.

The initiative sprang neither from the central government, then chiefly concerned with resisting change and propping up its failing authority, nor from the merchants, who in the main were merely the agents of the conservative bureaucracy, but rather from a very few enlightened provincial governors whose power waxed as the grip of Peking was loosened. These reformers took the lead in inducing merchants, compradores and gentry to put up capital, often supplemented by funds borrowed from official sources, for the establishment of modern enterprises. Nominally the management of these concerns rested with merchant directors; but the provincial governors retained the right of appointing and dismissing the managers, and the enterprises were all subject to official supervision. Hence the designation of this system of organisation as "official supervision—merchant management". The prototype was the China Merchants' Steam Navigation Company, which was intended to reduce the dominance of foreign shipping in Chinese waters. It was followed by concerns in banking, communications, textile manufacture and several other fields.

Why did this initiative fail to set going an industrial revolution in China? Why did the achievements of these new concerns compare so unfavourably with those of Western and Japanese enterprises in the concessions? Mr Feuerwerker's answer is that China's rigid institutions stultified the energies of the innovators. The central government tended to regard a successful firm as a source of relief for its treasury rather than as an enterprise to be fostered in the interest of further economic development. So risk capital was very scarce. The profits that escaped the financial exactions of the government were seldom ploughed back into the business but were mostly invested in real estate. Even the men who took the lead in promoting the new undertakings remained at heart officials, concerned primarily with their own status and with their obligations to their families. As the author emphasises, economic progress was a concept alien to Chinese traditions, and the pre-Revolutionary institutions were incompatible with the needs of a modern economy. Throughout the book, Mr Feuerwerker points the contrast between the Chinese and the Japanese response to "the challenge of economic modernisation", and he has made a valuable contribution to our knowledge of this significant period of Far Eastern economic history. It is a pity that at times he allows himself to write in the degraded style of the sociologists, a style not to be tolerated among historians. Here is a specimen: "The preeminence of the kindship orientation in traditional Chinese society exercised a formidable brake on Sheng's full participation in the behaviour patterns which we have stated to be characteristic of the entrepreneur"

Opposite Types

Thrills and Regressions
By Michael Balint.
The Hogarth Press and the Institute of Psychoanalysis. 148 pages. 18s.

This is a period piece in some ways, an intuitive literary study beased on the consulting room, but wandering far afield. It starts in the fairground and the pleasures of breaking china there, and goes on to elaborate another ingenious classification of human personalities which may stand comparison with Jung's extravert and introvert. Dr Balint also has two —the ochnophil and the philobat. The ochnophil is the clinging, dependent sort of person who has to share his troubles, who is happy only in familiar surroundings, who collects material objects, and cannot bear to part with his treasures. One does still meet grown-ups who keep their childhood toys in a drawer, or sleep with a long-loved teddy bear beside them on the pillow. The philobat, on the other hand, needs room for manoeuvre. "Don't fence me in" is his cry, and he is happiest sailing a small boat across the Atlantic, or exploring an untrodden wilderness, with no commitments, and only himself to depend upon. He has acquaintances rather than friends, and his material possessions are only those necessary to the exercise of his skills.

Most people, of course, are a mixture of both these types, as Dr Balint himself points out, but he has added two recognisable characters to the storehouse from which playwrights and novelists can draw, and what he has to say is often illuminating, if sometimes a little perverse. So long as the kind of writing is not taken to be scientific, and is not condemned on that account, it has much to offer to the reader who is interested in his fellowmen and likes to buttonhole them.

Parish Pump

Small Town Politics
By A. H. Birch.
Oxford University Press. 199 pages. 25s.

This is one of the best of the local political studies so far made in Britain. Although the project was a collective one, under the sponsorship of Manchester University's Department of Government, the result has gained enormously from the decision to let one man write it, because Mr Birch is an excellent writer. There are occasional signs that there were times when the research team felt some doubts of its choice of Glossop as a typical small town in which to study the operation of politics "on the ground." There is more than one crisp and illuminating generalisation which is followed by the admission that there is little to support it in Glossop. But this difficulty would probably have been encountered, in one form or another, in whatever town the team had picked on, and we shall only really begin to have an idea about what, if anything, really happens when the central party organisations tug at the string after we have got a whole series of studies like this.

Glossop is a cotton town of 18,000 people, which lies in an isolated dale in North West Derbyshire. Mr Birch's short but valuable historical chapter makes one rather striking social observation: Glossopians owe practically all the institutions in which they can take some civic pride to the energy and openhandedness of the rival families of gentlemen millowners who dominated the life of the town until the nineteen twenties. Now that they have departed and their mills are branches of large firms who send in professional managers from the outside and periodically switch them, no natural political leaders of comparable calibre have emerged.

Glossop's political activities, which cannot be said to make much of a splash in the life of the town, reveal some interesting oddities. Although in modern times the High Peak division, of which Glossop forms part, has always been a Conservative seat it is not, on the figures, a safe one (Mr Molson, the present member, lacks an absolute majority) and Glossop, as the only part of the constituency where the parties are evenly balanced, would seem to be the key to retaining it. Yet Conservative organisation in the town is still almost completely demoralised as the result of the shift of the divisional headquarters from Glossop to Buxton as far back as 1934. The shopkeepers and small businessmen who run the Conservative association in Glossop seldom attend the meetings of the divisional executive committee in Buxton, partly because the journey is awkward and the necessity for it resented, but mainly because they feel ill at ease with the county types whom they meet there. All three party organisations are more social than political, but the most socially successful are the Liberals—they have the gayest club and the most thriving women's organisation. Both women's and youth organisations in the Tory parti have collapsed—the women's association dwindling to six members over a fight about the charge for tea and cakes at whist drives. The local Labour party is divided between the older borough councillors who work closely with their Conservative and Liberal colleagues and are opposed to strict party voting in local affairs and a more militant group associated with the trades council. It will interest Transport House to learn that its standard plan for basing constituency parties on ward organisations is not followed and that in Glossop the trades council, which is explicitly forbidden by its rules to take up general political questions, is the only socialist body which habitually does this.

Mr Birch's team tried to discover, on the basis of interviewing a random sample, what Glossop's voters thought about political issues. They did not think very much about most of them. There were some peculiarities: eleven per cent of Conservative voters wanted to nationalise both the land and the press; and seventy-one per cent of the Labour party's voters were against raising the school-leaving age (as well as eighty-three per cent of Conservatives and eighty-one per cent of Liberals).

Perhaps Mr Birch's most fascinating chapters are those on the different levels of local government that have an impact on Glossop, and his book can be recommended to anyone who wants an introduction to the realities of the present-day division of power between them. One thing is clear: although the transfer of functions to the county council may have produced greater efficiency, it has drained the borough council of a great deal of its prestige and sense of purpose without arousing any compensating popular interest in a county government that is felt to be as remote as Whitehall.

The Maghrib

A Survey of North West Africa
Edited by Nevil Barbour.
Oxford University Press (for *Royal Institute of International Affairs*). 417 pages. 35s

A good survey of the Arabo-Berber lands of north-western Africa has long been needed in English; and this wise, well-written and well-produced book ably meets the need. Now that most of the Maghrib has emerged from the anonymity of the colonial epoch, and the old Barbary states have come alive again in singularly different form, it was in any case time for English scholarship to recognise the change. Mr Barbour's symposium—sensibly put together as a singlehanded work—is a good beginning.

He and his colleagues relate the story of each of these countries and fragments of countries "from the earliest times" down to 1958. First of all, they survey the Western

Maghrib: Morocco (French, Spanish, and the newly independent kingdom) together with Tangier, Ceuta, and Melilla; Spanish West Africa and the Spanish Sahara; Algeria and the newly formed French-governed Organisation Commune des Régions Sahariennes; and Mauritania. Thereafter Mr Barbour offers the same rapid but effective survey of the Eastern Maghrib—Tunis and Libya—stopping at the frontiers of Egypt and the Sudan. These parts cover much unfamiliar and forgotten ground that ought to be known and remembered now; but the reason why they make so useful a whole is because their writers have a respect and love of Arabic culture, and a sense (rare in England) of the human dignity and civilising power that have long lain hidden in the Maghrib behind the sorry dust and dreary silence of colonial appearance.

For many years British interest in "the Arab world" has meant interest in little more than the politics of dynastic rivalry in Arabia or the economics of oil extraction. Both may have their great importance; neither, by any stretch of careful research, could possibly be made to touch the springs of thought and action from which the Arab world—the whole Arab world—has drawn, and draws today, its sense of community and its determination on a new destiny. The drive for independence and for unity in many of these countries—among many of these peoples of Arabic culture—has therefore seemed, often enough, to come out of a void; and a whole host of *ad hoc* explanations—Nasserism, Bourghibism, Communism even—have been dragged in to explain what can be explained, in truth, only by the unique fact of Arabic culture.

This is one reason why a rebirth of British interest in that other "Arab world" which descends from Cordoba and Granada, from Tlemcen, Fez, and Tunis—the world of Ibn Bekri and Ibn Khaldun and of all their kind—is much overdue. Mr Barbour obviously agrees. He is careful to insist on the sense of continuity that links the peoples of the Maghrib today with their illustrious and sovereign predessors. How provocative of thought, for example, is the parallel drawn between two rebels of the Aurès mountains of Algeria, separated by nearly two thousand years. Given this perspective in depth, it will come as no surprise that Mr Barbour and his colleagues see the war in Algeria as much more than one more colonial upheaval, and as "a revolution affecting every branch of life."

It would be ungenerous to quibble at what may appear as minor blemishes on this admirable work. To one reader, at least, the description of the Organisation Commune des Régions Sahariennes seems to overlook some of the longrange political and economic aims that caused France thus to deepen the breach between these regions and Algeria proper to the northward. One would also like to have seen more weight given to the interacting influences that have long operated both ways between the Maghrib and the Western Sudan. But these, of course, are partly matters of interpretation and opinion.

In welcoming Mr Barbour's book one hopes that it may also serve, beyond its immediate purpose, as a stimulus to more detailed studies of the same culture region. Above all, one hopes that it may help to remind Arabic scholars and publishers in this country of the great want of good modern translations and commentaries of many Arabic classics. Perhaps one may even begin to look foreward to the day when the generous Penguin Books will lay upon the shelf, along with Thucydides and Xenophon and Caesar, a quota from the writers of the Maghrib.

Knots to Nuremberg

Eclipse of the German Navy

By Thaddeus V. Tuleja.
Dent. 284 pages. 21s.

In this short book Commander Tuleja (an American naval reserve officer and teacher of history) surveys the life and death of the principal German surface warships of the second world war. His interest is, so he says, in the men who manned and fought them, and he did not set out to write "a detailed history of German naval operations"; and one must judge the book according to the object which the author had in mind. The trouble is that something like a hotchpotch has resulted, starting with somewhat puerile prefatory definitions (do readers of such a book need to be told that a knot is a speed?) and ending with a discussion of the Nuremberg trials and sentences. In between we have something about Jutland, which seems a little outside the brief the author set himself, quite a lot about U.47's penetration into Scapa Flow and the sinking of the *Royal Oak*, a detailed account of the cruise of the disguised raider *Pinguin*, and a rehash of well-known stories like the River Plate battle, the chase and sinking of the *Bismarck*, and the last sortie of the *Scharnhorst*. These latter sometimes contain judgments that will, to say the least, surprise British readers. Thus was the loss of the 22 year old *Hood* really "one of England's most humiliating naval defeats"?

Commander Tuleja uses dialogue extensively, and as almost all of it must be derived from second-hand sources—if it is not imaginary—his book falls between the stools of journalism and historical narrative. Perhaps he wished to make it vivid and readable to the pupils of the school where he teaches; but should not the young be taught from books where authenticity is a keynote? Lastly the author almost completely omits the long struggle against the U-boats, and the many defeats they suffered in the Atlantic Battle. Observing that, at any rate, after Dönitz became Commander-in-Chief in January 1943, it was on them that Germany pinned its hopes, one may feel that either his title is rather inappropriate or that he leaves an important part of the task he set himself unfulfilled.

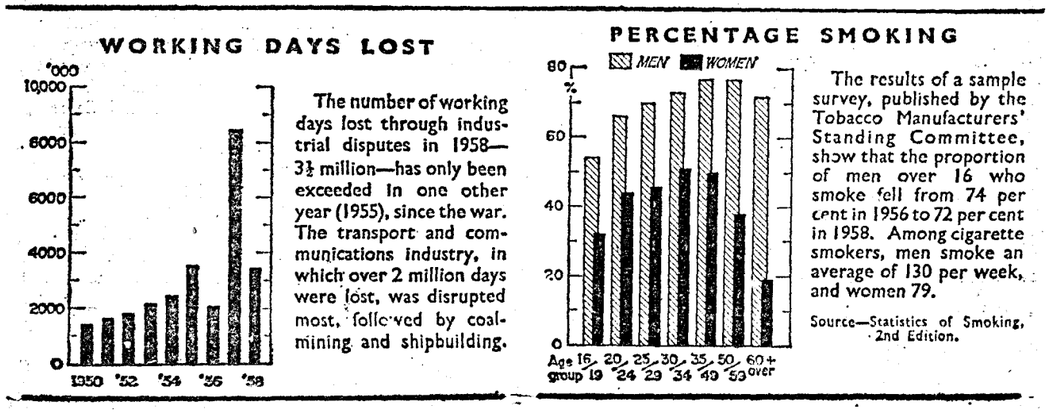
Poor Blacks

Freedom from Fear

By O. A. Sherrard.
The Bodley Head. 200 pages. 18s.

The abolitionist movement really started when Granville Sharp, walking down Mincing Lane, met an escaped slave who had been so badly beaten by his master that he was almost blinded. For years Quakers had felt uncomfortable about an institution so generally accepted for so long, but they needed influential leaders of the stamp of Sharp, Clarkson, Wilberforce and Palmerston (whose name is not mentioned in this book) before this crime against humanity could be abolished and suppressed. If true slavery is now a thing of the past, it is by no means forgotten. The colour bar is its contemporary reflection, and the number of books on the subject in recent years, many of which are ignored by Mr Sherrard, belies his suggestion that "Englishmen have largely forgotten their own good deed". The African today finds in this ancient wrong useful emotional ammunition against the European and the American, though curiously enough not against the Arab, who has a far longer record of slavery.

Although it has perfunctory chapters on slavery in the ancient world and in America, this book is mainly concerned with the story of the abolition of the British trade, not of emancipation generally, nor of the suppression of the illegal trade, which was a longer and a far more difficult business. Even if the book does not add much to the story, it may serve to keep alive what Lecky called one of the "three or four perfectly virtuous pages comprised in the history of nations".



AMERICAN SURVEY

AMERICAN SURVEY *is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.*

Congress Knocked Out

WASHINGTON, DC

Mr Lyndon Johnson, the leader of the Democrats in the Senate, will be forgiven if he murmurs the sad question of the boxer being disentangled from the ropes: "He never touched me. Where am I?" An extraordinary change has come over the American political scene in the last few weeks. It has confounded the arithmetic of the experts who were saying last January, almost to a man, that the ban on a third term, plus a Democratic majority of nearly two-thirds of Congress, equalled a powerless President. Mr Eisenhower has bithely ignored those who told him that he would lose all influence in his last two years of office because the 22nd Amendment forbade him to succeed himself, even if he wanted to. He still has such power that in the one field where he has chosen to exercise it — his demand for a balanced Budget, and his attack on "spend-thrifts" — he has forced the Democrats to capitulate almost unconditionally. And the remarkable thing is that it took only one tap on the nose, in the shape of the President's veto of a minor Bill, to persuade them to throw in the towel.

The most telling compromise involves federal aid to housing. Last year the Eighty-fifth Congress failed to produce a housing Bill; thus the generous measures which passed the Senate and the House of Representatives, in slightly different forms, earlier this year were regarded by most Democrats as the touchstone of the Eighty-sixth's liberalism. Now Congress has agreed to whittle down the amount of money provided for slum clearance — the most important item — to £ 900 million from the £ 1.5 billion which might have been spent under either of the original versions by the middle of 1961. It has also accepted the Senate's low figure for the number of publicly-financed houses to be built instead of coming down half way between that and the House's higher total, as might have been expected.

It is true that in both items Congress is still rather more generous than Mr Eisenhower. But many liberals believe that Senator Johnson had the weapons, if he wanted to use them, to get a much better measure past the President's veto. One part of the Bill, without which the house-building industry can hardly operate, extends the Federal Housing Administration's ability to insure mortgages; the President might have hesitated to throw out the bathtub containing this highly necessary baby. The Senate also handed over tamely, in a separate Bill, a concession involving interest rates which it might have used for bargaining purposes.

This is not all. The federal grants which Congress had earlier approved for the construction of airports have now been dutifully cut down to meet the President's specifications. The Bill, to assist depressed areas, having passed the Senate, is generally agreed to be about to die in the House. A measure sponsored by liberals in the House, which would have brought federal funds to the aid of the schools on a substantial scale for the first time, was last seen breathing faintly in that morgue of reformers' hopes, the foyer of the Rules Committee room. Between them these four Bills, now dead, dying or mutilated, were the chief test of what the current session could do against the President. A more modest school Bill may yet be passed. But the other issues on which Congress may still produce useful legislation — civil rights, foreign aid and labour reform are the main three — cut across party lines; none of them offers anything like a direct confrontation between the President and the Democratic opposition.

It is typical of Senator Johnson's cavalier style of leadership that he did not consult his colleagues in the party before ordering this retreat. The changes in the housing Bill were accomplished when two southern Democrats amenable to Mr Johnson — Senator Sparkman and Senator Fulbright — voted with the Republicans on the conference committee against the liberal Democrats from the North. Mr Johnson has some logic on his side. It has been clear that it would be virtually impossible for the Democrats to over-ride the President's veto, if he chose to use it, ever since they failed two months ago to gather enough votes to do so in the case of a minor Bill on rural electrification. But the angry and disappointed liberals say that Mr Johnson might at least have challenged a veto — and perhaps found, in the case of the housing Bill, that is was not forthcoming — before he undertook to come to terms with the President. Their frustrated desire to get to grips with the Administration was not satisfied by his help in rejecting Mr Lewis Strauss as Secretary of Commerce; they think that this looked suspiciously like a sop to the liberal Cerberus while Mr Johnson sneaked past bearing gifts to the conservatives in Hades.

Mr Johnson is not the only Texan getting angry glances from his colleagues in the North. Mr Rayburn, the Speaker of the House of Representatives, is under fire for acquiescing too readily in Senator Johnson's change of strategy. He is generally credited with being the more liberal of the two on questions of social reform. Indeed, he fought

hard to get the original bountiful version of the housing Bill past its opponents in the House. But he has an old man's traditionalism; he leaves most of the details of running the House to his committee chairmen, who are mainly to the right of him; and he is said to pay altogether too much attention to yet another Texan — Mr Robert Anderson, the quietly conservative Secretary of the Treasury.

Nevertheless, Democrats who wonder what went wrong must look beyond Texas. The liberals have run headlong into three hard facts of American politics. The first is that they are not the whole Democratic party. Even if the Democrats held a full two-thirds of Congress — which they do not, quite — they would be unable to ignore the President's power of veto because on most issues they would lose many more votes by defections from the South than they would gain from the liberal wing of the Republican party. The second hard fact is that, whereas in theory Mr Eisenhower might be deterred from using his veto by an appeal to public opinion, in practice he cannot be. The President's position as head of state gives him an overwhelming advantage in a public debate with Congress about his conduct as head of government.

Finally, when Senator Johnson and the liberals argue about what will benefit the party most, they are using the word "party" in two different senses. Mr Johnson and Mr Rayburn can fairly claim that their policy of meeting the President half-way has paid handsome dividends to the Democrats, in the sense that they have won control of Congress three times running against the party which held the White House. In this context, they are entitled to reason that it is no part of Congress's job to strike dramatic attitudes by going full speed ahead with legislation and damning the vetoes; far better to go cautiously now, they say, and hope to get a Democratic President in 1961. But the liberals, in saying that it would be best for the party to stand by its politics and risk the vetoes, are using "party" in a wider sense. They are not thinking chiefly of the collection of local representatives assembled in Congress, but of the still very misty entity known as the national party — which is embodied, for practical purposes every four years, in the presidential candidate.

The problem of forging the congressional groups into something more like two national parties is the subject of an essay by Mr Stephen Bailey, published last month by the Fund for the Republic. Mr Bailey thinks it could be done by a number of fairly minor reforms, such as having candidates for Congress rely more for their finance on the national committees of the parties and less on local sources. But is any such expedient enough to bridge the gap which the Constitution itself created?

Referendum on Schools

From a Correspondent in Virginia

In Virginia the struggle over racial segregation in the schools has moved into a new phase as the election campaign for the State Legislature builds up to July 14th, the day on which the Democrats pick their candidates; in many districts this primary election is in practice the final election, since the persons chosen by the Democrats will face little or no subsequent opposition. The main, and in many places the only, issue, is the relative merits of "massive resistance" to the outlawing of separate schools for Negro and white children by the Supreme Court of the United States and "freedom of choice", Virginia's latest method of getting round the decision. This Perrow programme was adopted last April at a special session of the State Legislature by a majority of one vote on the key questions in the Senate, and of from six to eight votes at various stages in the House of Delegates.

Already this precarious majority has been lost in the Senate with the retirement, on health grounds, of the member who was flown in from a sick bed to vote in April. The segregationists are hoping to tilt the balance still further

in the coming election, so that when the new Legislature meets next January they will be able to nullify the Perrow programme. This was designed to assure local option in school matters and to provide tuition grants for parents who are unwilling to have their children attend mixed schools, so that they may be educated in other ways. This is essentially the same scheme as that produced by the Gray commission shortly after the Supreme Court's decision five years ago. Then it was frustrated by the personal intervention of Senator Byrd, the state's senior representative in the United States Senate and the dictator who has controlled the dominant faction in the state's Democratic party for many years. He insisted on massive resistance to the Supreme Court.

The Perrow programme became law only after the Byrd loyalists had implored fellow members not to darken the "twilight years" of their leader and after the State Senate had adopted an unusual legislative procedure in order to by-pass the known hostility of the education committee. It also became law only after Governor Almond, who as State Attorney General had originally favoured the Gray plan but had campaigned for election in 1957 on a platform of massive resistance, had once more changed his position. He used all his political skill and influence to manoeuvre the Perrow programme through the special session. He has now come to believe, it seems, that massive resistance can only lead to the complete abandonment of public education by the state and that this would be a disaster. The Governor's assumption of the leadership of the moderate forces in the state and his appeal for popular support in his fight to preserve the schools are evidence of a new alignment in Virginian politics, of a growing challenge to Senator Byrd's domination — and the first test of its effectiveness will be the coming primary election.

Superficially the divisions in the Legislature last April were geographic; fundamentally, they were economic. In the part of the state below the James River (Southside Virginia) the proportion of Negroes to whites is much higher than in most other sections and the economy, based on farms and forests, has changed little since the eighteenth

What's happening in America?

In Washington or in Wall Street
In business or in government

You need to know the facts about both to understand the flow of events on the American economic scene. A mail subscription to The New York Times International Edition Weekly can help give you that understanding.

Each week you can depend on its news columns for accurate, objective coverage of current developments in U.S. business, industry, finance and government.

Each week, too, through its editorials, letters and informed commentary, you can discover American thinking and opinion on major political and economic issues of the day.

To add this distinguished newspaper to your reading of American news, just fill out and mail this coupon. Do it today.

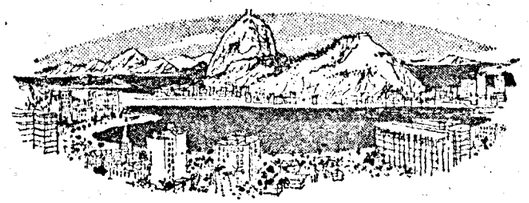
business in south america?



we can help you here!

OVER 50 BRANCHES IN KEY CENTRES —IN CONSTANT TOUCH WITH LONDON

YOU CAN SO EASILY KEEP IN TOUCH with your business interests in Latin America from London, through The First National City Bank of New York.

First National City has over 50 branches covering the whole of South and Central America and the Caribbean area, in constant touch with London. In addition you can, through us, call on the services of many thousands of banking correspondents everywhere. These men are fully experienced in the intricacies of world commerce and local regulations. Their advice will save you time and money.

Visiting the market on business? The First National City Bank will be happy to provide you with the introductions you need to ensure a friendly welcome when you arrive, and the best possible advice during your stay.

Call in and see us at either of our two London branches. Perhaps we can help *your* business interests too.

entury. Here as elsewhere in the state where agriculture brings in only a bare living, the races are competing on, or only just above, the level of real want. Not much money is available for education from taxation and that little is begrudged. A fierce pride provides the emotion on which segregationist organisations and flamboyant oratory thrive.

Counter to this emotion runs the newly-evinced determination of the industrialised areas of the state to maintain the conditions necessary to the operation of a twentieth century technology. Significantly these sections are not confined to the major cities — Norfolk and Newport News, Richmond, Roanoke — or the part of metropolitan Washington which spreads into northern Virginia. Most of the new plants established in the state, and indeed in the South, since the war have been built in rural districts; factories in what used to be fields, such as that of the General Electric Company near Waynesboro' or the Sperry-Rand Corporation near Charlottesville, have introduced both fresh types of employment and much higher levels of consumption. The managers of the new plants and of the new shops attracted by the increase in local purchasing power are important men in the community.

Modern industry cannot operate without educated staff and must be able to assure its employes that adequate school facilities will be available in the neighbourhood for their children. Even before the passage of the laws under which some schools have been closed, Virginia's educational standards raised difficulties for such companies. The state's annual estimated expenditure for each pupil is $ 340 compared with a high for the country as a whole of $ 535 in New York and a low of $ 164 in Alabama. After the school-closing laws had been passed, the head of a branch of a leading national corporation which recently brought a payroll of $ 5 million into a formerly rural area by opening a plant there, declare a that he would lose a fourth of his key personnel if the schools in his district did not remain open; he added that his firm would probably not have come to Virginia if it had had any idea that the state would think of impairing its school system. The quiet but persistent political pressure of those responsible for Virginia's new economic activity was an unpublicized but probably decisive factor in the success of the Perrow programme at the special session of the Legislature.

The mood in which the voters will go to the primary will be affected by various recent developments. For example, in Southside Prince Edward County, around Farmville, from which came one of the original cases on which the Supreme Court made its ruling and where a court order has required that integration be speeded up, advantage has just been taken of the Perrow legislation to abandon the school system. The county authorities passed a budget from which school funds were eliminated and local children now become eligible for tuition grants to enable them to attend private, non-sectarian schools. A private foundation which had already been formed will open schools for the 1300 white children in September; some 1650 Negro children are eligible for grants, but no provision has been made for them so far.

Whether or not the Governor still has his majority after the primary before long he will have to make a political decision that is of even broader significance than the one he has already made on public education. Last spring he challenged successfully Senator Byrd's domination of Virginia. Will Mr Almond attempt to organise the moderate forces which supported him then into a permanent new faction in the state's Democratic party? Or will he allow the so-called harmony on which Mr Byrd has always insisted to be restored? The Senator has already been forced to change his mind once about retiring when it became clear that with his departure, his organisation would be disrupted by the rivalry between his supposedly disciplined followers for the right to succeed him. If Governor Almond now tries to mobilise behind himself the new economic forces in Virginia, in the belief that eventually these must become the chief source of power in the state, then he may well find that he has given himself a head start when Mr Byrd eventually goes.

Mergers are Catching

By arranging a merger with the New York Trust Company the Chemical Corn Exchange Bank hopes to regain its place as the third largest in New York City and the fourth largest in the country, which it lost when J. P. Morgan & Company merged its assets with those of the Guaranty Trust Company. One merger tends to set off others, not only because banks value the prestige which goes with a high place in the hierarchy, but also because the larger a bank's capital, the larger the individual loans it can make; in New York the upper limit is 10 per cent of a bank's capital.

The new Chemical Bank New York Trust Company will have total resources of over $4.3 billion compared with $4.1 billion for Morgan-Guaranty, but its capital funds, at $385 million, are still smaller than its rival's $512 million. Other reasons for the merger are the opportunities it affords for operating economies, particularly through mechanisation, and the satisfactory way in which the trust operations and "wholesale" lending (to big business borrowers) of the New York Trust complement the largely "retail" character of the Chemical Corn Exchange, which deals mainly with individuals.

In the Morgan case, the Department of Justice decided after long consideration that it lacked the power, under the anti-trust laws, to prevent the merger. The present move, which has to be ratified by the shareholders, the Federal Reserve Board and the state banking authorities, will increase liberal demands for a substantial stiffening of the law, which Congress up to now has been reluctant to grant. The agitation will grow if, as seems likely, this merger is followed by others.

Economic Growth - Tax Free

From a Correspondent in New Mexico.

Many states try to attract new industries, but New Mexico is the first, though probably not the last, to permit them to be bought outright. Four years ago it passed a law which permits towns and cities to buy going business concerns outside the state and take them home; they are paid for by issuing bonds, which fall outside the limit on municipal debt, and which are to be redeemed from the profits. They are not a charge, in any way, against the municipality which owns, but is not allowed to operate, such enterprises.

Deming, a town of about 7,000 people, has led the way by paying about $1.2 million in 30-year bonds for two Californian plants which produce drilling tools. They are housed in an empty factory which was used to load shells during the war; its owner, understandably, was one of the most active supporters of this particular scheme and of the state's enabling law. He benefits not only by the sale of his factory, but also because he has a contract to operate the new business. It is expected to employ nearly 100 local people; only key staff are being brought from California.

The greatest incentive, however, was the hope, which has now been confirmed, that the federal government would exempt such a municipally owned enterprise from federal taxes; it is also free of state and local levies. This explains why the former owners can be paid 9 per cent interest (also tax free) on the Deming bonds in which they have been compensated. The economic growth of Puerto Rico has been stimulated tremendously by its exemption from all taxes imposed by the federal government in Washington. In effect, New Mexico has made it possible to create a series of tiny Puerto Ricos on the mainland. It is small wonder that other towns in the state – and other states – are watching closely Deming's experiment with tax-exempt enterprise.

Mr Hoffa and His Monitors

It was largely chance which made Senator McClellan's investigation into corruption in trade unions resume its hearings last week just as pressure was building up in the House of Representatives for the passage of some sort of labour reform legislation at this session. But the evidence coming out of the hearings that the notorious teamsters', or lorry-drivers', union is so far as unreformed as ever, in spite of the promises of its president, Mr Hoffa, that it would be cleaned up reinforces Mr McClellan's contention that the labour Bill passed by the Senate is not stringent enough. Unfortunately, however, attempts to strengthen the Bill will only make it more difficult than it already is to get any agreed legislation out of this Congress.

Meanwhile the need for legislation, at least where the teamsters are concerned, has been made less urgent by a ruling from the Court of Appeals in Washington, upholding the right of a lower district court to regulate the union with the advice of three monitors and to sentence Mr Hoffa for centempt should he continue to refuse to obey.

The monitors were appointed early in 1958, after some members of the union had contested the legality of Mr Hoffa's election as president, under a court arrangement which allowed him to take office provisionally. He has been trying to call a meeting of the union to confirm him in office and thus to get rid of the monitors, but this has now been forbidden by the Court of Appeals until the district judge, Mr Letts, gives permission. He will not do this until he feels that an honest election can be guaranteed, but there seems little doubt that even under these conditions Mr Hoffa would be re-elected. It is thought that the monitors may now try to force Mr Hoffa to retire. They are sure to insist on investigations of the most notorious branches of the union, on dismissal of the most unsatisfactory officers and on new by-laws and accounting practices for local branches.

Louisiana Still Long's

The macabre story of the Longs of Louisiana begins in 1935 when the famous Huey Long, the founder of the dynasty, was shot in the State Capitol by a man he had wronged. A spotlight from the top of the Capitol tower still plays on his tomb every night, keeping alive the memory of the martyred Kingfish. In May his 63-year-old brother, Governor Earl Long, apparently underwent a mental breakdown in full view of the television cameras and was spirited into Texas for treatment by his family, who claimed that he was suffering from delusions of persecution. But he made his way back to Louisiana, where his word is nearly law, and was freed last week by the courts after smuggling out of a mental hospital a tape recording charging his family with trying to put him out of the way so that his nephew, Senator Russell Long, might become Governor. The heads of police and hospital officials have rolled and there now seems to be nothing to prevent Mr Long from taking up his full duties again unless his doctors convince him that he must resign.

Governor Long is only a blurred carbon copy of Huey, the engaging demagogue who terrified liberals in the nineteen-thirties with his slogans of "Share the Wealth" and "Every Man a King". But, like his brother, the present Governor owes his iron grip on the state and its political machinery to a judicious combination of bread and circuses.

Under the law in Louisiana, a Governor may not serve two consecutive terms. A few months ago Mr Long made it known that he planned to get round this provision by resigning this summer so that he would be free, technically, to stand again in the preliminary elections in December. Few doubted that he would succeed, even though federal agents are examining the way in which the state has spent federal welfare grants, and the Governor's own finances. The anti-Long forces have been strengthened, however, by the growth of racial extremism; racial segregationists in the State Legislature have been busy removing from the voting rolls the Negroes who, with the poor whites, have been Mr Long's chief support. Exploitation of racial hatred has not been one of the evils of the Long regime. In May Mr Long opposed a further purge and lost. If the dynasty is to to go on, power must pass eventually to Senator Long, Huey's able son, at present the chief object of his uncle's rage. He bears the magic name, but he lacks "Ole Earl's" common touch and his devoted following. Moreover, his voting record in Washington is too liberal to suit his state's extremists.

Into the Common Market

In his annual report to Congress on the trade agreement programme the President repeated his warm welcome for the common market, with its promise of stimulating economic growth and political unity in Europe on the American model. But he also insisted that all such regional schemes must be "outward-looking" if the benefits of mass markets are to be shared by the world trading community as well as by the six and the seven. The United States itself sells over 17 per cent of its exports to the countries of the common market and it is also concerned about the under developed countries, particularly in Latin America, which sends a third of all its exports to Europe and is trembling for its coffee sales. Officials of the common market insist that it will not be restrictive, but Congress, noting the proposed uniform tariff of 30 per cent on tobacco, has doubts.

In a recent report the Federal Reserve Bank of New York argued that, although in the short run American exporters, particularly of automobiles, chemicals and other manufactures, might suffer, this would be more than offset by the long-run expansion of markets due to economic growth. Many American businessmen, however, are taking no chances. They are busy with plans for building factories or buying subsidiaries inside the common market or licensing foreign firms to make their products.

THE WORLD OVERSEAS

Kenya's Deadline

FROM OUR SPECIAL CORRESPONDENT

Kenya now has a political deadline — early 1960, before the general election there, when the Colonial Secretary will convene a round table conference in London to discuss constitutional changes. But who will sit round the table, and what changes will they consider? It is too easily assumed that Kenya has two parties which in London will present rival blueprints — the New Kenya Group led by Mr Michael Blundell, and the multi-racial Constituency Elected Members Organisation (CEMO) which consists of all the African and Asian elected members, plus Mr Shirley Cooke, European member for the Coast, and whish is led by Mr Mboya. This impression of a two-party system is vaguely strengthened by the way Mr Blundell has been barnstorming Britain with his group's prospectus, while Mr Mboya has been building himself up during his travels in Africa and America as a world figure, the representative of the people, Kenya's Nkrumah-to-be. In fact, these two mighty men have been arguing in the wrong places with the wrong people; in their absence their "parties" have shown signs of coming apart.

This is more serious for Mr Blundell. The New Kenya Group's prospectus remains a set of generalisations, which means that different sectors of his group interpret it differently. Mr Alexander, for example, is still well out on the right, sticking to his reservations, and recent meetings held by the group have taken a beating from the European diehards who refuse to join: the self-styled Big Four, led by Group Captain Briggs. In African areas, meetings have been small and tepid; inside the party, the liberals are grumbling that fine principles have not yet become specific proposals. On the other flank, African nationalists are making hay with the contrast between the group's liberal protestations and the government's actual performance — for example the decision to make a European-elected settler, Mr Bruce McKenzie, minister of agriculture in succession to Mr Blundell. Africans think that agriculture, especially when the Land Control (Native Lands) Bill is being debated and a white paper prepared on tenure in the white highland, should be in the hands of an official; Mr Swynnerton, author of the succesful plan for African farm improvement, would have done.

Mr Mboya's organisation is in fact very happy about the state of Mr Blundell's New Kenya Group, which it sees as divided, and which it thinks will become more divided as it tries to prepare specific proposals for the London conference. It thinks Mr Blundell is faced with the alternatives of the break-up of his party or of going to London with a vague mass of intentions that have not been reduced to concrete constitutional proposals. In either event, it expects to be able to dominate the conference with the weight of the electorate's authority behind it and a set of definite ideas that could be acted upon. It thinks that the side with clear and practical ideas of what it wants, and how soon, and how to embody them in British legislation, will win. It has induced Mr Lennox-Boyd to make constitutional advisers available; it hopes that it will get Sir Ivor Jennings, somebody coloured from the West Indies (Dr Eric Williams would be highly acceptable if he could come) and someone who helped with Nigeria's constitution (perhaps Sir Henry Willinck.) From such a commission it would expect a series of alternative, but quite practicable, schemes of constitutional change to emerge — but all of them schemes conceding, sooner or later, African control of the legislature and the executive council.

The organisation is, however, split on timing and method. The moderates believe that as time *is* on their side, the thing to do is to ensure that Africans will take Kenya over, including its European skills and assets, as a profit-making business. They think it wisest to be firm about aims, but flexible about means and even about the timetable — say, African domination and full autonomy by 1964, and the termination of the Governor's reserved powers by 1968. The thoughtful among them, while wishing to build up a Kenya-wide nationalist party, want that party to be rooted in district party autonomy (which means partly tribal control) so that the party boss, who might om might not Mr Mboya, could not become such a dictator as Dr Nkrumah. Their case, to anxious Asians and enquiring Europeans, is: "You should not worry about African rule — that is settled, and you will have virtually no say in political decisions. What you have to worry about is what sort of Africans will rule — and there you can, now and later, have great influence." But the extremists in the party are all for making — indeed, do make — rash promises of independence for an African-run Kenya by 1961. Nor do they conceal the fact that an African-run Kenya, though it will come into existence through British-type democratic procedures, will be an authoritarian state.

In this split — and it would be invidious to try to say just who is on which side — the New Kenya group sees great hope; it expects by making vague, tempting, liberal noises, to attract the moderates to its banner. Its members tell each other, with relish, how frightfully rude and overbearing Mr Mboya has become with his colleagues. But then, they have been promising the world an African split for two years; quarrels are one thing, crossing the divide is another. Their real and unperceived problem is what a

expert like Sir Ivor Jennings would do with their vague statement of principles; for the first question of constitutionmakers always is: "Who is to rule, and how?" The fact is that the Europeans still want, somehow, to rule Kenya, if not from Nairobi, then from London by proxy, at any rate for 15 more years.

This is why the Constituency Elected Members' Organisation feels that, in addition to its own members, only the European elected members who do have clear ideas ought to sit round the table in London. However, it feels, provided Mr Musa Amalemba, the specially-selected African member who is minister of housing, is not put up as representing any African but himself (though in fact this would rate him much too low) it will be prepared to sit down with the members elected on fancy franchises. They think this will add to a confusion which will benifit them — as, indeed, it may.

But the real danger between now and 1960 is that there will be competitive bidding on the African side for popular favour, as if the round table conference were an election. The endorsement of an African extreme platform, demandng Kenya on a platter or else, could wreck the talks and set Kenya on the road to violence.

Spain's Gibraltars in Africa

FROM A CORRESPONDENT

There are Spaniards, Don Salvador de Madariaga among them, who think it was a historical mistake of the first order that Spanish Colonial expansion in the sixteenth and seventeenth centuries was directed towards the New World. Much better, they argue, if it had been in North Africa. If all that intense, though transient, burst of energy and crusading-cum-commercial zeal had been so diverted, Spain might now be resting on a firm cushion of territory stretching from the Atlantic to the Nile, and the Western Mediterranean might be a Spanish sea.

By contrast, present realities are rather bleak. Spain has already lost its slim Moroccan protectorate and has had to abandon long-standing ambitions of dominance in Tangier. All that remains are the presidios — a few small pieces of Spain on the coastal fringe of the Moroccan mainland. The presidios consist of two sizeable towns, Ceuta and Melilla, and six minute and rocky islands off the coast between them. Melilla was conquered by the Spaniards in 1496 and has been intermittently under siege ever since. Ceuta, first taken and settled by Portugal, became part of Spain in 1581 on the temporary fusion of the two countries under Philip II. The subsequent reseparation left Ceuta in Spanish hands.

Under the Treaty of Tetuan in 1860, which ended a Spanish-Moroccan war, the position of the Spaniards in both places was affirmed by the King of Morocco. Since then the Riff tribes have shown on more than one occasion that they do not regard such treaties as binding on themselves. Much Spanish blood has been shed in protecting these two enclaves. Melilla has a population of nearly 100,000, Ceuta about 70,000. There are some Moors and some Sephardic Jews, but the great majority are Spaniards. Each town is like Gibraltar in that it is built on a rock, connected with the mainland by an isthmus which forms a recognised "neutral ground."

Ceuta and Melilla are the only decent ports in north Morocco, so that until recently all goods entering or leaving the area had to pass througt them. Except for the rich iron deposits in the mountains behind Melilla, which are now in Moroccan territory, this hinterland is poor country, and apart from a million tons of iron ore a year, exports and imports are negligible. Melilla lives on this, and on its people taking in one another's — and the large garrison's — washing. Ceuta, however, has a good harbour, and its excellent oil bunkering facilities, provided by a wide variety of international oil concerns, bring about 15 million tons of shipping a year to the port. Some ships prefer it to Gibraltar because there is more plentiful and cheaper water, and because, as the crews and the officers say the night life 'isn't so damm British." With the projected casino and a million pounds' worth of recent port improvements in Gibraltar, things might well be different in the future.

What of the future of the presidios? Most barometer tappers can see little but rain, with stormy weather to follow. Xenophobic nationalists in Morocco, keen, like Spaniards, to ease the pressure of domestic discontents by pointing artificially agitated fingers at alien Gibraltars on their soil, are already clamouring for their return.

Spain will not easily give up the presidios. They are regarded and administered as integral parts of the homeland; nor will it be forgotten in Madrid that little of the Moroccan gratitude which was expected to follow the handsome surrender of the protectorate two years ago has yet materialised. Ceuta and Melilla are, however, vulnerable in many ways. Goods that formerly passed through Ceuta are already being diverted to the purely Moroccan port of Tangier. Frontier controls and formalities have been increased. And, unlike provident Gibraltar, both towns depend on the mainland for water. This difference may one day count for much.

Samoa Debates its Future

FROM A CORRESPONDENT

For some forty-five years Western Samoa has been controlled by New Zealand under a mandate first from the League of Nations and later from United Nations. But during the past ten years New Zealand's grasp has progressively loosened, and the country is now largely self-governing. The legislative assembly of 48 members is almost entirely Samoan, and though the New Zealand high commissioner can veto legislation, he has never exercised this power. Apart from "reserved subjects," such as defence and external affairs, the Samoan Assembly may make its own laws with any outside interference. New Zealand indeed seems anxious to rid itself of its Samoan obligations without undue delay, and the prime minister, Mr Walter Nash, has announced a plan to bring self-government substantially into operation by January, 1960.

There is, however, a strong body of opinion, both in New Zaland and in Western Samoa itself, which holds that Western Samoa's progress towards independence is unduly precipitate. In the past this opinion has not found more than occasional expression in the press. But lately it has been freely canvassed, and it was submitted in different forms to the United Nations mission which has just recommended December, 1961 as the dead-line for independence.

The first objection to the present policy is that few Samoans understand just what independence means. They persist in asking for their "freedom," though the control which New

Zaland still has power to exercise has little, if any, effect on their daily life. It is supervisory rather than restrictive, and full independence merely means the removal of this unobtrusive supervision. But the normal consequences of complete independence clearly are not realised or understood by the Samoans themselves. The people of Savai'i, the larger though the less populous of the two main islands, told the UN mission that they were "unanimous in seeking their freedom under self-government." But they also said that they wanted a treaty of friendship under which New Zealand would come to their assistance whenever required. The technical and financial assistance given by New Zealand to Samoa has in fact always been considerable, and it seems that the Samoans expect this generosity to be maintained.

They also insist that they should continue to have free access to New Zealand. But there has been no suggestion that New Zealanders should also have free right of entry into Western Samoa. On the contrary, UN representatives have been told more than once that, with the exception of missionaries and one or two specialists, all foreigners living in the country should be called upon to leave immediately self-government is attained. One of the most outspoken members of the legislative assembly, Mr Tualaulelei, who was minister of lands until he lost his seat because of a conviction for assault, has frequently stated that there will be no place in the Samoa of the future for any persons who are not of full Samoan blood. Mr Tualaulelei has been re-elected to the assembly and may well fill a key position in the new state.

The second main objection is that there are at present no Samoans with sufficient education and experience to rule the country. The district of Falealili, which has always been noted for independent thought, made a strong recommendation to the UN mission that self-government should be deferred for 7 to 10 years. Although Falealili represents only about 3,000 people out of a total population of 100,000, it is a district of high standing. The adjoining district of Aleipata asked for a trial period of self-government–presumably still under some form of supervision from New Zealand–before Samoa made "the final transition with acquired experience."

A third objection to immediate self-government is raised on behalf of the minorities–those of European and part-European nationality. There are some 6,000 people in this group, including many who as planters, merchants and senior government officials have done much for the territory. Another problem is who should be the head of state of independent Samoa. The proposal endorsed this year by the legislative assembly and the two *fautua* (the chiefs who act as consultants to the high commissioner) is that the *fautua*, Mr Malietoa and Mr Tamasese, should become joint heads of state, and that any vacancy in the future should be filled by the assembly from members of these two families. Many believe that this system would prove unworkable.

Notwithstanding these fears and hesitations, it is almost certain that there will be an overwhelming majority in favour of early self-government when the plebiscite recommended by the UN mission is held. The decision to determine opinion by a plebiscite is a striking departure from Samoan custom. For centuries the *matai*, or chief, has spoken for all who live under his care and render him service, and only *matais* vote to elect members of the legislative assembly. But the UN mission stated unequivocally that all adults must vote individually on the question of home rule. Afraid that refusal would result in the indefinite postponement of self-government, the *fautua* and the assembly finally agreed. But this is an isolated exception to the Samoan insistence that the *matai* system must be retained as the basis of Samoan life.

New Colonists on Kharg

FROM OUR SPECIAL CORRESPONDENT

Shapur II came to the Persian throne in 310 AD, and during his long reign of 69 years waged three separate wars against the Romans. During one of them he brought a colony of Christians from Edessa and Palmyra in Syria as prisoners to the tiny island of Kharg in the Persian Gulf. It is believed that the prisoners settled down and, in the best Syrian fashion, turned the island into a stopping place on one of the main trade routes from India and the Far East to the Mediterranean. How long the Syrians lasted is not known but the island is littered with sherds of Chinese porcelain that indicate a transit trade with the Far East until the sixteenth century. All that is left to show that the island was once inhabited by Christians are a few rockcarved tombs with crosses on them.

In recent years Kharg was used by the Persian government as a place of banishment for political prisoners. The island was mentioned only in whispers on the mainland, where politicians who had been there did not brag about their experiences to those who feared they might one day have to go. During the past two years, however, the island has lost its bad name. Teheran officials speak of it in terms they might once have reserved for the French riviera. There is talk of developing its beaches for the benefit of the tourist trade or, at least, of using it as a holiday camp for employees of favoured government departments. During the Persian New Year celebrations, last March, the eighteen square miles of the island were so overrun with men, women and children–guests of the oil companies –that the construction workers found it difficult to get their work done.

Kharg is 25 miles from the Persian mainland, not far from Bushire. In summer, winds from the north keep the temperature lower than it is on either side of the gulf. The vegetation at Kharg cannot be described as lush, but it has a few gardens, and some of the few banyan trees in the area which were not planted by oil company landscape gardeners. The pleasures of Kharg were not, however, discovered by some Persian Butlin looking for new sites. It is far more important that Kharg is only 99 miles from the Persian oil fields at Gachsaran.

Persia has plenty of oil but is has long been difficult for the companies to get it out of the country to world markets. With the ever-increasing size of tankers it became necessary for the Iranian oil operating companies to find a port capable of taking the modern giants. Soon ships with five times the capacity of those that now inch up the muddy waters of the Shatt al-Arab to Abadan will be able to call at Kharg, and be on their way again in twenty hours. By using Kharg they can also avoid any embarrassment that might arise from having to pass through Iraqi territory on the way up the river. One day next year the oil will flow from Gachsaran through the pipe line and the tank farm at Kharg and then into the tankers tied up at the new jetty. The whole operation will be controlled from a central communications room at Kharg.

Over two hundred expatriates, American, British, French and Dutch, and nearly 2,000 Persians are building the Kharg terminal. When the construction teams leave the island they will have completed an airstrip, a small boat harbour where barges can be handled, a power generating plant, a sea water distillation plant, a workshop and garage, offices, a clinic, a club, houses for workers and staff, and, most important of all, a two-berth jetty on the sheltered east side of the island. Until these are finished most of the new colonists of Kharg will continue to live comfortably in tents.

Some of the family houses are already occupied. In them life goes on very much as it does in the older oil towns up and down the gulf. Food comes from all over the world, by way of a daily barge from Abadan; entertainment is provided by the cinema and by radio. The lively programmes from the United States air base in Saudi Arabia are greatly appreciated, though the news, delivered at great speed in broadest American, is sometimes confusing. One of the construction men rented the only available Persian house on the island and brought his wife to share the fishing, swimming and boating in the gulf. Their house has become one of the main tourist attractions, and the envy of those who have had to leave their families elsewhere. Many of the modern conveniences ordinarily demanded by twentieth century pioneers are lacking, but as a one-man project of integration it is a success.

The small local population has been pushed aside by all the activity going on around it. The work force for the Kharg project has been imported from Abadan, where there is an over-supply of labour. Those Persians who have always lived at Kharg may have to wait until the construction phase comes to an end before they have a chance to take advantage of having been re-discovered. They may be glad when peace and quiet come again, but Kharg will never be the same if the trippers from the mainland carry out their threat of turning the island into a resort.

Thorez Carries On

FROM OUR PARIS CORRESPONDENT

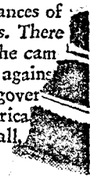
Ivry is one of the strongholds of the red belt surrounding Paris. There, in a large hall facing an impressive agglomeration of council houses, France's largest party held its assizes last week. The Communist party remains in membership and voting strength the biggest in France. Six months ago when only ten of its deputies found their way into the Assembly, superficial observers wrote the party off as dead and buried. These obituaries were premature. In style and self-confidence the Ivry congress was much like its Le Havre predecessor.

Things would have been different had the congress been held at the close of last year. The leaders would have had to explain why the party, for all its numerical strength, proved utterly unable to prevent General de Gaulle's return to power. After its defeat in the referendum and the loss of over a million votes in the parliamentary elections last November the leadership seemed in a self-critical mood. The mood has changed since. The local elections last March showed that the Communists had recovered their positions and that one Frenchman in four would again vote for them. Still more encouraging for them was the fact that many Socialists did not hesitate to vote for Communists in the second ballot. Comrades Thorez, Duclos and Co could claim at Ivry that their line had been right all along and was now paying dividends. Mr Suslov, tremendously appluded, brought Moscow's backing for the claim.

Even more than from the electoral results, the leaders drew comfort from the changing atmosphere in industry. Two years of declining real wages have strengthened the appeal of the communist thesis about paupérisation. Many workers shared the popular hope that General de Gaulle would bring them a new deal. Cuts in subsidies and social security, a wage freeze combined with a reduction of working hours undermined the Gaullist legend. There were almost no stoppages in the second half of 1958, but in recent months strikes have become frequent; and for the first time in years they are often the outcome of joint action by the communist and Catholic socialist unions. True, the railwaymen called off their warning strike last month when the government threatened them with requisition. But the three unions did withdraw together and even in this common retreat the Communists see the germs of future common offensives.

Having recovered from the shock of last year's events, the leaders show no intention of reshaping the party. A year ago voices could be heard among the rank and file talking about the need to revise the party's methods and replace the Stalinist leaders; they found no echo at Ivry. M. Thorez has no patience for opposition. But although the party is to remain monolithic internally, it intends to show a great deal of flexibility in its relations with other groups. In the new, politically more difficult, framework the Communists are to make renewed efforts in their search for allies. They have no illusion that they can unite the opposition by agreements with the leaders of other parties. M. Mollet and his socialist lieutenants are as hostile to a popular front as ever. The leaders of the small opposition groups are most reluctant to face the issue of alliance with the Communists. It is from below that the latter hope to impose a popular front.

In order to attract allies, the Communists do not come out with revolutionary slogans but with a minimum programme designed not to scare prospective partners. The main points of the platform presented as an alternative to the present system of personal rule include the calling of a constituent assembly elected through proportional representation; the nationalisation of the banks and the steel industry coupled with greater workers' control of state enterprises; the extension of the welfare functions of the state; and state as opposed to private education. The "restoration and renewal of democracy", and not proletarian dictatorship, was the refrain at Ivry. Even this minimum programme is not expected to attract allies rapidly. In the meantime the Communists will try to turn to their political account all forms of discontent ranging from the grievances of veterans to the grumblings of the winegrowers. There however, three main roads to united action: the cam for a negotiated peace in Algeria; the drive again sidising private, that is, religious, schools (the gover intention to increase this aid revives the anticlerica still strong among the French Left); and above all, action in the factories for higher wages.



For all their confidence in ultimate victory, t at Ivry did not disguise that their task is harder t General de Gaulle has a better hold of the state than his predecessors had. He also has more efficie pons against strike action. The Communists can no rely on parliamentary action to further their aims. now admit that a mass movement much stronger than th of the thirties is now required to impose a popular front and that a change of regime will be necessary this time. For this reason M. Servin was fairly critical in his report on party work. He claimed the total membership to be 425,000, roughly the same as three years ago; 68,000 newcomers nearly filled the gap left by departures. But the proportion of members under 25 has declined and many cells are not doing enough recruiting and propaganda work.

Watching the succession of speakers who last week at Ivry climbed the rostrum and against the background of a Delacroix painting of Liberty on the barricades, proclaimed their wholehearted approval of M. Thorez's lengthy report, one had the conviction that the old leadership has no intention of standing down or changing its line. M. Thorez and his associates hope that the Gaullist government will

unwittingly act as the party's recruiting agent and pave the way to a popular front.

But outward resemblances with Le Havre should not disguise the differences in the party's situation. The new political framework has already compelled it to switch its emphasis from parliamentary to direct action. It may force the party to further changes in structure, method and leadership. One thing is certain: France's communist problem has not vanished by magic of electoral law.

Laos Under Fire

The Arabs have their *malesh* and the Malays their *tida apa*. The Laos, when excusing inaction, say: *Bo mi* — "There isn't any." The stranger in the "land of a million elephants" who ask for a canoe is liable to be told: Bo mi. On pointing to one that is clearly visible, he will be told: Bo mi, the boatmen are fishing. He says that he will travel on foot, with porters; but "Bo mi, they're out hunting." So he prepares to set out along the jungle path. Bo mi, he is told, the rains have washed it away.

It may be hard to think of this remote and idyllic country as a source of danger to world peace, but paradox is no stranger to Laos, where the government's action against a dissident communist battalion has drawn threatening notes from Peking and Hanoi. But if Laos has indeed become a danger area, it is solely because its internationally recognised sovereignty is threatened from outside.

In the confused days of the Japanese occupation of French Indo-China, the royal princes of Laos split into to 10 jous resistance groups. One of them, Souphanna Vong, people o enlisted the help of the Vietnamese communists (Viethigh stand and in August, 1950, proclaimed a "resistance gotrial perio nt" called Pathet Lao, with himself as prime minisform of su Vietnamese communists used this a "legal" cover "the final tra asion of Laos. In April, 1953, units of their army,

A third obje emselves volunteers in support of a Laotian libehalf of the mi y, overran a large area of Laos. Though driven nationality. Ther French, they established the prince in two ding many who n provinces, Sam Neua and Phong Saly, as the officials have d administration claiming to be the only lawful is who should it in Laos. This arrangement suited the Vietminh proposal end ally as well as politically, for the opium of the two *fautu* rovinces became a profitable source of foreign exchanmissione r north Vietnam. In their tenacious support of Pathet should the f o pretensions lies the root of today's troubles.

At the Far Eastern conference at Geneva in 1954, the Vietminh pressed the claims of this government, which even Russia had not recognised. In the end, however, it was a Vietminh minister who signed the agreement on the cessation of hostilities in Laos, on behalf of the Pathet Lao forces. And on November 4, 1954, the Pathet Lao itself acknowledged that the two disputed provinces had come under the authority of the recognised government of Laos.

It was not until November, 1957, however, and after armed skirmishes and prolonged negotiations, that the government reached agreement with the Pathet Lao on the integration of rebel troops into the Laotian national army by March 18, 1958. Two rebel battalions were to be absorbed into the army; the remaining 7,500 men were to be demobilised. The government later announced that integration had been carried out according to schedule. On May 24th last year, it told the tripartite international control commission for Laos — appointed by the Geneva conference — that it considered the commission's work completed, since the government had now carried out all its obligations under the Geneva agreements. On July 19th, the commission decided by a majority vote of its Indian and Canadian members to adjourn *sine die*, against the formal protest of the Polish member.

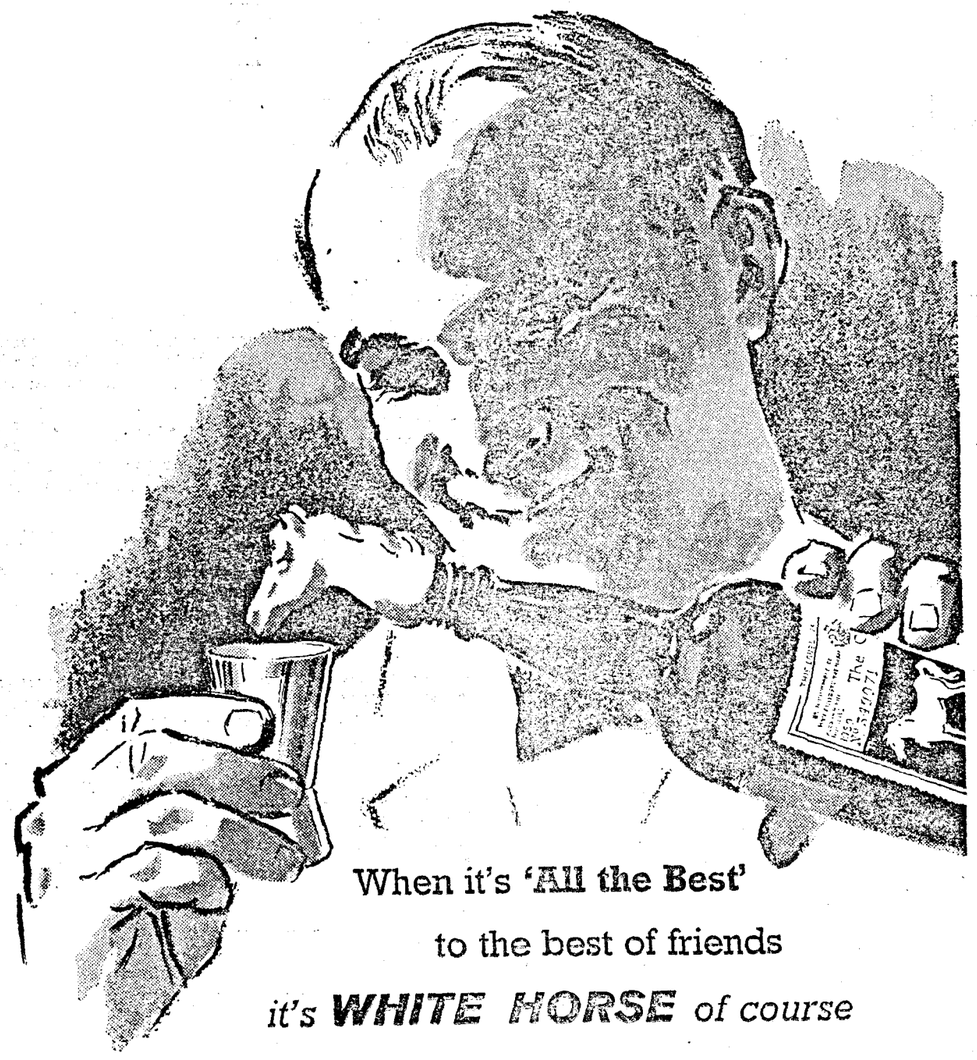
The happy illusion that all was well in the best of Laotian worlds was short lived. It is now evident that the two battalions were not in fact integrated; there was no agreement on what constituted integration. The Pathet Lao, through its communist-line political party, the Neo Lao Haksat, argued that they should retain their identities as separate units; the government wanted the men dispersed among other battalions. The party sought to place 120 officers in the Laotian army; the government complained that it had earlier agreed to limit its claim to 45. Last January, the government of Mr Phoui Sananikone was given emergency powers for twelve months. He and the chief of staff General Ouan, simultaneously losing patience, decided to surround the recalcitrant battalions. The ensuing three months were evidently spent by both sides in studying the whites of one another's eyes; then, on May 18th, the army warned the Pathet Lao commanders to lay down arms or face the consequences. One battalion gave in, but the other broke away and headed for the north Vietnam border. In a skirmish with the pursuing loyalists, both sides suffered casualties, numbering in all seven or eight.

These are the events which Peking and Hanoi represent as a grave threat to peace, and which the Chinese foreign minister describes as serious violations of the Geneva agreements. The Foreign Secretary, who has inherited certain obligations from his predecessor who was co-chairman of the 1954 conference with the Soviet foreign minister, could not ignore the complaints, which he has since rejected.

Laos has long — far too long — been beset by interference from its more powerful neighbours. It should now be allowed to deal with its own fifth columnists in its own way.

SHORTER NOTE

A brief but moving ceremony has been held at the Department of Justice to mark the final righting of the wrongs done during the war to the Nisei-American citizens of Japanese descent. In the hysterical days after the bombardment of Pearl Harbour 72,000 of them were moved from their homes on the West Coast to "relocation centres" inland. In 1945, after three bitter years, 5,766, most of whom had been confined at the notorious Tule Lake camp, renounced their American citizenship. It has now been restored to 5,378 who changed their minds and withheld from only 31, against whom there was reliably evidence of disloyalty. Generous compensation has also been granted for the confiscation of Nisei property and the destruction of their livelihood.



The man of experience sticks to White Horse Whisky and knows there will be no regrets. From peat and heather comes the rare bouquet. Good ripe, golden barley gives the mellow richness. Clear mountain burns softer than dew bring the gentle softness. And above all age-old skill, patient and unhurried, confers the genial warmth without a spark of fire.

The quality of White Horse Whisky is timeless. The saying: "You can tell White Horse Whisky blindfold" remains as true today as ever.

A day in the open—what better companion than a quarter bottle of White Horse—10/-. Other prices, bottles 37/6, ½-bottles 19/6, miniatures 3/10.

THE BUSINESS WORLD

OMEGA 10 JUL 1959

Mergers Take Over

Any take-over bid presumes simply that business assets could be more efficiently and profitably employed than they are. Personal ambition may prompt a particular bid. Personal antagonisms and self-interest may produce bitter opposition. The ease with which short-term credit can be obtained may, as it seems to have done in recent months, influence the timing of a bid. But these are incidentals. Mergers of one kind or another are commonplace in any flexible industrial society. Industries and companies are constantly on the move; the take-over bid is but one of the mechanisms of change. To believe that a code of conduct can be drawn up to govern that mechanism assumes that the market is a club from which any undesirable outsider can be blackballed and where the established members should be left to doze peacefully in their armchairs. To praise one bid because two boards of directors have come to terms and condemn another because it has been made directly to shareholders against the opposition of the board is to make a useless distinction. The test of merit comes later: has the redeployment of assets resulted in a profit high enough to justify the price paid?

What once seemed the separate and special motive for take-over bids in the postwar era has now lost some of its potency. Since Mr Charles Clore first began his dramatic forays, many companies and many investors have recognised that inflation, penal taxation and dividend limitation had left the book values and stock market prices trailing well behind the real values of many assets, particularly in the field of property. Directors have become more prepared to release the cash locked away in these hidden values and to put the resources to full use before a Mr Clore takes the decisions for them. Quick financial pickings from a take-over are no longer so easy to find. Even when they are found, they do not always produce a personal gain that the bidder can quickly realise. Like it or not, the new owners have often found that the newly-released resources have to be used to develop the business or others under their control. The financiers have perforce become industrialists, building up diversified industrial empires (as Sears Holdings) or promoting industrial concentration (as within Sears and the rest of the shoe trade). The succesful takeover, in such cases, turns out to be simply a special kind of merger; whatever its motives, the effective economic result is either diversification or concentration within industry.

Since the war many of Britain's strongest industrial groups have been diversifying their activities by mergers or other means. Once it reaches a certain level of financial, technical, manufacturing and managerial resources, the big modern company develops built-in "institutional" pressures to explore beyond its existing commercial frontiers, reinforcing the basic incentive of spreading one's risks. A substantial flow of internal funds awaits investment where it can earn the best return (which directors often feel they can identify better than their shareholders); largescale research and development departments throw up innovations that may not fit too tidily inside existing spheres of operation; products and by-products, given a little extra processing, invite entry into tempting new fields that can guarantee and increase one's throughput; managerial talent is trained to recognise new opportunities for expansion in adjoining or even quite far-off markets.

Diversification is often achieved, however, without an outright merger of identity. New joint companies such as Impalco, set up last week by ICI and Alcoa, can be established to join resources in a particular field; working arrangements without financial links, such as the nuclear consortiums, may suit new areas of overlapping interest. Mergers for diversification seem

rather more likely to occur where the scale of investment is comparatively modest and where some of the managements are particularly self-confident — as in Schweppes' bid for Chivers. Where the markets are similar and the products not too diverse, such managements may well feel they can apply their own acumen across the border, not remaining content with growth within their own business.

Diversification may thus proceed from an overspill of strength in one department or another. Equally, it can be defensive, where a company whose profits in its chosen sphere are falling attempts to bolster their total earnings by the purchase of new interests. Textile companies such as Courtaulds, having taken most of the opportunities to be found within their own field, are now buying their way further, into a variety of industries outside it. They have the liquid resources to make their bids, and presumably hope to secure from these new assets a higher return than by putting the money into gilt-edged. Redeployment of liquid resources in this way, incidentally, can also keep directors and managers in the powerful style to which they are accustomed. Inertia as well as dynamism can produce take-over bids.

For each merger aimed at diversification, recent years have brought several aimed at concentration. Buying up competitors is not the only way to achieve a bigger share of a market; historically, indeed, concentration seems to have come about as often by the steady "differential growth" of technically and commercially progressive firms as by mergers. This continues; it is inherently less noticeable. But behind the recent wave of mergers, which so much more dramatically symbolise the whole process of business concentration, several special influences seem to have been at work.

The access to a market that a merger can afford can be at least as important as the economies of scale in production that it may bring; and the British market was frozen into a peculiar rigidity during the period of wartime and peacetime controls. In a few industries such as brewing, licensing restrictions upon the total number of retail outlets and the tied house system have always meant that mergers were the only practical way to increase one's share of the market; somewhat similar conditions ,though less formalised, held good in other trades for several years after the war, while allocation systems prolonged their pre-war pattern. When those controls were finally loosened, established concerns had an incentive to consolidate or increase their hold on the market by defensive mergers with others, while newcomers to the market found that they could gain and widen distributive contacts with the market most readily by buying up other companies less aggressive or weaker than themselves. In terms of publicity, again, it is often less expensive to bid for an existing corner in the market and build upon it than to establish a completely new "brand image" from scratch.

It was no accident either, that the wave of mergers began mainly in the distributive trades; no other part of the economy was more ripe for "rationalisation" and indeed for innovations in technique. It was in these as the financial pickings of take-overs, were most apparent. Hidden property values could be unlocked and utilised; economies of scale in management, stock control, and particularly in the administration of hire purchase, could be secured. Marks and Spencer led the way in strengthening the distributor against the manufacturer, "integrating backwards" by sheer bargaining power rather than by financial link-ups: Mr Wolfson chose the merger. This concentration of ownership in distribution, parallelled and assisted by changing techniques such as self-service and the supermarket, has in the last few years begun radically to alter the balance of countervailing power in the British market, away from dominance by the manufacturer. In its turn it has increased the incentive for another kind of defensive merger among manufacturers.

For a while after the umbrella was lifted from many sheltered trades, the sellers' market persisted; for many the problem was still to build up capacity as fast as the total market was growing so that increasing one's share of the market could remain a second priority. But once the pace of general expansion slackened, increasing one's share became the only way to continue growing and to secure manufacturing and marketing economies of scale. The amount of competition that has developed over the last few years of surplus capacity may not have been intense by traditional standards, but it has seemed so to managers who have not been used to any for years.

Nationally and internationally, moreover, legislation has suggested that competition will intensify. Discussions about a free trade area ,and the fact of the common market, have brought the prospect of greater competition from abroad and greater chances to compete overseas — but has also served notice that all the economies of scale one can achieve will be required to compete successfully. Industrialists have witnessed a rigorous interpretation of the Restrictive Trade Practices Act, offering them less and less hope of justifying agreements of one kind and another not to compete. The cable makers have already admitted that their answer to the abandonment of price agreements is to merge ,and some other mergers in the field of metal products appear to have had the same motivation. Some clearheaded and cynical industrialists are prepared to argue that there may be some "natural" degree of competition for any industry at any given stage of its development; and that if the limits to this are not defined by price agreement, they will be set by concentration of ownership.

Bids breed rival bids, and mergers breed mergers: aggressive or defensive, the formation of one much larger group than before will promote the formation of others. Moreover, the pressure against restrictive agreements to limit competition, from home and abroad has certainly not yet exerted its full force. In more and more industries, today's various springs of competition may well lead towards oligopoly, "competition by the few". In practice, in Britain in 1959, that may be less objectionable than it sounds in principle; even in principle, it is almost certainly less objectionable than agreements not to compete among comfortable companies that make little attempt to seek further economies of scale one way or the other. Few liberal economists would argue that British industry or British trade could not possibly be more efficient than they are today; and so long as amalgamation will make them more efficient, so much the better. The eventual danger, obviously, is that the area and intensity of competition, as well as the number of competitors, may in its turn be reduced. If the consequences of the Restrictive Practices Court's outlawing of price agreements were to be price leadership by dominating firms in a wide range of industries, it would be logical to shift the balance, putting more emphasis — and more power — behind the Monopolies Commission. That situation exists in some British industries already; neither the commission nor any government has ever decided quite how to deal with it. But it would be exaggerating to say that the current wave of takeover bids and mergers seems as yet to have brought about price domination in many others.

BUSINESS NOTES

THE ECONOMY

Firmly Upward

Revision of the official index of industrial production for March and April now confirms that output was showing quite a clear rise even before the budget, and the early indications for May suggest that the rise has gone on steadily. The figures now put the level of activity at 109 (1954 = 100) for March, 110 for April (a point better than was expected), and probably 110—111 for May. This is about 5 per cent better than the level in May 1958, which lasted most of last summer, and marks a clear advance on the level of 107 attained in November after the first reflationary measures began to take effect. The Central Statistical Office has now recalculated this 1954-based index back to 1946 (showing a total rise of about 60 per cent). The current level of industrial output is just topping the earlier peak level touched in September, 1957; it is about 2—3 per cent higher than the peak of the 1955 boom.

Unemployment figures are the only indicators we yet possess reaching into June; they show a further marked improvement. The number of people unemployed fell by 67,000 to 413,000, or 1.9 per cent of all employees in Britain. The fall represented 58,000 fewer wholly unemployed and 9,000 fewer temporarily stopped. Seasonally, a fall between these two months of only about 30,000 in the numbers wholly unemployed would be expected; so these figures, coupled with a rise of 37,000 in the number of vacancies on offer, mark a considerable real reduction. Whether the employment figures will now "catch up" by beginning to rise remains to be seen; these figures are subject to considerable revision and their failure to move upwards may merely mark some statistical lag.

All regions benefited from the reduction in unemployment, with London and South-Eastern again recording only 1.0 per cent unemployed, though Scotland still shows a percentage of 4.0 and Wales one of 3.4. Even in 1956, when unemployment was at its lowest point since the war, more than 2 per cent of employees in Scotland were out of work.

TAKE-OVER BIDS

What Price Harrods?

Apart from the shares affected by the various take-over proposals, the industrial stock market has lacked any firm direction. Excitement has been largely confined to the £ 1 ordinary shares of Harrods. Shifts in market prices brought the rival bids of the House of Fraser and Debenhams close together in value: with the House of Fraser "A" shares standing at 41s, 3d. its bid of 2½ of "A" shares plus 20s. in cash was worth 123s. 1½d, for every Harrods share and with the Debenhams 10s. shares standing at 31s. its bid of four 10s. shares was worth 124s.

But the price of the Harrod's shares climbed above these values to 129s. because United Drapery Stores put in an-

other and a better bid. Its offer of seven of its 5s. ordinary shares for every two Harrods shares was worth 134s. 9d. with the UDS shares standing at 38s. 6d. Like the House of Fraser and Debenhams it is offering at least 40s. in cash for the Harrods preference shares which have equal voting rights with the ordinary units. Apparently, had not the House of Fraser made a bid, UDS would not have considered making one of its own. UDS seems anxious to preserve the Harrods business much in its present shape, being particularly attracted by the potentalities of the store that is now being built in Birmingham.

How far this competitive bidding for Harrods will go remains to be seen: Mr. Hugh Fraser seems prepared to carry on with the struggle, and over the week-end he improved on his ability to do so by announcing that the capital of the House of Fraser would be re-organised so as to give the "A" shares full voting rights. This decision, Mr Fraser says, was not prompted by the Harrods struggle, but its effect would be to put the House of Fraser bid in terms of voting on an equal footing with its two rivals.

While the momentum of the Harrods struggle mounted, the conflict over Scottish Union and National Insurance never came to the sticking point. The Yorkshire Insurance, which has from the beginning said it would not indulge in competitive bidding, withdrew its offer, leaving the field open for the better bid, made in cash, of the Norwich Union. As the Yorkshire Insurance has now withdrawn, the directors of Scottish Union will recommend shareholders to accept the Norwich Union offer. They, like the directors of Harrods, were faced with an awkward dilemma and, like them, have behaved with propriety.

EXPORT CREDITS

A Race Better Unrun

The Federation of British Industries has made a plea to the Treasury and the Board of Trade to facilitate longer export credits in selected cases by extending official credit insurance to ten or fifteen years and by relieving the exporter from his remaining small share of the credit risk. The FBI is aware of the objections to proposals such as these, which manufacturers in all countries have been pressing for years; but it thinks that the deflationary turn of events throughout the world has changed the balance of priorities. The argument is dangerous and dubious. The worst thing that could happen in a period when the world economy is weak is a race in export credits. Mercifully, such a race has been avoided; it has been avoided because the official credit insurance organisations that co-operate in the Berne Union have ignored pleas such as the FBI puts forward.

The new problem in a recession is shortage of buying power. The right remedy for that is the development loan, not the artificially extended banking credit. The much complained of competition from the US Export-Import Bank is in the form of such loans; the Berne Union countries agree that the conventions of the five year rule and the rest do not apply to this direct finance. The World Bank plays a big part in this field; private investors are beginning to come back; and Britain has recently made greater use of facilities under Section III of the Export Guarantees Act. If Britain can afford to spare more capital to finance overseas development than is considered profitable and safe by the commercial community, it is surely better in this way to keep it in the public domain altogether. There is nothing to be said for letting exporters, even selected exporters, draw on bank finance for long-term investment the success of which is thereafter a matter of concern only to the government.

ICI

Economist at the Top

It was once observed, in a room at the top of Imperial Chemical Industries, that "It is not on the whole an absolute disadvantage, in this organisation, to have been at some time or other a working chemist"; and non-scientists in less exalted niches in the hierarchy might consider that remark litotes indeed. Be that as it may, ICI last week announced that a non-scientist, Mr Stanley Paul Chambers, will succeed to its chairmanship when Sir Alexander Fleck retires at the end of February 1960. Mr Chambers is an economist by training and for pleasure; he joined ICI in 1947 from the direction of occupation finance policy in Germany — and, further back, from the Inland Revenue, where he is said to have been responsible for the idea of "Pay As You Earn". Within ICI his interests were at the outset mainly financial, but as deputy chairman since 1952 he has been increasingly concerned with the group's huge capital investment programme.

It is in this sphere of top management, particularly in so science-based an industry, that technical and economic questions are most intimately merged; research and development themselves, even in advance of "proposals to manufacture", are in a sense only capital investment once further (and more riskily) removed. While many other companies in British industry are still pondering deeply about fitting scientists into the management pattern and on to the board, ICI, long past that stage, has been somewhat anxious in recent years about making enough use of the non-scientist. Economics as a discipline occupies somewhat uneasily a no-man's-land between arts and sciences; and if it retains elements of alchemy, as some rude scientists would suggest, cannot the same be said of ICI? There is certainly no higher pinnacle than this one for the economist to emerge at the summit of British industrial management.

ALUMINIUM

A New Partnership

Aluminium is still in surplus but major producers are anxious to establish a firm contact with the British and European markets in front of the day when the consumption of aluminium in these markets begins to catch up with the high rate of consumption in North America. That was the background to the long and bitter struggle over the control of British Aluminium. When Reynolds Metals and Tube Investments won that battle, the proposed link between British Aluminium and the Aluminium Company of America (ALCOA) fell to the ground. Reynolds Metals had secured its access to the European market, ALCAN already possessed it through its British subsidiary, Northern Aluminium, but ALCOA, the world's biggest producer, was left out in the cold. It has not remained so for long: with ICI it is to form a holding company, Imperial Aluminium, which will take over ICI's aluminium plant in South Wales at a value as yet to be agreed but probably in the region of £ 10 million. The capital of this company, as in the instance of British Aluminium, will be held as to 51 per cent by the British company and as to 49 per cent by the American concern.

The plant in South Wales, manufacturing a wide range of semi-fabricated products, accounts in terms of capacity for only about 8 per cent of the British market, compared with about 25 per cent for the Reynolds-T. I. group and about 20 per cent for Northern Aluminium. But its intentions seem to be aggressive as well as ambitious. ALCOA can provide technical know-how in aluminium to reinforce ICI's experience in producing and selling non-ferrous metals and the far-reaching contacts of ICI's sales departments will provide ready access to the market. The Anglo-American groups have now sorted themselves out; and they appear ready to compete with each other.

FINANCE CORPORATION FOR INDUSTRY

In Advance of calls

The insurance companies and investment trusts that together with the Bank of England subscribed capital for the Finance Corporation for Industry after the war have become accustomed to bad news; this year the only solace Lord Weeks can offer them is that "I believe we have now covered the worst possibility". Results of the current year, he hopes, will be quite good. But writing off past investments (some of which might still yield something) has involved in the year to March 31, 1959, a clear loss of £ 2,196,190. This follows a loss of £ 902,322 in the previous year. But now there is no reserve left to fall back upon, and the loss has had to be carried forward.

In an attempt to make good this deficiency of reserves, Lord Weeks is resorting to an intriguing balance sheet innovation. So far FCI has financed its loans to industry almost entirely from bank advances, for which it has to pay the going rate. Its 2,500,000 shares of £ 10 each are only 4s paid. £ 500,000 in all. Naturally the insurance companies and investment trusts are reluctant to sink more capital in this financially unprofitable venture. Accordingly, the Bank of England has made available £ 5 million "paid in advance of calls". This advance is included under issued capital; its repayment would entail application to the court for a reduction of capital. For the first five years of its duration, "the terms of the advance are particularly favourable to the Corporation"; it is understood that at present FCI is paying no interest at all.

The Corporation's task has never been an easy one. It handles big transactions and unlike its sister organization Industrial and Commercial Finance Corporation, it cannot get a good spread of risk. It has suffered a few big and bad losses outside the steel industry, which remains FCI's principal sphere of interest. Lord Weeks hopes that every skeleton is now out of the cupboard; his shareholders will hope so too.

MOTORS

Output High, Exports Higher

Despite the persistent interruption of strikes during May, production of cars and commercial vehicles was sustained at roughly the same rate as in the previous month, when an all-time output record was set by the industry. Fewer vehicles were produced in May — 91,934 cars against 100,464 in April, and 28,156 goods vehicles and buses against 28,894. This is a decline of about eight per cent for the month; but May, which included the Whitsun holiday, contained only 20 working days, against 22 in April — a fall of over nine per cent in working time. Strikes reduced output at BMC, particularly of the Morris Minor. Elsewhere, there is every indication that the industry worked close to its full capacity for making cars throughout the month, and has continued to do so during June. The quickening of activity during April and May was sufficient to bring total production during the first five months of the year to a fractionally higher level than the total of the same period last year, thus fully offsetting the decline experienced during the first quarter of this year.

Having set an all-time record for car exports in April, the industry promptly broke that record in May, when 60,349 cars and 12,995 commercial vehicles were shipped overseas. This brings total export of cars during the first five months to 234,936, compared with 217,448 in the same period last year. Car exports in May were more than half as much as the total for the entire first quarter of this year. This concentration on exports still appears to be starving demand at home to some degree, although the waiting lists for most models seem to have become slightly shorter in the past month.

BANK CREDIT

Turn in the Trend

The rise in bank advances shows signs of slackening, but it is not over. At the mid-monthly make-up in June, which now supplements the special end-month statements of account, the London clearing banks together showed a rise of only £ 23 million in gross advances; after allowing for transit items the rise was £ 29 million. This was kept down by repayments of £ 9 million from the State boards. Increases in advances from September to May averaged £ 70 million a month. In June moreover for the first time, two big banks, Lloyds and the National Provincial, showed a fall in advances. A turning point was also apparent in the investment portfolios. The total fall of £ 21 millon was notably smaller than in previous months, cushioned by the first apparent bank purchase. Lloyds bought £ 10 million, following its big sales in previous months.

The upsurge in advances since the lifting of the credit squeeze a year ago has carried their total since mid-1958 up by £ 553 million and their average ratio to deposits from around 30 per cent to 38.3 per cent. The bank that has made the running is Barclays, which a year ago had the lowest ratio of advances to deposits among the big banks. Its increase of £ 167 million has now carried that ratio from 27½ to 37½ per cent.

INSURANCE

Tell Motorists the Truth

Aggregate figures of the British Insurance Association, whose members transact 80 per cent of the home and overseas business of the British insurance market, show a rise in total premium income of £ 83 million, to £ 1,425 million. That expansion of 6 per cent is notably smaller than has been recorded in previous years, but less of it arises from the inflation of money values. Total invested life funds rose by £ 334 million to £ 4,537 million and non-life funds rose by £ 45 million to £ 991 million. Since the figures refer to book values, they give no close picture of the disposition of new funds. But plainly a substantial portion went into equities, which now represent 18.9 per cent of life funds at book value and 16.6 per cent of non-life funds. These ratios have patiently been built up from about half the present level before the war. Gilt-edged stand slightly higher in the aggregate balance sheet than a year ago, following a slow decline. The ratio is down again, to 22.4 per cent of total funds in both branches — compared with 39.2 per cent in 1947, but 22.3 per cent in 1937.

Overseas business, reports Mr Charles Trustam, retiring chairman of the Association, "continues to flourish". Mr Trustam appears to be referring to volume of business. But the unprofitable underwriting experience in the United States has been checked to some extent by approval of increases in rates; and while accident results are still bad, the fire departments report an improvement. The one department that returns consistently bad results is motor insurance. In 1958 the companies' motor premiums throughout the world totalled £ 260 million; possibly more than half were outside Britain. The collective underwriting loss on this business was almost £ 10 million.

The increases in rates of which the motorist complains so bitterly still leave him subsidised. One wonders whether the insurance companies are doing the right public relations job on this. They refuse to publish details of motor business for each country. Since they insist that no country's motorists are being asked to subsidise uneconomic insurance in another country it is difficult to see what embarassment the companies fear from telling the public the truth.

S G BROWN LTD

Denationalising an Instrument Maker

An Admiralty decision to offer for sale S. G. Brown Ltd., the makers of gyro compasses, other gyro instruments and electrical equipment, has aroused political excitement both among the supporters of public ownership and among some more conservative opponents of take-over bids. The company was bought by the Admiralty during the war, because its owners engaged in disputes with it that hampered production. After the war the Admiralty retained ownership, to preserve the company as "war potential", and also perhaps to keep in being an alternative supplier to Sperry Gyroscope, the country's only producer of gyroscopic equipment before the war.

Browns was acquired for an agreed price of £ 55,750, in 1942, but its assets are now worth some £ 1,250,000: the Admiralty, limiting itself to a 5 per cent dividend, has had to provide altogether £546,000 of capital for the company, and a further £ 250,000 has been provided for in this year's Navy Estimates (in November last year the company had an overdraft of £ 270,000). Over the last three years the company has averaged a profit of £ 130,000 before tax, a reasonable but not exceptional rate of return on the capital employed. Technically it has a strong position in its field; apart from its own successful gyro-compass, it has a cross-licensing agreement with the Bosch Arma Corporation, one of the largest makers of gyroscopic equipment in the USA.

The situation in the gyroscopic instrument industry has changed somewhat since the war; the increased demand for this equipment in aircraft and missiles has led more companies of gyroscope equipment for aircraft, though sperry and S. G. Brown are still the only producers of marine gyrocompasses. This may be one reason why the Admiralty no longer feels justified in retaining Browns apart from its change in policy on the retention of production capacity; there are a number of large British companies that could usefully add it to their instrument divisions. The Admiralty last week committed itself not to sell to a foreign buyer or in such a way that it might be brought under foreign control, which would presumably rule out any bid from Sperry, which is partly American-owned, or Bosch-Arma. Other conditions that the government committed itself to observing included the protection of employment for the company's workers and its continuance in being as a company able to develop precision engineering. Finally, the Government promised that it would assure itself that the deal would not increase any danger of the establishment of a monopoly even in a particular branch of Brown's work.

ATOMIC WEAPONS

More Bombs

The French announcement that France's first nuclear test explosion was imminent coincided with a statement made in the House of Commons by the Paymaster General which can only be assumed to mean that a sharp increase in nuclear weapon production is about to take place in this country. The last year has seen the commissioning in various parts of the world of one nuclear reactor after the other which has been conceived, built and designed solely for the production of military grade plutonium. In France, both big reactors at Marcoule are now working with a potential output of 100 kilograms of plutonium a year; the gradual commissioning of the four Chapel Cross reactors in Britain is effectively doubling plutonium supplies here and a similar six-reactor station is coming into operation piecemeal in Siberia.

Against this background, Mr Maudling's statement that only one of the civil nuclear power stations would now be modified to make this military grade of plutonium looks at first sight like a decision to retire from the nuclear race (the exception is the Hinkley Point power station where work is too far advanced on the modifications). But what

Here's a car that's all car. It's the vivacious Renault Dauphine.

Look at her lines
The sheer chic of her! Delightfully fashion-conscious and so elegant. Five sparkling colours to choose from.

Look at her performance
Speeding along at over 70 m.p.h., she hugs the road like a lover. In town and country she averages more than 47 glorious miles to the gallon. How's that for economy!

Look at her fitted extras
Heater; demister; automatic starter; courtesy lights; overriders; safety features, etc. etc.

Put your foot down—insist on driving a Dauphine. Write to us at the address below for the name of your nearest demonstration dealer.

WALBROOK HOUSE, LONDON, E.C.4.

the government has in fact done is to exchange an insurance policy, which might or might not have been taken advantage of as circumstances made it necessary, for an assured source of supply. Under the agreement negotiated with the United States a month or so ago, Britain is to exchange plutonium — or rather spent reactor fuel containing plutonium — against American uranium 235. The rate of exchange, however, is decidedly in Britain's favour, one gram of plutonium against 1.75 grams of uranium 235. Allowing for the fact that uranium 235 is far the more convenient explosive to use and makes a smaller and more compact warhead, Britain gets nearly twice as much fissile material out of the deal as the United States. It also receives it in a form that is particularly scarce and expensive to produce in this country. Atomic weapons can be produced from plutonium alone, without any uranium 235, but scientists do so only when they have no other choice. French weapons production is bound to be handicapped until France has completed the proposed diffusion plant for the production of uranium 235; at present only the site has been chosen and, even though the plant will arrive largely pre-fabricated, it must be some years before it is in production.

OVERSEAS TRADE

Rise in Exports Widely Spread

The sharp improvement in British overseas trade in April and May is almost certainly too good to last. British exports in May rose by £ 3½ million to a new peak of £ 299.2 million fob, making the average for the two months £ 297 million, 8½ per cent higher than a year ago. Imports, thanks to an unexpectedly sharp drop in May, averaged £ 326 million cif, seven per cent higher than a year ago. With re-exports averaging £ 11 million fob the apparent trade deficit was only £ 18 million a month, £ 1 million less than a year ago. During the coming months a further growth in imports must be expected, for industrial expansion must eventually lead to a re-building of stocks, and British exports can hardly continue to grow at the recent rate. The best that can be hoped for is that they grow almost as fast as imports. The detailed export figures for May provide some grounds for confidence.

They show that the rise in exports was widely spread among the main commodity groups, whereas the April total was swollen by exceptionally large deliveries of ships, aircraft and submarine cable. While shipments of aircraft remained high in May, shipments of cars and chemicals set a new record and there was a substantial rise in shipments of commercial vehicles, machinery, wool and certain other textiles and other consumer goods. Exports were also well spread among markets, and there were further signs of recovery in exports to the sterling area.

Exports to Australia rose by nearly £ 20 million to £ 91 million in May, while exports to New Zealand rose by £ 8 million to £ 37½ million.

Taking April and May together shipments of road vehicles and aircraft, at £ 48½ million a month, were nearly £ 8½ million higher than a year ago; non-electric machinery showed an increase of over £ 6 million to £ 57 million while electric machinery rose by nearly £ 3 million to £ 21.8 million. Shipments of chemicals were nearly £ 3½ million higher at £ 25½ million while shipments of textiles, after lagging behind earlier this year, were slightly better than a year ago, and metals were also up. By regions, the outstanding markets remain North America and Western Europe. Exports, including re-exports, to North America in April-May, at £ 58 million a month, were £ 16 million higher than a year ago while exports to Western Europe rose by £ 10 million to £ 87 million. Exports to Latin America were unchanged at £ 13 million a month, and total exports to the non-sterling area showed a rise of £ 24 million to £ 186 million. Total exports to the sterling area, at £ 122 million a month, were still £ 2 million down on a year ago, but have largely recovered the ground lost in the first quarter, when they were 14 per cent down on a year ago.

INTERNATIONAL INVESTMENT

Stockbrokers of Europe Unite

Representatives of stock exchanges of the six common market countries and of Britain and Switzerland ended their two-day conference in Paris recently by setting up a permanent committee to foster closer co-operation. A number of moves have been taken this year. The trend is obviously in that direction, and quotation of securities of other European countries has grown significantly on European Bourses this year. German, Swiss and American investors have been substantial net buyers. But important technical difficulties, some within the province of stock exchange authorities and some within the domain of government and taxation authorities, remain to be solved before portfolio investment across frontiers assumes large dimensions. It is good news that the London stock exchange is playing its full part in these discussions. While Continental Bourses have taken the initiative in the recent moves for greater integration, they still tend to look to London as the biggest market — where any security quoted on a foreign Bourse may be dealt in, even if it has no London quotation. But so far, British investors' interest in Continental securities has been very limited.

Purchases of European stocks by American investors in the first quarter of this year reached $ 85 million, more than in the whole of 1958. United States direct investment in Europe also rose, though the reflux of short-term capital across the Atlantic in response to rising interest rates reduced America's net outflow of private capital. A still more striking increase in purchases of foreign securities is shown by German investors. Their purchases of DM 370 million (about $ 88 million) of foreign securities in the first quarter were as great as all previous purchases since these were permitted three years ago.

STRATEGIC STOCKS

Sales by Britain and U.S.

Britain's strategic stock of tin is now known to be 5,000 tons, equivalent to only about three per cent of world consumption but enough to meet British needs for about three months. All of it is to be sold over a period. On July 1st the manager of the International Tin Council's

buffer stock took over the 2,500 tons of tin that he is to sell on behalf of the Board of Trade. In announcing the date of transfer, the Board also gave the council six months' notice that it has a further 2,500 tons available for sale from January 1st, 1960 which will complete disposal of the government's stock of tin." After consulting the council and in the light of the circumstances prevailing, the government will decide whether the remaining 2,500 tons will be sold through the buffer stock or directly through brokers on the London Metal Exchange. If necessary sales will be spread over several months. Prices weakened slightly after the news, cash tin falling to £790 a ton, but not necessarily because of it; the main influence may have been the decline in American demand for tin as the threat of a steel strike drew closer. The tin council obviously believes that sales of strategic stocks will have less impact on the market if handled by the manager of the buffer stock, and if and when the United States government decides to dispose of its surplus tin the council will hope that he will be allowed to act as agent.

The American government has been pressed to sell its coconut oil to help relieve the shortage caused by the effects of drought on world production of copra, and has now announced that it is to sell the whole of its strategic stock of this oil, amounting to 265 million lb (118,000 long tons) because it is no longer needed. Partly in anticipation of this sale prices of copra and coconut oil have been falling. Philippines copra for prompt shipment is now about $ 235 a ton cif Europe, $ 60 below its peak in May, and copra for August shipment has dropped to about $ 222 a ton. The law requires that Congress and the public shall be given six months' notice of disposal of strategic stocks, but the government apparently intends to ask Congress to allow it to start selling sooner than that. The government intends to sell at intervals of six-weeks, offering from 10 to 14 million lb at a time; even if it sold at the higher rate disposal would take well over two years. Bids that do not reflect "a fair market value" will be rejected. It also seems likely that the American government may sell some of the perishable commodities that are surplus to stockpile requirements, such as rubber, fibres and other oils, next year. The bill approved by the House appropriations committee would have forced the government to sell some perishable commodities next year without buying replacements; the Senate committee's bill gives the government discretion to sell where this is in the national interest. The two houses have now to work out a componise bill and vote on it.

STOCK EXCHANGE

Ave et Vale

After a decade as chairman of the Council of the London Stock Exchange, Sir John Braithwaite has retired. As he sits back in the Rover car presented to him on his retirement by the members of the "House" he can look back on those years of change with nostalgia and with satisfaction. He came to office when private enterprise was in political disfavour and he has left office when "everyman a capitalist" is the mode. To have guided the affairs of a conservative institution, which clings dearly to its traditions whether bad or good, throughout those years, punctuated periodically by economic crises, is no mean accomplishment. To have set that institution on the path of reform and development is, perhaps, an even greater one. While Sir John has been in office, the compensation fund has been established, commission scales have been revised, public relations and public education on the meaning of the stock market have been vastly improved, a public gallery has been built, a cinema has been installed, the settlement department has been mechanised, and the first provision towards rebuilding the stock exchange has been made.

Change is inevitable and as Lord Ritchie of Dundee, who has been a member of the council since 1947, succeeds Sir John in the chair he will have to think ahead to the changes that are to come. The jobbing system can creak badly at times; more must be done to publicise the activities of the capital market and to educate the public in its doings; the commission rates are far from perfect; more mechanisation and more information, on the model of the New York Stock Exchange, are needed; members of the "House" have to think even more seriously about how the needs of the institutions, with their professional expertise, and those of the small investor, with his ignorance about the basic facts of investment, can be served at one and the same time; and the stock exchange itself has to be rebuilt. Fortunately, it is clear that Lord Ritchie has already thought hard about these problems.

SHORTER NOTES

The value of new orders received by contractors in the building construction industry totalled £378 million during the first three months of this year, according to the Ministry of Works, compared with £329 million in the preceding quarter and £339 million in the same quarter of last year. This is the highest quarterly figure for new orders since the Ministry began issuing this series late in 1956; since prices in this industry have remained virtually stable over the past few months, it represents a substantial potential increase over the level of building activity maintained throughout last year. Orders for new housing totalled £175 million, of which private developers accounted for £101 million; orders for private industrial building rose by nearly a third over the level of the previous quarter, to £51 million.

The first completely separate course for advanced education in watershed management has been inaugurated at Colorado State University. Several universities have given courses in watershed management as part of their curriculum in forestry and forest management; but now the question of water supply is becoming so vital that its study is worth Bachelor's and Master's degrees, and ultimately even PhDs. The Charles Lathrop Pack Foundation has granted CSU $75,000 to finance the new unit. Many inquiries about such a course have been received both from the United States and abroad, and it is expected to draw all the students that can be accommodated.

Another unit trust has been launched - the Commonwealth Unit Trust Fund, which, as its name implies, will invest in the securities of Commonwealth governments and companies. On its board sits an ex-Chancellor of the Exchequer, Mr Peter Thorneycroft, and his Financial Secretary, Mr Enoch Powell, the retiring City editor, Sir Oscar Hobson, and representatives of A.E.G. group of unit trusts. It is a cash fund, with the managers acting as agents and initially it is offering for sale 2,500,000 units at 10s. each. The estimated gross yield based on an equal investment in a selected number of securities is £ 4 5s. 9d. per cent.

COMPANY AFFAIRS

ROLLS-ROYCE

TWO problems now face the Rolls-Royce group. First, the substantial development expenditure which is required if the group's prosperity is to be maintained will have to be found largely from sales revenue, and an increase in commercial turnover is necessary to compensate for the decline in Government orders. Secondly, this increase in turnover has to be obtained at the expense of manufacturers in other countries, many of whom still continue to receive substantial support from their governments. Lord Kindersley, the chairman, cites the American aircraft industry as an example of strong government support – 85 per cent of its business still comes from the government in comparison with 50 per cent in the United Kingdom – a percentage, moreover, which is likely to decline in the future.

Rolls-Royce is, however, facing up squarely to these problems; shareholders should not be surprised if the increase in development expenditure reduces for some time at least earnings available for distribution. Higher research costs have already had their effect on profits: last year, though sales revenue rose by more than £4 million to £96,390,000 and the trading surplus advanced from £9,432,000 to £9,626,000, the improvement was not sufficient to cover higher development charges and the net profit declined from £2,320,000 to £2,087,000, even though tax was more than £500,000 lower at £2,520,000.

The group has already has some success in reorienting its sales and last year the increase in work on civil aero engines more than offset the reduction in government contracts. Among the other sections of the business the motor car department found trading conditions much improved with the ending of the credit squeeze and exports, particularly to North America, were a record. The development of the rocket motor progressed, whilst the nuclear engineering section is continuing to cooperate with Vickers and Foster Wheeler in the development of nuclear components for naval vessels.

Commenting on prospects for the current year Lord Kindersley expects that turnover will compare favourably with 1958. Outstanding orders at the year-end were £1 million higher at £113 million. New orders for aero engines were, however, being received at a somewhat lower rate than in recent years, reflecting the extent to which the fortunes of Rolls-Royce in the civil market are tied up with those of Vickers-Armstrongs, its most faithful customer. Research and development expenditure is expected to be higher than it was last year and Lord Kindersley says that it will be a "considerable achievement" if profits for the year can be maintained at the 1958 level. As earnings cover the 20 per cent dividend only just over 1½ times, the 100 per cent scrip issue seems unlikely to usher in a bigger effective payment. The £1 ordinary shares at 93s. 9d. yield 4¼ per cent.

COURTAULDS

THE decision by the directors of Courtaulds to raise the ordinary dividend by 8 to 9 2/3 per cent in the face of a decline in the group's total income of £13,918,669 to £13,539,335 must certainly be taken as a gesture of confidence in the future. The full accounts and the statement by the chairman, Sir John Hanbury-Williams, spell out the reasons for this confidence. Sir John points out that though the decline in earnings, which he believes has now been arrested, was relatively small there were some significant changes in the earnings of the constituent divisions of the group. Earnings from continuous viscose filament, both in the industrial and textile sectors, have shown a considerable decline, but this and the poorer results from the textile fabric divisions have been offset to a large extent by the recovery in profits from sales of viscose staple as well as by the improvement in the trading results of the two subsidiaries, British Celanese and Courtaulds (Canada).

This is of course accounting for the past but Sir John in his statement draws atention to several encouraging factors for the future. Demand for the company's industrial yarns has been picking up, so much so indeed that the division has in the last few months been working at full capacity; the tyre industry is at the moment the biggest customer of this division but the demand from the conveyor belt manufacturers is on the increase. Textile sales are beginning to benefit from the establishment of a new marketing organisation which has put Courtaulds in closer contact with the retail trade. Although exports of fabrics have continued to fall sales in the home market are "slightly better". Demand for "Fibro", the company's viscose staple, has improved and the production of "Courtelle" was started in February. Costs of production have been brought down by the vigorous implementation of the policy of concentration and rationalisation which followed on the merger with British Celanese. Finally Courtaulds has been very active in acquiring new interests outside the rayon industry.

WATNEY MANN

HHG hopes of a more dynamic policy from Watney Mann following the threatened bid by Mr Charles Clore, pushed the price of the £1 ordinary shares to an all-time high of 77s. Mr Clore's withdrawal naturally led to a reaction and the price fell 10s., but it still remained well above his bid price of 60s. The price was held up to some extent by the hope that the interim report would bring cheering news to shareholders about the value of the assets of the group, but when the statement came, announcing a maintained interim dividend of 7½ per cent and promising a detailed statement about the re-valuation of assets and the formation of a property company, the market price fell back to 65s. 6d.

Business, the directors say, has improved since the budget, and the benefits from the merger with Mann Crossman and the closing of the Stag brewery at the end of May are just beginning to accrue. All the signs are encouraging, but the present price of the shares implies that shareholders are expecting something far more dramatic and dynamic from the directors.

BOOTS PURE DRUG

THE yield of 3½ per cent on the 5s. ordinary shares of Boots Pure Drug standing at 22s. 6d. is low-but it is no lower than that offered by the equities of other growing multiple retail stores. Boots, the chairman, Mr J. P. Savage confesses, works on a low retail margin of profit. It, however, secures the advantages which accrue to a vertically integrated organisation. Its profits, therefore, turn on the level of sales which can be achieved. In the early part of the financial year which ended on March 31st last, turnover was not rising quickly enough to offset the effect on profits of higher operating costs and lower retail prices, but later in the year there was a substantial improvement in trade, especially at Christmas, with the result that the trading profit, before all charges, rose from £7,463,945, to £7,545,512 and the net profit advanced from £2,095,176 to £2,442,241. Sales and profits, apparently are continuing to improve at least in the home market.

Export sales, however, have fallen sharply and it must seen unlikely that they will pick up substantially again as more and more countries begin to rely on local manufacture. Boots, like other aggressive concerns, is etablishing its own local manufacturing subsidiaries abroad. This process and the need to modernise and develop its stores in the domestic market has led to substantial capital expenditure by the group: in the last financial year this expenditure came to £2,7000,000 and capital commitments at the year-end were of the order of £2,000,000. It is, of course, upon such expenditure that the growth of Boots, which unlike other multiples has not been active in seeking to merge with competing concerns, is based. That is why in buying the shares at the present price investors are looking beyond the dividend of 16 per cent paid for 1958-59 towards the restoration of the rate of 18 per cent which was paid on the capital before the 25 per cent scrip issue was made.

METAL BOX

DESPITE price reductions over a very wide range of products, an increase in wages to all hourly-paid employees and improvements in amenities and working conditions for all employees, the gross profits of Metal Box advanced by more than £700,000 to £7,826,000 in the year to March 31st. This achievement was made possible by an expansion of more than £2 million to £57,758,000 in the value of

sales; the increase in the volume of sales was considerably more. With the net profit the directors have raised the ordinary dividend from 11 per cent to 13 per cent. Earnings cover this payment more than three times and now a 50 per cent scrip issue is proposed.

The price of the £1 ordinary shares has risen from a low of 67s. this year to 80s. 6d., offering a yield of only 3¼ per cent. Throughout recent years the group has expanded steadily, spending a good deal on capital account. At the year-end outstanding capital commitments amounted to £2.7 million, but these were amply covered by the group's liquid resources of more than £4 million. The development plans certainly suggest confidence, though at the same time the chairman, Sir Robert Barlow, recognises that profit margins are likely to be squeezed in the current financial year, particularly if the group sticks to its policy of reducing prices wherever possible. Demand for cans is expected to increase; in the paper products division of the business the depressed conditions show some signs of coming to an end; and the plastics division is continuing to expand. There are thus solid grounds for investors' confidence in the Metal Box equity.

LONDON AND OVERSEAS FREIGHTERS

LAST year, when the chairman of London and Overseas Freighters, Mr Basil Mavroleon, reported — for the first time in the group's history — a fall in the operating surplus, he forecast that two years would pass before tanker freights recovered. Now, after a year in which shipping freights have been steadily slipping to ever lower depths, he still speaks of "no material improvement in less than two years." But he refuses to join the ranks of the pessimists who, he points out, speak in terms of a much longer period. The rise in the group's operating surplus from £2,969,204 to £3,418,403 mainly reflects the policy of long-term charters which the company entered into in 1956. These charters cannot last forever and to find profitable employment for those ships which are now free or soon will become free is "next to impossible," says Mr. Mavroleon. So far, however, the group has not laid up a single ship.

The maintained dividend of 20 per cent (which is three times covered by earnings and results in a yield of 6.2 per cent at the current price of 15s.) reflects the directors' wish that shareholders should benefit from the group's present prosperity. But Mr. Mavroleon warns that in difficult times "the company's resources must be preserved to protect the long-term interests of shareholders" even at the expense of some reduction, or even sacrifice ,of dividends." To what extent this presages a cut in next year's dividend remains to be seen, but current profits are running at a "satisfactory" level.

The prolonged uncertainty of freight markets has forced the company to revise its building programme and orders placed with Austin and Pickersgill, in which the company had a 50 per cent interest, for 4 dry cargo vessels have been postponed for two years. The only new addition to the fleet last year was a 19,000 ton tanker which has started its trading life on a charter providing profitable employment for some time. LOF's subsidiary in Bermuda, London and Overseas Tankers, which took delivery of its first ship at the end of last year and its second early this year, has arranged charters to keep them employed only until the middle of next year: but so far no employment has been found for the four 34,000 ton tankers now under construction in Sweden. The two bulk-carriers being built in Western Germany should be completed by 1960 when they will begin trading on an eight-year charter.

BRITISH AND COMMONWEALTH SHIPPING

BRITISH and Commonwealth Shipping's regular cargo and passenger services may have helped to cushion the company's earnings from the worst knocks of the slump in freight rates. But its consolidated profits before tax fell last year from £9.5 million to £4.8 million and its net profits from £4,815,000 to £2,454,000. This substantial fall in earnings adds to what the chairman, Sir W. Nicholas Cazer, calls the "balance of payments" problem, which is the bane of many shipping companies these days when falling income in a depressed market fails to cover the needs of a weighty capital investment programme. The gap between net cash inflow, which amounted to £7,805,000, and outgoings of £12,056,000 has up to now been bridged by the sale of investments (amounting to about £6 million last year); but with current rates of profit "considerably less" than a year ago the question of finance is obviously of mounting importance. The chairman does say, however, that this year's capital expenditure was more than normal and "the means should be available' 'to meet the planned replacement programme. Outstanding capital commitments stood at £27,900,000 at the end of December, compared with £37,950,000 the year before. Just what proportion it is hoped will be met by future earnings is, at this stage, problematic.

The balance sheet shows that in addition to the sale of investments, tax reserve certificates were reduced from £3,050,000 to £456,000, while the cash balance went up from £5.6 million to £7.3 million.

Last year the group extended its aircraft interests, accepting the delivery of two Britannias, and a new Viscount is due for delivery this month which will bring the group's air fleet up to five: the two new Britannias are to operate with Hunting-Clan under a trooping contract. The maintained 20 per cent dividend, which is almost five times covered by earnings, gives a yield on the 10s. ordinary stock units now standing at 40s. 9d. of almost 5 per cent .

PYE

PYE, the radio and television manufacturers, is to raise about £3,750,000 by a rights issue of ordinary shares. The new issue is partly a funding operation to pay off bank overdrafts and partly aimed at financing further expansion. The terms are likely to be announced at the extraordinary meeting on July 9th which will authorise an increase in the company's capital from £6,000,000 to £9,000,000 by the creation of 12,000,000 5s. ordinary shares. The directors say that the balance of the new shares that will remain after the "rights" issue will be held "ready for issue in association with any acquisition or for subsequent issue to ordinary shareholders." The rapid expansion in the renting of television sets has forced the firm to borrow from the banks on a substantial scale; at the same time Pye has increased its holding in British Relay Wireless and Television and has made further substantial investments in the Commonwealth. In Australia and New Zealand the group plans to build new factories; and funds are also needed for the establishment of production and selling facilities inside the European Common Market and for investment in television stations overseas.

CHARTERHOUSE INVESTMENT TRUST

THE CHARTERHOUSE Investment Trust has sold 1,000,000 of its shares in the Charterhouse Group for approximately £1,350,000 and the directors intend to retain the balance of 500,000 shares as a permanent investment. The proceeds of the sale — which produced a capital profit of about £270,000 — will be reinvested "in high class securities without jeopardising the maintenance of the 12 per cent dividend rate." The balance sheet shows that the Trust's portfolio of investments is worth at market prices 61 per cent more than the book value. The full accounts, which cover the period from November 12, 1957, to April 30, 1959, show that the income before tax was £269,242, compared with £197,585 in the previous twelve months. Investments at £1,820,809 compare with £1,696,720 in November 1957, and shares in subsidiaries, including those since sold, remain at £1,738,333. The total dividend for the 17 2/3 months period is 18 per cent and a 12 per cent dividend for the current year is forecast, so that at 58s. 3d. the £1 ordinary stock units yield 4.2 per cent — a typical yield for a sound investment trust. The £1,000,000 ordinary capital is to be converted into 4,000,000 ordinary shares of 5s. each — one example of Sir Nutcombe Hume's desire to attract the small investor.

FRIARY MEUX

THE £1 ordinary shares of Friary Meux, the brewers, are quoted at 56s. 9d. to yield 4 7/8 per cent — a low yield for the brewing industry even granted the speculative buying which has led to quite sharp rises in prices in recent weeks. The yield is based to some extent on the excellent record of the group since the merger in 1956 between Meux and Friary Holroyd. For the year to March 31st, last, there was a further improvement in the net profits: they rose from £361,290 to £423,482, excluding pre-acquisition profits of £40,917 in the latest financial year. The dividend has been raised from 13 to 14 per cent and earnings of 25 per cent give a rather stronger cover than is usual for a brewery concern.

COMPANY MEETINGS

BOOTS PURE DRUG COMPANY LIMITED

RETAIL SALES INCREASED BY 5.8 PER CENT
EFFECT OF PURCHASE TAX REDUCTIONS
MR J. P. SAVAGE ON THE CHALLENGE OF RESEARCH

The Seventy-First Annual General Meeting of Boots Pure Drug Company Limited will be held on July 22, 1959. The following is a Statement by the Chairman, Mr J. P. Savage, which has been circulated with the report and accounts for the year ending March 31th, 1959:

THE BOARD

Mr H. S. Hibbins (Vice-Chairman) and Mr S. Harker-Smith (Director) have resigned from the Board having reached the Company's normal retiring age. Both of them have spent the whole of their working life with us and their contribution to our expansion has been invaluable. It is the wish of all of us that they will enjoy a long and happy retirement.

Three new Directors have been appointed—Mr R. M. Dickson, Mr K. H. Harper and Mr K. D. Williamson—all of whom started their career with the Company as trainees. Their wide experience and intimate knowledge of our business will be of considerable help to the Board.

SALES

These were an all-time record and amounted to £82 million, an increase of £3,200,000 or 4 per cent.

Actually, in the Retail shops the increase in sales was 5:8 per cent but this was partially offset by a recession in the Wholesale and International Divisions.

PROSPERITY BONUS

In my speech to the shareholders last year I said we proposed to put this bonus on a permanent basis. A new scheme has been introduced for the payment of what will be known as a 'PROFIT EARNING' bonus. This sets aside 8½ per cent of the pre-tax profits of the Company for distribution to the staff based on salary and length of service.

The old bonus absorbed approximately 7½ per cent of such profits which means the staff now have a greater share and interest in our continued prosperity.

The cost of the new Scheme this year amounts to £464,280 against £414,927. Your Directors are very pleased thus to acknowledge the hard work and loyalty of the staff (now numbering 40,000).

PROFITS

The profits of the Group before tax amount to £4,997,839 compared with £5,057,350 for the previous year. In arriving at this year's profits we have charged the loss estimated at £350,000 incurred on our retail stocks as a result of the reductions in the Purchase Tax made in the 1958 Budget.

In the first six months of the year sales did not show the increase we would have hoped for, so that there was a rise in the expense ratio. There was however a real improvement in the second half of the year.

This improvement in sales, together with certain specific measures we have taken to reduce our expenses, has meant that most of the ground lost in the first six months of the year was retrieved by the year end.

Having regard to the widespread nature of our activities we operate on a very narrow profit margin. This is deliberate in the sense that it has always been our policy to give our customers the best value we can by selling our own goods at the lowest possible prices. But inevitably this means that in times when prices tend to be stable or even falling but costs and expenses continue to rise, profit margins are reduced. You may be sure that your Board is aware of this tendency and that all possible steps are being taken to reduce costs.

Depreciation charged on freehold and leasehold properties and on plant and fittings in arriving at the profits amounts to £1,467,991 compared with £1,369,254 in the previous year.

Tax provided has fallen from £2,962,174 to £2,555,598. This fall reflects both the change in the basis of the Profits Tax made last year and which applies for the first time to this year's profits; and the reduction in the standard rate of income tax to 7/9 made in this year's Budget. The income tax provided in the accounts is the tax which will be paid on 1st January next on the profits as included in the accounts; this tax will be charged at the new rate of 7/9. Even at this figure, with profits tax at 10 per cent the total tax is 9/9 in the £ which, in my opinion, is still far too high a proportion of the earnings of any Company.

As a result of the fall in the tax provision, the net profits of the Group have increased by £347,065, from £2,095,176 to £2,442,241. Of this latter figure £369,578 has been retained by the Subsidiaries and £2,072,663 represents the profits of Boots Pure Drug Co. Ltd.

DIVIDEND

We propose paying a final dividend of 10 per cent making a total with the interims already paid of 16 per cent for the year. These dividends are on the capital as increased by the scrip issue of one for four made last July and they are equivalent to 20 per cent on the old capital as against 18 per cent paid last year.

At the time we paid the two interim dividends of 3 per cent on the capital as increased by the scrip issue, we stated quite specifically that the dividend was being maintained at this rate solely to reduce the disparity between the interim and final dividends. Nevertheless we are glad to have been able to make an increase in the total dividend distributed for the year.

RESERVES

Of the Group profits of £2,442,241, goodwill written off amounts to £11,000, dividends on preference and ordinary shares to £1,281,231, leaving a balance of £1,150,010 profits retained in the business. This compares with £967,855 retained in the previous year. If we add the depreciation of £1,467,991 deducted in arriving at the profits, the total funds retained this year amount to £2,618,001 compared with £2,337,109 in the previous year.

CAPITAL EXPENDITURE

Our capital expenditure for the year has amounted to just over £2,700,000 compared with about £2,400,000 in the previous year The increase reflects for the most part progress with the retail modernisation programme to which I have referred on a number of occasions in the past. We have financed virtually the whole of this year's capital expenditure out of funds retained in the business.

The rise from £1,349,000 to £2,052,000 in outstanding commitments reflects the placing during the year of the contract for the construction of the new Administrative building in Nottingham.

STOCKS

Stocks show a small decrease and we feel it is a considerable achievement to have been able to support a sales increase of £3,200,000 without any additional stock investment. All sections of the business improved their rates of turnover and so contributed to the general plan of improving efficiency in the use of the vast sums employed to finance the goods in which we trade.

CASH POSITION

As a result of our success in holding the level of our stocks in the year under review and the fact that our capital expenditure has almost been met out of the funds retained in the business, our cash position at the end of the year shows little change as compared with the previous March 31st.

RETAIL PROGRESS AND DEVELOPMENT

Our retail sales increased by 5:8 per cent but the true increase in our volume of trade was considerably greater than this. The

Purchase Tax changes made by the Chancellor in his 1958 Budget, just at the start of our financial year, reduced our gross takings by more than 3 per cent and this proportion of our volume had to be made good before we began to show any increase. The lower prices helped our sale of cameras, leather goods and greeting cards but had little influence on cosmetic sales.

Our rate of progress improved steadily throughout the year, the accumulated sales increases at the end of the successive quarters being 4:1 per cent, 4:8 per cent, 5:1 per cent and finally 5:8 per cent. It will be evident from these figures that we enjoyed very successful trading at Christmas, in spite of the widespread and persistent fog, and that we were further helped by what might be described as good chemists' weather in the early months of this year. We dispensed over half-a-million more prescriptions than in the previous year and great credit is due to our managers, dispensers and other staff for the way in which they coped with the heavy load of work during six exceptionally busy weeks in February and March. The increase in the sale of our own medicinal, toilet and agricultural products, helped by the introduction of some highly successful new lines, has been most encouraging. Our Farms and Gardens' and Photographic Departments both made outstanding contributions to the final result, but I am glad to say that all departments shared in the increase.

Last September, and again in January this year, we announced substantial reductions in the selling prices of some of the leading lines of our own manufacture. These reductions, which were made possible either by reduced costs or improved manufacturing processes, were enthusiastically received by our own staff as well as our customers and will, I hope, be accepted as further proof of our determination to offer the best possible value at all times.

The Retail Development Programme, which I announced two years ago, has continued throughout the year according to plan. Fifty-six shops were substantially altered or refitted, amongst the most notable being those at Church Street, Liverpool; Shandwick Place, Edinburgh, and at Walsall. New shops were opened at Swiss Cottage, London, and in the New Town centres of Harlow, Stevenage and East Kilbride, in addition to three smaller acquisitions in other parts of the country. Seven branches were transferred to new and bigger premises and four were closed.

Encouraged by our customers' reactions to new methods of selling we are continuing to install self-selection fittings where appropriate and during the year a further thirty-two shops were equipped in part in this manner.

In the present year we are embarked upon a big programme including large new stores in Birmingham, Bristol and Loughborough. These are all scheduled for opening before Christmas, and the Birmingham store will be our biggest so far. Work has also started on rebuilding or large-scale extensions at Northampton, Cambridge, Bury St. Edmunds, Gloucester, Stafford, Slough and Lewisham. We are also pushing ahead with the modernisation of our smaller shops, but we regard it as even more important to maintain the highest possible standard of service in all branches, whether old or new.

PURCHASE TAX

A further reduction in the Purchase Tax was made by the Chancellor of the Exchequer in this year's Budget and we reduced our retail prices immediately the new rates were announced. Although we welcomed the reduction in the tax, the manner in which it is collected has meant that once again we have had to take a substantial loss on our tax paid retail stocks and this will be reflected in the profits of the coming year. Since 1953 successive reductions in the Purchase Tax have involved us in losses totalling three-quarters-of-a-million pounds. This has come out of the pockets of our shareholders instead of being paid as it ought to have been by the Exchequer. It would be quite wrong to say that we should not reduce our prices when the Purchase Tax comes down, or that we ought to make a profit out of our customers when the Purchase Tax goes up, as in neither case will competition or public opinion allow us to do this; nor would we wish to do so.

In a year in which the Chancellor of the Exchequer has once more expected us to finance his tax reductions for him, it would not perhaps be inappropriate to remind him that he has once again failed to implement the recommendations of the Tucker Committee and of the Royal Commission on the Taxation of Profits and Income that the taxation allowances at present confined to industrial buildings should be extended to commercial buildings as well.

STUDY OF METHODS

It has been the settled policy of the Company for a long time to use every opportunity of improving our ouwn efficiency by studying methods and developments not only in Great Britain, but also overseas. While there is plenty to learn in Europe, we find that America is the richest field of enquiry. In consequence, the Directors are sending a number of people to America each year and this is a good opportunity to acknowledge not only the benefit we get from these visits but also the very generous welcome and help we always receive from so many friends and even strangers all over the United States.

DISTRIBUTION

Last summer we completed a 64,000 square foot extension to our Heywood Manchester Warehouse. We get three major benefits from this: better balance of our distribution over the country as a whole, greatly improved efficiency at Heywood and better service to the branches supplied by this warehouse.

Although we have made big strides in distribution technique in recent years there is still much to do. Research and development leading to improved methods go on continually and we see a long period of progress ahead in cutting the cost of distribution.

SUPPLIES

Any large organisation calls on a great many trades for its supplies and we certainly do this both for raw materials and finished goods.

We appreciate the help and close co-operation our suppliers give us and especially the way they respond to the emergency calls an epidemic can produce.

RESEARCH AND PRODUCTION DEVELOPMENT

As manufacturers and suppliers of medicines and preparations for use in agriculture and horticulture, we operate in a highly competitive field. There is an ever-growing need continually to improve the lines in our inventory and to introduce new specialities. The outstanding successes of new chemo-therapeutic substances, especially in the last two decades, have transformed the practises of human and veterinary medicine and assisted very greatly in increasing the efficiency of agriculture and horticulture. Substantial as this progress has been much remains for further improvement and the success of new products stimulates even more the desire for newer and better ones. These can be produced only through research and development. We have accepted this challenge and, like the other leading pharmaceutical and chemical manufacturers of this country, are now ploughing back a very considerable proportion of our profits for this purpose. We have been handicapped to some extent by the need to replace and enlarge much of our laboratory facilities. Our fine new research building for pharmacology, bacteriology, virology and parasitology, begun in the autumn of 1956, has just been completed at a cost of £750,000 and we are now turning our attention to the improvement and enlargement of our facilities for chemical research and development.

The Hinchliffe Committee in their recent report on the cost of prescribing comment on the inadequacy of the amount of money spent on pharmaceutical research in this country in comparison with the much greater amount expended in the United States. Undoubtedly the ability of the American companies to support very large research budgets, which in the long run are bound to be correspondingly more successful in producing new drugs, is due mainly to their large and prosperous domestic market in which they can sell their products with high profit margins. The British manufacturers with broadly speaking only one domestic customer, the National Health Service ,enjoy no such advantage. While the Government should naturally be concerned about the increasing amount of the Drug Bill they must at the same time recognise that new drugs are very expensive to produce and that the expenditure on the long and costly researches which provide them can be recovered only from profits. It is refreshing to find that the Hinchliffe Committee have accordingly recommended that any pricing arrangements between the Ministry of Health and the British pharmaceutical industry should be designed to make full allowance for genuine research expenditure so as to enable a vital industry to make its maximum contribution to the development of drug therapy and also to the export trade.

INTERNATIONAL DIVISION

Our exports from the UK suffered a sharp decline, largely due to import restrictions imposed by many overseas countries during the year as well as increasing competition. However, we have made great efforts in recent years to expand our overseas manufacturing resources and most of our overseas Subsidiary Companies have been able to improve on their last year's turnover, despite these limitations on imports. A good example of the increasing reliance placed on local manufacture is that no less than 96 per cent of our Indian Company's turnover last year came from goods manufactured in our factory at Sion, Bombay, which is operating profitably.

In total, I am glad to say that sales by our overseas Subsidiary Companies have set a new record.

We would like to thank the staff of these Companies and our Agents in all parts of the world for their efforts in what has been a most difficult year for overseas trading.

WHOLESALE DIVISION

Our Home Wholesale sales were lower than last year. Much of the decrease was caused by the heavy stocking-up by the pharmaceutical trade at the time of the previous year's Asian 'flu epidemic. This had had the effect of reducing our contract and bulk chemical business during the current year. However, to balance some of this loss of business I am pleased to report an increasing home demand for our medical specialities.

PROSPECTS

Last July I was very cautious in my forecast of sales and profits and this was emphasised and confirmed by the results for the first half of our financial year.

Since then there has been a considerable improvement and I see no reason why this should not continue, which causes me to view the present year with some optimism.

Telephone Rentals LIMITED
OPERATING IN SERVICE

ANOTHER RECORD YEAR
CONTINUED PROGRESS IN CURRENT YEAR
MR FRED T. JACKSON'S STATEMENT

The thirtieth annual general meeting of Telephone Rentals Limited was held on June 22nd at the Registered Office, 197 Knightsbridge, London, S.W.7, Mr Fred T. Jackson, OBE, CompIEE (the Chairman), presiding.

Before our usual proceedings, I would like to mention the great loss we have suffered through the death of one of our directors—Sir Leonard Browett. We only heard of his death on the day that our Report and Accounts went to the printers.

I would like to pay a special tribute to the late Sir Leonard, for he was my ideal of an outside Director. He was never prepared to accept what he was told until the reasons for any decision had been explained to him.

I would ask you to stand for one minute as a silent tribute to the late Sir Leonard.

The Secretary (Mr W. J. H. Ainley) read the notice convening the meeting and the report of the auditors.

The following is the statement by the Chairman which had been circulated with the report and accounts for the year ended December 31, 1958:

First of all, I will refer to our last Annual General Meeting, when I informed you that we should have to take new offices so that we could get all our departments under one roof. This has now been carried out, and although this has brought about an immediate increase in Head Office expenses, taking the Organisation as a whole it will undoubtedly lead to more efficient administration ,with a resultant decrease in total overheads.

I will now deal with the progress made by your Company during the past year. In spite of more difficult trading conditions the amount or rental contracted for was a record, and as you will have seen from the Accounts, our profits on the year's working again show an increase. I am glad to be able to inform you that according to our internal figures, progress in the current year is also in the right direction, and up to the end of April we are again in the happy position of showing an increased profit.

In South Africa, very steady progress has been made in Johannesburg and Cape Town. Certain moneys we advanced at the commencement of our operation there are now in the process of being repaid, being surplus to requirements as both Companies are financially self-supporting. We anticipate that, in the relatively near future, South Africa will be making a contribution to our profits here by way of dividends.

So far as Australia in concerned, as you know the Company there is not our Subsidiary, but we have an investment which represents 50 per cent of the capital. Satisfactory profits are being earned and the Company is able to pay dividends, which make a contribution to our profits here.

In regard to Canada, I still have to use the phrase used at previous Annual Meetings: that we find this market a hard furrow to plough so far as our business is concerned. Our Company in Toronto continues to make progress, and we are gradually increasing the number of Subscribers and upholding our very good name for service. Briefly, we are quite confident that in course of time we shall have a very successful business in that country, for we always have in mind that it has a tremendous future for a business such as ours.

In regard to our Continental Companies, as you know we have a Subsidiary in Paris, and also in Brussels. Both of these Companies work at a profit, but their contribution to us, as the parent Company, is not one which has any considerable effect on our profits.

ACCOUNTS

I will now review the Accounts before you.

PROFIT AND LOSS ACCOUNT

The Gross Profit of £1,047,617 is our highest yet, and is £172,247 greater than our previous best, in 1957. This increase in Profit is apportioned as between Rental Revenue and the Profit on Trading and Miscellaneous Receipts £140,280; and Dividends and Interest receivable from all sources, £31,967.

Despite the greatly increased profit, on account of the reduction in the rate of Income Tax announced in the recent Budget Income Tax shows but a small increase of £13,405 over the previous year, and the Profits Tax actually shows a reduction of £4,411, due to the alteration in the basis of the levy in the 1958 Budget. On the other hand ,the Transfer to Tax Equalisation Reserve is increased by £91,000 to £167,000. I have in previous years explained the purpose and composition of this Reserve, and it only remains for me to tell you that the major part of this year's increase is accounted for by the need to adjust the provision included in the Reserve for Profits Tax from 3 per cent to 10 per cent, which is the current flat rate levy. I feel sure the Chancellor's proposals for the reduction in Taxation, both direct and indirect, were as warmly welcomed by you as by your Board, and I fervently hope that he will continue the good work in future Budgets.

The net Profit before transfers to Reserves and provision for Dividends, a £637,609, is up by no less than £163,253. This year we have increased our Transfer to the General Reserve to £250,000, bringing the total to £1,800,000. We have now considered it necessary to add to the Contingencies Reserve.

After providing for the transfers to Reserves, and the Dividends, on both the Preference and Ordinary Shares amounting to £187,494 as compared with £162,150 in 1957, we are left with an unappropriated balance of £196,695 to be carried forward to the current year. The increase in the amount of the proposed Final Dividend is due to two things, firstly to the fact that it will be paid on the Capital as increased by the Capitalisation Issue in February of this year and, secondly, that Income Tax will be deducted from the payment at the new reduced rate.

BALANCE SHEET

Liabilities: Both the Authorised and Issued Capitals are unaltered as the Capitalisation Issue was not made until February 1959. The Capital Reserves at £265,025 are little different from the previous year, and the Revenue Reserves now total £1,925,000. The Shareholders' interests consisting of Capital, Reserves, and unappropriated Profit balance, amount to £4,898,720, a

compared with £4,615,401 at the end of 1957.

I have already explained the increase in the Reserves for future Tax, and the amount of Accelerated Rentals carried forward calls for no comment, except to say that the Income Tax theron in suspense has now been eliminated.

Current liabilities are up by £104,521. This increase, as you can see, is mainly accounted for under three headings, namely Sundry Creditors and Accruals £25,275; Income Tax 1958-59 and earlier years £49,005; and Proposed Final Dividend £25,344. The Increase in the Dividend has already been explained, the additional Income Tax arises out of the increased profits in 1957, and the rise in Sundry Creditors is in the normal course of trading.

Assets: Referring now to the Assets side of the Balance Sheet, the net value of the Revenue bearing Installations has risen to £3,764,471, which is equivalent to 1.38 years' rent.

The net amount of Freehold and Leasehold Properties reflects but little change, but the Office Furniture and Fittings, Vans and Cars is some £8,908 greater as a result of the move to new premises. The Trade Investment representing our holding in the Australian Company remains unchanged.

The increase of £39,079 in Investments in Subsidiary Companies represents amounts capitalised in our Canadian Subsidiaries during 1958. Loans to Subsidiaries are unchanged; whilst the amounts due on current accounts have increased by £23,609.

Stock and Work in Progress are up by £20,896, whilst Sundry Debtors and prepayments are virtually the same.

Our liquid Resources in the form of Tax Reserve Certificates, Deposits with Local Authorities, British Treasury Bills and Cash, both in London and Australia, at £1,317,509, are £157,584 higher than they were at the end of 1957. This excess represents the surplus cash on the year's trading, bearing in mind that the increase of £104,521 in Current Liabilities should be offset against it.

CONSOLIDATED BALANCE SHEET AND PROFIT AND LOSS ACCOUNT

The Consolidated Accounts, having been prepared on a similar basis to that of the Parent Company, the material changes have already been dealt with in the foregoing remarks, with the exception of the items referred to in note 2 on the Consolidated Balance Sheet, which is self-explanatory.

The Net Profit of the Group before Taxation is £1,124,060 compared with £927,653 for 1957. After providing for Taxation, transfers to Reserves and Dividends, the balance of unappropriated Profits carried forward and attributable to the Holding Company's Shareholders amounts to £339,218.

CONCLUSION

I wish to conclude my remarks by paying a very sincere tribute to the Management and Staffs of our Organisation, both in this country and overseas. During the year under review, there was a considerable amount of reorganisation both in the offices and in the field which will undoubtedly bring about increased efficiency, with a still higher standard of service to our Subscribers. The success of this work has been and is being in very large measure due to the loyal and understanding co-operation of our employees, who have continued to show how strongly they identify themselves with the interests of the Company.

The report and accounts were adopted and the dividends as recommended, were approved.

The retiring director, Mr A. A. P. Ethelston, was re-elected and the remuneration of the auditors, Messrs Chas. W. Rooke, Lane & Company, having been fixed, the proceedings terminated.

FORSTER'S GLASS

A PLEASING RESULT

The fortieth Annual General Meeting of Forster's Glass Company Limited, will be held on July 15th in London.

The following is an extract from the circulated Review by the Chairman, Colonel Sir Charles Ponsonby, Bart, TD, DL, for the year ended March 31, 1959:

At the annual general meeting last year I referred to the appalling summer we were experiencing and said that this would be bound to have an adverse effect on our sales, particularly to the soft drinks and brewing industries. Both of these are very sensitive to weather conditions and we, who supply large quantities of bottles to them, are correspondingly affected. In these circumstances it is pleasing to be able to tell you that our turnover was only very slightly down compared with the previous year and that we have made a modest increase in profit.

It is now two years since we advanced our selling prices, and during this time we have had to absorb several wage increases as well as numerous other rising costs; fortunately, the rate of rise of the inflationary spiral has been greatly reduced.

During the year trading conditions in this, as in most other industries, have been difficult and ordering has tended to be on a day-to-day basis, making it impossible to forecast demand with even a reasonable degree of accuracy and to match it with production. In spite of a temporarily reduced demand for some of the types of bottles we produce, we have had compensation in other fields, where the merits of glass as a cheap and attractive form of packaging are being increasingly recognised.

The benefits of the re-equipment programme ,on which we embarked four years ago, are now making themselves felt in the form of higher productivity (and efficiency) which is helping to absorb the increased costs.

Although there are some signs of a general improvement in trade, much uncertainly persists. As far as obtaining our share of business is concerned, I feel that we can look to the future with reasonable confidence.

ADAMS PEAK TEA ESTATES

The thirty-ninth annual general meeting of Adams Peak Tea Estates Limited was held on June 8th in London, Sir Charles Miles, OBE, the chairman, presiding.

The following is an extract from his circulated statement:

The profit for the year ended December 31, 1958, after charging Depreciation, is £27,302, which compares with £34,778 for the previous year. The average prices received for our teas, both in London and Colombo, were lower than those of 1957 and although the crop produced rose by some 53,000 lb sales proceeds declined by approximately £2,500. Your Board recommend a dividend of 12½ per cent, on the increased capital, less Income Tax, leaving the balance to be carried forward slightly increased at £20,078.

For the greater part of the year under review the Ceylon Export Duty on tea has remained at 70 cents, or just over 1s. 0½d. per lb, but it is understood that the present duty might be replaced by an ad valorem sales tax, up to a maximum of 70 cents per lb, and a flat rate of Export Duty of 35 cents per lb. It remains to be seen how this Company will be affected.

With regard to the current year, our crop to the end of March is 223,556 lb, a decrease of 15,549 lb compared with the same period last year, but it is expected that this shortfall will be made good as the year progresses.

The report was adopted.

PHILIP HILL INVESTMENT TRUST

AN ACTIVE AND SUCCESSFUL YEAR

The twenty-seventh ordinary general meeting of Philip Hill Investment Trust Limited was held on June 15th in London, Sir Brian Mountain, Bart (the chairman), presiding.

The following is an extract from his circulated statement: I am pleased to report that the year under review has again been an active and successful one for the Group.

The Profit and Loss Account of the Investment Trust shows that the gross dividends and interest from investments have risen from £707,622 to £796,307 which, together with other income, including a dividend of £50,000 (gross) from the operating subsidiary Philip Hill, Higginson & Co. Limited, results in a total gross income figure of £855,612 as compared with last year's figure of £781,256.

Philip Hill, Higginson & Co. Limited and its subsidiary companies have had another successful year and the consolidated profits before taxation amount to £673,645 as compared with £553,803 for the previous year. Taxation absorbs £356,340 (£300,005) leaving a net profit of £317,305 (£253,798).

These results enable the Board to recommend the payment of a final dividend on the Ordinary Share Capital of 13½ per cent, less income tax at 7s. 9d., which together with the interim dividend of 6½ per cent, less income tax paid last October would make a total distribution for the year of 20 per cent, less income tax.

The report was adopted.

THE EVER READY COMPANY

(GREAT BRITAIN) LIMITED

(Manufacturers of Dry Batteries)

RECORD SALES AND PROFITS
CAPITALISATION OF RESERVES
STATEMENT BY THE CHAIRMAN MR E. N. ROWBOTHAM

The Annual General Meeting of The Ever Ready Company (Great Britain) Limited was held on July 1st at the head office, Hercules Place, Holloway, London, N.7.

The following is the statement of the Chairman, Mr E. N. Rowbotham, which has been circulated with the Report and Accounts for the period from March 2, 1958, to February 28, 1959:

RECORD SALES AND PROFITS

It is with satisfaction that for the sixth year in succession I am able to report an increase in the Sales and Net Profits of the Company. The Accounts for the fifty-two week period ended February 28, 1959, which are attached, show that the Net Profit after taxation has increased from £920,099 to £1,262,856. This record profit has been achieved by reason of substantial progress in practically all departments of the business, particularly in the export field where your Company has been successful in obtaining an exceptional increase in turnover. The encouraging picture presented by the Accounts owes a great deal to the work of Representatives, Distributors and Staff in the Export Division and all Employees of the Company, both at home and overseas. On behalf of the Stockholders and Directors I thank them all for their co-operation during the past year.

SPECIAL INTERIM DIVIDEND

Your Directors have recommended a Final Dividend of 15 per cent, making 20 per cent for the year as for 1958, and in view of the substantial increase in the Net Profit of the Company they have, in addition, declared a special Interim Dividend of 7½ per cent less Income Tax for the period of fifty-two weeks ending on February 27, 1960. This special Interim Dividend will be paid on the second day of July, 1959, with the recommended Final Dividend for the period under review, but will not be taken into account when consideration is given to future dividends. This treatment, of course, arises from the change in Profits Tax legislation and in effect means that the Company is at the present time paying an effective rate of 27½ per cent on the Ordinary Stock.

REVALUATION OF FIXED ASSETS

During the year your Directors have given consideration to the value of the Fixed Assets as shown in the Balance Sheet and have caused a valuation of the land and buildings to be made by a firm of professional valuers. This valuation showed that the present-day value of Freehold Land and Buildings exceeded the Book Value by £896,261, and we have therefore decided to show this item at the valuation figure and to transfer this excess to Capital Reserve Account. Your Directors have also caused a valuation to be made by the Company's Staff of the plant and machinery. This valuation, which has been based on the present-day replacement value and takes into account the years of use and the expected life of each machine, shows that the value of the plant and machinery of the Company in the Balance Sheet is adequate and they therefore propose to make no change in this item.

CAPITALISATION OF RESERVES

In view of the increase in the Reserves of your Company, due both to the revaluation of the Assets and the increase in the amount of the profits, the Board consider it advisable to bring the Issued Ordinary Capital of the Company more into line with the asset position. My letter to Stockholders on this subject which accompanies this Report sets out in detail the arrangements we propose to make to capitalise a portion of the Company's Reserves. I will not comment further here save to emphasise that Stockholders must not assume that on the Issued Ordinary Capital being increased by the amount of the proposed Issue, the total amount of dividend paid on the Ordinary Stock will be necessarily increased. Future dividends must depend on the course of future trading and also on the need for further capital investment which may arise from time to time.

ADEQUATE CASH RESOURCES

The Consolidated Balance Sheet shows that the Company's liquid financial position has been substantially strengthened. The surplus of Current Assets over Current Liabilities (including Deferred Liability for future taxation) has increased from £3,253,162 to £3,848,391 and the cash position of the Company is at the substantial total of £1,827,816 compared with £1,294,136. Taxation this year has amounted to £1,167,697 as against £992,204 last year due to the increase in the profits. The outstanding capital commitments have increased from £232,000 to £515,000. Among the major items under this heading are an extension to our Rolling Mills at Edmonton, the provision of a further large section to our Research Laboratories and an addition to the factory of our engineering subsidiary, Cramic Engineering Company Limited, at Southall.

PENSION BENEFITS

It is our policy to provide pension benefits on a non-contributory basis and we have made provision that, in addition to all members of the staff, all male works operatives with over two years' service and all female works operatives with over ten years' service shall receive, when they reach the age for retirement, a pension based on years of service and remuneration.

Our principal fund—The Ever Ready Superannuation Fund—is administered by a Trustee Company, and currently the market value of investments in this non-contributory fund, which commenced in 1951, exceeds £3 million. I consider the operation of this fund to date has been very satisfactory.

During the past year the pension funds of the Company have paid out over £50,000 in pension and other benefits. In addition, during the year it was my pleasure to present a further 272 gold watches to long service members of the organisation, bringing the total up to 627 of our people who have now been presented with a long service watch. Of this number, Stockholders might be interested to learn that no less than 574 are still working with the Company.

CURRENT TRADING SATISFACTORY

In the domestic market our sales have been buoyant. A recent innovation has been the introduction of a new product—"FIGARO" Electric Dry Shaver. To date this product has been very well received by our customers, and we are confident that it will make a useful addition to our existing range of products.

Overseas, subject to no major political or economic upheavals, we view the continuance of a large and expanding export business with confidence. Our export prices are highly competitive and our manufacturing resources are geared to the production and sale of dry batteries at the lowest possible price commensurate with the maintenance of the highest quality, but competition from the cheap labour countries of the Orient will have to be watched very carefully in many markets.

Trading for the current year has been satisfactory, sales to date being in excess of those for the similar period of last year.

ROLLS-ROYCE LIMITED

REVIEW OF 1958

Research and development the key to the future

The following are extracts from the statement by the Rt. Hon. Lord Kindersley, C.B.E., M.C., the chairman, which has been circulated with the report and accounts for the year ended December 31, 1958.

GENERAL REVIEW

DURING 1958 we achieved an increase in total revenue and we ended the year with outstanding orders marginally greater than a year ago. These are satisfactory features in a year of transition with many uncertainties and in which there was a marked lull in the ordering of new equipment for the major airlines. In spite of these satisfactory features, however, our accounts reveal lower profits. This is principally due to a substantial increase in expenditure on research and development.

Last year I emphasised that the current level of activity resulted from research and development originated many years ago. Much of it was of course initiated to meet defence requirements. Those requirements are diminishing, and all companies who seek to remain as major suppliers of aero engines are therefore faced with the task of finding from their own resources the money to continue programmes of work which will retain for this country much of the export business which has already been developed so successfully. In 1958 the aircraft industry achieved exports of £36 million. Without this continuing effort on development the British aero engine industry must inevitably be relegated to a minor role in world aviation.

During the last five years we have spent some £8 million on capital equipment entirely associated with development. In the last two years alone we have spent more than £10 million — an amount equal to the total retained profit shown in our balance sheet — on the direct development of engines, and the bulk of this has been spent on engines which are not yet contributing to profits.

It is in the best interests of the future stability of our business that the substantial sums which we require annually for development should be found in the most part from our sales revenue, and this in a time of diminishing government turnover means that our commercial turnover must be increased. We have to obtain this increased turnover in commercial competition with manufacturers in other countries who continue to enjoy, either directly or indirectly, support from their governments.

Our industry has achieved considerable success in the past under conditions less favourable than in America; we can do so again if our resources are applied with proper regard to the changing circumstances. It is therefore to be hoped that the consideration which is now being given by the government to support for such long-term future projects as super-sonic transports will not divert attention from the first necessity of securing a base from which these and intermediate developments can be successfully exploited.

There is every reason to expect that the turnover for the year will compare favourably with 1958. During the early part of this year however new orders for aero engines were still being received at a somewhat lower rate than in recent years. Expenditure on research and development must of course continue, and will probably exceed the figure for 1958. In this transition period through which the major part of our business is passing it must be counted as a considerable achievement if profits for the current year can be maintained at the 1958 level.

AERO ENGINES

The changes in British defence policy outlined in the 1957 White Paper were felt increasingly during the year under review. Fortunately in 1958 the increase in work on civil engines offset this reduction in government work.

In spite of the generally cautious attitude towards new equipment which has characterised the great majority of airlines during the year, the company's sales and engineering teams have been actively engaged throughout the world. *Rolls-Royce engines are now in service with or on order for 66 airlines and 31 other operators* in all parts of the world.

A total of more than 2,700 Dart engines have been built and have accumulated over 8 million running hours. The reliability of this engine has been proved throughout the world, and during 1958 a life between overhauls of 2,200 hours was achieved.

I referred last year to the choice of a Rolls-Royce by-pass jet engine now identified as RB.141 for the Airco DH.121 aircraft for British European Airways. This will be one of a series of engines which will embody your company's unique experience of by-pass engines and of civil gas turbine operation, and is intended to be the best possible design for sub-sonic transport aircraft.

The past year has seen the work on jet lift, pioneered by your company, carried a notable stage forward with the successful flight testing of the Short SC1 VTOL research aircraft which is powered by our RB.108 jet lift engines.

Our initial confidence in the Tyne is now bearing fruit; although only at the start of its service life, this engine has already increased in power from 4,000 h.p. to 6,000 h.p.* The Dart has been in service for six years, but development continues, and the engine has recently been type-tested at a rating of 2,660 h.p. which clearly increases it potential field of use.

ROCKET MOTORS

The development of our rocket motor, based on designs of the Rocketdyne Division of North American Aviation Inc. is continuing. Recent government statements on defence emphasise that the Blue Streak missile into which this engine is to be fitted will be one of the major deterrent measures safeguarding this country.

MOTOR CARS

I reported last year that the sales of motor cars at home during the early part of 1958 had been adversely affected by the credit squeeze and the general economic difficulties in which the country found itself. As these circumstances were alleviated during the course of the year the position improved ,a situation, which has been maintained up to the time of writing this statement.

Our export sales of cars were a record for the company, and the improvement was almost entirely due to the continually growing demand from the United States of America.

ENGINES AND TRANSMISSIONS

The Oil Engine Division has felt the effect of recession in the demand for the many kinds of capital equipment in which our engines are installed. Since the turn of the year, however, prospects have improved and there are indications that 1959 will be a better year in this and the other fields in which the Division is engaged.

The Motor Car Division continues to develop and produce petrol engines which covet a wide field of civil and military applications, and which are being supplied in quantity to the British and Federal German governments.

The manufacture and sale of industrial hydraulic torque converters and certain types of geat transmissions continued to grow throughout the year.

RAIL TRACTION ACTIVITIES

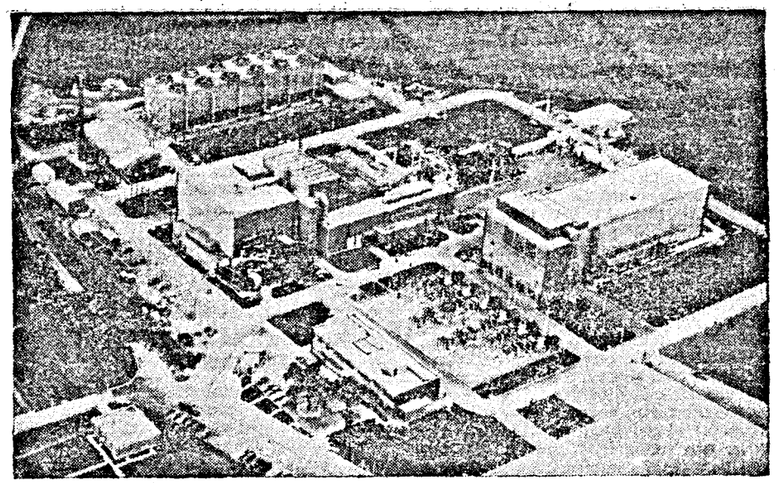
This new market for Rolls-Royce products is being energetically developed and the order book is encouraging. Diesel engines, transmissions and control systems can now be offered either as separate items or complete systems for use in shunting locomotives and railcars. Deliveries have been made to British Railways and to overseas customers, and many interesting enquiries are being dealt with.

NUCLAIR ENGINEERING

The work which we have been pursuing in this important field was marked by an event of great significance when arrangements were finally made on behalf of the Admiralty to purchase from the Westinghouse Electric Corporation in America a complete set of machinery for the first British nuclear submarine, H.M.S. Dreadnought.

A subsidiary company in which Vickers Limited and Foster Wheeler Limited are our partners has been formed, under the name 'Rolls-Royce and Associates Limited' and this company will carry on the work of designing, developing and procuring nuclear compartments for naval vessels.

In addition to these activities, work has continued on the study of other possible applications of nuclear power.



The High Altitude Test Plant at Derby which was officially opened by the Prime Minister, The Rt. Hon. Harold Macmillan, in September, 1958. The plant cost over £6,000,000 and is for testing aero engines at the simulated conditions of altitudes up to more than 70,000 ft.

OVERSEAS ACTIVITIES

The extensions to the equipment of Rolls-Royce of Canada Limited were brought into use in 1958.

During the year the Canadian company signed an agreement with the International Harvester Company of Canada under which the latter company agreed to use Rolls-Royce diesel engines exclusively for their Canadian-built heavy duty highway trucks.

Rolls-Royce of Australia Pty. Limited has continued to carry out the overhaul of all Dart engines operated by civil airlines in Australia. The airlines have now expressed a wish to undertake the overhaul work themselves as in normal practice, and preliminary talks have taken place to discuss the transfer of the work. The company will continue to operate, specialising in sales promotion and after sales service for all Rolls-Royce products.

During 1958 work was commenced at Sao Paulo on the building of premises for the overhaul of Dart, Avon, and Conway engines and for the servicing of diesel engines.

* * *

To all concerned whose efforts individually and collectively have contributed to the year's results I would like to express my thanks.

---

* Tynes power the Vickers Vanguards on order for British European Airways and Trans-Canada Air Lines and will power the Canadair CL 44's for the Royal Canadian Air Force. The Flying Tiger Line and Seaboard and Western Airlines and have also been specified for the Fairey Rotodyne and for the Short Britannic 3's for the

AMALGAMATED DENTAL COMPANY LIMITED

FURTHER SATISFACTORY TRADING

The fifty-fourth annual general meeting of the Amalgamated Dental Co., Ltd., was held on June 19th in London, Mr Aiken Watson, Q.C., the chairman, presiding.

The following is an extract from the chairman's statement circulated with the report and accounts for the year to December 31, 1958:

I am happy to report another year of successful trading. It may be a convenient time at which to review the background against which your Company operates. The dental industry in terms of value production is relatively small albeit of great importance to general health. Nevertheless, excluding North America, there are in Europe including the United Kingdom, approximately 200 manufacturers engaged in the manufacture of dental products. Of these the largest number is in Germany. For the most part these manufacturers produce a limited range of goods. On the other hand, your Company, through its Subsidiaries and Associated Companies at home and abroad, engages in the manufacture and marketing of virtually the whole range of dental products.

But the only outlet for this widespread activity is the Dental Profession save in so far as certain technical work in relation to artificial dentures is permitted to be undertaken by dental technicians. It follows that any substantial expansion of the industry at any given time is conditioned primarily by the number of practising dentists available in any given area of sales.

Very few countries in Europe at the present time have the requisite number of practising dentists to give what is deemed adequate service to meet the dental needs of their populations. This in most countries is being slowly remedied. But dentists cannot be trained overnight. In the United Kingdom it has been estimated that if every scheme for dental training now in contemplation began forthwith and was completed on schedule even after ten years the country would still be undermanned for its dental needs.

From this it is apparent that, leaving aside the underdeveloped countries, where the vital awareness of dental health has barely reached the level of public consciousness, the growth of the industry is more likely to be steady than spectacular.

IMPORTANCE OF QUALITY

Apart, therefore, from new markets in underdeveloped countries the continued growth of your Company increasingly depends on the maintenance of its marketing organisation and its determination and ability to produce new and improved products of the highest quality at competitive prices.

Marketing at home and abroad is an important part of our enterprise. In Canada, where the potential is great, a long period of Exchange Control has hampered our efforts. With the easing of these controls we have now acquired a retail outlet in Canada as the spearhead of extended activity in that territory.

Our current trading to date, in the absence of any major set-back, appears to assure to us another satisfactory year.

Once again, it is my privilege in your name to offer to our management and staff at home and abroad our warm thanks for their unsparing efforts to contribute to our continued success.

The report and accounts were unanimously adopted and resolutions to increase the share capital, issue bonus shares and pay the special capital and the ordinary dividends, as recommended, were approved.

THE CENTRAL MINING INVESTMENT CORPORATION

(SIR ARCHIBALD FORBES' STATEMENT)

The Annual General Meeting of The Central Mining & Investment Corporation Limited will be held on July 20 in London.

The following are extracts from the circulated statement of the Chairman, Sir Archibald Forbes, G.B.E.:

The profit for the year was £2,131,000 out of which the provision for taxation absorbs £850,000 leaving £1,281,000 for disposal. It is proposed that the final dividend on the Ordinary Shares should be 3/3d. per share which with the interim dividend of 1/6d. would make the total payment for the year 4/9d. per share as compared with 4/-d. for 1957-8. If this is approved the total distribution (after deduction of Income Tax) in Preference and Ordinary dividends will amount to £605,000 leaving £676,000 retained in the business out of the net earnings of the year.

The investment portfolio at 31st March, 1959 (excluding Gilt-Edged holdings and loans) had an approximate valuation, subject to the qualifications stated in the Accounts, of over £22m. This in geographical terms is broadly distributed as to 74% in South Africa and Rhodesia, 6% in Canada and the U.S.A. and 20% in the United Kingdom and elsewhere. Apart from undertaking our share in the financing of the companies and ventures embraced in the Central Mining/Rand Mines Group we are continually examining propositions for investment in other directions in various parts of the world including the United Kingdom.

SOUTH AFRICAN GOLD MINING INDUSTRY

The vigour and enterprise of the South African gold mining industry are amply illustrated by the fact that during the last seven years, no less than eighteen new mines have started producing gold in the Transvaal and Orange Free State and these are now responsible for some 47% of the Union's total output. From the beginning of 1952 to the end of 1958, these new companies produced gold worth £344 million against a capital outlay of approximately £270 million. During the same period dividends totalling £58 million were paid and South African tax and lease charges, which were greatly eased by the amortisation provisions of Union law governing taxation of mines, amounted to £12 million. Taxation will increase substantially each year from now on, as the 'tax holiday' enjoyed by each *mining* company draws to an end, but profits should also increase as the mines reach their planned optimum scale of operations in both tonnage and grade.

The average cost per ounce of gold produced by these eighteen mines during 1958 emerged at the remarkably low figure of 134/6d. Modern mining methods and layout, the large scale of operations and the high grade of ore milled have contributed to this achievement. Costs at the Central Mining / Rand Mines Group mines range from 108/-d. an ounce at Blyvooruitzicht to 247/3d. at Modderfontein East.

As to the prospects for the current year I am hopeful that the revenue from dividends and interest will be at least maintained. It is, however, more difficult to predict the outcome of share dealing operations and we cannot count upon a continuance of the favourable conditions of 1958/59. This is particularly pertinent in relation to one of our functions in the Central Mining/Rand Mines Group — to help to keep a reasonably free market in the shares of Group companies.

ST. JOHN D'EL REY MINING

Mr LEO MODEL'S REVIEW

The One Hundred and Twenty-eighth Annual General Meeting of St. John d'el Rey Mining Company, Limited, was held on June 24th in London.

The fololwing is an extract from the review by Mr Leo Model, which had been circulated with the report and accounts for the year ended December 31, 1958:

In the last twelve months work has been carried out on the programme which I outlined at that time. The gold mines from which the main source of revenue of the Company comes have been kept going only by reason of assistance from the Brazilian Government to the gold mining industry. This assistance is to continue until the end of the year but, should it not be renewed, the problems of the gold mines are such that their survival will be extremely doubtful.

Certain of the iron ore deposits have been thoroughly explored with encouraging results as far as development of tonnage is concerned. However, iron ore is in plentiful supply in the world today. To be competitive, Brazilian iron ore must move from the mines to the consuming centres of the free world in competition with other sources of high grade ore geographically closer to the consumers. In addition, the steel industries of the free world are just emerging from a severe recession and supplies of iron ore are plentiful. With the co-operation of the Brazilian authorities, however, it is hoped that the many problems facing the development of the Company's iron ore properties may be surmounted.

Additional financing will be required this year to cover the continued losses from the gold mining operation and the costs of completing the studies under way for the development of the iron ore properties. The present estimate is that a minimum of £500,000 additional financing will be required for this expenditure for the year 1959. As soon as requirements are fully assessed stockholders will be informed.

The report and accounts were adopted.

HEAD, WRIGHTSON & Co. LTD.

TRADING PROFIT CONTINUES TO GROW
MR RICHARD MILES REVIEWS ACTIVITIES

Extracts from the Statement by the Chairman, Mr Richard Miles, accompanying the Report and Accounts for the year ended 31st January, 1959, to be presented to the sixty-ninth Annual General Meeting on 9th July, 1959.

ACCOUNTS: Our gross trading profits for the year under review increased from £1,757,581 to £1,819,783. Our net trading profits rose from £722,574 to £874,654. Part of this increase is due to changes in taxation. Subject to your approval, we propose to pay a final dividend of 15%, which, with the interim of 5%, will make a total of 20% for the year, an increase of 2½% over last year.

The rate of receipt of orders declined towards the end of the financial year, and is still well below our target for the current year. The maturity of very large contracts varies from year to year, so that it does not follow that the results of our increased work-in-progress will be immediately apparent. The interval of time before any orders for new capital equipment are apparent on the shop floor is longer than many people envisage.

CAPITAL EXPENDITURE: As you may have observed lately, our capital expenditure has been much heavier than formerly. Continued capital expenditure is improving our efficiency. In addition to our being able to lift and machine to fine limits pieces of 100 tons, at The Head Wrightson Machine Co. Ltd., in Middlesbrough, we can now also lift 100 tons in our new shop at Head Wrightson Teesdale Ltd., in Thornaby. We can also bend, press, automatically weld, stress relieve, heat-treat and X-ray the thickest plates obtainable, for the components manufactured by that Company.

NUCLEAR ACTIVITIES: During the year the Prime Minister of Australia inaugurated the heavy water moderated reactor at Lucas Heights, near Sydney, engineered by Head Wrightson Processes Ltd. The D.R. 3. reactor for the Danish Atomic Energy Authority proceeds well, and it is expected to become critical later this year. After a slow start progress is now being made on the Dido reactor at Julich, Western Germany. Further export enquiries for similar reactors are being actively pursued. For the Bradwell Nuclear Power Station our heat exchangers are being delivered by sea to programme. Later in the year we shall start the laying of the graphite core. In Italy work is proceeding on the Latina power station which The Nuclear Power Plant Co. Ltd. are building in conjunction with Agip Nucleare. We have had a number of our staff out in Italy during the past six months.

There are now too many Groups chasing too little work. This is not in the national interest, at a time when there is a shortage of scientists and technicians.

RESEARCH AND DEVELOPMENT: Our Research and Development Department has played an important part in providing new, economic, and progressive ideas in nuclear power, and is extending its activities to keep us in the forefront scientifically in our traditional lines.

Our outgoings on research are substantial, but I am convinced we shall reap an adequate reward in due course. Our published exposition on new methods of steel making has met with a remarkably favourable reception.

SOME OF OUR WORK: This year we are sending you some pictures in a separate booklet accompanying our Annual Report. You will observe, in reading the booklet, the important part we play in equipment for the iron and steel industry. We supply complete plants for the preparation of coal, the production of sinter, smelting of iron, gas cleaning, and — a new development — steel making by the oxygen process, besides components such as specialised rolling stock, ladles and ingot moulds. At the finishing end our electrolytic tinning and galvanising lines are producing increasing tonnages throughout the world. The oil and chemical industries are also an important market and it will be observed how we cater for the varied requirements of refineries and chemical plants. Most of this work is based on heat transfer, and it was our experience in this line which led us naturally into our nuclear activities. The supply of mining plant, both for coal mines and metalliferous mines has long been one of our specialities, and although this equipment is now made by our Subsidiaries in South Africa and Australia, for the local market, we are constantly improving the design and performance of our equipment. In dock and harbour work we maintain our pre-eminence by our ability to build dock gates at Head Wrightson Teesdale Ltd. at Thornaby, test and then launch into the Tees and tow to site. Finally it will be realised that a very large proportion of our turnover is made up by supplying iron and steel alloy castings and forgings not only to our own engineering works, but to our friends and customers in many industries.

In passing I should like to record an opinion that the effect of the Restrictive Trade Practises Act will be harmful in some directions if carried too far.

OVERSEAS: Our Export Company has actively pursued business in many countries overseas. Some 30% of our total production is exported directly, and considerably more indirectly.

WORKS VISITS, TRAINING AND INTERCHANGE OF TECHNIQUE: The Prime Minister honoured us with some of his time in January. Subsequently a number of Opposition Members of Parliament spent a day with us.

We encourage visits of boys to our works, and are able to make a selection for our annual intake of some 70-100 apprentices from an application list of three to five times the number. Many of our technicians and others have been to most of the industrial countries abroad, and in return many of our friends from abroad have visited us.

I might perhaps use this occasion to express my thanks to our friends in the British Iron and Steel Federation, for enabling our overseas customers to train their young technicians in operating the plant we supply.

DIRECTORS AND PERSONNEL: Sir Richard Graham, Bt., and Sir William Scott, have accepted our invitation to be directors of Head Wrightson Teesdale Ltd. and The Rt. Hon. The Earl of Halsbury, formerly Managing Director of the National Research Development Corporation, to be a director of Head Wrightson Processes Ltd.

Our staff and workmen have worked well during the year. Without their loyal and able co-operation, our continuing progress would not have been achieved. Our thanks are due to them. As a practical expression of our appreciation of their efforts, we have, during the year, committed ourselves to a substantial improvement in pension arrangements. To enable us to meet our obligations, largely in respect of pensions for past service, we have made an allocation of £80,000 in the Accounts.

It is appropriate at this point to refer to the untimely death of Sir Claude Gibb, K.B.E., D.Sc., F.R.S., the Chairman of our associate The Nuclear Power Plant Co. Ltd., and to express our sympathy with his family, and with his colleagues at C. A. Parsons & Co. Ltd., and A. Reyrolle & Co. Ltd., and the other companies he so ably directed.

FINALLY: We have £24m. in work-in-progress, but although we are busy with many large enquiries, as I have already stated orders are still not being received at the required rate. It cannot be expected, therefore, that the exceptional progress we have made for many years past will be necessarily maintained in the short term. However, our position is strong and healthy, and we are exerting the maximum possible effort to secure orders arising from the general upward trend, which is now becoming discernible.

F. FRANCIS & SONS (HOLDINGS)

The 58th annual general meeting of F. Francis & Sons (Holdings) Limited was held on June 16th in London, Mr Frank Fox (chairman and managing director) presiding.

The following is an extract from his circulated review:

Profits of the Group before taxation are £292,796, and this includes the profits of Sagar-Richards Limited for the nine months ended December 31, 1958. Taxation requires £131,796 and it is necessary to capitalise the proportion of Sagar-Richards' profits earned before it was acquired by the Group; £18,951 (after taxation). The sum of £25,000 has been transferred to general reserve and the Board recommends a final dividend of 16 per cent on the Ordinary Share Capital making 20 per cent for the year.

After reviewing the activities of the Group's various interests, the Chairman continued: Our efforts at reorganisation are beginning to bear fruit, as is brought out by the results of trading during the first four months of the present year. Up to the end of April sales of the whole Group have increased by 39 per cent. This is quite a substantial increase, and whether we can keep it going remains to be seen. All our endeavours will be directed towards this end.

Subject to there being no major disturbance over which we have no control, our long-term prospects are good; but the reorganisation is not yet complete, and the current year will be bearing expenses consequent upon this.

Once again it is my pleasure and privilege to record our appreciation of the efforts of the management, the staff, and the work-people who have helped us so much durin gthe past year.

The report was adopted.

WALTHAMSTOW BUILDING SOCIETY

The 82nd annual general meeting of the Walthamstow Building Society was held on June 23rd in London.

Mr. Reginald W. Beken, F.R.I.C.S. (the chairman) presided and, in the course of his speech, said:

We have had a most favourable year notwithstanding the fact that it was almost as a whole dominated by fairly high money rates. Our watchword last year was "consolidation" and in spite of the easing of credit restrictions this must continue to be our theme if the reserve ratio is to improve year by year.

During the year under review £542,974 has been advanced on mortgage, an increase of £173,186 over the previous year. The mortgage assets now exceed £3 million.

The sum of £567,310 was subscribed during the year under review, an increase of over £100,000 over the previous year, whereas withdrawals and interest amounted to £404,656, slightly less than last year. On the day following the end of the financial year the amount due to shareholders rose above the £3 million mark for the first time.

The reserves ,including carry forward, now total £119,873. The ratio of reserves to total assets has again been increased and now amounts to 3.2 per cent,, a most satisfactory result of the year's working.

Total assets now amount to £3,653,462 an increase during the year of £282,628 representing a growth of over 8 per cent.

Under the House Purchase and Housing Act 1959 certain societies are to be granted full Trustee Status for their deposits provided they satisfy the Registrar that they comply with the important conditions laid down.

Your Board welcomes the proposals contained in this Act and I am particularly proud to announce that the Walthamstow was one of the first societies to be thus designated by the Registrar.

The rapport was adopted.

FOY MORGAN

A SATISFACTORY YEAR'S TRADING

The twenty-fourth annual general meeting of Foy, Morgan & Company Limited was held on June 11th at the Offices of the Company, 16 Eastcheap, London, E.C.3, Mr Peter Morgan (the chairman) presiding.

The following is the statement by the chairman which had been circulated with the report and accounts:

The accounts for the year ended December 31, 1958, which are now submitted, show that although there was an appreciable drop in your Company's gross earnings as compared with the previous year, the result of the year's trading had been satisfactory. We are able to recommend the maintenance of the rate of distribution of profit, and still to make a forther addition to the carry forward.

Trading conditions in 1958 were difficult. There was a fall in timber prices, interest rates were high, at least in the earlier stages, and consumption was curtailed. Whilst appreciating the pitfalls lying in wait for the forecaster, it appears to me that the present circumstances justify a hopeful outlook for our trade in 1959.

I would end my statement by once again expressing, on behalf of my colleagues on the Board and of myself, our grateful thanks to all those members of our Staff who have, by their loyal support, contributed so wholeheartedly to your Company's success.

The report and accounts were adopted.

Scenes like this occur throughout the Eastern Hemisphere, where Caltex is serving the peoples of many lands. Caltex serves not only by marketing high grade fuels and lubricants to motorists through its tens of thousands of service stations... but also in many other ways.

Caltex activities include finding crude oil, refining it into gasoline, kerosene, diesel oil, fuel oil, lubricating oils and asphalt stocks, and transporting this variety of petroleum products in over 70 countries, to where they may be used in local industry, in farming, in construction, and in all forms of transportation.

In these and in other ways Caltex serves not only the public but the economy of many lands.

... in Great Britain, look for the familiar REGENT *sign!*

AEI

Associated Electrical Industries have 70 factories

—at Rugby and Sheffield and Manchester,
Lydbrook and Harlow and Thorne,
Corby and Woolwich and Leicester,
Lincoln and Nelson and Larne . . . In these twelve towns (picked out for this advertisement because they more or less rhyme) there are A.E.I. factories making a multitude of electrical products for industry, transport, power stations and homes. And in many other towns there are other A.E.I. factories producing on the same diverse and mighty scale. What does all this add up to? Employment for 107,000 people. An annual output of over £180,000,000. And a sustained flow of the electrical equipment without which we'd all very soon find ourselves sitting in the dark, shivering with cold, with no job to go to and no way of getting there. AEI *part of a great Britain*

Birlec and the barrier

The embryo engineer or scientist, at the threshold of industry, will always find Birlec equipment and experience keeping pace with his expanding vision.

Gas turbine blades, gearing and ducting; airframe structural sections and sheets; undercarriage wheels, tyres and brakes; engine starting and flight control equipment; altitude test chambers and wind tunnels — all these depend, at some vital stage of production or development, on Birlec furnaces or adsorption driers.

Allied Chemical brings you new products to do new things...chemically

New products from Allied Chemical are offering new opportunities for increased growth and added profits to industries throughout the world. Today, with over 3,000 products, it offers one of the world's most complete lines of basic chemicals from one source.

Here are a few examples of new Allied Chemicals in action:

- NEW FOAMING URETHANES based on Allied's raw materials are inspiring functional creativity in cushioning, packaging, vibration and heat insulation, adhesives.
- NEW, TOUGH PLASKON NYLON RESINS bring the economy and mold-ability of plastics to the heavy-duty machinery field.
- FLUORINATED HYDROCARBONS provide the "push" for aerosol products, cool refrigeration equipment.
- NEW CAPROLAN NYLON is now being used in the manufacture of tires, upholstery, carpets, conveyor and automotive safety belts.
- LOW-MOLECULAR-WEIGHT POLYETHYLENES are the bases for better floor waxes, paper coatings, polishes, printing inks, textile finishes.

For information on how new chemicals from Allied can be used in your industry, contact your nearest Allied Chemical International Office. Also ask for our new illustrated booklet, *"Introducing Allied Chemical International"*, which briefly describes our company and its major products. Write on your company letterhead.

Halcyon Days

THE first half of 1959 has ended with the British economy apparently in very good shape indeed. How far does the recent improvement represent a genuine advance towards solving this country's basic economic problems, and how far is it merely a temporary respite? Three main economic problems have bedevilled Britain since the war; all are intermingled but all are in some degree capable of separate analysis. They are the foreign balance; the problem of internal pressure upon resources; and price inflation.

Of these, the problem of the sterling area's foreign balance is most obviously dormant for the short term, but also most obviously unresolved for the long term. The situation looks almost magically easier than usual at the moment because the terms of trade are currently very favourable to Britain, while the prices even of some commodities produced by the overseas sterling area happen to have recovered from recession more abruptly than the prices of most dollar commodities have yet done. But a deterioration of only 4 or 5 per cent in the whole sterling area's terms of trade would cost some £200 million a year and be likely to plunge the whole area back into deficit. Clearly a deterioration of that order is very likely to happen some time; one can say that without assuming the prophet's mantle and pretending to forecast when. When it does happen — or when electoral or other considerations cause increased uneasiness about the pound — is there any reason why the speculative tide against sterling should not sweep as abruptly up the beach as it did in 1957? There are now no effective dams to prevent foreigners switching out of sterling if they want to; that is a consequence partly of the advance to convertibility last December, but also, much more largely, of the *de facto* situation which convertibility was designed to recognise.

In the end, sterling's ability to avoid another crisis will depend not so much on the accretions of strength that it has enjoyed during the current respite — although some of these, particularly the growth of our international reserves (especially second line reserves) and Britain's own improved balance with North America, are not unimportant — as on whether those in charge of Britain's finances have learned the real lesson of 1957. This was that foreigners will hold sterling only if it is profitable for them to do so. The prerequisite that makes it profitable is that the interest differential that can be earned on sterling holdings must outweigh any nervousness about sterling's possible future devaluation, as expressed in the discount on the floating forward sterling rate. Very broadly, the question of whether Britain has learned how to avoid new-fangled crises of the 1949 and 1957 ilk depends on whether it has at last overcome its

new-fangled repugnance to go promptly, at the first sign of trouble, to high Bank rates.

On the second major problem — the question of what is the right level of internal demand to afford — Britain should also have learned some lessons in the last few years. It used to be the fashion to suppose that there was only a very narrow dividing line of march between the primrose path (the wild excess of demand which precipitated Britain into a £1200 million external deficit in 1951) and the waste land (the mass unemployment of the thirties). The way between looks much broader, although perhaps also a bit muddier, now. On the one hand, Britain itself has avoided a balance of payments deficit for eight successive years; on the other, the Government has kept demand below maximum productive capacity for the last three years without ever running into more than 3 per cent unemployment at the seasonal peak. But it has not proved as simple as had once been expected to restimulate demand; Mr Macmillan's dictum of 1956, that turning off the taps was difficult but turning them on again would be easy, has not proved true.

The long-term moral may be that tax and fiscal policies, which exert the most direct effect upon demand, should normally be designed to keep the economy running a little further from the waste land than they sought to do in 1956-58. But the immediate rider, which the Labour party and other critics of the last three Chancellors so often wilfully fail to see, is that this can be done only if there is at the same time sterner reliance on other weapons — on interest rate policy and less inflationary wage arbitration procedures — to keep the country away from the rocks of foreign currency crisis and continual price increases. If American interest rates continue to rise and if there is some reaction against sterling as the election draws near, an example might soon appear.

On the third front — price inflation — these also seem to be halcyon days. After twenty years of constantly rising prices the cost of living has now been stable for twelve months, and very nearly stable for eighteen. In part, this has been the result of running the economy nearer to the waste land; some people will say that this alone has made the waste worthwhile. But it has also been the result of two other factors. First, the idea has slowly begun to percolate among British manufacturers that price competition is respectable. The new ethos has shown itself at home in some breaches in individual resale price maintenance and in the judgments of the new Restrictive Trade Practices Court. More surprisingly, it has even begun to catch hold again in relation to price competition from abroad; the growth of freer trade doctrines has been one of the great developments of this Parliament. Secondly, there have been some — though still far too small — advances towards recognising that inflation through emollient wage arbitration is one of the biggest dangers to this country.

There can be dispute how far these two advances towards economic commonsense in the fields of prices and wages seem likely to be maintained; the second of them, the recognition that it is unprofitable to run away from strikes, would almost certainly receive a setback on the accession of a Labour government. But it is only to the extent that they are maintained, and to the extent that the right lessons have been learned about Bank rate policy and demand restraint, that the present golden summer can hope to be counted as the end of the long period of recurrent crisis and persistent price inflation, rather than merely as another very temporary respite in the middle of it.

Plain Tales from the Alps

At Geneva, Russia offers no concessions. But will developing perspectives in time bring Mr Khrushchev to seek a real settlement ?

PLAIN men have a right to be puzzled. Why go back to Geneva now, so soon after a forty day stretch in an arid diplomatic wilderness ? Surely the spotlight has played bleakly enough on the yawning gap between the powers and the impossibility of closing it at present ? Why expose the western partnership to fresh strains ? The Americans and the British, the French and the west Germans are out of step and out of sympathy with one another. The Italians and the Belgians have publicly expressed the other western governments' understandable dislike of having Europe's future discussed by the inner ring only. Who believes in a fruitful summit meeting at the beginning or the end of August ? Prime ministers are not necessarily prime movers, nor are heads of government infallible producers of heads of agreement. And Mr Khrushchev has done his best to make it clear that he is not disposed now to concede in person anything that he has refused to concede through the mouth of Mr Gromyko.

True, we seem now to be back where we were on November 27th, when the Russians first pronounced their sentence of lingering death on the freedom of west Berlin. There are only two real differences. A conference table has been laid, and, briefly, occupied; and instead of a simple six months' time limit for Berlin, there seems now to be a kind of loose-leaf calendar, which Mr Khrushchev adjusts from time to time. Apart from that, he has told the world with the resonance and repetition usually associated with the snark-hunting Bellman that he has no intention of scaling his demands down. And it is scarcely a concession that he has made in leaving his Damoclean sword suspended over Berlin for an undefined rather than a defined period. The whole purpose of a Damoclean sword is to dangle. After a few more postponements, it will not be difficult to imagine the Red Army, its joints perhaps stiffening a bit and its half-unsheathed weapons tending to stick in the scabbard, crouched menacingly and rather mindlessly over the Berlin autobahns for the whole of the fifteen years which, according to Mr Frol Kozlov, Russia needs to achieve the highest living standards in the world.

There is a curious contradiction between this ostentatious bid for world supremacy in the peaceful arts, and the playing of an on-again-off-again game of brinkmanship over Berlin. The plain man's question to Mr Khrushchev is : "If you do want peace, why start these war scares ?" The contradiction certainly exists. It arises, clearly, from the remarkably cocky phase through which the Soviet rulers are now passing — a phase in which their motto seems to be that you can heat your cake to near burning point and still have it. It is fairly understandable that the Russians should feel like taking risks when they are able to flit across to New York in a Tu-114 and wow the islanders of Manhattan with their technological wampum. And one phrase stands out from the torrent of Mr Khrushchev's recent speeches: "We have no reason to make any concessions; our proposals were not made for bargaining purposes".

IF this cockiness were all, there might indeed be little point in revisiting Geneva. But beneath it lie unresolved Soviet dilemmas that will outlast it. The jovial Khrushchev may think it splendid fun to tweak the West's several tails and set its Cerberus heads to snapping at each other. But what when he reaches the point of actually wanting a settlement ? A divided West will then be unable to provide him with any *interlocuteurs valables*, and he may find himself under the ironic necessity of having to adjust his tactics to help the West come together again. Again, it is now a legitimate and obvious Soviet tactic to try to push the German Democratic Republic into a respectable seat in the front stalls, or at least to make the world give it some sort of reluctant recognition. But suppose the Ulbricht regime could attain even the supreme bliss of slipping into a seat at the United Nations as a full equal of Albania, Byelorussia, the Dominican Republic and Yemen. Would that really solve the underlying problem — which is the habit Herr Ulbricht's subjects have formed of voting against him with their feet, since their hands are bound, and their clear intention of tossing him into the dustbin of history as soon as Big Brother retires to a safe distance ?

Better living standards are no more likely than diplomatic recognition to solve the problems that Mr Khrushchev faces in eastern Europe. He himself, in a presumably unguarded moment, recently remarked that the more prosperous people get, the more democratic they want to be. The appetite for liberty grows with the eating of more tangible victuals. For the Soviet government, any prospect of disengagement in central Europe is thus doubly perilous. First, if the Red Army goes, the local political police will not long survive. Second — and this is, of course, the West's headache as well as Moscow's — any military evacuation of a central zone means that one side will presumably have to resort to massive nuclear retaliation if the other ventures back into the zone. This is a point about which Mr George Kennan was more frankly honest than some other advocates of disengagement. The same uneasy line of thought lies behind the suggestion, noted by our Washington correspondent on page 92, that has been made by some American Democrats : that more troops, American and allied, must be put on the ground in Europe to lessen the risk of a nuclear clash.

Finally, there is the problem that was spotlighted last week, when Peking hastened to denounce the Labour Party's new project for a "non-nuclear club" as hypocrisy and humbug, while Moscow remained cautiously and totally silent on the subject. The Soviet government is, understandably, as unable to admit that it does not want China to acquire H-bombs as it is unable to admit that east Europeans want to be free. But that does not mean that awareness of these awkward realities may not be growing in Moscow. Perhaps the strongest argument for keeping up a semi-continuous dialogue with the Russians is that it provides opportunities for studying their transition from cockiness to concern over these unpleasing perspectives, and possibly for hastening that transition by an occasional wellplaced reminder. The western delegates will do better to return to Geneva with these thoughts in mind than with any great hopes of spectacular and early success.

Sea Fever

The sailing boom in Britain is centred on racing dinghies; but family cruisers and runabouts, as in America, may come next

BRITANNIA, having long ago ceased unaided to rule the waves, is now taking to the water again. But this time it is in racing dinghies, not battleships. Since the war there has been a boom in boating; ports, rivers, estuaries and even reservoirs and sandpits now flutter with a mass of sails where before there were few or none. This has not been done without altering the nature of the sport; sailing has changed since 1939 from a rich man's hobby into a sport for a broad group of enthusiasts.

Neither the size of the sailing industry nor the number of the sailing public are accurately known. Nobody, once having bought a boat, need register it with anybody who collects the figures, and dinghies, unlike most consumer durables, are made by small firms. None has yet conducted a thorough survey of its market and a few who are eligible even refuse to fill up forms for the census of production (which leads to a fine, but no data). The best guesses that can be made about the British industry, however, are that there are about 23,000 restricted class or one-design (i.e. pedigree) racing boats in existence, which are produced at the rate of approximately 2,200 a year; that the number of nonclass boats, dinghies, runabouts, prams, canoes, etc., is many times that figure; that, ignoring the fringe of part-time joiners, there are abou. 400 dinghy firms and 220 ships' chandlers, employing on average just over 10 men apiece; and that about a quarter of a million people are interested in amateur racing and boating in all its other forms. This number is about four times the prewar figure and is growing fast.

There are basically two reasons for the survival of the small man in boat-building. The first is that, until recently, the economies of scale in the industry were not great; it was little cheaper to have ten craftsmen nail together ten boats than it was to have one. But technical advances, which save both labour and enable the men employed to be less skilled, are changing that. The use of ultra-strong resin glues on chine (i.e. flat ply) and hot moulded ply (shaped and steam-baked in an oven) is now completely accepted. Fibre glass boats, for which the economies of scale are larger still, are beginning to win the devotees here that they already have in the United States. But the small man survives for a second and more important reason : large firms at the moment simply do not find it worthwhile to enter the field. Many small designers do their work partly for the pleasure it gives them, accepting in return low margins of profit even on their unduly low estimates of capital employed. The few large firms in the business use it as a sideline, relying heavily on management and capital used in their other activities.

THIS is the industry; but what of the quarter of a million amateur sailors who plough the water in these craft ? Because yachting requires both time and some money, it used to have an air of snobbishness attached to it; one remembers Queen Victoria's reported complaint when the Prince of Wales sailed with Sir Thomas Lipton : "He's gone boating with his grocer." But now, thanks largely to the economies of "build yourself" boats, the sailing frontier is moving rapidly downwards and, with the design of lighter racing boats which can easily be stored in a shed and then trailed to the sea on a summer weekend, rapidly inland. Middle class families anywhere who can afford a boat, a car and a trailer, clerks and skilled workers who live close to the sea and, especially, young people generally are now among the greatest supporters of the sport. The Royal Yachting Association, the racing yachtsman's governing body, reports an increasing number of members with ages between 10 and 20. The association now has 920 affiliated racing clubs and 7,500 members, compared with 350 clubs and 250 members before the war.

All these developments add up to the conclusion that in Britain (as opposed to the United States) it is the small racing dinghy that has been the big growth element in boating. The boom has been on this rather narrow front (the equivalent of the sports car end of the car market), on the approximately 12 foot, £100 to £250 class of boat, and in their respective second-hand values; the urge to race in such boats as the Firefly (2,500 sail numbers), Enterprise (2,600), National 12 foot (2,200), Cadet (2,500) and Heron (2,500) is particularly strong. For the rest, there are already about 1,000 catamarans. Nor are the yards for the larger racing yachts by any means idle. The demand (often from clubs) for cabin cruisers and ocean racers for upwards of £1,000 is sustained, though it is not increasing much. Only for the equivalent of the family car in boating — safe, capacious and with a decent, if unsensational performance and minimum upkeep — does the consumer seem hard put today to find suppliers.

This for once offers a complete contrast with the developments in the United States. There, where there are said to be seven million boat owners whose suppliers have a total annual turnover of £750 million a year, and where seven out of ten boats have an outboard motor, the demand is primarily for the family cruiser. Many of these motor boats, with their tail fins, flashing indicators, hotel- or caravan-like interiors, stylish gadgetry and the like are merely cars that go on water (and indeed can be ordered in fibre glass with a trailer, all to match the colour of the "land" car). But though this type may never attract the British sailor the importance of the family boat in America could presage developments here. Most British sailors would say that sea racing is too dangerous and needs to be too well under control to have an inevitably disorganised family on board; and just pottering around would not satisfy them. This idea needs examination in view of American experience.

There are, of course, important differences between sailing here and in America. Britain lacks the massive inland waterways and lakes that make high speeds with a motor possible; on most British waterways a really powerful engine is all but useless. Boating here is therefore concentrated on estuaries and the sea, where a light, skilfully handled boat scores heavily over a powered family cruiser, and sales of small marine engines, though sustained, have not been an important feature in the growth of British boating. There is also the question of difference in weather conditions, and the matter of price.

But none of these differences can disguise two major weaknesses in the British industry compared with the American, where change is therefore to be expected. The first is that in their commercial methods of manufacture and distribution, British firms are far less highly developed, though they may well design a better small boat, which is the British speciality. A greater concentration in boatbuilding here, and a greater separation between manufacture and repairing, seem inevitable in the future. Secondly, in Britain almost no provision is made either for family pottering or for family cruising. There is almost a complete gap between the £300 racing dinghy and the £1,000 yacht. Fairey Marine, Britain's largest manufacturer, plans in the future to try and fill this gap. (Its simple 16 foot 6 "Faun" in which three can sleep in a shelter cabin for £275 less engine is already a hesitant step in that direction.) Expansion could also be stimulated if firms decide to set up sailing clubs with a few boats for their workers — surely in many areas as good as providing playing fields. But the main new demand in the next four years looks like coming from the family, either for a boat giving reliable sailing or — more likely — for one relying for power primarily on an engine. Designing these miniature cruisers, without building in the ulcer-generating devices of social competition which seem to have taken their usual toll in the United States, promises to be profitable in the future.

NOTES OF THE WEEK

LABOUR PARTY

Mr Cousins's Third Force

THE Labour party has escaped relatively unscathed from so many weeks of near crisis recently that most people have given up believing that it really is capable of blowing itself to pieces by that bomb. But all eyes in the movement were fixed on the Isle of Man this week. The best available reports in London, and the ones that most Labour leaders themselves believed, were that Mr Frank Cousins went to the conference of his Transport and General Workers' Union with a definite plan in mind for reacting to Labour's new statement on defence, against which he cast one of the minority votes.

His aim was to emerge at the end of the week at the head of a third force within the party — one that would not go as far as the unilateral disarmers, but also would not be satisfied with a policy like that of the non-nuclear club which would depend on the unlikely agreement of many other governments before it could take effect. Mr Cousins did not want to provoke an immediate crisis in the party leadership by laying his megavote on the line against the whole of Mr Gaitskell's position. He did want authority from his union to move amendments at Labour's next annual conference which would inject three doses of the missing unilateralism into the party's policy. Under his plan a Labour government, without waiting for anybody else, would promise never to start testing nuclear weapons again, never to use nuclear weapons first against conventional troops, and not to add to the British stockpile of H-bombs.

Readers of this issue of *The Economist* will know, by the time it reaches them, whether Mr Cousins's conference has followed this script. If it has, Mr Cousins, having shown and strengthened his hand thus

far, will be able to keep everyone guessing which way he will vote on the main defence resolution at the Labour conference in October, if the amendments he proposes are not accepted there. His decision may well be affected by what happens at the other union conferences this week, where the miners and railwaymen were also expected to define their position on nuclear disarmament.

The truth of the matter is that some members of the Labour party — probably including Mr Cousins — more than suspect that, left to his own devices, Mr Gaitskell in office would pursue a foreign policy indistinguishable from that of Mr Macmillan. In consequence they want Mr Gaitskell to be tied down tightly by contractual obligations before he is translated to Number 10. It would be a mistake to assume that all members of Mr Cousins's potential third force necessarily value electoral victory so highly for its own sake that they could be counted upon in all circumstances to respond to an appeal not to rock the boat.

Much will depend on whether the three co-authors of the Labour party's statement, Mr Gaitskell, Mr Bevan and Mr Brown, manage to stick together. Mr Bevan has always used very different language from Mr Gaitskell in presenting the party's policies. For how much longer will they both remain satisfied that they are describing the same things? Mr Bevan and Mr Brown both object to the words "non-nuclear club" to describe their new policy, but for different reasons — Mr Bevan because they make it sound too trivial, Mr Brown because they are inaccurate. The former would like to make the policy sound more than it is, and the latter to make it less than it seems. The three men have so far skated most gingerly round the most explosive of the side issues, such as the problem of tactical nuclear weapons in Nato. But faced with Mr Cousins's amendments, will they all react the same way?

PRINTING DISPUTE

Ink is Black

LAST week the daily papers began to call the printing strike the printing crisis; this was when it began to seem likely that they themselves, because of the threat to their ink supplies, would be involved in it. At the same moment Mr Macleod started to work overtime to try to bring the parties to this tangled dispute together. Free speech has been subtly curtailed in Britain in the past two weeks — not so much because of the hamhanded (and possibly illegal) attempts of some Labour-controlled councils to stop releasing news to papers of which they disapprove, but because some papers still printing at home are being careful about what they ask their compositors to set up. From *The Economist's* fourth successive emergency printing home abroad (can our usual apologies about imperfections this week be taken as read?), three points seem worth making.

First, the TUC's idea of appointing an independent referee or conciliator, as distinct from an arbitrator, to this dispute is one that the Ministry of Labour would be most unwise to support. An arbitrator is at least supposed to pass judgment on what award, if any, he thinks is right. A conciliator or "catalyst" could have no other function than that of trying to influence the employers to increase their offer above what they think they can afford, towards what the unions are demanding. However distinguished a figure a conciliator for printing might be, the precedent might well be a disastrously inflationary one for future disputes in other industries.

Secondly, it would be hypocritical to pretend that the employers could expect much benefit from an agreement which accorded a bigger wage increase now in return for a promise to discuss restrictive practices later on. Restrictive practices abound in British printing because this is an industry in which men are paid at very skilled rates, but which technical innovations are gradually turning into a less skilled job. The unions would be singularly unlikely to knock down the defences they have erected against this trend, merely because of some new atmosphere in which they were supposed to feel more chummy towards the employers.

Houses Divided

BOTH sides in this dispute are divided in their own house. The split on the employers' side — between those who would find it profitable to pay more to stop the stoppage, and those who would not — has been obvious from the beginning; it is the unions' main source of strength. The split became more evident still as soon as the daily papers were threatened with involvement. One can sympathise with the daily papers in their indignation that they should be stopped because of a dispute about such a minor element in their costs as printers' ink; one can appreciate that they were not inclined to see the joke in the unions' statement that ink is black. But general printers can be excused for finding some of the leading articles in the daily press last week — hinting that it would be an act of statesmanship if they offered a little more to their men — rather hard to bear.

The division on the unions' side in the past two weeks has been between Natsopa, which was very ready to extend the stoppage to the national newspapers, and most of the other unions, which were privately appalled at the idea. The reprieve that Natsopa granted to the daily papers last weekend was clearly announced after pressure by the other unions. In terms of personalities, Mr Briginshaw of Natsopa has led the extremists in this dispute and Mr Eastwood of the Printing and Kindred Trades Federation has led the moderates. Mr Willis, this year's chairman of the TUC and the best known printing union leader until this strike began, seems to have been in the middle; he has not noticeably strengthened his position with anybody in the last few weeks.

DEFENCE

Who is the Nth Power?

IN the debate about the desirability of a non-nuclear club, much play has been made with the calculation put forward in the journal of the American Academy of Arts and Sciences, *Daedalus*, that twenty powers have the resources to make atomic bombs, and another six soon will have. The authors of this estimate divide potential bomb-makers into three categories. The first comprises twelve countries which the journal considers to have the full technical, economic and scientific manpower resources for a successful nuclear programme; they are six countries in the western camp (France, Belgium, Canada, West Germany, Italy and Japan), three in the communist camp (China, Czechoslovakia and East Germany) and three neutrals (India, Sweden and Switzerland). A further eight are said to have sufficient technical resources and an adequate economy for nuclear production but to be short of scientists; they are Australia, Austria, Denmark, Finland, Hungary, Holland and Yugoslavia. Six more middle sized powers (Argentina, Brazil, Mexico, Norway, Spain and South Africa) would, in the journal's view, have to wait another five years before achieving a nuclear weapons programme.

The article does not state a clear view on how long it would take any of these countries from an immediate start to production of their first test. France is widely believed to have been working on her nuclear programme for over six years, although her order for the bomb itself may have been formally issued less than two years ago; even when her first test has been held she will not be in Britain's class at the outset, and her production is not likely to exceed 20-30 bombs a year. But there is some evidence that the time interval between starting a programme and a test is shortening, and the cost declining. A plant capable of five twenty-kiloton bombs a year would cost only about $90 million over a five-year period, which modern Ministers of Defence are apt to regard as pin money. The cost of a strategic air force to deliver the bombs would be many times as much again, and rockets are expensive; but simple means of delivery may become cheaper.

What these figures mean is that, if a nuclear race did start, any of 20-25 countries could conceivably own sizeable stocks of bombs in seven to fifteen years from now. The countries not yet capable of making their own (like Israel and Egypt) might then hope to buy earlier models of the bomb on the same basis as they now buy obsolete but usable warships. This is a nightmarish prospect, if not an immediate one.

FRANCE

Qualified Support

FRENCH appeals for allied backing in Algeria have had a poorish response. Rumours of Mr Herter's angry reply when M. Debré first broached the matter privately with him had already gone the rounds in Paris when some guardedly favourable remarks by the director of the United States information service, Mr George V. Allen, on June 29th were suddenly hailed by the Gaullist press as a new departure in American policy. "Unreserved American support for General de Gaulle in Algeria" ran *Le Figaro's* headline. Exactly how reserved this support was must have been obvious to even the most casual readers of Mr Allen's words. The United States, he said, gave its "whole-hearted" support to General de Gaulle in his efforts to find an "equitable and liberal" solution in Algeria.

Unexceptionable as these sentiments were in the light of General de Gaulle's past policy statements, they could not be held to constitute the blanket approval that M. Debré has been asking for. To make no mistake, the State Department promptly emphasised that American policy had not departed from the official statement in April, 1958, that the United States attached the greatest importance to the necessity of finding a peaceful, democratic and just solution. Apparently the terms of this declaration allowed the American representative at the United Nations, Mr Lodge, to abstain from voting — thereby implicitly criticising French policy — when the Algerian issue last came up.

The prospect of a state visit by President de Gaulle next year may do something to improve Franco-British relations. The President will certainly be welcomed here both as the champion of French integrity in the past and as the one man who may still resolve France's troubles and uphold its reputation in North Africa today. But on lower levels the cross-Channel sniping continues. The formation of a Labour party group to study Algerian questions has prompted the emergence of a French parliamentary counterpart to look after Aden. They can both learn a lot if they put their minds to it.

Start on Fiscal Reform

THE French government is now considering a group of measures which mark a second phase in its economic reform programme. At the turn of the year tax changes cut back the budget deficit and helped to give the new franc a period of stability. Now the government is preparing to make a start on the appalling structural problems of the tax system. If present proposals go through, the "local tax", an irritating purchase tax collected by the small shopkeeper, which is a standing invitation to evasion, would go; instead, the tax on "added value", an intellectually satisfying form of turnover tax, would be applied more

widely. Income tax would be simplified into a single tax, and an early cut in rates would reduce the incentives for evasion, and thus facilitate further cuts later. A third smaller but valuable reform would affect company finances; tax remittances previously allowed against appreciation in the value of stocks in time of inflation are to go; instead, remodelled depreciation allowances are to be introduced as an incentive to fixed industrial investment. One final change, however, a cut in death duties, bears no relation to the proper objective of tax reform in France — to switch the burden from indirect to direct taxation; this change indeed seems to go in the opposite direction. Such a concession to property owners is the price of right-wing government.

The proposed reforms are only a beginning. Many years of effort may be required before direct taxes are made equitable and effective. And taxation is not the only sector of the economy where the pruning knife is needed. A tangle of restrictive practices in distribution has still to be cut through. M. Rueff, the intellectual father of the reforms of last December, has lately called attention to the fact that the bank cartel inhibits the operation of any effective monetary policy.

In economic affairs the government has been lucky since it turned over the new leaf in December; and perhaps it has deserved some of its luck. The small scale of price increases since the beginning of the year is in part the result of good weather, which has kept food prices down; but it is also a tribute to the policy of freeing imports which has helped to hold down industrial prices. But price stability has hitherto been achieved during a domestic recession. Private investment in industry has ebbed. With the Algerian war still a burden on the economy, the unanswered economic question for France is whether it can combine stability with renewed expansion.

ICELAND

New Look at Nato?

ICELAND's communists suffered a sensible defeat in the general election on June 28th, when the share of their party, the People's Union, in the total vote fell from 19 to 15 per cent, compared with 1956. The Social Democrats did still worse, losing a third of their voting strength. The communist check may be a long-delayed effect of Icelandic revulsion at the forcible suppression of the Hungarian revolt; the People's Union had already suffered reverses in local elections. But it seems likely that the party's internal economic polices were also to blame. Most of Iceland's voters are well aware of the country's precarious finances, which the People's Union has done nothing to improve. Although the former fisheries minister, Mr Josepsson, a People's Union member, lost his constituency seat, the result ought not to raise any false hopes in the British Trawlers' Federation. All Iceland's parties stand by the 12-mile limit, and the return of its ambassador in London remains as indefinite as ever.

The real victors of the election were the Progressives, who both gained two seats in the Althing and, after being long regarded as a rural party, invaded Reykjavik with surprising success. If the Social Democrat decline continues they may eventually replace that party altogether. Their success could lead to the re-examination of Iceland's part in the Atlantic alliance. The Progressives want to stay inside Nato, but they would prefer to have the stationing of Nato forces on their territory subject to Iceland's own decision on whether the international situation justified their presence at any given time. (In fact, no Nato forces were stationed in Iceland until the Korean war began.) This view seems to be gaining ground once again among the other major parties.

The election produced a national majority for the constituency changes which the parties themselves regarded as the chief issue before the country. Fresh elections will be held in September when these changes have been put into effect.

RACE LEGISLATION

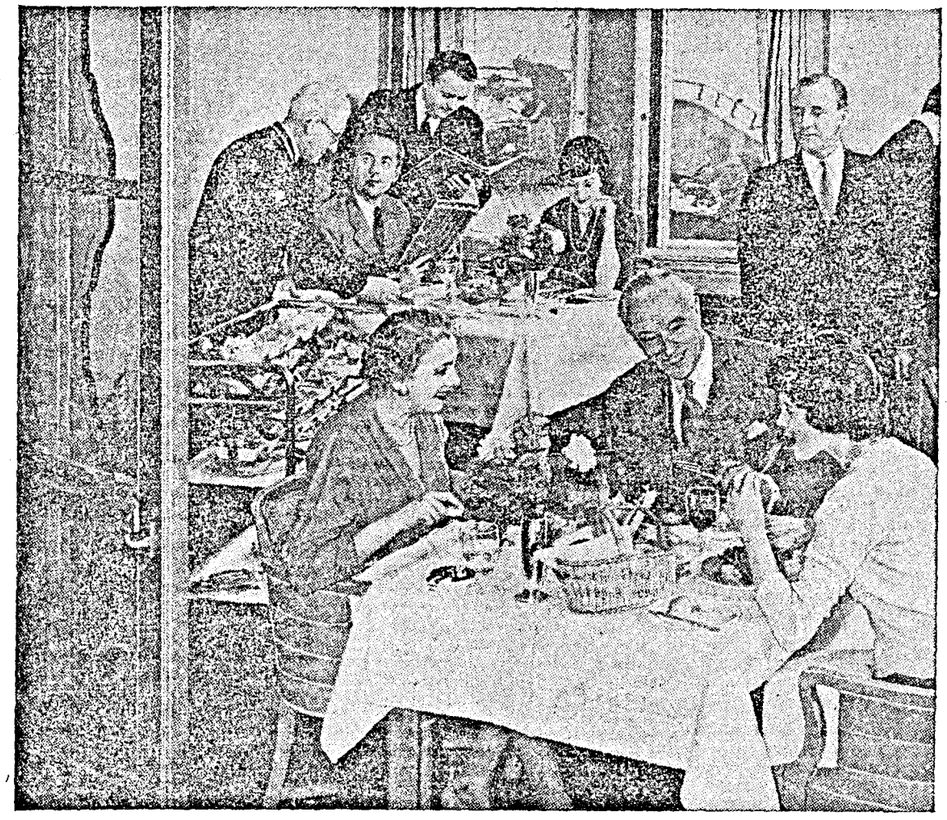
Aids to Persuasion

DESPITE its success in obtaining agreement on the terms of a bill against racial discrimination that will be sponsored by MPs of all parties, the British Caribbean Association still has a long way to go before it overcomes the general scepticism at Westminster about the value of any legislation in this field.

The draft to which the all-party group has agreed is based on Mr Fenner Brockway's existing bill, with the omission of its clause against racial discrimination in employment. Unfortunately it was not only employers who objected to this but also some of the unions, with the result that, unless this provision had been sacrificed, the bill would have been in trouble even within the Labour party. But, even as it stands, the bill would establish a most valuable legal precedent. It would make racial discrimination illegal in lodging houses, restaurants, pubs, dance halls and other public places. The penalties would range from small fines to the much more painful refusal to renew licences. Restrictive covenants would be banned in leases or agreements — this should be a useful protection for Jewish people and other identifiable minorities as well as coloured tenants.

The honest doubts about such a bill are of two types — a belief that it would be a dead letter because too easily evaded, thereby bringing the law into contempt, and a fear that it would exacerbate race relations by substituting the blunt antagonisms of the courts for the emollient processes of conciliation. The answer to these objections is to make clear in advance the way

...travel in a BIG way



Crossing the Atlantic in the spacious luxury of a great Cunarder is far more than mere travel. The price of your passage covers so much that is *beyond* price . . . the superb meals and faultless service; the brilliant programme of entertainment; the distinguished company; the boundless opportunities for carefree relaxation in the good sea air. As soon as you step aboard, you are in surroundings that are a tonic in themselves. There is no other link between the Old World and the New that enables you to arrive so invigorated and refreshed . . . so well tuned to the business and social rounds that lie ahead.

ATLANTIC HOLIDAYS

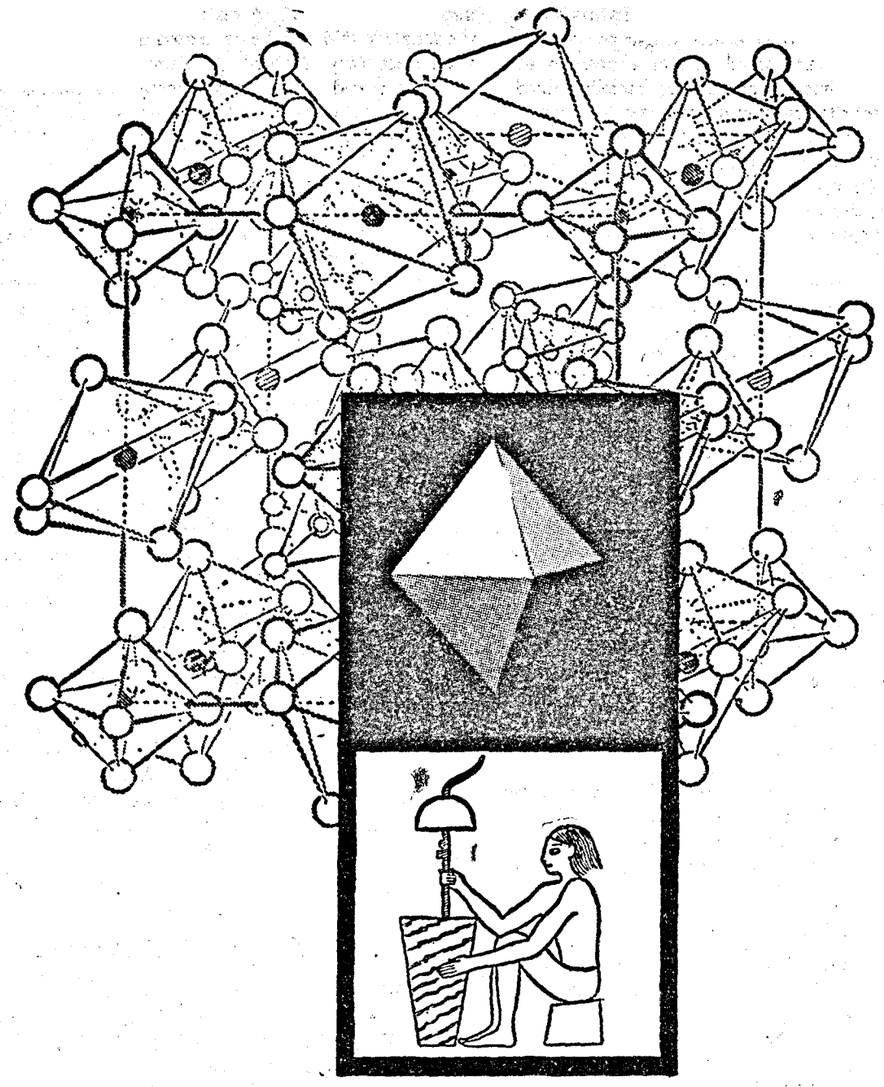
With the £100 Dollar Allowance, holidays in the U.S.A. and Canada are an exciting possibility. Ocean fares and all inland transportation in North America can be paid in sterling, leaving the dollar allowance intact.

MOST CUNARD LINERS ARE FITTED WITH ANTI-ROLL STABILISERS

Rest, relaxation and entertainment all the way to USA and Canada

Cunard

Apply CUNARD LINE, Cunard Building, Liverpool 3 (Liverpool CENtral 9201); 15, Lower Regent St., London S.W.1 (WHItehall 7890); 88, Leadenhall St. London, E.C.3 (AVEnue 3010) or consult your local travel agent—no one can serve you better.



The earliest chemical industry

Naturally occurring alum has been used by mankind for over 4,000 years. The ancient Egyptians used alum for fixing dyes or mordanting, but this was only the first of many applications. Later it found use in medicines, in tanning, and in the treatment of parchment. Eventually it was realised that such treatment of parchment facilitated the application of ink and pigment, anticipating the present-day use of alum in the sizing of paper.

SPENCE

PETER SPENCE & SONS LTD., WIDNES, LANCS.
Also at London, Bristol and Glasgow.

in which the supporters of legislation visualise its being implemented. Recourse to the courts ought to be a last resort. Immigrant groups should be in a position to obtain high-grade advice from a strong, racially mixed organisation about the bringing of test cases (this might well be a role for the British Caribbean Association, which has just opened its first local branch at Birmingham). Only the strongest cases should be brought, and preferably those in which a pattern of discriminatory conduct affecting more than one coloured person and in a variety of circumstances can be demonstrated. Evasions can be countered by good organisation — if a coloured man is turned away from a lodging house on the grounds that all rooms are filled, a white friend should immediately apply to see if he gets the same answer.

But, above all, the existence of a law in the background would mightily strengthen the force of persuasion. There could be a conciliation body, possibly official or semi-official in nature, which could attempt to settle informally charges of discrimination. Restaurant managers, publicans and estate agents are less likely to plead the unfortunate prejudices of their regular clientele if there hovers over the conversation the unspoken possibility that over-attention to the fastidiousness of other customers is likely to land them on the wrong side of the law.

RULE OF LAW

Justice and Reform

LORD SHAWCROSS's foreshadowing of "more profound and detailed study into the general problem of protecting the individual against abuse of power by authority" opens up stirring prospects of a new and overdue era of law reform. These prospects are greatly enhanced by the vigour which Lord Shawcross is imparting to his chairmanship of Justice, the British section of the International Commission of Jurists, to whose annual meeting his speech of last week was made, and by the happy circumstance that the prestigious chairmanship of the Bar Council is also held by a zealous reformer, Mr Gerald Gardiner.

Justice's annual report, which covers a remarkable breadth of activity for a small organisation that is only two years old, gives many instances of weaknesses found in the fabric of the rule of law. There is, for example, the absence of any appeal against conviction by a judge for contempt of court or against a judge's refusal to grant a writ of *habeas corpus*. Concern has recently been shown about the way in which confessions are obtained from prisoners who may be hazy about their legal rights and the extent to which uncorroborated confessions are admissible in court. Another report by a committee set up by Justice has drawn attention to the striking anomalies between maximum penalties for different types of offence, while the question which Lord Shawcross had most immediately in mind in his speech was that of how the citizen could best be protected in his dealings with the bureaucracy. According to the annual report, investigation and propaganda directed to finding and securing acceptance for the appropriate British equivalent of the Scandinavian *Ombudsman* are to be pushed ahead energetically — aided, it is hoped, by funds from a philanthropic foundation.

All this activity prompts two diverse reactions. The first is that it is yet another illustration of how slow the Labour party is on the uptake. Here it is, struggling away to obliterate the impression that it invariably wants to strengthen the state at the expense of the individual, but it apparently never thought of taking the initiative with a big offensive to strengthen the rule of law. It was necessary to wait until the party's most distinguished lawyer had left it for the crossbenches before law reform became a major talking point in the country.

The second reaction is that many of the matters which Justice discusses have recently been the subjects of major and often very controversial decisions in the United States Supreme Court and elsewhere in the free world. Whenever such controversies occur abroad, most British observers instinctively feel sympathy with the liberal side and most native liberals regard the British conception of the rule of law as the ideal towards which they are striving. Both would often be chagrined to discover how shaky are the foundations of this belief that the individual's rights are better safeguarded in law in Britain than elsewhere. This is certainly a field in which emulation between the countries of the western alliance should be encouraged. Let the race go to the freest.

THE SAAR

A Domestic Argument

ON July 4th the Saar was unobtrusively absorbed into the west German economy. Politically, it returned to Germany on January 1st, 1957, as a result of the Franco-German agreement of the preceding year. That agreement laid down that economic union should be complete by the end of 1959. In the event the process has been speeded up. That is a tribute to the success of two policies : to the economic measures in France at the turn of the year which brought prices in the Saar down to a level that makes the merger easy; still more, to Dr Adenauer's patient policy of rapprochement with France, which has now brought west Germany tangible rewards.

Though the Saar's return home has not been marred by the ugly noises of power politics, it has been somewhat troubled by a more domestic argument. France, which has long given a lead to western Europe in the field of social security, brought its own generous system to the Saar after the war, including (at family

allowances for every child. In western Germany allowances are given only for the third and later children in a family. Naturally the mothers of the Saar dislike losing the extra cash they enjoyed under the tricolour. In the Bonn Parliament the Saar's representatives have pressed their claims to retain the French system, but without success.

West German apologists point out that the Saarlanders, while losing the benefits of the French welfare state, will gain those of the German "economic miracle", including low and stable prices.

The west German Social Democrats have attacked the provisions for the Saar's return, on the ground that the abandonment of social benefits sets a bad precedent for the day when east Germany, too, comes home, and gives ammunition to the east German communists, who harp on the need to preserve the "social achievements" of the east German state. Admittedly they mean by this the retention of a political regime incompatible with German unity; but there are many non-communists who would like to see the east German social changes, or some of them, retained.

The Economist

JULY 9, 1859

ARMISTICE IN ITALY

WHILE waiting for tidings of a final and decisive battle in the centre of the celebrated quadrilateral of fortresses which has always been considered as the stronghold of Austrian Italy, the world has been startled by the announcement of an armistice between the two belligerents, and is still in considerable perplexity as to what this armistice may mean. ... Supposing, then, that a peace may really be in prospect and discussion, we wish most earnestly, and with the most grave meaning in what we say, to urge two things upon English statesmen and the English nation. The *first* is, — on no pretext and for no object whatever, to make themselves a party to any negotiations for peace, which shall not have as their basis the *entire* withdrawal of Austria from the Italian territory. If one single foot of ground inhabited by Italians be left to her, *nothing will have been done:* the old eternal sore will still be open; and all the blood shed in this war will have been shed in vain. The *second is,* — that the early termination of the war is no ground whatever for any relaxation in our naval and military preparations for defence, — *but the contrary.* If peace comes — and if the terms be just and good, as we sincerely hope they may — we must not forget that it leaves vast armies still on foot, invigorated, hardened, and excited by a campaign in which all parties have fought well; that it leaves many European difficulties still unsettled; and that it leaves Great Britain as it found her, in proportion to her wealth, to the extent of her dominions, to her pretensions and to her needs, immeasurably the least fully armed and the least formidable of the great Powers of Europe.

AGRICULTURAL LAND

Lost Acres

MR BROOKE, the Minister of Housing and Local Government, has just sounded a fresh alarum about that old Conservative bogy, the encroachment of suburbia and industry on good farming land. He has estimated that 600,000 acres in England and Wales are likely to be taken away from agricultural use over the next twenty years. This is 2½ per cent of the cultivated area, but because much of the land taken will be flat and fertile he thinks that the loss to agricultural output may be nearer 3½ per cent.

These figures are not in themselves as sobering and disturbing as Mr Brooke asserted. After all, agricultural productivity is increasing at a rate a great deal faster than 3½ per cent per twenty years; it would be a poor reflection on the industry if it was not. The new uses to which converted land is put are usually a great deal more profitable than farming. Perhaps the conservationists can fairly be said to have two points on their side. One is that the consumption of agricultural land is already restrained by tight planning controls; if these controls were lifted, the erosion of land would be much quicker. The second point is that this erosion will be progressive, so that in the really long run the shrinkage of agricultural space could perhaps outrun the gains in productivity. That is the case, not so much for fresh concern, as for retaining the degree of control which already exists.

Even in this modified form, however, the strength of the conservationists' case is very questionable. It assumes that a probably static population will go on spreading itself out even when urban congestion has been relieved; it ignores the substantial contribution to food supplies which private gardens make; and it posits a continuing trend towards economic self-sufficiency. A much more important point, surely, is that control over land use should and could be pursued by more rational methods. Instead of barring large areas to all save a few fortunate people who can get planning permission, some gentle fiscal pressure should be exerted against the use of large and sprawling building plots; the rating system could be altered to ensure this. It is depressing to find Mr Brooke clanging his party's old rusty bell sooner than do some fresh sums and fresh thinking.

IRAQ

Anniversary March

BAGHDAD is preparing a mammoth circus to celebrate the first anniversary of the revolution of July 14th. The people have been promised that not only the familiar faces of the armed forces, the peace partisans, the popular resistance forces and the league for

IN **LIFE**—THE SPICE IS INFINITE VARIETY!

Carefully blended material gets a quality overseas readership for your advertisements

LIFE International's editorial covers the wide and stimulating universe. That is why it has a world-wide audience of over 2,500,000 people; an audience of people who appreciate LIFE's unique photo-journalism, its comprehensive examination of topical events, its special expert reports.

This audience includes your best overseas customers—business executives and consultants, government officials and leading professional men in every field. They are readers who buy for themselves, their families, *and* their firms.

In LIFE International's advertising pages they see industrial products and consumer goods—prominently displayed in large pages, beautifully reproduced on quality paper.

To promote *your* business overseas . . .

LIFE INTERNATIONAL

Every Monday a Sudan Airways VISCOUNT 831 (maintained and crewed by Airwork) will fly from London to the Sudan. **This will be the only air service to cater specially for the Sudan.** Passengers who wish to break their journey at Rome, Athens, or Cairo may do so* and continue their journey by the next plane at no extra cost. The return flight from Khartoum will be on Thursdays.

VISCOUNT comfort...Rolls-Royce speed

The latest Viscount—the 831—is larger, much faster and even more luxurious than its predecessors. In a perfectly relaxed atmosphere, you can eat and drink, read and talk (nearly everyone on board will have a common interest in the Sudan) or simply sleep, lulled by the soothing hum of the four Rolls-Royce jet engines. An unusual feature of this flight will be a Free Information Service on all matters relating to Sudanese business, political, and social life. This will be very helpful to newcomers and to those returning after a long leave of absence. If you have business in the Sudan, ask your travel agent about the new Blue Nile Viscount.

**Subject to the approval of the Governments concerned.*

women's rights will appear, but that there will be Englishmen and Americans there, too. General Qasim has promised that all manner of important announcements affecting the future will be made. The Iraqi masses may understandably hope to hear about plans for housing, schools and hospitals, but the British and Americans will hope to find out where Iraq's political future lies.

The alarums about imminent communist control of Iraq have been drowned out recently by loud noises coming from Cairo. Claims that General Qasim has seen, at last, the anti-communist light which dawned upon President Nasser several months ago have been invented in Cairo and embéllished in Béirut. There is no love for the general in Cairo, only the fear that the communists are about to swallow up Iraq and him with it. The Egyptians are now describing him in favourable terms in an effort to charm his colleagues in the army away from communism. If General Qasim fell the Egyptians would not care at all. They would like to see him replaced by some other officer, preferably a pro-Nasser one — but an Arab nationalist would do.

It is more likely that the general does what he does not because he stands between Iraq and communism but because it is what the communists or their friends tell him to do. During the year of the republic in Iraq the whole trend has been towards the establishment of effective communist control. True, the line has sometimes wavered. The government's attitude towards the oil company, for instance, has been reasonable, but perhaps that is because Mr Mikoyan told Dr Kubba, in Moscow last March, that he had little to gain by upsetting the present arrangements. General Qasim recently ordered the release of a few political prisoners, but none of them has enough personal following to cause trouble for the communists.

The Iraqis may find it impossible to build a nation on the general's delphic utterances and Colonel Mahdawi's clowning, but, as the parade goes by next Tuesday, they should not forget that the land is still there to be cultivated if the water can be brought to it by wise use of the revenues from oil. The pattern for greatness remains the same. It is up to the Iraqis themselves to decide how the work will be done.

ISRAEL AND THE ARABS

Palestine Passions

One of Mr Hammarskjöld's virtues as a mediator is that he chips away at a particular point of conflict without being deflected into wider issues. During his two-day trip to Cairo at the beginning of the month he may have found it unusually hard to keep the argument to the point. The immediate purpose of his visit was to sort out the situation that has kept he Danish freighter *Inge Toft*, with its Israeli cargo on board, stuck for six weeks in Port Said. Two years ago, he managed to extract from Cairo a tacit agreement to allow Israeli goods through the Suez canal so long as the Israelis did not try to force the issue by sending along one of their own ships. But in the last few months this agreement has been kept rather erratically, and even before the secretary-general arrived in Cairo, President Nasser emphasised that he would only discuss the question of free passage in the larger context of the Israeli-Arab cold war. He claimed that the despatch of cargo through the canal was part of a deliberate conspiracy to embarrass and intrigue against the United Arab Republic, and that in the name of Arab nationalism, and of the Palestinian refugees, it was his duty to stand firm.

Straightforward bargaining was additionally complicated by the furore caused by the secretary-general's own report on the refugees. As the United Nations mandate for looking after them expires in a year, Mr Hammarskjöld had been asked by the General Assembly to have a look at the situation. His short term advice was unexceptionable; he recommends that the agency should for the time being continue its job, and that the muddle about who is or is not a refugee should be straightened out by a census and a more flexible relief policy. But he goes on to work out the practical possibilities of finding work for the refugees in their host countries. This, he calculates, would have to be done in conjunction with a programme of general economic development that would cost, over the next ten years, some $5,000 million.

As he points out, these suggestions are empiric and sidestep the UN decision that gave the refugees a theoretical freedom of choice. The Israeli response has been surprisingly lukewarm; the Arabs have raised a chorus of aggrieved and competitive dismay. The Iraqi and Jordanian governments have demanded high level conferences in their separate capitals; The Egyptians have set up a national committee on the Palestine question, headed by the minister of war, and have denounced Jordan's East Ghor canal project as part of the treacherous policy of integration. All in all, Mr Hammarskjöld may have found this an unfortunate time for a quiet talk on Israel's rights.

Sense and Sensibility

While the ugly charade over the Arab refugees plays on, the Israelis have been jolted by crueller memories. Mr Ben-Gurion's decision to sell 250,000 mortar grenades to the west German army has tiptilted the coalition government into a mutilating and painfully emotional crisis. The lines of the crisis are crossed confusedly; for one thing it is much too near the election date for the basic conflict between the good sense of keeping in with powerful friends and the sensibility of a sincere revulsion at the idea of condoning German

militarism to explain satisfactorily either the manner or the timing of the rumpus. Mr Ben-Gurion has asserted his authority in the Knesset, but, failing to make the dissident ministers resign, is now saddled with a debilitated caretaker government.

One of the puzzles of the whole affair is why a politician as practised and as astute as Mr Ben-Gurion decided to set off this time bomb in election year. However difficult it is for an arms exporting country to find innocuous customers, the deal is too small to be explained purely in commercial terms. Possibly the prime minister, aware of the sterility of a "ghetto complex", wanted to shock the country into a less ambivalent attitude towards Germany; logically there are no grounds for Israel, which accepts reparations, arms and trade from Bonn, to raise a moral uproar at the prospect of selling back some of the weapons which were incidentally manufactured in factories built with German money. And Mr Ben-Gurion may well have been urged towards his hard headed decision by good friends in France who saw the advantages of attaching a Jewish seal of respectability to the reborn German army.

But the defence ministry evidently miscalculated the reactions of their colleagues — and the shock their decision would give the country. For their part, the four dissenting left-wing ministers have been strangely dilatory in expressing their indignation; although it now looks as if the Mapai caucus, impatient of coalition government, pulled a bit of a fast one during the spring, the deal was discussed in general terms as far back as December. In the end the only party to benefit from a distasteful business may be Herut, the right-wing opposition party that has always had remarkably few scruples about lacing politics with emotion.

SOVIET UNION

Catching up with the Sputniks

To "catch up with America" is an exciting slogan. The targets of the seven year plan open up new vistas for the Russians. The pledge to fulfil the plan well ahead of schedule raises new hopes. But these tasks are the more difficult to achieve now that further increases in output will have to be reached chiefly through higher productivity. Hence the importance attached to the conference on automation and other forms of modernisation held in Moscow at the end of June, which was attended by members of the party's central committee, by heads of regional economic councils and other experts.

The mood of the meeting was a critical one. The general tone can be gathered from Mr Khrushchev's remark in his closing speech: "We have sent a rocket into the cosmos. Can't we eliminate production mistakes in our engineering industry?" The published reports of the debate provided revealing confirmation that the bulk of the Soviet economy falls far short of the sputnik standard. There is still too much manual labour in mining or chemicals. In most branches of industry a large part of the equipment is obsolete. The machine building industry cannot keep up with the demands of modernisation, and it is necessary to concentrate resources on the most urgent tasks, while utilising old-fashioned plants as efficiently as possible.

Other complaints voiced were concerned with the slow tempo of factory building, and with failures in management and coordination which have not been eliminated by Mr Khrushchev's managerial reform. But the revelation of some of these shortcomings should not be taken as a sign that the ambitious goals are being abandoned. Such bouts of Soviet self-criticism are normally used as a spur to further efforts.

CHINA

The Old Enemy

Floods along the great rivers are an old enemy of the Chinese peasant. They disrupt economic plans, too. The communist regime was greeted by bad floods in 1949, and it promptly set millions of peasants to work on building earth dykes and dams. But in 1954 there was widespread damage along the Yangtze and other rivers, and that winter the big cities had to tighten their belts. Now the floods have returned again, checked by the massive water conservancy schemes but still dangerous to life and crops. This year's targets in the farm production drive may be hard to meet, particularly in South China.

Torrential rain last month brought crisis to Kwangtung province, directly threatening Canton and the Pearl river delta. "River fighters" were mobilised everywhere against the danger of a great flood "such as occurs only once in a century." Before the peak was over, official figures gave nearly 200 dead and over two million homeless in Kwangtung alone. In Kwangsi, to the north-east, crops were washed away, and in south Fukien the floods were said to be the most serious for several decades.

Peasants were put in hurriedly to get in quick rice harvests before the flood tide, and when the waters went down replanting of new crops began again. In the north, official reports speak of heavy yields of winter wheat in the belt between the Yangtze and the Great Wall, but rain, hail and high winds are admitted to have damaged crops in many areas. In Chekiang province, the communes took special steps to recover grain by rethreshing the stalks after the first harvest.

These are not the planners' and peasants' only troubles. Drought in Manchuria and a major plague of locusts in five northern provinces, now reported to be substantially under control, may mean a drastic revision of crop estimates at this crucial time of "great leaping progress."

BOOKS

Medicine and Morals

Social Science and Social Pathology

By Barbara Wootton.

Allen and Unwin. 400 pages. 35s.

A tremendous amount of sheer hard work has gone into the making of this book, which should be read by anyone engaged in the social sciences, in psychiatry or in dealing with offenders. In contrast to so much of what she criticises, Lady Wootton's book is lucid and forthright; hard-hitting and rather impatient at times, but entirely free from that peculiarly nauseating kind of jargon which obscures so much of the meaning of social science literature.

She defines social pathology as "including all those actions on the prevention of which public money is spent, or the doers of which are punished or otherwise dealt with at the public expense". This definition leads her to survey all the supposed causes of crime in all its forms and, more briefly, such topics as illegitimacy, divorce and problem families. But it is a curiously limited definition; it excludes, for example, abortion, except where this appears in the criminal statistics, attempted suicide, and the phenomenon of social isolation so beloved by those who favour the idea of a sick society giving rise to ill-health and antisocial behaviour.

The inadequacies of official criminal statistics are shown to be so serious that Lady Wootton is in danger of cutting the ground from under her own feet where later in the book she herself relies on them; yet they make up nearly all of social research workers' raw material. The impression she leaves — that an understanding of the causes of crime is about as solid as a house of cards built on sand — is confirmed in her next section. Here she dissects twenty-four well-known studies of delinquency, examining them to see if they support any of the current theories of association or causation. Size of family, poverty, other criminals in the family, refusal to join churches or clubs, physical ill-health, mothers who work outside the home, broken homes, delayed maturity — these and others have all at some time been suspected of having some relevance to the increase in juvenile crime. (Dr Bowlby and the maternal deprivation theory come in for some very hard knocks indeed in one of the best chapters of the book.) We can learn from this section just how slim is the evidence incriminating all these circumstances. But Lady Wootton is perhaps too impatient with the failure of these studies, published often long ago, to provide her with exactly the facts she wants, and her preference for black and white distinctions may be unrealistic. For, like the causes of neurosis, the causes of juvenile crime, except in rare cases, are probably multiple and therefore can only be expressed in terms of greater or less correlation with factors such as those enumerated above. Lady Wootton's own views on causes seldom emerge, for the whole tenor of her work is critical — of methods, of definitions and categories, of prejudices and sloppy argument.

Her next quarry is the spreading empire of psychiatry, and here her criticism is not so much disapproving as intended to show clearly the road we are travelling. The definitions of mental health are easy targets, and she has as much fun with them as she has with social casework later. She quotes twenty-four including "mental health is the ability to live (1) within the limits imposed by bodily equipment; (2) with other human beings; (3) happily; (4) productively; (5) without being a nuisance" and "the criterion of mental health is the ability to adapt oneself to changing conditions without setting up conflicts or causing individuals to suffer pain or to feel discomfort." These definitions obviously contain moral and ethical judgments as well as medical ones.

In its minor forms, such as neurosis, mental illness is also very difficult to define in purely medical terms unless one makes comparisons with the socially and morally normal. In the category of "illness" now called psychopathic personality, the supposed illness — to quote Lady Wootton — "is the behaviour for which it is also the excuse". This extension of medicine, she points out, undermines the whole idea of criminal responsibility. As a result, she sees society as at present poised on a slippery slope to which there is no logical end till the situation is reached where all crime is illness. It is true that she examines many of the suggested stopping places — for example, that only motiveless crime is illness or that crime is illness, only if there is other evidence of illness besides the crime — but she finds none of them satisfactory. Yet one cannot help feeling, despite her brillant exposition, her warnings about tautological definitions and her nose for value judgments, that a reasonable practical solution can be found. It will presumably be a pragmatic one: whether in individual cases psychiatry can do anything to treat the "illness" and to prevent the criminal behaviour from recurring. This does happen with many sexual offenders, with some alcoholics and murderers, and with most of those who attempt suicide, and these on the whole are the groups who are sent by the authorities to hospital and out-patient clinics. (In this context, Lady Wootton's failure to discuss attempted suicide is significant, for it is a crime that she would surely agree should usually be treated as an illness rather than punished; but if she allows the thin end of the psychiatric wedge here, what happens to the rest of her case?) Aggressive and acquisitive offenders, on the other hand, respond far less well to treatment, except perhaps in childhood, and such people cannot be looked after in ordinary mental hospitals or psychiatric units. Whether or not there is any logical basis for doing so, this practical distinction seems to be the ledge we are precariously standing on at present.

Court and Culture

Endymion Porter: The Life of a Courtier, 1587-1649

By Gervas Huxley.

Chatto and Windus. 344 pages. 25s.

Endymion Porter is an admirable subject for a biography, not because his career was of great importance in itself, but because it reflects the brilliant sheen of the court of Charles I as one of the great art centres of Europe and catches the glow and heat of court intrigue and the scramble for profits and favours. Porter was Groom of the Bedchamber to Charles I, and enough material has survived to enable Mr Huxley to recreate his personality and activities. Coming from a small Cotswold gentry family, he was sent as a boy to be a page in the household of Olivarez, acquiring a knowledge of Spanish and a poise of manner that were to make him both useful and acceptable at the Stuart court. He was indeed fortunate in his early masters, for on his return from Spain he became the servant of Edward Villiers, linking himself with a family which, while still

UNITED NATIONS

YEARBOOK OF INTERNATIONAL TRADE STATISTICS 1957

Contains detailed data for the external trade of most countries of the world as well as global and regional summary tables to enable the reader to follow broad changes in the value, volume and price of goods moving internationally. Though most of the detailed data compare trade in 1957 with that in the immediately preceding years, the summary figures include comparisons with pre-war years. Volume I gives annual data relating to imports and exports for each of 118 countries including for the first time the U.S.S.R. Volume II is designed primarily for those interested in the broader economic aspects of external trade.

paperbound Vol. I 43/- (45/- incl. postage)
Vol. II 11/- (11/10 incl. postage)

TRENDS IN INTERNATIONAL TRADE

A comprehensive, up-to-date report on a number of vital questions in the field of international trade. The study, known as the Haberler Report, was made in 1958 by four internationally known economists. Various specific problems are analysed, such as the trade and payments difficulties of less developed countries, the need for stability in world markets for primary products, agricultural protectionism in the industrialized countries, and the effects of the European Economic Community on international trade. The protective role played by revenue duties in industrial countries is discussed. Published by the General Agreement on Tariffs and Trade, Geneva.

paperbound 14/- (14/8 incl. postage)

from: H.M. Stationery Office, P.O. Box 569, London, S.E.1

obscure, was on the eve of becoming the most powerful in England. And in 1619 he married the niece of George Villiers, about to be created Duke of Buckingham.

In this strongly running tide Porter was swept into the service of Prince Charles for whom he developed a strong and enduring loyalty. Porter was never a maker or critic of policy, but his career admirably reflects the artistic culture, the political incompetence and the mushroom fortunes of Charles's court. His knowledge of painting drew him into the great enterprise of building up Charles's collection of pictures; his knowledge of Spanish involved him in three unsuccessful diplomatic missions; and his closeness to the king allowed him to benefit largely from the patents, projects and grants on which the courtiers battened.

Mr Huxley has done his work with care and sensitiveness, and his book is particularly valuable for its study of the Stuart court as a centre of artistic patronage. Porter himself was a largely passive character, who suffered much at the hands of an unwise master, a tempestuous wife and a dissolute eldest son. A less charitable biographer might have laid more stress on the fact that Porter was associated with almost every aspect of Stuart practice and policy that was to bring forth the reckoning of 1640. Students of monopolies and advertising may be interested to note that eighty ladies of society, including four countesses and four viscountesses, were persuaded to produce testimonials in favour of the product of the unpopular soap monopoly, in which Porter had an interest.

Gandhi's American Disciple

Stride Towards Freedom

By Martin Luther King.

Gollancz. 214 pages. 16s.

"My feets is tired, but my soul is at rest". The famous summing-up, by an old woman, of the Negro boycott to end racial segregation on the buses of Montgomery, Alabama, is the theme of this absorbing book by the Rev. Martin Luther King. He is the great advocate, among his race, of complete non-violence on the Gandhian pattern, and believes deeply that the Negro will never be able to respect himself unless he resists injustice by all peaceful means. In Montgomery, thanks to the Negroes' extraordinary unity and discipline, and to a timely decision by the Supreme Court, non-violence triumphed over obstacles which Mr King, the chief organiser of the boycott, recounts without bitterness: the hostility of the city authorities, the craven silence of most of the white ministers, the bombing of Negro homes and churches, and the prejudice of local courts, which let the bombers go free and punished the oppressed. In spite of great provocation the Negroes did not retaliate, and the disgust of law-abiding whites with the extremists helped Montgomery to accept the Negroes' victory — in this one sphere.

Mr King believes strongly in the redemptive power of suffering and its ability to shame evildoers into repentance. But this does not prevent him, in his last chapter, from making a good many tart and sensible observations about people (even in the White House) who talk about being unable to change men's hearts by passing laws and refuse to see that laws at least can change habits and behaviour; about northern liberals so riddled with tolerance that they cannot take sides against evil; and about apathetic or self-serving Negroes who themselves need a good deal of self-improvement.

Guides to the New World

The American Travel Series: New York City; Florida; New England; The Caribbean and the Bahamas

By Andrew Hepburn.

Nicholas Vane. About 165 pages and 12s. 6d. each.

Now that the United States is no longer out of bounds to the ordinary traveller, these extremely helpful guides to most of the eastern areas likely to interest British visitors are extremely welcome. They are written for Americans anxious to see the sights of their own country, not for foreigners; but the wide range of information, the practical maps and the many useful hints should be even more valuable to the visitor from abroad whose time is brief and whose budget is small.

Visitors to New York will profit from the shopping guide, a long list of hotels and restaurants in every price range (also arranged so that the visitor in search of, say, Chinese or Hungarian food can find it) and from feature articles on the main parts of the city and nearby places such as Long Island. Even native New Yorkers will find much that is new — including the fact that "Commodore" Vanderbilt won his nickname by starting the ferry service to Staten Island.

Civilising Textbooks

Economics: Principles and Policy

By Royall Brandis.

Richard D. Irwin, Inc. 357 p. $6.00.

Economics and Man

By John S. Gambs and Sidney Wertimer.

Richard D. Irwin, Inc. 364 p. $6.00.

Anyone wanting, in the face of British scepticism, to make a case for the American view of what a university ought to do and whom it is for might do worse than produce these two books as evidence. They are at first sight simply two more additions to the overpopulated class of comprehensive elementary textbooks; one outlining theory and showing its relevance to policy, the other beginning with description, tackling theory through the comparative method, and then returning to particular problems. Both are good of their kind, well arranged, sound within their elementary limits, decently written.

So far, the description might apply to the top ten per cent of introductory textbooks written on either side of the Atlantic. But there is a pervasive difference. These are not "introductions" for students qualifying themselves to tackle more rigorous or elaborate works; nor are they attempts to cut a whole honours course down to size; nor yet are they completely extra-academic pieces of popularisation for the man in the street. Their aim is, essentially, to civilise a certain area of thought in the minds of reasonably intelligent young people who are going to be almost anything but economists. A habit of critically scrutinising *idées reçues* and instinctive reactions; sense of comparative magnitudes and of limits; a humane but unsentimental concern with the common weal; a rough and ready dexterity in the handling of a few key notions and techniques; such are the benefits which their readers — not only intellectual highflyers in some other field, but also good ordinary run-of-the-mill prospective citizens — may be reasonably expected to gain.

A British equivalent would find its audience: the good ordinary run-of-the-mill prospective citizen does not get into a university. Here, in effect, is what he misses; and the lack is worth thinking about.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Onward, Christian's Soldiers

WASHINGTON, DC

It is now quite clear that when Mr Christian Herter goes back to Geneva he will leave behind him an America more united, more resolute and less willing to compromise on foreign policy than it has been for a decade. From Herblock, the unrepentant liberal cartoonist of the *Washington Post* — who shows Mr Macmillan plunging heedlessly summitwards, into a snowstorm of Russian intransigence, while Mr Herter says anxiously, "Wait, let's think about this a minute" — through such middle-of-the-road papers as the *New York Times* and the *Christian Science Monitor* to the conservative *Wall Street Journal*, the judgment remains the same: that the West has already offered all the concessions it safely can, and that it is probably not going to be necessary to make that painful plod to the summit after all. The leaderwriters' imperturbability is matched by that of their readers; the few letters on Berlin which have appeared in the newspapers have none of them been critical of the Administration. Nor has there been any reappearance in Congress of the qualms shown there earlier this year. If this is apathy, as some say, it is an apathy which is wholly new since the crises over Lebanon and Quemoy last year.

On the face of it, this rigidity could bring sharp differences between the British and the Americans in the next round of talks. If it does not, it is because this time the State Department is leading public opinion instead of being caught, as it usually is, somewhere in the middle of it. Thus the department now seems to have defined the slightly mysterious "progress", which both Mr Eisenhower and Mr Herter have been demanding before they will agree to a summit conference, as something fairly minimal. It will be enough for the Russians simply to withdraw their time limit for the western evacuation of Berlin. In deciding this, the State Department seems to have pulled the President back from the position into which he stuck a tentative toe at a press conference last month; he suggested then that the Russians might have to declare publicly that the West could stay in Berlin until Germany was reunified. The difference, in terms of the chances of getting to the summit, is considerable.

The American press has paid surprisingly little attention to two hints by the Russians that they may be willing to satisfy this new, and milder, definition of "progress". One was the Soviet-East German communique, published on the day the foreign ministers flew home, which said roundly that the time limit was "not a matter of principle;" the other was Mr Gromyko's oddly-worded suggestion as he left for Moscow that when the time limit expired the Russians, instead of asking the West to leave Berlin, might simply agree to sit down and start talking all over again. But, if the press has grown too sceptical in the last few months to put much store by these hints, the State Department has not.

However, while an agreement not to mention time limits may be enough to get from the foreign ministers' level to the summit, to reach a settlement there will require something more. It may yet turn out that the Americans, when they arrive at the summit, are prepared to make some further modifications in the West's most recent proposals for Berlin and Germany. These might include a substantial reduction in the size of the western garrison in Berlin, instead of its "freezing" at the present level; and perhaps a change, in favour of the East Germans, in the composition of the proposed all-German committee which would ponder the problems of reunification. The latter change would be comparatively safe if any recommendations by the committee had to be approved by a popular vote in the whole of Germany. The reward to be won by such concessions would be the continuation of the western presence in Berlin.

Thus the State Department under Mr Herter continues to be, as it was under Mr Dulles in his last months, somewhat more pacific — or pusillanimous, according to the point of view — than a large segment of the American public, including many senior officers in the services. But it must be emphasised that the difference is a relatively small one. Both groups agree that the West is now in a better position to stand firm than it will be a few years hence if the Russians continue to make intercontinental missiles faster than the Americans. At present, Mr Herter is winning his spurs in what may well be one of his last chances to unsheathe that good old two-handed Dullesian sword, the weapon of nuclear brinkmanship. The difference between the two groups is whether it is best simply to call the Russians' bluff, as General Twining would prefer, or to offer up a few minor concessions in order to win a temporary respite.

The militants' argument is based on what might be called the twilight theory of American military supremacy. For one or two more years, the Administration believes, the Russians can inflict only limited damage on the United States in a nuclear war; and they can probably mount only a single assault, while the Strategic Air Command can return to Russian targets time and again. Mr Krushchev is perfectly well aware of this, runs the argument: so now is the time to call his bluff and prove to the world that he dare not make good his threats over Berlin.

It is perhaps only a passing criticism for Europeans to point out that, in this comforting nuclear equation, western Europe is the minor factor which might be neatly and utterly cancelled out. More to the point, for an American Secretary of State, is the fact that, if the bluff-calling fails and a war does occur, even the "limited" attack that the Russians can mount would kill millions of Americans. Moreover, the argument depends on Mr Khrushchev's believing that the Americans do in fact still have the nuclear superiority which the Administration claims, and that they are willing to use it. He might, for instance, believe that his anti-aircraft defences are better than the Administration gives him credit for. He might also believe, as Mr Joseph Alsop fears he does, that President Eisenhower is not really determined to risk a nuclear war over Berlin — and thus take the steps which will cause one.

It is these considerations which lead the State Department to be less uncompromising than the bluff-callers would like. But it is clear that the advocates of both points of view share one suspicion in common. Even if the West does manage to win a temporary respite in Berlin, this will not last unless something is done in the interval to make this outpost less vulnerable and less dangerous. In a few years — unless American scientists manage to perfect an anti-missile missile — the Russians will have achieved nuclear equality and the threat of massive retaliation will have lost its last shred of credibility.

One possible solution is getting less consideration than ever. Hardly anyone in Washington is thinking at the moment in terms of a political settlement in central Europe which would make Berlin less important to both sides because their noses would no longer be thrust together over it. But a well-argued pamphlet from the Democratic Advisory Council calls for an expansion of the United States Army from 14 to 19 divisions; and the Senate Foreign Relations Committee wants to spend more money on supplying arms to western Europe next year than the President asked for. These ideas are not yet accepted by all Democrats, and they may yet be frustrated by the demands of economy. They may, however, be the first stirrings of attempts to guard Europe with forces strong enough to deter Soviet expansion without invoking nuclear obliteration.

Steel Puts It Off

The last-minute postponement for a fortnight of the steel strike which was due to begin on July 1st did not mean that there had been a loosening of the deadlock which had persisted ever since negotiations began two months before between the companies and the trade union. The postponement merely illustrated the equal determination of each party in the dispute to avoid being blamed for a strike which is sure to be unpopular and which seems almost inevitable. Nor does the fact that the postponement came only after a special plea from the President indicate that he has changed his mind about the undesirability of interfering — openly, at least — with the process of collective bargaining. He insists that his sole duty is to see that the public interest is not forgotten and that his only concern, for the present, in any case, is that there should be no increase in steel prices.

The President's intervention, which was requested by the union leaders, well aware that their followers are reluctant to strike, enabled them to agree to an unconditional postponement without losing face. When a delay was suggested earlier by the companies, the union declined unless subsequent wage increases were made retrospective to July 1st. To accept this condition, the companies maintained, would be tantamount to abandoning their absolute refusal to consider any concession at all on wages or other benefits, on the ground that any increase in labour costs would necessitate an inflationary rise in steel prices. The companies' only offer (up to the time of going to press) has been an indefinite freeze of wages at present levels; this makes the weeks of negotiation look like a "farcical filibuster" to the union. While its original demand for some 250 improvements in wages and working conditions may have seemed almost equally farcical, it presented a much less costly "package" proposal recently.

The labour leaders, arguing on the basis of increases in productivity and in company profits, contend that this proposal would not involve a price increase and therefore would not be inflationary. The Administration had been asked for an official statement of the statistical facts behind the dispute, but this was refused. There are many in Washington, however, who believe that the union's case is well-founded. But the companies' side of the argument has been reinforced by the first report of the Cabinet Committee on Price Stability, which declares that inflationary pressures are again becoming critical and that recent wage increases are one of the reasons for this.

Attention has now been so concentrated on the steel negotiations that they have in effect become the symbol of the Administration's fight against inflation — and the companies have become the standard bearers.

It is thus difficult to see any way out of the deadlock which both sides could accept, at least before a strike has gone on long enough to bring a general economic slow-down and to make a wage increase seem the lesser of two evils. Moreover, the inflexibility of the companies is stiffened by the fact that in the long run their business would suffer little, if at all, from a strike.

Veto on Regression

BOTH the wheat and the tobacco Bills which President Eisenhower vetoed at the end of last month were retreats, made under the guise of easing the lot of the farmer, from the small, but nevertheless worthwhile, measure of flexibility which has been introduced so painfully into the farm price support programme during the last few years. The objection to the tobacco Bill was not that it would push up the support price; in fact, this is due to rise this year and the Bill was designed to hold it down, in order that American tobacco should not lose more of its foreign sales. But the method chosen was to fix tobacco prices at the current levels more or less permanently. It is unlikely that this tobacco Bill can command the two-thirds majority in both houses needed to over-ride the President's veto and it is certain that the wheat Bill cannot. This would have pushed the level at which wheat prices must be supported back to a fixed 90 per cent of parity, the formula supposed to guarantee the farmer's purchasing power, from the present fluctuating 75 per cent. To compensate for these higher prices the acreage that could be planted to wheat would have been reduced by 25 per cent.

A few years ago this would have looked like a satisfactory compromise, but experience has now shown that, when acreage cuts are imposed, farmers leave their least fertile fields uncultivated and concentrate on producing more from the fewer acres that are planted. Between 1954 and 1958 wheat acreage was reduced by 25 per cent but yield an acre increased by 30 per cent — and the higher support price proposed in the latest Bill would have given the farmer more money to spend on better machines and seeds and on fertiliser. The Administration estimated that the Bill, even though it might have checked the rate at which surplus wheat is piling up, would still have added $100 million to the present annual cast — $700 million — of the wheat price support programme. On the other hand, the Bill's advocates maintain that it would have saved $200 million a year.

So far nothing that has been done to adapt the farm price support programme to today's agricultural conditions has had any effect on the wheat surplus, the most costly of all the surpluses. That is why Congress was asked to deal with wheat this year. Various possible solutions have been outlined, but it is doubtful if anything will now be done before the adjournment. For the Bill which was sent to the President was in essence an admission that Congress was incapable of agreeing on any wheat legislation atallo. It was the Bill originally passed by the House and modified by the Senate; when the House refused to accept these modifications, the Senate approved the House Bill, by a small majority, knowing that it was sure to be vetoed. Thus the Democratic leaders, already accused of being in charge of a "do-nothing" Congress, put the onus of doing nothing in this case directly on the President.

All's Fairs in the Cold War

THE President paid an unscheduled flying visit to the Russian exhibition just before it opened in New York, partly no doubt out of curiosity to see the first such display since 1939, but also to ensure that nothing had been left undone on the American side to make a success of a return engagement: the visit of Mr Nixon to Moscow later this month to open an American exhibition in Sokolniki Park. The Russians are sticklers for reciprocity and the President's graceful gesture may help to keep doors open for the Vice President, a consideration of some importance if the deadlock at Geneva is still unbroken when the foreign ministers go back there. As the plans stand, Mr Nixon's trip will mirror, with almost photographic exactness, that of Mr Kozlov, a first deputy Soviet Premier who flew nonstop from Moscow to New York to open the exhibition. Mr Kozlov, after visiting Washington and seeing Mr Herter and the President, went on to San Francisco and Chicago; Mr Nixon will go to Siberia and the Urals. Both are making appearances on television.

These exchanges — at the highest official level ever undertaken — and the two exhibitions are the fruit of the agreement signed in January, 1958, to promote understanding between the two countries by encouraging visits and contacts of all kinds. Each country is putting its best foot forward, the Americans with a great display of consumers' goods, the Russians with a dazzling show of their technical accomplishments, including, in the heart of New York, models of the three sputniks. The exhibition has plainly impressed the Americans streaming to see it in near-record numbers, though commentators have pointed out that consumers' goods are more in evidence on the exhibition stands than in Russian shops.

Besides preaching peace, Mr Kozlov's mission is to encourage trade; with the United States selling only about $3 million worth of goods a year to the Soviet Union and taking about $17 million worth of imports, there is room for much expansion. Mr Kozlov told a group of businessmen that his country was particularly

interested in equipment for the chemical industry and for hydro-electric power, and in his wake there have arrived in New York representatives of the great Soviet trading organisations. But the warmth of the welcome to the Russians might have been greater if the business community did not suspect the fairness of their trading methods; if the average American did not resent the Russian insistence that no American worker could afford to live in the $14,000 house in Sokolniki Park; and finally if word of Mr Khrushchev's brutally-phrased interview with Mr Harriman had not leaked out. Mr Nixon struck a valid, as well as a popular, note when he told Mr Kozlov that lack of contact between the Russian and American peoples was not the only obstacle to better relations.

A Responsible Liberal

FROM A CORRESPONDENT IN CALIFORNIA

DURING the session of the State Legislature which has just ended political history was made by Mr Edmund G., better known as Pat, Brown, the second Democrat to be Governor of California in this century and the first to have his own party in control of both legislative houses. This enabled him to initiate both social welfare measures and public works, normally anti-recession moves, even though the state was enjoying great prosperity. His surprising success in expanding both the services which the state offers and the taxes with which it pays for them, to meet the needs of its exploding population, has made him into a potential Democratic candidate for the Presidency of the United States and has enhanced the reputation of his party throughout the western states .

Governor Brown's slogan has been "responsible liberalism". Since the beginning of the year California has been given a body of social legislation which resembles a new deal in many respects. A law has been passed against racial discrimination in employment and in publicly-financed housing; a ban on inter-racial marriages in the state has been repealed. New methods of protecting consumers have been approved, social welfare schemes have been extended and workmen's compensation allowances have been raised from $50 to $65 a week for temporary injuries and to slightly less for permanent disability. While all of this puts the accent on liberalism, the emphasis on responsibility is just as strong for, at the same time, money has been voted to pay for the new programmes.

Indeed, one of Governor's major accomplishments has been to induce the Legislature to approve new state taxes for the first time in 25 years. These include levies on banks and corporations and on beer, cigarettes and horse-racing and higher income and inheritance taxes. All were needed to meet a record state budget of $2,225,612,643 for 1959-1960. But it required the most skilful staff work by the Governor's office and firmness by his supporters in the Legislature to get these tax bills through, to wipe out the deficit of $68 million which he had inherited and to balance the budget.

The Governor's two major defeats were on his proposed tax on oil output and on his union democracy Bill. On the first his followers were outmanouevred by the oil lobby. The second provided for trade union records to be opened for the scrutiny of the members, for secret elections and for reporting of attempts by employers to influence union officials. On this labour leaders and businessmen joined forces; they persuaded Republican opponents of the Bill to hold firm against it and won over doubtful Democrats who were afraid of antagonising the unions. Mr Brown has charged Vice President Nixon with using his influence against the measure in order to keep the issue of corruption in the unions alive for the Republicans to use next year in their efforts to regain control of the Californian Legislature.

The most spectacular success of Mr Brown's first legislative session was to induce both houses to agree on a plan for sharing the state's water resources, something which had defeated his predecessors for years. He and his legislative leaders managed to reconcile the most important claims of all parts of the state by drafting a scheme which reaffirmed the basic rights of the northern counties from which the water comes and at the same time assured permanent supplies to parched and heavily-populated southern California.

The water will run along a 500-mile man-made channel from storage dams on the Feather River all the way to San Diego on the Mexican border. The principal new dam, at Oroville, will be the largest in the world — 725 feet high — and will collect the run-off from the northern mountains which now causes recurrent floods or flows unused into the delta region of central California. The plan also provides for replenishing the underground water tables, falling dangerously low in many places, thus assuring the future of the state's agricultural valleys. It is estimated that the projected system of pumps, dams, tunnels and pipelines will cost a staggering $1,700 million.

The water plan has further implications of great political importance for California. Sectionalism and rivalry between the northern and southern parts of the state have become chronic and serious, showing themselves in struggles over constituency boundaries, in competing claims by various branches of the state university and, above all, arguments over the distribution of the state's water resources. Talk of dividing California into two parts has never reached the formal stage but has frequently been acrimonious, and approval of the water plan seems to be the first step towards reconciling these divisive conflicts.

Next week Governor Brown will carry the matter to the electorate as he tours the state. He faces formidable hurdles before getting the plan started; this does not in any way detract from his achievement in breaking the long stalemate over it. That achievement is being attributed to many factors : desperation in a year in which the state has had only 50 per cent of its normal rainfall; popular approval and appreciation of the way in which Mr Brown is leading California's revived Democratic party; adroit and forceful handling of the issue by the Governor and his staff. This staff, a group of able young lawyers with considerable political acumen, is an important new element working behind the scenes. Governor Brown would be the first to credit it with much of his current success.

Who's Deterred?

IF a hypothetical attacker had succeeded in dropping 260 nuclear bombs on American cities and defence installations last October, about 50 million people would have been killed outright or fatally injured and about half the houses in the country would have been destroyed or made uninhabitable. This was the estimate given to a subcommittee of Congress's Joint Atomic Energy Committee by experts of the Office of Civil and Defence Mobilisation and of other government agencies during five days of hearings last month. Even so, the United States would have survived; moreover, the number of casualties from such an attack could be greatly reduced by building shelters, preparing to evacuate cities, and adopting simple warning systems. Experts from the Defence Department dismissed as fantasy the idea that the human race would be wiped out by clouds of radioactive dust.

To the 50 million Americans condemned to a hypothetical death, this may seem doubtful comfort. But advocates of a civil defence programme, such as Mr Holifield, the chairman of the subcommittee, feel that it is of the utmost importance to dispel the idea that a nuclear war would mean mass suicide and that nothing can be done to reduce its terrors. So does the Department of Defence; it does not want Mr Khrushchev to think that the United States is too horrified by nuclear weapons ever to use them. Whether the sensational headlines produced by prophecies of 6 million deaths in New York, 2 million in Boston, and so on,have had the bracing effect sought is another matter.

Once these hearings were completed, Mr Holifield, with four other members of the Atomic Energy Committee, spent a few days, at the Administration's suggestion, at the Geneva talks on the banning of nuclear tests; these talks are the chief hope that the warheads may eventually be brought under control. Hearings this spring seemed to convince Mr Holifield that the dangers from such tests were exaggerated, and most members of the committee feel, with Mr McCone, the influential chairman of the Atomic Energy Commission, that no agreement would be preferable to one without adequate provisions for inspection. The Administration's invitation suggests that it is sufficiently hopeful about the talks to want to convince influential Senators that the safeguards are sufficient, at least for tests above-ground.

Fiscal New Year

THE Administration was undoubtedly delighted to ring out the bad old fiscal year of 1959 on June 30th and to ring in the bright new one of 1960. Fiscal 1959 ended with just about the predicted deficit of $12.5 billion, nearly three times as much as at the end of 1936, until now the record for any peacetime year as far as deficits were concerned. The national debt stood at about $285 billion on July 1st; luckily Congress had driven itself to raise the ceiling on the debt just in time, from $283 to $285 billion permanently and to $295 billion until June 30, 1960. However, Congress has not yet managed to do anything about lifting the ceiling on the interest — 4¼ per cent — which the government may pay on its long-term bonds. While responsible Democrats realise that efficient debt management is today impossible under this condition, so far the rank and file of the party have refused to go on record as favouring higher interest rates in any form.

But, while the Treasury had to begin the fiscal year by raising $5 billion in short-term bills and will be going to the market again next month, it will not need to borrow nearly as much this year as it did last, for it now looks as if the 1960 Budget might be balanced. Paradoxically the Administration, which almost made itself a laughing stock by insisting last January that this would be possible, is now pooh-poohing suggestions that a balance is really in sight. Government officials are evidently afraid that, given any encouragement, Congress might start adding to spending programmes again.

On the income side Congress has refused to increase either postal rates or the petrol tax, items on which the President counted in his original balancing operation. It has, however, put up the taxes which insurance companies pay and has continued corporate income and excise taxes for another year at the rate originally imposed to meet the cost of the Korean war. The House managed to frustrate an attempt in the Senate to add some drastic changes in the tax legislation, which would have favoured passenger transport and penalised incomes coming from stocks and shares. But the main reason why the 1960 fiscal year opened so happily is the booming economic recovery; this is bringing a dramatic upsurge in business profits and personal incomes, and therefore in the estimates of the sums to be brought in to the Treasury by taxes on these two main sources of government revenue.

THE WORLD OVERSEAS

Berlin's West German Visitors

FROM OUR BONN CORRESPONDENT

At a reception for foreigners attending the Berlin film festival a Brazilian playwright in search of European wisdom asked Burgomaster Brandt whether he thought that the next federal chancellor, whoever it might be, would appreciably alter the course of German policy. "Well", Herr Brandt began sleepily, "since it looks as though Dr Adenauer is going to be with us quite a while yet — let's say, perhaps for another century..."

The socialist lord mayor was absent from the airport next day when the chancellor arrived to play his now minor role in the presidential election. He explained he had had to attend a party meeting; which everybody remembered was precisely the excuse that Dr Adenauer gave for not calling on the governing Burgomaster last December when west Berlin was about to elect a new city government under the shadow of reviving communist pressure. A shade humbled, if only fleetingly, by recent murmurings against his overbearing ways, Dr Adenauer seemed to have taken Herr Brandt's neglect to heart. During one of the tedious waits while ballot papers were being deciphered beneath the ferocious eagle in the Preussenhalle, he led Herr Brandt ostentatiously through the crowded restaurant into a private room and there spent half an hour with him alone. Just a *tour d'horizon,* the inquisitive were subsequently told: Berlin, Geneva, and all that. Later Dr Adenauer put it out that he hoped to spend several days in Berlin towards the end of the month. He has been accused repeatedly of indifference to the fate of the socialist-inclined city over three hundred miles from his native Rhineland.

Such chronicling of huff in high places, tit for tat, and making up again, must sound trivial outside Germany. It would not be worthy of record were it not but one of too many undignified skirmishes in which prominent German politicians have lately been engaged, largely in consequence of the confusion and annoyance caused by Dr Adenauer's startling gymnastics and assiduous belittling of other people. Perhaps not wholly taken in by that eagle, members of the Bundestag interested in ascertaining what sort of a figure they and their octogenarian *dompteur* have recently been cutting in the eyes of the public should have used the opportunity of being in Berlin to see the political cabaret staged by the *Stachelschweine* (hedgehogs) nightly to full houses just off Kurfürstendamm. The number of jokes inspired by happenings in Bonn, and the composition and the reactions of the audience, might have helped them to appreciate more clearly how much they have lost face this summer among their constituents.

Under the laws of the Weimar Republic, the president of the Reich was chosen directly by the whole electorate. Pronouncing this practice to have fostered an undiscerning and costly demagogy (shades of Hindenburg and Hitler), the postwar constitution-makers ruled that the president of the Federal Republic should be elected by the more enlightened parliamentary representatives of the people rather than by the people themselves. But since in one way and another these representatives have lately been putting the superiority and independence of their judgment in question, the people can scarcely be blamed for having become bored, cynical, or disgusted. The federal president-elect, Dr Heinrich Lübke, has already hinted both in public and in private that he considers his prime task, when he assumes office on September 15th, will be to try to promote national unity by restoring public confidence in the institutions and processes of democratic government. Evidently President Heuss agrees with him. In a congratulatory telegram to his eventual successor, Professor Heuss referred to "the manifold and unhappy bewilderment of recent months" that needed to be stilled.

Being the sort of man he is, Dr Lübke may pull it off. But he will begin his task with several heavy handicaps. Probably the least of these will prove to be the circumstances of his election — the public knowledge that until the last moment he was not considered by his party to be the best man for the job; for Dr Lübke is unquestionably a likeable man who will have no difficulty in winning a great deal of personal sympathy once people get to know him. A much more formidable impediment will be his confessional and party loyalties. Unlike President Heuss, who is a protestant and a Free Democrat, Dr Lübke is a practising catholic and a member of the Christian Democratic Union, as is Dr Adenauer, who has dominated the political scene so long that the charge is being increasingly heard that he is fashioning the Federal Republic into a one-party state — a *CDU Staat* — against the wishes of something like half the population of west Germany and at least three quarters of the population of east Germany. Yet from what is known of Dr Lübke it seems that he will prove to be a genuinely impartial and tolerant president, in spite of being in the awkward position of having to deal with a notoriously self-willed chancellor who has long been his chief and is twenty years his senior. It is possible that Dr Adenauer has learnt something from the hostility he has encountered during the past few weeks and will continue to be governed by his present conciliatory spirit.

Although they are disappointed that not a single Christian Democrat seems to have voted for their candidate by way of slapping Dr Adenauer with impunity, the Social Democrats are on the whole content with the result of their bid for the presidency. They have added to to the public conception of Professor Carlo Schmid's stature. At the same time they have retained him as a potential chancellor to present to the electorate in 1961 in place of the dowdy figure of Herr Ollenhauer.

Right and Left of Sir Roy

BY OUR SPECIAL CORRESPONDENT

In the eyes of the great majority of white Rhodesians, Sir Roy Welensky has gone forth as their champion to do battle with the ogres of Britain — the Labour party, the British press (though this may be in disarray), and the Colonial Office. His foray was planned some time ago, but now clearly it will largely be taken up with negotiations over the preparatory or parliamentary fact-finding commission which was to have visited the Federation, and over the composition of which Sir Roy and Mr Gaitskell signally fail to see eye to eye. On the British side, politicians of both parties will do well to make a new estimate of the Federation's prime minister; for whichever side wins the next election (and white Rhodesians as devoutly hope it will be the Tories as black Rhodesians pray that it may be Labour), it will be Sir Roy with whom they will have to deal in the tricky period leading up to, and during, the 1960 constitutional conference.

How strong, politically, is Sir Roy? Enormously strong on any practical estimate. After three elections, he dominates the Federal house; his United Federal party with an apparently slim majority of four nonetheless increasingly dominates the Southern Rhodesian territorial house (Sir Edgar Whitehead makes no bones about the fact that he is Sir Roy's lieutenant). Though the UFP just failed to win a majority in the Northern Rhodesian house, it is the major influence there. And now that Sir Arthur Benson has departed (between whom and Sir Roy a state of cold war prevailed), the governor in Lusaka is a Southern Rhodesian. And even in Nyasaland, where colonial office rule prevails, the governor, Sir Robert Armitage, leans heavily on Sir Roy — perhaps more heavily than on his own officials at times. Practically the entire press is behind Sir Roy — even the African newspapers owned by the Paver brothers. The radio is virtually his. Big business is behind him, and behind his party's finances. There is little future, immediately, for any politician not in with Sir Roy. And, in the suburbs, after the emergency, the Stonehouse affair, the various remarks passed in parliament at Westminster — well, it would be rather poor form to be against Sir Roy. He is not Huggie; but he is the settlers' Disraeli.

Yet there is opposition. To the right is the Dominion party, which passed its apogee with the part it played in the expulsion of Mr Todd from Southern Rhodesian politics. It made a poor showing in the federal elections, and did worse in Northern Rhodesia. It has a plan: the famous Field plan to split off Nyasaland, Barotseland and other irretrievably black areas into native states, which would live on a dole from the copper mines, and to maintain white supremacy — and a fairly strict regime of social apartheid — in the Greater Southern Rhodesia that would remain. It has some African nationalist support for this plan — on the basis of a temporary alliance. The Dominion party, however, is sick. Its leader, Mr Field, a genuine idealist, serves it from duty, and cannot compose its quarrels. Its most formidable member, Mr Humphrey Wightwick, does not see any real future in opposition, and finds many friends in the UFP. He is reputed to desire a coalition if not a merger. In the Southern Rhodesian house, the Dominion party leader, Mr Aitken-Cade, is no match for Sir Edgar Whitehead.

Sir Roy, however, is anxious to keep the Dominion party going; he needs an opposition on his right which will impress London with the dangers of thwarting him; his orders to Sir Edgar are to preserve Mr Aitken-Cade with loving care, at least until after 1960. Sir Roy may be a little less happy about the Central African Party to his left, though it has but four members in the Northern Rhodesian house. But it is organising itself, and a satisfactory division of labour has been made by electing Mr Todd as federal leader and Sir John Moffat as Northern Rhodesian leader. So far the CAP lacks a very distinctive policy; it certainly supports federation, which almost destroys its prospects in Nyasaland for a start. Moreover, though it is liberal, its high command is white, and looks for white votes. On this basis, Sir Roy holds all the cards.

But the CAP could be formidable in its own right, if it chose to go all out for African support. Mr Todd still holds the confidence of most of the Africans of Southern Rhodesia and many in Northern; some Nyasalanders would follow him if Dr Banda were permanently out of reach too. Sir John Moffat fought for the Africans on the African Affairs Board (now a UFP body). Both speak out against the social colour bar, now being battered by Africans. With the Africans, moreover, there is work to be done that needs doing; above all, the registration of Africans as voters, and more especially on the Southern Rhodesian register in the teeth of the native affairs department's quietly effective campaign to discourage this. From such vig-

orous grassroots politics, a better black-white political partnership could grow — one still out of the reach of the UFP. But there is none of the early British Labour party fervour among the well-off whites of the CAP; and, of course, no understanding of communist political methods. It is all rather wishy-washy, rather gutless, given to highflown sentiments, tea and buns.

But meanwhile the chance to rally the African masses, bewildered and disorganised after the shootings, jailings and proscribings, behind a liberal interracial party is passing. These are the critical months; but the CAP is not yet saying, loud and clear: "We will talk for you in London in 1960, whatever Sir Roy says. We will make the British alter the Federation; you shall have more votes; more devolution. But you must register, you must join, and you must swell the CAP vote at by-elections. That is what Sir Roy respects; that only; and the British are the same. But if you go underground, and play sedition, you play their game, for they are strong. May be some of you have aims beyond and more radical than ours. But the journey to Accra is a long one; surely it is worth taking a lift from a car for the first fifty miles, even if a white man drives it. Let's see how we get on." This would help Sir Roy for a time; but not in the long run. In the longer run it would help Rhodesia, still a no man's land between white and black Africa. If it fails to do this, the African Congressmen will in the end find a new name (such as the "Non-Violent African Voice") and new methods in a far bitterer political conflict.

Position Filled

FROM OUR CORRESPONDENT IN AUSTRALIA

WHEN the prime minister of Australia returned home this week, he carried with him the secret of who is to be the next governor-general. This (not a summit conference) is a topic that Mr Menzies went to Britain to discuss, and all was probably settled by the time the Queen and the Duke of Edinburgh departed for Canada. The present Governor-General, Field Marshal Sir William Slim, after the usual term of five years plus a year's extension, now feels that he must go home and will leave Australia in January.

Sir William Slim is held in such high esteem that it will not be easy to be his successor. Quite apart from that, his job is an arduous one that not every one of suitable age and eminence would wish to undertake. The governor-general is of course the Queen's representative in the Commonwealth and exercises under the Australian constitution roughly the same functions that the Queen exercises in Britain; he assents in her name to bills passed by the federal parliament (and in theory could dissent or reserve a law for the Queen's pleasure); regulations under acts of parliament are made in his name; he summons, prorogues and dissolves parliament — all these executive functions being by convention performed on the advice of his ministers. Another of his duties is to exercise the prerogative of mercy, though only in those parts of Australia that come under federal jurisdiction — that is, the capital territory, the Northern Territory, and the eastern half of New Guinea. The governor-general cannot interfere in anything that is within the sphere of state rights. Each of the six states has its own governor representing the Queen.

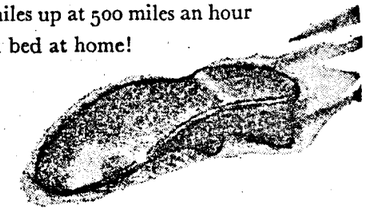
Australians themselves do not always understand that the governor-general's powers are limited by the sovereignty of the States, and they are apt to add to his labours by writing to beseech him to override some state law or to protect them from state bumbledom. Sometimes they tell their troubles to the Queen, and these letters too come straight back to the governor-general. If such a letter refers to something within his province, and seems to voice a genuine grievance, the department concerned may be asked to send the relevant papers to Government House. Usually, however, the letter is simply passed on to the department, and the writer is told that this has been done. Most of this work can be handled by the Official Secretary, who for his pains will often get some such reply as this: "I see that my letter to the Queen was intercepted and never left this country. Now I know that we have a Gestapo in Australia." Or, "My letter was addressed to the governor-general and not to you, you — bureaucrat." But though the governor-general is spared the lunatic or purely routine cases, there is an inescapable residue that he must deal with.

Many people would find equally tedious the ceremonial side of the governor-general's life — the taking of salutes (he is commander-in-chief of the armed forces), the opening of institutions, and the formal dinner parties several nights a week — though the degree of ceremony and formality is to some extent within their individual excellencies' control. Paradoxically, some duties have been made more burdensome by modern transport and communications. Once it would have been a big occasion indeed that would induce the governor-general to spend weeks journeying by land and sea to some distant city. But now he is expected to hop into a plane to attend all sorts of functions. This is good for the Commonwealth in that it has enhanced the governor-general's role of unifying the too separate States. But it is not very good for the governor-general.

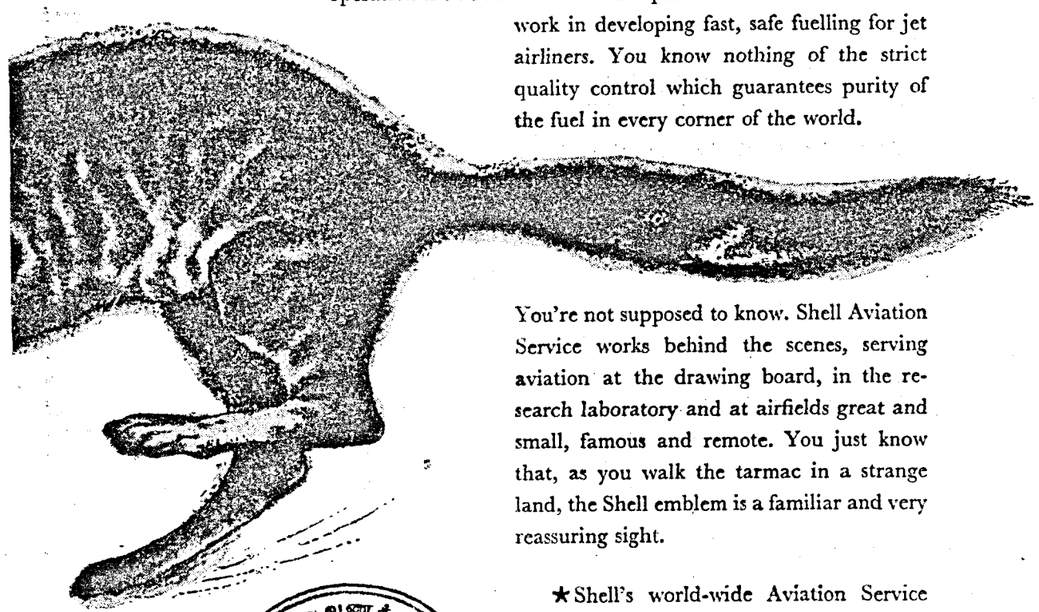
A governor-general today needs to have the health and strength of a youngish man combined with the grandfatherly maturity that makes the father-figure. He should be outstandingly eminent — if not by personal achievement, then by royal birth. It is preferable that his achievement should not be in political life, but if it must be, then better British than Australian. Australia has had one politician as governor-general in recent years: Sir William Slim's predecessor, Sir William McKell, had been Labour premier of

Quierrt!

Nothing disturbs your slumbers. Nothing jars your nerves. No wailing cats in the dead of the night. No clatter of milk bottles in the morning. It's rather strange and wonderful that, with jet travel, you can often sleep more serenely 8 miles up at 500 miles an hour than in your own bed at home!



It all seems so easy. When you watch our crews refuelling your aircraft,* pumping in AeroShell Turbine Fuel at 1,000 gallons a minute, you have no idea how complex the operation is . . . no idea of Shell's pioneer work in developing fast, safe fuelling for jet airliners. You know nothing of the strict quality control which guarantees purity of the fuel in every corner of the world.



You're not supposed to know. Shell Aviation Service works behind the scenes, serving aviation at the drawing board, in the research laboratory and at airfields great and small, famous and remote. You just know that, as you walk the tarmac in a strange land, the Shell emblem is a familiar and very reassuring sight.

★Shell's world-wide Aviation Service fuels on average one international airliner every 12 seconds, day and night.

YOU CAN BE SURE OF SHELL

Coal processing, oil gasification
—put the two into focus
and you have Woodall-Duckham.

I thought coal carbonisation was your forte—had been for years?

So it is. Two out of every five tons of coal carbonised in Great Britain today are processed in plants built and serviced by Woodall-Duckham.

Then why oil gasification?

Because a progressive firm doesn't rest on its laurels; it's too busy planning the future. Gas from oil is becoming as important as gas from coal. So that is why Woodall-Duckham now build oil gasification plants—Shell process or Hall process.

Do you mean that coal processing is going out?

Certainly not. Coal processing provides the essential coke for steel making. Then there's town gas production; the bulk of the country's supply is still made from coal—either in the traditional way or in one of the newer plants for complete gasification.

So you make the most of your opportunities?

We make the most of oil and coal, if that's what you mean.

New South Wales. That did not seem to cause any great difficulty, but in general it is better that the father-figure should be above political strife. A politician, moreover, might have difficulty in keeping his mouth shut — in preserving the all-wise mindlessness that is required of royalty and vice-royalty. Sir William Slim has allowed himself two calculated indiscretions a year, but his carefully regulated explosions of common sense can be attributed to soldierly bluffness, not to political bias.

A military man is in some ways particularly well qualified for the job, since he is used to ceremonial. But there is a feeling that there are too many military men in Government Houses in Australia. All the state governors are military officers, except Lord Rowallan who is going to Tasmania, and he is paramilitary; and all of them are British except the governor of New South Wales. A recent poll showed that two-thirds of the population want an Australian as governor-general — two-thirds which probably include all the Labour voters. Labour prime ministers have recommended two Australian-born governors-general: Sir Isaac Isaacs, a former Chief Justice, and Sir William McKell; they have also recommended several British ones, including the Duke of Gloucester. But other governments have always brought out a Briton to the big house at Yarralumla that so aptly symbolises Australian development, being a nineteenth century homestead converted into a stately pile.

La Gangrène

FROM OUR PARIS CORRESPONDENT

GANGRENE, says the Oxford Dictionary, is a necrosis, usually with decomposition, of part of the body. *La Gangrène* is the title of a small book bringing together the testimony of five young Algerians about tortures which they claim they suffered at the hands of the French police. The book's gruesome detail brings nothing new to people who had the stomach to read previous reports on torture in Algeria, such as M. Alleg's *The Question*. It is the same story of beatings, inhuman humiliation and repeated use of electric shocks (that modern version of the medieval rack). The only novelty — and the reason for the book's title — is that these events are alleged to have happened not in Algeria but in Paris. Until now, Frenchmen had thought that these practices had been perpetrated in their midst by the Gestapo alone.

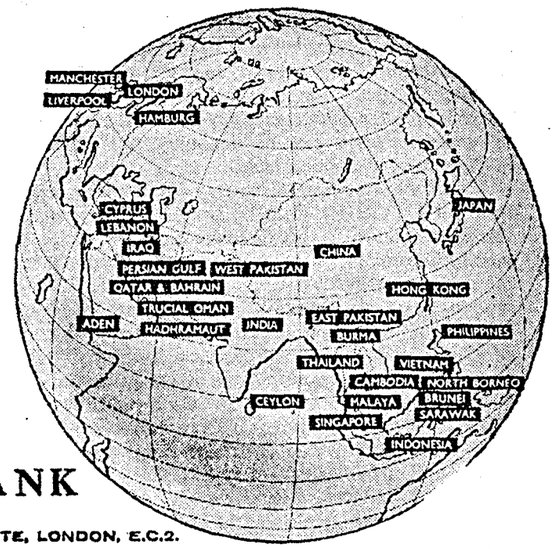
The hundred-page book containing these serious charges had only one day of legal existence. Hardly had papers like *Le Monde* begun to ask awkward questions than the book, published by *Les Editions de Minuit*, was seized on the ministry of the interior's orders. On June 25th M. Debré claimed in the Senate that this "infamous work" was a complete invention written by two hacks paid by the Communist party. M. Frey, the minister of information, was less emphatic a few days later. The book, he argued, contained assertions obviously false or exaggerated. But this discrepancy is not the only reason for questioning M. Debré's explanation. To seize is not to answer. The young Algerians' statements contained detailed accusations which have to be refuted. Some of their fellow prisoners still maintain that they did see the men in question in a pitiful state. There are also the doctors who could give evidence. And these are not the only allegations. At a trial in Toulouse last week two Algerians also claimed that they had been tortured.

It might be argued that torture is an inevitable consequence of the Algerian war. M. Mauriac, whose Christian conscience used to prompt him — before his conversion to gaullism — to attack the government violently whenever such cases were revealed, now seems resigned to this view. But the present government is not resigned to it — at least officially. After General de Gaulle's return to power, M. Malraux proudly proclaimed that there would never more be any torturing under French rule. He should now either refute the charges or have the culprits punished.

Whatever the merits of this case, the rot has spread surreptitiously to France. There are many symptoms. On June 26th, M. Servan-Schreiber, the able and courageous editor of *L'Express*, who is also chairman of an ex-servicemen's association that advocates a negotiated peace in Algeria, was to speak at a meeting in Lyons. But as soon as the meeting opened a gang of thugs, armed with bludgeons and whips, broke it up. The police finally intervened to prevent a massacre, but not before several people — including M. Servan-Schreiber — had been beaten up. The patriotic thugs have gone scot free. So have the murderers of Maître Aoudia, the Algerian lawyer in Paris, although the French police have recently given proofs that they can catch other criminals very quickly indeed.

Voici le temps des assassins. Was Rimbaud's cry prophetic, though premature? The atrocities of the last war and the potential horrors of the atom seem to have dulled the human conscience. True, there are still many Frenchmen willing to protest against torture. But they are a minority, and run the risk of being charged with defeatism or unpatriotic behaviour. To justify the seizure of *La Gangrène* M. Frey used the curious argument that it would have a bad effect abroad. Tangible proofs of innocence are more convincing than censorship. At a time when allied governments are urged to give unconditional backing to French policy in Algeria, their people are entitled to know what it involves. There are cases when silence means complicity, and scarcely more than a decade ago the world was full of argument about collective guilt. France's partners, like Frenchmen, have a deep interest in clear answers to awkward questions. They do not want to be compelled one day to echo in chorus the title of a French film: *Nous sommes tous des assassins.*

British Banking in Asia



These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

PUBLIC RECORD OFFICE

Money for Government

THE most consistent feature of the stock markets in London and New York this year has been coolness for government securities. The state of the economy in Britain is held by many observers to demand a lower long-term rate of interest; it has not induced many investors to buy gilt-edged at those allegedly extravagant rates. Even when the rise in equities has faltered, the switch to government securities has been modest. In London, the cult of the equity still stops just short of reversing the traditional relationship with yields on fixed interest securities. The break in the equity market early in June came, once again, when the average yield on shares in the *Financial Times* index had been brought within a fraction of the yield on Old Consols. But the yield on the share indices was already perceptibly below the yield on any other irredeemable or long dated gilt-edged security; and it is quite conceivable that a Conservative victory at the coming general election would give a boost to equities sufficient to push yields through the barrier set by the pure long-term rate of interest. That relationship has existed for some time in other countries, including the United States, Germany and France. Its prospect in Britain demands a reconsideration by investors of traditional precepts. No less, it demands a reconsideration by officials and by everyone interested in the working of a modern economy of how government is to borrow the money it needs to finance investment in the large public sector and to regulate the country's credit base.

The state of the gilt-edged market in past months is not to be compared with its utter demoralisation two years ago. The drastic monetary measures taken in September 1957 did a great deal to revive confidence in the currency. And for a year or so, that confidence was reflected in the gilt-edged market, which absorbed very large sales of stock by the government. Last autumn the tide turned. This coincided with the beginning of sales by the banks to finance their soaring advances. Many of these sales of gilt-edged, which had by last month reached over £300 million, are in effect absorbed by the authorities, but they exert a depressing psychological influence on the market.

At the same time, much of the switch away from gilt-edged by private and institutional holders reflects past rather than present feelings about financial investment. Most of the life offices, for example, have regarded gilt-edged more favourably in the past eighteen months, and some have added to their holdings; but for the most part they are implementing decisions to switch to equities taken years ago, a switch that for large investors, and those reluctant to face a realised capital loss on the existing book, had to be spread over many years. Many trust funds, moreover, have not been allowed until very recently to invest in securities outside the Trustee Act; recent sales of gilt-edged by them reflect simply the grant of permission by the courts, helped by new legislation in 1958, to implement long-standing preferences. All this makes gilt-edged look rather more friendless than they are. Yet making all these allowances, the performance has been disappointing. If gilt-edged are not attractive when the economy is in recession and prices are stable, when will they be?

This experience since 1957 seems to confirm, not with certainty but to a reasonable degree of probability, a feeling that has come into the minds of most investors since the end of the war: that equities may in modern circumstances have new and permanent attractions as an investment medium. The attraction of a stake in real assets is obvious at a time

of inflation; and fears of inflation have played a big part in the moves out of gilt-edged. But there is more to it than that, as we now see. Assume that inflation will be kept within bounds. Dividends from government securities will then be saved from monetary depreciation. But equity shares, which traditionally have been subject to the continual risk of a passing of the dividend and loss of capital, are to-day regarded, as a whole, as a stake in general economic growth which is pretty well taken for granted.

The chance of gain is bigger than it used to be; still more important, the risk of loss is considered smaller. In the first place, America's mastery of its third and most threatening postwar recession is taken by some people to show that the pre-Keynesian slump will not happen again. And secondly, even the investor who picks the wrong industry has a good chance of being saved from some of the risks of his risk capital by government action — whether by loan, grant or at times even by nationalisation. Holders of cotton shares, Cunard or the old LNER will know what we mean. Of course the risk of loss has not been eliminated, as unselective investors have found to their cost. But it may not be unreasonable to postulate, and many sophisticated investors have evidently done so, that the risk of loss on a portfolio of leading equities is less than the risk of monetary depreciation of gilt-edged — even if that risk itself is not considered unduly great.

For some investors, these considerations are still not decisive. They may need absolute certainty of receiving at given dates a given money income; to some extent that is true of life offices looking simply to actuarial commitments. They may place prime importance on liquidity — as the insurance company writing fire and accident risks must do to some extent; it is still usually easier to unload a substantial block of gilt-edged stock than the same amount spread over only a few equities. But if the investment climate really has undergone a fundamental change, gilt-edged will be fighting a losing battle. The cries of "something must be done" are not to be treated with the contempt to-day that was apposite two years ago when the government had not done its primary job of checking the debasement of the currency.

One perennial suggestion is for a radical departure from the fixed monetary return on government securities. Certain countries that have been particularly beset by inflation have introduced bonds whose fixed return is adjusted by an index reflecting "real" values; the cost of living, average prices of equity shares, or the free exchange rate against the dollar have all been used. The objections to this device are obvious. It has a devastating psychological effect in its manifestation that even the Government itself does not expect to maintain the value of the monetary unit; and in practice it is likely to prove so expensive that the equivalent fixed coupon would probably have drawn at least as much support. For these and other reasons, France, one of the few advanced countries to have made extensive use of "indexing", is ridding itself of it as part of its programme of financial *assainissement*.

A possible variation on the index theme is the idea of a "government equity", with a return varying with the real output of the national economy as a whole. This does not attract the same objections of principle as the straight inflation-hedge; and it might conceivably prove a popular side-show, in the same way as premium bonds have done. But the brunt of government borrowing could surely never be borne by such devices. Any major departure from the fixed interest principle would be dangerous and, in our view, wrong. The Government must demonstrate its faith in its money, and be under the strongest pressure to maintain its stability; and it should continue to provide the main repository for the many investors who want a fixed, guaranteed and non-depreciating monetary return.

If this argument is accepted, there remains one self evident means of making government securities attractive: by offering an attractive return. The authorities have moved a good way in that direction, under force of circumstance: they might have to move further yet. If investors rather than Sir Roy Harrod are right ,and the economy in future years is likely to be characterised by steady growth rather than by under-investment, then a continued high rate of interest will be the natural and desirable result; if investors prove wrong in their present assumptions, a high rate will not be needed to restore gilt-edged to favour. Immediately, while the economy is still judged to be in need of stimulation, a move to higher rates would obviously be anomalous; this year, some government borrowing from the banks rather than the gilt-edged market is in line with official policy. But the authorities should have no inhibitions, as soon as the economy is in need of financial restraint, in taking prompt monetary action and allowing gilt-edged to yield a sufficiently attractive return. The cost in the budget (which represents a transfer and not a loss of national income) is a minor consideration. Relatively modest increases in yield can have a powerful influence, especially if leading equities are yielding less. One can imagine, quite hypothetically, that a 6 per cent ten-year maturity might prove very popular with the growing number of private investors — and issues of this rather than a long maturity range would cushion the market depreciation of existing holdings.

Interest rates are historically high; but if investment conditions do prove to have fundamentally changed, these rates should not really be regarded as high to-day. The signs are clear throughout the world. In the United States, redemption yields on government securities have topped 4¼ per cent, which is the maximum coupon allowed by present law. If the US Treasury succeeds in its present bid to persuade Congress to raise that ceiling, America might move towards a 5 per cent long term rate; in the mid-fifties, the rate had settled down at around 3 per cent. The impact of this change on Britain has yet to be fully assessed.

What of the effects of high rates on industry? Do they not slow down investment and curb growth? It has been argued above that the pressure towa higher rates is itself a resultant of high achievem in these spheres, and of anticipation of furt achievement. In the theory, let it be repeated, mo ments in the financial markets reflect "real" econo influences and help to guide them in the right di tion. And in practice, the postwar experience Germany has been a striking demonstration that h — very high — interest rates can go side by side v very high investment and very rapid growth.

High rates certainly encourage a pruning of profitable investment; that does little harm. Wh British industry falls behind in investment the ex nation is less often that it has been calculated t the investment will not pay than that there h been no such calculations at all. That, presumably an argument for investment allowances; though true that these are anomalous at times when dem for capital is strong. The logic of the age of full ployment, in which money is easily put to use, is those who borrow money must pay dearly for it, those who lend receive the appropriate reward.

BUSINESS NOTES

VOTING SHARES

Giving Equity A Voice

ONCE A company is past the initial stages of growth, there is little point in leaving the bulk of the owners of its ordinary capital without a vote, or, at the best, only a limited one. If the firm is an efficient one — as the House of Fraser is — the directors have no need to fear for their jobs if the ordinary shareholders are enfranchised. If it is inefficient, the voteless share simply ensures that economic resources will go on being wasted. Almost all the public companies which retain voting control in the hands of a privileged few are well beyond that stage of growth where the devastating raid of a take-over bidder is to be feared. Many of them are efficiently run concerns that have ensured in their dividend policies that the non-voting owners of the equity have not suffered in their pockets. It would seem often to be only a desire to keep control within the family that has kept the non-voting equity alive in these companies.

In recent years, however, the disparity between the weight of voting and non-voting ordinary stock in these companies has become very much greater by custom of making scrip or rights issues — or share issues in satisfaction of a take-over bid — in form of non-voting stock. It is this growing dispa that has hardened opinion in the City against voteless equity. Dislike was strengthened when family interests in Carreras sold out at an extrem good price, leaving the owners of the bulk of the eq high and dry as minority and still voteless shareho in another company. Later the voteless ordinary sh holders in Jaguar Cars must have wondered quite v the meaning of equity was when, on rumours possible take-over, the price of the voting shares so and their own stock was left on the ground.

How long family pride will hold against the grow pressure of opinion remains to be seen. But the brea are beginning to appear in the wall: last autumn enfranchised all its shareholders and now the H of Fraser, making a one for forty scrip issue to voting stock in view of the disparity in market pr between the two classes of ordinary stocks, is to a full vote to the "A" shareholders. Until, howe such concerns as Marks and Spencer and Great U versal Stores grant all their ordinary shareholde vote, in keeping with their liberality to them in m tary terms, the wall will not come crumbling dow

THE ECONOMY

No Kickback from Sterling

On the eve of the holiday and the sterling crisis season, the waters are still mercifully calm. The nitial lift has been given to the domestic economy vithout sign of the much feared reaction in the overeas accounts. The inflow of gold and convertible curencies in June, at £19 million or $53 million, shows terling's underlying strength, which had already been pparent in the exchange markets. Big payments to the nternational Monetary Fund have been made, and yet ie reserves are above their level at the beginning of ie year. Not for many years has sterling stood so rong at midsummer. The months of biggest strain are ill ahead; but the present indications are that the asonal pressures should easily be met.

Inflows of short term funds may have played a small irt in sterling's continued strength; but the main ement has been the current balance. The balances of erseas sterling countries have almost certainly imoved, and the deterioration in Britain's exceptional 58 surplus has so far been less drastic than was excted. A new series of quarterly figures of the balance payments shows a current surplus in January-March that is before the excellent trade returns of April-ay — of £78 million. That compares with a peak rplus in the first quarter of 1958 of £170 million; no arterly figures are available for earlier years. On a ie payments basis, the visible trade deficit in the st quarter was limited to £14 million; this was offset a net surplus of £92 million in invisible payments. Final agreement has now been reached about the tlement of debts and credits under the old European yments Union. The upshot of the complex bilateral eements is that in the next two years Britain's net yments on this account will be a little more than the 20 million a year paid under the old funding agreents, but by the mid sixties, when France will begin repay its bilateral debt to Britain, receipts will almost ance repayments.

THE MARKETS

Wall Street and London

quity prices both in London and New York at the end of last week came back to the peaks they ched earlier this summer. That suggests that the lertone of both markets is strong, or, at least, it ngthens the impression that the level at which stance occurs to any fall in prices, expressed in ns of renewed buying by institutional investors, is igh one. One reason for this in the British stock ket is the success that the unit trusts, both new old, have had in attracting new savings to equity investment. There is in fact a persistent shortage of good class industrial stocks, as more and more of them are locked away in institutional portfolios.

Now, however, stockbrokers who have been heard to complain of the pressure of work that the boom brought to their offices should be able to relax a little. The holiday season always produces a slackening in activity both in dealings and new issues; in practice, therefore, the disruptions of the printing dispute may be less serious than they would be at other times of the year. In a thin market, it usually pays to move cautiously; and in the London market, the present need for caution is strongly reinforced by the inescapable fact that as every day passes a general election draws nearer. There may be the isolated explosion of interest in a stock affected by a take-over bid, but there is, in logic, reason to believe that equity prices should for the time being simply bump along. Wall Street faces a different and possibly less ephemeral check: the move to dearer money. Last week the rate on six months US Treasury bills rose to 3.7 per cent; and yields on a new Treasury sale of 258-day tax anticipation bills topped 4 per cent.

BEA JET

De Havilland Dilemma

The contract given to de Havilland to build 24 medium-range jet airliners for British European Airways, announced early last year and still unsigned seventeen months later, has put the company, the corporation and the rest of the aircraft industry on a multi-horned dilemma. For economic reasons, BEA specifically requires a jet of medium range; for reasons known only to its own engineers, it also has a marked preference for an aircraft with more than two engines (but for this prejudice the corporation would have no excuse for rejecting the French Caravelle twin-egined jet). But since the first tentative performance of the de Havilland airliner was worked out in the middle of 1957, the power of its three Rolls-Royce engines increased substantially to a point where the aircraft can carry, not the 70 to 80 passengers required by BEA, but not far short of 120. This is too big for the traffic expected, but if one engine were removed the aircraft would be reduced to something approaching 60 passengers, and this is too small.

Other companies in the aircraft industry are anxious to step in at this point and build BEA the 70 to 80 passenger jets that the corporation requires; it would, however, be extraordinarily difficult for BEA to change horses at this late stage and the latest plan appears to be to shrink the now fairly massive de Havilland aircraft down in size again by cutting ten to twelve feet off the fuselage and reducing the seating capacity from 118 down to 75 passengers. This can only be done if Rolls-Royce agrees to develop a scaled-down version of the original engine, an expensive process when the company is virtually committed to supplying the engine in its original, high powered form, for later versions of the French Caravelle. An alternative, which would hardly please Rolls-Royce, would be to substitute a Bristol Siddeley jet. This is one difficulty that the Minister of Supply can leave the industry to sort out for itself; the entire venture, including the engines, is privately financed which, in the circumstances, is probably just as well.

TAKE-OVER BIDS

Competitive Urges

The take-over bid is now so much in the fashion to have become almost a craze. An offer is made and no sooner has it been dispatched than another, at a better price, is on the way from a rival bidder. That rivalry works to the advantage of shareholders, for they are the sellers in an auction in which bidding establishes a price much closer to the real values of the shares than limited dealings in the sock exchange have done in the past. Auctions have already started for R. E. Jones, the hotel owners, and for International Twist Drill. Another has begun for Brand's Essence and A1 Sauce and the poor offer for the preference shares of Frederick Gorringe from Franco-British and General Trust may be the beginning of yet another. One aspect of these auctions is the part played in them by comparatively newly established dealing and finance houses, which, occasionally acting for unnamed principals, seem to relish the cut and thrust of a take-over struggle. These houses do not, of course, have the reputation of the established merchant banks and they operate much less conservatively.

Some of the competitive bids that are made seem to be designed as much to keep the other fellow out as to get in oneself. Competition can drive — and indeed, as in Harrods, has driven — prices up to very high levels, the bidders seemingly being very confident that either hidden balance sheet values or bigger profits or both can be realised. Some pushful bidders may end up with bad bargains: if they do, they have no one to blame but themselves. They are not usually offering to buy a collection of assets to be broken up and sold off; they are bidding in practically every case for a going concern, which they intend to merge with another. To realise a hidden property value has a cost to the bidders in the shape of higher future rentals, and in buying a going concern they have to look beyond the asset values towards the earnings potential of the company. If they do, they may find that their bids put a price of a good number of years' purchase on profits. Recently, for instance, Harrods has earned a net profit of just over £1 million a year; the three bids that have been made for its ordinary and preference shares all put a price of over £32 million on the company, whose net assets at book values are worth about £14½ million.

Harrods, it seems clear from the statements made by its directors, will eventually go to the highest bidder. All three bidders have said that they wish to preserve the traditional business of Harrods. But to justify the prices they have offered can they really afford to leave the comfortable ways of the Knightsbridge store unchanged, to say nothing of the company's provincial stores? The price being offered for Harrods and for other concerns only makes economic sense if the bidders are certain that profits can be jerked forward. They will be lucky to achieve this from any going concern without quite radical structural changes.

FOREIGN EXCHANGE

Dollar Deposits in London

Sterling's strength in the foreign exchange market, where the rate against US dollars has remained around $2.81¼, has again stemmed mainly from commercial demand; but there has recently been some support for sterling on capital account. This support derives largely from the growth of foreign currency deposits with London banks. Two main types of business are being transacted. The first is the acceptance of dollar, Swiss franc and other currency deposits by banking houses in London. These are usually for one month and on such dollar deposits London banks have recently been offering between 3-3¼ per cent, or appreciably more than the continental depositors could get at equivalent term in New York. The dollars are converted into sterling by the London house and the sterling is lent for corresponding periods to local authorities, hire purchase finance houses or similar borrowers who are prepared to pay around 4 per cent for this type of accommodation. The exchange risk is covered by a forward sale of sterling against the currency in question and a reasonable margin of profit is retained by the London banking house. Such deposits, it should be noted, are not included in the United Kingdom's published overseas banking liabilities. They are not sterling balances. The only sterling liability is between one resident and another.

The other type of currency deposit business, which has acquired considerable importance recently, is the borrowing and re-lending of dollars by London banks. At present New York banks are paying 2½ per cent on dollar deposits and charging 4½ per cent for loans. This margin provides scope for brokerage business on the part of London banks. They have been taking dollar deposits from Swiss, German and Dutch houses and relending the dollars, mainly to Canadian banks

which are exceptionally short of cash, but also to French and Italian banks. This is wholly intermediary business which London has been able to attract by reason of its unexampled network of correspondent banks and agencies.

The total amount of such currency deposits outstanding at any time is difficult to estimate since, particularly in the second type of such business, the same dollars may be lent and relent more than once. But at a rough guess it has been estimated that the amount outstanding may be around the equivalent of $500 million of which the major part would be dollars borrowed and relent by London banks. Between $100 million and $200 million represents currency deposits converted into sterling. This is obviously liable to sudden withdrawal: but the exchange risk has already been covered in the forward exchange operation.

WORLD BANK

More Finance from Europe

THE World Bank is actively considering a number of bond issues in Europe, Mr Eugene Black, its president, told the twelfth international banking summer school which recently met in Switzerland. Mr Black pointed out that while about half of the Bank's $1,900 million of funded debt is held outside the United States, the great bulk of this consists of European holdings of dollar bonds. But he added that he was sure the Bank would be redressing the balance considerably in the months ahead. A marked shift has already taken place in the pattern of expenditure of Bank funds. In the past year the share of non-dollar suppliers has risen to almost 60 per cent.

The Bank is giving much thought to broadening the market for its bonds, especially in the United States. Mr Black says that much the biggest buyers now are the pension funds, which together are estimated to hold half the Bank's stock outstanding in the United States. Life insurance companies and saving banks, which five years ago dominated the lists, have declined in importance. Another source of attracting private finance is through participation in the Bank's loans. In total, these have brought in $565 million. The participations are taken up without the Bank's guarantee, and have been confined to the early maturities. A few days after Mr Black spoke, however, the Bank announced a loan of $35 million for the development of extensive high grade manganese deposits in the Gabon Republic in French Equatorial Africa; Lazard Frères of New York is arranging to place at least half the loan with institutional investors who are taking the full fifteen years' maturity.

HIRE PURCHASE

Still Booming

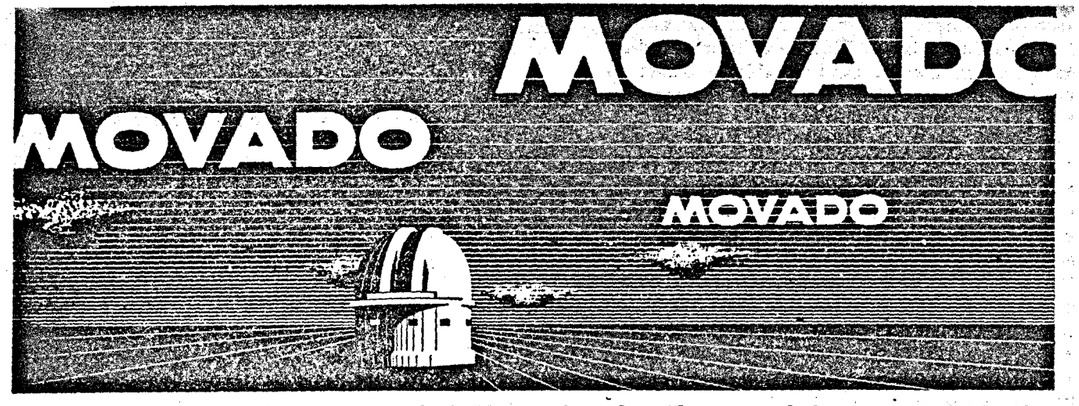
ANY sudden surge of buying on hire purchase is apt to bring its own setback, as the burden of increased repayments grows. But the hire purchase boom set off by the removal of restrictions last autumn is still in full swing. The Board of Trade estimates that the rise in total HP debt quickened in May to £34 million, after increases now put at £27 million in April and £22 million in March. This brings total hire purchase debt at end-May to £727 million, a rise of £200 million since end-October. Most of the increase was again for motor cars; and the tabulation by Hire Purchase Information shows that sales of cars on HP rose to a new record in June. Total contracts reached 92,776, over a third more than twelve months before. This continuation of bouyant buying on credit may be put down to the boost given to personal incomes by the budget reliefs and by industrial reexpansion — which the initial HP thrust itself helped to bring about. In this particular operation of economic policy, at least, the authorities' influence over hire purchase has proved an effective instrument.

DSIR

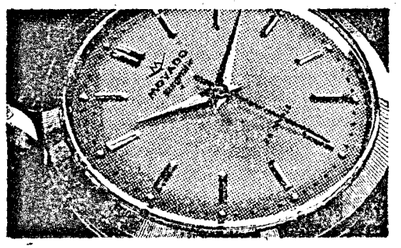
A Soft Answer

WHEN the working of the Department of Scientific and Industrial Research came under the review of the Select Committee on Estimates last year, the committee tentatively inquired whether it might not be a good idea to remove certain specialised laboratories, such as the road research laboratory, from the DSIR altogether and make them part and parcel of the government department responsible for roads in the case of the Road Research Laboratory, water supplies in the case of the Water Pollution Research Laboratory, and so on. The Council for Scientific and Industrial Research has now returned a softly worded and equally tentative negative.

The Select Committee made the suggestion in the first place because it was surprised at evidence of lack of liaison between DSIR scientists and the government departments that might have been expected to make most use of their services. The DSIR is against such a move for precisely those reasons that have made liaison difficult. It feels that so long as the laboratories remain independent, they can at least publish their work, even if this is ignored by departments it is intended to help. Were the laboratories to become out-stations of executive departments like the Ministry of Transport, scientists seem to fear that their work might be suppressed to suit departmental policy. What can have given them such an impression? Has the



For the third year in succession Movado wins the precision contest in the wrist-chronometer class at the official Swiss Observatory at Neuchâtel



MOVADO First on the list and holder of the record for the series award. (Movado beats its own last year's record by 5,46 against 5,85 in 1958.)

MOVADO Holder of the first place in the individual class. You can thus wear a Movado with the utmost confidence!

D.S.I.R.'s experience made it so mistrustful of the Ministry of Transport that it would prefer to carry the heavy burden of running the Road Research Laboratory unaided rather than second it to the Ministry? The Select Committee was reluctant to believe that the laboratory was not consulted about tenders received by the Ministry for roads built to new specifications. Perhaps it should have probed a little deeper.

COURTAULDS

Pulp for Swaziland

In another move towards diversifying its interests, Courtaulds is to go into partnership with the Colonial Development Corporation in a £10,000,000 scheme to manufacture in Swaziland unbleached sulphate pulp for the paper and board industries. A new company, the Usutu Pulp Company, will be formed, subject to "further assurance from the appropriate authorities on water availability, road development and effluent disposal." About half the total investment of £10 million will be equity capital held equally by Courtaulds and CDC, and the balance will be debentures and loans. A sulphate pulp mill will be erected in the Usutu forests, and these are to be taken over by Courtaulds from CDC which, over the past ten years, has planted more than 90,000 acres. It is hoped that the new mill will have a capacity of around 100,000 short tons of pulp per annum, and production is planned to start towards the end of 1961. Shareholders of Courtaulds will no doubt welcome this further evidence of the board's willingness to venture outside the rayon textile industry, but the success of the project clearly depends on the continuance of low labour costs, reasonable freight rates and good communications to the nearest port, Bella Vista: at the moment no railway exists between Usutu and the coast.

DOUNREAY

Any Minute Now?

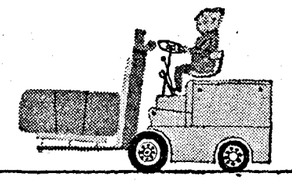
The Dounreay fast breeder reactor, one-time hope of Britain's nuclear power programme, is expected to go critical, i. e., to start working, before the end of the month. This is 15 months after the date originally specified, April, 1958, and the fact that no other big building project of the Atomic Energy Authority has ever fallen so far behind schedule indicates that there have been several changes of mind about Dounreay and its contribution to Britain's power supplies. A breeder reactor has many economic attractions: the most important is not the fact that it manufactures new reactor fuel at a faster rate than this is being burnt but its small size and the promise this brings of low capital cost. The core of the Dounreay reactor, capable of producing heat to generate 15 megawatts of electricity, is roughly a one-foot cube. This compactness overcomes the main existing disadvantage of nuclear power, especially on the British pattern, which is huge size and weight requiring elaborate foundations and extremely costly civil engineering.

But even a reactor as small as Dounreay holds enough pure nuclear fuel to produce a sizeable explosion and sufficient liquid sodium in its cooling system to start a formidable blaze. Hot uranium, as was shown at Windscale, burns merrily in the presence of air. Every precaution against failure is built into the reactor at the time it is designed; nevertheless, the delay in commissioning Dounreay last year was the direct outcome of a visit made by the designers to America a few months before the original date on which the reactor was due to go critical. On American advice they re-designed certain safety precautions designed to see that the fuel, if it should melt, could not run together into an explosive puddle at the bottom of the container; they also re-designed the fuel elements which have been a source of some trouble. At the same time, the project has ceased to enjoy the high priority that it had in the early days and many of its staff have been transferred to more seriously undermanned divisions of the AEA.

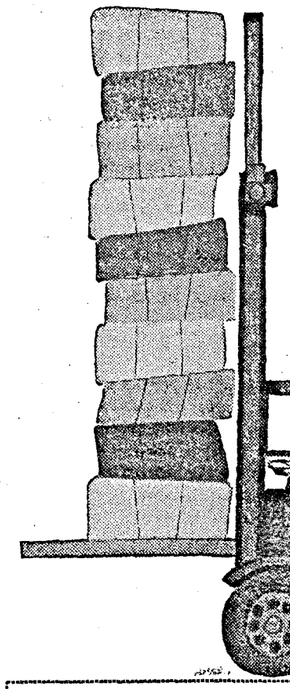
COMMODITIES

Recovery, Then Relapse

Recovery in commodity prices did not go far or last long. In the last seven weeks *The Economist* indicator, which averages the movements of seventeen items, has dropped by five per cent to 86 (1952=100). It is now nearly one point lower than a year ago and barely two points above the October trough, when commodities as a whole were at their lowest level for nine years. Though most items have weakened the sharpness of the relapse is mainly attributable to copra, which has dropped by 17 per cent in the last seven weeks, and to falls of roughly six per cent in copper, rubber, sugar, sisal and barley. Copra has fallen partly because the American government has decided to sell all its strategic stock of coconut oil, and copper and rubber have suffered from the threat of disposals from the strategic stock. Moreover, the production of rubber is increasing, the surplus of copper is growing, and the possibility of a strike in the American copper mines has diminished. But copper, after falling by £19 to £218 a ton — the lowest price this year — has since rallied to over £220 a ton. Lead has sagged below £70 a ton while zinc, in contrast, has risen to over £80 a ton, the highest price this year, and tin is steady at about £790 a ton. Among the fibres, cotton is steady, and though wool is lower on balance it has recovered



10 times bigger textile trade in 3 years!*



How's this for success? Four years ago a manufacturer of specialised textiles had an export turnover of exactly £4,855. Last year he topped £52,000—a tenfold increase in three years of ECGD credit insurance. A talk with his ECGD man had shown him that the financial risks of expanding overseas needn't hold him back, and with an ECGD policy in his pocket he was in a position to give credit straight away to big new buyers. In the very first year, exports shot up to nearly £13,000, and in one European market alone he's now doing business worth over £26,000. The price of success? As little as 6/6d. for every £100 insured with ECGD.

ECGD cover and buoyant exports go together. By helping out on the credit management side — that is, by vetting your prospective buyer and by guaranteeing payment — ECGD gives you a free hand to look for fresh business. Ask your ECGD man to look in and see you.

* This is a true story, but because business between ECGD and exporters is strictly confidential any details which could identify the exporter have been left out.

cac 28

nearly half of its earlier decline. All beverages have declined. Coffee prices had largely anticipated the devaluation of the Brazilian exchange rate for this commodity; the rate for cocoa has also been devalued, to a smaller extent, and the Brazilian minimum export price has been cut by 1½ cents to 32½ cents a pound f.o.b.

Demand for many commodities is seasonally slack, and some decline might have been expected. But with world production and trade expanding prices generally should revive later in the year, though not appreciably. There are few shortages in prospect. Prices of several commodities, notably grains and fibres, are unlikely to change much up or down. Coffee continues to be threatened by the huge surplus withheld from the market. Tin and zinc should remain steady and copper seems in little danger of any sharp relapse; presumably the leading producers of copper would not allow the surplus to grow as big as it did in 1957/58 before cutting output. But the markets in copper, rubber and some other items will remain nervous until the American government ends the uncertainty about disposals from its strategic stock.

STEEL

Expansion at Port Talbot

THE latest stage of the Steel Company of Wales' expansion is nearly completed. It increases the steelmaking capacity of the company's Abbey Works at Port Talbot by 12,000 tons a week, bringing total capacity up to three million ingot tons a year. Begun three years ago, the latest scheme included the provision of a fifth blast furnace, 80 new coke ovens and a new Bessemer plant; the replacement of the company's old slabbing mill by a new universal mill capable of handling the increased output; and the installation of a new four-stand cold reduction mill, which will roll some of the additional tonnage into lighter gauge steel, chiefly for the drum and galvanising markets. The new blast furnace, a giant with a hearth diameter of 31 feet and a capacity of over 10,000 tons a week, was brought into operation last May; the Bessemer plant was brought to its first heat last week.

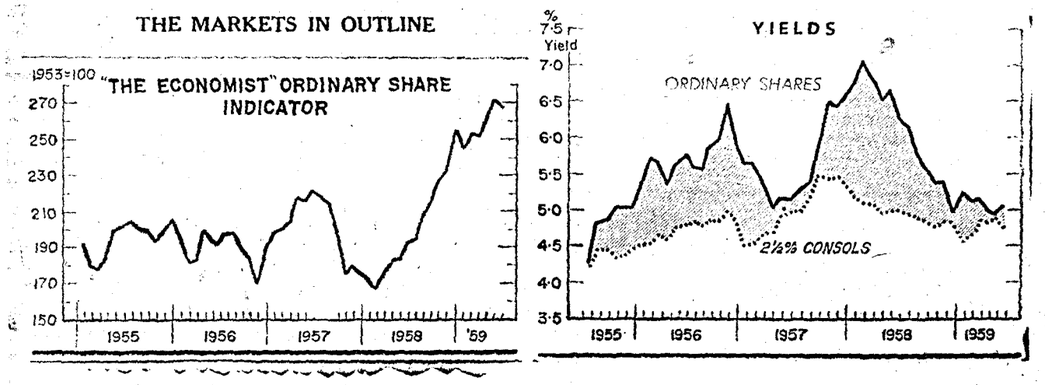
The Steel Company's decision to install Bessemer converters instead of additional open hearth furnaces was based on the fact that, by using oxygen and steam blowing techniques, steel of a quality roughly comparable to that made by open hearth furnaces (for this company's purposes) can be produced at lower capital and operating costs. The three 50-ton converters at Port Talbot are the first ever to be operated entirely on oxygen and steam blast throughout the whole blowing period; other Bessemer plants normally use air for a part of the time. The universal mill was brought into operation last November, and the old mill sold to Canadian steel company; because of a lack of headroom in the existing mill building it was not possible to install a conventional universal mill, of which there are now a number in America, and a special design, utilising an unorthodox drive to the vertical rolls, was supplied by Davy & United of Sheffield.

SHORTER NOTES

An amendment to the Finance Bill will reduce the stamp duty on transactions in securities and properties involving less than £5. Previously, these transactions attracted a minimum duty of 2s. and in the case of bearer stock, with a nominal value of £1, of 6s. The duty will from August be 6d. for every 25s. of the consideration. Because of the £5 limit, the practical effect of this concession will be small, except possibly for such bearer stock schemes as that sponsored by Aims of Industry.

* * *

Sir Ernest Lever has joined the board of Equity Credit, a wholly owned subsidiary of Lombard Banking. Unlike the other big finance houses, Lombard has made no direct link in share capital with a commercial bank.



COMPANY AFFAIRS

ULTRAMAR

AFTER the publication of the full accounts of Ultramar, the 10s. ordinary shares reacted sharply, falling from 64s. 3d. to 61s. Later the price came back to 62s. 3d. ex the capital distribution. There is no doubt, however, that the president's statement that the group had not been able to enter into a new long term sales agreement with Texas Petroleum or with any other oil company at a price which leaves Ultramar with a reasonable operating margin is a bearish factor. The old sales agreement with Texas Petroleum ended on June 30th. As Ultramar is one of the smaller independent oil concerns it is likely to be more affected than the bigger groups by the current surplus of oil. At the same time its operating costs, which were already high, have recently been sharply increased by the new tax rates in Venezuela, which cannot but have the effect of reducing profit margins still further. Any attempt to sell at discount prices might eliminate these margins completely and all the indications are that in the near future, at least, trading conditions are going to be extremely difficult for the group, even though the president, Mr A. Lorbeer, says he feels confident that a solution to the crude oil marketing problem will be found and that a fair profit will be realised from the oil reserves.

The failure to renew the agreement with Texas Petroleum was not unexpected but that does not really soften the blow. Though Ultramar is now free to negotiate other contracts if, and when, conditions improve, it is going to find the competition fierce. Shareholders will, however, note that the capital distribution paid from the exchange surplus account looks safe enough for the time being, for the amount standing in this reserve is still as much as £1,121,744. Moreover, the Mercedes loan repayments which give rise to this surplus are not yet completed and, at current rates of exchange, another £1,780,000 is expected to accrue from this source. The price of the Ultramar shares is subject to quite violent fluctuations because rumour has it that there is always the possibility, however faint, of a bid. But with oil still in surplus would it be worthwhile at the present moment making a bid for Ultramar's interest in the higher cost Venezuelan oil?

ASSOCIATED BRITISH PICTURE

AS soon as the directors of Associated British Picture, which controls ABC Television, raised the interim ordinary dividend from 7½ per cent to 20 per cent for the year to March 31st, the stock market guessed that the total dividend would be doubled from 30 to 60 per cent. That guess became a practical certainty when the dircetors also said that gross profits would be of the order of £4,600,000, compared with £2,800,000 in the previous year. The preliminary report, which did indeed bring a doubling of the ordinary dividend to 60 per cent and which revealed an increase in gross profits from £2,823,575 to £4,745,029, did not therefore set the price of the 5s. ordinary shares soaring. At 44s. 9d. these shares now yield 6.7 per cent but, as net profits have risen from £1,183,488 to £2,308,794 to provide a cover of over 2¾ times on the dividend, the earnings yield is as high as 18.8 per cent. In examining these yields, investors should note that perhaps as much as three-quarters of ABP's profits now come from commercial television and that the really big increase in profits from this source have already occurred. Nevertheless, the shares must rank high among the entertainment equities.

DE LA RUE

THE increase of 11 per cent in De La Rue's trading profits from £1,468,516 to £1,585,694 was mainly attributable to the Formica Group, whose profits account for 81 per cent of the total. The security division, Thomas De La Rue and Company, contributed 15½ per cent and Thomas Potterton, the water heater makers, accounted for the rest. The chairman, Mr Bernard Westall, says that the rise in trading profits was due to a large extent to the increased efficiency of the Tynemouth factory, to the elimination of losses in the security division and to the first contribution by Thomas Potterton to earnings. The outlook for all three divisions seems fairly promising. The Tynemouth factory has been extended for the manufacture of the new product "Beautyboard" — a refinement on the original Formica — which should lead "to a considerable expansion in the use of Formica veneers." Most of the £1 million to be raised by the one-for-five "rights" issue at 27s. 6d. is to be devoted to the group's plastic interests. At the same time, Thomas Potterton should this year enjoy the fruits of the ending of the credit squeeze and of lower purchase taxes, and the chairman says that although competition in bank note printing is increasing the group is in a position to manufacture more cheaply than its competitors. De La Rue has recently signed an agreement with the Compagnie des Machines Bull of Paris by which they will market — and perhaps later manufacture — business machinery and electronic computers. The 10s. ordinary shares, which recently have attracted some American buying, now stand at 45s. 9d. and yield 4.7 per cent, and the dividend of 20 per cent, which the directors hope to maintain on the increased capital, is covered three times by earnings.

ALBERT E. REED

THE advantages of a diversified range of products in an industry faced with recession are amply illustrated in the full report of Albert E. Reed. But if the group's spread of interests in the general category of paper products cushions the effects of a surplus of paper-making capacity throughout the world, it cannot altogether eliminate them. Since 1950, the group's turnover save for a slight setback in 1953 has been rising steadily and last year was no exception: sales rose by no less than £3.9 million to £66.2 million. But with profit margins narrowing in an increasingly competitive industry trading profits failed to rise proportionately: they rose by only £236,172 to £6,000,992, so that the gross return on sales was about 9 per cent. Three years ago this return was of the order of 15 per cent. Higher depreciation charges, reflecting installation of new machinery, left the profit before tax slightly lower at £4,277,670, compared with £4,500,956 in the previous year. But thanks to a lower tax charge of £2,075,000 (against £2,322,000) net profits after tax advanced from £2,335,883 to £2,515,381.

A breakdown of the group's turnover shows that 74 per cent of sales was attributable to the packaging side of the business (whose productive capacity has been increased by the acquisition of R. H. Filmer Ltd.), 14 per cent to printing and only 9 per cent to newsprint. A large number of

the group's eggs are thus in the packaging basket. Long term growth in this market seems assured, but competition within it seems unlikely to diminish.

At the moment there are few, if any, signs of a marked recovery in the paper industry, but the chairman of Albert E. Reed, Lord Cornwallis, argues that the indication of an upturn in industrial activity at home and in the United States should "if the process continues, relieve the situation caused by the temporary surplus capacity in the paper industry". But he expresses concern that in some parts of the world substantial additions to productive capacity are still being made although there are no signs that there is sufficient demand to absorb the additional output of these new plants. The reaction of the Albert E. Reed group was to cut capital expenditure last year from £6.5 million to £2.8 million. This sharp reduction in capital spending has strengthened the company's liquid resources: at the end of March these resources, taking investments at market values, amounted to £5.6 million and compared with capital commitments of only £2.8 million. The 14 per cent dividend is covered 1½ times by earnings and at 46s. 9d. the £1 ordinary shares yield 6 per cent.

BRITISH PLASTER BOARD

BRITISH Plaster Board has come out of the recession in the building industry exceptionally well. Last year building contractors were running down their stocks in the face of a general falling-off in new orders. Even so, the directors of British Plaster Board have reported record profits at £2.7 million (against £2.3 million), an increase in the ordinary dividend from 12½ per cent to 14 per cent and a two-for-five scrip issue. The advance in profits was not due to an increase in production but to the lower costs of production which resulted from the group's capital investment programme and to what the chairman, Sir Graham Hayman, calls "the continuing spread of our interests at home and abroad." These results augur well for the coming year, for new orders placed with contractors have already shown a marked rise, and these should in turn result in further orders for BPB's own products.

The full accounts reveal a big increase in capital commitments, which, at £1,376,000, compare with only £453,000 in the previous year. This to a large extent reflects an expansion in Canada and in the group's paper companies in this country. Sir Graham says that arrangements have been made for obtaining bank loans to finance these commitments. The purchase of O. J. Bradbury has added to the group's interests in the packaging industry, and the paper subsidiaries, headed by C. Davidson and Sons, have reported better profits, even though margins have fallen substantially. The yield of 4.9 per cent offered by the 10s. units at 29s. 1½d. is not unreasonably low, for the 14 per cent dividend is covered over twice by earnings.

WHITBREAD

IN common with other breweries, Whitbread has found trading conditions increasingly competitive in recent years. Nevertheless, in 1958 it more than recovered from the slight setback of 1957 and its trading profits rose by £162,000 to £3,306,000. This improvement has been achieved by the concentration on better quality beers whose sales have been kept up remarkably well even though total beer sales have fallen.

In an effort to insulate itself from the vagaries in demand the group has concluded reciprocal trading agreements with other breweries, of which the one with Fremlins for exchange of beers came into operation last December. Another method of entering into a trading agreement has been to acquire a large block of shares in another brewery — not large enough to give control, but enough to secure representation on the board. The latest link is with Brickwoods and about 30 per cent of the ordinary capital is said to have been acquired by Whitbread. There is no doubt that such an arrangement will be of benefit to Whitbread, but nevertheless the Whitbread "umbrella" is open to criticism. It effectively prevents any bid for control by another group, but at the same time gives Whitbread all the benefits of a trading arrangement without its having to make an outright bid for the shares of the company.

Mr W. H. Whitbread, the chairman, feels more optimistic about the future than for some time past, and he refers to the ending of the credit squeeze, and the reductions in beer duty and income tax. At the same time, the cash resources of the group have been strengthened, as £1,750,000 was raised on a debenture during the year. As a result a net cash balance of £234,604 has replaced a net overdraft of £921,521 and in total "quick" assets have doubled to £2,625,000.

At 108s. the £1 "A" ordinary shares yield 4 5/8 per cent on the maintained 25 per cent payment. The yield is rather low for a brewery. It reflects in part the profits record of the group, but is also influenced by the recent speculation in brewery shares as prices, although now on the decline, have not returned to the level at which they stood before Mr Clore made his bid for Watney Mann.

DORMAN LONG

IT has been apparent for some time that the heavy end of the steel industry has not shared in the recovery which is now keeping the strip mills busy. The demand for heavy sections and plates is still slack but there are some signs that demand for structural steels is beginning to pick up. The patchy nature of demand is reflected in the brief interim report made by the directors of Dorman Long in announcing an unchanged interim ordinary dividend of 4 per cent for the year to September 30th next. They say that increasing domestic and overseas orders for the new products of the Universal Beam Mill, which makes a wide range of constructional girder sections, has led to a doubling of shift working in that mill since the beginning of April. But they also note that in structural engineering keen competition for orders still continues and that output and profits show some reduction. Demand for the group's rolled steel products is still much below capacity and here, too, output and profits have been reduced. On the assumption of a maintained total dividend of 12 per cent, the £1 ordinary units yield just over 7 per cent at 34s. 1½d.

LONDON COUNTY FREEHOLD

THIS old-established property company does not offer the investors the same appeal as the current speculative favourites of the property market; nor does it carry the same dangers. Its main interest is in residential properties, though it also own shops, offices and factories. It has a subsidiary in Rhodesia, which is doing well; and further expansion overseas is not to be ruled out. Growth in earnings has not been sluggish. Net income after tax is up from £302,931 to £446,472 in the year to March 31st. The Rent Act has helped, but the company has cushioned the immediate rise in rents for sitting tenants, so that substantial further benefits will accrue in the current year. The directors have transferred rather more to reserve — £53,000, compared with £50,000. The dividend on the ordinary 10s. shares is 10d. for the year; this compares with a forecast of 8d. and an equivalent of 6½d. in 1957/58, before the 200 per cent scrip issue that followed the revaluation of properties. Before amortisation and depreciation, these now stand in the balance sheet at £17,856,000, compared with £13,362,000.

COMPANY MEETINGS

THE FINANCIAL TIMES LIMITED

EARNINGS WELL MAINTAINED
LORD POOLE ON CONTINUED DEVELOPMENT

The 31st annual general meeting of The Financial Times Limited was held on June 23rd at Winchester House, Old Broad Street, London, E.C.2, THE LORD POOLE, C.B.E., T.D. (the Chairman), presiding.

THE PRINTING DISPUTE

The Chairman said: Gentlemen,' since my statement was circulated to you, a nation-wide dispute on wages and hours of work in the printing trade has culminated in a general stoppage of production in the houses of printers in membership with the British Federation of Master Printers and the Newspaper Society, that is to say the bulk of the general and provincial newspaper printers of the United Kingdom. Happily, production of The Financial Times is not interrupted. Our subsidiary, St. Clements Press Limited, however, is involved. Its output had already been curtailed and its service to customers crippled since 3rd June by a ban on all overtime; beginning this week we face a period of uncertain length during which the general printing operations of St. Clements Press are totally stopped. This is neither the time nor place to go into all the circumstances which have led to this dispute, but I can assure you that your Board are following its course with the most urgent concern.

The impact of the stoppage on the company's profits cannot as yet be assessed, but its effect must be serious, and will inevitably be reflected in the profit and loss account at the end of the year.

CHAIRMAN'S CIRCULATED STATEMENT

The following is the Chairman's statement which had been circulated with the report and accounts for the eighteen months ended December 31, 1958:

Before I deal with the business before us I have the sad task of recording the very great loss that we as a company suffered in August last in the death of our chairman, Lord Bracken. The many and moving tributes paid to Lord Bracken were some measure of the affection he inspired and the distinction he attained during a career of great public service. Brendan Bracken was a man of brilliant and varied parts. He held many high offices. But to none of his activities did he devote himself more wholeheartedly than his early and abiding love of journalism. We of The Financial Times have much cause to be grateful to him for the enthusiasm and the genius that he brought to bear in the direction of our affairs. Under his inspiration the paper was broadened from a journal of primarily financial and economic interest to the lively, vigorous newspaper we have to-day, ranging over the whole realm of industrial and business interests.

CHANGES ON THE BOARD

Last October your Board of Directors did me the honour of electing me their Chairman. It may be convenient if I refer at this stage to other changes on the board, although some of them occurred after the close of the period to which the accounts before you refer. Mr. Herbert Tingay and Mr. Leslie Dearlove both felt that they had reached a stage when they could rightly ask for more leisure and we had regretfully to accept their resignations early this year. Mr. Tingay was chairman of George Newnes, with whom we are closely associated in our printing business, and was ever ready to place at our disposal the wealth of his great experience. Mr. Dearlove was for many years our general manager and his wise guidance was of great value in the development period after the close of the war. We wish them both many years of enjoyable retirement.

We have been singularly fortunate in persuading Professor Lionel Robbins to accept a seat on our board. Professor Robbins has earned a world-wide reputation as an economist and administrator and I cannot think of anyone whom we would more gladly welcome to our counsels. We were also lucky to secure the services as a director of Mr. John Smith, a member of the boards of Coutts, Rolls-Royce, and other companies. Our present general manager, Mr. Hunter, also joined the board in April so that we now once again have a full working team.

GROUP PROFIT MAINTAINED

Turning now to the report and accounts, I would point out that as a result of the change of accounting date from June to December, which, as was explained to stockholders in a circular issued last November, became necessary to comply with the Companies Act, the accounts before you cover a period of 18 months.

Comparison between the figures in the profit and loss account for the 18 months to 31st December 1958 shows that the profit of the group before charging taxation was proportionately unchanged from the figure for the 12 months ended the 30th June, 1957. The reduction in the rate of income tax together with capital allowances on the new building has resulted in a welcome reduction in the charge under this heading after deducting the special credit arising from the fact that it is only necessary to charge 12 months' tax against 18 months' profits. This is an exceptional item which your directors consider should be retained as part of the Company's revenue resources.

Your directors recommend the payment of a final dividend of 16¼% which together with the two interim dividends of 12½% and 20% makes 48¾% for the 18 months. This is *pro rata* to the 32½% paid in recent years. The directors also decided to pay a non-recurring interim dividend of 3¾% in respect of the year ending the 31st December, 1959. Subject to satisfactory trading during the remainder of the current year, it is the intention of the board to pay an interim dividend of 15% in November and to recommend a final dividend of 20% when the year's accounts are presented, making a total for the year ending the 31st December, 1959, excluding the non recurring interim, of 35%.

The balance sheet of The Financial Times reflects the progress of the new building which is now substantially complete and most of which is occupied by The Financial Times and its associated and subsidiary companies. The consolidated balance sheet reflects the provision by our printing subsidiary St. Clements Press of the newest equipment designed to make its printing works in the new building the most up-to-date in London.

THE ECONOMIC SPHERE

The 18 months covered by these accounts were a period in which the economy suffered a setback followed by a recovery which has been carried further this year. I need not recount the conditions in mid 1957 which led to the Government's remedial measures of September in that year. These measures were successful in restoring international confidence in sterling but they had to be taken just at the point when the economy of the United States entered upon a serious recession.

The fact that Britain's rigorous measures to curb inflation coincided with the beginning of world recession might, without very good management, have resulted in a severe recession in this country. In fact the recession was milder than that in most parts of the world. In 1958 it was possible to reduce Bank Rate by successive stages from 7% to 4%, as against the 5% level which had stood at the beginning of July 1957.

Industry was inevitably affected by the measures of disinflation and by the recession. For the consumer goods industries the ending of the credit squeeze and of hire purchase restrictions in the summer and autumn of 1958 made possible a rapid recovery; in some cases such as the motor industry, the recovery has surpassed all previous levels of sales. Capital goods industries have in general had a slower recovery but for most of them the prospect is now more favourable.

It is of some interest to review the effect of this cycle of activity on share prices. On July 1st, 1957, The Financial Times Industrial Ordinary index stood at 204. By the following November 5th, it had fallen to 159.0 which is a substantial decline for such a relatively short period. After recovery which was not maintained it fell to a low point of 154.4 on February 25th 1958. Throughout the rest of 1958 there was a recovery in share prices and at the close of the year the index stood at 225, reaching what was then its highest point ever on the last day of the year.

It is encouraging to know that the present revival in industry and in the

onomy is based not on the inflation hich existed in July, 1957, but on a conlerable measure of price stability and on rise in the reserves. The United Kingdom lding of gold and convertible currencies the beginning of July, 1957, was £850 m. r the end of September, 1957, it had fallen £661m., but by the end of 1958 it had covered to £1,096m. and the improvent has continued into this year.

STEADILY GROWING CIRCULATION

Throughout this 18 months The Finan- l Times has continued to develop and osper. Its circulation has shown a natural owth and for the 6 months to the end December, 1958, the audited daily net e figure was 85,565. This compared with 408 for the preceding 6 months. This crease has been followed by further ad- 000 mark and currently well above it. nces and although we must wait until e end of the half year for A.B.C. figures, an say that our own estimates show that r the first 4 months we were over the ie sale has been widely spread and I can ort that in the industrial areas there has en a steadily growing demand for the per.

The Financial Times must in many pects be a paper of record and no effort spared to ensure that the daily informan it gives under this heading is conhensive and accurate. It is the paper to ich the public instinctively turns for the ts and figures on which business depends, l a glance at the paper with its vast ss of statistical matter freshly compiled h day will show that a generous view aken of what should be included in this tion of the paper. It affords a daily staical guide to almost every phase of siness activity and the list of subjects ered steadily increases.

GOUR OF EDITORIAL CONTENTS

t is, however, in the broader aspects of torial content that the most striking nges have occurred. It is to the vigour l originality of its editorial contents and genuine value to the business commuy of its news and comment that we owe notable advance in readership. At one ie the concept of what constituted news the business man was rather dull and row. To-day The Financial Times nowledges that what is happening in eign affairs, in politics, in the diplomatic rld, on the labour front and in the netimes relaxes at the theatre, opera or nce laboratory, can as readily affect siness as economic policies, interest rates raw material prices. The paper to-day also not afraid to admit that the world iet, in the garden, at Newmarket or in eign travel, and recognises that values sometimes be expressed in terms of old sters or French Impressionists as much in Old Consols or Unit Trusts.

Towards the end of 1957 The Financial nes in company with George Newnes l Temple Press formed a new company, lustrial and Trade Fairs. The object s to organise industrial exhibitions both this country and abroad as we felt that re was a useful field there for our acti- es. Our colleagues, George Newnes, ady had a considerable experience in direction. The company has explored ny projects and the first exhibition to be held under its auspices, the Industrial Photographic and Television Exhibition at the Albert Hall in April this year, was sufficiently successful for plans to be laid for a similar exhibition to be held next year. As you may have read, the company is also interested in the negotiations now proceeding for a British Industrial Exhibition in Moscow and a Russian Exhibition in London.

INDUSTRIAL ADVERTISING

The advertisement revenue during 1958 was a record in the history of the paper. The most striking advance has been in industrial display advertising for which The Financial Times is now recognised as an established medium. Before the war the bulk of our advertising revenue was financial. To-day, although financial advertising is still one of the bulwarks of our fortunes and The Financial Times is quite clearly the first choice for insertions of this kind, more than half our advertisement revenue comes from industrial and other forms of display advertising. To meet the editorial needs of the present time and to accommodate this increased volume of advertising we have had to increase the size of the paper on many days throughout the year. Our surveys of selected industries or countries continued to be published throughout the period although we have more recently submitted full-page insets in the paper for some of the smaller surveys or supplements. These surveys and special pages enable us to deal more extensively with a subject than would be possible in the paper itself and afford advertisers a valuable means of publicity.

THE CURRENT YEAR

The current year has opened well. Circulation, as I have already indicated, has continued to rise and advertisement revenue has been buoyant, reflecting in part the better feeling in industry and the greater activity in the new issue market since the easing of Government controls but reflecting, also, the greater appeal of the paper and the successful efforts of our advertisement staff in attracting new business. Costs have, however, continued to rise. To some extent this is the natural result of doing more business and printing larger papers but the tendency for costs to rise outside any control that we may exercise is a constant source of anxiety. Editorial enterprise, on which the well being of any newspaper depends, is not cheap, but it would be foolish to grudge money spent on extending the appeal of the paper and thereby broadening the basis of our prosperity. During the current year our results must also be affected by the fact that our printing subsidiary, St. Clements Press, will inevitably suffer some dislocation as the result of the move from Portugal Street to our new building.

NEW BUILDING

This new building, Bracken House, is now rapidly approaching completion. The move began at Easter when the editorial and business staff left Coleman Street, where in one building or another the paper had been housed since its beginning, and took up their new quarters in Bracken House. There they are far more efficiently and comfortably housed under one roof instead of in five separate buildings. The second phase of the move took place over Whitsun when the production of The Financial Times was transferred from Portugal Street to the new building. This was a far more intricate operation but thanks to careful planning during the preceding months at St. Clements Press, all went well and there was no interruption in the printing of the paper. For the first time in its history The Financial Times is now edited, printed and published in one building. The advantages that this will bring are obvious. The new building will be more costly to run but we consider this increase will be fully compensated for by greater working efficiency. The Portugal Street premises of St. Clements Press were disposed of some time ago to their neighbour across the road, the London School of Economics. The lease of the main building in Coleman Street falls in next year and the tenancies of other buildings that we occupied have been terminated.

In conclusion, I would like on your behalf, as well as of the directors, to express our thanks to the whole staff for their services during the past year. They have had a strenuous year but as the results before you show they have successfully surmounted the difficulties.

The report and accounts were adopted.

ODHAMS PRESS

SALES WELL MAINTAINED

The 39th Annual General Meeting of Odhams Press Ltd. was held on June 12th in London.

Mr A.C. Duncan, FCA, chairman, in the course of his speech, said: — Our gross revenue amounted to £36,231,795, an increase of £1,041,090. The Net Profit, subject to Taxation, amounts to £1,995,521.

The sales of our newspapers and periodicals are still well maintained at over 23 million copies a week. The circulations, in terms of readership, as the IPA survey shows, are many times greater. The continued support of our advertisers is one of the best tributes to the value of this great coverage.

Since the date of the Accounts under review, we have issued £628,572 Ordinary Share Capital for the purpose of acquiring the business of the Hulton Press Ltd., publishers of 'Farmers Weekly', 'Housewife', 'Eagle' and kindred children's periodicals, as well as other properties, all of which should strengthen our organisation. More recently, we have made an offer for the Ordinary Share Capital of George Newnes Ltd., which has been recommended to their shareholders for acceptance by the Board of the long-established and prosperous publishing company.

With regard to the current year, trading conditions have continued to be satisfactory, although competition continues to be increasingly keen, whilst so far no worthwhile reduction in prime costs has been obtainable.

We have always endeavoured to maintain, and, in fact, have enjoyed, happy relations with our works employees and it is our sincere and earnest hope that the printing dispute will be decided by arbitration.

The report and accounts were adopted and at a subsequent extra-ordinary general meeting the proposed increase of capital to £7,500,000 was approved.

J. Lyons & Company Limited

MR I. M. GLUCKSTEIN'S STATEMENT

The Annual General Meeting of J. Lyons & Company Limited was held on 9th July, 1959, at the Trocadero Restaurant, Piccadilly Circus, W.1.

The following is the Statement by the Chairman, MR I.M. GLUCKSTEIN, which has been circulated with the Report and Accounts for the year ended 31st March, 1959: —

It is with deep regret that I have to mention the loss we suffered in December last by the death of our President, Mr M. Gluckstein. The youngest son of the late Mr Isidore Gluckstein, one of the founders of the Company, he had for fifty-seven years given outstanding service to it. He was appointed a Director in 1919, was Chairman of the Board from 1950 to 1956 and it was on his relinquishing that office that he was appointed the Company's first President. During his long service with the Company his contribution to its growth and progress was outstanding. We shall greatly miss his wise counsel, the fruit of long and wide experience and of deep human sympathy and understanding.

The Report and Accounts submitted with this Statement are for the sixty-fifth year of the Company which ended on the 31st March, 1959. They include the Balance Sheet and Profit and Loss Account of the Company and the consolidated Balance Sheet and Profit and Loss Account of the Group comprising the Company and its subsidiaries. Referring first to the Company's Balance Sheet, you will see that the authorised capital now stands at £16,070,342, and the issued capital at £14,122,749, an increase of £3,145,342 represented by the further "A" Ordinary stock issued as fully paid in accordance with the Resolutions of the Extraordinary General Meeting held on the 9th April, 1958. The sum thus capitalised, together with the expenses of the issue, has been taken from the Share Premium Account.

We had need of further finance, and in the autumn we arranged to borrow through Westminster Bank Limited the sum of £2,000,000 secured by a mortgage on certain of the Company's properties. The transaction was completed in February, and the loan bears interest at the rate of 5¾% per annum. It will be repaid by equal yearly payments of capital and interest combined over a period of twenty years.

THE YEAR'S TRADING

From the Company's Profit and Loss Account it will be seen that the balance from trading account is £4,359,946 compared with £5,304,150 for the previous year and the net profit for the year is £905,256 compared with £1,143,111.

We propose the payment of final dividends at the same rates as last year on the Ordinary, the "A" Ordinary and the Proportional Profit capital which, with the interim dividends paid in December last, will absorb £534,054. The dividends paid and accrued on Preference and Preferred Ordinary stocks amount to £289,401. The balance of the net profit for the year is £81,801. From the amount of £502,301 brought forward from last year we have transferred £250,000 as a provision against Subsidiary Companies' indebtedness leaving £252,301. To this has to be added £30,000 in respect of tax adjustments for earlier years and the balance from this year, so that the amount to be carried forward in the Profit and Loss Account is £364,102.

In my Statement last year I told you that we had had a good year. This year, I regret to say, we have not. I also told you last year that part of the increased earnings arose from favourable circumstances at home and abroad, the continuance of which it would be unwise to count upon. My fears unfortunately proved to be correct, but the fall in profits is not due to that factor only. Unseasonable weather played a part and so did the long bus strike in London, the effects of which continued to be felt for some time after it had ended, but undoubtedly the main cause was that considerably increased expenditure on selling, distribution and advertising did not lead to a commensurate increase in sales. Indeed, instead of being higher, sales were a little down on last year, which was a peak in our history, and were only held there by increased expenditure I have mentioned: some of this expenditure does not produce immediate results, but is expected to bear fruit more fully in the future.

Wages continued to rise, adding appreciably to our costs. We have always sought to keep our prices as low as possible and are convinced that the long-term good of the Company is dependent on the policy of giving the highest possible value to customers. Except in catering, in which unfortunately we again had to increase some prices, we were able to hold our prices steady, even at the expense of some narrowing of profit margins.

This has been a difficult year, but, without wishing to seem complacent, we are not pessimistic for the future prospects of the Company which is in good health and braced for further effort.

DEVELOPMENT

We have continued our policy of opening speciality restaurants to which I referred previously. At the Coventry Street Corner House we have opened "The Piccadilly," its principal aim being to serve those who are in a hurry, but wish for something more substantial than is usual at a counter service. At the Throgmorton Restaurant, in the City, a "Grill and Cheese" has been opened.

Three teashops have been opened during the year. Another in Bull Street, Birmingham, has been temporarily closed but will be reopened on completion of rebuilding. The Wimpy business continues to expand by the grant of further licences to caterers.

Eight further depots have been opened for the wholesale distribution of ice cream and bakery goods.

TRAINING ACTIVITIES

The Company's business has been built on training first and then on teamwork. By happy tradition we have always had men and women of long service whose example and willingness to help the newcomer add much to the value of the initial training. In recent years we have considerably expanded our scheme for the training of new staff in the various branches of our business and for continuing the training for promotion to supervision and management. We have also added a series of courses for those who have reached management level.

Our Bakery School is an example of the training we provide for boys of about the age of 16. It was formed soon after the end of the war to help us to check the decline in the number of skilled craftsmen in the trade. The course extends over two years, and during it the boys are paid the appropriate trade rate according to their age. They are trained to produce by hand all types of bakery goods from bread to wedding cakes, so that they become craftsmen. Bakeries today are becoming "push-button" in their mechanisation, but if they are to be successful it is necessary that some, at least, of the men in them should have had full experience in the craft. The boys are also encouraged to develop initiative and leadership, and arrangements are made for them to attend one of the Outward Bound Schools. By these means we not only maintain our numbers of skilled craftsmen but also find new foremen and supervisors.

Many of our staff are in direct contact with the public and it is not enough that our products should be of high quality and good value; they must be served, whether to the public or to the shopkeeper, in a manner which will earn and maintain goodwill. We therefore provide special training for such staff. Those who are selling to shopkeepers must not be content merely to get our goods into the shops; they must also help in every possible way to get those goods out again to the consumer. They are therefore taught in a model shop some aspects of retail selling, so that they may better understand the problems of their direct customers and help them to give the best possible service to the public.

Our courses of further training for staff of supervisory and management grades have, of course, much wider aims. They are designed to assist the members in the performance of their present work and also to encourage them to look ahead, to learn of other aspects of the business, and generally to develop their business faculties. The discussions at these courses are stimulating, lively and purposeful, and by bringing together men and women of widely different occupations do much to reduce the danger, so prevalent in these days, of overspecialisation.

We are always on the look-out for suitable applicants for training and are able to offer good prospects to those who are seeking a progressive and interesting career.

RESEARCH

Forty years have elapsed since we opened our Laboratories. Their purpose has been not only to ensure the purity and suitability of our purchases — that could have been achieved without any close integration with the business as a whole — but also to co-operate in the manufacture of our products so as to maintain the highest standards of hygiene and purity, and to play an active part in all appropriate branches of our business. They have in addition played an important part in the investigation of new methods and new products. Their work in all these directions continues, and it is evident that the initiative we took in setting up this scientific department has greatly contributed and will continue to contribute, to the Company's progress.

Some years ago we gave a postgraduate scholarship in the Chemical School of one of the Universities, and we are giving two more at other Universities with the specific object of providing additional facilities for postgraduate research in food chemistry. These may be a bridge towards later work with us as well as a contribution to the advancement of fundamental scientific research.

Research of other kinds has also been developed and we have units doing valuable work on matters such as engineering, restaurant, teashop and factory planning and distribution.

NYASALAND

I mentioned last year our Tea Estate at Lujeri. Future conditions in Nyasaland seem still to be unsettled but I am glad to be able to say that the disturbances in March, though inevitably affecting production, passed without serious damage. At one time our factories were threatened and the lives of our staff in danger. The dangers and difficulties facing our Manager and the staff were much in our throughts, and our thanks and admiration are due to them for the cool and steadfast manner in which they carried on. I am sure you will wish to be associated with this tribute to them.

I should also like to set on record our appreciation of the loyal and efficient service of all our other employees at home and abroad. They have well maintained the standards we have come to expect of them and they are eager to accept the challenge of the further effort necessary to ensure continued expansion of the business.

ARTHUR BALFOUR & Co.

LORD RIVERDALE ON DEVELOPMENT OF NEW OUTLETS

The 60th annual general meeting of Arthur Balfour & Company Limited was held on June 22nd at Sheffield. The Right Honourable The Lord Riverdale of Sheffield, Chairman and Managing Director, presiding.

The following is an extract from his circulated statement:

Trading conditions during 1958 became steadily more difficult. We started that year with a fair volume of business, but in the second half orders received did not enable us to maintain full production, and the year ended in an atmosphere of recession with many difficulties both at home and overseas.

The new Steel Works plant, announced in my last Report, came into operation smoothly and as planned in August, 1958, and although these conditions have not allowed us to work to capacity, the cost indications are favourable for the future.

No manufacturing division worked throughout the year without some period at less than normal and satisfactory operating levels.

It is difficult to define the relationships between our products and those of the Bulk Steel industry, but it is true that they are largely used in processing Bulk Steel. It is well known that by the end of 1958 the Heavy Steel industry of Great Britain was working at less than 75% capacity, and this must have had an effect on our business, as has the reduction of stocks in the hands of our customers. There are, however, other sales outlets for both our tools and steels, and applications to newer materials and new processes are developing and expanding rapidly.

Our essential alloys showed a further fall in overall prices and the adverse effect on stocks was not offset by a reduction in costs.

In every market more exacting demands and standards on the one hand, and fierce competition on the other, cut further into profit margins.

This year the contribution from subsidiary Companies has fallen substantially. All are down, with one exception showing a satisfactory profit.

Our considerable overseas efforts shows the all-too-familiar effects of artificial restrictions in world trade.

The profits of the Group at £202,672 before taxation but after exchange adjustments, compare with £349,621. Taxation absorbs £83,518. The Board recommend a final Dividend of 5¼%, making the total distribution for the year 8%.

On Steel Nationalisation I have nothing to add to my remarks in 1958, except to emphasise the damage done by uncertainty and fear of disruption at a time already difficult enough.

We have developed and launched a new product, metal cutting bandsaws, complementary to our tool range. Some original research has enabled us to produce a heavy duty drill under the title of "Blackcap," and this incorporates the results of research with benefit to reputation and prestige.

Turning to the prospects for 1959, the early months of the year have not shown te recovery we had hoped.

I believe our performance in quality is good, our plant improved and our team on its toes. We may, therefore, regain some ground by the year end, but I could not be other than cautious in predicting results for 1959.

The report was adopted.

THE CHARTERHOUSE INVESTMENT TRUST

SIR NUTCOMBE HUME ON ENCOURAGING THE "SMALL MAN"

The 34th annual general meeting of The Chartershouse Investment Trust Limited will be held on July 14th in London, and the following is an extract from the circulated review of the Chairman:

Since the 30th April 1 million of the Trust's shares in the Charterhouse Group Limited have been sold for a net sum of approximately £1,350,000 and of the balance still held the Directors' present intention is to retain 500,000 as a permanent investment in the belief that they will yield an increasing revenue as the years go by.

The Board is currently directing its attention to the reinvestment of the proceeds of the sale of 1 million shares in Charterhouse Group, and it is satisfactory that this can be done in high class securities without jeopardising the maintenance of the annual dividend rate of 12 per cent which the Trust is now paying. In the absence of unforeseen difficulties, it is the intention to pay an interim dividend of 6 per cent in December and a final of at least the same amount when the next accounts are presented in about June 1960.

It is proposed to convert the Ordinary Stock into Ordinary Shares of 5/- each. I hope this will lead to a freer market in the Ordinary Shares and make them more attractive to small investors.

A great deal of thought is being given to the problem of devising an investment medium suitable for small investors and so to encourage wage earners to become investors. It is doubtful if the traditional type of unit trust is really best suited for this purpose since it suffers from disabilities which make difficult the sale of its own capital to the type of person in question. Any investment that is to appeal to small investors must first be free from the necessity to reclaim income tax already paid at standard rate and from a 2% stamp duty on all purchases.

AWARENESS OF THE RISKS

If the "small man" is coming into the markets as an investor, it is essential that everything possible should be done to ensure that he is aware of the risks, as well as the rewards, that are inherent in buying Ordinary Shares. As the more sophisticated investor already knows, it is quite possible to suffer substantial capital losses even when market prices as a whole are rising.

The period since I last wrote my Chairman's remarks has marked a great change in the organization of the Charterhouse group of Companies. Your Company — the Trust — has become an orthodox Investment Trust Company with only about 15% of its total resources in its one big investment which will be 500,000 (or about 8 per cent) of the Ordinary Shares of The Charterhouse Group Limited which has recently placed its Ordinary Share Capital on the market. Many Stockholders of the Trust took advantage of the opportunity of buying Ordinary Shares in the Group and thus becoming directly interested in its future.

ASSOCIATED NEWSPAPERS LTD

LORD ROTHERMERE'S STATEMENT

The Fifty-fourth Annual General Meeting of Associated Newspapers, Limited, will be held on Tuesday, July 14, 1959, in the Memorial Hall, Farringdon-street, London, EC4. The following is from the statement by the Chairman:

The past financial year has been a period of stability. In my last annual statement, you may recall I expressed the view that we could look forward to a year no less satisfactory. I am very glad to report that the results are rather better than I then foresaw.

For the first time since the war the trend of increasing costs has been arrested. Taking the newspaper industry as a whole, there have been only minor increases in cost in one or two directions and actually some decreases in others. Advertising revenues have been fairly buoyant and your papers have followed the national pattern of steady circulations. The sales revenue of the group reached a record figure during the period under review, due to the full effect of price increases over a year ago.

No major difficulties have arisen in the field of industrial relations. In fact, the friendly and co-operative relationship between management, unions, and staff has been a welcome feature. I regret, however, that in some departments there still exists a lack of realism to the main problem which now faces us all. In present day highly competitive markets long-established industries and especially old-established firms within those industries are very vulnerable. For this reason it is vital that all sides should approach the introduction of new techniques and mechanisation in an objective and enlightened manner. For instance, it is incongruous that after years of negotiation no conclusion has been arrived at regarding the mechanical packing of newspapers.

ACCOUNTS

I would now draw your attention to several points in the Accounts. You will see from the Profit and Loss Account that profit on trading shows an improvement on last year. This was achieved in spite of the fact that the period includes two Easters, always an expensive occurence in daily newspaper publishing.

The dividend from Anglo-Newfoundland Development Co., Ltd., shows a decrease to 20 cents per share as compared with 37½ cents in 1957. In fact, the Anglo-Newfoundland group's profit showed an increase in 1958, but in order to maintain the Company's strong financial position, it was decided to reduce this year's dividend.

There has been a welcome relief from taxation by the reduction of Profits Tax to a flat 10 per cent, which reduction shows a material advantage to this Company as it is distributing nearly half its profits. The present year also in part benefits from the reduction of the standard rate of Income Tax. Both these alterations are welcome however, not only from the point of view of the Company and the shareholders, but as tangible evidence of returning prosperity and stability in this country.

Turning to the Balance Sheets, there are one or two items to which I should draw your attention. The variation in Trade Investment is mainly due to the effect of the change in our television interests in the country. So far as liquid resources are concerned, you will see that the sum total of Tax Reserve Certificates, Short Term Loans, and Cash in the Consolidated Balance Sheet is £1 million larger than last year's figure of £4½ million. Part of this increase arises from the longer credit now arranged in respect of payment for newsprint. These considerable liquid assets were, to some extent, necessary owing to certain forward commitments. For instance, there has been the repayment of £500,000 3¼% Unsecured Loan Stock, the purchase of West Country Publications Limited, and, as mentioned elsewhere, an amount reserved in the event of our increasing our holding in Southern Television Limited. Whilst, therefore, the balance may seem large, these changes will reduce it considerably. You can rest assured that your Board is watching the position carefully and that these resources will be used to the best advantage of the Company.

THE DAILY MAIL

During the year, the *Daily Mail* continued to add to its reputation for enterprise. For instance, the sending of two correspondents to the borders of Tibet to discover what was going on in that unfortunate country and their warning reports published some three months before the escape of the Dalai Lama; the support given to the crossing of the Atlantic by the Small World balloon, are but two of many examples both abroad and at home. The *Daily Mail* corps of correspondents and reporters ensure that no event can occur anywhere in the world without a *Daily Mail* man being there to report it.

The political influence of the *Daily Mail* remains unsurpassed by that of any other journal. This was illustrated by Sir Roy Welensky's choice of the *Daily Mail* for publication of a letter putting the case for the Federation of the Rhodesias and Nyasaland following the troubles which broke out in Nyasaland.

The leading article entitled Comment continues to be widely read for its forthrightness and "down to earth" common sense, but the *Daily Mail* is always ready to open its columns to points of view that differ from it own. The *Daily Mail* is a newspaper that has no axe to grind, and is therefore trusted by its readers.

THE EVENING NEWS

While sales of all London evening papers have shown a slight tendency to decline, last year *The Evening News* maintained its pre-eminent position in the London market. Sales were nearly as many copies as the two other evening papers together. *The Evening News* has been established for many years as the leading London family newspaper and the evening paper with the biggest sale in the world. The appreciation by advertisers of its pulling power is demonstrated by their supporting the large size papers which *The Evening News* has been able to publish.

The Evening News also is predominant for small and personal advertisements. These have greatly increased during the past year, and *The Evening News* is recognised by advertisers as being the paper which obtains the most satisfactory results.

THE SUNDAY DISPATCH

The complete change in the character of the *Sunday Dispatch* decided on two years ago caused a considerable loss of readership. I am glad to be able to report that the circulation is now steady. Its contributors include many of the most famous writers of our day, and agreements have recently been signed with some major "best sellers" for special feature assignments over the coming year. The quality of its news, sport, and financial coverage is recognised and has placed the paper among the best of the responsible Sunday journals.

THE DAILY SKETCH

The *Daily Sketch* has maintained its standard of lively and aggressive journalism which has more than doubled its readership over the last five years.

Throughout the year the advertising position steadily improved, and the gross revenue from this source was appreciably higher than in the previous year. The outlook for the current year is encouraging, and the present position is enabling the *Daily Sketch* to produce an increasing number of larger papers.

WEEKEND

This has been a difficult year for the magazine trade in general and 1958 saw the closing down and merger of some well-known publications. *Weekend* is the third largest gravure magazine in colour published in this country and the most popular weekly magazine covering a variety of interests, which appeal to all members of the family. Sales this year are showing a more satisfactory trend.

TELEVISION

Southern Television Limited, in which we hold a one-third interest with the Rank Organisation and Amalgamated Press, started operations at the end of last August, and is already earning profits.

Circumstances have arisen recently

which Associated Newspapers Limited can increase its holding up to 50 per cent in Southern Television, and if this can be achieved on terms satisfactory to your Company it is our intention to take this further interest.

PROVINCIAL NEWSPAPER INTERESTS

The provincial subsidiaries have continued their steady progress.

The volume of local display and classified advertising has increased from last year's record peak, and is still increasing. Although competition for national advertising has been greatly intensified, it is gratifying to note that more national advertisers are using our provincial newspapers for continuity advertising.

During the year, a favourable opportunity occurred of acquiring the Harmsworth family interest in West Country Publications Ltd. In accordance with our normal policy, the independence and local character of this group of newspapers will thus be preserved. This, I am sure, will be an investment which will be of considerable value to your Company.

GODFREY'S LIMITED

The 46th annual general meeting of Godfrey's Limited was held on June 22nd in London, Mr Herbert E. Down, F. C. A., Joint Managing Director, presiding in the absence of Lieutenant Colonel W. E. Castello, M. I. Mech. E. (Chairman and Joint Managing Director).

In the course of his circulated statement the Chairman said: In the communication made to Shareholders last February, it was stated that Profits for the year to December 31, 1958, would not reach that for the previous year, but that with the lifting of credit restrictions in the Autumn, confidence had then been restored. With the Budget there comes an additional and most welcome relief in Purchase Tax and the freeing of Commercial Vehicles from this tax, which makes the outlook for the current year much better, since the principal part of your Company's turnover is in Commercial Vehicles, Bodies, Tipping Gears and allied components.

In February last, your Directors decided that the improved conditions in the Trade were such that a Scrip Issue of 25 per cent could be made and the current dividend maintained on the increased Capital.

A further measure of our confidence in the future progress of your Company is the decision to go forward with building extensions at Godalming and Kingston.

Your Directors propose later in the year to make arrangements for increasing the Company's Capital on terms which should prove attractive to Members.

If the volume of business in hand is any indication of the prospects for 1959, your Directors anticipate that considerable improvement in the results will be achieved.

COMMONWEALTH DEVELOPMENT FINANCE COMPANY LIMITED

The Annual General Meeting of Commonwealth Development Finance Company Limited was held on June 25th at 27/32 Old Jewry, London E.C.2.

The Right Hon. The Lord Godber, Chairman, presided.

The Chairman said: — Gentlemen, in previous years I have not felt the need to say anything at the Annual General Meeting to supplement my printed Review, but the events of the last financial year have been unusual and I feel I should therefore address a few words to this meeting.

First came the mention of your Company and its activities at the Commonwealth Economic Conference at Montreal. Our activities have already made your Company known to many Commonwealth Governments, but this reference will have served as a general reminder of our function and it has given your Board and the Company's staff the encouragement of knowing that their work is recognised and appreciated.

Then came our share issue, the response to which has been a source of much pleasure to your Board. The Directors' Report of 25th May advised you that, in addition to applications for 980,000 new "A" shares received from existing shareholders, 76 other companies had applied to become "A" shareholders in respect of an additional 5,030,000 new "A" shares. More applications have come in since that date and I can announce that the total of applications now amounts to 6,320,000 "A" shares and that 81 new companies wish to become shareholders. After you have passed the necessary Resolution the authorised capital of your Company will be £30 million of which £26,310,000 will be issued. This result is most gratifying to your Directors. It implies an encouraging measure of confidence in the Company and its achievements and demonstrates an admirable sense of responsibility on the part of the subscribing companies.

I would like for a moment to strike a different note. In recent years this country has passed through severe difficulties which, if not yet entirely surmounted, are in my opinion well on the way to becoming past history. From time to time we have heard suggestions and inferences from some of our friends abroad that the strain of these difficult years has sapped the vitality of some of our great industrial and commercial enterprises.

Needless to say I have never countenanced such views and I am glad to have this opportunity of rebutting them and, in doing so, I am sure I may speak for you too.

My opinion has been amply confirmed by the response to our invitation to subscribe to our recent share issue on such a broad basis. To my mind it indicates in no uncertain fashion that the spirit of the merchant adventurer is still very much alive in this land and it augurs well for our own future and for the Commonwealth and all those which it is our purpose to serve.

I extend a warm welcome to all our new shareholders. I would add a special word of welcome to those new shareholders who form part of groups whose principals are in Canada or the United States and to say how pleased my colleagues and I are to see this demonstration of their interest in, and recognition of the value of, the development of the Commonwealth.

I should like to reaffirm your Board's appreciation of the ever present help afforded to us by the Bank of England, evidenced now by the substantial increase in its holding of "B" shares. You will also have seen that certain Commonwealth subscribers will be coming on to our "B" share register, which is a source of much pleasure to us.

I hope you will consider the Balance Sheet satisfactory. The addition to Reserve this year is the largest so far; nevertheless it is modest.

There are inevitable risks in the development field and the creation of substantial reserves is of the highest priority. Because, in the very nature of our business, the margin of earnings available to us will always be small and particularly because of the inroads made by taxation, it must take some years before our Reserve funds have been established at a satisfactory level. Nevertheless, eventually we hope to give our shareholders a modest return on their investment in CDFC.

The first calls on the new share capital will bring in £3,127,000 and your Board is now considering ways and means of raising long-term capital in order to reduce our large overdraft still further and to provide funds for further expansion.

I would like to make a special reference to the importance we are attaching to the help we can give towards the formation of development corporations in Nigeria and Rhodesia.

The imminence of independence in Nigeria in October 1960 throws a special emphasis on the policy in industrialisation which is being so energetically pursued in that country. Nigeria's expressions of goodwill towards Britain and acceptance of the Commonwealth idea and all that it implies, throw a very special responsibility upon this country to deserve and justify a continuation of that confidence in the years ahead. CDFC is assisting and indeed taking a lead, in the establishment of what will be called the Investment Corporation of Nigeria Limited. Your Managing Director, Mr. Hoar, has just returned from Lagos, having taken positive steps to bring the Corporation into being under sound management. I hope also to visit Nigeria later in the year.

In the Federation of Rhodesia and Nyasaland, availability of abundant power in the near future from the Kariba hydro-electric scheme will assist in the expansion and diversification of the natural development of the economy in those territories. The proposed Rhodesian Development Corporation will, it is hoped, be particularly well placed to give backing, both financial and advisory, to the smaller African and European enterprises, and we shall be glad to contribute to the Corporation not only from our experience gained from association with similar specialist corporations in other countries but also with an equity subscription.

The availability of new funds to CDFC and the publicity which has been attracted thereby will certainly increase the number of projects placed before us. In anticipation of this, we are increasing our staff and we have plans for our executives to travel more widely. I must stress that the standard of appraisal by which we judge our investments is high and that your Board will only be prepared to consider schemes which meet these high standards. Nevertheless, we have every confidence that our rate of investment will increase and that we shall be able to play an increasingly larger part in the industrial development of Commonwealth countries.

The Report and Accounts were adopted, and the increase in capital approved.

The meeting closed with a vote of thanks to the Chairman, Directors and Staff, to which the Chairman made a suitable reply.

LANCASHIRE DYNAMO HOLDINGS LIMITED

CHALLENGE OF INCREASINGLY COMPETITIVE CONDITIONS

The sixtieth Annual General Meeting of Lancashire Dynamo Holdings Limited was held recently in London. The following is an extract from the statement by the Chairman, Lieutenant-Colonel G. S. Marston, DSO, MC:

It is my privilege to present to Stockholders the Report and Accounts for the year ended December 31, 1958, and I am very pleased to be able to report that another record has been achieved by your Group both in Turnover and in Profit.

During the year your Directors honoured me by electing me as Chairman and Mr D. C. Lorkin as Managing Director following Mr S. F. Steward's resignation on his appointment as Director-Designate of The British Electrical and Allied Manufacturers' Association. As you are aware, I am Chairman and Managing Director of J.G. Statter & Co. Ltd., which became part of your Group in November, 1956, and I consider it a very great privilege to be able to play a greater role in your Group of Companies, which I believe to have a tremendous future.

Mr D. C. Lorkin is also Managing Director of Lancashire Dynamo & Crypto Ltd., with which he has been associated since 1932.

Earlier in the year Mr A. W. A. Dick-Cleland relinquished his Directorship and Mr R. A. Bent, Managing Director of our Electronic Company at Rugeley, has since been invited to take his place on the Board.

We have been fortunate to obtain the services of The Right Honourable the Earl of Halsbury and he has accepted the invitation to act as Vice-Chairman as from April 6th.

The Profit of the Group for the year, before Taxation, amounts to £836,466, an increase of approximately £90,000 over the previous year. The Profit of the Group after Taxation amounts to £396,796 as compared with the previous year's total of £382,721. The Consolidated Balance Sheet indicates that the liquid position of the Group has continued to improve during the year, consequent upon improved planning and production at our various Works.

Your Board recommends that the sum of £100,000 be transferred to "Reserve in Respect of Increase in Replacement Cost of Fixed Assets," thus increasing that reserve to £438,284 and that a further £100,000 be transferred to General Reserve to bring that total to £821,386.

The results for the year would in the Board's view justify a total dividend of 12½ per cent as against 11 per cent last year. As however an increased distribution for 1958 would attract additional liability to Profits Tax the Board recommends a final dividend for 1958 of 7 per cent (making the distribution the same as for 1957) and have declared a special bonus interim dividend for 1959 of 1¼ per cent payable at the same time as the final dividend which will not prejudice subsequent distributions for 1959.

As the various reserves now exceed the Issued Ordinary Stock the time is felt appropriate to make a further Bonus Issue. Accordingly the Board recomends the capitalisation of £726,317 of the Reserves and that a Bonus Issue be made to Stockholders in the proportion of 1 in 3. An Extraordinary Meeting will be convened to pass the necessary resolutions.

THE FUTURE

Increased competition is now being experienced, is still likely to continue and may become even more severe. We must however accept these competitive conditions as a challenge and I am confident that we are as well equipped to meet them as anyone in the industry.

I feel confident in spite of the difficulties we may have to face that the enthusiasm, determination and goodwill so evident to me will carry us through and help us to expand and to keep up to date and maintain the high standards of design, workmanship and service which for so many years have been synonymous with the Lancashire Dynamo name.

The solid foundation stone laid 60 years ago and the fine spirit af adventure then shown will, I am convinced, bring to your company further progress and prosperity in our present sphere of activities and in any new fields which we may enter.

The report and accounts were adopted.

At an Extraordinary Meeting the Board's capitalisation and scrip issue proposals and the increase of authorised capital were approved.

ATLAS ELECTRIC AND GENERAL TRUST

FURTHER INCREASE IN REVENUE

The fifty-first Annual General Meeting of Atlas Electric and General Trust Limited was held on June 25th in London.

The Right Honourable Lord Remnant, MBE, (the Chairman), presided and, in the course of his speech, said:

Total income at £1,289,000 was £49,000 up on the previous year. Ordinary expenditure showed no change, but the expenses of the capitalisation issue last January, amounting to £2,600, have been written off. The charge for taxation was reduced by £5,000 and the net revenue for the year was therefore some £51,000 higher at £634,000.

At the Extraordinary General Meeting held last December to consider the proposed capitalisation issue, I indicated that the Board expected to maintain the same rate of dividend, namely 12 per cent, on the enlarged Ordinary capital. That would have involved a payment of a final dividend of 8 per cent. We decided, however, to make the final payment 9 per cent and to transfer £175,000 to General Reserve.

The valuation of the investments now totals more than £21,800,000. This compares with a book value of £11,600,000 and shows an appreciation of £10,200,000 or 87,8 per cent.

There has never been a time when it was more necessary tha now to be constantly watchful over a large portfolio of investments. Take-over bids have become so common that some newspapers make a news feature of them every day. The fear of such a bid being made tends to influence the Board of a company to adopt a course of action which it might not take otherwise. Much as one may sympathise with a management which has conducted the business of a company with a proper regard to the interests of all concerned, it is undeniable that a take-over bid often leads to a more profitable employement of all the assets of a company.

The net asset value of £1 Ordinary Stock on March 31st last was 68/8d. On that date the Financial Times Industrial Ordinary Share Index stood at 219.4 and the Dow Jones average at 601.7. As those indices at June 1st had moved up to 240.1 and 643.51 respectively the net asset value at the latter date was considerably greater than 68/8d.

There has been much discussion recently in the Press and elsewhere as to how investors in various companies including Investment Trusts have fared over the last decade. As regards the purchaser of £100 Ordinary Stock of this Trust on March 31, 1948, his experience, as viewed at March 31, 1959, would have been as follows. His gross annual income would have increased from £2 to £19. The net asset value of his stock would have increased from £178 to £515. The market value would have increased from £72 to £450. No doubt it would be regarded as a very satisfactory investment.

I anticipate that the results of the current year will be as satisfactory as those of the year just ended.

The report was adopted.

WHESSOE LIMITED

SATISFACTORY OUTCOME OF YEAR'S WORKING
MR C. M. SPIELMAN'S REVIEW

The thirty-ninth annual general meeting of Whessoe Limited will be held on July 14th at 25, Victoria Street, London, S.W.

The following is the review of the chairman, Mr C.M. Spielman, OBE, MC, BA, MICE, MIStructE, which has been circulated with the report and accounts:

The year has been one of sharp fluctuations both in the demand for our products and in the availability of steel supplies. I am, however, glad to be able to report that although production in certain departments had to be curtailed for a period, the outcome has been satisfactory in that our increased efficiency resulted in profit margins being virtually maintained and, due to the greater value of work completed, a higher profit than that of last year has been achieved.

THE ORDER BOOK

In my review of last year I referred to the sudden falling off of orders following the crisis of September 1957. Owing to our large back-log of work we were able to continue in full production for several months. But the shortage of orders, particularly from the petroleum industry, persisted well into our current financial year, and ultimately in order to maintain continuity of employment we had to suspend week-end working and overtime in some departments. Despite this, certain of our departments then had only three months work in front of them, in place of the twelve months to which they had been accustomed for so many years. This change, however, brought its own compensation in that it had a most salutary effect on our efficiency and economy. All our employees reacted splendidly to the reversion to a more competitive state of trade, and we were able to quote keener prices as well as shorter deliveries. This in turn resulted in our obtaining at least our share of the fewer orders available. Moreover, towards the end of the year there was an improvement in both enquiries and orders, and whilst the latter are still not up to our productive capacity, most departments now have a good six months work in front of them.

We continue, however, to be dependent on that return of international confidence which will lead to a real revival in capital investment, and I would again remind shareholders that our continued progress depends in the main on the rate of development of the petroleum industry.

THE YEAR'S WORK

Whilst the majority of our contracts occupy less than a year, we always have some in hand which take two to five years to complete, and outstanding amongst these are our nuclear power contracts.

In the year under review we completed the four reactor pressure vessels at Chapel Cross, although two remain to be finally handed over. These are similar to the four vessels at Calder Hall which we completed a year ago. Calder Hall was, of course, the first nuclear power station to go into commission in the world and it is gratifying to have made a major contribution, not only to it, but also to Chapel Cross which also is a pioneer station. The two larger reactor vessels at the Bradwell Nuclear Power Station are more than half finished, and the single similar vessel which we are to build at Latina, Italy, is in the course of works fabrication. As a member of The Nuclear Power Plant Company we are building this latter vessel as our contribution to the first British contract for a nuclear power station overseas. We are also particularly pleased to have received from the Atomic Energy Authority the order, against strong competition, for the pressure vessel for their Advanced Gas Cooled Reactor which is a pioneering project of world significance. Shop work on this also is now in progress.

I referred in my last year's review to the prototype aluminium tank for the storage of liquid methane ordered by the North Thames Gas Board. This has been completed and methane gas, mixed with gas produced from coal, is now being supplied to consumers, and we are watching developments in this field with very great interest.

As usual, however, large oil storage tanks have constituted our base load, and represent a major part of our works and erection activity, and it is of interest to note that a growing proportion of our storage tanks are now welded by automatic methods which add considerably to the speed and quality of our work.

The year has also produced many interesting orders for Shand and Jurs equipment including the latest Telepulse distant transmission system by means of which the level and temperature of the liquid in any number of storage tanks is recorded at one central point. Demonstrations of this equipment have been made at several exhibitions both at home and on the Continent. Another pleasing feature of the year has been the considerably increased production of heat exchangers.

ACCOUNTS

The profit for the year after all deductions other than taxation amounted to £1,229,338 as against last year's previous record figure of £1,028,950. The corresponding figures after taxation are £629,338 and £503,950 respectively. We have included in the profit of the year a further £40,000 on the same long term contract on which we took £40,000 last year. The Board consider that this appropriation, whilst still leaving much of the profit in work in progress, gives a truer picture of the result of the year's work. Apart from this, our practice of only bringing in profit on work which has been completed and handed over has been followed.

In spite of the higher value of work completed gross work in progress at £6,054,416 is at approximately the same high level as last year, and the profit on this, other than the £80,000 mentioned above, remains to emerge in future years.

Capital expenditure, although somewhat below that of last year, continues to be considerable. Owing partly, however, to a substantial reduction in net work in progress, our liquid position has greatly improved. Whilst debtors are at about the same level as a year ago, creditors have been reduced by about £100,000 and in place of a bank overdraft of about a quarter of a million pounds, we have short term investments and a credit balance of well over half a million.

I have indicated in each of my reviews of the past two years that it is our intention to continue to expand. Our plans for further stages are well advanced and a start will be made in the near future. The rate of progress must be dependent, however, on the growth of the industries we serve. With the large prospective expenditure involved we must continue to be moderate in our distribution policy. Nevertheless, as I said a year ago, we believe that dividends should follow the trend of profits, and by profits I mean realised profits, and not any estimated future profits. An increase in dividend is thus solely a reflection of good results achieved; and it is on this footing that your Directors recommend a final dividend of 22½% on the Ordinary Stock, making a total of 27½% for the year, compared with 25% last year.

PRODUCTION FACILITIES

During the year our new welding shop has been completed. It is already in use for the automatic welding of heavy plate panels for nuclear power plant, and is equipped with a powerful isotope for radiography. The construction of the shop is of interest in that we understand it is the first large industrial building to be constructed with broad flanged beams made by Dorman Long & Co., in their new Lackenby Rolling Mill.

STEEL

Our production has been greatly eased by the ready availability of steel in place of the shortage, particularly of heavy plate, which has persisted for so many years and we are therefore very glad the steel industry has continued in its resolve to increase its plate rolling capacity in accordance with the Iron and Steel Board's expansion programme. I sincerely hope that the industry which supplies our life blood will not be sacrificed to political ideology and that it will be allowed to continue to give that efficient service which can only come from private enterprise. World wide competition is bound to become more and more intense, and it is only by private enterprise that it can be met.

PERSONNEL

Once again I would like to express appreciation of the good spirit that prevails throughout all the departments of the Company, and I believe that all our employees feel that they are part of an efficient industrial organisation. In particular I would express appreciation of the understanding attitude of our works shop stewards when it looked at one time as if we should have to prepare for redundancy. Fortunately that did not occur, but if it had I know we should have had their fullest co-operation.

We have re-organised our staff Engineering Division into three self-contained groups, each of which handles enquiries, tenders and contracts in all phases, and the result is a most effective day to day co-ordination of activities with a minimum effort devoted to paper and planning.

With the growth in complexity of our operations and methods of production, we require more and more technologists of high ability, and our staff numbers must inevitably grow. We continue to give opportunity and encouragement to our younger employees in the works and offices to pursue technical college studies on the day-release system, and the best of them to attend sandwich courses leading to higher diplomas. We are convinced from our own experience that the university graduate and also the sandwich course product are necessary for our future prosperity, and we hope to expand our employment of both.

On the debit side of industrial relations, the year has been one of unofficial strikes and upsets at many of our erection sites, and particularly the more important of them. There are seemingly elements determined to delay or wreck important construction projects, and our Erection Division have had to devote too much time and energy to disputes which need never have arisen.

ANALYSIS OF STOCKHOLDERS' ACCOUNTS

It will, I think, be of interest to our stockholders to know that our £1,000,000 Ordinary capital is held by 1,364 stockholders and that no fewer than 1,068 holdings amount to under £500 nominal. By value, 20.5% of the Ordinary capital is held by private individuals, 22.5% by nominee companies, 26.1% by insurance companies, and the remaining 30.9% by pension funds, investment companies and the like. Your Board consider the wide distribution and solid character of the holdings to be most satisfactory.

WOODALL-DUCKHAM LIMITED

A DECADE OF PROGRESS
PLANS FOR THE FUTURE
MR T. C. FINLAYSON'S REVIEW OF OPERATING COMPANIES' ACTIVITIES

The 11th annual general meeting of Woodall-Duckham Limited was held on June 29 at Woodall-Duckham House, 63/77, Brompton Road, London, S.W.3., Mr. T. Campbell Finlayson, C.B.E., M.Sc., M.Inst. Gas.E., M.I.Chem.E., F.Inst.F. (the chairman), presiding.

The Secretary (Mr. N. Granville Lang) read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman which had been circulated with the report and accounts for the year ended Dec. 31, 1958:

Before dealing with the Report and Accounts, I would refer to the appointment of my colleague, Mr. James Simpson, as Deputy Chairman of your Company. Mr. Simpson also holds the position of Deputy Chairman of Woodall-Duckham Construction Company Ltd., the principal Operating Company of the Group, and will, in future, undertake special duties relating to the operations of the growing number of Subsidiary Companies within the Group.

In the Report of the Directors it will be noted that Mr. J. S. Jeffrey, having attained the age of seventy, retires from the Board in accordance with the Group's retirement policy. Mr. Jeffrey was a Director of your principal Operating Company for 29 years, being Joint Managing Director for six years. During the past three years he has been Chairman of W. J. Jenkins & Company Ltd., an important Subsidiary Company of the Group. Your Directors would like to place on record their deep appreciation of the great contribution he has made to the Group's success during his 47 years' service with it.

I am pleased to report that the activities of the Group continued at a satisfactory level during 1958 in spite of the difficult conditions which prevailed in the Industries which the Group serves, namely, the Steel, Coal and Gas Industries. The value of work carried out during 1958 exceeded 14½ million pounds as compared with 15 million pounds in 1957. The value of orders received in 1958 was over 10½ million pounds compared with 12 million pounds in 1957. I am pleased to state that the Group still had over 18 million pounds worth of unexecuted work at the beginning of 1959.

THE ACCOUNTS

The Consolidated Profit and Loss Account for 1958 shows a profit before taxation of £1,617,185 compared with £1,264,938 for 1957. Taxation amounted to £757,028 compared with £620,890 for 1957. Thus, after deducting £13,978, the proportion of profits applicable to outside interests, the Group Net Profit for 1958 was £846,179 against £609,836 for 1957. Out of the Group Net Profit of £846,179, profits amounting to £636,338 were retained in the Subsidiary Companies, leaving a net profit of £209,841 available in the Parent Company's Accounts.

Of the amount retained in the Subsidiary Companies £425,758 was allocated to General Reserves, £100,000 to Research and Development Reserve, the remaining £110,580 going to increase the amount carried forward on the Profit and Loss Accounts.

In my Statement last year I drew Members' attention to the fact that the annual profits of the Group are very much influenced by the dates on which contracts are completed and the profits thereon brought into account. The financial results for 1958 have been very favourably influenced by the bringing in of such profits from a number of completed contracts of substantial size.

A similar influence, though to a lesser extent, will operate in respect of the 1959 profits. Profits for 1960 may, however, be adversely affected by the smaller order books for 1957 and 1958. Whilst bearing these facts in mind, your Directors nevertheless consider that Members should reap some current advantage from the conservative dividend policy adopted in the past.

They therefore recommend a Final Dividend of 15 per cent, on the Ordinary Shares, making with the 5 per cent. paid on the 31st December, 1958, a total of 20 per cent. for 1958, the same as for 1957. They have also decided to pay a Special interim Dividend of 5 per cent. on the Ordinary Shares in respect of the year ending 31st December, 1959, to be paid at the same time as the Final Dividend in respect of 1958.

They also propose, in due course, to pay a further Interim Dividend of 5 per cent. on the Ordinary Shares to be paid on 31st December, 1959. When your Directors come to consider the amount of the Final Dividend for the year 1959, they will take into consideration the financial results for that year and the Group trading prospects for 1960, but will not take into consideration the Special Interim Dividend proposed in respect of 1959.

RECORD OF PROGRESS

It may be of interest to Members to have a very brief summary of the last ten years' operations of the Company from the 1st January, 1949, to the 31st December, 1958. Over this period the net profit applicable to the Company has increased from £149,000 in 1949 to £846,000 in 1958; the net dividends paid from £44,000 to £164,000; the issued Ordinary Shares from £400,000 to £1,268,000 of which £800,000 was due to capitalisation of reserves; the Capital and Revenue Reserves from £160,000 to £2,439,000.

The total volume of work carried out

during this ten-year period exceeded £115 million. the total amount paid in taxes was over £5 million, whilst the total amount distributed in net dividends was just under £900,000. Thus, in spite of heavy taxation, your Directors have been able to build up a strong financial position by reason of the conservative dividend policy adopted throughout this period, which enables the Group to face with confidence the changing conditions to which I shall be referring.

The presentation of this brief review of results makes it a suitable opportunity for me to place on record your Directors' appreciation of the help they receive from their Consulting Accountants, Peat, Marwick, Mitchell & Co. Mr. R. G. Leach, one of their Partners, acts as Financial Consultant to the Group. The success of the Group has been greatly assisted by his ready advice and expert guidance on all financial matters.

EFFORTS TO MEET CHANGING REQUIREMENTS

As Members know, the Woodall-Duckham Group lives to a large extent upon the construction of plant and the supply of equipment to the Steel, Coal and Gas Industries in Great Britain and overseas. In the year under review there has been a slackening in demand for your Companies' products, partly because of the decline in the demand for iron, steel and coal, and partly because new processes of town gas production and of iron and steel making have caused some changes in the pattern of requirements.

Your Directors cannot influence the demand for steel, coal and gas but they can see to it that they have available plants and equipment suitable to meet the changing requirements of their Clients in these basic industries. This is their aim and their plan.

Your Group has developed an overall plan for Fuel Processing covering a wide range of plants for the treatment of coal, oil and raw gas to meet the needs of the fuel industries. Technical developments in the field of fuel treatment are taking place all over the world. Exchange of technical information know-how and patents between Companies is one of the surest and most economical ways of keeping abreast of the times.

It therefore may interest you to know that in one field or another member firms of your Group have Agreements for exchange of know-how with no less than 16 different overseas Companies. This requires a great deal of contact work and members of your Boards have visited Australia, America, South Africa, Rhodesia, Germany, France, Holland and Italy during the year.

Members may be interested to hear very briefly about the activities of the Operating Companies which constitute the Woodall-Duckham Group.

WOODALL-DUCKHAM CONSTRUCTION COMPANY LTD.

The Company has been heavily engaged in building a number of coke oven plants for the Steel Industry at home and in South Africa. Two important plants have been completed for the National Coal Board. One of these plants incorporates many new features relating to the instrumentation and control of the by-product plant—thus bringing some degree of automation to a Coking Plant.

A number of new and reconstructed coal carbonisation plants have been completed for the Gas Industry. It may be of interest to record that during 1958 over 20 million tons of coal was treated in Great Britain in coal carbonisation plants designed, built and serviced by the Company.

An order exceeding £2 million in value has been received from the South Eastern Gas Board to build at their Isle of Grain Works a high pressure Oil Gasification Plant using the Shell Gasification Process. The contract also covers the supply of ancillary gas treatment plants and a tonnage oxygen plant.

The Company has obtained from Stein et Roubaix of Paris a licence to exploit a new process—known as the MS Process—for the reforming of refinery and liquid petroleum gases, natural gas and light distillates to produce town gas. The process should have a useful application in Great Britain and various parts of the Commonwealth.

In this country the Gas Industry is actively exploring a number of alternative methods of making gas from coal and oil with a view to making available a cheaper supply of town gas. The employment of high pressure techniques renders experimental work much more complex and expensive and generally beyond the scope and resources of any individual Gas Board or contracting Company.

The Gas Council, under the leadership of Sir Harold Smith, are therefore to be congratulated on their longsightedness and enterprise in establishing at Solihull a Research Centre very well equipped to carry out such work. Not everything undertaken three can hope to attain speedy commercial success but without the courage to spend money on development work no progress can be made in establishing new techniques. It is, therefore, a source of satisfaction that the Woodall-Duckham Construction Company is one of the Companies which has entered into an Agreement with the Gas Council to build commercial plants in accordance with these Gas Council developments as and when they are ripe for commercial exploitation.

W. J. JENKINS & COMPANY LTD.

The year under review has seen the successful commencement of gas-making of 50 per cent. of the installed capacity of 14 million cubic feet per day of the Intermittent Vertical Chamber Oven Plant at the Garston Works of the Liverpool Group of the North Western Gas Board.

The Company entered into a further Agreement with Schuchtermann & Kremer-Baum of Dortmund for a licence to design and build Coal Preparation Plants based on the S.K.B. range of products, and, in particular, their latest speciality, the "Teska" Dense Medium Washer. This, allied with the previous licence for Resonance Screens, and W. J. Jenkins 'own speciality items for and experience of Materials Handling, will enable them to carry out contracts for complete Coal Preparation Plants, for which enquiries are already being handled.

Modernisation of the Works was completed by the installation of the final items of machinery in the Structural Shop.

Although the second half of 1958 saw a reduction in volume of orders placed, the Company has a full year's work in hand.

WOODALL-DUCKHAM (AUSTRALIA) PTY. LTD.

The year 1958 in Australia has shown a continuing trend away from orthodox carbonising methods, the emphasis having turned to oil gas systems. In New Zealand the position is rather different and a number of enquiries are arising for new Coal Carbonising Plant. Attention has been turned to the development of contracting work elsewhere and a degree of success has been achieved. Development in the air purification and dust extraction field has been undertaken. The Company has set up a Furnace Division and is confident that it will obtain a good share of the substantial volume of business to be done in this field.

In the case of the Refractories Division, the results so far have not come up to expectations, partly due to the change in the overall economic position and to keen competition. Particular effort has been made to improve the quality of the products and in consequence future results.

The year's results have been disappointing, due to factors which have already been mentioned, but it is confidently believed that the new activities and the progressive development of the Refractories Division will bring about an improvement.

THE STOURBRIDGE REFRACTORIES COMPANY LTD.

During the year under review further progress has been made in improving the plant and equipment and generally increasing the efficiency of the Works with a view to the progressive improvement in the quality of a wide range of products.

UNITED FIRECLAY PRODUCTS LTD.

The year 1958 has been a difficult one in all sections of the Company's activities owing to the lessening demand for the Company's products for the Steel and Building Industries resulting in an increase in stock of all products. The prospects are brighter, however, for the current year in both these fields.

In spite of the temporary recession, the plans in connection with increasing the capacity of the Refractory Section, which were initiated in 1957, were brought to finality at the end of 1958 and a start has now been made with the installation of the necessary new plant.

May I, in conclusion, on behalf of my colleagues and myself, offer to all those employed in the various Companies which comprise the Woodall-Duckham Group our warm thanks for all their efforts during the past year which have in no small part led to the Group's prosperity.

The report and accounts were adopted and the final dividend of 15 p.c., less Income Tax, making 20 p.c., less Income Tax, for the year, was approved.

Mr. E. N. Wenboru, M.Inst.Gas.E., was re-elected as a director and the remuneration of the auditors, Messrs. Longcroft, Smith & Co., having been fixed, the proceedings terminated.

Announcing
the expanded services of
RAYMOND INTERNATIONAL

To serve more efficiently the Commonwealth nations and the sterling areas, Raymond International has established a subsidiary with offices at Wingate House, 93/107 Shaftesbury Ave., London, W-1. The new London office is thoroughly equipped to undertake the complete construction of most types of civil works and processing facilities, from field surveys and soil investigations to completion.

For over half a century Raymond has been engaged in world-wide construction, so the name is already well known in many parts of the globe. Now, with the inauguration of Raymond International (U.K.) Ltd., we look forward to providing a wider range of services than ever before. If you are contemplating construction, we should like to discuss your requirements with you. Please write or telephone.

These are a few of the many types of RAYMOND CONSTRUCTION

Petroleum and Processing Facilities

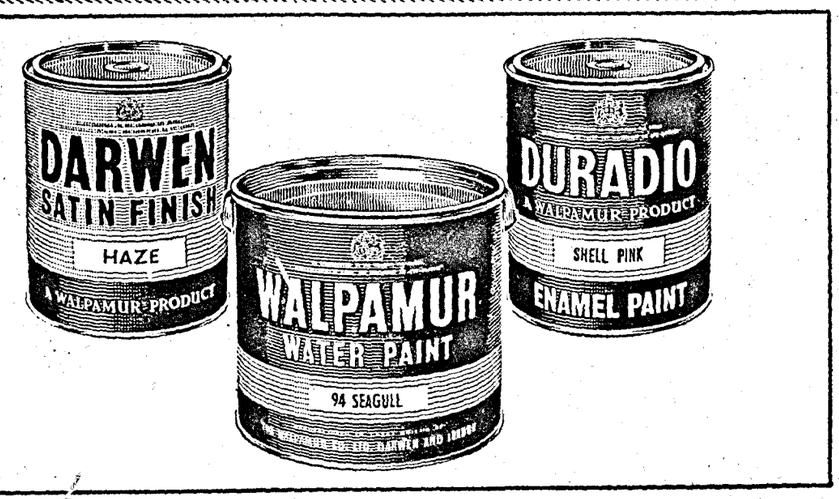
WALPAMUR Quality Paints



There is no short cut to a perfect painting job, interior or exterior, and the finest materials—Walpamur Quality Paints—applied with the care and attention they deserve, will ensure perfection of finish every time. These internationally famous paints are manufactured under constant expert supervision; exacting laboratory and practical tests ensure the maintenance of their consistently high standard. Applied with the skill gained from experience, they can be relied upon to produce decoration that will keep its handsome appearance throughout a long life. In the Walpamur range are paints, enamels and varnishes of superb quality for every conceivable need.

NATIONAL SAVINGS

For those pleasant extras in retirement

...without spending your capital

When your retirement comes, you will find that EXTRA income is a wonderful boon. That is exactly what National Savings Certificates can do for you. By planned encashment of Certificates over a number of years you can, in effect, draw the Income-Tax-free interest that your Certificates earn, whilst keeping your capital intact. For instance, the holding of £750, i.e. 1000 Certificates (10th issue) bought over a period, could give you an Income-Tax-free income of up to £31.0.0 per annum, or twice as much if your wife also has a similar holding WITHOUT DIMINISHING YOUR SAVINGS. 'Savings for Retirement' explains the details of this and other retirement plans – send for it today.

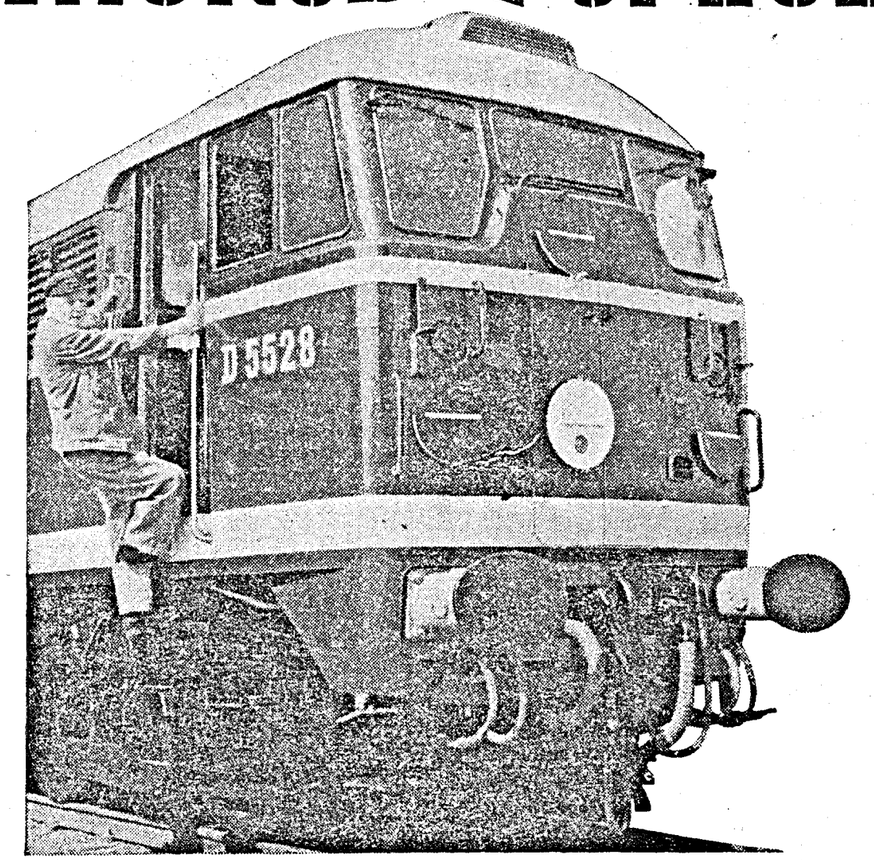
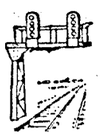
THURSDAY SPECIAL!





Every Thursday afternoon the signals go green to welcome the arrival of the week's most important "special" — the new Type-2 locomotive delivered to British Railways from the Brush works at Loughborough. This weekly delivery of Type-2 diesel electric locomotives is an important part of the modernisation of British Railways. The Brush locomotive now out numbers all other makes of this type in service. So successful has it proved — hauling passengers by day, freight by night — that HAWKER SIDDELEY INDUSTRIES has recently received a contract for a further 75 locomotives, which will double output at Brush until the end of 1960. Production capacity has been increased so that two locomotives can be delivered weekly without interfering with export or other home commitments. At home and abroad, Hawker Siddeley gives on-time, dependable delivery, supported by a vigorous after-sales service.

In Labour Again

IT WAS no doubt very naughty, but nevertheless not surprising, that the news from the Isle of Man last week, where the Transport and General Workers' Union was striking a blow for the good old cause of nationalisation, should have proved an irresistible temptation to Mr Morrison and Mr Shinwell to reaffirm their disregard for Mr Gaitskell. Oddly enough, Mr Cousins in his speech had endorsed the idea of share buying by the state, which is Mr Gaitskell's most characteristic contribution to Labour policy, and had rejected the notion of a shopping list of industries to be nationalised, which is the principal demand of Mr Gaitskell's socialist critics. But the old campaigners had correctly deduced from the tone of the conference's proceedings the robust refusal of the leaders of the union to be sweet-talked out of their fundamentalist attitudes to the nature of society.

The effects of this new fall-out on the immediate political situation in British politics are discussed in a note of the week on a later page. But do they presage something even more important for the long term? When the Labour party split over Mr Bevan and Bevanism just before the 1955 election, it was possible to argue that the main explanation of its apparent suicidal urge lay in an almost accidental complication of personal rancours, in quibbles about personalities rather than in a deep-seated conflict of principles. That argument will not easily wash for the second time running. The new split illustrates a fission which goes very deep in non-conservative political thought and action. It is a fission between instinctive socialists, who think that the main objective of politics should be to change human nature along with the structure of society, and instinctive liberals, who would like to change such things as inherited distinctions of class and wealth but are eager to accept human beings as they are.

This drawing of philosophical battle lines between the socialist and the liberal produces one very obvious result. It is at once evident that most Labour voters and nearly all Labour leaders, irrespective of the vocabulary they use, are on the non-socialist side of the line. The declared object of the Labour party's new style Gaitskellite policies, against which the old guard is kicking, is not to change the structure of society in any very fundamental way by government action but, in the first place, to make certain features of it less abrasive so that people pushing ahead to improve themselves will not feel upset by unfair obstacles put in their way, and, in the second place, to finance the Government's social policies in ways, such as drawing dividends from state owned equities, that might be less objectionable to the ordinary taxpayer.

Gaitskellite policy prospectuses, or something like them, are probably going to be normally needed if Labour is to attract the 14 million odd

votes it needs to be returned to power. The trouble is that these prospectuses are bound simultaneously to stir up revolt among many of the few thousand people who turn up to meetings of the Labour party and some of the trade union leaders, who are on the other side of the ditch. They really do want to change human nature and expect policies that look as though they might accomplish this object. This explains the atmosphere of double conspiracy that surrounds the Labour party's present policy; and has exposed its leadership to charges of sharp practice both from industry and from the true socialist. It is possible, as the Institute of Directors have shown, to build up a charge that Labour is aiming to achieve office with a moderate-sounding programme, which yet contains within it, if its various versions are textually collated, a hidden plan for a socialist take-over bid for the whole British economy. On the other hand, and more plausibly, Mr Cousins, Mr Morrison, Mr Shinwell, the *Universities and Left Review*, and Victory for Socialism all suspect that the continuity with characteristic socialist thinking is at best tenuous and that, in four words, they are being had.

Does the conflict between the things that Labour needs to avoid in order not to scare away the mass vote and the things that it needs to say in order to keep up the spirits of its party workers mean the gradual end of the Labour party as we know it ? Does it, for example, portend success for the Liberal party's take-over bid for the radical vote ? This is the alluring possibility which makes Tory opponents of socialism so gleeful and which buoys up Liberal spirits. It is tempting to say that the Liberals would now have a great opportunity if only so many items in their policy did not look like something that Mr Grimond "has fetched home from a political bring-and-buy sale" But in fact there is a major institutional factor in British politics which is likely to leave the Labour party as the principal challenger of the Tories.

This factor is Labour's connection with the trade unions. If this should really be damaged in the next round of scuffling over the bomb (which now seems less likely in view of the votes at the miners' and railwaymen's conferences) the situation would of course begin to look very different. But now comes the paradox : just as the chances are that the unions will continue to be the decisive factor in giving the Labour party the advantage over the Liberals within the left, and preventing the Liberals from ever having a real crack at the Tories, so it comes increasingly to seem that the unions may be turning into a severe handicap to the Labour party in conducting its own anti-Tory campaign.

This is happening in two ways : the public is blaming the Labour party for industrial conduct by the unions which affronts its sense of fairness and commonsense; and, to judge from some recent union conferences, it is no longer the case that a few union leaders, operating undemocratically, are able or willing to represent in the higher councils of the Labour party the mass of the voters who vote Labour but do not go to meetings. It was always something of an accident that the unrepresentative character of constituency associations and the autocratic habits of union bosses more or less cancelled each other out. The undermining of this conservative tradition of union leadership on which Mr Bevan had calculated in his three-year plan to achieve power in the Labour party is now coming to pass, not quite on schedule since it has taken five years instead of three, and Mr Bevan lost patience on the way and made his own terms. As a result, the situation in which the political left may soon find itself is that the link with the trade unions, while indispensable to keeping the Labour party as the official opposition, may be its greatest handicap to becoming anything else.

Achilles Heel of the Seven

The sensible agreement with Denmark is no more than a first step to solving the problems of farm trade in Europe.

NEXT Monday's seven-power talks in Stockholm on the little free trade area should open under a relatively favourable star, thanks to the understanding between Britain and Denmark reached last week. Agriculture has always been the trickiest element in the new scheme of the seven countries outside the European common market. Austria, Norway and Denmark have never felt so enthusiastic about the scheme as the British, Swedes and Swiss. Denmark, nearly three-quarters of whose exports are farm products, has always had particular reservations. If it is to be wooed into opening its frontiers to Swedish and British industrial goods, it must have something for its farmers in return. The attitude of Austria, and perhaps of Norway, has in turn depended on the Danes' decision.

Under the new agreement with the Danes, Britain is to waive the 10 per cent tariff on bacon, as well as the less important tariffs on blue cheese and canned cream. Certain assurances have been given about quotas too. These arrangements have some strong critics, as the Chancellor of the Exchequer found when he broke the news in Parliament last week. The National Farmers' Union not only dislikes the prospect of more Danish competition. It also feels (as the Danes do) that Denmark's interests would be better satisfied in a broader European context; it assails the idea that British farmers should carry the whole burden of Danish competition. But if, as it demands, subsidies and the bacon council successfully feather-bed the British pig, a new risk appears. The burden of Denmark's new advantage would then be borne by its principal European competitor, Holland. In that case the Dutch would presumably ask for compensations in the German market, at the Danes' expense (half Denmark's food exports go to the Six).

Such a process of retaliation and counter-retaliation would not be in the interest of Denmark or of Europe. But this does not mean that the new gesture is valueless. If there is to be freer trade in industrial products, there must be some freer trade in farm products too. In the long run, British farmers will have to compete. The tariff cuts for Denmark are a first and welcome step in the right direction.

From the start of the debate, however, the Danes have made it clear that what they want is not merely short term advantages in the form of a few cuts in tariffs and quotas, but long term commitments guaranteeing to their farmers expanding markets comparable to those that industrialists will get. Farmers are protected not only by tariffs and quotas but also by administrative measures : marketing boards and price fixing on the Continent, subsidies in Britain. The Danes want guarantees on these policy matters too. They therefore attach great importance to two commitments in the new understanding : that subsidies shall not be used to cancel out what they have been given and that the British Government does not intend to pursue policies which reduce Denmark's share of the British market or prevent it sharing in the market's growth.

EVEN these commitments are in a sense only a start. The Danes have always wanted an agricultural bargain based on the principles of the six-nation treaty of Rome. In such a deal the various forms of agricultural protection would not be abandoned altogether, but a common system would be gradually set up in which home and foreign producers would get equal opportunities. In the past the government has, perhaps, hesitated on all this as much for political as economic reasons. Probably it has been wrong to be so cautious about farm votes. In the next twenty years or so British subsidies will have to come down, whatever happens in Europe. The National Farmers' Union, highly sensitive about short term shifts, is a good deal more sympathetic to the sort of long term change embodied in the Rome treaty. But the prospect of long term commitments which reach deep into the life of national parliaments and civil services brings out, once again, that key implication of any economic union — that it means a measure of political union too. That fact has played an important part in the Government's caution.

Any attempt to merge Britain's system of farm protection with the Continental one raises a structural problem. The enclosure movement transformed British agriculture, so that today the British farmer is a small capitalist, often farming 150 acres or more. By contrast the typical Continental farmer is still a peasant, farming less than 25 acres, often in strips. He still needs and gets more protection than his British counterpart, and he gets it in a different form. Quite a lot of foodstuffs, notably grain, are imported into Britain at world prices. The British farmers are protected by subsidies to their personal income. It is a system with the great virtues of encouraging consumption and of showing the voter how much he is paying to keep the farmer comfortable. On the Continent, it would be impossible to support the peasant by such methods. Instead, he is protected by quotas, tariffs, price fixing and marketing arrangements. To merge the two systems will be hard.

In the next twenty years, however, something like a revolution may very well take place in continental agriculture. Gradually, men like Herr Lübke, west Germany's minister of agriculture and now its President-elect, have been persuading the peasant to amalgamate holdings. A revolution in production methods is beginning, as rising labour costs spur the peasant to raise his productivity by switching from grain to livestock. At the same time, there are pressures within the six-nation European community for changes in the method of agricultural protection. Men like Mr Mansholt, the Dutch member of the European commission, who is responsible for drafting its common agricultural policy, would like to see the community move faster towards a low price level and subsidies on British lines. His countrymen, like the Danes, share his view. By the end of the transitional period of the common market, a marriage with the British system may be much less difficult. And halfway arrangements can be envisaged, given agreement on principles.

The new principle, that freer trade in agricultural

products involves policy matters that range far outside the tariff field, is not a discovery peculiar to Europe. Among members of the General Agreement on Tariffs and Trade, the undeveloped countries have been pressing for a "confrontation" of agricultural policies. New Zealand, most actively, and the Australians, more cautiously, have pressed Britain to bring Commonwealth preferences into a joint deal in Europe. New Zealand would be prepared to make considerable tariff and quota concessions in the British market, if it got something like equal treatment on the Continent in return. The same political reluctance that has made the British Government hesitant in Europe has, however, led it to reject this initiative. Time will show whether that rejection is in the lasting interests of the Commonwealth.

Land Reform Club

Latin America has lagged behind Asia in innovations to help the peasant, but change may come swiftly

With the impetus of revolution behind him, Senor Fidel Castro has slammed merrily into the tortuous problems of land reform. Previous Cuban governments had dithered over land redistribution, never putting into practice the clause in the constitution that bans large estates. The new law is tough, unequivocal and sweeping. Nobody is allowed to own more than 1,000 acres except for sugar and rice plantations and cattle ranches, where the limit is around 3,000 acres. No foreigner may possess any land at all, unless the new agrarian reform institute decides that it is in the country's interest. Since most of the cultivable land is tied up in enormous estates, many of them owned by foreign companies; the law, if fully implemented, will entirely refashion the agrarian structure.

Cuba's problems stick out a mile. The republic is very short of money and is bound to come up against formidable technical difficulties. As critics, including Senor Castro's former minister of agriculture, have been quick to point out, there is certain to be a drop in efficiency. About one-third of the main export is grown by the American sugar companies who will now, unless the institute rules otherwise, be dispossessed, and who will have to buy supplies for their mills from a multitude of inexperienced smallholders. To add to the landowners' consternation, compensation will be based on the land tax and therefore will be well below the market price of the land — rough justice of a sort, since those who got away with most on their tax assessment will now be hardest hit.

Carving up the land inevitably clashes with the modern trend towards large-scale mechanical farming. But land redistribution is a social and political measure. Although it is often allied to development or reclamation projects, its first purpose is not to get more out of the soil but to spread agricultural incomes more evenly. On the other hand, agrarian reform in other parts of the world has shown how dangerous it is simply to hand out fragments of land and expect the new owners to carry on from there. Production will slide down disastrously, and the cultivators be no better off than before, unless the state takes the place of the landlords by providing credit, machinery and marketing facilities. It is very doubtful whether the Cuban government is in a position to do this immediately. But, to quote Miss Doreen Warriner's study of agrarian reform in the Middle East, "land reform in its initial and crucial stage is emphatically not a question for experts; it cannot be advised into existence but must be based on an impetus rising within the country".

The importance of the Cuban reform is that Senor Castro may have set the ball rolling not only at home but throughout the Caribbean and Latin America. Because of his success, his bravado and his wholeheartedness, he has come to symbolise for many Latin Americans their rebellion against the established order. The system of land tenure of most of the continent reflects the old order at its worst. Since the time of the Conquistadores farming has been dominated by the huge estates or *latifundios;* in Venezuela, which is only now contemplating some kind of land reform, 3 per cent of the landowners control 90 per cent of the cultivated land. In many of the twenty republics, although not in Cuba, only a tiny percentage of the cultivable area is used. In Brazil, for instance, vast distances and poor communications have prevented more than 5 per cent of the usable land being farmed, and most of this belongs to large landowners. Two-thirds of the total population depend on agriculture, and most of them live in bleak poverty. Latin American governments have often paid lip service to the theory of more equable land distribution, but except in Mexico, Guatemala and Bolivia, they have done precious little about it.

Latin America has been slow to join the land reform club. Asia is far ahead. Japan has transferred nearly half its cultivated area to peasant ownership, and in India and East Pakistan the abolition of the *zamindari* system has resulted in enormous areas being handed over to new smallholders. In the Middle East, Egypt has completed the reform that President Nasser initiated after the 1952 revolution, and similar schemes have been announced for Syria and Iraq. Persia has sidestepped the issue by avoiding any major legislation but distributing some of the Shah's estates to the peasants who worked them.

Land reform has to be got under way by a political impulse that rates social change above the temptations of a quiet life. Without this impulse the initiators can easily get bogged down among the problems it raises. But once the spark is fired, land reform lives or dies by the administration's success in substituting a working co-operative system for the old landlord-tenant relationship. The peasant has often grown dependent on his landlord. He needs, above all, a flexible and prompt organisation that will supply him with cheap credit; otherwise he can hardly escape the clutches of the moneylender. He also needs, if he is to hold his place in a competitive world, a co-operative organisation for marketing his products and for buying his seeds, fertilisers and machinery. Without all this, the situation can get as out of hand as it was fifty years ago in Mexico, when the revolutionary leader Zapata parcelled out the land and gave it to the peasants, but failed to follow through with an energetic and continuing policy of help for the new smallholder.

But the smallholder is often not easy to help. The Indian government is finding that one of its toughest problems is to teach the principles of cooperation to peasants who are entirely illiterate. A second difficulty is finding trained organisers, especially those required to work at village level. Theoretically, membership of a co-operative organisation should be voluntary; in practice there is usually substantial compulsion to join. In Egypt, for instance, the new landowner is pretty well regimented by an elaborate administrative system; while each new smallholder has two or three separate plots of land of about one acre, each plot is part of a large area devoted to a single crop that is farmed communally. The new Cuban law makes even less pretence about keeping the system voluntary; the agrarian reform institute is not only to be the sole provider of credit, but it can also discipline the farmers if they do not carry out its advice.

It may turn out that Senor Castro has plunged too wildly into the labyrinthine problems of land reform. Slicing up Cuba's huge plantations of industrial crops is an even more hazardous undertaking than handing over to peasant farmers smallholdings that they have already been farming as tenants. But the very boldness and throughness of his scheme may provide the dynamic for other Latin Americans who are trying to push procrastinating governments to change a system that must eventually be changed throughout the whole area.

NOTES OF THE WEEK

MR COUSINS'S BOMB

The Manx Challenge

Three main questions are raised by Mr Cousins's Manx challenge to Mr Gaitskell. First, does it ruin Labour's chances of being elected as Britain's government next autumn or spring? It certainly is not likely to improve them, but the British electorate is too complicated a body for the election result to be irrevocably determined by one factor alone. Secondly, if a Labour government did return, would it now be likely to carry into office specific commitments to a policy in which its own leaders do not believe? That would happen if the leaders of the Parliamentary Labour party split ranks when faced by Mr Cousins's assault, but in last week's foreign affairs debate Mr Bevan stood noticeably firmly beside the still admirably resolute Mr Gaitskell. It would happen if Mr Cousins secured a majority for his muddled anti-Nato policy at the Labour conference in October; the odds seem to be just (but only just) against this now that the railwaymen, miners and the Cooperative party have come down on Mr Gaitskell's side.

Thirdly, however, and perhaps most seriously of all: if a Labour government does come to power, might Mr Gaitskell's policies be continually affected by the need to look over his shoulder at an annual party conference over which he no longer has full control? The fact had better be faced that on some issues (even if not on the bomb) there is now almost bound to be a left wing majority at future Labour conferences; from time to time Mr Cousins will find an issue on which he can recruit the few extra hundred thousand votes

he needs to make a majority, when added to his own union's million votes plus the constituency zealots.

This is a situation that Mr Gaitskell as Prime Minister would have to meet with courage, and he made a very good start with his Workington speech last Saturday. His warning to his party that their annual conference cannot bind a Labour government on every detail of policy will need to be followed up and strengthened in future years; the British system of government could not work if a Prime Minister's policies were subject to veto by an outside potentate who had no access to the detailed information on which they were based. The freedom that Mr Gaitskell needs is not impossible to secure. If he were to come down to the first party conference after his election and to say flatly that its resolutions could have no greater status than interesting recommendations of view, he would get away with this brave impudence. But it would mean a blazing intra-party row. On major issues of national security Mr Gaitskell has shown himself a rock-hard fighter, ready to risk such rows. But on what he regards as less important points of domestic policy would he as certainly and constantly keep up the battle?

NATO

Reluctant Removal

General Norstad's long-delayed decision to remove the three wings of American fighter bombers from France has been taken with self-evident reluctance. It is bad news for everyone concerned. The military effect is immediately damaging, particularly as the tactical redeployment in the next six months will take place while west Berlin is under direct Russian pressure. Although the best has been done to preserve Nato's nuclear potential by sending as many bomber squadrons as possible to west Germany and switching the longer-range reconnaissance groups from Germany to Britain, this is simply not the way an effective military coalition can be run.

Such soothing remarks as those by General Palmer, deputy commander of the American forces in Europe, to the effect that neither the power nor the integrity of the alliance has been reduced cannot be given much credit. There is, of course, every incentive for the United States to persevere, even now, in its efforts to reach an understanding with General de Gaulle on the control of atomic bombs and warheads. But whether this can be done by protesting that no Franco-American quarrel exists is highly doubtful. Shape is right to avoid a slanging match. But it will be well advised to insist that the gravity of France's relationship with the alliance argues strongly for an early meeting beween Presidents Eisenhower and de Gaulle to have the whole affair out between them. No one but President Eisenhower can hope to influence General de Gaulle on what France's privileges and responsibilities in the alliance should properly be.

It is unavoidable that some of the fighter bombers should be moved to Britain, where their limited range must restrict their value to Shape. Although Mr Sandys has told the Commons that the Government can veto the use of these planes, as it can veto operations by American strategic bombers already in this country, the political repercussions do not end there. General Norstad regards the fighter bombers' nuclear potential as an essential arm against conventional attack from the east. Does Mr Sandys think that the consultation procedure, involving Washington, London and Fontainebleau, will stand up to an emergency? And can the Labour party leadership reconcile General Norstad's use of British bases with its own claim to Mr Cousins and his friends that everyone understands that Britain would never be the first to use nuclear weapons?

Mr Spaak Speaks Up

The much-harassed M. Spaak made some sensible points when he delivered his views on Nato's present discontent before a French parliamentary commission on July 9th. The habitual catalogue of complaints at French behaviour might make little impression on his audience, but it needed a Nato official to speak up for the smaller nations against General de Gaulle's idea of a three-power directorate to control western policy. M. Spaak could talk in the full knowledge of Belgian, as well as Italian, restiveness over the lesser powers' exclusion from western policy-making at Geneva. At the same time, he acknowledged the validity of the essential French argument that Nato is being outflanked in Asia and the Middle East. Since Mr Khrushchev is currently tending to link Berlin and the Chinese off-shore islands, General de Gaulle's desire for improved western consultation ought not to fall on deaf British ears should the guns opposite Quemoy begin another regular barrage.

M. Spaak also seemed to have the right answer on Algeria. He told M. Maurice Schumann that France could demand full support there from its allies, but that the demand itself would mean that the allies had the right to make their own views felt in the discussion. This is not what General de Gaulle wants, for there is no guarantee, despite M. Spaak's assurances, that the result would be at all favourable to present French claims.

The first rumbles of discontent at General de Gaulle's *politique de grandeur* are at last coming from across the Rhine. The west German press is increasingly unhappy about the danger of a rift with the United States as a result of the new Franco-German understanding. The very fact that the Italians, when approached by the general, made it clear that they meant to remain model, missile-bearing allies of the Americans, should stiffen German reluctance to incur Washington's displeasure. For the moment, Bonn is still trying to evade the issue.

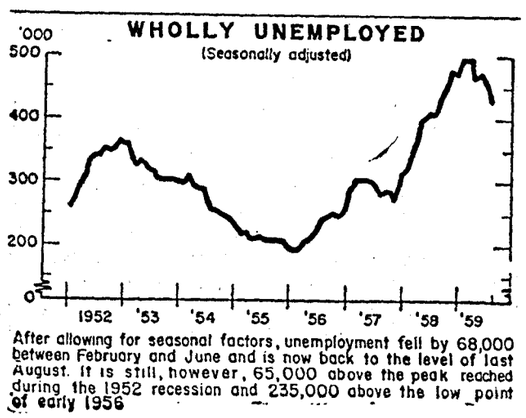
FRENCH AFRICA

Community or Commonwealth?

Tananarive, in Madagascar, was probably the only capital, besides Paris, where the executive council of the French Community could meet without giving the impression of taking sides in a controversy. The African members of the community stand divided. The federalists of the Mali government are in favour of a Commonwealth in which the independent African states or federations of states would be associated with France. M. Houphouet-Boigny, the Ivory Coast leader, is the chief spokesman of the other group, which is against any change in the present set-up. M. Modibo Keita, head of the Mali federal government, had apparently an opportunity in Madagascar to put his case to General de Gaulle. M. Houphouet-Boigny, in turn, told the press that those who did not like the community's rules should leave it. But the real battle has been put off.

Instead, the council talked of strategy and diplomacy. One need not be a sceptic to doubt whether Dahomey or the Niger can have much influence on the Berlin question. The problem of the community's foreign representation was of greater interest to all members. The Africans have been promised special representation in international organisations, and jobs in French embassies. These were not vital issues, but the meeting did not end without an explosive statement by President Tsiranana of Madagascar that the French Community would have its own atom bomb.

This is an official confirmation of an old rumour. The French bomb is expected to be of the Hiroshima vintage, and the means of delivery of this cumbersome weapon (first a Mirage, then a missile) are still to come. What the importance of this nominal entry to the nuclear club will be is not clear. But it has already brought one change in Africa. Ghana protested against the likely effect of nuclear testing in the Sahara. Its protest was dismissed, and resentment may have prompted Dr Nkrumah's decision last week to give *de facto* recognition to the Algerian rebel government. As in the Middle East, so in Africa nationalist gestures are contagious and difficult to resist. With Ghana and Guinea independent, and with French Cameroun and Nigeria soon following suit, M. Houphouet-Boigny, for all his recent success, is probably waging a losing battle against the spread of independent states.



After allowing for seasonal factors, unemployment fell by 68,000 between February and June and is now back to the level of last August. It is still, however, 65,000 above the peak reached during the 1952 recession and 235,000 above the low point of early 1956

PRINTING DISPUTE

Lord Birkett's Task

From a purely personal point of view, nobody would be better pleased than *The Economist* if the appointment of Lord Birkett as conciliator, or any other mechanistic gimmick, could bring an end to this wretched printing dispute. We are only too well aware of the flaws in this our fifth emergency issue; each week so far it has only been through truly awe-inspiring improvisation in foreign parts that we have managed to get out at all. That having been said, however, it had better be recognised that Lord Birkett's appointment, however potentially advantageous to us, sets a thoroughly dangerous national precedent. When a conciliator is called by the Minister of Labour to sit down with the two sides, but without any powers of arbitration, the natural tendency, nine times out of ten, is going to be for him to interpret his job as being to try to influence most employers to edge a little further towards the unions' claim, and thus towards the side of inflation.

It is true that there are special factors in this printing dispute which have persuaded Mr Macleod to run these risks. The principal peculiarity of this strike is that it broke out at a time when the employers had not yet offered as much as they were, at bottom, prepared to grant and when the unions had not yet decided how little they were really prepared to accept. Both sides have been searching for a ladder to climb down ever since, and Lord Birkett's appointment is meant to put that ladder in place. Mr Macleod may also have judged that, when both sides have used the ladder, the more expansive employers and the more moderate unions might find themselves within reach of each other, but that the more militant elements on each side might need to be persuaded to come into line with the rest of their own team; an outside intermediary like Lord Birkett might have a useful function to perform in essaying a little diplomacy within the split employers' side and between the split ten unions concerned. It should be noted that the Minister has also been careful not to mix up arbitration and conciliation functions for the future by giving this dangerous new job to one of the familiar stalwarts, like Sir John Forster or Lord Terrington, whom he will need as an arbitrator in the future. That, at least, is a wise precaution.

Politics of No Printing

BOTH the unions and Parliament have treated the politics of the printing dispute with fascinating gingerliness. There are uneasy memories in Transport House of the dreadful things that were done to the Labour vote last year by Mr Cousins's television appearances during the bus strike; this time the union hierarchy made efforts to persuade even the originally rough-tongued Mr Briginshaw to mutter as sweetly reasonable circumlocutions as he could whenever the television cameras came near him. In picketing, the unions' tactics have been to go to the Home Secretary to complain that the police were stopping their pickets from doing illegal things, and then themselves to tell their pickets not to do them. Although a few blatantly criminal acts continued to be committed — several hundred pounds worth of ink belonging to a blackleg press were reported to have been destroyed last week — the union leaderships have been trying to discourage them. The worst publicity Labour has got from the strike has arisen from the action of some Labour-controlled councils in expelling from council press galleries reporters belonging to blackleg papers. The *Daily Herald* itself came out last week with an astonishingly outspoken attack on this "impudent trampling upon the public's rights".

Last year the Parliamentary Labour Party put down a motion of censure against Mr Macleod for allowing the bus strike to happen; in this year's troubles it merely asked for a debate, during which Mr Robens regaled the House with diplomatic obscurantisms and the well-loved veteran George Isaacs talked about methods of printing when he was a boy. Nevertheless Labour's basic assumption emerged clearly: although it is not going to express itself in favour of strikes, it does assume that any settlement would be more convenient for the country than any stoppage, and it regrets that arbitrators are now inclined to pay some attention to what a trade can afford instead of following the pure conciliation function of trying to bully employers to grant whatever increase the unions will peacefully accept. Under a Labour government Ministry of Labour policy would be a recipe for perpetual inflation; the trouble is that the Conservative government will not attack Labour on this point, because it has not yet entirely abjured the recipe itself.

TRADE UNIONS

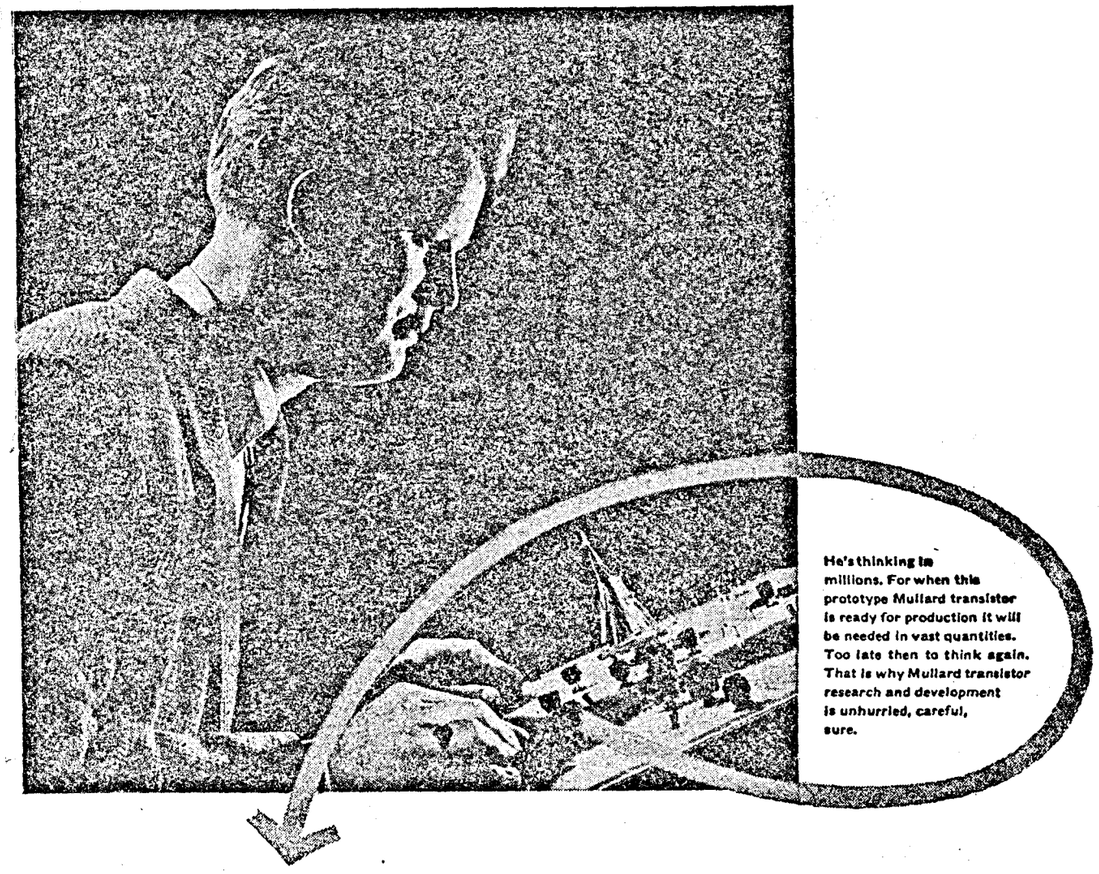
40 Hour Week

MR Cousins made it clear last week that he regards the striking printing workers as being in the van of the union movement's fight for a forty hour week; and the National Union of Mineworkers, which must be expected to become more militant now that the communist Mr Paynter has acceded to its leadership, is joining with the Confederation of Shipbuilding and Engineering Unions in an ill-defined grand alliance for the same objective. How far is the eventual settlement in the printing dispute likely to make this pressure for a general 40 hour week a really major national feature?

The answer will depend on what that eventual settlement is. The printing employers' last offer before the strike was for a 2½ per cent wage increase and a 42½ hour week, which would have added about 5 per cent in all to printing costs. Most people at present expect that the eventual settlement will be on a basis which will add something more to this, but not nearly as much as the unions originally claimed (the unions' claim, for a 10 per cent wage increase and a 40 hour week, would have added over 20 per cent to total printing costs). Whether the increase eventually accepted will take the form of an addition to the proffered 2½ per cent wage increase or a reduction in the proffered 42½ hour week will presumably depend on which alternative is regarded by the unions as saving more of their face at the time; in certain circumstances they might be more likely to decide that a bigger wage increase would do so.

The Campaign's Muddle

ALL this is a symptom of the muddle into which the new campaign for a 40 hour week has been born. Given proper organisation, there would be a reasonable case for saying that a reduction in working hours would be the best form in which British workers should take out the next instalment in the rise in their living standards. But under present working practices (often even the first hour of overtime is paid for at 50 per cent above normal rates) many workers, so far from wanting more leisure, are mainly interested in putting in as many nominal overtime hours as they can; their campaign for a shorter working week is really a campaign for having more of their work paid for at overtime rates. The 40 hour week campaign gained force this year because the union leaders were looking for some way in which to put forward disguised wage claims, at a time when undisguised wage claims were meeting with greater resistance from public opinion. It is fair to say that the recession also played a part in the origins of the campaign, because the 40 hour week was regarded as a possible way of spreading scarcer work, but the recession seems to be over now. The best way in which to arrange for more leisure for the British worker would be for each union to try to secure an agreement for a shorter working week, but with the concession that the first few hours of newly designated overtime should be paid for at less than present overtime rates. No big union, however, has yet dared to suggest that. So the new campaign is blundering forward with its banners bearing a frankly hypocritical device.



GOOD FOR A MILLION

In a few short years the whole science of electronics has been transformed by the invention of the transistor, the tiny device that performs a similar function to a radio valve but has the added advantages of small size, low current consumption and almost unlimited life. Transistors are used extensively in a great variety of applications, from hearing aids and pocket radios to computers and guided missiles. Their rapid adoption by equipment manufacturers in Britain is due in no small measure to the Mullard Design Philosophy. From its conception in the laboratory, every Mullard silicon or germanium transistor is realistically designed for large scale production thus giving the equipment manufacturer the assurance of consistent quality and performance, ample and continuous supplies, and low cost.
In this way industry is able to apply the benefits of transistor research quickly, safely and economically.

Mullard SILICON & GERMANIUM TRANSISTORS

CENTRAL AFRICA

Sir Roy's Concessions

LAST weekend Sir Roy Welensky was doing his best, within the politically feasible, to reach agreement in London on the composition of a commission to visit Rhodesia and Nyasaland. At a series of talks with the Government and the Labour party he gracefully made a series of concessions. He is now willing to have quite a large commission, with quite wide powers of inquisition. He is willing to agree with the British parties on the composition of the Rhodesian members, who he prefers should be non-party. He is willing to have Africans nominated from all three territories to serve, who would not be picked for their agreement with his views. He is willing (though not enthusiastic) to have members from Commonwealth countries with political experience of federations, or possibly a chairman from a Commonwealth country.

Sir Roy was, however, evidently finding the Labour party hard to woo. Behind their formula that the commission must be such as to win the confidence of Africans, Labour members have been pressing all sorts of conditions politically unacceptable not merely to Sir Roy, but to any white government in Central Africa. Last week some Labour members were demanding either a purely British parliamentary commission, or, if the commission is to be wider, were insisting on including on it Commonwealth representatives from countries like Ghana, India and the West Indies, and African representatives like Dr Banda who would have to be released from jail (at least in some cases) to serve. The difficulties should be obvious. All the three Commonwealth countries named are unfriendly to the Federation. And while, as a pure theory, it would be delightful to see how Labour constitutionalists on such a commission got on with the well-known rantings of Dr Banda (enhanced by the prison graduate cap he would no doubt wear) clearly none of the three Central African governments, except in the final stages of surrender under duress, could accept the idea. If these conditions are pressed to the end, it must follow that Labour is not interested in any sort of commission.

At heart, Sir Roy is not keen on it either. If Labour really does blandly insist on wrecking the whole idea, it will therefore be leaving Sir Roy with all the cards.

ILO

Passing the Buck

THE Government's reasons for not endorsing the International Labour Organisation convention designed to eliminate discrimination over jobs just do not wash. The official explanation is that while te Government accepts the principle of non-discrimination it can do nothing about it, since this would mean interfering with the traditional machinery for working out conditions of employment. To a man who may have been refused work on grounds of, say, his colour or his political opinions, this smacks of hypocrisy; for Britons who have sounded off about the evil practices of other countries, it is horribly embarrassing that their own Government refuses to give a lead. There is nothing so sacred about the negotiations between employers' and workers' associations that they have not been interfered with before. Evidently it would be difficult for the Ministry of Labour to enforce a law that made discrimination a crime — and there would be hundreds of ways of wriggling round such a law — but this is not to condone the feeble solution of passing the buck. If the Government expects its sincerity to be believed, it cannot get away with doing nothing to discourage a distasteful and shaming practice.

OMAN

The Imam Moves On

OMAN has been added to the list of Arab lost causes. It is to take its place beside Palestine and Alexandretta. July 18th is to be celebrated in Arab capitals as Oman's day. Few Arabs have the slightest idea where or what Oman is, and few Omanis are aware of the fuss being made over them by the faraway Arab press and radio. In the name of the Imam of Oman, Ghalib ibn Ali, his brother Talib and Sulaiman ibn Himyar, whose calling cards used to bear the title *Independent King of the Green Mountains*, revolted against the shadowy authority of the Sultan of Muscat and Oman in 1955. The revolt has failed twice since then because the insurgents' resources were meagre, the local tribes hesitated to take part until they could tell who would win, and the Sultan was able to call for British assistance in putting it down. Now all is quiet in Oman, most of those who thought it wise to leave home during the troubles have returned, and only those whose actions cannot be forgiven by the Sultan are still wandering around the Arab world.

Several months ago, Ghalib, Talib and Sulaiman turned up at Dammam, in Saudi Arabia. They had every reason to believe they would be welcome. The Saudis had once sent them arms and money and, for a brief period, trained Omanis to fight against the Sultan and his British allies. But the Imam and his party discovered that Saudi interest in supporting their cause had diminished. King Saud was no longer able or eager to play with any kind of Arab fire that happened to break out. All the Omanis got was a cool welcome in Dammam and a polite one in Riyadh. There was only one place where they could hope for a warm reception. They would have to join the growing group of Arab and African exiles in Cairo.

Cairo's radio and press have never admitted that the revolt in Oman is over. According to their tame Omani

commentators, thousands of British soldiers (170,000 was the number most recently mentioned) are being kept at bay in daily battles with a few hundred Omanis. Dozens of non-existent British planes have been shot down over Oman by Cairo radio. The Imam is expected to arrive in Cairo in time to be the hero of Oman Day.

Then there will be nothing for him to do but join the group headed by Haj Amin al-Husseini, a professional exile from Palestine since 1937. He will have little in common with the other Cairo exiles. The members of the provisional Algerian government, the Tunisian enemies of President Bourguiba, the former Iraqi ambassador to Cairo and all the rest are politicians. As a man of religion the Imam may soon regret that the quietness of the cool mountains of Oman was ever disturbed.

EDUCATION

More Room for Teachers

THE Minister of Education's decision to build another 4,000 places for teacher training by 1964 is undoubtedly the right one. He has evidently partly overridden the advice of his officials who believed that the 12,000 additional places put in hand last year were the maximum which was administratively possible; he is trying to do something to meet the estimate by the Central Advisory Council for Education that 90,000 more teachers are needed by 1970 compared with 1956. But it must be realised that another 4,000 places by 1964 will mean an output of only 1,250 additional teachers a year by 1967 or so. Virtually the entire increase in the output of teachers achieved by the increase in the number of places by 12,000 between now and 1962 will be swallowed up by the increase in the teacher training course from two to three years.

According to the annual report of the Ministry of Education for the year 1958 (Cmnd 777) the modest increase of 5,400 teachers last year permitted a very small reduction in the average size of classes in 1958. But though the primary school population has begun to decline, the decrease is being offset by the rising numbers in secondary schools, aided by the welcome tendency for children to stay on longer at school. Last year total school population remained fairly stable. It is expected that it will increase this year and next and then, after a very slight decline from 1963 to 1965, will rise slowly to a new peak in 1968. On present increases in the number of teachers, therefore, there is only limited scope for reducing the size of classes (partly by switching primary teachers to secondary schools); and there is little or no margin for such reforms as raising the school leaving age, or cutting out the use of unqualified teachers.

Last year the efficiency of private schools was investigated for the first time, now that Part III of Mr Butler's 1944 Act has been brought into operation. Fortunately the inspectors found that the vast majority of these schools, of every type, maintained acceptable standards. As they educate some 500,000 pupils of all ages, or just under 7 per cent of the total school population, there is a discernible note of thankfulness about them in the Ministry's report. They are doing the work of between 15,000 and 20,000 state teachers.

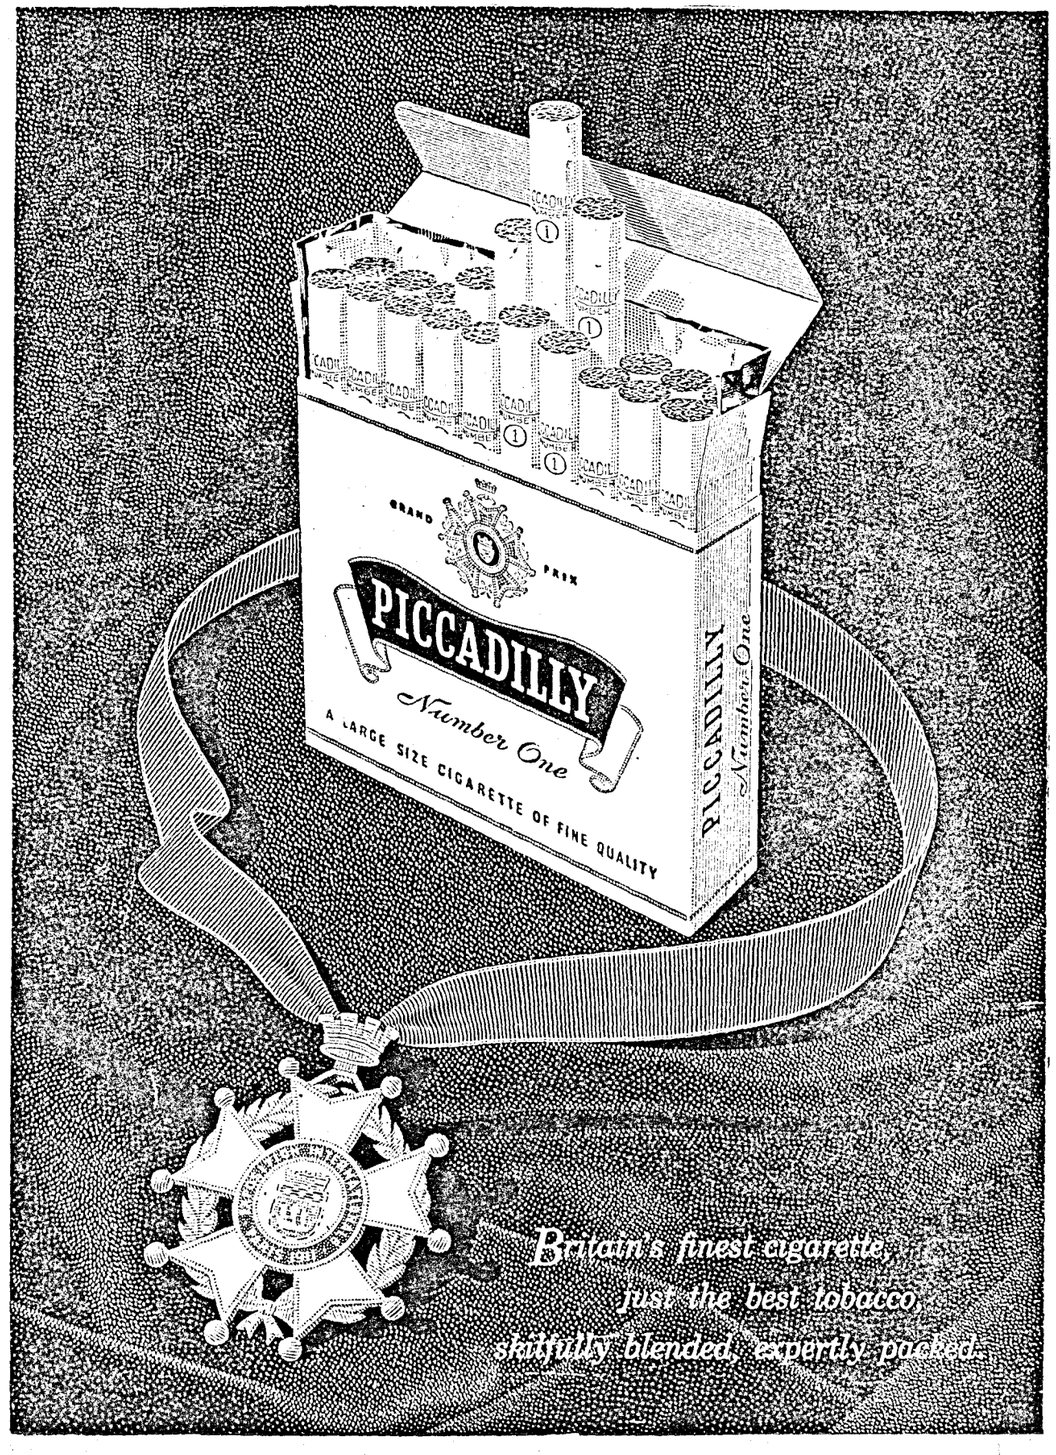
BELGIAN CONGO

Sticking to the Plan

M. VAN HEMELRIJK, the Belgian minister for the Congo, after another comprehensive tour, has reaffirmed the political programme announced in January. M. Kasavubu, the Bakongo tribal leader, came forward with a frank demand for a tribal state linked to French and Portuguese Bakongo areas, which might, or might not, be federated with the rest of the Belgian Congo; this the minister firmly rejected, making it clear that if M. Kasavubu's party pressed it they would again be suppressed. He is on strong ground here, as the other African parties are opposed to any such secession; and the loud African cheers for "our minister" elsewhere in the Congo must have strengthened his resolve to keep the territory intact. He ran into trouble (and a few flying tomatoes) with the white settlers, who fear desertion by the home government, and are reputed in the Katanga area to be secretly talking about seceding and linking up with the Federation of Rhodesia and Nyasaland. But the whites are few and thin on the ground, and the Kivu highlands (where they farm) are a long way from the Katanga (where they live much as the Rhodesian white copper miners live). M. van Hemelrijk was firm with them too.

More formidable are the demands of the Belgian civil servants who run the Congo, and who will make or break the new policy of rapid Africanisation of the public services. The minister was forced to promise that the government would discuss their position at once. They are said to be ready to serve under a Congolese government, provided their expatriate status is respected and their rights in the home civil service are entrenched. But they must have heard of the handsome lump sum compensation which the British (but not the French) government gives to colonial officials when Africans or Asians take over their own governments; and they may demand similar security. If they were offered it on British terms, however, the resulting exodus could leave the Congo helpless with its few educated Africans.

The government's plan still contains no specific timetable for independence — only one for the election of provincial councils. When, sometime next year, the Africans realise how far they still are from running



their own affairs, even indirectly, there may be more trouble. But at least it cannot now be said that the Congo is being run on the telephone from Brussels whether from ministry or from Palace.

INDONESIA

Sukarno's Take-over Bid

RETURNING to Jakarta after a world tour, President Sukarno lost little time in putting in a take-over bid for the political body of the Indonesian republic. His offer consists of shares for various social groups in a largely nominated single-chamber parliament, with himself as chairman and managing director. Being backed by the army, the bid — unlike some take-over bids — is unchallengeable.

These are the effects of a series of decrees proclaimed by the president from the steps of his palace, providing for a return to the 1945 constitution, invalidating the existing provisional constitution, and dissolving the constituent assembly. Further decrees authorise the creation of a provisional consultative council, composed of members of parliament and representatives of regions and groups, and of a smaller advisory council. In an order of the day, proclaimed almost simultaneously, the chief of staff, General Nasution, called for discipline throughout the army and trenchantly declared that public security and peace must be maintained by all possible means.

The revolutionary 1945 constitution provides for a presidential cabinet on the American model, though the nominated parliament recalls the corporative systems of fascist Italy and of the Iberian countries. President Sukarno had evidently hoped that the bill reviving the 1945 basic law would be passed during his absence on tour, but three ballots failed to provide the necessary two-thirds majority — perhaps because the members of the constituent assembly were unwilling to see their labours of several years wasted. General Nasution thereupon banned all political activities.

Although this crisis occurred early in June, the president continued his travels as planned — whether from supreme self-confidence or from irresolution may never be known. Now that he has seized power, he may be expected to order a stepping up of operations against the still defiant rebels in Sumatra and Celebes, using the arms his representatives have lately been buying in various countries. That way lies further inflation: negotiations with the rebels would be less costly in every sense.

PERU

Andean Hazards

ALTHOUGH Peru disentangled itself from the rule of military caudillos more gracefully than some of its neighbours, it, too, is suffering the teething troubles of an underdeveloped country feeling its way towards economic solvency by parliamentary means. On July 6th, the cabinet acknowledged its inability to control the confusion by handing in its resignation to President Manuel Prado. Despite heavy backing from the United States, the stabilisation programme has failed to prevent a huge budget deficit, currency depreciation and a spiralling cost of living. The government has been persistently accused by the opposition of extravagance and high-handedness ,and recent months have been bedevilled by strikes, political brawls and sharp counter measures.

Peru's last strong man was General Odria, who, to outsiders' astonishment, quietly stepped down at the end of his term of office in 1956 and allowed his presidential candidate to be defeated by Dr Prado, who had the support of the previously outlawed Alianza Popular Revolucionaria Americana (Apra). This change was interpreted in terms of the new democratic temper of Latin American politics; but the new government's respect for personal liberties has been severely tested during its attempts to enforce an austerity programme. In April this year the president countered a disruptive strike of bank clerks by suspending certain constitutional guarantees for two months. During this emergency period, Senor Fernado Belaunde, the leader of the main left-wing opposition party, and several of his colleagues were briefly imprisoned for defying the ban on mass assemblies. The rumpus this caused was yet another straw on the government's strained back. With a transport strike in the offing, the president has now to devise a new cabinet prepared to try its hand at mating austerity with political freedom.

The Economist

JULY 16, 1859

COUNT CAVOUR RESIGNS

COUNT Cavour and his colleagues have done well to resign office. Since the Emperor of the French openly proclaims to his soldiers that "the union of Lombardy with Piedmont creates for us a powerful ally *who will owe to us its independence*," they would, indeed, have tarnished their names had they remained as the responsible advisers of the Sardinian Crown in its acceptance of a gift which it cannot retain a moment after it has lost the favour of France. Nothing can be more clear than the Emperor's wish to intimate to Europe that he has now reduced Piedmont into a mere satellite of the French Crown; indeed he has done so exactly by stopping short at the line of the Mincio, and so leaving Austria in full possession of the key to Lombardy, – which she may resume at pleasure if ever, or whenever Sardinia has forfeited the favour of France. We have little doubt that Count Cavour and his colleagues would far rather have seen King Victor Emmanuel decline the dangerous gift of his Imperial ally than accept it as the price of such a peace. ... But, notwithstanding Count Cavour's grievous disappointment and betrayal, we maintain that both the Italian and English Liberals were right in claiming for his policy that, if somewhat rash, it at least held out a chance such as no patriot could lightly throw away. ... And we will not in the present hour of his trial withhold our hearty admiration from the great statesman who has so long and so ably worked for the liberation of Italy from Austrian domination, and has thrown up his great post directly it became evident that France was really endangering or ruining, instead of sustaining, that cause.

THE ARTS

Provincial Paucity

EIGHTEEN months ago, the Gulbenkian Foundation invited a small committee, under the chairmanship of Lord Bridges, to look at the needs of the arts in Britain. Its admirably honest and informal views have recently been published in a pamphlet "Help for the Arts".

This report is concerned not so much with finding out where the shoe pinches most, as with determining how the greatest numbers of people who are capable of enjoying the arts should be given the best opportunity of doing so and how contemporary art can be stimulated. This does not mean that the committee believes in spreading butter thinly; but it sensibly suggests that the amount of money that the Gulbenkian Foundation can dispense in Britain, even though it is to be concentrated on the arts in the next three or four years, would merely be swallowed up if given to the national institutions. The committee has gone out into the provinces, believing that it is there that the arts particularly need help; and through personal visits and questionnaires it has built up a more broadly based view of the whole position than has been presented before.

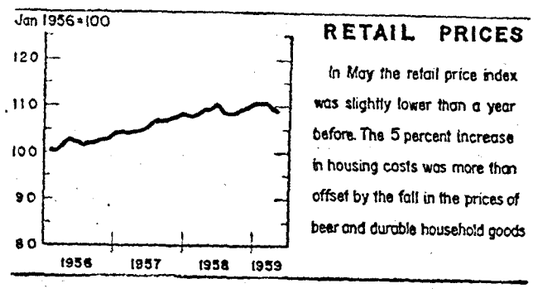
The bewilderingly untidy network of provincial art activities badly needs to be strengthened through co-ordination and concentration of resources in the larger cities. The Foundation, it is suggested, might encourage neighbouring local authorities to experiment in sharing common interests and might pay for an arts officer in the area to supervise this. The committee would like to see much more done for the arts in the new towns, more co-operation between universities and local authorities, national galleries other than the Victoria and Albert circulating works of art to the provinces, the government extending its power to accept works of art in lieu of death duties, and more films on the fine arts. Specific suggestions as to how the Foundation could help range over the provision of half the cost of purchases for the provincial galleries, the commissioning of an architect to advise on the design of small theatres, and the granting of fellowships for poets and artists. These suggestions are by no means revolutionary but, in sum, they could do a good deal to give stimulus where it is most needed. In declaring that it intends to play its part in implementing them, the Gulbenkian Foundation has accepted good advice.

CARIBBEAN

Shooting or Shouting?

NO love is lost between the Cuban revolutionary leader, Senor Fidel Castro, and General Rafael Trujillo, who for thirty years has run the Dominican Republic. When Senor Castro led his rebel army to victory on New Year's day, he made no secret of his evangelist ambition to help sweep the remaining dictators from the Caribbean board. General Trujillo interpreted this as a direct threat and set about elaborate preparations for defending both his eastern half of the island, and the Negro republic of Haiti, against outside attack. Now, after six months of threat and thunder, a storm seems ominously close. Last month General Trujillo's forces brushed off three Cuban-based rebel expeditions which had landed in different parts of his republic, and, after a hot exchange of charges and counter-charges, Cuba and the Dominican Republic have broken off diplomatic relations.

Despite the provocation, there is a fair hope that the storm will rumble on without breaking out just yet. Senor Castro is faced with critical domestic problems; although certain social reforms are being pushed forward at breakneck speed, a third of Cuba's labour force remains unemployed, and the revolutionary government is now no longer even superficially at peace with itself. Eventually the Cuban leader may turn to outside exploits; for the time being he is more likely to be embarrassed by the enthusiasm with which the Dominican and Haitian exiles in his country have adopted the belligerent spirit of his early speeches. General Trujillo, for his part, may find it wiser to stick to his aggrieved role of plaintiff, rather than provoke United States remonstrance, and stiffen Cuban solidarity, by sending an expedition to knock out the exile groups on Cuban soil.



BOOKS

Indispensable Indian

Nehru : A Political Biography.
By Michael Brecher.
Oxford University Press. 698 p. 42s.

IN his seventieth year, Mr Jahawarlal Nehru is beyond question the most important individual in Asia. He is also the best documented. More has been written about him than any other living Asian; much of it, excellently, by his own hand. It is Mr Brecher's achievement to have written a book which, despite the existing mass of material, will carry the average reader a long way forward in the understanding of both the man and his surging age.

The most familiar Neum is the western-educated, aristocratic disciple of Gandhi and tireless campaigner for his country's national freedom. Mr Brecher gives us this portrait freshly and perceptively renewed, putting due emphasis on the young Nehru's slow emergence from the shadow of his forceful father; on the self-doubt engendered during comfortable years in a secure, lingeringly Edwardian, world; on the sudden jerking of a rather romantic literary intellectual into the dust and dedication of a political cause, under the impetus of Gandhi's personality and General Dyer's fusillade at Amritsar in 1919; and on the nine spartan and reflective years of imprisonment which counter-balanced the seven youthful years in England. But Indian independence and the death of Gandhi come right in the middle of the book. The second half provides an unequalled study of India's first and only prime minister in the years of power; the narrative is sufficiently up to date to provide, for example, a close analysis of the political effects of the Chagla inquiry of 1958.

This is excellent contemporary history. The author's task has been a fairly formidable one, calling for a year's absence from McGill University and three years' work in all; and his success, one may deduce, reflects not only his own pertinacity and perception but also the characteristic readiness of most politically active Indians to talk very freely about both public and personal affairs. Thus Mr Brecher has been able to give us a detailed but clear account of the period of duumvirate between Nehru and Patel; of the crunch in 1950 and 1951, when the prime minister finally had to resort to resigning from the Congress working committee in order to break the grip on the party machine of Patel's traditionalist heirs, led by Tandon, and to clear the way for his own programme of social and secularist reform; of the loneliness of his subsequent unchallengeability; of his tangled relations with the breakaway socialist leaders with whom he has so much personal affinity; and of his oddly various circle of intimates during these latest years.

Mercifully for his people and for the world, India's indispensable and unrivalled leader has proved a devoted democrat. Personal power has nevertheless been thrust upon him by his colleagues' often callous readiness to let him bear all the heaviest burdens. Indians are becoming increasingly uneasy about their perilous reliance on one human life, and even about their comfortable habit of letting the prime minister make up their minds for them, particularly on foreign affairs. Mr Brecher's intelligent speculations about the way ahead make up one of the most interesting sections of an unusually interesting book.

Values And All That

Culture in Private and Public Life.
By F. R. Cowell.
Thames and Hudson. 367 pages. 30s.

CULTURE is a dangerous subject for writers. The fact that the word culture is an almost infinitely elastic holdall makes on the one hand for cross-purposes; on the other hand, it fosters an illusive belief that the redefining of culture (the word) amounts to a useful and illuminating statement about culture (the thing). Mr Cowell's book constitutes a tumble into this latter pitfall. He defines culture as a value system, particular cultures in the sociological or historical sense consisting always in the particular embodiment and continued transmission by particular groups, in their precepts, conduct, science, literature and artifacts, of the Good, the True and the Beautiful. So far, so good; much might be organised around this leading idea.

What Mr Cowell organises, however, through three hundred and fifty pages, is mostly a heavy-footed polemical ramble through the literature of the subject, displaying an astonishing amount of rather owlish erudition and a no less astonishingly patball standard of controversy. Cliché follows cliché, platitude platitude; open doors are powerfully hammered, enormous issues offhandedly dismissed. Here and there, maddeningly, one of the really significant questions is raised only to be dropped in favour of yet another disquisition on the obvious. What of the negative value system, the anti-culture which, uniting and inspiring its adherents and giving meaning and satisfying quality to their lives, is nevertheless in the end powerful only for destruction: the value system of the Nazi or the flick-knife gang? Is there any means of objectively distinguishing the negative system from the merely deviant, or the merely undeveloped, system?

Mr Cowell does give an early paragraph to the negative system (he gives as much to the list of named firms contributing to the establishment of St Catherine's College); later on, he briefly plays patball with the question of relative versus absolute values; and there he leaves the matter.

What of the transmission of value systems, by oral tradition or otherwise, fron parents to children, older to younger members of playgroup, gang, working team, political or religious leaders to mass following? What is known about these channels, what happens when one or another is clogged or discredited, or acquires a new importance compared with the others? Mr Cowell, heading a paragraph "How are Cultural Standards Established?", raises the hope of at least some informed and stimulating suggestions, perhaps of an intelligent comment on Mr Richard Hoggart's "Uses of Literacy"; but what follows is mere innutritious cotton wool, and he appears never to have heard of Mr Hoggart at all. What of the interaction of value systems with material standards, technology, productive organisation? Mr Cowell makes, rather wordily, the standard case against Marx, but never asks what elements, if any, in twentieth-century culture derive from, and are only appropriate to, a pre-industrial, pre-scientific state of society.

It is all rather a pity. A tremendous amount of work and learning has obviously gone into "Culture in Private and Public Life" and a tremendous amount, too, of serious good intention. But the net result is one potentially useful definition, a Reader's Guide to the appropriate field of controversy, a very occasional good phrase and an overpowering smell of the lamp.

Inscrutable Politician

The Second Cecil.
By P. M. Handover.
Eyre and Spottiswoode. 344 p. 42s.

ROBERT Cecil is one of the more inscrutable figures of English history. Some see in him only a cold and selfish politician, concerned above all with the consolidation of his own power. Stepping deftly into his father's shoes, he eliminated all rivals, secured the offices of Principal Secretary and Lord Treasurer and ended up wielding more authority than had ever come Burghley's way. Others hail the constructive and visionary statesman, author of the Great Contract, which might have solved the financial problems of the early Stuart monarchy and changed the course of English history. Recent historians have oscillated violently between these opposing interpretations of his career, and their lack of general agreement makes the absence of a reliable biography all the more irritating.

Unfortunately Miss Handover does not put an end to controversy by giving us the book we have so long been waiting for. In accordance with the curious wishes of her publishers she has written not a life, but an introduction, which stops short in 1604 when Cecil's career finally got going. Her contribution is an analysis of the means by which he attained power rather than an assessment of the use he made of it. She describes the squalid faction fight of the 1590s when Essex and Cecil jockeyed for office and influence under Elizabeth and at the same time endeavoured to ingratiate themselves with James VI of Scotland, her likely successor. In retrospect we can see that it was always an uneven contest, for the irresponsible and impetuous Essex was no match for his shrewd and calculating opponent. But at the time the issue seemed uncertain. Cecil was deformed and lacked the courtly graces. His peace policy had a limited appeal and he was personally unattractive. "Here lieth the Toad", they scribbled above his chamber. Ultimately he won through, but the strain had told and by the time James's accession had been safely engineered he was already a tired man.

Miss Handover's book is careful and painstaking, drawing on both printed and manuscript sources. But her approach is pedestrian, her interpretation of contemporary sources is sometimes unreliable and she seldom displays the penetration necessary for the appraisal of so formidable a career.

Scientific Philosophy

Modern Philosophy of Science.
By Hans Reichenbach.
Routledge and Kegan Paul.
422 pages. 28s.

HANS Reichenbach died in 1953. During his lifetime he was prominent, first in Berlin and later in California, in the philosophical movement that became known as logical empiricism. While in Berlin he was loosely affiliated to the so-called Vienna Circle from which logical positivism was born. Reichenbach's interests were always close to the philosophy of science, and he was particularly concerned with the theory of probability. Indeed he was notable for his attempts to replace systems of ideas that in any way savoured of strict causality by ideas that presupposed probability only. In this he was much concerned with the development of quantum physics, some of the ideas of which he anticipated.

The present book is a collection of translations from his writings, compiled by his wife, together with a foreword by Rudolf Carnap. On the whole it is not a very good selection and the title is rather misleading. More than half of the papers included originally date from the twenties or early thirties of this century, and some of them are directed towards targets that were of fairly local interest only. It is not likely that a reader would obtain a satisfactory impression from this volume either of Reichenbach or of the philosophy of science.

As the more general papers in the book indicate, Reichenbach thought that philosophy should be scientific, and that the solution of traditional philosophical problems about knowledge is best obtained by piecemeal investigation of the issues that arise in science. Perhaps for this very reason, he reveals himself at his best in this book when he is close to specific scientific problems or technical matters of logic. For example, the second paper included — that on the "Theory of Motion according to Newton, Leibniz and Huyghens" — is an admirable discussion of the issues involved in eighteenth century controversies about motion. And the first paper, on the theory of relativity, would have been very valuable had it not been concerned with discussions of that theory that now do not loom very large in the philosophical scene. On the other hand, later papers, such as those on the freedom of the will and ethical utterances, show that technical ingenuity does not necessarily lead to subtlety in the appreciation of philosophical issues. Indeed their outcome does much to cast doubt on the claim that philosophy should be scientific.

It cannot in general be said that this is a very satisfactory book. Despite the title, there is little in the way of a thread running through it. When all is said and done it remains a heterogeneous collection of papers of very unequal worth, and adds little to Reichenbach's stature.

OTHER BOOKS

ADVERTISING IN MODERN LIFE. By John Gloag. *Heinemann.* 207 pages. 10s. 6d.

Mr. Gloag says his book is "not an apologia for the use of persuasion by industrial and commercial interests". If it is not that, then it is very difficult to say what else it is. Nor is it easy to detect why Mr Gloag should have entered this disclaimer. As books explaining and justifying advertising go, it is pleasant and readable and could no doubt be examined with profit and instruction by many of the critics. Whether it will be read is doubtful. The author's sympathies are so overwhelmingly with the advertising business that even those doubts and problems which are constantly found inside that business hardly get a look-in.

THE SALMON. By J. W. Jones. *Collins.* 196 pages. 18s.

This is an interesting, carefully prepared study of the life cycle of the salmon, written by an expert in this field of research. It contains many facts hitherto unverified, some good photographs, and a comprehensive bibliography.

THE ANGLO-AMERICAN CONNECTION IN THE EARLY NINETEENTH CENTURY. By F. Thistlethwaite. *Pensylvania University Press.* London: *Oxford University Press.* 230 pages. 36s.

In this thoroughly amiable and scholarly book, Mr. Thistlethwaite continues his exposition of early American history in terms of the Atlantic economy. His conclusion that before the 1860s "the American frontier was, in a real sense, one of the frontiers of Europe" is certainly right; it gives early American history a framework of realism and intellectual cohesion not otherwise possible. The major portion of the book is devoted to details of the Anglo-American partnership in terms of a flow of capital, skilled labour, political and religious ideals, and education policy (where the ideas came from, rather than went to, the United States). The book is well documented throughout.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Nine Men and Two Poles

WASHINGTON, DC

SET Barenblatt against Vitarelli, and Uphaus against Greene; the result is not a Pan-European boxing festival but a rough and ready way of assessing the latest session of the United States Supreme Court. The nine Justices rose for the summer at the end of June after handing down, by narrow majorities, some of the most bitterly-debated decisions since the South was told five years ago that its racially-segregated schools were illegal. This time the racial problem was not the main issue; the Court had firmly and unanimously restated its position before the session began, and had told the South that the danger of violence would not be accepted as an excuse for clinging to segregation. The disputed cases involve the delicate question of civil liberties, or the rights of the individual citizen in relation to his government.

The liberals are protesting that "the new Court" has now beaten a retreat from the boldly libertarian position it had adopted in the past few years; *Time* magazine, for the conservatives, prefers to say that the Court has chosen a "truer course". It is no slur on the Justices' integrity that their decisions are being interpreted in political terms. As guardians of the Constitution, they have long been reconciled to the fact that in America the political and the judicial are hopelessly intertwined. It is doubtful, however, whether the extremer interpretations of what they have done in the past few months are justified.

In the first place, the Court has shown that it is still solidly liberal in one respect; it will allow no trifling with the prescribed rights of an accused man to a fair hearing, whether he is accused of a criminal offence or of disloyalty to his country. It held unanimously that Mr Vitarelli, an employee of the Department of the Interior, could not legally have been dismissed as a "security risk" because the department had not followed its own regulations — denying to him, among other things, the right to cross-examine witnesses. It also decided by 8 to 1 that Mr Greene, an officer of a company doing secret defence work, had been wrongfully refused a security clearance, since neither the President nor Congress had ever specifically authorised hearings — such as his was — in which the accused was unable to confront his accusers. The Court did not say what it would do if Congress or the President were one day to authorise such a lop-sided procedure; but the wording of Chief Justice Warren's opinion strongly hints that it would strike this down as unconstitutional.

In the second place, the controversial 5-to-4 decision in the Barenblatt case, involving a college instructor who refused to answer a congressional committee which asked if he had been a communist, was neither as radical nor as sudden a change of mind as the Court's critics allege. The nub of the decision was implicit in the Watkins ruling of 1957, that congressional committees have wide power to demand answers to their questions provided they explain the point of the questions. It should have been plain from Mr Justice Frankfurter's concurring opinion in the Watkins case that he took his stand then on the need for proper explanation of the questions put to witnesses, rather than on the broader grounds — the protection of individuals against investigation — cited by the Chief Justice. The majority which has now assembled round Mr Frankfurter includes only one man, Mr Justice Harlan, who went along wholly with Mr Warren two years ago. Two of the other three did not take part in the Watkins case and the third was in outright opposition.

NEVERTHELESS, three themes have emerged from this year's decisions which, it is fair to say, at least shift the emphasis of the Court's ideas. They reflect a special kind of judicial conservatism; a feeling of self-restraint about the Court's power to tinker with the political divisions created by the Constitution and, in particular, its power to infringe on the domain of Congress. The first is shown in a number of rulings which, to the displeasure of many liberals and to the delight of enthusiasts for states' rights, stress the line which the Constitution draws between the states and the federal government. In the Uphaus case, decided again by a 5-to-4 majority, the Court made it clear that the individual states are free to pass laws designed to protect themselves from subversive activities; this was not explicit in the Nelson ruling a few years ago, which merely held that federal legislation against subverting the United States government barred the states from entering the same field. In two other cases the Court declared that the passage in the Constitution which prohibits double jeopardy applies only to federal prosecutions, and does not prevent two prosecutions

for the same offence when one is conducted by a state. Thus a generally accepted rule of common justice takes second place to the exigencies of federalism.

The second theme emerged in two passages which paid unusual deference — by the Court's recent standards — to the prerogatives of Congress. In the Barenblatt case the majority not only observed that Congress's power of inquiry "is as penetrating and far-reaching as the potential power to enact and appropriate"; it also said that the Court must be very wary of passing judgment on Congress's motives in making investigations. It was these casual remarks which most irritated the liberals, just as in the Watkins case two years ago Chief Justice Warren's casual remarks about the limits of the power of inquiry irritated the conservatives.

Again, the same 5-to-4 majority upheld the two-year-old Act of Congress which modifies the effects of the Court's ruling in the Jencks case. The point at issue here is a defendant's right to inspect statements made by prosecution witnesses before his trial. The Court accepted Congress's definition of what statements have to be produced, which was narrower than its own definition in the Jencks case; it also ruled that the Judge — rather than the defence — should decide whether particular documents come under the definition or not.

Thirdly, the Court showed that in cases where individual liberties have to be balanced against the public interest it is willing to give substantial weight to the latter. It voted, once again by the same 5-to-4 margin, that a health inspector in Baltimore was entitled to enter a house to search for rats even though he had no warrant; henceforth an American's home is his castle except when "the maintenance of community health" demands otherwise. Similarly, the constitutional protection of free speech has to give way — in the words of the all-important Barenblatt ruling — to the "governmental interests here at stake", which include the right to interrogate a man about his past associations with the communist party.

It would be improper to suggest that the five Justices who issued these decisions, over the protests of their four colleagues, were directly influenced by the attacks made in Congress on earlier rulings of the Court, although the congressional pressures against the Court are likely to grow considerably milder as a result of what it has done at this session. What it is proper to suggest is that the public debate has helped to clarify and reinforce the ideas which have now been given extra weight in the majority's decisions.

All three of the themes which have emerged reflect attitudes long known to have been held by Mr Justice Frankfurter. He is the Court's oldest inhabitant, and has become one of the opposite poles — Mr Justice Black is the other — around whom judicial attitudes gather like filings round a magnetic field. Changes in the membership of the Court, and some second thoughts by Mr Justice Harlan, now seem to have brought a majority of the filings to Mr Frankfurter's end. In an address which he gave a few years ago, he pointed out that the difficulty of the Court's work lies in the fact that in most cases it has to strike a balance between two conflicting principles. He may now be reflecting on what he said then: "though a conclusion has a logical form, it in fact represents a choice of competing considerations of policy, one of which for the time has won the day."

Money Costs More

THE Treasury had to pay 4.73 per cent, the highest interest rate since 1921, last week when it sold at auction $2 billion worth of one-year bills. But it may not be altogether sorry for a demonstration of the heights to which short-term rates may be driven if Congress does not raise or waive the ceiling on the interest which may be paid on long-term government bonds and give the Treasury more flexibility in managing the public debt. With a good deal of difficulty Mr Mills has persuaded the House Ways and Means Committee, of which he is chairman, to allow the President, for the next two years, to disregard the ceiling of 4¼ per cent when he feels that this is necessary. The committee's decision was a victory for Mr Anderson, the Secretary of the Treasury, and for his admirer and fellow-Texan, Mr Rayburn, the Speaker of the House. But it is no guarantee that the Bill will have an easy passage through the Senate.

The Bill attracts the Democrats because it relieves them of any responsibility if the government's financing difficulties continue and saddles the President with the blame for dear money. Moreover, the Bill has a further sweetener in a rider to the effect that the Federal Reserve System should buy government securities of varying maturities when it seeks to expand the supply of money. This is aimed at the central bank's policy, now eight years old, of buying only short-term government obligations and reflects the belief of many Democrats and a good many Republicans that the restrictive credit policy of the central bank is responsible for the Treasury's troubles. Mr Martin, the chairman of the Federal Reserve Board, strongly opposes any return, however limited, to the bad old days when the bank pegged the price of government bonds. But the Treasury, which up to now has been standing firmly behind the central bank's anti-inflationary policies, is strongly tempted to accept the committee's relief, although it dislikes having it limited to two years, by which time the Democrats hope to have a President of their own in the White House.

Next month the Treasury will be back in the market with a big cash and refunding operation which will

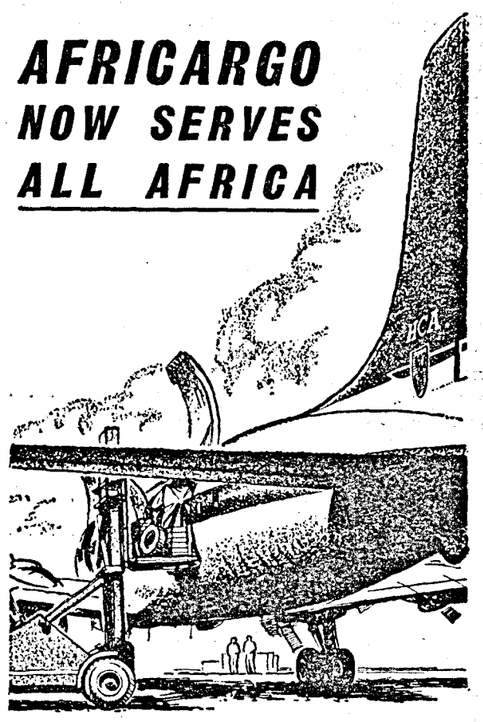
AFRICARGO NOW SERVES ALL AFRICA



with a new, faster airfleet

West Africa and Johannesburg—as well as East and Central Africa—are now linked with the U.K. by the Africargo airfreight service. This Hunting-Clan express service is now operated with modern pressurised Douglas DC-6C aircraft cruising at over 300 m.p.h. and with vastly increased cargo space. The all-cargo flights are supplemented by freight capacity on the scheduled Safari Viscount services. With Africargo, you get specialist care and handling as well. Cargoes are accompanied by trained flight attendants, you get firm bookings, and many other advantages an all-cargo service offers.

Consult your forwarding agent or write to:

put more pressure on the short and intermediate term interest rates which are already spilling over into the long-term market for mortgages and corporate issues. The central bank will hardly tighten money any more until this operation is past. But it is not likely to be frightened into abandoning a policy which is designed to restrain inflation, help to right the balance of payments and prove to foreign governments and banks that the value of the dollar will be protected.

Slap for the Democrats

PRESIDENT Eisenhower's strongly-worded veto of the housing Bill was a slap in the face for the Democratic leaders who had manoeuvred their followers into passing the measure by claiming that it was vetoproof. The compromise Bill which came out of the conference between Senators and Representatives provided for total expenditures not only much lower than in either of the separate Bills originally approved by the two Houses, but also a little lower, superficially at least, than the President himself had requested. The purpose of this unusual operation was to demonstrate that the Democratic majority in Congress was ready to work with the Republican President in producing constructive legislation. The veto thus strengthened the hand of the progressive Democrats who argue that their leaders, in attempting to produce Bills which the President can approve, are in effect repudiating last November's vote for liberal measures and that the party will pay for this cowardice at the polls next year.

The compromise Bill was in fact hardly an illiberal measure : it provided for 45,000 units of low-cost public housing, which the Administration did not want at all, for more to be spent on slum clearance than the Administration had proposed, for extending and altering various existing schemes and for adding new ones for housing elderly people and for building college classrooms. The total was put at $1.37 billion, instead of the $1.65 billion requested by the Administration, but this was achieved by leaving public housing out of the calculation altogether and by allocating only $900 million to grants for slum clearance; this was to be spent, however, in two years while the $1.45 billion for which the Administration had asked was to have lasted for six years. It was agreed that the Bill would have added only about $70 million to the federal budget in the current fiscal year, but it would have involved the government in heavy outlays on housing in later years and thus would have undermined the President's efforts to check the relentless rise in future spending.

This was the main reason why he returned the Bill, although he had many other objections to it. It is improbable that the veto will be over-ridden, but Congress will not be in any hurry to act on the request for a simplified Bill, continuing existing programmes at their current levels and expanding the authority of the Federal Housing Administration to insure mortgages. The bitterness this veto had injected into the relationship between the President and Congress has already been demonstrated by the unexpectedly sharp reduction which the Senate has made in funds for foreign aid. Furious at being accused of extravagance when they have been trying to co-operate with the President's drive for economy, the Democratic leaders are now in a mood to cut his requests where it will hurt him personally, regardless of the merits.

No Boat to China

MR AVERELL Harriman's exceedingly warm welcome in the Soviet Union, which he has just visited in the guise of a newspaperman, cuts no ice with Communist China. Peking has turned down his request for a visa. This must be a source of some satisfaction to the State Department, since it emphasises that it is the Chinese, not the Americans, who are to blame for keeping China *incommunicado;* the refusal may also relieve the State Department of some of the pressure from a growing queue of Americans, including members of Congress, who would like to see at first hand what Communist China is doing. For nearly two years the State Department has been keeping alive the permission granted to some thirty representatives of news-gathering agencies to disregard the general ban on travel to China. But Peking has refused visas to all but one because the State Department cannot commit Washington in advance, as the Chinese demand, to admitting Chinese newspapermen into the United States on a reciprocal basis. The department stands ready, however, to ask for the law against such admissions to be waived in individual cases.

Mr Harriman, the former Governor of New York, a former Ambassador to Russia and a millionaire many times over, sought permission to visit China on the technical ground that the articles he is writing about his travels are now his only regular employment. It was granted by the new Secretary of State, but with some misgivings; if Mr Harriman, lightly disguised as a journalist, were allowed to go, it would become harder to refuse others but not impossible. Justice Douglas of the Supreme Court has been turned down because his assignment for the *National Geographic* magazine is not "full-time". It remains to be seen whether Peking will deal more kindly with Mr Vincent Sheean, who has received a passport valid for China.

Such concessions to journalists lie purely at the discretion of the State Department, in the view of a three-man panel of the Court of Appeals. It held last month that the department was justified in refusing to renew the passport of Mr William Worthy, a journalist who in 1956 went to China in defiance of a ban

by the department, which at that time had not been converted to the view that Americans are entitled to have the facts, even about their enemies. The authorities are ready to renew Mr Worthy's passport if he will agree to observe the restrictions in it, but he takes the view that the Secretary of State has no constitutional power to curb his right to travel in peace-time. It seems likely that he will appeal. Last week the same court also upheld the refusal of the State Department to give a passport to Mr Waldo Frank so that he could visit Communist China as a special correspondent for Latin-American newspapers and lecture on American affairs at the University of Peking.

Another State on the Way

THERE will be no first birthday for the 49-star "Alaska flag" which was officially inaugurated on July 4th; for by Independence Day, 1960, Hawaii will have become a state and that day the 50-star flag will be flown in its turn for the first time. As a result many institutions, including government offices, are making do with the old 48-star flag. Nevertheless a brisk business was done on July 4th on top of the Capitol in Washington, running 49-star flags up and down, one after another, about a thousand altogether, on four flagpoles, to satisfy the demands of the boy scout troops, chambers of commerce and others for a new flag which had flown over the United States Congress on the day of issue.

Hawaiians actually voted at the end of June, by about 17 to 1, an even bigger majority than had been expected, to accept the statehood which Congress bestowed on them in March. But the President will not proclaim Hawaii formally a state until some time after the election on July 28th, when the 170,000 registered voters will choose a Governor and state legislators, and two Senators and a Representative to go to Washington, nearly 5,000 miles away. The voters picked party candidates for these offices in a primary election held at the same time as the referendum on statehood. Far more votes were cast on the Democratic ballot than on the Republican, but this is not very significant since none of the Republican candidates for major offices were opposed. However, most observers expect the Democrats to do well in the general election.

Hawaii was a Republican stronghold as long at it was dominated by the white businessmen and landowners, but in recent years the islands have turned to the Democrats as the citizens of Asiatic origin, who make up 75 per cent of the population, have become increasingly prosperous, increasingly well-educated — and increasingly interested in politics, as the names and faces on the election posters show. One of the Republican candidates for United States Senator is of Chinese ancestry, the other Japanese. The Democrats offer a Japanese-Hawaiian only for the seat in the House of Representatives; but then, he lost an arm fighting for the United States in the last war.

It thus seems fairly certain that the new state will be represented in Congress by at least one member of Asiatic race. It is also clear that, whatever the political affiliations of the Hawaiian delegation ,the members will all be free from racial prejudice and will be strong upholders of the rights of minority groups. They will also all be interested in military questions, since Hawaii relies on defence installations for much of its income. They are likely to have strong views on trade union matters, for the longshoremen's union, allegedly infiltrated by communism, is an important influence in the islands. But on other issues that are prominent in national affairs, the new members of Congress will be relatively inexperienced — on farm price supports, for example; the Hawaiians grow sugar and pineapples, not wheat and cotton.

SHORTER NOTES

Beginning this autumn the Senate is to publish details each quarter of the names and pay of the people employed in each member's office. This is in answer to the charges of nepotism in Congress which were made earlier this year and about which the House of Representatives as a body has so far done nothing. The Senate spends nearly $10 million a year of the taxpayer's money on providing office staff for its 98 members; this sum is shared among them according to the population of the state each represents.

The law banning the issue of trading stamps by shopkeepers in Wyoming was ruled unconstitutional by a state court a few days before it would have gone into effect, on the ground that it discriminated unfairly against the companies which issue these stamps. Wyoming's attempt to ban them was discussed in *The Economist* of May 30th, on page 849.

* * *

The Department of Agriculture has discovered that, when maize is planted carefully with the point of each kernel downwards, the yield is higher than when the seeds are simply scattered along the row. It is now suggested that the kernels may be stuck on a tape which will hold them in the vertical position and can be fed into a mechanical planter so that even large fields of maize may be sown in this improved way.

* * *

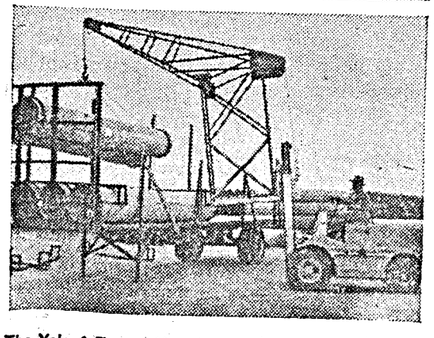
Makers of plastic bags, in which most clothes are now brought home from the cleaners, have launched an expensive educational campaign to teach parents to keep them away from small children. The manufacturers are also trying to develop a less dangerous bag. They fear that unless they succeed, the use of the bags may be restricted or forbidden. So far this year 55 children have been suffocated; a few used the bags as "space helmets", but most of the victims were small babies laid on the bags, which clung to their faces.

Lightweight Yale trucks increase warehouse space *and speed crowded area handling*

PHILADELPHIA, U.S.A. High manoeuvrability is an outstanding characteristic of the Yale Warehouser. The model shown right is moving and stacking groceries in a narrow-aisle warehouse. This rider-type Yale truck operates quickly, safely and efficiently in aisles as narrow as 6′ and high-stacks capacity loads. Handles 2,000, 3,000 and 4,000 lbs. economically. Platform, pallet, straddle and Extend-A-Load models.

YALE FORK LIFT TRUCKS HANDLE HEAVY LOADS ECONOMICALLY

SINGAPORE – This Yale electric truck not only handles heavy loads of cargo in bags, but also in crates and drums. Yale electric trucks are especially long-lived and economical to operate and maintain. Fume-free, they are ideal for indoor work. Versatile Yale electric trucks are available in capacities ranging from 1,000 to 200,000 lbs.



YALE PETROL TRUCKS TAKE WIDE VARIETY OF ATTACHMENTS

JOHANNESBURG, SOUTH AFRICA – Here we see a familiar Yale petrol truck with a special crane-type boom for handling metal conduit. Yale petrol trucks, available with a wide variety of attachments, handle all kinds of special jobs as well as standard type jobs with *speed, efficiency* and economy. Capacities range from 2,000 to 20,000 lbs.

The Yale & Towne Manufacturing Company, Wednesfield, Staffs, England · Chrysler Building, New York, U.S.A. · Manufacturing Plants: Velbert Rhld., Germany · Phila., Pa., U.S.A. Licensed Manufacturer: FENWICK – Saint Ouen, Seine, France · Milan, Italy · Barcelona, Spain

- Yale makes the world's most complete line of petrol, LP-gas, electric, diesel and hand lift trucks.
- Yale industrial lift trucks are uniformly high in quality, wherever manufactured.
- All Yale equipment available in currencies of the free world.
- For further information contact your Yale sales and service representative-located in principal cities of the world.

Man with a smug smile . . .
. . . has a face made from the Cariflex latex designed for the manufacture of foam rubber. An increasing number of manufacturers with perfectly normal faces show equal expressions of satisfaction at the performance of all types of Cariflex rubbers.

Shell extends its service to industry.
With the introduction of **Cariflex** styrene-butadiene rubber, Shell offers a sure source of supply to the world's rubber industry, whose requirements can no longer be met from natural sources. The quality and reliability of **Cariflex** is backed by Shell research, experience, manufacturing and world-wide marketing facilities. Several different types of **Cariflex** are available including hot and cold polymers, oil masterbatches and hot and cold latices. Applications vary from tyres to floor tiles, and foam and footwear. For details of **Cariflex** Shell-made rubber, consult your Shell Company.

THE WORLD OVERSEAS

Japan's Mr K

FROM OUR CORRESPONDENT IN TOKYO

On July 11th, Nobusuke Kishi, prime minister of Japan, embarked on a pilgrimage to Britain, Western Europe, the United States and South America, which he expects will take forty days but which his critics are already urging should be shorter. Mr Kishi's critics never tire of saying he is doing Japan no good, but when he proposes to leave it their indignation knows no bounds. On this occasion they are complaining that his trip has no specific purpose, and are not appeased by his bland reply that this is correct but that he hopes all the same to promote goodwill. Mr Kishi's baggage includes a large number of Japanese decorations that he proposes to confer on foreign dignitaries. In exchange, he expects to get a number of medals for himself. This expectation has rendered the critics even more apoplectic than usual.

Mr Kishi has been prime minister more than two years. Throughout that time he has had a consistently bad press. The newspapers run frequent public opinion polls to indicate that his stock is falling lower and lower. In a recent round-table discussion, the most eminent of the commentators were asked to compile a list of Japan's ten best living politicians. They refused to include Mr Kishi at all, but indicated their willingness to place him at the head of the ten worst.

The prime minister's attempts to grapple with foreign policy — sometimes single-handed, sometimes in accord with his foreign minister, Mr Fujiyama, and sometimes in conflict with Mr Fujiyama — have not been very successful. Japan's current dealings with the two Koreas illustrate this. The bid to rid Japan of pro-communist Koreans by dispatching them to North Korea seems doomed to failure by the understandable reluctance of the International Red Cross to be dragged into the business, especially on the terms being dictated by the North Koreans and apparently acquiesced in by the Japanese Red Cross. Meanwhile, South Korea has been still further estranged.

Japan's attempt last year to play footie-footie with communist China while retaining its trade and other ties with Formosa met a roughly similar fate, though on that occasion it was the communists who were finally estranged. With regard to South-east Asia, Japan's former co-prosperity sphere, Mr Kishi continues earnestly to preach that large doses of American finance are needed to enable Japan's impoverished neighbours to buy Japanese goods; but Washington continues ominously non-commital. And Mr Kishi's and Mr Fujiyama's proposed revisions of the United States-Japan security treaty look like producing a first-class rumpus in Japan this autumn, when the Diet is expected to get its first proper look at the proposals, while Washington obviously continues to harbour reservations.

Mr Kishi has other internal troubles. He is now on his third cabinet, and the list of his dismissals is impressively lengthy. Try as he may, he has been unable either to satisfy or subdue the factions in his Liberal-Democrat party. Mr Ikeda, a former foe, is now in the cabinet, but may have entered it with a political knife tucked up his kimono sleeve. Mr Kono, a former supporter, is now an outspoken foe. Last autumn, Mr Kishi hesitantly produced his first really major piece of legislation, the Policy Powers Bill. He was compelled to withdraw it amid a storm of public protest. Mr Kono darkly predicts that the same fate will befall the revised United States-Japan security treaty. Meanwhile the turbulent Diet remains in its usual condition of near-chaos, with the government party and the Socialist opposition squabbling fiercely over the distribution of committee chairmanships.

Thus the critics have whole quivers of arrows to stick in Mr Kishi, and palettes of paint to bedaub him with. Yet Mr Kishi's political hide remains unpunctured, and his critics' picture of him continues to mislead. For the truth is that the Japanese prime minister is best compared to a stonewall batter. His score is unimpressive, but his wicket refuses to fall. Moreover, he continues to win the elections and the by-elections. The Socialists, who have vowed to knock him for six, seem as far as ever from their necessary first target of gaining one-third of the Diet seats, and are even more divided among themselves than are the Liberal-Democrats: Mr Suehiro Nishio, an important Socialist who could be likened to a more responsible Mr McGovern, has just accused the left wing of his party of being dupes of the Communists.

Moreover Japan, despite the political confusion, is obviously making rapid economic progress. The average worker's wage, though still low at £14 a month, has gone up by 20 per cent in the past ten years. Mr Kishi may not be able to take all or even a major part of the credit for this; but when he promises on behalf of the conservatives to double wages over the next ten years, he gets more respectful attention than the Socialists get with their offers of a class party that will spearhead (in joint action with the Communists) a peaceful revolution. In short, the critics applaud the Socialists but the people seem to prefer to vote for the unspeakable Mr Kishi.

If the persons Mr Kishi plans to meet abroad have been reading and believing the Japanese press, they may find themselves pleasantly surprised. A softspoken although by no means an indecisive man, Mr Kishi not only has considerable charm of manner, but also a sense of humour and an ability, when he chooses, to express his thoughts with great frankness. He wants to ask a lot of questions, and is particularly curious to know more about the British Government's thinking on the subject of communist China. Mr Kishi is rather solidly pro-Washington, for what he deems good Japanese reasons, but also appears to have a good deal of respect for London's political intelligence, based on Britain's rather longer experience of the international political jungle. Besides, Britain also is an island that lives by trading.

But Mr Kishi spoke no more than the truth when he said that the chief object of his tour is to promote goodwill, a commodity which the Kishi government believes post-war Japan still needs much more of. Mr Fujiyama on his last visit to London was much embarrassed by having genuine imitation ball-bearings thrust under his nose during a television interview. West Germany's largest shipyard at Hamburg has been closed in the faces of Japanese visitors. All this worries the Japanese. Rapidly recovering economically, building pulp mills in Alaska and steel mills in Brazil, increasing their exports to Canada fivefold and doing brisk business even in Australia, they still feel they lack the world's goodwill, and that without it all their achievements remain precarious. They know they have a reputation for being clever, perhaps too clever, and industrious, perhaps over-industrious; what they would like to do is to convince the world that they are also what they themselves call "sincere". To do this, they propose to walk quietly and talk softly, stating their case (which they think is a good one) moderately, like reasonable men. And Mr Kishi, despite his vociferous domestic critics, may be just the man for such a job.

Nasser's Political Pyramid

FROM OUR MIDDLE EAST CORRESPONDENT

Owing to the large numbers of seats contested in the elections of July 8th for the local councils of the National Union in Egypt and Syria, it may be weeks before their meaning becomes clear. There are more than 9,000 successful candidates, the great majority of whom are quite unknown outside their own localities. At first glance it appears as if the Baath Socialists, as expected, have suffered a setback. Outstanding Baathist candidates like Akram Hourani and Salah Bitar polled substantially less than the independent Colonel Sarraj, minister of the interior and President Nasser's steadiest support in Syria. Many leading figures in the anti-Baath coalition were elected comfortably. The measure of the Baath setback, however, is not yet possible to assess with any confidence.

These elections mark the first practical attempt to carry out the sisyphean task of fusing the two peoples of the United Arab Republic. Since the act of union early last year a central government has been sitting in Cairo; command of the armed forces was unified even before that. But apart from these two instances the machinery of unification has stalled. A United Arab Republic visa, accepted without question in Egypt, is not necessarily honoured by the Syrians. Land reform in Syria, while following the broad outlines of land reform in Egypt, differed from it in material particulars; even so, its applicability to Syrian conditions is fiercely challenged by Syrian agriculturists and agronomists. While economic issues between Egypt and Lebanon were solved with little difficulty, the Syrians have scarcely budged from their original position. Indeed, Arab critics of President Nasser, who formerly accused him of swallowing Syria and sending Egyptian officials to swarm over the land like locusts, now reproach him for failure to control his Syrian subjects. The formation of the National Union is an attempt to destroy the memory of past divergences in Egyptian and Syrian political practices and to substitute for it a single nationwide movement in support of the central government.

From the constitutional angle the subservience of the National Union to the government seems assured from the start. The new local councils will shortly elect provincial councils for the 33 provinces of the Republic. The provincial councils in turn will elect the National Congress. This will be the highest organ of the National Union. From members of the National Congress Nasser will handpick the National Assembly, the future legislature of the UAR, the only limitation on his freedom of choice being the proviso that half of its members must have been members of the dissolved Syrian chamber of deputies or the former Egyptian national assembly. The laborious processes involved seem to preclude any chance of a hostile National Assembly. In the circumstances it is small wonder that President Nasser felt able to abolish the screening committee originally set up to pronounce on the suitability of candidates and to order his officials to observe strict neutrality in the electoral battle. Contemplation of this colossal pyramid prompts the question whether it was worth building at all, especially as all that really matters is the few blocks of stone constituting the apex.

In case the constitutional process has left any loopholes for the formation of an opposition, the government saw to it that the local elections were completely

free from the stigma of politics. Candidates were forbidden to mention in their electoral addresses the name of any political party or of President Nasser himself. Instead, they were exhorted, and in some cases ordered, to confine their campaigns to expounding the aims of the union, which are the establishment of a socialist democratic co-operative state and the furtherance of the aims of Arab nationalism. As a result of this the meaning of the elections is largely obscured by a host of trivial issues. One candidate, despairing of a more telling war cry, promised his constituents more bus stops. A leading Beirut daily remarked smugly that few Syrians could have the slightest idea what they were voting for.

In any case, the election results probably count less than the course of the electoral campaign, which showed a significant swing in Syrian political opinion. The strongest political force in Syria before the union was the Baath Socialist party and its leaders were the principal architects and beneficiaries of union. As a result they have attracted to themselves all the bitterness aroused by the failure of union to cure Syrian ills (including, incidentally, two bad harvests). During the electoral campaign there was a strong tendency for non-Baathists, including the Communists, to make common cause. Many non-Baathist candidates withdrew their nominations to avoid splitting the vote. In protest against this manoeuvre many Baathists did the same, notably in the big towns like Damascus, Hama, Homs and Deir Ezzor.

There is strong evidence that President Nasser not only approved of the discomfiture of the Baath but that he actually promoted it. The deadline for withdrawal of nominations was extended a week to the obvious prejudice of the Baath. The ban on politics itself hurt the Baath more than its opponents, since it removed most points of possible friction that might have set Populists, Nationalists, Communists and Independents flying at each other's throats. The minister of national guidance for the Syrian region has been hauled over the coals for allowing Damascus radio to favour Baathist candidates. This was a particularly bitter blow because the minister was the brother of Colonel Adnan al-Malki, the Baath martyr who was murdered by a sergeant during a football match.

It may seem curious that President Nasser should have turned against the movement that made him a present of Syria. But at least some of the reasons may be guessed. First, the Baath, even though formally dissolved as a party, still retains its coherence as an independent political movement and President Nasser dislikes such animals prowling around his garden. Second, Baath pretensions to be the sole purveyors of Arab nationalist theory must irritate a masterful empiricist like Nasser. Third, the Baath failed him badly in Jordan and Iraq; in both countries its precipitate actions were largely responsible for the prolonged quarrels that have divided Cairo from Amman and Bagdad. Fourth, it is just possible that he may have found that Syria in its present condition is not quite such an acceptable present after all.

Social Democrats Regroup

FROM OUR BONN CORRESPONDENT

For some time the object of increasing disparagement — largely of the genus deriving from "poor old chap, he means well" — Herr Erich Ollenhauer is suddenly hearing his praises sung warmly all around him. The Social Democratic Party chairman's renunciation of any pretension to ministerial office in the event of the party heading the poll in the 1961 election has been acclaimed as a rare and exemplary act of abnegation. Now that Herr Ollenhauer has put himself out of the running for the chancellorship his critics are ready to concede that he has been a competent party chairman all along and a valuable parliamentarian. Yet it can scarcely have been lost upon him that while thus lauding the merit of knowing when to climb down many of his eulogists have been looking hard at Dr Adenauer. For once, it seems, the self-satisfied Christian Democrats are envying the opposition the modesty of their leader.

The wisp of a legitimate question remains: did Herr Ollenhauer slip, resignedly, or was he pushed? Herr Ollenhauer ran into open defiance at the Stuttgart party conference a year ago last May. There was restive criticism then of his prosaic leadership. Some of his closest and oldest colleagues were voted off the executive against his recommendation. The uncomfortable left-winger, Herbert Wehner, was elected a deputy chairman, obviously with the purpose of gingering the party regime. It has taken more than a year for the modest Stuttgart innovations to make themselves felt. But now the general election is that much nearer, and recent public opinion polls have indicated that the Social Democrats have alienated themselves still further from the sympathies of the electorate. One of the latest tests, taken since Dr Adenauer's unpopular assumption of indispensability, credited the Christian Democrats with the support of 49 per cent of the electorate and the Social Democrats with only 31 per cent, compared with the ratio of 46 per cent to 41 per cent recorded earlier in the year. This was a salutary, if unpleasant, shock.

At a council of war held *in camera* from July 5th to 7th the party leaders made their first important dispositions for a more impressive bid for power. A seven-man committee was set up, under Herr Ollenhauer's leadership, to plan a convincing election campaign. This, it was agreed, must be based on the presentation not only of an intelligible, attractive, and practicable programme but also of a reputable team capable of carrying it out. In addition to Herr Ollenhauer, the committee consists of three outstanding Bundestag deputies and three successful Land premiers: Professor Carlo Schmid, who specialises on foreign affairs, the party's defence expert Fritz Erler, the economist Heinrich Deist, Chief Minister Georg Zinn of Hesse, Burgomaster Max Brauer (Hamburg) and the governing Burgomaster of Berlin, Herr Brandt. The committee intends to be hard at work during the parliamentary holiday and to report to the executive with recommendations early in the autumn. An extraordinary party conference is to meet at Bad Godesberg in November to give the rank and file an opportunity to discuss the leadership's policies and tactics.

It was simultaneously with the setting up of the committee that both Herr Ollenhauer and Herr Wehner (an ex-communist) either volunteered or were tactfully persuaded, to acknowledge that, in their different ways, they were liabilities to the party so long as they were considered to be candidates for ministerial office, and consequently to make it known unequivocally that they renounced all such ambition. Both men will continue to devote themselves to party organisation and planning. Not least among the problems awaiting their attention is the long-standing dispute between the party's left and right wings. The conflict has lately flared up again in a much-publicised personal set-to between Herr Wehner and the parliamentary whip Dr Karl Mommer over the latter's allegations of fellow-travelling and communist infiltration, particularly among the younger socialists. Herr Wehner has pointed out that the Social Democrats are in the disadvantageous position of having to wage war on two fronts, against the Christian Democrats on the one and the communists on the other: all the more reason for clarifying the party line as far as possible and at the same time avoiding bigotry. In the peculiar circumstances of German partition and the twilight of orthodox marxism, it is doubtful whether the internal differences can be satisfactorily settled.

Since the Social Democrats reckon that even should they head the poll in 1961 they would not be strong enough to form a government alone they are not committing themselves to a shadow cabinet. But they are putting it tentatively about that the chancellor of a government dominated by their party would probably be Professor Carlo Schmid, the vice-chancellor and foreign minister Herr Brandt, the economics minister Dr Deist, and the defence minister Herr Erler. These are all respected and, except perhaps that of Deist, generally reassuring names.

Parallel with these developments in the Social Democratic party, determined moves are afoot among the Christian Democratic leaders to reorganise their party "from top to bottom". The details of the reorganisation are still obscure; but it is clear to all that its main object will be to reduce Dr Adenauer's oppressive authority and to make it difficult for a successor to wield a like power.

Hungary after the Big Leap Forward

BY A CORRESPONDENT

Having completed the "big leap toward socialism", the Hungarian communist regime has now landed on solid earth with something of a thud. It has not really lost its balance, but neither is it quite sure where to turn now. The essence of the big leap was the amazingly violent and correspondingly effective collectivisation campaign of the last few months. The methods employed were simple. Plain-clothes state security squads would occupy a village, collar the leading peasants one by one and keep them at the council office until they agreed to pool their land. There would be a few pathetic scenes, a suicide or two, and another socialist village would be born. Before the campaign, barely a sixth of the country's arable area was state or collectively owned. At the recent conclusion of the campaign, it was triumphantly announced that the proportion had risen to 50.5 per cent: Socialism had gained an absolute majority.

It is believed that, spurred on by the energetic neo-stalinist wing of the party, the state security organs took the bit between their teeth and leapt farther than the political committee really expected them to; hence the spectacular result of the relatively short collectivisation campaign. Mr Kadar is believed to be pleased enough with it, particularly with the magic 50.5 per cent which has, as it were, carried his cause over the hump. But he is said to be a bit worried about certain repercussions. For one thing, the state security organs jumped rather too eagerly at the chance of being tough, and displayed rather too much independent initiative. It was certainly initiative in a good cause — but who can tell in what cause it might be next time? For another thing, the despair and despondency generated by the campaign has not remained confined to the countryside. It has spread to the urban population just when the party was hoping that public opinion was getting reconciled to the inexorable facts of life. To assist this reconciliation and demonstrate that life under socialism is not just arrest and retribution for counter-revolutionary crimes, the regime has been making touchingly misdirected gestures at brightness and gaiety: shiny cars and refrigerators are being imported, shop fronts are being jazzed up, main streets are getting neon lighting, and state industry has started producing chewing gum and coca-cola. The scorn of the neo-stalinists at this sort of appeasement and self-debasement is, of course, another worrying by-product of Mr Kadar's efforts to leap forward and lean over backward at one and the same time.

If large-scale land collectivisation is not to remain a farce, something will have to be done rapidly to equip the new collective farms with buildings and machinery.

This urgent need comes at a time when the regime is politically and otherwise ill-placed to embark on such highly capital-intensive developments. Squeezing resources for investment out of the economy by depressing the standard of living would infringe the newly discovered dogma, attributed to Mr Khrushchev himself, that such a course is the cause of counter-revolutions. Besides, by next year the balance of payments must swing into surplus to enable repayments of the 1957 Soviet loan to begin. Investment in the current three-year plan is in fact largely directed to industries (engineering, telecommunications, diesel traction equipment) for whose products Soviet import demand has been indicated. The absolute volume of investment has only just reached that of the "soft" year of 1954, and is well below the rate mainained in the heroic 1950-1952 period. Besides, obsolescence and past neglect of maintenance are beginning to tell on industrial productivity Mr Jeno Fock, the economic expert in the political committee, ruefully admitted that with the existing rate of investment, the technological level can at best be held and cannot rise.

Consolation is found in thoughts of the 1961-65 five-year plan. This envisages great expansion in chemicals and engineering and, surprisingly, none in coal and basic steel. Apparently, the Soviet promises of a pipeline from the Georgian oilfields to Hungary, and of an east European power grid, are being taken seriously. Should they materialise, the energy-starved Hungarian economy might start to outgrow the Procrustean bed of autarchy into which the first five-year plan had forced it.

Khrushchev's Technocrats

SCARCELY six months have elapsed since the launching of the first Soviet seven year plan. Summer is normally the season when Moscow turns its attention to the countryside, to crop and harvest reports. Yet at the end of June the limelight was switched on to industry and its modernisation. Planners, officials, chairmen of regional economic councils and academicians spent five days in Moscow, together with members of the party's central committee, discussing ways of improving efficiency and thus making it possible to fulfil the plan. On closer scrutiny, the purpose of the meeting was threefold : to spur on the masses to greater effort by painting for them a bright picture of the future; to draw up a balance-sheet of shortcomings and a list of priorities; finally, to coordinate the various regional plans and drives, because two years after Mr Khrushchev's managerial reform the Soviet planning machine is still not working smoothly.

Outwardly, the planners had every reason to rest on their laurels. In the first five months of this year the plan was over-fulfilled by 5 per cent. Gross industrial production is now running at a rate 11 per cent higher than a year ago; this is well ahead of schedule. During the meeting, delegates from Moscow, Leningrad and Sverdlovsk promised to fulfil their plan in six or even five years. But the planners know how ambitious are their objectives. The pledge to reduce working hours, if kept, will roughly cancel out the growth of the labour force. Productivity must therefore rise every year by six to eight per cent.

Such a growth in productivity may seem fantastic. Yet it may well be achieved not only through technological change but because many Soviet enterprises offer wide scope for improvement. Productivity in Russia's top plants can stand comparison with American achievements, but in a large number of Soviet factories equipment and methods of production are obsolete. During the conference it was disclosed that three-fifths of construction work is done by manual labour, that mining is insufficiently mechanised, and that the work carried out by 40 per cent of the employees in the chemical industry could easily be done by machines. Another complaint was that in engineering, for instance, there are about a million superfluous supervisors. There is plenty of waste to eliminate.

Stalin's method was to mortgage the present for the distant future. Mr Khrushchev wants to get quicker results. His earlier decision to switch the emphasis from water to steam power stations, where investment matures more rapidly, was typical of his attitude. Since the machine building industry cannot replace all old equipment at once, stress must be laid on a limited number of ventures, while automation should spread wherever it can save labour most quickly. Elsewhere, production should be raised in the meantime by small improvements, by a more efficient use of available equipment and by the influx of more skilled manpower.

Mr Khrushchev seems more conscious of the time factor than was his predecessor. Many speakers complained that the setting up of a new factory often takes much too long. The erection of the Soviet steel mill for India took only a couple of years; in Russia it sometimes takes three times as long. What is worse, when machinery is delivered it frequently has to wait for the building to house it. This has even happened when badly needed machinery has been imported.

The other lesson of the conference was that Russia has not yet found a system that reconciles economic planning from the centre with local initiative. The 105 regional economic councils created by the Khrushchev reform apparently tend to give priority to local requirements often to the neglect of outside demands. Smooth and efficient channels for inter-regional exchanges have not yet been found. In addition, the emphasis on local development has reduced the powers of the coordinating organs. Only now is a modernisation plan for the whole of the country to be drawn up in Moscow. Stricter discipline and party control of management are the two methods prescribed to fight the dangers inherent in decentralisation.

A gracious welcome to your guests

THE FENNER-DODGE
SC BALL BEARING PLUMMER BLOCK

A sealed bearing with relubrication facilities giving longer life under arduous conditions.
Easy to fit housing designed to give adequate spanner room and elongated bolt holes allow lateral adjustment.
Separate collar provides bearing to shaft fixing without distortion of inner race.
Special seal designed for low frictional losses and keeps grease in and dirt out.
Deep groove ball bearing with long inner race distributes loads over greater shaft area, and is fully self-aligning.

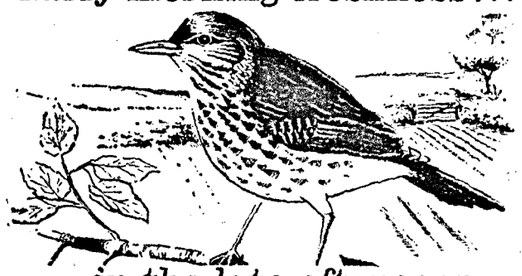
LARGEST MAKERS OF V-BELT DRIVES IN THE COMMONWEALTH

Early morning freshness...



...in the late afternoon

Outside it may be sultry, but the overpowering heat and dust-laden city air cannot enter this office. A Temperature Room Air Conditioner maintains a clear, cool flow of air, fresh as morning dew, throughout the work-long day. It filters out the irritating dusts, controls temperature and humidity, is unobtrusive and easily fitted in any room or office.

LIVING FACTS

- Promotes comfortable, healthy conditions
- Dispels fug and staleness
- Conditioner can be flush mounted inside or out
- Window or wall fitting with simple installation in glass-fronted and concrete multi-storey buildings
- Water or air-cooled
- An installation with a conditioner in every room is less than half the cost of a central station system

THE BUSINESS WORLD

About to Stall

THE MINISTER OF SUPPLY: *The state of the aircraft industry is certainly not such as to give rise to any satisfaction in anybody's breast...*

MR GEORGE WIGG: *Is it not abundantly clear that what is wrong with the aircraft industry is that there is too much Sandys in the works?*
House of Commons, 6th July 1959.

EVERY aircraft has its stalling speed, where it ceases to be airborne and will certainly crash unless rapid corrective action is taken. Many observers believe that the British aircraft industry is dangerously close to this stalling speed today, and that nothing short of a sharp dose of government aid in the form either of orders or of new development contracts can save it from disaster. Others, more brutal or perhaps more detached, feel that much of the industry is simply not worth the effort of saving. The industry has not changed, more's the pity, but its markets have changed both at home and abroad. Lancashire knows what that can mean, and so does the government; but the process has been immeasurably more concentrated in time in the aircraft industry, simply because it has always been so dependent upon one big military customer who suddenly changed his mind. For more than a year, the Ministry of Supply has tried to accelerate the contraction and rationalisation of this industry by cutting down the steady transfusion of public funds that had supported it through previous lean years and indeed throughout most of its short history. The policy was to allow the smaller companies to die a natural death from financial anaemia — a disease to which most of them are already predisposed.

This policy has not been a conspicuous success. At the beginning of this summer, the industry was still employing 242,000 men, which is 90,000 more than the Ministry estimated that it might be able to support when the process of contraction is completed: its labour force has declined less than 25,000 over the last two years. The industry has 13 different civil aircraft in or about to go into production, seven of them big ones weighing more than 50 tons); about a dozen different military aircraft, five different guided missiles, two or three helicopters, as many as 25 different motors and gas turbines of various types, and a range of research and experimental aircraft in the stage before orders could be placed. Its project offices are doodling preliminary sketches of supersonic aircraft and space vehicles.

A list of that length, however, gives a wholly illusory impression of vigour in the industry. It is not a sign of commercial health, but a measure of the extent to which the industry's limited resources are being dissipated among far too great a number of projects. Many of its production lines will run out of orders before the end of next year, the one making the Comet among them.

THE industry has been told often enough that it must contract, that it should rationalise into fewer companies, that it ought to concentrate its resources on fewer projects and, by implication, do them better. It has done none of these things; but before they offer more gratuitous advice, its critics should stop a moment and ask themselves why it has not. The reason is fairly simple. The orders that the industry can expect to receive for any one design, be it aircraft, engine or rocket, are so small that unless a

company bids for several orders at once it will find it impossible to make ends meet. Instead of a square meal, each company lives on a diet of snacks.

Thus a big company such as Vickers Armstrongs is today working simultaneously on three major civil airliners, a small supersonic bomber of extremely difficult design, and an anti-tank guided missile. A small company such as Fairey is dividing its resources between the Rotodyne, in itself a big project for any design office, its share in the development of de Havilland's new medium range jet airliner, boat building, specialised engineering for the Atomic Energy Authority, air surveying, and a certain amount of other precision engineering. The huge range of engines in production and under development at Rolls-Royce provides perhaps the best example of all. Rolls-Royce either dare not or will not fail to bid for every new engine contract that comes up, providing that it has the remotest hope of meeting the specification.

At the risk of stating the obvious, the reasons why the industry's orders tend to be so small can be summarised under three heads: the rising cost of individual items of equipment, which cuts down the numbers bought; the shrinking and altering defence programme at home; and the increase in competition abroad. Little can be done about the first item. The fact that a Hunter fighter costs about £176,000 today, a big turbo-prop engine £50,000, and a small airborne guided missile £7,000 is simply a measurement of their mechanical complexity, though certain defence items remain costly because they are not demanded in numbers large enough for economic production.

But it should have been possible to foresee the effects of defence economies and of rising foreign competition. The trouble with the industry is not, as Mr Wigg unkindly suggests, too much Sandys in the works, but too little. Mr Sandys, who has served his time as Minister of Supply, must remember that the source of several companies' post-war prosperity was largely the fact that Vampires, Meteors and Canberras were not only bought in quantity by the RAF but were used in large numbers by almost every air force outside the Iron Curtain. It was too much to expect that this could continue. Other countries have rebuilt their aircraft industries, so closing their markets to British exports and increasing competition in the few areas, such as Germany, South America, and the Middle East and parts of Asia, where there remain open markets.

This was inevitable, but nobody in this or any other country pretends that it is an economic way to build aircraft. If the British industry is in a bad way, the French aircraft industry is in an even worse pass, even though its design and engineering resources are in some respects far ahead of those in most British aircraft companies. The virus that attacks both these small industries is the smallness of their orders; and even the much bigger American industry, with a total home demand far more able to support a viable scale of operations, is not immune.

British manufacturers seem to have jumped prematurely to the conclusion that they can achieve economic runs of production only with transport aircraft. The 400 Viscounts delivered by Vickers-Armstrongs seem to bear this out; the company may indeed eventually sell between 500 and 600 of these phenomenally successful aircraft. So would the recent successes of the Hawker Siddeley group in two particularly difficult markets, medium range freight aircraft and the so-called "Dakota replacement". Fokker in Holland and Handley-Page in this country have both burned their fingers on aircraft very like Hawker Siddeley's Avro 748, for which the Indian Government has just placed an order worth £25 million to replace its large Dakota fleet.

But if Nato countries were able to agree on common military specifications, it would be possible to get similarly large production runs on military equipment. Long military production runs, based on a few sizeable orders, would have a far more stabilising effect upon the aircraft industries of Western Europe than the ordering of civil aircraft in twos and threes at very irregular intervals. The price that would have to be paid for this stability would be the use by the British services of a certain amount of equipment manufactured in other Nato countries. And the services are certain to argue that this price is too high. They have always in the past found reasons why the RAF, for example, needs aircraft with a slightly different performance from those used by, say, the French or the Americans. The Army is still rejecting, for reasons only comprehensible to itself, a French anti-tank guided missile that saw active service as long ago as Suez and is now used by 11 countries including the United States.

ONLY the Minister of Defence and his Cabinet colleagues can decide whether it is worth while to over-ride this mixture of valid argument and prejudice in order to bring a measure of stability into what is still among the country's most important defence industries. But if a bargain should be made with other Nato countries, it must be carried through according to the letter of the agreement. Common specifications have been drawn up before, for a ground attack fighter and for an anti-submarine aircraft. In each case the experiment has been followed by a nasty fit of the sulks on the part of countries whose designs were not chosen. Relations between the French and Italian industries have been strained by the award of the contract for a ground attack fighter, and the French Air Force has no intention of honouring the concomitant agreement to buy the fighter that was finally selected. Britain also retired in dudgeon from the anti-submarine aircraft competition when the decision went against British designs.

Co-operation of this kind would increase the size of individual orders for military aircraft; it would not increase the total volume of military business. There is no prospect, that is to say, of affording stability in this way to all the design teams in all the aircraft and engine manufacturing companies in all the West European aircraft industries. The logical conclusion is a degree of co-operation between the European industries; and this economic necessity is already having that effect among the Continental manufacturers, particularly between companies in France and Germany. There is a real danger that the British industry will be cold-shouldered out of the market unless it can offer some form of *quid pro quo*. The government can do this through the Ministry of Defence. Alternatively, individual companies could do what Pratt and Whitney have already done from America; that is, invest in foreign companies. The American offer to put money into the French nationalised engine company finally tipped the scales against an agreement with Rolls-Royce and for one with Pratt and Whitney, a decision that is likely to have extremely damaging repercussions on Rolls-Royce's foreign business.

It is unkind, perhaps, to suggest that British companies should invest abroad at a time when they have neither the cash nor the business to run their own businesses properly at home. The alternative, however, is to remain in today's blind alley, with orders getting steadily smaller and famous names becoming to an even greater extent mere pensioners of the Ministry of Supply. Aircraft orders are approved and bestowed for an unstable and explosive mixture of economic, aerodynamic, and political reasons. When Mr Sandys comes to draft next year's defence white paper, therefore, he might usefully look through his aircraft album to see swops he can make with this country's allies. He may even get some quite valuable cards in return.

BUSINESS NOTES

FUEL POLICY

Sir James At Bay

THIS year, Sir James Bowman told the miners' conference at Scarborough last week, the amount of British coal sold at home and abroad will probably be about 30 million tons lower than in 1956; no comparable drop in demand has been known in the industry's history except in the early nineteen thirties. The miners' union, he said frankly, was entitled to convince itself that a political solution that would give coal some protection against competition from imported fuels still might be on politically (after October?). The National Coal Board, given the repeated statements of this government's fuel policy or substitute for one, was not. It had to take decisions now; and in veiled terms Sir James indicated what some of those decisions might be.

The board was doing all it could, he said, to get coal used at dual-firing power stations now using or due to use oil; in any case, a slow decline is planned in the use of oil after the peak in a year or so. By 1965 it was agreed that the electricity boards would be able to take 55 million tons, as against 46 million tons this year; any extra the board could sell to dual-firing stations would be over and above that. By 1970, Sir James added, it was believed that the Central Electricity Generating Board alone might require something like 80 million tons of coal or coal equivalent a year. "We have already made it clear that we will be able to supply their additional requirements," he observed (addressing this last no doubt to whomsoever it might concern).

He complained openly and bitterly about the Gas Council's downward revision of its earlier estimates of coal requirements for 1965, arguing that the employment and security of men at pits producing gas coal, the capital investment committed by the board to meet that first estimate, and the reserves of high-quality coal, should not be thrown away to gain the gas industry what he considered a narrow advantage. Losses, however, should properly be carried where they occur; if Sir James wants to hold the business let him cut the price; does he really feel the earth will cave in if his deficit temporarly gets bigger? The attitude of the gas

industry, a comparatively small and itself declining nationalised industry that of late has been fired with ambitions (which could still prove delusions) of grandeur, may not have been too helpful in recent bargaining; but not being beastly to the Coal Board is not among Sir Harold Smith's statutory duties.

Where To Fight

Sir James Bowman was equally frank in discussing with the miners whether to enter into a general price war with oil in the general industrial market. The Coal Board has never been allowed to accumulate any reserves to match the enormous financial strength of the oil companies, who are already cutting far below posted prices. Sir James is shrewdly aware that coal's only real strength in competition might lie in guaranteeing fixed prices, though short-term cuts would help when a customer ready to switch is worth sacrificing something to hold. Given the movement of the product from the pit to the consumer and without excess stocking, he said, the standard of efficiency now achieved in the mines would ensure profitable working at the present general level of prices, which has not changed since mid-1957; moreover "provided the improvement continues, the industry could hold out a promise of ability progressively to adjust prices on an economic basis." In as labour-intensive an industry as coal, any such statement gives hostages to fortune; but it does contain the only possible core of a competitive policy for coal.

Some months ago the oil companies were at pains to prove to the sheikhs that they have recently been losing heavily upon the combined operation of transporting, refining, and distributing all their products. In spite of the thickness of the cushion of profit on oil production that outweighs those losses, those are not circumstances that the companies can wish to continue over any extended period. The pricing of any particular one of their many joint products, certainly, is pretty arbitrary. But the selective long-term contract at today's prices, on occasion even with the chance of downward adjustment on renewal, is the one pricing device that they might not care to match in their aggressive selling of fuel oil. Dare coal employ it?

KEMSLEY NEWSPAPERS

Sale of An Empire

Much, if not all, of the newspaper empire run and effectively controlled by the last survivor of the three Berry brothers family, Lord Kemsley, may soon be sold to Mr Roy Thomson, who at 65 is ten years younger than Lord Kemsley. Mr Thomson controls 28 newspapers in North America, some British provincial newspapers as well as *The Scotsman* north of the Tweed — and Scottish Television. That is a kingdom in itself: with Kemsley Newspapers it becomes an empire. The realm of Kemsley Newspapers, however, has been shrinking: in 1952 it sold the *Daily Sketch* to the *Daily Mail* group; in 1955 sold control, though still retaining a financial interest, of three newspapers in Glasgow to the *Daily Mirror* group, as well as the *Daily Dispatch* to the *News Chronicle*. Lord Kemsley concentrated more and more of his attention on the *Sunday Times*. In addition to this Sunday newspaper, Kemsley Newspapers controls three others: two nationals, *The Empire News* and the *Sunday Graphic*, and one provincial, the *Sunday Sun* of Newcastle. It also owns a string of morning, evening and weekly newspapers in the provinces which, for provincial newspapers, have high, though in a few cases declining, circulations. At Withy Green in Manchester, moreover, Kemsley Newspapers has one of the biggest printing houses in the world, which prints among other newspapers the northern editions of the *Daily Mirror* and the *Daily Telegraph*.

Mr Thomson is already a power in Scotland; control of Kemsley Newspapers will make him not much less powerful in the North of England. For the provincial newspapers, he has already said that there must be close operating supervision, hard selling, snappy management and very efficient administration at the local level. Being in it himself, with gratifying rewards, Mr Thomson is well aware of the power of commercial television. Did he not once describe it as a licence to print your own money? But his Canadian newspapers have successfully secured local advertisements against its competition and he seems prepared to fight just as hard in this country. Ambition may have spurred Mr Thomson on, but, without the inroads that commercial television has already had upon the circulations of the provincial newspapers, would he have been seeking control of Kemsley Newspapers just at this moment and would Lord Kemsley, for that matter, have been willing to sell?

To judge by the behaviour of the stock exchange, the sale will take place at a good price. Before the directors of Kemsley Newspapers said that negotiations were taking place which, if concluded, would be of advantage to ordinary shareholders the ordinary shares had jumped by 12s. to 53s. 9d. A day later they rose as high as 75s. before coming back to 68s. 9d. and the next day, before it was confirmed that it was Mr Thomson with whom Kemsley Newspapers was negotiating, they were up again to 75s. The stock jobbers appear to have suspected a leakage of some kind and the three of them concerned have submitted their dealing books to the Council for inspection. At 75s. the market has set a value of over £9¼ million on the Kemsley equity.

DOLLAR PREMIUM

An Election Hedge

For the first time for seven months a premium reappeared last week on dollar securities quoted in London. Since early December the premium was quoted "nil". On Wednesday of last week it re-established itself at a modest ¼ per cent, and rose to 1 per cent on the Friday. There has been some net investment in US equities which, despite the height of the Dow Jones index, are still being backed in London, partly as a result of convincing propaganda by such an invasion of visiting Wall Street pundits as the City can seldom have entertained at any one time. But the main reason for the return of the dollar security premium is buying of short-term dollar bonds by London as a hedge against disturbance of the foreign exchange and security markets which might be expected at the general election.

Most technical arguments favour such hedging operations. They involve little exchange risk, since the dollar now stands below the parity; the switch back into sterling may be made when the combination of autumn and election pressures has moved the rate in favour of the temporary holder of dollars. Meanwhile, the rise in money rates in New York makes this temporary investment in dollars attractive in itself. Last week the US Treasury paid 4¾ per cent on one-year bills, the highest rate on any issue since 1921. In these circumstances the surprise is that the volume of election hedging should have been so small. The sterling exchange remains firm in spot and forward markets.

HARRODS

Burnt Fingers

Like bees to honey, speculators swarm to any stock which is subject to a take-over, whether in fact or in rumour. But the course of market prices in the Watney Mann affair and now in the Harrods struggle must have taught them that losses as well as gains can be made. How unwise it can be to gamble on what appears to be a certainty was amply demonstrated when the House of Fraser made its definitive offer for the Harrods preference and ordinary shares. There were two bids, worth not less than 40s. in cash, in for the preference shares from Debenhams and United Drapery Stores and it certainly looked as if the House of Fraser would be making an equivalent offer. When its formal offer came, however, it was only 30s. in cash for the preference shares because it seems Mr Hugh Fraser, having apparently secured some preference shares through the market, was concentrating his fire on the ordinary shares. The market price of the preference shares immediately fell 8s. 3d. to 32s. 3d.

Mr Fraser did, however, improve on his original offer for the ordinary shares, bidding £3 in cash plus 2¼ House of Fraser ordinary shares for each of them. With the House of Fraser shares then standing at 42s. that put a theoretical value of 152s. 3d. on the Harrods ordinary shares. That was, in a sense, too good to be true and the speculators learnt another lesson: the day after the bid the Harrods shares did not go higher than 140s. and soon fell back to 134s. 6d. Later the price of the House of Fraser shares began to sag, falling to 38s. (putting a value of 145s. 6d. on the Harrods shares), and the Harrods shares came back to 131s. 9d. At these prices the House of Fraser offer for the Harrods ordinary still had the edge on the others, but only a slight lead in terms of the combined bid for the preference and ordinary. The weakening of the House of Fraser shares was perhaps inevitable as soon as investors realised what a high price Mr Fraser was prepared to pay to control Harrods and as soon as they began to wonder quite how he would find the £12 million in cash for the ordinary shares and the £6 million in cash for the preference shares if his bid were successful. There is not all that much cash in the House of Fraser balance sheet and the directors are talking of considering financing arrangements by way of mortgage or sale of property. What properties, it might be asked, and what would the new rentals cost? Is Harrods, if it were left in its present form, really worth the price that is being offered for it?

ATOMIC ENERGY

Empty Seat

Next week, Lord Plowden publishes his last annual report as chairman of the Atomic Energy Authority. At the end of the year he retires to become head of British Aluminium and there has been no indication yet of who his successor is likely to be. There is a growing feeling that no announcement is likely to be made now until it is clear whether a general election will be held in the autumn, since most candidates would prefer to know the outcome of such an election, and the kind of government under which they would be asked to serve, before they allow their names to go forward. The chairmanship of the Atomic Energy Authority is not politically and economically as ticklish a job as those of the nationalised industries concerned with activities that in theory at least ought to be commercially viable. But it is an extremely exacting one for a layman.

Since the resignation of Lord Salisbury the AEA, previously the responsibility of the Lord President, has become the direct responsibility of the Prime Minister, and the ration of time any Prime Minister can devote to its affairs is bound to be small. But as Lord Plowden's report next week is likely to show, the AEA is entering on a particularly difficult phase. Once its Win-

frith Heath station is complete, it will start on a programme of reactor research that has been held up while the long wrangle over that piece of Dorset scrubland wound its way through local inquiries and onto the statute book. Sir John Cockcroft, who was in charge of the Authority's research at the time, gave repeated warnings about the consequences of the hold-up at Winfrith Heath, which was planned to take over certain work from Harwell and concentrate in particular on small-scale reactor experiments, which have been delayed about two years. Some of the reactors that will be built at Winfrith are the direct successors of Calder Hall but others represent a complete break with that type and follow certain types so far tried only in the United States. The next chairman of the AEA will have final responsibility for deciding how much effort the AEA ought properly to put into these fresh lines of development. The British nuclear consortiums up to now at least have depended exclusively on the AEA for basic research into new reactor types, and have never independently designed any system that has not previously been tried out by the AEA. So its decisions over the next few years about research, and whether they are the right ones, may have a profound influence later not only on the nuclear power programme at home, but on the chances for reactor sales abroad.

BRITISH OVERSEAS TRADE

Imports Up, Exports Down

IN JUNE, as expected, British exports were lower and imports higher than in the previous month. Exports, at £250½ million fob, were £49 million below the record total for May. A fall as sharp as that was not expected, and the start of the holiday season could only have been marginally to blame. Comparison with June last year is not possible, because the trade figures were then distorted by the dock strike. The average value of exports in the second quarter was £281½ million a month. The Board of Trade, after allowing for the dock strike, estimates that exports in the second quarter still showed a respectable increase of 4½ per cent over a year ago, though this failed to match the rise in imports. Last month imports rose moderately by £20½ million to £331½ million cif, and the average for the second quarter, at £328 million a month, was 6½ per cent higher than a year ago.

With re-exports almost unchanged at £10.2 million, the apparent deficit jumped up from £1½ million in May (the smallest ever) to £71 million. But the deficit for the whole of the second quarter, at £107 million, was only £8 million higher than in the second quarter of last year, and it was £10 million smaller than in the first quarter of this year.

RESTRICTIVE PRACTICES

End of Flour Quotas

THE Millers' Mutual Association's quota equalisation scheme, under which members of the association voluntarily rationed their output to match demand, has now been abandoned. Unlike the agreements of the National Association of British and Irish Flour Millers, which were abandoned last May, the Mutual Association's agreement had not been referred to the Restrictive Practices Court; like them, however, it had been registered as a restrictive trade practice under the Act, and it seems very likely that the association's members have preferred to abandon it rather than attempt to defend it. This is the third time in recent months that agreements in flour milling have been ended; price recommendation schemes of the Scottish bakers were declared void by the Court in Edinburgh last month. A number of price recommendation agreements are still being operated by certain English bakers, and are scheduled to come before the Court in November.

The Millers' Mutual Association has no formal connection with the National Association of British and Irish Flour Millers, although many English millers are members of both groups. It seems unlikely that the ending of the restrictions which formerly ran throughout this industry will result in a fall in the price of bread; much more likely is the reduction of considerable uneconomic excess capacity within the industry, mostly of small mills, and its corollary, an increasing concentration of business in the hands of the few major groups which already control most of it.

RAILWAY FARES

Up At Last

TEN months ago the British Transport Commission lodged with the Transport Tribunal a scheme for giving it greater headroom to increase passenger charges on train and London Transport services. After considering the commission's proposals for eight months, the tribunal rejected them as lodged — but included in this interim decision several broad hints of the kind of scheme it would accept. The commission accordingly re-did its homework along the lines suggested, and promptly submitted its revised proposals; now, after a delay of another six weeks or so, the Tribunal has finally accepted these. In effect, they cut the Commission's powers to raise fares, where it sees fit, by almost half.

The commission's request to raise its standard (i.e. maximum) fares by fifty per cent (from 2d. to 3d. a mile second class and 3d. to 4½d. a mile first class) was approved by the tribunal's interim report, and so passed its second examination unchanged. The commission's request to be allowed to abolish the archaic early-morning return fare concessions was also approved in principle in May — but no indication was given of when this should take effect. It has now been decided that these workmen's fares will continue until the end of 1960, although with a higher maximum; the tribunal's decision, however, gives no clear-cut indication that they will definitely come to an end after that.

In its interim decision the tribunal implied that the increases sought in maximum second-class season ticket rates were about twice as high as they ought to be; these increases were accordingly scaled down to about half-size by the commission, and have now been approved. The new scheme will replace the present passenger charges scheme on August 1st, and the commission can then begin raising its fares at least a part of the way toward their economic levels. Except for certain limited increases in the London area, however, the commission has stated that it will take no action on the proposed increases until the end of the summer — or until more than a year after the date of its original application.

BANK OF ENGLAND

Improving That Report

THIS year's report of the Bank of England carries further the limited but important improvements initiated last year, and repeats the promise that subject to the report of the Radcliffe Committee (which is expected fairly soon) future reports will carry a more detailed annual monetary review. The reports this year and last are distinctive in that they do not belie their description. This year in particular the review of the capital market makes a real contribution, notably in giving indications of the trend of holdings of gilt-edged and Treasury bills by domestic investors other than the banks and by foreign holders. Thus it is interesting to learn that between September, 1958 and end-February last (the awkward date that marks the end of the Bank's financial year and thus sets the period of its review) a continuing fall in overseas holdings of gilt-edged securites was more than offset by a rise in the holdings of the British public: and it is novel, if it is not surprising, to see the Bank record that owing to sales by the banks in this period there were quite substantial net official purchases of stock.

Yet these revelations really amount to little more than titbits; it is still not possible, as it surely ought to be, to make a quantitative assessment of relevant trends in the gilt-edged market and the money market. The Bank report contains a tabulated reconciliation of the impact of government finance on floating debt. That is just what everyone wants to see: but the Bank's analysis begs all the important questions by taking total floating debt, including that held within government departments, rather than the significant portion held outside.

The figures show a rise in the floating debt in the year of £470 million; yet the issue of tender bills, which is what matters, fell by £70 million. Here is a striking instance where the partial picture is not only misleading but misleadingly bleak. The Bank has made real efforts, in its report and in other directions, to make the public better informed about its activities and its views; and they do not pass unappreciated. But one may hope that in the next step forward now under contemplation, the general approach and tone of the Bank surveys will lean further from traditional banking reticence. Full information clearly expressed, as the examples of the Federal Reserve and the German central bank amply show, is not incompatible with operational competence.

GRAMOPHONE RECORDS

Local Depression

THE value of sales of gramophone records fell by nearly a fifth in the first four months of the year, but the depression was by no means universal. The Board of Trade's returns show that the value of manufacturers' sales (excluding purchase tax) dropped from £4.8 million in the first four months of 1948 to £3.9 million in the same period this year; yet Decca, which controls nearly half the total market, is actually doing slightly better this year than it did last. Its improvement is not a spectacular one, but it means that the whole of the depression is being born by only half the industry, and in particular by the smaller companies. It raises the question how long some of them can continue to remain in business.

The reduction in purchase tax had had little impact on record sales since it means only 3d off the price of the cheapest discs and no more than 2s off the price of the most expensive. The market for pop records, which make up the bulk of sales, is more sensitive to fashion than to price and Decca's good results to date are largely due to the high proportion of current hits that come from its catalogues. This is as much a matter of luck as management; but the greater the number of recording stars a company can afford to have under contract, the wider it spreads its odds. This militates against the small record company, unless its catalogue is extremely specialised, and also against new entrants into the industry. In an industry that even now is turning out more than five millions discs a month, there is room for small companies to exist side by side with the giants. But it is doubtful whether a medium-sized producer has much chance of achieving commercial success.

MOTORS

BMC's Farina Sixes

THE Wolseley 6/99 is presumably the first of a new series of six cylinder cars from the British Motor Corporation, just as the 15/60 was the first of its new four cylinder 1½ litre models. The sixes, like the fours, are based on the mechanical specification of the models they supersede; but there has been a little more change than there was with the fours. The 6/99 engine has gone up from 2.6 litres to 2.9 litres by increasing the cylinder bore, and now has a three-speed gear box with Borg-Warner overdrive instead of the previous four-speed unit. The former gear box casing is retained, but with new gears; these are all fitted with the efficient Porsche type synchromesh, the first time it has been used by BMC. Borg-Warner automatic transmission is a £50 optional extra, £12 10s. less than on the previous model. This cut, which can be expected to apply to the other similar BMC cars that will follow, suggests that BMC expects high sales of automatic transmissions and is prepared to accept a small profit margin.

The other change is the adoption of Lockheed disc brakes on the front wheels. This is the first large order that Lockheed has obtained for its disc brake; having entered the field rather later than Dunlop or Girling, the company has found it difficult to get established. The car's other features are the strictly conventional ones of its predecessor; BMC obviously expects that the new body design will be attractive enough to sell the car to customers.

VALUING WORK IN PROGRESS

What is Cost?

ALTHOUGH a full report is not yet available it is clear that last week's case in the High Court that Duple Motor Bodies won against the Inland Revenue will be of first importance. That case concerned the proper basis of valuing work in progress. The company contended that prime cost alone — labour and materials — was material. The Revenue fought for the addition of overheads. The Special Commissioners who first heard the case found that on proper accounting principles either method might be adopted by the directors but went on to state that their personal preference was for the addition of overheads and on this footing they found in favour of the Revenue. Mr Justice Vaisey reversed this decision and it would appear that he took the view that as the Commissioners had found as a question of fact that either method could be adopted by the directors it was inconsistent for the Revenue or the Commissioners to settle the matter on their own preference.

The case will almost certainly go higher: questions of the valuation of stock or work in progress are fundamental and are rarely settled below the House of Lords. Revenue counsel will fight hard to show that a question of law is involved, and not merely one of fact. But for the moment the decision favours the taxpayer and, more important, gives support to the contention that generally accepted commercial and accountancy practices and principles form the soundest basis for arriving at taxable profits. That contention was badly shaken in the Broadstone Mills case in 1953: now the first step has been taken towards its rehabilitation. The Revenue may fairly complain that there are many practices but few principles behind the valuation of stock or work in progress. But they must remember the Royal Commission's recommendation that since no single method of stock valuation should be imposed a trader should be permitted to adopt any proper method that is suited to his business subject to safeguards relating to the effect of a change from one method to another. Duple is likely to become a household name to connoisseurs of tax law.

SHORTER NOTES

Employment in the manufacturing industries continues to improve. An increase of 7,000 during May — compared with a normal seasonal fall of some 10,000 — was mainly responsible for the rise of 62,000 in total civil employment which was about 20,000 better than was expected. Other changes during the month included seasonal increases in agriculture, building and professional services totalling 53,000, and a further decline of 5,000 in mining and quarrying.

The post-budget buoyancy in retail trade continued in May when turnover was 6 per cent higher in both value and volume than a year earlier. Sales by durable goods shops were up by 20 per cent — a smaller rate of growth than in April, but still well above the 12 per cent increase in the first quarter. In addition, the fine weather brought a big rise in clothing and footwear sales; these were 10 per cent higher than in the previous May, having shown practically no expansion in earlier months this year.

George Kent Ltd., maker of industrial controls and instruments, is sending this month the whole staff of the Customer Training School, which the company normally operates at it works at Luton, to *Empresa Nacional Siderurgica S.A.*, the Spanish state-owned Steelworks at Aviles, on the north coast of Spain. A large group of Spanish instrument mechanics will receive five weeks' instruction in the use of the company's instruments, which are extensively used in the operation of this British-built plant.

COMPANY AFFAIRS

BEECHAM GROUP

ON a dividend of 24 per cent, covered about twice by earnings, the 5s. ordinary shares of the Beecham Group, standing at 33s. 9d., yield just over 3½ per cent. Both British and American buyers of the shares are clearly discounting growth. Where is this growth likely to occur and how strong will it be? So far, apart from the succesful penetration of the United States market with Brylcreem, the group has made its biggest gains in sales in the home market. Its willingness to go on expanding in this market is evident not only in its advertising campaigns of branded goods (in which it has been a big user of commercial television) but also in its acquisition of Thomas and Evans (making Beecham the biggest soft drinks manufacturer in this country) and of James Pascall, the sweet manufacturers.

Beecham's efforts to hold on to its gains in the domestic market will certainly not slacken and clearly in soft drinks, through the purchase of Thomas and Evans, door to door delivery (which can be just as costly as selling through retailers) may give it an opportunity of trying to increase its share of the market. That, however, seems on recent evidence to be possible only by some sacrifice of profit margins and by a willingness to spend fairly heavily on capital as well as current account.

Beecham's research chemists, for example, have made a breakthrough with the production of penicillins by chemical synthesis. That should eventually bring in a profit to the group, which has already signed an agreement with an American company, Bristol Laboratories, which will produce and sell the new penicillins in Northern America and pay royalties to the Beecham Group, but its immediate effect is the decision by the group to spend at least £1 million on the development of the new processes and products.

It is perhaps therefore in overseas markets, where so far the sales of Beecham products have not been rising so quickly as at home, that the group sees the best opportunity for really profitable expansion. But to break into these markets costs money. Efforts in advertising have to be concentrated on a relatively narrow front and often the group has to set up local factories (at some sacrifice as the chairman, Mr H. G. Lazell, says in the economies of large scale production) to secure a foothold in these markets.

Growth at home or overseas may therefore be relatively slow. To meet the needs of expanding the business, the group has re-organised its management structure and its directors are now asking shareholders to agree to an increase in their borrowing powers. That suggests that the management is keen to pursue any new opportunities or markets with vigour but share holders should also note that such policies require the aid of profit retentions.

INTERNATIONAL COMPUTERS & TABULATORS

THE merger of Power-Samas Accounting Machines with British Tabulating Machine was a move to concentrate the office machinery and computers industry in the face of growing competition, in this country and abroad, from the American combine International Business Machines. Both Power-Samas, which before the merger was a subsidiary of Vickers (which now controls 38 per cent of ICT's equity), and British Tabulating Machine have in recent years spent considerable sums on research and development; and since the merger the business has continued to expand, mainly on the rental side. This has put a considerable strain on liquid resources; at the present rate of borrowing the directors say that overdrafts of the group without a funding operation would amount to £6½ million by the end of September.

The group therefore plan to raise about £8,000,000 by the issue of £4,000,000 of a 4½ per cent debenture stock (1979-84) to the company's shareholders at 97 and a "rights" issue of 1,935,984 ordinary shares on a *6-for-25* basis at 45s a share. Money from these issues will be used to pay off the group's bank overdraft of £5.3 million and the £2 million loan from the Finance Corporation for Industry, which was due to be repaid finally by 1963. This will be the first debenture issue on the stock exchange for some time and should go well with the institutions: the market expects it to command a small premium since the cover on the new stock is more than three times on assets and just over four times on interest. The "rights" on the ordinary shares are worth about 6s 9d on the market price of 79s 6d on the existing units.

The group's dividend policy is likely to be conservative (at the time of the merger the directors said the dividend would not be less than 8 per cent) in view of the costs of development overseas. There is still the £2,000,000 loan from Vickers outstanding and its repayment will put another strain on the group's resources. If ICT is to expand still further it may therefore have to come to the market again for new money. That is in the future but the merger has already got off to a reasonable start, for the directors say that ICT's current profits—including Power-Samas for nine months and British Tabulating for a year—are now running at a higher rate and for the full financial year they are likely to exceed the two companies' combined profits in the previous year.

ELECTRICAL & MUSICAL INDUSTRIES

A YEAR ago Electrical and Musical Industries, though it was holding about £3 million in cash, had a bank overdraft of nearly £2½ million. It is not therefore all that surprising that the company has decided to raise about £4 million in new money by means of a rights issue in order to provide additional capital and to meet the needs of an expanding business. Nevertheless the announcement came as something of a shock to the stock market and the ordinary shares fell 3s to a new 1959 "low" of 49s 6d before rallying a little to 50s.

One new 10s ordinary share is offered for every five existing shares held at a price of 40s. The "rights" are worth only about 1s 8d and the terms of the issue are rather less generous than many which have come to the market in recent months. At an ex-rights price of 48s 4d the yield would be 4 1/8 per cent assuming that the forecast 20 per cent dividend for 1958-59 is repeated on the enlarged capital for the year to June 30, 1960. A year ago the chairman, Mr J. F. Lockwood, told shareholders that he expected trading conditions to become more difficult, particularly as costs were rising. Although it seems EMI's business has expanded since then, despite the tailing off of the boom in the gramophone record business, the yield is not especially generous. As the shares to be issued are not registered under the United States Securities Act of 1933 American holders will be unable to take up their rights to subscribe but they will be able to sell their rights so long as the sales are made.

COURAGE & BARCLAY

YET another brewery merger may now be on its way: Courage and Barclay, a brewery which itself is a product of a merger four years ago, and H. and G. Simonds have signed a reciprocal trading agreement and the directors of both companies are now considering the most suitable method, including the use of a holding company, by which a closer association between them can be achieved. A merger between these two breweries would produce a powerful unit, controlling nearly 3,000 public houses. Courage and Barclay trades largely in the London area and the Southern Counties while H. and G. Simonds trades in Southern and Western England and South Wales. Both have interests in breweries overseas.

This announcement followed hard on the heels of the news that the net profits of Courage and Barclay ran at a record level — at £1,008,825, against £885,489, — in the year to March 31st last. These satisfactory results are no doubt due in part to the continuing demnd for the group's John Courage bottled beer, whose sales have been increasing each year since it was introduced in 1954, as well as to the steadily rising lemand for canned beers, which Courage has been marketing for twenty years largely in overseas countries. Another factor which may have contributed to the advance in earnings is the higher output of Barclay's lager, reflecting the installation of additional plant and storage facilities. The £1 ordinary shares in Courage and Barclay stand at 52s. 9d. to offer a yield of 5 per cent on a dividend of 13 per cent, as increased from the 11 per cent paid for 1957-58.

LINTANG INVESTMENTS

MR MAXWELL Joseph has sold the controlling interest in Lintang Investments, the property company which owns Dolphin Square, to H. Jasper, the City banking group which has also been active recently in the property market, for about £4 million. The shares have been sold for 24s. each in cash and H. Jasper is offering to buy the shares owned by other investors at the same price. Thus, complete acceptance would cost H. Jasper about £7½ million, though in view of H. Jasper's recent successes, some Lintang share holders may be content to remain as minority shareholders in the subsidiary company. The ordinary shares in Lintang, it will be recalled, were placed through the stock market only last March. The placing price was 11s. 9d. but dealings began at 16s. and the price momentarily went as high as 23s. 6d. Jasper and Lintang have been competing with each other in bidding for R. E. Jones, which among its properties owns the Piccadilly Hotel. The directors of R. E. Jones have recommended shareholders to accept the Lintang bid of £3 million and now, presumably, the Lintang deal will give Jasper control of R. E. Jones. Jasper has only recently made a successful bid for the Rubens-Rembrandt hotel group.

NCHANGA

NOT surprisingly the announcement of a 300 per cent scrip issue by Nchanga, the largest copper mine in the Rho-Anglo group, gave a fillip to the copper share market as a whole. It proved, however, to be only a temporary one, for prices soon fell back again on the continued weakness in the price of the metal. The scrip issue came after a year in which profits before tax rose by nearly £1 million to £7,835,000 and net profits by more than £330,000 to £4,705,000. The dividend has been raised from 50 per cent to 62½ per cent, or 12s 6d per share after the deduction of Northern Rhodesian Federal Tax, and is paid out of earnings of 13s 5d per share. The 300 per cent scrip issue is one of the largest scrip issues ever made by a mining concern and it was this much more than the improvement in profits which attracted attention. The increase in profits stems partly from the recovery in the commodity price, but both mining operations and profits are now clearly benefiting from the recent modernisation and development programme. Nchanga is now mining on the average a lower grade of ore than it was before this programme was set in train but it still remains the lowest cost producer in the Rhodesian copper belt, and its production was stepped up a little when Bancroft was shut down for a year from April 1, 1958.

Big sums had to be appropriated to reserves to finance the further development of Nchanga and the scrip issue is the accountant's way of recognising the growth that has taken place in the mine's physical capacity and assets. At their current level the price of the ordinary shares is rather too heavy for most investors and the scrip issue should help to increase their marketability. At an ex-scrip price of around £3 5s the yield would be just over 4 7/8 per cent, net of Rhodesian tax, assuming that the dividend is scaled down proportionately.

STANDARD BANK OF SOUTH AFRICA

IN a year in which the economy of the Union could not escape the effect of the world wide recession, Standard Bank of South Africa shows an increase in disclosed profits from £876,542 to £1,080,864. As forecast at the time of the one for five rights issue in February, the final dividend on the increased capital is being raised from 7½ per cent to 9 per cent making the total dividend for the year 14 per cent, against 12½ per cent. Evidence of a difficult year is that the bank's deposits are virtually unchanged at £333 million. The balance sheet for cash is up by over £2 million at £52 million and Treasury bills have almost doubled at £18 million while Trade bills and advances are together some £13 million less than at March 31st 1958. Last January Standard Bank acquired a 40 per cent interest in National Industrial Credit Corporation, the South African subsidiary of Mercantile Credit. This acquisition also gives the bank a stake in hire purchase in the Federation of Rhodesia and Nyasaland through the Rhodesian subsidiary of the South African company.

In his statement, Sir Edmund Hall-Patch, the chairman, points out that despite a drop of 1.4 per cent in net national income for 1957/58 compared with 1956/57 the country's economy remained basically sound and virile. Helped by higher interest rates and other measures, the net payments deficit of £20 million on capital account in 1957 gave way to a net surplus in 1958 of £86 million. Of this net inflow £55 million represents private capital, a striking reflection of continued foreign confidence in the Union. But reviewing recent events in the Central African Federation, the chairman gives warning that the capital inflow required for a faster tempo of development will not take place without an assurance of political stability.

INVESTMENT TRUSTS

THE four investment trusts of the Mercantile group are to be amalgamated. The trusts concerned are the Mercantile Investment and General Trust, United States and Mercantile Investment Trust, The Second Mercantile Trust and New Mercantile Investment Trust. The merger will result in one of the biggest of all investment trusts and it is hoped that it will widen the market for the shares. Lors Clitheroe, the chairman of the group, sees in the limited marketability of investment trust chares one of the chief obstacles to attracting small investors to this medium if investment, but he does not seem to find in the recent public issue by Ashdown, where an attempt was made to combine the advantages of an investment trust with the marketability of a unit trust, an ideal solution to this problem.

British Empire Land Mortgage and Loan on the other hand is following in the footsteps of Ashdown, offering 1,600,000 of its 1s. ordinary shares at 3s. each, on an estimated initial dividend yield of 5 per cent. Immediately before the announcement the existing shares were quoted at 3s. and the offer price is just above the net asset value of the existing shares as at the end of the financial year on September 30 1958. As stock market prices have risen sharply since then, the issue price must be below the present break-up value. The record of the trust is a good one: over the past ten years earnings have risen from 8 5/8 per cent to 27 3/8 per cent, the dividend rate has been raised from 7 per cent to 15 per cent and five small scrip issues have been made. Because of the gearing of the capital structure of the trust, this record compares favourably with those of the unit trusts, and the terms of the offer are a little more conventional and a little more attractive than those of the Ashdown experiment, which did not commend itself much to investors.

W. H. SMITH

THE advance of £254,000 to £2,279,000 in the trading profits of W. H. Smith, the wholesale and retail distributors of books, periodicals and newspapers, in the year ended April 4th last, seems to have stemmed mainly from an improvement on the retail side of the business. The management structure of the retail division has been reorganised and that already seems to have been of considerable benefit to the group. The profits from wholesaling once again rose, but again less sharply than profits were rising elsewhere in the business. The recent development of gramophone record departments in some of the stores is described by the chairman, Mr D. J. Smith, as an outstanding success and sales in these departments are continuing to rise. For the future Mr Smith expects a further increase in the sales of gramophone records and a further improvement in the sales of children's books.

Following the sharp rise in net profits from £765,000 to £1,167,000, the dividend has been raised from the equivalent of 10 per cent to 12 per cent. A further 10 per cent scrip issue is proposed and the ordinary shares, now quoted at 58s 9d, yield just over 4 per cent.

ALLIED IRONFOUNDERS

IN view of the recession in the building trade and the effects of the credit squeeze the 11 per cent fall in Allied Ironfounders' trading profits in the 53 weeks to April 11, 1959 was not unexpected. In the full report the chairman, Mr W. H. Smith, points out that most of the decline in earnings was due to the slackening-off in building activity and to the £271,600 loss incurred by the group's Australian subsidiary.

Since the end of March, Allied Ironfounders has enjoyed a continued improvement in sales and the volume of orders in hand is higher than at this time last year. Certainly, with the revival in the building trade—especially in the private sector— and the Government's plan to improve and re-equip old houses the outlook for the coming year seems promising.

The market has been hoping that the dividend will soon be restored to 13¾ per cent and on the current dividend of 12½ per cent the £1 ordinary shares at 45s. 3d. offer a yield of 5½ per cent.

ABRIDGED PARTICULARS.

Application has been made to the Council of The Stock Exchange, London, for permission to deal in, and for quotation for all the issued Ordinary Shares in the capital of the Company.

FIRTH CLEVELAND LIMITED

(Incorporated under the Companies Act, 1948)

INDUSTRIAL HOLDING & INVESTMENT COMPANY

AUTHORISED SHARE CAPITAL

		Issued & Fully Paid
£1,000,000	in 1,000,000 6 per cent. Cumulative Redeemable Preference Shares of £1 each	£1,000,000
2,900,000	in 14,500,000 Ordinary Shares of 4s. each	1,100,000
2,100,000	in 10,500,000 Founder Shares of 4s. each	2,100,000
£6,000,000		£4,200,000

LOAN CAPITAL

£893,575 5½% Redeemable Debenture Stock 1973-1978

OFFER FOR SALE

of

4,000,000 Ordinary Shares of 4s. each at 16s. 6d. per share

by ELECTRIC AND GENERAL INDUSTRIAL TRUSTS LIMITED

Payable in Full on application.

The Application List will open at 10 a.m. on Thursday, July 23, 1959, and close on the same

Preferential consideration will be given to applications from holders of Preference Shares and Debentures and from employees, suppliers and trade customers.

The principal United Kingdom Companies in the Group are:

Metals Division : Richard Hill Ltd., Middlesbrough.
The Firth Company Ltd., Warrington.
The Sheffield Wire Rope Co. Ltd., Sheffield.
Firth Cleveland Steel Strip Ltd., Tipton.
British Lead Mills Ltd., Welwyn.
R. E. Roberts & Son Ltd., Bolton.

Engineering Division : Simmonds Aerocessories Ltd., Treforest, Glam.
Firth Cleveland Tools Ltd., Wolverhampton.
Firth Cleveland Instruments Ltd., Treforest, Glam.
Firth Cleveland Pumps Ltd., Leicester.
Keeton Sons & Co. Ltd., Sheffield.
Landmaster Ltd., Hucknall, Notts.
Stenor Ltd., Richmond, Surrey.

There are also 5 manufacturing Companies operating in Australia, Brazil, South Africa, and Holland.

Products range from semi-finished raw materials to complicated electronic devices, and they find their outlet in such diverse activities as agriculture, and the generation of atomic energy, as well as in motor vehicles, shipbuilding, aircraft, domestic appliances, radio and television and many other industries.

Retail Division : Max Stone Ltd. Wolfe & Hollander Ltd.
Civic Radio Services Ltd. Escott Brothers Ltd.

163 Branches, selling radio and television receivers, complete house furnishing, domestic appliances and equipment; industrial electrical installations. Also operates its own Hire Purchase and Rental Companies.

PROFITS & PROSPECTS

The combined profits of the Group (before Taxation) for the past 5 years were: —

1954	.....	£1,097,303
1955	.....	1,471,889
1956	.....	1,613,349
1957	.....	1,846,737
1958	(14 months)	1,705,787

Subject to any major set-back, the profits for the current year should exceed £1,800,000.

DIVIDEND

The Board intend to recommend a total dividend of 24% (less tax) for the year ending 31st December 1959 — Based on the offered price of 16s. 6d. per ordinary share, the dividend yield would be £5 16s. 4d. (less tax.

FOUNDER SHARES

All the issued 16,000,000 Ordinary & Founder Shares carry equal voting rights but Founder Shares will not receive any Dividend until 1961, after that they will rank equally with the Ordinary Shares.

Copies of the Offer for Sale, on the terms of which alone applications will be considered, and Forms of Application are obtainable from:

BANKERS

COMPANY MEETINGS

THE AUSTRALIAN ESTATES COMPANY LTD

A DIFFICULT YEAR

SIR DENYS LOWSON, BT., ON DROUGHT PROBLEMS

The Annual General Meeting of the Australian Estates Company Limited was held on July 14 in London.

Sir Denys Lowson, Bt., the chairman, in his review, which has been circulated to stockholders, said :

ACCOUNTS

A year ago I was able to report a gross trading profit of £1,405,866 which was the second highest in the Company's history; but I then pointed out that we were already experiencing very different conditions with below-average rainfalls; while simultaneously the price of wool had also suffered a considerable setback. The drought conditions and falling price of wool continued; so that both the pastoral and agency results for 1958 were adversely affected. The sugar areas had a favourable season; but as a result of the international sugar supply situation, and consequent necessity for some restriction of output, earnings did not reach the record level that might otherwise have been anticipated.

It will, therefore, come as no surprise to stockholders that our gross trading profit for the year ended December 31, 1958, amounted to only £738,338; a result that in the circumstances we believe to be not unsatisfactory. Provision for depreciation has again been increased, and at £510,379 for the first time exceeds the half-million mark. Australian taxation is reduced from £358,639 to £81,934; and United Kingdom taxation takes £23,939 against £5,013.

As mentioned in the directors' report, we have been able to bring back a total of £224,533 in respect of taxation which has been over provided in the past, but is now no longer required. As a result of the negotiations which our taxation advisers have been carrying on with the Inland Revenue over a number of years, the liabilities for almost all past years have now been finally settled; in many cases on a basis satisfactory to us. These negotiations have referred not only to the provisions of the Finance Act, 1957, under which the Company received the benefit of the legislation dealing with Overseas Trade Corporations; but also to disputes as to whether expenditure incurred on certain projects in Australia and allowable as a deduction against profits in that country's taxation assessments could properly be set off against income in arriving at the amount assessable to United Kingdom taxation.

After taking into account interest on our loan stocks and other items indicated in the profit and loss account the consolidated net profit amounted to £239,785, of which £22,374 has been retained by our subsidiaries.

Goodwill on businesses acquired during the year has been written off in the sum of £34,648; £17,552 is the amount which we transfer this year to Debenture Redemption Sinking Fund; and £16,000 has been allocated to staff provident fund; this amount is required to make good the decrease in the real value of the fund arising from the depreciation in the purchasing power of Australian currency over the last two years. We believe that in a business in which so much depends on the skill, hard work, and enthusiasm of our staff, this allocation is one which stockholders will heartily approve. Finally, we are proposing to pay a dividend of 7 per cent. on the Ordinary and "A" Ordinary stock which requires £87,127.

After making these appropriations the balance to be carried forward amounts to £393,693; as compared with £347,422 brought in from last year.

TAXATION

We had hoped that this year's Finance Bill would include provisions having the effect of treating income from the overseas subsidiary companies of an overseas trade corporation on the same basis as income from overseas branches, a matter to which I referred in my remarks last year. This has not so far been done; but it remains our earnest hope that before long the Chancellor of the Exchequer will feel himself able to put an end to this anomaly, and I understand that a number of amendments to this effect have been tabled for discussion during the consideration of the Finance Bill in the House of Commons. One such amendment has already been moved but mainly because of the supposed possibilities of tax avoidance the Government refused to accept it. However, stockholders may be interested to know that so far we have found it impossible to visualize any means by which tax avoidance could arise.

DIVIDENDS TO OVERSEAS STOCKHOLDERS

I do not think I need add to what has been said in the Directors' report regarding our proposals to make arrangements to pay dividends to overseas stockholders without deduction of tax from that part of the dividend which comes out of the Company's overseas trading operations. If the new Article is approved, stockholders who are able to satisfy the United Kingdom Inland Revenue regarding their overseas residence will be saved the necessity of submitting an annual claim for repayment of United Kingdom taxation. I feel sure that these proposals will be of benefit to all members of the Company; and I hope that they may also help to increase the number of our stockholders in Australia.

PASTORAL

Victoria had an abnormally dry autumn and winter; but conditions improved in the early spring and were favourable until the end of the year. In New South Wales the season was mostly favourable; but quite the reverse prevailed in Queensland. The failure of the 1957-58 normal Queensland "wet" season, coming on top of a previously light rainfall year, brought drought conditions to large areas of the far north-west, central, southern, and south-western districts, causing heavy drought costs.

Surface water shortages occurred in many parts, and at Terrick Stud and Flock we had the unusual experience of failing to get any run, or flow of water, in important creeks for no less than two and a half years. As a result, some waterholes never previously known to be dry were without water for up to six months.

Apart from Chatsworth and Mount Howitt which experienced particularly severe condtiions, other cattle places got through reasonably well. Brandings were slightly higher; but although more cattle were sold, the price realized was almost £5 per head lower.

Queensland sheep properties, excluding Dagworth and Bonus Downs, suffered severe drought. Thylungra ,to preserve its breeders, sent 36,000 ewes away to agistment outside and to our own property at Bonus Downs; Mount Morris rolled mulga for all its breeders for seven months; Terrick Stud and Flock fed most of their sheep for five to seven months; the Flock, in addition, sending 2,500 ewe weaners to agistment at Dagworth.

Despite these very difficult conditions, the total number of breeders is only about 3,700 lower; with the age classification in the favourable positoin of 87 per cent. between one to five years. Under the conditions which prevailed, this is an extremely good result.

Mortality at 9 per cent, was only 1 per cent. higher. Total sheep numbers are about 8 per cent. down through forced sales of Queensland wethers and wether weaners, together with some lower lambings. As a result of the Queensland drought we received £1 per head less for the sheep which we sold, and we also sold 1,000 fewer rams. Our total wool clip was 1,063 bales lighter than last year's outturn and realized 24d. per lb. less.

Raby continued its 1957 successes at local New South Wales shows, taking top and other awards at Dubbo, Trangie, Warren and Nyngan.

Terrick Stud, though it failed to secure any of the major awards at Longreach and Blackall, secured top prices for its sale rams at both centres; and succeeded in winning several other prizes. In addition, one of its strong wool fleeces was successful in winning top and other awards at Winton, Hughenden, Townsville and Hobart Shows.

Sorghum silage produced at Terrick Stud proved to be a valuable and cheap drought fodder. Lambing ewes and other dry sheep did well on it. Stocks of sorghum are now almost depleted at Terrick Stud; and although we had hoped to replenish these early in 1959, it looks as if the rains have come too late. Dagworth may be able to harvest some; Thylungra could not plant owing to the continuing drought.

Following the drought, the Queensland Government announced that lessees might apply for, and be considered for, a five years' extension of lease where drought hardship could be established. Applications are being submitted for Terrick Flock, Mount Morris, Thylungra, Chatsworth and Mount Howitt; and we are hopeful of securing the extensions, with the consequent temporary postponement of the Thylungra, Kyabra and Mount Morris resumptions indicated in my previous review.

Under recently amended legislation for Queensland stud leases it is likely that we may later secure a new 40 years' lease for Terrick Stud, but unfortunately there now seems little likelihood of retaining any part of the Bonus Downs lease, which is due to be resumed in December, 1960.

SUGAR

Australian production of raw sugar in 1958 was 1,412,000 tons—the highest on record—being some 85,000 tons greater than that of 1954, the previous highest outturn. Production in Queensland amounted to 1,354,000 tons, compared with 1,256,000 tons in 1957.

All Queensland sugar producing areas experienced a favourable season, with the result that cane available for harvesting was greatly in excess of available sugar markets. It was necessary to restrict sugar production and, as a result, a large tonnage of cane was left unharvested. The proportoin of the raw sugar output exported was higher, figures for 1958 being approximately 59 per cent, for export and 41 per cent. for Australian consumption.

The British Commonwealth Sugar Agreement has again been extended for another year, and it will now operate until the end of 1966. A conference of sugar exporters and importers, convened in October, 1958, by the United Nations Organization, negotiated a new International Sugar Agreement which will operate until 1963.

Kalamia Mill crushed 376,000 tons of cane, compared with 380,000 tons in 1957. At Pleystowe Mill 363,000 tons of cane were crushed, compared with 390,000 in the previous year. Both mills achieved increased crushing rates, the results of plant improvements; and in each case crushing terminated earlier than in the previous year. Kalamia produced 56,000 tons of raw sugar in 1958, and Pleystowe 52,000 tons.

Cane crushed from the Company's cane farms at Kalamia amounted to 19,900 tons, compared with 18,900 tons in 1957.

Bulk sugar handling was extended and installations operated throughout the season at Mackay, Lucinda Point and Bundaberg. Similar facilities are now being installed at Townsville, which will assist our Kalamia mill; and these should be in operation for the 1959 season. A fifth port, Mourilyan, is being converted and is expected to be ready for the 1960 season.

AGENCY

Our wool stores in Brisbane and Melbourne handled fewer bales of wool than the record number of the previous year, due to drought conditions which resulted in a considerable fall in wool production.

Sales of stock were maintained at a high level, but sheep values declined in sympathy with the wool market and were also affected by the adverse seasonal outlook.

RESEARCH

The company again acknowledges the very valuable assistance rendered by the Universities, C.S.I.R.O., and the Departments of Agriculture and Stock in both Queensland and New South Wales.

Due to drought conditions, only limited progress was possible with our agricultural project of growing sorghum. However, its value is clearly brought out by the fact that in spite of severe drought we were able to record a 66 per cent. lambing from ewes fed on this fodder, which was conserved in pits.

At the sugar mill, consultants have completed a study of engineering procedures which was of considerable benefit. Similar successful studies have also been carried out in the working of our wool stores, and in our office systems elsewhere.

WOOL

It is estimated that 4,600,000 bales will be received into Australian brokers' stores for season 1958-59; and if this eventuates the production will be second in volume only to 1956-57 when receipts totalled 4,867,000 bales.

That stock losses proved less than expected can be attributed to good management and scientific research, as dry conditions continued for lengthy periods in part of the Commonwealth.

It is anticipated that the number of bales in each State will be as follows:—

	1957/58 (Actual)	1958/59 (Estimated)
	Bales	*Bales*
New South Wales	1,404,180	1,580,000
Victoria	1,244,559	1,250,000
Queensland	696,308	715,000
South Australia	512,209	529,000
Western Australia	406,823	430,000
Tasmania	88,434	96,000
	4,352,513	4,600,000

The clip from many parts of the Commonwealth was below normal standard, being less attractive in style, shorter in staple, and thinly grown.

A comparison of the number of bales sold in Australia and the proceeds of the clips over the last five years is as under:

Season	Bales	£ (A.)	Average per lb.
1954-55	3,955,601	352,814,670	71.28d.
1955-56	4,297,338	333,894,936	61.23d.
1956-57	4,886,897	483,030,133	79.99d.
1957-58	4,374,694	337,770,553	62.60d.
1958-59 (estd.)	4,600,000	285,000,000	50d.

The market has been a most disappointing one, and the average price per lb. lower than any season since 1948-49.

When sales opened in August, 1958, prices were considerably lower than at the close of the previous season (June, 1958) and continued to decline until well into January, 1959. On several occasions there were indications of improved conditions, but these did not materialize.

During February a more stable market was experienced, followed by moderate gains in March and such a sharp appreciation during April that values reached the highest point of the season.

Great Britain was again the principal buyer, Japan occupying second position, displacing France, which, however, filled the third place, followed by Italy.

Market movements during the 1958-59 selling year are illustrated by the following clean costs on Australian Show Floors, which were supplied by the Australian Wool Bureau:—

—	Average 64s per lb.	Average 56s per lb.
1958		
June	109d.	83d.
September	97d.	75d.
December	86d.	72d.
1959		
January	87d.	72d.
February	90d.	74d.
March	94d.	76d.
April	115d.	89d.
May	109d.	86d.
June (19th)	108d.	87d.

WOOL PROMOTION

It has become evident in recent years that the sale of synthetic materials and garments in Australia has increased considerably; and also that many people appear to be unaware of the merits of woollen clothing, which is available in a wide range from Australian manufacturers and importers.

After consulting the trade, the Company undertook to hold displays in a number of their main offices in Victoria, and also in Brisbane; and, with the cordial cooperation from manufacturers, distributors, and retailers, it was possible to show a good range of woollen garments and materials. with a preview of new lightweight printed woollen materials which will be available shortly. Technical improvements developed by C.S.I.R.O., such as permanent pleating, shrink and moth proofing, and stain resistance, were shown, and appropriate literature distributed.

While the displays were limited to the space available in our offices, we believe from subsequent comments from the industry that they did stimulate interest and demand, particularly in the country, and were considered a useful effort to assist the wool industry to regain some of the ground lost in recent years.

GENERAL

There is probably no business in Australia whose income fluctuates more than that of the pastoral industry. Graziers' profits and losses are dependent upon two important factors — seasons and world prices — and neither of these can be predicted or controlled.

Good market prices can be largely offset by drought, which affects the woolgrower in a number of ways: he loses many of his sheep, and the percentage of lambings which he would normally have obtained falls; while his wool clip off the surviving sheep is lightened and reduced in quality. His costs of production per lb. of wool rise owing to drought expenditure, agistment, feeding costs, lighter clips and fewer sheep.

A large northern or western cattle station owner cannot move all his stock to avoid drought; agistment is rarely available, and failing this relief, he can only sell stock at reduced prices. The loss of breeding stock reduces his brandings and lowers his income for several years.

During the last two years the season and prices have been against the pastoral industry ,and have affected this Company's profits, but we have preserved our breeding herds and, given good seasons, recovery should be swift.

This Company has benefited materially during the last two adverse seasons from the substantial expenditure made since the war at our various stations on water, subdivisional fencing, and other improvements. Without them, and the timely judgment of the general manager and the head office management group over the movement of our flocks and herds, we would have suffered very severe losses.

Regarding the general Australian situation, wool prices have fallen over the past two years. In the 1957-58 season, income from wool declined by £145,000,000, and in 1958-59 it is probable that it will also fall. On present estimates a further drop of £50,000,000-£60,000,000 is probable.

Of the many factors affecting Australia's economy, it has in the past been the size of the wool cheque which has exerted the greatest influence and determined whether money was plentiful or scarce. It is remarkable, therefore, that the general level of prosperity in Australia during the past two years has remained high, and secondary industry and manufacturing have been prosperous.

The population of Australia has now passed the 10 million mark, the economy is sound, and leading economists predict a bright future.

FUTURE PROSPECTS

In my review last year I mentioned that the history of the pastoral industry in Australia had shown that the whole situation could change overnight if good rains fell. Although the drought conditions prevailing at the end of 1957 continued throughout 1958, I am pleased to say that most welcome relief was received late in March this year, when excellent rains fell on almost all of our sheep and cattle properties.

This has enabled us to return cattle and sheep from agistment country to their original pastures ,and as we were able to keep our breeding flocks and herds virtually intact, we should be able to build up to full carrying capacity again before long.

The wool market rose sharply in April, reaching the highest point of the current season, and, remained firm in early May; although subsequently there have been signs of hesitancy. With the improvement in stock values and the seasonal position, a better return from the pastoral and agency sections of our business is likely; but much depends on the wool market up to the end of 1959.

The American demand for third grade boneless beef has caused an unprecedented rise in prices paid for all classes of cattle. We have made the best of the opportunities presented by this market through selling aged and cull cows, but care has been taken not to oversell and thus deplete the breeding herds. While it is not possible to predict how long this demand will continue no decline in the American market is at present, in view.

Prices in the United Kingdom for our first quality beef are firm, and it seems clear that the Queensland beef cattle industry will continue to be of major importance in the economy both of the State and of Australia. It should also benefit from the new north-about shipping service for chilled beef sent to this country.

The outlook for the sugar mills remains good, and therefore we confidently expect that results will be improved for 1959 and that this year will again be one of substantial progress.

STAFF

The year under review has been a difficult one for many of our staff, in particular for our station managers in the drought-stricken areas. Their responsibilities were considerably increased as it was necessary to organize large-scale supplementary feeding, and to supervise large numbers of stock on agistment country.

Our agency managers were untiring in their efforts to assist clients, and our own stations, with their drought problems and all our sugar mill staff continued their efforts towards maximum efficiency throughout the year.

The whole of the Company's staff has rendered excellent service, and has merited our warm appreciation and thanks.

Once again we owe deep thanks to the constant endeavour, wisdom, and sound judgment of our general manager, Mr G. S. Colman, and also to the assistant general manager, Mr G. H. Colman, as well as to the other members of the head office management group in Melbourne. They have carried us safely through a difficult and anxious period. We are greatly indebted to them one and all for their enthusiasm, hard work, and never-failing loyalty to the Company.

THE BRITISH PLASTER BOARD (Holdings) LTD

A RECORD TRADING ACHIEVEMENT

SIR GRAHAM HAYMAN ON A WELL-EQUIPPED AND GROWING ORGANISATION

The 42nd annual general meeting of The British Plaster Board (Holdings) Limited will be held on July 22nd at Bath House, 82, Piccadilly, London, W.1.

The following is the statement of the Chairman, Sir Graham Hayman, which has been circulated with the report and accounts for the year ended March 31, 1959:

Directorate: Mr J. F. Strable and Mr T. S. Durham, who have both attained the age of 70 years, will retire from the Board at the Annual General Meeting.

Mr. Strable came to this country from Canada in 1933, since when he has been continuously associated with the development of the Gypsum Industry here. He became a Director of this Company in 1944 when your Group acquired Gyproc Products Limited Mr. Durham has been a mining consultant to the Group for many years and joined the Board in 1947. Both Mr. Durham and Mr. Strable have thus been associated with our organisation during a period when its activities and ramifications have greatly expanded. The experience of both these gentlemen will remain available to the Group as they are to continue as consultants, but I would like to thank them on behalf of all my colleagues for their outstanding work throughout their years of service, and to wish them both a happy retirement.

Since the last Annual General Meeting Mr. F. G. Flood and Mr. D. L. Walker have been appointed to the Board. Mr. Flood has had considerable experience of the Gypsum Industry in this country and is a full time executive in charge of The Gotham Company Limited and its associated companies. Mr. Walker was, until recently, General Secretary of the Federation of British Industries, and in that capacity has had close contact with all branches of industry over many years. I am sure the qualifications and experience of both these gentlemen will prove of value to your Board and I recommend your confirmation of these appointments.

FINANCIAL RESULTS

It is gratifying to be able to report that the Group profit on trading of £2,751,894 for the year to 31st March 1959, was a record, and £470,000 higher than in 1958.

While the volume of trading in all sections of the Group has been maintained at a satisfactory level, these improved results have been achieved mainly by reductions in costs of production arising from the Company's policy of re-investment in more modern equipment, plants and buildings, and by the continuing spread of interests.

The change in the basis of assessing United Kingdom profits tax and the reduction in the standard rate of income tax have made an appreciable and welcome reduction in the burden of taxation.

After providing for taxation on the year's results, and bringing into account adjustments relating to prior years of £138,611, there is an amount of £1,431,146 available for appropriation. Of this sum, subsidiary companies have retained £337,756 as reserves and unappropriated profit and £500,000 has been added to the general Revenue reserve of the Holding Company.

The increases in the issued Preference and Ordinary Capital and in share premiums shown under Capital Reserves represents the cost of acquiring the entire issued capital of O. J. Bradbury & Son Ltd., for £264,999 and the balance of the Ordinary Capital of Gypsum Industries Ltd. Dublin, for £103,457. The Preference capital of the latter company remains in the hands of shareholders outside the Group and represents the major portion of the outside shareholders' interests shown in the

Consolidated Balance Sheet.

It will be noted that the amount of contracts for future capital expenditure is £1,376,000 compared with £453,000 in the previous year. A large proportion of the current year's figure reflects the continuing expansion of our plants in Canada and in the United Kingdom paper companies. The balance represents expenditure to be incurred on modernisation and replacement of assets in other sections of the Group. Should it become necessary arrangements have been made with our bankers to obtain temporary facilities to finance these expenditures.

Your Directors consider that the results now before you justify a modest increase in dividend, and they accordingly recommend the payment of a final dividend of 9%, which, together with the interim payment of 5%, makes a total for the year of 14% compared with the total for last year of 12½%.

It will be seen in the Holding Company Balance Sheet that the Share Premium account now stands at £583,527, and the General Capital Reserve at £2,127,967. making a total of £2,711,494. In order to bring the issued Ordinary Capital more into line with the real value of the assets of the Group, it is proposed to utilise this amount to make a distribution to ordinary shareholders of two Ordinary Stock units of 10/- each for every five such units held. This proposal will be put before an Extraordinary General Meeting of the Members to be held on 22nd July 1959, immediately after the Annual General Meeting, when a resolution to increase the authorised Ordinary Capital from £7 million to £10 million will also be proposed. If these resolutions are passed, the Issued Ordinary Capital will be increased from £6,778,734 to £9,490,228.

TRADING ACTIVITIES IN THE UNITED KINGDOM

During the year our mining companies in the United Kingdom produced about two million tons of gypsum and anhydrite. Gypsum stone is the base for the plaster used in plaster board and for the range of building and special plasters produced by the Group; it is also used in the manufacture of portland cement and for a variety of other purposes. Anhydrite is sold outside the Group mainly for the production of sulphuric acid and fertilizers. The programme of mechanisation of our mining operations continues and this has enabled us to improve quality and off-set the effect of rising costs.

The level of home sales of plaster and plaster board has been substantially maintained during the year in spite of the lower level of building activity.

In the roofing felt section, the operations of D. Anderson & Son Limited were expanded and have been materially improved by the installation of new plant and equipment to which I referred in my last statement. In order to rationalise production, it was decided during the year to close down the small factory of Blackwells and National Roofings Limited at Altrincham, and to concentrate production at the Anderson main factory at Stretford, Manchester. This has yielded beneficial results, but competition remained keen early in the year and has recently been intensified.

Our paper companies centred round C. Davidson & Sons Limited in Aberdeen have shewn improved earnings, mainly due to the extensions to plant and buildings carried out over the last few years. The results have been achieved despite increasing competition in the industry, especially in the converting and merchanting side where profit margins have fallen considerably. At present, the capacity of the industry generally is greater than demand and consumers' stocks are being kept at a low level. However, the anticipated general improvement in business activity in the country should have a favourable effect, particularly in the section producing packaging materials.

As already mentioned, the Group has purchased the entire capital of O. J. Bradbury & Son Limited, an old established company in the Nottingham area, which trades as paper merchants, paper processors and bag makers. This will extend the range of our packaging products and I am sure that the purchase of this company will make a useful contribution to the operations of our paper companies.

The profits of the engineering companies show a satisfactory increase, although they amount to only a small proportion of the Group total. There has been a steady demand for the standard products made for the road transport, refrigeration and agricultural industries. Constant fluctuations in copper prices made trading conditions difficult and until more stable prices for this material are established, it is expected that these difficulties will continue.

OVERSEAS

In Canada our programme of expansion continues. Capacity at the Winnipeg plaster board plant is now being further increased, and the output of the Calgary board plant which was doubled early in 1958, is also being further extended in order to meet the growing demand. In Vancouver, where a satisfactory market for our products has been built up by supplies from our plant at Calgary, we are now erecting a new board plant and plaster mill, which should be in production before 1960. Our rock wool insulation company is shewing a good return on the capital invested, although highly competitive conditions operate in this field.

As I indicated earlier, the Group acquired the balance of the issued Ordinary Capital of Gypsum Industries Limited, Dublin. This Company, with which we have been associated for many years, produces gypsum stone, plaster board and plasters for the Irish and overseas markets. A new gypsum deposit at Drumgoosat, near Dublin, is being developed, and with the latest operating techniques which we are introducing it is anticipated that improved costs and the high quality of the rock should enable our Irish subsidiary to obtain further outlets in export markets.

In France, your Group has substantial minority interests in Placoplatre S.A. and Platrieres Modernes de Grozon.

The unsettled political conditions in that country during the summer of 1958 had a widespread effect on the economy and there was a marked fall in building activity. I am glad to report, however, that there has been an increase in the volume of orders during recent months, and prospects for the current year are favourable.

In Sweden, remarkably good progress has been made by our associated company Svenska Aktiebolaget Gyproc in developing the use of plaster board, and plans are now in hand to increase production to satisfy the growing demand in that area.

The plaster mill of Gyproc-Benelux S.A., our Associate Company in Belgium came into production in the Spring of 1958 and the board plant produced its first plaster board at the end of that year. It may be some time before fully satisfactory trading conditions are achieved, but sales in the Benelux countries are now developing steadily.

Our associated company in South Africa, Gypsum Industries Limited, has had a good year in spite of the fact that during the period under review the building trade generally was less active in that country.

Our Rhodesian subsidiary earned a small profit for the year, but it should be noted that while the disturbance in Nyasaland had no discernible effect on the economy of Southern Rhodesia, the restrictions on credit were not lifted until the end of 1958. This made it more difficult for our board and paper mill at, Umtali to obtain orders and encouraged consumers to keep their stocks on the lowest practicable basis. The future outlook, however, for this Company is encouraging.

In pursuance of our policy of developing overseas, the Group has acquired a 50% interest in a small Australian Company, Woodtex (S.A.) Limited, which makes wood wool slabs. We are to provide technical assistance to enable this company to expand and develop its sales in South Australia.

Our exports of gypsum products were lower during the year but this was to be expected in view of the operations of our associate companies in Europe. However, a contributory factor was the Exchange Control restrictions imposed by certain overseas Governments, particularly in New Zealand.

FUTURE PROSPECTS

While the foregoing is a brief review of the main products of our Group, I would add that we also produce a variety of other materials including many based on gypsum and paper. Your organisation is well equipped to establish new outlets and it is closely following the present drive in the United Kingdom to increase the thermal insulation, fire protection and acoustic treatment of buildings of all sorts for which our gypsum products are specially suitable.

Quite apart from these developments, I am confident that the building industry in this country can look forward to a reasonably high level of activity in the years ahead, so that a good rate of demand for our main products should continue. The higher rate of investment in the public and educational building sectors of the building programme, the removal of restrictions on local authorities in respect of housing schemes, the reduction in the Building Society mortgage interest rates and the freeing of credit generally, should all contribute towards satisfactory trading results during the current year.

In Canada, it is difficult to forecast what temporary effect the recent credit restrictions may have on the building industry, but we are confident that our companies will at least maintain their position.

The foregoing, taken in conjunction with our widespread operations and investments in other markets, should enable your Group to continue its progress.

I feel our Stockholders will agree that the results of the year's operations now presented are very gratifying, and I would like to associate them with the Directors in expressing to employees of the Group at all levels, both at home and abroad, our real appreciation of their sustained efforts and enthusiasm during the past year.

THE METROPOLITAN RAILWAY SURPLUS LANDS CO. LIMITED

Summary of Sir Bernard Docker's statement to Shareholders on the Report and Accounts for the year to 31st March, 1959, at the Twenty-sixth Annual General Meeting on 3rd July, 1959.

Profits.—Gross rents increased by £28,538 to £421,616 and net income from properties by £19,198 to £312,277. The profit on re-sale of properties in our subsidiary was about £10,000 better at about £68,775. In the final result, group profits before taxation rose by £36,803 to £342,330, and after providing for taxation, net profits amounted to £177,264 against £122,529 in 1957-58.

Dividend.—We are now recommending a final Dividend of 7% making, with the Interim Dividend of 3½% paid last November, 10½% for the year, compared with one Dividend of 7½% in respect of the preceding year. This will leave £86,287 to carry forward compared with £75,400 brought in.

Re-valuation of Property Assets.—We have decided that the time is appropriate to adopt the Valuation of our Property Assets made by the Directors as at the 31st March, 1957. Accordingly, we asked Messrs. Knight, Frank and Rutley, who made a Valuation of our properties in 1949, to check the internal Valuation made in 1957, and they have certified that such Valuation is fair and reasonable. We have therefore, adopted that Valuation with adjustments for transactions since, in the Balance Sheet at the 31st March, 1959. The resultant surplus together with the surplus on the sale of a few properties we have carried to Capital Reserve, which now stands at £2,106,742.

Increase in Share Capital and Alterations in Articles.—We are recommending Shareholders to increase the authorised Capital from £2,640,915 to £6,000,000 and to make certain changes in the Articles of Association. The alterations are in the main designed to facilitate the expansion of our property assets which remains our aim.

Subject to the necessary alterations being agreed, we shall ask you to resolve that £1,320,457.10.0 of the Capital Reserve be capitalised and distributed by way of a Scrip Issue of one share of 10/- credited as fully paid for each two such shares held on the 10th July, 1959. We have no intention at present of making any further issue of Capital for cash or otherwise.

We have done well out of our investments in subsidiary and associated companies engaged in trading and development of real Estate. Such investments have hitherto been restricted by our Articles and we have found this a handicap which we recommend should be removed.

Subsidiary Companies.—Ortem Estates is very active indeed in the Estate development field and has already transacted substantial 'profitable busfness in the current year.. Our joint venture in The Whelmar Property Company Limited is fulfilling all our expectations. Two of the six Estates in the Midlands mentioned in my statement last year, those at Mansfield and at Matlock, have been sold. Development and sales have proceeded satisfactorily on the others. The development of two sections of The Alkrington Estate near Manchester is proceeding apace and houses are being sold well in advance of completion. We are confident that this trade investment will continue to be remunerative. On the other hand it is unfortunate that our Buildings subsidiary Thomas Brevetor Limited, incurred a loss of nearly £20,000 on Building Contracts and we shall take the first opportunity of disposing of this business.

General Observations.—This has been an important year for us. We have emerged from the shackles of credit restriction coupled with taxation particularly Profits Tax as formerly levied which bore exceptionally heavily on us. Competition for property investments is exceptionally keen. Nevertheless we have negotiated a number of purchases amounting to between a quarter and half a million pounds in all, which will give a satisfactory return in due course.

We have carried out some small scale commercial property development schemes with success. We intend to take a much larger interest in re-development schemes both for investment by the parent Company and for re-sale by our principal subsidiary and we are actively seeking participation in such schemes.

We are expecting our rents to continue to maintain a steady growth. Any striking increase from this source, however, in any one year will depend on our success in achieving expansion.

We expect unless some factor at present unforeseen intervenes, to pay, in the current year, the equivalent rate of dividend, that is 7% in all for the year, on the capital as enlarged by the proposed 50% Scrip Issue. Furthermore, we have made a good start and if good fortune remains with us, the present indications are that the revenue for the current year may show a further improvement and enable us, not only to maintain this equivalent rate of dividend on the enlarged capital, but possibly improve upon it to a modest extent.

(The Report and Accounts were adopted and the resolutions increasing the Capital, approving the Scrip Bonus and altering the Articles were passed.)

LAMBERT BROS

CONTINUING EFFECT OF DECLINE IN FREIGHT MARKET

The 56th annual general meeting of Lambert Brothers Limited was held in London on 25th June.

The following is an extract from the circulated statement of Mr. Ratteliff Steel:

I am sorry to have to report that the decline in the freight market continues with no sign of improvement. I feel that it will take some time before any material change occurs.

It is true that we have many interests other than shipowning but they are sensitive to the state of the freight market.

The Consolidated Accounts for 1958 show a net profit of £231,647 after charging United Kingdom Taxation £165,984. It is proposed to pay a final dividend on the Ordinary Stock at the rate of 12½% making a total for the year of 17½%; this together with the Preference Dividend absorbs £124,406. It is proposed to transfer the sum of £50,000 to General Reserve, and carry forward in Profit and Loss Accounr £494,958.

It is also proposed to make a further distribution of 2¼% on the Ordinary Stock out of Capital Accretions Account making a total of 4¼% for the year.

The Temple Steamship Company had, as was expected, an unsatisfactory year. The persistent depression in the freight market deepened and severely affected our shipowning activities.

At Austin & Pickersgill's new shipyard at Sunderland, in which we have a substantial interest, the building berths were completed during the year and the whole project should be finished in the autumn.

In reviewing the Company's many activities at home and abroad the Chairman indicated that with the decline in the coal trade the establishments abroad were now mainly occupied in ships agency business.

On the Suez Canal, Lambert Brothers (Egypt) Ltd. has operated under sequestration with efficiency and satisfaction to our shipowning clients. We now look forward to desequestration under the Anglo-Egyptian Agreement.

Our many departments in London, while affected by the laying up of vessels, continue to provide a comprehensive service.

Our Ship Consignment and Agency Departments in London and Liverpool have had an extremely active year.

Our Freight Agency Department has had a busy year looking after the interests of the Interocean Line of San Francisco and of the American Export Lines Inc. of New York. During the year we took over the representation of the Virginia States Port Authority.

The activities of our Aviation Department and Travel Agency Bureaux, in London and Newcastle, have increased steadily with satisfactory results.

With the recession in shipping the Marine side of Lambert Brothers (Insurance) Ltd. has naturally had a somewhat more difficult time in the past year. Fortunately, the basis of its business has recently become more widely spread through its Non-Marine, Overseas and Underwriting Agency activities.

C. C. WAKEFIELD & Co. LTD

GROUP SALES OF CASTROL REACH NEW PEAK
A YEAR OF TRADING PROGRESS AND EXPANSION
MR L.W. FARROW'S STATEMENT

The 42nd Annual General Meeting of C. C. Wakefield & Company Limited was held on July 17th at Winchester House, Old Broad Street, London, E.C.2.

The following is the Statement by Mr L. W. Farrow, C.B.E., the Chairman, which has been circulated with the Report and Accounts for the year ended 31st December, 1958.

Before I proceed to review the results and activities of the Group for 1958 I am sure that Stockholders will be interested to learn that the current year marks the centenary of the birth of our founder, the late Viscount Wakefield of Hythe, the Diamond Jubilee of the business and the Fiftieth Anniversary of the introduction of Castrol. To commemorate the last-mentioned of these anniversaries a special illustrated booklet entitled "The First Fifty Years" has been prepared. This publication records a half-century of achievement in the world of speed on land, water and in the air and a copy is being sent to every Stockholder.

GROUP TRADING

In this memorable year in the history of the Company it gives me particular pleasure to announce that the sales and trading profits of the Group for 1958 were higher than ever before. One of the factors contributing to this achievement has been the acquisition of Fletcher Miller Limited on the 1st January, 1958, but even before taking the figures relating to this new Subsidiary Company into account, the volume and value of sales throughout the world constituted a record for the Group.

Sales of Castrol, both at home and abroad, reached a new peak and this principal product of your Company retained its position as the best selling branded motor oil in the United Kingdom, a tribute to its reputation for high quality established over the past fifty years.

These results have been achieved in the face of continued and undiminished competition directed largely towards restricting the display and sale of Castrol at service stations and garages. Stockholders will be interested to learn that notwithstanding this aspect of competitive activity, Castrol continues to be more widely available to the British motorist than any other motor oil.

During the year under review, following a lenghty period of intensive research and development, your Company introduced Castrol Antifreeze in the United Kingdom and I am happy to say that sales exceeded our expectations. This product contains an exclusive type of anti-corrosion additive making it equally suitable for use in petrol and diesel engine cooling systems.

The Group trading profit for the year amounted to £4,142,919, an increase of £1,044,496 over the previous year. In comparing these results, however, it should be borne in mind that 1957 trading was adversely affected by the Suez crisis.

INDUSTRIAL OILS

Your Group's industrial business in the United Kingdom is now conducted through Wakefield-Dick Industrial Oils Limited and Fletcher Miller Limited, and the acquisition of the latter Company has added considerably to our marketing strength in this field. Much progress has already been made in establishing a co-ordinated trading policy between these two Subsidiary Companies whose combined sales activities place the Group among the foremost suppliers of lubricating, cutting and insulating oils to British industry.

Pleasing results were achieved by both Companies in 1958, notwithstanding the difficult conditions experienced by some sections of industry in the United Kingdom, and they have made a valuable contribution to the record Group sales and profits to which I have already referred.

CHEMICAL PLANT

Throughout 1958 further progress was made in the installation of the Company's new chemical plant at Stanlow and this project has since been completed.

In my Statement last year I mentioned that the surplus production from this plant would be marketed through our Subsidiary, Edwin Cooper & Company Limited, which commenced its new trading activities on 1st January, 1958. I am pleased to report that, in its first full year of operation following its resuscitation this Company has succeeded in making a profit.

RESEARCH

To keep pace with the general expansion of the Group, our technical staff has been increased considerably during the last decade and extensions have recently been made to our Research Centre.

Continued research is conducted at this centre into all aspects of lubrication and the development of improved chemical additives, in order to maintain our reputation for products of a supreme quality and to satisfy the demands of industry for new and highly specialised lubricants.

One example of these speciality products is a unique synthetic lubricant for gas turbine engines which our technologists have now brought to the stage of final development after almost ten years of research. Aero engine builders have been considerably impressed by the remarkable properties of this fluid.

OVERSEAS TRADING

In 1958 the Overseas sales of the Group were, in the aggregate, the highest ever recorded and the overall trading profit derived from these operations showed an increase in comparison with the previous year. These results were accomplished in spite of difficult trading conditions in certain countries where, in some cases, losses were incurred.

Stockholders will appreciate that, as with all international organisations having extensive interests abroad, the Group's Overseas business is sensitive, in varying degrees, to the political and economic changes which occur from time to time in different parts of the world. On the other hand, the geographical spread of the Group's activities adds to its strength and flexibility by making it less susceptible, as a whole, to the vicissitudes of individual markets abroad.

CASTROL HOUSE, MARYLEBONE ROAD, N.W.1

The erection of our new Head Office premises to which I referred last year is ahead of schedule and it is now anticipated that the building will be ready for occupation in the late summer of this year. Having regard to the anniversaries mentioned in the opening paragraph of this Statement ,it may perhaps be considered a happy coincidence that our move to the new address will also take place in 1959.

ACCOUNTS AND DIVIDENDS

The Consolidated Net Profits of the Group, after taxation, amounted to £1,459,412 (1957 £906,560).

A sum of £531,692 has been set aside for Depreciation. This exceeds the corresponding figure for 1957 by reason of additions to the Fixed Assets of the Group.

Difference on Exchange amounted to £100,617 (1957 £105,313), due principally to the deterioration in the French Franc and Brazilian Cruzeiro.

Expenses of a non-trading nature amounted to £40,747, of which £17,142 is attributable to the issue of bonus shares in July, 1958.

In view of the increased profit achieved in 1958, your Directors recommend the payment of a Final Dividend on the Ordinary Stock at the rate of 15 per cent., less income-tax, making a total for the year of 22½ per cent., which, on the Capital as increased by the one for three scrip bonus in July, 1958, compares wtih an equivalent of 20 5/8 per cent. paid in respect of 1957.

Preference and Ordinary Dividends absorb a total net amount of £516,450 (1957 £447,817). Net transfers to Reserves in the Group Accounts amount to £802,315 which includes £735,014 set aside to General Reserve (Parent Company, £721,772). After these appropriations the Consolidated Profit and Loss Account shows a carry forward balance of £793,827 (1957 £653,180).

The Consolidated Balance Sheet and the Parent Company's Balance Sheet reflect the acquisition of Fletcher Miller Limited, and embody the changes in Capital approved at the Extraordinary General Meeting held on the 11th July, 1958.

Current Assets of £14,037,562 exceed Current Liabilities and Provisions by £7,530,876, an increase of £431,106 when compared with the figure at the end of 1957. This is after having paid more than

£750,000 of the cash consideration for the acquisition of Fletcher Miller Limited.

On 31st December, 1958, total stockholders' interests amounted to £11,310,964, an increase of almost 100 per cent, on the corresponding figure six years ago.

The financial results for 1958 reflect a year of progress and expansion and I am sure Stockholders will agree that they reveal an eminently satisfactory position.

PROSPECTS

With regard to prospects for the current year, it is too early to make any firm forecast, although I can say that Group Sales for the first four months show an increase over the corresponding period of 1958.

If this trend can be maintained throughout the year without any narrowing of the margins between cost and selling prices, the Group should have another successful year's trading in 1959.

MANAGEMENT AND STAFF

In conclusion, I wish to pay tribute to our Managing Director, Mr L. M. Broadway, his Management Board colleagues and all members of the Staff of the Group, at home and overseas, for theiz zeal and industry during 1958. The record figures under review speak for themselves but these could not have been achieved without the combined efforts of all who serve the Group so loyally and enthusiastically throughout the world.

WEBB CRYSTAL GLASS COMPANY

The 39th annual general meeting of Webb's Crystal Glass Company Limited was held on July 8th in London.

The following is an extract from the circulated statement of the Chairman, Mr R. E. N. d'Abo:

"The group Profit for the year amounts to £56,574 as compared with £53,294 for the preceding year and the Net Profit, after taxation, to £24,659 as against £23,655.

The balance sheets of the Group and the Parent Company show a strong financial position — our Current Assets and Investments exceeding our Current Liabilities and interests of outside shareholders by £346,297.

Edinburgh and Stourbridge Works. Sales of hardglass for the electronic industry fell during the year but we increased our sales of decorated table glass in spite of a diminishing export field in the Commonwealth.

Walthamstow Works. The main output of this works is the supply of components specially designed to each customer's particular requirements. They now cover an extremely wide range of industries and an increased turnover can be reported.

Your Directors have initiated final plans for remodernising and improving all three works. We hope these improvements will enable the works to take advantage of the expected increase in demand for our products.

The profits for the first four months of this year show a substantial gain over last year, and providing there are no major upsets, I am confident that the 1959 results will show an improvement.

The report was adopted.

M. WISEMAN COMPANY

RECORD SALES

The forth-second annual general meeting of M. Wiseman & Company Limited was held on June 30th in London, Mr. Frank Max Wiseman, chairman and managing director, presiding.

The following is an extract from his circulated statement for 1958:

Despite record sales, the net trading profit of the Group, after charging all expenses and after deduction of Income Tax and Profits Tax, amounted to £58,395, compared with £61,437 for the previous year. The Ministry of Health continue to control prices of all lenses and a proportion of frames, and this considerably affects their profitability.

There is an increasing desire to wear spectacle frames of better appearance than those supplied under the Health Service, and this tendency is now proving of benefit to your Company, and the factories now have full order books.

The turnover for this year up to May 31st is in advance of the same period of last year, and the immediate outlook is satisfactory. The interim dividend for 1958 was 9 per cent. The final dividend paid for 1957 was 12 per cent. Your directors decided not to recommend any final dividend for 1958 but to declare a special interim dividend for 1959 of 12 per cent payable on July 1, 1959.

The total reserves now stand at over £500,000 whilst the issued Ordinary share capital is £244,200. In order to bring the issued capital more into line with the actual capital employed in the business, your directors recommend a scrip issue of fully-paid Ordinary shares in the ratio of two for each five held.

The report was adopted and the proposed scrip issue approved.

BRIXTON ESTATE LIMITED

The Annual General Meeting of Brixton Estate Limited was held on July 2nd, in London, Lieutenant Colonel Sir Francis Humphrys, GCMG, GCVO (the Chairman), presiding.

The following is an extract from his statement:

Properties.—On October 30, 1958, the properties were revalued, as a result of which there was a surplus of £1,905,217 over the Book Value. This surplus was transferred to Capital Reserve.

Gross Income has increased by £26,899 and net profit, subject to tax, has risen from £151,890 to £164,824.

Net Revenue.—The provision for taxation is approximately the same as last year and the net profit after tax has risen by £11,907.

Reserves and Bonus Issue.—Out of the large allocation to Capital Reserve resulting from the revaluation of the properties, £1,050,000 was absorbed in paying a bonus of three for one. After adjustments the Capital Reserve now stands at £857,088.

Future Prospects.—The prediction last year that there would be an improvement of Rental Income is already being realized and if conditions remain favourable increased distributions for 1959 and 1960 can be expected. I am happy to say that the outlook for the Associated Company is also most promising and an increasing contribution seems likely to be made from this source.

Dividend on Ordinary Shares.—Two interim payments of 7½ per cent, less tax, were paid on the Capital before the last bonus issue, and a final dividend of 3¾ per cent, less tax, on the increased Capital is now recommended; the total is equivalent to 30 per cent on the old Capital.

The Report and Accounts were adopted.

RECKITT & COLMAN HOLDINGS LIMITED

LARGER TURNOVER AND TRADING PROFIT, PROGRESS OVERSEAS
MR J. B. UPTON'S REVIEW OF GROUP'S ACTIVITIES

The Sixth Annual General Meeting of Reckitt and Colman Holdings Limited was held in the Connaught Rooms, London, W.C.2, on Friday, June 19, 1959.

The following is an extract from the Chairman's Statement, in respect of the year ended December 31, 1958:

Group sales, excluding inter-company sales, were 6 per cent greater in 1958 than in 1957. This increase is not quite so large as last year's and reflects the growth of competition at home and abroad, as well as the slight world recession during the year. In the USA, where the recession was most publicised, our American Subsidiary, the R. T. French Company, expanded its turnover and this, coupled with the acquisition at the beginning of the year of two new businesses in Australia and South Africa, has raised to 63 per cent the proportion of Group Sales now made outside the United Kingdom.

Trading profit rose from £7,977,000 to £8,589,000 and this increase is in proportion slightly better than the increase in turnover, thus halting the downward trend in margins of the last few years. This result has been obtained despite the need to provide in 1958 an extra £143,000 for depreciation, and the comparison would have been even more favourable had not the habitual weakness of some South American currencies made it necessary to write-off against exchange differences the sum of £426,000 as compared with £131,000 in 1957.

The Consolidated Profit for the year, after taxation, is £4,481,000 (£3,991,000 for 1957) and from these taxed Profits £511,000 has been transferred to the Reserve for Replacement of Fixed Assets.

It is satisfactory to find that the final results for 1958 have confirmed the expectations of the Directors last November when they decided to increase the Interim Dividend, and I am satisfied that the further increase now proposed in the Final Dividend is also justified.

Resolutions will be put before you at an Extraordinary General Meeting to capitalise some of the reserves and to authorise the issue of two new Ordinary Shares in respect of every three existing Ordinary Shares. If this issue is sanctioned your Directors would expect that, in the absence of upsets in the international sphere, they will be able, in respect of 1959, to recommend Ordinary Dividends totalling not less than 9 per cent on the increased Capital (equivalent to 15 per cent on the present Capital) in which case they may decide to equalise to a greater extent the two distributions by paying 4 per cent as an interim in January, 1960.

Your Directors are conscious of the need to secure a fair return on the proportion of the Group's profits that is progressively being ploughed back into the business and they are satified that since the formation of Reckitt & Colman Holdings Limited at the end of 1953, the additional resources made available each year to the Operating Subsidiaries have been applied profitably. I hope that the future will offer other and equally promising opportunities for development.

Group results for the early months of 1959 are satisfactory and progress is better outside the United Kingdom than at home. This is to be expected for there are in the expanding markets abroad more opportunities to be followed up.

If the payment of the Final Dividend is approved on the basis recommended, the capital employed as at December 31, 1958, represented by the shareholders' interests in Capital and Reserve plus the minority interests and amounts set aside for future Tax, will be £46,676,000, as compared with £43,996,000. The corresponding figure at the end of 1953, that is to say at the time of formation of the Group, would have been approximately £35,300,000.

Over the years part of the increase in employed capital has been applied in replacing, with new products, some of our older lines which have passed through their peak. A further part of our retained profits has been invested by building new factories at home and abroad, in the latter case sometimes to secure by local manufacture the continuance of trade which, because of import restrictions or competition, we would otherwise have lost; another part has been used to acquire new businesses. It is, therefore, reassuring to find that over the last five years the total Profits of the Group have risen to the extent required to pay dividends commensurate with the capital now employed.

Capital Expenditure to meet the needs of an expanding business in various parts of the world was over £3 million in 1958 and the figure for 1959 is likely to be greater. On the other hand a more ready supply coupled with greater stability in the price of raw materials has enabled us to reduce by about £500,000 the value of our inventories, with the result that our liquid position remains strong and well able to cope with such new developments as we foresee.

TRADE

The trade of the Group is carried on by six operating subsidiaries in the way I described last year. However, it was during 1958 that Reckitt & Sons Limited, J. & J. Colman Limited and Reckitt Colman Chiswick (Overseas) Limited took over the remaining parts of the business previously conducted by Reckitt & Colman Limited. The results achieved by these sub-groups in 1958 are therefore compared with what they would have achieved in 1957 had they then been constituted in the same way.

Reckitt & Sons Limited, apart from its chemical subsidiaries, again increased its sales and the resulting profit also grew.

Amongst the new household products, which are taking the place of old, Windolene was one for which a satisfactory sales increase was recorded. Amongst the Toiletries, Steradent did particularly well, while in the Pharmaceutical field our analgesics, led by Disprin, again went ahead and Disprin Junior was introduced especially for children.

The Chemical Subsidiaries did not have so satisfactory a year, chiefly because of a drop in the possible export trade to India. So far as Reckitt's (Colours) Limited was concerned that trade was merely transferred to our overseas subsidiary whose Ultramarine factory in India functions very smoothly.

J. & J. Colman Limited and its Subsidiaries maintained their sales and increased their profits.

Colman's Mustard continues to hold its place as the nation's condiment and, although the weather in 1958 was not such as particularly to encourage the consumption of concentrated soft drinks, the sale of Robinson's Lemon Barley Water held up well, while further progress was made in developing the trade for Robinson's Orange Smash—the high quality concentrated drink made from whole fresh oranges. The name of Robinson has also been known for generations in the world of infant feeding.

Joseph Farrow & Company Limited of Peterborough had a good year and were able to increase their sales of canned foods whilst at the same time expanding the distribution of French's Bird Foods, which they introduced to the UK market just over a year ago. They also increased the share of the honey trade held by Gale's brand. Conditions in the canning industry will be more difficult this year because last summer's unfavourable weather reduced the crops of fruit and vegetables suitable for putting into tins.

Chiswick Products Limited and its Subsidiaries, which now operate almost entirely in the United Kingdom and Eire, did not quite maintain the high turnover they achieved in 1957, but their Trading Profit was very satisfactory.

They held their share of the competitive shoe polish market, and improved their sales of white and suede cleaners. The floor and furniture polish markets remain fiercely competitive.

Sissons Brothers & Company Limited found that 1958 was a somewhat difficult year for the paint industry, partly due to less activity in the building trade. Despite this, home sales were reasonably well maintained.

Siscomatte, the rubberised steam-proof paint for kitchens and bathrooms, is now well established as one of the major lines of the Company while Siscogloss is receiving more publicity and is now available in colours which tone with the more popular shades of Siscomatte. Siscogloss is an alkyd resin paint equal to any top quality gloss paint on the market and its very reasonable price should appeal to the householder.

Export sales were satisfactory, bearing in mind the unsettled conditions abroad. It has however become increasingly apparent that, in order to retain a valuable overseas trade, local manufacturing must be undertaken in some territories and plans are already being made with this in mind.

The statement concluded with a tribute to the Staff and Employees.

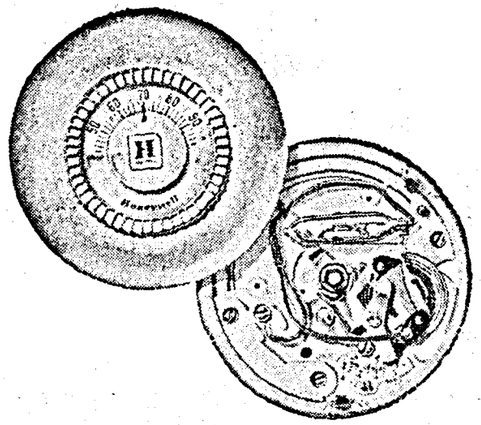
Subsidiaries and distributors in most countries throughout the world



This is the Honeywell Round. More homes throughout the world are equipped with it than any other thermostat. Extremely sensitive and responsive, it gives you fingertip control of heat instantly and accurately. Its 80 precision parts and fully enclosed mercury switch are 100% dust-proof and trouble-free. The outer ring snaps off and can be easily painted to match any decorating scheme. For more information on Honeywell's complete line of control systems for heating or cooling, write to Honeywell.

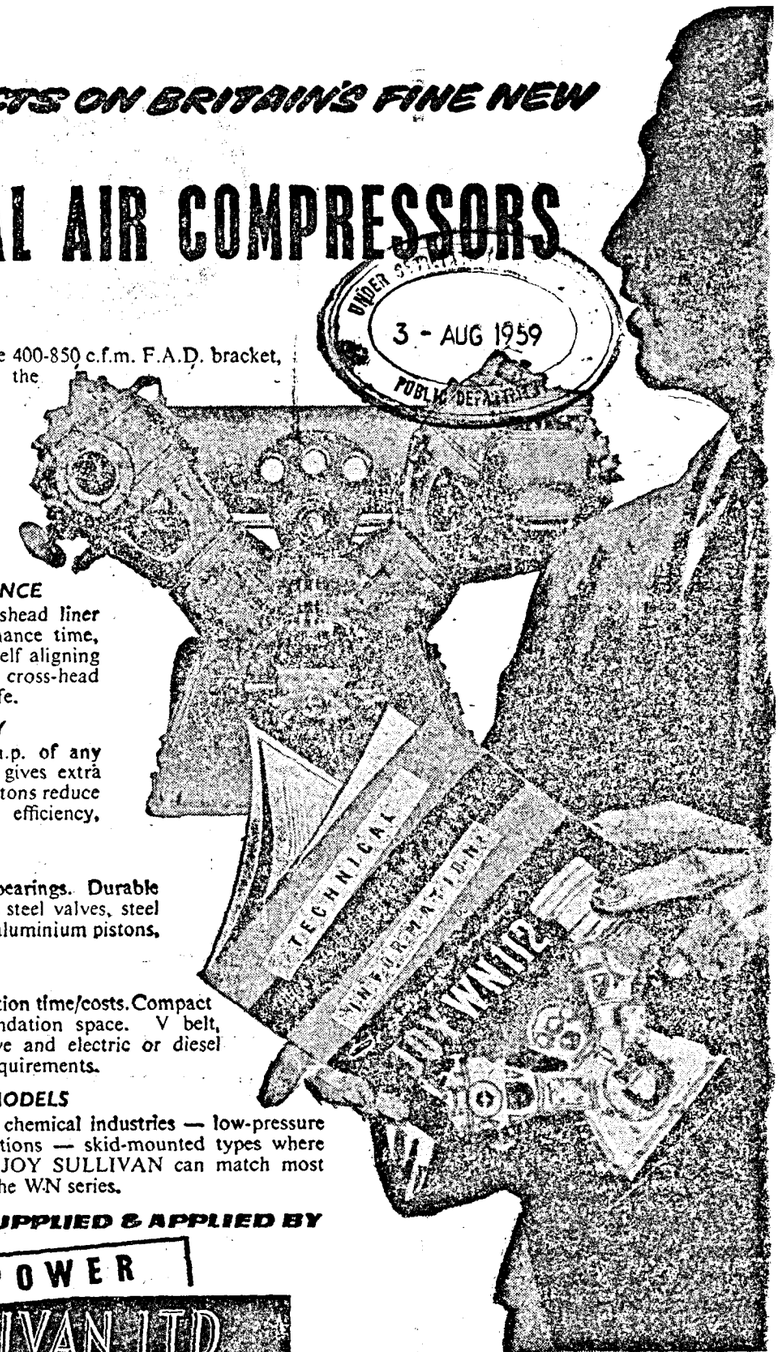
GET THE FACTS ON BRITAIN'S FINE NEW

INDUSTRIAL AIR COMPRESSORS



Where air consumption is in the 400-850 c.f.m. F.A.D. bracket, at pressures up to 125 p.s.i., the new British made Joy WN.112 Industrial air compressors handsomely meet your specification. Look at these design features — each one *positively* contributing to the efficiency and durability for which Joy-Sullivan plant is renowned abroad.

FOR MINIMUM MAINTENANCE
Replaceable cylinder and crosshead liner eliminate rebores, cut maintenance time, restore 'new' performance. Self aligning main bearings and box-type cross-head guides for low loading, long life.

FOR TOPMOST EFFICIENCY
Joy control requires least h.p. of any system. Tubular inter-cooler gives extra cooling surfaces. Truncated pistons reduce recompression loss, improve efficiency, give streamlined airflow.

FOR EXTRA LONG LIFE
Oversize spherical roller main bearings. Durable construction embodies stainless steel valves, steel piston rods, replaceable liners, aluminium pistons, mehanite frame.

FOR EASY INSTALLATION
Package design reduces installation time/costs. Compact vertical design for small foundation space. V belt, direct or flange mounted drive and electric or diesel motors match in with most requirements.

SPECIAL JOBS — SPECIAL MODELS
Oil-free versions for food and chemical industries — low-pressure models for specialised applications — skid-mounted types where portability is required . . . . JOY SULLIVAN can match most individual requirements from the WN series.

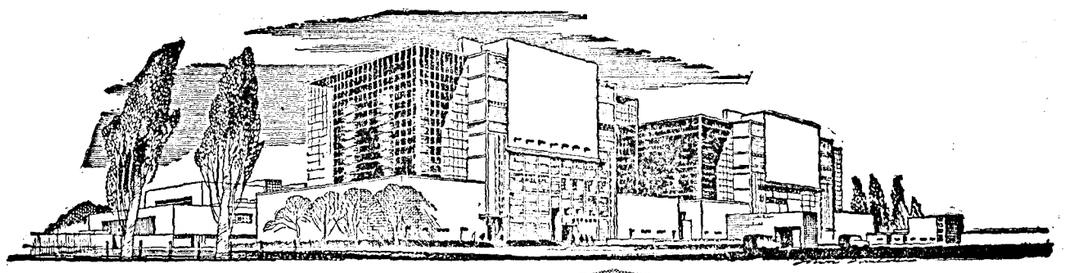
SIR ROBERT McALPINE & SONS LTD.



Bradwell, Essex, has leapt into fame as the site of the first commercial nuclear power station in the world to be built by N.P.P.C. Eight names make The Nuclear Power Plant Company Limited. N.P.P.C. thus combines the resources of eight specialist companies whose individual skills are co-ordinated to form a unified team capable of undertaking the construction of complete nuclear power stations throughout the world.

Bradwell nuclear power station will have a guaranteed output of 300 Megawatts. It is being built by The Nuclear Power Plant Co. Ltd for the Central Electricity Generating Board.

Motoring pleasure from Oslo to Monte Carlo

If you cross the Channel or the North Sea with your car this summer, take a tip from the seasoned motorists and fit Dunlop Gold Seal tyres. Dunlop are so completely dependable everywhere: on the great, fast auto-routes or the slow, meandering by-ways of the countryside. They are not merely built for the finest and most trouble-free service—they are in fact *bred* for it! Dunlop are the tyres to give you exceptional milage, road-holding and dependable performance no matter where you may motor.

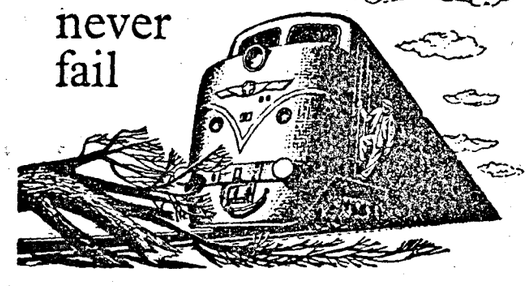
Dutch firm trebles output of a vital material

Holland's roads depend on cement. Indeed, the Dutch produce and use more cement per head of population than many other countries in Europe. Of Holland's entire output 65% comes from the ENCI Cement Company at Maastricht, who now produce over 900,000 tons per year, more than three times their pre-war figure. Compressed air is vital to the cement industry. When ENCI began to expand, they made a very careful study of available compressed air equipment. They chose two Atlas Copco compressors—and saved £3,000 a year on fuel bills alone. To-day nine Atlas Copco AR and AA compressors are installed at the ENCI works, supplying air for drilling in the pit, stirring operations, agitating the mixture in slurry tanks, and for the pneumatic transport of cement and other materials.

Brakes that never fail



Compressed air is versatile. Atlas Copco provides the means for all its many applications. For over 40 years Atlas Copco have supplied brake compressors for railway engines of all types. The latest diesel locomotives built by the NOHAB Company for Norwegian and Danish State Railways have a maximum speed of 65 m.p.h. and weigh nearly 98 tons—and use Atlas Copco brake compressors.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Home Thoughts from Abroad

EVERY week for over a month we have had to apologise for imperfections in *The Economist*. Readers are entitled now to an explanation. The best explanation is the facts. The starting point is our belief that the overriding duty of a newspaper at all times is to appear, as best it may. In mid-June we were suddenly bereft of our printers in London by the general stoppage (which may or may not be settled before we appear again). We have not during the stoppage found any printer still working in this country (whether "black" or "white" in the disputing unions' eyes) able to produce a paper suitable or punctual enough for *The Economist*'s worldwide readership (nearly half of which is overseas and unaffected by the British dispute). We have therefore had to print abroad, with the British unions pertinaciously stopping bolt-hole after bolt-hole by appeals to continental solidarity, and with the British masters themselves not too happy about it.

We have had no rest in exile. First a contract we had to print in Switzerland was stopped by union pressure. Then the issue of June 20th was half-composed in Belgium, half-composed in France, and printed in Brussels. The issue of June 27th was produced in half a dozen different places scattered over the city of Paris during a heat wave. The pages for the issue of July 4th were got ready in Copenhagen, but printing there was ruled out only forty-eight hours before publication time, and everything (including staff) had to be lifted by air four hundred miles to Belgium. The worst week of flight from the unions' long fingers was the next : the issue of July 11th was composed in one Belgian city, imposed in another and printed (on a machine for which the pages had not been fashioned) one hundred miles away in a third; the final printing arrangements were only set up near to midnight on July 9th. And so it has gone on. It is only relative to these other flittings that the issue of July 18th, from Hasselt in Belgium, had the smoothest passage so far.

Our trials have not only been abroad. Each week, staff and all copy have had to be flown out in echelon from London (and then switched about according to the state of the chase); and each week, when by the skin of our teeth they were printed, 65,000 copies had to be flown back here. Then our domestic troubles began. From the start the London wholesalers were coerced by their union workers into refusing to handle papers printed "black" abroad. Each week *The Economist*, without the usual help from either these wholesalers or its closed-down printers, has been despatched to its long-suffering readers by its own ordinary staff.

It is the readers, of course, that matter before everything and everybody else; their right of access to news and opinion is the press's duty. *The Economist*, which employs no printing workers, is not a party to the

present dispute. It has its views about the dispute, as it has about all industrial disputes, and has expressed them frankly.

In this as in other disputes, it has set its face editorially against any pressure to make an inflationary settlement simply for the sake of peace. This has not affected in any way its own duty to come out, by whatever means. *The Economist* does not complain that the stoppage (whether called a strike or lockout) happened. These trials of strength are the logical, if primitive, end and sanction of collective bargaining itself; and it would be absurd and unjust to assert either that the printing workers have an obligation to waive what they feel to be their rightful claims rather than to stop the press or (which has been the more frequent and inflationary suggestion) that for the same reason printing employers have an obligation to buy off strikes by paying more than they can afford.

But what this dispute has revealed, and what Lord Birkett (as chairman of the talks between the disputants, which are reported on another page) has surely helped to make plain, is that there is no simple confrontation in the printing industry between employers on the one hand and workers on the other. There are employers and employers — a fact long ago recognised by that powerful, if less than wholly admirable, separate body, the Newspaper Proprietors' Association. For a change, the printing unions have chosen "capacity to pay" as the basis of their claim instead of the usual cost of living (a poor runner this year) or the better pay of other workers (a poor argument for them at any time). They should be pinned to their premise. There are some large combined printing and publishing houses which can afford to pay more (much less no doubt than the unions' asking bid but possibly closer to the NPA rates than many employers care to contemplate); but the general run of printers certainly cannot afford this.

IT IS not only the unions that will have to recognise this disparity. The employers must recognise the disparity, with all the implications it has for them. In every industry the onus is, or should be, on the employers to lead; and leadership cannot consist, as the master printers sometimes seem to believe, merely in the stronger members, doubtless from the highest motives of solidarity, saying No to every wage claim which the majority cannot afford. That is, the more efficient and prosperous firms cannot just hide behind their sentiments of loyalty towards their weaker brethren or simply stand pat on their obligation, which *The Economist* must be the last to deny, not to add fuel to inflation. For good managements, keeping wages down is not the only choice. What they can all seek to do, if they are denied the soft option of higher charges, and if they are given the unions' cooperation, is to absorb higher costs by greater efficiency. This is the crux for them; it is, even more, the crux for the printing unions. Greater efficiency is the key to higher wages, and to better printing; but it is impossible unless the cocoon of restrictive practices in which this antediluvian industry is swaddled can be stripped away. It would be foolish to look for too much from the talks that have been going on; the unions tend to regard their practices not as restrictive but as protective — against precisely the technological changes that the industry really needs. But it was no bad sign that the talkers round Lord Birkett's table quickly got down to studying these questions of productivity.

AS things are, the printing employers have become as defensively-minded on wages as the unions are on conditions of work; and the result is a three-yearly war of attrition which is as stupid as it is unprofitable for everybody. If Lord Birkett has been able to hammer home to the restrictive-minded on both sides all the implications for them of "capacity to pay", something like a sensible outcome might possibly be reached from what has too often seemed, in our own isolated trials, to be a cynical and even farcical performance. The Birkett talks were started only because the national newspapers (who were not involved in the general dispute) were threatened with a drought of ink, of which there has all the time been enough somewhere for them to carry on; and then only after the general union of printing operatives (which has on this occasion made all the running ahead of the printing craftsmen) had very nearly carried its cat-and-mouse act too far by actually stopping them.

Only then did the general printing dispute come to be called a national crisis. Only then did thunderous leading articles appear about the harm done by the dispute to innocent bystanders. The real innocent bystander has been the reader, the customer whom every collective body, whether of workers or of employers or of distributors or of newspaper proprietors, most persistently and restrictively ignores. *The Economist* and every other paper up and down the country which, often against greater difficulties than ours, has striven to appear in these weeks, can claim no special virtue. But they can at least hope to be acquitted of this too prevailing vice.

Invitation to Washington ?

Mr Khrushchev's real interest is not a summit meeting on Germany but improving contacts with the United States

WHAT does Mr Khrushchev see from his window just now ? After the Polish visit his summer plans seem intentionally vague. He has now even cancelled his tour of the Baltic capitals, giving as his reason the unfavourable reaction of some people in Scandinavia to the prospect of receiving him. Must this be attributed to pure delicacy of feeling, or is there another reason ? Mr Khrushchev gives the impression of standing by to catch the first TU 114 to wherever the outlook is most promising. Looming above all, of course, is the summit, still beckoning and still wreathed, however faintly, in the relaxing atmosphere every international clamberer seeks.

Then there is Berlin, that highly awkward little property, apparently needed to round out the communist estate of 900 million souls. But is it so important that everything must be staked to get it ? Mr Khrushchev does not seem too certain. If anything, he seems to be looking beyond Berlin to the American political landscape he has been angling to visit ever since he came to London.

Mr Khrushchev has certainly been prodding the latest American visitors to the Kremlin. Mr Harriman, impressed by Mr Khrushchev's verbal bellicosity, thinks he should be asked to Washington whether there is a summit or not, and Senator Fulbright has agreed. It would not be unlike Mr Khrushchev if he now played hard to get. The sounds of disappointment coming from Moscow over American reluctance to admit the peacegiving benefits of Soviet trade may be part of the process. But this economic rebuff is unlikely to weigh too heavily on Mr Khrushchev's mind. If he really has a purpose to go to Washington himself, it is not to talk trade but to talk politics.

The idea of a visit from Mr Khrushchev as an alternative to the summit is something that President Eisenhower may not immediately welcome. The only Russian he has ever considered having as a house-guest was Marshal Zhukov. But, diplomatically, an informal get-together at the White House seems likely to be a more effective way of doing business than a full-blown conference of heads of government. The main purpose of a summit exercise is to give the Americans and Russians a chance to talk directly to the point, something that is not always possible when there are other people in the conference room. If Mr Khrushchev went to Washington it would cut short the wrangle over what constitutes visible progress by the foreign ministers. It would avoid the side issues of whether Poles, Czechs and Italians should attend or not. It might also set a limit to the influence, on both sides, of those Germans whose political interest is served by the continuance of East-West tension.

If, in fact, the foreign ministers stay at loggerheads for another three weeks, the logical recourse should not be to the four or six-power summit, which can always come later, but to a direct Russo-American confrontation simply to see if there is anything new to be said that Mr Gromyko does not have the authority to say. There seems to be no legitimate British interest that would suffer from Mr Macmillan's exclusion from such a parley; after all, he has had his say with Mr Khrushchev already this year. Britain is not likely to dissent from any Russo-American understanding on either Germany or nuclear tests. General de Gaulle might. But for sheer convenience's sake there is a good deal to be said for nominating Mr Macmillan and General de Gaulle as founder members of the non-summit club.

But has Mr Khrushchev anything to say to President Eisenhower, on Germany or anything else, that Mr Gromyko has not already said at Geneva ? It is possible that he might have. Mr Macmillan returned from Moscow convinced that Mr Khrushchev is the only Russian whom it is worth doing business with. Mr Khrushchev would probably not dissent from this estimate. His final terms for anything must come from his own mouth. To discover what these terms are, the West must test him personally, and test him with something more purposeful than the package deal offered to Mr Gromyko at Geneva. At present there seem to be advantages to Mr Khrushchev in seeking a general relaxation of tension. The greatest advantage would undoubtedly come if the relaxation were accompanied by access to American loans and trade. For Mr Khrushchev to expect this, as Mr Mikoyan seems to have done, would now be unrealistic. What, then, does he stand to gain ?

THE Soviet drive to overtake American production is getting into gear; yet Mr Khrushchev has just had to admit some serious imperfections in his industrial system. There are managerial reforms to be completed; modernisation of machinery is badly needed (it seems to be this that Mr Khrushchev means when he talks of automation); Soviet planners have

run into trouble over the shortage of development capital; existing development funds and production surpluses are badly needed within the communist block and in aid to uncommitted countries. Spending on the astral and arms competitions with the United States will always be high, but any saving in the military budget would help the industrial drive.

At the same time, pressure for consumer goods is plainly increasing in the technocratic and managerial classes. Housing demands are at last having to be satisfied on a massive scale. Visitors to Moscow speak of a car craze — and Soviet production of private cars has hitherto been pegged down to artificially low levels. A magnate community — Russia's top people — has come into being, and its influence and tastes are spreading to a wider bourgeoisie. The whole message of the Soviet exhibition in New York, that a society capable of achieving American living standards already exists in the Soviet Union, is itself the measure of Mr Khrushchev's latest problem.

These pressures have all been evident before, but as Soviet energies are concentrated on the economic race they are becoming more urgent and more difficult to resist. Mr Khrushchev does not see this social development as a weakness. He is the first Soviet leader who is not only anxious to beat the Americans at their own game but is confident that this really will happen. Whatever traces may remain in formal Marxist dogma, Mr Khrushchev's bid for world power no longer depends on the theses of capitalist slump and communist revolution. In place of the slump he puts, as he told Mr Harriman, the contrast between the 2 per cent annual growth of the United States economy and the faster pace the Soviet Union means to keep up even after American production has been overhauled. In place of world revolution, he relies on the underdeveloped world's admiration for Soviet living standards which, according to Mr Kozlov, will be unsurpassed in 15 years' time. These calculations may go wildly wrong without upsetting Soviet self-confidence in the final issue.

When placed in the context of the nuclear stalemate, the new Soviet emphasis on outclassing the United States economically suggests logically some form of political accommodation between the two world blocks. It could easily take a decade to bring about even a limited arrangement. But among the more significant developments of 1959 may be counted the increase in Russo-American contacts, and not least the travels of younger political figures like Mr Nixon and Mr Kozlov. The leaders on both sides need at least to understand how their opponents' minds work.

Mr Khrushchev has understandable personal reasons for having the last word in Soviet diplomacy. This alone would explain his readiness to travel to the summit, or to Washington. He can use a period of international relaxation. He has an evident interest in seeking agreement on the control of nuclear weapons and general disarmament. None of this is so much against western interests that President Eisenhower can refuse to meet him. Mr Khrushchev naturally wants to embarrass the West if he can. His tactics over Berlin have already revealed western divisions and have weakened Dr Adenauer politically in Germany. The crisis has given Mr Khrushchev all the local fringe benefits he could have wished for. But if the West is to plumb the deeper currents in Soviet policy the only way is still to sound Mr Khrushchev himself. The job can be done better in Washington than anywhere else.

The Author's Friend

Between the author and the publisher stands the agent.
What does he do for his ten per cent commission ?

"NOBODY thinks it odd to trust a good solicitor for the sale of a house," wrote G. K. Chesterton to one of A. P. Watt's sons in 1922, "but after all a man can say for himself without embarrassment : this is undoubtedly a large house. It is not always so easy to say : this is a most brilliant novel, or let me offer you this superb epic." By then the profession of literary agent had been in existence for nearly fifty years. It was invented by A.P. Watt himself in 1875 when he was looking for a new job under the shadow of the failure of Strahan, the publisher who employed him; his first client was George MacDonald. In the same year the Society of Authors was founded by Walter Besant. It was a period when Tennyson could demand £5000 for an epic, but a publisher could pick up King Solomon's Mines for £25. Together the Society and the agent have striven to improve the ordinary rewards of authorship, and it may be suspected that the agents have done most of the work.

Today almost every professional author uses an agent. Only a George Bernard Shaw (who was also his own publisher) could expect to explore all the subsidiary rights : translations, paperbacks, films, television, serial, digest, syndication, strip cartoon, long playing records and so forth, which often bring in more than the original book or article. Publishers are now entirely resigned to agents as the middlemen of literary wares. They fight for their clients' rights, but they also act as a sieve through which a large proportion of the flood of incoming manuscripts is short-listed. A large agent estimates that of 1,000 manuscripts submitted to him (other than the work of established authors) he can try to sell only 100, and of this 100 he may place three or four. This takes a great deal of work off the shoulders of the publisher and his readers.

It also greatly increases the power of the agents, through whom publishers must now expect to get most of their publishable manuscripts and new authors. But the work of a literary (now commonly called authors') agent is exacting and specialised. Three-quarters of British authors' output now goes through the hands of five agents, of whom Curtis Brown is probably the largest and most departmentalised, and A.P. Watt the oldest. Outside the big five, there are perhaps a hundred smaller agents, often one man shows and not always very competent. The tendency is undoubtedly for authors to concentrate on the big five who alone have the resources to follow up subsidiary rights and who have a strong pull with publishers. (This excludes a number of agents who specialise in plays and performance rights and the performers' agents who, in the terminology of the profession, handle flesh.) Agents rather grandly say "we choose, we do not seek, publishers." For new authors the advantage of the big agent is that he not only knows what sort of book (and especially novel) is currently appealing to what publisher; he can also sell his books in batches, and, when he does, he can press a few "speculations" on publishers who are obliged to him for last year's best-seller and who rely on him for steady bread-and-butter lines.

How many authors can an agent live on ? This, of course, is a matter of the sales of the authors in question. Three-quarters of all authors make less than £500 a year on their work; only ten per cent make over £5000 a year. The agent who can pick his clients exclusively from the upper income bracket naturally does well. An agent runs his business on the ten per cent of royalties which he deducts by way of commission for his services; thirty authors (who need not even be alive) earning £10,000 a year will, as a matter of arithmetic, provide him with a gross income of £30,000 a year. But agents cannot generally be so selective (though one is reputed to be so), and it usually takes more like 200 authors of all kinds to produce such a sum. And even £30,000 a year will not suffice for more than quite a modest organisation in central London; to cover all rights, an agency probably needs to employ a staff of at least fifteen. In fact the turnover of the big five, though undisclosed, is greater than this, and has to be.

Agents are fussy about their definition of an author. The clients they want are men and women who write continuously (even if part-time). They do not want to place the once-for-all work of scholarship which wins a man his professorship, or deal with the pure specialist who usually knows his own market best anyway. They want (though often they do not get) the steady textbook writer; but in general they handle the broad category of literary work which they sell to a surprisingly narrow range of general publishers. They deal with perhaps 50 of these, sometimes only 30. They rarely offer a book to more than ten successively; if it won't go then, they know it is a failure, or a masterpiece in advance of the age.

An agent needs flair to find, even to create, the new authors of whom he is the impresario (as J. B. Pinker was, before the wars, for D. H. Lawrence and Arnold Bennett). He needs a thorough knowledge of publishing, though he may depute the innumerable BBC and ITV contracts that his agency must nowadays keep lubricated. Agencies are of all kinds : most are built round one man or on a family tradition, others are partnerships or even limited private companies. They share a common tendency to fission; they lose their young subordinates to publishing houses or to practise as agents on their own account. They are as individualistic as the authors themselves; yet some principle of optimum size preserves a situation in which five large firms control most of the trade.

So far they have failed to form a central association. Many agents and authors regret this, since they think an association could fight for such things as the retention by authors of a bigger proportion of the subsidiary rights which they share with their publishers; it is argued that an agents' association, with its greater business experience, could do this far better than the Society of Authors. Probably such an association or negotiating body will come into existence in the end, because subsidiary rights are becoming so valuable in relation to the earnings of the average hard-cover book that publishers, faced with falling earnings from books, are trying to recoup from the author's share. But this is where the agent can expect to increase his earnings also; the future of the author-agent relationship lies largely in the exploration of the new media of mass entertainment which show no sign of shrinking.

NOTES OF THE WEEK

GENERAL ELECTION

Mr Micawber's Victory ?

THE sands of this Parliament seem to be running out. Both parties are now treating it as a good working hypothesis that the general election is likely to be held on October 15th or October 22nd. One bar to this would be if an October election interfered with the timetable for a summit meeting, but that is not thought to be probable. So conversation at Westminster in these dying weeks has turned increasingly from when the election is likely to be to who is likely to win it.

Four years ago one could say that two questions seemed likely to decide the outcome of the election of 1959 or 1960. The first was whether the standard of living would rise sufficiently quickly under Conservatism to make Labour's philosophies look out of date to an enriched working class; that has not happened. The second question, then, was whether the remarkable coincidence of short term advantages that brought victory to the Tories in 1955 could really be expected to come to their aid again just before the new election. By what Labour must regard as an appalling fluke, the coincidence seems to have occurred. Once again, as in 1955, preparations for a summit conference are taking foreign policy out of the election. The small recession is over, unemployment is falling, and this time there have been eighteen months of price stability as well. The sun is shining down on Britain's packed beaches in the first hot summer since 1955, and in an atmosphere of easy holiday contentment the literally floating voter feels no burning need for a change. The printing trade unions have brought some ill-timed discredit on Labour just as the engine drivers' union did in 1955; and Mr Cousins has obligingly caused the party split that Labour's now very shadow foreign secretary did on the eve of the last election.

As a result, the public opinion polls are currently suggesting that the Tories have the sort of one or two per cent lead in the country that they had at the election of 1955. This is not a margin that makes a Tory return to power in an October election anything approaching a betting man's certainty. But it does mean that Labour is having to look very hard for new issues. Where can it find them ? In Africa ? The major assault on Mr Lennox Boyd may seem like manna to Labour MPs, but the ordinary British voter is probably less liberal on colonial affairs than moralists and moderates like to think. Can votes be won by Mr Gaitskell's unflappability about the bomb row ? Unflappability is Mr Macmillan's registered trade mark, even if Mr Gaitskell now has more things to flap about. Nobody who has made any study of the strange things that can swing the minuscule mobile part of the British electorate will deny the possibility that something to help Labour win the last requisite two per cent of the national vote may yet turn up. But at five minutes to twelve the gods that watch over Mr Micawber's philosophy still seem to be favouring the Conservative side.

CENTRAL AFRICA

Storm over Great Smith Street

THE storm which has been blowing up for some time over Central African affairs reached the stage of gale signals this week. Before the protracted three-sided wrangle between Mr Macmillan, Mr Gaitskell and Sir Roy Welensky over the composition of a fact-finding commission could be resolved, rumours began to spread that the report of the Devlin Commission would prove to be highly embarrassing to the Government on several counts. This impression grew with the hurried arrival of the governor, Sir Robert Armitage, from Nyasaland. The publication of the Devlin report was, moreover, expected to coincide at the end of the week with the appearance of the disciplinary tribunal's report on the deaths of the detainees at Hola Camp in Kenya. Thus the last two weeks of Parliament's time are to be dominated by debates on the constitutional future, and the recent administrative past, of East and Central Africa. Mr Lennox Boyd is having to run the gauntlet, and Labour is determined that neither he nor the Government is to be allowed to escape unscathed.

At the unnaturally early hour at which *The Economist* has temporarily to go to press, the full political consequences of all this could only be a subject of surmise. But one point is worth making. The time has come when the possibility should be considered of postponing to 1961 or 1962 the promised review of the federation's constitution. The atmosphere which was being engendered this week hardly seemed conducive to cool thinking about the alternatives for Central Africa's future — which range from federal independence on the present basis, to a much looser form of confederation, or even complete dissolution of the federal bond.

Section 99 of the federal constitution (embodied in an Order in Council in 1953) requires merely that a review shall be made in not less than seven nor more than nine years from its initiation. If the basic issues are now to be clouded by recrimination over Nyasaland, and if an extra two years could be used to enable Mr Lennox Boyd (or any other Colonial Secretary, Labour or Conservative) to provide Nyasaland and Northern Rhodesia with more advanced constitutions, postponement would be worthwhile. Whenever the conference takes place, the most important things are that all the facts, as well as representatives of all communities in Central Africa, should come to the conference table; and that politicians in Britain should face the talks in a spirit as near as possible to bipartisanship and as far removed as can be contrived from this week's excited ructions.

RUSSIA AND POLAND

Gomulka's Not for Burning

IN October 1956 Mr Khrushchev travelled to Poland at the head of an impressive Soviet delegation to bully the Poles into obedience and to prevent the return to power of Mr Gomulka, the heretic. Last week, as soon as he arrived at Warsaw airport, Mr Khrushchev had words only of praise for the Polish people and Mr Gomulka, their leader. In 1956 the tension was such that an explosion on the Hungarian model was only just avoided. Now Mr Khrushchev has been able to travel throughout the country speaking at random at numerous meetings. Obviously, not all his words pleased his audience. Any defence of the Nazi-Soviet pact, for instance, can hardly go down well among Poles. But when Mr Khrushchev proclaimed at a mass meeting at Szczecin (better known under its German name of Stettin) that the Soviet Union "would not hesitate to fight for the Oder-Neisse frontier" the applause was genuine and spontaneous.

Mr Khrushchev has learnt the lesson that Stalin's rule of complete conformism is not the most suitable for running the Soviet block. Within limits, the Polish leaders have been allowed quite a degree of independent action. Personal freedom of speech is not the only feature distinguishing Poland from other countries in the communist world. Thus, last week, the Polish party's central committee discussed agriculture in terms that were more reminiscent of Jugoslav than of Soviet ventures. Small farmers, it was argued, cannot afford the burden of investment in building and equipment needed to increase production. Instead, they should be encouraged, by subsidies and tax-reliefs, to join "peasant circles", a form of co-operation for the common use of equipment. This is a long way from collectivisation, but the Russians have not attacked the heresy. They have promised to supply machinery.

The concessions are mutual. In exchange for a degree of independence and better economic terms, the Polish leaders have proclaimed unequivocally that they belong to the communist block led by the Soviet Union. Both Mr Khrushchev and Mr Gomulka are probably pleased with the bargain. It is one that is certainly a disappointment to those whose hopes about Poland soared high in 1956. Yet Mr Khrushchev's trip is also a reminder of how much things have changed in Stalin's former empire.

PRINTING DISPUTE

Breaking the Deadlock

THE agreement to set up six productivity committees, reached last week between the printing unions and employers meeting under the wily chairmanship of Lord Birkett, seemed as if it might mark the beginning of the end of the printing dispute. For a month or more the two sides had indulged, both verbally and through the letter columns of the press, in a lively battle of words. But after the first three-hour session of joint talks at the Ministry of Labour, both sides agreed that "they were getting to grips with some of the problems". After another 6½ hours of talks, a united appeal was made to the respective ranks and files to avoid aggressive action; and, with the setting up of the six committees at the third meeting, "a real measure of progress" was reported.

By then the bargaining position seemed tolerably clear. The unions, having won their point about not going to arbitration (Lord Birkett's job is to act as a catalyst, not a judge), had had to concede the employers' point that talks about productivity should precede those on wages and hours. The latter remained in contention. Some compromise had to be sought between the employers' earlier offer of the equivalent of a 5½ per cent increase (made up of a 2½ per cent wage increase and a small reduction in hours) and the unions' new real objective of the equivalent of a 10 per cent increase. A figure of 7½ per cent had inevitably been mentioned. The first step might be a guarded agreement by the unions that there is scope for higher productivity. The employers might reply that this higher productivity could enable higher wages to be paid; with Lord Birkett's help a *quid pro quo* might follow. But the question to ask then would be how far the longer term problems of actually raising productivity and standards of management, and of preventing three-yearly wars of attrition in the industry, had really been touched.

IRAQ

The General Promises

GENERAL Qasim, apparently unshaken by the unexplained collapse of discipline at Kirkuk during the anniversary celebrations of the revolution, continues to be both Nasser and Naguib to the Iraqi people. As Nasser, he rules the country, rewards the armed forces generously for the power he owes to them, and keeps in confusion those forces he believes to be hostile to himself. As Naguib, he gives the impression that he is happier in the role of a popular, baby-kissing political candidate than in that of a stern dictator.

Having spent weeks saying that Iraq was not ready for the resumption of party political activities, the general calmly announced that they would begin again

within six months from July 14th, the first anniversary of the revolution. He promised that a permanent constitution would be presented to the people for approval, and expressed his hope that by next July a national assembly would be established through free elections. Pre-revolutionary Iraqi political parties were not of great importance, and freedom of elections was notoriously limited. After the revolution the surviving parties were ostensibly merged into a national union that was neither national nor united. Only the communists had the organisation and discipline to exploit the situation, and their easy success in penetrating the government at nearly all levels set off alarms all around the country's borders. Last week's fighting at Kirkuk may have been less their doing than the expression of local hatreds, namely between Kurds and Turkmen.

Foremost among the communists' demands have been those for participation in General Qasim's cabinet and for the lifting of the ban on party activities. They did not succeed in placing any of their leaders in the cabinet, but they may hold it a greater victory to be able to operate openly as a political party. The general's resistance to communist clamour has recently gained him, outside Iraq, a measure of respectability he has not enjoyed since the earliest days of his revolution; but the claim that he is an obstacle to communism has been largely based on what he has not done. Now he proposes to do something. It is what the communists ordered; but presumably the non-communist politicians who are not dead, gaoled or in exile are to have an equal chance to fight for a share of power. If there ever is a free election campaign, General Qasim may have to reveal what nobody knows about him today: where he stands.

CYPRUS

Archbishop and General

GENERAL Grivas, according to himself, has gone to a remote part of the Peloponnese in order to write his memoirs. How much better if he really would. Instead, he has been making rebarbative statements about the Greek political scene which seem to confirm that he intends to make a bid for power in Athens. If he does, he may well at first attract to himself many of the disgruntled have-nots of Greek politics, but it is doubtful whether in the long run he will prove any more successful at turning the military prestige he won in Cyprus into political capital in Athens, than he was after the war when he tried to exploit his resistance record in the same way.

Of more immediate concern are his attempts to interfere in Cypriot politics. Although Archbishop Makarios has been coming under increasingly bitter attack from the general's supporters in the island, he has done his best to gloss over his difficulties with Grivas. Last week, however, six former Eoka leaders, two of them ministers in the archbishop's cabinet, found it necessary to fly to Greece in an attempt to mend matters between the archbishop and the general. Grivas has apparently complained that he is not being sufficiently consulted in the negotiation of the settlement for Cyprus, and that the archbishop is being too accommodating to the Turks and the British. Basically the trouble is that Archbishop Makarios genuinely wants to make a success of the agreements which he signed in London; but Grivas would not, it seems, mind torpedoing them.

General Grivas may genuinely see the London settlement as a sell-out of Greek-Cypriot interests. He may also calculate that continuing championship of Greek-Cypriot rights will further his political ambitions in Athens. Whatever the truth of his calculation, it could have tragic consequences for Cyprus. Archbishop Makarios is making a statesmanlike effort to carry the former Eoka leaders along with him in support of the London settlement; indeed, he has been criticised for including too many of them in his cabinet. If Grivas goes on sniping at the archbishop, these men will be faced with an impossible conflict of loyalties. The archbishop would most probably weather an open split with Grivas's supporters, but only the extreme Left would benefit.

SPANISH ECONOMY

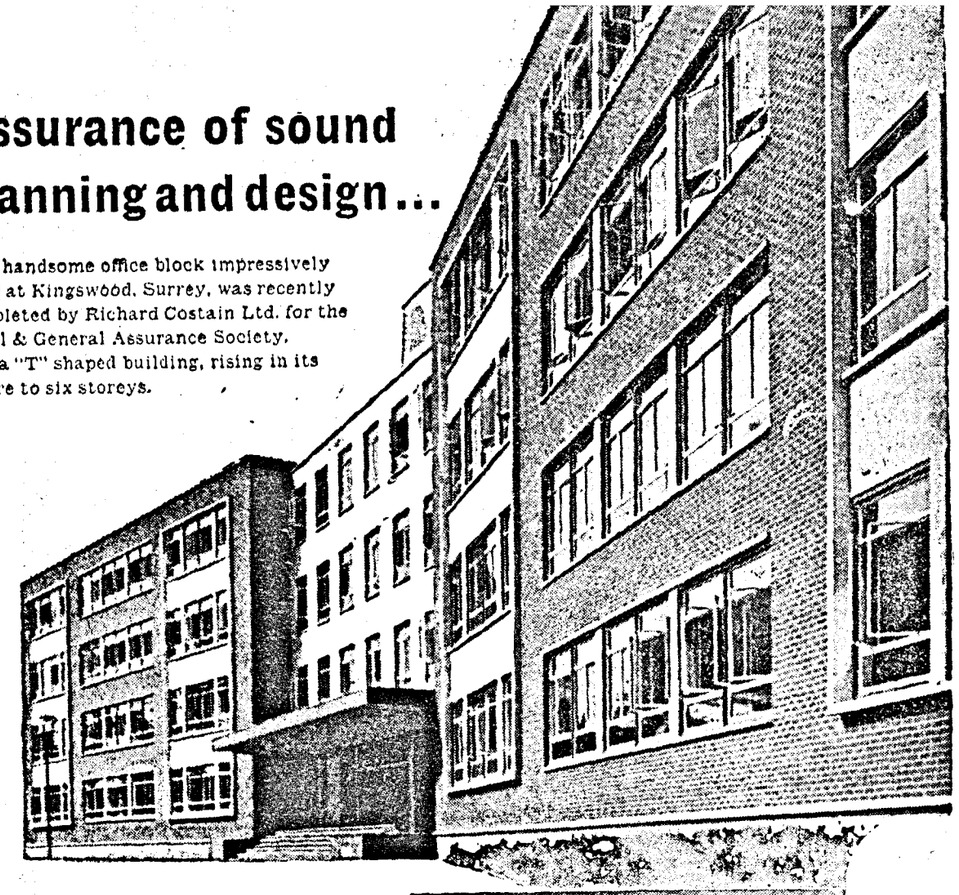
Opening the Door

THE long awaited rescue operation for the Spanish peseta was announced last week-end, as a prelude to Spain's full entry into the Organisation for European Economic Cooperation on Monday. The peseta has been devalued; the par value is changed from 42 to 60 to the dollar, giving a rate of 168 (compared with 118) to the pound. These rates are close to those that have lately prevailed in free markets, including the London market in peseta notes that was available for tourists. The devaluation is flanked, as expected, by substantial foreign credits. These may total the equivalent of £142 million, or nearly $400 million. The International Monetary Fund, which Spain joined last year, is providing £27 million, and contributions are also being made by the United States government, New York commercial banks, and the OEEC.

Spain's move into OEEC is obviously welcome on economic grounds. More than two decades of economic isolation have left something like economic petrifaction in some sectors of the economy. Some still follow a mediaeval pattern. Even the new industries are gripped by the paralysing fiscal and legislative arrangements of General Franco's corporative state. Inflation has been persistent. The fresh wind of competition from abroad will not solve Spain's economic problems, but it will clean out some cobwebs, political and social, as well as economic. The tourists who have been coming to Spain in the last few years have caused a lot of new questions to be asked. More foreign trade is bound to push the process further.

Assurance of sound planning and design...

This handsome office block impressively sited at Kingswood, Surrey, was recently completed by Richard Costain Ltd. for the Legal & General Assurance Society. It is a "T" shaped building, rising in its centre to six storeys.



The Costain combination of sound preliminary planning plus technical experience and skill enabled the contract to be finished in less than 18 months.

PARLIAMENTARY PROCEDURE

Debatable Questions

MUCH of the time in the debate in the House of Commons about its own procedure last week was taken up by Labour backbenchers picking over each other's peccadilloes. Ordinary backbenchers made cracks about defeated or sacked ministers who used their privy councillorships to monopolise debates; privy councillors hit back at backbenchers who make one-day forays to the front benches and then return to the obscurity whence they come; and both took it out of shadow ministers who barge in too often with supplementary questions. The delicious part of these spiteful exercises, from the point of view of the regular onlooker, was that, although no names were used, everyone knew exactly who was meant.

But the uneasiness underlying the whole discussion was reflected in the touching solicitude which member after member showed for the well-being of those parliamentary press correspondents who have found themselves increasingly unable to stifle their yawns. It may be, as Mr Gaitskell once pointed out, that politicians do not exist primarily for the entertainment of journalists. But if MPs continue to bore one another to the extent that they have recently contrived to do, the press gallery, which is the most sensitive conducting rod between the elected and the electors, will go on conducting this infectious boredom to the public. This is not a case for the greater staging of sham fights, but for the restoration of genuine debate.

Debate ought either to sharpen and clarify the choices that will later have to be made between the parties by the voter — this is the main merit which the disciplined two-party system is supposed to possess — or at the very least it should identify and define issues that require further discussion. The first purpose is often defeated by the very party system it is supposed to serve; the great issues of principle, concerning for example nuclear disarmament, occur within one party rather than between the two, and the true confrontation of argument is transferred from the open debating chamber to the closed committee meeting. The second is frustrated by that dismally overworked formula with which nearly every MP starts his speech : "I know the hon. gentleman will forgive me if I do not follow his line of argument."

Parochialism at Westminster

MR BUTLER ought not to be allowed to get away with the fantastically superficial manner in which he dismissed the suggestion made by a minority of the Select Committee on procedure for an experiment with specialised committees. Having got off on the wrong foot by assuming that the Select Committee had recommended the experiment, whereas its majority had rather decisively rejected it, the Home Secretary propounded the strange view, without any supporting evidence, that it was impossible to adapt a single feature of another legislative system without assimilating all of them.

The American analogy was a red herring of Mr Butler's own devising. No one had proposed that the specialised committee on colonies should handle legislation. The Select Committee's minority had even refrained (which was rather a pity) from suggesting that it should conduct investigations, with access to officials and official papers. Certainly, within the framework of British party discipline a committee chairman would never possess the practically autonomous political power which he does in the United States. So it is hard to understand why Mr Butler should imagine that a specialised committee would usurp the prerogatives of the executive. What it would do would be to increase the understanding of backbenchers and make their criticisms more sustained, more consecutive and better informed.

If Mr Butler was misleading in his references to the United States, his parochial slip was showing even more prominently when Mr Bellenger promptly pointed out that specialised committees and ministerial responsibility had been found perfectly compatible on the European continent. Claiming precocious academic achievement in the field of French constitutional history, the Home Secretary stooped to the slickest and hoariest argument in British controversial practice : all French experience can be ignored, because look what has happened to France. A few weeks ago the Atlantic Congress was casting round for something useful to do to emphasise the non-military aspects of Nato. It might care to consider a suggestion for the establishment of elementary classes in comparative institutions for Nato politicians.

FRANCE

Diplomatic Troubles

GENERAL de Gaulle is running into serious trouble in Africa. The split with Ghana now seems complete. The news of Dr Nkrumah's recognition of the Algerian rebel government was badly received in Paris, and the French ambassador is not returning to Accra. The general seems to have believed that by presenting his atom bomb as a French Community enterprise he could ignore all independent African criticism. This has turned out to be pure self-deception. Liberia has joined Ghana's protest against the Sahara tests, and a Nigerian complaint, transmitted through London, has also been presented, although its effect seems to have been purposely blurred by Mr Macmillan's conciliatory remarks in the Commons last week. Perhaps the west African states are in no more danger from fall-out than the populations of Nevada and New Mexico have been up to now, but General de Gaulle has shown

himself surprisingly contemptuous of African sensibilities.

The political price may be a steep one. The leaders of Liberia, Ghana and Guinea met last week at Sanniquelle, in Liberia, where Dr Nkrumah had an immediate opportunity to expound his latest action on Algeria. Another chance will come when all the independent African states meet at Monrovia on August 4th. A group of 25 Afro-Asian countries have already put in their regular bid to have Algeria on the agenda for the next session of the UN General Assembly in September. Although General de Gaulle could never have expected to influence this block, the spectacle of independent Africa aroused over both Algeria and the French bomb may have a direct bearing on the United States vote, which the general wants to recover this year.

Even at Geneva, France has been the object of fresh suspicions. Despite Herr von Brentano's denials, the west Germans seem to have sensed a potential rift in the Paris-Bonn axis. The possibility that France may not always be a reliable spokesman for Dr Adenauer's cause is thought to have been partly responsible for Bonn's proposal to have east and west German advisers admitted to any four-power commission on reunification. Beside these troubles, the private chat between General de Gaulle and the Soviet ambassador, Mr Vinogradov, at the July 14th parade in Paris, from which both emerged in evident good humour, may not count for much. But at least Moscow has not yet recognised the Algerian rebels.

TRADE UNIONS

Shaky Alliance

In the past fortnight Mr Foulkes, the president of the Confederation of Shipbuilding and Engineering Unions, has been trying to put some teeth into his embryo alliance of engineers, mineworkers and railwaymen. Backed probably by Mr Paynter, the communist leader of the National Union of Mineworkers, he has been holding meetings with the electricity workers to try to hammer out a common policy in presenting this year's claims for higher wages and a shorter working week. So far, he has not had much success. The electricity workers, instead of supporting the confederation in its double claim, have asked only for a 40 hour week (along with previous demands for longer paid holidays and an improved sick pay scheme); while the immediate support of the railwaymen and miners, who have enough troubles of their own from the recession, seems more unlikely still. There has not been any tradition of close working between the three groups of unions since the collapse of the ill-fated Triple Alliance of the 1920's.

Nevertheless, a loose bargaining alliance between the unions certainly would make tactical sense. Since the TUC has tended to avoid arranging this, it is not surprising to find the confederation taking a lead. The advantage of an alliance springs inevitably from the fact that it is now better to win an award in a prosperous industry and spread it through arbitration than it is to launch an all-out attack on whatever group of employers happens to be nearest to some militant union's hand. Since union strength tends to be concentrated in the oldest and least prosperous industries, where inability to pay is becoming a powerful counter-argument to a claim, a careful plan is needed if another tactical error like the London bus strike is to be avoided. Most of the orthodox union proponents of the new alliance view its functions in this moderate light, even though some of its communist sponsors might dearly like to elevate it into a full-scale working class challenge to the state.

JAPAN

A Place in the Sun ?

The widespread impression that the Japanese prime minister came to London with nothing to offer and left empty-handed may, in the long run, prove misleading. Mr Kishi is a man of broad ideas; and while some of them are evidently based on Japanese self-interest, it is more to the point that the self-interest is enlightened. His visit was perhaps too short to produce any really concrete results, but if it proves to have helped to disperse the cloud of outdated notions that obscures the Japan of 1959, it will still have been worth while. His conversation with Mr Amory and Sir David Eccles revolved around Britain's claim for £1 million for losses arising from Japanese aggression against China in the nineteen-thirties, and Japan's reiterated request that Britain should accord it most favoured nation treatment under the General Agreement on Tariffs and Trade. With Mr Macmillan, Mr Kishi discussed one of his pet schemes for economic aid to the underdeveloped countries.

A world obsessed by much-publicised economic growth in Russia and China has tended to overlook the fact that Japan has made comparable progress since 1945, without communism. Even more than before the war, Japan is today the industrial giant of Asia. Obliged, even more than Britain, to export or die, it now offers manufactures of improved quality, most of them no longer produced by sweated labour.

Last year Mr Kishi's attempt to boost trade with mainland China while still giving diplomatic recognition to the Nationalist government in Formosa broke down when Peking unilaterally denounced all trade agreements with Japan. With the China market closed, politics and commonsense alike dictate that Japanese industry should find outlets in south-east Asia. Bitter memories of the wartime "greater east Asia co-prosperity sphere" have long frustrated this aim. More

A fine achievement of Rover engineering . . .

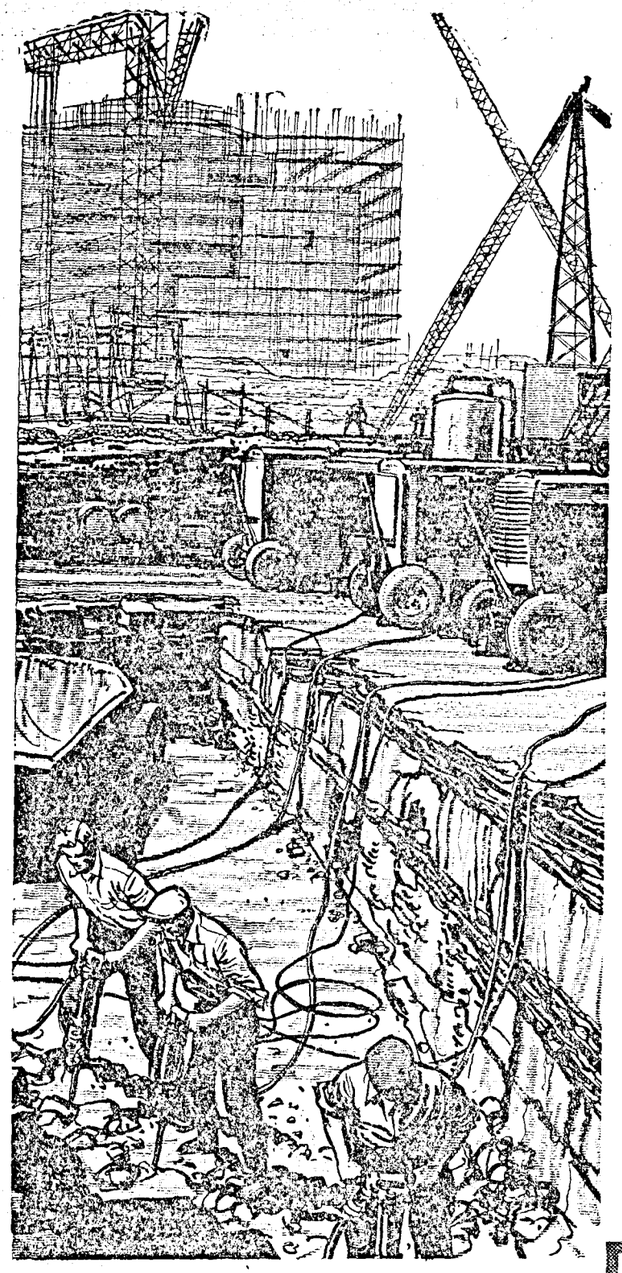
THE ROVER COMPANY LIMITED, SOLIHULL, WARWICKSHIRE AND DEVONSHIRE HOUSE, LONDON W·1



Taylor Woodrow chose Holman

Reliability pays at Hinkley Point

The world's largest atomic power station, with a capacity of half a million kilowatts, is taking shape at Hinkley Point, Somerset. The contract, for the Central Electricity Generating Board, is being carried out by the English Electric, Babcock & Wilcox and Taylor Woodrow Atomic Power Construction Co. Limited.

Compressed air equipment plays a very important part in its construction; Taylor Woodrow chose Holman for the job. Batteries of compressors, rock breakers and chipping hammers with the well-known Holman reliability built into the design are taking shift after shift of rigorous work without faltering, beating construction schedules and slashing operating costs.

In major projects all over the world Holman units are proving their reputation over and over again. For sheer reliability and low running cost, you can't beat Holman.

recently, however, a series of reparations agreements, of which the latest is with south Vietnam, have opened the way.

Another Prosperity Sphere for South-East Asia

MR Kishi's own original plan was to harness Japan's skills and production to American dollars, to supply the demands of the underdeveloped countries of south-east Asia. After this was cold-shouldered in Washington, he began to think in even wider terms of Japanese help for underdeveloped countries in Africa and the Middle East, as well as in Asia, with a second international bank providing the money.

The idea certainly has interesting features. Trade between Asian countries is tending to grow more rapidly than their trade with the developed West, and this tendency is likely to continue. In these circumstances there is much to be said for the idea that these countries might make an effort to reduce trade barriers on a regional basis. They would hardly be prepared to plunge, at this stage, into anything like a free trade area; but there might well be scope for an effort to get rid of quotas, on the lines of the liberalisation programme applied in the Organisation for European Economic Cooperation.

Such a programme is not likely to get far unless there is a sanction behind it. If a regional organisation had a development bank at its centre, it might enjoy an impetus comparable in kind to that which Marshall aid gave OEEC. Such an organisation could only be a success if Japan was merely one of several equal partners in it. Like west Germany in Europe, Japan has a great contribution to make to a collective effort; but that contribution will be acceptable to its neighbours only if it is clear that Japan is not going to run the show. A regional development bank would, therefore, have to draw substantial contributions from other countries in the area, and perhaps from Europe and the United States.

The Economist

JULY 23, 1859

FOREIGN ENGAGEMENTS.

IF England ever received a distinct and solemn lesson on the infinite evil which is involved in time-serving and makeshift diplomatic arrangements, that lesson has been given her by her share in the treaty of Vienna. Ever since 1815 she has been fettered by the engagements, and her name tarnished by the unobserved engagements, of that treaty. She has seen Austria absorb Cracow without resistance, — she has herself broken through, and righteously broken through, the treaty to establish the independence of Belgium, — and she has never ceased to feel the disgrace of being committed to the Austrian occupation of Venice and Lombardy. Her diplomatists have been hampered and tortured by provisions to which the faith of their country was committed, and which yet they knew to be at once iniquitous and fatal to an enduring peace. England has justly lost position by being a party to a treaty on the observance of which she was not prepared to insist; and still more by being a party to a treaty many of the provisions of which the English people professedly regarded with dislike and abhorrence. The late Government were, in great measure, perhaps mainly, ejected from power because they wished well to the Austrian power in the North of Italy, and might possibly have assisted to strengthen or re-establish it. Yet to the treaty which gave Austria that power England was a principal party, and English faith was pledged to its observance. No position could be more humiliating, and never did we need more than we do at present to read the lesson which it teaches — to give the sanction of the English name most charily to foreign engagements, and only in cases where we are fully prepared to support to the uttermost the principle we have thus sanctioned.

SCHOOLS TELEVISION

More Telly in Class

THE BBC has announced that its experimental schools television service is to be made permanent, and the number of series is to be increased from five to ten a week in September 1960. The Schools Broadcasting Council, which is an independent watchdog, has received a favourable report on schools television from its senior education officer. Some 780 schools (about 2 per cent of all state schools) now have TV sets and use the service, the majority of them being secondary modern schools. They have found that television can be a most useful additional tool in the hands of the schoolmaster, but only, of course, if he is prepared to adjust his own course to the television demonstrations of the subject: television cannot replace the teacher, and it can tempt the lazy teacher to be lazier still.

The BBC is parading the fact that it has successfully laid on the first nationwide educational television service, as compared with the much spottier efforts of American commercial television, and with the more limited contribution of Associated Rediffusion in this country. This is fair comment, but the argument should not be pushed too far as a presumed demonstration in support of the BBC's present charter and privileges as a licence-supported service. There is more than one perfectly good way of ensuring that the schools get a television service even in a competitive commercial set-up. Had the BBC not provided this service, there would indeed have been grounds for criticism. How far central control of educational television (which indulges in rather a lot of general civics) is satisfactory will no doubt have to be watched.

BOOKS

Labour and the Colonies

New Fabian Colonial Essays.
Edited by Arthur Creech Jones.
Hogarth Press. 272 pages. 25s.

British Policy in Changing Africa.
By Andrew Cohen.
Routledge. 128 pages. 12s.

BOTH in office and opposition the British Labour party has played a leading role in the colonies. In the years of power, 1945-51, it took the decisive steps: it gave independence to India, and in Africa it set the colonies on the road to independence *via* one-man-one-vote democracy. It is regarded by Africans as the party that will, when next in office, finish the half-completed job; and for the same reason it is regarded by the white settlers in East and Central Africa (not to mention South Africa, the Congo and Algeria) as the cause of all the trouble.

Such simplified images are never true; colonial policy is at least 80 per cent bipartisan because, to give one good reason, it is to a great extent determined by world events. It would do white settlers a lot of good if they would sit down patiently (very patiently) and read this useful collection of Fabian essays and discover how much more complex are the springs of Labour action and motive; and how many doubts thoughtful Labour people (the kind that influence action when the time comes) still harbour. This is a book full of leftist guilt: guilt about the wickedness of imperialism; guilt about the fact that good was found to be inextricably intertwined with that evil; guilt about the prospect that, for the masses, independence may bring not liberation but a new enslavement to the privileged intellectuals, the people with whom Labour supporters hobnobbed as students in the days when all, black, white and brindled, were members of the oppressed proletariat of the world.

The big gap in these essays, indeed, is any attempt to probe the experience of Ghana since 1957; and it is this which makes it so easy for white Rhodesians to make the jibe that Labour intellectuals choose with care the parts of Africa they get indignant about. But most of the contributors to this book seem to have written with uneasy feelings about Ghana. Dr Rita Hinden ends her introductory essay with the words: "What British socialists are now learning is that an evil is not undone simply by withdrawing from the scene of the crime; there is still a debt to history waiting to be discharged."

But how does one pay a debt to history incurred by making treaties of protection with primitive chiefs in 1880, and by all that followed therefrom? The socialist answer has, it seems, little or nothing to do with politics. Mrs Nicholson, for example, writes most interestingly on the problems of racial and religious minorities, but she advances no theory about how they can be safeguarded; she merely proposes that wider vistas shall somehow be opened up. Independence is right for any country except one that would then be dominated by a white minority. Labour's true solution is to be economic; if standards of living are somehow raised all will be well, and the Fabians repose great hopes in schemes for pouring cooling libations of international capital on the troubled colonial scene. Dr Balogh is quite straightforward: by a rigid system of economic and monetary controls, aimed at turning the sterling area into a controlled, planned economic unit, he would divert the earnings of British working men firmly into the capital development of the territories they have so long exploited by proxy; he has it all worked out technically. Unfortunately, he fails to reassure us that British trade unionists will concur in these plans. Mr Arthur Gaitskell's more cautious exploration of means of developing colonial economies from the ground up is certainly more realistic, informed as it is by his administrative and business experience.

The Fabians like Mr Gaitskell and Mr Creech Jones who have had practical dealings with Africa show up to advantage in this collection. Sir Andrew Cohen's study falls into the same category, and (though perhaps he cannot be called a Fabian) might well have helped to illuminate the Fabian theorisings. His book throws no light on the controversial aspects of his governorship of Uganda, inevitably since he is still a civil servant; but Sir Andrew's socialist predilections have never been successfully hidden, and his book is very much a study of how a progressively minded administrator deals with problems of Africa along the lines which Fabian writers so authoritatively lay down from London. The result is a very good if sometimes wry book, and one that perhaps only those who have served in Africa will fully appreciate (or, here and there, understandingly disagree with). The author was lecturing to Americans; but these are also lectures for Fabians. Dr Balogh should read Sir Andrew.

Man-Agenda

The Landmarks of Tomorrow
By Peter F. Drucker.
Heinemann. 208 pages. 21s.

MR DRUCKER is well known for his studies of big business and of the requirements of modern business management. He has had the valuable experience of being reared and educated in Central Europe between the wars, of working a short time in England, and then of settling in the United States a generation ago and becoming American. In this, the most intellectually ambitious of his many books, he tries to compass the outlook on the world now and in the future that an accelerating technology will demand. Unhappily the high cost of Mr Drucker's transatlanticification is his becoming "so soundly bethump'd with words" that his meaning often escapes Europeans. So much of contemporary American sociological gobbledybook has spun a cocoon round his ideas that words seem to be substituted for thought, rather than to be used for its conveyance.

The book is uneven. Parts are excellent, especially those analysing and describing our plight in the West as victims of the effects of our technology. Also good are the examinations of industrial man in his urban settings, and of the durability of big business. Mr Drucker points out that "of the hundred largest manufacturing companies in the United States thirty years ago, more than half have disappeared from the list today" (though the Great Depression did a lot of that). He rightly emphasises the revolution in organisation and methods, in administration, and in the chain of command in business as in all other social groupings for specific purposes (for instance, churches). He sees the identity of problems in such groupings on both sides of the Iron Curtain — and it is remarkable how many scientists, economists, editors and politicians in the West still fail to see that. But the book ends in what Mr Ernest Bevin, describing a colleague's speech, once epitomised as "clitch, clitch, clitch". "We live in an exciting age of transition" *et*

cetera. At least one reader was delighted by the misprint on page 135 which mentioned "Egypt's Aswan Damn" — doubtless the biggest in the world. If only Mr Drucker had stayed within his expertness, and written simply (as he can), not even a compositor — let alone a proof reader — would have been pushed into such a revealing slip.

Good-bye to Steamers

British Railways Today and Tomorrow
By G. Freeman Allen.
Ian Allan. 194 pages. 25s.

A BOOK outlining the future of railed traction in this country can be considered timely, and anyone interested in the future of British railways, and in the modernisation programme, will find this book well worth reading, though an elementary knowledge of railways is essential to a full understanding of it. The author might well have been forgiven some bias in view of his connection with the railway press (he is editor of a monthly railway magazine) but he has managed to sidestep pitfalls and has presented his subject readably and fairly. The only fault is a rather annoying repetition of certain conclusions, as though the author were drumming facts into a class of schoolboys more interested in other things.

It is the railways' "tomorrow" with which the book deals in the main. It gives all the pros and cons on the question of motive power — steam, diesel or electric — but much of the material on steam is already outdated and can only serve to highlight achievements with a form of power which the author freely admits could never be considered efficient in the same way as electricity, for instance. After stating the reasons for the apparently unnecessary expenditure of high sums of money on diesels — at best a stopgap until electrification can be completed — the author goes on to deal with the various aspects of electrification, examining in some detail the different systems in use. He points out that no matter what the form of traction is, the railways must look to the service of their customer if they are to hold the travelling public. If British railways have not yet had to contend to any degree with the competition from the air that the American railways are experiencing, they may well have to later, when the helicopter gets into its stride. Nevertheless, this book is far from gloomy in its assessment of the railways' "tomorrow".

LETTERS

Parking Discs

SIR — Sir Thomas Hutton in your issue of 13th June made a good case for the use of parking discs in central areas. There are a number of other factors that make desirable an experiment in this method of control of kerbside parking.

The first is the flexibility that can be introduced so that such control schemes can be tailored to the particular requirements of the district. This is unfortunately impossible with parking meters. Moreover parking meter installations by themselves do nothing to solve parking problems. In fact they aggravate conditions in surrounding areas. We must either face the fact in London that every residential and commercial road, street and square from Bayswater to Stepney and from St Johns Wood to Lambeth will have its parking meters, or look for some other and less intrusive form of control of kerb-space in those fringe areas where a turnover of car parkers is not so desirable as it is, for instance, in streets adjacent to a popular shopping centre.

Secondly, and most important, the existence of a parking meter or parking disc method of control over a wide area begins to make practicable the provision of off-street parking facilities for the longer term car parker. The present economics of parking garages scarcely encourage developers to build them. But the picture is quite different if kerbside parking is controlled. For the reasons that Sir Thomas has stated so well, the disc system is the more attractive method in many parts of central areas.

Last year the British Road Federation produced its experimental parking town report based upon these principles and linked to a close assessment of the business, shopping and recreational needs of motorists driving into Kingston-upon-Thames. In the 11 months that have elapsed since the publication of the report, support for its principles has come from the Minister of Transport and, more recently, from the Home Secretary. Moreover the council of the royal borough is considering whether the suggestions made will make it possible for it to become the country's "experimental parking town".

It is to be hoped that such an experiment will be conducted and the lessons learned applied elsewhere. If, as we believe, the system works well, it would certainly not be too late for it to be applied in London.
— Yours faithfully,

C. D. MORGAN
British Road Federation, W.1.

Air Navigation

SIR — In your article "Air Ticket to Moscow" in *The Economist* of June 5th you finished with a statement on navigational aids which we find somewhat difficult to follow. You said: "It seems unlikely on these figures that Moscow Airport and its surroundings are busy enough to justify installing navigation equipment as elaborate as the Decca System, that is designed specifically for areas so crowded that aircraft are flying almost wing-tip to wing-tip. The fairly elementary landing aids ordered from Pye by the Russians two weeks ago seem much more in keeping with the actual traffic requirements." We believe this statement is possibly more than fair to us but certainly much less than fair to the Russians.

We do not claim, nor does anyone else in the navigational aid field for that matter, to provide facilities which will enable aircraft to fly "wing-tip to wing-tip". Indeed, we sincerely trust that the practice of flying in that hazardous relationship will be confined (for many years to come) to trained formation pilots at Farnborough.

There are several major reasons for the Russian interest in Decca. We suggest the following: (1) Its accuracy and flexibility are such as to make it pre-eminently suitable for the control and economic operation of jet and other aircraft. (2) Decca coverage, from a given number of stations, embraces a much greater area than do competitive systems. This coverage is, moreover, available from the ground to any altitude and can therefore be employed by a wide variety of users of all types, instead of being restricted solely to fixed-wing aircraft. (3) The Decca system can cater for any increase in air traffic in the foreseeable future and the co-relation of Decca and our long-range aid, Dectra, means that the system can be conveniently expanded to cover the vast distances of Russia. The use of Decca by Russia would enable a complete navigational link-up to be established through to the west.

Yours faithfully,

E. R. BONNER
The Decca Navigator Company
New Malden.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Steel's Crusade

WASHINGTON, DC

ANYONE who thinks the steel strike that began on July 15th is "more of the same old thing" is greatly mistaken. The forces involved are admittedly the same as those that have already produced four major strikes in this industry since the war, but the attitudes of the participants, particularly those on the management side, have undergone something like a revolution. Conceivably the outcome could influence labour negotiations not only in the United States but in much of the western world for a number of years to come.

The position of the steel companies, dominated by the views of a new team of managers at the huge United States Steel Corporation, is simply that the health of both the industry and the country requires an absolute halt to increases in wage costs for a while. Nobody believed the companies when they kept saying this, but it turns out that they meant it. A settlement on the basis of an increase of from 6 to 8 cents an hour in wages and other benefits combined is too much for them, even though such an increase could probably be absorbed without raising prices and with profits remaining as good as or better than those of recent years.

Mr Blough, the chairman of US Steel, is known to believe with something like passion that an increase in steel wages would be "inflationary" even if it required no increase in steel prices, on the ground that it would lead to higher wages in other industries where the cost could not be absorbed. He apparently believes that the United States will drift slowly into the oblivion of the Greeks and Romans unless it can disabuse itself of the idea that working men are entitled to a wage increase each and every year.

Mr McDonald, the president of the steel workers' union, has clearly been as surprised as anyone by this attitude. Although he has never said so publicly, it has become evident that he would be willing to settle for a "package" increase of from 8 to 10 cents an hour, which is pitifully small by the standards of earlier postwar settlements; the last one, in 1956, brought upwards of 20 cents an hour for each of three years. To be rebuffed after a show of what he feels is unprecedented moderation is a galling and bewildering experience for Mr McDonald. Now he has a strike which neither he nor his workers wanted; and he must wonder as he goes to sleep at night whether the industry's attitude will ever change, even under pressure of a strike. He is right to wonder. But if the industry stands by its opposition to any net increase at all in costs, Mr McDonald's position becomes quite impossible. It is almost inconceivable that, say, sometime in October he should settle for practically nothing; this would be a setback to his prestige, and to that of all organised labour, of staggering proportions. But in the unique context of this strike, nothing is inconceivable.

AT the last minute the industry offered a small package of improvements in benefits, pensions and the like, in the first year of a two-year contract and a "modest" wage increase in the second, if the union would accept changes in provisions of the present contract which, according to the industry, lead to featherbedding and higher labour costs. This demand for changes has surprised Mr McDonald no less than has the adamant stand of the employers on the whole negotiation. It seems that he has felt more pressure from the rank and file of the union to stand firm on this point than to insist on a liberal package of new gains.

The local branch's very reason for existence is to "protect" the men against elimination of jobs and other efforts to achieve efficiency. The idea of going back on past successes in this field is even more galling than would be that of accepting an embarrassingly small amount of new gains.

But once again Mr Blough and his followers apparently believe that an important principle is at stake. Taking advantage of what they correctly judge to be a swing of public opinion against the unions, they feel, it seems, that they are knights doing battle for the whole future of the American economy in its struggle with the Soviet Union (and with the European steelmakers).

It is quite impossible to say at what point the sheer loss of profits from a prolonged strike would finally induce them to give in. Perhaps never: after all, in a managerial society, even one in which much of the compensation of top executives takes the form of "stock options", there is not quite the same personal interest in profits as there is in a society in which owners and managers are the same people. Mr Blough is being urged by conservative businessmen from all sides to "hold out until Christmas if necessary to win"; if, unlike most captains of industry in the postwar period, he feels that he is fighting for his country as much as for his industry, he may do so.

AMONG the somewhat bewildered spectators of this strange drama are the officials of the government. Although many of the President's associates have felt from the start that the ideal settlement would involve no wage increase and a price cut, they hold that a settlement modest enough not to require a price increase would be highly satisfactory. It would, among other things, set a postwar precedent. They are evidently convinced — without ever saying so publicly up to now — that a rise of 8 to 10 cents an hour would meet that criterion. There are reports, probably reliable, that they, and in particular Vice President Nixon and the Secretary of Labour, Mr Mitchell, have advanced this view to the management side. But this year, unlike 1956, when the Secretary of the Treasury, Mr Humphrey (a steel man himself), was the President's messenger, these pleas, if they have been made, have fallen on deaf ears. Mr Blough is under no legal compulsion to heed the views of the Administration, and he apparently feels that even the Administration does not appreciate the evils of a settlement which would involve the industry in any increase at all in labour costs.

Mr Blough's view is supported by respected observers as well as by the typically militant segment of business opinion which sees trade unions driving the country to perdition. For example, Mr Allan Sproul, the former president of the New York Federal Reserve Bank, has joined the group of "moderate" conservatives who are scornful of the suggestion that last autumn's automobile settlement, for from 10 to 12 cents an hour, was somehow a victory for sanity and a stable price level. There appears to be some genuine and objective agreement with the idea that it is more important to establish the principle that wage increases must not always be taken as a God-given right than merely to set a standard for much less generous wage settlements than have become usual. Thus the extraordinary stand of the steel companies has not, so far, aroused any strong antipathy in a public that is habitually quite pragmatic and prides itself on a sense of fairness.

To the experts in labour negotiations, it seems almost inevitable that a strike must be followed by a settlement more generous than the companies could have had on July 14th. But nothing is inevitable in this situation. Mr Blough feels the wind of public opinion and the tide of patriotism behind him, and he has the indispensable support of a majority of his fellow executives in the steel industry. The spectre of idle plants and vanishing profits may yet sway him. But Mr McDonald more than anyone else wishes that this could be considered certain.

Democrats Begin to Fight

MR BUTLER, the chairman of the Democratic National Committee, who speaks for the party's members and leaders in the important urban states of the North and West, recently opened fire on its conservative southern leaders in Congress, with whom he has long been at odds. In his view, and that of other Democrats disappointed by the achievements of their big congressional majority, too much watering down of legislation, in order to induce the President to swallow it, runs the risk of blurring the issues on which next year's presidential election will turn. At once the supporters of Mr Johnson, the Democratic leader in the Senate, called on Mr Butler to resign, accusing him of splitting the party in the face of the enemy and of scheming to nominate an extreme liberal for the Presidency at the party convention next July. This cross-fire between two centres of power in the party, which is so cheering to the Republicans, is an embarrassment to potential Democratic presidential candidates in the Senate; even Mr Humphrey, whose progressive views, particularly on Negro rights, are close to those of Mr Butler, has been careful not to take sides.

Last week Senator Humphrey became the first Democrat to admit openly that he wants to be President. On the evidence of the Gallup poll he is the least likely to succeed, and even in Minnesota, his own state, local straw votes suggest that he is losing ground to Senator Kennedy of Massachusetts, who is continuing to pull ahead of other contenders. Mr Humphrey will begin campaigning in the Middle West in the autumn and will enter a number of presidential primaries, including that in Wisconsin; this is a piece of good news for Senator Kennedy. These primaries, which are held in some, but not in all, states, give contenders a chance of demonstrating their popularity and the members of the party an opportunity of expressing their preferences.

Senator Kennedy, however, has found one door after another shut in his face by local "favourite sons" who either have presidential ambitions of their own or who wish to lock up the state's votes so that they can dispose of them to the best advantage at the nominating convention. California is out of bounds because Governor Brown is too strong to beat and controls too many delegates to affront. Senator Kennedy will have to brave the displeasure of Governor DiSalle if he runs in the Ohio primary. Senator Proxmire has been willing to oblige the Governor of Wisconsin by standing as a "favourite son" to keep the local party free of national feuds, but only if he is unchallenged. By not beating about the bush, Mr Humphrey has made it virtually certain that Wisconsin will be the scene of a decisive clash next spring, as it has often been before.

Munitions Lobby Up-to-date

IN the middle thirties when the Nye investigation indicted armament manufacturers as "merchants of death", the United States was spending only about $700 million a year, some 10 per cent of its national budget, on defence. Today it is spending $40 billion a year, almost 60 per cent of its total outlays, for this purpose, and with this huge expansion the armaments industry has become respectable. While nearly all defence buying is done not under competitive bidding but by negotiated contract (any excessive profits are recaptured by subsequent renegotiation with the manufacturers) and while government accountants recently discovered evidence that the services have been overcharged on a number of occasions, yet no serious scandal is likely to be revealed by Representative Hébert's current enquiry into the munitions lobby.

So far he is concentrating on the conflict of interest that may arise from the employment by defence contractors of retired military men and he is handling his witnesses with kid gloves. Nothing else would be suitable for Admiral Radford, Generals MacArthur and Ridgway and the many other national heroes among the 768 former officers who are now employed, according to Senator Douglas, by 97 large companies which do substantial defence business. It is alleged that some of these men may have been tempted to ingratiate themselves with potential future employers while still on active service and that now they earn their large salaries by using their influence with their former colleagues to get military contracts for their new firms. Their activities are restricted to some extent by law and by departmental regulations, but it is thought that these may need strengthening. However, these are all men of proved integrity and the services like to deal with people who know their needs from experience. Moreover, the country would undoubtedly suffer if retired officers were no longer allowed to use their knowledge and ability on its behalf and they themselves would suffer if they were no longer allowed to use their training to supplement their retirement pay.

So far Mr Hébert has not gone into the broader pressures about which the President himself complained earlier. He is said to have been particularly incensed at an advertisement put out by the Boeing Airplane Company, at a time when the future of its Bomarc missile was being debated in Congress, to show the large number of towns which benefit economically from the manufacture of this weapon. There are many communities and many companies today which are almost entirely dependent on defence contracts. Naturally, at a time when defence spending is being held severely in check and when its pattern is changing drastically, local and business interests are going to do all they can to induce the service departments, and the Congressmen who provide the money, to concentrate on the particular weapon for which their town or company is responsible. Thus it is probably true, and if true understandable, that competing defence contractors have encouraged inter-service rivalries and that decisions have been based on political as well as on purely military factors.

Lady Chatterley's Licence

LAST month the Postmaster General banned the first unexpurgated American edition of "Lady Chatterley's Lover" from the post on the ground that it is "filthy and obscene", a ban that has made the 30-year old Lawrence novel a best-seller in some cities and paid handsome dividends to the publisher who had the brilliant idea of asking the Post Office for an opinion. The French film version has not been so lucky. The Supreme Court, a more sophisticated audience, decided unanimously early this month that New York State's refusal to grant the film a licence was unconstitutional. Some Justices poured salt in the wound by describing the controversial old war-horse as a pathetic love triangle that would hardly have offended Victorian sensibilities. Even the lower court in New York, which had upheld the ban, did not contend that the film was obscene.

Justices of the Supreme Court cannot afford to spend much time at the cinema and after this decision they may not need to. The majority went on to strike down the parts of the New York censorship law which proscribe films that portray "immoral" acts as acceptable behaviour. In ringing phrases Justice Stewart, who wrote the majority opinion, declared that freedom of speech, which the First Amendment guarantees, is not limited to the advocacy of ideas which are generally accepted; the Constitution also protects the advocacy of unpopular beliefs, in socialism, for example, or adultery or the single tax. Two members of the majority, Justice Douglas and Justice Black, would not even have left standing the prohibition against obscene films; they feel that prosecutions under the laws against pornography are an adequate protection for the public. To some members of Congress, such liberty slides too easily into licence, and Bills are being proposed to restore to the states their power to censor films. Under the past battering from the Supreme Court only four states and a few cities now attempt to do so; these four ill-assorted bed-fellows are Maryland, Virginia, Kansas and New York. Pennsylvania's efforts to write a statute that would be constitutional have just been struck down by its own courts. A federal court has also overturned Chicago's ban on the film "Anatomy of Murder". Such decisions, and the growing maturity of the public's taste, are helping to liberalise, little by little, the rigid censorship which the moving picture industry itself enforces at the source.

DOW CHEMICALS *and agriculture*

In Europe, Asia, Africa and the Americas Dow agricultural chemicals are at work helping growers and ranchers to increase production and lower costs. In a French grape arbor, in a German reforestation area pernicious grasses are kept under control with Dow chemicals. In the Philippines, in Malaya, in Cuba the machete is replaced by chemical spraying, the easier, surer method for killing weeds. On plantations in Brazil, Nicaragua or South Africa similar methods increase the yield of coffee and cotton. Dow brush killers clear Australian range lands for better cattle feeding. Another Dow chemical seeks out and destroys grubs that emaciate cattle, damage hides.

For complete information on how the many Dow agricultural chemicals can help you save time, effort and money, contact your local Dow representative or the branch office in your area.

LARGEST MAKERS OF V-BELT DRIVES IN THE COMMONWEALTH

Thaw Toward China

FROM A CORRESPONDENT IN CALIFORNIA

WHEN Mr Clair Engle defeated Senator Knowland in California last November, the main issue in the campaign was whether the powers of trade unions should be limited, but the principal result was to remove the most influential congressional champion of Generalissimo Chiang Kai-shek. In May Senator Engle completed the process by a speech which may mark the beginning of the end for that masterpiece of diplomatic immobility, the policy of the United States toward Communist China. His careful plea for gradual revision went unmentioned in the *New York Times;* he was even relegated to page seven of the *San Francisco Chronicle;* but on the desks of informed people copies of his address were soon in evidence and, significantly, Mr Knowland's newspaper, the *Oakland Tribune*, attacked his successor's "dubious circumlocutions" in its leader columns.

Yet Mr Engle was careful not to leap from one extreme to the other; he did not advocate recognition of Communist China or its admission forthwith to the United Nations. He merely asked that American policy should cease to be completely negative, and begin to seek ways of making contact with the government of the Chinese mainland in hopes of preventing "the total marriage of China and the Soviet Union... on the basis of Chinese necessity". He saw no easy path to friendship with China. But a less forbidding American posture "would wear off the sharp edges. It would reduce our differences, ruling out the specious, artificial, unrealistic images which many Americans hold of China and which the Chinese now hold of the United States."

Mr Engle's is not the first such voice from the West Coast. His colleague from the State of Washington, Senator Magnuson, has long advocated dropping the present total embargo on American trade with the Chinese mainland. All five members of the House of Representatives from Oregon are on record in favour of trade with China; the irrepressible Senator Morse, also of Oregon, was one of the half dozen colleagues who rose to congratulate Mr Engle on his address in the Senate. The San Francisco Chamber of Commerce has passed no formal resolution on the matter but, through its World Trade Department, it has taken an active part in bringing what has been described as "subtle pressure" to bear on Washington to explore the possibilities of trade and of opening channels of information to the Chinese mainland. The *Pacific Shipper*, a trade publication, has campaigned for several years on the issue, its initial interest having been sharpened by the discovery that the United States government itself seemed to know very little about developments in China, and was unwilling to divulge what it did know.

Public opinion polls conducted a year ago by the *Portland Oregonian* and the *San Francisco Chronicle* showed a surprising amount of discontent with the present policy on China, even after allowances were made for their unscientific sampling methods. Only 2 per cent of those who replied to the *Chronicle* favoured retention of the present embargo. Such sentiments are no doubt strengthened by news stories of the embargo's ineffectiveness; a recent account on the front-page of a local newspaper quoted the Assistant Collector of Customs in San Francisco as admitting the difficulty of detecting falsifications under "country of origin" on customs declarations.

The obvious interest of the West Coast is economic. In the Northwest particularly, pre-war Chinese purchases of American lumber and flour are remembered. Mr Harry Bridges's International Longshoremen's and Warehousemen's Union is perhaps the loudest voice demanding a resumption of trade; bulk cargoes such as lumber or grain require much manpower, and would help to offset increasing mechanisation on the docks. Yet neither the ILWU, the businessmen, nor experienced observers expect any very dramatic gains to accrue in the short run from a change of policy. Between 1935 and 1941, China's share of United States imports never reached 2 per cent; exports to China ranged between 2.1 and 3.4 per cent of the United States total. Japan and the Philippines did more trade than did China with West Coast ports.

Recently Representative Charles Porter, a Democrat from Oregon, called for an economic fact-finding mission to China and tried hard to draw up an appetising list of things which the United States might import, but he had to admit that in most cases the pickings were unlikely to be great. Merely to mention such things as "edible apricot kernels" is to suggest limited possibilities. Several of the mainstays of prewar Chinese trade would probably not return to prominence; shortage and embargo have produced their usual results, the discovery of substitutes and the development of domestic output. Hog bristles have yielded very largely to synthetics; tung oil is now produced in the southern United States. Canadian trade with China, through Vancouver, has not been such as to excite Seattle or Coos Bay unduly: last year Canada's leading import from China, by a wide margin, was walnuts; in eleven months her exports to China amounted to less than £8 million, nine-tenths of this from wheat. Given the long lapse in contact, and the great changes in China, prediction is difficult; but in the short run, at least, China would probably not provide more than a useful supplement to the West Coast's already thriving foreign trade.

BUT the short run is not the main concern of Americans who are troubled about the seemingly endless stonewalling of their government on the question of China. West Coast businessmen, watching Britain's exports to mainland China doubling in 1958 while West Germany's nearly quadrupled, fear that they will

find the Chinese market pre-empted by the time they get there. They are increasingly impatient with official arguments against ending the embargo that consist mainly of minimising the trading potential of China; they point out how illogical it is to permit trade, at least a limited amount of it, with the Soviet Union, which is powerful enough to constitute a military threat to the United States, while prohibiting all commercial contact with China, which is still in the early stages of industrialisation.

In some cases, the real concern about China may not be so much economic as political and strategic. But people are still greatly afraid of being tarred with the pro-communist brush if they speak up for revision of policy toward China; and the dead of Korea are not forgotten. It is convenient, therefore, to have a hard-headed economic reason for venturing to criticize the existing state of affairs. It is perhaps because this economic argument carries more conviction on the West Coast than elsewhere in the country that congressional figures from the Far West are leading the way toward a more flexible policy. Although California sent three times as many tourists to the Far East in 1958 as any other state, there is little evidence of a distinctive attitude toward China on the Pacific coast. Any typical audience of the World Affairs Council, whether in New York, St Louis, or San Francisco, will contain substantial numbers of people, probably a majority, who want at least exploratory efforts to be made to end the Chinese impasse.

The clearest indication that a change will come with the next Administration in Washington, if not before, is perhaps the care that some politicians are taking not to be caught with the old China policy in an epoch when not only Senator Knowland, but also Mr Dulles and Mr Walter Robertson, the former Assistant Secretary of State for the Far East, have departed from the Washington scene. The next major opportunity may arise early in the autumn, when Conlon Associates, a San Francisco firm of economic consultants, submits the far eastern portion of the Senate Foreign Relations Committee's massive study of United States foreign policy. Meanwhile both Senator Engle and Governor Brown of California are planning trips to the Far East. Neither is a political neophyte, nor yet a Don Quixote.

Captive Capital

WASHINGTON, DC, may be the capital of the free world, but its voteless residents cannot spend a penny of their own tax money without congressional authority. For months this spring employees of the District of Columbia stood in danger of being sent on leave without pay because the House of Representatives did not want to give the city the supplemental spending authority which it needed to keep its playgrounds open full-time and to maintain its parks. When Congress debated the District's Budget for the fiscal year which began this month, one of the great issues was whether free lunches should be provided for 7,000 undernourished children in the primary schools and whether such a programme should be financed, in part, by raiding the funds for engaging more teachers.

After much delay Congress agreed to permit spending of $241 million, about $5 million less than the city requested; of this $25 million comes from the federal government in lieu of the taxes which it does not pay on federal property in the city. President Eisenhower asked Congress to appropriate the full $32 million which it had authorised for this purpose, but the District has been accustomed, for more than a generation, to being short-changed, particularly by the House, which refuses to believe that residents of Washington pay their fair share in taxes. For this year at least the city has been saved from raising its tax rate by the economic revival, which left the Treasurer with an unexpected surplus of $1 million on June 30th, and by a promise of higher revenues from a property reassessment. Next year, however, the authorities may be forced to take this step, which they fear will speed up the exodus of well-to-do white people from the city and make it even harder to provide adequate services for the impoverished Negro majority.

Such parochial matters make the congressional District Committees unattractive assignments for able members of Congress and the few who are challenged by the city's problems soon become disillusioned because entrenched prejudice in the House bars the way to their solution. For example, a Bill to provide urgently needed judges for the Juvenile Court is being frustrated, for the second time, because the Department of Justice refuses to promise not to appoint a Negro. The Senate is about to pass, for the fifth time, a home rule Bill which would relieve Congress of the boredom of municipal housekeeping and give Washington responsible government for the first time in more than 80 years. But by failing to hold hearings on it, the Southerners on the House District Committee have postponed once more a measure which they fear would mean a Negro-dominated government for the "federal city."

SHORTER NOTE

After two winters of experiment at the University of Wyoming it has been found that overcoats for sheep made of nylon covered with plastic stand up comparatively well to life on the range and naturally even better to life on the farm. These coats keep the wool cleaner and prevent it from being damaged by snagging and so on; it was also found that losses from the attacks of coyotes were less in flocks with coated sheep but that the number of lambs was about the same. The nylon coats seem to have frightened off the coyotes but not the rams. But it is not yet clear whether the coats are worth their cost of from $2 to $3 each when tailored in quantity.

THE WORLD OVERSEAS

Berlin's Golden Summer

FROM OUR SPECIAL CORRESPONDENT

BERLINERS cannot complain of western neglect this summer. The election of a federal president, the final of the west German football championship, and the film festival, brought this month and last into the isolated western sectors a flood of variously distinguished visitors, among them Dr Adenauer and the federal cabinet, some 1,200 parliamentarians, General Aramburu of Argentina, Miss Rita Hayworth, and General Sir Francis Festing, the Chief of the Imperial General Staff. At what was purportedly a wine tasting ceremony, that austere European bachelor, Professor Hallstein, was photographed in the act of being tendered a stiff gin by Miss Esther Williams of swimming pool fame. Fearing that the going may not be again as good, many unsung and unphotographed west Germans have also been looking up old Berlin friends, while thousands of west Berliners, with similar presentiments, have made a point of no longer postponing that holiday in the Alps.

Western protestations of unwavering support for Berlin have been simultaneously almost as numerous and expansive as western visitors. They have come, to name only a few, from President Eisenhower, Mr Herter, Mr McCloy, Mr Diefenbaker, and Mr Selwyn Lloyd. Senator Humphrey has told the annual congress of American mayors that west Berlin is the most important city in the world, regarded by Americans as one of their own cities. "What we do for Berlin", the senator went on to say, "is of more consequence to our future fate than anything we do for our own cities". From Hamburg the Socialist International has assured the Berliners of "feelings of solidarity". And in his more serious moments Professor Hallstein has been inquiring into the possibility of the Six taking collective economic measures to help west Berlin; he has invited Burgomaster Brandt to visit Brussels before the summer is out to discuss the subject further. All in all, it was understandable that an intoxicated daily came out with a banner headline bravely claiming that "Berlin is a capital again".

Happily, there are deeds to report as well as words. According to the Berlin chamber of industry and commerce, the west Berlin economy developed faster during the first five months of this year than that of the German Federal Republic. This expansion was due in large measure to the schemes which the west German Federation of Industries launched to help Berlin within a few weeks of the Soviet threat of November 27th. The allied air lift of 1948-49 was known to the Berliners as the *Luftbrücke* or air bridge. West German industry's politically inspired patronage of Berlin's factories is now being called the *Wirtschaftsbrücke* or economic bridge.

It has had the effect of raising west Berlin's total industrial production between January and the end of May by 9 per cent (west Germany, 5 per cent), compared with an average increase of 4 per cent throughout 1958. Turnover increased at the same time by 11 per cent, compared with an increase of 7 per cent during the first five months of 1958. Deliveries to west Germany, which went up by 7 per cent in 1958, increased between January and May by 12 per cent. It is not surprising to hear that Berlin's big and well-established electro-technical industry has the greatest progress to report. Manufacturers of consumer goods and foods, and processers of chemicals, have also been doing remarkably well. In consequence of busier times the number of unemployed in west Berlin at the end of May was 61,000, some 25,000 fewer than in May 1958.

Yet it would be fallacious to suppose that everything in the Berlin kitchen garden is lovely. The important engineering and textile industries are just holding their own in spite of the abnormally favourable circumstances of competition. West Berlin's exports to countries other than the Federal Republic increased by only 10 per cent during the first five months of the year, compared with an increase of 11 per cent in 1958. At the end of May unemployment in west Germany was only 1.6 per cent, but it was 6.5 per cent in west Berlin. It does not need the use of such words as "economic bridge" to remind the realistic west Berliners of the unnaturalness and precariousness of their present way of earning their beer and *Eisbein*, or to warn them that all those humming factories and purring new hotels cannot count for ever on customers going so far out of their way to help a chronically insolvent friend.

The golden summer has not turned their heads. They are expecting little comfort, if any, from Geneva or a summit conference. Yet their loyalty to the West is still almost embarrassingly unquestionable. Naturally it derives to a large extent from self-interest: the west Berliners can see with their own eyes how much better off they are materially than their compatriots beyond the Brandenburg Gate, and they appreciate their less

oppressive political air. But there is an altruistic streak, too, in their resistance. Between January 1st and June 30th this year, no fewer than 74,377 east Germans fled to the West — roughly the population of a town the size of Jena. It has not been lost upon the west Berliners that half of these refugees from communism have made their escape through Berlin. Nor, of course, upon Herr Ulbricht. There lies the rub.

France's Wine Industry

FROM OUR PARIS CORRESPONDENT

THE French wine trade since the war has undergone its usual vicissitudes. Until 1950 there was a shortage of wine, as of everything else. Then came five years when too much wine was flowing down too few throats and the state had to intervene to absorb the surplus by distilling it into industrial alcohol. Two bad harvests followed and reversed the situation: scarcity returned and there were two spectacular price increases. Now the tide is turning again and a bumper crop this year would certainly produce another crisis of overproduction.

The vicissitudes of the wine trade are not a minor matter in France. Viticulture accounts for nearly a tenth of the total agricultural income. Vineyards cover between three and five million acres and there are close to 1.5 million growers, most of them small producers. In vast areas of southern France wine alone is produced. M. Milhan, an economist, has pointed out that in regions such as the Hérault department (around Montpellier) the whole pattern of existence—including such apparently unrelated features as girls' attendance at secondary schools—is closely linked with revenue from wine. The price of wine, however, is not only of interest to producers; 11 per cent of what Frenchmen spend goes on beverages and wine is their staple drink.

Since most of the small producers cannot afford to withhold their crop for long, whatever the price, the inevitable vagaries of nature are quickly reflected in market fluctuations. Moreover, land under vineyards is usually poor land that is not very suitable for other purposes. Nor can the equipment be easily switched to other uses, while investments in viticulture mature slowly. During the last war production was affected by shortages, chiefly of labour, fuel, sulphur and sulphate. The resulting scarcity attracted fresh capital into the vineyards which suddenly bore fruit with a bumper crop in 1950; this was followed by five years of good harvests. Since the Algerian output—varying from 300 to 450 million gallons—is absorbed by the French markets (it is used to fortify cheaper French brands), total supply outstripped the demand. Every year the state had to purchase some 100 million gallons of wine for distilling into industrial alcohol. This practice was rendered wildly uneconomic by the appearance of much cheaper sources of alcohol; it was made even more wasteful by the state's simultaneous obligation to distil beet. In a country where alcoholism is a national scourge, subsidies to make wine cheaper could hardly provide a solution. In 1953 the government revived the programme for cutting down output while improving quality and applied it with renewed vigour: bonuses were granted for uprooting inferior vines in order to free land for more economic uses.

FRENCH WINE CROP

(Million imperial gallons)

	1949	1950	1955	1956	1957	1958
France	880	1,350	1,320	1,110	715	1,018
Algeria	320	315	317	410	325	293
Total	1,200	1,665	1,637	1,520	1,040	1,310

(Calculated on basis of 1 hectolitre equals 22 imperial gallons).

Bacchus, incensed by man's interference in his affairs, obtained his revenge. In February, 1956, heavy frost damaged the vineyards. In the following winter the damage from frost was again disastrous. Within two years wholesale prices (at the farm) more than trebled and, in spite of the government's efforts, retail prices about doubled. The extraordinary thing was that for some time French consumption went on undiminished. Only in the last nine months has it dropped by over one-tenth.

The part played by the anti-alcohol campaign (with its posters in the metro recommending "no more than a litre a day") in bringing down consumption is a matter for argument. The producers naturally blame adverse propaganda for all their troubles. Frenchmen do not drink as much as they did fifty years ago and younger people today certainly consume less than the older generation. Drinking habits are also gradually changing. Beer consumption has been rising steadily by about 10 per cent a year and even faster in the last couple of years; it has even made inroads into traditional wine-drinking regions. Sales of soft drinks, too, are up, though their competition is less serious. On balance, however, the decline in wine drinking is due to economic causes rather than to anti-alcohol campaigns. Wine consumption remained stable, despite price increases, as long as real wages were rising. It dropped only when real incomes began to fall.

Green into Gold

As long as springtime melts the snows of the Rocky Mountains, the desert will grow green a thousand miles away. From the Colorado River, through the All-American Canal, sweet, silt-free waters now flow abundantly to what was once a heat-crazed, hostile wilderness where only cactus and sagebrush grew and gold-hungry men died for the want of a drink. Today, that same Californian desert gives richly. And the colour of its 20th century gold is the green of a lettuce leaf.

In the Imperial and Salinas Valleys of California and the Salt River Valley of neighbouring Arizona are grown both the best lettuce in the country and the biggest commercial volume. Farming is on a very large scale, over some 180,000 acres, and nothing is left to chance. Unfortunately the constant heat, together with ample moisture from irrigation, provides ideal conditions for insect pests —particularly aphids and the cabbage looper, *Trichoplusia ni* (Hbn.). Infestation builds up throughout the season, sometimes increasing heavily just before harvest, and when this happens, the marketability of the crop is greatly reduced. Until recently, because of undesirable residues left on the leaves, there was no effective insecticide which could be used at this critical time.

With Phosdrin, Shell's new systemic insecticide, however, the problem is being solved and lettuce-growers are enthusiastic about the results already obtained. Phosdrin is both fast-acting and fast-disappearing *and can safely be used within only a few days of harvest.* Its killing power is dramatically swift, and with this important new insecticide Shell offers to growers of many crops a greater hope of unspoilt harvests. Phosdrin, in a modern alchemy, can turn green into gold.

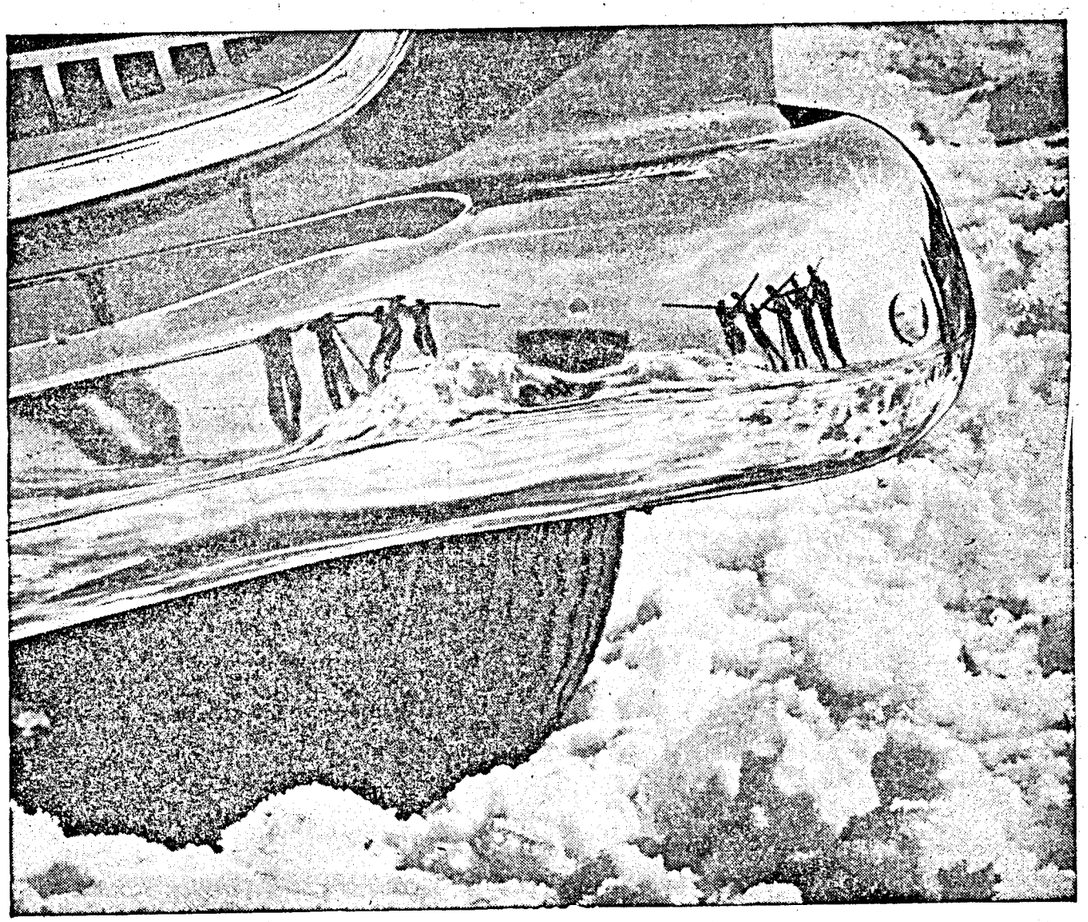
LIC DEPARTMENT

you can be sure of Shell chemicals

Issued by the Shell International Chemical Company Limited and the Bataafse Internationale Chemie Mij. N.V. For further information consult your Shell Company (in the U.K., apply to Shell Chemical Company Limited).



One man's fun . . .

When today's greenness lies deep hidden in snow and the tap's drip is a brittle ice-finger, some eyes will sparkle: to skiers and skaters and small boys with toboggans, winter is a wonderland. But to motorist or truck driver, peering into the blinding confetti of a blizzard or skidding suddenly on unseen ice, the short days of the year can bring both trial and tribulation. At the very least, the penalty of forgetfulness or neglect of winter safeguards can be a fat repair bill.

Special-tread tyres and de-icing fluids; antifreeze; greases and Multigrade oils, hydraulic brake fluids for cold weather duty: all these help to ease the driver's load, to protect his vehicle and make his journeying safer. And in all of them the work of Shell chemists plays an essential part, both in development and in production. Shell chemicals serve transport in many ways.

Shell is one of the leading world-producers of the high quality glycols used in antifreeze and hydraulic brake fluids. *Cariflex* Shell-made rubber provides tyres, pedals and radiator hose. *Carina* P.V.C. is used in cable coverings and in the manufacture of leathercloth. Shell hydrocarbon solvents and detergents are base materials for car polishes and cleaners; Shell acetone is used in the manufacture of safety glass, Shell methyl ethyl ketone in the dewaxing of lubricating oils. If *your* road leads towards a process employing industrial chemicals, call on Shell.

Shell Glycols

Glycols have important uses in many industries, ranging from the manufacture of pharmaceuticals and explosives to transparent paper and synthetic fibres. They are used as plasticizers in many processes. *Glycols, detergents, resins, plastics. Base chemicals and additives. Solvents, synthetic glycerine, synthetic rubber . . . Shell chemical production serves every industry. Ask your Shell Company how Shell facilities, experience and world-wide service can serve you.*

Whatever the reason, the fall in demand combined with a growing tendency to import cheap wine in order to keep prices down (wine is an important item in the cost of living index) worried the growers. When last year's harvest showed a substantial increase over its disastrous predecessor, wholesale prices fell sharply. Retail prices have not changed much, partly because of the increased taxes on wine that were introduced in the austerity budget last Christmas. Wholesale transactions are still few, both growers and traders hoping that the price will turn in their favour. But the weather has been good up to now and the consensus of expert opinion is that, in the long run, years of surplus will be the rule and shortages an exception.

Exports cannot solve the long-term problem of wine surpluses for the simple reason that France has too much *vin ordinaire*, and exports are chiefly of quality wine. The labelled quality wines *(vins d'appellation controlée)* account for only a tenth of the crop by volume, and something like a fifth of them are exported. Years of shortage tend to be also years of quality. Burgundies and clarets were excellent in 1956 and good in 1957. According to the *cognoscenti*, last year's quality was more mixed. The white burgundies were still good, but the red rather light-bodied; and as for the clarets, the expert advice is that the 1958 vintage should not be kept too long.

Last year Great Britain, with total imports valued at nearly 11,000 million francs, became France's best customer for alcoholic beverages, followed closely by the United States. Germany dropped from first to third place because the Germans import a great deal of lower grade wine and tend to switch to Italy when French prices rise too high. British imports of French brandy are roughly equal to half the French home consumption and brandy remained last year the most valuable of France's alcoholic exports (more than 18,000 million francs). Champagne came next (about 10,000 million francs), while burgundy and claret combined brought in roughly as much. Exports of wine and spirits are a big source of income for France, but they do not provide a solution for its viticulture problems.

If the diagnosis that surpluses will continue is right, the remedy must lie in the previous policy of reducing the area under vineyards while improving their quality. Wine growers and traders are clamouring for a reduction in taxes, most probably in vain. To prevent a major crisis the government has agreed to intervene in order to keep wholesale prices within guaranteed limits for a volume corresponding to French consumption. It will also subsidise stocks up to 17.6 million gallons. But no government measures are likely to stabilise the wine situation quickly. Road barricades and other forms of protest in the wine-growing regions of the south may soon remind the world again of the perennial vicissitudes of this ancient industry.

Russians and Chinese in Yemen

BY A CORRESPONDENT

THE Yemenis are not backward because they want to be. Until 1956 they confidently expected some western nation to send them technicians, government or private, who would lead them along the road to the twentieth century and make them as rich as their Saudi neighbours. Occasionally there was hope. First there was a French company, then a west German firm was given an oil concession for a limited area around Hodeida, then the Americans of Yemen Development Corporation got a broad concession for minerals of all kinds. The first two failed for lack of capital and the third was little more than a promoter's dream. Token American economic aid was rejected because Egyptian advisers told the Imam that he was being insulted. The Yemenis began to believe that the West just did not care.

When, in 1956, Imam Ahmad met President Nasser and King Saud in Jeddah he found out that perhaps help could be obtained elsewhere. Spurning Nasser's offer to get him aid and arms from Russia, the Imam insisted on making his own arrangements — if he could find the money. King Saud, who was then engaged in widespread meddling among his neighbours, came to the rescue by giving the Imam three million dollars for the purchase of Russian arms. The arrangements were soon made and arms began to arrive in Yemen when the Suez Canal was unplugged in April, 1957. With the arms came economic and technical aid. Chinese, Czechs, Russians, Russians calling themselves Czechs, Roumanians and Bulgarians soon established themselves in all departments of the Yemen government. Now 700 Chinese and 200 European communists exercise great influence in the country. The numbers may not be staggering, but it must be remembered that Yemen was a closed country to all foreigners until three years ago.

The western democracies did little to stop the build-up of communism in Yemen. Between visits to communist capitals, Crown Prince Muhammad al-Badr set off for London in 1957 for talks with the British Government about Yemeni claims to the Aden protectorate. The talks were doomed to failure before the Crown Prince ever left home because the Egyptians had convinced him that he was going to London to receive the protectorate as a gift. When the young man arrived in Whitehall, however, he discovered that his British hosts had no intention of giving him anything but a good time. The Americans, meanwhile, had decided that Yemen was lost and not worth worrying about. For eighteen months, while the communists were sedulously moving in, not a single American diplomat set foot in the Imam's uncomfortable guest house in Taiz.

For the Russians, Yemen is a useful staging area on

the way to Moslem Africa. They seem ready to spend as much as £35 million to gain paramount influence in the country. Chaotic conditions in the government, largely due to the Imam's failing health, enabled the early communist missionaries to establish themselves firmly, but there are signs that they may have gone too far too quickly. While the Russians give the show away by behaving too much like old-fashioned imperialists, the Chinese are more interested in turning the Yemeni peasants into happy communist ones. Work on a road the Chinese are building from Hodeida to Sanaa is accompanied by songs of proletarian solidarity.

Late in 1958 the Imam realised what was happening to his kingdom, and set out to regain the balance he had lost between East and West. It is not a simple task, and he has not yet succeeded.

His first problem was his own health. Five years ago he was given morphine to relieve the pains of rheumatoid arthritis and promptly developed an addition to the narcotic. Then there was the question of the succession, which the Imam had tried to settle in an un-Yemeni fashion by appointing his son as crown prince. During the past few years, the crown prince has become an admirer of all things communist, though recently he has publicly followed President Nasser's anti-communist line; he is a weakling with few followers in Yemen; and he fancies himself a leader of Arab nationalism of the Nasser school.

The only other contender for the throne is the Imam's brother, Saif al-Islam Hassan, who may not be a dangerous rival to Imam Ahmad, but his strong following among the powerful mountain tribes would, barring outside influence, enable him to succeed his brother. The Imam also has to contend with an emotional third force made up of a disunited assortment of anti-monarchy groups including the communist converts, the pro-Nasser students, parts of the Shafai sect of Moslems, and three separate groups who all call themselves "Free Yemenis".

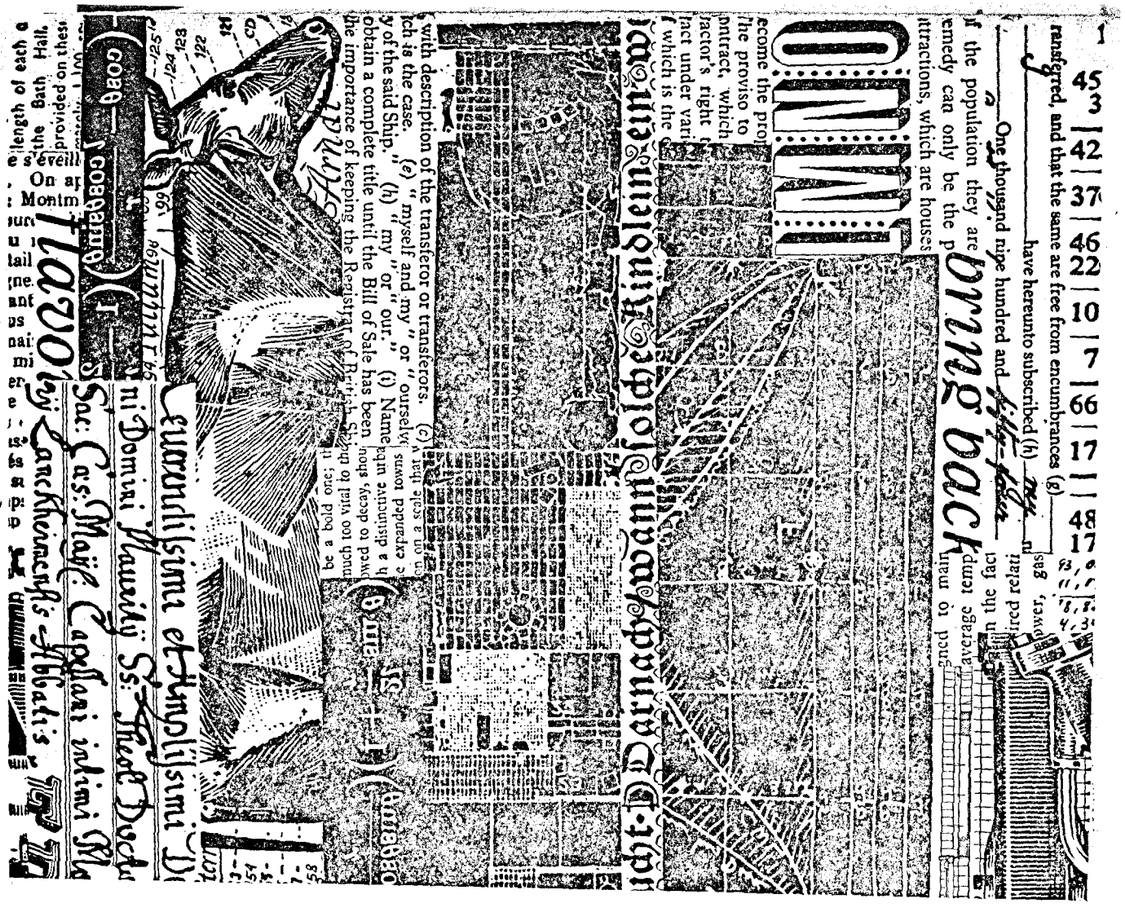
At least, the Imam's health has improved. In April he was packed off to Rome where he has been cured of his addiction to morphine. While his father has been away, the crown prince, whose foreign travels kept him out of the mainstream of local politics for nearly three years, has been unsuccessfully trying to win friends. He transferred or gaoled a number of senior government officials; he announced a pay rise of 25 per cent for the army, though there is no money with which to pay it; and he ordered army units to Sanaa, presumably to protect himself, when they should have been putting down a civil disturbance elsewhere. The number of such disturbances has increased all over the country. In most places it has been caused by isolated units of the army having their own way about some local complaint. At no time have any of the tribes been involved. They, like Saif al-Islam Hassan, are biding their time.

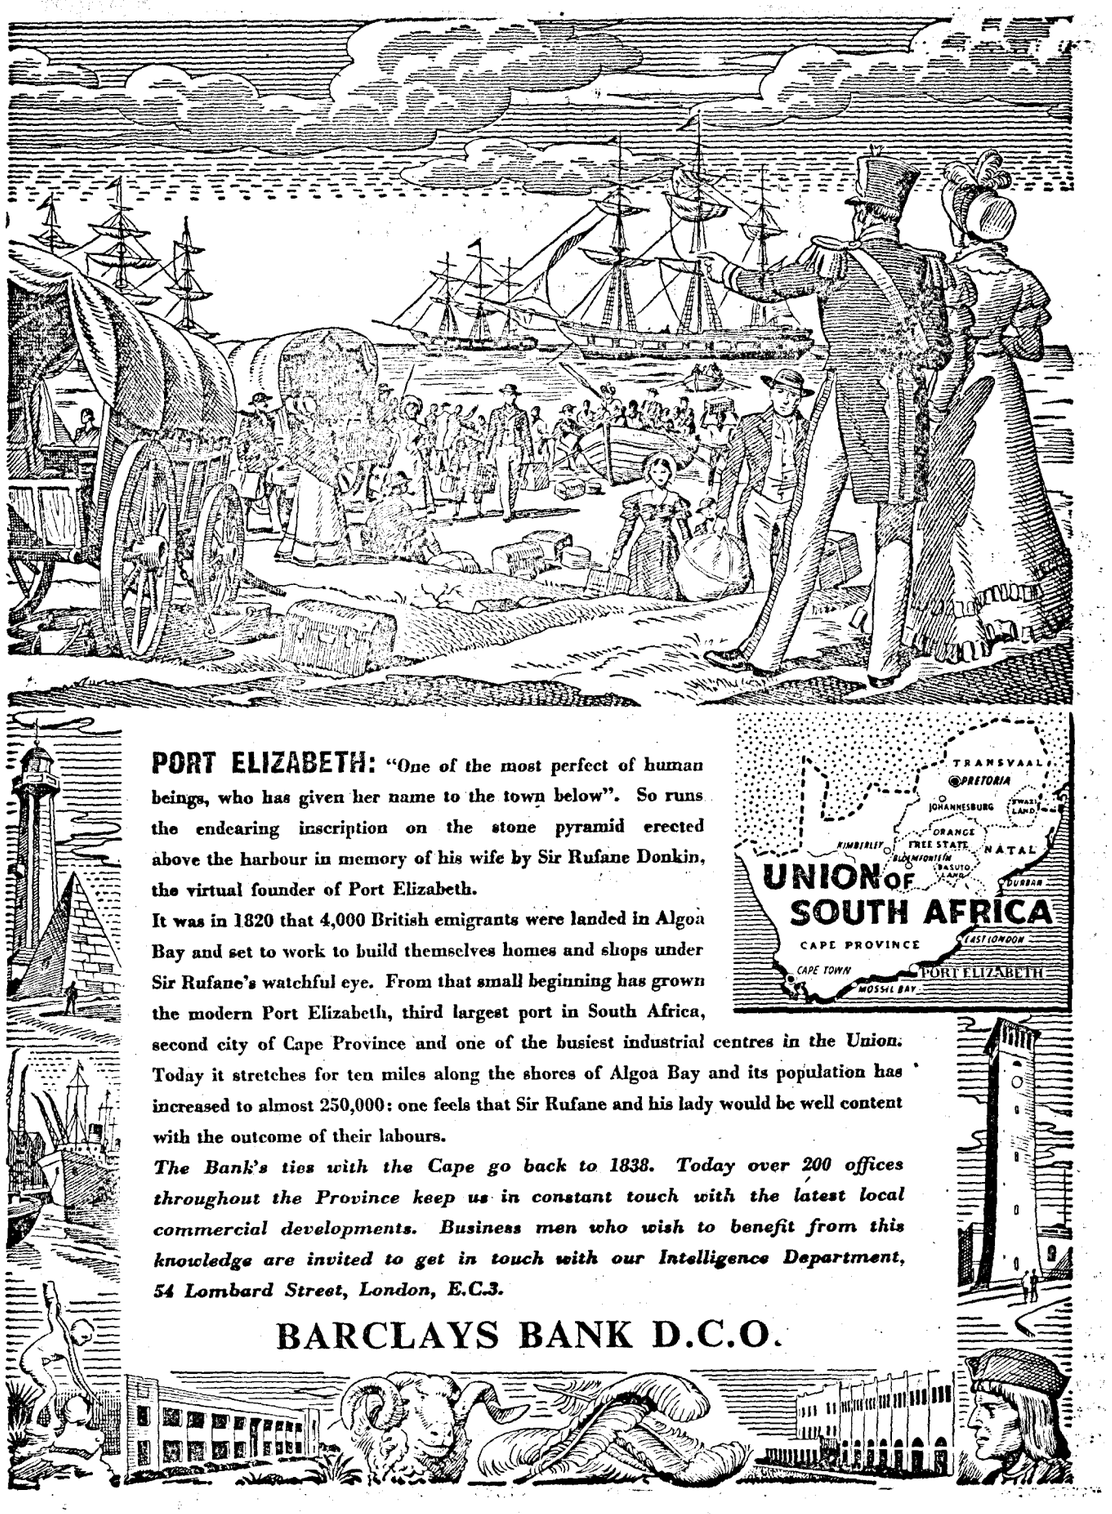
The burden of western help for Yemen falls on the Americans. The remnants of pre-war Italian influence are not political, Algeria keeps the French in disgrace in the Arab world, and Britain's position in Aden prevents close ties with the Imam. An American legation recently joined the growing diplomatic corps in Taiz, and the Imam's first move towards regaining his balance was a request for shipments of wheat from the United States to relieve famine-stricken areas of his country. Unlike the episode in "The Ugly American", when communist agents labelled American wheat "Gift of Russia", these sacks were clearly marked "Gift of the United States". When, later, the Russians sent a donation of wheat they sent it in unmarked sacks, and the Yemenis thought it was further help from the United States.

Tough Bargain in Austria

AFTER more than two months' hard bargaining, during which the coalition between the People's party and the Socialists came near to extinction several times, and Herr Raab, the Chancellor, nearly lost his office, the two parties have come to terms and Austria at last has a new government. The cabinet changes gave ample recognition to the Socialist gains at the general elections in May; the People's party could not get away with "small change" concessions. In the new cabinet formed on July 13th the Socialist Vice-Chancellor, Dr Pittermann, will now be in charge of nationalised industries, the over-due divorce between the chancellery and the foreign ministry has been accomplished, and Dr Kreisky has replaced Dr Figl as the minister. Government by coalition will continue, but by the new pact between the parties the powers of the parliamenary presidium — Herren Figl, Olah, and Gorbach — have been increased, in recognition that parliament should have more say in the affairs of the coalition than hitherto.

Throughout the negotiations, the People's party, although not its chairman, the chancellor, concentrated on the defence of the ministry of finance against inroads by the Socialists. In the new government, neither the minister nor the state secretary is a Socialist; but Herr Raab's party has paid a high price. The control of nationalised industries has passed from the chancellor to Dr Pittermann, whose activities will, it is true, be circumscribed by a number of checks; still, the Socialists have gained a position of considerable influence in economic affairs. This will be reinforced by their acquisition of the foreign ministry, since, in the near future, the minister will be responsible for the conduct of Austrian policy toward both the European common market and the little free trade area





PORT ELIZABETH: "One of the most perfect of human beings, who has given her name to the town below". So runs the endearing inscription on the stone pyramid erected above the harbour in memory of his wife by Sir Rufane Donkin, the virtual founder of Port Elizabeth.

It was in 1820 that 4,000 British emigrants were landed in Algoa Bay and set to work to build themselves homes and shops under Sir Rufane's watchful eye. From that small beginning has grown the modern Port Elizabeth, third largest port in South Africa, second city of Cape Province and one of the busiest industrial centres in the Union. Today it stretches for ten miles along the shores of Algoa Bay and its population has increased to almost 250,000: one feels that Sir Rufane and his lady would be well content with the outcome of their labours.

The Bank's ties with the Cape go back to 1838. Today over 200 offices throughout the Province keep us in constant touch with the latest local commercial developments. Business men who wish to benefit from this knowledge are invited to get in touch with our Intelligence Department, 54 Lombard Street, London, E.C.3.

BARCLAYS BANK D.C.O.

THE BUSINESS WORLD

Banking's Year of Freedom

A YEAR ago the credit squeeze ended; the banks reopened their doors to the personal borrower and bought their way into hire purchase. This year they have made rights issues on favourable terms and their shares have boomed. The dramatic ventures of last summer, which for weeks lifted banking to an unaccustomed place in the popular headlines, have had a lasting impact. Some bankers at the time expressed concern at all the publicity. Few regret it now. The banker is no longer in the popular mind the man who says No. Once again he is a lending banker — a function in which a whole generation of the banks' younger customers had never known him before. At the same time, in their wider and more difficult task of drawing in new classes of customers and returning to their role as leading personal lenders, the banks' progress has been limited.

The clearing banks' advances since the end of the squeeze have risen by more than £600 million, or by 30 per cent; that is an extraordinary expansion. Despite it, the rise in total bank deposits has until quite recently been only 2 per cent. The Government has kept down its borrowing from the banking system, and in order to maintain sufficient liquidity the banks have financed most of the increase in advances by running down their holdings of gilt-edged investments. Their average ratio of investments to deposits has fallen from 33 per cent to under 27 per cent; while their ratio of advances has risen from below 30 per cent to 38 per cent. This is a shift back towards normal. Most bankers would themselves be happy to see the share of advances rise a good deal further; though they recognise that they may at any time be checked in circumstances calling for renewed official restraint.

The authorities are presumably keeping a close watch now. A major initial upthrust was to be expected as the pent-up demand was released; but the pace of lending only recently began to slacken, and then only modestly. In some industries, re-expansion of activity this year may have led to larger advances; but on the whole industry seems to be fairly liquid, and until investment in fixed assets and in stocks revives, this liquidity may actually be enhanced by the rise in output and sales.

AROUND one quarter of the past year's increase in bank advances seems to have gone to personal and professional borrowers, and as much again to hire purchase finance companies and retail traders. Only about a third of the total increase has gone to industry, which was generally favoured through the years of restriction; but there have been many instances, particularly among smaller firms in trades like building, of a switch to bank advances in place of borrowings from finance houses or still more expensive sources. Among the Big Five banks, by far the biggest increase in advances is that of Barclays, at 44 per cent (from July 1958 to mid-June 1959); second with a rise of 29½ per cent comes Lloyds, which together with the National Provincial stands aloof from the new formalized personal loans; and the smallest increase, of 22 per cent, is at the Midland. This is the bank that led the announcement of personal loans and supplemented them, in splendid isolation, with personal cheques, offering at low cost a bare bones transfer account without normal current account service.

To some extent, the differences in growth of advances represent differences in types of business. Thus Barclays has a specially high proportion of personal customers, whilst the Midland and the National Provincial have relatively many big in-

dustrial and commercial accounts. Yet it is difficult to resist the conclusion that Barclays, anxious to maintain its displacement of the Midland as Britain's largest bank, may have been rather more thrustful, and may have been helped by its decentralised administration. It has certainly been prepared to unload large blocks of gilt-edged. But the Midland is not sitting back; and there is no reason to believe that it, or any other of the big banks, is now rejecting any reasonable proposition. Banking competition is very welcome to the potential borrower; it is widening, for example, the alternatives open to the man who wants to finance the purchase of a house.

It has also benefited the banks, including those that have been content to take a back seat in the orgy of innovating and publicising. It is an old adage in the banking world that advertising by Bank A brings customers scurrying not only there but into Bank B; to many people, a bank's a bank. The publicity about personal loans, and even the Midland's advertising of its unique service of personal cheques, has encouraged the banking habit in general. So far, the banks that do not offer the new facilities do not appear to have suffered by not doing so, and they show no signs of a change of heart.

THEY must beware of complacency. The experience of the first year of personal loans has been instructive. They have not been, as some predicted, a nine day's wonder. Since the initial rush abated last autumn the number of applications has been remarkably steady. Most personal borrowing is still in the form of the conventional overdraft with its flexible provisions for repayment and its flexible interest rate charged not on the initial advance but on the actual daily debit balance. The overdraft is the most economical form of borrowing that exists. Yet even those managers who try to persuade their existing customers of this economy have at times found the customer preferring the more expensive and more restrictive personal loan. This is not wholly surprising, especially if the banks are reaching the new class of borrower. The man who has a regular income finds it most convenient to repay in regular instalments; he has found through his experience with hire purchase that he can thereby safely incur a debt that might appear frightening in the form of an open overdraft. There must be very many people, perhaps a whole new stratum of potential customers, who can confidently be relied on to meet fixed monthly instalments but for whom the responsibility of an overdraft might appear excessive.

To this extent, the banks that are not offering formalised personal loans, and those banks whose managers are soft-pedalling them, may be cutting themselves off from a big field of potential expansion. Many bank managers, especially perhaps in the older generation, have a certain reserve towards this form of credit in a packaged parcel, which to some extent denies them the exercise of their traditional banking function. Head offices ought to be on guard against this type of professional thinking, which may discourage new business that is profitable to both bank and customer. There are, indeed, plenty of signs that a new banking public is in the process of emerging; the Saturday morning cashing of household cheques goes with the Saturday morning parking difficulties in every market town and shopping centre. The best branch managers are the ones who recognise these new customers.

A striking feature of the past year has been the rapid growth of hire purchase side by side with the increase in bank lending. Even the smaller finance houses have continued to grow, in face of competition from the bigger houses whose affiliations with the banks have helped both the supply of funds and the flow of business. The prospect for the small fry might appear different if hire purchase as a whole stopped expanding; but not everyone is convinced that this will soon happen. For the bulk of consumer borrowing, the source remains the finance house rather than the bank.

THE bank most committed to personal loans is undoubtedly the Midland, and that could be an important factor in the long-term struggle for growth. The ultimate role of the Midland's personal cheques is still uncertain. They have proved less burdensome to the bank than at first seemed likely, largely because the accounts, including a number opened with a bundle of dog-eared pound notes, have retained substantial credit balances. The publicity for cheap banking has also brought in many people who need, and take, ordinary current accounts. Indeed big increases in new accounts are reported by all the banks.

The new customers include a fair portion of weekly wage-earners; but the more striking feature has been the new middle class customers opening banking accounts for the first time. While the banks are thinking carefully of ways to cater for the mass of wage earners, few bankers expect any sudden inrush. The major obstacle is not the Truck Act but enduring social habit. And the prize currently in reach for the bankers, the top bracket of the wage earners and the bottom bracket of salary earners, is challenging enough in itself.

BUSINESS NOTES

KEMSLEY NEWSPAPERS

Mr Thomson Takes Over

MR Roy Thomson, it is clear, wanted a bigger empire; if Kemsley Newspapers had not been his next purchase it could have been another newspaper group. Whether Kemsley represents the limit of his cheerful ambition remains to be seen but at the moment he and his managing director, Mr James Coltart, have to devote their energies to finding out really what the Kemsley empire is and what should be done to it. The amicable negotiations between Mr Thomson and Lord Kemsley were disturbed only once — and, then, from the outside, when the completion of a buying order for 10,000 of Kemsley ordinary shares was followed by another order for 5,000 shares from the same source. The market price then began to rocket and the jobbers began to complain about a leakage.

The deal, putting a price of 90s. on the Kemsley ordinary shares and thus valuing these shares at over twice the market price that ruled before the negotiations began, is a complex one. First, the 252,000 non-voting ordinary shares in Scottish Television (divested of its interests in *The Scotsman* and Mr Thomson's other Scottish newspapers, seemingly because Mr Thomson has regard for local Scottish pride) are to be sold to Kemsley Newspapers for £1 million in cash, £500,000 of an existing debenture stock and £2 million of a new deferred stock. Secondly, Lord Kemsley and his family will sell their 40 per cent holding of 1,000,000 ordinary shares to Mr Thomson and his associates at £5 a share, £4 million in cash being payable immediately and the remaining £1 million being payable over ten years. To ensure that all ordinary shareholders are treated alike, Lord Kemsley and his family will release out of the money they receive £500,000, to be used in enabling other shareholders to sell their shares at 90s. in cash each. Effectively, then, the Kemsley family receives only 90s. for its shares. Other shareholders can sell out at the same price, for Helbert Wagg and Company has agreed to purchase or find purchasers for the remaining 1,500,000 shares at 90s. each. Certain institutional investors have sub-underwritten this scheme and are prepared to take up the shares.

Ordinary shareholders need not sell and some of them may well be prepared to go along with Mr Thomson. If they do so, they become more akin to participating preference shareholders than to owners of the equity. First, they will be a minority, for through the ordinary and deferred shares Mr Thomson and his associates will control two-thirds of the votes of Kemsley Newspapers. Secondly, though they will gain immediately in income, they have to share their participation in profits with the deferred shareholders. The ordinary shareholders, under this scheme, will be entitled to receive a cumulative dividend of 30 per cent per annum before any payment is made to the deferred shareholders. After deferred shareholders have received a non-cumulative dividend of 15 per cent, the ordinary shareholders will be entitled to receive one quarter of any further profits distributed, with the remaining three quarters going to deferred shareholders. Their stake in the growth of Kemsley Newspapers and Scottish Television is thus restricted. For 1959, Kemsley Newspapers expects to pay an ordinary dividend of 21 per cent (against 15 per cent last year) and for 1960 an ordinary dividend of 30 per cent and a deferred dividend of 15 per cent. On the basis of estimated profits before tax for the group in 1960 of £3 million, full distribution of earnings after charging tax at current rates would mean a dividend of just under 40 per cent on the ordinary capital and one of about 50 per cent on the deferred shares. But existing shareholders have the choice : either a good price in cash or an opportunity to stay with Mr Thomson, who has been willing to pay £5 a share to gain control.

A Number of Honeys

HAVING paid that price, Mr Thomson has to increase the profitability of the Kemsley group. He is confident that he will. The *Sunday Times* he seems prepared to leave alone and he may not have much worry about the *Empire News*, but the *Sunday Graphic* has a comparatively small circulation and cannot be very profitable. Mr Thomson is prepared to bear a loss only as long as there is the prospect of building up the circulation and revenue of a newspaper; like any other business man (and he is that, rather than a newspaperman), he is not prepared to go on making losses for ever. But it is only after trying to put the newspapers on a profitable basis that Mr Thomson seems to be prepared to dispose of them or to close them down. Both at Withy Grove in Manchester, where the Kemsley presses print the northern editions of the *Daily Mirror* and the *Daily Telegraph*, and in London, the printing capacity of the group is not being fully utilised : Mr Thomson will be finding out if it can be.

Mr Thomson has said that there are "a number of honeys" in the provincial newspapers controlled by Kemsley Newspapers. Indeed, in each locality, these newspapers — except the *Evening Chronicle* in Manchester, which may not be easy to put on a profit-making basis — enjoy a monopoly, giving them some protection against the competing claim of com-

mercial television. That monopoly situation is their attraction to Mr Thomson and it is one he is anxious to exploit. Kemsley Newspapers, in the days when it was an even bigger empire than the one now taken over by Mr Thomson, built up a centralised organisation. Mr Thomson may have to think of trimming that organisation if the Kemsley provincial newspapers are to become more local, as he appears to desire. More local in news and more local in advertising is the way that Mr Thomson argues that the profits of the provincial newspapers can be made more impressive. His motto seems to be : give the local editors autonomy, but if they fail to be local enough in their outlook shake them up; and sell advertising space locally — and hard.

INTERNATIONAL INVESTMENT

Fair Play for Whom?

A NEW approach to the establishment of some sort of ground rules for treatment of foreign capital is suggested in a report published this week by an all party commission of MPs, under the chairmanship of Mr Arthur Creech Jones, appointed by the Parliamentary Group for World Government. Its recommendations differ in two fundamental respects from previous proposals in this sphere, which have mainly come from bankers and lawyers. First, the MPs have in mind a charter for borrowers as well as lenders. Secondly, they believe that a rigid code having the force of international law is impracticable; they would be content with a convention embodying a few general principles which would encourage and guide the drawing up of specific agreements between individual countries. The group proposes the establishment of an arbitration tribunal to judge disputes, but it is against any idea of material sanctions, such as a stop on new lending; the one weapon would be the force of world opinion as guided by the tribunal and a secretariat.

The prime object of the parliamentary group has plainly been to produce a report that is acceptable to the borrowing countries. That, certainly, is a vital aim, and it stood little chance of being fulfilled in some bankers' proposals. But the MPs lean over too far. Much of what they say on borrowers' rights, including the right of nationalisation and the right to prevent foreign concerns from interfering in domestic policy, is common ground; affirmations to this effect in the convention would be harmless if irrelevant. But the MPs also seem disposed to accept a lax attitude to restrictions on transfers; it is obviously unreasonable, they suggest, to expect a country to continue large transfers of foreign exchange servicing foreign capital at a time of balance of payments difficulties. That attitude is just what foreign investors fear, and a code that sanctified it in all circumstances in advance could do more harm than good.

Presumably, however, this report is intended only as a starting point; and if it succeeds in bringing borrowing countries into serious discussion it might conceivably lead to useful results. But it is well to recognise that the difficulties of securing a worthwhile agreement are immense. What would or should the arbitration tribunal have said about Colonel Nasser's nationalisation of the Suez Canal Company?

IN THE MARKETS

Election Nerves and Holidays

THE London equity market experienced a sharp setback last week. A steady flow of selling pushed prices lower day by day, though the market rallied before the weekend and opened firm at the beginning of this week. The downturn was widely attributed to nervousness about the election, now strongly tipped for October. By no means all brokers agree that this was the predominant influence. New issues are running high; and investors, particularly the more speculative investors, have been taking profits before going on holiday. Some of the froth has been knocked off the market. But the election is obviously an important restraint, as it has been through the summer. Prices of leading equities, as opposed to speculative favourites, have at no time risen really far above their level at budget time. Some people feel that industrial recovery has been sufficiently discounted in market prices; but there is still a good case for thinking that a Tory victory would lay the basis for a new upward thrust.

While ordinary shares have languished, gilt-edged have been firm, prices edging slowly upward. But activity remains modest. The government broker appears to have achieved some net funding, but not much. A continued drag in this market is exerted by the London County Council's April issue, with a coupon of 5 per cent and a price of 95½. By the end of last week the discount had almost run off. The underwriters may soon be able to see the back of this unfortunate issue; not until then, and until a significant premium appears, will they welcome a resumption of gilt-edged issues.

Meanwhile the £10 million debenture of the Industrial and Commercial Finance Corporation has been offered for sale. With a coupon of 5½ per cent, a price of 98½ and redemption dates 1980-82 the gross redemption yield is about £5 12s per cent. Only £5 million of the issue has been offered to the public, the rest being taken firm by the underwriters. In the money market, the bill rate was again unchanged at £3 9s per cent at the tender on Friday last week, despite the sharp increase in money rates in the United States (with the peak of 4¾ per cent on one year bills there). Sterling remained firm in the official markets (though security sterling wilted somewhat) and the London premium on dollar stocks rose no further.

AIRCRAFT INDUSTRY

Pump Priming

IN last week's aircraft debate the Minister of Transport used the words "pump priming", and Mr Aubrey Jones later made it clear what his colleague meant. The aircraft manufacturers are to receive token orders big enough to necessitate a full-scale commercial production line, but too small to give the manufacturer a profit on the machine in question by themselves. The government apparently hopes that this will start the ball rolling for new aircraft and that ordinary commercial orders will follow in numbers big enough to repay the cost of development. For example, the Ministry of Supply is buying three Handley Page Heralds, which will be operated by British European Airways under an arrangement that indemnifies BEA for any losses incurred. This arrangement was arrived at only after BEA had consistently refused to place a commercial order for the Herald, on the grounds that it would not fit profitably into the corporation's route network. BEA could be wrong, but this is purely a matter for its board to decide. Likewise, BEA has resisted persistent pressure to order the Fairey Rotodyne aeroplane-cum-helicopter. Now the Minister of Transport announces that the corporation is to buy six (while the services buy twelve) and his ministry will subsidise their operation. At the same time he announced that the British Overseas Airways Corporation was reopening services to South America in January and "I hope it will sell more Comets in South America".

This suggests that the government intends that the two airline corporations shall carry out the function performed in America by the military who place initial orders for military versions of many, though not all, civil types. The American services, who are not specially interested in economic operation, nurse these aircraft through their teething troubles on defence account. In this country, the corporations are to do this along with trying to operate commercially : they are to be compensated for the extra costs involved by a government subsidy. If this is in fact the way in which the government plans to salvage the aircraft industry, it needs more careful explanation and justification than Mr Watkinson cared to give it. It implies just the kind of interference with the policy and planning of the two corporations for which the Select Committee only a week or so ago reported that the Minister possessed no Parliamentary authority.

Self Help

WESTLAND'S merger with Saunders Roe will make the combine the biggest helicopter manufacturer in Europe though that is perhaps not saying much. Westland is making an issue of 3,200,000 new Westland 5s. ordinary shares, plus £100,000 in cash, for the ordinary capital of Saunders Roe, while de Havilland, which owns about a third of the Saunders Roe capital, is taking over two subsidiary companies which are interested only in general engineering and plastics. Helicopters are still commercially in their swaddling clothes and are not built in the same numbers even as fixed-wing aircraft. But they have a small, steady market, a good deal less fickle than either the civil or the military demand for fixed-wing aircraft, and Westland, strengthened by the controlling and sustaining interest of John Brown, is in a much stronger position financially and in engineering resources than many aircraft companies whose names are household words.

The Westland merger is made possible because the company sees a prospect of expansion. Other mergers in the aircraft industry fail to take place just because the partners refuse to believe that two can starve as cheaply as one, whatever the Ministry of Supply may tell them. Does this plan for token production orders make the prospect any brighter? In America, the Douglas company announced that it would put a new, medium range jet airliner into production as soon as it had reasonable hope of orders for 75 machines. Only two British civil aircraft, the Viscount and the Britannia, have sold this number in recent years. The government is urging companies to tool up for production on the basis of orders too small to break even, *pour encourager les autres*. It is not only the government which believes this policy will work; the de Havilland company is prepared to enter with its eyes open into a contract to build the uneconomically small number of 24 jet aircraft for BEA. An American accountant would probably disagree.

STOCK EXCHANGE PLACINGS

Regulating the Market

THE public offer for sale is the fairest method of bringing new securities within the reach of investors. Placings, however, are on occasion unavoidable and the Council of the London Stock Exchange is clearly anxious to ensure that when they are made the market should be orderly and that the general body of investors should be given some opportunity to subscribe. It has just issued a letter of guidance to members, setting out a policy which, the Council claims, is designed to facilitate a wider distribution of the stock that is placed.

In the first stage, the Council requires the company concerned to make not less than 25 per cent of its equity capital (or at least 20 per cent of its fixed interest capital) available when it makes a placing. In the second stage, the Council requires that the marketing arrangements ensure that not less than 25 per cent of the equity capital placed (or 20 per cent in the case of fixed interest stock) is made available to the market. That means that in effect the sponsoring brokers can place only 75 per cent of the equity (or 80 per cent of

a fixed interest stock) with their own clients. Having doing so, the Council is of the opinion that the sponsoring brokers should not then participate in the disposal of the securities reserved for the market. It is only after the brokers have completed their placing, the Council argues, that the jobbers should proceed with theirs. In doing so, the jobbers are recommended by the Council to keep their lists for applicants open for a day, and in gathering applications to retain only a reasonable proportion (10 per cent being the amount normally judged to be sufficient) for the opening of dealings. The aim here seems to be to ensure that the jobbers gather in applications at a normal turn to themselves and do not retain too much stock on their own books in advance of dealings that may begin well above the placing price. When dealings begin, however, the Council urges the jobbers to quote realistic prices that need not be closely related to the placing price.

These recommendations make the demarcation between the brokers and jobbers fairly precise and they should make the market more orderly. They cannot, however, in themselves ensure that the shares placed pass into the hands of the general public, for with any placing, however closely regulated, there will always be a hierarchy of privilege.

STEEL

Whose Responsibility?

LAST year the British steel industry began to re-examine its forecasting of long-term demand for steel; decisions were reached taken about its development of further strip mill capacity; and it had to think about justifying certain of its trade practices. All of these matters lie within the responsibilities of the Iron and Steel Board, and the board was indeed concerned in all of them; but in none, last year, did it quite hold the initiative. For two years it had been arguing with the British Iron and Steel Federation about the amount of steel that the industry ought to be able to produce by the early sixties — 29 million ingot tons a year, 27 million tons, or, from the same plants, 28 million tons; during the last stages of this argument, which was never quite stilled, the industry was failing to sell as much as 20 million tons of steel a year. The upshot, last year, was an agreement to do the forecasting exercise over again, and also to look forward a little farther. Late in the year the Prime Minister announced that semi-continuous strip mills would be built at Ravenscraig as well as Newport, the board concurring. During the year the board continued to discuss with some steel producers certain of their trading arrangements which might or might not fit in with its duty of seeing that steel is produced in Britain under competitive conditions; here again, it was not the only authority interested, nor the one that made the pace.

In its annual report for 1958, published last week, it says that it had changed its mind since the year before about the capacity expected by 1962 from 27 million ingot tons to 28 million tons as a result of "more experience of the potential performance of modern plant, progress made with projects under construction, and certain additional proposals since approved." So far as the strip mills are concerned, the board says that it was able to accept both these projects in principle, without waiting for detailed plan, because it was satisfied that none of the alternative places proposed has the same net advantage on all counts as Newport or Ravenscraig.

As regards trade practices and competitive conditions, the board holds its cards even closer to the table. After restrictive practices began to be questioned, the steel industry's agreements requiring producers to charge not less than the maximum prices the board determines sets were abandoned; but the trade associations still recommend, without any sanctions, that members shall in fact charge those prices, and without exception, even in recession, they do. Having regard to the that it sets prices on the basis of costs, the board think that the new voluntary arrangements about prices are "not inimical to the objectives of the Iron and Steel Act of 1953". It adds frigidly that it forms no part of its own functions to examine trade practices in the terms of the Restrictive Trade Practices Act, 1956, which so far has been interpreted according to considerably more orthodox definitions of what is competitive and what is not than the board uses.

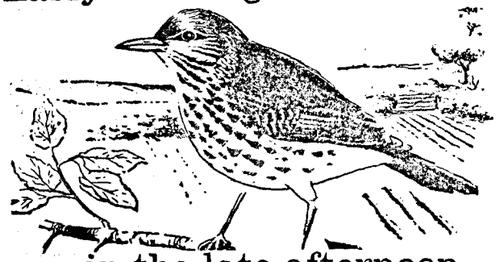
ROADS

Mistakes on the Motorways

BRITAIN started to build a national system of trunk roads comparatively late in the day, and is now having to run to catch up: expenditure on these roads has grown from less than £2 million in 1954-55 to over £32 million in the year ended last March. This is an ambitious rise; and the Select Committee on Estimates, in investigating the trunk road programme, showed itself aware of the difficulties that such ambition can bring. But the committee's report is nevertheless sharply critical: the programme is described as inadequately prepared, to some extent out of proportion, and not ideally organised. The committee charges, *inter alia*, that there was inadequate research into materials, methods and traffic needs, before beginning construction; that no adequate scheme of national priorities for road building exists; that too much attention was paid to motorways through fields and too little to removing urban bottlenecks, and that there is a lack of centralised direction of the programme. Its major conclusions call for some serious answers.

The sorest point it touched was the question of research, and the relations between the Ministry of Transport and the Road Research Laboratory, which is part of the Department of Scientific and Industrial

Early morning freshness..



...in the late afternoon

Outside it may be sultry, but the overpowering heat and dust-laden city air cannot enter this office. A Temperature Room Air Conditioner maintains a clear, cool flow of air, fresh as morning dew, throughout the work-long day. It filters out the irritating dusts, controls temperature and humidity, is unobtrusive and easily fitted in any room or office

LIVING FACTS

- Promotes comfortable, healthy conditions
- Dispels fug and staleness
- Conditioner can be flush mounted inside or out
- Window or wall fitting with simple installation in glass-fronted and concrete multi-storey buildings
- Water or air-cooled
- An installation with a conditioner in every room is less than half the cost of a central station system

How many chairmen at this table?

Apart from the Captain himself, at least one of the other gentlemen at this table usually turns out to be a Chairman. Counting nearby tables, the score would be much higher. For this is the P & O First Class Service to Australia. Here, in one of the mighty ships of the P&O fleet the British businessman with his eye on Australia or the East, encounters prospects from the outset.

It's no accident. Out of some six hundred and fifty fellow passengers travelling first-class *nearly half will be people with similar or connecting interests in the same territory as yourself*. A high percentage of *those* will be people from the very area you're visiting. *They'll* give you the lie of the land you're visiting as none else can. Conditions are ideal.

On P & O both the sun and the service wear a smile. You have time to know people, to pursue ideas without interruption, to rest properly. You do more constructive work in four weeks at sea than you do in four months at home. Yet you arrive back fresher than when you left!

If you have interests in Aden, India, Pakistan, Ceylon, Malaya, the Pacific or 'Down Under'—it *pays to travel all or part way* by P & O First Class Service to Australia (or the Far East). Special seasonal terms and Executive Tickets are available. Ask someone to check *now* with your Travel Agent or with P & O direct. 14/16 Cockspur St., S.W.1. Tel: WHItehall 4444 or 122 Leadenhall St., E.C.3. Tel: AVEnue 8000.

P&O *First Class to Australia is an investment*

Research. There has never been much love lost between these two bodies; the suggestion made last year by the Select Committee's report on the DSIR, that the Road Research Laboratory should be transferred to the control of the Ministry, was rejected by both sides. Research on materials and building methods, though authorised in some cases several years ago, was not started until after roadbuilding had begun; other important research, on earth-moving machinery for example, has not started yet and studies of traffic in cities, perhaps the most important road problem of all, are not very far advanced.

COTTON INDUSTRY

The Disinvestment Allowance

THE schemes presented to Parliament for the reorganisation of the spinning, doubling and weaving sections of the cotton industry are ambitious and uncertain of success. The first stage is to scrap a bare minimum of the surplus machinery by March 31st. Firms that want to scrap must apply for compensation by September 30th, and applications received by August 31st will be eligible for a bonus of five per cent on the compensation paid for retiring them. Unless applications cover at least six million of the 24 million spindles in place, 400,000 of the 1½ million doubling spindles and 45,000 of the 240,000 looms, the whole schemes fall through. The government is ready to pay two-thirds of the cost of compensation; the rest will be raised by a levy on the industry, which will also have to compensate displaced workers. The second stage is to encourage re-equipment within the next five years by a government subsidy of 25 per cent. To qualify, a firm must scrap a further amount of machinery, equivalent in productive capacity to the new machinery; if it fails to do so it must repay 75 per cent of its compensation on the net addition to its plant.

Compensation is at three rates, premium, standard and discount. The premium rate applies to a firm that goes out of business altogether; in that case compensation will be tax free. A firm that closes down a particular mill or mills gets the standard rate, and a firm that had a mill closed down, or a part of its machinery idle when the government first announced its proposals on April 24th, receives the discounted rate, provided that its machinery could have been brought into operation again without undue difficulty and expense. In spinning the standard rate is 8s per mule spindle plus a basic sum of £250 per carding engine (to cover the preparatory machinery), and in weaving £60 per 48-inch loom. The premium rates are all 25 per cent higher; the discounted rate in spinning and doubling is 25 per cent lower and in weaving 20 per cent lower. These rates are generous to firms that would have shut down earlier if official aid had not been in the wind.

AIR FARES

Room for Cuts?

IT IS a pity that the ginger group of the Air League of the British Empire (is it not time that name was changed?) did not take the trouble to spell out its case for the halving of air fares in rather more detail, for it might not then have been so easy for the chief executive of British European Airways to dismiss the claim as "nonsense". The Air League says that airlines should be able to carry passengers on international routes at 3d a mile, making a single fare across the North Atlantic of £43 against today's third class fare of £81, or 5.6 pence per mile.

The 3d fare is not entirely unreasonable. The airlines themselves already carry passengers at half, or nearly half fare if people buy a package deal holiday from a travel agent. A correspondent writes from the United States that travel agents there have started their own flourishing underground movement against the standard air fares of the International Air Transport Association. This consists of offering intending passengers membership of a club, which usually exists in name only, that by happy coincidence has chartered an aircraft which leaves for Europe and returns home on the very dates he had in mind to travel. Using the newest equipment and with full cabin service, these chartered aircraft operate on a one-way fare of about £46 to £47.

The Air League reached its figure of 3d a mile after studying the published costs of a piston-engined Douglas DC 6B airliner, one of the outstandingly cheap aircraft of this generation; the figures might have worked out very differently if other types of piston-engined, or even turbo-prop, aircraft had been chosen. But the independent airlines have themselves asked the Minister of Transport for permission to halve fares on several African and Far Eastern routes on which they would use not only DC 6s but also Britannias. The trouble with the international airlines is not, as the Air League suggested, that they should be using old, slow aircraft for cheap 3d. flights; the myth that an old, slow aircraft is also a cheap one dies hard. It is that they operate too many uneconomic routes that have to be subsidised out of profits earned on the others.

FUEL POLICY

Clean Air and Coal

REGULATIONS have at last been introduced under the Clean Air Act that extend to coal-firing installations using automatic stokers that have been put in since the beginning of 1957 the general exemption from smokeless zone prohibitions that already applied to oil-firing "package boilers". Over a period while so many other elements in the choice have been impelling industrial customers to switch to oil, this particular

discrimination has given the coal industry a legitimate grouse; efficient modern equipment burns the one fuel as smokelessly as the other.

To some extent coal also suffers from one of the assumptions upon which clean air legislation is based — that what the eye can't see the nose can't smell. Air pollution, in Britain, is measured almost entirely according to the Ringelmann chart, which classifies smoke according to how sooty it looks at a given distance. The Medical Research Council, for example, considers that diesel fumes are not a health hazard, though in the United States and Germany fumes from vehicle exhausts are regarded as requiring control. Smoky or not, moreover, the sulphur content of fuel oil is often much higher than that of coal.

The coal industry is hardly in a position to complain about clean air legislation in general. But the effect of the legislation could hardly have come at an unluckier time for the industry, and some details of the clean air administration have affected it in unexpected ways. There have been signs in the last few years that a few big coal distributors are at length prepared to mechanise their coal delivery depots: Charringtons, for example, has had excellent results from a year's operations at a new mechanised depot near Alexandra Palace, which handles about 80,000 tons of coal a year and accepts it in full trainloads. But further initiative of this kind is at present checked by the uncertainties of local option in the matter of smokeless zones: a company will not be anxious to spend say £100,000 on concentrating trade into a big mechanised depot in an area where long before it has got its money back local councils may "go smokeless" — in which case the distributor's job becomes simply one of hauling smokeless fuels about, mainly from depots at the local gasworks. Local choice may be an essential element in legislation for smokeless zones; but some closer consultation with the centre, by which broad priorities for given regions were set down, might usefully reconcile it with other, equally desirable developments in the fuel market.

ROAD TRANSPORT

Surveying the Goods Vehicles

Nobody is in doubt that the volume of goods carried by road in Britain is increasing: even the Transport Commission's annual reports, for example, are studded with charts purporting to show how this contrasts with the chronic decline in British Railways' freight receipts. But while there are fairly detailed statistics of the number of goods vehicles in operation, there are no regular or comprehensive measures of their employment. The Ministry of Transport has recently published the results of a sample survey made during one week in April of last year, similar to one made in 1952. Seven years ago 940,000 goods vehicles were on the roads; by last year the figure had grown to 1,270,000, of which more than one million were vehicles with C licences.

Out of a total of 513 million ton-miles recorded as being carried during the survey week, C licensed vehicles (carrying their owner's goods) accounted for about 46 per cent, A licences for about 44 per cent, of which 9 per cent came into the category (carrying goods on contract for particular customers) and B licences for another 9 per cent. Goods vehicles belonging to British Railways and British Road Services come into this total; there are about 35,000 of these in all, most of them with A licences. The growth of a half to two-thirds in A licence business reflected changes in licence regulations under the 1953 denationalisation Act. The rise in C licence traffic of about one-fifth is less than might have been expected; the Ministry speculates that this group may have been the most seriously affected by recession at the time of the survey.

By relating the results from the survey to the manual counts of traffic which it continuously makes at fifty points throughout the country, the Ministry has been able to make some very rough guesses about the volume of goods moved in the year. These suggest that road transport accounted for about 23,100 million ton-miles of traffic in 1958, or about 56 per cent of the total, compared with 18,800 million ton-miles, or 46 per cent, in 1952. The comparable figures for the railways are 18,300 million ton-miles, 44 per cent, in 1958, and 22,400 million ton-miles, 54 per cent, six years earlier. The total volume of traffic, based on these estimates, was virtually the same in each year; in the six years between the two surveys, there was an increase of nearly one-quarter in the quantity of goods carried by road.

LABOUR PRODUCTIVITY

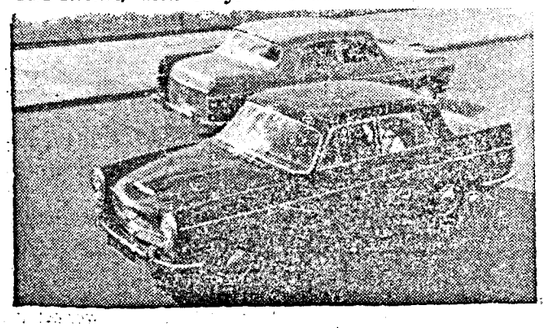
The Edge Remains

A joint study just published by OEEC and the Department of Applied Economics at the University of Cambridge provides new comparisons of national output and labour productivity in Britain and the United States. Valuing the output of industries and services in each country at British prices, the report finds that, on average, in 1950 the United States was producing 5.4 units for each comparable unit in this country; by 1957 this ratio had risen to 5.8. But because employment rose faster over these years in America, the change in the relative productivity per worker was less marked: the average output per American worker was 2.1 times as great as that of the British worker in 1950 and 2.2 times as great in 1957.

New imperious lines - new urgent power

AUSTIN A99

THE NEW AUSTIN LINE — WRIT LARGE. Here's the latest and greatest of the Farina Austins — and as with the others, the A99's advanced styling is achieved as the result of strictly practical planning: it's a 5-6 seater with a huge boot. All seats have hide facings. NEW 2.9 LITRE BMC ENGINE, with 6 cylinders and twin carburettors, is more powerful and accelerates vividly all the way up to the 90s. DISC BRAKES AND OVERDRIVE. Disc brakes are fitted to the front wheels and overdrive is added to the synchromesh gearbox. Fully automatic transmission available. Fitted windscreen washers and heater. Price: £810 plus £338.12.6 purchase tax.



By Appointment to Her Majesty The Queen Motor Car Manufacturers The Austin Motor Company Limited

Backed by BMC 12-month warranty and BMC service

AUSTIN LOOKS YEARS AHEAD

THE AUSTIN MOTOR COMPANY LIMITED · LONGBRIDGE · BIRMINGHAM

The picture becomes a little less unfavourable to Britain if the measurements are made at American prices; even so, labour productivity is about 1.7 times as great in the United States. Since it is impossible to say which approach gives the more realistic estimate, the statisticians resort in their detailed comparisons to an average of the two sets of prices — to be precise, they use the "geometric mean".

The detailed study, which is mostly concerned with manufacturing industries, unfortunately relates only to the year 1950. Using 100 to represent output per worker per year in the British industry, the corresponding index in 44 manufacturing industries in America ranged from 111 in shipbuilding and ship-repairing to 561 in the metal cans industry, with an average for all manufacturing industries higher than that for the rest of the economy at 268. The dozen industries for which the index was under 200 included several traditional British export industries, such as cutlery and the woollen and worsted industry. Among the remaining 32 industries were chemicals with an index of 372 and motor vehicles with one of 466.

The difference in wage levels in the two countries, at the official rate of exchange, usually exceeds the difference in labour productivity. Among the 44 industries the resulting cost advantage to British manufactures was most marked in shipbuilding where the ratio of labour costs per unit of output was about eight dollars to the pound; but in only ten of the industries did this ratio fall below the parity figure of $2.80. However, since in general basic raw materials are relatively cheap in the United States, British exporters usually need some advantage in labour costs if their products are to be competitive.

FILMS

Is It Box-Office?

UNTIL April 1957 the terms upon which the National Film Finance Corporation lent public money to finance the production of feature films precluded them from doing so when finance could be obtained elsewhere on commercial terms. An amending Act then removed this restriction, and in the next year the corporation approved more loans for making new films than in any earlier year. But the 1957 Act did replace that limit upon the financing of particular films, with a more generalised duty: the corporation was instructed to perform its functions in such a manner as appeared to it best calculated to avoid making a loss on all its loans taken together. Its burst of activity in 1957-58 did not prevent the corporation from showing a loss of about £116,000; and in 1957-58, the corporation reported last week, it lost £222,367. The conclusion it draws from this is that it should be absolved of even the generalised obligation not to make a loss. Interpreted strictly, it feels, the Act of 1957 would require it to make only guaranteed loans, the kind that might equally easily be made through a bank. But its purpose, it rightly claims, was to assist British film production; and since British film production today appears inherently even more unlikely to make profits, perhaps Parliament should decide "whether the balance of advantage lies in providing the Corporation with further funds or leaving the industry to endeavour to find its finance elsewhere."

If, as would seem to be demonstrated, the British nowadays more and more prefer to take their visual entertainment in drawing rooms rather than in cinemas, Parliament should perhaps also consider whether the corporation's occupation is nearly gone. Entertainments Duty has been considerably reduced, and producers of British films made in Britain still get an extra share of the shrinking total box-office receipts siphoned to them through a statutory levy on takings. Apart from this levy, a backer of large numbers of films with end money, such as the corporation is, would in 1958 have been able to recover only 52 per cent of the total cost of these films — though most other people concerned in the game, such as stars, producers, directors, and distributors do sustain a more than modest standard of living out of these films' having been produced. A film bank accustomed to the peculiar financial circumstances of the film publishing industry is one thing; a film bank which never expects to see the money it lends back is another. Are British films worth an almost open subsidy if the British public do not find them worth looking at?

COPPER

Producers Cut Output

FIRST signs of a check to world over-production of copper came last week when two major producers announced that they were cutting output. Prices in London responded quickly, cash copper rising by £17 to £226 a ton. The first move was by Phelps Dodge, one of the big three American producers, which said that its output in the second half of this year would be seven per cent lower than in the first half. A few days later Rhodesian Selection Trust announced that its output in the second half of the year would be down by 10 per cent.

The other Rhodesian copper group, Anglo American, made a guarded statement; it pointed out that the rate of operation was flexible, and that its sales in the second half of the year were unlikely to be as high in the first half (when output and deliveries were unusually high following the ending of the strike in the mines late last year). During the 1957/58 recession Rhodesian Selection Trust cut output long before Rhoanglo. World stocks of copper are not high, but they have been rising at a fairly rapid rate. If other leading producers also cut output the market will respond quickly.

COMPANY AFFAIRS

DISTILLERS

JUST as the directors indicated last December, the profits of the Distillers group did not forge ahead quite so rapidly in the second half of the financial year that ended on March 31st last as they had done in the first six months. Gross profits after depreciation in half yearly periods have run as follows: £11.4 million, £11.3 million, £12.9 million and £11.9 million. Thus profits were still rising in the last six months but at a slower rate; and it looks as if increased sales of hard liquor have offset lower earnings from the industrial division. Over the full year, the group's trading profits before depreciation advanced from £24.8 million to £27.1 million and its income from trade investments went up from £1.5 million to £1.8 million. Both depreciation and tax were slightly higher and the net profit rose from £10,583,000 to £13,172,000.

The two-stage scrip issue carried through by Distillers in November certainly seemed to point to a more generous dividend policy and now bigger earnings have given the directors the opportunity to be more liberal. The year's ordinary dividend is set at 12½ per cent, compared with the equivalent of 10 2/3 per cent for 1957-58, and it is covered over twice by earnings. Something like three quarters of these earnings come from distilling and so far the group does not seem to have earned on the capital employed in its chemical, plastics and biochemical interests as high a rate of return as it obtains on the capital invested in potable spirits. Last November the directors said that the development programme, of which no details were given, would make it necessary for the company to find additional finance of up to £15 million in the next two years. These plans now seem to have been trimmed, for after another review of future capital requirements the directors say that, having regard to the present programme and the phasing of the expenditure involved, they do not consider it likely that fresh capital will be required on the scale previously envisaged and that it will certainly not be required in the current year. That announcement, almost as much as the increased dividend, was responsible for the rise in the price of 10s. ordinary units by 1s. 1½d. to 27s. 7½d. immediately after the preliminary statement was issued. At this price the yield is 4.6 per cent.

CO-OPERATIVE PERMANENT

THERE are still plenty of people anxious to obtain mortgages for house purchase and the building societies continue to be unable to satisfy all the applications that are made to them. Certainly, in the last six months or so they have been less restrictive but in the coming months, because the net inflow of money has slackened since the reduction in borrowing and lending rates, mortgages may become a little more difficult to obtain than they have recently been. The beginning of the Government scheme of special loans for pre-1919 houses should, however, temper the difficulties. The recent experience of the building society movement is well illustrated in the results of the Co-operative Permanent for the six months that ended on June 30th. Receipts in that period came to £25,294,000, compared with £22,005,000 in the previous six months, and withdrawals to £17,356,000, compared with £15,442,000. The net inflow was thus £7,938,000, compared with £6,563,000, and, as advance repayments practically balanced new advances, the society built up its liquidity ratio from 15.8 to 16.8 per cent at book value and from 15.0 to 16.3 per cent at market value.

The big net inflow of money occurred at the beginning of the year but since the rate on shares was reduced from 3½ to 3¼ per cent, net, receipts have fallen off and withdrawals have risen. The flow of money to the building societies from bank deposits, where rates came down long in advance of the building societies' rates, exhausted itself by the end of April and in the meantime the competition for money from the unit trusts, stock exchange investment and personal spending was growing. Mr Herbert Ashworth, the general manager of the Co-operative Permanent, does not expect the society's figures to be so buoyant in the second half of the year as they were in the first.

FIRTH CLEVELAND

THE marketing of 25 per cent of the equity of Firth Cleveland is the result of the furling of the Chancellor's umbrella on surtax companies. The company's preference shares and debenture stock are already quoted on the stock exchange and now a quotation is being sought for the 5,500,000 ordinary shares of 4s. each. Of these shares 4,000,000 are being offered to the public at 16s. 6d. each. In the fourteen months to December 31st last, the group earned a gross profit of £1,700,000 from a turnover of £21,000,000, a slightly lower rate than in the two preceding years as its operations were affected by the hire purchase restrictions and the credit squeeze. In the current calendar year the directors expect gross profits to be more than £1,800,000. There should be a further growth in profits in the following two years, reflecting the earnings accruing from the greater volume of hire purchase and rental business that the group's retail division has recently secured. On the ordinary shares, the directors expect to pay a dividend of 24 per cent, so that the shares are being offered at a yield of 5.8 per cent. The founder shares, of which there are 10,500,000 in issue, do not rank for a dividend in 1959 or 1960 but on July 1, 1961, they automatically become ordinary shares, with exactly the same rights as those now being offered to the public.

Investors are thus being offered a stake in the equity of a family concern, which is largely the creation of the work of its chairman, Mr C. W. Hayward, and in which he and his associates retain control. It has thrived under his direction and seems likely to go on doing so but within two years time a considerably enlarged ordinary capital will have to be serviced. In the prospectus, Firth Cleveland is described as an industrial holding and investment company: as that, because the group's fortunes and interests have been built up gradually over the years, it ranks among the better of its kind. The metals division, the engineering division and the retail division offer diversity, but within the metals and engineering divisions there is a fair degree of vertical integration; the diversity, in fact, is not haphazard though the group's markets are widespread.

GENERAL ELECTRIC

THE trading results of General Electric in recent years have been among the most disappointing in the electrical manufacturing industry, and its profits in the year ended March 31st last suffered a further setback. But following the pessimistic interim report issued in January shareholders can gain a little cheer from the final outcome, for in the last three months of the year the decline in earnings appears to have been halted. Over the full year profits, before tax, fell by £516,000 to £4,249,000, but with taxation more than £1 million lower the net profit improved from £1,605,480 to £1,983,000. The total dividend for the year is being maintained at 10 per cent, a ½ per cent increase to 7 per cent in the final payment exactly compensating for the cut that was made in the interim dividend. Earnings have improved slightly, to 16½ per cent.

Sales were once again a record rising by 3½ per cent to £108 million but most of the improvement in profits came in the final quarter of the year. Depreciation is said to be higher, though no figure is given, and though the initial costs and research expenditure on the Hunterston atomic power contract have been written off, another £250,000 has been set aside from current profits to provide against any further costs which may accrue. The directors say that it is not yet possible to forecast the outcome of the contract. The £1 ordinary shares rose 2s. to 35s. on the announcement and they now yield 5¼ per cent.

BLACKBURN AND GENERAL AIRCRAFT

NAVAL orders for aircraft are smaller than those placed by the RAF but as Blackburn is one of the smaller aircraft makers the Fleet Air Arm order for the N.A. 39 should, as the chairman, Mr E. Turner, says, keep its aircraft division reasonably occupied for a number of years. As Blackburn, apart from repairs and overhaul, has virtually ceased working on the Beverley Transport, the size of its profits from aircraft will obviously turn on any success it has in selling the N.A. 39 to customers other than the Fleet Air Arm, to whose specifications it was designed. Much of the capital expenditure of £530,000 in the year to March 31st last was on equipment for this aircraft and this year, as Blackburn prepares to manufacture it in production quantities, capital expenditure

will be of the same order of magnitude. Tooling up for this aircraft occurred at the same time as orders for the Beverleys ran off and in 1958-59 the group's trading profits fell from £1,025,013 to £669,596; its net profits fell less sharply, from £547,104 to £408,111; a final tax free dividend of 6 per cent in addition to an interim capital distribution of 4 per cent, free of tax, replaced the 1957-58 total payment of 10 per cent, tax free; and a net bank overdraft of £320,735 replaced a cash balance of £389,794.

In a year or so, there seems to be a chance that earnings from the aircraft division will begin to pick up, for as well as the N.A. 39 order the level of activity in the engine company, which specialises on small gas turbines, continues to grow. Blackburn has already diversified its activities, securing interests in engineering, agricultural and horticultural machinery, building and civil engineering, but aircraft still make up the major portion of its activities. But its policies for the future seem to be aimed more at further diversification, especially perhaps in electronics, rather than at concentration within the aircraft industry. Indeed, Mr Turner argues that mergers and other forms of grouping within the aircraft industry at a time of falling demand can only result in spreading the available work very thinly with consequent increases in the overhead content in the cost of production. To make use of the skills and techniques acquired in the aircraft industry in other fields makes sense, so long as the moves are made with deliberate care and so long as the managers, as those of Blackburn seem to be prepared to do, are willing to spend time, energy and money on reorganisation and development.

RENOLD CHAINS

As Mr Charles G. Renold, the chairman of Renold Chains, forecast a year ago, the profits of the group declined in the year to March 29th last. The trading surplus was more than £220,000 lower at £1,622,000 and the net profit of £495,561 compares with £558,770 for 1957/58. Thus earnings for the maintained 12½ per cent dividend have fallen from 25 5/8 per cent to 15 3/8 per cent on the capital as increased by the "rights" issue in June 1958. As the business is mainly confined to the mechanical transmission of power and the conveying and handling of material by its extensive range of conveyor and elevator chains, profits tend to reflect the general level of business activity both at home and abroad and clearly its latest results have been affected by the recession in economic activity last year. Towards the end of the financial year, trading began to pick up and sales and orders improved, a trend which has been maintained in the current financial year.

During the year a three for eight rights issue was made at par which brought £2 million into the group's funds and enabled it to increase its manufacturing capacity, particularly at the factory site at Burton-on-Trent, to meet an expected increase in orders. The book value of fixed assets has already risen by £1,400,000 and there are still capital commitments of £839,000 outstanding. It seems possible that the shortage of liquid funds may remain something of a problem, for in 1958/59 the net bank overdraft rose from £230,000 to £551,000 even though the new issue was made and the cash from ploughed back profits amounted to more than £559,000. The company has, however, purchased short term investments of more than £1 million.

The profits of all the companies of the group were lower during the year, except for the Australian subsidiary where the planned extensions were completed and where profits from both manufacturing and selling were satisfactory. The contribution of the new acquisition, Perry and Company (Holdings), to profits was rather disappointing, though recently there has been some improvement in its results. With a net asset value close on 43s. the £1 ordinary shares of the group are currently quoted at 43s. 9d. and yield 5¾ per cent.

BUTLINS

BUTLINS can expect a good reception for its forthcoming one for four rights issue at 4s. per share. The existing 1s ordinary shares are quoted at 6s., which points an opening premium on the new shares of 1s. 7½d. Considering the company's recent record — shareholders have had their dividend doubled over the past four years — the issue seems assured of success, but the company's dividend forecast should add to its attractions. Bookings at the company's holiday camps have so far been maintained at last year's record level. The interim dividend on the present capital is being raised from 10 per cent to 15 per cent and the final dividend on the increased capital will at least be maintained at 25 per cent. That points to a total dividend of at least 40 per cent, to offer a prospective yield of 6 7/8 per cent on an ex-rights price of 5s. 7½d. The new issue will bring about £882,000 into the business.

LINEN THREAD AND COURTAULDS

TWO further moves towards diversification in the textile industry have recently been announced. The chairman of Linen Thread, Mr William E. Luke, told shareholders last March that the group would continue to pursue its policy of extending its operations into growth industries to compensate for the decline in its traditional business. The directors have now announced that the group has acquired for £1,500,000 the family business of Delaney Galley and certain of its associated companies. This purchase represents a complete breakaway from the traditional products of Linen Thread. Delaney Galley specialises in the manufacture of various automotive components, such as radiators, heaters and cooling apparatus. Its future plans include developments in the radar, electronic and nuclear fields. No forecast is made of Delaney Galley's profits, which are said to have fluctuated with the changes in the fortunes of the industries it serves. The sale of Linen Thread's American subsidiary brought £4¼ million into the group and this acquisition is presumably only one of the first steps into other fields.

Of all the companies, it is Courtaulds which has been the most active in acquiring new industrial interests. It is now going into the corsetry industry, making a £2,362,500 cash bid for the ordinary capital of Gossard (Holdings) with an offer of 13s. 6d. for every Gossard 5s. ordinary share. Apart from the manufacture of foundation garments Gossard has a tailoring and outfitting business, two London laundries and an engineering company. With interests in both South Africa and Germany, where Courtaulds also operates, the business should make a useful addition to the Courtaulds group. It is moreover an example of moving into industries where the skills and techniques of the traditional business of the bidder have some application. That may be a more conservative approach but also a more profitable one than spreading one's risks by ventures into completely alien industries.

COURAGE AND BARCLAY

LAST year's fall in beer sales is attributed by the chairman of Courage and Barclay, Colonel J. H. Courage, to the bad summer, the London bus strike and to easier hire-purchase facilities. With the hire-purchase sales reaching new peaks every month it does indeed seem likely that the increasing number of people entering into hire-purchase agreements will be less able to spend so much on beer and what Colonel Courage calls other dispensable items. But in spite of these adverse factors the directors have reported record trading profits at £2,140,899, against £2,134,037, and net profits of £1,008,825, against £885,489, and an increase in the ordinary dividend from 11 to 13 per cent. Rationalisation following the merger four years ago of Courage and Co. and Barclay Perkins, increased sales of the extensively advertised "John Courage" bottled beer and a rising demand for Barclay's lager, at home and abroad, have all contributed to these satisfactory results.

The group's expansion and modernisation programme, which in the past four years has led to the building of more than 50 public houses, has so far been financed internally by the sale of high value sites. On the production side, rationalisation continues, and the centralisation of brewing facilities for Greater London at Horselydown has left the Park Street site available for redevelopment: the directors plan to build a new bottling factory alongside the existing factory there. It is hoped to finance this project partly by the sale of other production properties (none of which can be sold before the new plant comes into operation); but the time has now come when the company is forced to raise additional capital. The form in which it will be raised depends on conditions ruling at the time and the chairman says that until the final plans are approved and construction schedules agreed he cannot say when that time will be. In the light of recent discussion on property values as shown in many brewery companies' balance sheets, there is little doubt the directors of Courage and Barclay are now making the best use of their property assets. Whether the talks now going on with H. and G. Simonds result in a merger or a reciprocal trading agreement remains to be seen, but whatever the outcome it could lead to a better share of the market for both concerns. Since the preliminary figures were published the £1 ordinary shares, in line with the general fall in brewery shares, have fallen 3s. to 50s. and now offer a yield of 5.2 per cent.

COMPANY MEETINGS

GUEST, KEEN AND NETTLEFOLDS LIMITED

MR K. S. PEACOCK'S REVIEW

The fifty-ninth Annual General Meeting of Guest, Keen and Nettlefolds Limited, was held on June 25th at Birmingham, Mr. K. S. Peacock, chairman and managing director, presiding.

The following is an extract from his circulated Statement for the 53 weeks ended January 3, 1959:

In my Statement last year I again made it clear that we considered the ownership of our steel works of major importance to the Group and I outlined the size of our investment in the iron and steel industry. Since that time much has been both said and written on this subject by politicians and by those directly connected with the industry. Although no really cogent arguments have been put forward for renationalisation, the Labour Party have stated that they propose, if elected again, to take this step. It is deplorable that for ideological reasons they are still apparently willing to risk the disruption of this great industry on which the country so much depends.

As I dealt so fully last year with our reasons for opposing renationalisation in any form, I do not propose to repeat the arguments but wish again to advise you that your Board are completely and unalterably opposed to the step in every way.

The position of the G.K.N. Group is, I think, almost unique in that our steel interests, as previously explained to you, serve mainly our own finishing works and the great importance of this close through-and-through contact must once more be emphasised. Practical considerations do not seem, however, to be taken into account in Socialist theories,

RESTRICTIVE TRADE PRACTICES ACT

There is another matter, also political, to which I wish to refer, and that is the Restrictive Trade Practices Act, 1956. When this legislation was proposed I am sure that every right-thinking person was anxious that it should be in such a form as to protect the consumer from unreasonable or too restrictive marketing arrangements.

Unfortunately the wording of the Act appears, from the statements made in the judgments of the Court, to go much further than this—so far, in fact, that it threatens to make co-operation between manufacturers in any way virtually impossible. Many Group Companies are members of Trade Associations and, in the light of the Court's interpretation of the Act, it would appear likely that a number of these Associations may have to be disbanded.

They have, in my opinion, conferred great benefits not only on the industries concerned and the workpeople employed but also, as is most important, on the consumer. But in the nature of things it is difficult to furnish legal proof on this point since it involves proving what could have happened without the agreement. It is interesting to recall that a number of these Associations were formed on the recommendations of the Government of the day in the early 1930s after detailed investigation by the Import Duties Advisory Committee. The basic considerations in regard to Associations should surely be:

1. Are they progressive and do they help the industry to co-operate technically and use the latest modern practices?
2. Are the profit rates of members reasonable, taking bad times with good, in relation to turnover and net assets employed?
3. Do members deal fairly with their customers?

TRADING CONDITIONS IN 1958

In spite of a deterioration in trading conditions in the latter part of 1958, I am pleased to be able to report that the surplus (before taxation) for the whole period of 53 weeks has been maintained at the same weekly rate as for the 52 weeks of 1957. Turnover has increased, but profit margins, particularly in the finishing end of the business, declined in the latter part of the year. It must be recalled that prices of materials increased in 1957 with a resultant windfall in profits arising from sales from stocks, but the reverse applied in 1958, representing a decline in profit comparing the two years of no less than £1,300,000. In addition the year 1958 also bore a full year's cost of the new works pension scheme and improvements to existing pension schemes.

The fixed assets have increased from £15,934,000 at the end of 1951 to £78,590,000 at the end of 1958. Bearing in mind that in 1951 we no longer owned the steel companies which had been nationalised, this tremendous growth reflects partly the re-acquisition of the steel companies in 1954 and 1955 and partly the very large expenditure on improvements and modernisation and on expansion of productive capacity throughout the Group.

LIQUID RESOURCES OF THE GROUP

As regards the liquid resources of the Group, consisting of bank balances in hand less overdrafts, tax reserve certificates and marketable investments, these have contracted from their peak in 1951 of £23,229,000 (which included £13,902,508 remaining from the compensation received on nationalisation of the steel companies) by no more than £3,129,000 to £20,100,000 at the end of 1958. This maintenance of the financial strength of the Group, despite the very heavy expenditure on fixed assets and stock, has been made possible by a dual policy of retaining profits and of getting in new finance both by way of loan capital and by a rights issue to the Ordinary Stockholders.

It is the Ordinary Stockholders, however, who have provided by far the most important part of the increase in the Group's financial resources during the period, their total interest having risen from £40,976,000 at the end of 1951 to £105,803,000 at the end of 1958. Profits retained during the seven years account for £47,502,000 of this increase and the balance of £17,325,000 represents the net proceeds of a right issue to the Ordinary Stockholders in 1957 and the value of shares issued on the acquisition of subsidiaries.

The surplus on trading has increased from £9,226,000 in 1951 to £24,895,000 in 1958 and has approximately kept pace with the increases in turnover and in total net assets. This is shown by the ratio of surplus to turnover having fallen only from 13.5 per cent. in 1951 to 11.9 per cent. in 1958, but on the other hand the ratio of surplus to net assets has slightly improved from 16.1 per cent. to 17.1 per cent. Within this overall stability there are, of course, wide fluctuations from year to year as between the different companies, both at home and abroad. But the Group serves many industries and this is a great source of strength.

PROSPECTS FOR 1959

The deterioration in trading conditions applying to the latter part of 1958 has continued in the early part of 1959. It is possible that the trading results for 1959 will not reach those of the year under consideration unless there is some marked improvement in general conditions.

Our capacity has been enlarged in many directions by the large capital expenditure of recent years and we are well placed to increase our volume of sales substantially. The steel companies and the re-rolling sections of the Group have been operating at a reduced rate, but there are now indications of an improvement in demand. Some of our manufacturing companies are also experiencing improved demands as a result of the revision in purchase tax and hire purchase arrangements, and the motor industry, to which we are large suppliers, remains buoyant, but the engineering side of our business as a whole is down, both in turnover and earnings, at the present time. Profits of our overseas companies have been well maintained.

Your Board have decided that, in spite of existing trading conditions, the Stockholders should participate in the increased profits that we are able to report for 1958. The final dividend is, accordingly, recommended to you at 9 per cent, to give a total for the year of 13 per cent. It will be recalled that the dividend paid for 1957 was 15 per cent on the Ordinary Share Capital prior to the three for ten scrip issue in September, 1958. This rate is equivalent to 11½ per cent on the new Capital of £39,492,069, so that the recommended dividend for 1958 of 13 per cent represents an effective increase of 1½ per cent.

Stockholders may be interested to know that capital expenditure in 1958 reached a record total of £17,621,627.

The report and accounts were adopted.

ALBERT E REED & Co., LTD

CONTINUED GROWTH IN PAPER AND PAPERBOARD MANUFACTURE AND CONVERSION
LORD CORNWALLIS REVIEWS GROUP'S ACTIVITIES

In his annual statement presented to the Fifty-sixth Annual General Meeting of Albert E. Reed & Company Ltd., paper manufacturers and converters, the Rt. Hon. Lord Cornwallis of Linton, K.B.E., M.C., the Chairman, said: —

During the year Mr F.J. Clark and Dr P.H. Sykes have joined the Board of your Company, and I am pleased to have this opportunity of welcoming them on your behalf. Mr Clark's responsibilities are to direct the packaging interests of the Group and Dr Sykes is in charge of the research and development activities. We have no doubt that their wide experience in other spheres will constitute additional strength and will be of great assistance in the pursuance of the Group's policies.

TURNOVER AND TRADING RESULTS

Although profits have been maintained at substantially the same level as last year, this has only been achieved by increased production and turnover as the competitive trading conditions in the paper industry to which I referred last year have become increasingly severe during the financial year ended 31st March 1959.

The turnover, including intercompany sales, was £66,200,000 compared with £62,300,000 last year representing an increase both in volume and in value. The total trading profits for the year, before charging depreciation, are £6,000,922 against £5,764,750 for the previous year.

The installation of large new production units and the continuance of our policy of modernisation in our plants is reflected in the depreciation charges which have increased from £1,263,794 to £1,723,252, and this increase is the cause of the fall in trading profits after depreciation from £4,500,956 to £4,277,670.

After providing for taxation on the trading profits, there is left a net profit of £2,515,381 available for distribution as dividend and transfer to reserves, compared with £2,335,883 for the previous year.

The Directors recommend a final Ordinary dividend of 9 per cent., less income tax, which with the interim dividend paid on 13th December 1958, will make a total of 14 per cent., less income tax, for the year, the same rate as last year.

After providing for this and for the Preference dividend, and after bringing in the balance of £375,594 from the previous year, £1,486,397 is available from which £1,000,000 has been transferred to General Reserve, which now stands at £13,000,000.

This leaves £486,397 to be carried forward on the Group Profit and Loss Account, compared with £375,594 carried forward last year.

BALANCE SHEET

The consolidated balance sheet of the Group shows that the net interest of the shareholders of Albert E. Reed & Company, Limited has increased from £37,354,224 to £38,633,604 during the course of the financial year. This is represented by retained profits, less debenture issue expenses, and the 228,572 "A" Ordinary Shares issued as consideration for the acquisition of R.H. Filmer, Limited, to which I refer later.

Capital expenditure involving both the provision of new plant and buildings and the reconstruction and modernisation of existing assets has amounted to £2,780,000 during the year.

You will recall that the consent of the Capital Issues Committee was received to the new debenture issue to which I referred in my statement last year and the £5,000,000 was subsequently subscribed.

GROUP ACTIVITY

I have already mentioned the increase in Group turnover and I am pleased to report that growth has continued both in the paper and board manufacturing and in the converting operations of the business.

World paper and board production, however, is still materially in excess of world demand and we have not, therefore, been able to take up the full production potential of the new paper machine at Aylesford Paper Mills and the new board machine at Colthrop Board and Paper Mills. Both machines have, however, from time to time, operated at full rated capacity and the Group is in a position to expand its output very substantially on the resumption of full demand which may still be delayed for some time, but which we are satisfied will come in due course.

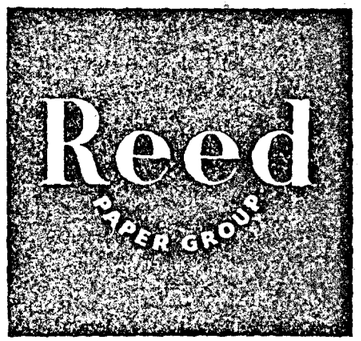
DEVELOPING PRODUCTION POTENTIAL IN PACKAGING

Production potential on the packaging side of the business is being actively developed and ranges over a wide field, with considerable emphasis on research and development in the design and production of new packages.

The acquisition during the year of R.H. Filmer, Limited, has additionally strengthened our productive capacity in boxes and cartons. This company is an old-established concern with a fine reputation and is the largest producer in the country of paperboard containers for the horticultural industry, taking substantial tonnages of board from the Group, thus affording an excellent example of our continuing vertical integration.

An indication of the extent to which these packaging activities feature in the Group as a whole is given in the analysis of Group sales for the year ended 31st March 1959. From this you will see that 74 per cent. of sales are represented by wrapping paper or converted packaging products:—

£66,000,000
Group Sales
Analysis by main products Groups



In addition to these main interests we are continuing to develop certain specialist subsidiary products — the pitch fibre pipes, for example, manufactured by Brookgate Industries Limited and distributed by The Key Engineering Company Limited, both subsidiary companies of the Group, are being rapidly established in the constructional engineering, building and agricultural fields.

ASSOCIATED COMPANIES

The Tasman Pulp & Paper Company Limited in New Zealand, in which your Company holds 25 per cent. of the equity, continues to make progress and it is pleasing to be able to report that for the financial year ended 31st December 1958, that company has shown a profit of £258,019 after providing for the heavy depreciation charges amounting to £1,707,467 to which I referred in my statement last year. I feel that the confidence which your Board has always had in the Tasman company is now proving to be fully justified and that we can look forward to progressive development in this great project, although, partly because of the exceptional depreciation charges and partly because of the major initial problems which always have to be faced in launching a project of this size, it may be some time before we can expect an income return in the way of dividend.

Encouraging results are also being achieved by Kimberly-Clark Limited, manufacturers in this country of creped wadding products, in which we hold a one-third share. We are, in conjunction with our American partners, ploughing back profits in the development of this concern rather than distributing them as dividend, and another high-speed wadding machine is likely to come into operation towards the end of the year.

PROSPECTS

Your Company's liquid resources are for the most part to be utilised in capital development plans already in existence, but I feel that the sound financial position disclosed by the balance sheet will enable your Company to continue the policy of expansion and diversification, and to take advantage of whatever fresh opportunities may arise.

There are indications of an upturn in the general level of business in the United Kingdom, and no doubt if this continues it will have the effect, to some extent, of relieving the situation caused by the temporary surplus capacity in the paper industry, and the substantial recovery of general activity which is reported from the United States and Canada should also make some contribution to this end. It would be unrealistic for me, however, to suggest that we look forward at an early date to any reversal of the extremely competitive situation in our industry, as in certain parts of the world very substantial additional productive capacity is still being laid down although there are no signs as yet that there will be any demand for this additional production when it comes into operation.

EFFORT TO MAINTAIN STABILITY

There are times in almost any industry when productive capacity overtakes demand, and in this respect the paper industry is not at all unique. When, coupled with this situation, there is the interplay of other economic forces a period will be experienced when it becomes more difficult to retain profits at figures which not only enable the capital to be serviced but provide a margin for retention and development of the business. At these times it is important that the efforts to improve efficiency should not be impaired and that quite substantial expenditure should continue to be made on research and development. Unrestricted price warfare in such periods can have very deleterious effects on the health of any industry, produce a state of affairs where capital is not easily available for important projects and menace the continued full time employment of labour, and not, in the long run, give any lasting benefit to the ultimate consumer. We therefore deplore some of the price cutting which has already occurred and which has been to an extent which is in no way justified by reductions in costs. For our part we are continuing to pursue our efforts to maintain stability in paper prices and in the price of wood pulp which is the basic raw material of papermaking. As the world's largest buyers of wood pulp we feel a special responsibility in this connection, and we believe that the continuation of unrestricted reduction in margins will not be beneffeial to the industry in this country or in the world.

CONFIDENCE IN THE FUTURE

In spite of the short term dangers to which I have drawn attention, we have nevertheless the greatest confidence in the long term future prosperity and growth of this great industry of which your Company forms such an important part.

CONCLUSION

The Group markets many types of products — most of them well tried and established, others new and even experimental — and I know it is encouraging to our shareholders to realise that production in our mills has been maintained, and even raised to still higher levels. I can, therefore, sincerely thank, on your behalf, our management and staff for their intensive efforts and our thanks are due to all those whose enthusiasm and, endeavour enables us to keep our production at such standards of tonnage and quality.

LORRAINE-ESCAUT

The Ordinary General Meeting, held on the 16th June 1959, approved the Accounts for the financial year 1958 which show a profit of 1,301,559,552 francs, and resolved that a gross dividend of 8% be paid, that is to say, less taxes but after taking into account the return on income from subsidiaries, 642 francs net, which is exactly the same as the previous dividend.

After having paid tribute to the memory of President Raty, who died on the 20th June 1958, the Board referred in its Report to the development of French industrial activity which, in spite of the fall recorded especially at the end of the year, still shows a 6% improvement in comparison with 1957.

Production of the French Ironworks amounted, in 1958, to 14,600,000 tons against 14,100,000 tons in 1957, and out of this production, the share produced by the Company reached 1,830,000 tons against 1,725,000 tons the previous year.

On the commercial plane, activities remained firm on the home market until the autumn, when a certain slowing down was recorded, consequent upon substantial reduction in stockpiling by consumers. On the export side, following an unfavourable first quarter, there was a marked recovery which did not however affect prices which remained at a mediocre level.

The Tube Industry, like the Iron Industry and contrary to the majority of its foreign competitors, again improved its production with 918,600 tons in 1958 against 867,000 tons in 1957 (the Company produced as its share 383,000 tons of tubes against 359,000 tons). The home demand for tubes showed a certain drop especially in regard to non-welded tubes. The position has been the same in regard to exports, where prices are at a somewhat unfavourable level. On the other hand, there is a very substantial demand for large welded tubes, which is of special interest to the Company's Works at Sedan.

The Board then proceeded to detail the programme of works undertaken by the Company. The extension of the capacity of certain large plants marked fresh advances: the Senelle steel-works, the capacity of which has reached 50,000 tons per month, hoop (strap) iron plant at Thionville, Tube Works at Sedan which make it possible to attain 80 to 90 kilometres of tubes per month, etc.

Moreover important works are in hand, including agglomeration, crushing, construction of a Martin hearth at Mont-Saint-Martin, construction of a second large capacity blast furnace at Senelle and modernisation of the finishing plant and welding shop at Anzin.

The Chairman concluded this Report with a speech during which he dwelt upon the recovery recorded particularly since March and which is illustrated by a gradual return of production figures to more satisfactory levels. It has been clearly stated that during the first five months of 1959, 752,500 tons of steel and 159,000 tons of tubes were manufactured against 792,500 tons and 157,000 tons respectively for the same period in 1958. Compared with that of the whole of the previous year, the monthly average over the first five months gives 150,500 tons against 152,500 tons in 1958 for steel and 31,800 tons against 31,900 tons for tubes.

Finally, during the same period, a total of 2,070,000 tons of ore was extracted, against 2,260,000 tons during the first five months of 1958.

The Chairman finally referred to the manner in which the capital, as decided by the Board, is to be increased; the effect will be to raise the capital from 15 to 16.5 thousand million francs by the creation of 150,000 new shares for cash, issued at par increased by a premium equal to the nominal amount, that is to say in all 20,000 francs. The subscription list, which opened on the 6th July, will be closed on the 31st July next.

GODFREY PHILLIPS LIMITED

ACCOUNTS SHOW STILL FURTHER IMPROVEMENT
A SOUND AND POWERFUL STRUCTURE
MR P. A. GODFREY PHILLIPS ON THE OUTLOOK

The fiftieth annual general meeting of Godfrey Phillips Limited, was held on June 26 at 112 Commercial Street, London, E.1., Mr. P. A. Godfrey Phillips, chairman and managing director, presiding. The Secretary, Mr. A. H. Grindell, read the notice convening the meeting and Mr. H. C. Medlam, F.C.A., of Messrs. Fitzpatrick, Graham & Co., the auditors, read the report of his firm.

The chairman said:

Gentlemen, you have heard read the notice convening the Meeting and the Auditors' Report. As the Accounts and the Directors' Report have been in your hands for some time, with your permission we shall consider them as read. (Agreed.)

It is my special pleasure to welcome you here today on the occasion of our Fiftieth Annual General Meeting, and I am particularly glad that we have with us today the chairman of our Australian Company, Col. F. H. Wright. The history of the business extends back, of course, over a very much longer period, having been founded 115 years ago. In 1908, however, increased capital requirements arising from expansion of trade made necessary its conversion into a Limited Company, from which has grown the Group of Companies with diversified and worldwide interests whose accounts are before us to-day. In its history your Company has had its full share of success and it has also suffered its setbacks, and it is perhaps appropriate, on this occasion, to reflect on the efforts and achievements over the years which have resulted in the building of a sound and powerful structure, the inherent strength of which has enabled us, on more than one occasion, to overcome periods of great difficulty in our trading fortunes.

In recent years, as is well known, we have been passing through such a period, and we have fallen back on these resources to support lower profits and even losses. From this it must not be inferred that we have overcome the immediate trading problems that face us, and which have been featured so prominently in our Reports and in my addresses to you in the past few years. Nevertheless your Board is pleased to be able to present accounts which show a still further improvement in our trading position.

GROUP PROFIT

From the Consolidated Profit and Loss Account it will be seen that the Group Profit before taxation amounts to £496,401, compared with £422,141 for 1957. This increase arises from a higher Trading Profit and from lower Interest Charges, the result both of lower Interest Rates during the year and a further reduction in Bank borrowing throughout the Group. In this latter connection it has again been possible to effect adjustments in the levels of Group stocks. In this section of the Account there is an increased Exceptional Profit of £50,145, arising mainly from the sale of factory premises in Australia, where we have been through a period of considerable reorganisation to which I shall refer later. Against this, however, is a substantial increase in the figure for Depreciation of Fixed Assets which, in the year under review, required no less a sum than £231,594.

I should perhaps here stress that in our industry much of the expensive equipment is of a specialised nature and, in consequence, changing conditions of trade and variations in the preferences of the smoking public throughout the world impose heavy charges for Depreciation in respect of Plant and Machinery. In this matter your Board has always followed a realistic Depreciation policy, the wisdom of which is demonstrated in a period of readjustment and reorganisation.

NEW CIGARETTE-MAKING MACHINE

Furthermore, as most of you will have read, there has been a remarkable development in the design of cigarette-making machinery by a British engineering company and I am pleased to be able to tell you that your Company was the first independent company in Britain to order these new machines which will enable us to maintain our reputation as manufacturers of the highest quality cigarettes.

After providing United Kingdom and Dominion Tax of £273,590 and crediting Provisions No Longer Required of £9,133 there results a Group Profit, after Taxation, of £231,944 compared with £209,350 in the previous year. Of this sum £81,654 is applicable to the interest of Outside Shareholders in Subsidiary Companies so that there remains a profit attributable to the Members of Godfrey Phillips Limited of £150,290 as against £123,005 in 1957.

This sum is added to the amount brought forward from 1957, which is adjusted by £3,428 in respect of Dividends on shares subsequently acquired from Outside Shareholders and, after transferring £11,198 to General Reserve and after deducting Dividends paid, accrued and proposed, there remains to be carried forward to 1959 the sum of £ 1,645,059, an increase of £37,118.

BALANCE SHEET FIGURES

Turning now to the Consolidated Balance Sheet: this discloses that Fixed Assets have increased in net value, after Depreciation, by nearly £118,000, reflecting the acquisition during the year of new factory premises at Waddon, Surrey, in which are housed our Lithographic Group, Day & Wilkins Limited and also our Letterpress Subsidiary, the Spenser Press Limited. Investment in Current Assets shows a reduction of over £533,000 and the excess of these over Current Liabilities and Provision stands at the figure of approximately £6,780,000. There has been no change in the Share Capital. Capital Reserves and Revenue Reserves and Surplus amount, so far as relates to Godfrey Phillips Stock and Shareholders, to over £4,727,000 and have increased during the year by £44,000.

In the Balance Sheet of Godfrey Phillips Limited there has been no material change in Fixed Assets, but Investments in Subsidiary Companies have increased by £297,000. This arises from our acquisition of Forget-Me-Not Cards Limited during the year and from the purchase of the remaining outside interests in one of our Australian Companies. Advances to Subsidiary Companies are reduced by some £137,000 and these, together with Current Assets, exceed Current Liabilities and Provision by approximately £2,990,000.

FACTORS CAUSING CONCERN

Turning now from the accounts to a review of our trading during 1958; this can be classified under three headings; first our Home and Export Cigarette and Tobacco Trade, with which it is convenient to consider our very considerable Imported Cigar Trade; second our overseas Cigarette and Tobacco Trade, conducted through our various Subsidiary Companies in India, Australia, and New Zealand, and our tobacco leaf interests in Southern Rhodesia; and third our diversified interests at home, which include our printing and publishing activities.

It is the first of these, our Home and Export Cigarette and Tobacco Trade which causes most concern. At this time last year I drew attention to the increasing number of brands of cigarettes available in the lower price filter categories and there has been, during the year, no let-up in the launching of new brands generally. In their Report your Board remark on the very heavy weight of Advertising Expenditure now being concentrated on the filter field as a whole. It must be recognised that the margins of profit currently available to manufacturers are, for the majority of brands, quite inadequate to support advertising campaigns on the scale at present carried on to entice the filter smoker. In the straight cigarette field the position is no easier, the public acceptance of brands being seemingly limited to the leading sellers in each price class. In the circumstances it is not surprising that a smaller manufacturer, such as ourselves, finds it extremely difficult and not at all profitable to maintain brands in the face of this competition; from this one must conclude that the opportunities for obtaining rich rewards from the manufacture of cigarettes are severely limited to all but the leading manufacturers.

In pipe tobaccos our position is somewhat more secure, for pipe smokers as a class are more conscious of quality, more selective in their buying and more loyal to their considered choice. However, as the statistics show, this is a gradually declining trade and does not appear to attract the younger restless generation of to-day as much as it did their more relaxed fathers. Nevertheless the high reputation of our products and the steady sale that they enjoy makes a valuable contribution to our home trade.

EXPORTS

It is against this background, together with the volume of exports that we are able to achieve in overseas markets, that our home manufacture is planned and carried on. Exports, however, are dependent on a flourishing Home Trade. It is therefore satisfactory that we have been able to maintain the general level of our exports although we have not yet replaced the volume lost as a result of the New Zealand embargo. There are signs of a softening of the attitude towards importation by the government there, but there is little hope of an early resumption of cigarette imports. Is it too much, however, to hope that at least token imports of smoking tobaccos will be permitted before our famous Four Square name is forgotten in that loyal but distant Dominion?

Our very considerable turnover in imported cigars from Havana and Jamaica has continued to increase. As foreshadowed at this time last year, our business benefited from the increase in the dollar quota for the purchase of Havana Cigars. Unfortunately, as a result of labour conditions in Cuba, our suppliers have just been forced to make a sharp increase in their export prices to take effect immediately. The actual increase exceeds the increase in dollar quota recently agreed for next year with the late Cuban Government; consequently the freer availability of Havana Cigars to this market is not likely to materialise unless a fresh agreement is reached. It can reasonably be hoped, however, that the greater margin of advantage in retail price that Jamaican Cigars will henceforth enjoy, will encourage their sale.

Let us hope that the Jamaican manufacturers take advantage of this golden opportunity to re-establish the prosperity of their industry. The Group's importation of cigars makes a very valuable contribution to profits and, although as a result of this increase in prices our trade may not be able to expand as rapidly as we had hoped, I see no reason at this juncture to fear that we shall not be able to maintain our present position.

SUCCESS IN INDIA

I shall turn now to our overseas trade. In India we had a successful year, your Company there showing a very satisfactory increase both in volume of scales and in profits. India, however, is at present passing through a critical stage in her history and the strains imposed on the economy by her ambitious plans for expansion are formidable not least in respect of foreign exchange. There have been important changes in the structure of Company taxation in the recent Budget, the effects of which are not easy to foresee.

Furthermore, political considerations in India affect quite considerably the rewards of invested capital. Nevertheless, if the risks are large, so also are the potentialities. It would be hazardous to make any long term forecast of the future in India but I confidently expect that results in the present year will be no less favourable than those in the year under review.

IMPROVEMENT IN AUSTRALIA

In Australia during 1958 the improvement of our fortunes was maintained and the sales of Viscount King Size Filter, which was marketed in October 1957 and on which our hopes for ultimate recovery were based, showed very satisfactory progress. This had continued during the present year so that this brand, in the face of formidable opposition, is now easily the second largest selling filter brand. The conditions necessary to pave the way to this achievement have been established over the past two or three years during a very thorough reorganisation of all our interests and the prosecution of economies in production, selling and distribution, which have borne fruit in the success of Viscount. During the last twelve months we have succeeded in negotiating a merger with another manufacturer the International Tobacco Company of Australia (Pty) Limited, and we have good grounds for believing that this will greatly strengthen our position. Our efforts are being concentrated on the progress of Viscount and on the development of the brands acquired as the result of this merger. These efforts will be directed, at the expense I am afraid of early profits, to the sound re-establishment of our trade on a profitable basis for the future.

NEW ZEALAND

In New Zealand the sharp increases in the retail price of cigarettes, necessitated by the heavy increase in taxation imposed by the Budget of 1958, reacted adversely on the level of consumption. This, together with the embargo on imports, has caused some upheaval in the domestic market, which is really only just beginning to settle down as many smokers are forced to transfer their allegiance from imported lines to those manufactured locally.

Your Company there has built during the years very considerable Goodwill both with the Trade and the public and is well-placed to weather this transition period. This is a profitable market and so naturally attracts competition which is scarcely likely to decrease. However our management there is young and energetic and I am sure is equal to the problems now facing it; I fully expect that our New Zealand interests will continue to make a profitable contribution to the Group.

NEW ORGANISATION IN RHODESIA

Now I would like to make some comment about the Federation of Southern Rhodesia and Nyasaland. For some years past tobacco manufacturers throughout the world, particularly in Europe and Asia, have been steadily increasing their use of Rhodesian tobaccos at the expense of tobaccos from the United States of America.

Consequently leading American leaf dealers have found it necessary to enter the Rhodesian market in orders to increase their range of offerings. With the great technical knowledge that they have acquired in buying and handling leaf tobacco, together with the highly trained and expert sales staff which they have at their disposal, they have already become a major factor in the Rhodesian leaf tobacco industry.

Our Group operates on the Rhodesian market through its subsidiary company African Tobaccos (Pvt) Limited who have bought leaf directly on the auction floors and sold, either directly or through agents, to the members of our Group and to other customers. This Company has this year acquired an interest in Dibrell Brothers of Africa (Pvt) Ltd., a newly formed subsidiary of Dibrell Brothers of Danville, Virginia, who have been for close on a century your Group's main suppliers of American tobacco. African Tobaccos (Pvt) Ltd's Managing Director has been appointed Managing Director of Dibrell Brothers of Africa (Pvt) Ltd., and will continue to supervise our requirements of leaf, which will still be handled by the same buyers.

We believe that, as a result of this consolidation of our interests with those of Dibrell Brothers, we shall be able to purchase our own requirements both more economically and at the same time provide better service to our outside customers. Although the benefits of this new organisation are not likely to be felt in terms of profit until 1960, I am convinced that we have made a very satisfactory arrangement which holds out excellent prospects of future profitable returns on our Rhodesian investments.

LETTERPRESS AND LITHOGRAPHIC ACTIVITIES

To turn now to our diversified interests at home; I am glad to report that these are being gradually developed to become worthwhile profit earners for the Group. This cannot be quickly achieved, but the measures which have been taken to house our letterpress and lithographic activities in adjacent modern single storey factory premises and to re-equip these businesses with up-to-date plant and machinery are already showing signs of bearing fruit. In any physical move of production units there is bound to be a temporary set-back in output and such a programme cannot be embarked upon without incurring heavy costs. I am glad to say, however, that both these businesses are well back into their stride although all the new machinery on order is not yet fully installed.

The establishment of our paper back book publishing Company continues and Four Square Books are becoming more widely distributed and read and their reputation for quality and value more generally appreciated. This is a difficult trade for a newcomer, but our undoubted initial success and the foothold which we have acquired are in no small measure due to the benefits we have been able to bring to this venture from our experience in selling and distribution to the Retail Trade, and from our wide associations for distribution in export markets. In the meanwhile we are developing sales technique and methods of display, presentation and marketing which should assist materially in the expansion of

sales and, as we overcome the initial development problems, I look forward to the continued progress of this Company and to its contribution towards profits in the current year and to a further increase in the future.

FORGET-ME-NOT CARDS

In the first half of the year under review we further extended our publishing interests by acquiring a greeting card publishing company, Forget-Me-Not Cards Limited, and I expressed in my Report last year the hopes which we hold for the future of this business. The greeting card habit in this country is rapidly growing and, if it is to follow the pattern on which it has developed in America since the War, the industry must be on the threshold of still further expansion here. It is America that is setting the pace in this industry and we are therefore fortunate to be able to draw on American experience in the design and production of our cards and in the most modern selling methods. We are fortunate too to have inherited a young and enthusiastic management which is energetically working, now unhampered by lack of capital, for the progress of their company.

Furthermore our knowledge of the retail trade in this country, together with help which we have been able to afford through our selling and distribution organisations, has enabled us to plan and put into effect a rapid expansion of this side of your Group's business. Undoubtedly there are profitable years ahead despite strengthening competition. In the eight months of 1958 during which we owned and operated this Company, it made a welcome contribution to our profits and this contribution should be materially increased during the current and subsequent years as the planned expansion of its activities takes effect.

INDUSTRIAL RELATIONS

On the subject of our publishing interests I must utter one word of warning. A prolongation of the present dispute in the printing trade could quite seriously curtail our activities, for we rely considerably on printers outside the Group for our books and greetings cards and are entirely dependent on outside sources for packing materials. In the field of industrial relations the history of our Group is a remarkably good one and it is to be hoped that our new interests will not be hampered, at this early stage in their development, by a prolonged dispute which can do nothing but harm to our future earning power and to our capacity to maintain our present full complement of employees.

I should like once again to thank, on behalf of my colleagues and yourselves, all our various workpeople, management and staffs throughout the Commonwealth for their unfailing loyalty and efforts in the past year. For them particularly I am delighted that we have again been able to show an improvement in results, for it is not always easy when things are not going too well to carry on with that enthusiasm and purpose which is so necessary to a happy and successful concern.

THE CURRENT YEAR

Before concluding I will try and indicate our prospects for the current year, although this is perhaps more difficult than usual owing to the present labour dispute in the printing trade, the effect of which on our publishing interests it is impossible at this juncture to forecast. Notwithstanding this threat we shall pursue the development of these interests with vigour using our very considerable organisation and resources to the utmost in promoting and developing these new enterprises to the point where they are substantial profit earners justifying the effort and investment which has been put into them. This target cannot be reached quickly but we expect to take a considerable step towards it in 1959.

In our Home Cigarette and Tobacco Trade we undoubtedly have a difficult problem and this is under constant review. Any further measures that are necessary will be taken and your Board will ensure that the planning and reorganisation which has been carried out so far does not stop short at a point where unsatisfactory trading is allowed to jeopardise the profit earning capacity of the Group as a whole. Overseas we can, I feel, look forward to a satisfactory year in which our trading results should be at least as good, if not better than in 1958, and should enable us to bridge the gap until the benefits accrue from the new ventures to which I have referred. In general it is my belief that the current year should mark one further step towards the attainment of more prosperous and settled conditions.

On the proposition of the Chairman, seconded by Mr D.V. Littlejohn, T.D., F.C.A., the report and accounts were unanimously adopted and the proposed dividend of 5% and Jubilee bonus of 2½% both less income tax, on the ordinary stocks and shares, were approved; the retiring directors, Mr D.S. Barron, C.I.E., and Mr A.M. Borthwick, M.C., T.D., were re-elected and the directors were authorised to fix the remuneration of the auditors.

BRITISH BORNEO TIMBER COMPANY

The annual general meeting of The British Borneo Timber Co. Ltd. was held on July 23 in London. The following are extracts from the Address of the Chairman, Mr. H. G. C. Townsend:

The year's operations to 31st December 1958 resulted in a profit on working of £43,275 before taxation. This is an improvement of nearly £77,000 over the previous year when there was a loss of £33,498. After providing for taxation, the profit for the year is £22,756. The Board recommend a dividend of 10% less tax.

In 1958 log production rose to some 6½ million cubic feet, an increase of nearly 20% on 1957 which was itself a record. Figures for the past four years show how steeply production has risen since mechanised logging finally displaced hand logging. It cannot be expected that this rate of expansion will continue. As penetration into the jungle becomes deeper an increasing strain is placed on all phases of operations, most of all on transport. All the evidence however points to the conclusion that high production is essential for reasonable profits. The policy must therefore be increased log production with vigilant care over extraction costs.

Sales kept pace with rising production. The main factor limiting profits continues to be the sawmills, and sawn production was again restricted to a figure considerably below capacity.

For the current year log production is running slightly above that of the same period of 1958. Prices for the most part remain firm but as log production generally in North Borneo is rising, increased competition is almost certain. Import restrictions continue to hamper business in some markets but prospects are that the sawmills will show definite improvement.

FORESTAL LAND, TIMBER AND RAILWAYS COMPANY

The fifty-third annual general meeting of The Forestal Land, Timber & Railways Company, Limited was held on June 30th in London. Sir Gerard d'Erlanger, CBE, ACA, (the chairman), presided. The following is an extract from his circulated review:

The results for the year which compare unfavourably with those achieved in 1957, reflect in the main the fluctuation which occurred over these two years in the world market for wattle extract. The year 1958 saw in this industry, as in most others, the operation generally of a policy of running down of stocks and a consequent sharp reduction in the total sales of tanning extract as compared with the previous year. The importance of this factor in relation to the trading results for the year can be gauged from the fact that the total sales of wattle extract by the South African wattle industry fell from 1957 to 1958 by rather more than 23 per cent.

Sales for the first months of the current year indicate a recovery of demand; and the Group continues to hold firmly its full share of the market.

After commenting on the progress of the programme of diversification aimed at the development of new sources of income which was such a vital element in the policy of the Company, the chairman continued:

We are approaching the time when the need to face the financing of the various new projects involved will be reached. I feel, therefore, that I must warn Members that, when considering the rate of dividend which it should recommend in the future, the Board will have to give full weight to the need for conserving our financial resources.

The report and accounts were adopted.

MERCANTILE AND GENERAL REINSURANCE COMPANY

MR H. K. GOSCHEN REVIEWS ACTIVITIES

The ANNUAL GENERAL MEETING of The Mercantile and General Reinsurance Company Limited was held on July 21 at the Company's chief office at Moorfields House, Tenter Street, Moorgate, London, E.C.

The following is a statement by the CHAIRMAN, Mr. Hugh Kenneth Goschen, which has been circulated with the report and accounts for the year ended December 31, 1958: —

The accounts for 1958, which are now presented, have again had to take care of a heavy Canadian experience. It is true that this was better than in 1957, particularly in the Fire Department, but the overlap from that disastrous year into 1958 exceeded the very large reserves that had been set aside in order to provide against this contingency. In 1958 by far the greater proportion of the Canadian loss again arose out of liability business transacted by way of Excess of Loss Covers. It is evident that the adjustments effected in these covers during the previous year were inadequate to meet the rising trend in costs and awards, as well as in loss frequency, and that the situation calls for a far-reaching reassessment of the liabilities undertaken by reinsurance. We have a substantial business in this type of cover in the Canadian market, but if we are to continue to provide this service it can only be on the basis of considerable adjustments in the conditions under which the cover is made available. Reinsurers have supported this market heavily in a most difficult period, but they obviously cannot be expected to continue to do so for an indefinite period. The burden has this year been divided more evenly between this company and its subsidiary, but this has entailed drawing on our reserves in order to write down the investment in that subsidiary to its proper value.

FIRE DEPARTMENT

Turning now to the individual accounts, I can report that the business of the Fire Department closed with a small profit. There were again a number of very heavy losses both at home and overseas. In general, however, apart from Canada, our experience was profitable in almost all the many countries in which we operate. A number of new connections were formed and our Fire business as a whole showed a healthy development. The demand for profitable Fire reinsurance tends to increase as compensation is sought for losses and retrenchment in other sectors and various competitive influences have led to a temporary check in the growth of our net premium income. Competition is intense in Fire reinsurance. We endeavour to meet it by providing our friends with ample and continuing cover and with specialized facilities to suit the particular needs of the individual companies. We are pleased to be able to say that these special services are becoming more and more appreciated.

ACCIDENT DEPARTMENT

The Accident Department continues to expand and the year 1958 has produced an appreciable increase in premium volume attributable in part to a rearrangement of the retrocession protection afforded to our Canadian subsidiary. The addition to the premium reserve to cover unexpired risks corresponding to this increase was a severe charge in a year of indifferent underwriting results.

Turning to the individual classes, I regret to report that Burglary business is now showing a most unfavourable trend in consequence of the hold-ups, pay-roll thefts, and other forms of armed robbery that are almost daily reading in the London Press. Legislation to permit the payment of wages by cheque would be of the greatest help in improving this unfortunate experience and it is to be hoped that these proposals will be implemented shortly. Our Personal Accident Account has also given us many heavy claims this year, including a substantial payment in respect of the air disaster in Munich when the Manchester United Football Club was involved. The rapid growth of air travel, combined with the increasing number of fatalities on the road, are factors contributing to our rising loss ratio for this section of our business that was once so profitable. We have also sustained a loss this year for Guarantee business, normally one of our more satisfactory classes, this being due mainly to the financial difficulties of an important group of trading companies in South Africa, in which we were involved under a number of separate reinsurance treaties. Motor business continues to be a cause of much anxiety and Public Liability, which also gave us a loss, is creating many problems for us with the increasing demand for high limits of indemnity of the widest scope. Our Workmen's Compensation Act business in Australia continues to run heavily and our constant efforts to put this on to a sound basis are made more difficult by the ever-rising scale of benefits payable to injured employees under the local legislation.

It will thus be seen that Accident business generally is running through a most difficult phase at present and it is mainly the less substantial classes that have closed with a profit margin. This is not sufficient to offset the bad results of the larger and more important classes when added to the continuing adverse experience of our subsidiary in Canada, so that I regret to report that we have ended the year with an overall deficit in this department.

MARINE DEPARTMENT

The increase in our Marine income amounting to 22.6 per cent. over last year derives from a further spread of our connections in most of the markets of the world and this is welcome. However, the general trend in Marine business to-day is one of contraction due to tonnage laid up and the fall in Hull values, and in the cargo market rates remain low under the pressure of competition. We must, therefore, expect a slower growth in the next year or two. The impact of serious casualties felt in recent years has lessened, but the runnings-off of the accounts of the immediate past years continues to reflect these heavy losses. These features do not give us much cause for optimism and we are retaining the surplus on our operations in the Marine Fund, which now amounts to 128.6 per cent. of net premiums.

LIFE DEPARTMENT

The Life Department can once again report record business. The net new sums assured amounted to £34,471,971 as compared with £27,616,211 in 1957. In the United Kingdom, our most important territory, new business was buoyant, while overseas a notable feature was the volume of business transacted in Australia by our branch office and by our subsidiary company in Sydney under our Australian general manager, Mr. Owen K. Taylor, and thanks to the considerable underwriting activities of Mr. K. Graves. Moreover, our new branch in Canada also had a successful year under Mr. Michie's guidance, while South Africa too made an appreciable contribution to our progress. The new business (measured in sums assured) was distributed as to 50 per cent. in the United Kingdom, 25 per cent. in Australia, Canada and South Africa, and 25 per cent. in other overseas territories. The Life premium income now exceeds £3,000,000 and the Life Assurance and Annuity Fund has passed the £10,000,000 milestone. Claims by death were heavier than in the previous year, but the overall mortality experience was satisfactory. The interest yield on the Life investments showed a marked improvement and there was a substantial rise in market values at the close of the year.

INVESTMENTS AND LOANS

You will see from the balance-sheet that the Investments and Loans of the Company (General and Life) again show a considerable advance. The total amount, at £20,494,209, compared with the sum of £16,568,077 invested at the close of the previous year, represents an increase during the year of approximately £3,926,000. The year 1958 witnessed a marked change in the economic climate of the United Kingdom. In the early part of the year the financial scene was dominated by the protective measures taken by the Government in the previous autumn, but by the middle of 1958 it became apparent that inflationary pressures were easing. The Bank rate was

reduced in five stages from 7 per cent. to 4 per cent. and measures were introduced permitting some relaxation in the control of credit, principally those relating to hire purchase and bank advances. Long-term interest rates, however, were little affected by the marked fall in the Bank rate and conditions for the investment of long-term funds were satisfactory. We have increased our investment in British, Commonwealth, and Foreign Government securities and we have continued to make important additions to our holdings of Debentures and equities in the United Kingdom. Equity prices, both in the United Kingdom and in North America, showed substantial rises. Taking our investments as a whole, the market value exceeded the book value at the end of the year by an increased margin.

I am sure you will all wish to join with me in thanking the officials and staff throughout the organization for their wholehearted efforts. We are indeed fortunate in having such a loyal and enthusiastic body of men and women to carry on the work.

BANQUE DE PARIS ET DES PAYS BAS

PARIS

The Annual General Meeting of the Banque de Paris et des Pays Bas was held on May 21 with M. Emmanuel Monick in the chair. The following are extracts from the report presented by the Board of Directors:

REVIEW

Two factors dominated the world economic scene in 1958: an abundance of dollars in the monetary field and an abundance of energy in the economic field. On the one hand, sales of $2,300m. worth of gold by the United States showed that the dollar had ceased to be a scarce currency. On the other hand, the fall in the price of crude oil, the increased competition between oil and coal, and the accumulation of pithead stocks of coal marked the end of a world shortage of fuel.

In France economic development during 1958 was influenced by an anti-inflationary policy imposed as a result of the continued drain on the country's currency reserves. Production increased by app. 6 per cent and consumer demand stabilised.

The Bank participated in the launching of the 3½% Government loan as well as in financial operations on behalf of a number of companies.

As a result of the Bank's decision to take an active part in the expansion of the Algerian economy, it collaborated with another organisation in the formation of *Société Algérienne de Développement et d'Expansion "Socaldex"*. Planning is also being carried out in connection with a project to build iron and steel, chemical and petrochemical plants in Algeria.

PROFITS AND DIVIDENDS

At December 31, 1958, the balance sheet total amounted to Frs.177,277,889,645 as against Frs.167,535,853,045 at the corresponding date in 1957.

After all expenses and allocations, net profits amounted to Frs.1,210,667,607, and it was accordingly proposed to distribute a net dividend of Frs.650 per share as against Frs.600 in 1958.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

SQUARE GRIP REINFORCEMENT COMPANY

The following are extracts from the Directors' Report of The Square Grip Reinforcement Company (London) Limited for the year ended March 31, 1959:

The year just concluded has been a challenging one, but in spite of keen competition the Company secured a larger share of the business available, and output has again exceeded all previous records, although at lower profit levels.

Export sales were satisfactory but earnings were adversely affected by the low Continental prices being offered.

The combined profits of all the companies of the Group for the year ended 31st March, 1959, after providing £31,193 for Depreciation, amount to £255,608 (last year £338,505). There has been provided for Taxation the sum of £117,731 (£165,237) and the Net Profit of the Group after Taxation is therefore £137,877 (£173,268).

The Directors propose a Final Dividend of 16½ per cent, making 22½ per cent for the year.

In addition to the Final Dividend the Directors are proposing a distribution of 3 per cent free of tax out of the accumulated capital profits of the Company.

The General Reserve now amounts to £150,000, and the Directors are proposing to capitalise the whole of this sum by the issue of 3 new Ordinary Shares of 5/-each, credited as fully paid, for every 8 Ordinary Shares held on the 19th of June, 1959.

HIELD BROTHERS LIMITED

The 37th annual general meeting of Hield Brothers Limited was held on June 30 at Briggella Mills, Bradford, Mr. David H. Hield (the chairman), presiding.

The following is the statement by the chairman which had been circulated with the report and accounts for the year to March 31, 1959:

I have pleasure in submitting our Annual Report, showing a profit after taxation of £113,600 as against £43,968 last year, which we consider satisfactory, but I must point out that these results have been helped by the provision of £37,446 against forward contracts on which tax was provided last year and which has eased our tax burden this year by £18,255.

The profit brought to the Appropriation Account is £216,908, which is £38,570 more than last year. We recommend the payment of the half year's dividend on our 6 per cent. Cumulative Preference Stock and 17½ per cent. on the Ordinary Stock for the year and to put £50,000 to Reserve Account, which leaves a balance of undistributed group profits to be carried forward of £174,819.

It has been a difficult year: in the early part there was a severe recession in trade which was accentuated by a fall of 25 per cent. in wool values, which checked buying, delayed deliveries, and in turn led to the keenest competition for any new business.

We have to-day a substantial order book and all our mills are working full time, but margins are lean.

As to the future, I hesitate to make any forecast, but I hope it will be less troublesome than the year behind us.

I wish to record on behalf of the Board our thanks to our staff for their work in this arduous year.

The report and accounts were adopted and the dividend, as recommended, was approved.

The retiring director, Mr. D. H. Hield, was re-elected and the remuneration of the auditors, Messrs. Alfred Dobson & Co., was fixed.

At a subsequent extraordinary general meeting alterations to the Articles of Association having been approved, the proceedings terminated.

DUFF DEVELOPMENT COMPANY

The 28th ordinary general meeting of Duff Development Company Limited was held on June 26th in London, Mr. Eric H. North (the chairman) presiding. The following is an extract from his circulated statement:

For the year 1958 production of rubber was 4,753,930 lbs from 6,598 acres tapped against 4,528,945 lbs. from 6,688 acres in the previous year.

The cost of production was 15.52d. per lb. To this must be added 1.93d. per lb. for Export Duty making together 17.45d. per lb. The comparative figures for 1957 were 16.42d., 2.36d. and 18.78d. respectively.

The net proceeds of the crop totalled £411,824. The average net price obtained for all grades (i.e. including all forms of scrap) was 20.79 d. per lb. equal to 22.79d. per lb. Landed London Terms.

After meeting the Cost of Production, Export Duty, Administration Expenses and Debenture Interest, a Profit of £70,812 remained.

You will notice that the £45,164 6% Convertible and Redeemable First Mortgage Debenture Stock was redeemed at 105 per cent on 31st December 1958. In order to conserve the Company's working capital the sum of £45,000 (roughly equal to the principal sum involved) has been transferred from the unappropriated profit to General Reserve.

There is left available after various adjustments £74,594 of which the proposed dividend of 30 per cent for the year 1958 (less tax) will absorb £41,869 leaving a balance to be carried forward of £32,725.

The report was adopted.

THE WIGGINS TEAPE GROUP

(WIGGINS, TEAPE & CO. LIMITED)

ANNUAL REPORT AND ACCOUNTS OF THE WIGGINS TEAPE GROUP FOR 1958

PRODUCTS

THE GATEWAY RANGE

(*a*) Watermarked paper for letterheads, ledgers, air mail, blotting, cheques, stamps, office systems and index boards.

(*b*) Printing and drawing papers—coated art papers and boards, chromos, gummed papers, cartridges, details, tracing, chart and recording papers.

BANKS, BONDS, MANIFOLDS AND CONTINUOUS STATIONERY PAPER.

"NO CARBON REQUIRED PAPER"—the time saving copying paper.

PACKAGING PAPERS:
Glassine, Greaseproof, Genuine Vegetable Parchment, Glazed Imitation Parchment, Tissue, M.G. Sulphite, Foil Backing, etc.

TISSUES

INDUSTRIAL BASE PAPERS
Photographic, dyeline, ferro prussiate, plastic laminate, abrasive, oil and air filter, etc.

COMMERCIAL AND PERSONAL STATIONERY AND ENVELOPES

DISTRIBUTION CENTRES—
Home—Belfast, Birmingham, Bristol, Cardiff, Edinburgh, Glasgow, Leeds, Liverpool, London, Manchester, Newcastle, Nottingham.

SALIENT POINTS

Net Profit (including adjustments in respect of previous years £50,415) after taxation and minority interests	£2,129,979
Debenture Interest	213,732
Preference Dividend	89,007
Ordinary Dividend	869,655
Net Profit retained in Group	957,585
	£2,129,979
Net Current Assets	11,033,063
Fixed Assets	20,630,035
Trade Investments	683,083
Total Capital Employed (including Debentures and Loans)	£32,346,181

EXTRACTS FROM STATEMENT BY MR L. W. FARROW, C.B.E., CHAIRMAN

STATE OF TRADE AND SALES: The state of trade in the Paper Industry is very much the same as I reported in my Statement last year. Though there has been a small increase over 1957 in the demand for paper, the market is overshadowed by the new manufacturing capacity which has become available. This state of affairs continues to promote highly competitive conditions.

With these trading conditions as a background, it is most gratifying to be able to report that the turnover of the Group again showed an increase, so we can claim to have obtained our fair share of the business available. In fact, our volume of sales again constituted an all time record in the history of the Group.

In spite of increased import restrictions in many overseas markets we were able to improve on our 1957 export sales and achieved in 1958 a new record for the Group.

PRODUCTION: It is pleasing to report that the volume of paper produced at our mills in 1958 showed an increase on that of 1957, thus constituting a new record.

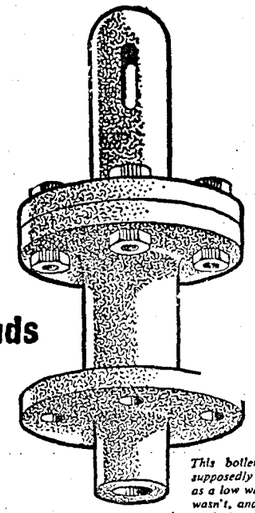
SELLING PRICES AND COSTS OF PRODUCTION: There was no general change in selling prices in 1958 as compared with those in 1957. Severe competition, in some cases from imported papers had, however, an effect on the papers sold in the lower price bracket, in which the bulk of the Company's extra production took place. It was possible to some extent to offset this state of affairs by increased efficiency, although the average profit per ton showed a small decrease.

NEW DEVELOPMENTS: The new paper machine at our Dartford Mill which commenced production last year is one of great complexity. It was designed to make papers of very diverse nature. Profitable operation of this machine has taken much longer than we had anticipated, and some mechanical alterations were necessary before satisfactory quality over the whole range could be made. This delay has resulted in considerable losses. I am glad to say we have now reached a point when these losses have been largely curtailed, if not entirely eliminated.

The woodpulp mill at Sudbrook, South Wales, is now running profitably but the initial operations produced substantial losses. When this mill was started up, no pulp manufacturer had had any experience in processing mixed hardwood by the continuous digestion method of producing bleached woodpulp. Our designs and methods were evolved as a result of information obtained from the U.S.A. and Sweden, which was adapted to the use of the species of hardwood available in this country. It was, therefore, to be expected that losses should be incurred in starting up a plant of this nature. The quality of the pulp is excellent and the present productive capacity of the mill is considerably in excess of our expectations.

I can safely predict that these two ventures which, with working capital, have absorbed over £4,000,000, will prove to be profitable investments for the Group.

PROSPECTS FOR THE CURRENT YEAR: The Sales for the period from the 3rd January to date again show an increase. The net profits for the same period also show an increase. Trading conditions, however, continue to be very difficult or the reasons I have indicated. Subject to circumstances beyond their control, your Directors are hopeful that the results for 1959 should not prove to be unsatisfactory.



This boiler fitting cost thousands of pounds

This boiler fitting was supposedly doing its job as a low water alarm. It wasn't, and the resultant explosion not only cost the firm a boiler house, but a crippling loss of profits.

—and two people could have prevented the accident

An accident like this, caused by a defect in the working parts of the apparatus, need never happen—if a qualified Engineer Surveyor regularly inspects machinery. But first it is the responsibility of someone at top-level—a director, the secretary or chief engineer—to see that all their industrial machinery is regularly inspected and properly insured by specialists.

1859 1959

Vulcan inspects and protects

Vulcan, who this year celebrate a century of experience—and look forward to learning more every day—provide just such a service. It costs no more than insurance and inspection by 'general practitioners'. Our appointment is always welcomed by company engineers and insurance brokers—because they know that if defects are to be found, a Vulcan Engineer Surveyor will find them, and prevent the accident that would have happened.

CARBON VANES ARE DIFFERENT!

Light as aluminium, non-hygroscopic, readily machineable, highly resistant to wear and requiring no lubrication—these are some of the special properties of MORGANITE CARBON VANES. They are especially suitable for use in rotary pumps and compressors where non-contamination is essential.

MORGANITE CARBON VANES resist chemical atmospheres and corrosive conditions; withstand high temperature, immersion in liquids; are suitable for inaccessible positions and completely eliminate maintenance.

MORGANITE CARBON VANES are solving the specific problems of many manufacturers—maybe they will solve yours. Please write or telephone for leaflet SD 69, or for one of our Technical Advisers to call.

RANSOME AND MARLES CHOSE COUNTY DURHAM

— and started another success story

Site research on a nationwide scale preceded the decision of the Ransome and Marles Bearing Co. Ltd. to build their new factory at Annfield Plain—one of County Durham's many industrial sites. The company's major need was a large labour force easily trainable to the high precision standards of bearing manufacture, and this they have found in good measure.

Next consideration was the availability of factory services — water, fuel, transport etc., and here again demand was well satisfied.

So successful was this new factory in County Durham, that it was extended considerably only two years after opening, and the company own adjacent land against such time as further extensions may be required.

Every assistance for E-X-P-A-N-D-I-N-G firms

In addition to their basic requirements, Ransome and Marles found willing co-operation at all levels of local and national government. Housing priorities for key workers, for instance, was but one of the many tools made available for establishing this new industry.

After satisfying these primary needs Ransome and Marles found a number of advantages associated with manufacturing in County Durham. The easy access to all parts of the Kingdom via excellent road and rail routes. The fact that coal, coke, gas and electricity are the cheapest in the country. As production and sales continue to climb, Ransome and Marles view with every satisfaction their decision to expand in County Durham.

SITE VACANCIES IN COUNTY DURHAM

THIS CASE HISTORY reflects the favourable atmosphere for industrial expansion to be found throughout County Durham. Dozens of sites—hundreds of acres all over the County are ripe for development. And each site has its own local advantages for certain industries, plus the advantages of the County as a whole. Site details, together with full information on all factors affecting production and distribution are thoroughly surveyed in 'Industrial Opportunities in County Durham,' a 24 page digest specially prepared for firms contemplating expansion. *A copy is available from* THE COUNTY PLANNING OFFICER, DURHAM COUNTY COUNCIL, 10 CHURCH STREET, DURHAM.

UNDER SECRETARY TO GOVERNMENT 10 AUG 1959 PUBLIC DEPARTMENT

Living with Devlin

THE Devlin report is the Government's own self-made boomerang. And it carries a delayed-action charge. Even more explosive than its strictures on what happened in Nyasaland last March are the possible implications of its findings for future policy, not only in Nyasaland but in the Federation at large. The Government's first reaction has been to brazen it out by brushing aside the unpalatable bits. In the debate on Tuesday the Government made this partial but really fundamental rejection of the report a matter of confidence : explanations, yes, but no apologies, still less any resignations. Perhaps, to politicians on the eve of a general election, this seemed the only way to ride out the parliamentary storm; but these expedient tactics have made the responsibility which Ministers are so eager to shoulder together vastly harder to discharge.

On the face of it, this explosive report by the Devlin commission on events in Nyasaland was testimony to detached British justice and fair play. It could even have been regarded as a feather in the cap of the Government that set up this well-manned commission. Instead, the Government's response has been, roughly, "tell the truth and shame the Devlin". The trouble is that ministers chose the commission, its members and its methods of inquiry, precisely to discover the truth. Now they wish, it seems, to have it both ways, to lean on the report where it fits their policies, and to disparage the rest. It is fair enough that the governor-on-the-spot, Sir Robert Armitage, and his supporting ministers in Whitehall should make their full rejoinder to the commission's strictures and conclusions (the points of conflict are summarised on page 267). But ministers and their cohorts in Parliament put themselves out of court in so discrediting their own fact-finders. By so doing, they turn a blind eye to the warnings in the report on both the attitudes of the Africans and the assumptions of their white rulers. And they set an ill precedent for all future impartial fact-finding exercises, at home or abroad, in colonies and in emergent Commonwealth countries equipped with British institutions — most immediately and fatefully in Central Africa itself.

Politics has overridden the appearance of detached justice, as well as the instinct which Mr Lennox-Boyd must have had to resign forthwith. Perhaps this was inevitable. What has happened has justified the doubts expressed here last March whether a quasi-judicial commission to investigate the past would in the event do anybody any good, in preference to a political mission to Nyasaland to show a bi-partisan flag, to calm feelings, and get people talking constructively about the future. From the nature of the task, the Devlin report is argumentative as well as judicial and has completely convinced nobody either in Britain or in Central Africa. Everybody is picking out of it fresh evidence to bolster his own case and

quoting scripture against his opponents. Everyone is splitting hairs about what exactly is meant by a "police state" or whether the omission of the word "so-called" before the word "riot" from a letter of Dr Banda in the original white paper about the murder plot makes Dr Banda a traduced and innocent man. Everyone, including African nationalist politicians, has become more self-righteous. Justice may have been done, but counsel has been clouded.

For this the commission cannot be blamed. The Government, which gave it its brief, can be blamed; convinced that it had crushing evidence of a murder plot, it coveted the imprimatur of a judicial body to trounce its opponents. Yet everybody who knows Africa knows how fantastically hard it is to pin down motives, intentions and even facts in an African situation. It was always a fair guess that the main conclusions of the commission would boil down to three: that by March 3rd Nyasaland had reached the point of near-anarchy where the Government had to act; that whether the wild African talk picked up by informers amounted to a plot to massacre whites or not would depend very largely on the spectacles worn by the observer; and that the shortcomings of a colonial police force aided by inexperienced troops would lead to illegal use of force.

WHAT is done is done. It was never the past that mattered most, but the future. The real challenge of the Devlin report is not what it says about the "plot" and its handling; it is "What happens now?" Whatever the balance of votes in Parliament, this report will powerfully influence the course of events. Above all, it must profoundly affect plans for the constitution of Nyasaland and for the fact-finding commission to prepare for the review of the Central African federal constitution, which the Prime Minister and Mr Lennox-Boyd (before the report appeared but after they knew what was in it) asked the Labour Opposition to back. The Government, jib as it may, has now to live with the Devlin report. Not to recant or resign, however honest the refusal, solves nothing.

The report and everything that has been said about it reinforce the arguments in favour of the wider fact-finding commission ahead of the constitutional review. It has all along been clear that if no preparatory work is done before the review in 1960 (or later), the conference will then bog down in interminable disputation about the results of loosening or tightening federal ties; about whether this or that change in the franchise would bring in 10,000 or 100,000 more black voters; and (here the Devlin alarm bells sound loud and clear) about African attitudes and interests. **The Devlin report itself will be used by all the disputants as ammunition.** Yet, in themselves, its findings do not serve the purpose of a constitutional review, perhaps not even on the Nyasaland Africans' opposition to federation. The preparatory commission will have to check, as a first task, the Devlin commission's conclusion that this opposition is "deeply rooted and almost universally held". Similar scrutiny will have to be made of African feelings in Northern and Southern Rhodesia, if a full picture is to be put before the conference. The Prime Minister has specifically said that the commission is to consider how far the Federation has lived up to the preamble about partnership in the constitution, and even whether federation itself should continue.

Here, indeed, is the immediate crux of the Devlin row. There is no evading the findings of Sir Patrick Devlin and his colleagues on Dr Banda. If they are right in saying that Dr Banda himself never approved of violence and was ready to compromise, Dr Banda has a strong claim to represent the Africans of Nyasaland on the preparatory commission. It is a claim which the Government and Sir Roy Welensky will not, perhaps cannot, admit. But, in rejecting the Devlin commission's opinions on Dr Banda, the precedent is set for the Africans of Central Africa to reject anything in the findings of the preparatory commission. They will be more than ever convinced, after the Devlin findings, that Dr Banda, or somebody from his entourage, is the only fair nomination.

Between now and 1960, moreover, there is the urgent problem (highlighted, again, by the Devlin findings) of restoring the rule of law and something like political life to Nyasaland. The Government has announced that more Africans are to be nominated to the legislative council; and two of these are to be offered seats in the executive council. But what will this amount to while the Congress leaders, enjoying a very strong degree of popular support, remain locked up? It will probably prove hard enough to get any anti-Congress Africans to serve, even if they are assured that Dr Banda and his colleagues will remain under lock and key. And, at worst, these men will be invited to serve in a Government which will have to continue the repressive measures that the Devlin report stigmatised as: "no doubt only temporarily — a police state".

After the Devlin report can the Government indefinitely keep the Nyasaland Congress detainees untried and under lock and key? A judge, working with distinguished colleagues, has found that the charges on which the detention of many of these men were sustained are not proven. The Nyasalanders will not believe that they can be justly held. Others must

ask why, if they must be held, they cannot all be fairly tried. Again the key position is held by Dr Banda himself. If he were now returned to Nyasaland, it would become almost intolerable for the Government and certainly for the governor; if he were brought to Britain and freed, so that he might be declared a prohibited immigrant, everyone would feel that it was a dirty trick. Obviously some sort of political life has got to be restarted in Nyasaland; obviously, too, the frank findings of the Devlin commission have made it extraordinarily difficult to restart it. Yet the longer the Government shrinks from starting the process of release, the louder will become the demand for "justice, based on the findings of a British judge".

The Government can have its way now, with some buffets, in Parliament. Mr Macmillan has involved the whole credit of himself and his Government. In the general election just round the corner it is likely that colonial issues will not be decisive. But, even if the Government wins, it is surely going to find that living with the Devlin report is its own penance.

The Commission and the Governor

THE Report of the Nyasaland Commission of Inquiry (Cmnd 814) under Sir Patrick Devlin, published on July 23rd, seeks to set out the facts of what happened in Nyasaland from July, 1958 (with a brief introduction 1944-58) up to the final operations which crushed the proscribed Congress party. It was not part of its brief to make any recommendations. With the report were published the comments of the Governor, Sir Robert Armitage, in which he disagrees with many of the deductions made by the commission from the evidence it collected. The main points of the two white papers may be summarised as follows (approximately in the order of the Devlin Report):

1 Inevitability of a Clash. The *Commission* holds that by 1958 an unbridgeable gulf existed between the Government and the Congress; the Government, upholding federation, saw almost any protest against it as disloyal and seditious; failed to realise the Congress was based on popular support rather than the machinations of a few agitators; and through the great power of the administration, police and chiefs stifled the attempts by Congress to work up a national agitation. Denied any real constitutional outlet to make its views effective, the Congress was driven to illegal tactics (at first only of a harassing nature, such as the flouting of soil conservation rules).

The *Governor* denies all this, saying that Congress was free to state its views, but "what is not legitimate... is to challenge the lawful authority of government".

2 The State of Emergency. The *Commission* considers that, because collision was inevitable, a state of affairs was reached in which growing excitement and violence compelled the government by March 3rd "either to act or to abdicate", and it had to resort to emergency powers. The *Governor* agrees with this. But the *Commission* contends that some of the incidents which led to police action that roused African anger at this stage were exaggerated.

3 The Responsibility of Dr Banda. The *Commission* considers that Dr Banda did plan a vociferous agitation to bring "pressure" (his words) on the British government to win African control of the legislature and to end federation; but it does not consider that he intended large scale violence. On the other hand it thinks his lieutenants, who brought him to Nyasaland, did intend considerable violence; it blames Dr Banda for leaving so many critical meetings to these men (Chipembere, Chiume, Chisiza) and for becoming a messiah-like front for their actions, and it finds that Banda's main concern was to go to prison, and create a precedent on the Gandhi model.

The *Governor* retorts that, on the contrary, when Banda spoke of "setting Nyasaland on fire" he approved of arson and murder, even if he did not intend to commit it personally.

4 The Murder Plot. The *Commission* did not find "any detailed plan for massacre and annihilation" in the final stages of the disorders. It plays down the significance of the meeting of Congress leaders in the bush on January 25th; it considers that the report of one informer, on which the government relied and which set out a neat series of decisions for "R-day" is entirely suspect; and the corroborative report did not, in fact, corroborate it. It concludes that the meeting was a very ragged affair (at which several people often talked at once); all that emerged was a determination that, if Dr Banda were arrested, "breaches of the law were to be committed and that attempts by the government to enforce it were to be resisted with violence." Some leaders did talk of killing Europeans and something like a "black list" of quislings was started.

The *Governor* replies that this is a distinction without a difference: that "there was not merely talk, but that decisions as to the course of action to be followed had been reached"; he adduces evidence in the Commission's report of Africans speaking of bloodshed (e.g. Chipembere in a speech: "We mean to die for this country or win liberation.") to support his against the Commission's deductions. He considers Banda privy to these decisions.

The *Commission* declares there was much "negative evidence" that there was no plot.

5 Disorders leading up to the Emergency. Analysing these, the *Commission* concludes that Africans generally only meant to make forcible protests, not to kill, it thinks Congress leaders meant to stir up more violence.

6 Disorders during the Emergency. Again the *Commission* considers that the course of these shows that the mobs were slow to violence, but that some agitators egged them on, and this led to the casualties which were incurred, some of which the Commission considers were unnecessary. The Commission thinks undue force was used in the arrest of some Congress leaders. It also thinks that some illegal force was used in the restoration of order, and this was authorised from the top; and that the troops carried out bullying, punitive expeditions.

The *Governor* denies this, and replies that the Commission seemed to expect troops and police to take impossible risks by letting situations get out of control by withholding fire in some instances. He hotly denies that Nyasaland is now "a police state ...where it is unwise to express any but the most restrained criticism of government policy."

7 Sir Roy Welensky's Role. The *Commission* reports, and the *Governor* concurs, that the Federal Prime Minister did not influence the Nyasaland government's decisions in any way, though he recommended that Lord Perth should not proceed on his mission to discuss a new constitution as the disorders were working up, lest the British government should seem to be negotiating under duress.

After Sir Roger

Experience of the Makins experiment at the Treasury raises some important, and impersonal, administrative issues.

THE news of the departure of Sir Roger Makins, at the end of the year, from the Treasury to the chairmanship of the Atomic Energy Authority represents more than merely a change of office by a distinguished, if sometimes controversial, public servant, with a uniquely varied career. It also marks the end of the first stage of an important administrative experiment. It is exactly three years since Sir Roger was appointed to be the first joint permanent secretary at the Treasury with a specific responsibility for economic affairs; the idea was that the other permanent secretary at the Treasury, Sir Norman Brook, should be free to concentrate on the Treasury chief's main role, as head of the Civil Service.

Most people in Whitehall, and especially in the Treasury, resent any journalistic discussion of particular civil servants' contributions to the trend of policy; they say that civil servants should be regarded as powerless and therefore uncriticisable advisers or administrators, and that only ministers' decisions exist to be discussed. This is a misconception of British democratic tradition. Historically, the idea that the influence of particular civil servants is not fair game for discussion has always applied only to those who have had no major influence at all; it was never applied in the nineteenth century to, for example, the great colonial proconsuls and prominent British ambassadors abroad. Now that key civil servants in domestic departments plainly exert an important influence, the press has a duty to comment.

Unfortunately, the duty is a difficult one. By the nature of things it is easier to analyse what appear to be the personal predilections of ministers, who make speeches, than of civil servants, who do not. Yet even in the political field journalistic analysis nowadays is far too often based on unreliable gossip column stuff. Any discussion on the Makins experiment had better be confined to general principles rather than to speculations about personalities.

Two general points stand out. The first is that the creation of the office of a joint permanent secretary has up to now tended to increase the influence of what used to be called the traditional "Treasury view" of economic policy, at the expense of the professional economists' view of it. Before Sir Roger's appointment, ever since the famous budget speech which Sir Kingsley Wood delivered (and which Maynard Keynes wrote) in 1941, the trend had been the other way. In the circumstances of Britain in the last three years the new structure has been almost bound to help cause some swing of policy in this direction. It is endemic in economists to throw up ideas; it is inevitable that a professional civil servant, inserted at so high a place in the hierarchy, should act to some extent as a sieve, deciding that when certain ideas are passed on to the Chancellor they should carry recommendations to caution with them. To say this is not to say whether an extra dose of caution has been a good or bad thing in British economic policy since 1956; but it is silly to pretend that there is anything ungracious in noting one important administrative reason why the dose has been applied.

SECONDLY, the experiment has not led to tighter and more efficient control over government spending and over the mechanics of tax raising, as some people had hoped that it would. It was the wrong office to create for this purpose. There has long been a strong case for appointing some sort of new co-ordinator or overlord to three sub-departments of the Chancellor's domain: the Inland Revenue, the Customs and Excise department and the estimates-examining side of the Treasury. Some people think that this should be a political job, for a sort of Minister of State for the Budget; others think that it should be a civil servant's job. There is probably room for both. But, even in theory, it was difficult to see why a new appointment at the Treasury's civil service summit should lead to a smoother running in the mechanism of these administrative departments lower down; and, in practice, the rough noise made by clanging brakes in these departments, at the time of Mr Thorneycroft's resignation eighteen months ago, showed that the idea just had not worked.

There is naturally great interest in Whitehall in who Sir Roger's successor will be. Most of this interest, however, is a recondite matter of personalities. But an important, if hidden, decision affecting future economic policy will be taken according to whether the vacancy is filled by a man with the same functions as Sir Roger has had, or whether it is filled in a way which suggests that some of the lessons of the experimental Makins period have been learned.

Spending the Oil Money

Middle Eastern streets are not paved with gold, and few are paved at all.

OIL has not made the Middle East rich. There are, it is true, small oases of prosperity in the wide deserts of poverty, but the area as a whole has not been deeply affected by the discovery of oil in it. This is not because wicked oil companies mercilessly exploit unsuspecting populations, or because feckless governments of producing countries have wasted their revenues on plaster palaces and this year's Cadillacs. The neglect of centuries cannot be overcome in a few years. Among the so-called oil-rich states only Kuwait has more money than it needs. Persia, Saudi Arabia, Iraq and Qatar can easily absorb as much money on desperately needed domestic projects as they will ever receive from oil.

It is not necessarily a sign of hard-heartedness or indifference that suggestions that they should use the oil revenues to help their less fortunate neighbours are not sympathetically received by these governments. They see no more reason why they should share their oil than that South Africa should share its gold, Malay its tin or Ghana its cocoa. If the United States is willing to share its wheat, that is because there is too much of it to sell in the world's markets. In Persia and the Arab countries it is not likely that enough oil will ever be sold to produce a surplus of money.

At the congress of the Socialist International at Hamburg last month, Mr Aneurin Bevan offered a plan for the economic development of the Middle East. The money, according to Mr Bevan, would come from (unspecified) outside sources and from Middle East oil revenues. Cantankerous and selfish attitudes on the part of the Middle Eastern oil producing governments would be overcome by taking as much as ten per cent from the oil companies' revenues and placing it in the capable hands of an international agency, the United Nations perhaps. A fund would thus be created to encourage the economic development of the have-not Middle Eastern countries, who would then be happy, friendly towards the West, and less inclined to block up the Suez Canal or to blow up the pipelines across the Syrian desert.

Mr Bevan's plan offers more pitfalls than panaceas. It would raise an unwelcome spectre to brood over the already delicate negotiations between companies and governments. The companies would have to consider it when discussing payments of royalties; the governments would worry about how it might affect concession terms. The governments, both have and have-not, already find it hard enough to get along with each other without the additional abrasive action of a fund established by somebody else with money they would consider at least partly theirs. They would regard it with suspicion as a creation of foreigners, and insulting because it would imply to them that the peoples of the Middle East did not know what was best for themselves. The first Middle Eastern reaction to Mr Bevan's plan came from Jordan, presumably one of its chief beneficiaries, where the Jerusalem newspaper *al-Difai* ignored the economic riches he was offering and reminded him that he had offered no solution to the Palestine problem.

AN Arab plan, like Mr Bevan's in intent if not in detail, has already been presented to the Arab governments. Mr Emile Bustani, an eminent Arab contractor and politician, has been trying for several years to work up support for a plan to establish an Arab development bank. His plan is not complicated by involvement with the United Nations, nor is it one that the Arabs can regard as insulting. He wants the producing governments and the oil companies each to chip in five per cent of their revenues to build up a fund, run by Arabs with expert advice of their own choosing, from which those countries in need could borrow on a business-like basis for economic development.

Mr Bustani ought to know what the Arabs want. As a Lebanese he is aware of the problems of the have-not state, and as a contractor he is well placed to appreciate the benefits that oil revenues produce. But he has had little success in convincing either the governments or the companies that his is a practical proposition. The governments are more interested in the immediate public relations value of token contributions to politically acceptable causes, such as Palestine refugees or Algerian exiles, than in long-range and untried plans. The oil companies already find it difficult to limit the scope of their activities in the area. As the largest employers and makers of money in the Middle East it is not surprising that they are involved

in economic and social undertakings in their zones of operation. One of them recently set up a modest development loan fund of its own. But they prefer to leave regional and national projects to the governments. The plan-makers sometimes fail to realise that oil companies fundamentally are governed by the same economic forces as other major industries, and that millions of pounds are not so easily found simply by dipping into a capacious pocket.

During last summer's protracted Middle East crisis President Eisenhower asked the United Nations to set up a regional economic development plan to assist and accelerate improvement in the living standards of the Arabs. He said that the United States was willing to furnish a lot of money, and he hinted that those Arab governments that could afford it might share the burden. Mr Eisenhower's generous offer fared no better than other less sweeping ones. The Arabs have never taken it up.

Is there any way in which the West can transform the whole Middle East in a single operation ? If all plans are to be based on the supposition that the area can only be treated as an integrated unit then, for the present and the foreseeable future, the answer seems to be No. Individual countries may, at their own request, receive help and use it wisely. Scattered small projects may bring more direct benefits than unwieldy large ones, and they do not rouse so much suspicion. For the present the West will have to be patient, devoting its efforts to the creation of an atmosphere of trust and confidence, until, on its own, the Middle East attains a position of balance between political and social awakening on the one hand and economic progress on the other. If that happy day comes, then large-scale economic development schemes will not have to be imposed on the area by well-meaning outsiders; the people most directly concerned will know when and how to ask for what they really need.

NOTES OF THE WEEK

PRINTING DISPUTE

Hour by Hour

THROUGH the haze of pretence that now customarily surrounds everything that concerns the troubles of the press, progress towards a settlement in the printing talks went steadily, if painfully, forward until on Tuesday agreement was round the corner. Every day had tended, of course, to end in "deadlock" : every bid by the employers was "final" to them, and "unacceptable" to the unions; there was a last minute hitch. And so it was always bound to go on until the settlement was reached. All last week, there was this outward display of militancy and inward degree of nearing agreement. The employers had made a number of concessions on their first stiff draft; and, in spite of the talk about things being final and unacceptable, there was reason to believe that the offer of a 3½% increase in wages and 1½ hours off the formal working week did come pretty close to what most of the union leaders were prepared to accept, with the possible and powerful exception of Mr Willis, of the London Typographical Society.

One thing Mr Willis could not countenance, rather oddly perhaps, was the condition made by the employers that craftsmen should only be employed on craftsmen's work. Even so, Lord Birkett, waiting deftly for his chance, fixed upon the other outstanding question : that is, hours of work. These the unions wanted to see reduced, first in principle and then by stages, to 40 hours a week in 1962. Lord Birkett's first intervention or advice, when he suggested a 41 hour week by 1961, failed. Then, more ingeniously, he suggested an immediate 42 hour week plus a larger percentage wage increase. This, coupled with a two or three years' standstill period and union undertakings about productivity, was the proposition that caused the talks to go on throughout last week-end, and which was finally agreed by both sides. By Tuesday only the mechanics of a return to work were in dispute.

Beyond the bargaining table the expected pressures towards a settlement were building up. Union members, either six weeks out of work or paying a handsome levy to those who were, were becoming harder-pressed, especially near holiday time. On the other side, some big publishers might have been losing sums of £250,000 a week from the stoppage.

Others Join In

IN the week before their annual holidays, 3000 workers at the Morris division of the British Motor Corporation have gone on strike. The reason was that the corporation had decided, after a long series of unofficial stoppages at the plant, to sack a senior shop steward and immediately after the walkout the Transport and General Workers Union, the Electrical Trades Union, and others (though not the Amalgamated Engineering Union whose members ballotted to stay at work) recognised the strike as official. (Was Mr Cousins's support of the extreme industrial left here a follow-up to his support of the extreme political left at the Isle of Man ?). The BMC management has evidently decided to toughen its policy towards unofficial action. Whether it can do what Fords did at Briggs in the neglected state of industrial relations at its plants remains to be seen.

RUSSIA AND AMERICA

Prima Ballerina Assoluta

MR KHRUSHCHEV is hogging the spotlight. He is not going to speak his lines, the decisive lines of this summer's diplomacy, until he is good and ready. Diplomatic reporting, reduced to a study of his moods, has seldom seemed more chancy. He returned from Poland rather tired and, apparently, rather cross with the West. He had some tough things to say about Berlin. He brushed the Scandinavians aside. He brooded darkly over the international danger of American prayers for the captive peoples of eastern Europe. By the time he began his verbal sparring match with Mr Nixon among the washing machines at the American exhibition in Moscow (which is further discussed in American Survey), he had every headline writer hanging on his least word.

In fact, the prospect of a summit conference has depended on Mr Khrushchev all along. He alone can give the word that could draw President Eisenhower to a meeting. The foreign ministers and nuclear negotiators at Geneva evidently cannot by themselves; as this has become plainer, they have dropped out of the news. It is, perhaps, a suitable commentary on the usefulness of foreign ministers' debates in Mr Khrushchev's day and age.

The Postman's Round

YET Mr Gromyko serves one purpose, at least. Whatever Mr Khrushchev may say on the spur of the moment, Mr Gromyko has to follow orders. Last week, Mr Gromyko was still hanging on at Geneva, and still declaring that the Soviet Union would not attempt to change Berlin's status while negotiations with the West were still in being. The nuclear experts, although down to the finest of fine points over inspection, seemed even further from breaking off. Mr Khrushchev's public invitation to President Eisenhower to visit Moscow himself thus appeared to be a positive suggestion on the kind of talks he would personally prefer. Mr Nixon was not empowered to negotiate in Moscow. But he was a suitable postman for carrying invitations of any kind, and one with inside knowledge of the frame of mind in which they might be penned.

Mr Khrushchev's excitability at the American exhibition was not unnatural. He had seen at first hand, for the first time, the idealised projection of those living standards which it is his aim to surpass in the Soviet Union. Whatever thoughts he has about a visit to the United States would be uppermost in his mind. His undisguised aspiration to secure American trade and credits seems to have prompted his comment that the present exhibition was "like inviting someone to a restaurant and offering him dishes forbidden by his doctor." He was frank enough to admit Russia's slow start in the economic race, something very apparent even to a Muscovite audience. Even so, it is a new sign of Russian self-confidence that Mr Nixon's very effective arguments for capitalism were published in part in *Pravda* and *Izvestia*. But none of this gave a sound clue to what Mr Khrushchev's unpredictable diplomatic sense would prompt him to do next.

KENYA

Hola Verdict

THE report of the inquiry into the charges brought against the prison officers in control of Hola camp, where eleven Mau Mau hard core detainees died in such questionable circumstances, appeared in time to deepen the sense that something was badly wrong in British Africa. It is a most careful report — even though it is hard to follow some of its explanations about what force is legal to compel recalcitrant fanatics to work as the first stage of a psychological cure. Nevertheless, it did pinpoint the immediate responsibility for the circumstances in which the Mau Mau detainees died as the result of ill treatment. But even in the case of Mr Sullivan, who alone was found guilty of gross dereliction of duty, there were extenuating circumstances. He did not fully understand the Cowan plan, and he did not receive a copy of it on which he should have drawn up his operational orders. He is therefore being requested to resign, so that loss of his gratuity shall not be added to his punishment. For the reasons which permit this clemency to be extended, Mr J. H. Lewis, the Commissioner of Prisons, who is shortly due to retire, has asked to have a successor appointed at once; of course he incurs no loss of pension rights. Mr Coutts was acquitted and there are no reflections on Mr Cowan. Mr Cusack, the minister (an official) in whose department these things occurred, was already retiring before the inquiries took place.

It cannot be said that justice has miscarried. Yet this "disaster", as Mr Lennox-Boyd has called it, is made to look more like an accident or a misfortune. Some more senior personage in the chain of authority might have felt the call for personal penance, to purge the public sense of guilt for such happenings in a crown colony. Of course other issues hang on such a gesture — the morale of the prison service, the propaganda use to which African politicians could put it — and if the chosen course may not seem instinctively right, it no doubt appears to officials the lesser evil in the interests of all. The Labour party is not convinced by any of this; they want Mr Lennox-Boyd's, or the Governor's,

or somebody's head. In the end, one is left with a committee of experts to make recommendations on the future of the remaining Mau Mau camps. It is a small consolation. The political ripples of this affair, with others, will continue to be felt to the disadvantage of British rule in Kenya.

IRAQ

Can the General Accept ?

NEARLY everybody who is anybody in the world today has been to Moscow. Russian hospitality being what it is, there is nothing strange about General Qasim's being invited there. It would have been more surprising if the Soviet deputy foreign minister, Mr Kuznetsov, in Baghdad for the celebrations of the Iraqi revolution's first anniversary, had not included in his diplomatic baggage an invitation to Qasim. The prime minister of Iraq will have to consider the implications of a visit to Russia with more care than the Russians used in extending the invitation. Mr Kuznetsov announced it at his own press conference, not waiting for the Iraqis to disclose it themselves.

When other heads of state set off on a spree to Moscow they can, most of them, reasonably expect their governments to last until they return. Some doubt exists whether General Qasim can make such an assumption. If all the troubles in Iraq are stirred up by communists, as Cairo claims, then presumably the Russians could order them to behave while Qasim was away. If the army's loyalty is as dependable as Qasim claims, he could count on it to keep things under control; but another revolt, perhaps in Baghdad instead of Mosul or Kirkuk, might mean the end of the army as an effective force in the country. If the adoring mobs represent a solid consensus of opinion among Iraqis, then they would not allow the sole leader's position to be usurped by others, but Qasim may remember that these same mobs once cheered Iraq's dead royal rulers as loudly as they now cheer him. The secret of General Qasim's attitude towards east and west could be kept if he chose to go to Moscow — but the future of Iraq might be settled while he was away.

TUC

Square Look at the Economy

CONSIDERING all the hoops it must have had to go through, the 15,000-word economic survey produced last week by the TUC is a remarkably able piece of work. Most of the survey's difficulties (as of others before it, which never saw the light of day) have been caused by the conflicting economic viewpoints among the 30-odd members of the General Council; there was probably not much worth publishing, for instance, in a document from which Mr Cousins, Mr Carron and Mr Ted Hill had all cut out the bits unacceptable to them. This lack of a strong statement of economic policy did the TUC a good deal of harm. It looks bad when a body that is always urging economic policies (such as full employment) on others cannot produce a reasoned policy of its own.

The economists at Great Russell Street are thus to be congratulated on producing a document that can be so easily used against their members. The history of economic policy before 1955 is succinctly and objectively given, together with a rather bland statement about the economic aims of trade unionism; how many unionists are prepared, as the TUC say they are, to sacrifice wage increases for the needs of wider social ownership or defence? But it is on post-1955 events, when history becomes politics, that the survey is most interesting. It agrees that recent deflationary policies "have, despite the more militant wages policy approved by Congress since 1956, succeeded — at a cost — in imposing a policy of wage restraint on the trade unions". It also agrees that the present economic position is healthy and that "1958 did not see a widespread breakdown in industrial relations". On the other hand, the TUC fairly criticises the slow-down in output that followed deflationary policies and declares that not all our present appearance of prosperity is due to these.

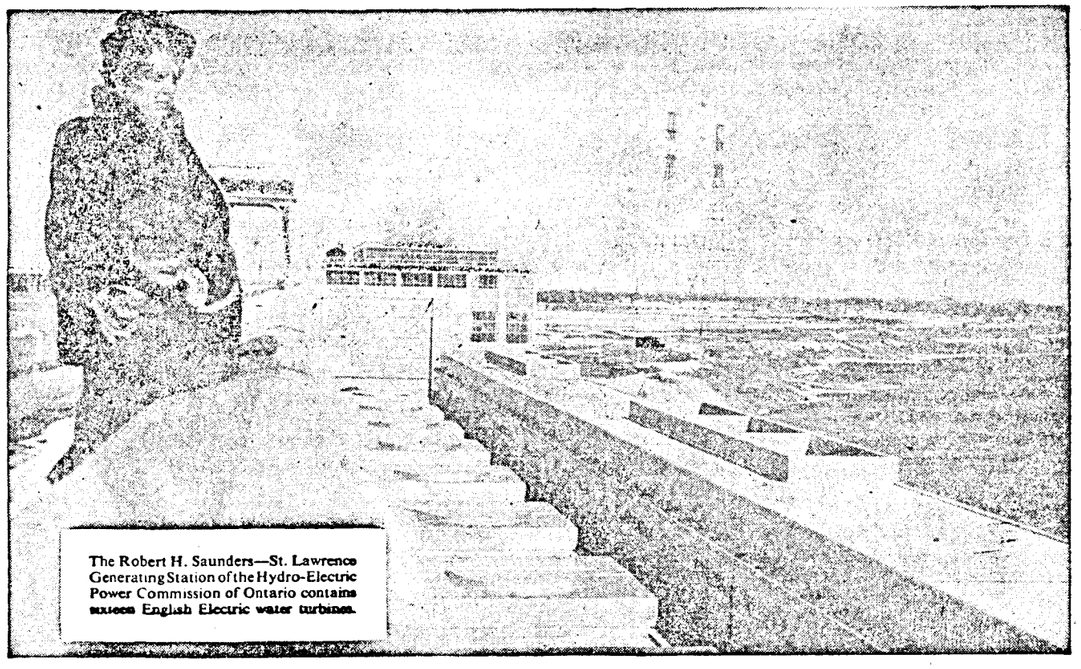
The remedy is expansion. This is the way the economy is now headed. But on the subject of possible inflationary increases in wages at such a time (increases to which foreign holders of sterling are sometimes too touchy) the survey is less than candid. It says that "a government that genuinely seeks to maintain full employment can reasonably expect trade unionists to cooperate" in avoiding difficulties of price inflation. Some Labour shadow ministers must wish that it could.

CRIME

London's Black Record

THE growth in crime continues. Sir Joseph Simpson's first report as London Commissioner of Police (Cmnd 800) records that indictable crimes in the metropolis in 1958 rose again for the fourth successive year. The total was 151,796, which is 25,000 more than last year and nearly twice as many as in the postwar trough of 1954-55, when it looked as if the prewar degree of law-abidingness had been restored after the upsets of the war years and the ending of the black market with the abolition of rationing. Minor offences, which mainly means motoring, have also increased again. In addition Sir Joseph refers to the anxieties of the police over the race situation.

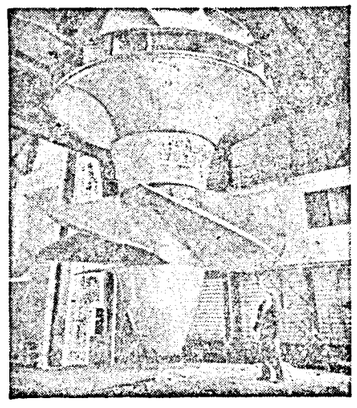
THE WORLD IS CRYING OUT FOR MORE **POWER**



The Robert H. Saunders—St. Lawrence Generating Station of the Hydro-Electric Power Commission of Ontario contains sixteen English Electric water turbines.

THE 1,200,000 HORSE-POWER PURR

...from the St. Lawrence it carries to Britain



The fixed blade propeller runner for one of the sixteen English Electric 75,000 h.p. water turbines before installation.

For centuries the International Rapids of the St. Lawrence River roared—and their tremendous energies went to waste. Today, from the rapids comes a purr—the purr of thirty-two turbines sitting astride the International Line, sixteen in Canada, sixteen in America, generating power for the two great partners in the St. Lawrence Power Project.

For this historic project, the English Electric Group supplied all sixteen of the turbines on the Canadian side. Valued at over $7,500,000, their combined might is 1,200,000 h.p. The English Electric Group also supplied the power station's control-room equipment; the transformers and switchgear for the transformer station; and transformers for the American side. The turbines were ordered from English Electric Canada—a division of John Inglis, English Electric's Canadian associates—and built by John Inglis, to the design of English Electric in Britain.

So, at last, the St. Lawrence is at work for North America in a big way, helping to create more power for greater prosperity.

Schemes like the St. Lawrence Power Project are of great benefit to Britain, too—in three ways.

FIRST, through these schemes English Electric makes a substantial contribution to our national trading balance, thus enabling Britain to buy more freely in dollar or foreign currency markets.

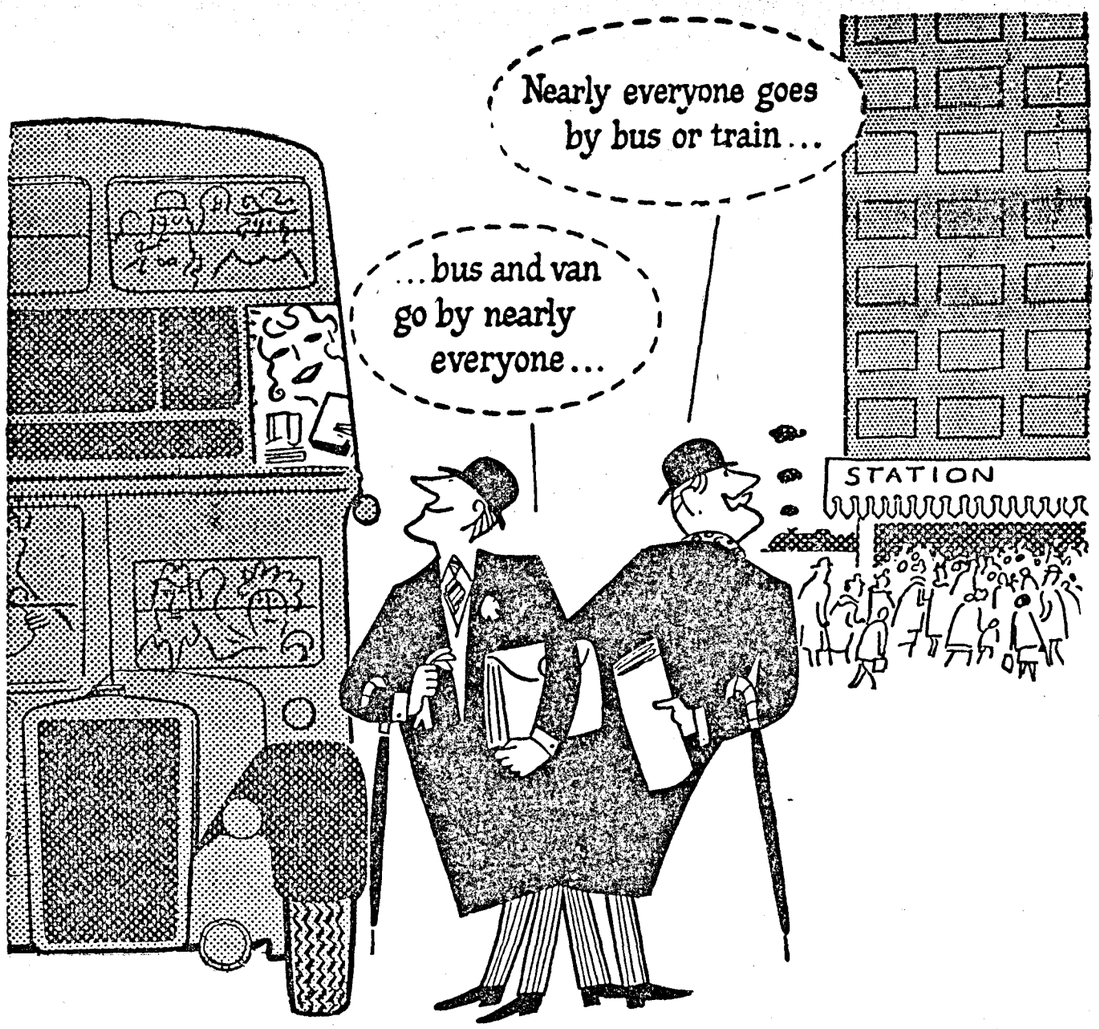
SECOND, the experience English Electric gains can then be applied to similar schemes elsewhere. Indeed, English Electric's world-wide experience works for *everybody*.

THIRD, the ability of any country to buy abroad is linked with its productivity and prosperity; and, as a huge new supply of power such as this scheme is releasing increases the prosperity of a country, so it generally increases that country's ability to buy abroad—including goods from Britain.

Producing equipment to generate power from water is only one aspect of English Electric's world-wide activities. The Company also makes equipment to generate power from coal, from gas and oil, and from the atom. English Electric is also busy providing more efficient transformers and switchgear to *distribute* this power and better locomotives, electric motors and domestic appliances to *use* it.

The key to a richer life is to put more power into the hands of more people—*and that is the business of English Electric now.*

Power is the business of ENGLISH ELECTRIC ...bringing you better living



...so everyone sees

BRITISH TRANSPORT ADVERTISING

1,000 million passengers travel on British Railways every year, 4,000 road side sites confront millions of people, British Transport buses travel 841 million miles every year: Add the 910 million rides on the Underground and the people who see the 9,000 poster-carrying vans and what have you got? The largest advertising audience in the country. British Transport Advertising is a well-documented medium: ask for rentals and all the statistics you want from

or 6-7 Castle Terrace, Edinburgh 1 (Phone: Fountainbridge 5222).

Colour, continuity and a massive audience at economical rentals

The Commissioner offers much the same explanations as were put forward by his predecessor. There are too few police, especially in the CID, where the case load has risen from 205 crimes per detective per year to 258. The Commissioner implies that there is a close relation between the graphs for minor and for indictable offences: for the increase in the number of motorists coming before the courts erodes the traditional good relations between the police and the public on the one hand, and draws off policemen from chasing criminals to chasing motorists on the other. The Commissioner hands out quite a number of rebukes this year: to members of parliament who for political reasons still decline to tackle the almost unenforceable laws on gaming and betting, which sets another large section of the public against the police; to the press for its reporting of some types of crime; to the general public for its failure to realise its own responsibilities in repressing crime, and, particularly in connection with race tension, for "a selfish insistence on the rights of the individual citizen", which "conveniently disregarding the rights of his fellows, has made it more difficult for the police to nip incipient trouble in the bud".

The major increase in crime, however, has occurred in the 14 to 20 age groups, in which it rose by the shocking total of 25 per cent. For the 21-30 age group it rose much less and, for older people, by hardly anything. The attitude of the young is therefore the key to the "crime boom"; and here there are two factors. One is that the 14 to 20 age group has grown; in greater London it is now around 700,000, of whom in 1958 in fact some 10,000 were arrested and perhaps 30,000 more got away with their crimes. This puts the wickedness of modern youth in better perspective; but the increase is still bad enough. It seems that nothing succeeds like success with the young and imitative, and the ratio of convictions is just too low, at present, to keep the infection in check. What is needed, in short, is more police, and fewer distractions in the way of traffic problems. The police are prone to think the morals of the entire public are in a state of rapid decay. What Sir Joseph's report discloses is that the attack on crime must be better directed to the points that need attention.

DEFENCE

Recruitment Sags

TRENDS in recruitment during the last three or four months have again begun to worry the service chiefs. There are small but unmistakable signs that the effects of the recent improvements in pay and conditions are wearing off. The Royal Navy and the Royal Air Force are hardly affected; but there has been a sharp fall, since February, in the recruitment of other ranks on regular army six-year engagements. This, however, is the sensitive point in the plan to achieve all-regular forces, and more particularly to build an army of 180,000 regulars. In May, the intake of six-year recruits was almost half of February's intake.

The great response of recruiting to the Sandys plan (designed to replace conscripts by an all-regular force) encouraged the service chiefs last year to think that they could achieve an army of 180,000, instead of the original one of 165,000 which was strongly attacked as inadequate for British commitments to Nato and overseas. On the trends of last winter, in fact, there seemed a good chance that by 1962, when the last conscript goes home, it would be possible to recruit 170,000 or more regular other ranks, which would make possible an army of but little under 200,000. But even on the average of the last four months, assuming it gets no worse, the army should have 160,000 regular other ranks by 1962, thanks to the stabilising effect of long-term engagements. This would still make it possible to hit the revised target of an army of 180,000 officers and men in 1962. Only if the downturn noticed in April and May continues will pessimistic talk of reverting to Mr Sandys's original figure of 165,000 be justified. Reliance on long-term engagements in any event means that the army reaches its peak size only by 1965, so it should have well over 165,000 officers and men by then, even if recruiting drops further in the months ahead.

The great hope of creating all-regular, professional forces was that rising morale and a sense of professional solidarity would halt the tendency for recruiting to rise and fall with successive inducements. But the drop in six-year army engagements has coincided with the upturn in employment in Britain; and it may well be that, when employment is rising, regular army recruiting cannot be expected to touch the monthly intake of last year. It yet remains to be seen, taking one year with another, and ironing out the effect of accidental events (a small war or incident boosts recruiting like a pay increase) how large a wholly volunteer British army can be.

THE SEVEN

Free Trade Writ Small

AGREEMENT on most of the essentials of a little free trade area of seven European countries outside the common market is indicated by the White Paper published this week. Ministers meeting in Sweden on July 20th reached a political agreement blessing the technical work done so far; they have instructed the experts to set to work in September to draw up a convention. Tariffs are expected to come down by 20 per cent on July 1st next year to bring the reductions among the seven into step with the common market. Afterwards, it is intended, tariffs will continue to fall in step with those of the Six; though the seven governments are still bearing in mind the possibility

that if the common market shows no interest in a broader agreement on terms they find acceptable, they may step up the pressure by cutting tariffs faster.

In organisation the new scheme is essentially the old British free trade area plan writ small. It will be run by a Council of Ministers acting by majority vote on certain pre-defined occasions only — otherwise, by unanimous decision — and by a managing board. There will be rules of competition and an arrangement for agriculture. Superficially, some of the same ground is covered as in the Rome treaty. But in detail and conception the new institutions reflect the British preference for keeping institutions and commitments down to a bare minimum, and for solving problems as they arise, not before.

In some of its other features the new scheme differs from the old free trade area plan. The seven are making no arrangements yet for reducing quotas on a preferential basis. One interesting innovation has also been proposed, though not yet adopted: the idea of a consultative committee of industrialists, bankers, farmers, and trade unionists from the member countries. The ministers also agreed that their governments should accredit diplomatic representatives to the European community; Denmark has done so already. This can be seen as a recognition either of the need to come to terms with the Six, or of the permanence of the gulf that has opened. Now the remaining "undeveloped" members of the Organisation for European Economic Co-operation seem to be taking up their positions at the side of one group or the other. Portugal is already a member of the group of seven, although it may have a special position, not unlike that of Greece in relation to the Common Market, when the association comes to be formed. Turkey may follow suit later. Only Iceland of the original seventeen has as yet made no move at all. Another, Ireland, is trying to keep a foot in each camp.

The Economist

JULY 30, 1859

MOBILISING RESOURCES

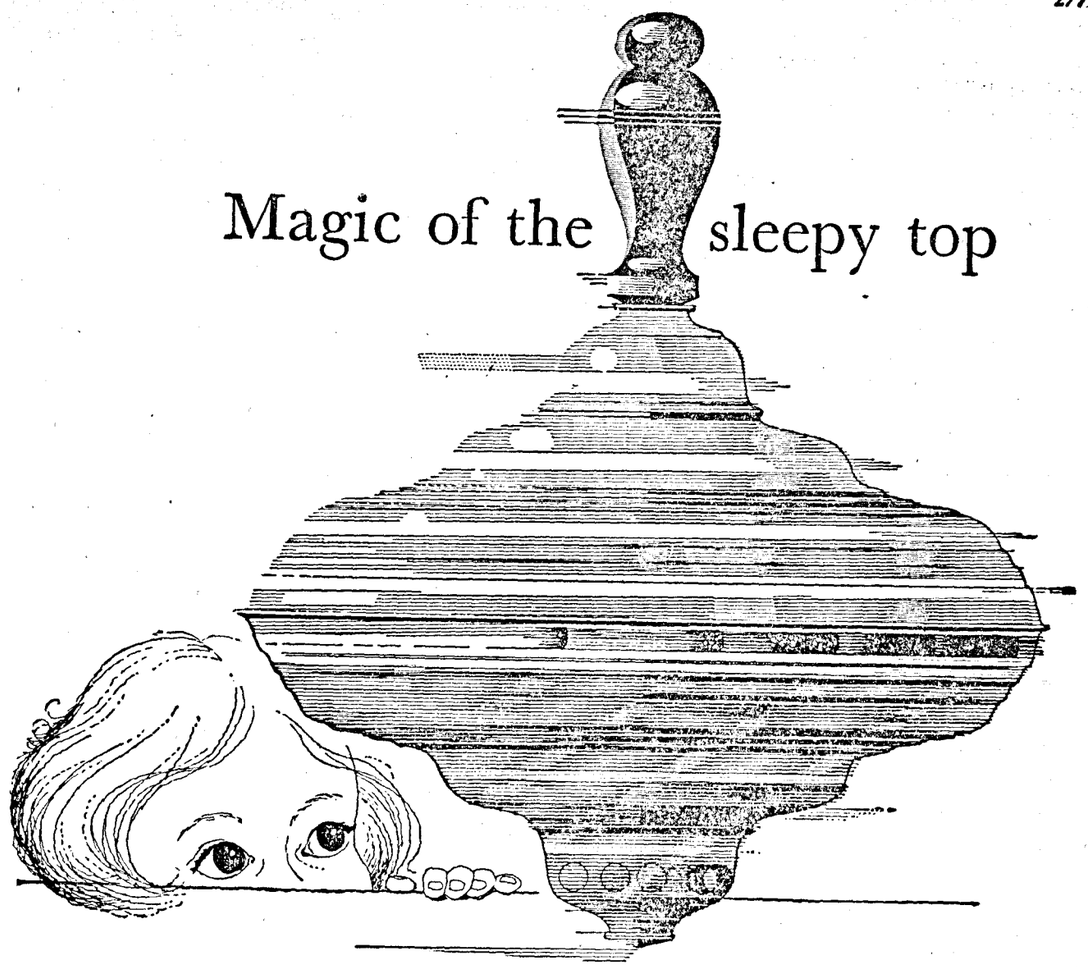
THE announcement in the *Moniteur* of the intention of the Emperor of the French to put the French army and navy on a peace footing will be accepted in England, as it is doubtless meant, as a pledge of that enduring good-will between the rulers of the two countries which we have always wished to promote between the peoples... But, on the other hand, we must protest against any attempt to urge the English nation into so false a step as any relaxation of its efforts to restore the proper strength of its navy on the ground of the announcement we have referred to... Many persons quiet their own apprehensions, and think themselves justified in ridiculing the warnings of others, by the recollection that the *resources* of this country in wealth, science, mechanism, and seamen are vast, unequalled, and almost unlimited. They are so. No country can rival us in these *potential* means of safety and of strength. Taxes to the amount of seventy millions scarcely burden us. A loan to the amount of a hundred millions would scarcely embarrass us. Our seafaring population is probably threefold that of France. Our engineers and our workmen are the most skilful, and our workshops the most numerous and the best fitted in the world... But what are all these boundless possibilities if we do not utilise them, and utilise them in time? What are all these resources if they are not available? What, but a cellar full of ingots when our need is of coined gold? What, but the reversion of a magnificent estate to a man whose life and liberty are jeopardised for the want of a little ready money? Let us bear in mind that property which we have not means of defending, resources which we cannot at once call into activity, belong not to us but to our assailants. *Reserved* forces, such as ours, are only eventual capabilities, not active and existent powers.

THE PODOLA CASE

Westminster Guardians Alert

MESSRS Paget, Silverman, Grimond and others were right to press for explanations in the House of Commons over the mysterious circumstances in which Guenter Podola came to be injured during or after his arrest and the length of time for which he was kept in custody before being formally charged with the murder of a policeman. The Speaker was equally right to squeeze the discussion off at the point at which he did. The whole episode was a refutation of Sir Kenneth Pickthorn's case, made during the recent debate on the House's procedure, for a convention that all sustained argument with the Speaker or smuggling in of substantive points under the guise of points of order should be treated as the caddish equivalent of cheating at cards in a club.

It is true that too much time has been wasted this session through exploitation of points of order. But the Podola case showed how serious a loss it would be if the House's rules and conventions became so cut and dried that even the most determined members were automatically barred from saying another word from the moment that the Minister first murmured the magic phrase "*sub judice*." Indeed it is very much to the House's credit that time and again so many backbenchers are seen on their toes in support of individual causes that are scarcely likely to bring them popularity. The Speaker, having in effect acquiesced in an unmistakable demonstration by the House of its interest and anxiety, took the position that in practice no absolute differentiation could be made, such as many of the lawyer MPs were trying to sustain, between matters affecting the charge of murder against Podola, which everyone would accept as being *sub judice*, and doubts about the conduct of the police before he



Magic of the sleepy top

A top spins, faster and faster, so perfectly poised that you can scarcely see it moving. Children say it 'goes to sleep'.

Something like this happens in the engines of smooth-running motor cars. Ignition is so well controlled that the engine runs quietly and with effortless rhythm.

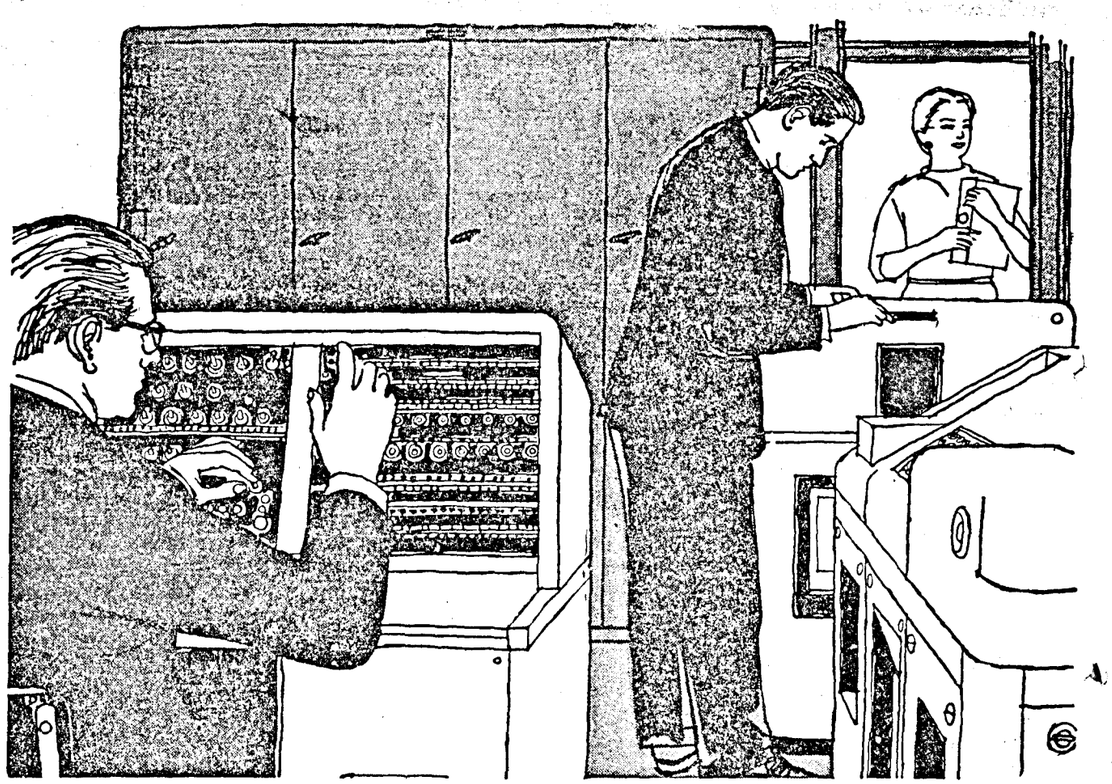
In new cars, properly run-in, this occurs naturally. But soon engine deposits begin to upset ignition. Rhythm is spoilt. Power is lost. It happens in every car.

How could these deposits be made harmless? The problem had to be solved, for under the more testing conditions of modern engines the effects of deposits are particularly severe.

Shell found the answer. It was I.C.A., the Ignition Control Additive based on tricresyl phosphate which, blended with high-quality petrol, neutralises the deposits and gives the motorist a superbly smooth engine.

I.C.A. was the greatest development in petrol for 32 years and it grows more and more valuable as compression ratios rise. It shows how fundamental research, in which Shell invests vast sums, helps to make motoring better for everyone.

YOU CAN BE SURE OF SHELL



Searching for the right answer

Data processing continues to play an increasingly important role in the conduct of modern business. Punched card equipment, electronic calculators and computers provide more business information in less time than any other form of office machinery. Users of these methods have always known most about their business soonest.

The widened range of equipment of I·C·T, and its integrated technical development, is rapidly opening up new fields of application. Choice of I·C·T equipment ranges through punched card machines using 21, 40, 80 and 160 column cards—to small, medium and large electronic computers, employing combinations of punched cards, paper tapes and magnetic tapes.

Determining the optimum method of employing data processing equipment is a highly skilled task. I·C·T staff are experienced in these matters; their knowledge and experience have proved valuable to enterprises of widely divergent character and size, from firms employing under 20 people to corporations of international repute, local authorities and nationalised industries. They can help you.

If you think your research, production, marketing or financial affairs are capable of improvement there are well established reasons for believing that the combination of I·C·T staff, equipment and training will provide you with the right answer. We suggest you get in touch with us.

was charged, on which they wanted to pursue their interrogation of the Home Secretary then and there. The common sense of this ruling was supported by a question from Mr Charles Hobson which, in seeking to put in a good word for the police, gave the impression that Podola had been previously convicted. This was obviously carrying the discussion on to dangerously prejudicial ground.

The danger that remains is that the mystery of Podola's treatment may not be cleared up by Parliament because it will not meet again in time, nor by the court which is hearing the murder charge because such questions might be deemed irrelevant if the defendant had not made a statement whose admissibility was being challenged. But Mr Butler cannot now fail to be aware of the public need for a convincing explanation — if not in the court during the trial, then after.

NORDIC BLOCK

The Stay-at-Home

None of the four Nordic governments that were to have been Mr Khrushchev's hosts this month has been visibly shaken by his brusque decision to stay away. The Baltic jaunt had appeared for some time to be losing its place in Mr Khrushchev's summer calendar. The clinching argument for cancellation seems to have been the Scandinavians' evident determination to see that the affair remained a jaunt, and not a purposeful diplomatic exchange. The Swedish foreign minister, Hr Unden, had already turned down Mr Khrushchev's proposals for making the Baltic a sea of peace, and although the Swedes had some pertinent points to make, including the banning of nuclear weapons on the Soviet shores of the Baltic, this type of discussion was not what Mr Khrushchev had in mind. He clearly did want to influence the two Nato members, Denmark and Norway, perhaps continuing the nuclear discussion where the Polish foreign minister, Mr Rapacki, had left it in Oslo last October. But the Norwegians set aside only one day for talks, and that specifically for an exchange of views, not negotiations.

Mr Khrushchev seems to have been stung both by Scandinavian press criticism and by such happenings, uncongenial to a sensitive man, as Miss Sonie Henie's refusal to rent her Oslo home to him. The long round of official functions, tourist haunts and hostile audiences, without even the chance of political conversation that he had in London, must have struck him as a game not worth the candle. Even in Poland he was complaining that it was a hard way to make a living. This is a setback for the plans for a neutral Nordic block that he seemed to be evolving in the spring, and he has taken it badly. The notes to Sweden, Norway and Denmark on July 20th were particularly querulous about attacks by government papers, and the descent into personalities seems to have been intended to send shivers down Scandinavian backs. It is exactly how the Russians treat the Finns when they want to show displeasure.

This time the Finns themselves have come off lightly. The cancellation sent to Helsinki was polite and regretful, something for which the Finns, entangled as they are in trade talks with both the Russians and the Outer Seven, could be mildly relieved. Although *Pravda* has pronounced darkly against Finnish membership of the Outer Seven, the Finns have refused to be rattled. Their foreign minister, Mr Törngren, has told both sides not to jump to conclusions about Finland's choice. Moscow has time to blow hot and cold by turns before these negotiations are ended.

CUBA

One Man Show

July is high season for revolutionary anniversaries. On Sunday it was the turn of the Cubans who celebrated July 26th, 1953, the official birth of their revolution. Senor Fidel Castro, the "maximum leader of the revolution", has also chosen this as a time to demonstrate his popular strength by drawing into Havana half a million peasants from the six Cuban provinces. Their enthusiasm is his answer to the sour hangover caused by his blatant trickery over the presidency.

Senor Castro resigned as prime minister on July 17th, but his resignation did not last long and proved to be a manoeuvre to get rid of the president, Dr Urrutia, and put in his place Dr Dorticos, a lawyer whose support for the land reform programme is assured by the fact that he himself drafted many of its provisions. Dr Urrutia, appointed president in the first flush of victory on New Year's day, was a magistrate whose exceptional courage and integrity had already been proved under General Batista. At the time there were some rather wan hopes that his presence would have a restraining influence on the revolutionary government. But Senor Castro very soon showed that he identified the government with himself. His spot decisions are announced during marathon television speeches; if his ministers or service chiefs disagree with him, he sacks them; to get rid of the president, a more elaborate technique was required.

Senor Castro has not allowed his inexperience in government to stand in his way. His social revolution has turned Cuba's economic structure upside down with the immediate results of vast confusion, contracted investment and innumerable sore toes. The land reform programme is a gamble; Cuba is short of almost everything that is needed to make it work. But Castro's dynamism, for all his amateurish methods, leaves his critics on the shelf and assures him of the crowd's cheers.

None of this makes him a communist. The accounts of a communist-dominated Cuba which the dismissed chief of the air force, Major Diaz, has been spreading in the United States can probably be regarded as old wives' tales. As is evident, Cuba in its disorganised state is a fine fishing ground for any communist organisation. But Senor Castro has shown no sign of any coherent political philosophy, Marxist or other. And he, for better or worse, runs Cuba.

THE LEGITIMACY BILL

Second Thoughts

A LAST minute squabble between Lords and Commons has been avoided. On July 21st, during the report stage of the Legitimacy Bill (a private member's bill), the Lords agreed, by 83 votes to 64, to restore the main clause, which they had deleted, by 27 votes to 19, during the committee stage at the beginning of the month. The purpose of the clause is to legitimate a child whose parents subsequently marry, even if one or both of them had been married to someone else at the time of the child's birth.

Those who argued and voted against the clause cited, as members of the House of Lords are always prone to do on such occasions, the rare case that might cause difficulties in the most unlikely circumstances, and insisted that the clause would undermine the sanctity of marriage. But, as others pointed out, the clause becomes effective only when the original marriage has been ended in any case and the parents of the illegitimate child have entered into a new, and legal, marriage with each other. The clause is a natural extension of the Legitimacy Act of 1926 and of the divorce laws, and, quite apart from the political problems it would have stirred up, the House of Lords would have been swimming against the tide of opinion had it insisted on deleting the clause.

FRANCE

Anti-Clerical Echoes

THE clash between the advocates of state and religious education in France is deferred to November. Only then will the government present its education bill designed to define the status of private (i.e. religious) schools and the amount of state aid to which they are entitled. M. Debré announced this in the Assembly on July 23rd during a stormy sitting. To keep his pro-clerical majority patient during the holiday interval, the prime minister promised that school credits would be granted at the beginning, and not as hitherto at the end, of term.

The school quarrel is an echo of the great battle which, at the turn of the century, set French clericals and anti-clericals at loggerheads not merely over education but over the whole problem of the separation of Church and State. Yet it is not just an anachronism. The proselytising energy of the Catholic Church and its political connections make the left-wing parties treat the spread of church schools as a threat to themselves. In 1951, the quarrel was revived when a conservative majority (the communist strength having been reduced by a change in the electoral law) secured state grants for private primary schools under the so-called Barangé Law. Deputies favouring church schools were returned in greater numbers at the last election. The government was, therefore, expected to increase state aid and extend it to private secondary schools. The show of popular opposition, expressed in variously-sponsored meetings to defend the lay school, seems to have come as a surprise.

The government has also had a second reason for caution: anti-clericalism is one of the platforms on which Radical, Socialist and Communist supporters can stand together. It has now decided not to rush things. A non-party commission has been set up (presided over by a Socialist, M. Lapie, despite his party's disapproval) to devise a solution that could take the whole question out of politics. But even though it stays at work until November, it is difficult to see how the commission can find an answer acceptable to everybody.

MALAYA

A Racial Election ?

AFTER Malaya's first two years of independence, the Alliance party should get comfortably back into power at the federal elections on August 19th. No other party is contesting all the 104 constituencies (the lower house will now consist entirely of elected members). The Alliance remains a union of the United Malays National Organisation, the Malayan Chinese Association, and the Malayan Indian Congress. Its candidates are drawn from these parties in the proportion of 69 Malays, 31 Chinese and four Indians. It thus appeals to the whole multiracial community.

But, if there is no prospect of any alternative government, opposition has now become formidable, and, what is worse, racialist in its appeal. The failure of the conservative Party Negara has been followed by the rise of the Pan-Malayan Independence Party (PMIP), which has unexpectedly won power in state elections in Kelantan and Trengganu, practically obliterating the Alliance there, and successfully making a crude appeal to communal prejudice among an illiterate Malay peasantry.

Within the Alliance there is fresh racial trouble; the Malayan Chinese Association has split over its demand for better terms for the Chinese community. They are to get little except permission to take examinations in their own language; but several important members have resigned to stand as all-out Chinese independent candidates, and the party accepted UMNO's inability to yield more only with difficulty.

UNDER SECRETARY OF STATE 10 AUG 1959 PUBLIC DEPARTMENT

BOOKS

Men of Conscience

Philanthropy in England 1480-1660.
By W.K. Jordan.
Allen and Unwin. 410 pages. 42s.

PROFESSOR Jordan is well known for his solid four volumes on "The Development of Religious Toleration in England", a study of the sixteenth and seventeenth centuries, and for his stimulating "Men of Substance", an account of two liberal thinkers and pamphleteers of the Civil War period. For him the sixteenth and seventeenth centuries saw the decisive forging of modern institutions and the liberal outlook; and he has now embarked on an ambitious study of charitable gifts and bequests in the period from 1480 to 1660 in order to determine the scale and the changing pattern of private giving. This first volume offers a broad review and analysis of all charitable gifts and bequests made in ten counties, representing a third of the population and over half the wealth of the country. A second volume will deal with London in more detail, and a third with rural England.

It is appropriate that a scholar from America, where the great foundations play so massive a part, should reveal to us with such statistical thoroughness the influential role of the great charitable benefactions of this period. Professor Jordan estimates that by the end of his period the endowed capital devoted to charitable ends may have amounted to as much as a twentieth of the total capital stock of the country. Despite the Elizabethan poor law, almost the whole of poor relief was provided by private charity. Private endowments of schools, scholarships and universities transformed the structure of English education, and the period saw a ninefold increase in the number of lay schools in the ten counties. Indeed at the end of the period one pamphleteer proposed a national system of higher education and the sending of all able students to the universities at the public expense. Private benefactions also endowed the great London hospitals, improved roads, erected municipal buildings and flowed into a wide variety of schemes for social rehabilitation. Private charity both cushioned English society against the dislocating shocks of rapid economic change and gave expression to new views of social welfare and opportunity.

In all this the merchants, who bequeathed over a sixth of their estates to charity, and especially the great London merchants, played a dominant part. Although they formed only one tenth of all donors, they gave nearly half the total contributed to charity, and their influence was the greater since they concentrated their giving on shrewdly conceived and prudently administered trusts. Poor relief and education were their main concerns, with the church low in their scale of preferences. Indeed, Professor Jordan emphasises what he calls "the momentous shift from men's primarily religious preoccupations to the secular concerns that have moulded the thoughts and institutions of the last three centuries".

Here he identifies the church with religion, mistaking a change in institutions for a change in temper and outlook. Certainly private contributions to the church steadily declined until the close of Elizabeth's reign, and the fall was only temporarily checked by Laud. And the isolation of the clergy is further emphasised by the fact that, of all social groups, they were the most insensitive to the needs of the poor. But Professor Jordan has to devote much space to the impetus given to charity by Protestant and Puritan exhortation: religious and secular concerns are not so easily separated.

Professor Jordan, though well aware of the rising curve of prices in this period, wisely avoids any attempt to correct his figures for the changes in the value of money. He warns the reader that "statistical results have an almost hypnotic effect in the beauty and rigour of their apparent accuracy", and yet has been hypnotised himself into forgetting the effects of inflation and into the use of exaggerated language. In eight pages he uses the epithets incredible or unbelievable five times; and in another five pages he is twice staggered and thrice amazed by his own statistics. Nevertheless his laboriously collected and carefully analysed figures throw a flood of light on the changing structure of English society. He has already shown, in "Men of Substance", that he is as interested in individuals as in social trends, and readers of this first volume will look forward to the promised studies of individual benefactors and particular charities in the two volumes that are to follow. To the social and economic historian Professor Jordan has a wealth of new evidence to offer and some important corrections of conventional views; to the reader disposed to think of social welfare as a product of the benevolent modern state he supplies a different and a more individualist pedigree of ideas; and to the intending benefactor he gives some heartening precedents and many practical object-lessons.

Two Bourbons

Louis XIV : *An Informal Portrait.*
By W.H. Lewis.
Andre Deutsch. 224 pages. 18s.

Madame Royale
By Joan Evans.
Museum Press. 208 pages. 25s.

MR LEWIS misses his target, perhaps because he has fired at the wrong one. His foreword says "this is not a biography of Louis XIV, still less is it a survey of French History during the period 1638-1715". But it reads like an attempt to combine the two. Mr Lewis's hope "that it may some day provide notes for a definitive life of Louis XIV" will be shared by those who enjoyed his earlier book "The Splendid Century", for he tells good stories with uninhibited relish and his character-sketches are crisply ironic. But an informal portrait of Louis is a contradiction in terms: his life was monotonously regular, even in its irregularities; as formal as the battle-scenes in which painters immortalised his military mediocrity. Nevertheless he was the one essential and, as it turned out, irreplaceable part of the monarchical machine. Without him the machine broke down. This was the main cause of the Revolution, in which none of his descendants suffered longer or more bitterly than Madame Royale.

None displayed a fortitude more worthy of his example. Eldest child of Louis XVI and Marie Antoinette, Marie Thérèse Charlotte (Madame Royale from her birth in 1778) was made of sterner stuff than either. Her three years in prison under the Terror, deprived of the simplest decencies if not of the bare necessities of life, callously left in ignorance of her parents' execution, and of her brother's miserable death, embittered but did not weaken her royalism. Nor, when the fall of Robespierre brought some alleviation of her hardships and, eventually, her release in exchange for French prisoners held by the Austrians, did she allow herself to be made a pawn in the shifty manoeuvres of her exiled uncle Louis XVIII. She accepted the impotent

Duke of Angoulême as a Bourbon family duty rather than as a husband; but she was the senior partner, domestically and politically.

Like her uncles, she returned eventually to France having learned and forgotten nothing. Her fearless refusal to compromise was politically disastrous: she alienated Napoleonic notables who were prepared to serve the restored monarchy; her rudeness to his wife was a compelling reason for Ney's defection. But during the Hundred Days she displayed an invincible determination, and an impartial contempt for pusillanimous Bourbons, Bonapartist generals, and time-servers who changed sides. Her husband's army in Provence disintegrated quickly but she held out at Bordeaux long enough to win the respect, if not the obedience, of the troops she tried to rally with speeches delivered in her loud, harsh, masculine voice.

It is not surprising that after Waterloo she refused to intervene for Ney; nor that in 1882 she should have wildly applauded her husband's inglorious victories over the Spanish Constitutionalists; nor that she preferred Charles X's reactionary bigotry to Louis XVIII's parliamentary hypocrisy — though had Charles listened to her, the 1830 Revolution might have been postponed, and she might not have passed into a third exile that lasted till her death in 1851.

There is nothing informal about Miss Evan's portrait. It is simply, but skilfully, drawn. It explains the personal failure of the Bourbons; but it also confirms Napoleon's opinion that the Duchess of Angoulême was "the only man of her family."

OTHER BOOKS

FIRST REPORT ON THE WORLD HEALTH SITUATION 1954-56. *World Health Organisation, Geneva.* 400 pages. 17s. 6d.

The first part of this volume consists of a general survey discussing such subjects as nutritional standards, environmental and other conditions affecting health, the administration of health services and activities and future developments in the health services. The second part gives for 157 countries, grouped in the World Health Organisation's regions, a review of the provision of health services, of vital statistics and of the chief health problems and how they are being tackled. Some background information (on population, climate, economy, standard of literacy) precedes each country survey so that the picture of health and sickness presented can be looked at in the light of the country's state of development.

LETTERS

Colonial Students

SIR — Your recent survey of the position of overseas students in this country was read with interest and appreciation here. There is, however, a misunderstanding in the statement that "the British Council cares for students sponsored by the Colonial Office or by their own governments, but not for those who have reached Britain under their own steam".

There are two special services, (a) meeting and help on first arrival, and (b) assistance in finding permanent accommodation, which are available to students from colonial and foreign countries. As regards the first service, obviously the council cannot meet and help a student on arrival — except by accident — unless it has previously been notified that he is coming. This necessarily implies that the student has contacted the official machinery for the notification of movements that exists in his own territory. As regards the second service, the council cannot assist a student to find permanent accommodation unless he has obtained a recommendation from his national authority. This is so that some ultimate authority may be available in the event of disputes arising and is indispensable if the confidence of landladies is to be gained and retained.

These two special services apart, all the council's welfare services are available to any bona fide overseas student of any nationality, whether or not he is sponsored by his own national authorities, and it is pleasant to be able to record that thousands of private students do make use of them. — Yours faithfully,

PAUL REED

The British Council, W. 1.

Northern Nigeria

SIR — There are one or two points that I would like to take up, after reading the interesting and penetrating account of the situation in Northern Nigeria by your special correspondent in Kaduna. The dependence on the premier is an undoubted fact, but the referring to him of decisions in all departments does not necessarily imply the absence of capacity to arrive at decisions by his ministers. It is a legacy of the emirate system that all decisions on matters of importance must be ratified by the head.

It is true that the public service has up till now drawn heavily on the pagans and Christians of the middle belt since they provide the largest number of educated "northerners", but a strong section of the Northern People's Congress has shown resentment of this fact and an unwillingness to accept the middle belters as true northerners. These people already feel that the dice is loaded against them in matters of promotion and selection for the "plums". They fear that with the reduction of expatriate influence in the Public Service Commission and the Establishment Office the career of the non-Moslem northerner may be subject to prejudice and handicaps. This is one of the reasons why the advocates of a separate middle belt state reject the argument that they would thereby lose a great field of advancement for their sons.

Finally, your correspondent says nothing of the vexed question of votes for women. The Sardauna recently committed himself to figures saying that only 5 per cent of the northern women wished to vote and when 50 per cent ask for the franchise it would be granted. The 5 per cent may be comparable with the number of northerners who were genuinely interested in, and aware of, the issues involved in the last election. It is likely that a plebiscite taken after due advertisement of the question would even now produce the required 50 per cent. — Yours faithfully,

MEIMUNA SABO

M.v. Accra.

Sea Fever

SIR — I am sure I shall not be the only reader to pick up a point in your article on the sailing boom.

Surely it was not Queen Victoria who made the celebrated remark "He's gone boating with his grocer", but the Kaiser. Sir Thomas was hardly moving in those circles at the turn of the century, and the remark was made at a time much nearer to the Great War. Moreover, was it not George who had gone boating, and not Edward? Edward, as Prince of Wales and as King, was far happier with the ladies in the gardens of the Royal Yacht Squadron than on board a yacht. — Yours faithfully,

MICHAEL G. HENSMAN

Norton-on-Tees.

Ever met someone who's tasted glass?

UNITED GLASS

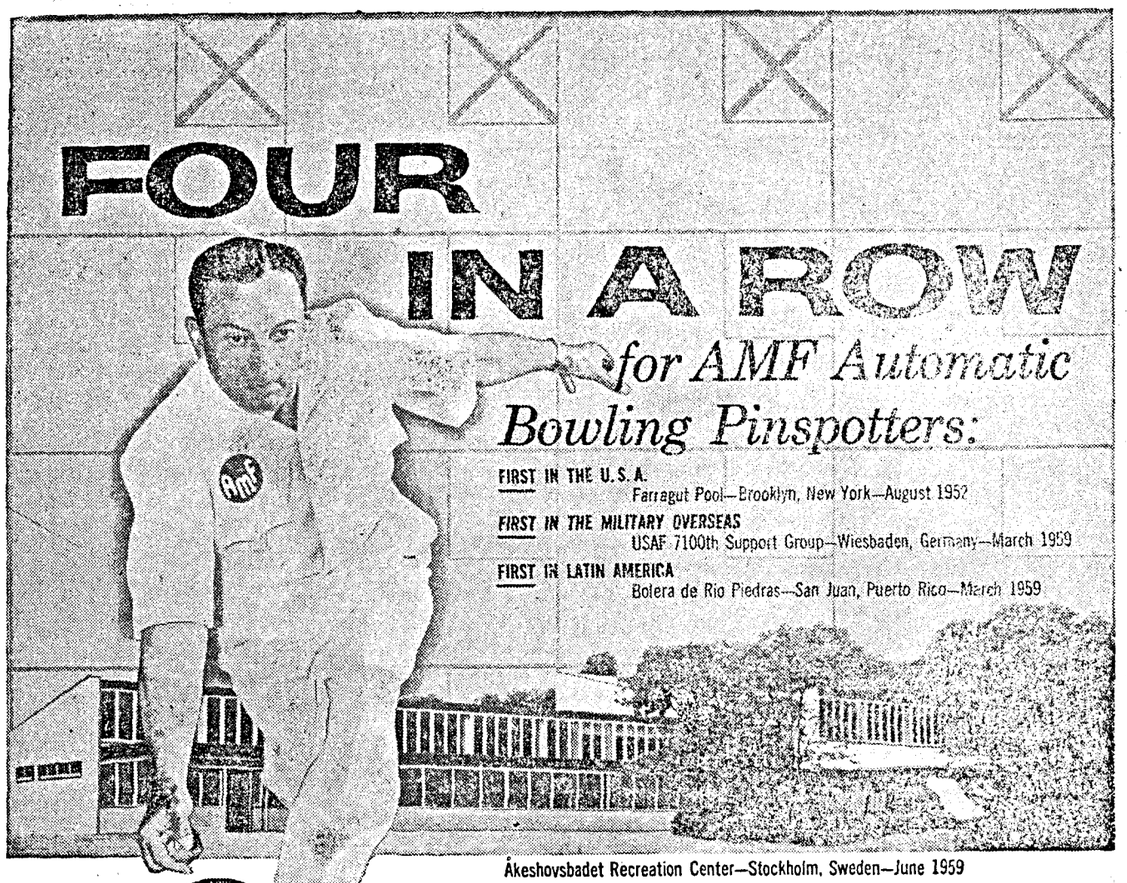
THERE ARE people who say they can taste metal and plastics but nobody has ever tasted glass. It has no taste. It never affects what's in it. It makes the most hygienic containers of all — for beauty preparations, medicines, cleaning products as well as foods and drinks.

Glass—the choice of manufacturers

Manufacturers are choosing glass to package more and more new products. United Glass Ltd. gives them the service they need — including market research into packaging and first class design.

MAKERS OF BOTTLES AND JARS FOR THOUSANDS OF GOOD THINGS

UNITED GLASS LIMITED. 8 LEICESTER STREET, LONDON, W.C.2. Tel. GERrard 8611. Telegrams: Glaspak, Lesquare, London



Åkeshovsbadet Recreation Center—Stockholm, Sweden—June 1959

And now AMF is first with Automatic Bowling for European civilians!

AMF chalked up its fourth "strike" in a row on Sunday, June 14, 1959, when the historic first ball was rolled down the lane at one of eight AMF Automatic Bowling Pinspotters installed in Stockholm's new Åkeshovsbadet Recreation Center. Thus began operation of the first AMF "Automatics" to be used on the European continent in a commercial bowling establishment.

Additional AMF Pinspotter installations are planned for Sweden. Fourteen machines will be installed in Stockholm's Kungsholm Hall by August 15th, another eight in Per Albin Hansson Hall by early fall. Kungsholm Hall, in addition to AMF Automatic Pinspotters, will be completely equipped with AMF's "Streamlane Decor," the new, exciting concept in bowling center equipment which features the unique Underlane® "Magic Circle" Ball Return.

More than 60,000 AMF Automatic Bowling Pinspotters have now been either installed or contracted for, both in the United States and in countries abroad. More installations will be opened in other European cities in the very near future – *all equipped by American Machine & Foundry Company* – to enable the growing number of enthusiasts overseas to enjoy bowling at its best – *automatically!*

World's largest manufacturer of Bowling Equipment

INTERNATIONAL AMF GROUP

American Machine & Foundry Company

AMF Building • 261 Madison Avenue • New York 16, N.Y., U.S.A.

Manufacturing subsidiaries and sales offices: LONDON • GENEVA • BOLOGNA • STOCKHOLM • SÃO PAULO • TOKYO

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Challenge of the Cornucopia

WASHINGTON, DC

LIKE some mindless machine, the land goes on pouring out more food than Americans know what to do with, while the distraught mechanics in Congress and the Department of Agriculture throw levers this way and that in a vain attempt to stop the flood. Some of the remedies now being suggested by normally rational men would wring a smile from the Marx brothers. Senator O'Mahoney of Wyoming wants wheat farmers to take a year's holiday from cultivation, buy a "crop" out of the existing reserves of wheat, and then sell it again. The Secretary of Agriculture, Mr Ezra Benson, is trying to cure the overproduction of eggs which has brought the poultry industry to the verge of ruin by urging everyone to buy more eggs; if his campaign were carried to its logical conclusion, the Americans would simply transform their bursting granaries into bursting waistlines. It is reckoned that the total value of the surplus crops held by the government, now nearly $6.5 billion, will increase by a third in the next four years if things go on at the present rate. The costs of storage alone — a billion dollars annually — would finance the housing Bill recently vetoed by the President and buy thirty intercontinental missiles as well.

All three most important crops — maize, wheat and cotton — go on piling up. Last summer Mr Benson managed to persuade Congress, at long last, to push the producers of maize one or two faltering steps nearer to a free market. They were allowed to grow all they wanted in return for accepting a lower price support. But the latest estimate is that this year's maize harvest will yield a record 4.2 billion bushels, 10 per cent above last year's, itself a record. Since most of the maize is used to feed livestock, one of the consequences will be a glut of pigs next year. The National Planning Association thinks that this may well bring prices down to near ten cents a pound, the "ten cent hog" which is the nightmare of both the middle western farmer and the politician who will need his vote in November, 1960.

If no legislation is passed by Congress at this session to cut down the supply of wheat (one Bill, which would have reduced the acreage but increased the support price, has already been vetoed by President Eisenhower) Mr Benson prophesies that the entire wheat programme may collapse. This year's harvest will add nearly 1.2 billion bushels to the 1.3 billion surplus carried over from last year, and no more than two-fifths of this can be consumed in the next twelve months. The prospects for cotton are little better.

Neither of the rival ideas for doing away with these surpluses has made much headway. Mr Benson may reasonably point out that his attempt to "set the maize farmers free" has not been given a fair trial, since the support price is still a fairly generous one. But it seems clear that nothing short of sudden and total immersion in the icy waters of a free market will make American farmers cut production drastically. If the support price is cut gradually, they respond by producing more in an attempt to keep up their income. And if all price supports were suddenly abolished, as Senator Capehart of Indiana has brashly suggested, the effect would be to drive off the land thousands of those small (if not especially efficient) farmers whom every good American since Thomas Jefferson has called the backbone of the nation. (The limit of $50,000 a year which Congress has just placed on loans to a single farmer on any one crop is an attempt, probably an ineffectual one, to cut the cost of the subsidies by confining to this group help which up to now has had to be shared with large and prosperous commercial enterprises.)

The alternative method, to limit the number of acres a farmer can plant while guaranteeing him a high price for what he grows on them, is no better. Fertiliser and machinery merely enable him to get more out of a given area. In most crops the yield an acre has gone up by a quarter in the last six years, and no one knows when the process will end. It is this which has made a few bold spirits urge that limits be imposed, not on the number of acres planted, but on the amount of produce a farmer is allowed to put on the market.

THERE remains another possibility. Recently a growing sympathy has been detected for the idea that large food surpluses are not a burden, to be groaningly shouldered by the government until a way is found to prevent them, but a nudge in the ribs from the gods about man's responsibility to man. This idea is not new. The conflict between those who want to cut down production and those who prefer to accept the

surplus and search for ways to use it goes back at least to the New Deal. What is relatively new is the idea that if purchasing power at home and abroad is insufficient to absorb the surplus, then the United States government should step in to create "effective demand" on a permanent basis.

Senator Mansfield, the Democrats' second-in-command in the Senate, in one of the troubled and compassionate speeches that are his speciality, has recently urged that more food be distributed to needy people at home. Senator Humphrey, the first avowed candidate for next year's presidential race and a perennial fountain of ideas, has introduced a Bill to set up a Peace Food Administration for spreading the surplus abroad more effectively. This would combine under a single man the operations which are now run by an inter-departmental committee from nine different agencies. Instead of calling the job "surplus disposal", as if America were getting rid of old boots, Senator Humphrey's proposal would involve long-term planning. He believes that the Peace Food Administration should distribute $10 billion worth of commodities to poor countries in the next five years in return for local currencies (as well as making outright gifts on a smaller scale) compared with the $4.5 billion worth which has been disposed of in this way since 1954.

There are, of course, obstacles. The Department of Agriculture quite rightly points out that over 85 per cent of its surplus stocks consist of six basic commodities. Unless it deliberately buys other foods to add to its larder, it cannot supply a balanced diet to needy families; it claims that it already answers every request from voluntary relief agencies which can be met from existing supplies. Abroad, the problem is to distribute American food without injuring the other suppliers who want to sell their produce on the same market. Senator Humphrey's scheme would make sure that other countries were consulted before the United States acted. The problem is not insuperable; the American surpluses should be used to feed people who simply do not have foreign exchange to buy food on the world market.

If the idea of a permanent "surplus" is accepted, this will lessen the danger that many small farmers are going to be pushed out of agriculture. It may offend economists of the Manchester school that government aid should keep these marginal producers in existence when their output cannot be sold on the free market. But an observer who looks at America's cities today is tempted to reply that it is better liberalism to check the drift away from the land and use this surplus produce to help poor countries overseas. Such a policy would also recall what Senator Humphrey claims is "the authentic America — an America grateful for her bounty... eager in her generosity, an America whose pocketbook is open even if Communists do not threaten."

Exposition of America

Not since Yalta (an unfortunate precedent) has an American of Vice President Nixon's official standing visited the Soviet Union. Mr Nixon is the only man, other than the President, who has been elected to office by the whole body of American voters, and he sits both in the Cabinet and in the Senate. Even without his unquestioned ability he would therefore be able to speak with more authority, and to bring back home more authoritative answers to his questions, than anyone except the President himself. But it was made clear before the Vice President left Washington that he had no power to negotiate but was only to explain the American point of view as firmly and as unmistakably as possible. In particular, he was to impress upon Mr Khrushchev that intransigence over Berlin was likely to force the United States, however unwillingly, into a nuclear war.

The Vice President began brilliantly and in so doing seems not only to have earned Mr Khrushchev's respect but also to have brought a little nearer to fulfilment Mr Khrushchev's belief that Mr Nixon will be the next President of the United States. He showed himself fully as tough and almost as quick as the Russian Premier in a running, or rather walking, debate, in the full eye and ear of the public. In this argument the two threw everything at each other except the kitchen stove on which they were leaning in the typical suburban home at the exhibition of the American way of life which the Vice President had come to Moscow to open.

To Mr Nixon the purpose of this "exposition" is to demonstrate both that Americans have plenty which they are determined to defend and also that they prefer to compete with the Soviet Union in spreading that plenty peacefully over the world rather than in self-destruction. But the main difficulty of the organisers will be to convince the 50,000 visitors who are crowding in each day that the average American can afford, and can find in the shops, the washing machines, cars and clothes which are on display in such profusion (washed down with free Pepsi-Cola).

Even in the United States there has been some doubt whether a true picture is being presented: the dramatised fashion display had to be altered, after its preliminary showing in New York had been criticised on the grounds that too many of the girls wore trousers and that Negroes appeared in unlikely social situations. The art exhibition, too, had to be altered after Representative Walter claimed that many of the artists were communists and President Eisenhower admitted that the abstract works did not appeal to him personally. In one way, at least, the exposition has undoubtedly encouraged friendship between Americans and Russians; only a concentrated co-operative effort got the specially-constructed and imaginative buildings ready, or as ready as such shows ever are, by the opening day.

Army under Ice

FROM A CORRESPONDENT IN COLORADO

Somewhere under the thick Arctic ice, presumably in Greenland, Army engineers are now building an experimental, but complete, military base, big enough to contain living quarters, supply dumps, shops, offices and a garage. This comes after four years of trials by the Snow, Ice and Permafrost Establishment of the Army Engineers in co-operation with the University of Denver. Surface bases are almost impossible to conceal in the Arctic and they are vulnerable both to air attacks and winter blizzards. Moreover, the ice or permafrost underneath them tends to melt so that they sink continually and must be constantly readjusted. But if such bases could be put under the ice most of the inconvenience and risk of surface installations could be avoided.

The chief purpose of the original experiments was to find out whether the ice, since it is plastic, might not collapse, or at least close in, on any large artificial cavern dug in it. Secondly, it was necessary to discover the best ways of digging and maintaining such caverns. The project began in 1955 when a tunnel with huge rooms leading off it was dug straight back into an ice cliff; eventually the tunnel was 1,170 feet long, 12 feet wide and 7½ feet high; one of the rooms was 60 feet square and 25 feet high, the other 120 by 21 feet and 7½ feet high. At the start most of the digging was by pick and shovel, with the occasional help of explosives; then a coal cutter and coal-mining trams, running on rails, were added; and now a continuous coal-mining machine is being employed. The only time when coal-mining equipment is not perfectly suited to the work is when moraine ice, containing reefs of sand and gravel, is encountered. Then it is back to the old pick and shovel again.

At its inner end the original tunnel was 200 feet vertically beneath the surface. Deformation, from the plastic ice filling up rooms and passages, proved to be no problem. Such cavities do close up but so gradually that the room can easily be trimmed to its original dimensions at intervals of months. The roof need not be arched, but it appears that the installations should be no deeper under the ice than is necessary for concealment and protection against bombing — 150 feet or so down. Machinery, food and other equipment left there during the winter were found in perfect condition and it is now being suggested that it might be possible to store America's huge stocks of surplus food in these ice caverns. This would cost less than do present methods of storage and the food would be preserved for the use of the swarming peoples of the future. However, for the present, the military applications of the scheme are of more immediate importance.

Nuclear Show Boat

Nobody expects the *NS* (for Nuclear Ship) *Savannah,* the first atomic merchant vessel, launched by Mrs Eisenhower last week, to be any more of a commercial proposition than the shoal of atomic submarines, which are already in service, or the cruiser, the destroyer and the aircraft carrier, all powered by nuclear energy, which the Navy is building. These are at least considered to have real military, even if little economic, value while the Defence Department is very doubtful if this would apply to any aircraft with a nuclear reactor which could fly in the near future. For this reason the military authorities are going very slowly with their atomic aircraft, to the annoyance of Congress's Joint Atomic Energy Committee. Its members believe that to be first in the sky with nuclear energy would give the United States a great psychological advantage over the Russians. Propaganda is also the immediate purpose of the *Savannah,* which is to sail the seas demonstrating that the United States develops the atom for the benefit rather than the destruction of the whole world, and also keeping the American flag "pre-eminent" upon the international trade routes.

But for some time the sixty passengers (the ship will also have about 750,000 cubic feet of cargo space) will be experts learning how the vessel functions and studying how to make its successors into paying propositions. It is said that the nuclear reactor, cooled by pressurised water and fuelled by 7,050 kilograms of uranium oxide, enriched with U235, will as the result of improved technique be out of date before the ship starts its first voyage, sometime in 1961. One of the great needs is to reduce the weight of the steel shield against radiation; this and the reactor system together weigh 2,500 tons. The builders are convinced that the passengers will receive no more radiation from the reactor than they do from the sun on deck. Already a specialised crew is being trained in such fields as atomic physics and mathematics. The radioactive wastes are to be stored in the ship for disposal when it touches shore; it will not have to refuel until it has travelled 300,000 miles. But the relatively low operating expenses are counteracted by the low cargo-to-size ratio of the 22,000 ton vessel and by its very high cost of over $40 million.

Virginia's Primary Issue

On Bastille Day voters in Virginia had their first chance to choose between Governor Almond's moderate (and therefore revolutionary) stand on racial segregation and a return to the *Ancien Régime,* with its policy of shutting the tax-supported schools for white children when the courts require the admission of Negroes. Virginians gave the Governor a vote of

confidence. Members of the Democratic party were picking their candidates for next autumn's voting for the State Legislature; in a one-party state such as Virginia, this is the same thing as electing them. Die-hard supporters of complete segregation made a violent assault upon the Governor's most influential supporters. If Mr Almond's tiny majority in the Legislature had been destroyed, it might have been possible to repeal the new Perrow laws which, after next March, permit local schools-boards, in the last resort, to admit Negroes.

The repulse of this attack was more impressive than appears from a gain of two seats for the moderates in the State Senate; they actually lost a few seats in the House of Delegates. But it was in the Senate that reinforcements were most needed, and it was in the Senate contests that the racial question was most clearly posed and most decisively answered. In Alexandria, State Senator Boothe won a 2 to 1 victory over an extremist related to Senator Byrd, Virginia's political boss, who rallied all the resources of the Byrd machine to crush Mr Boothe. Like the Governor, Mr Boothe prefers racial segregation, but realises that at least token compliance is necessary now that the courts have destroyed the last legal foundations of "massive resistance." The victory of another liberal in Norfolk, the big sea-port where schools were shut for a time last year, was made possible by the growing Negro vote, as well as by the evident determination of white Virginians not to sacrifice their schools on the altar of racial prejudice. Even some segregationists paid lip-service to public education.

The results were a personal rebuff to Senator Byrd, though his machine is flexible and enduring enough to accommodate itself to change. The real significance of the vote is that the extremists cannot now hope to reverse the first steps toward a saner racial policy; that the "silent moderates" may no longer be afraid to speak out; and that Virginia's example may have far-reaching effects in other southern states. It should strengthen the School Board in Little Rock, Arkansas, which is making tentative plans to reopen the high schools which Governor Faubus shut last year under a state law which the courts have now declared unconstitutional.

Jet-propelled Profits

Of all this year's business stories, none has been more striking than that of the airlines. Twelve months ago bankruptcy was a possibility for nearly all of them; now satisfactory profits are becoming the rule rather than the exception. This results partly from the increased traffic (June's figure was 15 per cent above June, 1958) which has come with the general economic recovery and partly from the higher fares which were allowed on a temporary basis last year; the rise is likely to be made permanent soon and probably augmented a little. But the main stimulus for the industry's optimism is the jet aircraft. The big gains in passenger traffic have come to the companies which have been operating jets on domestic services since the end of 1958, while United Air Lines, which is not going into jets until September (using DC-8s), has been carrying only a few more people than last year.

These aircraft are bringing a new dimension to long distance flights and one which seems sure to encourage more air travel. American Airlines now offers a non-stop service from Washington to Los Angeles (2,300 miles) leaving at noon and arriving at 2 p.m. (there is a time differential of three hours between the cities). The return flight, in the same aircraft, leaves at midnight and sets the passenger down in Washington at 7.30 a.m. Trans World Airlines flies on a similar schedule. The fare is $182.99 each way first class and $125.90 for coach seats; the aircraft are divided equally between the two and have been carrying a hundred or more passengers on every flight. This means that each of these Boeing jets, which costs about $5 million, is bringing in almost $30,000 gross a day; its takings will equal its purchase price within six months.

This depends on the aircraft operating practically at capacity, which may not continue once the novelty has worn off and more of the huge jets are in service on more airlines. On the other hand air travel is one of the fastest growing businesses in the country. Moreover, the jets should be able to show a profit even with loads of 65 per cent of capacity. Companies using the Boeings report that they have had fewer initial operating difficulties with them than with any other new aircraft, until the recent disturbing trouble with the landing gear. And experience has shown that one Boeing jet replaces not two of the piston-powered Constellations or DC-7s, as had been calculated when orders were given, but three.

SHORTER NOTES

Last year Americans spent $306 million on chewing gum, enough to provide them with 200 sticks of gum each. It took 150 million pounds of sugar, 50 million pounds of maize syrup, 20 million pounds of dried sapodillo sap and other natural materials, 24 million pounds of rubber and resin and 6 million pounds of chalk.

* * *

Early this year the United Hatters, Cap and Millinery Workers' Union took over the Merrimac Hat Company, the mainstay of the town of Amesbury, Massachusetts, in order to keep it from closing down and leaving 350 members of the union without work. The union invested $435,000 in the company which has made a profit of $47,442 since February, compared with a loss of nearly $120,000 in the like period of last year.

THE WORLD OVERSEAS

The Sun King's Fortress

FROM A CORRESPONDENT IN THE PYRENEES

Professor Felix Trombe of the Sorbonne is a man of many parts: physicist, speleologist (a labyrinth of Pyrenean grottoes has just been named after him), archaeologist and proprietor of a bucolic thermal establishment *pour les dames et les nerveux*. Ten years ago he persuaded the national committee for scientific research (CNRS) to sponsor an inquiry into the possibilities of harnessing solar energy. The ministry of defence lent him a yard and a cluster of ancient buildings at Mont-Louis, 5,000 feet up in the eastern Pyrenees (what history-loving Frenchman could have resisted the chance of plotting the solar revolution in a citadel built for the Roi Soleil?) and even threw in some old German searchlight reflectors. It was with these swords-become-plough-shares that the first experiments were carried out. Within two years the results achieved coaxed out of the treasury the funds needed for the construction of what is now the Mont-Louis solar station's showpiece — its *four solaire*.

The name "solar oven" is misleading. The boy scout in one is apt to envisage a huge lens on a tripod with a leg of mutton roasting merrily beneath. At Mont-Louis everything is done by mirrors. A mobile plane *mirror, the orienteur*, tilted towards the sun, reflects the sun's rays on to a vertical concave mirror, the *parabolique*, which reflects and focuses them on the object to be heated. Each mirror weighs twelve tons.

The *orienteur*, thirty feet across, is made up of 350 bathroom size mirrors, and is induced to track the sun by a simple arrangement of photo-electric cells and solenoids, two governing the east-west axis and two north-south movement. The parabolic reflector, a masterpiece of optical engineering, is the largest and most efficient of its kind in existence: nearly forty feet in diameter, it has more than 3,300 component mirrors, each one adjustable individually.

The "oven" stands on a platform between the two mirrors, about five yards from the centre of the parabolic reflector. It is roughly the size of a domestic gas-oven, with a hole about two feet wide in the side facing the *parabolique*. Through this hole a cone of light and heat is directed into a revolving, water-cooled crucible, which can be observed only through dark glasses: to watch it is like looking into the mouth of a volcano. Even when Mont-Louis is deep in snow, temperatures of 2,000 deg. C. can easily be reached. The oven's normal working temperature is above 2,700 deg. C. It will melt a thick iron bar in ten seconds.

The old searchlight reflectors are still used for laboratory experiments. Temperatures of up to 3,000 deg. C. are reached and pinpointed so precisely that apparatus only a few inches away can be manipulated without inconvenience to the operator. In a walled garden behind the citadel, *orienteurs* direct the sun's rays into blacked-out laboratories through screens which extract all but infra-red or ultra-violet rays. On the roof, instruments click continuously from dawn to dusk analysing solar radiation. In an inner drawing-office, plans have been drawn up for a gigantic new installation at Odeillo, six miles to the west: there, sixty convergent *orienteurs* will direct the sun's rays into a parabolic reflector 140 feet in diameter. Whereas the searchlight reflectors can heat only one cubic inch of material at a time and the existing *four solaire* not more than a cubic foot, the Odeillo installation will be able to handle commercially important quantities.

Quantities of what? Atomic reactors, jet aircraft, and missiles require what the copywriters call "wonder alloys" tolerant of unprecedented high temperatures and stress. The metallurgists who produce them need refractory ceramics of hitherto unattainable stability, purity, hardness and heat-resistance. Not only are these exotic new materials extremely difficult to purify and homogenise; they also tend to absorb impurities at high temperatures from the chemists' and metallurgists' own electrodes and crucibles.

The solar oven dispenses, of course, with electrodes, a major source of impurities. And since its crucible is a revolving one (originally merely to facilitate its cooling), the combination of heat and centrifugal force builds up a protective layer of the material being purified which effectively preserves the bulk of the end-product from contamination.

Mont-Louis has already supplied several tons of zirconium and other rare metals to French industry. It produces corundum (a crystalline alumina, one of the hardest substances known) more perfect than any existing in nature. It has developed new compounds such as calcium zirconate for use in refractory cements. Security restrictions forbid any mention of the quantities of uranium oxide and other materials treated on behalf of France's atomic research establishments; but it is stated that in all cases the utilisation of solar energy has made possible the manufacture or extraction of a purer and cheaper product than could be obtained by any other means at present employed in France.

(The first of two articles.)

New Outlook for Southern Italy

FROM OUR CORRESPONDENT IN ROME

THE discovery of important methane deposits in the Matera district in Apulia, which was announced in June by the State hydrocarbon concern, ENI, completely changes the outlook for the industrialisation of the South. In the nine years since the Cassa per il Mezzogiorno was set up, succeeding governments have spent vast sums on preparing southern Italy for industrial development. But the results so far have been meagre. Unemployment is alleviated to an appreciable degree only during the temporary work on road building, irrigation schemes and so forth. The special measures devised to attract industry to the South have been neutralised by the scarcity and high cost of electric power. Today, continental southern Italy consumes a bare 9.4 per cent of the total national output of electric power, and a sizeable firm in the South pays fifty per cent more (8.3 lire instead of 5.46) per kilowatt than one of the same calibre in the North. The difference in power costs has been the main reason given by industrialists for their reluctance to move south and the chief argument of politicians, particularly in the Liberal party, who oppose what they call "uneconomic" projects to set up state industries there. Only the chairman of Fiat, Professor Valletta, has had the wit and originality to point out a truth worthy of Lapalisse, namely that until the South has been industrialised it will not be economic to plant industry there. The attempt must therefore be made in uneconomic conditions or not at all.

The Matera discovery goes far towards removing the disparity in power costs between North and South. The wells at Ferrandina and Pomarico relate to a single deposit and ENI has announced an estimated reserve of ten billion cubic metres, but the experts claim that this is a conservative estimate and that the deposit is probably at least twice as big. At their estimated production capacity, the Ferrandina wells will yield two million cubic metres of very pure gas a day. This is three times as much as the two neighbouring provinces, Bari and Taranto, could absorb today for domestic and industrial use. One of the advantages of the Matera site is its nearness to these two industrial centres and the ease with which pipelines can be laid across the Apulian plain. A more difficult task, but by no means insuperable for ENI, which has already laid two thousand miles of methane conduit in sub-Alpine country, will be to take the pipeline across central Italy via Potenza to Salerno and Naples.

Geologically the Matera discovery is important because, at long last, it confirms the existence of hydrocarbons in the Tavoliere which, from Matera to Foggia, has the same geological formation. This means that prospecting will be carried on here with renewed hope and energy. Economically the discovery of gas at such a central point of southern Italy justifies Signor Mattei's constant refusal to extend his northern pipeline in order to bring methane from the Po Valley to the South. This, he claimed, would increase the price of methane to the northern consumer, and the money spent on such a costly enterprise would be better employed on prospecting in the South.

What does Signor Mattei intend to do with this new supply of methane? His first aim is to give southern Italy cheap power. This means building new thermal electric power stations as well as supplying methane to the existing electricity companies, whose present monopoly is one cause of the high cost of electricity in the South. But it is safe to assume that Signor Mattei will not use all his methane to generate power. A handsome margin will be kept for industrial use inside the ENI framework. There is no room in Italy for another synthetic rubber factory which would compete with ENI'S own establishment at Ravenna, but all the other branches of the petro-chemical industries are open to Signor Mattei; fertilizers, plastics, synthetic fibres, pharmaceutical products. The choice will not be made immediately. When the minister responsible for state industry suggested a meeting to concert plans with some leading industrialists, Signor Mattei replied that he would give private enterprise a year's start in which to show how seriously it means to take advantage of the new conditions he is creating for the South. Proof that a new climate already exists is the fact that within a few days of the announcement that gas had been found at Matera the government cut short a long controversy and decreed that the State holding company, IRI, should set up a big steel plant at Taranto.

IN Sicily, ENI's offshore prospecting has discovered an extension of the Gela oilfield which will yield three million tons of crude oil a year. Gela oil is dense and sulphurous and a big international oil company would probably leave it where it is, but Signor Mattei intends to refine it locally and sell the products, shipping them directly from this ancient but long neglected port. His plans for Gela include a six million ton refinery, a thermal electric power station and a fertilizer plant which will use sulphuric acid recovered from Gela crude. This is a characteristically bold act on Signor Mattei's part, for it will probably hasten the closing of the depressed Sicilian sulphur mines. The mines are unhealthy and uneconomic. They employ five thousand workers and cost the state £7,000,000 a year. It would be cheaper to pension off the miners or teach them new skills, but in the old climate no one ever dared to propose this. By creating a new industrial context for Sicily, Signor Mattei acquires the means to give the death blow to the old mines.

Austria's Uneasy Coalition

FROM A CORRESPONDENT IN AUSTRIA

NOW that the Austrian crisis seems to be over leaving everyone feeling better, but a little limp, it is possible to review the events of the past ten weeks. The party leaders have now approved a revised coalition pact which defines their spheres of influence. Exhaustion has helped them. All the protagonists wish for nothing so much as to avoid any further conflict, and to get away for the holidays.

On May 10th, the Chancellor, Herr Raab, found himself with a majority of one over the Socialists. The figures were: People's party (OVP) 79; Socialists (SPO) 78; Freedom party (FPO)8. The Communists had vanished. The Socialists, headed by Dr Pittermann, maintained that they had polled more votes than the People's party, and it was only because of the laws of election arithmetic that they were deprived of that majority of seats in Parliament to which the will of the voters entitled them. They therefore demanded, and were determined to achieve, parity in the government. The main task was to break up the Raab-Kamitz combination. Dr Kamitz, the former minister of finance, is, in the eyes of right-wing supporters, the man most responsible for the solidity of Austria's economic revival. Dr Pittermann said that he would agree to Dr Kamitz remaining, provided that a Socialist secretary of state were to be introduced into the ministry. This, for a time, had the desired effect. Dr Kamitz replied that he would never take office under such a limitation.

The battle continued, week by week, covering the whole field but mainly concentrated on finance, foreign affairs and control of the nationalised industries. On June 12th Herr Raab let off his bomb. He offered the ministry of finance to the Socialists, subject to ratification by the People's party committee, of which he is chairman, adding that if this body did not agree, he would resign. There was general consternation and hefty protests from the provinces, industry and the press. The party committee rejected Herr Raab's proposal at a stormy meeting. In spite of jeering comment by the Socialists, Herr Raab did not resign.

Many attempts have been made to explain why the Chancellor took this sudden step without consulting his party. Was it a matter of calculated shock tactics? Did he — this is a widely accepted view — believe that by throwing the book at the Socialists he would cause them to sink under the weight of their extensive social welfare policy? It is likely that, like Dr Adenauer, Herr Raab overestimated his authority over his own party.

It seemed that either he or Dr Kamitz had to go, since the former finance minister was unwilling to accept the presence of a non-identical twin in his ministry. Negotiations dragged on. At midday on July 7th, Herr Raab handed back the task of forming a government into the hands of the President. Dr Schärf, who has been a working Socialist party member since the age of 15, did a surprising thing. Far from sending for Dr Pittermann, he instructed the party committees to carry on negotiations on their own. The effect of this decision was that the committees, freed of the pressure of publicity and conflicts of personality, have been able to work out a new basis for the coalition. Offices are now distributed as follows:

People's party: Chancellor (Herr Julius Raab); finance (Dr Kamitz); education (Dr Heinrich Drimmel); agriculture (Eduard Hartmann); trade (Dr Fritz Bock); defence (Ferdinand Graf). Socialist secretaries of state have been appointed to the ministries of trade and defence.

Socialist party: Vice-Chancellor (Dr Bruno Pittermann), with ministerial responsibility for the nationalised industries; foreign affairs (Dr Kreisky); interior (Josef Afritsch); justice (Dr Tschadek); social affairs (Anton Proksch); transport (Karl Waldbrunner). OVP secretaries have been appointed to the ministries of the interior and foreign affairs.

Leaving aside a mass of small change, the main outcome is that the conservative People's party has held on to finance, but lost foreign affairs and, subject to restrictions and 3-monthly reports to parliament, control over the nationalised industries. There are few new faces. The last-minute appointment of Herr Josef Afritsch, a member of the Vienna city council, to the ministry of the interior, made banner headlines. Herr Figl, former foreign minister, is senior member of the triumvirate forming the parliamentary presidium.

"This task", said Herr Raab recently, "is going to be the most difficult of my life. Above all, confidence must be re-established between the parties, and a factual basis found for the work of government." What are the prospects? The almost total stagnation of the past two years cannot be maintained much longer. It will depend mainly on the Socialists whether the third Raab government can live out its normal term; and the crucial decisions will come over questions of Austrian and European economic policy.

A Year of Talk on Germany

THE present phase of east-west exchanges on Germany and Berlin can be said to have opened last September with an exchange of notes between east and west. At that time both the east and west German governments were concerned to show that they had not lost interest in reunification. The east Germans and Russians proposed an all-German committee to discuss reunification, side by side with a four-power commission which would work out a German peace treaty. The west Germans replied with a note proposing a four-power commission on the German question which might draw on experts from the two German states. Beneath these two proposals, so similar in form, was

an underlying difference which is present today in the Geneva talks. The west wants free elections leading to the formation of a government chosen by the Germans; the east Germans wish to avoid such elections and to obtain the maximum recognition abroad for their state; they want any moves towards German unity to leave intact the political setup in east Germany and if possible extend their influence westward. Thus Bonn seeks to avoid all direct talks with the east Germans which might give their regime respectability and status. The east Germans on the other hand press for direct talks.

On November 27th Mr Khrushchev added a new ingredient by proposing to end the occupation of Berlin; he suggested that west Berlin be made a demilitarised free city, and threatened to hand over control of the routes to Berlin to the east Germans within six months if no agreement was reached in the meantime. Fears were expressed in the West that such a transfer might be a prelude to a gradual strangulation of the city's supply routes. But it was difficult to see what the West could do to stop it. In the long run Berlin's problem can only be solved as capital of a reunited Germany. The western powers therefore replied by emphasising their right to be in Berlin, proposing broader talks on the German question, and repeating the west German proposal for a four-power commission on the subject. Moscow countered on January 10th, with a note proposing a peace treaty with all Germany; but German reunification was, as usual, to be worked out between the two German states.

During the next three months the Russian position changed in several respects. Early in March Mr Khrushchev, visiting east Germany, backed up his demand for an all-German peace treaty with the threat that Russia would conclude one with east Germany alone if no progress was made. But later he retreated from this position, as well as from the threatened time-limit in Berlin. Instead he agreed to the Geneva conference, which met on May 11th.

There the West once more had the opportunity to seek a solution of the Berlin question by resolving broader issues. It did so in its "package plan" on European security, German unity and Berlin. This plan did not propose what, in many eyes, is the essential *quid pro quo* if the Russians are to be persuaded to give up their puppet regime and occupation in east Germany — an offer to define beforehand the frontiers, alliances and military status of the new German state. But the western governments did make certain significant moves, agreeing that German unity might have to take place gradually, by stages over a period of years; accepting the idea that the east Germans should be brought into the process of working out how this should be done, and proposing a mixed committee consisting of 25 representatives from west Germany and 10 from the east, which would formulate proposals for increasing contact between the two German states and draft an electoral law. As a *riposte* on Berlin they proposed that, until Germany was reunited, not just west Berlin but the whole city should be merged through free elections, and that the four powers should keep their troops in the city.

The Russians rejected the package on May 15th. They returned to the position they had taken up on January 10th, proposing a peace treaty with all Germany, and an all-German committee to discuss reunification.

The differences on Germany were evidently so great that the talks began, after all, to move back towards discussion of Berlin, as a separate question. The emerging idea of a separate interim agreement on Berlin was the most important development in the first phase of the Geneva conference. For a while the Russians appeared to recognise or at least acquiesce in the western occupation.

The east Germans, however, evidently felt that the emerging compromise did not give them enough in the way of recognition or control in Berlin. And on June 9th, after a visit to Moscow by the east German leaders, the Russian position hardened. Mr Gromyko suggested that the western occupation of Berlin could continue under such an agreement only for a year. After that Russia would negotiate a separate peace treaty with east Germany and put into practice its original proposal for demilitarising west Berlin. The ensuing clash caused the conference to be adjourned on June 19th.

WHEN the ministers met again Mr Gromyko reverted to the proposal for an all-German commission on reunification and contacts, linking this with the conception of an interim agreement on Berlin. Meanwhile the west Germans had been active in the exchanges between the western powers. And on the permanent treatment of the German question the western governments reverted to the idea of a four-power commission with east and west German experts attached. Both sides were taking up positions similar to those they adopted in their notes last year. Attempts have been made to bring the two positions closer together. But fundamental differences remain on two matters. The Russians want the two German states to have the same number of votes as the west Germans in any all-German group. The West still insists on giving the west Germans a majority. On Berlin, too, the difference remains wide. The West fears any time-limit on the duration of interim arrangements in Berlin, and holds to its view that if there are to be interim arrangements, they must last until the reunification of Germany is achieved. Russia wants a time-limit. From this point of view it cannot greatly console the West if the Russians, to make a concession, extend their time-limit by six months or two or three years; for the mere existence of a term to the statute of west Berlin would undermine the western position there.

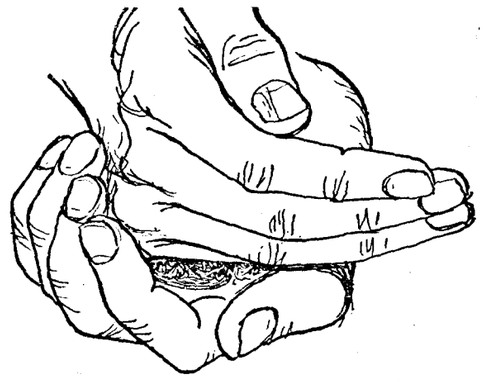
SPARKLING WATER

Bubble, bubble
Tummy trouble
How ill it can betide you,
But 'mornings after'
Turn to laughter
With Perrier beside you.

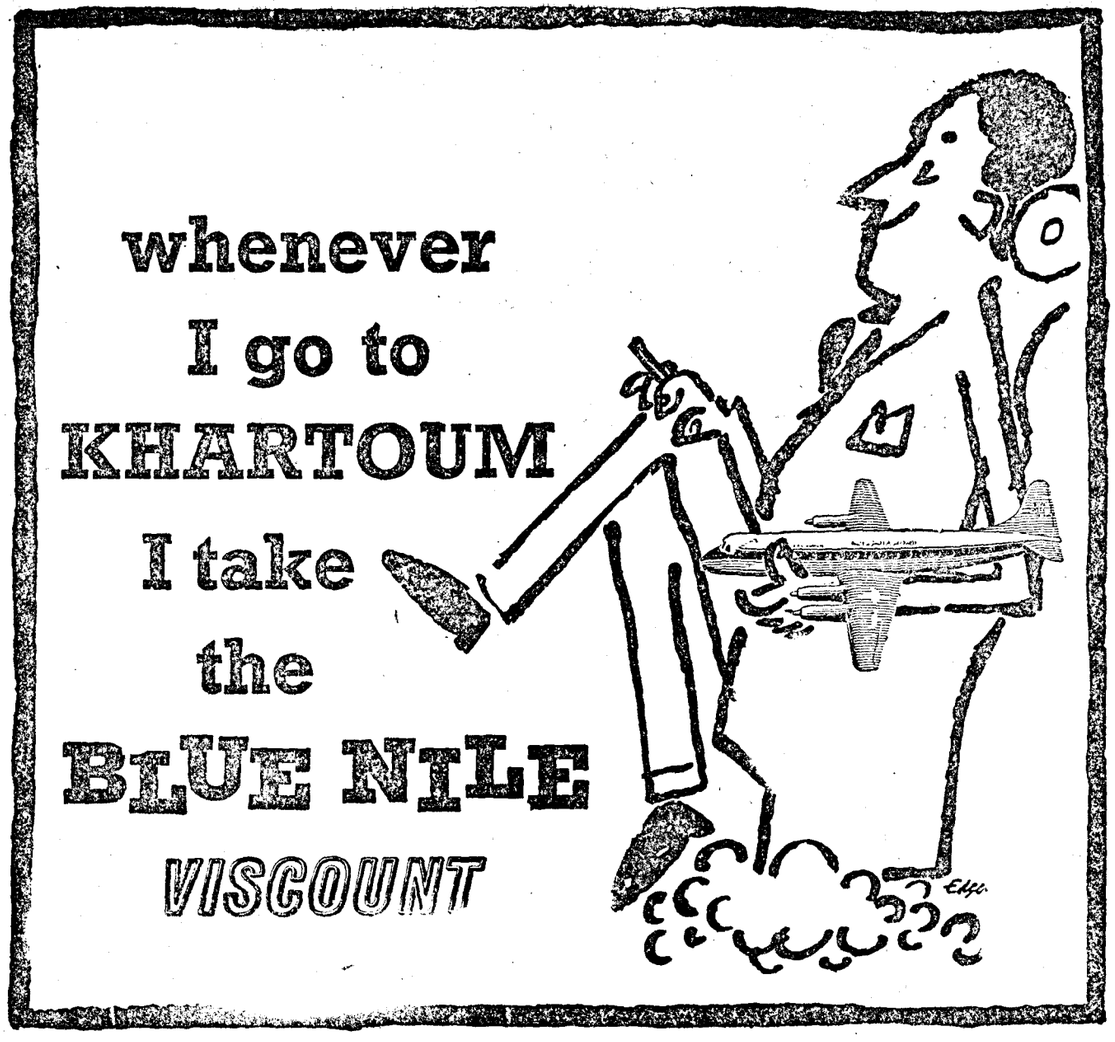
Perrier makes you SPARKLE



rub your hands with enjoyment...

Take a slice of Player's Medium Navy Cut; rub it in your hands. Smell the richness. Fill your pipe. *Then* you'll discover that *fresh-rubbed* Player's Medium, made from matured tobacco, has an *extra* flavour. Ask for Player's Medium in the vacuum-sealed tin to be sure of ever fresh enjoyment.

PLAYER'S MEDIUM Navy Cut
1 ounce airtight tin 4/11½

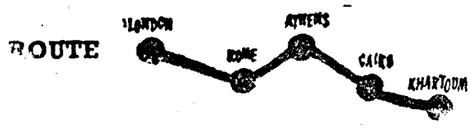


Every Monday a Sudan Airways VISCOUNT 831 (maintained and crewed by Airwork) will fly from London to the Sudan. **This will be the only air service to cater specially for the Sudan.** Passengers who wish to break their journey at Rome, Athens, or Cairo may do so* and continue their journey by the next plane at no extra cost. The return flight from Khartoum will be on Thursdays.

VISCOUNT comfort... Rolls-Royce speed

The latest Viscount—the 831—is larger, much faster and even more luxurious than its predecessors. In a perfectly relaxed atmosphere, you can eat and drink, read and talk (nearly everyone on board will have a common interest in the Sudan) or simply sleep, lulled by the soothing hum of the four Rolls-Royce jet engines. An unusual feature of this flight will be a Free Information Service on all matters relating to Sudanese business, political, and social life. This will be very helpful to newcomers and to those returning after a long leave of absence. If you have business in the Sudan, ask your travel agent about the new Blue Nile Viscount.

*Subject to the approval of the Governments concerned.



SUDAN AIRWAYS' *technical maintenance provided by Airwork, who are also UK Managing Agents.*

THE BUSINESS WORLD

Competitive Railways Sooner?

IN THE pounds and the circumstances of 1955, the plan to re-equip and modernise British Railways that was put forward by the Transport Commission and "supported" by the Government covered the expenditure of £1,240 million over the 15 years to 1970. Late in 1957, the commission told the Government that as a result partly of inflation and partly of more precise budgeting, this figure needed to be revised upwards to £1,500 million — and that certain other things that had not been thought of at the time of the plan, but would become necessary to make it a success, would cost about £160 million more. Last autumn the Transport Commission suggested to the Minister of Transport that it should undertake "a full, detailed, and urgent review of the whole modernisation plan," and Mr Watkinson replied that it certainly must. It has — and has decided that the alterations and accelerations it now has in mind will not cut the capital cost below that eventual £1,660 million. The main change it has in mind is to get more than three-quarters of that total spent in the next five years.

At first sight, this seems surprising. The circumstances in which the commission proposed this re-examination were those of slump into an unexampled deficit of £89 million last year, which overstrained even the system of deficit financing upon which the railways had been allowed to subsist since 1956. Since that year the commission has been allowed to borrow to cover its current deficits as well as to finance its long-term fixed investment; and it has been permitted to capitalise the interest upon both kinds of borrowing for three years or more from the time of borrowing. This concession was made because the railways were in too compressed a competitive situation to escape from their deficits by increasing their charges, which seemed likely to drive more traffic away; it was to bridge the period until maturing investment brought them greater efficiency, to stem the loss of traffic and to afford better financial results from a competitive level of charges. The loss of traffic, as expected, went on; and last year's recession in the heavy industries, which provide so big a slice of rail traffic, knocked the commission even farther into deficit.

The commission has not cut back its estimates of what needs to be spent on the railways because it still holds that the original plan, and the financial calculations erected upon it in 1956, were soundly based. Subsequent events, it admits, have now made desirable some modifications to the plan; "but they are not many and are principally in the direction of accelerating its execution." It can cite the government and the main representative organisations of industry in favour of the proposition that a modern railway system is essential to the prosperity of the country. That being accepted, it must, like any other nationalised industry, assume some generally accepted rate of economic growth when it plans ahead.

IN 1955 the commission set its hand to making its sector of transport more efficient during a period in which it knew its competitors would continue to capture some of its share of the business. The total volume of business has not expanded as it had hoped, and it has lost more of its share. The conclusion it draws from these ugly facts is that it needs to be efficient and competitive sooner: 1965-74 will not do. Hence its claim that much more capital investment should be concentrated into the next five crucial years of the plan. Having spent since 1955 some £420 million (of which a quarter covered works authorised before the plan was made), it wants to spend another £975 million from this year to the end of 1963; and to get its revitalised railways competing on a level basis early in the sixties, not late.

Technically, this acceleration does not imply many radical changes from the original plan. Electrification of the main line from King's Cross to Doncaster and possibly York has been put back, and the route will go over to diesel traction for the time being at least. On the other hand, electrification from Euston to Birmingham, Manchester and Liverpool may be brought forward. About 1,000 miles of electrified track are in use today; by the end of 1963 this will rise to some 1,600 miles, and by then work will be in progress on a further 600-700 route miles. There are rather more than 100 main-line diesel locomotives in service today; by the end of 1963 there should be 2,300.

What was always physically implied in this modernisation plan was the development of a somewhat smaller, though technically more efficient, railway service, concentrating upon doing what rail can do well and not doing what other services, or customers' own transport, can do better. Spending more money to achieve this end more quickly means reducing some other things faster. Between 1954 and 1958 the commission closed 300 miles of route and nearly 400 stations; between this year and 1963 it proposes to close another 1,800 miles of route and proportionately even more stations. It gives no figure to indicate what reduction it expects in its labour force through streamlining some services and closing others (such as redundant stations and workshops); the ordinary "annual wastage" of labour over the plan would probably more than cover the expected rundown in employment, but wastage does not necessarily work in the right places.

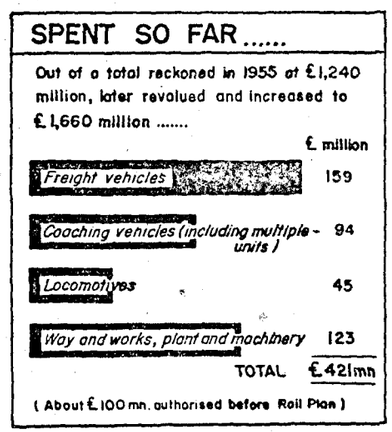
FINANCIALLY, the commission professes the same hopes as before that all will come out right on the night. By 1963, it hopes, gross receipts should more than cover working expenses, leaving a substantial working surplus that should more or less cover its increased capital charges; the prospect is therefore, "if the efforts made are successful and circumstances favourable.. a small net surplus; on the other hand, if circumstances are unfavourable, a deficit is to be expected." Reckoning 1963 against 1957 (not 1958), it is counting upon an improvement of from £5 million to £35 million in freight receipts, from slightly more traffic at slightly lower rates, with reduced working expenses; from £50 million to £70 million more from passenger services, through a higher volume of traffic, higher fares, and reduced expenses; and £10 million more from services other than the railways; all this set against extra costs of about £10 million a year for better signalling, automatic warning control, and the like. Its working surplus, therefore, might be £55-105 million better than the £4 million working deficit of 1957, i.e. a surplus of £50-100 million. Against this it expects its central charges to rise to about £85 million. Its chances of a net balance, therefore, are far too close to be comfortable. And this shaky balance, if achieved, will be in part only because interest on deficits between 1956 and 1963, and on much of the capital invested since 1956, will even by 1963 still be held in suspense.

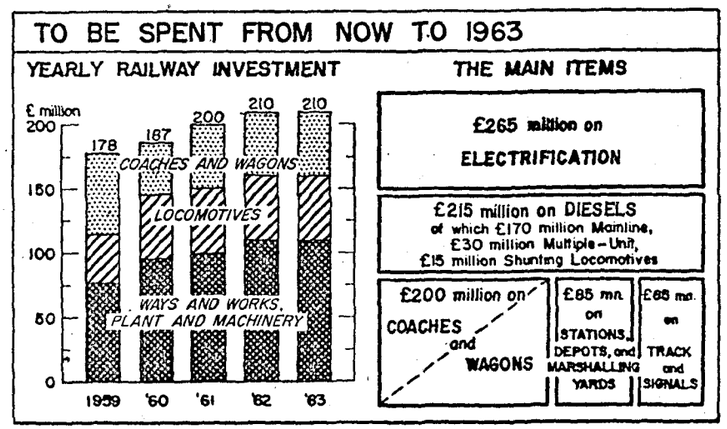
It is not too clear how seriously one is intended to take this brave and wistful hope of solvency. For the first time in public the commission utters some guarded and obscure phrases about the possibility of lightening the burden of its necklace of millstones. Its central charges, it says, are very large compared to the level of surpluses that would be regarded as acceptable by "the various agencies of public control"; they are also fixed and inflexible, being interest on borrowings payble in good years and bad. "If the commission are to be put in a position to pursue consistent policies on a longterm basis, it seems essential that in due course their financial structure should receive consideration afresh".

To this veiled overture Mr Watkinson, commenting upon the new report that it was a "clear honest statement of the problems facing the commission", could make no direct response; anything that might be proposed would be a matter for the Cabinet, not a Minister. He offered no comment either upon the commission's request for some long term assurance of investment allocations. As to the more specific application to spend much more money than had been expected over the next five years he said: "The government has not been able to answer this point at this time. Otherwise the government accepts the report".

Sir Brian Robertson equally was not to be drawn about what kind of relief from its obligations the commission might have in mind, except to say that what it might or might not ultimately propose would certainly be "far more complicated" than simple cancellation of any large block of its financial obligations. If this modernisation and rationalisation programme is pushed through as the commission intends, there is no doubt that by 1963 it will be left with the duty to pay interest in respect of a pretty large basket of assets that are no longer in use or in some cases even in existence. It used to be taught that one essential element of equipment for a railway undertaking in a developing community was the right to go into liquidation from time to time and to write down its dead assets. Nevertheless the interest on transport stock remains a public charge. Nobody could rule in advance upon the proposals for financial reconstruction that the commission has not yet made; but there are many elements in the balance of fairness here.

One is left at the end with the basic article of faith: that a modern railway system is essential to a small crowded modern industrial society, rich and growing, we hope, richer. In this society today, the railways and some other public services suffer from effective competition from capital equipment owned by former customers who apply few commercial criteria to its operation. These former customers nevertheless desire to have public services around (and also clean, new and running on time) for the few times when they might want to use them; and these customers, being taxpayers, also think it a disgrace if nationalised industries do not pay. It is against this rich, sombre and confused background that the commission is resolutely proposing to stake the public's next thousand million pounds.





BUSINESS NOTES

STANDARD AND MASSEY-FERGUSON

A Deed of Separation

STANDARD is to sell its tractor manufacturing plant at Banner Lane and its half-interest in a tractor plant in France to Massey-Ferguson for £14,900,000. It is not selling its tractor engine plant in Coventry, and will indeed continue to supply Massey-Ferguson with diesel engines from there until the end of the year and with vaporising oil engines for some time longer; and only until "disengagement is completed in August 1961" has it undertaken not to sell tractors. The 7,757,938 units of Standard stock held by Massey-Ferguson are to be acquired by J. Henry Schroder and Helbert Wagg and offered to Standard stockholders on a 3 for 10 rights basis at 5s 9d. Standard, after paying off creditors for tractor manufacture, tax on the sale of certain assets, and other items, will ultimately be left with about £12.5 million in cash, representing a capital profit of about £5 million. It proposes to pay out £4 million of this in a tax-free distribution of 2s 6d per 5s unit. The price finally obtained for its tractor manufacturing interests, which have been manufacturing tractors for Massey-Ferguson under a contract that ran until 1966 but which Massey-Ferguson did not intend to renew, was rather more than the market had expected; but the tax-free distribution was perhaps rather less than some investors had hoped, and Standard ordinary slipped a little on the terms.

The company has already earmarked most of the £8½ million with which it will be left after the distribution to shareholders for the further expansion of its car manufacturing capacity. It plans to spend some £2 million on the assembly department at its Canley factory in Coventry, £1 million upon its body-making facilities, £1 million on the new paint and trim shop at Canley and a further £2 million to increase the capacity of its car plant; this will leave over £2 million for extra working capital as production of cars works up towards 180,000 by the end of 1960.

Standing Alone

DURING this financial year Standard will probably have produced about 90,000 cars and 70,000 tractors, though this balance is shifting, and its car output is already at the rate of 110,000-120,000 a year. During this financial year, it says, profits will have come almost equally from tractors and from cars; the final profit will be "substantially higher" than the £2,740,000 earned in 1957-58, but during the coming

year of readjustment Standard expects that it may fall by a quarter to a third. It expects to pay not less than 12 per cent on this year's results; for the unsettled year of 1959-60 it thinks the dividend, given stable conditions, will not be less than 9 per cent. It is steadily pushing up production of cars, particularly of the new Triumph Herald; this is attracting strong demand, though at the moment, the company says, demand is greater than it can meet for every model that it is selling.

By the end of 1960 it expects to have the capacity to produce 180,000 cars a year, and hopes that market conditions will enable it to work to that capacity; next year's production might be something of the order of 140,000-150,000. The company is well aware of the gamble it is taking in trying to compete on cars alone, without the steadying business in tractors. It would hardly have taken this initiative, eleven months ago, had it not believed that the Herald was likely to be a winner in the British market and overseas. It has more models to follow, some of which may revert to a chassis construction as this small car has successfully done. Standard is well aware that its success and its survival among the big six will depend upon making somewhat different cars from theirs; it seems less likely in future to compete, model for model, with BMC and Ford.

Massey-Ferguson, after the divorce, is now left as, it claims, the largest tractor manufacturer in the world; its recent purchase, F. Perkins, will begin to supply the Banner Lane plant with engines soon after Massey-Ferguson formally takes over on August 31st this year. Standard will be left at the outset as the smallest of Britain's big six motor manufacturers, for although its car production is probably about as high now as that of Rootes or Vauxhall, its limited production of commercial vehicles does not begin to compare with theirs. Its decision to expand in the car field involves not only making more cars but also making more of the car: it has bought the body building firm of Mulliners (Holdings) incorporating the Forward Radiator company and the body paint and trim plant at Coventry that used to belong to Fisher and Ludlow. With further paint and trim facilities at Canley, and the new car assembly hall there, Standard will be in more complete command of its manufacturing arrangements than for some years. It has now to prove itself and the new designs upon which it is staking so much.

THE ECONOMY

Quicker Recovery

RESTRICTED by the printing dispute to a short general survey of the current economic scene, the new and fourth issue of *Economic Review* is the most cheerful so far published. "The pace of recovery", the National Institute of Economic and Social Research contends, "looks like being rather faster than we estimated in our last issue." All observers are bound to lean heavily on the official index of industrial production as a progress guide. When the National Institute last put forward its views, the latest figure was a March forecast of 107 - 108 (1954 = 100). Later revisions have now brought this figure up to 109, and the most recent estimate now is 110 - 111 for May. Since this is already 3 to 4 per cent above the level at the end of last year, the Institute's previous view of a rise of 4 to 5 per cent by the end of this year plainly looked conservative. But the latest estimates are provisional ones.

Recovery has stemmed from the rise in consumer spending, focused on durable goods, and from higher exports, notably of cars. As a result, it is by no means widespread. Within the metal-making and metal-using industries, the Review finds that the only two sections to show an increase between the third quarter of last year and the first quarter of this year, after allowing for seasonal factors, were vehicles and electrical engineering. Output in the mechanical engineering industry took the brunt of the decline in investment in plant and machinery and fell significantly, and in the Institute's view, in spite of better export prospects, it may not recover much until private investment picks up. Although there is no firm evidence that investment plans are being revised upward, there are some moderately encouraging signs.

The rise in consumer spending is expected to continue, as the Budget exerts its full impact. The recovery in exports, well under way in Western Europe and North America, may extend to the sterling area. The prospect for price stability remains good; but the *Review* gives a warning about wages. Employment has risen only very modestly in relation to output so that productivity per man, particularly in manufacturing, has gone up sharply (though part of this reflects longer hours worked). So far this year wages have been fairly stable and labour costs per unit of output "must now be falling". This leaves scope for lower prices or higher profits. The Institute hopes that manufacturers will choose to cut prices, since higher profits would encourage wage claims. But would they not also renew faith in new investment?

CREDIT EXPANSION

A Marked Upturn

A SIGNIFICANT change in the credit trend has emerged in the past two months. For the first time since the credit squeeze ended twelve months ago, the rise in bank advances has been accompanied by a major expansion of bank deposits. During the ten months to May, the growth in advances of the clearing banks by no less than £565 million was accommodated, remarkably, without any rise in net deposits, thanks to a substantial reduction in the banks' holdings of liquid assets and their large sales of investments. In these past two months to the mid-July make-up, net deposits have risen by £279 million, to £6,645 million, and the index compiled by Lloyds Bank, which is corrected for seasonal fluctuations, has shot up by 2.7 points, to 116.4 (1948 = 100). This is the sharpest movement it has yet shown. In the preceding ten months it had risen only from 111.5 to 113.7.

This spurt in credit expansion has been attributable to two main factors: first, a striking increase in liquid assets and, secondly, an accentuation of the rise in bank advances. Holdings of liquid assets expanded during the eight weeks by no less than £203 million, a more than seasonal movement that enabled the banks to accommodate their additional advances without any commensurate sales of gilt-edged. Sales during the four weeks to mid-July amounted to only £5 million, bringing the eight week total to £26 million. Advances rose by £89 million during the four weeks and by £114 million in the eight. Part of the acceleration in the latest period was due to the demands of the State boards and part was a reflection of the distorting transit items. If both these elements are excluded, the rise between mid-June and mid-July was at the average rate of about £17½ million a week, compared with £9½ million in the preceding four weeks. In spite of these demands, the average liquidity ratio rose over the two months from 30.9 to 32.7 per cent. The strains on government finance resulting from the budget concessions and stickier conditions in the gilt-edged market are now having their expected and not alarming effect on the credit base.

LONDON ROADS

A Twenty-Year Compromise

THE report of the Committee on London Roads (Cmnd. 812) is the first of a number of studies to help the Government in deciding the shape of Britain's future road programme. Set up by the Minister of Transport in November 1957, the committee included representatives of the London County Council, the Road Research Laboratory and the Ministry, under the chairmanship of Mr Nugent, joint Parliamentary Secretary to the ministry; its report sets forth two alternative programmes for improving London's road system over the next twenty years. The first assumes an average expenditure of £6 million a year on new roads and major improvements, based on an annual government expenditure of £60 million for the entire country. The second assumes that the total road programme will be enlarged, making available an average of £10 million a year for the London area for the twenty years. In each case, three-quarters of the money will come from the Government, and the rest from the LCC.

The volume of through traffic crossing London is comparatively small; the growing commuter traffic now totals about 70,000 people in private cars, against about a million who use public transport. Most of the city's traffic is generated at the centre; it is mixed and growing at an alarming rate (though only half as fast as for the country as a whole). The greatest difficulty arises from the cost of acquiring property in the centre of the city for conversion to roads, from the slowness of natural redevelopment and from the need, which the committee fully accepts, to fit any scheme for improving the roads into the wider social and business framework of the city.

Under these conditions, any road programme is bound to be a compromise. The committee has examined and rejected proposals for urban motorways, such as the A and B ring roads and the Riverside Highway, which in general promise spectacular immediate benefits to motor traffic at a rather considerable price and with rather debatable results later on: the A ring road, for instance, would now cost at least £150 million. At a press conference on the report, Mr Nugent quoted American traffic engineers as feeling that urban motorways had helped to destroy the city centre of Los Angeles. Instead the committee has opted for a patchwork of improvements to the major graded-road intersections (120 of which lie in central London) and on removing bottlenecks from the inner circular and the intersecting cross-routes. The £200 million programme accelerates the £120 million one, and adds further improvements to the main radial roads. The smaller of the schemes would mean the rehousing of about 19,000 people, at considerable extra cost. The new roads and redevelopments planned in these schemes are designed to increase the capacity of the roads and intersections affected by about 50 per cent over 1956, during the working day (though the increase at peak hours, or for the city as a whole, would not be as much as this). The £120 million programme would achieve this in 20 years; the £200 million programme would accelerate the process, and improve radial roads more.

Progress by Deterrence

LONDON'S traffic is already increasing much more rapidly than road capacity would increase in these plans, and a better road system will naturally attract more vehicles. More efficient use will thus have to be made of existing streets, and the future growth of traffic, beyond a point, will have to be discouraged. The committee looks to controlled parking to solve both of these problems. It is convinced that ultimately the streets must be kept completely clear of parked cars except in the few areas, such as Mayfair and Marylebone, in which there are or will be parking meters allowing short-term parking. This will necessitate the building of parking garages to accommodate 30,000 long-term parkers who now take up about 100 miles of kerb space every day in London; it is

thought that such a plan might increase the traffic capacity of London streets by 15-25 per cent.

The cost of parking garages is high: the committee estimates that they may average as much as £1,500 per car space, which would mean a total cost of some £45 million. Assuming an 80 per cent occupation, this would require a daily charge of at least 12s. 6d. By further raising this charge and by firmly prohibiting free on-street parking, all but essential long-term parking could then be discouraged. This is clearly the ultimate answer, and plans have recently been announced for the first parking garage to be built in the City, early next year. But on-street parking cannot be (or at least is not) effectively prohibited until some garages are available; and until it is prohibited, existing garages will not be economically used (this is the case with the one or two private ones now in operation). This will increase their cost even further. The Government's view is that this cost should be borne entirely by the local authorities; the LCC has naturally disagreed.

The committee admits that this is not an ideal plan. Within likely financial limitations, they have produced a sensible set of compromises — and a document for Mr Watkinson to brandish if he ever gets around to answering the criticisms of his activities recently made by the Select Committee on Estimates in a proper manner. Road development is a slow process, and it is not speeded by the Government's (and the LCC's) refusal to allocate funds for more than one year at a time. But even the more modest of the two suggested programmes depends on an annual level of expenditure of £6 million, which will not be reached until 1960-61; only £2½ million was spent on London roads last year.

OVERSEAS TRADE

Guessing at the Surplus

DETAILED trade returns for June seem to confirm that the fall in exports and rise in imports was no more than a statistical reaction from the exceptionally favourable figures of the previous month. These records of physical shipments can fluctuate quite haphazardly in individual months. Despite the apparent deterioration in June, the performance in the second quarter as a whole marks a decided improvement on expectations earlier in the year. Exports were 7 per cent higher than in the first quarter and 4½ per cent above the second quarter of 1958, reversing the earlier downward trend. The biggest improvement has been in engineering products, especially cars. Imports were 4½ per cent above their value in the first quarter and 6½ per cent above the second quarter of 1958. The steepest rise in imports this year has been in oil and finished manufactures. Despite the rise in industrial production, imports of industrial materials have barely risen in volume and are slightly down in value, though in recent months an upward trend has become marked.

The apparent trade deficit shown by the trade returns dropped to a total of £105 million in the second quarter, only slightly above the figure in the second quarter of 1958. The payments figures then showed the true balance of visible trade (valuing imports as well as exports fob and making the appropriate timing adjustments) to be in modest surplus; the current balance including invisible earnings showed a surplus of £107 million. In the first quarter of this year, when the trade returns showed a deficit of £117 million, there was a true trade deficit of only £14 million and a current surplus of £78 million. There is thus a good chance of this being bettered in the second quarter. Moreover, the deterioration from last year's exceptional surplus on visible trade has been wholly in trade with the rest of the sterling area. Exports to non-sterling countries have risen by 10 per cent in the first half of 1959, while imports from them have risen only 4½ per cent.

ATOMIC ENERGY

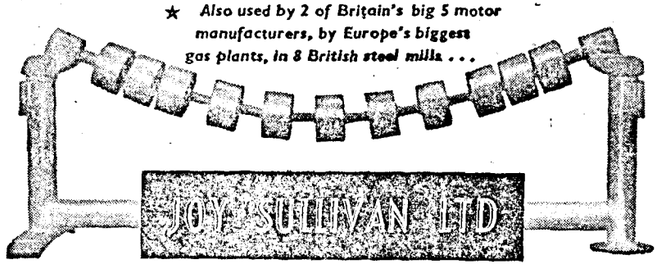
After Lord Plowden

THE appointment of Sir Roger Makins to succeed Lord Plowden as chairman of the Atomic Energy Authority on January 1st next year was announced a few hours before Lord Plowden was due to present his fifth and last annual report. Lord Plowden's great achievement during his five years' work has been to bestow a more efficient administration on a sprawling, decentralised, autonomous and largely understaffed group of laboratories, factories and construction sites that compose the Atomic Energy Authority's empire. The structure that was designed or just growed to achieve this task somewhat appalled Sir Alexander Fleck when he came to inquire into the AEA's organisation, but in fact it has largely survived; most of the changes in organisation made on Sir Alexander's recommendation have one by one been abandoned.

Lord Plowden made no secret last week of his belief that the AEA has been growing too fast. Its staff has doubled since he took office in 1954; its numbers rose from 30,000 to 35,000 in the twelve months to March 31st this year. This rate of growth must, he said, be halved, to give time for consolidation. Research, however, is unpredictable as thistledown; it is difficult to departmentalise, plan and budget as neatly as sound administration might demand. The chairman of the AEA has to judge how far he can allow scientists freedom to back their hunches when those hunches frequently require the construction of research apparatus costing hundreds of thousands of pounds and of reactors costing several millions. In such a position a wholly scientific training can be as much a disadvantage as an advantage: what is required, here as almost everywhere, is one of those somewhat apochryphal beings who know about science but are not currently

BRITAIN'S BIGGEST CEMENT MANUFACTURERS* SPECIFY JOY LIMBEROLLER CONVEYOR IDLERS

★ Also used by 2 of Britain's big 5 motor manufacturers, by Europe's biggest gas plants, in 8 British steel mills . . .



CAPPIELOW, GREENOCK, SCOTLAND. Export Sales 7 Harley Street, London W1

At one such works a programme of complete replacement of conventional idlers with Limberollers is in progress. Limberollers have also been supplied to 4 other cement factories. The reasons for Limberollers' wide acceptance in all industries are not hard to find. LIMBEROLLER's flexible steel cable 'cushions' the load, reduces material breakdown. Their self-centering action reduces spillage. Their Neoprene rollers reduce belt wear. They are spaced at up to twice the spacing of conventional idlers. Their two, sealed-for-life bearings NEED POSITIVELY NO MAINTENANCE.

LIMBEROLLERS are demonstrably superior on most conveyor installations. See how they would cut your materials handling costs by writing for leaflet L125.

A LOT TO DO WITH STEEL

Simon-Carves build coke ovens to make coke for blast furnaces and gas for steelworks heating processes. They build complete power plants to supply steelworks with steam and electricity. Huntington Heberlein *(Simon-Carves subsidiary)* build plants to sinter iron ore fines and blast furnace dust *(economy in ore and coke and better blast furnace output)*. Simon-Carves *(and subsidiaries)* work in one way or another for practically all Britain's leading steelmakers, and for such famous overseas steelmakers as

Tata Iron & Steel, Indian Iron & Steel, Government of India *(new Durgapur steelworks)* . . . Australian Iron & Steel . . . Iron & Steel Corporation of South Africa, Rhodesian Iron & Steel Corporation . . . Société Métallurgique de Normandie, Cockerill-Ougrée, Forges de la Providence . . .

STEEL?

In their experienced and resourceful way Simon-Carves *(and subsidiaries)* have had for a long time – a lot to do with steel.

SIMON-CARVES LIMITED IS A LEADING COMPANY OF SIMON ENGINEERING GROUP

COMBINING THE IMMENSE RESOURCES OF

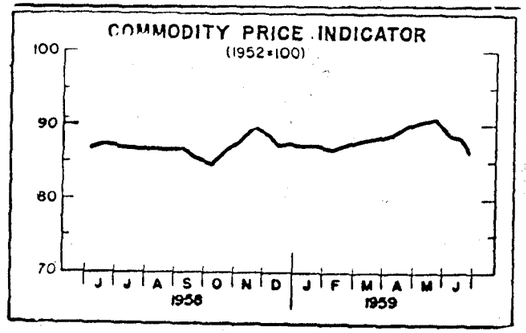
in love with any part of it. In default, a diplomatic administrator who knows what the Treasury will wear will probably do.

Lord Plowden's successor will have to rule upon the question of how many different types of nuclear power stations can be developed by the AEA in addition to the Mark 11 and Mark 111 versions of Calder Hall to which it is already committed. Preliminary studies have been started (and abandoned) of many among the more exotic reactor types; the current annual report shows that the present favourite is a reactor in which the fuel is suspended in heavy water and cooled by steam. This has the advantage that it can be built in almost any size; but Sir William Cook, head of the AEA's industrial and engineering groups, said last week that it would be three or four months before the investigations showed whether it was worth attempting to build such a reactor.

Zeta on Ic(s)e

How important flexibility is in such an organisation is well illustrated by the AEA's experience with research into thermonuclear fusion. The AEA's own scientists have known for some time that they would never be able to achieve controlled fusion in Zeta or any apparatus like it. The extraordinary thing about Zeta is that it worked as well as it did; it has given better results than any other piece of fusion apparatus in the world but for reasons that remain a mystery to this day. Instead of making another frontal attack on the direct control of fusion the AEA has therefore decided to go back to first principles and build a vast piece of experimental apparatus for basic research into the unknown phenomena whose effects have been demonstrated in Zeta.

If this new apparatus, ICSE (for Intermediate Current Stability Experiment) helps to find out why Zeta can be pushed to the threshold of fusion but not beyond, and why the extra power fed into it since the ten-fold increase in the size of its condensor bank merely leaks away instead of raising temperatures to fusion point, the AEA will know whether and how Zeta's successor should be engineered. But ICSE will take two to three years to build. Meanwhile work on larger versions of Zeta is being abandoned. If this decision can be taken as a pointer to future policy, it suggests that the AEA has reshuffled its priorities into the correct order and taken to heart criticism that, compared with other countries, it has been neglecting basic research in favour of active engineering development and doing so to an extent that was beginning to endanger this country's scientific reputation.



THROGMORTON STREET

A Touch of the Sun

Midsummer madness seized the stock exchange last week when spectacular activity in Ford shares, following rumours that the American parent was to increase its shareholdings in Ford of England (of which it owns 55 per cent) jolted the market out of its holiday doldrums. Overnight buying by United States investors on Tuesday followed by professional speculators in London caught the jobbers very short of stock. On Wednesday of last week the shares jumped 16s to 85s and in after hours dealings they touched 90s. Ford of America then denied that the company was purchasing Ford of England stock and stated it had no plans to do so. Next day New York and London took their profits and the price slipped to 76s; subsequently it moved up and down with continued speculation.

The equity markets as a whole showed narrow movements. Investors' attention was concentrated on a few stocks — Standard and Massey-Harris, the new property issues, Ford and Ultramar. The news that Ultramar might be making a rights issue put the stock down 3s 3d to 54s. The company is negotiating for a controlling interest in the Golden Eagle Company of Los Angeles, a subsidiary of the Panama Refining and Petro-Chemical Company. This would help to give Ultramar a better spread of interests; at present it has little refining capacity to balance its output of crude oil. The two companies are discussing plans to build a refinery in Panama with a capacity of 70,000 barrels a day and the scheme will probably be too large for Ultramar to finance out of earnings alone.

Oversubscription of three new property issues suggests that the speculative activity in this section of the market has not subsided. Daejan's offer of two million 2s shares at 6s 8d each attracted no less than 19,000 applications for nearly 22 million shares. The issue of 1.2 million ordinary 5s shares at 14s in Sunley Investment Trust was twice oversubscribed, and that by City and County Properties for £339,000 attracted applications for over £1,350,000. But properties did not drain the rest of the new issue market. The £5 million debenture stock of the Industrial and Commercial Finance Corporation offered at 98½ received applications amounting to about £8,600,000; and the Firth Cleveland offer of over four million ordinary 4s shares at 16s 6d was oversubscribed more than thrice.

INDEPENDENT TELEVISION

Profits Up, Charges Up

HIGHER rates for advertising on independent television followed hard on the heels of reports of record profits for three leading programme companies — Associated Rediffusion and Associated Television, reporting for the year to April 30th, and Associated British Picture which in the year to March 31st derived 56 per cent of its profits from independent television. Associated Rediffusion, whose equity is largely divided between British Electric Traction and Rediffusion, slightly bettered its forecast of "not less than £7 million" by returning a profit of £7,134,000 before tax; this is the highest commercial television profit yet recorded in Britain. The dividend is equivalent to just over 20 per cent tax-free on the increased capital. Associated Television increased its profits before tax by £1,600,000 to £5,316,000 — very close to the estimate last February when the company sought a quotation on the Stock Exchange for its "A" shares. Also in line with that forecast, the dividend is 100 per cent. The full report of Associated British Picture shows that out of total trading profits of more than £5,434,000 as much as £3,051,000 comes from the television interest. The dividend has been doubled to 60 per cent.

In raising their autumn rates by as much as 10 per cent during peak viewing times, the television companies are merely accepting the fact that the demand for peak advertising greatly exceeds the time for it. Advertisers who cannot get a peak time booking will not accept a second-best substitute and off-peak times remain, by comparison, unattractive whatever the rates charged for them. Television contractors have already come under criticism for crowding too much advertising into peak viewing periods, which they are free to do as long as the average over the day does not exceed six minutes an hour. The new rates could well be the result of a hint from the Independent Television Authority that this has been carried too far.

DISTILLING

Competition in the Bar

DISSATISFACTION with the returns that they obtain, as wholesalers, from the rising sales of gin in the bars of the pubs under their control no doubt explains the decision of six of the largest brewers to join in financing the Squires Gin company, which was originally set up by Whitbreads two years ago. Gin sales last year, 4.2 million proof gallons, were about twice those of 1939, and are continuing to rise, while beer sales have fallen. In the past some brewers have sold their own brands of gin, but they have only gained a moderate share of the market. The Squires gin, with the backing of these major brewers, may however secure a larger share of the market; its backers certainly hope it will. They insist that it will not replace the proprietary brands in their bars; but there will be an obvious incentive to offer Squires to the customer who asks for "gin", when at present he will most probably be sold one of the proprietary brands. But it would be far more difficult to "push" the new brand in off-licences without obtaining public acceptance for its name and off-sales form a large, and growing, proportion of the total. The distillers of proprietary brands among whom Distillers Ltd. is the dominating group, do not object to increased competition, and hope that their relations with the brewers will not be harmed; but they would resent any attempt to reduce the public's freedom of choice in the gin it drinks.

Excise duty accounts for 24s 9d on a bottle of gin sold at off-licences for 35s 9d. The distiller sells this to a wholesaler for something under 4s; the wholesaler, who in the case of public-house sales is the brewer, gets a little over 2s; and the retailer selling it by the bottle gets about 5s. The retailer selling the gin in nips, ordinarily the publican, can probably make markedly more profit than this; 30 nips at 1s 9d each would bring 52s 6d from a bottle costing him just over 30s. There is not much room for price competition in the distiller's share of the price, and to sell a new gin at cut prices, until it became thoroughly established in the public taste, might be a hazardous piece of sales promotion. The brewers propose to sell Squire's gin at the normal price of proprietary brands; but this "integration backwards" may give them the chance of slightly larger pickings from the various margins the trade makes on a bottle.

MOTORS

Another Record Month

PRODUCTION of both cars and commercial vehicles climbed in June to a new record level. A total of 123,059 cars and 39,623 goods vehicles and buses were produced during the five-week month (ending July 4th) compared with 104,762 in June 1958; weekly output of cars, at 24,612, was slightly lower than that recorded by the Board of Trade in April, but on a working day basis production was in fact almost ten per cent higher than in either of the two previous months. Car production during the first six months of the year totalled 573,796, an increase of 27 per cent on the first half of 1958. These figures may represent the industry's zenith for this year: annual holidays begin this month, and there have been two strikes at BMC plants, both of which have affected production.

Exports fell slightly, although overseas demand is reported to be continuing at a high level: 47,586 cars and 9,853 commercial vehicles were exported in June, compared with 60,349 cars and 12,995 commercial vehicles in the preceding month. Nevertheless, car exports were a record for the quarter, and the total for the first half-year was 15 per cent over a year ago. Commercial vehicle production and demand have both jumped sharply in the past three months; the record rate of output in June brought total production for the first six months of this year to 168,311, compared with 157,725 in the same period a year ago.

AIRCRAFT

Mr Watkinson Intervenes

THE Minister of Transport has taken the drastic step of ordering the British Overseas Airways Corporation to put the affairs of its associate companies in order, starting with those of Middle East Airlines on which losses are now running at nearly £1 million a year. The corporation's accounts for 1958-59, due to be published soon, may show that losses on the 17 associate companies of BOAC have trebled in twelve months and account for nearly half the £4 million deficit admitted by BOAC on the year's operations. Since these associate companies have been run by a separate holding company headed by the deputy chairman, their operations have been kept separate from the general management of BOAC. Mr Watkinson has now told the corporation's chairman to ask his deputy, Sir George Cribbett, to explore what was described in the House of Commons as the "extremely grave" situation in the biggest loss-maker of them all, Middle East Airlines.

Mr Watkinson is probably over-sanguine in assuming that BOAC would be making a profit now were it not for the combined effects of American intransigence over the Tokio route and the associate companies' losses. But in blaming the associates he undoubtedly puts his finger on one of the weakest points in the corporation's administration, or that of any other airline with similar subsidiaries. Investing in small national airlines gives a big international operator traffic rights that it might not otherwise be granted, as well as a means of keeping its international competitors out. But the small airlines see that it pays dearly for the privilege. In the case of BOAC, they seem to have turned the screw too hard. Not long ago its chairman ruefully told a Parliamentary committee that he is up against a general assumption that BOAC has a bottomless purse. But another difficulty, which was not mentioned, is that these small airlines carry out the kind of short-range operations of which a long-range carrier like BOAC has no practical experience. It may explain how British European Airways, with 12 subsidiaries (not all of them airlines) manages to keep its loss on them within four figures.

The Slump that Wasn't

EVIDENCE published by the International Air Transport Association does not bear out the complaint of many airlines that 1958 was a bad year for traffic. The 86 member airlines of IATA between them carried 7 per cent more passengers than the year before. Excluding those on domestic routes, whose results are dominated by the vast trunk networks of North America, international passenger traffic rose 12.4 per cent, which is far removed from a slump, even for an industry accustomed to think in terms of a flat 15 per cent increase per annum. A total of 14 million passengers on international, and 55 million passengers on domestic routes adds up to a formidable figure.

The trouble with the air transport industry last year seems to have been that although it was carrying more passengers, mail and freight in 1958 than ever before, its aircraft were flying not much more than half full. Airline operations appear to suffer from a surprising lack of flexibility, fluctuating from a state of too few seats for the traffic to too many. Other industries, even though their capital plant is not divisible into small, independent units such as the aeroplane, seem to make a better go of matching long-term re-equipment to short-term demand.

More than Meets the Eye

HAWKER Siddeley's offer to buy the whole of the share capital of Folland Aircraft (10s 6d in cash for each 10s ordinary share, making a total price of £813,750) may prove a bigger bargain than it appears. With the trainer version of Folland's Gnat fighter likely to be adopted by the RAF, it gives Hawker Siddeley a fresh toe-hold on the military market from which it is in some danger of being squeezed out as the Javelin, the Vulcan and the Hunter come to the end of their production runs. It is even more useful in giving Hawker Siddeley a new opening in India, where the group is beginning to build up a considerable volume of business. Gnats have been sold to India and the fighter version is just going into production there under licence.

It is less certain that Hawker Siddeley will be able to take over Folland's other great asset, its chief designer and managing director, Mr W. Petter. He was responsible for the design of the Canberra bomber and did the groundwork on the Lightning fighter, two aircraft that established English Electric as one of the most successful companies in the aircraft industry, before he went to Folland to test his theory that a modern supersonic fighter could still be small, cheap and easy to build. The construction of the Gnat fighter was financed out of profits from Folland's substantial sub-contracting business. The merger with Hawker Siddeley will solve a good many of the difficulties facing the company since the cut-back in military production began to dry up the flow of these sub-contracts.

COMPANY AFFAIRS

GENERAL ELECTRIC

GENERAL Electric's full report confirms that after two rather disappointing years business is improving. Profits before tax fell from £4¾ million to £4¼ million in the year to March 31st; the fall would have been steeper but for a substantial improvement in trading in the last quarter of the year. This has continued into the current year. Sir Leslie Gamage, the chairman, states that the year began with an order book worth £133 million, compared with £110 million a year before. He feels that demand for electrical consumer goods will remain strong, though he expects a slight reaction after the boost following the ending of hire purchase restrictions and the budget. Demand for the group's other electrical products should gain momentum during the year. The improvement in trading has come at a fortunate time for the group: the £8 million loan stock will have to be replaced by a new issue within the next few weeks.

Whilst the chairman hopes for some improvement in total profits in the current year, he is despondent about the cables and electric meters section of the business, where there have recently been price-cuts by some of the group's competitors. He also reports that orders for telecommunication equipment from the GPO have fallen far short of expectations; and the cut in the Electricity Authority's generating programme is likely to have an adverse effect.

It remains to be seen therefore whether GEC can improve its profit margins during 1959-60. In 1958-59, with sales at a record £108 million, profit margins on sales declined further from 4 5/8 per cent to just under 4 per cent. Margins were as high as 9½ per cent in 1954-55 and have fallen every year since then. An attempt to reverse this trend is being made by a tighter control of research and development expenditure; and management consultants are advising the board. Diversification has not brought the intended results, and the decision to cut out certain lines and to concentrate on the more profitable products is to be welcomed. Furthermore, some of the heavy capital spending of recent years should presumably be yielding a return.

But this can hardly apply to the group's substantial expenditure in its atomic energy division. None of the five big consortiums is likely to see its money back on nuclear research for many years, although GEC is better placed than most since it has secured two nuclear power station contracts, one for Scotland and the other for Japan. Neither is expected to yield any profits with which to offset even part of the cost of development; indeed the group will be doing well if it succeeds in breaking even on the bare cost of construction. But they do at least mean that the group's expensive design and engineering staff, as well as a good deal of costly plant, are earning their keep, and that the group is acquiring experience that may serve it in the long run. At 36s the £1 ordinary stock yields under 6 per cent.

GREAT UNIVERSAL STORES

FOR eighteen months, until the relaxation of hire purchase restrictions last autumn, Great Universal Stores appeared to be marking time. The preliminary results show that the group is back on the road of expansion. The raising of the dividend from the equivalent of 32½ per cent to 35 per cent, the one for ten scrip issue in non-voting "A" shares to both classes of shareholders and the increase in group trading profits from £23,193,764 to £24,569,202 were no surprise to the market. The ordinary shares at 51s. remained unchanged following the results; the "A" shares fluctuated and closed 9d. up at 43s. 1½d.

Last year the rise in group trading profits was more than accounted for by the inclusion of £2.1 million of profits earned by companies newly acquired by the group: this year new acquisitions account for only £200,000. Moreover, the practice of spreading income from hire purchase contracts over the period in which the debt is paid off has the effect this year of understating trading income quite considerably. No less than £3,379,253 has been provided for unearned profits and collection charges on increased hire purchase debts, compared with only £326,366 the previous year. This is a remarkable reflection of the surge of hire purchase business transacted by the group; and the benefit should be seen in next year's profits.

After a slightly lower tax charge of £11,326,755 (against £12,034,818), the group's net profit at £9,866,780 compares with £8,181,210 in the previous year. The ordinary dividend is again covered just over twice by earnings; the yield on the 5s ordinary units at 51s is 3.5 per cent, and that on the 5s "A" ordinary units at 43s 1½d is 4.1 per cent.

DOWTY GROUP

ALTHOUGH it is too early to make an accurate assessment of the contribution made to the Dowty Group's earnings by Rotol, the manufacturers of aircraft equipment formerly owned jointly by Bristol Aeroplane and Rolls Royce, the preliminary figures for the year ended March 31st do reflect three months of Rotol's profits. They may have contributed to the increase in group trading profits before tax from £2,018,430 to £2,166,848; Rotol's profits for 1958 amounted to £735,000. And Rotol's concentration on supplies of equipment for civil aircraft will help to cushion the effects on the Dowty Group of reduced orders for military aircraft, which have hitherto been its main interest.

A fall in overseas taxation from £59,496 to £18,396 suggests a considerable fall in profits of one or more of the overseas subsidiaries. Shareholders will be interested to learn more on this point, as well as on the expected advantages of the acquisition of Rotol, from Sir George Dowty in his annual report. United Kingdom taxation is slightly higher at £1,070,313 against £1,030,462, leaving the group's net profit after tax at £1,078,139, compared with £928,472 in the previous year. The £3,500,000 acquisition of Rotol was financed by a rights issue last February of nearly 2 million 10s ordinary shares at 36s. 6d., but these shares do not rank for the dividend of 11½ per cent. It is hoped to maintain this dividend on the larger capital next year. The 10s. ordinary shares yield 4½ per cent at a price of 41s. 3d., a clear indication of investors' confidence in the prospects of the group's widening interests.

CONSOLIDATED GOLD FIELDS

CONSOLIDATED Gold Fields shares have recently been very active in the London Stock Exchange and the group has now announced that it is to follow the lead of other mining finance groups by transferring to the Union of South Africa the operational supervision of its South African interests. At the same time it has made offers for the ordinary share capital of New Union Goldfields and for H.E. Proprietary. It is proposed to change the name of the wholly owned subsidiary, African Land and Investment, to Gold Fields of South Africa. This company will then assume technical and administrative responsibilities for the mining and industrial companies of the group in South Africa, subject to Treasury consent. The company is to remain registered in the United Kingdom and there will be no radical change in the tax position.

Both the concerns for which Consolidated Gold Fields is bidding are mining finance companies. New Union's interests are confined to South Africa, whilst H.E. Proprietary also has interests in the United Kingdom, Canada and Australia. New Union Goldfields has an investment portfolio of over £3 million and, as well as performing services for numerous companies, has mineral rights and other mining interests. One £1 share in Consolidated Gold Fields is offered for every seven 5s. shares in New Union, or 10s. 6d. in cash for each New Union share. Immediately before the offer became known New Union shares were quoted at 9s. 9d. To H.E. Proprietary shareholders one £1 ordinary share in Gold Fields is offered for every three of their shares with an alternative offer of 24s. 6d. in cash. At the price of 20s. 4½d. before the offer, H.E. Proprietary holders see a profit of 4s. 3½d. per share if they accept the share exchange, or 4s. 1½d. if they prefer cash.

The results of Consolidated Gold Fields for the year to June 30th are not yet available, but the directors state that they are confident that profits will exceed those of the previous year. A final dividend of not less than 3s. 6d., making a total of not less than 4s. 9d. per share has already been forecast. Assuming a total of 4s. 9d. or 23¾ per cent, the prospective yield at a price of 75s 3d is under 6½ per cent.

MAPPIN AND WEBB

GROUP trading profits of Mappin and Webb, the gold and silversmiths, fell sharply during 1958 from £327,000 to £136,000; and after charging more for depreciation, there was a loss of £14,000 before tax, compared with a profit of £227,000 in 1957. After providing for tax and minority interests, the loss was £51,000 against a profit of £33,000, and ordinary shareholders receive no dividend. The dividend for the previous year was 10 per cent. Though there is some consolation in the capital profit of £506,000 on the sale of certain fixed assets, and while the directors state that 1959 should show improved results, there seems little to justify the sharp rise of 15s 7½d to a new high of 43s 9d in the 10s ordinary shares, and of 2s 6d to 15s 9d in the "A" shares. Is there a takeover bid in the offing? The property sales should have improved further an already liquid position.

This is the second year running that trading experience has been disappointing and once again the directors could have given more specific reasons for the setback. This is attributed simply to exceptional expenditure on the reorganisation and modernisation of some sections of the group's business, and to the necessity of making further provision to meet exchange losses in Brazil. There is no doubt that the business is soundly enough based to weather a year or two of difficult trading; but it is to be hoped that the company is now beginning to benefit from the reorganisation of recent years.

INTERNATIONAL TEA

LAST year, when International Tea made a one for one scrip issue, the chairman, Mr William Bolwell, warned shareholders that this did not presage any increase in the ordinary distribution. In fact the dividend at 10 per cent compares with the equivalent of 9½ per cent on the smaller capital. Yet the market was disappointed and the ordinary shares were marked down by 11½d. to 12s. Group trading profit has fallen to £2,264,169 from last year's record of £2,448,675 (which covered 53 weeks) but the consolidated net profit is slightly higher at £798,651, compared with £771,410. Tax absorbs £937,895 (against £1,169,572) and the provision for depreciation is increased from £429,505 to £486,152.

The group appears to have held its own during a year of keen price competition between the big multiple stores, and although profit margins have presumably been narrowed this has to some extent been offset by increased turnover. The group is still in the throes of its modernisation programme; last year 200 retail branches were converted into self-service stores which should help to boost sales further. The modernisation scheme has so far been financed by selling certain freehold properties and leasing them back. The directors say that the sale of the remaining properties will result in a surplus in the region of £500,000. The 5s. shares at 12s. yield 4.2 per cent and the ordinary dividend is covered 1.8 times by earnings.

RICHARDSONS, WESTGARTH

LAST year, the chairman of the Richardsons, Westgarth group, Mr I. J. Philipson, warned shareholders that fierce competition in all fields of the group's activities was bound to lead to narrower profit margins, and probably to a lower absolute level of profits in the year ending on March 31st 1959. His forecast is borne out by the fall in trading profits from £1,470,200 to £1,075,600. But a closer look at the accounts shows that the group has come out of the recession in the capital goods industries better than might have been expected. The depreciation charge is up from £323,269 to £412,945 and atomic and other development expenditure has absorbed £391,550, against only £196,279 last year, so that the gross profit before these charges is down by only £109,700 to £1,880,066. On the other hand, the considerable amount of capital expenditure during the year is reflected by the fall of almost 50 per cent in the tax charge from £811,000 to £465,000. A large amount of this expenditure was incurred on developing the group's multi-stage evaporator (which makes fresh water from the sea), the first of which is now successfully operating in Kuwait, and on the extension of atomic research facilities at Heston.

The nuclear power consortium, Atomic Power Constructions, of which the group is a founder member, has won the contract for the United Kingdom atomic power station to be built in North Wales: to be commissioned in 1964, it will have a net output of 500,000 kilowatts. Meanwhile, the ending of the credit squeeze has not led to any rapid improvement in the group's trading: new orders have fallen off considerably and cancellations of orders have been mounting, so that the group's total order book stands at £34 million, against £50 million at this time last year. Any substantial increase in new orders brought about by a general revival in the capital goods trades will not be reflected for some considerable time in profitable work going through the work shops. It is, therefore, inevitable, says the chairman, that the current year's profits will be less than last year. He holds out little hope of any improvement in the ship building market — to which the group supplies marine engines and boilers — so long as the present world shipping surplus persists, but there has been a notable increase in enquiries affecting the general engineering side of the business. But if the short-term outlook appears gloomy, in the long run prospects seem a little more promising. The revival in the consumer goods trades should eventually work through to the capital goods sector. At any rate, the directors hope to be able to maintain the 8½ per cent dividend, at present twice covered by earnings. On this dividend the 10s. ordinary shares at 12s. 1½d. yield 6.7 per cent.

TESCO STORES

THE rise in group trading profits of Tesco Stores (Holdings) from £78,000 in 1952 to a record £714,000 for the year ended February 28th (compared with £583,600 the previous year) speaks for itself. The firm is a pioneer of retail self-service in this country. Of its 150 branches, 144 are now self-service stores and within the next twelve months ten more supermarkets are to be opened. The chairman, Mr J. E. Cohen, believes that the next ten years will see even more rapid changes in retail trading. He is confident that the supermarket is here to stay, although he concedes that certain goods are always best sold by sales staff. Like most of the big retail groups, Tesco Stores has pursued a cut-price policy in the past year, which has led to increased turnover but narrower profit margins throughout the food trade. The group's bulk purchase methods have helped to widen the range of products and to offer exclusive lines to the public.

The rapid expansion over the past few years and the building of one of the biggest food warehouses in the country at Cheshunt has to some extent strained the liquid resources of the group, but the cash balance on February 28th was still comfortable at £554,000. Reserves at £994,000 amply provide for the three-for-ten scrip issue in preferred ordinary shares to holders of the preferred ordinary and ordinary shares, which will absorb only £174,000. The 1s preferred ordinary shares (the ordinary shares are still held privately) now stand at 8s to yield 3¾ per cent allowing for the proposed scrip issue.

PATONS AND BALDWINS

AS had been expected, profits of Patons and Baldwins, the manufacturers of wools and hosiery yarns, showed a marked recovery during the year to May 2nd last. The trading surplus was almost £800,000 higher at £4,349,000; and as there were no stock losses (for which more than £2 million had to be charged in the previous year), the net profit after tax improved from a little short of £500,000 to £1,527,000. The dividend in 1957-58 was 12½ per cent including a profits tax interim, below that of previous years but generous in view of the reduced cover; it is now unexpectedly raised to a total of 16 per cent, even though profits have not quite recovered to their record 1956-57 level.

By the end of the financial year wool prices, which had fallen steadily until December, had regained the levels of twelve months previously. The chairman, Mr J. S. Bullimore, feels that if these prices can at least be maintained, the confidence which is returning to the industry will be strengthened. Sales of worsted and woollen lines were at approximately the same level as in the previous year, despite a slow start, while sales of acrylic yarns made a useful contribution to turnover and profits. Exports were lower, however, because of increasing import restrictions abroad. As the export trade is an important and substantial part of the business any further fall in sales could have a significant effect on the group's profits. Broadly, however, the woollen industry looks in much better shape than for some time and 1956-60 could prove to be an auspicious year for the group. At 42s. 9d. the £1 ordinary shares offer 7½ per cent.

DAVY-UNITED

THE dividend of Davy-United for the year to March 31st last has been raised from 20 per cent to 30 per cent on the capital as increased by the one-for-three rights issue. The dividend is not payable on the recent 100 per cent scrip issue. The trading profit has risen by well over £500,000 to £1,586,000, and the net profit from £532,000 to £910,000 The old shares jumped by a further 8s 9d to 68s 9d on these figures.

COMPANY MEETINGS

COURTAULDS LIMITED

SIR JOHN HANBURY-WILLIAMS' STATEMENT

The Forty-sixth Annual General Meeting of Courtaulds, Limited, was held on July 22 in London. The Chairman, Sir JOHN HANBURY-WILLIAMS, C.V.O., in his statement to shareholders, said:

Ladies and Gentlemen,

It is a pleasure to welcome you to our forty-sixth Annual General Meeting, on this occasion in a new place and a week later than was originally planned.

The Directors' Report is already in your hands. It includes a review of the trading conditions for the past year, and I do not wish to cover that ground again. I should, however, like to refer to the question of the final distribution now recommended by your Board which, if adopted, restores the rate of dividend for the year very nearly to that paid before the recession.

In their interim announcement, the Board gave it as their view that the net profits for the full year would be close to those for the preceding financial year. In the event this view has been justified, though tax adjustments have resulted in an improvement in net profit greater than could have been expected when the interim announcement was made. While trading profits are slightly down, therefore, available profits are up, and these circumstances influenced your Board after a very careful review of the outlook for the year 1959/60 — to which I shall refer later — virtually to restore the rate of dividend to its former level.

In this connection, you will have noticed that we have adopted the practice which is followed by some other companies in declaring dividends in shillings and pence per unit of Ordinary stock, rather than as a percentage of the nominal capital. We feel that the procedure we have now adopted is right, and trust that it has your approval.

HALF-YEARLY STATEMENTS

A further change in our practice which we propose to make is the issue of half-yearly statements of our results. These will be issued with the announcement each year of the interim dividend on the Ordinary stock and will, I hope, be useful to you in watching the progress of your Company. We have reached this decision only after long and careful thought, but we have now been persuaded that the advantages of publication of half-yearly results outweigh the administrative and other disadvantages, including the risks of estimation and trade fluctuation.

INTERESTS OF SMALL STOCKHOLDERS

I may add that in considering their recommendation for a final dividend, your Board had fully in mind the fact that it is a matter of great importance to all stockholders, but perhaps particularly to those who are in the lower income groups. You will, I think, be interested to know that about 84 per cent of our 106,500 Ordinary stockholders — ten thousand of whom are our own employees — hold 500 units of stock or less, and 35 per cent hold 100 or less.

These figures are significant and demonstrate not only the large number of our stockholders — including Preference stockholders there are now over 137,000 — but also the interest which is being shown by the smaller investor in free enterprise. We have very few large individual stockholders and of these almost all are institutions which have the responsibility for administering their investments on behalf of all classes of society.

MARKETING DIVISION

Before passing on to deal with events which have taken place since the Directors' Report was prepared, there are one or two matters of a general character to which I should like to refer. Of these the first is our drive on marketing, and although this has been mentioned both in the report now before you and in the previous report, I feel that I cannot over-emphasize the importance to the Company of the steps we have taken.

In my speech two years ago I mentioned the efforts we were making to narrow the time between successful research and the marketing of new, or improved, products. I said that essentially this was a question of closer collaboration among all those concerned, and that we were making a special study of it. As a result we decided last year to set up a new Marketing Division to co-ordinate certain functions — namely product development, sales, technical service, market research and advertising. Its task is not merely to work within our organisation, but to co-operate actively with others and find out the views of everyone concerned — spinners, weavers, knitters, dyers, finishers, makers-up, wholesalers, retailers, right down to and including the final consumer. We felt that by studying the views and reactions of people at each stage in the process, and relating them to consumer needs, we could best contribute to the ideal of providing the right goods at the right price.

This, of course, has meant that we have become far more concerned with the problems of providing information both to our customers in the trade and to consumers. As you know, we are not large advertisers in the sense that some manufacturers of well-known branded goods are. Nevertheless, we are now making increasing use of advertising in the Press and on television to stimulate public interest in our yarns and fibres and encourage people to buy goods made from them.

In February this year we took a further step in putting these ideas into practice when we opened the Marketing Division's new showroom at Celanese House, 22 Hanover Square. We are extremely proud of this, and believe it is the finest of its kind in London. You have all, ladies and gentlemen, received invitations to visit this new showroom and see an exhibition, designed for you as stockholders, showing the wide range of the Group's products. You will, I think, be surprised at the extent of the range and, I hope, pleased by the quality and attractive design of the exhibits not only in the textile ranges but in the numerous products in the industrial field.

I hope those of you who can will go and see it, and also take the opportunity to see the facilities for fashion shows which are available there. Incidentally, we are not keeping this centre solely for our own use; we make it available to outside organisations too. No doubt many of you will have read that the Incorporated Society of London Fashion Designers chose it for their remarkable Spring Show in the early part of this year.

As the Marketing Division develops its techniques, we hope further to narrow the gap in time and money between research and sales, and we shall continue to use the various advertising media to promote confidence in goods made from our yarns and fibres. Nor should it be forgotten that the goodwill of satisfied consumers can establish confidence among our customers in the trade. Indeed, in the past year when imports from the Far East have done so much to disturb the state of trade, I believe that some of our promotional campaigns have considerably helped to restore a measure of stability.

EMPLOYEE RELATIONS

Another matter which is of paramount importance in your Company — and indeed in all companies — is the co-operation of the employees. I have in the past frequently referred to the first-class work done by those whom we employ. Not only are they proficient in their particular professions, crafts and skills, but they understand the importance of the well-being of the Company and show a readiness to accept change and the will to produce results.

The extent to which change takes place among staff of a progressive enterprise is not always realised. During the past two years alone, many of our top executive staff have either changed their jobs or have accepted wider responsibilities. This has been done harmoniously, and with a degree of cohesion and goodwill at all levels which is particularly gratifying and gives me the greatest confidence for the future.

We continue to give constant attention to developing to the full our employees' potential abilities. As you know, we have our own training centre at Kenilworth for foremen, junior technical staff and others, which is used throughout the year. We make extensive use of outside training courses, such as the Administrative Staff College at Henley, the Oxford Summer School, etc., and above all we continue to apply the system of job rotation which is the keystone of all-executive development.

We are always trying to improve our own arrangements and to that end we are starting a new series of Management Development Courses, the first one now being held at Trinity Hall, Cambridge, designed especially to stimulate and encourage our younger managers and potential managers, on whom so much responsibility will rest in the future for the continued growth and prosperity of the Group's business.

We must not think, however, that the whole benefit of good relations with our employees can be reaped merely by the institution of suitable courses for management at all levels, excellent though these are. For some years we have adopted the practice of acquainting the employees with the main economic events of importance to the nation as well as to the Company. Every year there is an extensive programme of talks given by senior officials of the Company under the general heading of "Financial Enlightenment", and we believe that these have been useful in creating a feeling of identity between the employees and the Company by making them aware of and explaining some of the major problems with which we are faced.

To these methods and, of course, to our co-partnership scheme — in which I have great faith — we can, I think, attribute the good labour relations and genuine understanding of the Company's problems for which we have reason to be grateful during the last two difficult years.

I should, on your behalf, like formally to record our gratitude to all employees of the Group at home and overseas for the hard work, loyalty and enthusiasm which they have given during this last year.

ORGANISATION AND MANAGEMENT

My next point, which is linked to the activities of those whom we employ, is the matter of organisation. Courtaulds, Limited, has during the past few years expanded its activities to a very high degree, and this has raised many questions of organisation and management. Courtaulds, Limited, is both an operating and a holding company, some of the activities being delegated to the direct control of management committees, others being operated by the boards of subsidiary companies.

Those Divisions which form part of Courtaulds, Limited, itself are primarily the Viscose Staple Fibre and Viscose Filament Yarn Divisions, and certain smaller Divisions closely connected with viscose products. All other activities, apart from those of a Group administrative character, are performed through subsidiary companies, and all activities in the Group overseas are performed by subsidiaries.

The organisation is closely knit, since nearly all the directors are wholly devoted to the affairs of the Company, and the remainder spend the greater part of their time on the Company's affairs. Through the chairmanship of management committees and the boards of the main subsidiary companies, all matters of importance come to the main board for decision, and particularly those concerned with new investment and finance. The Board of the parent Company is kept fully informed on the progress of the whole Group through management and financial reports which are regularly submitted to the Board in London, and to speak on which the senior directors of the subsidiaries are invited to attend.

The development of the organisation has been gradual and as the Group expands we hope to make further changes to increase delegation and at the same time to improve control by the main board while, where possible, shortening the lines of communication. These questions are constantly in the minds of your directors.

RATIONALISATION OF PRODUCTION

I will now pass on to events which have in the main developed since the date of the Directors' Report, of which I think the first should be the acquisition of Harbens Limited.

On previous occasions I have referred to the excess capacity of production in the textile industry not only in the United Kingdom but in nearly all industrial countries of the world, and I have expressed the view that the most hopeful means of achieving a prosperous industry was by the reduction of that excess capacity and the more intensive use of up-to-date machinery. With increasing competition, especially from Asia, the problem has become even more acute, and I welcome the proposals of Her Majesty's Government for financial assistance towards the cost of scrapping redundant machinery and re-equipment, which represent a significant move towards its solution.

Broadly speaking, it is laid down that provided certain conditions are fulfilled the Treasury are prepared to make payments to those who are willing to scrap out-of-date and redundant machinery, and also to those who re-equip. In the former case, suitable compensation would be paid to those who become displaced. The speed with which detailed schemes for the spinning, doubling and weaving sections have been prepared and submitted to Parliament for approval, indicates that the leaders of the industry are alive to the opportunities offered of establishing a more efficient and competitive industry.

While the production of staple fibres and continuous filament yarns is excluded from the terms of the new Act, the Company's spinning, weaving, dyeing and finishing activities fall within its scope, and we accept the responsibilities which it imposes. It will take some time to see how the whole scheme operates, and its success will depend very largely on the goodwill of those who are connected with it, but undoubtedly it is a step in the right direction.

In the rayon industry we faced this problem of excess capacity some time ago when, owing to lack of demand, we were compelled to close one of our continuous filament yarn mills and curtail production elsewhere. The acquisition of the Stock of British Celanese Limited gave us the opportunity of implementing our policy of still further rationalisation and concentration in the interests of efficiency and, as is stated in the Directors' Report, we have stopped and are scrapping approximately 2,000 looms. This policy is now beginning to bear fruit.

In spite of the steps which we have already taken in this direction, we believe that still further rationalisation of production is necessary before supply and demand are more evenly balanced; we therefore readily responded to a suggestion, which arose naturally out of discussions on other matters, that we should examine the possibility of making an offer to purchase the Ordinary and Preference shares of Harbens Limited.

After discussions with the directors of that Company, whose friendly co-operation I should now like to acknowledge, an offer was made on our behalf by Baring Brothers & Co., Limited, to acquire the 6 per cent. Cumulative Preference Shares of £1 each of Harbens Limited at 15s a share, and to allot one fully paid Ordinary Share of £1 of Courtaulds, Limited, for each nine Ordinary Shares of 5s each of Harbens Limited. In due course the offer was made unconditional, and up-to-date acceptances representing over 90 per cent. have been received. Our respective experts are at present occupied with working out a plan to integrate production with our own programme in a manner which will cause as little dislocation and hardship as possible with due regard to the interests of all concerned.

Whether, and how much further, we should proceed in our endeavours to equate the capacity of production of the United Kingdom rayon industry with potential demand is a problem which continually occupies our minds and is not easily solved. At present we have a considerable share of the home market in both viscose and cellulose acetate fibres, but the variety of fibres both natural and man-made which makes our business so competitive is a continual stimulus to us in our efforts to keep selling prices at such a level that our plants are employed to the greatest possible extent, and that the ultimate consumer is assured of obtaining good value for money.

This may be the point at which to mention that, as you may have seen in the Press on Monday of this week, an offer was sent out by Baring Brothers & Co., Limited, to the shareholders of Gossard (Holdings) Limited to acquire the 3,500,000 Ordinary Shares of 5s each in that Company at a price of 13s 6d per share. It is obviously far too early for any comment on my part, but the offer has been made at what in my opinion is a fair price, and I hope that in due course we shall be able to record a satisfactory conclusion of the transaction.

RUSSIAN CONTRACTS

I mentioned at the Annual General Meeting last year that we had just concluded a contract with the Russian authorities for a cellulose acetate spinning plant, to the value of some millions of pounds. During the last twelve months, the manufacture of the equipment has proceeded steadily, and

already shipments to a value of £1,500,000 have been made. Further substantial shipments will be made this summer, and some of our engineers will shortly be helping with the installation of the more specialised units.

We felt there was scope for increasing business in this field, and accordingly we formed early this year a subsidiary company, Primex Limited, in order to deal with it. I think most of you will already have seen in the Press that Primex concluded at the end of April three further contracts with the Russian authorities. These comprised a second cellulose acetate spinning plant about a third bigger in capacity than the one ordered the previous year — a rayon tyre cord production unit and an acrylic staple fibre plant. The total value of these contracts was approximately £15,000,000, and work is already proceeding normally on all of them.

The merits of the acetate yarn and tyre cord produced by the Courtaulds organisation are already well known all over the world, but acrylic fibre production is a relatively new thing for us. We are satisfied that we have a very good process and a very good product which we market under the name "Courtelle", and we think the Russians are wise — with a fairly wide choice available — to put down a unit of the kind we have developed.

It may be asked whether it is good business to make available to Russia the fruits of Courtaulds' experience in the field of these various fibres. We have come to the conclusion that it is: the Russian people form a vast market, and the plants we are providing will be only a beginning to satisfy the needs which will assuredly develop in the next decade. I might mention that our agreement with the Russian authorities provides, in some cases, for an exchange of developments for a period of some years. Besides these sales of capital goods to Russia, I am able to say that our business with that country in staple fibre and filament yarns is also steadily developing.

There is no doubt at all to my mind but that a progressive increase in trading between the United Kingdom and Russia will go far to bring about a more normal and equable relationship, and that the opportunities which trade gives for ordinary citizens of both countries to have ordinary contacts will in itself do a good deal to remove possible misunderstandings.

INTERESTS IN SOUTH AFRICA

Our recent Annual Reports have referred to our venture in South Africa, where we now have considerable forest interests and operate a rayon pulp mill to produce from our timber one of the indispensable raw materials for our viscose production processes. Our associates in this venture are the Industrial Development Corporation of South Africa, and I should like to say once more what a cordial and happy association this is, and how much we value the help and collaboration we so unfailingly receive from its Chairman, Dr van Eck, and his staff. This rayon pulp mill in Natal is currently being enlarged, and by the end of 1960 will be producing more than twice the weight of pulp for which it was originally planned. The expansion rests to a great extent on the development of improved techniques in our own research and development laboratories in the United Kingdom, and in the course of this work we have obtained a considerable knowledge in the field of pulp manufacture.

An opportunity arose at the beginning of 1958 to consider whether we should perhaps extend our interests in this direction. The Colonial Development Corporation have since the war developed a considerable acreage of pine forests in Swaziland, and the first plantings in these forests will shortly come to maturity. We have been investigating, with our friends the Colonial Development Corporation, the possibility of using some of the newer techniques devised by Courtaulds in order to ensure the profitable exploitation of the forests. We are now both satisfied that the conditions do exist for a successful venture, and a new company is being set up — the Usutu Pulp Company — in which Courtaulds and the Colonial Development Corporation share equally in the equity, to produce pulp by the sulphate process destined for the paper and board industries.

This venture has an element of pioneering about it in that we shall be using on a large scale a young wood, and it will also be a major enterprise in the relatively undeveloped territory of Swaziland. For its success it will obviously depend on full cooperation and collaboration from the Colonial Office and the local administration in Swaziland, who will be responsible for the considerable measure of road improvement in the province which will be necessary for the establishment of the mill.

The mill itself will incorporate all the results of our recent research work, and will be a unit of very advanced technology. We are planning that it should come into production in the latter part of 1961. Our assessment is that by this time there will be a market for the pulp in the United Kingdom and in Europe, and we are considering other plans which should ensure a market for a considerable part of the output. But I must stress that in going ahead with this scheme we are embarking upon one of the principal functions of free enterprise — that is, to take a calculated risk in the expectation that it will succeed and be fruitful for all concerned.

The work we have done jointly with the Colonial Development Corporation in studying the project in the last twelve months has been carried out in a very thorough and co-operative way, and we look forward to a long and happy association with the Corporation.

While on the subject of Africa, I must refer to the floods which occurred in May and which caused such extensive damage along a substantial part of the East Coast. The pulp plant of the South African Industrial Cellulose Corporation, our subsidiary, was seriously affected and was in fact covered with silt to a depth of four feet throughout the plant. By herculean efforts the area was cleared and production restarted in three weeks, and only those who know the site and the conditions can fully appreciate what this meant in terms of labour. I know you would like to join with me in sending congratulations and good wishes to all employees there. So far as the records show, floods on such a scale are completely unprecedented, and we do not expect any recurrence.

FUTURE PROSPECTS

I now come to the future outlook, and feel that we can look forward with growing confidence. I have already referred to the benefits which might arise as a result of the Cotton Reorganisation Act, and you are aware of the Government announcement in connection with the opening of negotiations for the formation of a Free Trade Area with Austria, Denmark, Norway, Portugal, Sweden and Switzerland. These renewed efforts, in so far as their ultimate objective is to achieve a closer trading association with the European Economic Community, are welcome and although difficulties may arise before the negotiations are brought to a successful conclusion we must nevertheless rely on those concerned to see that not only the textile industry but all the country's commercial interests are properly safeguarded.

The current year up to now has shown an improvement in our trading conditions, particularly in the textile field, and we hope that this will be maintained. The extent to which our hopes are fulfilled in respect of the first six months of this year will be revealed in the interim announcement of profits and dividend to which I have already referred, and which will be issued in the autumn.

In conclusion, may I assure you that our Board is actively engaged in pursuing a policy of development in undertakings which appear to offer a profitable future, and with our strong liquid position coupled with a highly skilled and loyal team, we shall strive to maintain that same spirit of pioneering for which your Company has been renowned for more than half a century.

Copies of the Report and Accounts for the year ended 31st March, 1959, and of the Chairman's Statement can be obtained from the Secretary, Courtaulds, Limited, 16, St. Martin's-le-Grand, London, E.C.1.

ALLIED INDUSTRIAL SERVICES

The annual general meeting of Allied Industrial Services Ltd. was held on July 23 at Bradford.

The following is an extract from the circulated statement by the chairman Mr Frank W. R. Douglas:

I think we can say that we have had a satisfactory year. It has been one in which we have continued to enlarge and diversify as and when suitable opportunities occurred and we have also undertaken a considerable amount of re-organisation in our main subsidiary, A. Bell & Sons Limited, all of which we are hopeful will ultimately result in increased profitability of our operations.

The Group Net Profits for the year ended 31st March 1959 amount to £499,134 as compared with £351,638 for last year. After deducting Net Profits of £32,274 retained in the account of subsidiaries, the Net Profit of the Company for the year is £466,860. With the carry forward from the previous year and taxation adjustments, there remains a disposable balance of £519,660 out of which your Directors have transferred to General Reserve £250,000. Your Directors recommend the payment of a final dividend of 16% on the Ordinary Shares (making a total of 25% for the year) leaving £38,022 to carry forward to next year.

The increase in profits this year over last year has been greater than in any other comparable period and your Board recommends an increased dividend and in addition is proposing a one in four scrip issue credited as Fully Paid.

It is, of course, too early in the year to forecast what our results will be, but there are one or two encouraging signs. Our current turnover continues to show some expansion and I hope this latter feature will increase over the year.

SAUNDERS VALVE COMPANY LIMITED

The annual general meeting of Saunders Valve Company Limited was held on July 28 at 23, Blomfield Street, London, E.C.

The following is an extract from the circulated statement by the chairman, Mr J. C. Billingham, F.C.A.

A year ago I indicated that no great change in trading experience was to be expected, and such has been the case. Turnover of the group has been virtually maintained at the same level as in the previous financial year which must be regarded as a creditable result.

Sales of Saunders diaphragm valves were similarly maintained but the proportion of export diminished from 58% to 51% — the lowest since normal trading in this product was resumed after the war.

A SATISFACTORY NET PROFIT

Profit margins have overall been substantially maintained despite increased wage costs and in general no corresponding price advance; indeed in marginal cases prices have been reduced.

In the circumstances the net profit of £250,000 before providing for taxation may be regarded as satisfactory when compared with the profit for the previous year of £292,000 the figure of profit for comparative purposes after making adjustments. The provision required for income tax and profits tax is £124,000 and we are left with a net profit after taxation of £126,039. From this your directors recommend a total dividend of 17½% (of which 4½% has been paid as an interim dividend). The amount required for this purpose is £52,750 so that the dividend in respect of the past year is covered 2.4 times. In pursuance of our usual and rewarding conservative policy, we retain within the business 58% of the net profits after taxation available for distribution. We propose to strengthen the company's reserves by an addition of £52,744 by a transfer out of the balance of undistributed profits which will bring the general reserve up to £600,000. We shall then carry forward an amount of £65,014 as the balance of undistributed profits.

Since we circulated to you the company's annual accounts as at March 31, 1959 there has been a decision by the Special Commissioners of Inland Revenue in the case of another company on the question of the extent to which indirect and overhead expenditure should be taken into account in ascertaining the cost value of stock and work-in-progress for tax purposes. The decision is understood to be under appeal but is nevertheless being applied by the Inland Revenue, and your directors have decided that the company's stocks should be valued on a basis more in line with the basis being adopted for tax purposes.

CURRENT YEAR'S PROSPECTS

In general we can look forward with some confidence this year. Saunders diaphragm valve sales both at home and abroad should be at a higher level than last year. We like to think of this side of our business now as the provision of an essential service to industry rather than the sale of a product. We continue to keep abreast of the newest developments in chemical resistant materials and have been able to bring what were comparatively recently laboratory experiments to the production stage. Our goodwill depends on the diaphragm valve user's confidence in our ability to manufacture and select the most suitable materials for his particular needs and problems. We shall continue to utilise substantial resources to this end.

Our aircraft section has not had an easy year, but we have had the satisfaction of increasing our output by 20% over the previous year without making inroads into our order book. This is eminently satisfactory having regard to the downward trend which this industry is now experiencing. We are naturally alive to the likelihood of increasing difficulties in obtaining new aircraft business, dependent as it must be on the volume of aircraft construction overall. Yet our products have proved to be adaptable to the needs of allied projects and we are endeavouring to use the technical abilities and precision manufacturing facilities this section demands for the needs of other industries.

DEMAND FOR IRON CASTINGS

The demand for iron castings outside the group is now increasing and we have recently rationalised production in both our iron foundries. Thus the foundry of our subsidiary, Goulds Foundries Limited, has now been fully integrated with that at Cwmbran and we are thereby able to extend the range of iron castings we are able to offer, though at the same time we have limited the grades of metal to those suitable for our own needs. This will both improve the service we can offer our customers and the efficiency of this side of our business.

Our pump section has concentrated some of its efforts in the supply of circulating pumps for central heating systems. There is a good demand for such a product and our newly introduced "Safrav" circulator has been well received. We expect further progress, particularly with this product, in the current year.

THE MORGAN CRUCIBLE COMPANY LIMITED

The 25th annual general meeting of The Morgan Crucible Company Limited was held on July 30 in London.

The following is an extract from the circulated review of the chairman, Mr P. Lindsay, O.B.E., M.C.:

The Consolidated Profit Statement reveals a decline in Group Earnings compared with the outcome of the previous year. For this the trade recession experienced in the initial months of the year is not alone responsible. We suffered a prolonged strike in our New York factory at a time when North American trade was beginning to pick up, and we were involved also in a changeover of production (now completed) in the main factory of one of our Home Subsidiaries. These events falsified our mid-year budget of Profit by causing a fall in Group Sales, with a resultant decline in gross earnings of £180,000 though a net difference of no more than £75,000, thanks to less taxation.

Though the overall picture of Sales and Profit is disappointing, the details are not discouraging. The Parent Company's Sales were well maintained and the resulting Profit slightly higher than the previous year.

EXPORT

Overseas Sales have fallen from nearly 45 per cent to just over 40 per cent of total turnover, for which the interruption of our trade in North America is largely responsible. We have reason to hope that the lost ground will be recovered in the current year. Competition in export markets being intense, we are expanding our organisation. Branches in place of Agencies have been opened in Milan and Mexico City, and in Brazil a manufacturing Company has been formed.

Having completed factory extensions in Sydney, we are now in the process of moving to new production sites also in Johannesburg and Toronto.

It will have been observed from past reports that the value based on the market price of a quoted Investment in an Associated Company has been greatly in excess of book value. We consider it more rational to show this Investment now at nearer its market price, thus causing an addition of £1,798,693 which we propose to carry to Capital Reserve. The Directors are considering as to whether, under the circumstances, the Capitalisation of part of the resulting Reserve is appropriate.

Our standard range of products, particularly of carbon components, calls for constant expansion in step with advances in electrical and mechanical technology. Opportunities have been pursued actively. We have not added, however, to the number of entirely new ventures. Those to which reference was made in my last report are progressing slowly, success being attendant on prolonged test under working conditions.

World trade appears to be emerging from the doldrums. This, coupled with the growth of our potential, resulting from capital development during recent years, is reflected by a marked upturn in our Budget of Sales and Profits.

PATONS AND BALDWINS LIMITED

POSITION MAINTAINED AND CONSOLIDATED

MR J.S. BULLIMORE ON THE OUTLOOK

The annual general meeting of Patons and Baldwins, Ltd., will be held on August 19th at Darlington.

The following is the statement of the chairman, Mr J.S. BULLIMORE, circulated with the report and accounts for the year ended May 2nd, 1959:

Stockholders will observe from the Directors' Report that Mr A.R. Procter and Mr P.A. Wright retire from the Board this year by rotation and do not offer themselves for re-election.

Mr Procter joined John Paton Son & Company Limited at Alloa as a young man, in 1914, and after gaining experience on both the manufacturing and wool buying sides of the business, was appointed in the early twenties the first Mill Manager of the then newly built company factory in Launceston, Tasmania. His service there was recognised by his appointment in 1930 as a Director of the parent company and in 1958 he was elected Vice-Chairman of the Board. My colleagues on the Board and I are glad to take this opportunity of expressing our warm appreciation of the lifetime of valuable service rendered to our company by Mr Procter, which I am sure you would wish me to place on record.

Reference was made in my last report to the great service Mr P.A. Wright has given our company. Since his retirement from the Chairmanship two years ago he has continued to give us the benefit of his wide experience and knowledge of our business, and we are very much indebted to him. We extend to both Mr Procter and Mr Wright our best wishes for a long and happy retirement.

RECOVERY FROM SALES SETBACK

In commenting upon the prospects for 1958/59 at the conclusion of my statement circulated with the Accounts for last year, I referred to a decline in the volume of orders being received both from the home and export markets. By the date of the Annual Meeting at the end of August 1958 I was able to report that the decline had stopped and that there were encouraging signs of an improvement in demand in the Home Market although the Export Trade still looked a little uncertain. I also referred to the heavy write down of stocks at 3rd May 1958 for which the results of last year bore no less a charge than £2,140,105, and suggested that with this out of our system we, as a company, were well placed for the future. You will see from the figures now put before you that the year 1958/59 has, taking into account these circumstances, turned out very much better than might have been expected.

Taking the year as a whole, sales of Worsted and Woollen yarns recovered from the early setback of slow selling and reached much the same level as for the previous year. I made special reference in my statement last year to man-made fibres and the progress made by the company in installing a special process unit for the spinning of yarns from fibres in the acrylonitrile group such as "Orlon," "Acrilan" and "Courtell." This unit was in production during the whole of the year and sales of acrylic yarns have made a worth-while contribution to turnover and profitability.

Overall the company maintained and consolidated its position in its traditional fields of the manufacture and sale of branded handknitting yarns and of wool yarns for manufacturing purposes, and has now in addition become one of the largest suppliers of yarns from acrylic and man-made fibres to the machine knitting industry.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

You will see from Section I of the Consolidated Profit and Loss Account for the P. & B. Group that the gross surplus brought in is £4,348,688 compared with £3,564,725 before last year's writing down of stocks. The group figures include the results of operations of the company's branches in Canada and New Zealand and also of Patons & Baldwins (Australia) Limited which once again has made an excellent showing and a corresponding contribution to Group results.

The credits in Section I for profit on redemption of debentures, interest on deposits and other investments, and from the trade investment, have increased from £92,718 to £139,875, the increase being due to profit on debentures purchased during the year, and to increased income arising from the temporary investment of liquid cash held either against impending tax liabilities or temporarily available for investment.

The charges in Section 1 of the Accounts follow the usual lines and call for no particular comment from me save to refer to the increased charge for bonus to employees. In view of the satisfactory results of the year the Board are pleased that it has been possible to increase the share in the profits and prosperity of the group awarded to our employees at home and abroad. The cost of the bonus this year comes out at £238,501, with the basis of distribution again recognising length of service.

TAXATION

Section II of the Accounts sets out the share of the group profits taken by the greatest profit sharers of all, the Chancellor of the Exchequer and the tax collectors at home and abroad. The surplus of the group before taxation brought in from Section I is £3,387,126 and of this a total of £1,740,190 has to be set aside for taxation, either currently due on profits earned to 2nd May 1959 or to be paid in due course. Last year we welcomed the abolition of differential rates of Profits Tax on retained and distributed profits and you will observe that for the first full year since then £326,473 has had to be set aside for this tax at the flat rate imposed in 1958.

The reduction in the standard rate of Income Tax from 8/6d to 7/9d in the £ in the 1959 Budget marks a step in the direction of more realistic rates of tax and is greatly to be welcomed, also the reintroduction of investment allowances on capital expenditure. Investment allowances and initial allowances, whilst going some way towards recognition of the vital need to maintain and promote capital investment are only palliatives serving to shade off the heavy burden of tax rates. It is to be hoped that the Chancellor will pursue his way towards further cuts in direct taxation by a pruning of all forms of avoidable Government expenditure. Lower taxation is essential to the continuance of a vital and healthy industrial and commercial economy, and on the personal level would give encouragement and reward to endeavour at all levels.

After taxation charges and the taking out of £120,316 for the interest of outside stockholders in the profits of a subsidiary, the profit of the year carried to the appropriation section of the Accounts is £1,526,620.

APPROPRIATION ACCOUNT AND ORDINARY DIVIDEND RECOMMENDATION

The amount of £106,242 for transfer to reserve in the accounts of a subsidiary is the parent company's share of £A.200,000 set aside to reserve by Patons & Baldwins (Australia) Limited, after making an ordinary dividend distribution for the year at a rate of 8½%.

During the year the company has made substantial purchases in the open market of 4% First Mortgage Debenture Stock at prices below par, this yielding a profit against par value of £23,944 shown in Section I of the Accounts. In accordance with past practice a sum of £191,367 being the nominal value of Debenture Stock so purchased has been set aside out of the profits of the year and has been transferred to Capital Reserve.

The balance brought forward on Profit and Loss Account from last year of £748,244 has been reduced by £227,599 being the amount, after deduction of Income Tax, distributed in August last year as a special interim ordinary distribution for the year commencing 4th May 1958 in circumstances which were fully detailed in the statement of accounts issued at the time.

Bringing these figures together, the amount available for disposal at this time is £1,749,565, the first charge on which is a total of £199,582 in respect of dividends on the two issues of Preference Stock and the interim ordinary distribution of 2½% made in February. Your Board recommends that the balance of £1,550,074 shall be dealt with as follows: —

In payment of a final dividend on the Ordinary Stock of 13½%	£436,396
An appropriation to General Reserve	500,000
Carry forward to next year	613,678
	£1,550,074

The Board is pleased that the results of the year are such as to permit the recommendation to stockholders that the final distribution on the Ordinary Stock shall be 13½% giving a total ordinary dividend for the year (excluding the special interim dividend referred to above) of 16%.

CONSOLIDATED BALANCE SHEET

The figures in the consolidated Balance Sheet show no significant change, other than to reflect the steadier results of the year. The cost value of fixed assets has increased by just under £595,000. The major part of the reorganisation of production facilities and plant layout at the Scottish factories is now complete and should yield benefits in the shape of greater flexibility and efficiency in production. The normal replacement of old machinery and the introduction of the latest aids to control of quality, especially important with synthetic fibres, make constant demands on cash resources and underline the wisdom of ploughing back profits for the maintenance, improvement and extension of production facilities.

The value of stocks is some £471,000 up on last year — principally due to the holding of stocks of synthetic tow and materials. Bank balances and cash stand at £1,722,072 compared with £1,192,924 twelve months ago.

Taking the Balance Sheet as a whole, the net assets after eliminating the interest of the outside minority stockholders in Patons & Baldwins (Australia) Limited now stand at £19,057,603.

EXPORTS

The year 1958/59 proved a difficult one in the Export Markets and the volume of trade done failed to come up to the level of the previous year. New Zealand, one of the company's chief export markets, was obliged by her balance of payments difficulties to re-impose in 1958 a quota licensing system for imports and this, coupled with competition from local producers in other foreign markets, has made export trading increasingly difficult. In all the circumstances we have done well to maintain sales within striking distance of the figures for the previous year.

I am glad to be able to report improvement in the trading of your company's branch in Canada. For several years conditions in the textile industry in Canada have been very difficult, but during the last twelve months there has been a modest revival in which the company shared, and it is gratifying to record that the branch is once again contributing towards the prosperity of the Group.

There appears to be no progress to report so far as the European Free Trade Area is concerned, and with the breakdown of negotiations with the Rome Treaty countries, it now looks as if conditions within these six countries when the Common Market comes fully into operation will be such as to render trade for the British producer even more difficult than it is now — if not indeed impossible. The conception of the "Little Free Trade Area" represents only a shadow of the larger plan but is worthy of support if only in that it may serve to alert all to the loss which will occur to all if Europe is to be split into a number of separate economic units.

Export trade represents a substantial and valuable part of P. & B. business and your Board is fully alive to the need for active efforts to meet changing conditions in the world markets in order to maintain and increase our share of the available business.

SHANGHAI

Developments over the year have made it plain that continued operation of the company's factory in Shanghai, China, is a fruitless if not impossible task. There is no true *modus vivendi* between Communist and Capitalist regimes, at least not within the borders of the totalitarian state, and with the growth of China's own productive resources the need for continued toleration of foreign owned enterprise within China has become less and less. The Chinese authorities were therefore approached with a view to the company being relieved of further responsibilities for running and maintaining our plant and personnel and in the hope of obtaining proper compensation for the surrender of our assets.

An agreement has been come to in recent weeks which will not be fully implemented until the end of 1959. Another announcement will be made to stockholders as soon as is appropriate in the circumstances, but I can say now that it would be unrealistic to expect that the settlement of affairs will bring much material benefit to the company.

PERSONNEL

The prosperity of industry and hence of the nation is inescapably bound up with the prosperity and contentment of the workers, as is the one with the other. I am therefore very gratified that during a year when unemployment and short time working have been the common experience in our industry, we have been successful in maintaining full time employment throughout all the factories of the group.

The P. & B. group has long been well served by the loyalty and hard work of its employees of all ranks, operatives and managers, and your Board places on record its appreciation and is pleased that the results of the year are such as to allow the award of the profit sharing bonus to which I have already referred.

THE WOOL MARKET AND PROSPECTS

The past twelve months has seen remarkable changes in the wool market. Raw wool prices, especially in the finer qualities, fell steadily from May/June and at the end of December the price of 64s. reached the lowest point since the days of Wool Control. Greater confidence gradually asserted itself and resulted in a substantial strengthening of wool values in early March, and at the close of the company's year wool prices had regained the levels of twelve months ago.

If these can be fully maintained this should go a long way towards strengthening further the returning confidence which has now developed in most sections of the textile industry, and will at the same time greatly help the economies of the primary producing countries — Australia, New Zealand and South Africa — to our own ultimate advantage. Our own trade prospects appear to me reasonably good and I do feel that with our reputation for quality of products and service to our customers, we can look to the future with reasoned confidence.

SHEFFIELD TWIST DRILL AND STEEL

The twelfth annual general meeting of The Sheffield Twist Drill and Steel Company, Ltd., was held on July 8th at Sheffield, Mr Alexander Dormer, chairman and managing director, presiding.

The following in his statement circulated with the report and accounts for the year 1958:

The net profit of the Group before taxation, for the year 1958 was £437,079 compared with £685,750 for the previous year, a reduction of £248,671. The reduction in profit is due to an all round lessening in demand for cutting tools by the engineering industry. In 1956, I referred to the tying of the demand for tools to work and form steel, to the production of steel. The tonnage of steel melted in Great Britain dropped appreciably in the past year, and your Company's turnover has been affected accordingly. Further wage awards, coupled with a disinclination to increase prices, have also contributed to a lessening in profit margins, partly off-set by our own processing of raw materials. During the current year this processing will help to reduce our manufacturing costs.

Our factories at Worksop and Hednesford are also suffering from the recession in the engineering trade, in spite of strenuous efforts to increase their sales. All the extensions at Worksop, Sheffield and Hednesford are now complete, so that without any further exceptional capital expenditure we shall be able to take full advantage of an upward trend in the engineering trade. Fixed assets now stand at £1,238,961 and the outstanding commitment for capital expenditure, £35,000.

THE CURRENT YEAR

Since the commencement of 1959, there has been a further drop in turnover due to price cutting because of excess national capacity, and a falling demand. The month of May, however, showed a welcome increase in orders, and in the country's steel production. If these trends continue, 1959 should show a turn in the tide towards prosperity in the engineering industry. Export sales for the year showed a 5% decrease as compared with 1957. As this is less than the percentage drop in home trade, it must be considered satisfactory.

The report and accounts were adopted.

GENERAL MINING AND FINANCE CORPORATION LIMITED

(Incorporated in the Union of South Africa)

CHAIRMAN'S REVIEW

The following is Sir George Albu's Review covering the Operations of the Corporation during the year ended 31st December, 1958:

I am pleased that it is possible for me, in opening my review, which covers the progress of the Corporation during its sixty-third year of operations, to refer to the increased dividend declared on the Ordinary shares for that financial year. The dividend income of the Corporation for the past financial year was 25% more than that of the previous year, due mainly to the increasing dividends declared by mines in the Orange Free State and in the Klerksdorp area. In addition to this large increase in revenue, an opportunity arose during 1958 to dispose of a substantial portfolio of investments on favourable terms to the American-South African Investment Company Limited. These events resulted in material improvements in both the profits and the financial position of the Corporation, and your Directors, therefore, were enabled not only to increase the dividend for the year on the Ordinary shares from 5/- to 6/- per share, but also to place an amount in excess of £1¼ million to Reserves. Reference to the Balance Sheet will show that the excess of current liabilities over current assets had been reduced to £473,000 at 31st December, 1958, an improvement of £928,000 in comparison with the previous year's deficiency of £1,401,000.

During the year the Corporation took up rights accruing to it from its shareholdings in various companies and in addition purchased a substantial portfolio of shares in some of the newer mines to replace a portion of the investments sold to the American-South African Investment Company Limited. The financial position is not yet as liquid as it might be, and although opportunities for additional investment will arise continually, there should be some scope, in due course, in the margin of future net profits to improve liquidity gradually.

In my address to shareholders at the last Annual General Meeting I gave a résumé of the growth that had taken place over the last decade in this Corporation, and in the value of its investment portfolio. As compared with a market value of its portfolio of £15,700,000 at the end of 1957, the figure had improved to £22,100,000 at the end of December last, with a further improvement to £26,300,000 at 31st March, 1959.

The Corporation's interests in the older mines of the Witwatersrand at the end of 1957 comprised one-fifth in value of its portfolio at that time, but the position has now altered with changing market prices and today less than 15 per cent, of the Corporation's holdings is in the older mines. I think shareholders will agree that this is a happy position and with the Orange Free State and Klerksdorp goldfields still in the developing stage, with some mines not yet in full production, it is to be expected that the dividend income of the Corporation should increase annually for some years to come.

One of the major contributions towards the improved position of the Corporation at the end of 1958, arose from its interest in Free State Geduld Mines, Limited. The development which was disclosed by the Chairman of Free State Geduld at the recent Annual General Meeting was without precedent in deep level mining in the South African gold-fields. Although the extent of the very rich area then under discussion comprised only 215 feet at which stage the reef was faulted out, it is gratifying to note that the Directors' Report for the quarter ended 31st March, 1959, has disclosed that the reef has again been intersected and 25 feet sampled gave values in excess of 4,000 inch-dwts. With values of this order it is apparent that Free State Geduld has a most promising future.

Among the Corporation's recently acquired interests, the most important has been in the Riebeeck Gold Mining Company Limited, now merged with Loraine Gold Mines Limited following the approval of shareholders in November last. The Chairman of the Company at the recent Annual General Meeting reported that No. 3 shaft (formerly No. 1 in the Riebeeck area) is expected to reach its final depth in December, 1959, and the small amount of development in the Elsburg (Upper) Reefs in the northern portion of the former Riebeeck area had disclosed promising values. We shall look forward to further disclosures in this interesting area.

The supply of European labour in the industry shows some signs of improvement, but there are still shortages in certain categories. The supply of Native labour has recently attained the highest levels known in the Industry for some years and is now practically sufficient to meet the requirements of the Industry.

During the year under review, representatives of the Combined Development Agency visited South Africa for discussions with the Atomic Energy Board. These discussions resulted in an agreement to limit the maximum quantity of uranium oxide that will be purchased by the Combined Development Agency to 6,200 tons per annum. There is provision, however, for the periodical reduction of this total after the year 1963, as and when the various sales contracts entered into by individual producers with the Agency expire.

None of the uranium producers in this group will suffer a diminution in their present scale of operations, but Buffelsfontein may, under certain circumstances, obtain an increase in its quota of some 86,000 lbs. of uranium oxide per annum. There is no restriction on the disposal elsewhere by the Atomic Energy Board of any production of uranium oxide in excess of the 5,200 tons.

It is of the utmost importance that steps should be taken by the Government to ensure that South Africa will be in the forefront in any market that might develop for uranium as and when the contracts with the Combined Development Agency expire, and to this extent it is interesting to note that the initial steps have been taken. You will have noticed in the press recently a news paragraph to the effect that a Sales Survey Team from South Africa, in which the Mining Industry is represented, has proceeded overseas. The purpose of the visit is to study markets at first hand and to make personal contact with those who are responsible for the procurement of their respecti e countries' requirements of uranium oxide.

Although there was a further improvement in the net national income of the Union in 1958, the rate of increase declined noticeably as compared with the immediately preceding years, and the indices of activity in certain sectors of the economy suggested a downward trend. This was noticeable, for example, in farming, building and construction, manufacturing, real estate sales and mining, other than gold mining. The high levels of employment obtaining in recent years tended to decline, except in the gold mining industry in which the decline elsewhere gave rise to a freer supply of labour.

The Union's external trade was marked by a further increase of some £10,000,000 in imports to £568,000,000 and a sharp decline in exports from £446,000,000 to £384,000,000 due primarily to falling commodity prices. The incidence of increased imports fell mainly in the first half of the year, following the relaxation of controls in the closing months of 1957. The gold and foreign exchange reserves declined to the low level of £72,000,000 in May 1958, forcing the authorities to impose measures designed to reverse this trend.

Bank credit was restricted by the application of supplementary reserve requirements to the commercial banks, with successive increases between June and October to a maximum of 8%, subsequently reduced to 6% in November. Some interest rates were raised, the banks were requested to exercise considerable caution in making advances for the importation of goods and there was stricter control of foreign exchange for Union residents. Further restrictions on the importation of motor vehicles were introduced, coupled with a tightening of hire purchase regulations and the imposition of increases in some customs and excise duties.

During 1958 signs of a recession were to be found in most countries, with business becoming increasingly competitive and commodity prices generally declining. It might, therefore, have been expected that there would be some reduction in the working costs of the South African gold mining industry, but these costs continued to rise. Nevertheless, with the improving labour supply and the gradual development of the newer and richer mines on the Far West Rand, in the Klerksdorp area and in the Orange Free State, the gold mining industry made very satisfactory progress. The value of gold production increased by over £7,000,000 to a total of £220,000,000, and the value of uranium exported increased by £3,000,000 to £53,000,000, a total of £273,000,000, equivalent to over 47% of the large bill for imports.

In the second half of the year, world attention was increasingly directed to the importance of South African gold mining shares as a hedge against the continuing depreciation in the true values of currencies, and there was a sharp upward movement on the Johannesburg Stock Exchange, which has continued into 1959, both in the volume of business transacted and in share prices. The net inflow of capital funds to the Union in 1958 was about £86,000,000, of which £55,000,000 was estimated to have been derived from the movement of privately owned capital, much of which was no doubt invested in South African gold shares. For this reason, and following the control measures already referred to, there was a gradual improvement in the gold and foreign exchange reserves to £112,000,000 at the year end, and since then to a higher level.

It should be obvious to those in authority that, while other sectors of the economy are less favourably situated, the gold mining industry is playing its usual very important part as a stabilising factor by providing an impressive and increasing amount of foreign exchange and by attracting substantial capital to the Union. It is, therefore, imperative that future fiscal and other policies of the Government be such as to ensure not only a reasonable return on investments in gold shares, but also an atmosphere of security for overseas and local potential investors.

For some years now the Union of South Africa has encountered difficulty in obtaining sufficient capital funds. With a view to encouraging the flow of foreign capital to the Union the Government last year exempted from taxation profits earned by companies on the sale of shares or gold bullion if the shares or gold are acquired with funds transferred to the Union from overseas for this purpose, or with funds derived from the shares so purchased arising either from their realisation or from dividends received.

Existing Finance Companies domiciled in South Africa would have great difficulty in taking advantage of this exemption and these Companies are, therefore, at a disadvantage in competition with the class of Companies which enjoy the amendment to the taxation laws. The domestic Companies are also subject to a further disability if they fall within the orbit of the Undistributed Profits Tax provisions.

Mining Companies have limited lives and if the Gold Mining Industry is to continue to play its present major part in the economy of the Union it is necessary for the Companies which finance mining development to pursue their present practice of re-investing in new mines profits made on the realisation of shares in the older Mining Companies. With this in view most Finance Companies refrain from distributing by way of dividends any major portion of profits arising from share realisations, but place these surpluses to Reserves where they are available for financing new development. The incidence of Undistributed Profits Tax on such profits is particularly unfortunate in that it severely limits this policy, and it is desirable that the Minister of Finance should give full consideration to this aspect of the tax, especially in view of the exemption from taxation granted to foreign capital, to which I have already referred.

During the latter part of last year and up until the date of the issue of this Review, there have been certain statements made by the Minister concerned in regard to the sale of gold. It has been reported that the Reserve Bank will be prepared to sell gold in bar form in quantities of 25,000 ounces. Although there has been a great deal of speculation on the price of gold, this is a matter in which America is largely concerned, and while the sale to specified buyers through the Reserve Bank is desirable in order to attract foreign currency, such sales cannot affect the position of internal illiquidity which now exists among the leading countries of the world. While it is understandable that the United States of America do not wish to pay a higher price for gold at the moment, I am convinced that the international monetary situation is such that eventually the price must rise. Every economic factor as at present known to us points to this being the logical conclusion of the financial policies being pursued in certain countries. In the meantime I think it would be advisable for the use of gold to be more widely appreciated by the masses of the people throughout the Western world. I, therefore, hope that the South African Government will permit the Mining Industry to dispose of a proportion of its gold either in the form of small bars, coinage or medallions and that this will encourage a generation which has never appreciated the true value of the metal to realise that it has some property which has made it the basis of international dealing throughout the centuries.

THE CITY OF LONDON REAL PROPERTY COMPANY

BOARD'S PROGRESSIVE POLICY

The Annual General Meeting of The City of London Real Property Company Limited was held on June 30th in London. Mr Edmund Howards, FRICS, (the Chairman), presided and, in the course of his speech, said:

Further rebuilding schemes having been completed Gross Rents and Service Charges show a substantial increase and after deducting outgoings in respect of Ground Rents, Rates, Insurance, Repairs and Company Management, the balance remaining amounts to £1,906,392 as compared with £1,655,814 last year, an increase of £250,578. Our total charge for taxation on the profit for the year shows a reduction of £121,207.

The balance on Revenue Account for the year is £883,306 and after writing off £38,101 in respect of 6 per cent Debenture Issue Expenses and Discount, and the payment of the dividend on the 5 per cent Preferences Stock, the Directors recommend a final dividend of 11 per cent on the Ordinary Stock, making 15 per cent for the year. This will leave the sum of £282,464 to be carried forward.

In order to maintain the level of rents and to improve the standards of accommodation for our tenants, we are continuing the policy of modernisation of our older buildings.

In addition, many improvements of a minor nature will be effected in a number of the Company's properties, particularly in connection with the public parts of the buildings and service installations.

There has been little change in building costs over the past year and, although I am naturally grateful that there has been even a short period of stability, I am still confident that with improved efficiency prices could be reduced. Investigations are constantly being made of the latest developments in building technique, both at home and overseas, and I am hopeful that with the introduction of new methods and materials, particularly in the field of reinforced concrete design, we shall be able to improve still further on the standard of office accomodation while effecting substantial savings on initial costs and subsequent maintenance outgoings.

Transactions completed during the year envisage a programme of expansion which has been planned on a long-term basis to include the acquisition of further sites and the redevelopment of some of our existing properties.

The chairman then outlined in detail an extensive programme of development and continued:

The schemes I have mentioned, together with other projected developments, will involve a considerable capital expenditure. Such commitments amounted to £3,900,000 at April 12th, and now with other developments exceed £8 million. Arrangements have been made with the Company's Bankers for temporary finance and at the appropriate time this indebtedness will be funded by the issue of further loan capital.

I make no secret of my satisfaction at the further growth in your Company's affairs which conforms with the outline of policy with which I concluded my speech last year. For the past fourteen years we have planned and carried out very large rebuilding schemes, and your Directors continue to have in mind the enlargement of the scope of your Company's activities and the very extensive programme referred to above is a further step in that direction. I am confident that the outcome will be of benefit to the Company.

The report was adopted.

THE BRITISH BANK OF THE MIDDLE EAST

A SATISFACTORY YEAR'S TRADING
SIR DALLAS BERNARD'S REVIEW

The seventieth annual general meeting of The British Bank of the Middle East was held on July 14 in London, Sir Dallas Bernard, Bt., Chairman, presiding.

The following is an extract from his circulated statement for the year ended March 31, 1959:

We have experienced a satisfactory year's trading and the balance sheet total is £12,150,000 higher than a year ago, an increase of 15 per cent. Moreover, this increase is well distributed through the various items of our Accounts.

Our Cash and Money at Call at £10,393,000 is £3,345,000 less than a year ago but, on the other hand, our holding of Treasury Bill is up by £2,315,000.

Our Investments at £28,104,000 compare with £25,373,000 last year and include for the first time an item of £300,000 representing the first call on the shares we have taken up in The Bank of Iran and the Middle East to which I shall refer again later in this statement.

Our fixed assets at £281,000 are £30,000 less than last year.

Loans and Advances at £35,000,000 are £8,300,000 higher and the liability of our customers for credits and guarantees at £14,549,000 is increased by £2,200,000 on the figures of a year ago.

RESERVES EXCEED £2,000,000

Turning to our liabilities with the allocations now proposed the published reserves of the Bank will stand at £2,375,000.

Current, Deposit and Ancillary Accounts at £74,000,000 show a satisfactory increase of £9,800,000 on last year, which compares with an increase of £9,500,000 in the previous year.

As usual, the past year has been eventful and more than one part of the area in which we operate has occupied the newspaper headlines from time to time. Nevertheless, I think you will agree that the Accounts which are put before you reflect solid progress of which we can be proud.

The final dividend of 7½ per cent which is recommended, makes a total of 15 per cent for the year which compares with 10 per cent for the previous year. The Directors have allocated £100,000 to Reserve and £50,000 to Bank Premises Account, and are satisfied that the results of the year's operations fully justify the higher dividend.

The key to the economic prosperity of the Middle East is oil production. In the four main areas in which we are interested — Iraq, Iran, the Persian Gulf and Saudi Arabia — oil production in 1958 was 204,546,000 metric tons compared with 169,961,000 metric tons in 1957, an increase of 20 per cent. Here is the firm base on which we stand because the revenues accruing to the producer countries in foreign exchange are large and available for financing development and the import of goods which cannot be found locally.

PERSIAN GULF CURRENCY

As members are aware, we have a keen interest in the Persian Gulf Sheikhdoms. The currency circulating in that area has hitherto been the Indian Rupee. The same notes being legal tender in a country where it was necessary to conserve foreign exchange reserves and also in a zone that had a surplus of foreign exchange, there was an open invitation to those in India unable to obtain sterling to find ways and means of sending currency into the Gulf. The Indian Government decided to stop this by issuing a distinctive rupee note, legal tender in the Gulf Sheikhdoms, but not in India. Beginning the 11th May for a period of six weeks, all existing notes circulating in the Persian Gulf are to be exchanged for Indian Rupee notes of a special issue which are easily recognisable. These special Rupee notes will be exchangeable in India for ordinary Rupee notes and the banks remitting such special notes to India will be able to exchange them for sterling on the same terms as they formerly purchased sterling with the ordinary Indian currency. After termination of the period fixed for the exchange of notes, the foreign exchange facilities hitherto attaching to ordinary issue notes will cease. Our seven branches in the Persian Gulf have been co-operating with the Reserve Bank of India in the rather arduous task of effecting the withdrawal of the old notes and their replacement by the new.

Mr W. I. R. Bulfield, who has been London Manager since 1953 and is well known to many of you, has retired after completing forty years of devoted service to the Bank, at home and overseas. We wish him good health and happiness in his well-earned retirement.

His place has been taken by Mr J. D. Hammond, until recently Manager of our Bahrain Branch.

For the satisfactory result which I am able to report, our thanks are due to all our Staff at home and abroad for a year of work which has not been without anxieties.

OVERSEAS INTERESTS

I will now mention separately various areas in which we are interested.

IRAN. — One of the most interesting events of the year which I have to report relates to Iran. As you all know, we established ourselves in that country in 1889 under the title of The Imperial Bank of Persia, and traded there continuously until 1952 when we closed our last branch due to circumstances which we regretted but could not prevent.

Iran is prospering and is now a fast-developing country with modern industrial output increasing every year. Its crude oil production in 1958 was 39,800,000 tons compared with 34,800,000 in 1957 and payments to Iran on this account were £88,250,000 and £76,400,000 respectively.

The laws of Iran make it impracticable for a non-Iranian bank to open branches, but an Iranian bank can accept foreign participation up to 49 per cent.

Several Banks have opened there with this participation and so we ourselves, with Iranian associates, all prominent men, have founded The Bank of Iran and the Middle East — an Iranian limited company with Head Office in Teheran and a capital of Rials 250 million (approximately £1,200,000). We have a 49 per cent interest held in ordinary shares and represented in our Balance Sheet by a separate item.

The new bank has five Iranian Directors and four British Directors; a senior member of our staff has been seconded to it and has been appointed Managing Director.

It opened for business on the 6th May. The experience gained by many years of practical banking in Iran will be at the disposal of the new bank and also the assistance of our chain of branches throughout the Middle East. I am sure you will be glad to hear that we are again functioning in Iran and will join with me in wishing the new bank every success.

ADEN. — As anticipated in my last statement, the world-wide fall in commodity prices and the trade recession in America has had an adverse effect in Aden and there was a decline in exports from the territory in 1958.

PROGRESS OF BRANCHES

In Iraq, our three branches in Bagdad and our branch in Basra had a reasonably satisfactory year, and our new branch at Mosul opened its doors in December.

In Jordan, our branches at Amman and Jerusalem were able to operate satisfactorily and under more settled conditions than in the previous year.

In the Lebanon, our three branches in Beirut and our branch in Tripoli are in a strong position to assist in a revival when the opportunity offers.

In Libya, our branch at Tripoli has had a satisfactory year and our newly-established branch in Benghazi is fulfilling our expectations.

In the Persian Gulf, our new office at Abu Dahbi opened on the 10th February and has made a good start. Our branch at Dubai has had a satisfactory year although lack of demand from neighbouring markets during the latter half of the year has caused a sharp drop in the value of goods imported.

In Tunisia, our Tunis Branch has completed its first full year's operations and to date progress has been satisfactory.

In the United Arab Republic — Syrian Region — our branches in Damascus and Aleppo continued their activities.

At the meeting, the Chairman referred with regret to the death on 3rd June of Sir Kinahan Cornwallis, who had been a Director of the Bank for 13 years.

The report and accounts were unanimously adopted.

RICHARDSONS, WESTGARTH & Co.

The annual general meeting of Richardsons, Westgarth & Co., Limited was held on July 17 at Wallsend.

The following are extracts from the annual review of the Chairman, Mr O.J. Philipson:

The year under review has been one of considerable productive activity, with the value of production more than £16 million, as in the previous year but higher costs have led to the reduction in Trading Profit from £1,470,183 to £1,075,651. The latter figure is struck after deduction of Depreciation £412,945 (£323,269 last year) and Atomic and other Development expenditure £391,550 (£196,279 last year). After deduction of Tax, the Net Profit for disposal is £610,651 compared with £659,183 last year, a reduction of some £48,000.

MARINE

The North East Coast Subsidiaries engaged in the building of Marine Engines have continued in active employment. North Eastern Marine have entered into an agreement with A.B. Götaverken, Sweden, to manufacture Marine Oil Engines to their design, and Parsons Marine are collaborating with Messrs. Brown Boveri, Baden, on Marine Steam Turbine design.

Engineering Division. The Division has been actively engaged during the year in a variety of work, including the design and development of Co² Blowers for use in Nuclear Power Stations, and further work on the Group's new Multi-stage Vacuum Flash Evaporators, which considerably reduce the cost of producing fresh water from the sea and which were pioneered by the Group in this country.

Atomic Power Constructions Ltd. During the year, this Consortium, in which our Group holds a considerable financial interest, continued to build up its organisation of highly qualified technical and other personnel and materially to extend its excellent research facilities at Heston.

Subsequent to the close of the past year it has been announced by the Central Electricity Generating Board that Atomic Power Constructions Ltd. has been successful in winning the contract for the latest U.K. Atomic Power Station, to be built at Trawsfynydd in North Wales.

This is the first nuclear station to be ordered by the Generating Board since 1957. All the Works in the Group will benefit from this major contract.

TRADING CONDITIONS

The difficult conditions encountered during the past year by the heavy Engineering and Eelectrical Industries are too well known to need emphasis here. Fiercer competition has existed in all fields both at home and abroad, orders have been much more difficult to obtain, and then only with considerably reduced profit margins.

With the knowledge that any large orders secured in the near future will not, for a considerable time, reflect themselves in profitable work going through the Shops it is inevitable that profits for the current financial year will be less than for the year now under review unless, however, unforeseen circumstances arise, it is hoped to maintain the dividend distribution at the same rate.

If, from the recent noticeable increase in the number of enquiries, the future of the Industrial Market can perhaps be viewed with a certain amount of hope, that of the Marine Market can only be a cause for the gravest concern. Whilst the flow of cancellations, suspensions and deferments has now diminished, there are few new orders, and little improvement can be anticipated failing a material change in world trade and shipping freights. It must be recognised, that, even when that does occur, there will still remain a considerable excess of world ship-building capacity and that orders will only be secured in the face of severe competition at home and abroad, where already considerably extended credit terms are being offered to Shipowners.

It is neither the responsibility nor the desire of your Directors to indulge in politics in any form. They are of the opinion, however, that they would be failing in their duty did they not draw your attention specifically to certain proposals, put forward by a political party, which might in the future involve nationalisation of the affairs of your Group, by one means or another.

Your Directors are unanimously of the opinion that nationalisation of the larger companies in the industries in which we are engaged would be a disaster for the companies, their employees and the country as a whole. The Board would propose to resist any policy of this kind, in any way that lies within its powers, but the matter being one of such vital principle, shareholders are being invited to support the views of the Directors or otherwise by means of a Resolution to be submitted at the Annual General Meeting.

LONDON & OVERSEAS FREIGHTERS

The 11th annual general meeting of London & Overseas Freighters Ltd. was held on July 15 in London, Mr Basil M. Mavroleon (chairman and managing director) presiding.

The following is his circulated review:

The Operating Surplus for the year under review, amounting to £3,418,403, was £449,199 more than the previous year.

At a time when the shipping industry of this country, and indeed the world, is passing through one of the greatest depressions it has ever known, it may seem odd at first sight that your Company should be reporting increased profits. This is, of course, the result of comparatively long-term charters entered into some years ago. But—and this is the reason for the warning attached to the year's trading figures when they were first published early in April—even long-term contracts come to an end. Some of our long-term fixtures have already run off, others will be completed during the current year. To find profitable employment for the ships thus becoming free is next to impossible, but so far we have not, I am happy to say, laid up a single ship. It is not possible to say what the immediate future holds for the shipping industry, but I know of no one in the industry who expects a material improvement in less than two years —the pessimists speak in terms of a much longer period. My confidence in the long-term welfare and prosperity of the industry is unshaken, but your Company may have to pass through lean times, though perhaps not so lean as some of its foreign competitors. Nevertheless, I am glad to be able to tell you that in my view the profits for the year to March, 1960, will prove to be very satisfactory in all the circumstances.

DIVIDEND

The dividend has been maintained in accordance with your Boards' policy of endeavouring to see that the shareholders for the time being share in the Company's prosperity. There is, however, another side to this policy. It is that in difficult times the Company's resources must be conserved to protect the long-term interests of shareholders as a whole — even at the expense of some reduction, or even sacrifice, of dividends. To what extent this may affect the current year I cannot say.

FLEET AND BUILDING PROGRAMME

The only change in the Company's fleet during the year has been the addition of the "LONDON HARMONY," in March, 1959. This new 19,000 d.w.t. tanker has commenced trading under a charter providing profitable employment for some time.

As regards contracts for new buildings, those placed with Austin & Pickersgill Ltd. for four dry cargo ships have been postponed for two years.

ASSOCIATED COMPANIES

London and Overseas Tankers Ltd. took delivery of its first ship, "OVERSEAS PIONEER" on the 2nd December, 1958, and its second ship, "OVERSEAS EXPLORER" on 13th February, 1959. These two tankers have commenced trading profitably under charters which will keep them employed until mid-1960.

No employment has yet been found for the four 34,000-ton tankers on order in Sweden for delivery during 1961 and 1962.

The keel of the first of the two bulk-carriers on order in Germany for London and Overseas Bulk Carriers, Ltd., is due to be laid in August this year. The vessel should be completed in the second quarter of 1960, from which date it is provided with profitable employment for eight years.

No employment having yet been found for the sister-ship due for delivery one year later, the Owners have asked the Builders to postpone the ship for two years.

Addressing the meeting, the chairman said: The Operating Surplus for the three months ended 30th June, 1959 is estimated at £870,000 compared with £740,000 for the corresponding period in 1958 and £3,418,403 for the year ended 31st March, 1959.

The report and accounts were adopted.

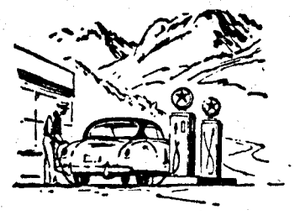
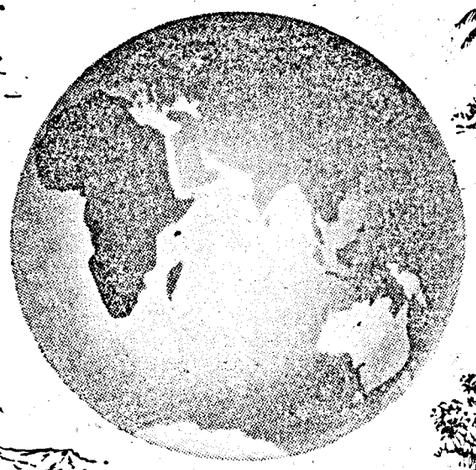
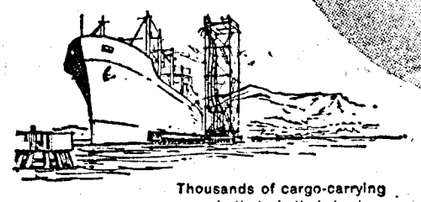
Countless homes and industries use Caltex petroleum products for clean, odor-free heat, power and for efficient lighting.



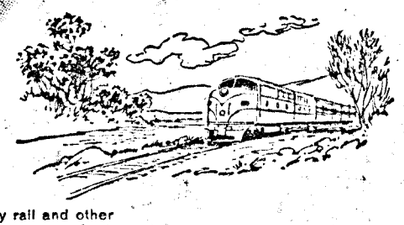
Motorists find that Caltex service stations offer the finest lubricants and fuels their cars can use.



Caltex fuels and lubricants for the farm have helped increase the effectiveness of mechanization.



Thousands of cargo-carrying vessels that ply their trade across the seven seas rely on extensive Caltex bunkering facilities.



Many rail and other transport systems depend on Caltex lubricants and fuels for swift, efficient motive power.

Serving the peoples of over 70 countries

In the search for oil... in refining... and in marketing a broad array of Caltex petroleum products, the Caltex trademark symbolizes the help and service this company provides the free peoples of many nations in the Eastern Hemisphere.

A major part of this service is the availability to local industry, agriculture and motorists of fuels, oils and lubricants of the finest quality that man has been able to create.

In these and in many other ways Caltex continues to serve nations, economies, individuals.

...in Great Britain, look for the familiar REGENT *sign!*

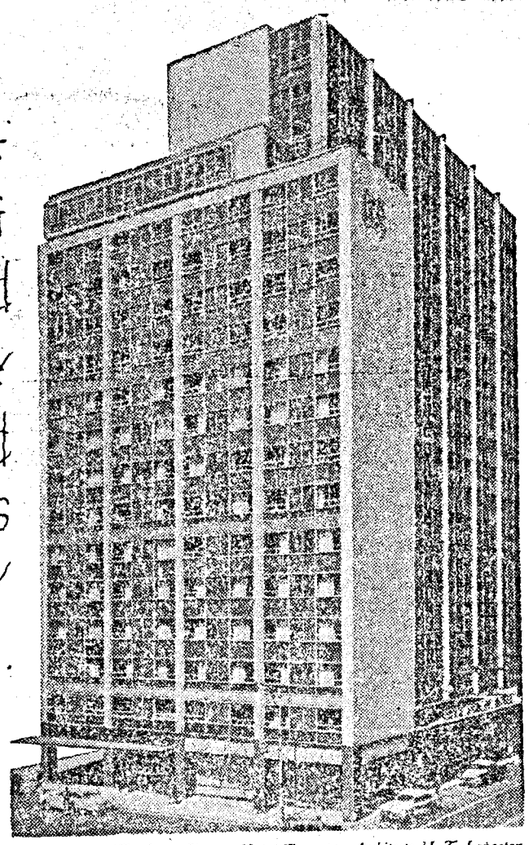
curtain WALLING is when A building stands behind it And KEEPS warm and DRY and looks pretty and...



The Lord Simcoe Hotel Toronto. *Architect: H. T. Langston*

"Is when a building stands behind it? Does the child mean a wall?'

"But of course he means a wall. A transparent wall, a translucent wall, or if you prefer it a wall of opaque panelling hung on concrete and steel.'

"The child means WALLSPAN?"

"That is undoubtedly what the child does mean—WALLSPAN—the name that Williams and Williams contributed to British Architecture — to World Architecture. The name for the glittering aluminium murals that form one or more sides of those soaring monolithic office blocks, those airy garden-landscaped factories, those gay and utterly functional schools. With WALLSPAN the skeleton building is clad in days instead of weeks. WALLSPAN telescopes the time between the first glint in the architect's eye and moving-in day."

"Williams & Williams" products make better buildings sooner?"

"Sooner—better—more beautiful even.'

WORLD-WIDE ACCEPTANCE

Why is it that S.T.C. is such a universally trusted name in the World of telecommunications? Partially because the S.T.C. organisation has repeatedly proved its ability to produce integrated communication systems on a truly massive scale. Partially because S.T.C. products—from the smallest component to the most complex network—have won an enviable reputation for dependability. But primarily perhaps because nothing pleases S.T.C. more than to face the challenge of a *new* problem—and to succeed in solving it. All these resources . . . all this experience are yours to enlist, no matter what your telecommunications problem may be.

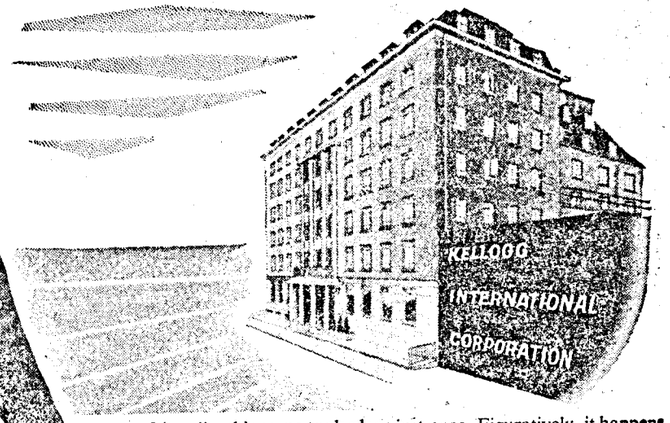
TO WORK ON PROCESS PLANT PROBLEMS



Literally, this scene took place just once. Figuratively, it happens with increasing frequency. More and more production executives are bringing processing problems involving chemical changes to Kellogg House. Here, completely new approaches to perfecting new processes are accomplished often.

Backed by experience of designing and building process plants of all types throughout the world, and supported by a constant flow of advanced technical data from Kellogg's Research Laboratories in the United States, the engineering staff at Kellogg House is unusually equipped to make valuable contributions to processes. Once the processing design has been perfected, Kellogg's staff can make important savings during the design and construction stages of a new plant.

Kellogg International Corporation welcomes the opportunity to work with clients at any stage of the plant's development, from the time the process is conceived through construction. However, the optimum in efficiency and economy usually is achieved when KIC assumes *full* responsibility for the plant. By co-ordinating and controlling engineering, procurement, and construction services under one central management, KIC can complete any new plant at a pre-determined cost.

Inquiries are cordially invited concerning Kellogg's co-ordinated, cost-controlled approach to the new plant.

THIS CHEMICAL "BOILS" ON ICE

It's one of more than 100 inorganic and organic fluorine chemicals made by Allied Chemical, world's largest producer of fluorine, hydrofluoric acid and compounds derived from them

Fluorine chemicals are pacing developments throughout industry. The rocket and missile field, for example, is evaluating elemental fluorine and halogen fluorides.

The story is the same in less glamorous areas:

Plating. B&A metal fluoborates are vital to plating of metals, alloys and plastics.

Chemical Processing. Boron trifluoride is a versatile catalyst for petroleum, synthetic rubber, plastics, dyestuffs and other industries.

Light Metals. B&A alkali fluoborates help produce superior aluminium, simplify and improve magnesium casting.

Electrical Equipment. Many improvements in electrical and electronic equipment are made possible by sulfur hexafluoride, an inert dielectric gas.

Chemical that boils at below-freezing temperatures supplies the "push" to many of today's new aerosols for household and industrial use. The liquid, one of Allied Chemical's fluorinated hydrocarbons, is also used in air conditioning and refrigeration

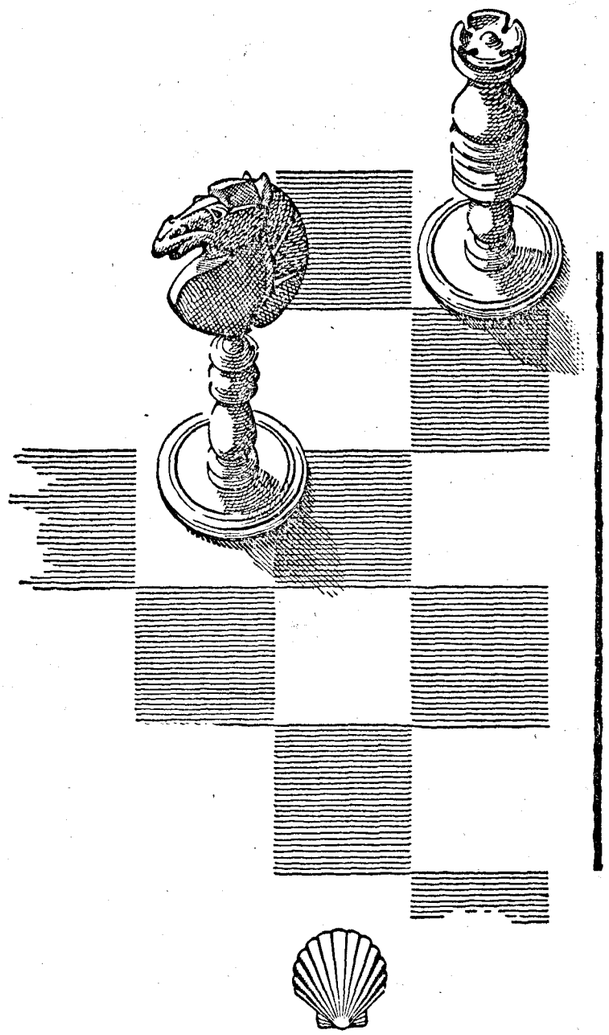
Knight's move, or castle's?



Can Shell be sure? Those who want to make a career in Shell often ask, "Where am I likely to be in 15 years' time?" Geologists, physicists, geophysicists, chemists, engineers, chemical engineers, economists and arts men: they all want to know where they are going to get to.

We may have a pretty shrewd idea, but we cannot always know for certain; partly because things move very fast these days, partly because people change their ideas as they go along.

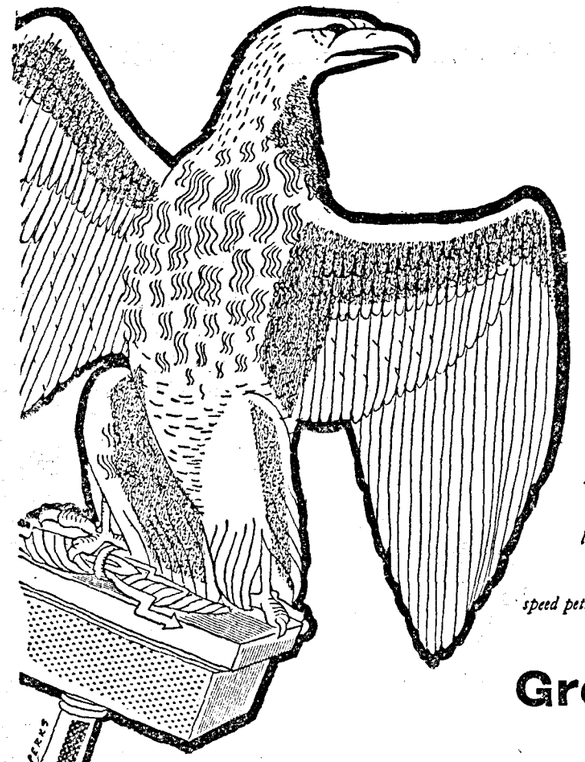
The aim, however, is to plan a man's career several moves ahead. He may move in a direct line like a Castle. Or he may move like a Knight, sideways and forward. For instance, the chemist, engineer or chemical engineer can move from the operational to the commercial square; the geologist or physicist from exploration to production; the arts man from Marketing to Personnel Administration . . . and all towards top management.

And a pawn can always become a Queen.

As the oil industry and the chemicals-from-petroleum industry expand, the variety of moves a man can make is constantly increasing.

this is the world of SHELL

THE SHELL PETROLEUM COMPANY LIMITED · ST HELEN'S COURT · LONDON EC3

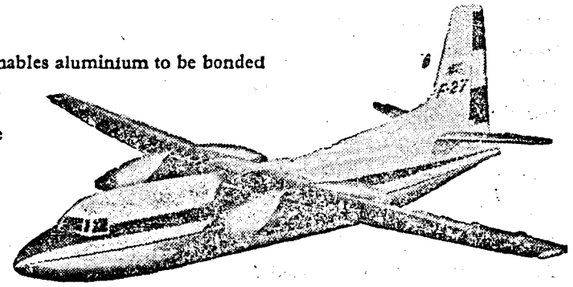


ANNUS MIRABILIS

Aluminium was a precious metal when Napoleon III used it for the eagles on regimental standards. In 1886, two scientists —Hall in the U.S.A. and Héroult in France —evolved a method of extracting aluminium from its oxides. The availability of a metal both light and strong led to the development of the high speed petrol engine, which made possible mechanical flight.

Great minds . . .

Redux, introduced in 1942, enables aluminium to be bonded permanently, with freedom from fatigue stresses. It provides high strength with considerable saving in weight; it gives greater safety and more economical operation. Today, over 70 types of aircraft—from guided missiles to jet airliners—depend on Redux.



The Fokker Friendship makes extensive use of Redux

From Parliament to People

THERE can be no certainty, but there is a strong probability that the session which in fact expired last week is this Parliament's last. In one sense, it has been for almost three years a posthumous Parliament. Elected precisely to sustain Sir Anthony Eden in office, it saw him falter almost from the outset and then tragically, almost grotesquely, fail and fall. Yet it survived the wreck, in order to support a government founded on the principle of treating as an unfact that bitter sequence of miscalculated events for which its leading members bore individual and collective responsibility. This, indeed, it did to such purpose that the world's impression of the Government's vitality and debating skill consistently rose, regardless of the validity of its case; until in the final encounters on Hola and Central Africa the most vulnerable of its Ministers has emerged as the most triumphant of its dialecticians.

How has this paradox been contrived? It is natural to seek the first explanation in terms of men. In Mr Gaitskell the Opposition has a consistently effective parliamentary performer, but he is its only one. Perhaps the name of Mr Wilson might be added, if the memory of the Bank Rate tribunal did not linger, if he refreshed the serious content of his speeches as regularly as he renews his jokes, and if he gained stature by committing himself on such great subjects as nuclear disarmament. But Mr Bevan's fangs are drawn : flair and flare have become mannerism; a muted didacticism that too often betrays an Eisenhowerlike innocence of published information cannot rouse the conscience of the country. There are moments, as in his well-put advocacy of the non-nuclear club, when Mr Bevan gives again at least the hint of a great foreign secretary; but these have been dishearteningly few. As for the rest of the shadow cabinet there is much good hard work, but, away from the levers of power and the springs of information, little élan; and, time and again, the carefully mounted assaults crumble through a disabling want of style.

On the Government side the Prime Minister's performance still veers abruptly between that of the new calm self-contained commander and that of the old insensitive farceur, between aristocrat and parvenu. But, thanks largely to his special and natural skill in the management of men, most of them of over-average ability, the impression that the country is run by a well-oiled machine consciously articulated in Downing Street is uncommonly bright for the fag-end of any administration. What is more, because the Labour Party has been under the necessity of laying out all its signals on the hillside well in advance of the election, Mr Macmillan has been able to display himself in the truest tradition of a Tory prime minister by walking off with much of the Opposition's raiment. By Tory precedent and standards, this sleight-of-hand is in no sense cheating : the

Conservative principle in politics is, at its best, supposed to compass the anticipation by a small margin of any popular demand for any specific change. So, if an Opposition, intent on proving itself more pragmatic than doctrinaire, itself does some suggestive devilling, that is very obliging of it.

Mr Macmillan's skill and the vigour of well-adjusted subordinates, however, are not all. There has been luck, both with the terms of trade and with the election cycle itself. Provided Mr Macmillan could pump back morale into the disintegrated team which he inherited, an election was not necessary until after the interval of pennypinching was over, and the Government could display a new openhandedness towards the electorate. The reality of economic advance here and now blots out any intricate statistical arguments about where the responsibility may lie for the low starting point and the lateness of the starting hour.

There are also in politics, from time to time, great secular trends in popular feeling that bear only indirect relationship to the words of politicians. One of these is the current sense that the folkways of trade unionism, now established and entrenched, are no longer to be pampered as being outside the permissible range of critical discussion. The blessings of a steady price level (and even, as Mr Heathcoat Amory has been wistfully musing, of a declining one) have now a novel value. As more and more people feel middle-class, middle-class feelings rank higher on the totem pole.

But what of Suez itself, the great humiliation ? On no subject does there appear to be a greater contrast between Parliament and people. On that subject alone this Parliament came blazingly alive, but on that subject ever since the event itself the country has played wilfully dead. The one supreme merit that is claimed for the adversary system of politics, with its two artificially disciplined parties drawn up in opposite arrays at a sword's distance from each other, is its superior ability to clarify, by sharpening, the issues on which the country is to pronounce. But when once in a while a great issue arises which is really shaped by nature for this treatment, the country blenches at the implications, aghast at the consequences to its fabric of too much contention.

Mr Macmillan's achievements in the Premiership have been founded on his understanding of this reluctance of the contemporary Englishman to brace himself to confront great moral issues, with all their implications of passionate commitment and severed friendship; and on his further understanding of the common responsibility that a majority of the country feels for having, with Sir Anthony, willed the muddled ends of Suez, irrespective of the possession of the means. Great empires are never willing to contract altogether without first satisfying the psychological necessity of actually suffering a visible defeat, even in circumstances in which a victory is hardly a possibility. It does little credit to the Tories that so many of them should now be whispering that the entire blame for the fiasco can be laid to Sir Anthony's health; it does some credit to much of the public that, having shared the guilty emotions of Tory ministers, it does not now belabour them with the consequences.

Having attained in the Suez debates what was until then his finest hour, Mr Gaitskell never seems wholly to have recovered from his discovery that a large proportion of his own troops in the country were not behind him. A craving for respectability has befogged much of the Opposition's later endeavour. Perhaps the Opposition is right. Perhaps it is true that only Conservatives can get away with the lusty swinging of the broadsword with which, under Sir Winston Churchill's leadership, they approached the elections of 1950 and 1951. Shrillness in an underdog does not perhaps command the same tolerance from the floating voter as the same stridency from a temporarily displaced élite. But it is quite certain that such thoughts would not have inhibited Mr Gladstone, any more than did the remonstrances of his colleagues that the public could not be expected to show interest in the massacre of Bulgars by Bashi-Bazouks.

If the pattern of this Parliament is projected into an autumn election, the Opposition is in danger of finding that Mr Macmillan has by some prestidigitator's alchemy contrived to create, simultaneously, the impressions that there are no issues in British politics and that it is the Labour Party's fissions, fusions and confusions on which the voter is being called summarily to pass a verdict. Too often Mr Gaitskell has manoeuvred himself into the position of a minister defending a white paper, without the aid of a minister's resources; and Labour candidates may find themselves devoting time to explaining what their policies are not that might have been much better spent in advancing the case for replacing an ostensibly successful Government.

The truth is that there are issues aplenty in British politics, at home and abroad, which are certainly not unworthy of submission to the British electorate. The Government may try to fuzz them; the Opposition may be coy about them. But if the coming election is to mean anything, the simplifying process of political battle must work to give the country sharp images of the parties between which it has to choose. This simplifying process is much maligned, sometimes rightly so. Specialists in subjects that become issues of contention raise their hands in expert horror, seek to shoo the simplifying politicians away, and demand that decisions that affect their speciality should be taken out of politics. If they had their way, political debate would concern only trivial things on the margin. This is to take altogether too low a view of the political process.

Party conviction is but one of the three ingredients that go to make up policy. The other two are the permanent role of government and the impact of external personalities, facts and events. It is right that independent commentators like *The Economist* should call attention to intractable facts that limit the choices of whoever attains power. But it is quite wrong that politicians should become so subdued that the voter is given the impression that no elements whatever in the amalgam of forces determining the actions taken on his behalf are at all amenable to the exercise of his choice. It is all-important to restore meaning to the word "election" itself.

Multi-racialism at Home

No single lobby or pressure group has arisen to organise coloured people in Britain for their defence. The most hopeful development lies in interracial co-operation against specific abuses

In half-conscious imitation of the spiders' webs of "progressive" and "betterment" associations which stretch exuberantly through American Negro communities, the West Indians in London have been indulging in almost an excess of organisation. Until the time of Kelso Cochrane's murder last May in London, such groupings, many of them closely related to local associations in the Caribbean islands, kept to themselves. During the race riots in the Notting Hill district there were attempts to float a wider National Association for the Advancement of Coloured People after the American prototype, but although the title was copied, the reality was never approached. Many West Indians, particularly in Notting Hill, feeling themselves let down by inflated aspirations, determined to act only with their immediate neighbours.

In the weeks just before the Cochrane murder the West Indies Migrant Service, smelling more trouble in the bad areas and worried at the complacent assumption that the racial problem had evaporated with Mr Justice Salmon's memorable charge to the jury in the Notting Gate riot cases last year, brought together the various immigrant clubs and societies into a Standing Conference of West Indian Leaders for Community Development. But this move revealed a divergence of viewpoints among West Indian leaders.

The divergence springs from the ambiguities in the West Indian's attitudes towards themselves, towards their white neighbours and towards politics. Should, for example, West Indians take pride in the Negro race ? Or should they seek to be considered first and foremost as British citizens, among whom characteristics of race and colour should be immaterial ? Should the word "coloured" as opposed to "West Indian" be used at all ? As the West Indian Federation gets under way, a further question will doubtless arise as to whether the immigrants should think of themselves as visitors from an independent nation or as British residents in their own mother country.

Such questions are earnestly discussed by articulate West Indians. The answers which they give affect their political attitudes. If West Indians are primarily "coloured people", it follows that their natural allies are the Africans, who are obsessed with the worldwide struggle against "colonialism" and inclined to the conviction that nothing worthwhile is to be got without making a great deal of noise in the getting.

The Cochrane murder provided the occasion for Mr Bashorun, the president of the Association of African Organisations in Britain, to announce flamboyantly the formation of a coordinating committee which would organise Cochrane's funeral and demonstrate by banners and processions, vigils in Downing Street, boycotts of South African goods and so forth against unfair treatment of coloured people everywhere. This approach contrasts with the emphasis which is placed by the West Indian authorities and most of the social agencies concerned with the day-to-day problems of getting individual West Indians accepted in British communities on their merits, regardless of colour.

Cutting across this division is another : the division between those, on the one hand, who feel that West

Indians are more easily assimilated into respectable English society than other coloured people, or indeed than most foreigners, because of their essentially conservative, property-owning, cricket-playing traditions and a cultural background in islands where the colour bar is only occasionally and erratically present; and on the other hand, doctrinaires who see the immigrants as natural allies of the poor whites in the class struggle. Most of the poor whites do not see it that way. The Mosleyites and the White Defence Leaguers are having some local success in stirring them up to believe that their grievances against their environment, many of them legitimate, can be attributed to the West Indians. Nevertheless left-wing enthusiasts see a sharpening of class distinction as the ultimate solvent of race prejudice. But this is an outcome that does not appeal to West Indians with higher social ambitions than being assimilated with the lowest of London's low, white or coloured.

THESE ambiguities, which affect both the West Indians themselves and the large number of English organisations that have become involved in the racial question, should not be overdrawn. There are sensible and sophisticated people as well as hotheads among those who favour the more demonstrative methods. The West Indians leaders passed one critical test of maturity when, on the morrow of the Cochrane murder, the Trotskyites proposed the formation of a vigilante group armed with batons to patrol any area in which the Fascists were operating. Even Mr Ezzrecho, who leads the most militant West Indian group in Notting Hill, promptly wrote to Mr Fryer, the Trotskyite leader, telling him to keep out. The "Defence Committee" of Mr Bashorun's new organisation changed its name, so as to avoid any impression of taking the law into its own hands.

There are skilled politicians like the ubiquitous Dr David Pitt, the only West Indian to be a prospective parliamentary candidate (he has been adopted by the Hampstead Labour Party), who think that the weapons of conflict and conciliation, public protest and private assimilation have all to be used as tactics suggest. But friction between these lines of approach is inevitable. So deep is the prejudice against the public authorities among part of the immigrant community in Notting Hill that attempts to deal with rackrenting landlords by careful preparation of test cases brought by West Indian tenants have not received universal support. Tenants who stick out their necks expect a degree of immunity from retaliation which cannot by the nature of things be absolutely guaranteed; West Indians who work with the authorities run some risk of being dubbed informers by their compatriots.

Nevertheless the diverse strands of West Indian activity are being brought together by the Standing Conference of West Indian Leaders for Community Development and by the British Caribbean Association. The eighteen organisations and clubs with such titles as the Coloured People's Cultural and Social Association, the Harmonist Movement, the Stoke Newington Caribbean Social Club and the Racial Brotherhood Association, which send representatives to the Standing Conference's monthly meetings cover every part of London in which West Indians are to be found.

The mood of these club leaders is healthily self-critical. They are especially worried by their failure to attract local white residents to their activities. Contact has hitherto been largely with outsiders with a conscience about race relations. Such club activities may even promote separateness rather than assimilation. There are a number of ways to avoid this. Clubs should find out what the individual interests of their members are, invite the secretaries of existing professional, social and hobby organisations to address them and offer membership. Local West Indian leaders should see that their compatriots register on the electoral roll as soon as they become qualified, since this is the only way to overcome the extraordinary lack of interest so far shown by local political organisations in the problems of potential coloured voters. Suitable West Indians should try to seek prominence in local affairs, because only then will many white people drop the habit of classifying all West Indians in their minds as unskilled labour. West Indians who find themselves exploited, as many tenants are in areas like Notting Hill, should seek common ground with white inhabitants who are in the same position. It is encouraging to learn that the small group of skilful social workers who were behind the recent successful test cases brought before rent tribunals are now promoting a multiracial tenants' association in North Kensington.

In certain respects West Indians in London's slummier areas have more political pull and more access to publicity than the previous white tenants, some of whom have traditionally put up with rackrenting, intimidation and other abuses because of a feeling that their own way of life was too vulnerable to permit of official scrutiny. Public anxiety about the race problem has called attention to situations which were in any case a scandal and West Indians have a chance of adding in the field of civic virtue to the services which the public is already accepting from them and beginning to accept and acknowledge in such fields as nursing and public transport.

BOARD OF TRADE 15 AUG 1959 PUBLIC RELATIONS

The Six in Business

Tariff and quota discrimination within Europe is insignificant as yet.
But business men are looking further ahead

THE common market today is on the political defensive. Economically it is a fact of life. In France, both inspiration and doubting Thomas of the European movement, General de Gaulle and his followers have rejected the whole intellectual content of M. Monnet's Europe. Yet the start of the common market in January gave occasion for a radical change in French economic policy, while the dynamic sectors of French industry, having already shown some remarkable changes in attitude in the preceding years, have taken the common market to heart and made it the occasion for further advances in organisation and production methods. In Luxemburg and Brussels the "Europeans" are in the vale of doubt and find it difficult to move beyond the letter of their treaties. Yet the first tariff and quota changes under the treaty of Rome have initiated a far-reaching process of economic change.

Exporters from the countries outside have of course been the first to feel the effects. The incidence of tariff and quota changes has so far been small, but with an eye to the future, distributors inside the common market are dropping British agencies and turning to distribute the products of the Six. And business men within the Six are looking further ahead than immediate export opportunities. Earlier this year the European Commission drew up a list of industrial agreements within the community. It listed some fifty mergers within individual member countries as well as arrangements for new investments by outside companies, almost all American. Most interesting of all, perhaps, it listed some thirty cooperative arrangements between firms in the community, cutting across the national frontiers.

Most of the industrial agreements are combined arrangements for joint selling and production. Krupp and the French firm PIC have agreed on joint construction of complete installations for preparing coal. Renault and Alfa-Romeo have agreed to use each other's distribution networks and assemble each other's vehicles. Bayer has agreements with a number of French firms in various fields for joint technical cooperation. Firms in the community are getting a foothold next door so that they can expand sales rapidly as the barriers come down. They are beginning, by agreement, to pool production resources, specialising in different fields, as falling customs barriers make some fields of production less profitable and others more so. Inside individual member countries small firms have been getting together to face the new competition. In France there has been a far-reaching reorganisation in the textile industry. In Holland small engineering firms are setting up a consortium.

In banking it has been realised that a single European market, with capital free to move within it, will produce new needs for services covering the whole market. New joint industrial projects may have to be financed jointly. Backing will have to be found for an expanding flow of goods and capital. Groups of banks have already agreed on cooperative arrangements that could lead to international mergers later on. In distribution the big European stores are already going in for joint buying. The European commission also listed 60 new joint organisations formed by business and professional associations in the six countries. These are not price agreements. They are groups for sorting out common problems that arise from the common market, and lobbies for pressing on governments and the new institutions in Brussels a common point of view.

Is a monster cartel growing up across the Channel instead of a market? Cartels and state intervention are after all, familiar enough historically in Germany, Italy and France. Yet the removal of trade barriers within the common market, which is its essential characteristic, will in itself produce if not a new surge of competition, then at least the threat of it. It is the prospect of new competition, after all, that has initiated the latest stage of industrial change. But in the community, as elsewhere in modern industrial life, competition will no doubt be less than perfect; and the new industrial agreements tend to combine a productive response to competition with resistance to it. The question is which ingredient will be strongest in the new common market cocktail.

ONE judgment can probably be made. It seems safe to say that the agreements, mergers and other arrangements that are taking place within the common market will not wholly arrest the shifts in production that should result as industrial tariffs fall. There are enough dynamic forces to ensure that the *status quo* will not be frozen. The common market has rules of competition, which prohibit certain restrictive practices; much depends on how they are interpreted and enforced. All that can be said at present is that the commission of the community is taking a courage-

ous line. But for the moment enforcement depends in part on national laws. Here only west Germany, with its new liberal economic climate, has an anti-cartel law with real teeth.

What is the implication for firms outside the new industrial relationships within the community ? In one sense the prospect is not yet bleak. It will be some years before major shifts in investment take place, based on the assumption that the division within western Europe will be permanent. German firms, for example, are not yet working on the premise that they will be the only major industrial power to get a new footing in the French market. They still assume, and even hope for, some sort of wider agreement. Once that hope dies, or becomes dim, then industries in Germany may start adjusting themselves to a more permanent hold on a larger share of the markets of the Six, and a more disquieting situation will arise.

One important bridge still exists in the great international companies that operate on both sides of the line: Unilever, Siemens, General Electric, Ford, General Motors, and the others. British firms that have subsidiaries inside the Six, or agreements with firms there for the distribution or assembly of their products, are also playing a part in the holding operation. The British Motor Corporation's negotiation with Innocenti for the assembly of the Austin A40 in Italy is a good example.

The deepening of the industrial division within Europe is thus a gradual process. The rift is by no means irrevocable; but new interests are steadily being established. Habits of cooperation and the technical arrangements made today set the pattern for mergers, common production arrangements, and joint efforts in third markets later on. Indeed, the specific arrangements that are now seeing the light are often the sequel to friendly contacts that have been evolving ever since the common market treaty was signed. There are still some similar contacts between insiders and outsiders. Associations of business organisations still include countries like Switzerland, Sweden and Britain as well as the Six; but inevitably the new common market groupings are tending to displace them.

In new investment, it is true, uncertainty about the future is unfortunately holding all west Europe back, including the common market countries. Both Europe and the American investors are tending to adopt a policy of wait and see. Yet already the tide is beginning to flow. In the first quarter of this year $240 million of American capital came to Europe, compared to $150 million in the same period last year. Inside the Six, Holland and Germany, where the climate is more favourable than elsewhere, are getting the lion's share. Once it becomes apparent that the present division is to last, American firms will tend to push on with investment in the area of the Six, thus identifying their own interests with this new reality.

NOTES OF THE WEEK

RUSSIA AND AMERICA

How Small a Summit ?

WHILE Mr Nixon was on tour in the Urals, word began to go round that the idea of Mr Khrushchev visiting Washington, until lately so fanciful, had to be taken seriously. On Monday the rumours were confirmed by announcements from Washington and Moscow. Evidently Mr Nixon had combined with the other duties of his Russian tour — opening the American exhibition, matching Mr Khrushchev in cross-talk, inspecting power plants and nuclear ships, answering well briefed official hecklers dressed as workers and peasants — the really important task of preparing the way for the heads of the American and Soviet governments to meet, first in the United States next month, and not long after again in Russia.

For President Eisenhower the decision not only to receive Mr Khrushchev in Washington, but also to go to Moscow himself, is the gesture for peace which he has always been thought to intend before his presidency was over. For Mr Khrushchev it is a personal triumph; this is what he has long campaigned for. Elsewhere in the western world reactions were mixed, as had to be expected, and on various levels of sincerity. The governments of America's European allies were not cold to the idea, no, not they; they welcomed it warmly. Or if they had doubts, these were at that moment being allayed by offers of a western summit conference to go over the ground first in Paris, and by assurances that nothing would be settled behind anybody's back, or indeed at all. Meetings between Mr Eisenhower and Mr Khrushchev were even spoken of as the best possible preparation for a *summit* conference: that is, a summit at which the lesser heads of government would join the greater.

It would be a pity if the effectiveness of these vital meetings should be too much circumscribed by too much consideration for the lesser great powers. It is true enough that east-west relations are so intractably deadlocked at so many points that any set of east-west talks has to be seen as one of a long series; and in that

series, not only foreign ministers' conferences but also meetings of two, four and more heads of government, as well as United Nations committees, disarmament bodies, and many more besides, will play their part. But it remains overwhelmingly probable that of all these the indispensable meeting will be the summit for two; and the less that is said and done to limit its effectiveness, the better.

Dust in Whose Eyes ?

MR NIXON's decision to visit Poland on his way home from Russia provoked some dubious reactions. Mr Walter Lippmann, for one, predicted that the Vice-President would be accused of fishing for the Polish-American vote at the expense of Poland's own interests. But Mr Nixon's performance during his Russian tour had scarcely suggested that he was likely to make any false moves in Poland. His responses to the sometimes crass heckling of Mr Khrushchev and the more humble Soviet faithful were marked by the cordial vigour of a seasoned American politician who, in his own good humoured phrase, has been "insulted by experts".

Each day of his visit evidently presented new puzzles to the Soviet press monopoly, which sometimes gave substantial reports of his friendly but frank remarks, but sometimes suppressed key passages; and it played up some fanciful accusations, for example about his having allegedly offered money to a Moscow market employee. It was silent about the long tussle before Admiral Rickover was permitted to get as good a look at the nuclear icebreaker in Leningrad as Soviet visitors had taken at American nuclear achievements. But it published Mr Nixon's plea for the opening to foreigners of cities such as Novosibirsk, that strange Siberian boom town of 900,000 people which turned out, during this unusual visitation, to have no hotel. Back in Moscow, while an inexplicable and dismaying amount of dust swirled up from the cement floor which the Russians had laid for the American exhibition, the Soviet press, not to be outdone, huffed and puffed its best in a too obvious endeavour to becloud this vision of a brighter way of life.

But the forceful plea for the removal of Soviet barriers to understanding between peoples which Mr Nixon, on his return to Moscow, broadcast over the Russian radio and television, was also faithfully reproduced by *Izvestia*, though less handsomely treated by *Pravda* which he had accused of misreporting his tour. And while the press of other east European countries was tongue-tied with embarassment, the Polish papers gave much space to the tumultuous welcome that the people of Warsaw gave him — a far warmer one than they had already given Mr Khrushchev.

PRINTING SETTLEMENT

Counting the Cost

AFTER well over 100 hours of intensive discussions, and after the now too familiar "complete deadlock" at the eleventh hour, a formula for ending the general printing dispute was finally hammered out between the unions' and employers' leaders on Friday last week. Its terms are not simple. The employers for their part have conceded an increase in wages of 4½ per cent and a 1½-hour reduction in the working week (with some extras for provincial press workers who already have a shorter working week). This is reckoned to be an effective rise in pay of at least 8 per cent, against the employers' original overall offer of 5½ per cent; it is a big jump. Although it is supposed to run for three years, the agreement is subject to review after two if the unions feel, as they will no doubt say, that a further increase is then justified. On paper, the unions have also made what could be in practice some important and productive concessions. They have agreed that in future better use will be made of the industry's various skills, that shift-working and work study will be encouraged where necessary, and that new processes will be cooperatively developed. They have also agreed at last that a boy who stays at school for a year after he is 15 should be allowed to deduct this time from his six-year apprenticeship course.

In the end, outside pressure and the patient and persuasive services of Lord Birkett made it possible for the agreement to be reached, and work to be restarted, without waiting for the separate unions to ballot on the terms first. All 100,000 men returned to work on Thursday (an earlier resumption might have involved the employers in unwelcome payments for the August Bank holiday) and now the unions will each ballot their members with a recommendation to accept the terms. It is not likely, though it is still possible, that, once the strike has been called off, any of them will refuse to do so. (And quietly on Saturday, to the pleasure of the national press, the ridiculous dispute in the printing ink industry was settled.)

At this stage one can give only a first and cursory judgment on the dispute as a whole. The 4000 printing firms involved are estimated to have lost £13 million, the 1000 provincial newspapers £3 million, the unions another £3 million and the men themselves perhaps £8 million or about £75 apiece. The employers who, apart from their direct losses, have also to face the long term effects of lost readers and clients, will almost certainly never get their money back; while the men, having gained 2½ per cent, or 6s 6d a week, in earnings by the strike, will take up to four years to recoup themselves. Whether it was a famous victory, and for what and for whom, will now depend upon what happens to prices — and to productivity.

THE ROYAL TOUR

Candour Among Friends

THE Queen's return from Canada ends a six-week visit that has not had the best of press notices. This candour does not mean that the tour has done other than fulfil its purpose. The Queen herself undoubtedly did all in her power to make it a success. It should have been no surprise to the organisers, or to anyone else, that the thinnest and least vocal crowds were in French-speaking Quebec and in Ottawa, a city that has by now become accustomed to royal occasions. The tour seems to have given most pleasure to the smaller communities of the northern and western territories.

Through shock, personal discomfort or the daily search for originality, a number of British correspondents chose to misinterpret the facts of Canadian life into suggestions that the Queen had been by turns insulted by popular indifference and overworked by offical eagerness to overdo the local formalities and pomposities. The Canadian press, particularly in Toronto, promptly replied by declaring all was well and showing up most of Fleet Street's wilder inanities. The outcome of this unnecessary squabbling was that when the Queen did succumb to travel tiredness and a minor illness in Alaska, the affair was bungled into being presented as a major, and almost political, crisis.

The Queen may well echo Mr Diefenbaker's conclusion that future tours might be less formal and less strenuous. The Canadians, like all Commonwealth countries, have to decide exactly what active part the monarchy is to play in their public life. The question arises over the duties of the Queen and the Governor-General, a post which is now to be filled in Ottawa by its first French-speaking occupant, Major-General Vanier. Experience should bring a compromise in which a royal opening of parliament has its own ceremonial style, and a visit to a prairie township another; and neither need be on the British pattern. Not the least valuable part of a royal visit is what Britain learns about the rest of the Commonwealth.

INDIA

In the Deep South

THE reluctance with which Mr Nehrù eventually decided to ask President Prasad to oust Kerala's communist ministry was wholly understandable. India is engaged in the world's largest experiment in democracy, and it is an unwelcome admission of the limitations of democracy when a state government duly constituted after free elections has to be dismissed and direct administration from Delhi imposed. Moreover, the communists themselves have several reasons to welcome the introduction of president's rule in Kerala: it may enable them to appear as martyrs instead of as tyrants. Since they won power in India's southernmost state in the 1957 elections, their reputation has sharply declined. Mr Namboodiripad and his colleagues have visibly failed to provide a marxist panacea for Kerala's poverty, and they have increasingly turned to beatings-up and volleys of rifle fire as a substitute for popular support. Next week, they would have faced a mass march on Trivandrum, the state capital, and a Hobson's choice between yielding to their angry opponents and mowing them down.

Now, while protesting their own innocence, they have been enabled to complain that their dismissal from office is discriminatory and unconstitutional. Communist leaders have also dropped heavy hints that the game of making life impossible for a state government can also be played where the Congress party is in power, specifically in West Bengal. The weak link in their argument is their rejection of the idea of going to the polls again at any early date. (Many observers, eyeing the divided and ill-led Kerala opposition, have judged that the communists stood a good chance of winning another election if it was held now; but the party leaders presumably think that their chances would be better after a short sojourn in the wilderness.) Mr Nehru's unwillingness to award them a cheap martyr's crown was evidently overcome by the prospect of a complete breakdown in the deep south.

LOCAL GOVERNMENT

The Copper and the Council

THE Nottingham Watch Committee suspended their Chief Constable, Captain Popkess, for refusing to divulge to them the contents of a report which he made to Scotland Yard on the behaviour of certain Nottingham councillors on a visit to East Germany, including two members of the Watch Committee. The Home Secretary told them bluntly and rightly that they had no power to do any such thing. They have therefore perforce reinstated him. Inevitably their feathers were ruffled and they went back on their decision reluctantly; but they are unwise to show this in their public statement, which also contains a lengthy, but irrelevant, exposition of the relations between the watch committee, the chief constable and the Home Office. Their plan was, no doubt, to throw dust in the eyes of the Nottingham electors, by vaguely suggesting that Mr Butler, in some mysterious and tyrannical but certainly Tory way, had been twisting the arms of a decent bunch of Labour councillors who had been persecuted by a high-handed, nosey (and ungrateful) copper. It is rather a lame piece of electioneering, but it may go down better than it deserves to do if the tension between the public and the police has grown to the extent that the recent report of the Commissioner of the Metropolitan Police, and the Report on Criminal Statistics for England and Wales, published last week (Cmnd 803) suggest.

It has been an unhappy month for the public relations of city councillors. The public is clearly not siding with the Labour councils that have excluded the reporters of emergency local newspapers on the ground that Labour principles must be put before the right of the public to have the news of what their elected Bumbles are up to — so far as this is ever possible, which is often not far enough. But in other matters councillors in several cities have lately given the impression that they are a great deal more authoritarian and a great deal more obsessed with party political dogmas than are the politicians at Westminster. This is a very bad impression to give. It is hard enough to make the public realise that the town hall and county hall are important; the worst way to go about it is to show that they are self-important.

LAOS

The Uncivil War

EVER since May, the communist governments of China and north Vietnam have been claiming that there is a civil war on the territory of their small Buddhist neighbour, Laos. Since, at the time the claim was first made, casualties scarcely exceeded half a dozen, it was hard to take it seriously. A dissident battalion of the communist-led Pathet Lao forces had broken away from encirclement by the government's army and was heading for the north Vietnamese border. Now it has come back in greater strength, inflated with Thai troops from north Vietnam, who look conveniently like the Laotians of the border region, and officered by cadres trained in north Vietnam. Until torrential rain began a few days ago, fighting of some violence was taking place in Sam Neua, one of the two provinces overrun by the north Vietnamese communists in their invasion of Laos in 1953.

By these methods, a merely tense situation has been turned into a dangerous one, and a local skirmish into a fair imitation of a civil war, calculated to deceive the eye at a distance of a few thousand miles. The Laotian government has reacted by despatching reinforcements to the threatened area and by arresting various leaders of the communist-line Neo Lao Haksat party, including the royal prince Souphanna Vong. Further confusion has been caused by reports of incursions across the Laotian border: from Burma, by remnants of the Chinese Nationalist forces; and from Siam, by Vietnamese communist refugees, evidently provided with arms.

The new threat to Laos arises from communist schemes hatched in Peking and Hanoi. The Chinese are determined to weaken and, if possible, eradicate American influence over Laos. The north Vietnamese are trying to provoke a return of the three-nation supervisory commission for Laos, set up under the Geneva agreements of 1954 but disbanded last year at the request of the Laotian government. Mr Gromyko advocated the return of the commission when Mr Selwyn Lloyd called on him at the weekend to complain of interference in Laotian affairs by the North Vietnamese. The British and Soviet foreign ministers, as co-chairmen of the Geneva conference of 1954, which ended the Indo-China war, share responsibility for seeing that the truce is observed. Laos, as a member of the United Nations, will doubtless prefer recourse to that body to the reconvening of the three-nation commission, in which it sees an instrument for the protection of local communists.

SICILY

Signor Milazzo's Second Victory

THE latest twist in Sicilian politics has put the Roman political dovecotes into a fine flutter. Signor Milazzo, who broke away from the Christian Democrats last November and for eight months ruled Sicily at the head of a bizarre coalition ranging from the extreme Left to the extreme Right, was again elected regional president on July 28th. It was a hard-won victory. At the regional elections on June 7th, Signor Milazzo was unexpectedly successful; although all the biggest guns of the Church and of the Christian Democrat party were mounted against him, he and his Christian Social Union won nine seats.

The Christian Democrats, with 34 out of the 90 seats, embarked on a frenzied and protracted search for a formula that would either allow them to reabsorb Signor Milazzo into their own ranks, or at any rate exclude him from power. They did not succeed, in spite of manoeuvres which included a boycott of one session of the regional assembly. After two indecisive ballots last week, Signor Milazzo finally defeated his Christian Democrat opponent, by 45 votes to 43; this time his party is supported by the Communists and Socialists, who between them have 32 votes, and four unknown defectors from the Christian Democrat or extreme right-wing ranks.

In Sicily, Signor Milazzo's victory is hailed as a triumph for Sicilian autonomy. In Rome it is deplored as a success for the Communists. It is bound to have considerable influence on the heartsearchings and manoeuvrings in which the Christian Democrats are already indulging in preparation for their party congress in October. The party's severe setback in Sicily may cause it to swing away from the Right, on which it is now dependent for its parliamentary majority, and may considerably assist Signor Fanfani's efforts to stage a comeback.

GERMANY'S EASTERN NEIGHBOURS

Stillborn Pacts

WHEN the Geneva conference was approaching, the west German foreign office brewed up a plan for getting on friendlier terms with the Poles and

Czechs. For some time a school of thought in Bonn has held that diplomatic relations with the two countries could help to tone down their persistent ill feeling towards Germany, and could even contribute to the eventual settlement of the German question. Hitherto, however, any such move has been held up by the doctrine that Bonn could not recognise governments that recognised the German Democratic Republic. Now, with the east Germans at the side table in Geneva, that doctrine is becoming more and more anomalous, as well as more obviously an obstacle to progress on the German question.

If the talks on Germany went well, the west German foreign office proposed to offer non-aggression pacts to the two countries, and a mutual pledge not to use force against each other, as a prelude to the resumption of normal relations. The west Germans were not prepared formally to accept the Oder-Neisse frontier line; they would have stuck to the formula that a settlement of the frontiers must be left to the peace treaty. But even on this matter, more normal relations might have helped to move things in the right direction.

The first phase of the Geneva conference hardly seemed propitious for the plan, and Herr von Brentano held his hand. When round two, in turn, went badly he asked the federal cabinet whether he could put forward the proposal anyway, however the Geneva talks went. But the Bonn cabinet has turned the idea down. The Geneva conference, Dr Adenauer explained, was not going to be saved by such a device. Above all, the German refugee leaders from what is now Polish or Czech territory were raising vehement objections to a move that would, they thought, prejudice Germany's territorial claims.

It seems unfortunate that this pressure group has been allowed to tip the scale. Support for the more extreme refugee leaders is steadily dwindling as the refugees are absorbed into west German life. Yet their organisations still get financial support, and a ready ear, from the federal government. It is held in Bonn that German public opinion is not ready for a new approach to the frontier question. But by falling over backwards to avoid offence to its diehards, the federal government inhibits any turn for the better.

WORLD YOUTH FESTIVAL

Operation Youth

THE seventh world youth festival, generously endowed by Moscow, which officially ended in Vienna on August 4th, represented an experiment. For the first time since the inception of these festivals in 1947, the meeting was held in a non-communist country. This put the organizers' nerves to a test. For once there was no benign, absolutist state in the background to bulldoze any difficulties away. The Communist party of Austria was in no position to supply the customary applauding masses to form a backcloth to the festivities. Delegates could not be protected from encountering a hostile, or indifferent, or highly argumentative public. The professional shepherds of youth knew what to expect and did what they could to provide against it. All the Soviet block delegations had been carefully selected and primed before their departure; in Vienna, fleets of coaches conveyed them swiftly from one event to another; most of them lived on Danube barges, at a safe distance from the corrupting influences of the capital.

After the first meeting in 1947, it has been customary to provide the festivals, which occur every other year, with brief, easily intelligible and translatable slogans: the banners through the years would provide a useful guide to the development and changes in Moscow's propaganda line. Whereas the early rallies were designed to inspire young men with a hatred of the capitalist system and a desire to fight it (the Bucharest festival in 1953 was the last to pursue that purpose directly) a shift of emphasis occurred two years later in Warsaw, where Picasso's dove of peace brooded over the proceedings. In Moscow in 1957 the "peace offensive" was launched in full force; in Vienna, peaceful coexistence and the "non-political" character of the festival were stressed, but the African and Asian nations, the "fighters against colonialism and imperialism" were singled out for special attention.

By now the serious young men in Budapest, Prague and Moscow, who tried hard to organize pleasure and edification for the not-so-serious young from all over the world, will be holding the inevitable *post mortem* on their efforts. It is likely that the unrest among students in Warsaw and Moscow that followed the last two rallies there was one of the reasons that made them to look to Austria for hospitality. But their experience in Vienna has probably taught them that on neutral or hostile ground, the effort and money involved in this propaganda exercise are liable to go unrewarded. Peking ought to be safer.

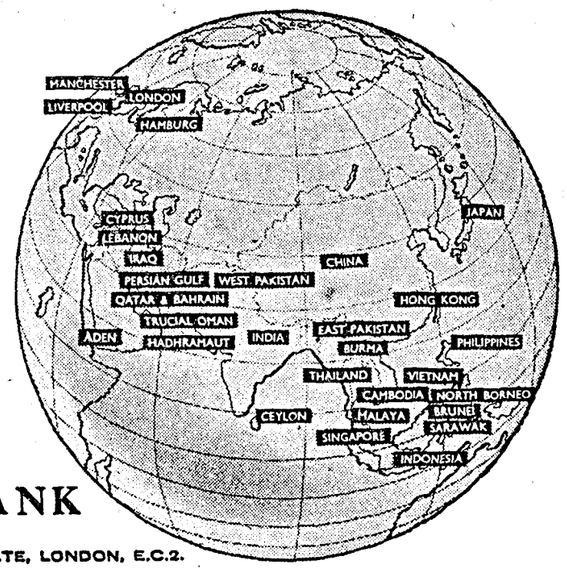
THE ARABS

Mending Arab Fences

IN 1948, as the Arab world began its descent into the morass of discord from which it has yet to rise, the then secretary general of the Arab League went from country to country selling war. He was a better salesman than statesman and the Arabs bought a war they were not militarily or psychologically prepared to win. Seven Arab armies failed to save Palestine from the Israelis. The leaders who so rashly promised arms and soldiers they could not furnish spent the following years blaming their defeat on each other until, one by one, they were replaced by *coup d'état*, revolution and assassination. The secretary general eventually became a political adviser to King Saud and, presumably, studies war no more.

The new generation of Arab leaders has been as

British Banking in Asia



These are the territories served by THE CHARTERED BANK and its wholly-owned subsidiary, The Eastern Bank Limited, through a system of one hundred branches extending to most centres of commercial importance in the Middle East, South and South-East Asia and the Far East. Those branches provide complete and up-to-date banking services, sustained by expert knowledge and long experience of Eastern trade, finance and industry. In London an effective credit information service and skilled assistance and advice are available to merchants and manufacturers seeking new business connexions in Asian markets.

THE CHARTERED BANK

(Incorporated by Royal Charter 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2.

Branches in the United Kingdom at Manchester and Liverpool. Agencies at New York and Hamburg.

THE EASTERN BANK LIMITED

Head Office: 2 and 3 Crosby Square, London, E.C.3.

unsuccessful as the old in creating an atmosphere of peace and good will among all Arabs. The recent reconciliation between the United Arab Republic and Jordan is the first concrete sign of a change in Arab attitudes since last summer's brief period of amity between Cairo and Baghdad; but this time there is reason to believe that it will be of a more enduring nature. King Hussein broke off relations with the UAR because he held President Nasser responsible for the fall of the Hashemites in Baghdad. But he soon found that trouble with Nasser also meant increasing difficulties with the Syrians on his northern border. After an appropriate number of olive branches had been sent to Cairo by King Hussein, President Nasser despatched Mr Abdul Khaliq Hassouna, the present secretary general of the Arab League, to Amman to talk peace. Mr Hassouna said all the right things, and the border between Jordan and Syria, closed for nearly two months, was reopened on July 30th. The way was paved for the restoration of full diplomatic relations.

In Cairo, President Nasser spoke for three hours on the occasion of the seventh anniversary of his 1952 revolution without attacking any of his favourite Arab enemies — the prime minister of Iraq, the king of Jordan or the president of Tunisia. Turning aside from the talk of political glory that has kept Egyptians excited, if not particularly well fed, for the past seven years, he promised to double the income of Egypt in ten years and that of the UAR in fifteen. It is too soon, perhaps, to say that he now believes that if he can improve the lot of the Egyptians and Syrians, he will be in a better position to do something for other Arabs as well. If he can bear to devote his energies to his own economic problems and leave inter-Arab politicking to the able secretary general of the Arab League he will discover that much of the first seven years of his rule was wasted in needless quarrelling.

Summit at Casablanca

As many Arab states as are then on speaking terms will meet at Casablanca on September 1st to talk about the Palestinian refugees. The meeting is being described as a summit conference, but whether or not all the heads of state will turn up depends on the rise and fall of diatribe in the intervening weeks. Meanwhile there is talk of a preparatory conference to thresh out an agenda or at least, on the Geneva model, to define the lowest common factor for getting talks going.

The genesis of this conference is Mr Hammarskjöld's report in June in which he recommended to the General Assembly a way of tackling the refugee problem within the framework of the economic development of the countries in which the refugees now find themselves. While acknowledging the UN resolution that the refugees should be free to choose between repatriation in Israel and integration in their places of exile, he faced up to the impossibility of putting this into practice; he suggested integration *in situ* as a sensible alternative. Mr Hammarskjöld recognised that a plan to help the refugees needs to be part of a wider economic programme for the benefit of the whole area. He sugested one that would involve outside investment of $3,400 million by 1970 to provide stable employment at a slightly higher standard of living for the indigenous population, and a further $1,700 million to provide jobs for the refugees. But so far the Arabs have ignored the economic attractions of this scheme because, publicly at least, it has been impossible for them to focus on anything except the tacit departure from the principle that the exiles should be free to go back to their old homes.

Casablanca, which is about as far from the Palestinian refugee centres as anyone can get in the Arab world, was chosen as the meeting-place in preference to Jerusalem, Baghdad or Beirut because it seemed one of the few places where all the heads of state might be able to gather at the same time. There may even be advantages in Casablanca's remoteness. Should the conference decide to tackle the refugee problem as an economic and social exercise instead of dwelling on its politics, the Arabs will have addressed themselves to the human substance of the question for the first time.

KENYA AND TANGANYIKA

Mr Nyerere's Reconnaissance

Mr Julius Nyerere, the president of the Tanganyika African National Union, has been making a reconnaisance, and very wisely, in London before the report of the Tanganyika constitutional investigation which will appear in August. So far Mr Nyerere, the victor of the Tanganyika elections, has kept his party admirably in check. But he will clearly find it difficult to maintain a situation in which, having won an overwhelming electoral and moral victory, his party sits in opposition in the Legislative Council but contributes five ministers to the Executive Council. In order to indicate that this can be regarded only as a transitional arrangement Mr Nyerere has not himself taken office. He is asking that within a reasonable period, but certainly some time next year, Tanganyika should have new elections under a constitution that would provide a majority of common roll (and therefore African) seats in the Legislative Council and African control of the executive council. Broadly, he is asking for the Gold Coast constitution of 1951, though he agrees to reserved seats for Europeans and Asians, and would undertake not to abolish them when he gets — as he would get — power.

It seems almost inevitable that this demand will be conceded in principle; the difficulty is more likely to be outside than inside Tanganyika. The Colonial Office is probably worried about repercussions in Nyasaland and Kenya. But in Kenya a new and more hopeful avenue has been opened up by the government's

decision to permit non-racial political parties to organise. This has apparently broken up Mr Mboya's uncompromising Constituency Elected Members' Organisation and has caused its African, Asian and European elected members to get together as a genuinely multi-racial party, not unlike Mr Blundell's New Kenya Group, if far more radical and pro-African. Mr Nyerere has already sought to act as a mediator in Kenya, and he may be useful in that role again. He is well aware of deficiencies in Tanganyika, where Africanisation has barely begun. But nationalism, it is clearer than ever since the Devlin report, cannot be thwarted, only guided; and there seems sense in giving a chance to Mr Nyerere who is nationalist but commonsensical, and who is happily free of the chip on the shoulder that warps the outlook of so many African leaders. With his help, East Africa might be brought forward on a practical timetable to self-government.

EDUCATION

Commonwealth Teaching

THE Commonwealth Educational Conference, which has just completed its labours at Oxford, has done extremely well; if its proposals can be filled out more vigorously by the constituent governments, it may prove to be the most substantial result of the Montreal conference, which launched it last September. The £5 million scheme to provide a thousand scholarships for able young academics to study at Commonwealth universities is a natural and useful attempt to maintain intra-Commonwealth cultural links; as a greater Rhodes scholar scheme it could do a lot of good, provided that it is not confined to the narrower type of scholarship-subsisting academic who is now becoming so prominent and so peripatetic a feature of the modern scene. The core of the conference's achievement is the agreement to help the educationally-backward members to obtain more expatriate teachers and to train more indigenous ones. It was wisely recognised that there is a shortage of teachers in all countries, no matter how advanced; for the demand for education is almost insatiable, whether it be a question of ever higher educational standards (and ever more well-found teachers) in countries like Britain, or a question of raising literacy from the level of 5 per cent that is common in parts of Africa.

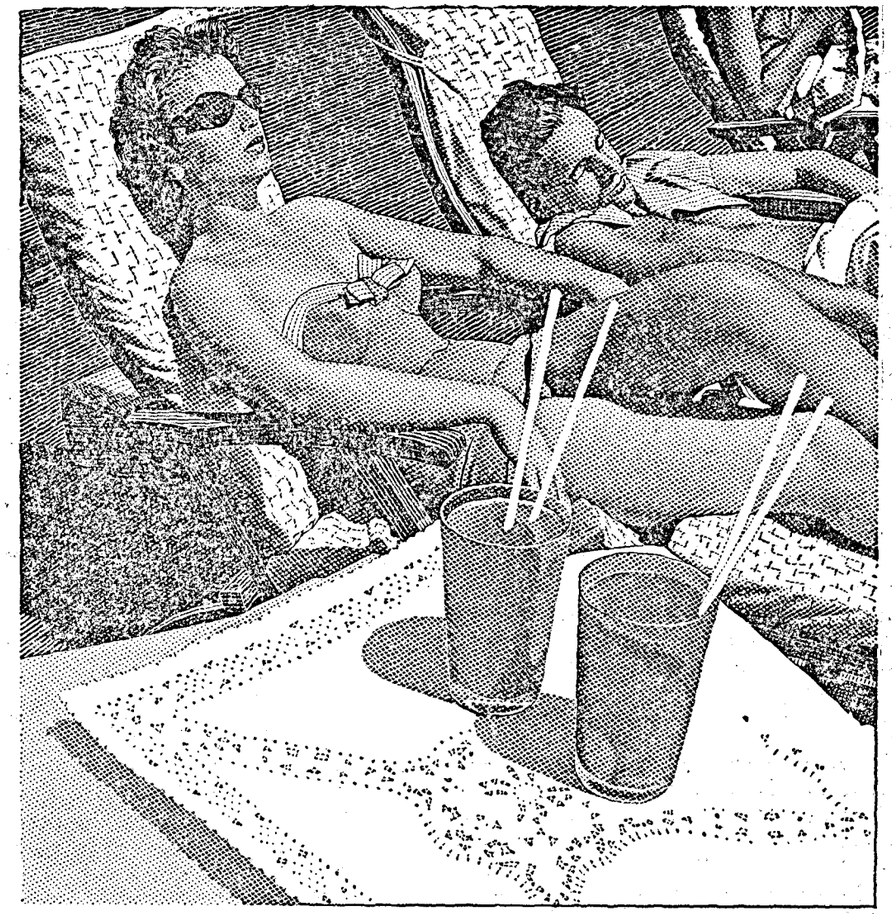
But in countries like Britain and Canada it is relatively easy to train more teachers, while in countries like Nigeria, Nyasaland or India, the shortage of teachers in secondary schools — the crucial growing-point in the provision of technical, professional and administrative cadres — is critical. In Africa, the success of self-government, and certainly the survival of British institutions, is likely to depend on a rapid expansion of the secondary schools, and on improving the higher classes in those schools. The conference's estimate of 1200 technical and secondary schools teachers a year as the requirement in the needy Commonwealth countries is certainly not an overestimate. It is not, however, entirely clear from the conference's report how help is to be given. In the interests of reducing the size of classes and giving teachers a better training, the British teacher-training programme has been twice expanded. This fresh challenge means more places in colleges (and university education departments) to enable both British teachers to take service abroad and African teachers to train alongside British (which is particularly important in science subjects and for the better teaching of English as a second language). The £5 million to be spent by all Commonwealth countries on this programme will not go far. There is to be a further review in 1961 — and it may be predicted that by then the sum will have been found quite inadequate.

The Economist

AUGUST 6, 1859

THE BUILDING STRIKE

THE hours of work are a simple matter of agreement between masters and men, and on neither side, independent of positive contract, can they be fairly or legally made matter of compulsion. Nay, the men have a perfect right, an indefeasible claim, to demand ten hours' wages for nine hours' work, or eleven hours' wages for their present ten hours' work — if they can get it... If the men see, or believe, that the building trade is so brisk that their employers can well afford to give higher wages, and will probably do so rather than encounter the inconveniences of a turn-out, they have a right to ask for an advance, and even to strike work if it be refused. If they know that the demand for their special class of skilled labour... is greater than the supply, if contracts are many and labourers are few, then they are fully entitled to ask and to expect an advance of wages; or, if they prefer to take their benefit in that form, a reduction of the hours of work. In that case they would simply be requiring the increased market price of their peculiar commodity — a requirement which it is mere folly and injustice to expect them to forgo. We may even go further, and admit that they are entitled to agree among themselves, and to combine with one another not to work — i.e., not to sell their article — except on their own terms. To this extent, therefore, we concede and endorse their claims; and we hold that the blame which has been cast upon them has been unreasonable and undeserved. But — and here we take issue with them — when they ask for an advance of wages or a reduction of hours in the face of the fact, notorious to all and blazoned by themselves, that numbers of men are unemployed and that the trade is overstocked, they are guilty of unpardonable unfairness, ignorance, and folly, because they are asking an increased price for an article of which, by their own admission, the supply exceeds the demand; they are asking what is impossible, and are flying in the face of the clearest and best established economic laws. And when, in order to enforce this unnatural claim, they compel fellow-workmen, who would fain continue at work, to join their union and partake their strike, they are guilty of a tyranny which is no whit less wicked than the oppression of King Ferdinand.



Her boss was unlucky . . .

. . . he had to race back!

Miss Holt is a much-travelling secretary to a much-travelling Business tycoon. She and her boss had to go to South Africa recently, and, business completed, he was again looking forward to a fortnight's well-earned relaxation, with his feet up, in Union-Castle comfort all the way home. But London called him and said 'Sorry, you've got to race back, most immediate'. He was *not* in a good temper when Miss Holt saw him off at Cape Town. She took his heavy luggage with her by sea, the restful way, the right way, the Union-Castle way Sunshine, smooth seas, wonderful food, first-class service, swimming, dancing, cinema shows and good companionship. That young man in the next chair is extremely glad Miss Holt didn't have to race back. So is Miss Holt.

TO SOUTH AFRICA, TO EAST AFRICA AND ROUND AFRICA

the going's good by **UNION-CASTLE**

Every Thursday at 4 p.m. from Southampton to Cape Town. (By certain Mail Service sailings there are reductions in First Class return fares.) About twice a month from London for the Round Africa trip.

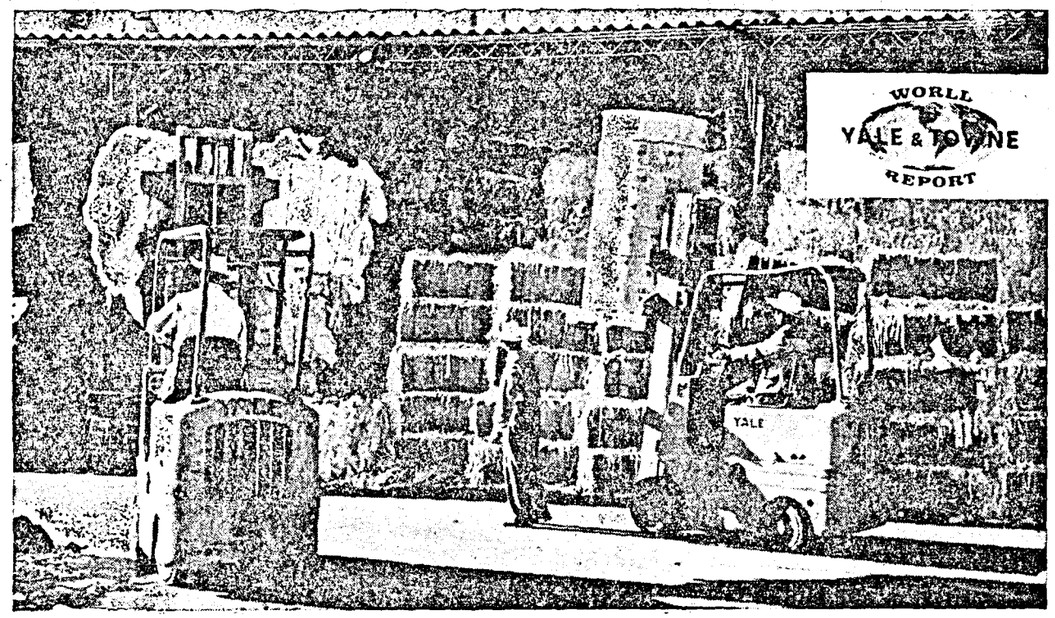
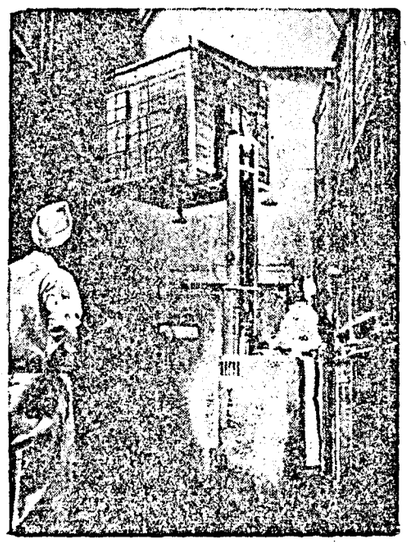
19-21 Old Bond Street, London, W.1. Tel: Hyde Park 8400 or Travel Agents.



YALE TRUCKS SPEED HANDLING, CUT COSTS COMING AND GOING

SANTA CLARA, MEXICO—One Yale petrol truck speeds raw pulp into this paper plant, another speeds finished paper to market. Operations are performed at great saving in cost, time, space and labour. These lowered production costs take place in all types of industry using Yale Industrial Lift Trucks. Capacities of Yale petrol trucks range from 2,000 to 20,000 lbs.



NARROW AISLE TRUCK SHOWS AGILITY IN HANDLING STORAGE CONTAINERS

ENGLAND – Special containers of chocolates are stacked in rows 3 high by this straddle type Yale Warehouser. These Yale narrow aisle trucks manœuvre with ease in areas only 6′ wide. They permit the greatest possible use of floor and air space. They handle loads of 2,000, 3,000 and 4,000 lbs. with unusual speed and the economy of electric truck operation. Complete Yale Warehouser line includes fork, platform, pallet and tractor models.

- **Yale makes the world's most complete line of Petrol, LP-Gas, Electric and Hand Lift Trucks.**
- **All Yale Industrial Lift Trucks are uniformly high in quality, wherever manufactured.**
- **All Yale equipment available in currencies of the free world.**
- **For further information contact your Yale Sales and Service Representative – located in principal cities of the world.**

BOOKS

Being Groomed for the Top

William Lyon Mackenzie King: *A Political Biography. Vol. I, 1874-1923.*
By R. MacGregor Dawson.
Methuen. 526 pages. £4. 4s.

THE biography of Mr W.L.M. King, long delayed as it has been, has acquired a curious topical interest this year since it has become known how great an influence he continues to have on the present Canadian prime minister, Mr John Diefenbaker. Although in the spirit of proper political piety Mr Diefenbaker has collected a number of relics of Sir John A. Macdonald, the first and greatest of Canada's Conservative prime ministers, the place of honour in his house and his mind is reserved for the Liberal Mackenzie King. Above his bed hangs a framed letter from Mr King, congratulating him on his contribution to some long forgotten debate. The first volume of the projected biography covers only the first few years of Mr King's premiership, which was eventually extended to become the longest tenure of office ever held by a Commonwealth prime minister. In one way this gives it a special fascination, for it covers the first forty-eight years when he was largely unknown; and in those years must lie the key to understanding the later years, when his characteristic private quirks became so very odd and his characteristic public postures so extraordinarily successful. The temptation to seek for clues to the current actions of Mr Diefenbaker will, however, be greater in the succeeding volumes.

The biography has been dogged with misfortune. Professor Dawson, of the University of Toronto, was originally to do the whole work with a grant from the Rockefeller Foundation, which had for so long given financial support to Mackenzie King. But the unfortunate death of Mr Dawson last summer has led to other arrangements for the remaining two volumes. The second is in the hands of Professor Blair Neatby, of the University of British Columbia, who has been collaborating with Professor Dawson. The third, covering the final years, has a unique interest since it was undertaken by Mr J.W. Pickersgill, Mr King's closest political collaborator from 1937 until the end. Mr Pickersgill has now become a prominent and controversial political figure in his own right, after joining Mr St. Laurent's last Cabinet as minister from Newfoundland; but in the crucial years with Mackenzie King he was officially "executive assistant", a political adjutant in the backroom, speech-writer, arranger, adviser, and regarded variously as joe-boy, or Man Friday, or Grey Eminence – according to the viewpoint.

Professor Dawson's first volume neatly leaves the story on the threshold of what in retrospect has come to be called the King era, concluding with an account of the Imperial Conference of 1923, at which Mackenzie King fought almost alone against the British Government's efforts to lay down a common imperial policy on preferences, on foreign policy and on defence. It records a remark General Smuts is supposed to have made to Mr King as the conference ended: "You ought to be satisfied. Canada has had her way in everything". L.S. Amery, who was leading the drive for common defence, commented in his memoirs thirty years later: "Mackenzie King was chiefly concerned to avoid committing himself to anything". Lord Curzon, foiled in his attempt to get the draft declaration he wanted on foreign policy, wrote to his wife at the time: "Mackenzie King, the Canadian, is both obstinate, tiresome and stupid, and is nervously afraid of being turned out of his parliament when he gets back". Mr King was always nervous about the reactions of the Canadian Parliament and people; but that is only another way of saying that he was extremely sensitive to public opinion and more concerned not to lose touch with it than to press any particular policies of his own. His own diary, summing up the Imperial Conference, records: "It was very outspoken, perhaps too much so; but I know I have saved a very serious situation developing so far as Canada is concerned".

BUT the main theme of the first volume is how Mackenzie King ever came to be the spokesman for Canada, for he would never have seemed an obvious or even a probable choice. Mr Dawson describes rather than explains. He is the first writer to have access to an unimaginably voluminous collection of personal files. The diaries, made available by the trustees through a generous interpretation of Mr King's will, would have been almost enough by themselves. In addition there are copious letters, memoranda, university papers and state papers and a complete collection of all the invitations ever sent to the Prime Minister, whether he accepted them or not, together with his personal notes prescribing the vegetables to be served at an official dinner. Nothing was too trivial for Mr King to keep, and he seems never to have doubted the abiding interest of everything relating to himself.

This persistent conviction of his own importance becomes somewhat more intelligible through Mr Dawson's description of his "peculiar family". His mother was a daughter of William Lyon Mackenzie, leader of the farcical revolt of 1837; his father, John King, was a lawyer who somehow never managed to become entangled with an adequate income. No one in the family seems ever to have doubted that the mother should have the best of whatever was available; and even when Willie's sisters were of marriageable age the new dresses went to Mrs King, gladly sacrificed by the daughters. Equally unquestioned, even by Willie himself, was the assumption that nothing must be allowed to curtail his preparation for a brilliant career. Constantly encouraged by his father to seek ties that would be "helpful" and of a "solid, substantial character", King's ability to know the right people would have earned a more robust character the reputation of a pusher. But his approach was ordinarily too meek, too subtle, to provoke jealousy. It is no surprise that his first success in Canadian public life should have been as a conciliator in labour disputes. Nor is it at all out of key that, after losing his seat in Parliament in the 1911 election, he found wartime employment in the United States as a labour consultant to the Rockefeller Foundation. Having avoided the conscription crisis of 1917, which split the Liberal party, he seized the chance to appear as a compromise candidate when the Liberals chose a new leader in 1919. (There appears to be no substance in Mackenzie King's claim that he was Sir Wilfred Laurier's own choice).

Thus was decided the dilemma which he chronicled himself in his twenty-second year: "There are three worthy ambitions before me: a leading position in political life, a leading position in university life, and a leading position in the Church". Which of the three it should be, he piously left to God; but in any case it was to be "a leading position".

The Public School in the New Age.
By George Snow.
Bles. 142 pages. 12s. 6d.

NOW that one comes to think of it, there has been a remarkable falling off in the public school novel. In the twenties the angry young men emerged to fame (and rich pickings in journalism) from the squalid purlieus of Eton or Dotherichboys College, bursting with indelicate copy, and looked back with anger on fagging, compulsory games, and compulsory (but deviationist) sex. Alternatively, they took the loyal line and went big in the middle-class magazines (or was that before 1914?). There seems to have been a bad falling off, at any rate; and perhaps Mr Snow's loving excursus of the public school in the welfare state supplies some of the reasons. It is, apparently, dreadfully hard to be misunderstood, bullied, beaten or sacked in the public schools of today; games are not compulsory, there is woodworking and ornithology *ad lib;* it is almost as pop (is that right?) to compose the school opera as to get one's cap; people are far too busy to fall in love with each other, and if they do the masters are wonderfully understanding and modern about it; and as for the masters, that grand team of excellent men, there is not an eccentric, drunk, sadist or ex-convict among them. Experts in boy-master relations, they have boundless care for the dullest boy. They set a fine tone, but in quite the modern idiom; religion flourishes and all of it seems to be splendidly C.S. Lewis and Anglican.

Mr Snow is a respected public school headmaster with great experience; and if he portrays the public school as an institution now perfected at the very moment when the barbarian attacks on it are reaching new heights, his witness is not to be rejected out of hand. Indeed it carries much conviction for all its curiously archaic and essayish absence of references, footnotes, and quotations from psychological textbooks and government documents. There is something convincingly technical about the picture he produces. The boys are busy; the colleges hum with activity. Leadership is being produced. A sense of responsibility is being turned out. It is easy to understand why prominent business men send their boys to public schools or try to recruit their young executives from them; and why the preponderance of executives comes from public schools. The schools promote a mass of organisation of boys for boys and by boys, who really obtain wonderful experience in "running meetings, serving on committees, keeping minutes and accounts, learning points of procedure". To think that managerial experts bewail Britain's lack of graduate schools of business administration! In the public schools, cool efficient business routine is inculcated at the right, the impressionable age.

But is the public school outworn for all its educational efficiency (boys are got through GCE in goodly numbers at A and O level)? Does it promote class education for those "born to rule but not to serve"? Mr Snow's answer is to admit that only the relatively well-off can send their boys to public schools but even so the public school community is a mixed bag nowadays: the son of the take-over-bid magnate rubs shoulders with the son of the newspaper peer. Friendships are formed readily across such social gulfs. Mr Snow regrets that the old professional classes are sending fewer of their sons to the public schools and putting up with state grammar schools. But, against that, he can show that a high proportion of boys come from fathers who never went to a public school themselves, so there is much valuable mingling. In this the public school of today performs the function of its Victorian predecessor, which brought together the heirs to the old landed aristocratic culture and the newer commercial dynasties of power. Certainly, if the schools are as good as Mr Snow says, it is no wonder that, notwithstanding taxation, inflation and death duties, they are all booked up for as far ahead as can be foreseen. They cannot be starved out; if the socialists want to destroy them, they must take them by storm. And that, as is clear even from a book that lays the gilt on the gingerbread rather thickly, would be a loss to the country.

The March of Conquest: *The German Victories in Western Europe, 1940.*
By Telford Taylor.
Edward Hulton. 460 pages. 42s.

WE are now as far distant in time from VE day as the beginning of 1933 was from Armistice Day, and the intervening fourteen years have produced far more dramatic sources of concern with the present rather than with the past than even the troubled years between Versailles and the New Deal. Yet despite missile and space satellites, the second world war remains a subject of absorbing interest to the professional historian and the general reader alike, as the pages of the *Sunday Times* bear witness. In Britain there is an element of nostalgia in this, nostalgia for the days when Britain's shoulders held the sky suspended, but in the main it is legitimate interest in a series of episodes and a developing narrative that not only encompasses the most dramatic six years in human history, but which also still enfolds a host of unsolved conundrums.

Mr Telford Taylor is not a professional historian, but a New York lawyer, who saw much of the war from the inside as an intelligence officer and an official. He has already published a study of the relations between Hitler and his generals on the eve of the war, and in this long, scholarly volume he traces this relationship through the first winter of the war to the triumph of the Somme-Aisne offensive and the fall of France. Although he draws on material that has for the most part been available for some time, he has a comprehensive grasp of it, and his descriptions both of the organisation of the German war machine and of the actual course of operations is clear and most readable, even though his style sometimes lacks form and restraint.

But it is more than just a narrative, for Mr Taylor's purpose is to show the enormous gap in quality between German tactics and German strategy. "On land and sea and in the air, the tactical handling of the German Forces in Norway, the Low Countries and France was superb. On a large scale, no such level of performance had been achieved in the twentieth century... At the higher level of inter-Service plans and operations, where tactics and strategy often overlap, the Wehrmacht's achievements were often remarkable, but serious shortcomings were likewise apparent. Army-Luftwaffe co-operation is a good example... In the uppermost range of grand strategy, the Germans' record was abysmal. Vitally important problems were overlooked or nonchalantly disposed of on the basis of personal penchants... In the realm of ultimate strategy — waging total war to achieve a victor's peace — the leaders of the Third Reich were miserably incompetent."

Mr Taylor's explanation of this undoubted fact, sketchy though it is, is an important one. There was in Hitler's Germany no general concept, even in its hour of triumph, of the national interest. It was not merely inter-service rivalry but rivalry between services, industry, the SS, and the Nazi party, which made it impossible to reach clear decisions. "And by a strange but appropriate irony, it was especially in the sphere of strategic decision-making, where by common supposition dictatorships are more swift, flexible, and cold-blooded than democracies, that the Reich was found wanting."

AMERICAN SURVEY

AMERICAN SURVEY, is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Tomorrow's Strategy

WASHINGTON, DC

IT is at last possible to hope that a change in American military policy is in the making. For the last six years it has lain as slumber-bound as the sleeping princess, dreaming its dreams of massive retaliation; now a twitching eyelid, a fluttering of finger-tips, can be observed. The prince whose magic kiss has started this process is Mr Dean Acheson, the former Secretary of State. Mr Acheson is chiefly responsible for the excellent pamphlet on defence published recently by the advisory council of the Democratic party, which challenges the whole basis of the strategy adopted by Mr Eisenhower's Administration. But the new ideas are not confined to a handful of Democratic intellectuals. It appears that the council's pamphlet was prepared with the unofficial advice and consent of a good many senior officers in the Defence Department, particularly in the Army. It is widely believed that both Vice President Nixon and Mr Nelson Rockefeller are ready to make the necessary reforms (and spend the necessary extra money) if either of these Republicans becomes President in 1961. No doubt Mr Eisenhower is too deeply entrenched in his fiscal foxhole for anything to be done in the next eighteen months; but there may well be radical changes after that.

Ironically, this major assault on the President's entire defence policy is developing just when a minor attack on a single part of it is fading away. There is no longer as much alarm about the dangers of the "missile gap" as there was in the early spring. It now seems likely that the Administration was right, and the pessimists wrong, about the probable Russian lead in intercontinental missiles. Mr Khrushchev, it appears, was uncommonly modest about his production of long-range missiles — as distinct from shorter-range ones — in his recent talks with Mr Averell Harriman. On the American side, it is now known that the supply of Atlas missiles can be doubled if and when Soviet output makes this necessary. Moreover, some ingenious ideas have been put forward (for siting Atlases in mountain canyons, for instances, and putting half of the Strategic Air Command's bombers in underground hangars) which would probably require the Russians to launch about ten times as many missiles to guarantee knocking all of the American ones out. Thus the danger that the Soviet Union might soon get so far ahead that it could destroy America's entire retaliatory power in one fell swoop no longer seems as acute as it did.

But this bright coin has a reverse side: the Americans, for their part, know that soon they will be unable to knock out enough of the Russians' missile sites to save their own cities from destruction. It is impossible to get officials in the Administration to admit the chilling implications of this; but it should have been apparent long ago that a state of "nuclear parity", as the Democratic pamphlet calls it, gravely undermines the usefulness of atomic weapons as a means of deterring the Russians from a conventional attack. It does not destroy it entirely: the Russians might still fear, for instance, that a conventional assault on the whole of Europe would anger the Americans so deeply that they would let the nuclear boomerang fly. At the other end of the scale, Mr Khrushchev might judge that the benefits of plucking some peripheral plum like Iran were too small to justify even the very faint risk that massive retaliation might be used against him. But in general the nuclear deterrent (except as a means of deterring the other man from using his nuclear weapons) is plainly a diminishing asset.

THIS has three possible consequences for American strategy. The Democrats' pamphlet faces two of them squarely. It wants the United States to spend enough extra money to make sure that the "missile gap" stays tolerably narrow and that nuclear parity is maintained. But, more important, it believes that the growing freedom of the Russians to exert pressure on the free world's frontiers with their conventional forces must be met by an expansion of the United States Army. General Maxwell Taylor, who retired this summer as Chief of Staff of the Army, has put the same idea very lucidly by saying that the North Atlantic Treaty Organisation's concept of "the sword and the shield" is being reversed. The big atomic weapons are now the shield — against similar weapons on the other side — and the task of providing an active deterrent has been inherited by the ground forces.

There are various ideas about how much the Army should actually be expanded but it seems agreed that it would be better to keep most of the extra divisions, probably about six in all, as a mobile reserve in the United States, with air and sea transport to move them quickly abroad, rather than to deploy them around the edges of the free world.

The second likely consequence is that tactical atomic weapons will be demoted. These are coming to be

considered as dubious an asset for an army to carry around as were Hannibal's elephants. If it is the aim of strategy to avoid a general holocaust, then the use of tactical atomic weapons is also to be avoided unless a limited nuclear war, involving only the smaller varieties of mushroom clouds, is thought to be possible. The Administration still appears to be wedded to the theory that it is, but the Army, which would have to pull the lanyard, is less certain. It seems that General Taylor and his successor as Chief of Staff, General Lemnitzer, would rather be in command of forces well equipped in other ways, so that it might not be necessary to use atomic armaments. The Democratic pamphlet says flatly that the Army should carry them only in order to deter the Russians from using theirs, and should be prepared to fight with conventional weapons alone.

The pamphlet does not discuss the third consequence of the new strategic thinking, but this may well prove to be the most important for the West's foreign policy. It rests on two premises. First, the Russians undoubted superiority in medium-range missiles means that the American bases which lie under their nose in Europe will soon be (if they are not already) virtually worthless. This will strengthen the movement to "bring the deterrent home" — to concentrate it, eventually, in solid-fuelled Minuteman and Polaris missiles stationed underground or under water. One school of thought in Washington thinks that this may make it necessary to provide the European allies with a nuclear deterrent of their own. So far this is a minority view; but even now the Administration is quietly handing over a number of atomic weapons, with everything except the actual warhead, to five or six Nato countries. In the second place, many observers believe that General Norstad's goal of 30 front-line divisions, plus a reserve which can be mobilised quickly, will be enough to hold the line in central Europe even if atomic weapons are ruled out. But if the European allies can be persuaded to raise more troops (and, in particular, if German rearmament continues) it is hoped that something like this goal might be reached without expanding the present American contribution of 5 divisions.

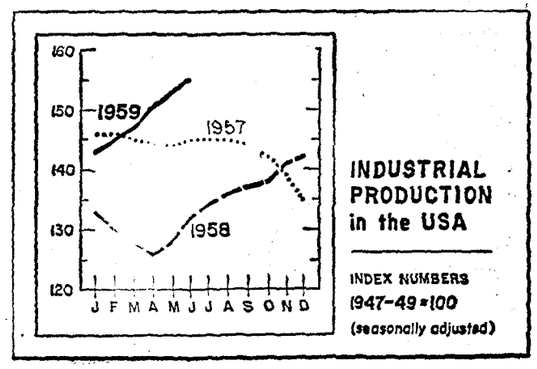
If this is so, it is possible to foresee a time when the Americans will play only a minor part in the ground defence of Europe and when they themselves will want to station their nuclear weapons elsewhere. Thus the need for an American presence in Europe, which killed the proposals for disengagement eighteen months ago, would have been stripped of its obvious urgency. It might then be possible to revive the idea of separating the two great powers in Europe (with the beneficent effects this would have in Eastern Europe) without pulling out the cornerstone of the West's defence.

Before any of this happens the West will have to steel itself to pay the cost. The Democratic pamphlet which sets out the basis of the new strategy says boldly that the Americans will have to spend an extra $7½ billion a year for five years to buy the right kind of and, even more important, the new Governor and defence; perhaps the other Nato countries will also have to put more in the kitty. There was some argument among the Democrats about the exact size of the bill, as well as about the wisdom of announcing it. But the pamphlet has been received, encouragingly, without loud shrieks of dismay. Perhaps the United States, after so long a dalliance with the false charms of massive retaliation, may now realise that it cannot buy security cheaply.

More Prosperous than Ever

HALFWAY through 1959, on the eve of the steel strike, every major statistic told the same story of a great new surge of prosperity. The first official estimate of the gross national product during the second quarter of the year, issued at the end of July by the President's Council of Economic Advisers, puts it at a seasonably adjusted annual rate of $483.5 billion, a new record for the third successive quarter. The $500 billion economy expected in 1960 may now arrive this year, even with the slowing down of growth imposed by the strike. Part of the expansion is due to stocking-up, particularly of steel, but higher consumer spending accounted for nearly half of the rise.

Personal income, rising month by month, reached a seasonally adjusted annual rate of $383 billion in June, $26 billion more than in June, 1958; this was due mainly to record-breaking employment. There were 67 million at work, an increase of 4.6 million jobs in four months, and if unemployment also rose in June, this was only because about 2 million school-leavers and college graduates were looking for their first jobs. The index of industrial production, now soaring above the peaks of the last boom, is continuing to rise, and the revival in the production of durable goods, particularly automobiles, is especially heartening. To gild the lily, the Federal Reserve Board, which has been revising the index, finds that it has under-estimated the rate of growth in the past decade; when the new figures are published, June will be at 165 per cent, not 155 per



cent, of the 1947-49 level. The only unwelcome new record is that of the cost of living, but the increase is slight and seasonal.

The great expansion of sales has had a spectacular effect upon corporate profits. The automobile companies made three times as much money in the first half of 1959 as in the first half of 1958 and the Ford Motor Company's profits set new highs. Rather to its discomfiture, everything the steel industry touched also turned to gold. The United States Steel Corporation, which has been telling the strikers that they cannot expect a penny more this year, has had to confess that it made $148.4 million in the second quarter, the largest profits in its history. Nevertheless the chairman announced that the industry could promise to hold prices steady only if it were left to reach a voluntary settlement with its workers. This is a plain warning to the Secretary of Labour, who has constituted himself a one-man fact-finding expedition, to keep out. The aluminium industry, which employs some members of the steel workers' union, and whose contracts expired on July 31st, is doing so gladly. Its workers have agreed to continue on the job until 30 days after the steel strike is settled.

Republicans' Rising Star

THE first election campaign in the new state of Hawaii was conducted in the romantic and rambunctious style to be expected of the Paradise of the Pacific: hula dancing and ukelele playing at every meeting, leis permanently round the shoulders and hibiscus behind the ears of all the 155 candidates for 81 offices, speeches in nine languages, continuous television appearances, eight large islands and numerous small ones to visit and local colour without end. In one way the results were also what was to be expected. Over half of the successful candidates (in a region where three-quarters of the people are non-white) were of Asiatic race and these included three of the five men elected to state-wide offices. The Lieutenant-Governor is a Hawaiian, the state's single member in the House of Representatives in Washington, Mr Inouye, is a young Japanese-American lawyer with a distinguished war record, and one of the two United States Senators, Mr Fong, is the millionaire son of a Chinese labourer.

But something else about Mr Fong is not at all as expected: he is a Republican. The Democrats have dominated Hawaiian politics since 1954 and had counted on repeating there their sweeping success last winter in Alaska. Admittedly Mr Inouye and the other Senator, Mr Long, are both Democrats and that party also holds 33 seats to the Republicans 18 in the State House of Representatives. But the Republicans won narrow control of the State Senate, by 13 to 12, Lieutenant-Governor are both Republicans.

It is, indeed, to Governor Quinn personally that the Republicans seem to owe their surprising success, according at least to a report from the islands in the *Christian Science Monitor*. A young man, he was appointed Governor of the Territory by the President in 1957, but his Democratic opponent was equally well known and liked. Mr Quinn's main contribution was to promise a land reform programme, which appealed to a wide public in an area of large estates where land is scarce and difficult to acquire. The proposal was also an effective answer to the Democratic charge that the Republican party in Hawaii is controlled by a few wealthy landowners and interested only in preserving things as they are.

Governor Quinn's courage and imagination have brought his party even bigger rewards than its stimulating victories in the election. For in a new state the first Governor has power to fill all the appointive offices at the same time, a chance which seldom if ever occurs again. Mr Quinn will have some 750 appointments to make in the law courts and on various boards and commissions and hundreds of less important jobs to fill.

Inquest on the Bond Market

FOR the last five months the government bond market has been under close scrutiny by a joint study group drawn from the staffs of the Treasury and the central bank. While the full report is not yet generally available, its principal findings are now known. The investigators have concerned themselves, not with the current difficulties in the government's financing, but with last year's speculative boom in government securities which ended abruptly in a summer break from which the market has never recovered. When the Federal Reserve Board reversed its tight credit policy at the end of 1957 to combat the recession, speculators rushed into the bond market in the expectation of still easier money to come, only to unload in haste when the Fed again reversed its course.

In re-enacting the crime, the study group has gathered a mass of information and technical detail but its general diagnosis contains little that is new. It found evidence of speculative excesses and other undesirable practices, but it also placed some of the blame on the timing of the various government issues and on the sharp swings in monetary and budgetary policies which, aimed as they were at maintaining economic stability, had jeopardised the market.

In its recommendations the report is neither radical nor definitive. To build a defence against future bursts of immoderate speculation, it explores various possibilities for enforcing larger down-payments in cash, either through the imposition of direct margin requirements similar to (though much lower than) those now imposed on purchases of equities, or through more indirect methods. On the basic question of whether the

bond market as now constituted is the best way of organising government financing, the report expresses confidence in the present system in which a select group of seventeen dealers, acting on their own account and as brokers, make the primary market in "governments". The alternative is an auction-type market which, like the stock exchanges, would draw in a multitude of brokers and subject all transactions to the full light of publicity. The report rejects this on the grounds that, in view of the large size of the government's financial transactions, such a market would prove more, rather than less, temperamental.

Equality ad Absurdum

SENATOR Humphrey of Minnesota, the first man to hurl his hat into the presidential ring, snatched it back the same day. But even his written statement, "I am not a candidate for the Presidency", failed to persuade the Columbia Broadcasting System to let him appear on its well-known television programme "Face the Nation". The Senator was the first victim of the ruling of the Federal Communications Commission that televisions and radio stations which allow one candidate to appear, even on a news programme, must give equal time to every other one, no matter how obscure or how cranky. CBS, which is leading the campaign to have this ruling reversed, may have applied it with intentional and unnecessary harshness; so far, the Senator is only seeking to become the Democratic candidate. But the National Broadcasting Company, which took a more lenient view of the Senator's presidential status, heard at once from Mr Lar Daly, Chicago's perennial candidate for almost every office, who was the occasion, last February, for the FCC's pettifogging ruling.

The Federal Communications Act prescribes that, when a station allows a candidate to "use" its facilities, it must give equal time, on the same terms, to all others. But the principle was not applied to news until last February; if this interpretation is not reversed by Congress, there may be no first-hand coverage of next year's presidential campaign. In 1956 there were over a dozen presidential candidates representing splinter groups which polled, in all, only 410,000 votes out of the 62 million cast. One, the Christian Nationalists, received eight votes. Under the present ruling each of these candidates could have claimed as much news coverage as the President, even when he was appearing in a non-political capacity.

Congress is composed of potential candidates seeking the widest opportunities to appear on radio and television programmes and, fired by Senator Humphrey's sad plight, the Senate Commerce Committee voted unanimously to amend the Communications Act to exempt not only news broadcasts, but also new interviews, panel discussions and documentaries from the shackles of equal time. Debates were omitted as impossible to define, but in other respects the broadcasting companies should be well satisfied if this Bill is passed. It may have to be toned down, however, to please the House of Representatives, whose members have to seek re-election every two years, not every six, and who consequently are more alarmed than are Senators by the risk that broadcasters may be tempted to play favourites.

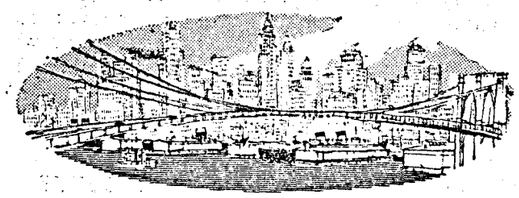
Reforms for Bank Reserves

CONGRESS agreed last month to eliminate certain inequities in the requirements for the reserves which must be held by banks that are members of the Federal Reserve System. Such banks have always been classified in three ways, as country banks, reserve city banks (those in most big cities) and central reserve city banks (those in New York City and Chicago, the two main financial centres). Under the old law, the Federal Reserve Board could require country banks to keep from 7 to 14 per cent of their deposits at the appropriate Federal Reserve Bank; banks in reserve cities to keep between 10 and 20 per cent; and those in central reserve cities to maintain reserves of between 13 and 26 per cent of their deposits.

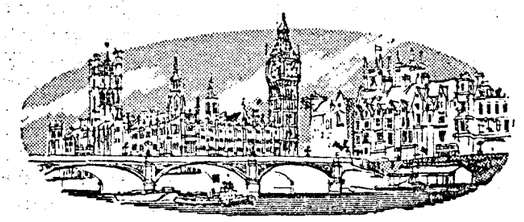
Bankers hold that some reform in this system is long overdue. One provision of the new Bill permits cash in the vaults once more to be counted as part of a bank's reserves. This is of particular interest to country banks, which keep more cash on hand than city banks do, and would add about $2.5 billion to the reserve base. The Bill also provides for the elimination, in three years, of the classification of central reserve city banks; at the end of this time, and perhaps sooner if the Federal Reserve Board so decides, they will need to keep reserves no larger than those held by banks in other major cities. The new range for such banks is from 10 to 22 per cent, a maximum two points higher than the central bank thought necessary. The original justification for classifying banks into three groups and treating them differently was that, before the central banking system was created, country banks kept their reserves with their city cousins; this is no longer true and many country banks are now as big as the city ones. The third reform also moves away from the old geographical standard by giving the Federal Reserve System more power to vary the reserve requirements for individual banks; for example, it may permit a small bank in a reserve city to hold the reserves appropriate to a country bank.

All of these changes in effect lower the reserves which must be kept and thus permit a greater expansion of credit. The central bank will move cautiously to put them into effect and can always counteract the expansion. But credit restriction will not always be necessary and these reforms will make a modest contribution some day to the broader credit base which a growing economy demands.

business with America?



we can help you here!



THE AMERICAN MARKET
AT YOUR FINGERTIPS—IN LONDON

MONTH BY MONTH business with America is increasing. But are you getting your share of it? Are you taking advantage of the possibilities offered by this valuable trading area? If not, perhaps we can help. Get in touch with American business by calling on The First National City Bank of New York, right here in London.

In either of our two London branches you will find qualified American banking experts maintaining close contact with every aspect of American business life.

Through our Head Office in Wall Street (connected with a network of branches all over New York City and correspondents throughout America) we can provide you with up-to-date information specially tailored to suit your needs. We can put you in touch with reliable importers and exporters and arrange banking facilities wherever they may be needed to expedite your business ventures.

Pay a call on The First National City Bank. Find out *for yourself* just how much we can help you.

THE WORLD OVERSEAS

Shabby Chaos in Iraq

FROM OUR CORRESPONDENT LATELY IN BAGHDAD

GENERAL Qasim is showing the Communists his teeth. Without mentioning them by name, he has made several sharp references to their illegal activities, notably after the outbreak of July 14th at Kirkuk. He continues to reject some of their more extreme demands, such as the carrying out of death sentences. Far from bowing to the clamour for arming the Popular Resistance Forces, he has suspended their activity and announced severe penalties for members found carrying arms or even wearing PRF uniforms. Several Communist party members of the second rank are in jail. Many hundreds of prisoners have been released, despite strident communist protests. There are strong rumours in Baghdad that the prime minister proposes shortly to reinstate several senior army officers arrested for suspected complicity in the Mosul revolt.

Yet, just as the assumption last spring that the Communists were carrying all before them has proved to be wrong, so also it is necessary to beware of the present tendency to credit General Qasim with the intention of "cracking down" on the Communists, with a view to eliminating them as a political force. Study of his acts as a whole suggests that he is still engaged in a balancing act, with the aim of establishing his own leadership over all political groups supporting the republic. This seems to be the only reasonable explanation of apparently contradictory actions. Having stood firm against the communist demand for the immediate resumption of political activity, he has now set a date — January 6th — when parties will be free to operate as such. Having condemned the manifesto of the Communist-inspired United National Front, he has admitted three of its signatories into his government. At least one of them is a Communist. She is Dr Naziha Dulaimi, the new minister for municipalities and the first Arab woman ever to hold ministerial rank.

Whether or no January 6th will also mark the end of the famous "transitional period" of the revolution is a subject of conflicting opinion. In any case, it is largely a matter of words. The revolution has let loose forces that will take a long time to settle down. General Qasim himself once brightly remarked that Iraq would have "a revolution every month"; it may prove to be only too true. In effect, if not in so many words, he has added an important proviso: there must be no revolution against his own authority.

In the circumstances, it is probably idle to look for finality. The only political finality in sight is a straightforward military dictatorship, and that is a step which General Qasim would take only in the very last resort. It would certainly lead to serious unrest, and probably to copious bloodshed. It could even bring about his own overthrow.

The admission of Communists or near-Communists to the government is interpreted by some as a Communist victory. But it is more commonly regarded as a sop. The leading Communists, such as Abdul Qader Ismail and Adel Salam, were overlooked; and the posts awarded to their comrades were of minor importance. The key ministries of defence, foreign affairs and finance are still held either by General Qasim himself or by men unconditionally loyal to him. The promotion of the staunch General Ahmed Saleh Abdi, the military governor-general, confirms the recent conspicuous growth of his power, which he wields with singleminded determination to see the authority of law restored.

While the Communist press still enjoys remarkable freedom to criticise the government, its monopoly is now broken. The respectable *al-Ahali*, the organ of the National Democrats, is becoming increasingly outspoken in its polemics with the Communist *Ittihad al Shaab*. Two frankly anti-Communist papers are now appearing in Baghdad. "Why", asked one of them the other day, "did Adel S'Lam adopt his present name? Because S stands for Stalin, L for Lenin, A for Angles and M for Marx". That evening a wholly plausible though unfounded rumour that the paper's plant had been wrecked swept through Baghdad.

General Qasim's speech on July 14th contained an interesting hint that the Iraq government is still dissatisfied with the present arrangements with the Iraq Petroleum Company. "We are conducting negotiations with the petroleum companies", he said, "and our position will be decided later according to the results of the negotiations". IPC, as usual, is non-committal on this. But it is inevitable that the company's position in Iraq will suffer for some time from the same lack of finality that characterises the political situation as a whole. One high government official remarked that the negotiations would probably be phased over a long period. When asked whether the government proposed to respect its contracts, he said that there were many ways of carrying out agreements: "For instance, one can observe them formally and make — shall I say? — difficulties".

Baghdad today is a paradise for the political analyst and the crystal ball merchant. Yet one leaves the city

with two overwhelming simple impressions. First, that what Iraq needs, as General Qasim himself so often insists, is a long period of steady work, with a truce to holidays, demonstrations and general junketing. Second, that the country is unlikely to get it. A pall of shabby chaos seems to hang over the city, as opaque and irritating as the dust storm that blanketed it for a week before July 14th. Most things seem to work somehow, but seldom at the time or in the way one expects. After a few days in Baghdad, one discovers that a life full of surprises is not necessarily stimulating.

Spain's Second Chance

FROM OUR CORRESPONDENT IN MADRID

SPAIN's admission (on July 20th) into the Organization for European Economic Cooperation is a rescue operation with a strong do-it-yourself twist. For while membership in the organization makes available to the Franco government international credits amounting to $375 million, this aid is conditional on drastic, even revolutionary, reform of the Spanish economic structure. In effect, Spain is to have a second chance to set its economic house in order.

The first chance came in 1953, when the United States agreed to furnish aid in exchange for the right to build and man military bases. But Spain muffed the chance. The billion dollars' worth of economic assistance (not counting some $700 million spent on base construction and modernization of the armed forces) funnelled into Spain in the past six years has served merely to slow, not halt, the downhill drift of the Spanish economy. Economic diagnosticians place the blame for this on the regime's stiff-necked refusal to follow the American prescription that came with the dollar tonic: liberalise your economy; let foreign capital come in to help; develop agriculture, your biggest foreign exchange earner; end the complicated system of multiple exchange rates and give your currency a realistic exchange rate; jettison some of the controls and red tape which tend to throttle rather than control economic development; encourage competition. Rather than do these things the Franco government took advantage of the American windfall to embark on an extensive industrialization scheme. The temptation to do this was understandable. The American aid programme went along with it in vital sectors of the economy, such as development of power, transport and communications. But the Spanish government pushed its industrialization scheme too far too fast, borrowing more and more to finance it. Spain found itself in the grip of growing inflation. Since 1956 the cost of living has risen 40 per cent, wiping out the benefits of the wage increase of three years ago. Gold reserves were almost gone, the currency was weak, and the value of imports nearly twice that of exports. The country — and the regime — were headed towards bankruptcy.

Now, through membership in OEEC, Spain is being given a second chance to reform its economic life. Economic aid from this new source is conditional on compliance with the organization's recommendations (and those of the International Monetary Fund). Unlike the United States, which has avoided talking tough to France out of solicitude for the American bases, OEEC can lay down the law on pain of withdrawal or cancellation of the assistance made available. The Americans felt, perhaps mistakenly, that they could not risk offending General Franco, because of their military needs in Spain, by vigorously cautioning him on economic policy. No such qualms hamper OEEC; it is Franco who is having to conform to the organization's terms, to the relief of the Americans.

His government has pushed through a stabilization programme which, in effect, revamps the economy along (for Spain) sensationally liberal lines. The peseta was devalued as a start. Measures have been set in motion to restrict credit advances, cut expenditure, balance the budget, increase tax revenue, and check monopoly practices. But the road ahead will be rocky and hazardous. Observers point out that the new credits are being made available to help Spain meet the initial impact of the reform programme, and to instil confidence, and that if the Spanish have to use up all these credits within a year, then there will be reason to doubt the programme's success.

They attach great importance to public confidence in the Spanish government's stabilization programme. Success depends to a large degree on collective willingness to play fair and to sustain for a while the painful readjustments which the new policy makes inevitable.

To what extent the public can be inspired to back up the new programme would appear to depend on the government's ability to demonstrate its good faith, by distributing the weight of taxation more equitably, or by putting a stop to monopolistic practices which have had the effect of keeping prices high in certain commodities, like textiles, despite a glut on the market. Above all, much depends on the government's ability to keep prices in line. If prices go up substantially, then the menace of a wage spiral will loom and with it the collapse of the stabilization plan. In this connection it is surprising that the censorship allowed the Madrid paper *Ya* to say, in an article discussing the reforms, that prices "should not go up more than 5 per cent... certainly not more than 10 per cent." Will traders take this as an invitation to raise their prices by that much now, before imports start trimming the shortages?

An interesting corollary to the Franco regime's programme for economic liberalization is its evident determination to resort to unabashed authoritarianism against any subversive tendencies which application of the programme might stimulate. A new and tough law on public order codifies and fortifies the earlier legislation which has served to keep the regime in power and the people in their place.

Ammunition for Israel's Elections

FROM OUR CORRESPONDENT IN TEL AVIV

JULY has seen a fundamental change in Israel's pre-election scene. A month ago there did not seem to be any vital election issues; neither in foreign nor domestic policy was there room for a major battle. The prime minister, weary of coalitions, had promised to make his main election issue the abolition of proportional representation and the introduction of a two-party system on the British model. But it did not seem likely that this platform would arouse a deep response, especially among voters many of whom would be taking part in free elections for the first time.

Now this has all been changed: first, by the news of the arms deal with west Germany and, second, by the communal riots that have broken out at Haifa, Beersheba and a village in Galilee called Migdal Haemek. The election campaign has been intensified on both fronts: the arms sale provides the material for a fight over foreign policy, while the riots have torn the veil off one of Israel's most delicate problems — the relationship between the old-timers and the new immigrants.

No holds are barred in the battle over the sale of grenade launchers to the west German army. Mr Ben-Gurion's opponents accuse him of violating the memory of the Nazis' victims, and of helping to arm a Bundeswehr led by members of the old Wehrmacht. The prime minister and his supporters argue that the defence of the state must have priority over everything else, and that the Germany of Adenauer is not that of Hitler. To the surprise of many who believed that the public would not tolerate an arms deal with Germany, Mr Ben-Gurion has won considerable support. The argument that once Israel has sold arms to Germany, it will be able to buy German arms in return has made a deep impression on people who believe that the Arabs can get all the Russian weapons they need.

The emotional tone of the debate has largely blurred the political implications. It is, however, well known that Mr Ben-Gurion is worried by the fact that Israel does not enjoy the advantages of membership of any group of powers, and that he has tried to bring Israel closer to Nato. As friendship with France did not open all doors, the deal with Bonn might provide another way in. Some Israelis doubt the wisdom of this political line, and point out that the advantages of a rapprochement with Germany must be weighed against the hostility it would arouse in Moscow.

In discussing the riots, all the parties move very carefully. This is not only because they all hope to catch the votes of the new immigrants, particularly the North Africans, but also because everyone is aware how explosive the situation is. At Haifa the riots were touched off by a policeman who, apparently losing his nerve, shot and wounded a disorderly drunk. About a week later North African immigrants on relief work at Migdal Haemek protested violently against an order to work harder, and the next day fighting broke out in the main street of Beersheba. Both at Haifa and Migdal Haemek there was renewed rioting last weekend. Some of the housing conditions at Haifa are shocking, while the Galilean village lacks employment other than emergency relief work. At Beersheba, on the other hand, jobs and houses are adequate and the police blame the riots on criminal groups.

A government committee, with a judge as chairman, has been appointed to report on the riots and their causes. The committee will meet in public, and so will give the Israelis an unusual opportunity to study the relationship between different communities and the frame of mind of those who believe themselves underprivileged. Nearly all the immigrants from Moslem countries find it difficult to fit themselves into a western economy, and, at least to begin with, their standard of life is lower than that of most Europeans. People recognise that the fusion of various tribes into one nation must take time; still, they feel uneasily that the suspicion of the eastern Jews that they are discriminated against might, unless dealt with quickly, lead to an explosion.

Prairie Politics

FROM A CORRESPONDENT IN WESTERN CANADA

OVER the last two months, two of Canada's three prairie provinces, Manitoba and Alberta, have held provincial general elections and in both of them the government in office has been returned to power with an increased number of seats. In Manitoba, the Progressive Conservative government, led by Mr Duff Roblin, changed its minority position in the assembly into a majority one, by winning 34 out of 57 constituencies. In Alberta, Mr Manning's Social Credit government did considerably better, having 35 out of 61 seats at the dissolution and 61 out of 65 seats when the election was over. But there the resemblance between the two elections ends.

Mr Duff Roblin is the grandson of a former premier of Manitoba. At the provincial election last year, as Conservative leader, he faced the Progressive Liberal party which had enjoyed one of the longest continuous terms in office of any Canadian provincial party. Mr Roblin emerged from the election as leader of the strongest of the three parties contesting it, but his government could be voted out of office whenever the two other parties, the Liberal and the CCF, chose to combine to do so. These two parties gave Mr Roblin a year in which to consolidate, or damage, his position, and he made good use of it.

He made an extensive reform of the educational system one of the main planks in his programme and he

was wise enough to take his proposals, and his cabinet, to the electors in a campaign for a referendum. Thus, in effect, he fought his next election in advance, and on ground of his own choosing. Mr Roblin also took trouble to include in his party's candidates an unusually high proportion of youngish and able men. In this last May election the Conservative gains in seats have deprived both the opposition parties of some of their best men. Mr Roblin can fairly be said to have established for himself a position as one of the ablest provincial political leaders in Canada.

When Mr Roblin's success in Manitoba was followed by a parallel Conservative victory in Ontario, many Conservatives and some others were disposed to believe that the Progressive Conservative resurgence in Canada under Mr Diefenbaker was far from exhausted. But they were wrong. After the Alberta election, which took place a few days after that in Ontario, the Conservatives could console themselves with the fact that they had displaced the Liberals as the second choice of the province and secured almost one vote in every four cast; but the fact remained that the Social Credit party, after twenty-four years in office, had won an absolute majority of the votes cast and the largest proportion of seats in the legislature that it had ever held.

At first sight the result of the Alberta election would seem to be a considerable set-back to the Conservative cause in Canada as a whole. But it was not the Social Credit party that won in Alberta; it was the premier of the province, Mr E.C. Manning.

It would be hard to find two political leaders in the same country who contrast more sharply than do Mr Roblin and Mr Manning. Mr Roblin is concerned to get capable men around him, to use them fully and to preside over them as *primus inter pares*. The party he leads may be more competent than those in opposition to it, but it is not basically different from them. Mr Roblin has shown that he can be as effective in opposition as in power. Mr Manning has never been in opposition, nor has he thought of his party as having any kinship with any other. Instead he has come to embody in himself the four strains that predominate in the Alberta of 1959. First, as political head of the province he neither shares nor, probably, wishes to share, any of the real responsibility of government with anyone, whether in his executive council or in the assembly; equally, they are content to serve as members of a Manning team. Secondly, he has retained control of the development of the oil and natural gas industry within the province from 1947 onwards, and has discharged that responsibility in a way that has satisfied the major companies operating in that field. Thirdly, he is a religious leader who regularly conducts every Sunday a religious radio programme that covers far more of Canada than Alberta alone. Fourthly, he has managed to avoid (or, as some detractors would say, to suppress) any scandal within his government or party that would tarnish the public image he has consistently displayed.

For the Liberals in Alberta, this election was a disaster. Four years ago, they had captured a third of the popular vote and had won fifteen seats in the assembly of 61 members. Last year, after their Federal defeat, they changed provincial leaders and the change was more a sign of demoralisation than of recovery. They have four years now in which to begin to regain political health and strength, but they start any recovery under many handicaps that the Conservatives at least do not share. The Conservatives, however, have very real problems. They know now that for them the Diefenbaker spell has been broken and that, if they are to win next time, they must fight as Albertan Conservatives. And they have no one now whose shadow is large enough to fall across Mr Manning's smiling and confident face.

Roubles for the Negus

As the Emperor of Ethiopia, Haile Selassie, continues his travels, he may well be congratulating himself on the apparently inflated value Moscow seems to attach to his friendship. Alternatively, he may be wondering just why Mr Khrushchev is bidding so high. The most curious feature of the trade and economic agreement concluded during the Emperor's visit to Moscow in July is the size of the new Soviet loan. If the full amount of about $100 million (400 million roubles) is paid out in, say, five years, it will represent about $1 a year per head of a population of perhaps 20 million. In recent years, economic aid to Ethiopia from all sources has worked out at only 30 cents a year per head. The United States allocated $27 million to Ethiopia between 1952 and 1958, but had only spent $17.3 million by June, 1958. In terms of magnitude, therefore, the Soviet offer dwarfs previous offers.

Mr Khrushchev must be as well aware as Haile Selassie that Ethiopia's financial and economic situation makes it difficult for this technologically backward country to carry a loan of this size. Ethiopia's usual exports of raw hides and agricultural produce are normally barely sufficient to cover imports of essential consumer goods. Can it confidently expect to repay a loan — even at Moscow's usual low rate of interest — which is to bring "various machines and equipment, precision engineering products, rolled ferrous metals" leaving little room for traditional trade?

It would not be surprising if the full amount of the loan were never spent; yet this does not mean that the whole thing can be dismissed as propaganda. Mr Khrushchev's grand gesture will certainly have repercussions well beyond Ethiopia's southern borders. Soviet technicians will be given a chance to make informative geological surveys in a region to which Russia attaches increasing importance. A corner of "non-Arab Africa" will have been opened to Soviet economic influence.

THE BUSINESS WORLD

The Dollar

ALL this year, world exchange markets have presented an unaccustomed sight. Sterling, convertible and on the eve of a general election, has remained strong; the D-mark, while firm, has not regained its magnetism for speculators; the French franc has at last been given solid foundations. But one currency, the United States dollar, has been persistently weak for well over a year, and has attracted increasing attention. At the annual meeting of the of the International Monetary Fund in Washington next month, many delegates will be tempted to offer to the fallen the helpful advice that not long ago was being administered to them. "Really there's no reason why America should have to devalue the dollar" is a double-edged comment that is nowadays to be heard in surprising places

There is, indeed, no smoke without fire, but fires are started, and smoke billows and blows. The fact that the dollar has been below its middle parity against sterling and the leading Continental currencies and the modest inroads into America's vast gold stock do reflect significant movements in America's foreign payments. But these movements are quite unlikely to force a devaluation on the dollar : they make a rise in the price of gold (which America alone could introduce) more remote, not less. And a devaluation of the dollar which was not immediately followed by other currencies is inconceivable. The current denigrators of the dollar, and their innocent followers on both sides of the Atlantic, ignore the massive and unparallelled defences of the American authorities; they also misrepresent, through ignorance or wishful thinking, the nature of the change in the American balance of payments. All this could have serious consequences, for while false reasoning and loose talk could hardly bring about the results their perpetrators predict, they could still push the American authorities into defensive action of a quite different and possibly harmful kind on interest rates, or tariffs or foreign aid.

Last year, for the first time, America discovered and began to view with alarm what has been called its net payments deficit. In fact, America's surplus on current account has been exceeded by capital payments in every year since 1950, with the exception of 1957, after Suez. The rest of the world has been drawing gold from America and adding to its dollar assets. In 1958 the deficit rose sharply, to $3.4 billion; and $2.3 billion of this was taken out in gold. This year, partly in response to higher interest rates in New York, foreign withdrawals of gold have slackened. But America's net deficit has grown, and a week or two ago the National Foreign Trade Council issued some arresting forecasts for the outcome in 1959.

The current surplus, as the first chart shows, is expected to disappear completely, and the net deficit is expected to rise to a record of $4.9 billion. Compared with immediately preceding years, the basic deterioration is in merchandise trade. Recently, for the first time, the United States has lost its traditional trade surplus with Europe, including the United Kingdom. America, it is being said, is pricing itself out of world markets.

A second look at the figures suggests a different picture. The outstanding fact is that the surplus on current items of a commercial nature (excluding both exports of military equipment under direct grants and military expenditures overseas) remains very large. In 1958, when the dollar came under pressure, it was $5.2 billion. This was one third higher than the average in 1951-55, and meant that receipts were nearly 30 per cent in excess of payments. But even in 1959, the United States will earn a commercial surplus of about $3 billion. The point is that net earnings of this impressive size barely suffice to finance vast overseas military outlays; nothing is left over to finance payments on capital account.

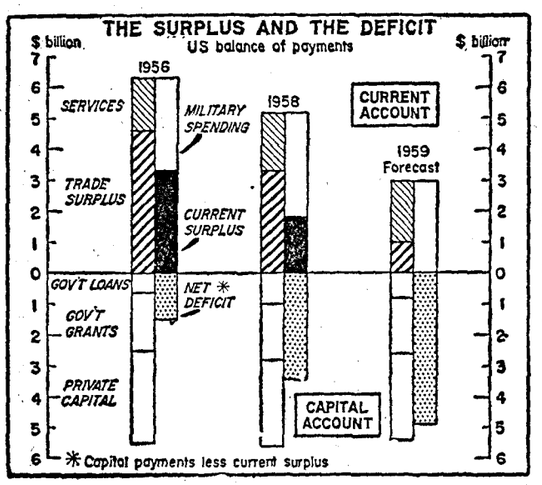
So the outflow of gold and dollars is entirely attributable to the American Government's special payments. Even at their diminished levels of 1959, commercial earnings are sufficient to finance outflows of private American capital (these are in fact just about met by investment earnings). But current earnings are not sufficient to finance the government's outlays for its overseas military establishments, at $3 billion or more, and for grants and loans to foreign countries of another $2½-3 billion.

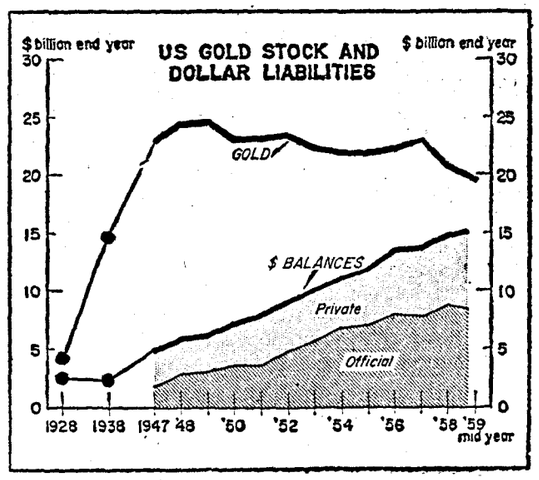
These increases in military spending and foreign assistance were masked in 1956 and 1957 by abnormally high trade surpluses. Now that these have duly run down, misleading conclusions are being drawn. The remarkable fact is that America's huge trade surplus has kept up for so long. For many years after the war America was virtually without a rival as a supplier of industrial equipment in world markets. Europe and Japan had to stage their comeback; America's advantages in design, delivery and kudos could not last. America's share of world exports has indeed fallen in the postwar period, but no more than Britain's; it is still a quarter larger than it was before the war. Nor is there any general weakness in the main indicators of potential competitive power. The growth in national product has been much slower in recent years in America than in Continental Europe: but America's expansion since 1938 (averaging 4.2 per cent a year) is unmatched in Europe. American export prices have risen rather more than those of its competitors (other than Britain) in the fifties; but, notwithstanding the present obsession with inflation, the creep in domestic prices in America has been much slower than in almost all other countries.

What of the rise in imports, which this year is expected to bring the total to $15 billion, compared with less than $13 billion in 1958 and an average of $11 billion in 1951-55 ? This could reflect a tendency for any enriched society to favour the foreign and exotic product — though enriched societies also know the passing fashion. A short two years ago, when Sir Donald MacDougall's penetrating study of "The World Dollar Problem" related to dollar scarcity, the usual projections were being produced to show how American imports tend to lag behind. Indeed even now American imports have risen no more than in line with national income.

To recapitulate: there is nothing surprising in the recent narrowing of America's industrial and trading lead over Europe. Indeed it was specifically planned, with Marshall aid as a leading instrument to bring it about. The tapering of aid to Europe would ordinarily have offset, in the American payments balance, the effects of Europe's revived competitive ability. The current disequilibrium is caused by the intrusion of new aid and special outlays of a different kind, stemming from America's reaction to the Korean war and its desire to help the poor non-Communist countries of Asia. Little of this aid goes to Europe, but the dollars percolate into its reserves. Non-economic factors, as M. Bertrand de Jouvenel has recently shown in an elegant analysis (published in his June bulletin from 205 Boulevard Saint Germain, Paris 7), have dominated the whole postwar economy, and are now distorting the external position of the dollar.

ONCE it is accepted that the new style dollar problem is a political product there should be less confusion about appropriate remedies. America is not suffering from domestic over-spending nor, relatively to other people's performance, from cost inflation. Given the size and wealth of the American economy the budget is not frightening in itself; nor, to anyone who understands and accepts the elements of modern economic theory (which many bankers do not), are budget deficits on the scale of 1958-59 inflationary in an under-employed economy. No fundamental domestic re-adjustment is demanded by the foreign balance of commercial transactions.





As the American authorities and American public opinion come to appreciate this, the pressure will inevitably grow for an adjustment of the non-commercial items (though protectionists will doubtless lose no chance to reinforce their pleas for higher tariff). Already there have been indications that the American administration is thinking of paring its contribution to the proposed International Development Association. The Continental countries are likely to be urged to take a bigger part in international aid for poor countries, and that is certainly reasonable. There may be growing pressure on the American administration to tie its aid to purchases from the United States, which would be unfortunate; but the receiving countries could still spend a higher portion of their free dollar earnings outside the United States.

It is not the fact that payments considerations are forcing America to choose between radical adjustment of foreign aid or radical adjustment of its domestic economic policy. If America wants to continue to help underdeveloped countries, it can do so without imposing artificial pressure on its ordinary foreign transactions, simply because, unlike other countries, it has tremendous leeway for running a net payments deficit. Observers recently expressed alarm when the American gold stock dipped below $20 billion, yet it is still as large as the rest of the gold reserves in the whole free world. There has been alarm too about the fall in the ratio of gold to dollar liabilities, yet it is still comfortably greater than unity.

In practice, the American authorities have been much more worried about outflows of gold than about the ratio of gold to dollar liabilities; and their recent increases in interest rates have helped to finance more of the deficit through an inflow of short-term funds. Foreign dollar balances could safely rise a lot further; America's chosen foreign disbursements could be financed partly in this way rather than through a constriction of the commercial balance. And if the American authorities themselves became nervous about their vulnerability, they might feel less hostile about proposals for taking the strain off key currencies by widening the facilities and strengthening the powers of an international monetary body.

That could conceivably be one beneficial by-product of this year's strange dollar scare, together perhaps with some eventual advantage for sterling from the demonstration that it is not the only major currency to come under fire. The other potential results are less likely to be comforting. European Governments and central banks ought to seize their opportunity for helping to save the Administration from being forced into restrictive measures. They could abandon discrimination against dollar goods, which is now anomalous on all counts; they could ease restrictions on exports of capital to America; and they could contribute their fair share of international aid. Next month's IMF meeting will provide an obvious chance for a display of goodwill. If it is missed, Europe may long regret smug talk about the weakness of the dollar.

BUSINESS NOTES

RESTRICTIVE PRACTICES

A Judgment for Price-fixing

IT WAS inevitable that the Restrictive Practices Court, which so far without exception had ruled against every restrictive agreement brought before it, in strict conformity with the simplest copybook headings of orthodox economics, should eventually encounter one in which the balance of advantage was considerably more complex. It did so in its latest case: and Mr Justice Upjohn held that the price-fixing agreement of the Water Tube Boilermakers Association, because it benefited the industry's exports more than it harmed the public at home, was not contrary to the public interest. The association had entirely failed to prove, he found, that the public would be denied any benefits if the scheme were ended: on the contrary, slightly lower prices might be quoted. But its abolition would be likely to cause a substantial reduction in the industry's volume of earnings on export business: and Mr Justice Upjohn held that the association had satisfied Paragraph (f) of Section 21 (1) of the Restrictive Trade Practices Act, and proved that their restriction was not contrary to the public interest.

The agreement in question was one under which six large boilermaking companies — Babcock & Wilcox, Clarke Chapman, International Combustion, John Thompson Tube Boilers, Simon-Carves, and Yarrow &

Co. — consulted about prices before putting in competitive tenders. They tried to "evaluate" prices on a common basis; the lowest price agreed was called "the lowest evaluated price"; and one or occasionally two "selected members", chosen as being relatively short of contracts (by comparison with shares in a base period) were allowed to reduce their quotations down to this "lowest evaluated price", while all other members stuck to their original quotations.

The object, as Mr Justice Upjohn saw it, was to spread the work in a period of admitted recession in the industry, which might be expected to last for about five years. The industry was concentrated into the hands of eight or nine companies, including these six in the association. In the home market there is only one customer, the Central Electricity Generating Board, for the very large power station boilers; it is nowadays placing only a few orders a year for huge boilers, which take four or five years each to build, and some of the companies in the association have not managed to secure any CEGB orders for some years. The Generating Board, it may be said, had given evidence against the price agreement, which it felt made for higher quotations than these companies might have put in given straight price competition. It feels that there is surplus capacity artificially maintained in this industry by the process of sharing the work.

Boilermakers As Before

SEVERAL other grounds upon which the boilermakers had sought to justify their price agreement were partially or wholly rejected by the court. They had argued that it was necessary to help them bargain on equal terms with "a preponderant buyer", the CEGB: the court held that this might be so, but the scheme applied to many other home contracts as well and was therefore unnecessarily wide. The court did not accept, either, the argument that capacity, or key personnel, could not be retained in these big companies without the agreement: or that the industry's comparatively small expenditure on collective research, £80,000-100,000 a year, would have to cease without price-fixing; or that quality would depreciate if it were abolished. But the court was satisfied that the main object of the scheme when applied to foreign business was to get the order for Britain; that it made for much more pooling of technical, commercial and financial information and consultation between companies than would occur without it; that without it companies which now maintain overseas offices and staffs might have to close them "with a consequential loss of orders"; and that if the agreement were removed there would be a substantial drop in the volume of exports compared to the total of the whole business.

Mr Justice Upjohn said that the court's partial acceptance of the "preponderant buyer" argument as regards CEGB did not mean that wherever such a buyer required competitive tenders a case for some restriction was made out: there were six big and efficient firms "who ought in the national interest to stay in business", quoting for these few very large orders which it was expedient should to some extent be spread over the industry. The case does not therefore offer a general precedent: nevertheless, some other industries that supply the Generating Board with heavy equipment, and in which the number of companies and the methods of tendering may not be dissimilar, will no doubt be studying this aspect of the judgment with the greatest of care.

The key point of this judgment, from the practical rather than the legal or economic point of view, is that the amount of capacity now in the industry, and now considerably under-employed, is held to be required in being and in the same ownership against the increase in demand that the industry hopes will occur after the mid-sixties. The Generating Board reckons that it will place no more than two to three contracts a year for the next few years and not more than eight a year over the period 1965-75: outside the court, it has often communicated the feeling that in several of its main supplying industries there are too many separate groups, if not too much capacity. It is by no means axiomatic that the structure as it is, without further amalgamation, will be of the greatest possible benefit to this industry as a whole, to its customers, and to Britain's export efforts over the next decade or so: it is a matter of judgment.

THE ECONOMY

Rising Less Rosily?

THIS week, the official statisticians have taken a little of the rosiness out of the view of the economy's progress given last week by the National Institute of Economic & Social Research. Their latest calculations of the index of industrial production, based on 100 in 1954, have produced a June forecast of 109-110 following 110 in May (the lower of the two figures forecast a month ago) and 109 in April (revised downwards a point). Production has reached 4 or 5 per cent above the low point of the middle of last year but seems to have lost impetus again.

Moreover, the official estimates of the first quarter's national income and expenditure in the current issue of *Economic Trends* do nothing to dispel the doubt. Measured from the expenditure side, the gross domestic product in the first quarter of this year is reckoned to have been just about the same as a year ago at current prices and 2 per cent lower in real terms at constant prices. On the other hand, measuring the gross domestic product from the income side, it appears to have been 3 per cent higher in current prices and therefore, presumably, about 1 per cent higher in real terms. But whether the nation in the first few months of this year was producing rather more or rather less than a year ago seems to be anybody's choice.

TAKE-OVERS

Profit and Loss

THE long drawn out struggle for Harrods took three new turns last week. Mr Hugh Fraser submitted his formal offer to shareholders; United Drapery, which at one time seemed more likely than Debenhams to counterbid effectively against Mr Fraser, withdrew; and Debenhams duly increased its own bid. For Harrods £1 preference shares, Debenhams offer one 10s ordinary unit and 10s in cash, worth 40s at the time of the offer; the Fraser offer is 30s in cash. For Harrods £1 ordinary shares, Debenhams offer 3½ of their own ordinary shares and 40s in cash; the Fraser offer is 2¼ of its shares plus 60s cash. The Debenhams offer originally had an edge of some 6s per share over Fraser, but this quickly fell away as Debenhams shares fell and Fraser picked up. But the really striking feature of this take-over situation is that the Harrods shares themselves are far lower than their potential worth in terms of the rival offers. Last week they slipped from 130s to less than 135s, 12s-14s below the theoretical value of the Debenhams and Fraser bids.

The fact is that in any take-over of this scale, involving potential new issues of shares by the bidders that would increase their issue capital by 70 per cent, the market price of the bidders' shares before the outcome is settled provides no reliable guide to what the successful bid would be worth; for the market is plainly in danger of being depressed by the swollen volume of shares. Investors clearly feel that the auction in this case is running high. Significantly, the ordinary shares of United Drapery rose by 1s 3d to 39s after it announced that it was withdrawing from the fight. Equally, investors gave a good reception to Mr Fraser's hint in Glasgow that his present offer might be the last word and that a new issue of shares would never constitute a threat to the company's dividend record. The total dividend for the current year will not be less than 40 per cent; on the larger capital, this would only just be covered by last year's earnings of Fraser and Harrods. Mr Fraser has stated that he will not seek finance from outside for the take-over. Does he intend to sell some of the Harrods properties? Debenhams, which has forecast a dividend of 15 per cent that would be covered 1½ times, and would invite the Harrods board to continue in office, proposes to seek short term bank finance and then to fund this through the issue of a debenture.

It seems that the battle can still go either way; and conceivably there can be deadlock. That adds another reason for the lag in the Harrods shares. Certainly the general investing public is more wary of taking a speculative fling in any and every take-over than it was some months ago. Undiscriminating followers of Mr Charles Clore in particular, have had their fingers badly burnt. Following withdrawal of his bid for Watney Mann, he last week dealt a blow to speculators in Mappin and Webb, the silversmiths, who also control certain department stores. The Mappin and Webb shares had risen dizzily to 50s in preceding weeks, in the face of a passed dividend and poor trading results. Mr Clore was after the shares; but instead of putting in a bid above the market, he acquired control through market operations and was able to make his offer for the rest of the shares at 27s 6d, a realistic price, no doubt, but a painful one for innocent speculators.

THE MINISTER IN REPLY

There is A Road Plan

MR HAROLD WATKINSON, the Minister of Transport, had a busy time of it during the final week of the last Parliamentary term. In a number of answers to questions, he covered certain of the points that had been raised by the Select Committee on Estimates in criticising his department's planning of the trunk road programme: he handled a debate on the rehash of the railways' long-term modernisation programme; and just before Parliament rose, in a smoothly-phrased written answer, he dealt with most of the main comments on his relationships with the airlines that had been made several weeks before by another Select Committee, that on nationalised industries. Every department, at times, comes in for these protracted, time-consuming, and no doubt salutary ordeals by committee; a year or so ago it was the Ministry of Power that was going through several hoops at once. The process will, from now on, affect these two ministries fairly steadily, owing to their relationships with and responsibility for the public industries and other large sectors of public investment. Those relationships are more complex in practice than the statutes might suggest: particularly for the Ministry of Transport and Civil Aviation, of which it has been said that if it stayed within its actual statutory powers practically no major road improvements might ever get done at all.

One of the Select Committee's main criticisms on the roads had been that no adequate scheme of priorities seemed to govern the trunk road programme. On the last day before Parliament rose, Mr Watkinson did set out an order of objectives, at least: the creation of a network of national trunk roads, the relief of major urban bottlenecks, and the carrying out of as many lesser schemes all over the country as remaining funds will allow. Work on the trunk road network is now concentrated on five major projects: the modernisation of the Great North Road, the construction of the London-Birmingham motorway, the improvement of access from London to the Channel Ports, the improvement of roads between the Midlands and South Wales (including the Bristol-Birmingham and Ross Spur motorways) and the construction of the South Wales radial road. The relief of urban congestion "has to be tackled where it occurs": at present work on about £80 million worth of large schemes is in progress

in urban areas, and "no major city is without examples." This bald restatement will not adequately answer the select committee's criticisms, though it should do more to turn away wrath than his earlier, testy public rejoinders.

Ice on the Rails

THERE had been "no plan, no recommendation and indeed no discussion with Sir Brian Robertson on the capital structure of the railways," said the Minister of Transport in the debate on the annual report of the Transport Commission, which conveniently turned into a debate on the commission's recent re-appraisal of its long-term railway modernisation plan. Any particular proposals would be carefully and sympathetically examined, said Mr Watkinson; his Parliamentary Secretary, Mr Nugent, had earlier noted that the industry found the fact that all its capital is in fixed-interest stock a handicap, but had added that any shift from the present capital structure could only be considered if "it will strengthen financial discipline and accountability, rather than the reverse." Here as elsewhere in comments upon the report, the Ministry's spokesmen were coldly non-committal. "The reassessment is the honest opinion of the commission" summed up Mr Watkinson, "and the Government accept it as such and will give it the most careful study."

Mr Watkinson was careful to add that the commission shares its financial troubles in running a railway with almost every other railroad in the world, with the exception of the Dutch railways and possibly some on the West Coast of the United States. But he found a convenient dog to belabour in passing by noting that the plan upon which the government had lent the commission a great sum of money would still be running much as it should have been "had it not been for the complete failure of the nationalised coal industry to sell its products". Rational debate upon the proper running of nationalised industries is perhaps more than can be expected from either side of the house during what could be the last debating of a moribund Parliament.

Flying Without Controls

URBANITY was the keynote of Mr Watkinson's reply to the recommendations made by the select committee that recently reported on the operation of the two nationalised air corporations and his relations with them. He agreed with the utmost blandness that "it may seem unsatisfactory that certain functions I exercise in relation to the corporations and independent airlines lack statutory force", but gave no indication that he might be prepared to behave in any other manner in the future. He pointed out that the Minister must have some control over the corporations' capital expenditure, whether or not he has any statutory authority to do so, simply because the money comes from the Treasury. Elsewhere he "entirely endorsed", "noted with interest", or "was greatly interested in" the Select Committee's views about such diverse subjects as BOAC's engineering costs, a possible merger between the two airlines, and supersonic aircraft.

Mr Watkinson did, however, repeat once again his opinion that something drastic must be done about present arrangements for licensing air services run by the corporations and the independent airlines. For several years he has not concealed his view that the present system is unsatisfactory and that new legislation should be introduced to put it on a more sensible basis. The test case that has been before him for several months, namely applications by three independent airlines to run services to British territories at half the present fare, must be settled within the next few weeks. Whatever the compromise he makes between the conflicting interests of the independent airlines trying to expand their network and the corporations trying to protect their traffic from half-price competition, Mr Watkinson appears resigned to the fact that it will be a thoroughly unsatisfying one. This Gordian knot, however, he leaves to be cut by another parliament and conceivably by another minister.

CDC

A One Way Equity ?

THE Colonial Development Corporation should be well pleased with the report on its financial structure recently submitted by a committee headed by Lord Sinclair of Cleeve with Sir Archibald Forbes and Sir Harold Howitt as its other members. The report, produced with remarkable expedition (the committee was appointed in April), applies a convincing logic to the reconciliation of statutory aims and appropriate means of finance; its basic acceptance of the principle of special financial treatment where the corporation is required by Parliament to do things that a commercial undertaking would not find profitable must certainly have been noted by Sir Brian Robertson, even if he would have a more difficult case to prove.

Hitherto, the CDC has been financed by fixed interest stock from the Government at current gilt-edged rates, with cancellation of interest on special loans and postponement of interest for a fructification period of the first seven years. This abatement itself implies an emerging strain on the corporation's finances in future years. The Sinclair committee suggests a division of capital into three. Money used by the corporation for loans to governments or statutory bodies, which is regarded as commercial business, would be borrowed on A stock. Interest would be paid by the corporation under existing arrangements, and capital would be repaid on terms similar to those set by the corporation for its own borrowers. For other, more risky purposes, the Corporation would borrow from the Government on B stock, and this would replace the rest of the

Experience Counts . . .

EVERY TONNAGE OXYGEN PLANT NOW WORKING IN BRITAIN HAS BEEN BUILT BY BRITISH OXYGEN ENGINEERING LIMITED

Hundreds of tons of oxygen a day - used in the making of steel, chemicals, fertilisers, town's gas and other basic products - are produced by low-temperature plants installed by British Oxygen Engineering Limited.
In recent years, British Oxygen Engineering have designed and built in England more than 20 tonnage oxygen plants varying in output from 50 to 200 tons a day - with combined capacity of more than 2000 tons a day. B.O.E. tonnage oxygen plants are also in operation or under construction in India, Australia and other parts of the Commonwealth. If you need tonnage oxygen plant, British Oxygen Engineering Limited can help you. B.O.E.'s works at Edmonton, London, is one of the best equipped of its kind in the world with a team of highly skilled designers and construction engineers.

corporation's existing debt, except that representing the special losses, which would be replaced by a C stock. The C stock would also replace the accumulated liability for interest resulting from the fructification arrangements.

In each financial year following January 1st 1959, the committee recommends, any surplus on the profit and loss account should be appropriated in the following order of priority. First, interest on A stock; second, transfer to general reserve fund, which the corporation should try to maintain at £500,000. Payments of interest on the B stock should rank after this, and should be subject to a maximum of, say, 5 per cent. Provision for redemption of the B stock would rank fourth, and redemption of C stock last. The vociferous demands for special treatment made by Lord Reith during his chairmanship have thus won the committee's endorsement.

GOLD

London and New York

THE market price of gold in London has for some time been held at an unusually high level. In terms of dollars it has been up to $35.14 and though it has come back to $35.12¾ per ounce, it is well above the price ($35.08¾) at which central banks can buy gold in New York against sales from their European holdings in London. The disparity is partly explained by the fact that many central banks have become diffident about converting dollars into gold. In view of this reluctance the demand for gold tends to be concentrated on the London market and to lift the price here to a premium over the New York parity; this is not a shipping parity because gold is dealt in between the two centres without necessarily obtaining any physical movement of the metal.

The premium on gold in London is a reflection of the reluctance with which the Bank of England has been prepared to satisfy the demand of the market. The Bank is an unwilling seller of gold, for it does not wish to increase its holding of dollars and thus itself incur the odium of converting these dollars back into gold in New York. This limitation of supplies in the London market has reduced its turnover during July. But suggestions that gold business has been at a low ebb during the whole of this year are wide of the mark. Experience may have varied from one firm to another but for the market as a whole it seems probable that the turnover in the first seven months of this year was about 50 per cent above that of the corresponding period of 1958.

Turnover in the new gold certificates which offer non-residents future delivery of gold in Toronto or London has been very small; foreign hoarding demand has not yet become accustomed to this London facility. Certain types of central banking business have also disappeared with the transition from the European Payments Union to the European Monetary Agreement; but private as well as central banking appetite for gold has remained keen, as the high level of the free market price shows.

COMMERCIAL TELEVISION

Uneconomic Rent ?

PROGRAMME contractors of the Independent Television Authority pay an annual rent that averages something like 1s 4d to 1s 6d per head of the population within reach of the ITA's transmitters, giving the ITA an annual income described as "substantially above" £3 million. But the contractors' joint income is running at £40 million a year, or very nearly £1 a head, and half of this represents clear trading profit. Some contractors are in fact paying well above these average rents, but the discrepancy between rents paid and profits earned is so large that the Committee of Public Accounts has bluntly told the ITA that, in the Committee's opinion, the authority is not getting a large enough share of the cake. To which the ITA has replied that only one-third of the rents are required to cover running costs. The balance is put to a reserve which, even after financing the construction of all the Band III transmitters it has built and will build between now and 1964, will leave ITA at the end of its initial charter period with a balance of £4 million in hand. "Enough", Sir Robert Fraser seems to imply, "is enough". He plainly feels no enthusiasm for the committee's suggestion that a proportion of any higher rent could be passed on to the Treasury.

If licences to operate a station were put up to tender, then the committee feels that the ITA might discover what really constitutes an economic rent. This proposal has outraged one contractor, Associated-Rediffusion, but it is by no means certain that the rest of the industry regards it with equal disfavour. One possible obstacle is that since its inception, the ITA has had remarkably few bidders for any of its stations, even after the emergence of commercial television from initial losses to big profits. There is no shortage of deserving projects on which the ITA could spend its extra income. For example, it sponsors no research; all the investigations into new transmission systems and colour television are done either by the Post Office or the BBC.

TOOTAL & HOLLINS

A Textile Merger

TOOTAL of Manchester and William Hollins of Nottingham have announced that they are discussing the possibility of a merger. Both companies are well known for their branded goods, Tootal for its Pyramid handkerchiefs, ties and socks and Hollins for its Viyella and Clydella fabrics and manufactured goods. A merger would bring together two organisations which are not directly competitive but have much in common. Both firms have a wide range of production not limited to any one fibre; both are vertically integrated and spin, weave and manufacture their products; and both have extensive marketing organisations. Plainly there is scope for considerable economies. Tootal has recently been extending from textiles into the plastics and chemical engineering fields; the attraction of this amalgamation is presumably that it would create one of the strongest textile groups in the country.

The merger is expected to take place on the basis of some sort of a bid from Tootal for the issued capital of Hollins. On the latest available balance sheet figures, for June 30 1958, the total assets of Tootal amounted to £10.1 million, compared with Hollins's £5.2 million. Issued capital is in about the same proportion, £4,750,000 for Tootal and £2,250,000 for William Hollins. Tootal's 7½ per cent dividend was paid from a net profit of over £232,000 which provided earnings of 9 per cent. William Hollins paid a 10 per cent special interim for 1959, in lieu of a dividend for 1958 when there was a net loss of £64,000. Since the directors have stated that discussions are expected to take some time, movements in the companies' shares have been modest. Tootal ordinary were unaffected by the announcement and remained at 30s, whilst Hollins moved up 10½d to 25s.

AIRCRAFT INDUSTRY

Development Costs

EVERY year that the Committee of Public Accounts scrutinises the books of the Ministry of Supply it can rely on uncovering at least two or three instances where the cost of developing some item sponsored by the Ministry has risen two, three or four times above the original estimate. In its latest report published last week it cites the case of the Bristol Orion turbo-prop engine, the estimated development costs of which had doubled from £6.5 to £13 million before the engine was cancelled after the "largely nugatory" expenditure of £4.5 million. But this is easily outstripped by the record of Rolls-Royce's civil version of the Avon engine, the RA 29, specially developed for the Comet IV. The cost to the Ministry almost quadrupled, from an original estimate of £2.4 million to £8.8 million, after which it was made plain to Rolls-Royce that any extra cost would have to be borne by the company. Nor is this confined to engines alone: the de Havilland Sea Vixen fighter has trebled in price and its development cost jumped from £1 to £4 million since it was first ordered in 1953. The bill for a radar scanner rose from £60,000 to £1.9 million, a 30-fold increase in eight years.

The committee barely conceals its suspicion that the Ministry and the industry are partners in a conspiracy to take the Treasury for a ride. When it recommends that "the Treasury are specifically warned... if an estimate of cost is conjectural and may well prove to be too low", it is putting its finger on the main reason why estimates do in fact go awry, apart from the fact that specifications are frequently changed in mid-design and made much more exacting, as they were for the radar scanner. The environment in which the Ministry and the industry both work, knowing that if the decision to order an aircraft or an engine has been taken the cost becomes of secondary importance, does not encourage accurate forward estimating. Costs may also depend, as they did in the Rolls-Royce factory, upon the progress made with companion projects that may be halted halfway through. But is the industry going to adopt quite the same cavalier attitude to the cost estimates of civil projects now that the companies have to pay for their own development?

SHIPBUILDING

The Slump Spreads

EIGHT million tons of shipping are at present laid up throughout the world for want of cargoes, and shipping freights, at rock-bottom levels, show no sign of recovering in the near future. This state of paralysis, now entering its second year, is beginning to spread to the shipbuilding industry, both in Britain and abroad. According to Lloyd's Register shipbuilding returns for the second quarter of this year, tonnage under construction in Britain at the end of June totalled 280 ships of just over two million gross tons, a decline of some 215,000 tons from the previous quarter and the lowest level for two years. Roughly one-quarter of this total is now fitting out afloat, and the rest remains to be launched; 49 per cent represents tankers. During the quarter 69 ships (364,000 tons) were launched, and 90 (417,000 tons) were completed: only 58 ships, totalling 189,000 tons, were started.

This tonnage commenced in the second quarter was the lowest for any quarter since the war, and the amount of work "preparing" (i.e. for which plans have been approved or materials bought but on which work has not yet begun) has fallen by half in the past year. According to the Shipbuilding Conference, new orders received in the first six months of 1959 amounted to only 82 ships of 98,000 gross tons — and these orders were almost entirely offset by cancellations during the same period. At the end of June, the industry's total order book stood at 528 ships of 4.7 million tons; but this total, though comfortable at first glance, does not reveal the postponements arranged by a number of owners, which are believed to have been considerable.

The slump has been felt unevenly throughout Britain so far (Belfast and Dundee shipyards have in fact more work in hand than a year ago), but several of the smaller yards have laid their last keels for a while, and have no new business of any kind in sight.

AIR TRANSPORT

Mediterranean Clapham Junction

BRITISH European Airways attaches more importance to its recent agreement with Olympic Airways than at first sight either the size of the airline or the amount of traffic originating in Athens might appear to warrant. Olympic, with its fleet of 14 Dakotas and half a dozen bigger aircraft, has taken on a new lease of life since it was bought from the Greek government by Mr Onassis nearly two years ago. It now has two jet D.C.8 jet airliners on order and, more important from BEA's point of view, two of the same type of Comet IV which BEA will have in service early next year.

A third of all BEA's traffic consists of passengers taken over from other, long-distance airlines and carried on the last leg of their journey which may lie off the main inter-continental trunk routes. More and more of these passengers find it convenient to change aircraft at Athens which is rapidly becoming the Clapham Junction of the Mediterranean. By forming a consortium with Olympic, and pooling fleets, the two airlines will be in a position to offer a daily jet service to all the major cities of Europe and the Middle East. Olympic possesses some valuable traffic rights, especially in the Middle East, which will now be available to BEA.

TOURISM

Scope for Superliners ?

FOR more than two years an American, Mr Edgar Detwiler, has been seeking support in Europe for the building of two superliners of some 100,000 tons for use on the North Atlantic : he recently announced that he hoped building would start soon in Holland. The Verolme United Dockyard of Rotterdam has recently completed a dry dock capable of taking ships of this size, and would like to use it for the construction of these vessels. Mr Detwiler proposes to use the ships to develop low-fare Atlantic traffic carrying 8,000 passengers each at suggested minimum fares of from £36 to £62 return, excluding food, which passengers would have to buy at the various restaurants on the ship. The operating speed would be 35 knots and the power required about 32,500 h.p. All machinery would be mounted as far aft as possible to give the maximum clear length of hull for passengers; no portholes would be provided, the entire ship being air-conditioned, though there would be fixed windows on the upper decks. Construction would be prefabricated, as for a bulk cargo carrier.

Technically the design seems entirely practicable, and it shows careful thought on the problems of passenger-carrying ship design — even if the paucity of open deck space might be unpopular with some passengers. The economics of the project seem more questionable. A 100,000 ton ship could only be used on the Atlantic because nowhere else would there be ports to take it. This is a serious drawback for a ship intended to tap the tourist market; unlike the business traveller, the tourist is seasonal in his habits, as airlines have discovered with their increasing dependence upon him. It would be impossible to use such a ship for winter cruises — which seems to be the most satisfactory means of ensuring the profitable operation of an Atlantic liner.

An increase in traffic might reasonably be expected by operating a ship at fares that, even on the higher estimates, are about half current sea or air fares. The airlines obtained a 27 per cent rise in traffic from a 20 per cent cut with economy fares, but the capacity of one ship would be 480,000 passengers a year, assuming 60 crossings, which seems possible with four-day crossings from Rotterdam to New York; this capacity would itself be 20 per cent more than the total number of passengers who crossed the Atlantic in 1958, and more than the total capacity of all the new ships scheduled to come on the Atlantic route by 1961-2.

ATOMIC ENERGY

Second Thoughts

SINCE it entered a hurriedly designed project for the nuclear ship competition organised by the Admiralty, the General Electric Company appears to have had second thoughts about just how such a marine reactor should be built. It has now produced details of a much smaller, lighter design, weighing less than 2,000 tons as against the original figure of 2,400 tons, and costing £2 million (excluding turbines) instead of £3 million. The company makes two bold claims for this reactor : that it could be built immediately on the basis of existing techniques, and that if installed in a 100,000 ton vessel to give 50,000 shaft horsepower, it would be competitive with conventional diesel powered ships of the same size. With some development, the company claims that this reactor could be scaled down to give 20,000 shp in a 50,000 ton vessel.

GEC has done intensive research on scaling down the diameter of nuclear reactors of the Calder Hall type (the design used here is the Mark II, advanced gas cooled version) to reduce their capital costs. It now believes that a 70 MW power station could be built around this design for a capital cost of £65 a kilowatt, compared with £108 for nuclear stations now under construction and the A.E.A.'s estimate of £80 to £90 a kilowatt for advanced gas cooled reactors in general. Ironically, however, its only chance of proving this claim is to convince the Admiralty that such a reactor is suitable for ships, since the Admiralty is willing to sponsor a marine reactor but no one at this moment is asking for tenders for small land-based power stations.

WHEAT AGREEMENT

The Council and the Surplus

THE NEW three-year International Wheat Agreement came into force on August 1st, and the wheat council met in July in London to prepare for it. The old exporting members, Argentina, Australia, Canada, France, Sweden and the United States are joined in the new scheme by Italy, Mexico and Spain (but not Russia), making nine in all; and Britain, the largest importer, has returned to the club. The new scheme is broader in scope as well as in membership than the old one, and simpler in its obligations. Members can no longer be obliged to buy or sell certain quantities at the maximum and minimum price. Instead, importers undertake each year to buy from the exporters, as long as the price is below the maximum, not less than a certain percentage of their total commercial imports, and exporters undertake to supply all their commercial needs. When prices are declared to be at the maximum the importers' obligation lapses, but the exporters' obligation broadly continues. The minimum price remains at 150 cents a bushel for the standard grade, No. 1 Northern Manitoba wheat, ex-Fort William, but the maximum has been cut by ten cents to 190 cents; the current price is 167 cents.

Owing mainly to British pressure, the council is now required to make an annual review of national production policies, stocks, prices and trade (including the disposal of surpluses). It remains to be seen how quickly the council tackles its task, and how effective this practice of confrontation will be. The surplus is growing bigger still. The United States, which was embarrassingly blessed with a record crop of 1,460 million bushels in the 1958/59 season, had a carry-over of 1,280 million bushels on June 30th, nearly half as much again as a year ago. With a new crop estimated at about 1,150 million bushels, and allowing for some fall in exports owing to the good crop prospects in most importing countries, its carry-over a year hence could rise to a record of nearly 1,400 million bushels, giving it a year's crop to spare. Canada is expecting a bigger than average crop, and the Australian surplus is growing again.

SHIPPING

Higher Fares in Season

TRANS-Atlantic steamship lines suffer from highly seasonal demand. From mid-June through October the demand for bookings greatly exceeds capacity; during the rest of the year the number of passengers falls off so sharply that some lines switch their trans-Atlantic ships to pleasure cruising. The revised fares recently announced by the 26-member Atlantic Conference attempt to overcome this by raising all basic fares from next year by roughly 7½ per cent (in some cases, ten per cent), and then offering a reduction of ten per cent on round-trip travel during the off-peak season. Cunard's cheapest single tourist class fare from Southampton to New York, now £62, becomes £67 next year in summer and £60 10s in winter. The differential between summer and winter fares will thus be about twice as much as now.

The increases will bring peak-season sea fares substantially closer to the £81 basic third class fares offered by the airlines throughout the year. The concession on winter fares leaves them almost unchanged from their present levels. For the first time more people crossed the Atlantic by air than by sea last year: it might have paid to try lowering the off-season fares rather than raising the peak-season ones.

PLASTICS

Polyester Film from ICI

AFTER several years spinning Terylene polyester fibre, Imperial Chemical Industries has decided to install plant for the production of the same material in sheet yarn. A pilot plant for the film, Melinex, has been working since 1954, its limited output being supplemented by imports from the USA where du Pont has been making the film for some years, or from Germany. The new ICI plant, which will cost £2½ million, will be producing 2,000 tons a year by 1960-61, in the disused Ardil factory at Dundee. Melinex costs 25s to 35s a pound against only 2s 7½d for polythene. Costs should fall when the new plant is ready and the difference may be reduced in practice because the polyester film is stronger than polythene and can be used more thinly. Its melting point is 260 degrees centigrade, about twice that of polythene and its insulating properties are good.

The film is used at the moment in the form of tape as cable insulation, enclosed by a rubber or plastic cover and for other electrical uses where a thin insulating material is needed. ICI intend to concentrate first on the electrical market then on its decorative uses. Metallic sheet or thread can be covered with polyester film to make it untarnishable, and in the USA this has led to an increase in the popularity of dress or suit materials shot with gold or silver thread; cars are also built with metallic sheet for the interior trim. So far the main use for this product in Britain has been tinsel.

SHORTER NOTE

The new semi-continuous steel strip mill to be built by Messrs Colvilles at Ravenscraig is to employ one additional blast furnace instead of two (Ravenscraig already has one furnace in blast). The existing steel-making capacity there consists of open-hearth furnaces; but it has generally been assumed that the new capacity at Ravenscraig and at the other strip mill to be built at Newport would employ one or other of the oxygen converter processes that have been developed on the Continent since the war, and both companies have now chosen the Austrian L-D process.

COMPANY AFFAIRS

ASSOCIATED HOTELS

THE forthcoming rights issue of participating preference shares to the ordinary shareholders in Associated Hotels may presage further issues of this type by companies whose owners do not wish to lose control of voting power, but need to raise money. In the present climate of investment opinion, a company would find it very difficult to get a good response for a rights issue in non-voting shares. Associated Hotels is to issue 627,150 6½ per cent cumulative participating preference shares at par on the basis of one for every four 5s ordinary shares already held. In addition to their minimum 6½ per cent, the new shares will rank for a further payment of one-third of the payment on ordinary shares: in other respects they will in effect share in one quarter of the company's equity. Holders of the existing 50,000 £1 preference shares will be offered the opportunity of converting into the new shares. Since they will gain about 7s a share on the exchange the offer will presumably be fully accepted.

The issue is being made in order to finance recent purchases of property by the company. A 60 per cent interest in Kensington Palace Hotel, which owns five other hotels, has been acquired at a cost of £1.14 million borrowed from the bank. The issue will enable some £600,000 to be repaid. The Erskine family which controls the business has stated that its own allotment of the new preference shares will not be put on the market.

HOOVER

THE boom in consumer durable goods set off by the removal of hire purchase restrictions last October has lasted longer than most business men dared to hope. Hoover's interim report underlines the continued buoyancy of demand for household appliances: but the directors state that there are now definite signs that demand is tapering off. This is not likely to disappoint shareholders who have been told that group trading profits for the six months ended June 30th, more than doubled, to reach £5,650,000, only a little below profits for the whole of the previous year. A tax charge of £3,000,000 (against £866,000) leaves a group net profit of £2,566,000 compared with £852,000 in the same period last year. But the interim dividend stays the same at 6d a share on the ordinary and "A" ordinary shares.

Group sales, helped by the cuts in purchase tax on household goods and the introduction of new models as well as the freeing of hire purchase, increased in the six months ended June 30th by no less than 90 per cent. Exports, however, rose by only 4 per cent and presumably a substantial proportion of this increase went to the United States; the group's sales in this market in the previous year were hit by the recession. The directors are gloomy about the possibility of maintaining exports at their present level, especially to Western Europe where, they say, the advent of the common market is making their position more difficult. But the plans already announced to spend large capital sums in France while partly designed to overcome the ban on imports of washing machines in France should also give the group a firmer foothold in the whole common market.

UNITED DOMINIONS TRUST

NEW evidence of the booming conditions in hire purchase is furnished by the results of United Dominions Trust, whose gross profits increased by practically 50 per cent in the year to June 30th. The latest year's figure is £3,237,980, compared with £2,264,357, and net profits show an even sharper increase from £990,732 to £1,535,707. The final dividend of 16 per cent and bonus of 5 per cent bring the total distribution up to 25 per cent, payable on the capital after last year's issue of £1 million ordinary stock to Barclays Bank. The dividend on the smaller capital in the previous year was 20 per cent. The consolidated balance sheet shows that customers' accounts receivable have jumped from £58 million to £77 million and bank loans and acceptances are up from £14.7 million to £28.7 million.

JOHN BROWN

JUST why John Brown and Co., the Clydeside shipbuilding and engineering group, has avoided the setback the directors thought likely at the time of the £2 million rights issue last March, when they forecast a 10 per cent fall in group trading profit, will no doubt be explained in the chairman's full report. In fact, group trading profits for the year ended March 31st rose from £3,336,382 to £3,353,153 and the dividend remains at 10 per cent on the increased capital. The preliminary figures took the market by surprise and the ordinary shares were immediately marked up. Tax absorbed £1,669,155, compared with £1,944,422 last year; after a smaller credit of profit from prior years, at £70,000 against £135,000, group net profits rose from £1,391,960 to £1,683,998.

Last year the chairman, Lord Aberconway, said that only a very small proportion of contracts placed in British shipyards had been cancelled; and presumably the continued progress of the group is partly attributable to the steady working through of a long order book. Meanwhile shareholders will have to wait for the full report to see how a year of recession in the capital goods trades has affected the other subsidiaries — and particularly John Brown Land Boilers, who last year experienced intense competition from overseas together with a drop in demand for thermal plant arising from the switch to nuclear power stations. Earnings on the ordinary capital have gone up from 23½ per cent to 24 per cent despite the rights issue, and the 10 per cent dividend is still covered 2.6 times by earnings. The group is clearly in a healthy position to face the vagaries of the shipbuilding industry. The £1 ordinary shares at 32s. 3d. yield 6.2 per cent.

JOHNNIES

THE net profit of Johannesburg Consolidated Investment fell sharply in the year to June 30 th last from £1,940,000 to £990,000. The setback stems partly from lower investment income, but also from a very sharp increase from £400,000 to £1,050,000 in taxation. Switches in portfolios resulted in a profit for tax purposes of £230,000 and together with investment appreciation these have entailed a tax provision of £370,000; in the previous year, by contrast, the group secured a tax credit of £681,000 for investment depreciation. The profit before tax is only about £300,000 lower at £2,040,916. The dividend, as expected, is maintained at 22½ per cent.

Income from the group's holdings was probably at least equal to that of the previous year. The increase from £18.9 million to £25.2 million in the market value of investments reflects the improvement of Kaffir prices during the past year. The decline in earnings was presumably caused by the absence of any dividends from the platinum companies in which the group has substantial investments and the lower return from the base metal holdings. At 63s. 3d. the £1 ordinary shares yield 7 1/8 per cent.

VACTRIC

LAST June, Arusha Industries made an offer to Mr W.C. Pegley, the chairman and largest shareholder of Vactric, of 55s and 53s a share respectively for the ordinary and 'A' ordinary 5s shares. The offer was rejected on the grounds that it did not take into account the earnings potential of the group. Provided the upward trend of the group's trading profits is maintained, outside shareholders will feel that Mr Pegley was right: but the ordinary shares at 42s 6d (to yield 4.3 per cent) and the 'A' ordinary at 39s 6d (to yield 4.6 per cent) are still well below the bid price. Trading profits of the group as at present constituted were £636,044 for the year ended March 28th, against a comparable figure of £246,802 in the previous year. The final dividend of 25 per cent on the capital increased by the one for nine scrip issue raises the total distribution by one third, to 36¼ per cent.

The Canadian subsidiary, which has now been sold, incurred a loss of £271,602 compared with £73,931 the previous year; and the sale of Awley Finance meant that the group received a dividend of only £45,000 against a full year's dividend of £163,745. Capital reserves of the group now total £557,012 (against £208,231); they include £281,556 transferred to reserve as part of the capital profit on the sale of Awley Finance and £67,225 from the sale of the Canadian subsidiary.

Obviously Vactric has benefited from the relaxation of hire purchase restrictions and the reductions in purchase tax on its refrigerators, washing machines and vacuum cleaners. There are also signs that the fall in orders from the aircraft industry, which last year caused a setback in the precision tools section, has recently been reversed.

COMPANY MEETINGS

THE GENERAL ELECTRIC COMPANY

SIR LESLIE GAMAGE ON IMPROVED OUTLOOK

The Fifty-Ninth Annual General Meeting of The General Electric Company Limited will be held on September 3 at Magnet House, Kingsway, London, W.C.

The following are extracts from the statement by Sir Leslie Gamage, M.C., the chairman, circulated with the report and accounts for the year ended March 31, 1959:

In my review last year I expressed the hope that we should achieve some improvement in profits in the 1958-59 financial year. This hope seemed far from realisation when the board reviewed the figures for the first nine months' trading and decided the interim dividend. In point of fact, however, the profits for the last three months of the year surpassed our expectations. As a result the profits on actual trading account, before charging depreciation, etc., amounted to £9,407,000, a slight increase on last year's figure of £9,320,000.

We have decided to recommend a final dividend of 7 per cent, which, with the interim dividend paid in April, will make a total of 10 per cent, the same as the previous year.

NEW WORK OUTSTANDING

Under the conditions which prevailed last year it was a real achievement to have increased our turnover by over £3,000,000 to an all-time record of £108,000,000. More important still, we start the year with a satisfactory order book of £133,000,000, considerably higher than last year. Outstanding among new work is an atomic energy plant in Japan.

It was also a notable achievement on our part to have increased our exports over a period in which total British exports showed some decline; this was accomplished despite fierce competition which forced down profit margins. At home the recession in industry continued to deepen until the late autumn, when a change of Government policy was announced — a change which I had hoped would have taken place some months earlier. The results of that change in policy, so far as our Company is concerned, were felt more immediately in the domestic equipment and radio divisions.

FACTORS IN THE OUTLOOK

You will, I think, expect me after these two lean years through which we have passed, to give you my views as regards the future. With economic and political conditions at home and overseas constantly changing, it is impossible to promise or to guarantee — I can only tell you frankly what I think and hope that I shall be proved correct.

I expect that the increased demand for electrical consumer goods will continue though perhaps at a somewhat lower level, while the revival in demand for many of our other products will gain momentum as the year progresses — hence the current year's prospects should, for these reasons alone, promise some improvement.

There are, however, unfortunately, some clouds on what might otherwise be a clear sky. In cables, electric meters, and certain other sections of our industry, some of our major competitors at home and abroad seem bent on a price-cutting policy, which appears to me self-defeating, particularly at a time when markets are expected to expand and when the cost of raw materials is tending to rise.

We have also to see what may be the effects of the dollar import liberalisation, and whether our American competitors will endeavour to use our market as a dumping ground for their surplus production. Added uncertainties arise from the recurring demands of labour. There are also those uncertainties which must arise with a general election in the offing. Without talking politics, I would emphatically state that the renationalisation of Britain's efficient and expanding steel industry would bring no benefit to steel users; while the recurring threat to penalise advertising is not only myopic but could affect the scale of production dependent on a mass market. Another cause of uncertainty arises from the negotiations for a Free Trade Area of the 'Outer Seven'. I doubt whether this by itself holds any dramatic advantages for industry as a whole, but I endorse the proposal hoping that it will provide a bridge for closer association with the Common Market. For the British electrical industry, liberalisation of trade between the 'Outer Seven' should, on balance, bring some advantages, but business may be hindered for a time by the differences between British and Continental standards.

INCREASED EFFICIENCY

I have dealt so far with the economic and industrial factors which have affected last year's trading and are likely to affect the current year. If I were to weigh them all up, the good against the bad, I would say that the outlook for the company for 1959-60 can be viewed as improving.

However, the company's management is not content merely to wait upon events, many of which are beyond our control. We have taken a number of steps internally calculated to improve the company's efficiency and profit-earning capacity.

We have continued the reorganisation of the company's management. Our widespread general products group has been split up into divisions, each under a general manager responsible for both production and sales; the new arrangement will add to the efficiency of both manufacturing and distribution. In the engineering group, we have reorganised the functions of the senior staff on a divisional basis, so as to bring about greater individual control, quicker decisions, and better and more personal service to our customers.

FEATURES OF YEAR'S TRADING

General Products Group: Home sales for the group showed an increase over the previous year of 8 per cent. The increase was spread over the group as a whole, with particularly marked increases in the domestic equipment, lighting and radio divisions. The contribution of the group to the company's overall profit improved.

The main outlets for the group in overseas markets were in the domestic equipment range, lamps, lighting equipment, and ventilation. "Osram" lamps continued to hold the largest share of all lamp sales in the United Kingdom and make an important contribution to G.E.C. exports.

Engineering Group: The heavy engineering industry is showing signs of improvement following an 18-month period in which capital expenditure in heavy equipment was at a low level. The company's order book reflects these trends and there has been a distinct improvement towards and since the end of the financial year.

Towards the end of the financial year, we entered into extensive negotiations with Japanese Atomic Power Co. for the construction of a complete 150 MW nuclear power station. A 'letter of intent' to proceed with the contract has been received and, in the meantime, design work is proceeding.

We have entered into manufacturing and 'know-how' agreements with M.A.N., of Germany, and the F.A.P.I.G. Group of Companies of Japan. We recognised some time ago that only highly industrialised countries would be interested in nuclear power and they must inevitably wish to construct and fabricate the major part of the plant themselves. The agreements entered into provide us with a contribution towards our development costs.

Telecommunications Group: Within this group, our company manufactures a wide range of telecommunication and electronic equipment. These products cover the requirements of the General Post Office telephone service at home, as well as overseas telephone administrations, remote control systems, long distance speech and television transmission and designs and manufactures of a wide range of electronic systems, both for peaceful and defence purposes.

On the telephone side of our business, the reduction in Government expenditure had its effect upon us in common with our competitors. We have made strenuous efforts to build up our telephone exports and our success has to some extent offset the lowering of purchases by the General Post Office; we have, in fact, increased our telephone exports by 60 per cent in the last three years, a significant achievement. We installed trunk-dialling equipment at Bristol during the year, the first of its kind in the country.

THE BRITISH & COMMONWEALTH SHIPPING COMPANY LTD

SIR W. NICHOLAS CAYZER'S REVIEW

Addressing the company's shareholders at the fourth annual general meeting, held in London on July 15, the Chairman, Sir W. Nicholas Cayzer, Bt., said:

When I addressed you last year I forecast that there would be a substantial fall in profits for the year 1958. Unhappily, this forecast has proved only too correct, and recently when the 1958 results were announced your Directors warned you that there would be a further decline in profits. At this stage it is impossible to be precise, but the further decline will be material in amount though present indications are that it will not be of the same magnitude as we have just experienced.

The dividend on the Ordinary Capital for the year 1958 has been maintained at the same rate as 1957, but as in the meantime the Capital has been increased by a 5 per cent. bonus issue stockholders have received a slightly larger amount, though, thanks to the change in Profits Tax legislation, the net cost to the Company is somewhat less. Although we have been able to maintain the rate of dividend for 1958, I must warn you it may not be possible to do so next year. We shall, however, look most carefully at the results and take into account the prospects at that time before arriving at a decision.

As explained in the notes, the cash flow is all important and we shall have to watch this with the greatest care. When considering the overall position it should be appreciated, however, that in the event of the trading profit falling below the wear and tear allowances certain recoveries of tax will be made which will help to offset the fall in profits.

THE OUTLOOK FOR SHIPPING

I think it may help you if I outline the situation as I see it today. Until recently, with minor setbacks, shipping has had a satisfactory run since the war ended, though the ever-increasing cost of replacements has tended to place a strain on the financial resources of those Companies which wished to maintain and modernise their fleets. Korea and Suez accentuated the need for ships, and in those days even ships that were old and ready for the scrap heap could make a profit. As a result of buoyant trading the rate of shipbuilding orders increased. Then some eighteen months ago shipping capacity outstripped world trade and freights fell sharply, and have been falling ever since. There is no doubt that the estimate of the increase in world trade was over optimistic, and this perhaps has been most dramatically illustrated in regard to the world consumption of oil. We face, therefore, an unbalance between trade and ships.

In assessing the future on this broad front we must consider to what extent and when the unbalance in trade and ships, to which I have referred, is likely to be redressed. In the normal way the fact that rates are unattractive would ensure that fewer orders for ships were placed, and that the ships that are laid up at present would gradually disappear from the scene thus redressing the balance. Nevertheless, these simple economic facts of life can be completely upset by decisions taken at national levels. The reasons for the decision of a nation to foster its own Mercantile Marine will vary according to circumstances — national security, balance of payments problems, prestige. But whatever the reasons such policies can result in building or retaining tonnage in excess of world requirements.

If this goes on, with its depressing effect on trading results, unsubsidised fleets must decline, or be subsidised, and in the case of the subsidised the taxpayer must pay more and more tax to keep up whatever fleet is decided on for one reason or another. But the policies of subsidies and flag discrimination are the very negation of all the other attempts which are being made to expand trade between Nations in order to foster a spirit of friendship and progressively improve the standard of living of all concerned.

The solution to many of our problems lies in greater International understanding. However good the reasons for such policies may appear I think there is no doubt that, in time of peace subsidies, flag discrimination and so on create situations when in due course all will be losers. Subsidies create subsidies, counter measures can create ill-feeling, and so it goes on. It remains to be seen if there is sufficient wisdom and understanding in the West to surmount what are admittedly very real difficulties to the partners who make up this alliance. The more we can meet and discuss our problems the better chance there is of overcoming them. There is a tendency at a distance to become rigid and rather emotional about one's own National difficulties. Much study is needed if we are to comprehend the International problem of transport that exists today and pursue the right course.

It so happens that traditionally we are a seafaring Nation, and given an equal opportunity I think we are capable of providing a service second to none. In the interests of the world as a whole would it not be a good thing to allow those who have shown ability or aptitude in a particular sphere to get on with the job without hampering their effort with unnatural restrictions? After all, the world can only go round if we are ready to take in each other's washing.

From what I have said it might appear we are reconciled to our fate and are crying for charity. As an industry we are anything but idle. We shall fight for our place in the sun, and I am happy to say that we have the sympathetic understanding of H. M. Government in trying to find a solution to the many problems which confront us. Only lately our Minister of Transport, in spite of his many other pre-occupations, made time to go to Washington for discussions on shipping. At these discussions the problem that exists between the subsidised and the unsubsidised, as well as flag discrimination and other matters, were discussed, and although no spectacular progress was made it was a beginning to worrying out the problems that oppress us, and this beginning must be vigorously followed up.

OUR OWN AFFAIRS

To return to our own affairs, we are constantly reviewing the services which we operate. We have come to the conclusion that the passenger ships which operate the Round Africa Service can be improved quite considerably without major structural alterations, and we are proposing to commence work on the three newer ships, the KENYA CASTLE, RHODESIA CASTLE and BRAEMAR CASTLE, as soon as the necessary arrangements can be made. While as much as possible will be done during normal repair periods, it may be necessary to withdraw them progressively from service for short periods.

While watching our existing services we continue to examine new developments which may affect our business, such as the bulk carrier, containerisation of cargo or the carriage of liquid gas in ships. We have not cancelled any orders for new ships, but we have parted with a number of old friends, and some not so old, for whom profitable employment depended on unnatural trading conditions. The bulk of tonnage laid up at the present time would require fairly substantial increases in rates of freight before it became economic to return it to service, whereas a more moderate increase in rates would suffice to make many of the modern ships which are trading reasonably economic units. In this context one tends to refer to rates of freight because one thinks in terms of the tramp or the tanker which is largely employed on short term or voyage charter. In the liner business, in which we are mainly engaged, rates are not quite so susceptible to the same movement, but lack of cargo can result not only in reduced earnings from smaller carryings but an inability to raise rates to meet increasing costs.

SPRINGBOK SHIPPING COMPANY

Since last we met I have paid a visit to South and Central Africa. During my visit I announced our intention to create and develop a South African Shipping Company in which, in due time, it is hoped that the South African public will wish to take an interest. Mr D.G. Malan, who has accepted the appointment of Chairman and Managing Director, is here at the present time to finalise arrangements regarding the transfer of ships and the setting up of a South African organisation, and I am sure you would wish me to express our thanks to him for giving up the very responsible position of General Manager of the South African Deciduous Fruit Board, and to the Deciduous Fruit Board for releasing him, to undertake this important task. I know that he feels, as we do, that it is one well worth doing.

NEW PASSENGER SHIPS

Further developments during the course of the year include the entry into service of the PENDENNIS CASTLE and the launching of the WINDSOR CASTLE. We were greatly honoured that the WINDSOR CASTLE was launched by Her Majesty Queen Elizabeth The Queen Mother, and such an auspicious beginning must surely give to all of us just that bit of extra encouragement to put our best foot forward in this new endeavour. The entry of the PENDENNIS CASTLE into the South African Mail Service has, I think, been received very well. She is a beautiful ship, and from the passenger angle her decor has come in for a lot of praise.

I am very conscious of the threat of competition from the air with ever faster and faster aircraft, but our passenger revenues are being well maintained, and there seems to be an increasing awareness of the fact that a voyage by sea can do much to restore the health of body and mind, or better still act as a preventive medicine.

DISPUTES IN SHIPBUILDING

It has been said many times before, but is still worth repeating, "the building of new ships is an act of faith". How disappointing it is to find that having created work for our shipyards strikes within the yards can retard progress and increase costs. Surely it can only be a matter of time before all sections of the community recognise their responsibility, the one to the other. But time is not on our side, it is only the realisation today of our needs which will ensure our future. To the Unions I would say, there is no point in achieving better working conditions for your members if there is no work to do through pricing yourself out of the market, and equally I would say to Management, let there be no misunderstanding between you and those who work for you as to the issues involved in so international and competitive a business as ship building. Good relations between Management, Unions and workers are paramount. Better to swim together than sink alone or together.

Finally, let me say that the Directors, Managers and staff, afloat and ashore, have all worked, and are working, hard to secure a future for your Company. In these challenging times we must consider ourselves indeed fortunate to have such a loyal team working for us and they deserve our thanks. I am confident that with the determination to succeed we shall overcome our present difficulties and prove that we are not just fair-weather sailors.

NYASALAND RAILWAYS LIMITED

The 28th annual general meeting of Nyasaland Railways Limited was held on July 22 in London, Mr W. M. Codrington, C.M.G., M.C. (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

In my statement last year I alluded to two inter-related factors, one economic and the other political, which would affect the progress of Nyasaland and consequently the future of our Company. Towards the latter part of the year both these factors increased in importance. It became apparent that the credit squeeze was affecting the rate of development and capital investment in the Protectorate; while, at the same time, concern about the political future was having an adverse effect on commercial activity—particularly in relation to import traffic—which naturally has a considerable bearing on our earnings. In these circumstances it is satisfactory that the results achieved justified the maintenance of the dividend at 6% on the Ordinary shares; but it must be remembered that this would not have been possible but for the satisfactory level of activity attained in the earlier months of the year.

INCREASING ACTIVITY OF EXTREMIST ELEMENTS

The events which led to the declaration of an emergency in Nyasaland have been described in a despatch from the Governor of Nyasaland which has been published as a White Paper. So far as the Railway and its staff is concerned, our own experience amply confirms all that Sir Robert Armitage reports about the increasing activity of extremist elements and the intimidation of moderate Africans who are anxious to continue their progress in co-operation with Europeans. That this intimidation has been real and that it is reinforced by threats of witchcraft in its most horrifying form there can be no doubt. Indeed, when I was last in Nyasaland, long service members of our African staff, who were playing a valuable part in our staff welfare and liaison activities, complained to me personally and sought our protection.

Altogether we employ some 7,000 Africans of whom approximately 3,000 are employed at Limbe where our central workshops are situated. When the emergency was declared, all but about 200 of our African employees in Limbe stopped work. Out of the whole of our staff about 60 were detained under the emergency regulations, of whom 27 were employed in our workshops at Limbe. As soon as these few men had been removed all our staff returned to work; and our officials have told me that, with the threat of intimidation lifted, the whole atmosphere regained the cheerfulness which had been strikingly absent during the preceding months of fear and uncertainty. The railway service was never interrupted; and within 24 hours all trains were running normally. That the authorities were faced with a serious plot, which they frustrated just in time, I have no doubt.

The emergency placed a considerable strain on our staff; and in particular the Lake Service was called on to carry out special services for the transport of police and troops, and the removal of detainees. The contribution that our Company and its officers, headed by Mr Stevens, was able to make has been generously acknowledged in letters we have received from His Excellency the Governor of Nyasaland and from the Federal Minister of Transport.

While the removal of a relatively small number of extremists has resulted in the restoration of law and order and to a great extent removed the fear of intimidation, uncertainty undoubtedly exists about the future of the country. This uncertainty is unsettling for our staff of all races, holds up the development of the country, saps confidence, and consequently decreases economic activity of all kinds on which the fortunes of this Company depend. This state of affairs is aggravated by the prospects of a General Election in this country in the relatively near future. Nobody in Nyasaland knows whether a change of Government here would mean an attempt to implement the views expressed by individual members of the Opposition who have been active in colonial matters, some of whose statements have encouraged the more gullible Africans to think that a change of Government in London would result in the immediate grant of "one man one vote irrespective of colour" in Nyasaland.

STATEMENT ON FUTURE BRITISH POLICY NEEDED

That Nyasaland will progress towards a predominantly African Government is reasonably certain. This prospect is indeed accepted by most of the 8,000 or so Europeans in Nyasaland. But those of all races who realise the extremely small proportion of Nyasaland's 2½ million African inhabitants who can even read and write, let alone understand current political and economic problems, are understandably concerned lest any attempt to progress too rapidly may merely have the effect of subjecting the great mass of Africans to domination by a very inexperienced minority. On this problem there must surely be a considerable measure of agreement between the major political parties of this country. The restoration of confidence in Nyasaland is in the interests of all its people just as much as of our Company. In my opinion it is a matter of great urgency. Would it not be possible to issue an authoritative statement backed by both the Government and the Opposition about future British policy in regard to these territories? Such a statement would be twice as effective if reinforced by definite steps to inspire confidence in the future of Nyasaland and to develop its potentialities by making available substantial sums from the Colonial Development and Welfare Fund.

We, for our part, within the limit of our resources, shall continue our policy of trying to train Africans for posts of greater responsibility in our organisations. We are also continuing to explore the possibilities of raising fresh capital with which to improve the transport facilities which we hope will be needed in an increasingly active economy. But at the present time political uncertainty is completely inhibiting commercial enterprise and development, and unemployment among Africans is rising. It is only right that I should warn you that until this uncertainty is removed and future stability assured, our traffics will be adversely affected. This can only lead to a serious reduction in our profits to the detriment of our dividend. Meanwhile our Management are actively pursuing economies imposed by the decreased economic activity in the country.

The report and accounts were adopted.

LAPORTE INDUSTRIES LIMITED

MR L. P. O'BRIEN'S REVIEW

The 52nd annual general meeting of Laporte Industries Limited was held on *July 16 in London, Mr. L. P. O'Brien* (the Chairman), presiding.

The following is an extract from his circulated statement:

Despite the less favourable conditions which were encountered in selling our chemical products both at home and abroad, the Group total turnover was only 2.07 per cent in value lower than for the previous financial year, and that notwithstanding price reductions over a wide range of our chemical products.

The Group profit of £1,813,378, after provision for depreciation and other items, is lower by £285,567 or, say, 13½ per cent less than in 1958. However, in these accounts we have increased the provision for depreciation by £265,914 to £968,786. Higher provisions for depreciation occur in the accounts of nearly all the subsidiary companies throughout the Group and arise mainly in connection with completion of construction of plants for increased manufacturing capacity with improved efficiencies for our principal chemical products. The new plants provided came into operation progressively throughout the year and an expensive "teething" period elapsed before they attained full efficiency and their rated productive capacities, and before achieving satisfactory costs of production.

Based on the lower rates of taxation now in force it is estimated that we require to provide £809,640, which is £244,123 less than a year ago, and consequently, our Group income after taxation, at £1,003,738, has declined by £41,444.

In July 1958, as a result of capitalisation of reserves, the Ordinary stock (which was reconverted into shares) was increased to £8,114,743, on which an interim dividend was paid in December last of 2½ per cent less tax at 8s 6d in the £, and your Directors now propose a final dividend of 5½ per cent less tax at 7s 9d in the £, making 8 per cent for the full year.

We are left with retentions within the Group amounting to £602,558, which is £81,510 less than was the case twelve months ago.

Of the profit retained within the Group of £602,558, £537,661 has been placed to reserves, the profit and loss carry forward in the subsidiary companies has increased by £44,474, and that of the parent company by £20,423.

The current year has opened with a firmer tone than prevailed twelve months ago so far as our United Kingdom and Australian companies are concerned, and I believe that in twelve months' time you will receive a satisfactory report and statement.

SUBSIDIARIES

Laporte Chemicals Limited: Although this subsidiary pursued a policy of price reductions, it was successful in maintaining its sales turnover, but with reduced profit margins. The completion of the new hydrogen peroxide plant operating by the autoxidation process referred to in previous statements was unfortunately delayed and it was not until the last quarter of the year that it was operating at rated capacity and efficiency and satisfied the Company that it was a technical and commercial success which justified it in embarking on this method of manufacture on such a large scale.

Laporte Titanium Limited: This company came through a more than usually difficult year with a slight increase of profit after meeting a much heavier charge for depreciation on fixed assets not yet fully employed. The Phase III additions to manufacturing capacity and the new sulphuric acid plant were completed and Laporte Titanium Limited is now equipped to deal with anticipated additional demands which can reasonably be expected.

Laporte Acids Limited: During this year, consequent upon the completion of the new sulphuric acid plant at Stallingborough for Laporte Titanium Limited, Laporte Acids Limited lost the benefit of orders from that source, but that was for the planned benefit of the Group as a whole. The older sulphuric acid plants have been dismantled and in consequence the output of acid at the Yorkshire works rateably curtailed, with corresponding reduction in profits for the year ended 31st March 1959.

The Fullers' Earth Union, Limited: This company enjoyed a successful year's trading following the modernisation of its plants during recent years and improvement of its manufacturing technique.

Laporte Chemicals (Australia) Proprietary Limited: This subsidiary has made good progress and should continue to do so during the current year.

Pembina Mountain Clays Limited: The first year's trading results are not satisfactory, as a loss was incurred. Needless to say, the closest attention is being given to the affairs of Pembina Mountain Clays Limited by all concerned, and it is anticipated that better results will be achieved at an early date.

After reviewing the activities of the Associated Companies, the Statement continued: The Chemical and Engineering Research and Development Departments throughout the Group have enjoyed the satisfaction of witnessing practical demonstrations of the value of their joint work in connection with some large scale capital projects on which they have been engaged for several years past.

EXTENSION OF THE GROUP

The Company has acquired the whole of the issued capital of The Sheffield Chemical Company Limited, James Wilkinson and Son Limited and Glebe Mines Limited. These three companies were closely allied through some of their largest shareholders and work in close harmony together with a considerable amount of inter-trading.

The total consideration for the purchases has been the issue of 1,285,715 Ordinary shares of 10s each, allocated as agreed by the vendors as a whole.

The report was adopted.

CHARRINGTON GARDNER LOCKET & Co.

The 56th annual general meeting of Charrington, Gardner, Locket & Co. Ltd was held on July 24 in London, Sir John Charrington (the Chairman), presiding.

The following is an extract from his circulated statement:

A year ago I was pleased to be able to report record profits and I am able this year to put before you results which represent a further advance.

Profits after Taxation at £197,383 show an increase of £55,869 on the corresponding figure for last year of £141,714. Your Directors recommend an increased Final Dividend of 7% on the Ordinary Stock which, with the Interim Dividend, makes a total of 11%.

The distribution of fuel oil as it continues to develop is assisting in our improved results, but I must make it plain that the increase in the profits of the Company is not due to an exceptional rise in oil profits. Trade in coal and coke has made a valuable contribution.

Our Lighterage Department has inevitably suffered from the general decline in goods available for carriage by barge which has occurred in the Port of London this last year. Our fleet has been maintained in good condition and some of the larger craft converted to the carriage of oil.

Our sales of house coal continue to decrease, whilst those of smokeless solid fuel show a marked tendency to rise. We have made a feature of smokeless solid fuels for some years, and with the introduction of the Clean Air Act we expect to maintain fully our lead in this market and to offer the public a wide variety of those available.

It is only to be expected that our sales of coal and coke for industrial purposes should show a decline in tonnage in view of the increase in the use of oil in this field, but in so far as those customers have continued to use coal and coke, our trade has been maintained in all respects.

The Company's trade in oil has continued to advance sharply in line with the national tendency.

The comparatively young branch of the Company's oil trade in Birmingham is developing well, and already more storage has been provided at our terminal at Bedworth.

The Mobil Company is at present engaged in the construction of an ocean terminal for their various petroleum products at Ellesmere Port, near Liverpool, and we have been entrusted by them with the marketing and distribution of all their fuel oils from this point.

Our capital expenditure has continued during the past year at a fairly high level. Our plans for future expenditure are for the provision of the additional plant necessary to handle our trade in all types of fuel. I believe that this immediate programme is within the compass of our existing financial resources, and I look forward to a continuation of the Company's good progress.

The report was adopted.

THE MIDLAND TAR DISTILLERS LIMITED

IMPROVING DELIVERY POSITION

The 37th annual meeting of The Midland Tar Distillers Limited was held on July 17 at Oldbury, Mr R. B. Robinson, B.A. (the Chairman), presiding.

The following is the statement by the chairman circulated with the report and accounts for the nine months ended 31st March, 1959:

In my statement to you in December last I referred to the absence of Mr. Stanley Robinson and to our hope that we should soon see him back and in good health. I am more than glad to say that both these wishes have been fulfilled though as some of you may have seen from Press Announcements he has on medical advice relinquished his responsibilities as Chairman. I have been elected in his stead and Mr Brendan Robinson has been elected as Vice-Chairman. Mr Stanley Robinson occupied the Chair for twenty particularly difficult years. As to his success in that office, I need do no more here than point to the present position and reputation of this Company; they speak for themselves. We are indeed glad that Mr Stanley Robinson's services and long experience are still available to our Board.

CHANGE IN ACCOUNTING YEAR

The Accounts now before you cover, as forecast in December last, a nine months period; our year end is now 31st March and in consequence of this it is not profitable to make comparisons with the last Accounts. Not only does a change of this kind introduce difficulties on the first occasion but in addition we are holding our Annual General Meeting two months earlier, relatively, than in the past. We are grateful to Messrs. Harrison, West, Ledsam & Co., the Company's Auditors; Messrs T. O. Williams & Davies, the Auditors under the Tar Agreement and to all the Company's staff concerned for all that they have done to make this possible.

As a result of the change in the accounting year certain tax provisions amounting to £191,791 are no longer required. We have applied this useful non-recurring benefit to the General and Obsolescence Reserves. A secondary effect is the virtual elimination of the provision for taxation under "Current Liabilities" and a considerable reduction in the item "Income Tax 1959/60 payable January 1st, 1960."

I referred last December to the fact that we were liquidating some of our Local Loans. With one exception these investments have now been called in and the money arising has been used to finance temporarily high stocks and to purchase Tax Reserve Certificates.

The reduction in debtors and the high stocks should not mislead you into inferring any reduction in our activities. The explanation lies in the fact that at 30th June we normally have large sums owing to us from Local Authorities for deliveries of Road Tar, whilst at 31st March the season's deliveries have not yet commenced.

During the period under review the first annual Sinking Fund instalment of £10,000 has been applied by the Trustees in the purchase of £10,854 (nominal) of our Debenture Stock.

TRADING CONDITIONS

The price-cutting in Petroleum Fuel Oil, which I referred to last time, continues and our prices have had to reflect it; on the other hand deliveries are improving and the effect of the Steel recession seems to be moving away.

Our Tar Acid home sales continue to be reasonably good. Mr Brendan Robinson, our new Vice-Chairman, was in the U.S.A. earlier in the year on the affairs of our American Subsidiary. Whilst he is not despondent on a long view, and indeed, sales are improving, there is no doubt of the present competitive effect of the large quantities of domestic tar acids. We are more than ever glad to have our own small storage installation (Midland Storage Inc.) and its activities extra to the primary purpose of handling our Tar Acids justify some optimism.

PRODUCTION OF SECONDARY DERIVATIVES

In the policy of producing secondary derivatives from our orthodox Refined Products at Four Ashes, we are making successful progress. As an example of this our plant to make 2-Vinyl Pyridine from Alpha Picoline went into successful operation at the programmed date at the beginning of February last and is now in commercial production. This chemical is mainly used in the preparation of a special synthetic rubber for tyre construction.

Our Chief Research Chemist and Chief Chemical Engineer have recently been in the U.S.A. The experience and the information they have gained in their tour will be of considerable benefit to us.

We have, as you may well imagine, many visitors to see our Four Ashes Refinery from time to time, and we were extremely glad to welcome the Midland Section of the Institution of Gas Engineers under its President, Mr Bate, in October last.

In the new distillation plant at Nechells we have met with some unfortunate teething troubles but experience so far indicates that its performance and ease of control are remarkable. There is still a good deal of redevelopment to do at Nechells as I indicated to you in December last but this programme is well in hand.

Once again I must thank all our staff and workpeople for their loyal and efficient service.

The report and accounts were adopted and the dividend of 7½% on the Ordinary Shares was approved.

THE METAL BOX COMPANY LIMITED

Below are excerpts from the Chairman's Review of the Year: —

Sales at home and overseas and income from investments were again a record at £76,786,000.

Profits after all charges and taxation were £569,903 higher at £3,913,410.

The sale of beer in flat top cans again increased and there are now 118 different types of canned beer available.

It is also encouraging to report a growing interest in canning among soft drink manufacturers and we anticipate that several of their products will be marketed in cans during the coming twelve months.

RESEARCH AND ENGINEERING DEVELOPMENT

Expenditure on Research, Engineering and Production Development was some £750,000 and is still increasing. The work already done has resulted in improvements in techniques, equipment and materials, the advantages of which are passed to our customers — and also to many of our suppliers. The sum spent, although a large one, has to cover not only our needs in an increasingly diversified field, but also to some extent those of our associated and subsidiary companies.

Research. The substantial enlargement of our research facilities to which I referred last year is now nearing completion.

Our greatest efforts are directed towards economy in the use of tinplate and to the development of more economical protective and decorative materials and processes. We have also extended the breadth and depth of our research and development work on plastic containers and greatly intensified our efforts to achieve supremacy as suppliers of containers and service to the frozen food industry.

Technical Engineering Development. The new facilities at Boreham Wood for engineering developments are in fairly full occupation and have already enabled work to expand into the non-metallic field. The development programmes in all fields have been designed to ensure that the Company will continue to keep firmly in the lead in its manufacturing techniques.

Production Engineering Development. Service to our customers is being provided on an expanding scale and extensions to the service depots have been put in hand to give the increased facilities required.

We have always considered it of the utmost importance to give service, in a very wide sense, to our canning customers. Similar assistance is now being rendered to our customers using paper and plastic containers. A new range of equipment has already been developed and is being added to as the field expands.

I anticipate an expanding demand for our products but despite the technical advances which we are making, we shall, I think, be hard put to it to hold our profit margins.

At the Annual General Meeting the resolutions adopting the Report and Accounts, the Dividend, re-electing retiring Directors, altering the Articles, and capitalising the Reserves, were approved.

AMALGAMATED ROADSTONE CORPORATION

The 23rd annual general meeting of Amalgamated Roadstone Corporation Limited was held on July 21 in London, Mr W. H. Gatty Saunt (chairman and joint managing director), presiding.

The following is an extract from his circulated statement:

The Consolidated Accounts show that operating profits of £903,333 compared with £1,116,775 in the previous year, were down by £213,442.

However, when we come to "Net Profits after Tax and Minority Interests" of £253,684, compared with £323,251, the reduction is only £69,567 and, after maintaining dividends on the Ordinary Stock at the rate of 15 per cent. per annum, we have been able to increase the net amount carried forward by £84,871.

TRADING CONDITIONS

In my Statement a year ago, I warned you that the substantial reduction of all constructional work and the progressive reduction in expenditure on road maintenance was continuing during the year now under review and would inevitably result in contraction of our trade and profits. We also had to contend with the most adverse weather conditions experienced in any summer since the War. Since early March of this current year, however, our tonnage and profit have shown substantial improvement compared with last year and we have every reason to believe this upward trend will continue.

While it is, of course, disappointing to have to report a reduction in operating profits of over £200,000 even though the net reduction after tax, etc., is as above-mentioned only approximately £70,000, it is, I think, fair to point out that this is considerably more than offset by realised tax-free Capital Profits, and still further by our indirect interests in the profits of Associated Companies not consolidated in our Accounts.

The Capital Distribution of 5 per cent., £62,500, referred to in the Directors' Report, derives from our shipping Subsidiary, but your Company also received on its holding of Amalgamated Limestone Corporation Shares a Capital Distribution of 6d per Share in November, 1958. A further Capital Distribution of 2s per Share will be received on the 5th August. These two distributions amount to £127,890, and this sum added to approximately £10,000 still left to the credit of the Capital Profits Account from other sources, means that an amount equal to 11 per cent. tax-free on our Ordinary Stock still remains undistributed.

Last year I referred also to the heavy burden of the old Distributed Profits Tax, especially on our Preference Dividends. We have enjoyed only partial alleviation in the year under review, but henceforth, the effect for our Company is such that it would now actually cost less (in the net amount distributed plus the amount of taxation involved) to pay our Preference Dividend and 20 per cent. on our Ordinary capital, than it used to cost to pay our Preference Dividend and 15 per cent., a remark which should not be taken to imply any present intention to increase dividends to that extent.

From the Directors' Report and Chairman's Statement of Amalgamated Limestone Corporation Ltd. you will see that from the proceeds of the sale of its Cement Works at Plymouth, it repaid on the 1st July, 1958 our loan of £500,000 and also retained a profit of £372,000.

The profits of that Company derived from its wholly-owned undertakings in the United Kingdom are, of course, consolidated in our Company's Accounts, but its holdings in Ulster and Kenya are minority (but only just minority) interests. The profits accruing thereon are not, and cannot be, consolidated in its Accounts, still less in the Accounts of our Company.

It is therefore pertinent to draw your attention to the substantial achievements of both Ulster Limestone Corporation and the British Standard Portland Cement Company of Kenya, described by Colonel Cleaver in his Statement to Shareholders of Amalgamated Limestone Corporation Ltd.

ANNUAL REVALUATION OF FIXED ASSETS

This seems to me to be an appropriate point at which to refer to our annual revaluation of Fixed Assets by Messrs. Gerald Eve & Co. and of our ships by Messrs. T. W. Tamplin, which, as at 31st October, 1958, were as follows:

	Balance Sheet £	Valuation £
Property	1,150,000	1,787,000
Freehold and Leasehold		
Fixed Plant and Machinery	1,530,000	3,315,000
Loose and Mobile Equipment	243,000	1,054,000
Ships, including payments on account of new ships	1,027,000	1,328,000

from which it can be seen that such valuations aggregate nearly £7,500,000 against written-down book values of less than £4,000,000. In addition there is, of course, our valuable holding in Amalgamated Limestone Corporation Ltd.

It is especially noteworthy that the valuation of our ships at a time when shipping values are at the lowest point for twenty years and £200,000 below last year's valuation, still exceeds book value by £300,000.

The reliability and validity of our annual revaluations has been strikingly illustrated by the fact that the purchase price of the Cement Works sold last year by Amalgamated Limestone was actually based on Messrs. Gerald Eve's valuation.

With regard to Tarmac Limited, preliminary conversations with a view to amalgamation were initiated early this year.

In conclusion, I would like to express my thanks to each and everyone of our Executive Directors, who coped so well with what was a really difficult year.

Once again I am glad to report that no labour troubles have marred the happy relationships which exist in all branches of our Corporation and I am sure you will join with me in expressing our thanks to all concerned.

In response to a Shareholder's question regarding the negotiations with Tarmac Limited, the Chairman said: "Several months ago it seemed to us to be a very constructive amalgamation and on both sides we tried very hard to work out mutually satisfactory terms. We very nearly came to terms, but when we attempted to compromise the gap seemed to widen, and last week it became quite apparent that we could not get agreement on terms which would be proper to go on with and we could not recommend such terms to our Shareholders, so we had to issue a notice to the effect that the negotiations had broken down."

The report and accounts were adopted.

CHAMBERS WHARF AND COLD STORES LTD.

IMPROVED FACILITIES

The 32nd annual general meeting of Chambers Wharf and Cold Stores Limited was held on July 29 in London, Mr. Charles Goldrei (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

The Net Profit before Taxation for the 52 weeks ended 27th March 1959, after charging Depreciation and the other charges detailed in the accounts is £295,029, as against £350,476 for 1957/58. The charge for Taxation is £148,955 as against £204,598, thus leaving the Net Profit after Tax at £146,074 as against £145,878 for the previous year. £54,000 has been transferred to General Reserve.

Your Directors recommend the payment of a Final Ordinary Share Dividend of 11½% making 16½% for the period — the equivalent dividend for the previous year on the Ordinary Share Capital as augmented by the Scrip issue in September 1958 would be 16 1/8%.

DEVELOPMENTS

In my Statement last year, I reported the completion of the extension to our Riverside Jetty. This has considerably improved our Riverside berthing and cargo handling facilities and enabled us to increase the number of ships worked. During the year two of our older warehouses have been demolished and are being replaced by a modern riverside Dry Goods Warehouse of some 3,500 tons capacity, which should be completed by the end of the year. We have acquired the adjoining freehold riverside warehouses, known as Sterling Wharf, which, after alterations, should be available by September next.

In order to improve the facilities offered to our customers, especially in the Meat and Quick Frozen Food Trades, a night service at our Riverside Cold Store has been in operation since May 1st 1959.

Your Directors decided that the time had arrived to provide additional cold storage accommodation in the suburbs of London and so assist in the distribution of Quick Frozen Foods. We are therefore now erecting a modern mechanised Cold Store of some 5,000 tons capacity in the Walthamstow area, and this we hope will be in operation before the end of the summer.

The report and accounts were adopted.

THE METAL BOX COMPANY OVERSEAS LIMITED

The trading results of the Overseas Group have again shown an increase on the previous year but this year the increase has been less pronounced. The sales of the overseas subsidiaries totalled £18,770,000 representing a rise of just over 4%; the trading profits were correspondingly higher at £2,242,000.

During the year our subsidiary in South Africa completed its twenty-fifth year of operations and in so doing followed closely on our Indian Company's anniversary, which was celebrated last year.

Demand for the Group's products continues to rise and additional manufacturing operations have been started in India, Malaya and South Africa.

In India, land has been purchased at Faridabad near Delhi for a new factory to serve customers in Northern India and it is hoped to commence production in the new premises early next year. An additional factory is also planned in the Bombay area and negotiations for a suitable site are in progress.

The factory at Petaling Jaya near Kuala Lumpur in the Federation of Malaya, to which I referred last year, is almost completed and will shortly be in production. This factory will initially be equipped to produce general line containers and will serve the needs of the expanding industry in the Kuala Lumpur area. There are encouraging signs that the availability of Metal Box containers will stimulate existing local packaging industries.

In South Africa, the Vanderbijl Park factory is being extended and will be equipped with a new high speed line built by Metal Box England for the manufacture of beer cans.

All the factories will be equipped with modern machinery manufactured by the Home Company, thereby providing a very valuable market for exports from the Home Machine Shops. During the year machinery to the value of £850,000 was exported overseas.

Towards the end of the year the Company acquired from its Italian associates their holding in La Superbox Fabbrica Contenitori Metallici S.p.A., the can making company in Florence to which reference was made last year. More than 90% of the capital of that company is now held by us, the balance being held by our associates in France and America.

The existing factory is being equipped with additional Metal Box machinery and will operate under our management.

It is expected that the demand for cans in Italy will steadily increase following the establishment of the European Common Market, and it is planned to build a second factory in Italy during the coming year.

EXPORTS

In the past year we have exported goods to a value of £2,660,000. This shows an advance of some 10% over the previous year's figure, part of which relates to machinery and equipment manufactured in the Home Company's factories. This continues the changing pattern of our exports.

THE MOUNTAIN COPPER COMPANY

The 57th annual general meeting of The Mountain Copper Company, Limited was held on July 17 in London, Mr. R. Ellerton Binns, B.Sc., M.I.M.M. (the chairman) presiding.

The following is an extract from his circulated Review:

The operations for the year ended 31st December, 1958 resulted in a Group Profit on Sales of £188,118 as compared with £174,715. The total gross earnings amount to £193,984 as against £217,757 for 1957. The reduction in gross earnings is due to the fact that San Francisco Chemical Company paid no dividend in respect of the year under review, whereas in the previous year we received £35,478 ($100,000) from that source. These results can be considered most satisfactory, for the year was an exceptionally difficult one characterised by extremely erratic trading conditions.

SHASTA OPERATIONS: The adverse effect of the American business recession was decidedly more marked in the earlier part of the year, the general trend being toward a gradual improvement.

With regard to the current year I am pleased to report that pyrites sales to date are higher than for the corresponding period of 1958 and the gradual improvement which marked the latter half of that year so far appears to have been maintained. The future, however, remains obscure, fraught as it is with the prospects of labour troubles and major strikes in the United States, which could adversely affect our business. However, I believe that in the absence of any unforeseen setback or protracted strike troubles the current year should be a better one for Shasta than was 1958.

MARTINEZ: The rapid fluctuations and changes in Martinez operations and sales as evidenced in the past year's working should clearly indicate the difficulty of gauging with any reasonable accuracy even the trend of that business over a twelvemonth. On the other hand sales to date remain satisfactory and accordingly, bearing in mind the probability of strikes and other troubles, I think we can look forward to the current year's results being as good as those for the year of the Accounts.

SAN FRANCISCO CHEMICAL COMPANY: As I have previously stated, the San Francisco Chemical Company, in which we hold a 50% interest, paid no dividend in respect of 1958 although the results were better than those for the previous year. Its liquid position, having regard to its immediate commitments, remains satisfactory, a factor which, together with the large reserve of ore now proved and available at Cherokee and other areas and the highly efficient plant and equipment now in service, may be regarded as providing the Company with a sound platform from which to take-off on its next important expansion stage.

The resolution for the adoption of the report and accounts and the payment of a dividend of 9d per share, less tax, was moved by the Chairman, seconded by Sir Denys Lowson, Bt., (Deputy Chairman) and was duly approved.

CREDIT LYONNAIS

At its meeting on 10th June 1959, the Banks Control Commission approved the Accounts for 1958 and the proposals of the Directors. The dividend is fixed at 200 francs gross (against 175 francs for the financial year 1957), including the guaranteed minimum interest of 69 francs 63 and a super-dividend of 130 francs 37. Payment was made on the 6th July 1959 at the rate of 176 francs nett.

The Banks Control Commission also approved the proposal to increase the Capital and Reserves of the Credit Lyonnais. The capital is thus increased to 12 thousand million francs and the Reserves entered in the Balance Sheet to 2,500 million francs.

The Report stresses that results show a definite improvement with a total of 944,407,682 francs against 673,179,641 francs. Interest charges continue to increase considerably; although capital employed in discount and overdraft operations increased to a lesser extent, it reaped the benefit of a continuance in the official discount rate at 5% during a greater part of the year. Commissions on bank operations increased to a modest extent, and stock exchange operations have fallen sharply. The mass share issues dealt with in 1958 favoured an expansion in commission on subscriptions. The increase in operating expenses is due primarily to interest paid (especially with respect to re-discount and pension transactions) as well as to a heavy increase in fiscal burdens.

MILLARS' TIMBER & TRADING

The annual general meeting of Millars' Timber & Trading Co., Ltd., was held on July 6 in London, Major A. W. Bird, D.S.O., managing director, presiding.

The following is an extract from the Directors' Statement for the year 1958:

Trading results showed a reduction compared with 1957. The Group trading surplus fell from £365,290 to £293,074 although turnover did not suffer to a great extent, being only 5 per cent. down. Net profit amounted to £87,914, and from that we have transferred £20,000 to Contingencies and General Reserves.

The merchanting side of our timber business made reasonable profits. The main cause of the falling away in our profits was the Jarrah and Karri side of our business in the domestic Australian market. The turnover in the export markets for Jarrah was well maintained although there was keen competition from other woods and amongst the Jarrah and Karri producers themselves.

Our Liverpool Company—David Roberts, Son & Company (Bootle) Limited—made satisfactory profits and increased their turnover. They are the main specialists in the Greenheart trade throughout the world. Greenheart is in increasing use in docks, harbours, and similar marine works everywhere.

Unrest in the Middle East disturbed our markets, but we are actively engaged in expanding our sales elsewhere, and these efforts have met with some success.

AMALGAMATED LIMESTONE CORPORATION

The 8th annual general meeting of Amalgamated Limestone Corporation Limited was held on July 21 in London, Colonel D. W. Cleaver, D.S.O. (the chairman), presiding.

The following is his circulated statement:

I will mention first the sale of Saltram Cement Works which enabled us on 1st July, 1958, to repay £500,000 borrowed from our Parent Company, Amalgamated Roadstone Corporation Ltd.

It also resulted in a Revenue Profit of £196,672 and a Capital Profit of £175,979. It is this Capital Profit which, supplemented by a recent receipt from Kenya, provides the £200,000 which we have decided to distribute on the 5th August 1959, being 2s. per Share free of Income Tax and Surtax.

THE YEAR'S RESULTS

Trading Profit of our wholly-owned undertaking amounted to £160,090 (which included seven months profit only in respect of Saltram Cement Works which were sold as from 1st June, 1958), against £175,998 for the previous year. Depreciation absorbs £45,910, Loan Interest £20,000, Taxation £170,960, Auditors' and Valuation Fees £2,420, leaving, after bringing to credit the above-mentioned Revenue Profit of £196,672 arising from the sale of Saltram Cement Works, £117,472 to be added to the net amount to be carried forward which will then be £274,962.

The exceptionally wet summer of 1958 was most adverse to our trade in ground limestone for agriculture, but I am glad to say that this current year is looking much better and we must hope for continuation of fine weather for the rest of this season. Profits from the Company's other activities were satisfactory and are being maintained.

Ulster Limestone Corporation whose trade, as you know, is also the production and sale of ground limestone for agricultural purposes, suffered from last year's exceptionally wet season; its profits were about one-third lower than those of the previous year. Since March this year, however, its production and sales have recovered well and given a continuation of favourable weather conditions, I shall be surprised if the current year's results are not back to those of previous years.

I am glad to be able to report that having ploughed back all profits available to that end, it has now redeemed in full in four successive annual instalments, the whole of the £94,000 Loan Stock issued to finance its undertakings. The resultant undivided profit was capitalised by the issue to Shareholders by way of bonus, of new Redeemable Stock the total amount of which is now again £94,000.

PLANT EXTENSIONS COMPLETED

The British Standard Portland Cement Company in Kenya continues to flourish. The Plant extensions to which I referred last year have been completed and the productive capacity can be rated at 300,000 tons of cement per annum. Average selling prices in East Africa have shown some contraction during the year under review, but the very high quality of cement produced, and its consequent ever-increasing popularity with consumers, together with reduced costs stemming from the increase in production, should enable the Company to continue to show excellent results.

This Company has also now redeemed out of profit the whole of the £560,000 Loan Stock issued to finance the first stage of its development. Also out of profit, its capital expenditure on properties and works as at 31st October, 1958, amounted to over £1,900,000 and its net liquid surplus had grown to over £400,000.

In the absence of that Company's Accounts and Directors' Report, this is, I think, the best way to bring home to you the value of this investment. As soon as the Directors' Report reaches us, copies will be circulated to you.

The staff and workmen have worked throughout with their usual zeal, and on your behalf I take this opportunity of thanking them for their unfailing goodwill and assistance.

The report and accounts were adopted.

BRITISH SUGAR CORPORATION

The 23rd Annual Ordinary General Meeting of British Sugar Corporation Limited was held on July 28th in London.

The following is an extract from the circulated address of the Chairman, Sir Edmund Bacon, Bt., for the year ended March 31st, 1959.

Turning now to the agricultural and operating results of the past twelve months, I am able to tell you that with a yield of 5,724,328 tons the 1958-59 sugar beet crop established a new record for this country. It was almost a million tons higher than the average of the previous five years. The crop was grown by 35,454 farmers on 413,658 acres, representing an average of 11.67 acres per grower.

Many individual factory yields per acre were also records. Spalding averaged 16.53 ton per crop acre and five East Anglian factories had yields of over 15 tons per acre. The average yield for the whole country was 13.88 tons per acre, compared with the previous record of 13.11 tons in 1953-4, and 11.81 tons, the average of the past five years.

FAVOURABLE WEATHER

Favourable weather during the winter of 1957-58, which facilitated the preparation of excellent seedbeds, gave the crop a good start, and the excellent germinating quality of 1957 harvest seed resulted in higher plant populations. Heavy rains during spring and early summer kept the crop growing and prevented the spread of aphids, with the result that it was relatively free of virus yellows.

In addition there was a greater use of systemic insecticides than in any previous season and one-quarter of the crop, or 100,000 acres, was sprayed by the end of July. Another favourable feature was the good growing weather during the autumn, which resulted in a steady increase in root weights during the greater part of the campaign.

Harvesting was handicapped by periods of excessive rain in the South and snow in the North, but thanks to strenuous efforts by growers and our field staffs, factories were kept fully supplied, and the whole crop, with the exception of some very small quantities of frozen or waterlogged beet, was delivered. Although the heavy rainfall depressed sugar contents to around 15 per cent., juice purity has shown a welcome improvement and has been equalled only once in the past five years.

ADVANCE IN MECHANISATION

The fact that about 60 per cent. of the crop was harvested mechanically compared with about 6 per cent. ten years ago shows the advance that has been made in the mechanisation of autumn work on the crop. Similar if less spectacular progress is being made with the mechanisation of spring work to reduce hand labour, and 42 per cent. of the total acreage was sown last year with specially-processed seed.

This has been brought about to no small extent by the demonstrations which we have organised in conjunction with the Sugar Beet Research and Education Committee. Both the spring and autumn demonstrations in 1958 were well attended and very successful.

Sugar production consisted of 451,241 tons of white and 285,550 tons of raw sugar, equivalent to a total output in terms of white sugar of 722,538 tons. The production of dried pulp in all forms was 413,888 tons. The increase in the production of pulp nuts to 19,811 tons enabled them to be more widely offered both to growers and the feeding-stuffs trade and they have been well received. Molasses production was 242,735 tons.

NEW TECHNICAL RECORDS

I am glad to tell you that new technical records have been achieved. These have been made possible both by our policy of capital expenditure to expand capacity and increase efficiency and by the magnificent work of our employees at all levels, in preparing for the campaign and in the campaign operations.

The daily slicing capacity of the factories rose to a new high level of 47,617 tons per day, and even at this capacity the loss of sugar which occurred in processing was the lowest recorded.

We have again reduced considerably our seasonal labour complement so that the number of man-minutes per ton of beet worked has reached a new low level.

Capital expenditure last year was £1,898,000, a sum which has never before been exceeded in the history of the Corporation. We have not yet obtained the full benefit of this expenditure, as much of it is being devoted to large schemes which will take two years to complete, as, for example, continuous extraction plants at three factories and one new power plant. Amongst projects completed during the year were the erection of bulk sugar silos at Brigg, the provision of a large pulp drier at Cantley, improvement in beet reception at Cupar, and a new evaporator plant at Ipswich.

The use of automatic control devices and instrumentation has been widely developed in our factories and this work has resulted in a more constant quality of output and generally in improved working conditions.

The report and accounts were adopted.

"MONTECATINI"

Società Generale per l'Industria Mineraria (Milan)

The Board of Directors of *Società Montecatini* met on June 15 in order to review the progress made by the Company and the Group as a whole during the first part of the current business year.

The economic results of the first three months of 1959 are better than those of the comparable period of the previous year. For the period January-May 1959, substantial progress in production, sales and deliveries, whether in respect of Montecatini or the Group as a whole, may also be recorded. The Montecatini Company itself has had an average increase of 5% in its turnover up to now.

The Board also took note that, following the resolution adopted at the Company's Annual General Meeting of April 28, 1959, a bond issue for 510m. is to be floated in the United States, in co-operation with Mediobanca. This loan will be underwritten by a group of American banks led by Lazard Frères & Co., Lehman Brothers and Kuhn Loeb & Co. It will ensure the necessary funds for the erection of a plant for the production of Moplen (polypropylene). This plant is expected to be completed and on stream by the beginning of 1961, and will further increase the high esteem in which both Montecatini's technical prowess and its achievements are held abroad.

The issue of the second part of Italian bonds totalling Lit. 30,000m. has been deferred, however, pending the provision of legislation, which has been foreshadowed for some time, regarding the incidence of income tax on the interest accruing on bond holdings.

The Board further noted with satisfaction the gradual but steady development of the wide production programme of the Parent Company and its subsidiaries, which continue to follow, especially in the depressed areas of Italy, the traditional Montecatini policy which tries to combine the provision of production facilities in accordance with sensible market requirements, with the objective of contributing, directly and indirectly, to raising the standard of living of the Italian people in the wider general interest.

Fully conscious of its duties as a great national enterprise, the Montecatini Company has a number of industrial projects in the planning stage and in process of erection in various parts of the country, and particularly in the following eleven provinces: Grosseto, Terni, Pescara, Naples, Foggia, Brindisi, Catanzaro, Syracuse, Caltanissetta, Agrigento, Cagliari.

These projects are in almost every case of considerable magnitude and some are constructed on a grandiose scale. They are always exceedingly well received both by the local authorities and by the local population, since it is realised that in the ordinary course of events they are bound to give rise in their turn to new and growing enterprises for ancillary and complementary production. They will also promote the expansion of transport facilities by sea and land and the establishment of infra-structures, the technical specialisation of labour and other important aspects of economic and social life.

LOBITOS OILFIELDS LIMITED

The 51st Annual General Meeting of Lobitos Oilfields Ltd. was held on July 21, Mr F. C. Bowring presiding.

The following are extracts from his circulated statement for the year ended 31st December, 1958:

In addition to the highly competitive trading conditions which have prevailed in the oil industry during the year under review, the results for the year unfortunately also reflect the serious difficulties with which our interests in Peru and Ecuador are contending.

In order to safeguard as far as possible the future of your Company's operations, your Board has sought to broaden its interests. Your Company's stake in Canadian oil and gas, and potential oil-bearing territory has been increased; plans for modernising and increasing the flexibility of the Ellesmere Port refinery are under consideration, and investment in the manufacture of specialty products has been increased.

PERUVIAN SUBSIDIARY (C.P.L.)

The continuing uneconomic domestic prices obtainable for refined products necessitated severe curtailment of the Field operating programme, and by the end of December all drilling had ceased and all possible economies were being effected. As a consequence production is declining and, unless economic conditions permit resumption of full drilling, it must continue to decline to the detriment of the operating companies and the Peruvian economy.

TANKER

The new 15,500 d.w.t. tanker was launched on 21st December, 1958, and named "El Lobo." She commenced her maiden voyage in May.

DISTRIBUTION AND MANUFACTURE

Highly competitive trading conditions continued in the areas served by the three distribution companies, but they maintained their respective market positions.

Since the end of the year under review your Company has acquired a majority interest in Dussek Brothers & Co. Ltd., manufacturers of cable oils and compounds, paint and putty and other specialty products.

CANADA

During the year under review the exploration and producing Company of Lobitos in Canada, became a subsidiary. It acquired further acreage in Pembina and two drilling reservations in the Bigoray area some miles North East of the Pembina Field. Two successful gas wells have been drilled on these reservations on a farm-out basis, and one of them has indicated the presence of a substantial gas reservoir at shallow depth.

Further drilling will, however, be necessary to evaluate the full potential of these discoveries, which are separate from and in addition to the Minnehik gas field already proved by the Company.

Lobitos' field of activities has recently been widened by an application for a permit to explore approximately 2,500,000 acres in the Arctic Islands of Cornwallis, Bathurst and Melville. It has been arranged for geological and aerial surveys to be undertaken immediately. Owing to its geographical remoteness, it is proposed to carry out these operations through the Round Valley Oil Company, which is a subsidiary of Lobitos Oilfields Ltd.

PROFIT

The Profit of £451,668 shows a substantial fall from the results of the previous year in spite of a material reduction in the United Kingdom taxation charge due to Investment Allowances granted mainly on the new tanker m.v. "El Lobo."

SOCIETE ANONYME DES AUTOMOBILES PEUGEOT (PARIS)

At the Annual General Meeting held on June 23rd with M. Jean Pierre Peugeot in the Chair all the resolutions were unanimously adopted.

The gross dividend for the financial year 1958 was fixed at Frs. 962.60 gross for the 1,600,000 shares at Frs. 11,250 which will be payable at the rate of Frs. 756 net at a date to be decided by the Board of Directors. This represents an increase of 7 per cent on the preceding year, taking into account the changes brought about in the firm's capital.

The turnover for the year reached Frs. 133 milliard — an increase of 19.56 per cent on the previous year — with a total production of 188,714 vehicles against 166,521. The sales in France have increased by 4 per cent, while those overseas have risen by 51 per cent, this figure being greater than that for the total overseas sales of the French automobile industry, which now stands at 47 per cent for 1958.

The net profit for the year after deduction of Frs. 4,400 million for amortisation amounts to Frs. 3,179 million, an increase of Frs. 200 million on the previous year, the percentage on the turnover being slightly less than that of 1957 (2.68 per cent) due to the fact that the increased sales consisted almost entirely of exports.

REPFRANCE

75, Champs-Elysées, Paris, France

The First Annual General Meeting of REPFRANCE was held in Paris on April 27th under the Chairmanship of M. Jean Picard, Chairman of the Board of Directors. The following is a summary of the report presented by the Board:

The Company was formed in 1957 by Lazard Frères, Banque de l'Indochine, Chargeurs Réunis, Cie Financière de Suez, Cie Française du Sahara, CNEP, CIC, Paternelle, Pechelbronn, and Société Financière de l'Artois, in order to finance the development of oil prospection and extraction in France and the Franc area.

REPFRANCE holds interests in 21 companies engaged in the search for oil. The portfolio includes a 2.77 per cent interest in SN Repal which itself controls half the Hassi Messaoud and Hassi R'Mel oil deposits.

Other holdings include a 10 per cent interest in Petrorep which exploits the Coulommes deposits in the Paris region. As a result of its participations, and of various

agreements between interested companies, REPFRANCE participates to a greater or lesser degree in existing deposits or future discoveries from 71 per cent of the area in France for which prospecting permits have been granted, and from 85 per cent of the concessions in the Sahara.

Consequently, REPFRANCE shares to the extent of 4 per cent in the discovery of the Hassi 'el Gassi field, some 50 miles south of Hassi Messaoud, by Pétroles d'Aquitaine. The Company also holds 1.5 per cent interest in the oil deposits found by COPESEP in the Paris region.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

HENDERSON'S TRANSVAAL ESTATES

The 47th annual general meeting of Henderson's Transvaal Estates, Limited was held on July 8 in London.

Sir Joseph Ball, K.B.E. (the chairman), presided and, in the course of his speech, said:

The net profit attributable to the parent Company, after all charges including taxation, at £89,000, is rather more than double the figure for last year, namely £43,700. In the light of these very satisfactory results, your Board feels justified in recommending a final dividend of 15% which will make a total distribution for the year of 21¼%. It is probably unnecessary for me to point out that the recommended rate of dividend is an all-time high in the history of the Company.

Commenting on the Company's dividend record, the Chairman said: Stockholders have been well rewarded in the past, and I have no hesitation in expressing the view that they may look forward with some confidence to the future prospects of the Company.

Turning for a moment to the Company's investment portfolio, I may here remark that, since the end of the financial year, there has been an increase in the value of our quoted securities which, on 3rd July, showed the very substantial appreciation of £350,000 on the balance sheet value of £675,000 — as compared with an appreciation of £216,000 on 31st March last.

The Chairman then reviewed the activities of Tweefontein United Collieries Limited, White's South African Portland Cement Co. Ltd., and Mineral Holdings Limited.

The report was adopted.

SPEAR AND JACKSON

The 54th Annual General Meeting of Spear & Jackson Limited was held in Sheffield on July 16, the Chairman and Managing Director, Mr Stephen M. de Bartolomé, presiding. The following are extracts from his statement.

1958 had not been an easy trading year. Mr de Bartolomé recalled that a lessening of activity in the timber trade inevitably affected the Company's important export business in wide bandsaws and circular saws, just as a general reduction in demand for steel had its effect on the Company's home sales of metal-cutting saws, notably segmental saws.

Despite unfavourable factors there were others contributing to the Company's very satisfactory results. In British Columbia, for example, an upturn of demand from merchants serving the lumber industry, prompted by fears of stoppages, helped to explain the better results achieved by the re-built Canadian factory. The purchase and subsequent trading results of a subsidiary, acquired in April, 1958, were also reflected in the accounts. Modest improvement had been recorded by most manufacturing departments, off-set here and there by narrowing profit margins. Demand, in particular, for first quality Sheffield made hand tools had shown no slackening.

Continuing development was an essential condition of continuing prosperity, said Mr de Bartolomé, and the Company's considerable modernisation plans were being pressed forward. Outstanding contracts and schemes approved required £293,000.

Group trading profit, before taxation, of £317,258 compared with £266,239 for 1957. Net profit increased by £26,449 to £149,938, and recommended by the Directors was a dividend of 20% and a bonus of 17½% (as against 20% and 7½% for the previous year). The report was adopted and an increased distribution of 37½% was approved.

TELEPHONE MANUFACTURING COMPANY

The 29th annual general meeting of Telephone Manufacturing Company Limited was held on July 13 in London, Mr Fred. T. Jackson, O.B.E., Comp.I.E.E. (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

The Group profit for 1958 amounted to £102,848 before providing for Taxation. This represents a reduction of £140,316 on the figure for 1957. After various adjustments, including provision for Taxation of £59,059, the Balance of Net Profit of the Group amounts to £61,890 as against £84,412 for 1957.

We are now suffering from the loss of business from the British Post Office for Subscribers' Apparatus and whilst it was possible to maintain in 1957 the rate of turnover achieved in 1956 with the help of business from other sources, it has proved quite impossible to offset the further reduction experienced in the year under review.

The expansion of the Telephone Service and the plans for automation are dependent on capital being made available. The Post Office are not their own masters in this respect and until the Treasury loosens the purse strings they will continue to be handicapped in their planning of the service and prevented from undertaking any energetic campaign to expand it.

The Line Transmission business at our St. Mary Cray factory has been well maintained. Our Capacitor Division, also at St. Mary Cray, is growing steadily and we believe has a promising future.

General prospects for the current year are not encouraging. I am afraid that I can only forecast a further deterioration in the result of our trading for 1959.

The report was adopted and the total distribution of 10% approved.

DENNISTOWN RUBBER COMPANY

The 26th Annual General Meeting of Dennistown Rubber Estates Limited was held on July 10 in London, Sir Harry Townend (the chairman) presiding.

The following is an extract from his circulated statement:

The working profit for the year under review was £26,620 compared with £31,351 for the previous year. This reduction is attributable mainly to the lower price which we received for our product. Output also declined by some 24,000 lbs. After providing for taxation your Directors were able to maintain the dividend at 20 per cent.

Replanting is continuing according to plan and in 1958 we dealt with 107 acres on Kim Song Estate and 93 acres on Parit Buntar Estate. At the end of the year the Company had 1,319 acres of improved material equivalent to 40 per cent of the total acreage under rubber. Some 376 acres of this improved material were mature.

Output from the Oil Palm area on Parit Buntar Estate continues to improve and this area is making a contribution to the profits of the Company.

The estimates for the year ending 31st December, 1959, are based on an output of 1,350,000 lbs. The crop harvested up to the end of May amounted to 563,600 lbs.

The present spot London price for No. 1. Ribbed Smoked Sheet is around 29d. per lb. and is giving us a satisfactory return. Prospects for 1959 accordingly appear good.

The report was adopted.

WALKER CAIN LIMITED

The 37th ordinary annual general meeting of Walker Cain Limited was held on July 10 in London.

The Rt. Hon. Lord Brocket (the chairman), presided and, after commenting on the adverse weather conditions encountered during the year and the setbacks suffered by certain heavy and capital goods industries together with textiles, continued:

Against this background of less favourable economic conditions our own output lost some ground; but the drop in production was not alarming and I am glad to say that draught beer, by far the greater output of our Brewery, suffered less than bottled. Wines and Spirits sales were well maintained.

You will remember that for many years I have complained of the high taxation on Beer and Spirits. In my last annual speech I expressed the rate in terms of purchase tax as 160%. I am therefore grateful to the Chancellor of the Exchequer for reducing the beer duty which, expressed in terms of purchase tax, now stands at 130%.

Following our usual practice, the benefit of this reduction in beer duty was immediately passed on to our customers.

Since the Budget our beer sales have risen, but an improvement in trade was apparent during March, and one must conclude that a proportion of the increased trade since April is a continuation of this improvement. It may be a little time before a recovery in the heavy and capital goods industries manifests itself, but prospects are now brighter.

The report was adopted.

DORMAN LONG UNIVERSAL BEAMS AND COLUMNS IN THE HIGHWAY PROGRAMME

Universal beams and columns have a far greater load-carrying capacity than any previously available in Great Britain, and can be obtained in lengths up to 90 ft.

In relation to the highway programme, this extra strength means that for a great many bridges Universal beams are now being used with a minimum of fabrication. Moreover, each basic section is available in different 'weights', giving a wide selection to the designer.

Compared beam for beam with those hitherto available, this means that the same loading per foot can be carried over a much wider span, or several times the loading if the spans are equal. For example, they are capable of carrying the heaviest Ministry of Transport loadings over clear spans up to 75 ft. wide, in some cases greater if high tensile steel is used.

All work is simplified whether in design or fabrication.

The illustration shows the Cataractonium Bridge, one of 8 bridges built under the direction of R. Sawtell Esq., A.M.I.C.E., County Surveyor for the North Riding County Council: this bridge over the River Swale is built upon piers and has side spans of 56 ft. and a centre span of 75 ft.

In all these bridges, Dorman Long Universal beams have been used to great effect, and except for the widest spans, without added flange plates.

DORMAN LONG

NOW IN THE SKY FOR THE FREE WORLD

N-156F

AN ENTIRELY NEW KIND OF FIGHTER!

NORTHROP'S SUPERSONIC FREEDOM FIGHTER DELIVERS HIGH-PERFORMANCE DEFENSE AT 1/2 THE COST OF COMPARABLE FIGHTERS!

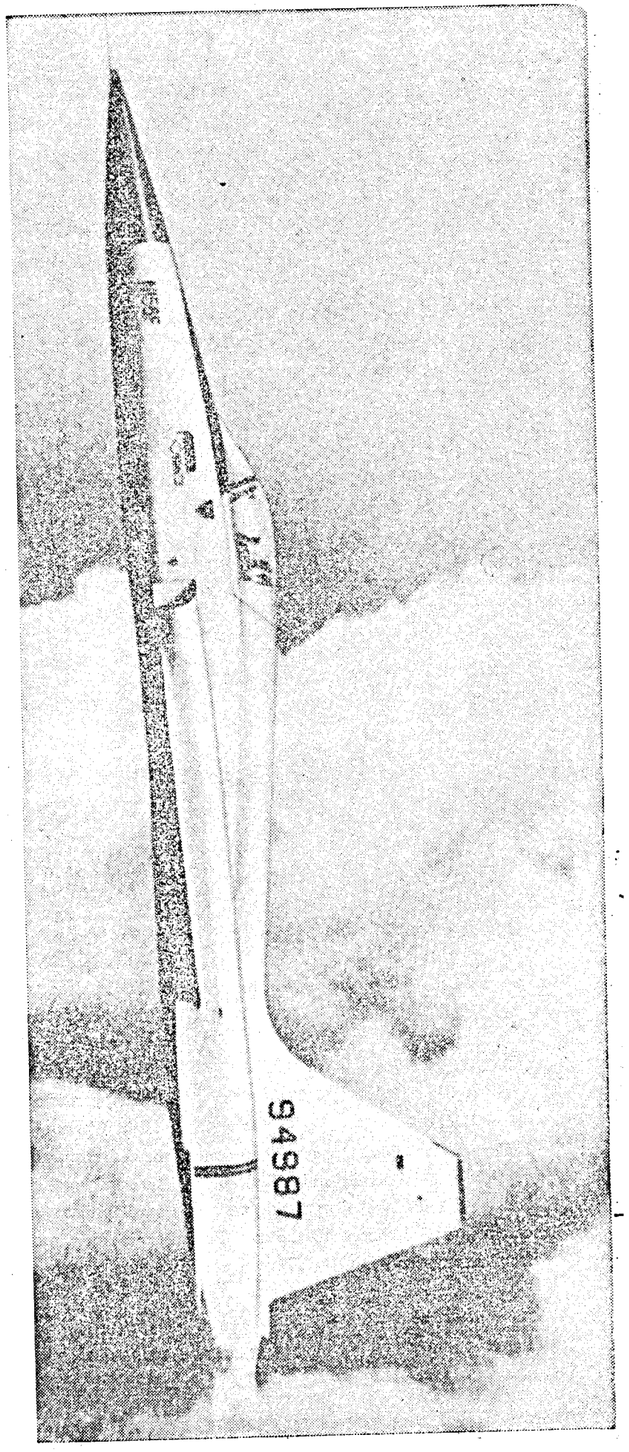
Northrop's N-156F is the first airplane U.S.-designed specifically for defense needs of the other Free World nations. The Freedom Fighter takes advantage of new jet engines, new lightweight materials, new design technology that no other fighter yet reflects. With its multi-purpose mission capability, performance, and ease of operation, the N-156F can virtually double a nation's effective fighting force.

This is because the Freedom Fighter is lighter, smaller, and easier to operate. Light, simple design cuts procurement costs, results in fuel savings and ease of maintenance. The Freedom Fighter cuts by approximately 50% the need for heavy, costly ground support and rare skills.

This highly reliable airplane can take off any time—almost anywhere—scant seconds from the scene of possible air or ground combat. This mobility contributes to quicker reactions. It keeps more aircraft battle-ready along a wider and more dispersed perimeter for maximum striking power—with minimum vulnerability. As a multi-purpose fighter, the N-156F flies air-to-air, air-to-ground, and low-altitude strike and reconnaissance missions.

No weapon system today matches the Freedom Fighter's advantages. It costs less to buy, to fly and to maintain. And because the N-156F is designed for production outside the United States, this new fighter will contribute to the economies of the countries it will defend.

Test pilots use the word "clean" to describe the N-156F's performance. Their reports praise its low- and high-speed flight handling characteristics. They find the new fighter meets and exceeds all the performance indicated and assured by extensive wind tunnel tests. They appreciate its twin-jet safety – its all-weather dependability.



NORTHROP INTERNATIONAL

A Division of **NORTHROP CORPORATION**

Beverly Hills, California, U.S.A.

A small plant...

The Kellogg organisation has earned a world-wide reputation for the speed, economy and over-all efficiency with which it tackles the smaller engineering and construction projects as well as the more spectacular ones. A recent example is the fume absorption plant, part of a major uranium processing operation, at the Springfield Works of the United Kingdom Atomic Energy Authority. Kellogg International Corporation undertook the entire responsibility for engineering and building this small but vital project, and applied to it all of the experience and knowledge gained in the firm's largest undertakings.

Kellogg International Corporation welcomes small projects, and handles them all in a big way. Inquiries are cordially invited concerning the co-ordinated engineering, procurement, and construction service KIC provides for plant investments of *any* size.

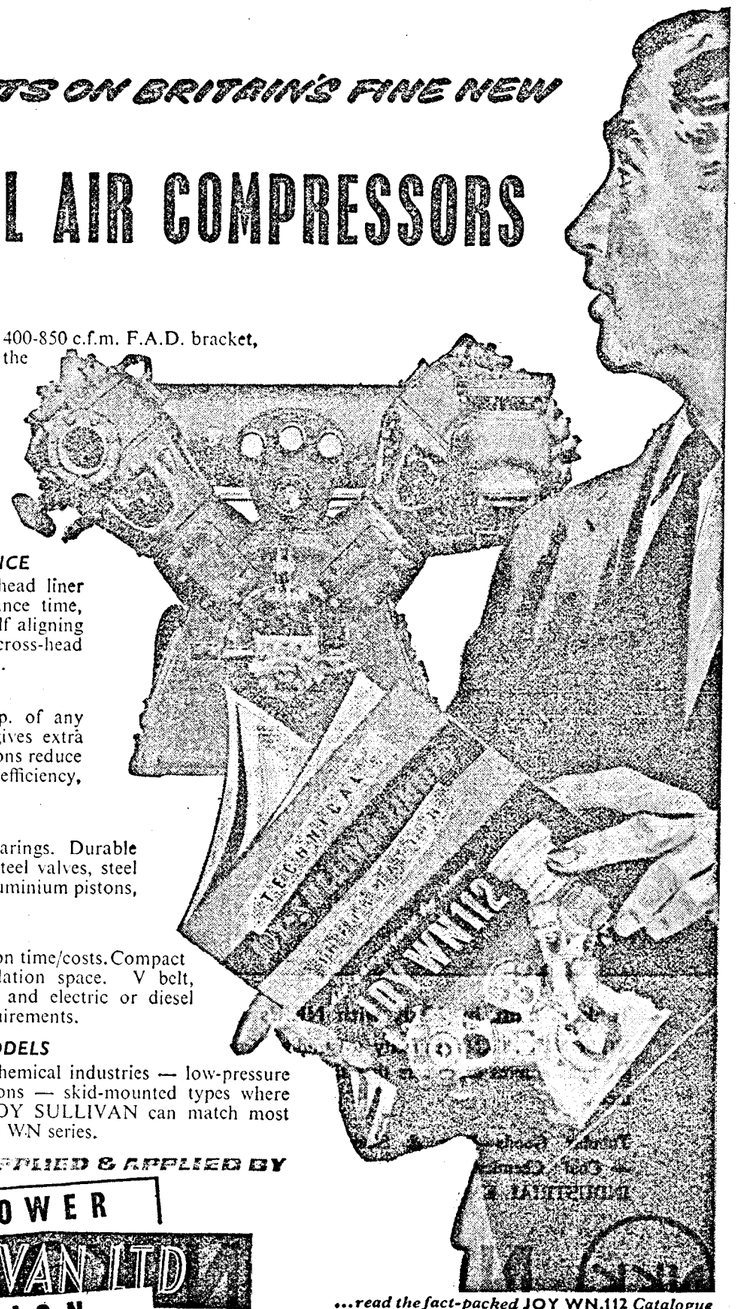
GET THE FACTS ON BRITAIN'S FINE NEW

INDUSTRIAL AIR COMPRESSORS



Where air consumption is in the 400-850 c.f.m. F.A.D. bracket, at pressures up to 125 p.s.i., the new British made Joy WN.112 Industrial air compressors handsomely meet your specification. Look at these design features — each one *positively* contributing to the efficiency and durability for which Joy-Sullivan plant is renowned abroad.

FOR MINIMUM MAINTENANCE
Replaceable cylinder and crosshead liner eliminate rebores, cut maintenance time, restore 'new' performance. Self aligning main bearings and box-type cross-head guides for low loading, long life.

FOR TOPMOST EFFICIENCY
Joy control requires least h.p. of any system. Tubular inter-cooler gives extra cooling surfaces. Truncated pistons reduce recompression loss, improve efficiency, give streamlined airflow.

FOR EXTRA LONG LIFE
Oversize spherical roller main bearings. Durable construction embodies stainless steel valves, steel piston rods, replaceable liners, aluminium pistons, mehanite frame.

FOR EASY INSTALLATION
Package design reduces installation time/costs. Compact vertical design for small foundation space. V belt, direct or flange mounted drive and electric or diesel motors match in with most requirements.

SPECIAL JOBS—SPECIAL MODELS
Oil-free versions for food and chemical industries — low-pressure models for specialised applications — skid-mounted types where portability is required . . . . JOY SULLIVAN can match most individual requirements from the WN series.

Why No. 5 Blast Furnace matters

There were four blast furnaces in the City of Steel, producing 30,000 tons of pig-iron every week for steel-making. Why should a fifth be important or even necessary?

Here in Britain the fact which most surely reflects our rising living standards is the rapidly increasing demand for things made from sheet steel and tinplate: motor-cars and tractors, washing machines, refrigerators, television sets, canned food and beer.

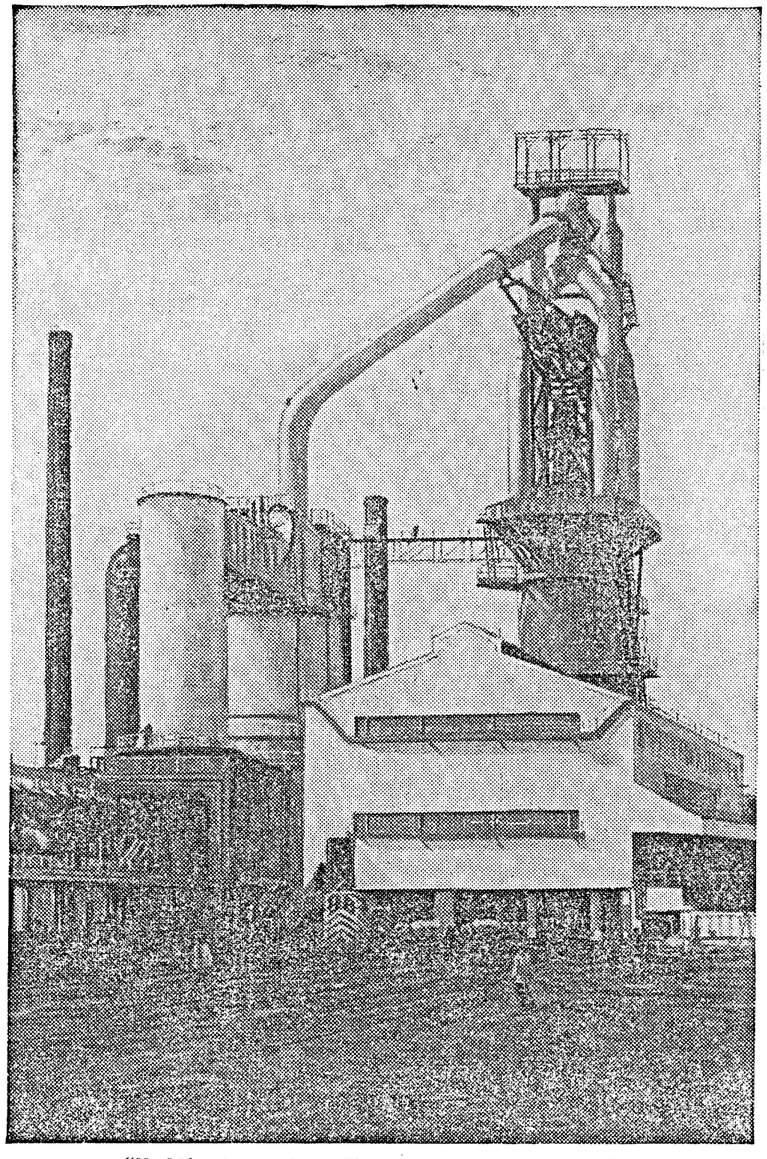
The manufacturers of all these things need more raw material to meet the demands that you—and the rest of the world—are making. As standards of living go on rising they are going to need even more. In fact 30,000 tons of pig-iron a week are no longer enough.

CITY OF STEEL

That is why we in the City of Steel have been increasing our capacity. Our Third Development Plan, now nearing completion, has entailed the construction of magnificent new plant, part of which is the new blast furnace. Designed with all the most modern technological improvements, it also happens to be one of the largest in the world.

But what matters to us in The Steel Company of Wales is the extra 10,000 tons of pig-iron it will produce every week for making into steel.

No. 5 Blast Furnace is an expression of our confidence in the continuing rise in standards of living at home and abroad.



"No. 5 Blast Furnace, Margam Works." From an original painting by Charles Cundall, R.A.

THE STEEL COMPANY OF WALES LIMITED

SUBATLANTIC TELEFILMS

The skill and enterprise of the B.B.C. engineering staff, in successfully transmitting television news films via the Transatlantic Submarine Telephone cable, has achieved yet another advance in telecommunications techniques. B.B.C. slow speed telerecording equipment was designed to operate over the S.T.C. music transmission equipment which was specially developed for the transatlantic cable system and installed in Montreal, New York and Oban.

Other S.T.C. equipment, including the newly inaugurated microwave radio-relay system in Newfoundland, submerged telephone repeaters in the Newfoundland-Nova Scotia section of the transatlantic cable and coaxial cable equipment in the U.K. also played an important part in the transmissions which enabled B.B.C. television viewers to see filmed records of the arrival of Her Majesty the Queen in Newfoundland and other highlights of the royal tour, only a few hours after the events had taken place.

S.T.C. has second-to-none experience in the development and manufacture of transmission systems and equipments which are in service throughout the world.

The German Deadlock

WEST GERMANY, it has been said, has its foundations in the west and its national aims in the east. Thus, Bonn rightly sees its western friendships as a condition of survival; whatever unwelcome things Mr Eisenhower may have heard from Dr Adenauer during his Thursday in Bonn, he will not have heard anything to throw doubt on west German loyalty to Nato or to the European Community. At the same time, the pursuit of national unity is imposed on German governments by a trend in German national feeling older and deeper-rooted than the German Federal Republic; and Nato, in accepting west Germany as a member, had to accept this German national aim as its own.

It is an aim that necessarily involves conservative west Germany with communist eastern Europe, either by way of conflict, or by way of accommodation. It is not, therefore, through an old man's eccentricity that any attempt at a change in east-west relations causes Dr Adenauer to look round indignantly, like a man who has just discovered that his wallet has been stolen. Not only is west German policy adjusted to bad east-west relations and, in a way, based upon them. An attempt to change them (say, by Mr Eisenhower and Mr Khrushchev) will involve those who attempt it in a discussion of German affairs in Dr Adenauer's absence, whether (as in Mr Khrushchev's case) they like it, or (as in Mr Eisenhower's) they do not.

It may not have been inevitable, but it was certainly natural, that the assiduous cultivation of western friendships should have been matched in west German policy in these ten years by a dogged mistrust of any east-west talks. Mr Eisenhower may have been able to reassure the German chancellor that there would be no rash deals with Mr Khrushchev behind Germany's back. He was probably able to draw reassurance in turn that Bonn will put the cohesion of the alliance before the pleasures of self-indulgent policies of prestige and, equally, before the deceptive attractions of a European block led, in opposition to American leadership, from Paris. His landing at Bonn will have done good. Still, an underlying west German suspicion of the American-Russian talks is likely to remain, and to come to the surface again if the talks appear to go well.

Yet Dr Adenauer must be aware that Germany's inability to help in any way to shift the deadlock on the German question is the point at which he is most vulnerable. In his ten years of rule he has attended to west Germany's foundations, the western ties, with astonishing success. West Germany is the strong and respected ally of its former conquerors and the trusted friend of the United States. Dr Adenauer's single-minded vision and generous willingness to make concessions have wrought a historic change in Germany's relationship with France. But the decade of this transformation has also seen the division of Germany gain acceptance in international life and the two German states grow steadily apart. In economic life, political behaviour, and military effort, each part of Germany has been welded into the power block in which it lives. In the pursuit of national unity the Bonn government can show no progress.

In part that has been by the Russians' wish; they value the existence of a communist regime in east Germany, and the Russian military base there has been, at times, a key to its control of all eastern Europe. But the west's efforts to remove the division have been no more than negative—the refusal, in effect, of formal acceptance to the present position, without any very plausible

suggestions for changing it. Dr Adenauer and his allies have accepted the stalemate, for very different reasons.

He himself seems well aware that inflexible western policies are unlikely to yield results today. But he still cherishes the hope that one day, if the west steels itself to wait and builds up its strength relentlessly, Russia will give way. Germany's allies, by contrast, did not rearm Germany for the purpose of imposing western policies on central and eastern Europe. Nor is it easy to see any reality in Dr Adenauer's hopes of a crumbling of Russian power. But in both Britain and France there is an inclination to be content with the *status quo* in Germany; to divide a country in two is, after all, a most effective curb on its power. This is not to accuse the western governments, which have regularly paid their respects to German unity, of hypocrisy. But their first interest was to see west Germany tied to the western camp; the need for collective self-defence against Soviet hostility has caused other, longer-range considerations to be put aside.

MR KHRUSHCHEV and President Eisenhower are not going to remove the east-west conflict in a few meetings. Their separate concern for the security of their alliances will remain. Yet the fact that they are to meet indicates a change of attitude, a common reluctance to leave world relations where they are, and the dawning awareness that if the risk of war between them is not to continue to grow, it must somehow be actively reduced. Once accepted, this awareness could constitute a common interest between the two greatest powers, which carry the heaviest burdens and run the greatest risks.

Such a new approach must differ markedly from Dr Adenauer's conception of a long, dedicated wait while the strength of the west builds up. No doubt, therefore, he has been urging President Eisenhower to caution; reminding him that west Germany must be treated as a military equal with the other allies; doing what can be done to ward off negotiation, particularly on central Europe, but also generally on any subject except, perhaps, world-wide disarmament, which experience has shown not to promise early results. This is not an easy role to sustain year in, year out, without reaping odium. Dr Adenauer's policy is not only yielding few results in the east. It is also beginning to cast shadows across the second key interest of west Germany, its friendships in the west, not only with Britain, but with America as well.

Dr Adenauer's position in the alliance is indeed a difficult one. With reason he has made the alliance with France a first object of policy. Less rightly, he has sought to use this new alliance to block what looks like a new turn in the policy of the United States. But the partnership with President de Gaulle, too, is uneasy. In his use of the ties with Bonn to further national French aims, General de Gaulle sometimes treads on German toes. General de Gaulle's demand for a special place in western councils is both a slight on Germany's own standing in the alliance, and a test of Germany's allegiance to the United States.

One episode in the new exchanges between the United States and the Soviet world has already caused heart-searching in Bonn: Vice President Nixon's visit to Poland and the warmth of his reception there. Bonn not only refuses to accept Poland's present frontiers, it also refuses diplomatic relations with the east European countries that recognise the east German state. Now it has had to watch the Poles explaining to Mr Nixon that there is another side to the frontier question, reminding him that it is just twenty years since German troops marched into Poland, and providing him with a living demonstration that some of the changes in eastern Europe since 1945 are here to stay. Bonn's effort to cold-shoulder the eastern countries seems to invite the very deal over the heads of Germany which some Germans fear. The Nixon visit has prompted a good many people in Germany to ask whether it is not time for a change, at least in this matter of diplomatic relations with the Poles and Czechs. In the end, after all, a lasting settlement of the eastern frontier question implies a *rapprochement* between Germany and Poland, just as peace within western Europe required the reconciliation between Germany and France.

SUCH considerations apply, with equal force, to the German question itself. So long as Bonn continues to set its sights beyond this world, it will find it hard to exert the influence that is due to it if serious, down-to-earth east-west exchanges take place. Dr Adenauer, it is true, still has considerable scope to obstruct; the West still needs Bonn's loyalty. But the American interest in a *détente* might grow to such a point that he would be overridden. In Berlin, for example, the western allies have a real interest in an interim agreement that might allow them to hold the line there without trouble for a number of years. If, during the breathing-space, nothing were done by the Germans to encourage a process of unification, then at the end of the pause the schism in Germany would be all the deeper, and Berlin's position in an alien world more precarious still.

Dr Adenauer's insistence on the total boycott of the east German state is in one sense wholly understandable. He knows that its citizens dislike the regime they live under, and that they look to west Germany for leadership and moral support. Yet could there be any better evidence of the west German interest in an easier relationship between the two blocks than Herr Ulbricht's own efforts to clutch Mr Khrushchev's coat-tails and hold the process back? A military relaxation in central Europe would deprive the present east German regime of its *raison d'être*. There, too, the time may come when Russian interests, like American, may override the obstructive efforts of lesser allies.

The failure of the Adenauer era has been the failure to reconcile the foundation-laying in the west and the aims in the east. Any relaxation, military or political, of the tension in central Europe implies putting the present crescendo of hostility between the two German states into reverse. It implies the fixing and recognition of frontiers that west Germany so far refuses to accept, and arrangements to limit forces that would seriously curb German liberty of action; it might well mean the end of Bonn's claim to a complete equality of military status with the other Nato powers. In the circumstances of the cold war that may seem unpalatable. Yet Dr Adenauer's own historic achievements in burying the ancient feud with France and building the European Community can only last if they can outlive the circumstances of the cold war which gave them birth and if they are made to serve a wider and more settled Europe.

Labour's Way Out

A suggestion for Labour's first task if it loses the next election

MR GAITSKELL can be excused if he feels dispirited when he sets off for Moscow this week to visit Mr Khrushchev. In 1955 Labour became the first British opposition for ninety years to allow the government of the day to increase its majority at a general election. In 1959, the pollsters now say, Labour has an odds on chance of promptly beating its own record.

Why has this come about? In 1955 it was commonly said that the Tories had been exceptionally lucky during the preceding Parliament. It is less easy to say that in 1959. The Tories have seen a Prime Minister fall sick in the middle of an explosive crisis, they have had to absorb the first significant world trade recession since the war, they have run into almost every possible colonial trouble, they have seen the government of Britain's most important ally incapacitated by prolonged illness, and they have had very bad luck both politically and economically in Europe. This is not a picture of the most fortunate administration for ninety years.

So the fault behind the Opposition's unhappy showing must lie in the Labour party itself. Is it a matter of leadership? This is always an easy jibe, but, within the limits set by his party's constitution, Mr Gaitskell has tried to do nearly all the things which middle of the road critics in 1955 said that a Labour leader ought to do. In the last Parliament Mr Attlee was blamed for not setting out sufficient policy statements. In this Parliament Mr Gaitskell has emitted shoals of them, twopence plain and sixpence coloured. He has wrung them by main force through his party machine, and has done his utmost to make them conform with his own moderate views. But the electorate has taken less note of the moderation than of the bombast in the margin of the threat that Labour would municipalise all those houses, and of the scope given for the Institute of Directors and Mr Mikardo to say that it would nationalise the six hundred largest British companies. On balance the carefully planned policy statements have probably lost votes for Labour, by putting the Opposition upon the defensive.

If Labour did badly in 1955, when it had no policies, and threatens to do worse in 1959, when it has them galore, where does the fault lie? Is it something deep in Labour's organisation—in the company Mr Gaitskell has to keep and drill and compromise and quarrel with when he tries to put forward a reasonably satisfactory Labour face to the world? All the evidence suggests that this is indeed the trouble. The floating voter feels that the Labour party is still in some measure in pawn to class warrior socialists, with whom he has no sympathy, and to one big vested interest, which he has come to resent.

The past week has provided yet another object lesson in the self-defeating nature of Labour's constitution. Because seventy-five delegates to the Municipal Workers' Union left their conference hall to have tea one afternoon last June, the union's delegates had to be recalled last week to get Mr Gaitskell out of a very awkward corner. All the newspapers are saying that the way in which the union thus reversed its policy on the H-bomb was an insult to democracy. But surely, in terms of the practical state of affairs today, the real insult to democracy, the thing that really annoys floating voters, is quite different: it is that, just because these three hundred men follow one particular full-time or part-time occupation, that of trade union organiser, their views should come to be all-important in deciding what policies should be put forward as the prescribed diet for that one half of Britain's electorate which does not want to vote Tory.

ALL political parties in a democracy today tend to be in some form an organised hypocrisy. On the one hand, their problem is to convince those who mainly finance them (in Labour's case the trade unions, in the Tories' business enterprises), and those who work and canvass for them (a few hundreds of left or right wing zealots), that their money and effort are properly appreciated. On the other hand, they have to perform the much more important national role of putting forward a policy which their elected leaders genuinely judge will advance the common weal and for which they think that they can secure the support of more than half the country.

The Tories have been helped out of this contretemps because their industrial paymasters in recent years have accepted that they should not wield exceptional influence, even over policy matters that directly concern them (such as monopoly trade practices), let alone over those that do not; it is impossible to imagine the directors of ICI having to be recalled from holiday in order to restate their personal views on the H-bomb in such a way as to save Mr Macmillan from having to resign the leadership of his party. And the Tories' way of handling their constituency zealots is by arranging that the only motions debated at Conservative conferences are ones that the party leadership is ready to accept; hordes of black-minded Tory reactionaries, screaming for flogging to be reintroduced for crimes for which it ceased to be the punishment a century ago, find themselves formally voting for a resolution which propounds only that current problems of crime and punishment need greater research.

The Labour party has always relied on a different form of organised hypocrisy. Its system is to allow private delegates to its conference to put forward the wildest motions, which, if carried, would presumably oblige the leadership to resign. But it then arranges with half a dozen big trade union bosses, gathered in a back room, to use their block vote to ensure that such motions are defeated. This system is generally praised by visiting journalists as making for a livelier conference, mainly because there is always an outside hope that something may go wrong to confront the leadership with a catastrophe. Even regarded as light entertainment, the conference cannot be such huge fun to the party leaders as it is to the reporters. But the Labour system has two much more serious other defects.

First, it has made the party leadership the prisoner of its

paymasters; Mr Gaitskell feels bound to agree with the TUC, or at any rate not to disagree with them, on a whole range of subjects from strikes to restrictive-minded trivia about Shop Hours Acts—in a way that Mr Macmillan would never feel bound to concede to the FBI. Secondly, because the danger of defeat at the annual conference is, in some small degree, ever-present, and because the leadership believes that a defeat would have such dire results, Mr Gaitskell and his colleagues are continually having to make at least verbal concessions to their left wing zealots. At present no Labour leader dares to talk about nationalisation or any other outmoded feature of the fundamentalist socialist faith except with some mixture of vagueness, insincerity and part-acceptance of the militants' nonsense; and all three of these shifts have been proved to repel the middle group of voters. Moreover, the strains at conference time seem likely to grow in the next few years; the biggest, but not the only, reason for this is the emergence of Mr Cousins in charge of the largest block vote.

IF Labour loses this third election in succession, and does not want to lose a fourth one, its first concern after the debacle, before busying itself with forming any new policies, should be to set its leaders free from these crippling ties to people and interests outside Parliament. Would this strategic way out for Mr Gaitskell and his colleagues really be as difficult as most Labour MPs assume?

What would happen if the first item on the shadow cabinet's rebuilding programme, after the election, were to announce that henceforth they would only continue to serve if they were allowed to treat conference resolutions as no more than interesting expressions of view? Mr Gaitskell could add that if the conference decided to pass a specific motion of no confidence in him, and if this was confirmed by the parliamentary party, then he would resign; but that otherwise the main decisions on policy, as tempered by listening politely to other party members' views, must become the sole concern of the leader and his shadow cabinet. This would involve a considerable trimming of the powers of that extra-parliamentary body, the Labour national executive. The next party conference would seethe with indignation, but the movement would not really be likely to combine to bring all its best-known national leaders down.

Then, fortified by this new independence, Mr Gaitskell and his colleagues could explain to the TUC that henceforth they would have to risk occasional rows with them, as the Tories have several times done with their own industrial paymasters. Nothing would do the Labour party more good with the electorate than this demonstration that its day-to-day policy is independent of any vested interest, as any left wing party's policy always ought to be. The unions would feel hurt at this occasional criticism from within their own household, but they would be unlikely to withdraw their financial support from the party, for they are always going to prefer Labour to the Tories.

To many worried Labour MPs all this will seem an awe-inspiring counsel of desperation. But if it loses the coming election by an increased majority, will the party really fail to see that it will then be in a desperate situation? Until it reorganises its hypocrisy, Labour seems likely to face—not indeed perpetual election defeats, for sometimes the swing of the pendulum against the Tories is bound to override every other factor—but at least a lower batting average of success than can be good for the continuance of the two party system of government in this country.

Private Bills

How private bills which confer new powers on local authorities, companies or individuals plough their way through Parliament.

THERE are skeletons at the bottom of Hammersmith Flyover. Under the Disused Burial Grounds Act of 1884, the land that contains them should remain open space for ever. The London County Council's highway programme in the area could only proceed after special petition of Parliament and relief by private legislation.

So many legal snags crop up in a single year of its task of governing London that the LCC has to promote an annual catch-all private bill. Some nationalised industries, particularly the Transport Commission, are also regular promoters of private bills. But a private bill is a rare, important and expensive event for most local authorities. It has to run an interesting gauntlet through Westminster; promoters and opponents of private bills present their case before legislators who act for the time being as judges.

When a council wants additional powers it entrusts the task of drawing up and handling a bill to a parliamentary agent. This disappearing breed—there are now only eighteen, in ten firms as compared with thirty-two before the war—consists of persons, usually lawyers, authorised by the Speaker to engage in parliamentary proceedings. The agent's first task will be to advise the council about the formal steps it must take to warn possible objectors before Parliament will entertain its petition, and about the informal steps which may appease potential opposition before the parliamentary process starts. He is likely to emphasise that the average cost to the promoters of an unopposed bill in the 1952-53 session was £1,549, while a bill fought by objectors through every stage cost a full £5,970, quite apart from the objectors' own costs.

One cost common to both unopposed and opposed bills is the traditional fee charged by each House of Parliament, the size of which relates not to the complexity of the bill but to the amount of money which the bill proposes to raise or expend; minimum fees, except for charity bills, are £82 in the Commons and £100 2s. in the Lords, and the scale is anything but logical. In addition, the ratepayers have to pay the parliamentary agent's fees (rigidly fixed by the Speaker and the Clerk of the Parliaments) and the printing bills, both for the draft statute itself and for the advertisements in the local press and the *London Gazette*, usually eight in number, which have to precede consideration in parliament. When

works are to be constructed, plans, dossiers, and the cartoon (a large-scale map which is the chief visual aid to any exposition before a parliamentary committee) have to be prepared and notices served on landowners and others who may be affected. If the bill is opposed, the council has to meet, on top of all this, the fees to counsel, shorthand writers and expert witnesses and duplicating the daily proceedings.

Before any local council can promote a bill, a majority of its total membership must have approved it at two successive meetings which have been advertised in the local press. The bill is then deposited in Parliament by November 27th. If the authority is a borough or urban district council, a town meeting of all local government electors must be convened by press advertisement and placard between December 12th and New Year's Day. Fortunately only a small proportion of those eligible turn up—Manchester would have had difficulty in accommodating the 490,936 people invited to such a meeting in 1950, to which six hundred actually came. But more than a hundred demanded a referendum of all the voters, which then had to be held; in it 5.2 per cent of the voters participated and it cost the city 2s. 11d. a head. In smaller towns the public meeting is usually farcical, with only members of the council and the press turning up.

IF the bill has cleared these hurdles, it is then allotted to one of the two Houses by the Chairman of Ways and Means and by the Lord Chairman, at present Sir Charles MacAndrew and Lord Merthyr respectively. Their job is to organise private bills through all their stages, just as the Leaders of the two Houses do with public legislation, and they try to divide the initial work, which is usually decisive, more or less evenly between the two Houses. If the bill is to originate in the Commons, Sir Charles sends it first to Mr Hugh Farmer, a parliamentary clerk who has the title of Examiner. He checks that the bill's sponsors have met all the procedural requirements of Standing Orders up to that stage. Opponents may submit memorials complaining that the newspaper notices were inadequate, the plans inaccurate, the vote in the council invalid or the estimate of costs too rough.

The next stage is that the Speaker reads out the title of the bill, with others, at the opening of business before question time. If a single cry "Object" is heard, the bill is held up until the Chairman of Ways and Means can steal time from Government or Opposition to hold a second reading debate at 7 p.m. The parliamentary agent, brooding over the fate of his foster-child from a box "under the gallery," will try to spot the objecting member, and later corner him to try to induce him to stop blocking the works. If a second reading debate does occur, a member can move an instruction to the committee which is going to consider the bill in detail. This will either suggest or direct that it insert certain provisions—say, that a contract be open to public tender or that the design of a new bridge shall be decided only after a competition and with the advice of the Royal Fine Arts Commission.

After second reading, the bill goes to one of two types of committee, depending on whether opposing petitions have been received. Unopposed bills are scrutinised by a small panel headed by the Deputy Chairman to make sure that their terms do not violate sound legislative practice, and that the views of government departments have been properly taken into account. When bills are opposed, objectors must first get their petition past the Court of Referees, consisting of the Chairman and Deputy Chairman of Ways and Means, the Speaker's Counsel (Sir Alan Ellis), and seven MPs. This interprets the recondite precedents that determine whether a petitioner has *locus standi* (a concept whose wafer-thin refinements occupy no fewer than seventeen pages of Erskine May).

The bill then comes before one of the Committees on Opposed Bills, on which four MPs sit, one of them in the chair with an original and also a casting vote. The attendance of committee members is compulsory; indeed this is the only duty which an MP who has been suspended from the House can be obliged to perform. The cases of the promoters and objectors are presented by bewigged counsel from the parliamentary bar, who examine and cross-examine witnesses on oath. Normally promoters try to limit further expense by meeting legitimate points that appear to be making an impression on members of the committee. The parliamentary agents flit to and fro drafting and redrafting compromise amendments. One wall of the committee-room is lined with a benchload of bureaucrats, who at frequent intervals are called upon to state "the view of the Minister."

After the committee stage, the bill goes to the House for consideration (the equivalent of a public bill's report stage) and third reading. Unless all opponents have been appeased or have given up, the fight may then begin again in the Lords. A Joint Committee of the two Houses has often been advocated to cut down the expense, and this device is occasionally resorted to. But most of the experts are against it on three grounds: many interested parties who at present hold off until the first hearing has revealed whether the bill is worth fighting would, if there was only one committee stage, feel it necessary to reserve their rights by filing formal petitions, which would thus become more numerous; secondly the breathing space provides an opportunity for accommodation between opposing parties; and if all such attempts fail the second House does act, in effect, as a court of appeal.

ALTHOUGH this ancient procedure for private bills has often been criticised, generally on grounds of expense, it emerged almost unscathed from two major reviews in 1930 and 1955, though they produced useful minor reforms. Another joint committee, which is looking into the methods of promoting bills, is due to report shortly. Recommendations for massive changes seem unlikely. There has been scarcely any support either at the time or since for the proposal by the House of Commons' most celebrated clerk, Sir Thomas Erskine May, that private bill work should be transferred to a special branch of the judiciary.

The House does not allow party political judgments to intrude upon its judicial function in considering private bills. Indeed MPs may carry this virtue too far. The unopposed parts of opposed bills sometimes contain clauses that need conscious consideration by politicians, exercising political judgments about civic freedom or the power of local executives. Sometimes, on second reading or thanks to an alert government department, they get this, but not always. A committee can only hear the witnesses produced by the contending parties—it may not send for witnesses of its own—and almost all its time is taken up on clauses contested by particular vested interests. Four rather haphazardly selected

(and perhaps self-selected) backbenchers seem rather an inadequate sample of the House to make decisions, perhaps by default, which set important precedents.

Conversely there has been an increasing tendency in recent sessions for private bills which have passed their second reading to be rejected by the small private bill committee because of the objections of a government department. This happened this year over the bill to permit a harbour barrage to be built at Milford Haven. The promoters argued that without a harbour barrage there would be insufficient industry; the ministry that until there was sufficient industry it would be premature to build a barrage. This would hardly seem to be the kind of issue for a small committee.

Despite all the sometimes over-elaborate precautions to ensure that legitimate interests are alerted, it is still possible for powerful promoters to slip through a fast one. Two examples come to mind. Despite the paraphernalia of deadlines, meetings, advertisements, standing orders and so forth it is possible for a promoter to insert an amendment into his bill months after it has been deposited, provided he can persuade the Standing Orders Committee that it is above board. The combination of short notice and heavy emphasis on the expensiveness of fighting a case in committee may silence protests.

The second example comes from this year's LCC (General Powers) Act. The ultimately awful House of Commons speech was delivered by Mr Albert Evans, the Labour member for South-west Islington, last month on an instruction to committee to save the people of Islington from having an annexe of Covent Garden dumped in their midst. Nevertheless it did the trick. At the last minute, after all the elaborate examination of plans and witnesses in committee, the LCC announced that it had suddenly woken up to the fact that the ideal solution of the annexe problem was to place it not in Islington but in Finsbury. The power that would enable the LCC to acquire the Finsbury site had been conveyed in general terms in another clause of the bill, without the committee or the Finsbury interests being aware of it.

Whatever its occasional shortcomings, however, the process of private legislation is a valuable constitutional safeguard. It would be a pity if, through inadequate appreciation, public opinion allowed its sphere to be eroded still further by the tides of legislative delegation and ministerial order.

SOVIET LIVING STANDARDS—I

Appetite Grows with Eating

A review of the progress of Soviet society towards its proclaimed goal of a standard of living able to stand comparison with the West.

IN the dawning era of cordial invitations it may be ventured that the emphasis in the competition between the two blocks will one day be shifted from guns to butter, or from rockets to well-filled refrigerators. Within limits a country's striking power can be inferred from its total industrial strength and particularly from the capacity of its heavy industry. To a judgment of its standards of life, output per head of the country's light industries is more relevant. Russia's industrial power is no longer questioned, and the progress of its heavy industry has been sufficiently demonstrated and acknowledged. Much less is known about how the Soviet population actually lives; the subject was for too long obscured by Russia's secrecy, and by the Manichean versions of opposing propaganda, representing the Soviet Union alternatively as the workers' paradise or the communist hell.

Calculation of average supplies per head of population is not the only, or the most sophisticated, method of assessment. But it is a sufficient yardstick roughly to measure Soviet achievements or plans and to set them against the advanced Western standards, so long as the limitations of the method are kept in mind. Ideally, it assumes that the available supplies are equally divided; the bigger the discrepancy between the rich and the poor, therefore, the more it is out. In Russia the differences were widened in Stalin's time by general scarcity and the policy of incentives; now the gap is being narrowed by more plentiful supplies and an increase in the lowest wages.

The Russian leaders now openly admit their lag and set the American standards as their goal; it is only fair to state the handicaps under which they have entered this race. The Bolsheviks took power in a backward country devastated by war and civil war. Scarcely were the not very high levels of the beginning of the century restored in the late nineteen-twenties, than collectivisation wrought more damage in the countryside than any armed conflict had done. Efforts to make this up and to build up a powerful industry were then interrupted by the German invasion; and the recovery from the second world war was not complete until, say, 1950. Throughout the Stalinist period rapid industrial progress had to be assured by a high rate of investment out of a small national income. Consumers had to wait while the present was being mortgaged for a distant future. Only after Stalin's death did Mr Malenkov promise a rapid improvement in living standards; and Mr Malenkov's fall was accompanied by the reassertion of the rule of "priority for heavy industry." Whatever the slogan, targets set for light industry now tend to be reached. The average Russian feels an improvement and his hopes for the future are high. But it is not long since he ceased to be the planners' Cinderella.

AGRICULTURE was the traditional laggard of the Soviet economy. For years increases in food supplies were merely enough to keep pace with the growth of urban population and little was left over for improving the diet. In 1953 Stalin's successors decided to get quicker results through a policy of higher investment and greater incentives. The results so far have been very successful, though further objectives are no less ambitious. If they are achieved, the food problem in

Russia in the late nineteen-sixties will be one of quality rather than quantity. Already the familiar shift is taking place from the starchy foods—like bread and potatoes—towards meat, vegetables and dairy produce. As supplies grow, Soviet citizens should fairly soon be more concerned with taste, variety and freshness.

Questions of quality and taste should soon become important, as well, for such staple consumer goods as clothing. Here, Soviet progress has been steady rather than spectacular. Three pairs of shoes every couple of years—the present average—may not be excessive but it is quite a lot in a country where many people went barefoot a generation ago. The variety of materials promised is also quite impressive (the rising proportion of silk is interesting) so that the public may begin to discriminate, to ask for brighter patterns, for better-cut and better-finished ready-made clothing. Mr Khrushchev relies on the chemical industry to help him with the job; hence the Russian interest in foreign synthetic fibres (as well as in plastics). Drabness rather than shortage may be tomorrow's trouble.

If the average Russian can expect fair comfort in food and clothing in the near future, should the planners keep their word, his chances of owning durable consumer goods remain small. Here again there are interesting exceptions. In a country lacking dressmaking and repairing facilities, a sewing machine is still a valuable possession. By now sewing machines are fairly common; by 1965 there should be one in nearly every household. Watches are another exception, which shows how much can be achieved in a short time when the decision to move quickly is taken. Soviet greed for watches was proverbial after the war and "Davai Chassy" (give me your watch) was an expression well known where Russian troops were stationed. Last year Soviet output of clocks and watches reached 25 million (about a third wrist-watches). Yesterday's coveted bit of loot has ceased to be a luxury. Wireless has also spread; by 1965 there should be one in almost every Russian house. Television is beginning to catch up. A million sets were produced last year and by the middle nineteen-sixties a third of the Soviet population should be able to view at home.

THE GROWTH IN SOVIET CONSUMPTION

SALES OF DURABLE GOODS IN THE SOVIET UNION.

	Annual Average				Index 1959–65
	1952–58	1959–65 planned	1952–58	1959–65	(1952–58 = 100)
	'000	'000	'000	'000	
Refrigerators	1,150	6,690	164	956	580
Washing machines	1,150	10,400	164	1,486	910
Sewing machines	11,950	25,175	1,713	3,596	210
Radio sets	19,500	35,100	2,787	5,014	180
Television sets	2,950	13,625	421	1,947	460
Motor-cycles	1,525	4,125	218	589	270

OTHER symbols of the "American way of life" will be scarcer. A motor-car is clearly to remain the privilege of the very few for years to come. Even in 1965 only one Russian in fifty will have a motor-cycle; the bicycle will be the only popular means of private travel. Supplies of other durable goods are to be stepped up considerably but even so it remains the upper quarter of the population that can hope to own a refrigerator, a vacuum cleaner or a washing machine. Refrigerators for all may be a slogan for the next plan.

The relatively slow expansion in consumer durables has two reasons. One is that they compete with producers' goods for scarce resources. This is particularly true of motor-cars. But lack of space is the restricting factor for household equipment. Overcrowding remains the worst hardship of the Soviet citizen. The urban population has increased by over 70 million people since 1926, and the pace of industrialisation has precluded a volume of investment in housing that could have matched this influx. With about nine square yards of floor space, the average Russian town-dweller is now scarcely better off than in Tsarist times. Even at the end of the current major housing drive, in 1965, his average will be about 12½ square yards. Thus, where there are now about three persons a room, the average will be nearer to two. It will be a relief. But a huge effort will be required to bring the Russians rapidly to the desired level of one person a room.

Services are another field where there is need for rapid improvement. Not the social services; there, Soviet achievement has been remarkable. A life expectation of 67 years (compared with 44 years in 1927) is a tribute to the health service. Soviet education no longer needs advertisement. The number of books, papers, theatres or cinemas, though rising steadily, is already high. Social insurance is comprehensive, and at 60 everyone is entitled to a pension of at least half his (admittedly low) wage. The deficient services are those aimed at the customer: laundries, hairdressing saloons, repair shops, efficient snack-bars, general shops easily accessible and providing the goods that are wanted. Mr Khrushchev had launched a campaign on this front earlier this year. The scope for action is tremendous.

Wider rights for the consumer are likely to be followed by demands for the political rights of the citizen. Why does Mr Khrushchev nevertheless follow this path? Moscow's interest in the American exhibition—and Soviet propaganda against it—are not the only proofs of the Russian's desire for an easier and more comfortable life. Mr Malenkov is gone from power, but his slogan of a new deal for the consumer is alive because it fitted what the Soviet people wanted. Mr Khrushchev cannot forget, in his diplomatic travels, what they expect of him.

(A second article will compare Soviet with British and American standards.)

NOTES OF THE WEEK

MR EISENHOWER

Two Summers

AUGUST has been even more golden than the sun-bathed August just twenty years ago which ended with the die cast for world war. That month was marked by its own form of east-west contact, the collapse of French and British talks with Stalin's government and the suddenly disclosed German-Soviet pact, which cooked the goose of Poland. This year, having opened with an international crisis over Berlin, has taken a different course; the threats to stand and fight that were being heard in the spring are forgotten, and the autumn is to be marked by the comings and goings of the leading statesmen seeking ways round the conflicts of power that divide them.

Mr Eisenhower on his journey round north-western Europe will no doubt hear some uneasy voices pleading doubt or special interest; but few people who recall the contrast between this summer and that can well doubt the validity of his mission. His remarks before he left Washington leave no real room for supposing that he is unaware of the limits of what personal diplomacy can accomplish when hard causes of hostility stand in the way. If they did, the bounds will have been thoroughly beaten by the time his successive talks with Dr Adenauer, Mr Macmillan, General de Gaulle, and the other western European leaders are over. In the talks with Mr Khrushchev that are to follow, Mr Eisenhower will no doubt do what he has said he wants to do: seek "some little break" through which it may be possible for world relations to move into a better phase. There is no cause for wild hope in this, but none for alarm.

THIS August, Stalin's successor has sent letters of his own to the western heads of government, designed, no doubt, to play upon their sensibilities and divisions over the Berlin issue; and notably, to drive a broad, blunt wedge between the West Germans and the others. But, in keeping with the diplomatic style of our cautious times, Mr. Khrushchev's messages cannot be equated with the secret diplomacy of twenty years ago. His letters have always been of a kind with Russian statements in open conference: lengthy, logical, remorseless expositions of Soviet attitudes and aspirations that are in themselves well known.

It is not that Russian diplomacy has become meaningless but that it seems to seek, even in the written word, to clear itself from the blame for any possible misunderstanding, however casual or subtle, that could lead anybody to do anything rash. The excessive solemnity and elephantine dialectical style of Mr Khrushchev's diplomacy seems to offer its own small glimmer of hope.

Quiet Weekend?

NOT the least bitter source of Franco-German discontent has been Mr Macmillan's agility in cutting himself in on the Eisenhower-Khrushchev exchanges. Even at the beginning, when Mr Eisenhower read out the invitation to his press conference on August 3rd, Mr Macmillan's approving cable was already in his hand. These avuncular greetings clearly implied that the whole business began in Moscow last February; it would be a hard man who could really think of locking uncle out altogether. Mr Eisenhower's response, including a television date on Monday night, has been all that is gratifying. It has become a pleasant, and not wholly untrue, conceit to point to the pastoral joys of Chequers as a refreshing interlude for the tourist between the lecture rooms of Bonn and the state chambers of the Elysée. If, in fact, Mr Eisenhower decides to return next week, purely to sniff the breezes of the Ayrshire coast, it will take a lot of explaining away.

The talks at Chequers may be leisurely; all the same, Mr Macmillan is likely to have something pertinent to say. The British attitude has at least one thing in common with the continental allies: the belief that the Eisenhower-Khrushchev exchanges are in no sense a proper method of negotiation between East and West. Mr Eisenhower's steady avowal that his talks will be merely exploratory has served to confirm the British view that, sooner or later, the four-power summit, empowered to negotiate directly on central Europe, will come to the forefront again. Its timing may depend on Mr Eisenhower's journey to Moscow, but it could become practical politics early in the new year. The doubtful factor is Mr Khrushchev's interest in resuming the Geneva talks on any other basis except western abandonment of what he still, after six months of argument, dismisses as the anachronistic status of west Berlin.

LABOUR'S HEALTH SERVICE

Nothing But the Best?

THERE is a remark in the introductory paragraphs of Labour's policy statement on the health service that takes us right back to 1945. "It is as stupid," it runs, ". . . to have anything less than the best as it is to neglect industrial maintenance and capital provision for new industrial development." "Nothing less than the best is good enough"; "we cannot afford not to have it"—it was as a result of basing the welfare state on such slogans that the Labour party ran into the periodical financial crises that caused Sir Stafford Cripps and later Mr Gaitskell to place a ceiling on health service expenditure and to introduce the charges that the party now pledges itself to abolish.

No ceiling is to be found in the new *manifesto*, which both Mr Gaitskell and Mr Bevan have signed. It is simply taken for granted that the taxpayer will have to find most of the extra sums needed for Labour's ambitious plans, although there is a mention of reviewing health service contributions when Labour's superannuation scheme is introduced and meanwhile "Labour intends that the employer should pay a fairer share towards the cost of the health service."

There is no recognition anywhere in the statement that the Labour government may have to choose between, say, bigger spending on the hospitals and on the general medical services. Yet some such choice would be inevitable, for even if Labour were prepared to spend the necessary money, there simply would not be enough professional people to carry out its proposals. On the financial side there is no attempt in the statement to cost the reforms on any accurate basis. The £50 million mentioned for annual capital expenditure on the hospitals, though certainly not larger than is desirable, will apparently be spent according to the length of waiting lists—a most misleading guide. The figure of £100 million a year, mentioned as the possible total extra expenditure which a Labour government would be incurring on the health service at the end of five years, was apparently simply a guess thrown out at the press conference. When allowance is made for such facts as the cost of any new demand now held in check by the charges to patients, which Labour wants to abolish, it may well be an underestimate.

There is some evidence that the prescriptions charge, in its present form, is inefficient; but there is no evidence that either it or any of the other charges

causes real hardship. If the new hospitals are to be the splendid places Labour envisages, the case becomes stronger, not for abolishing charges wholesale, but for extending them: for example by making the existing charge for amenity beds universal.

Likely Professional Reactions

THE great pity about this financial irresponsibility is that it vitiates a document which, viewed purely as an exercise in firing the imagination, would otherwise have much to commend it. A Minister of Health who would inject some initiative and drive into health service administration is certainly needed. Nor are most of the detailed proposals likely to rouse professional opposition. More money for research, higher pay, better working conditions, the encouragement of group practice for general practitioners—these are intended to allay professional mistrust of Labour policy, and there is no mention of a fulltime salaried medical service, over which Mr Bevan fought and lost a battle with the doctors.

There are, in fact, only three proposals to which the doctors' representatives are likely to object. The first is the integration of the teaching hospitals with the regional hospital boards, which means that they would lose their separate governing bodies. Even this proposal, however, which would bring the English teaching hospitals into line with the Scottish, is not likely to provoke the opposition it would have done in 1946. The second is the establishment of more intermediate posts between junior hospital staffs and consultants. The medical profession will need to be assured that this is not a ruse to obtain more consultants on the cheap.

The third, and most controversial, proposal is the abolition of paybeds in hospitals. It is true that this is not set out as an aim in itself, but is said to follow naturally from the improvement envisaged in the general wards, their conversion into small units and the provision of enough staffed beds to put an end to waiting lists. If, however, accommodation on this scale and at this standard is ever achieved—which, frankly, does not seem likely—private specialist practice, which is so heavily supported by insurance schemes, is likely to remove itself into premises outside the health service. There would then be a duplication of capital resources and manpower which the provision of paybeds in health service hospitals was intended to avoid.

CHINA

Down to Earth

THE Chinese Communists have owned up. The eighth plenary session of the party's central committee, which took place at Lushan in the first half of August, drastically revised the production plan for the current year. This involves cutbacks that are far more serious than anything even Chinese drought and floods—which have hit agriculture badly this summer—could account for. According to the official news agency, the committee "re-examined this year's plan for the development of the national economy and found that the original targets were somewhat too high and need to be appropriately adjusted." The projected "great leap forward" was in fact transformed into a skip: the Chinese planners have reverted to the target figures of the second five-year plan, announced in September 1956 and condemned, two years later, as over-cautious.

Not 18 million, but 12 million tons of steel will be produced this year; 335 million tons of coal instead of 380; for grain, last year's output figures and evidently this year's target figures have had to be still more severely cut. Because of the shortage of agricultural labour, the central committee decided that the production of steel by simple back-yard methods, of which so much had been expected, should no longer be included in the state plan. The lowering of sights means that the Chinese now expect to take ten, instead of the two or three years promised last autumn, to catch up with present British output.

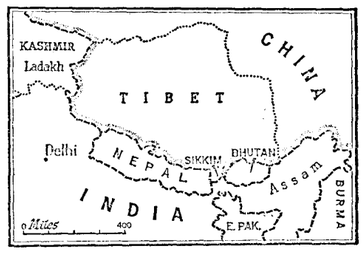
In the higher echelons of the party, the moderate planners have made their points; the preservation of the agricultural communes—they are now proving their value in combating natural disasters—was a concession to the more ambitious leapers. But while the central committee was ruthlessly cutting down its plans, it detected a new party deviation. On August 14th, two days before the conclusion of the committee's secret session, a leading article in *Hung Chi* (Red Flag) denounced "*rightist* go-slow tendencies"; true, it said, they were limited to a small number of cadres, but they might spread "like germs." Mr. Chou En-lai, one of the first men to return to Peking from Lushan, attacked the same aberration before the seventeenth session of the Supreme State Conference on Monday. The party bosses are clearly interested in letting their more humble comrades know that the new modesty of the target figures is intended to bring the planners' world closer to real life, not to make things easier for the common man.

INDIA AND CHINA

Expansive Motherland

THE friendship between India and China, which has been such an important element in Mr Nehru's foreign policy, is becoming more and more of a one-way street; it now consists of a long-suffering determination of the Indian Government not to be provoked by the increasingly arrogant and outrageous behaviour of the Chinese. The rights of trade and pilgrimage in Tibet retained by India under the 1954 agreement with China are being steadily whittled away by Chinese action. All kinds of obstacles have been put in the way of Indian traders, and some have been forcibly prevented from going to the Indian Consulate in Lhasa. Now the right of pilgrimage to the Tibetan holy places has been virtually abrogated by a warning to would-be pilgrims not to enter Tibet because the People's Liberation Army will be conducting military operations and cannot assure the safety of foreigners. The aim appears to be to seal off Tibet completely from the outside world, so that there may be no foreign witnesses of what is happening there.

Not content with their subjugation of Tibet, the Chinese have been talking of "re-uniting" with "the great motherland of China" Ladakh, Sikkim, Bhutan and



the northern frontier districts of Assam. Substance is given to reports of Chinese expansionist intentions by Peking's continued refusal to give India any satisfaction over the circulation in China of maps showing considerable areas of Indian territory as part of China. Questions in parliament at Delhi have now drawn from Mr Nehru an assertion that the MacMahon Line—the boundary of Assam agreed with China more than forty years ago—will be defended. Ladakh, as part of Kashmir, and Sikkim are both officially under Indian protection. So far there has been no commitment on India's part to defend Bhutan, but Mr Nehru demonstrated his concern for its future by his recent visit, and it is now reported that the Bhutanese prime minister, Mr Jigme Dorji, is to visit Delhi to arrange a defence pact with the Indian government, with the purpose of keeping the Chinese motherland on the other side of the Himalayas.

TRADES UNION CONGRESS

No New Momentum

THE 280-page report of the General Council of the Trades Union Congress is not, this year, a particularly scintillating document. There is no event like last year's bus strike to liven it up. Perhaps the most enterprising section of the report is the economic committee's survey, already published separately, of Britain's economic

situation since the war. The TUC reports somewhat negatively on the chances of greater co-operation between unions, on its lengthy exchange of critical letters to the Electrical Trades Union about press charges that that union has been rigging the election of its officers, and on the fact that total trade union membership appears to have declined, albeit slightly, for the first time since 1953. As well as finally admitting, as Mr Woodcock did on the radio recently, that public opinion is beginning to turn against the unions, the general council also seems to have decided that there is nothing much at the moment that can be done about it.

This promises little excitement for the Blackpool conference which starts on September 7th, since the procedure followed there is to go through the general council's report, section by section, and to debate resolutions critical of the report submitted by member unions. Few of these are new. A sensible one from the Engineer Surveyors' Association urges that all unions should define more clearly the separate functions of their officers and their shop stewards; but it is not likely to lead to any positive action. In the main group of resolutions on wages and hours there is much less emphasis than usual this year on straight wage claims and much more on demands for the 40-hour week; but this may well be indicative of a tactical ploy rather than of a trend. New straight wage claims in some profusion should probably be expected some time after the general election. Mr Cousins's long, woolly motion, attacking Labour's (and everybody else's) H-bomb policy, remains on the final agenda. The debate on it will presumably be the highlight of the congress; but now that the municipal workers have dodged their way back to Mr Gaitskell's side, Mr Cousins faces a prospect of a possibly fairly heavy defeat. One problem may be whether he will be a big enough man to accept this without finally relapsing into an angry rebellious role in all trade union affairs.

SUBSIDISED LEISURE

The Bids . . .

THE pamphlet on "The Challenge of Leisure" published by the Conservative Political Centre this week, over the signatures of four Tory MPs and five other able Conservatives outside Parliament, has come at what ingenuous people might regard as an inconvenient time. Detailed reports on the Youth Service by the Albemarle Committee, and on sport by the Wolfenden Committee (for the Central Council of Physical Recreation), are expected shortly; and the CPC itself is to publish this autumn a long Bow Group report on "Patronage and the Arts," which has taken two years to prepare. The only reason for publishing a short (23 pages) pamphlet on all these three subjects now is the imminence of the election; Labour was known to be about to propose taxpayers' bounty on these matters too. So the Tories craftily decided to get in first.

The Tory group's proposals for increased subsidies and grants would cost between £7 million and £10 million a year at first, increasing progressively as standards rose. In sport they call for large loans or grants to local authorities and voluntary bodies for the construction of outdoor and indoor sports centres, and for the establishment of a Sports Council on the analogy of the Arts Council. This is the most amateurish section of the document. For youth, the pamphlet notes that "the facilities afforded by the Youth Service, in varying degrees of efficiency, are used by about 30 per cent of the 15 to 21 age groups"; it wants to double both this proportion and the present state expenditure on it of £3 million a year. The section on the arts, as might be expected from this group, is the most expertly written. Where the report remembers to advocate discrimination, most of its emphasis falls in the right places—it wants to support drama and the arts in the provinces and not merely in London, to found any National Theatre around the Old Vic, and it urges artistic enterprises to use a "pound for pound" approach in seeking extra subsidies from industry and local authorities. But the group's main concern, in its dozen or so recommendations about the arts and fifteen other "points for study," is to mention every possible form of aid before Labour gets round to mentioning it too.

. . . and the Yardstick

THREE years after the abolition of the subsidy on bread, both political parties have therefore decided that it is now more popular to advocate the subsidising of circuses. There is no need to be too crabby about this. In terms of health and fun and cultural development, some of the proffered money will be a good long-term investment. But one reminder to hard-headed electors seems advisable. Many teenagers nowadays, and most (though not all) of the people who are keen on the sorts of arts which committees want to subsidise, belong to the better off section of the community; they can legitimately be expected to pay at the booking office or in membership fees some of the extra cost of the expansion of their chosen amusements. Votes will deserve to be won by whichever party prospectus least infrequently remembers this.

EUROPE

Erhard's Bitter Mission

DR ERHARD has been visiting Greece and Turkey during the last fortnight, discussing German investment in the two countries, and their projected association with the common market. The mission has been valuable. While the twelve principal industrial states of western Europe have been getting together in the new trade groupings, the undeveloped countries have been left out in the cold. Now, at last, something is being done to show them that they are not forgotten.

For Dr Erhard, however, the mission must have had something of a bitter taste. For the line-up of Greece and Turkey beside the common market, and Portugal beside the outer group, is one more reflection of the rift in western Europe, already so apparent in the diplomatic field. Economically, it is nonsensical for some of the undeveloped countries of southern Europe to be attached to one group and some to the other. What they all need is access to all the markets of free Europe, together with a joint scheme of aid to assist them in development.

A Mediterranean Bridge

THE common interest is so obvious that it prompts a question. Why not, despite the rift between the industrial states of western Europe, make an effort to devise a common programme for the undeveloped ones after all? Neither one "side" nor the other has any spectacular interest in keeping one or other of these poorer neighbours to itself. Indeed, the supply of capital to them, and perhaps even the opportunities they want for agricultural exports, will be a burden. The points of contact between the two trading blocks in western Europe are, in all conscience, few enough today. If a common effort could be made, before separate vested interests get entrenched, to devise a joint programme for Turkey, Portugal and Greece, perhaps Iceland and Ireland, and one day Jugoslavia and Spain, then one small unifying force would have been set in motion. No doubt there is also a need for the rich European countries to get together to help the vaster undeveloped areas overseas. But a start could be made in Europe's own backyard.

A first obvious move would be for all twelve industrial countries to extend the same trading facilities to the undeveloped countries. Investment is the second main requirement of Europe's undeveloped world. The common market already has an investment bank to help its backward areas. OEEC, too, has cherished the idea of a lending institution of its own. A solution might be a joint arrangement in which the common market's contribution went through its investment bank, while other members of OEEC contributed through a linked or associated OEEC channel. The two would have to work together in a common programme.

KENYA

One Forward, One Back

KENYA'S new multi-racial National party has had its teeth pulled before it could even show its bite. The party was formed

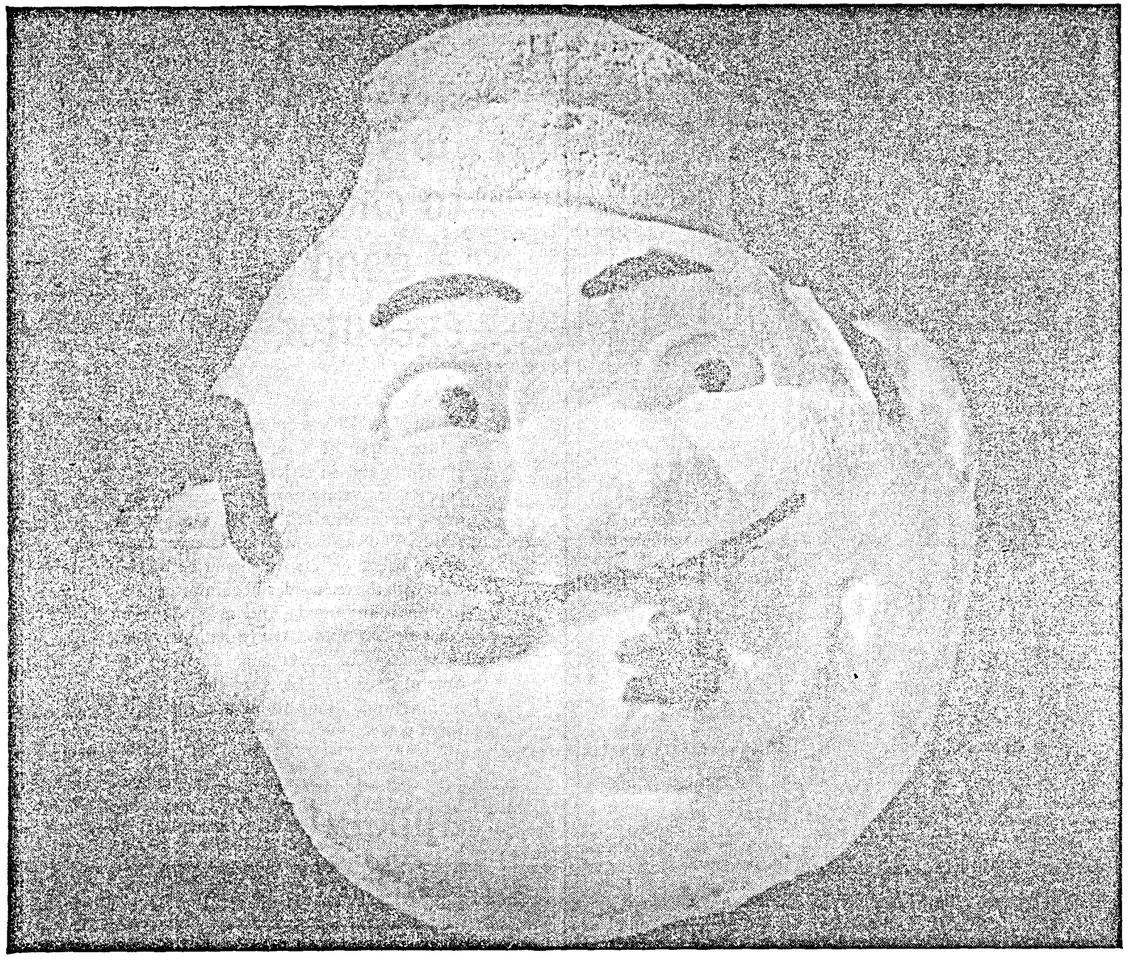
How
to choose
a good
executor

So much will be required of him. Your estate must be wound up quickly, efficiently and in strict accordance with your wishes, yet no worry or responsibility must lie upon the shoulders of your family. Your assets must be safeguarded, yet no friend or relative should be burdened with the technical and administrative problems involved. And always there must be available a sympathetic adviser to whom your dependants can turn in time of need . . . Those are the requirements; and all of them are fulfilled when you

appoint
MIDLAND BANK
EXECUTOR AND
TRUSTEE CO. LTD

The Manager of any branch of the Midland Bank or of the Trustee Company will gladly give you further details and arrange for confidential discussions; or you may write direct to Midland Bank Executor and Trustee Co. Ltd., Head Office, 6 Threadneedle Street, London, E.C.2.



Cheerful Chef has no worries about supplies of S.B. rubbers, and is doubly pleased with the knowledge of Shell reliability carried by the name of Cariflex. He himself is made from the Cariflex designed for the manufacture of foam rubber.

Shell has put a new look on the world supply situation for man-made rubber.

Today, it's Shell-made rubber . . . **CARIFLEX.** Available in twenty different types of dry rubber and latex, including hot and cold polymers, oil masterbatches, carbon black masterbatches and hot and cold latices, **CARIFLEX** is general-purpose styrene-butadiene rubber with the extra assurance of all things Shell—backed by Shell research, experience, manufacturing and world-wide marketing facilities. For industrial products and mechanical goods, for tyres and toys and footwear; for latex foam, upholstery and adhesives, *think from today in terms of* **CARIFLEX.**

about a month ago to fit the emergency regulation that allows political parties to organise on a nationwide basis only if their members belong to more than one racial community; it looked for the support of both the African and Asian elected members of the legislative council. But six of the fourteen African elected members, led by Mr Mboya, Dr Kiano and Mr Odinga, quarrelled with the vagueness of the party's constitutional proposals. This dissident group issued its own policy statement, reiterating such demands as elections by common roll, a definite date for independence and the release of all political prisoners. On Sunday, the six made their break-away official by announcing the formation of a new political party, the Kenya Independence Movement.

The emergence of the two multi-racial parties, the National party and Mr Blundell's New Kenya Group, had made it look as if Kenya's constitutional deadlock might at long last be eased. The fact that both alliances contained African, Asian and European members was a sign of grace; it was hoped that sufficient numbers from each community would be in the mood for concessions by the time the bargaining started at the constitutional conference next year. This was certainly true of the Europeans. Although the New Kenya Group's policy statement was studded with old-fashioned reservations, Mr Blundell's success in canvassing nearly all the European elected members was alone evidence of change. The settlers, except for the die-hard fringe that follow Group Captain Briggs, have backed Mr Blundell because, in the context of modern Africa, they can protect their interests only by bargaining, not by sitting tight in an exclusive but untenable position. But by the same token, it is probably naïve to expect Africans, who are becoming more and more conscious of the strength of their position, to retreat to meet the Europeans half way.

NYASALAND

Anticlimax

The Nyasaland government's first positive reaction to the Devlin report is to issue a set of constitutional modifications. If these changes were intended to show goodwill, their triviality defeats their purpose. The number of nominated African members on the legislative council is to be increased from 5 to 7, but this gesture is to be offset by adding 2 seats to the official majority on the council. Two African members are for the first time to be appointed to the executive council. Any member who is in detention can have his seat taken away at the Governor's discretion, and a substitute appointed in his place; both Mr Chiume and Mr Chipembere have now lost their seats. The Governor, Sir Robert Armitage, emphasises that these are only interim measures to tide over a difficult period. But this sort of constitutional arithmetic adds up to very little; it will certainly not cool tempers that are looking for a more relevant solution to a wretched situation.

BISHOP OF SOUTHWARK

Prayer Book Controversy Again

The Bishop of Southwark's attempt to secure liturgical uniformity in his diocese has received widespread publicity in the secular press. For this, his dramatic denunciation of the Reverend Harris of Carshalton and his subsequent press conference have been largely responsible. Unhappily these reports have served not to clarify but confuse the issue. Mr Harris's case is an extreme one. He is a "papalist"—that is, a member of the Church of England who accepts all the teachings of the Church of Rome, but maintains that, since the Church of England broke from Rome as a corporate act, reunion should be on a corporate not an individual basis. However sincere the motives of the papalists, their attitude will strike the majority as unstraightforward to say the least, and the Bishop's action in suspending Mr Harris will command very general support both inside and outside the Church. But the explosive issue is not the papalists, a tiny minority, but the use within the Church of England of the 1928 Prayer Book; the Bishop's orders restricting the use of this in his diocese could raise some interesting legalistic controversies.

What are the facts? Only one Prayer Book is authorised by law, that of 1662. The revised Prayer Book was rejected by the House of Commons in 1928. Nevertheless the 1928 Book is sanctioned by the spiritual authority of the Church; all four Houses of Convocation approved its use in 1929. The Bishop could thus make a case either for forbidding the use of any Prayer Book save that of 1662 or for allowing it with the variations proposed in 1928. He has taken neither of these courses, but followed the one for which no authority spiritual or temporal appears to exist: he is permitting some of the 1928 variations and forbidding others. His critics will thus accuse him of acting contrary to the mind of the Church as expressed in Convocation and also to the genius of the Church of England which has been to allow the widest variations in liturgical practice within reasonable limits, clearly exceeded by Mr Harris. If his clergy refuse to obey, then the Bishop will have to accept the flouting of his authority or proceed against them in the courts; if he does the latter, some of the old controversies between Church and State could arise in a particularly complicated form. The one thing that is certain about the publicised neck of this new and newsworthy Bishop is that he has a doughty talent for sticking it out.

AGRICULTURE

Chief Farmer's Exit

The decision of Lord Netherthorpe (much better known as Sir James Turner) not to seek re-election as President of the National Farmers' Union will bring to an end a long and significant period in the political history of British agriculture. For fifteen years the retiring President, assisted by the general secretary (Mr Knowles) who was himself an earlier president, has made farmers' views known in Whitehall and Westminster in no uncertain way. During this period, the farmers' union built up a uniquely influential position in the counsels of government—typified by that annual marathon of consultation procedure, the price review, and by some vigorous horse-trading over statutory marketing schemes. The team of Turner and Knowles acquired an experience of top-level policy-making for agriculture which no minister or civil servant could match, and the "sacred bull of British agriculture" (as one harassed official once called Lord Netherthorpe) knew how to roar to good effect if the union's accumulated prerogatives were at any point threatened.

The union's strategy might even be said to have been built around the personality of its departing president. Not only was he a scourge to recalcitrant Ministers of Agriculture, but he knew well how to charm and bully his fellow-farmers into accepting the numerous deals and compromises to which union and government agreed. His speeches, full of mixed metaphors and dripping with righteous indignation and honest (but frustrated) patriotism, were admirably John Bullish. In steering the union firmly into a non-partisan political position, to the occasional disgust of Conservative MPs, he nicely reflected farmers' typical sentiments—which are that the Conservatives are best for the country but that Labour may be induced to give most money to agriculture. This neutrality also paid handsome dividends in preserving the union's close consultative status in Whitehall, "aloof" from political entanglements.

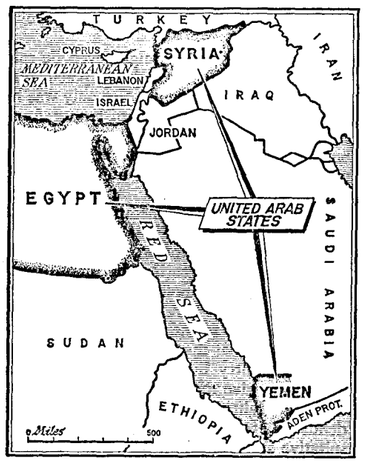
Yet the gains of the union under Lord Netherthorpe have in fact been reached by political means. While farmers' unions overseas have often concentrated upon agricultural co-operation and self-help schemes, this union has thrown all its collective weight behind enlisting state backing over price guarantees, compulsory marketing boards, and other means of support. Recently, however, the close partnership between the union and the government has grown thinner and shakier. The Ministry of Agriculture, strengthened by its amalgamation with the Ministry of Food, has become more resistant; a marketing setback pushed the union into trying a competitive marketing venture of its own (the Fatstock Marketing Corporation); and the Government's small

farmer scheme—which the union did not altogether like—is weakening its role as the equal guardian of all farmers, big and small. Lord Netherthorpe's exodus leaves a void in the union's leadership which some think will eventually result in a new organisation (possibly with again a rotating presidency). Might it also pave the way to a new strategy?

YEMEN

The Imam's Return

TRADITION says that a ruling Imam of Yemen must never leave his own domains. In the past Imam Ahmad got around this restriction by claiming, not very seriously perhaps, all the Arabian peninsula. He refused to accept the word "border" in any language and introduced a transliteration of "limitrophe" into his Arabic correspondence. He could not, however, stretch his *limes* as far as Rome, where he had to go for a cure this summer; and by going there he was clearly flaunting a long-established custom. Quite possibly, now that he is home again, he wishes he



had not. He was hardly off the ship at Hodeidah when he had to begin setting straight the affairs of state that threatened to get out of hand while he was away.

A speech made to tribal and popular delegations at Hodeidah has been widely quoted to prove that the Imam is a reactionary and bloodthirsty character (there was rather a lot about chopping off heads) and that his bumbling son, Saif al-Islam Muhammad al-Badr, represents progress. The Imam's knowledge of some things may be limited, but he knows how to run the Yemen; his son, easily persuaded by Egyptians to say what they tell him to say, does not. Imam Ahmad, too, wants his country to catch up with the rest of the world, but he pursues progress in his own way. His speech at Hodeidah was designed to show his subjects that he was once more in his old fighting form. It was meant for local consumption, but outside the country it was interpreted by some as a protest against any kind of Arab unity and by others as a protest against the federation of amirates in the Aden protectorate.

Whatever the commentators on his own radio stations said, and they have probably been set straight by now, the Imam has no desire for a closer union with President Nasser's United Arab Republic. Even the vague arrangement called the United Arab States, composed of Yemen and the UAR, is not entirely to the Imam's liking. He regards the Egyptians as carpet-baggers and more dangerous to have about the country than other foreigners. Their efforts on his behalf in his quarrel with Britain and the rulers of the Aden protectorate oblige him to treat them with civility; but that is all.

MALAYA

A Clear Mandate

TENGKU ABDUL RAHMAN'S Alliance party won its expected victory over a deeply divided opposition in the Malayan federal elections on August 19th. With 70 seats out of a total of 104, the government should be able to carry out its middle-of-the-road policies with a considerable amount of confidence in the future. Any European government with such a majority would not hesitate to put its policies into action; but the Malayan government will still feel the necessity of keeping an eye on the growing threat of the right-wing Pan-Malayan Islamic party which won 13 seats.

Directing its appeal to the Malays alone, the PMIP unreservedly pledges itself to transform multi-racial Malaya into an Islamic state with a government and legal system based on the Koran. The party's surprising triumphs earlier this summer in the state elections in the two preponderantly Malay states of Kelantan and Tregganu threw the ruling Alliance party into a state of near-panic. In the race against modern political institutions the Moslem fanatics can be certain of two advantages: it is hard for the government to ignore their demands without giving the appearance of being against religion; and their appeal is attractive to those Malays who feel that their country is already overrun by foreigners of all races and creeds.

The threat of a strong left-wing opposition has diminished as that from the right has increased. The Socialist Front, with eight seats, demands abolition of the emergency regulations, abrogation of the Anglo-Malayan defence treaty, expulsion of foreign troops, restrictions on foreign investment, and neutrality in the cold war. It is the pattern that has led newly independent countries into economic dependence on the communist block. Perhaps the Malayans, having had a taste of communist methods in their own jungles, are less anxious to take the path that leads to positive neutrality.

At home the prime minister has a clear popular mandate for the co-operation among Malays, Chinese and Indians that his party offers. Success in the elections, however, does not mean that he can overlook the necessity of keeping the foundations of his party strongly based, as equally as possible, on the three communities. If he can keep the political home front quiet he will be able to take the lead in promoting economic and cultural co-operation among the independent nations of South East Asia from Burma to the Philippines.

CROWDED PRISONS

Struggling Against The Tide

THE prison commissioners' report (Cmnd 825), which covers the year 1958, cannot reflect the improvements promised by the White Paper last February. Thus the report still shows the commissioners struggling with an ever-increasing influx of prisoners—the average population in 1958 was 25,108, against 22,368 in 1957 and 20,900 at the end of 1956—and the number of men sleeping three in a cell in the local prisons had risen to 6,000. Further, although the commissioners have repeatedly complained that the resources of the local prisons are unnecessarily strained by having to take in men awaiting trial who are not subsequently sentenced to imprisonment, they have had to make the point yet again. Over 27,000 untried men were remanded in prison in 1958, and, for each of the years 1954 to 1958, from 38 to 44 per cent of prisoners so received were not sentenced to prison on conviction.

But in spite of the increase in numbers the report is able to report a gradual spreading of the better atmosphere in local prisons to which the commissioners called attention last year. The so-called Norwich experiment, which has revolutionised the mutual attitudes of prison officers and inmates, has now become the Norwich system and is being extended to nine other prisons. The participation of prisoners in the running of the prisons, which has followed from the Norwich system, is proving successful. A great deal can clearly be done in making a prison sentence more constructive without waiting for the new buildings to be put up.

REFRIGERATORS

"Which" Hunting

FEW bodies in Britain today can claim a brighter record of growth than the two voluntary organisations that set out two years ago to advise consumers on which brands of goods in the shops seem to provide the best value for money. But as their strength and market impact have grown, so inevitably has the counter-attack

Kokusai Kanko Bldg., 1-1, Marunouchi, Chiyoda-ku, Tokyo, Japan

by aggrieved manufacturers against their judgments. A particular assault is now being launched by some manufacturers of refrigerators against the Consumers' Association, publishers of *Which*. Starting from scratch in the autumn of 1957, this association now has nearly 150,000 members paying £1 a year for its monthly magazine. It has already tested products as diverse as cameras, smoking cures and tennis balls.

Earlier this year it tested refrigerators. Rightly or wrongly, but certainly independently of any pressure, it recommended a *model made by Lec International* as the best bargain among those it had tested. This has raised a storm of protest. One leading competing manufacturer has circulated all its stockists refuting the report in bitter terms, while several other firms have made more discreet protests. As a result, anybody now going to a retailer to buy a refrigerator on *Which*'s recommendation is likely to come out again with a bundle of indignant anti-*Which* leaflets.

To a large extent this mutual criticism is healthy, as well as inevitable. Prospective purchasers ought to be intelligent enough to make up their minds after reading both sides of the case. But perhaps three guiding principles can be enumerated to help them. First, examine whether the protesting manufacturers have been able to impugn the association's reports on any important question of fact ; that will be quite possible on occasions, for sometimes the association's testing methods, as well as the products they test, are bound to be less than perfect. Secondly, note that the two sides are sometimes talking about different things ; manufacturers tend to judge their product by its technical efficiency, while the associations try to sum it up in terms of its value for money to the average consumer. Thirdly, remember that the retailer is rarely a really independent expert adviser ; at any one moment, in most consumer durables, he is almost bound to have a personal interest in pushing a particular brand or brands.

SOVIET UNION

Russians on the Never-Never

HIRE PURCHASE—so often described, in communist literature, as the capitalist squeeze on the instalment plan—has made its debut in the Soviet Union. By a decree, published last week, Soviet shops are allowed to sell certain consumer goods on hire purchase. The buyer will have to pay between a fifth and a quarter cash and the rest in six to twelve monthly instalments. The rate of interest will vary from one to two per cent.

What has decided the Russians finally to adopt a method which for years they had abused? The suggestion that they have been forced to it by consumer resistance, and that this is merely a scheme to get rid of unwanted goods, cannot be taken seriously. Soviet planners fix the prices; a price reduction would have been a more logical step. On occasions sales have also been authorised when shoddy or unwanted goods had piled up. Besides, the list of items that can now be sold on HP disproves the theory. Radiograms, better quality wireless sets, cameras, motor cycles, sewing machines or watches are not goods for which demand is lacking.

The explanation seems to be that the Soviet Union is now beginning to produce on a mass scale certain durable goods too expensive for workers to buy at once. The 6 or 12 instalments and the low interest rate (however unorthodox) should help. For a few years now Russian town dwellers have been able to hire goods ranging from an accordion to a sewing machine. The addition of hire purchase forms part of the trend towards mass consumption.

WEST AFRICA

Woman's Day

IN Accra this week the Federation of Ghana Women has been running an Ideal Home exhibition. The component parts of the perfect house have been provided by various business firms; thus the United Africa Company has contributed an all-electric kitchen. On traditional Women's Institute lines, there are also competitions for the best cake (with palm wine an acceptable substitute for yeast), the best dress and the best flower decoration. If the exhibition is a longish step from Olympiad standards, its organisation, with the emphasis on *douceur de vivre*, is yet another sign of the rising star of the West African woman.

Clubs, welfare societies and lecture groups have been springing up in the last few years. Their members are advised how to control their hair, their figures and their husbands; how to dress and make up with sophistication; how to educate their children and themselves. The Federation's bulletin "The Ghanaian Woman" not only discusses routine topics like health, beauty and cooking, but also goes into the question of too easy divorce laws, and the problem of the husband who thinks himself "superior" by virtue of his manhood.

Outside the home, women are competing for jobs that would have been unthinkable for them even a short time ago. There are women doctors, two or three lawyers and journalists; one woman runs an ante-natal clinic, while another is on the board of Mobiloil in Lagos. On a different level of education, girls are displacing men as switchboard operators, shorthand typists and —the ambition of many pretty girls—shop assistants. The market women, an influential group, have always been more active in retail trade than West African men; by now many of them are extremely well off, own a lot of property and could, if they wanted, have a powerful say in the way things are run.

Next term the University College of Ghana will for the first time open a residential hall for its women students. The numbers have risen fast, but there are still only 44 women out of a student body of 650. There is room for more girls: the difficulty is to find candidates with the right qualifications. The old argument that there are no jobs for female graduates no longer holds water, but most families need a lot of convincing before they will let their daughters remain at school for the sixth form. Social patterns are changing fast, but the "superior" father still prefers a daughter whose education will not frighten away a husband.

The Economist

AUGUST 27, 1859

POWER FOR AGITATORS?

The influence of the Trades' Unions is also a characteristic of the present movement which, in its political aspect, is in the last degree unfavourable. We have recently given our opinion of these associations in themselves, and with reference to their particular objects, and we need not repeat it. But the whole of their practical working shows the dangerous prominence they give to the talking agitator among labourers above the true industrious labourer. Operatives, as a class, are too busy to be able to carry on such associations as Trades' Unions : persons who have to work nine or ten hours a day cannot do it, especially when they belong to a class whose experience in business is very small. In consequence, these unions fall into the hands of a professional class of secretaries and similar persons, who have very often sinister interests, not identical with those of the true working men, but who impose upon them by superior fluency in speech and greater readiness in administration. The indefinite power which experience shows that such persons acquire, would cause us much anxiety if we thought that a household or a rate-paying franchise would be adopted by Parliament. Whatever views the working man may take of his own interest, he is often unable to act on it without the consent of irresponsible functionaries. He is not independent, but dependent. The experience of these strikes confirms what has often been alleged before, viz., that in giving power in name to the working classes, you in reality give, or run a risk of giving, power only to those who do not work among them. We can imagine no greater political misfortune than an acquisition of general political influence by the kind of agitator who is popular in 'Trades' Unions'. But conclusively as we think recent facts establish the extreme danger of giving the whole power in the State to the working classes, they rather confirm than disprove the arguments of those who desire that the working classes shall, nevertheless, have *some* power in the State. These facts show that the working classes have peculiar interests, peculiar ideas, and peculiar feelings. We may not think their notions well founded : we may believe that they frequently misunderstand their own true interests : we may be sure that their sentiments are often exaggerated. Still if it be the principle of a free constitution to give a share of influence and an opportunity of expression to every class and interest in the State, so exceptional and distinctive a class should not be omitted.

LETTERS

Radcliffe Report

Sir—It is difficult to read your comments on the Radcliffe Report without being convinced that the welcome you give it is far less warm than the document deserves. And the chief reason for this seems to be your refusal to accept the committee's evaluation of the role of Bank rate.

Thus "whatever can be argued about September, 1957, surely the package consisted of one article (the 2 per cent rise in Bank rate) and it worked," and again, commenting on the Radcliffe prescription for dealing with a threat of headlong inflation, "there is one rather staggering omission from the emergency package: Bank rate."

But surely it must be clear to you by now that September, 1957, is irrelevant, in that by that date no "headlong inflation" in fact threatened. It is not necessary here to analyse the particular events of that summer, events that led a running-down of the sterling balances to degenerate into a devaluation-scare rout, nor even to argue whether for that particular (external) problem 7 per cent Bank rate was or was not an appropriate remedy. It is sufficient to point out (*a*) that the run on sterling had little, either in its initial or its final stages, to do with the state of the domestic economy, and (*b*) that the world recession of 1957-58 was already under way in this country—as is clearly evidenced by (among other things) the fact which you yourself acknowledge that Mr Thorneycroft's ceiling on bank advances was never even touched. And it was, of course, largely the recession (and no Thorneycroftian nostrum) that caused the unions to tone down their wage demands.

In short, since the "evidence" of September, 1957, is seen to be phony, and since no corroborating evidence exists, there must be more than a strong presumption that the Radcliffe Committee is, after all, right in the function it allots to changes in Bank rate.—Yours faithfully,

NIGEL LAWSON

London, SW3

Chemical Weapons

Sir—In your issue of August 22nd you seem to deprecate the idea that the West should devote more effort to the development of non-lethal chemical weapons such as nerve gases. "The only use . . . of chemical weapons," you say, "would seem to be in minor wars. . . ."

Since the end of World War II, however, the West has been involved in only one major war (Korea). During the same period our forces have been engaged in a substantial number of minor campaigns (Palestine, Malaya, Kenya, Aden, Oman, etc., etc.). It would therefore seem that weapons suitable for use in minor conflicts are of major importance to us.

The argument in favour of chemical development can be briefly stated:

1. It is sometimes desirable that the West should be able to use force.

2. It is almost always desirable to keep casualties to a minimum.

3. The best way of keeping casualties to a minimum is the use of non-lethal weapons.

4. The best potential non-lethal weapons are chemical weapons.—Yours faithfully,

PHILIP GOODHART

House of Commons

The Householder's Highway

Sir—Your suspicions are misdirected; I brought the cases which you referred to last week in order to prove to residents and others that "garaging" was a misuse of the road. (My family's cars are garaged at some expense, the rateable value being increased on the conversion of the saddle room into a garage.)

The very nature of the horse encouraged the use of the road for the purpose for which it was built: a local service and access road. Now with the horseless carriage, "garaging" often leaves no space for necessary parking and stopping, *which is permitted by law*. You also overlook the strong probability that a householder has a common law right of access; a right which receives some recognition in a meter parking zone.

About five years ago a garage with standings for, say, 100 cars, within 100 yards of my front door, was closed and let to the GPO. Moons Garage 300 yards away is not always full. Again, with the permission of County Hall, developers in the immediate vicinity have for the most part neglected garages; indeed, stands for four cars have been converted into living accommodation.

Old folk of limited means have written letters of thanks, complaining themselves of noise, smell and the obstruction of light, coupled with the disinterest of authority. Except in certain sections of the Press, I have found no sympathy for people who "garage" daily all day in a place where they neither live nor work.

The problem is "garaging" (not parking). The solution is coercion; the choice, meters, regulation 89, or some other method.—Yours faithfully,

ANCRUM EVANS

London, SW1

Parking Discs

Sir—I was pleased to see from Mr Morgan's letter in your issue of July 25th that the British Road Federation, like the AA and RAC, support the parking disc scheme. Surely such expert opinion should not be lightly brushed aside by the Ministry?

I have now been able to see the report of the party led by Mr Samuels which visited Paris in April this year on behalf of the Ministry. It is clear from this that while it was admitted that the disc scheme had worked effectively in Paris, there was no attempt to see if it could be adapted to meet their requirements for London. They were only concerned, as in the report made in January, 1958, to find arguments against its adoption.

These were singularly weak and may be summarised as follows—with my comments:—

(a) "Enforcement is likely to be expensive." There is no evidence that, other things being equal, this would be more expensive with the disc scheme than with parking meters.

(b) "The cost of enforcement falls on the public rather than on the motorist." This is not an essential feature of a parking disc scheme and can be overcome very easily by making a charge for the disc.

(c) "Commercial vehicles gain only haphazard benefit." It is just as easy to reserve road space for commercial vehicles under one scheme as under the other—if it is really necessary.

(d) "No alternative provision is made for the all-day parker." Nor is it under the parking meter scheme, and it has already been admitted that the so-called profits will be quite insufficient to do anything effective.—Yours faithfully,

T. J. HUTTON

London, W1

Restrictions on Motorists

Sir—We appreciate the points made in your article "Red Tape on the Bonnet." You are, however, unfair to this association in suggesting that we have not actively pressed for a change in the present situation. For some time past we have made very strong representations to the Government to change the present regulations which make it difficult and burdensome for foreign visitors to bring their cars to this country. It is quite true that Great Britain alone of all the major European countries still insists on customs documents.

We have also suggested that there should be very close co-ordination between the Government departments dealing with aspects of tourism. The association enjoys very close relations with the Board of Trade, but many matters which affect the tourist are the concern of other departments, although to those departments they may appear to be on the fringe of their activities. The Ministry of Works guards and maintains but does not always promote or floodlight ancient buildings. Customs and the Home Office inspect travellers coming to this country for reasons which have nothing to do with the encouragement or welcome of visitors. In spite of this we would not agree with your suggestion that customs officers are ill-mannered. We have no complaints about their lack of courtesy, but only sometimes question marks about their excess of zeal in charging duty on passenger's "trophies" of the tour, which, of course, is entirely according to the law.

This association organised, with the assistance of Government departments, a conference on tourism last year, bringing together all the interested parties. The need to make provision for the enormous growth of touring by private motor car was emphasised at this conference and the association will continue to draw the attention of the Government to the urgent desirability of easing the burdens which Britain almost alone in Europe still maintains on the foreign motorist bringing his car to this country.—Yours faithfully,

L. LICKORISH

The British Travel and Holidays Association, London, SW1

Sir,—In your article "Red Tape on the Bonnet" you refer to the restrictions applicable to foreign motorists if they wish to enter the United Kingdom. May I draw your attention to another curious example of "red tape" in connection with the importation of motor vehicles by British owners, who have previously resided abroad?

I, for instance, have held a valid German driving licence for the past 5 years, having held a British Control Commission driving licence for three years before that. Whenever I came to the United Kingdom as a visitor I was allowed to drive any car, my German licence being considered sufficient proof of my ability to control a vehicle in motion.

Now, however, that I am resident in the United Kingdom I am not allowed to drive my car unless accompanied by a driver holding a British licence and having "L" plates on my car.

As one has to wait a considerable time before being admitted to a driving test, it does seem rather curious that someone who is let loose on the roads without qualms when being a temporary visitor is not trusted to be capable of driving his vehicle the moment he becomes resident in Great Britain.—Yours faithfully,

Bromley G. P. CLARE

. . . and on Dogs

Sir—I was interested to see a reference to the six months' quarantine for dogs in your article "Red Tape on the Bonnet." This unnecessary and obsolete law causes a good deal of unhappiness to dog owners, misery and sometimes death to the dogs. If the period were reduced to, say, a fortnight, with the dogs being inoculated on arrival in the UK at an approved kennel, rabies or other illness must show up almost at once. Besides Britain, I believe only Australia (and Canada in certain instances) still insist on a period of quarantine and it is comparatively easy to take a dog in and out of most other countries in the world.

It is said that breeders in England are the active supporters of the present law since they are frightened of competition from kennels on the Continent. Surely the organisations for protecting animals should start a campaign for more logical regulations or have they, too, some interest other than the happiness of the animals themselves?—Yours faithfully,

R. R. G. RIVINGTON

The Hague, Holland

Iceland

Sir,—I greatly enjoyed reading your two articles under the heading "The Iceland Saga." That is not to say that I agreed with the opinions expressed, but, after all, a saga is by definition an old heroic Scandinavian tale or myth. It is far from my intention to tangle opinion-wise with *The Economist*, but may I be allowed to make three points?

First, big nations, too, have their rights. The fact that Goliath was big did not prove him to be wrong. If, as we believe, our trawlers are engaged upon their lawful occasions around Iceland, then it is the duty of any British government to provide them with protection. This isn't aggression.

Secondly, it is not accurate to say that "Icelandic fish have been staying outside the 12-mile limit in the past year." At some seasons there is prolific fishing inside the 12 miles. I was in the *Lord Beatty* in April when she returned with a fine catch of more than 3,000 cwt of fish, including 980 cwt of some of the best haddock landed in the UK this year, all caught inside a haven within the 12-mile limit. This was by no means a unique experience.

Lastly, going about my business in this country among those most hurt by Iceland's action, I find little or no ill-will, or anything akin to it, towards the Icelanders.

May I now look forward to an article exploring the way in which the Icelandic and British industries can be made more complementary? Then perhaps we shall get somewhere.—Yours faithfully,

FARNDALE PHILLIPS

The British Trawlers Federation, Grimsby

The West Indies

Sir—I should like to comment on your note on the West Indies. First, it seems a trifle optimistic to assert just now that "Jamaica is beginning to learn, if falteringly, that it is too small to stand on its own without federation." Attitudes there have hardened against the centre since the federal elections of March, 1958, and are now virtually unanimous. The JLP fought the general election last month on the theme "Jamaica must lead or leave the federation," while the winning PNP made an election pledge on federation which included "proper representation on a population basis, protection against every form of taxation, revision of the constitution to give us freedom to pursue our own economic development policy, protection of Jamaica's interest and in particular of our industrial programme in everything that relates to customs union." The official proposals for constitutional change—described by some as a "Hands Off Jamaica" stand—include a suggestion that some units might establish a closer relation with the federal government while others would be free to have a looser association with it. This might be interpreted as a proposal that some units belong to a federation while others opt for membership of a *con*-federation.

Secondly, as regards British Guiana, while there is strong support there already for accession to the federation, my own observations suggest that none would enter if the representation offered were strictly proportional to the present half-million population. This might be shortsighted, of course. It is based on several fears—of being a small minority in any federal parliament, of being swamped by immigrants as the result of the votes of other units, of the East Indians being dominated by Africans, and of Jamaican politicians. However imaginary or exaggerated, these fears exist as a force to be reckoned with in regard to the accession of British Guiana to the federation. Adoption of the Jamaican demand for representation on the basis of population, subject to each unit having one representative, seems to me sufficient at present to keep British Guiana out of the federation.—Yours faithfully,

Manchester D. J. MORGAN

Nottingham

Sir—May I, as one who a year ago was resident in Nottingham, correct one item in your comment on the city's affairs last week?

The gentleman you describe as Councillor Ives is not in fact a councillor, although he did go with two Socialist members of the council to Jena in connection with the suggested planetarium. I have also been told on what seems to me to be good authority that he has on occasions been present at meetings of the Labour group at which council business has been discussed. In fact, if you were to look into it, I think you would find that the presence of Mr Ives, who as secretary to Nottingham Labour party has no official standing in council matters, in the Jena party and at Labour group meetings helped to start the criticisms and allegations to the police that caused Capt. Popkess to start the investigation that would not have been needed if the Jena party had been frank about the financing of their visit.—Yours faithfully,

Kidderminster K. M. RAW

BOOKS

Sociology and the Cold War

The Causes of World War Three
By C. Wright Mills.
Secker and Warburg. 175 pages. 15s.

SINCE Professor Wright Mills is the Texan sociologist whose work on the "power elite" supplied left-wing discussion groups in Britain with most of their current clichés, his views on the cold war are certain to command an audience. Unfortunately this bundle of passionately written articles and lectures seldom addresses itself to the theme of its sensationalist title. The nearest Mr Mills produces to a "cause" is the glib judgment that Russia and America are growing more and more alike. This is only true to a very limited and qualified extent, and even if it were more true than it is, that it makes war more likely does not follow self-evidently. Still less does it follow that war is inevitable, which is the proper implication of the title. Mr Mills clearly does not believe that himself since this would render pointless the third section of the book, which contains his manifesto on how to avoid war. The author restates his celebrated thesis.

> The top of America is increasingly unified and often seems wilfully co-ordinated. . . . The power of decision is now seated in military, political and economic institutions . . . . As each of these domains has coincided with the others, as decisions in each have become broader, the leading men of each—the high military, the corporation executives, the political directorate—have tended to come together to form the power elite of America.

Mr Mills goes on to say that the familiar checks and balances of American politics, which give observers the impression that American government is weak, multiform and diffuse, still operate but that they only apply to the range of issues that used to be, but are no longer, the principal subject matter of politics. They do not apply to the issues of peace and war, boom and slump. The public therefore enjoys the illusion, but not the reality, of living in a liberal democracy.

There is something in this. But of course it has never been true of any democratic government that problems of foreign policy and defence, which in the long run may affect people's lives more drastically than any others, were susceptible to proper democratic discussion and control. The question has only just arisen in America because until recently it scarcely had any foreign and defence policies. Factors that Mr Mills interprets as making America more like Russia are in fact making it more like Britain. Even so, with their congressional hearings, American politicians have a bigger shot at bringing the monster of government under control than the House of Commons ever aspires to.

Mr Mills attaches great importance to certain defects in the structure of American government that do in fact differentiate it from the British system. There is no "establishment" to connect the "power elite" by intangible links with unofficial sources of informed opinion. There is no higher civil service and the so-called "political appointees" are not skilled politicians at all, but politically inexperienced corporation executives and retired generals. Lastly, the United States lacks disciplined political parties that can present clear choices to the electorate.

This is all true up to a point, although Mr Mills has his full share of the usual American academic illusions about the logical qualities of disciplined parties while the concentration on corporations as the principal recruiting ground for government service rather than, say, the universities is a temporary phenomenon of the Eisenhower Administration that could well be changed by its successor. But where has this got Mr Mills? For his sociological analysis to justify the importance he attaches to it in the context of the cold war he would have to show that the adoption by America of these features of the British system would make it more likely that the United States would adopt his own recipe for avoiding the otherwise inevitable third world war. Since this includes unilateral American disarmament the connection is, to say the least, not apparent. Nor, to take a lesser point, does it seem to follow that the installation of a British-type civil service (which might be a good move in its own right) would lead to a greater degree of participation by the individual citizen in decisions affecting peace and war.

Mr Mills's own attitude to his discovery, the "power elite," is highly ambiguous. At one moment we are told that the top military, political and economic institutions seem "wilfully co-ordinated" and must be attacked in a rigorous uncompromising way; at another we are led to suppose that it is rather a good thing that there is so much effective power concentrated in a small group because if the intellectuals would only bestir themselves they could influence it decisively by reason. For an apostle of reason, he often verges perilously close to hysteria. But this may only be the effect of flagellating a pedestrian style in order to make it appear forceful.

Mr Mills supplies a manifesto for the intellectuals to force down the throats of the power elite. Its points include unlimited subsidised travel for intellectuals, and unilateral abandonment of American bases (and Berlin?; he does not say). The art of Madison Avenue is to supplement the science of the sociologist. The American government would announce its unilateral programme "one big item every other day, beginning at once and in plain language," and Mr Mills stipulates that:

> until the sequence of announcements is completed, the US Government should not respond officially to inquiries from any other nation.

Through American Eyes

The English Health Service
By Harry Eckstein.
Harvard University Press. London: *Oxford University Press.* 310 pages. 30s.

THE sub-title of this book on the health service is "its origins, structure and achievements," and Mr Eckstein proclaims that it is, in fact, primarily a study of how the health service came into being—to which he devotes the first 160 pages. They will be more interesting to his fellow Americans, who may one day be faced with the decision to accept or resist socialised medicine, than to the English reader, who now takes the health service for granted but would like to have an outside observer's view of its achievements and shortcomings.

In this, however, he may be somewhat disappointed. Mr Eckstein writes fully about the organisation of the service, and gives useful diagrams showing how the various administrative and advisory bodies interlock. But the third aspect mentioned in the sub-title—achievements—is hardly dealt with. Mr Eckstein mentions the better distribution of doctors, particularly general practitioners, brought about by the health service. He agrees that it has made nothing much worse and a number of things much better. But this, though it may reassure American doctors anxious about their clinical freedom, is niggardly praise. One would have liked a much fuller appraisal of, for instance, the hospital service, which is claimed to be the health service's greatest achievement.

The shortcomings that Mr Eckstein lists are familiar to English readers: the lack of co-ordination between the three main branches of the health service; the failure to spend money on hospital building; and the status of general practitioners—which is, however, not so low as he makes out. But there is one shortcoming, or what he thinks to be a shortcoming, which people in this country will think he belabours excessively and that is the Ministry of Health's decision not to press local authorities to go ahead with health centres. Health centres would, Mr Eckstein seems to think, have solved many of the health service's problems. But, quite apart from the question of capital cost, they have practical disadvantages that he ignores

There are one or two other points on which he does not give the whole story. The wholesale revolt of the medical profession against Mr Bevan early in 1948, was not only a reflection of its distrust of certain

aspects of the National Health Service Act. It also symbolised the feelings of all the professional classes about certain aspects of the Labour Government and about certain statements made by one or two of its members. Secondly, when Mr Eckstein deals with the Ministry of Health's campaign to end the queues of tuberculous patients waiting for hospital beds, he ought to mention that it was enormously helped by the big advances made in the treatment of tuberculosis at the same time. Thirdly, it is difficult to see why he equates a desire for privacy in hospitals with snobbery. On this subject he also omits to point out the extent to which private specialist practice in hospitals is underpinned by insurance schemes.

This book is one of a series called Harvard Political Studies, which explains Mr Eckstein's approach to his subject and his long epilogue on the health service and the process of planning. It is therefore not altogether fair to him to judge the book simply by his account of the health service; and English readers looking at it as a case study of planning will find much to interest them. One should add that they will also find the book readable, lucid and at times even sprightly.

The Government of Transport

The Ministry of Transport and Civil Aviation
By Gilmour Jenkins.
The New Whitehall Series: Allen and Unwin. 231 pages. 21s.

THE movement of people and things is a major form of activity in any civilised community, but, more striking, it is an activity involving more interaction between its individual components and requiring more co-ordination than almost any other form of activity. That we should need a large and complicated machinery of government to deal with the field of transport is therefore not surprising, and a description of part of this machinery by such an authority as Sir Gilmour Jenkins is welcome.

The authors of the books in this series on the various Ministries have had a problem to avoid being dull, but the writer of this book has taken full advantage of the widespread interest in the subject and has produced a readable and, at the same time, comprehensive study of the activities and methods of working of his Ministry. The central part of the book is obviously arranged according to the three principal media of transport: the sea, the land and the air. Under each can be found an outline of the main problems and the policies applied for their solution. Much is said about safety, particularly on the sea, on the road and in the air; the railways have less of a problem in this respect. Something is said about efficiency and integration, but the main theme is the protection of the public interest.

The Minister of Transport is responsible for the merchant navy and other services such as the coastguards. His responsibilities take him as far afield as to the protection of whales in the Antarctic.

Many readers will turn to the section on highways in the hope of finding something to encourage them. They will learn that the Minister is not responsible for very much; the villains of the traffic problem are the 1,300 local authorities, the property owners, the police and above all the tradition of freedom for people to use the roads as they will. There is little indication in the book of the tremendous amount of bargaining that goes on between the Ministry and other authorities—"If you do this for us, we'll do that for you." It is a wonderful game of finesse, but how costly in time. The cost of the man-hours needed to get a minor road improvement agreed usually exceeds those required for the improvement itself. The frustration that this leads to among civil servants after a time is not discernible in this book, perhaps because the author was presumably helped by younger colleagues.

Any reader will realise from the book the negligible part that science plays in the government of transport. Except for a small team on indefinite loan from the Ministry of Supply for work on airports, there is no scientist to be found anywhere, and only a casual reference is made to the Roads Research Laboratory, the main source of scientific advice available to the Minister on the roads side. A "Traffic Engineering Branch" appears in the appendix but not in the index or in the text—perhaps because it contains only two traffic engineers. As a consequence, the long required book of standards to guide highway engineers throughout the country has never been finished.

Other reviewers might have different comments to make. All, however, would emphasise that no library on transport matters would be complete without this book. No writer of letters to the newspaper should put his pen to paper until he has read the appropriate chapter.

Early Africa

The Prehistory of Southern Africa
By J. Desmond Clark.
Penguin. 366 pages. 6s.

LITTLE by little the archæologists and anthropologists are drawing Africa into the general stream of human history; and the general reader, as well as the specialist, can be grateful to Professor Mallowan for making sure that Penguin Books' excellent archæological Pelicans bear full witness to this process. In securing Dr Clark's new book for publication in this series, which he edits, Professor Mallowan has done more than provide a successor to Sonia Cole's book in the same series, "The Prehistory of East Africa": he has published the best general book on African prehistory to have appeared, so far, in any language.

Part of the reason for this superiority lies in Dr Clark's gift of organisation: this mass of material, spanning æons of uncounted time and burdened with a bewildering luggage of nomenclature (much of it wildly inefficient), needs a powerful grip if it is to yield an orderly narrative. Dr Clark knocks it around with an admirable lack of respect such as only a man who really knows his subject can dare to show. Moreover, Dr Clark bothers with his prose; he really seems to want to be understood.

Apart from being orderly and readable, Dr Clark is also a practical archæologist. His work on early iron age layers at the Kalambo Falls, near the border of Northern Rhodesia and Tanganyika, has quietly undermined a good deal of wild and academic guessing, and has put the recent prehistory of southern Africa on a solid foundation at last. He is consequently especially good on the long and difficult transitional period from late stone age to iron age in east-central and southern Africa. For the same reason he is clear and sensible about the medieval stone-building cultures of southern Africa; and these concluding sections of his book are much superior to those in its companion volume, "The Prehistory of East Africa." Much that Dr Clark has to say here confirms the view that a thorough-going archæological survey of central-southern Africa, co-ordinating known results and covering territories hitherto unsurveyed, is now badly needed.

The Young Cowper

William Cowper of the Inner Temple, Esquire
By Charles Ryskamp.
Cambridge University Press. 293 pages. 30s.

THE poems and letters on which William Cowper's fame is established belong to the second half of his life. We think of him as a recluse, an intensely pious Evangelical convert, living quietly at Huntingdon, Olney or Weston Underwood, comforted and sustained by Mrs Unwin, but seldom quite free from the dread of a return of that insanity which in 1763 put a complete stop to his life in the world of affairs.

Dr Ryskamp has produced an authoritative account, copiously documented, of Cowper's earlier years: his childhood at the rectory at Berkhampsted, his schooldays at Westminster, and his life in the Middle and Inner Temple, as a rather desultory student and practitioner of the law. He has chased up references to dozens of Cowper's relatives, friends and associates and the second half of this beautifully produced book is devoted to hitherto uncollected letters, essays and verses. Dr Ryskamp's scholarly study will be indispensable to serious students of Cowper; but one wonders how many these are, in com-

parison with those casual readers who, dipping into the delightful letters or sampling the poems, fall under the spell of Cowper's gentle charm.

What Dr Ryskamp's researches have usefully established is that Cowper before his mental breakdown was a gayer and more normal young man than we might have guessed. He had quantities of friends, he belonged to and wrote for a Nonsense Club, he was fond of good clothes and of the amenities of life. Indeed, throughout his life, and in spite of his tiny private means, he always managed to satisfy the requirements of a gentleman of very modest tastes, relying on his friends to provide when his wants exceeded his budget.

The title of this book is taken from Cowper's habitual description of himself on his title pages. That he styled himself "Of the Inner Temple" suggests the importance that he continued to attach to his brief period of association with men of the world; and as for "Esquire," he was always very conscious of belonging to a good family. There is a rather pathetic letter printed here, to his cousin Maria Cowper, in which he admits that he had sent William Unwin to call on her at the Park, Hertingfordbury, partly in order that "when he hears me called that Fellow Cowper, which has happened heretofore, he may be able upon unquestionable Evidence to assert my Gentlemanhood and relieve me from the Weight of that opprobrious Appellation." Of course, his tender conscience impels him to blame himself bitterly that his Vile and Deceitful Heart should harbour such considerations: "In good Truth it was abominable Pride of Heart, Indignation and Vanity, and deserves no better Name." But in this book we get little of the Evangelical Cowper; and it is both interesting and salutary to have our attention directed to his early years, when, like any young man, he seems to have relished pastime and good company.

Be it Remembered

The Spanish Town Papers

By E. Arnot Robertson.
Cresset Press. 199 pages. 21s.

THE "libel," or official statement of a prize case before the Vice-Admiralty Court at Jamaica, invariably begins with the formula "Be It Remembered." The author of this elegantly written and elegantly produced book says that it is only the stout paper on which these "libels" are written that has preserved the enclosed personal correspondence of such improbably named people as Mr Zachariah Goforth and Mrs Thankyou Wickham from disintegration by damp and neglect or destruction by hurricanes, thieves and ants.

Miss Arnot Robertson has resurrected these obscure personages from the dry legal records of the War of American Independence. The material may be of slight historical importance, but she has distilled an unusual amount of human interest out of it. Moreover, her book illuminates a neglected aspect of the war: the interruption of the commerce between the rebellious colonists and the West Indian planters, who never really cared who won the interminable wars that were always being fought in the sugar islands provided their trade was not damaged by busybodies like the young Captain Nelson. The history of privateering is so obscure a subject that one deplores the absence of solid statistics in an otherwise admirable little book, which illustrates, by extensive quotation, how

> despite the smell of wickedness, greed and brutality which comes up from these brown damp-stained, insect-eaten papers, there comes, too, movingly, across the years, a sense of the good, enduring human things.

Of Diverse Origins

Psychiatry and the Public Health

By G. R. Hargreaves.
Oxford University Press. 118 pages. 12s. 6d.

IN his Heath Clark lectures, which this book records, Professor Hargreaves briefly traces the evolution of psychiatric practice as we know it today. It is a complex story involving "private madhouses," Justices of the Peace, compulsory education and juvenile courts as well as general medicine, and in unravelling it the author shows very clearly that many of the present difficulties stem directly from the diversity of these origins.

Psychiatry's isolation from general medicine, which is still only slowly being broken down; the curious and difficult relationship between hospital and local health authority; the division of responsibility for child guidance clinics; the vast nineteenth century mental hospital and the disputed post of medical superintendent; even the tendency of psychiatrists to invade fields which strictly are the preserve of the sociologist, the moralist and the theologian—all these and other problems become clearer, but no more easy to solve, if their historical causes are known

The book looks forward, too, to the development of preventive psychiatry, and here Professor Hargreaves has much to criticise and many constructive suggestions to make. The more obvious defects in medical education and the harmful effects of the present division of responsibility for the health of the young between family doctors, hospitals, education authorities and local health authorities are two of the problems of current concern that he deals with. His plea for an extension of the services provided by the local health authority for patients discharged from mental hospitals and for the development of an integrated mental welfare service is, of course, in keeping with the proposals of the Mental Health Act. Anyone who is concerned with the establishment of an effective service of this kind ought to read this summary of the background.

OTHER BOOKS

THE ECONOMICS OF "UNDER-DEVELOPED" AREAS: An Annotated Reading List of Books, Articles, and Official Publications. Second enlarged edition. Compiled by Arthur Hazelwood. Published by *Oxford University Press* for *Institute of Commonwealth Studies.* 168 pages. 8s. 6d.

This invaluable guide to the published material on under-developed countries has been out of print for some time. The new edition contains some 400 additional items selected from the material that appeared from 1954 to early 1958.

THE STRUCTURE AND EVOLUTION OF THE UNIVERSE. By G. J. Whitrow. *Hutchinson.* 212 pages. 21s.

This is a completely revised edition of "The Structure of the Universe" which the Reader in Applied Mathematics in the University of London (Imperial College of Science and Technology) wrote over a decade ago for Hutchinsons Home University Library. Described as an introduction to cosmology, it should admirably fill students' needs; but it is of equal use to the inquiring reader equipped with some mathematics. The conclusion is worth citing:

> Our idea of the universe as a whole remains a product of the imagination. . . . There was a monk indulging against the teaching of the Master in cosmological inquiries. In order to know where the world ends he began . . . interrogating the gods of the successive heavens. . . . Finally the Great Brahma himself became manifest, and the monk asked him where the world ends. . . . The Great Brahma took that monk by the arm, led him aside, and said: These gods, my servants, hold me to be such that there is nothing I cannot see, understand, realise. Therefore I gave no answer in their presence. But *I* do not know where the world ends.

That, from the "Dialogues of the Buddha," shows how little is new under our sun.

Paperbacks:—

THE AMERICAN PRESIDENCY. By Clinton Rossiter. *Muller.* 166 pages. 4s.
This was reviewed in *The Economist* on April 6, 1957.

THE PSYCHOLOGY OF THINKING. By Robert Thomson. *Penguin.* 215 pages. 3s. 6d.

POETS IN A LANDSCAPE. By Gilbert Highet. *Penguin* in association with *Hamish Hamilton.* 270 pages. 6s.
This was reviewed in *The Economist* on April 20, 1957.

GALLIPOLI. By Alan Moorehead. *Arrow Books.* 320 pages. 3s. 6d.
This was reviewed in *The Economist* on May 12, 1956.

THE MAKING OF THE MIDDLE AGES. By R. W. Southern. *Arrow Books.* 288 pages. 3s. 6d
This was reviewed in *The Economist* on April 25, 1953.

GLASS THROUGH THE AGES. By E. B. Haynes. *Penguin.* 310 pages. 8s. 6d.

A DICTIONARY OF ART AND ARTISTS. By Peter and Linda Murray. *Penguin.* 363 pages. 5s.

GEORGE FOX AND THE QUAKERS. By H. Van Etten. *Longmans.* 191 pages. 6s.

MOSES AND THE VOCATION OF THE JEWISH PEOPLE. By André Neher. *Longmans.* 191 pages. 6s.

MEDICINE AND MAN. By Ritchie Calder. *New American Library of World Literature.* London: *Muller.* 256 pages. 4s.
First published in March, 1958.

MUSIC AND IMAGINATION. By Aaron Copland. *New American Library of World Literature.* London: *Muller.* 127 pages. 4s.

SIR GAWAIN AND THE GREEN KNIGHT. New translation by P. Stone. *Penguin.* 144 pages. 2s. 6d.

THE PENGUIN BOOK OF FRENCH VERSE. 4—THE TWENTIETH CENTURY. Edited by Anthony Hartley. *Penguin.* 377 pages. 5s.

'YES SIR, I said, YOU'RE THE BOSS!'

You're the boss, you give the orders . . .
and the Independent haulier carries them out. There's no red-tape
to stand in his way. He makes his own decisions swiftly . . . executes them
promptly. And he puts *you*, the customer, first.

Personal service—that's the reason why so many firms are regular customers—
have been for a long time—of Independent hauliers. They like the scrupulous attention paid
to their special demands. They know how Free Enterprise competition
has held down prices since de-nationalisation. And, of course, they like the prompt service
given equally to the heaviest freight and the smallest load,
to the local delivery and the long cross-country haul.

The Free Enterprise Haulier puts *you* first

Nationalisation means goodbye to all this!

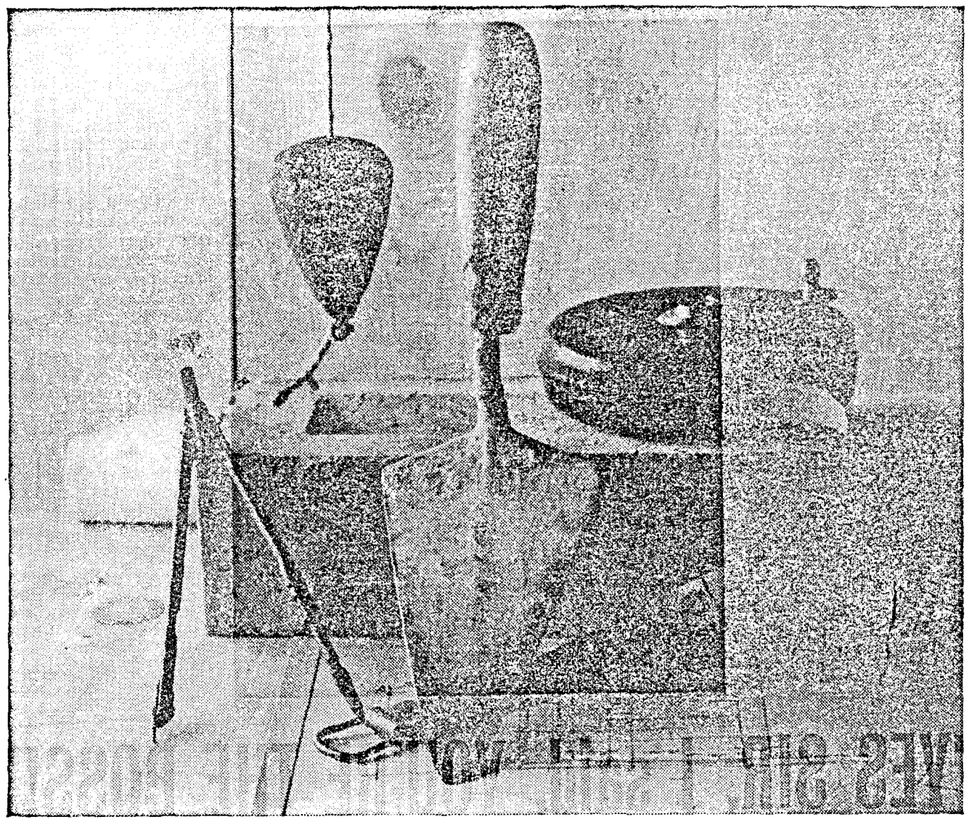
or directly with the Head Office at: 146 New Bond Street, London W.1. MAYFAIR 9050



a new town every month

Australia has a monthly population increase of 20,000—the equivalent of a new township every month of the year. But Australia is in a position to welcome such expansion. Matched by vast resources—and resourcefulness—expansion goes hand in hand with prosperity.

Just as the Australian is proud of his country's achievements, so has every Briton a right to be proud. For Australia was founded with British capital and, in the main, developed with British capital. In the last ten years alone, British investment in Australia has totalled almost £500 million—sufficient evidence of the favourable climate awaiting British capital.

Australians look forward with confidence to a continuing trading, manufacturing and financial partnership with Britain. Representatives of the Federal Government of Australia in the United Kingdom will be glad to provide information about opportunities and methods on trade, investments and migration.

Australia's stability and resources offer opportunity for enterprise with reward.

Australians are not only waiting for others to invest. Already they devote 25% of their national income to investment. But so great are the opportunities that British, European and American industrialists are encouraged to take a financial interest in Australia—not only for long-term investments, but as a base for Asian trade.

Economically sound, with stable labour conditions, Australia is a free enterprise community. Her aluminium and brown coal deposits are the largest known. Uranium, copper, lead, zinc, other strategic materials, giant hydro-electric schemes and a world standard steel industry are newsmaking features of Australia's industrial growth. The annual value of Australian produced manufactured goods now exceeds her total production of all primary products, including minerals. Important, too, are the favourable taxation agreements with the United Kingdom which ensure a tax level of one country only.

AUSTRALIA

AUSTRALIA'S REPRESENTATIVES ARE AT AUSTRALIA HOUSE, THE STRAND, LONDON, W.C.2

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Economic Specialists

WASHINGTON, DC

By the time Vice President Nixon's special Cabinet committee and the special inquiry by Congress's Joint Economic Committee, both initiated early this year, have produced their respective prescriptions for encouraging economic growth, guaranteeing full employment and maintaining stable prices, the national economy may be giving a practical demonstration of all three. With any luck, and assuming only elementary good sense in the government's monetary and fiscal policy, the next few years could see America enjoying the "soundest" prosperity in the country's postwar experience. While in the good years of 1956 and 1957, American productivity remained in a strange state of semi-stagnation, all the investment made in the later nineteen-fifties should be bearing fruit in the form of genuine growth during the new period of expansion which is now beginning. With farm and food prices remaining low, with the first signs of resistance to wage inflation and with wartime liquidity now at last worked off, the chances are better than they were in earlier booms that price rises will not get out of hand. While no one counts on this, publicly, at least, the arguments for its probability seem highly plausible.

Meanwhile, the two surprisingly parallel inquiries into the matter go on. Unfortunately for Americans, they are most unlikely to produce anything as reasoned, unanimous and clear-cut as did the Cohen and Radcliffe Committees in England. There are different causes for this in each case, and they help to explain why it is so difficult under the American political system for the "commission" approach to be as effective as it is in England.

Mr Nixon's Cabinet Committee on Price Stability for Economic Growth has produced two reports so far. The first, unfortunately for the later work of the committee, was inevitably regarded as political. Dealing only with the threat of inflation, its effect was merely to endorse the policies of the President. The report was well worded and persuasive on such matters as why indefinite creeping inflation is to be avoided, but political speeches on the television screens are also well worded and persuasive. The committee's next report, issued ten days ago, contained a series of elementary lessons in economics—asking the question of "what do we want from our economy" and answering it with "growth, maximum opportunities for employment and reasonable assurance of stable prices"—but it was so innocuous that it baffled the reporters who were assigned to write about it.

At a briefing one of the members of the committee let slip that the Administration now felt that the problem of inflation was pretty well under control for the moment and would therefore concentrate on the problem of growth. This was promptly emphasised in the newspaper stories on the report and produced a cry of triumph from the labour leaders who had long insisted that this was the right approach. Meanwhile, nobody has read the elementary lessons—which are rather well done—and the next items in the series may suffer the same fate. Even if the news value of these coming dissertations is greater, as for the next ones it may be, the committee's future output will inevitably be tarred with the political brush of the first report and will be viewed with suspicion in many quarters. This is probably a pity, for the quality of the reports promises to be high and the matters to be examined are of great importance.

The Joint Economic Committee suffers from a different difficulty. By all odds its most useful function is the taking of evidence. Economists of great ability and reputation sit down and prepare reasonably concise, occasionally brilliant papers on all manner of subjects, which are then thrust upon the press, and presumably, the public. But even the best of these papers are often too abstract or historical to provide a decent newspaper headline and as soon as a government official testifies the newspaper stories concentrate on the political clash arising from the committee's questions. As a result, to cite one example, a brilliant analysis by the Secretary of the Treasury of the process of growth, presented as his prepared paper, went almost entirely unnoticed.

When the Joint Committee produces its report next January or February, it will almost certainly show the effect of partisanship. The Democratic chairman, Senator Douglas, was once a prominent economist, but the life of politics has dulled his objectivity and diverted his attention. The membership of the committee includes a strange mixture of those who are there by virtue of their intelligence and those who owe their positions to their congressional seniority. While the Democrats include three of the brighest of the younger liberals (Representatives Bolling, Reuss and Coffin), the Republicans have only recently acquired a persuasive spokesman. By dint of extraordinary effort and doggedness, Representative Curtis of Missouri is at last beginning to speak in an economically intelligent conservative voice, and recently he has received some assistance from the sensible Senator Bush. But many of the members do not attend the sessions at all and others, like Representative Patman and Senator O'Mahoney, confine their participation to endless cantering of irrelevant hobby horses.

In general, the committee's inquiry suffers from the fact that if it is to be objective—as it has been so far—it will inevitably be unexciting, while if it sets out to prove the viewpoint of the Democratic majority, its report, even if basically sound, will be discounted as political. If, after receiving and presumably digesting the papers of two score economists, the committee produces a unanimous answer to the problem of reconciling price stability with economic growth, everyone will be surprised.

By the time both inquiries have completed their work, the 1960 election will be dominating economic discussion, for better or for worse. From this distance in time it seems likely that the economic argument, with all its ramifications, will be by far the most outstanding issue in that election. A great deal of importance in American economic history has happened during the six and a half years in which a conservative Republican Administration has been in charge. The election debate, while perhaps distressing to the economists, will at least have the merit of creating an image, and revealing the fact, of a genuine split between the parties in this field. But it will also obscure the amount of genuine agreement on some of the elements affecting growth, price stability and full employment. Thus the two current and ambitious attempts to elucidate publicly what Mr Heathcoat Amory has called "the great economic problem of our time" are likely to be frustrated on every side by political considerations.

Preparing for Mr Khrushchev

THE millions of words which the airborne regiment of reporters accompanying President Eisenhower to Europe will dutifully send back to fill the newspapers and the television screens may make Americans realise that their allies are looking askance at Mr Khrushchev's visit to the United States. Until now the average American has been so occupied with discussing the plans for that visit and with trying to decide whether it is to be welcomed or cold-shouldered that he has hardly noticed the reactions to it in other countries.

But if he had, he would have little sympathy for fears that the United States may come to an agreement with the Soviet Union behind its allies' backs. For the average American's views were put, as so often before, by President Eisenhower at his press conference on Tuesday when he said that he had invited Mr Khrushchev to the United States in order to find out whether he had any proposal for reducing world tension which was worth studying and in order that Mr Khrushchev might see for himself how a free people lived and worked. The visit is regarded as a mere holding operation and nothing is expected from it, for some time, at any rate. Nor does the average American share the fears felt abroad that the friendly, open-hearted Mr Eisenhower may be led up the garden path into the lions' den by the cold, calculating Mr Khrushchev. The new, or rather the renewed, Eisenhower is confidently felt to be as capable of coping with a Russian Premier today as he was with German Generals fifteen years ago. Certainly he will be well coached during his present European trip.

After some initial doubts Mr Khrushchev is being given the full treatment of a Head of State, with the President meeting him at the airport and a National Press Club lunch with questions afterwards. Congress is beginning to reconsider its determination to adjourn before he arrives so as to avoid the embarrassment of having to invite him to address a joint session. It is also being suggested that it might be instructive for Mr Khrushchev, when he goes to Pittsburgh, to find the steel strike still in progress (as it probably will be) as a demonstration of the freedom enjoyed by American workers. The leaders of those workers have refused to meet him officially, in protest against forced labour camps in Russia, but some of them will tell him privately about the facts of American trade union life. And Mr Henry Cabot Lodge, the American Ambassador to the United Nations, is to accompany Mr Khrushchev because, it is said, he is so expert at answering difficult Russian questions quickly and efficiently. Mr Khrushchev may be refusing to visit defence installations and the small towns and housing estates which were suggested as being particularly educational for him, but he will not be able thus to escape the lectures on the American way of life which are the price he must pay for his invitation.

The State of Hawaii

LAST Friday Hawaii, which is closer to Tokyo than it is to the federal capital, became the 50th state to be admitted to the Union. The occasion was proclaimed with all due solemnity in Washington and received with characteristic informality in the executive chambers of the Iolani Palace in Honolulu, where the new Governor, sporting a four-foot garland of pink carnations, was duly sworn in. The Republican elephant will not forget in a hurry its pleasant surprise that the first encumbent of this distinguished office—Mr William Quinn—should be a Republican. Hawaii's emissaries to Congress—one Republican and one Democrat to the Senate and a Democrat to the House of Representatives—will now start wrestling with unfamiliar problems, such as farm surpluses, and others, such as defence, race relations and labour reform, which strike nearer home. The Stars and Stripes, which only recently rearranged its pattern to accommodate Alaska, has now added a fiftieth star, although the new flag will not come into use until July 4th of next year.

"By Golly, I Didn't Think I Could Swing It"

Despite its strange geography and relative lack of industry, Hawaii is no poor relation; the income a head of its half million inhabitants is higher than that in 26 of the states, and it contributes more to federal funds than it takes from them. In contrast to Puerto Rico or the West Indian islands, Hawaii has enough jobs to go round and its agricultural wages are the highest in the world. Dependent on supplies from the mainland for most of its food and raw materials, Hawaii has four large money-earners which at present more than foot the cost: defence installations, bringing in over $300 million a year, sugar ($150 million in 1958), pineapples ($110 million) and tourists ($83 million). There is little official encouragement of industrialisation and a good deal of sentiment in favour of preserving Hawaii's charms, but new industries have taken root, many of them under the guidance of the west coast industrialist, Mr Henry Kaiser, who came to the islands for a holiday five years ago and stayed to give them a strong taste of his imaginative enterprise.

Hawaii's economy rests heavily at present on its value as a military base and is highly vulnerable to a change in strategic fashion. More and more tourists offer the only practical way of reducing this dependence, and hopes are running high that statehood will bring thousands of visitors curious to look over the new state. In any event, jet air services will make this pleasure resort more quickly accessible to the American holiday-maker. Hawaii also sees itself as the air cross-roads of the Pacific; a stop at Honolulu is scheduled on BOAC's round the world flights. As if to justify this hope, the International Air Transport Association meets in Honolulu next month.

IDA and Boggs

SINCE one of the purposes of President Eisenhower's visit to Europe is to increase co-operation in improving living standards in under-developed countries, he is presumably going to back up the efforts already made by his economic officials to sell the idea of the International Development Association to other potential participants. IDA, deposited on the Administration's doorstep early last year by Senator Monroney and only very recently accepted as a desirable member of the family, is intended to provide long-term loans on much easier terms than can the World Bank, which works to strict commercial standards. A capital of $1 billion is suggested for IDA; it will finance only sound and essential projects, but they will be in under-developed countries and will be

HOW CAN TV BEST HELP TEACH?

one answer to the problem

The problem of how television can be best used for education is not an easy one. That its potential value is enormous is hardly disputed—it is how most effectively to fit it into the general pattern of education that has still to be discovered.

A contribution towards solving this problem has now been devised by Granada TV, in a series of programmes which will be shown on television screens to Science Sixth Forms next term.

For this series of programmes a number of Britain's leading scientists have consented to give lectures. Among them will be:

SIR EDWARD APPLETON
SIR ALEXANDER TODD · PROFESSOR LOVELL
SIR JOHN COCKCROFT · PROFESSOR MASSEY
PROFESSOR WADDINGTON

The lectures will be independent of any school syllabus. Each programme will be self-contained. The aim of the series is to give Sixth Form students the opportunity of seeing, in their own classrooms, leading scientists talking about their work. Each lecture will last for half an hour.

The programmes will be supported by Teachers' Notes which will be provided in booklet form in due course.

The programmes will be transmitted between 11.40 a.m. and 12.10 p.m. each Thursday, with a repeat at the same time on each following Monday. There will be ten programmes during the term and they will start on Thursday, September 24.

GRANADA TV

Starting 24 September

of types which do not qualify for assistance under other international programmes.

IDA has two main advantages, from the American point of view, and these are the excuse for setting up a new agency to do work which is already being done elsewhere, by the American Development Loan Fund, for example. IDA will bring other countries into the programme for helping backward areas, notably West Germany and Japan which could now afford to be generous, it is felt; and its loans should be acceptable to "neutral" countries which have been reluctant to commit themselves to the United States by taking its money but in which there is often urgent need to counter communist influence. IDA is to deal in soft as well as hard currencies and thus to provide an outlet for the foreign funds which have accumulated under the American programme for disposing of farm surpluses abroad. Other countries may feel that this provision has been inserted to suit the convenience of the United States and various other objections are also likely to be made when the scheme is debated at the World Bank meeting next month. But if IDA is approved, little difficulty is expected in getting Congress to provide the American share of her dowry, $320 million.

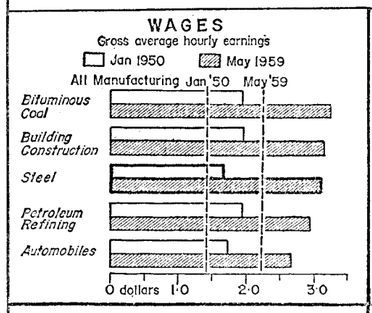
The growing conviction that foreign aid should no longer come from the taxpayer, but should be confined to loans and private

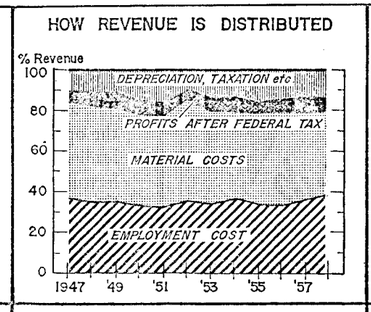
Background of the Steel Dispute

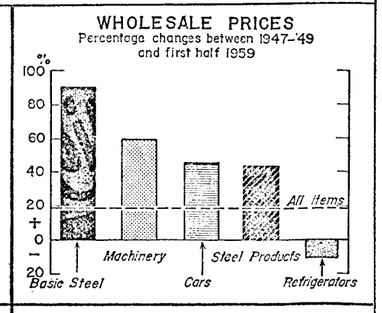
THE steel strike, which started at midnight on July 14th, is now in its seventh week. The United Steel Workers' union is demanding an increase in wages and other benefits equivalent to 15 cents an hour—a sum which it considers the industry can well afford without raising prices. The companies, on the other hand, are sticking to their original view that no wage increase is possible unless steel prices also go up. In order not to start a new inflationary spiral, they want to freeze wage rates for this year and to grant a "modest" increase next year in return for concessions on work rules; these the union has indignantly rejected. In addition, the companies claim that a further rise in the price of steel would invite excessive foreign competition. At the same time the record level of company profits in the first half of this year, which has been a central factor in the dispute, reflected in part the general anticipation of a strike by steel users. Arguments have thus centred on the relative movements of wages, prices and profits, and to this welter of facts and figures the Secretary of Labour has now added the results of his own fact-finding mission, some of which are set out in the charts below.

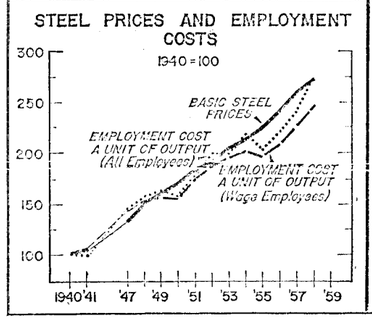
The immediate effect of this official publication has been to confirm the claims of both sides. Management is upheld in its contention that steel wages are higher, and have risen more steeply, than those in most other manufacturing industries; and that employment costs per man hour have risen faster than have steel prices. By turning to different series of statistics, the union can point out that steel prices have risen more steeply than employment costs per ton of steel; that they have increased more than wholesale prices generally and much more than retail prices; and that steel users have kept their prices down more effectively than have steel producers. The figures on profits similarly support both cases: steel profits have been higher than those for manufacturing generally when set against revenue, but lower when judged in relation to the amount of capital invested. If these findings fail to suggest where the bargain should be struck, they do give the layman a strong impression that both sides can afford to make concessions.

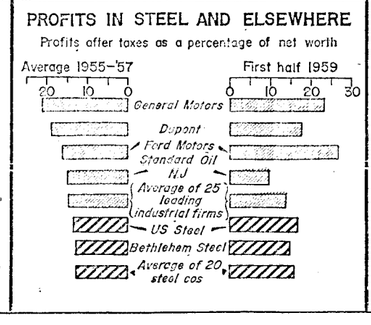
Over half a million workers are employed in an industry which can produce 148 million tons of steel a year. There are over 250 producers of finished steel, but the four largest plants employ more than half of the industry's workers. Capital investment for each production worker has more than doubled in a decade, to $20,000 in 1957. Steel workers earned on the average $5,350 in 1957, but the recession last year reduced this to below $5,000; in both years nearly a third of them earned over $6,000.

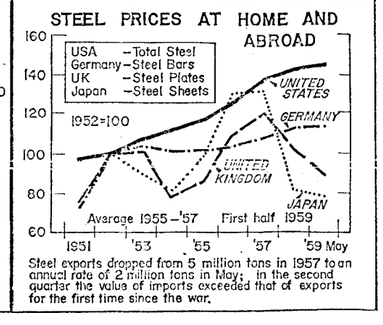












Steel exports dropped from 5 million tons in 1957 to an annual rate of 2 million tons in May; in the second quarter the value of imports exceeded that of exports for the first time since the war.

investment, is also apparent in the progress at last being made by the Boggs Bill which gives tax relief to companies doing business abroad. Intended to encourage foreign investment, it should get through the House of Representatives before adjournment, although the Senate will not consider it until next year. By then, unfortunately, more attention may be being paid to the trade unionists and others who are already arguing that American firms which are active in other countries are competing unfairly with domestic industry. The Bill has been amended to counter some, but not all, of the Treasury's fears that it will mean a heavy loss of tax revenue. Its chief provision now is for the setting up of special subsidiaries by American firms operating abroad; their earnings would not be subject to taxation until the money was brought back to the United States.

Labour Closes its Ranks

THE executive council of the American Federation of Labour and Congress of Industrial Organisations met in the Pennsylvania mountains last week to plan for next month's convention in San Francisco and to examine its wounds after the rain of blows under which the labour movement has been reeling recently. The sharpest of these, and one which the trade union leaders seem to feel has knocked them right out of this particular political ring, was the passage by the House of Representatives of a Bill for reforming the trade unions which was bitterly opposed by labour spokesmen. In fact, the opposition may have been too bitter; the labour lobbyists apparently failed to allow for the strength of the public reaction against corruption in the unions and for the pressure that this put on Congressmen. Arrogant threats of loss of trade union support seem to have influenced some Representatives who normally follow the labour line to vote for the Bill. Its passage, and the likelihood that the Senate will accept it with little modification, left the members of the AFL-CIO council wondering what had hit them. For only last November they were rejoicing that nearly all the candidates they supported had been returned to Congress and that the new Legislature could be relied upon to favour labour. The old-fashioned trade unionists who have always shied away from direct political action are now saying "I told you so."

But in the long run the trade unions may be more severely hurt by the steel strike. This was forced upon a union which did not want it by a group of managers who have only recently come to the top in the industry and who are determined to substitute a "tough" policy for the "give and take" which has long characterised wage bargaining in steel. If this reactionary approach prevails, and it now looks as if it may, it will be copied in other industries. For this reason the AFL-CIO council came swinging into the ring against this "big business conspiracy": they demanded that President Eisenhower intervene to force a settlement on the industry; they organised various gestures of solidarity with the steel workers; and they made plans for giving the strikers financial support.

Finally the council decided that at such a time labour should close its ranks, and so the International Longshoremen's Association is to be invited to return to the AFL-CIO under a few not very onerous conditions. This was the first union to be ousted by the federation for corruption, six years ago; it has now been cleaned up, but by the New York Waterfront Commission rather than by its own efforts. One reason for the invitation, which hardly seems to have been earned, is that the AFL-CIO leaders fear that if the ILA is left on its own any longer it may be tempted to co-operate with Mr Hoffa's notorious teamsters' union on which most of labour's congressional troubles can be blamed.

Second Try on Housing

HAVING failed to rally the necessary two-thirds majority to override Mr Eisenhower's veto of the Housing Bill sent to him last month, the Democrats in the Senate concurred in the passage, last week, of a substitute measure. By reducing total commitments from $1.3 billion to a little over $1 billion, the revised Bill goes some way to meet the President's complaint that its predecessor was "excessive" and "inflationary," but on individual programmes he has by no means got his way. The authorisation for new public housing has been cut from 45,000 units to 37,000, against the President's request for none this year. Funds for slum clearance have been reduced from $900 million to $650 million, but his objection to the present method of financing the programme—by direct Treasury advances instead of congressional appropriations—has been ignored. And new schemes for building college class rooms and homes for the elderly have survived his disapproval.

The Bill contains, however, one provision which the Administration urgently needs: permission for the Federal Housing Authority to continue its insurance of mortgages on private homes. FHA has not only exhausted its funds but has issued letters of "intent to insure" to a value of $5 billion. Democrats are taking full advantage of the Administration's susceptibility on this score. It explains why they have felt able to take the risk of making only modest concessions on this year's Bill and why they have given FHA only a one-year extension instead of the two requested; they hope next year to tack additional funds for public housing and slum clearance on to the coat-tails of a new authorisation which FHA will be needing.

The House of Representatives is expected to approve this measure, providing technical difficulties, exploited by its conservative opponents, do not prevent it reaching the floor at this crowded end of the session. According to usual practice, the Bill has been dispatched to the House Banking Committee, from whence it must go to the Rules Committee to gain a place in the legislative programme. Not only might its progress be blocked, but by this route the Bill would in any case be open to amendments which there is now little time to debate. An alternative course is to bypass both committees and bring the measure straight to the floor of the House; but standard procedures can only be broken in this way on certain days. Providing the Bill reaches the White House, Mr Eisenhower is likely to sign it; not only will there then be no time to extract a third version from Congress, but the Senate's vote of approval last week was large enough to over-ride a second presidential veto.

Democrats and Angels

THE recent argument over who in the city of angels were to be the actual angels financing next summer's Democratic convention in Los Angeles was basically a struggle for power within the party. For a few days it looked as if the city would lose its chance to inaugurate its new sports arena with the first presidential nominating convention ever held in Los Angeles. It owed the chance to Mr Paul Butler, the chairman of the Democratic National Committee, who beat down those who did not want the delegates to have to travel so far in order that California's Democrats might be rewarded for their sensational victories last November by being the centre of the party's attention next year. The move west was also meant to ensure that the convention would be dominated by the liberals, the group to which both Mr Butler and the party leaders in California belong.

Unfortunately for this plan the subsidy of $350,000 with which

Up the High Mobiles

FROM A CORRESPONDENT IN NEW YORK

UNTIL a firm of market analysts gave the term a new meaning, a mobile was a modern art object hung from the ceiling on wires, its several parts so delicately poised that it vibrated with the slightest breeze. Now the phrase "high mobile" has been coined for what are also called the "tastemakers" or the "leadership elite for change." These mobiles are not art objects, but people, also delicately poised and vibrating, but not so much with breezes as with new products, services and ideas. They have been identified and pinned down in a New York suburb, but their cousins can be found along the Main Line near Philadelphia, on the North Shore near Chicago, and across the bay from San Francisco. Their discoverers believe that this new species may help to answer the questions which obsess the manufacturers of consumers' goods: what is the customer going to want tomorrow, next week, next year? How can his wants be predicted?

Millions of dollars have been spent in an effort to find the answers and more millions will be spent in the future. The newest theory, formulated by students of buying habits and backed by a Princeton professor of sociology, is based on the belief that a high degree of mobility, up, down, and sideways, is the distinguishing mark of American society in the twentieth century, and that it contains the key to reliable predictions about consumers' tastes. These theorists argue that in the American world change is not only constant, but also profitable and desirable; it is painful only if people are not prepared for it.

But what, or who, causes change? The second step in the argument is that "whenever change occurs, some unusual individuals must be the first to make the change." If this is accepted, the third step is to identify these unusual individuals

and find out how they tick, for what these "high mobiles" want today is what millions will want tomorrow.

THE first search for them was conducted in Ridgewood, New Jersey, a leafy suburb on the west side of the Hudson River, full of commuters, community fervour, outdoor barbecues and high fidelity, where people own their own homes and enjoy a "high saturation in communications media." Here 82 white families having an income of more than $5,000 a year, and half of them headed by college graduates, consented to act as guinea pigs. The first aim was to find out how receptive these families had been to change. Out of these inquiries came the discovery that only about 27 per cent could rank as high mobiles; 50 per cent were in a middle range and 23 per cent belonged to the world of snails and tortoises.

The high mobiles had bought items from the test list very early. It included 75 products and services which have become popular since 1945. They moved from high fidelity to stereophonic sound two years before the others followed; they led in buying electric blankets, foreign cookbooks and credit cards for travel. They were purchasing Irish whiskey for ten years before it became popular in the United States and ballet slippers for eight years before they became common street wear among the young. On the other hand, they were only four years ahead of the crowd in buying automatic clothes driers, and only two years ahead in accepting automatic dishwashers. The high mobiles led the present boating boom, but fell behind the middle mobiles in installing home swimming pools. As for the low mobiles, copper saucepans are their prestige item; if the high mobiles ever started this trend it was so long ago that they have forgotten it.

THE outstanding characteristic of the high mobiles is their sensitivity to change in many sectors, whatever their age or income. Quick-moving, easily bored, these are the restless ones, tied not to habit or to the values of their ancestors (except for eighteenth century furniture and political theories) but always seeking something different. Not too far ahead of the crowd, they are bird dogs of the about-to-be-popular, bellwethers of change whom the rest will follow happily. They have more than the average tendency to travel, a wider variety of friends, more curiosity, a slightly better education, more success in their careers and a greater interest in politics than the normal man or woman. Comfortable, but not rich, they do not watch television but they do buy paperback books—and read them. Education and culture rank high in their scale of values.

Whether the high mobiles can be exploited commercially remains to be seen. Obviously the theory has not been tested sufficiently to make wide claims safe. But the implications of this attempt to get out in front of the crowd must not be underestimated. It flies in the face of egalitarian democracy; it challenges the pre-eminence of the lorry driver. If this trend continues, a high mobile might even run for President.

Los Angeles in effect bought the convention was offered by a group organised by Mr Edwin Pauley, a conservative oil magnate. He is an old crony of ex-President Truman's but did nothing to help the Democrats in California in the days when the party was in eclipse there. Mr Pauley claimed that he had been promised 5,000 seats; these are valued at $500 each and were essential if he was to raise money for the subsidy. The arena will only hold 16,000 people and, when delegates and press and wireless representatives have been accommodated, there will be fewer than 5,000 places left. If Mr Pauley's claim had been accepted, the public galleries would have been filled with a host of people from the host city and there would have been no seats available for allocation by either the state party organisation or the national committee. More important, Mr Pauley would have been able to pack the galleries with supporters of whatever presidential candidate he favoured—his choice, like Mr Truman's, is believed to be Senator Symington—and a claque of this kind can have a decisive influence on a nomination.

Faced with this challenge to his prestige, Mr Butler, denying that any promise had been given and backed by California's Democratic officials, stood firm against both Mr Pauley and the Republican Mayor of Los Angeles. When it became clear that Mr Butler was prepared to take the convention business and publicity away from Los Angeles altogether, the Mayor capitulated and Mr Pauley withdrew to Hawaii. A new committee, headed by Mr Dan Kimball, also an ex-member of Mr Truman's Cabinet but a liberal sympathiser, undertook to raise the $350,000; the 4,500 spare seats will be shared equally between the state committee, the national committee and the Los Angeles committee; and the presidential nomination will, from present indications, be "wide open." California's Democratic Governor, Mr Pat Brown, intends to arrive at the convention with the state's delegation, the largest after New York's, pledged to support him. That he will in fact be nominated is improbable, but he may dictate who is to be.

ADVERTISER'S ANNOUNCEMENT

THE WRONG WAY AND THE RIGHT WAY

Dr FRANK N. D. BUCHMAN

"WE are not ready to live in the world that faces us." The man who says this is a production genius in charge of 400 scientists and 35,000 men who launched Atlas in answer to Sputnik. There is a wrong way and a right way of launching a rocket into space. There is a wrong way and a right way of living on earth.

Dr. Douglas Cornell, Executive Officer of the National Academy of Sciences, says, "Science has made it possible for the world to be destroyed between lunch and the cocktail hour. But the problem does not lie in science, it lies in man. It is modern man who needs to be remade."

There is a wrong way and a right way to meet the challenge of Communism. An American general who trained the army of an Asian nation says, "I tried to fight Communism with an army and with economic aid. I trained good soldiers. But I was unable to equip them with a world idea superior to Communism. Moral Re-Armament is the idea I was looking for. It is the right way to do it."

We have been living the wrong way for so long that we have come to accept it as normal. Broken homes, disrupted industries, divided nations, deadlocked conferences—these things are not normal. They are the inevitable outcome of doing things the wrong way. Many people condemn Communism. But could it be that the hate, greed, fear and selfishness which create confusion and division in our own society, are the strength and essence of Communism? Millions who would never join the Communist Party, make its advance inevitable by the way they live.

MORAL RE-ARMAMENT OR COMMUNISM

Admiral William H. Standley, who was United States Ambassador to Moscow and Chief of Naval Operations, sees this issue clearly. In a thought-out statement which has gone all around the world, he says, "The choice for America is Moral Re-Armament or Communism."

An Air Force general in charge of 8,000 men who are part of the Strategic Air Command and for two years have been on a fifteen minute alert, says: "The young men who are sent to me don't know what democracy is about. They live as they please. As for Communism, that doesn't concern them and they don't or won't trouble to understand it." While arming against atomic attack from without, we have already surrendered within ourselves the basis of our defence—moral character.

The right way is not "my way." It may not even be "your way." The right way is God's way. Some seem to think that freedom and democracy mean "do as you please." Each man decides and goes his own way. Fathers and mothers do as they please and then they are alarmed when their children follow their example. It is estimated that more than one million youth will go through the juvenile courts this year in America. Broken homes spread disillusion throughout the nation.

A play called *The New American*, written and produced from their own experiences by a group of young Americans, is capturing the mind of America with an answer to delinquency, divorce and subversion. At the invitation of the Commanding General, it was shown at one of the largest Marine Air Stations in the world, and at command performances for Air Force bases, and in high schools. At one of these bases a newspaper described it as "a great driving force which is awakening the free world from complacency." The Mayor of one city where this play was shown, said: "It is the soundest, most down to earth thing that ever came to our community." The Mayor of another city said: "It must go to every school and college throughout America."

MOST ASTONISHING EVENT

There is a wrong way and a right way in statesmanship. A high official of the German Foreign Office, former Ambassador to Canada, told the Press, "The most astonishing event of post-war European politics is the reconciliation of Germany and France. A major factor in the birth of an apparently permanent friendship between these former enemies is Moral Re-Armament." And Dr. Adenauer, the German Chancellor, in a letter to me says, "Unless this work of Moral Re-Armament is extended the peace of the world cannot be preserved." The Chancellor talks of Moral Re-Armament as the unseen but effective force in achieving international agreements.

A diplomat who has been at the heart of the great international conferences that have taken place in the last fifteen years, writes to say, "Three events in recent months have amazed the diplomats." In each case the answer has been found through men who have changed.

The first was the Lebanon crisis. This issue which divided the world was solved by ten Arab nations who united to bring an answer to East and West. The man most responsible for this was the Secretary-General of the Arab League, who was in Egypt when he heard the news of the crisis. He had the compelling thought, which he believed came from God, to fly immediately to New York. He obeyed. He found the Arab States divided amongst themselves, and all the other nations divided against each other. There was a real risk of war. Early one morning a further thought came to him, that the Arab nations were meant to be a bridge and not a battleground. He brought them all together in one room, and they stayed together until they found a resolution on which they all agreed. When it was put to the United Nations, the vote was 80—0. *The Times* of London said: "Overnight an almost magical transformation has come over the scene."

NEW UNITY IN ASIA

The second event was the new unity being brought to birth through Asia. A token of this was the visit of the President of the Philippines to Japan and his reception in the Japanese Diet. Little more than a year ago the feeling between those two countries was so intense that such an action would have been political suicide. The man who as Speaker of the Japanese Diet received the Philippine President, and was one of the plenipotentiaries who signed the Peace Treaty for his country, says that in the last two years Moral Re-Armament has brought reconciliation between Japan and the Philippines, wrested control of the largest single political organisation in Japan from Communist hands, established new relations with Indonesia and Viet Nam, ended a dispute with Free China, and is now in process of healing the division between South Korea and his country. The President of the Philippines says "The bitterness of former years is being washed away by compassion and forgiveness." *The New York World-Telegram* comments, "This visit of the President of the Philippines to Japan may mark an historic turning point in post-war affairs."

THE CYPRUS SETTLEMENT

The third most recent event is the Cyprus settlement. An Asian Ambassador in Washington was in my home. He had been chairman of the committee that vainly tried to bring an answer to Cyprus in the United Nations. He told us, "Cyprus

(*Continued*)

ADVERTISER'S ANNOUNCEMENT

The Wrong Way and the Right Way (continued)

unsolved would have shattered European unity and could have led to European war this year." The answer was brought by men—British, Greeks and Turks, who through Moral Re-Armament honestly faced the fact that they had been doing things the wrong way. A British Member of Parliament went to see some of the Cyprus leaders and was honest about the places where he felt he and his country had made mistakes. A Greek leader expressed his sorrow to the British leaders in London for the situation of bitterness and bloodshed in Cyprus. A Turkish editor went to Athens and in an article which appeared throughout the Greek Press, said that his country and Greece were meant to live as brothers and not as enemies. *The New York Times* called it " a resounding success for enlightened statesmanship." Is not this the answer for our overworked and under-inspired statesmen ?

ONLY HOPE FOR AFRICA

A diplomat of world experience says, " In Africa today they are saying everywhere to the white man, ' How soon can you leave ? ' But to the Moral Re-Armament men and women they are saying, ' How soon can you come ? ' " My friend Dr. Azikiwe, Premier of Eastern Nigeria, recently entertained Premier Nkrumah of Ghana on a State visit. He took the occasion to show him the Moral Re-Armament film *Freedom* through which Africa has spoken to the world. Written by Africans, and acted by Africans it shows how a young nation threatened with destruction through division and Communism in its own ranks, can find the secret of unity and the right road. Afterwards Premier Azikiwe spoke to the nation of 36 million Nigerians and said, " We must build a hate-free, fear-free, greed-free Africa, peopled by free men and women." The newspaper of Ibadan, the great Nigerian city where the largest university in West Africa is situated, came out with the headline, " MRA is our only hope."

In the great cities of South Africa *Freedom* has been showing to packed audiences. In Cape Town the manager of the theatre himself introduced the film and said : " We believe this is the most effective weapon in the free countries today to win the world to the right idea." At the end of the film the man who plays the part of the Prime Minister in it, the former President of the African teachers of South Africa, steps in front of the screen in the glorious robes which he wears in *Freedom*. He speaks to those audiences, which is an unprecedented event in the life of South Africa. For probably all the white people in that theatre it is the first time they have ever listened to an African speaking. Afterwards night after night he is surrounded by those who want to find from him the secret of how to get their own lives and the life of South Africa on the right way.

The Colwell brothers sing at each performance. These three young Americans are playing a major part in this revolutionary answer in South Africa. They have given up Hollywood contracts, and over the past years have had a profound influence on the leadership of Asia and Africa. In South Africa they won thunderous applause by their commitment and their songs sung in national languages that few South Africans have ever tried to master. Of them, the Mayor of their own city in California says, " These three are securing and undergirding the defences of America." They tell the South African audiences that they are giving their lives to the answer they feel Hollywood is meant to interpret to the world.

BATTLE FOR THE WORLD

A battle is being fought for the mind of the world. Think of the mothers in Asia, Europe, Africa, yes, even America, who weep because their children are learning the wrong way to live from the motion pictures we make in the West. Rickard Tegström, the brilliant Walt Disney cameraman, who went to Africa to film *Freedom*, spoke of the films he saw in Africa. He says, " From white screens against the blue-black African night, the dregs of Western civilisation's film production were poured out over defenceless young Africans night after night." Now this cameraman is lending his genius to put the answer on celluloid. He is at present completing the filming of *The Crowning Experience*. It is inspired by the marvel of the life of Mary McLeod Bethune, born of slave parents, who rose to be the adviser of Presidents in the White House, and who said of Moral Re-Armament, " To be a part of this great uniting force of our age is the crowning experience of my life."

The Crowning Experience showed in the South as a play for four months last year and then broke the 123-year attendance record at the National Theatre in Washington. Of its effect a leading newspaperman of Atlanta said, " This is the greatest news story to come out of the South this year." Rickard Tegström adds, " Filming must be in the hands of men who understand the need of the world today and the deepest need of mankind. The statesmen who realise this in time can save the world from disaster."

CLEAN UP THE NATION

U Nu, Burma's great statesman, recently visited me. We talked of the need for statesmen to be able to read men as we read a page of print. We spoke of their need to diagnose and cure every corrupt and subversive influence, and so safeguard our nations from going the wrong way. We dealt with the urgency in the ideological struggle for the men who lead to be incorruptible and to create around them men and women with clean hands and pure hearts. U Nu together with the Prime Minister of Japan and Presidents of the Philippines and Viet Nam has just welcomed the Moral Re-Armament Assembly of Asian peoples in Japan. Said he : " It is giving a clarion call to one and all to read the writing on the wall."

The objective of the Assembly is to clean up the nations from bottom to top. One of the instruments is a play called *Shaft of Light*, written by the great-grandson of the founder of modern industrial Japan. This play deals incisively with men at the Cabinet level, with politicians of all parties, with industrial and labour leaders who can be bought with money, tempted by position or by indulgences which make them vulnerable to Communist strategy. The play is being nationally acclaimed because it deals fearlessly with the primary need and gives the answer.

What is the answer ? The author of this play, Masa Shibusawa, spoke recently in Washington at the farewell service for a great American patriot, Priscilla Cornell. For the last few years, with her family and through the weakness and pain of cancer, she has fought for a clean-up in the leadership of America, Europe, Asia, and Africa, and helped create the good news of a world changing. Said Shibusawa, " It is up to us to carry on what she lived. With the Cross of Christ lived in reality — which means a change at the very root — America can save the world. This is the revolution which takes the Communists' breath away and changes them."

That's it. The whole-hearted, single-minded, completely dedicated commitment to provide our nations with leaders who are fear-free, hate-free, greed-free, men and women who know the strategy, the power and the unity that comes when the will is totally given to God for the building of a new world.

There is a wrong way and a right way for statesmanship. MRA has conclusively demonstrated in some of the most critical national and international deadlocks that when the fear, hate, and greed in man is changed, solutions are rapidly achieved. This is the panorama before us — so simple that many miss it, so fundamental we cannot do without it.

This challenging statement of the clear and urgent alternatives facing America, Britain and the whole free world was given at the opening of the Summit Strategy Conference for Moral Re-Armament at Mackinac Island, Michigan, U.S.A. It has been carried by press and radio in all five continents. It is inserted here by a group of British businessmen at their own cost because they are convinced that the only choice is between Communism and Moral Re-Armament. They are determined that Britain and the world shall choose Moral Re-Armament.

Bill of Health—I

Insuring Against Illness

NEW YORK

THE problem of how Americans can best be protected against the high cost of illness is much in the public mind. The central question is whether the present complex of voluntary insurance agencies can move far enough and fast enough to forestall government intervention. The numerical success of the voluntary system has certainly been impressive; while in 1940 only 12 million Americans carried any sort of health insurance, today the number has reached 123 million, or nearly three-quarters of the population.

The existing pattern of health insurance bears a peculiarly American stamp: the mingling of a host of local, non-profit schemes with the standard commercial operations of private enterprise. The non-commercial side is at present dominated by two complementary organisations—Blue Cross, which provides hospital insurance, and Blue Shield, which gives some coverage against surgical and medical costs. Both grew up in the nineteen-thirties. Blue Cross plans were originally sponsored by the hospitals in an attempt to get a solid and predictable financial base for their operations. Blue Shield's main expansion came after the war; its dominant motive has been the doctor's passionate desire both to hold " socialised medicine " at bay, and to maintain a direct financial relationship with his own patients even when they are in hospital. There are today 90 Blue Cross and 70 Blue Shield plans in different parts of the country, and each one lays down its own rates and benefits and is financially independent.

Pitted against the " Blues " are the insurance companies which do not, by contrast, enjoy a tax-exempt status. Reassured by the earlier successes of Blue Cross, they have made a major inroad into this type of insurance and have taken first place (in terms of numbers enrolled) in the provision of both hospital and medical insurance. In addition, there are several independent insurance plans which represent new approaches to pre-paid medical care.

BY offering more attractive policies to those in existing groups (of employees in one firm, of householders in one area) the main problem of a voluntary scheme—how to attract the healthy as well as the sick—has largely been met. In the past the " Blues " have, as a matter of principle, applied uniform rates irrespective of the health expectations of the recipient, but this desirable social goal has now been undermined. The insurance companies have adopted variable " experience " ratings, particularly in their group policies, and the " Blues," which cannot afford an overdose of the unhealthy or a heavy loss of customers, are being forced to do likewise.

The overhead costs of insurance are by no means negligible, although the various agencies have improved their performance progressively. Blue Cross now retains on the average 5 per cent of its income to cover operating costs while Blue Shield absorbs 13 per cent. On their group policies, the commercial companies allot 11 per cent of income from premiums to overheads, but on individual policies (with their heavy cost of selling and collection) over half the annual premium is absorbed in expenses.

The average plan today provides good cover against any short illness that can be treated in hospital ; it does not safeguard the insured against prolonged or chronic illness on the one hand, nor does it cover the out-of-hospital medical expenses—on doctor's bills and medicines—which make up such a large part of the total. Moreover, except under a few isolated schemes, neither mental illness or dental treatment have been brought within the field of insurance. Thus, even the insured person can only expect to get, on the average, one-third of his total medical costs covered.

THE " Blues " are making various and differing attempts to extend the benefits they provide, but the insurance companies have gained the centre of the stage with their " major medical expense " policies, offered either as a supplement to other plans (they are often carried in conjunction with a Blue Cross plan) or as a comprehensive scheme. In exchange for high maximum benefits ($5,000 to $10,000), the insured pays the first instalment of any claim (typically $100) and a percentage (20-25) of the rest of the bill. Launched only nine years ago, this type of insurance covered well over 17 million people at the end of 1958.

But even if insurers were ready to broaden the benefits they offer, premiums would then rise beyond the reach of a great number of families. With the current accent on " fringe benefits " in wage negotiations many employers are paying part or all of the health insurance premiums of their employees, and in many cases either they or the trade unions are providing supplementary health facilities. Employers today contribute more than a quarter—over a billion dollars—of total premiums. Even if they could be persuaded by the unions to shoulder more comprehensive policies, these benefits would accrue only to certain groups, and only to them during their working lives.

The main obstacle to providing insurance for out-of-hospital medical expenses has been the difficulty of welding the independent medical practitioner into a workable insurance scheme. Thus most of the experiments in more comprehensive insurance have been based on group medical practice in which the physicians, as a rule, are salaried and the patients forfeit the right to choose an individual doctor. In the past these schemes have faced active opposition from the organised medical profession which has made many difficulties for them. But this summer, after years of internal controversy, the AMA has officially removed the stigma against pre-paid group practice, although some of the state medical societies—notably New York—remain adamantly opposed to it.

Today about 5½ million people are enrolled in some 150 group plans of which the best-known are the Health Insurance Plan of Greater New York and the Kaiser Foundation Health Plan on the west coast, each with over half a million members; the largest is the union-sponsored United Mine Workers' Welfare and Retirement Fund with a million participants. There are of course group practices, such as the famous Mayo clinic, which are not associated with insurance.

FOR all these schemes, nearly 50 million Americans still carry no form of health insurance, and this group consists to a large extent of those who can least afford to meet their own medical expenses. In particular, the retired worker poses a singularly intractable problem. For at the very moment when his use of medical services tends to rise steeply, he is likely to find either that his policy expires with his job or at best that his premium (without contributions from his employer) doubles—and meanwhile his income has probably been reduced by half.

Congress is considering a Bill which would provide federal health insurance for pensioners, and the insurance companies, most of whose policies have in the past expired automatically at 65, have been offering group insurance to the aged. But the scale of benefits—tailored to the premiums which can be paid—is very low. The " Blues " have always looked leniently on the retired worker, and they too are attempting to improve his lot.

Also left out of voluntary schemes are low-income families, who trust to luck rather than pay insurance premiums, and the unemployed, whose policies either end with the job that is lost or, if they can be continued, impose a financial burden that cannot be met. It is a sad fact that the individual commercial policy, which gives such a poor return in benefits, is more prevalent among low-income families, particularly rural ones, who tend to fall less obviously into some insurable group.

The idea of comprehensive government insurance has always had its staunch supporters, but in recent years the demand for it has been blunted by the rapid progress of voluntary schemes. In particular, the trade unions, having failed to achieve a more radical programme, have been concerned more with supplementing than with replacing the present system. But today the issue has re-emerged because of the very sharp increases in medical costs. Several Blue Cross plans have raised their rates by as much as 40 per cent in a single step, and others are due for substantial up-grading. While the insurers cannot on the whole be held responsible for this trend, it has inevitably focused attention again on the question of how health costs can best be met. On the other hand, the majority of Americans are far from convinced that the government could handle the job better.

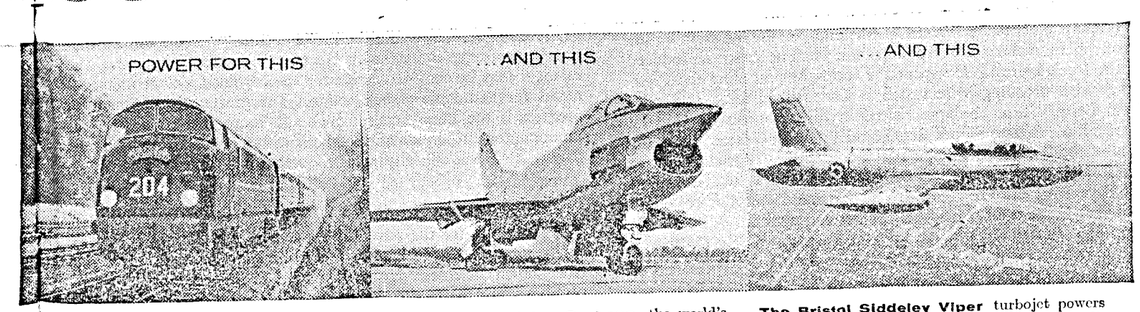
...AND BRISTOL SIDDELEY SUPPLY THE POWER

One of the largest manufacturers of motive power units in the world, Bristol Siddeley Engines Limited produce the Marine Proteus. Adapted from the outstandingly successful Proteus aero-engine which powers the Britannia airliner, the Marine Proteus has been chosen by the Royal Navy for the "Brave" class fast patrol boats. These boats have been developed by the British Admiralty in conjunction with Vosper Limited, the builders. Three Proteus give a total of 10,500 hp —propel these boats at over 50 knots.

The Marine Proteus is quick-starting, flexible, reliable and holds large reserves of power for acceleration. It is also very compact, easy to maintain and in its latest form gives 4,250 shp for a weight of only 2,885 lb.

BRISTOL SIDDELEY ENGINES LIMITED



Bristol Siddeley Maybach diesel engines are designed for a wide variety of applications and range from 200-3,000 hp. Here is a British Railways diesel hydraulic locomotive powered by two Type MD 650 engines, developing a total of 2,200 hp.
