Coal shares enjoyed selective support; but there was a marked shrinkage in the volume of business done. This was mainly due to the cautious attitude adopted by operators on rumours of the Government decision to change the statutory selling price of the commodity into ceiling price. Amalgamated met with sustained support upto Rs 26.06 from Rs 25.50, to finish the week at Rs 25.62 on profit-taking. New Beerbhoom were enquired upto Rs 20.81 from Rs 20.25 following the increase in dividend from 75 nP to Re 1 per share for last year. Bengal were, however marked back to Rs 308 from Rs 313, while Central India were neglected around Rs 8.00. Western Bengal were nearly maintained at Rs 6.47. Burrakur moved rather irregularly between Rs 18 and Rs 18.44 to close finally at Rs 18.00.

In the week's dealings, the Tea section attracted the utmost attention and a fair business was recorded at dearer rates. Although the revival of buying interest in this section was unusual at this time of the year, three main factors contributed to the sudden turn in sentiment. First, the prospects for the new season's crop were considered to be bright in view of the lower "afloat" stocks in London, indicating increasing consumption in the producing countries. Secondly, it was expected that the companies of the Assam gardens might announce higher dividends for last year. Finally, there were rumours of the possibility of the international tea agreement being revived and confined to India and Ceylon.

Dealings were prominent in Baghmari which changed hands at Rs 24.87 to Rs 26.62 (Rs 26.25); Brooke Bond at Rs 19.12 to Rs 22 (Rs 20.50); Bishnauth at Rs 21.37 to Rs 22.37 (Rs 21.87); Grob at Rs 17.62 to Rs 19.25 (Rs 18.94); Hantapara at Rs 127 to Rs 145 (Rs 142); Hat-tikhira at Rs 13.87 to Rs 14.56 (Rs 14.37); Methoni at Rs 24.06 to Rs 25.69 (Rs 24.87) and Tezpara at Rs 18.50 to Rs 19.50 (Rs 19.37). Figures shown within brackets were the closing rates for the week.

Lack of fresh support caused a quieter tendency in the Textiles section where Jayshree were the only exception having remained firm at Rs 9.10. Cawnpore on offer at Rs 5 to Rs 5.12; Elgins at Rs 15 to Rs 15.12 and Kesoram at Rs 13.94 to Rs 15.25.

With the exception of Dyer Meakin which were supported upto Rs 16.87 from Rs 15.75 from influential quarters, Sugar shares remained generally quiet with prices showing little or no change over last levels. Operators were generally inclined to await further developments on the sugar front. Cawnpore had sellers at Rs 10.25 to Rs 11 against Rs 11.54, while SKG moved between Rs 9.75 and Rs 10. Raza/Buland were maintained at Rs 14.31.

In the Engineering section, price movements were mostly influenced by the speculative in Indian Irons which, in turn, were subjected to settlement considerations till the middle of the week. Against week-end closing of Rs 24.62, Indian Irons opened lower at Rs 24.38 and receded further to Rs 24.20 at which

level some bear-covering coupled with replacement buying pushed up to the rate to Rs 24.77, to recede again at the close to Rs 24.45. TEXMACO, after being taken upto Rs 26.10 from Rs 25.55 on reports of the dividend being maintained for last year, closed lower at Rs 25.30 on profit-taking. GK Williams were taken upto Rs 41; Indian Galvanizing upto Rs 17.81 and Marshalls upto Rs 6.19, to quote at the close at Rs 40; Rs 17.62 and Rs 6.19 respectively.

Miscellaneous issues moved with the general trend of the market. Orient Paper changed hands at Rs 36 to Rs 36.70 (Rs 36.30); Indian Cable at Rs 31.37 to Rs 32 (Rs 31.37); Indian Aluminium at Rs 21.00 to Rs 21.81 (Rs 21.00); Indian Copper at Rs 4.23 to Rs 4.30 (Rs 4.23); India Steamship at Rs 14.62 to Rs 14.75 (Rs 14.69); Rohtas at Rs 21.75 to Rs 22.25 (Rs 22.00); Dunlop Rubber at Rs 32.50 to Rs 33 (Rs 32.50); Alkali Chemicals at Rs 24.62 to Rs 25.81 (Rs 24.69); NICCO at Rs 34.50 to Rs 34.69 (Rs 34.69); at Rs 34.50 to Rs 32.12 to Rs 32.37 (Rs 32.37); Indian Oxygen at Rs 27.50 to Rs 28.25 (Rs 28.25); Sirpur Paper at Rs 13 to Rs 13.19 (Rs 13.00) and Phillips India at Rs 22.87 to Rs 23.25 (Rs 23.25). BIC were on offer at as low as Rs 5.06 against Rs 5.25, while Karanpura Development were enquired upto Rs 14.25 from Rs 10.37. Hindustan Motor were a narrow market moving around Rs 8.94.

Bombay

THE Bombay Stock Exchange witnessed one of the liveliest sessions during the week under review. Following a steady opening, prices displayed a rallying tendency due to sustained buying and short-covering, being influenced by encouraging corporate reports. But, the higher levels met with heavy realising pressure, resulting in small losses on balance.

STEELS: The inspiration for buying spree in Tata Steels was derived from the decision made by the directors to issue new shares. They propose to issue "A" Ordinary shares in the ratio of one new share for every five Ordinary shares and "A" 7½ per cent Second Preference shares in the ratio of one share for every two first or second preference shares. This decision is subject to the consent of the Controller of Capital Issues. In the case of either issue, the full amount will be payable on application. Meanwhile Tata Ordinaries, after opening at Rs 187.50, steadily advanced to Rs 192.75.

TEXTILES: Although Textile scrips drifted lower early in the session, they recovered fully towards the close in sympathy with the general trend of the market. Dealings were prominent in Century, which changed hands at Rs 528.50 to Rs 552 (Rs 549); Bombay Dyeing at Rs 62.40 to Rs 64.30 (Rs 64.30); Kohinoor at Rs 276 to Rs 288 (Rs 282) and Svadeshi at Rs 229.50 to Rs 238 (Rs 238). Figures shown within brackets were the week's closing rates. Mysore Spinning were nearly maintained at Rs 81.50 and so also Indu Ordinaries at Rs 8.28.

MISCELLANEOUS This section provided several firm features. Tata

Chemicals spurted to Rs 17.72 from Rs 16.80 on reports about the implementation of the company's expansion programme. Cement shares were a steady feature with ACC having buyers upto Rs 158 and Digvijay upto Rs 153. Shipping shares were more or less maintained. Scindia moving between Rs 18.44 and Rs 18.88. Engineering shares recorded impressive rises. Alcock went up sharply to Rs 300, to finish slightly lower at Rs 230 on profit-taking. Premier Construction met with good demand upto Rs 340 from Rs 327.50. In the automobile group, Premier Automobile were enquired upto Rs 118. Among others National Rayons changed hands at Rs 299.50 to Rs 307.50; Bombay Burmah at Rs 542 to Rs 559; Belapur Sugar at Rs 311 to Rs 315 and WIMCO at Rs 220 to 233.

Madras

On the Madras Stock Exchange, buying interest was generally selective; but prices ruled steady.

TEXTILES: In this section, Travancore Rayons were an active feature, having firmed up further to Rs 20.90 from Rs 20. There was enquiry for Bangalore Woollens, Colimbatore Pioneers and Buckingham & Carnatics at the market rates, Maduras moved irregularly to close lower at Rs 28.25 after touching a high of Rs 29 with sellers at this level.

PLANTINGS: There was subdued buying in this section although a few Rubber shares met with keen absorption. Estates producing high-grown teas were keenly sought after by buyers, both in Madras and Bombay and several upcountry centres, Hileyburias met with some demand upto Rs 19.20, while Peria-karamalais maintained last level. Twayfords met with business at Rs 17 and Chembra Peaks at Rs 4.32.

Among Rubber shares, Cochin Malabars met with good business around Rs 6.30. Be Bes met with some offerings at the market rate. Thirumbadig were done at Rs 2 and TRTs at Rs 7.75 c.d.

MISCELLANEOUS: Aluminium Industries continued to be easily absorbed upto Rs 19.55 although there was some selling pressure at this level towards the close. Ashok Leylands moved up further to Rs 8.95, while activity in FACTs slackened although the rate was maintained at Rs 9.45. Singareni Collieries had some sellers at the market rate.

London

THERE was a return to firm conditions on the London Stock Exchange. The recent bout of profit-taking in Industrials subsided and prices made a good response to a fresh demand. Business was however selective.

Many of the leading Industrial improved and a number of others closed higher. The feature of Motors was the strength of British Motor Corporation in response to a good investment demand. Radl shares attracted a fair amount of attention. Gilt-edged securities were an exception to the general trend and closed with widespread losses as a result of persistent sma selling.

a million people say
“yes”
to Life Insurance —
a new achievement in
1958

In the 12 months of 1958, about 10 lakhs of new insurance policies were bought from the Life Insurance Corporation of India. In financial terms they represent a total of

Rs. 344.68 Crores

worth of New Business. To put it mildly, this is a record far outstripping the previous all-time high of Rs. 283 Crores in 1957 when 8 lakhs of new policies were written.

AN ENCYCLOPAEDIA OF INVESTMENT

Calcutta Stock Exchange Official Year Book 1959

More Comprehensive Than Others

The Press and the Public alike endorse the Calcutta Stock Exchange Ex Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Government, the Reserve Bank of India, all Exchange and Schedule Banks, Insurance and other Financial Institutions, and leading business houses use it, is a proof positive of its superiority over any other publications of a similar nature.

Contains full particulars relating to the stocks, shares and debentures of all companies and Government Securities and Public Bodies' Loans quoted on the Stock Exchange. Also contains information of general interest to investors including rates of Income and Super Taxes, Wealth and Expenditure Taxes, Capital Gains Tax, Bonus Share Tax, and Estate Duty. Price Rs. 12.50 nP. Postage Rs. 2/-. Add 50 Naye Paise to outstation cheques. Available from the Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta-1.

30, 1959

FOR THE INVESTOR

Prices Recede due to Bombay Pressure

Investment Gossip:

THE Colour-Chem issued was a thundering success. In a more modest way, the other recent issues have been taken up by the market or thought will be fully absorbed by investors. There is no apprehension that any of the new issues and rights issues will languish for lack of investment support.

Then, a month from now, the shareholders of the Tata Iron & Steel Company will be asked to consider the desirability of a rights issue to both ordinary and preference shareholders. The terms of the offer, as far as the ordinary shareholders are concerned, will presumably need to receive Government's approval.

But, well before the Tata issues comes on the market, the Central Government will have got their borrowing programme out of the way. Also, the State Governments should by then have completed their new loan effort for the year. Thereafter, in point of time, current indications are that there will be a fairly long queue of capital seekers in the investment market.

Meantime, corporate news continues to be generally good. The National Rubber accounts, published last week, are particularly impressive. In another field, Okayti, with its results for 1958, strongly suggests that last year was much better for tea as a whole. Down South, Travancore Rubber has experienced a considerable increase in both sales and profits; and shareholders stand to receive an increase in their dividend. Here in Calcutta, Jeewanlal have done relatively well, and are now within sight of wiping out the accumulated carry forward of losses over a long period of years.

This, then, is the background to the stock exchange activities of last week. Speculatively speaking, —for, the stock exchanges continue to be in the grip of the gambling fraternity—the week opened cheerfully enough; but then came a minor shake out, sparked off, they say, by Sir Chintaman Deshmukh's assertion, in his first utterance on such matters since he laid down office as Finance Minister, that there was scope still left for taxation in this country. Shake off there was, the bulls did not succeed in putting up the settlement rate, prices receded, then recovered.

But as the week ended, there was a veritable landslide. I understand that the Bombay Stock Exchange authorities have reached certain decisions which may mean that, if certain requests of theirs are not implemented by the Indian Iron and Steel Company, then, Dalal Street will no longer have Indian Iron as a clearing counter. In the wake of such news, Bombay, which had all along, in view of the impending Tata rights issue, kept up its tone and sentiment, faltered suddenly, lost heart and sold out Irons. The reaction was swift and prices slumped.

As I write this, no one is prepared to pass an opinion on whether or no this fall in prices is temporary. Every intrinsic factor that should influence stock exchange movements certainly suggests that the prospect for stock exchange prices is upward. But then, it is no secret at all that it is not the intrinsic factors upon which are based the whims and caprices, the frenzied activities, the gambols of operators and jobbers on Dalal Street and Lyon's Range.

Investment Notes:

The response to the issue of new capital by the Indian Rayon Corporation is reported to be encouraging. It is likely that the subscription list will be kept open till Saturday this week.

The West Coast Paper Mill has proposed to raise fresh capital for Rs 80 lakhs by the issue of 50,000 Ordinary and 30,000—6 per cent tax-free Cumulative Preference shares, both of Rs 100 each. In this respect, the company has already received the sanction from the Government. The shares will be issued, in the first instance, to the existing shareholders of the company, at par, in the ratio of one new Ordinary share for every two such shares and one new Preference share for every two such shares held. The new capital is to be utilised for meeting the temporary financial obligations of the company. All the sections of the mill went into production on the 16th May.

It is understood that the Bombay Stock Exchange authorities have prohibited transactions in the shares of the Colaba Land & Mill Company Limited, as provisional liquidator has been appointed.

The Mukund Iron & Steel Works Limited has decided to increase its share capital by about Rs 40 lakhs, subject to the consent of the Controller of Capital Issues, by offering right shares in the ratio of one new Ordinary for every equity share held.

Mysore Chemical Manufacturing Company Limited has decided to issue 20,000 equity shares of Rs 10 each. The last date for lodging renunciation letters is the 10th June, 1959.

Investment Brief:

Bengal Assam Steamship has raised the dividend from Rs 5 to Rs 6 per share for the year ended 31st October, 1958.

In Bombay, Podar Mills have proposed to raise the dividend from

Rs 10 to Rs 18 per share, including a special bonus of Rs 8, for 1958.

Binod Mills have maintained the dividend at Rs 6 per share.

Alcock Ashdown has maintained the dividend at Rs 12.50 per share for 1958.

In Madras, Travancore Cements have maintained the dividend at 6 per cent for 1958.

IBP Repeats

Balance-Sheet Reviews:

DESPITE a decline in earnings, the Indo-Burma Petroleum Company Limited has maintained the Ordinary dividend at 20 per cent for 1958. Sales are shown lower at Rs 1.50 crores against Rs 1.88 crores, while the net profit amounts to only Rs 14,12,754 as against as much as Rs 23,07,913 in the previous year. The Depreciation amount is raised to Rs 4.23 lakhs from Rs 4.09 lakhs. After transferring a sum of Rs 15.92 lakhs being taxation provision no longer required and Rs 1.09 lakhs being Development Rebate Reserve no longer required, the directors have been able to provide a sum of Rs 5.00 lakhs for General Reserve, apart from raising the Taxation provision to Rs 31.27 lakhs from Rs 30.43 lakhs and Development Rebate Reserve to Rs 1.52 lakhs from Rs 1.09 lakhs. According to the directors' report, there is a proposal that the present managing agents, Messrs Steel Brothers & Company Limited, should continue rendering their services for a further period of three years from 1st January 1959.

National Rubber

National Rubber Manufacturers Limited has reported satisfactory working results for the year ended 31st December, 1958. The substantial progress achieved in the expansion programme undertaken by the company is reflected in sales, which have risen to Rs 1.63 from Rs 1.32 crores. But, the net profit, after providing for Depreciation and Taxation, is only slightly higher at Rs 3.94 lakhs against Rs 3.46 lakhs in the previous year, mainly due to rising cost of production and reduction in the selling prices of certain products on account of competitive conditions of the market.

In respect of allocations, the Depreciation amount is raised to Rs 2.43 lakhs from Rs 2.20 lakhs. After transferring a sum of Rs 2.00 lakhs from Dividend Equalisation Fund, the directors have set apart Rs 3.22 lakhs for Development Rebate Reserve and reduced Taxation provision from Rs 1.52 lakhs to Rs 35,000. A dividend of 6 per cent is recommended on the increased Ordinary capital as against 10 per cent on the old capital.

According to the directors' report, the entire new issue of shares, in 1958, was fully called up and ranked for dividend; but the full benefit of the additional capital could not be secured due to the inevitable time-lag between the receipt of new plant and machinery and their going into full production.

It is stated that, when the entire new plant will start production in full swing, sales will considerably surpass the present figure. These are expected to be about Rs 2 crores for the current year, and the target of Rs 3 crores is likely to be reached in 1960. The production of Cycle Tubes has now been taken in hand and additional capacity will be installed during the current year for the manufacture of substantial quantities of Transmission and Conveyor Belting.

Osmanshahi Mills

The working of the Osmanshahi Mills Limited has resulted in a loss of Rs 10.70 lakhs for the year ended 30th September 1958 without providing for Depreciation. The company incurred a loss of Rs 8.54 lakhs in the previous year. As a result, the dividend is passed over again.

Sales of cloth and yarn have, however, risen from Rs 1.29 crores and Rs 7.56 lakhs to Rs 1.63 crores and Rs 14.63 lakhs respectively. Sales of waste have, however, dropped down from Rs 4.23 lakhs to Rs 2.27 lakhs.

Modern Mills

Also, the working of the Modern Mills Limited has resulted in a loss of Rs 2.59 lakhs for the year ended 31st October 1958 as against a profit of Rs 3.20 lakhs in the preceding year, after providing Rs 42,545 for Wealth Tax against Rs 44,145; Rs 3.37 lakhs for Depreciation against the same amount; Rs 2.19 lakhs for Development Rebate Reserve against nil and Rs 44,525 for managing agents' remuneration against Rs 53,577. Sales of yarn, cloth and waste have moved up from Rs 1.62 crores to Rs 1.70 crores. After transferring Rs 3.50 lakhs from General Reserve and Rs 1.65 lakhs from Machinery Rehabilitation Reserve and providing for the proposed dividend, a sum of Rs 31,558 is carried forward.

Vijay Mills

The Vijay Mills Company Limited, Ahmedabad, has earned a profit of Rs 2.44 lakhs for 1958 as against Rs 78,854 in the previous year. The profit has been arrived at after providing Rs 4.83 lakhs for Depreciation against Rs 7.10 lakhs and Rs 4.71 lakhs for Taxation against Rs 1.50 lakhs. Sales of cloth yarn and waste have amounted to Rs 1.98 crores against Rs 1.94 crores. The directors have proposed to maintain the distribution of Rs 40 per share, including the bonus of Rs 5 for the year.

Travancore Rubber

The crop of the Travancore Rubber & Tea Company, Limited was adversely affected by the strikes that were reported by nearly all the estates in Kerala. It weighed only 482,401 lbs in the year 1958. There was, therefore, a decline in the net profit, before providing for Depreciation and Taxation, to Rs 1.38 lakhs from Rs 1.83 lakhs for 1957. The amount set aside for Depreciation is Rs 11,170 (Rs 11,792) and Taxation

Rs 54,000 (Rs 77,500). The transfer for Reserve for Capital Expenditure is Rs 13,000 (Rs 5,000). The dividend on the Ordinary shares is reduced from 15 to 10 per cent for the year.

£RS Anandam Rubber

The Anandam Rubber Company Limited has also been obliged to report a decline in earnings for the same accounting period to Rs 85,894 from Rs 1.16 lakhs in the previous year. There was a good tea crop; but the rubber crop was well below the estimate. The amount set aside for Depreciation is Rs 18,336 (Rs 18,789) and Development Rebate on Machinery Rs 22,105 (Rs 5,234). The taxation provision is lower at Rs 21,000 (Rs 32,000). The Ordinary dividend has been reduced from 15 to 10 per cent.

£RS Delta Jute

In common with other companies in Andrew Yule group, the Delta Jute Mills Company Limited has reported encouraging working results for the year ended 30th November, 1958. Sales have risen to Rs 1.34 crores from Rs 1.27 crores, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 3.66 lakhs against a loss of Rs 2.70 incurred in the previous year. The Depreciation amount is raised to Rs 1.95 lakhs from Rs 1.25 lakhs. After transferring a sum of Rs 1.13 lakhs from Dividend Equalisation Reserve, the directors have provided Rs 34,643 (Rs 34,500) for Wealth Tax; Rs 23,200 (nil) for Taxation and Rs 2.83 lakhs (nil) for Development Rebate Reserve. They have recommended a final dividend of Rs 4, making a total of Rs 6 per share on the Ordinary shares against nil.

£RS New Beerbhoom Coal

The New Beerbhoom Coal Company has reported a rise in sales from Rs 1.02 crores to Rs 1.29 lakhs for the year ended 31st October, 1958, while the net profit is higher at Rs 2.19 lakhs against Rs 1.89 lakhs in the previous year. The sum provided for Depreciation is lower at Rs 2.96 lakhs against Rs 3.59 lakhs. After transferring Rs 24,000 from Capital Reserve, the directors have provided Rs 24,000 (Rs 44,000) for Wealth Tax; Rs 4.90 lakhs (Rs 2.90 lakhs) for Taxation and Rs 48,034 (nil) for Development Rebate Reserve. They have

recommended a final dividend of 60 pF, making a total of Re 1 per share for the year against 75 pF per share. Raisings are shown at 621,721 tons against 530,672 tons and despatches at 626,445 tons against 529,938 tons.

£RS Rajnagar Tea

The Rajnagar Tea has passed over the dividend for 1958 against 11 per cent despite a net profit of Rs 25,988 against a loss of Rs 13,391 incurred in the previous year. The net profit is arrived at after providing for Depreciation and Taxation. A sum of Rs 11,080 (Rs 7029) is provided for Depreciation; Rs 1.83 lakhs (Rs 1.08 lakhs) for Taxation and Rs 2,990 (nil) for Development Rebate Reserve. The amount carried forward is higher at Rs 1.41 lakhs against only Rs 1.18 lakhs brought in. The directors state that no remittance has been received from Pakistan since the date of the last report despite the best efforts to obtain sanction from the State Bank of Pakistan for the transfer of past profits to India. Representations on this subject are still continuing.

£RS Thamarapally Rubber

The net profit of the Thamarapally Rubber Company Limited, before providing for Depreciation and Taxation, amounts to only Rs 1.43 lakhs for 1958 as against Rs 1.66 lakhs in the previous year. The amount set aside for Depreciation is higher at Rs 4,310 against Rs 3,659, while that for Taxation is lower at Rs 60,000 against Rs 83,000. The dividend on the Ordinary shares is maintained at 30 per cent. Rubber harvested is 241,819 lbs. The estimate for 1959 provides for a crop of 245,000 lbs.

£RS United Flour

Following a slight decline in net profit from Rs 2.08 lakhs to Rs 2.05 lakhs, the United Flour Mills Company Limited, in Shaw Wallace group, has reduced the dividend from 40 to 37½ per cent for the year ended 30th November 1958. A sum of Rs 46,588 (Rs 52,430) is provided for Depreciation; Rs 2.73 lakhs (Rs 4.04 lakhs) for Taxation and Rs 20,186 (Rs 3,370) for Development Rebate Reserve. Sales are shown at Rs 95.77 lakhs against Rs 91.35 lakhs.

Employment and the Third Plan

AT last week's meeting of the Central Committee on Employment, Mr Gulzarilal Nanda, as was to be expected of him, had much to say that needed to be said. But what emerged at the end of two days' deliberations, we fear, makes dismal reading. The totally fantastic suggestion has been made that, where alternative methods or techniques were available, that which vouchsafed greater employment potential was to be preferred; and this is a recommendation made without the usual economic qualifications. That is to say, no regard has at all been had for such factors as costs of production, in determining whether or not the labour intensive method is to be preferred. We can, of course, quite understand the Central Committee's anxiety about the employment, or, rather, the unemployment situation. An estimate places the back-log of unemployment, as at the beginning of the Third Plan, at 7 million; and new entrants to the labour force in the third quinquennium of the country's planned endeavours are expected to be in the region of 14 million. A Rs 10,000 crore Plan, it is thought, will not be able to provide gainful employment for more than 12 million. The bleak prospect, therefore, is that, with all India's strenuous efforts, the pressure of people seeking jobs will be greater at the end of the Third Plan. But even such solicitude, aroused no doubt by the gigantic size of the problem ahead, is no excuse for rehashing into what can only be termed a bullock-cart mentality. We might as well proceed, if we were to accept the Committee's suggestion, to emulate China's example and literally "mass" produce steel!

We are also told that the Committee, which is next scheduled to meet in October, will be considering at that time "unorthodox methods of increasing employment opportunities." We would like to know what is wrong about the orthodox methods. For example, a substantial road-building and housing programme and public works are, since President Roosevelt initiated the New Deal in the early 'thirties, the tried and proved method of creating new employment potential. In Indian conditions, with the strain and stress being felt in the sphere of transport, nothing is more desirable than the creation of the facilities without which there cannot be an expansion, in any worth while fashion, of road transport. Moreover, purchasing power would in this wise be widely dispersed; and it would be the have-nots who would have the first glimmerings of rescue from their age-old poverty.

But the real problem is, as Mr Nanda pointed out last week and as Sir V. T. Krishnamachari, Deputy Chairman of the Planning Commission, recently emphasised, to remove the pressure from land. At present, 70 per cent of India's population live off the lean of the land; and it is industrial opportunities which will succeed in so diverting labour as to reduce to 55 per cent, by 1976, the agricultural force constituting India's population. In this context, a note prepared by the Labour Ministry calculates that investment of the order of Rs 43,000 crores will be necessary, over the next three Plan periods, to eradicate

unemployment. We have no means of knowing the basis for such a figure. But, surely, what is important is to discover ways whereby both the cause of Indian industrialisation and the problem of unemployment can, if possible, be simultaneously tackled. For our part, we believe that the two are inter-linked, much more so than the axiom hackneyed by repetition, that industrialisation has always proved to create more employment, would suggest. This is because India's task is enormous, and because the twentieth century demands that the curse of unemployment be banished as soon as it may lie in our power.

Certainly, labour intensive schemes will form an important part of our thinking on Plans; and, certainly, public works programmes will have to less or greater extent, to be adopted. But, beyond this, it is also vital that the cost structure in the economy is not permitted to be distorted by too great an emphasis being placed on providing jobs. So it is that we think inevitable a growing realisation that the fostering of small scale industry need to be given a primary importance. Indeed, aside from the food effort that we would have to undertake during the Third Plan, our most imperative task will be to plan for mushrooming small scale industry. This is at once a great provider of jobs and a source of new wealth in the form of production. We are happy to find, in this regard, that the Central Committee has come out with the idea that there should be "rural industrialisation and particularly location of rural industrial estates." For, we take it that what the Committee has in mind is the starting, on planned lines and satisfactory scale, of small industries in the rural regions.

But here, we will have the problem of

Indian Finance

Established 1928

May 30, 1959

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

resources, and not merely a difficult foreign exchange situation, although the latter may also arise. Small industry that is spoon-fed by Government will not thrive; and there may also be cases, due to bureaucracy, of starvation, intended or no. It is important that small industry grows with individual incentive and effort. What would thus be required is a series of business transactions, whereby individuals with enterprise would have a chance to earn their way. This would mean considerable financial assistance, in the form of loans, for procuring equipment and plant. Besides, training in the use of the machines would also be necessary. Neither of these requirements, however, should present an insuperable difficulty.

The US Trade Mission which recently visited East India has presented its report to the US Department of Commerce. This visit should prove of considerable significance, for, the report has stressed that prospects are extremely encouraging for Indo-US cooperation in the realm of small industry. It is this fact which encourages us to believe that even rupee finance should be available without much difficulty in the cause of setting up Indo-US enterprises. The Cooley Amendment to Public Law 480 should prove a source of finance in this respect. Secondly, the Mission, alive to the need for training, has suggested a programme where-by industry, universities and governmental authorities would be requested to cooperate so as to maximise the training opportunities.

Thus, employment, or the problem of unemployment, depends for its answer partly upon the fostering of small scale industry. This would require both money and training—but neither should be difficult to provide.

Labor's Contributions to the American System

By A. J. HAYES

NO one can deny the gains that America's labor unions have made in the workplace. Today we take it for granted that a union shop will have fair wages, decent hours, safe working conditions, a health and welfare plan, and an old age pension. Yes, these are the things that we take for granted—but how much they mean to our everyday life—and how much they have contributed to our welfare and happiness as a people!

Take the matter of shorter hours, summer vacations and paid holidays. At one time leisure was the exclusive possession of a very small and aristocratic class. Leisure was the hallmark of the rich and the wellborn. Now leisure is the possession of all the American people. Not just the factory owner, but the factory worker as well, has time for education, sports, culture, reading, travel and family life.

This one gain by organized labor—the increase in leisure time of a whole people—has been a tremendous contribution to the American way of life—a contribution probably without parallel in human history. Another gain in which I think we can take particular pride is the fantastic growth of negotiated health and welfare plans. This is a gain that

has come recently, but it is one that is already making a tremendous contribution to the health and welfare of the nation.

These gains, standing alone, are enough to justify the existence of the labor movement. For, after all, the function of a trade union is to improve the working and living conditions of the workers. However, they do not tell the whole story. While raising living standards, organized labor made at least two other vital contributions to the American industrial system.

First, by increasing and extending purchasing power, labor provided an ingredient without which there could have been no mass production: namely, mass consumption. Had workers not been able to raise their wages above subsistence levels, there would have been no mass markets for the goods and services that flow in endless streams from American's workshops.

All the rich people put together could not begin to consume the prodigious output possible under America's industrial system. And if it were not for the purchasing power that collective bargaining placed in the hands of the workers, this flow would soon dry up.

Secondly, because of labor's constant drive toward a higher standard of living, manage-

ment has had to seek new and better methods of production. This means they had to exploit machines and not workers. Over the years the result has been higher output per man, increased earnings for workers, and more profits for employers.

However, man does not live by bread alone. Economic achievement is not the only yardstick by which we measure progress. In a political system such as ours—a system of government by representation—there must be a strong force capable of and responsible for representing the plain people in the fight for progressive and humanitarian laws. Organized labor has always been such a force in the United States.

As early as 1828, for example, it was the labor movement, small and weak as it then was, that led the fight for free public schools, the abolition of debtors' prisons, universal male suffrage and similar reforms.

Income Tax Arrears

By S. S. JHUNJHUNWALA

THAT the collection of Income tax assessed by the authorities is not in a satisfactory state is a well-known fact as evidenced by the very big amount of arrears disclosed from time to time. Generally speaking, the realisation of this tax has also to face the difficulties peculiarly common to all taxes in our country, viz., the slow-moving machinery of the executive on the one hand and the non-paying attitude of the subject on the other. The all-too-prevalent tendency of people to avoid or minimise their tax liability is accentuated in India by the legacy of non-cooperation towards the Government which happened to be a foreign one a decade ago.

COMPOSITION OF ARREARS

The strong drive launched by the Government of India some time ago for the collection of the Income Tax arrears does not appear to have borne results. Rather, in quite a number of cases, the assessee have been unduly harassed without monetary gain to the Revenue. It is high time that the Government examine afresh the question of these arrears and the first step in such an effort should be a proper appraisal of the composition itself of the arrears. Apparently, these arrears are composed of the following broad classes:—

- Arrears relating to assessments in dispute being subject-matters of undisposed of appeals;
- Arrears of protective assessments;
- Arrears realisation of which is "doubtful" as understood in the common commercial sense of the term;
- Arrears which are irrecoverable;
- Arrears from such assessee who manage to be on good terms with the executive on the highest or any lower levels and avoid paying their dues as long as possible, and
- Dues of assessments made at the lag end of the year leaving no time for payment during the financial year, dues not being paid pending some rectifications of mistakes to be done by the Income Tax Officers and dues regarding which there is no dispute and which the assessee are trying to pay off gradually according to the availability of liquid funds in their hands after meeting their current business requirements.

It would be evident that whatever may be the book-figure of these arrears, in order to arrive at a sound figure in terms of realisable money—and that is what matters after all—it is necessary to make a classification on the lines indicated above and make the necessary deductions and allowances. When more and more rigid standards are being prescribed for

It is on that basis that we have consistently fought for better industrial health and safety laws, an improved workmen's compensation system, more comprehensive social security, increased minimum wage coverage, a more equitable system of unemployment compensation—and all other laws and programs designed to protect the American people against disease, injury, poverty, unemployment and old age.

Another problem, one that concerns many people both in and out of the labor movement, is the problem of technological unemployment caused by automation. Contrary to much popular belief, organized labor is not opposed to the introduction of automated equipment in industry. We recognize that automation is one more step forward in the long-term effort to increase per-capita output. We feel strongly that our country must advance as rapidly as possible in the field of science and technology.

the preparation of accounts and balance sheets of the public companies, it is but fair that Government themselves should be scrupulous regarding their financial statistics.

To make the point more clear, it may be borne in mind that a debtor failing to satisfy his debt in time is generally regarded as dishonest or worse. Thus, the amount of arrears of a particular tax proclaimed to be due to the Treasury does reflect on the integrity and attitude of the tax-payer. But if such arrears happen to be composed in reality in considerable degrees of the categories a, b, c and d detailed above and are shown to be so, the picture changes. And persons connected with Indian Income Tax affairs should be well aware that our gross Income Tax arrears are composed to a considerable extent of these four negative categories.

A businessman is very anxious not to show an irrecoverable debt on the assets side in his balance sheet but Government are to the same extent shy in deleting it by writing it off. Life is full of vicissitudes and there are always people of means ruining themselves or getting ruined. If on proper enquiry in the relevant cases it is found that such is the fact, then there should not be the least hesitation on the part of the Government to write the dues off and make the slate cleaner and truer.

Similarly, it does happen that the assessee may not be completely ruined but might fall down to a lower rung of the financial strata and not find it possible to pay off all his debts. In such cases, the Income Tax authorities show their activity by trying to use all the cudgels the law has equipped them with and thus completely throwing off and ruining the assessee who has then to choose between starvation and dishonest or underground means for making both ends meet. If the approach of the administration be one of understanding and sympathy—and that is what is expected in a welfare State—in such cases there should be a fair State—in such cases there should be a fair compromise on the principle that the State gets its dues upto the maximum possible extent as would leave the assessee something to carry on his money-earning activities for the decent maintenance of himself and his dependants, the balance amount of dues is written off so that the sword of Damocles is not on the head of the individual to prevent him from utilising his energy to the fullest extent, and the assessee should undertake to pay his future taxes regularly, this undertaking of his being coupled with vigilance on the part of the State to make timely assessments and collections. If need not be emphasised that if a person is forced to go off the rails and stop

earning money he and his dependants will constitute an increase in the already heavy burden of the State.

The assessments termed as protective assessments, little known two years ago, are now fairly common. Where an Income Tax Officer is not quite sure as regards the correct person liable to pay tax in respect of a certain transaction or venture or series of ventures or transactions involving more than one person, he imposes the tax liability for the profits of the same, not on one person most likely to be the correct subject of assessment, but on all the persons involved therein. Generally, the number of persons entangled in one case is two but there are also individual cases involving more than two persons. It is also correct to state that such assessments are in respect of big and substantial amounts.

An instance would be helpful. An Income Tax Officer comes across a venture with which A, B and C appear to be connected and he finds it difficult to tag the proprietorship of the same on any one of the three either due to complications of fact or law. The profit in the venture amounts to one lakh of rupees. The Income Tax Officer will assess this sum of one lakh separately in the hands of A, B and C. If the officers assessing these three persons are different, the information will be passed on amongst each other to enable the triple assessment to be completed.

Now, all the three assessee would naturally file appeals and ultimately only one of them or two or all of them jointly but only to the aggregate extent of one lakh will be held liable. In the meanwhile, all the three assessee will ask for the stay of collection of tax on these amounts and the Income Tax Department would like to realise as much tax as possible from all the three in spite of the impropriety of such steps and probable administrative instructions to the contrary resulting in further heart-burning.

It should not be difficult to see as to why the protective assessments form a class by themselves as distinguished from other assessments under appeal for the simple reason that in the former cases there is bound to be reduction of tax liability to a certain foreseeable minimum extent whereas in the latter ones there will be confirmation and enhancement besides reduction. Allowance should be made in this category on the basis of the average percentage of relief disclosed by the statistics of the country-wide disposal of appeals.

The last two categories remaining to be considered are comparatively self-evident.

The dues which are left unrealised on account of the specially soft relationship between the authorities and particular individuals are generally good debts but there is no wonder if a portion of them is ultimately found to be irrecoverable due to some reason or other. This will continue to be so long as human nature continues to be what it is at present.

The last category of arrears will also continue to exist to a greater or larger degree. This is inevitable in the nature of things as there is bound to be some time-lag between assessment, adjustments, rectifications of mistakes and payment of full tax. However, experience shows that there is ample room for more promptitude on the part of the Departmental officers and a greater spirit of co-operation and keener desire for payment on the part of the tax-payer.

The right remedy, in short, would be a practical approach based on mutual understanding and sympathy both in the matters of assessment as well as collection of tax accompanied with more and more fruitful expenditure by the Treasury. This may require a bold departure from old sticky traditions but the law of progress demands it.

EDITORIAL NOTES

Tale of Tea

The annual meeting of the Tea Association of India, held last week at the India Exchange, Calcutta, served as the occasion for the ventilation of the points of view of the Government and of the Industry, especially on the question of taxes. The Chairman of the Tea Board, Mr. A. B. Chatterjee, explained the Government's attitude, while Mr. Kanoria, the outgoing president of the Association, put forward the familiar case for relief to Common Tea. In justifying the level of taxes Mr. Chatterjee emphasised the demands of national development, rather than the conditions in the industry itself.

The revival of the International Tea Agreement was another question which the Chairman of the Tea Board and the President of the Tea Association approached from different angles. While the world overproduction of tea lent edge to the demand for the revival of the agreement, it is also necessary to take into consideration whether it will be a practical proposition to arrive at an agreement to which all producing countries would accede. The entry of many new producers, like East Africa and Argentina, into the world markets and the return of China as an exporter on a large scale introduce additional complications. As Mr. Chatterjee pointed out, the time is not ripe for an International

Agreement, though local arrangements on an ad hoc basis might be possible.

The emphasis on differences should not be allowed to obscure the wide area of agreement on several matters of vital importance to the industry. There is identity of views on the need to intensify propaganda for Indian tea in foreign markets, as well as to take steps for expansion of the domestic market. The urgency of replantation is another matter which does not admit of any disagreement. The spokesmen of the industry are anxious that the Tea Guarantee Fund should be set up expeditiously. In this connexion it is encouraging to learn that the Tea Board has already prepared a scheme for expediting replanting which was being submitted to Government.

★

Anglo-Soviet Trade

While the Geneva talks continued to remain deadlocked, and Mr. Selwyn Lloyd only made himself the target of criticism in the Western camp for his "conciliatory" approach to the Russians, his colleague at the Board of Trade has been able to report better success from Moscow, where he had gone as leader of the British Trade Mission. The negotiations have resulted in the conclusion of a five-year trade agreement which presents many interesting features, apart from opening out prospects of increased trade between the two countries. Sir David Eccles is confident that the agreement would lead to a substantial increase of trade on both sides starting from the very first year. Both Governments have agreed on arrangements which are expected to lead to a progressive increase in trade from year to year. The working of the agreement will be reviewed by representatives of the two Governments meeting annually alternating between London and Moscow. Apart from examining the fulfilment of the agreement, these meetings will help to work out steps for further increase in the volume of trade.

The agreement is expected to be followed by large Soviet orders on British firms for capital equipment, especially for the cellulose, chemical and paper industries. The Soviet Seven-Year Plan has given a prominent place to the development of the chemical industry, whose output is to be increased several-fold, so that it would become one of the most important sources for production of consumer goods. Soviet leaders have not made a secret of the fact that they could make use of foreign equipment and know-how, especially in the manufacture of the new range of plastics and artificial fibres. One of the objects of Mr. Mikoyan's visit to the USA, last January, was to interest American industrialists in the proposition. Though he got a better reception from American tycoons than from the State Department, it was evident that he was not able to make much head-

way in putting through business deals. In this context it is interesting to note that the Anglo-Soviet trade agreement provides for exchange of industrial and technical information by organisations and firms in both countries.

Attempts to expand trade between the two countries in the past have not made much headway because of payment problems. British firms were not in a position to give extended credit for Russian purchases of equipment which far exceeded the value of imports from Russia. Sir David has pointed out that the value of Soviet purchases under the present agreement will also exceed their current sterling earning. But it has been arranged that a substantial part of Soviet orders for capital goods will be financed through the facilities made available by the Export Credit Guarantee Department of the Board of Trade. The agreement is to be replaced by a treaty on trade and navigation on which talks are to start not later than the first half of 1960.

★

American Eye View

"Despite statements which appear frequently in the Indian Press about the growth of the socialist system in the country, it is quite evident that the field for private sector investment is increasing". This interesting sentence appears in the report submitted by the U.S. Trade Mission which toured Eastern India early this year. While steady growth of the private sector has been pretty obvious, it has not prevented some champions of the private sector from starting a scare propaganda at the least provocation. It should now be clear even to such persons, if they care to peruse this report, what opportunities they are missing by wasting their energies on an ideological crusade instead of minding their own business like good businessmen.

The report states that the record of American firms operating in this country has been quite favourable, while at the same time, pointing out that the climate for foreign investment can be made more favourable by tax adjustments "in order to meet more attractive situations prevailing elsewhere." The Mission it is interesting to note has discovered through individual discussions, favourable opportunities for joint ventures for the production of a wide range of tools, manufacturing equipment and consumer goods covering over 36 different items. As a result of its observations and discussions, the Mission has drawn the conclusion that Americans have a real opportunity in cooperation with Indian businessmen to participate in building up a strong economy for India. Are Indian businessmen for their part ready to avail of the opportunity?

★

John Foster Dulles

John Foster Dulles was a provocative, controversial figure. In his

mind's eye, he saw clearly what had to be done to preserve and defend democracy. The patriot that he was, he was unswerving in the paths he had chosen. That some of these paths were thorny, and that some failed to lead to the objective was not necessarily his fault. But, in his life-time, it was his failures that were accentuated. A sarcastic world press coined the word "brinkmanship" as epithet for his policy. And failures there undoubtedly were. The Suez imbroglio was not a little due to his decision to retract the offer of help for building the Aswan Dam. But it is patently unfair to judge the measure of a man only by the decisions that went wrong. Unfortunately, his failures stood out prominently, because there were single, individual events, whereas his achievements tended to be obscured because it was only the passage of time that proved such decisions to be so. For example, Dulles always held that it was the lack of show of strength by the world at large which made it possible for Germany to flirt dangerously with ideas of fresh conquest after the first World War; and he decided that a show of resolute determination would alone prevent Communism from seeking to expand without fear of reprisal. His diplomatic achievements before he assumed office as Secretary of State under President Eisenhower also tend to be overlooked. He was the chief architect of the Japanese peace treaty, and that Mr. Truman, a democratic President, should have chosen him for the job indicates how highly his abilities were rated. A brave man, he bore the pain that cancer brings. And, last week, the free world paid homage to the death of one who, politics apart, was reckoned a religious, good man.

New Thoughts on New Loan

THE contraction in note circulation, during the week ended May 22, is not as pronounced as might have been anticipated; the slack season, thus, has set in, but has yet to gather momentum. On the other hand, if regard is had for the State Bank figures, it is significant that the total of Advances of that institution has fallen below the Rs 200 crore mark. Similarly, there is a considerable improvement in the position of Scheduled Banks relative to the Reserve Bank, as noted in the latter's returns for May 22. So, from the point of view of Scheduled Banks, the easier tendency is, if not marked, clearly discernible. As such, with May drawing to its close, the imminence of the borrowing programme of the Central Government, and that of the State Governments a little thereafter, is the topic of moment to the money market.

It is now to be expected that the Central Government will not defer beyond, say, the end of June the announcement relating to the new loan. The subscription lists, in this view, should be opened around the middle of July, allowing time for the State Governments to complete their own borrowing programmes by about the middle of August. However, at the moment, the banking system appears ill-equipped to support government borrowings in any worth while way. For, while it is true that the trend in Advances is already downward, the heavy investment of Scheduled Banks in gilt-edged during the previous year has left very little to spare, by way of resources, for any new gilt-edged issues. This is a point which emerges clearly from a study of the investment/Deposits ratio. Just prior to the opening of subscription lists last year, the ratio of investments to net Deposits was placed at 28.24 per cent; a year and a week later, the ratio had risen to 37.03 per cent. Again, cash and balances with the Reserve Bank have fallen from 9.83 per cent of net Deposits on May 9, 1958 to 6.64 per cent on May 15, 1959. While net Deposits are marked higher by Rs 134 crores, investments have increased by Rs 200 crores. In this situation, how much would the Scheduled Banks be able to set apart for the new loan?

Last year, Scheduled Bank, investment in the new loan was seen to be in the environs of Rs 34 crores—coincidentally, just short of the total subscriptions of Rs 58

crores to the short-term, 3½ per cent 1963 loan. Of this amount, it may be noted that the State Bank accounted for Rs 35 crores. However, in addition, through purchases from the Reserve Bank tap, the banking system has absorbed a considerable volume of gilt-edged. Then, in our analysis of various figures pertaining to new loan subscriptions, we had concluded that the Reserve Bank had probably put in Rs 50 crores into the new loan. Now, according to the Report on Currency and Finance for 1957-58, the Reserve Bank's holdings of Treasury Bills at the end of March 1958 amounted to Rs 1190 crores; and, as at that date, the Rupee Securities held by the Reserve Bank in both departments aggregated Rs 1409 crores. Thus, it may be inferred that marketable securities held by the Reserve Bank at the beginning of 1958-59 were placed at roughly Rs 219 crores. To this we have to add, firstly, the Rs 50 crores representing the Reserve Bank's probable investment in the 1958-59 new loans, and the Rs 60 crores of securities that were created as a special issue by Government and sold to the Reserve Bank late in August 1958. The total of marketable securities is, hence, around Rs 330 crores. But we must remember that the Reserve Bank has sold considerably through its tap since April 1958. Indeed, after accounting for Scheduled Bank investments at the time of last year's new loan, the net increase in the gilt-edged holdings of the banking system, as at May 15, 1959, works out to roughly Rs 146 crores. It would follow that the marketable securities held by the Reserve Bank barely exceed Rs 180 crores.

We wish to show, thus, that, while the Scheduled Banks other than the State Bank may not, unless there is a substantial return of funds from the mofussil owing to slack season influences, be able to put in more than Rs 20 crores to the current financial year's new loan programme, the Reserve Bank will be obliged to increase its portfolio, so that it would be in a position to possess securities for sale through the tap. In this context, it needs moreover to be borne in mind that, very conceivably, the bulk of Reserve Bank holdings are in early maturities. At the least therefore the Reserve Bank would feel compelled to subscribe Rs 50 crores; to this, we have to add, say, Rs 100 crores representing holders of the maturing 3 per cent 1959-61 who will choose to convert. The State Bank and the other Scheduled Banks should be good for another Rs 40 crores. Other institutional investors may be expected to put in Rs 30 crores, or roughly the estimated figure in respect of last year's new loan programme. All this adds to Rs 220 crores, or roughly the amount envisaged in the Budget for the current year. It is thus that we feel that a new loan floated by the Central Government for Rs 225 crores, with conversion facilities in respect of the maturing loan,

should impose no strain upon the money market.

Indeed, if, by new loan time, the slack season gets well into stride, the over-subscription could be sizeable. However, we have no need to peer so much into the future. At the moment, only two facts need to be stressed: Scheduled Bank subscriptions are likely to be smaller than last year;—but the Reserve Bank may conceivably choose to purchase rather more of the new loan.

Slack Season Sets In

The returns of the Reserve Bank for May 22 show that active note circulation has contracted by Rs 13.63 crores to Rs 1752.35 crores. Rupee Coin, however, returned from circulation in the meagre amount of Rs 0.22 crores. Currency has been contracted against Rupee Securities by Rs 15 crores by transfer to Investments in the Banking Department, so that the Reserve Bank's cash in the till is lower by Rs 1.14 crores at Rs 18.83 crores. While the decline in active note circulation is not inconsiderable, even sharper falls are to be expected, if the current slack season is to follow the pattern set by last year.

The first thing to be noted in the Banking Department is the steep rise of Rs 44.34 crores in Investments. A part of this, Rs 15 crores, is due, as we have seen, to transfer from the Issue Department. The balance, clearly relates to deficit financing. The purpose for which the Government instituted ad hoc can be seen to be the payment of monthly instalment in respect of grants, loans, advances, etc., to the State Governments. For all the deficit financing, the Centre's balances are higher only by Rs 1.43 crores at Rs 54.40 crores. On the other hand, the Deposits of State Governments have improved by Rs 8.07 crores to Rs 17.79 crores, with their indebtedness, meantime, declining by Rs 10.91 crores to Rs 32.62 crores.

The Reserve Balances of member banks have risen encouragingly by Rs 8.08 crores to Rs 80.40 crores, with the State Bank accounting for about Rs 2 crores of this. At the same time, the Other Loans and Advances of the Reserve Bank are lower by Rs 7.94 crores. Both these would seem to indicate that, at any rate as far as the banking system is concerned, the slack season has well and truly set in.

Balances Held Abroad have recorded a small decline of Rs 0.32 crores to Rs 24.30 crores, but, even at this level, the Reserve Bank's holdings of foreign securities in both departments exceed Rs 200 crores.

The return of funds owing to slack season influences is indicated in the State Bank return for May 22, with Deposits rising by Rs 5.77 crores to Rs 525.04 crores

and the total of Advances falling by Rs 2.19 crores to Rs 199.50 crores. This has enabled the borrowings of Rs 5 crores to be liquidated. Although gilt-edged investments are practically unchanged, the continuing high figure of Other Assets would suggest an impending addition to the portfolio. In the result, State Bank's cash in hand and with Reserve Bank is higher by Rs 2.16 crores at Rs 28.47 crores.

According to the return of the Scheduled Banks for May 15, the 1959 slack season is getting under way. The total of Advances is lower by nearly Rs 6 crores, with the State Bank responsible for Rs 2½ crores; it is likely that Advances now placed at Rs 1021.28 crores will fall below the Rs 1,000 crore mark by the end of the month. On the other hand, Deposits have risen by Rs 11.19 crores to Rs 1739.11 crores; and the next return of Scheduled Banks should show the Deposits have again overtaken notes in circulation. All of this rise in Deposits is to be attributed to banks other than the State Bank. Mainly reflecting the sale of securities by the State Bank in the relevant week, investments of Scheduled Banks have declined by Rs 8.31 crores to Rs 625.31 crore. The improvement in resources has been utilised to reduce sharply, by Rs 14.16 crores to Rs 26.37 crore the borrowings from the Reserve Bank. In the result, cash balance have improved by Rs 6.26 crore to Rs 161.12 crores.

American Gold Outlook

By Paul Einzig

GOLD continues to flow from the United States continues at abnormally high rate, and a weekly announcement of a substantial decline in the gold reserve causing growing concern. Though at the time of writing the reserve is still above the \$20 billion mark, at the present rate would not take long before the figure will decline below it. The psychological effect of an announcement of the gold reserve having declined below \$20 billion would be considerable. Moreover, this is also cause for concern about psychological effect of the decline of the reserve by some \$1 billion that will take place in the near future in connection with the release of the resources of International Monetary Fund. Though that transaction will create the amount of the American quota in the resources of International Monetary Fund, American application to the Fund for assistance would be interpreted as an admission of weakness which itself would produce adverse psychological effects.

Yet there is no reason why United States, like any other member country, should not draw the Fund's resources in face of speculative attack against

May 30, 1959

currency. After all, the Fund is supposed to exist primarily for reinforcing the defences of currencies against unwarranted speculative attacks. Pressure on the dollar due to anticipation of its devaluation comes well within the scope of this definition of the Fund's purpose, unless the pressure is due to fundamental disequilibrium between prices in the United States and abroad.

The deterioration of the American balance of payments, owing to the unduly high cost of production in the United States has been widely regarded as one of the causes of the gold outflow. Beyond doubt the wage spiral is in full operation, in spite of the high extent of unemployment. Industries have been outpriced from some foreign markets, and have lost ground even in domestic markets.

The perennial American export surpluses have been one of the major economic headaches of the world during the past forty years. The absence of such surpluses is not by itself a major disaster, so long as the United States is in a position to balance their international accounts. At present the United States could easily balance their accounts by suspending foreign aid. The Administration has decided against that solution, and foreign aid is to continue on a very substantial scale. But for this the United States would not be losing any gold as a result of the adverse change in the balance of payments; they would merely be gaining gold on a reduced scale.

There is, therefore, no justification for attributing the outflow of gold to the decline of exports and increase of imports. The United States merely continues to spend on foreign aid without having a corresponding surplus in her balance of payments. Her net deficit in international accounts that is responsible for part of the gold outflow is not the result of the operation of economic forces but of a political decision to continue to spend on foreign aid regardless of the deterioration of the balance of payments position.

This means that the decline of the gold reserve cannot be attributed to any fundamental disequilibrium. If the International Monetary Fund were to be called upon to grant assistance to support the dollar, it could not decline on the ground that it would be bolstering up an untenable position. Of course there would be no justification for enlisting the Fund's resources for deferring an adjustment made necessary by a fundamental disequilibrium. On the other hand there would be every justification for taking that course in face of a speculative exaggeration of an outflow of gold due to American assistance to other countries.

The United States Treasury should make it clear that, if necessary it would not hesitate to draw upon those resources. And the International Monetary Fund should make it clear that it would be willing to place its resources at the disposal of the United States.

A public announcement to that effect before the American contribution actually causes a further loss of gold would be very helpful even if it merely amounted to stating the obvious.

The United States authorities should also show indication of their willingness to lower the reserve ratio if this should become necessary as a result of unduly heavy gold withdrawals. Many experts abroad are inclined to believe that if continued gold outflow should reduce the gold reserve below the present statutory minimum, a devaluation of the dollar would become a preferable solution. There is nothing sacrosanct about the present statutory minimum, and its reduction would be an infinitely smaller evil than a devaluation. The willingness of the American authorities to lower it should go some way towards discouraging devaluation speculation.

Every Government and Central Bank of the free world is under deep debt of gratitude to the United States. It must be remem-

bered that American assistance was granted since the war with an entirely unprecedented generosity. Is it too much to expect the Treasuries and Central Banks of the free world to refrain from doing anything that would aggravate the difficulties that the United States is liable to encounter if the gold outflow should continue at the present rate?

This is not the moment for converting dollar reserves into gold reserves. Any conceivable losses that holders of dollar reserves are liable to suffer through a devaluation of the dollar would be a mere fraction of the amount of American assistance received since 1945. Apart altogether from any gratitude for past favours, it is well to remember that the United States are likely to remain the main source of future assistance to the free world. All holders of dollar reserve may safely expect future American aid far in excess of any conceivable potential losses they would suffer in the unlikely event of a dollar devaluation.

The United States authorities and the American public are bound to remember which countries have remained loyal in face of the present artificially stimulated dollar scare, and which countries are leaving what they wrongly consider to be the sinking ship. No blame is attached to a Treasury or a Central Bank which maintains the same proportion of dollars to gold as hitherto. But American opinion has every cause to resent any panicky conversion of dollars into gold. Treasuries and Central Banks could and should meet their gold requirements out of new gold output available in the gold markets. It is essential to maintain and increase the amount of such free gold. From this point of view the prevention of gold smuggling into India is important. Likewise it is important not to enable the Soviet Union to reduce its gold exports by the granting of credits that would enable it to import without having to pay with the aid of gold sales.

PLANNED PRODUCTION

With the increased industrialisation in the Country, the demand for Electric Motors has been continuously increasing, particularly in the range of 50 to 250 H. P.

To keep pace with this upward trend in demand, KIRLOSKAR ELECTRIC COMPANY have so planned their production that their output of motors in this range has also been increasing from year to year.

The increased production of these motors has resulted in conserving foreign exchange.

WORLD OF BUSINESS

Fan Makers Association

Presiding over the annual meeting of the Fan Makers' Association of India, which was inaugurated in Calcutta last week by West Bengal's Minister for Commerce and Industries, Mr I. Sukumar was in the happy position to highlight the successes of an industry with a heartening record of skill and enterprise. Production has increased more than three-fold in the five years since 1954—from Rs 2.39 lakhs in 1954 to Rs 6.32 lakhs in 1958—while exports during the same period have increased two and a half times from Rs 9.52 lakhs in value to Rs 23.24 lakhs. Fan manufacture is one of the few industries which has been able to report increased exports in 1958. During this year the exports registered an increase of 28 per cent over the previous year. If Indian fans are now successfully marketed in thirty-six foreign countries, it has

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/43/P&M/469/B/59 for supply of 1 No. Improved High Speed Motorised Radial Drilling, Boring and Taping Machine 37" radius capacity 2", 5 H.P., 440 Volts A.C. 50 cycles. Earnest money is Rs 280/-. Tenders will be opened on 23-6-59 at 12 noon. (ii) Tender No. CON/COS/44/148-152/GB/59 for supply of Bolts, Rivets and Nuts etc. Details to be obtained from the tender schedule. Earnest money is Rs 360/-. Tenders will be opened on 29-6-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta-23 by local firms.

Tender should accompany the receipt for depositing the earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES
S25

been on the strength of their quality. In striking contrast to many other industries which are apologetic of the quality of their products, and are not confident of finding markets abroad unless they are able to offer a price incentive, the president of the Fan Makers' Association is able to make the proud announcement that India "has the distinction of producing one of the finest ceiling fans in the world and we are competing with the established brands on the basis of our quality and performance."

Mr I. Sukumar has emphasised the importance of adopting the latest techniques of manufacture and for that purpose making the best use of our engineers. He has suggested the formation of the small Technical Advisory Body attached to the Association in order to assist the members in solving the technical problems that arise from time to time. There is no escape from the fact that the technical and scientific aspects should have special attention if the Indian industry is to keep in step with foreign standards. As each manufacturing unit will not be able to command the requisite talents, it will be to the advantage of all to create a common pool of technicians.

It is satisfactory to learn that the industry last year was not seriously hampered by shortage of materials. The shortages that remain are likely to disappear shortly. Mr Sukumar, however, has drawn attention to the need for ensuring equitable distribution of materials in short supply, like enamelled winding wires and condensers. He has also suggested that the industry will be well advised to conserve electrical steel sheets by adopting minimum permissible stator cores. Government can also help by permitting some imports of electrical steel sheets as well as of Nylon to encourage the use of this important plastic material which is necessary to maintain competitive standards of quality.

National Carbon—Record of 25 Years

Twenty-five years ago the National Carbon started its operations in India with one small plant capable of assembling six million flash light cells a year using imported parts. In its Silver Jubilee year as Mr J. R. Galloway told the annual meeting, the Company operates two battery plants which together can manufacture over 142 million dry cells per year of various types including the well known "Mini-Max" flat cell; a cell designed especially for battery operated radios, hearing aids, tele-communication equipment and other electronic devices. In addition to its battery plants, the Company also operates a plant for processing manganese ore, a strip mill for alloying and processing zinc and a new plant at Lucknow capable of manufacturing up to six million flashlight cases a year. It is also gratifying to learn that a good part of the raw material and practically all of the component parts used in the products of these plants is of indigenous origin.

The statistics given by Mr Galloway give an indication of what, by

any standard, is a remarkable record of growth. Over the past quarter century, gross sales have increased from Rs 7,65,000 to Rs 6,05,00,000; fixed assets from Rs 5,34,000 to Rs 2,34,00,000; personnel employed from 406 to 2540 men and women; annual wage bill from Rs 75 thousand to Rs 92 lakhs; and taxes from Rs 17,900 to Rs 86,14,632.

The achievement of the last twenty-five years afford the starting point to the greater expansion envisaged in the range and volume of the Company's activities in the near future. A Rs 4½-crore plant for manufacturing organic chemicals and polyethylene resin is under construction at Trombay and is expected to be completed during the latter part of 1960. The combined output of chemicals and plastics, when the plant is fully operative, Mr Galloway said, will be close to 15 million pounds annually, having a net sale value of over Rs 2 crores. The products include Butyl alcohol, Butyl acetate, Acetic acid, all basic chemicals required for manufacturing paints, dyestuffs and pharmaceuticals including anti-biotics. The Trombay plant will produce 6 million pounds of polyethylene annually which will meet a substantial part of the demand for this important plastic which is finding increasing use in this country, especially in industrial applications.

Difficulties of Mills

Assessing the prospects of the cotton textile industry in the country, Mr N. H. Tata told the annual meeting of the Svadeshi Mills Company Ltd, that, though the industry is in a bad condition today, he felt confident that "given the necessary aid and encouragement by Government and by close and whole-hearted co-operation between the employers and employees, this premier industry is still destined to play a predominant role in the developing economy of the country." With this guarded assessment of textile prospects, no one who is familiar with the general direction of economic development and the place of the cotton textile industry in the national economy will be disposed to disagree. And the encouraging prospects which beckon in the not distant future should also act as an added incentive to the efforts to overcome the problems that continue to hamper the industry in the present. What these problems are and how best they could be met were indicated by Mr N. H. Tata, both in his address to the Svadeshi Mills Company Limited, as well as in his Chairman's address to the 47th annual meeting of the Tata Mills Limited which was also held on the same day.

The main problem is the high cost of production which places Indian manufacturers at a serious disadvantage in foreign markets. Mr Tata drew attention to the fact that costs of material, labour and other items of manufacture had risen very steeply in recent years. It was essential to take steps to ensure a measure of stability in the prices of cotton, sundry stores and dye-stuffs, coupled with wages correlated to productivity, in order to safeguard the future of the industry.

Apart from the problems facing the industry as a whole, the units producing coarse and medium counts are labouring under additional disadvantages consequent on changes in consumer preferences. They are further handicapped in adjusting their production to the needs of the market by the Government's policy of allotment of foreign cotton only to those who had been using it previously. Mr Tata observed that this policy made the rich mills richer and the poor poorer, and regretted that well-intentioned textile control measures should result in widening the disparity that existed between the fine count mills and those producing medium and coarse counts.

Mr Tata also referred to the adverse effects on marginal units of the production restrictions ostensibly designed to favour the cottage and small scale sectors. It is not clear how the economy is benefited by creating low paid employment in the unorganised sector, at the cost of closure of mills, throwing thousands of workers out of employment. Most of the mills, and not merely the marginal units, are in need of renewal and replacement of equipment. Stressing the urgent need for rehabilitation and modernisation of the industry, Mr Tata remarked that it would be impossible for the industry to tackle these problems, unless longterm loans on liberal terms were given by Government. The present terms and conditions for assistance by credit institutions like the N.I.D.C. and the I.F.C., he said, "need to be substantially liberalised, so that all those who are in desperate need may derive the maximum advantage in the quickest possible time."

Progress at Mithapur

The most outstanding feature of the Second Lime Kiln of Tata Chemicals at Mithapur, which was blown-in by Director Choksi on May 10, is not that it is the largest lime kiln in India, but that it was designed and engineered entirely by Indian engineers on the staff of the company at Mithapur and over 95 per cent of it was fabricated in India.

The first kiln at Mithapur was commissioned in the forties and the teething troubles of the new enterprise gave the organisation the opportunity to get acquainted with the logistic and handling problems of largescale lime production. The second kiln, which has now gone into production, is rated to burn 450 tons of limestone per day. Its construction has occupied two years involving 110,336 erection man-hours. It has cost only half of what an imported kiln of similar type would have cost, as it has been entirely made in the country. While the saving in foreign exchange cost is itself a matter for satisfaction, the way it has been effected is a pointer to how costs may be cut on other projects in the public and the private sectors. The achievement has shown that the creative impulse that Jamsetjee Tata gave to India's industrial development continues to animate the enterprises that bear his name.

WORLD OF JUTE

Mixed Trend in Prices

PRICES of Jute Goods have been showing a mixed trend during the past few days. While hessians are ruling fully firm both for ready and forward delivery goods, sackings have continued to remain depressed with prices developing an easier tendency due to selling pressure.

Despite the absence of any marked improvement in foreign enquiries, the firmness in hessians is attributed to persistent hopes of early revival of foreign buying, not to speak of the shortage of ready stocks. The future for this category of goods is considered optimistically in the light of a sound statistical position.

With offtake running at a high level and the normal peak consumption months till to come, it is believed that the USA will start buying more rapidly soon. Moreover, the steady rise in US stocks of burlap, from the beginning of the year, is not considered to be too high in the light of the present increase in business activity in that country.

In the above connection, the Deputy Chairman of the Indian Jute Mills Association has stated that the Indian jute industry is now prepared to provide new fabric constructions that will stimulate new uses for jute fabrics.

He adds, that such uses are needed to offset inroads in the trade, which have been made by substitutes and changes in packaging and handling methods for many jute commodities.

Also, it is pointed out that the new uses and India's almost complete self-sufficiency in raw jute account for the recent improved position of the industry. As a result of these developments, US consumption of burlap has increased and is expected to be maintained at a high level in the coming months in spite of the increased competition from Pakistan.

Sources close to the trade also expect Argentina—the second largest buyer of Indian hessians—to enter the market for her usual quantity of 60,000 to 70,000 tons. The market is also busy with covering against the recent Russian order for 7½ million yards. Thus, with the prospect of substantially huge orders from the USA and Argentina, the near-term outlook for hessians should be generally considered bright.

It is true that, despite the reduction in stocks, sackings cannot look

forward with the same degree of confidence and its prospects are clouded by possibilities of greater Pakistani competition, because of increased output and exports in that country. According to the latest reports from Dacca, exports of jute goods are higher at 97,699 tons for the nine months ended March 1959 as compared to only 79,544 tons in the corresponding period of the 1957-58 season.

But, it is felt that the accumulation of stocks with the Indian mills has been relieved to a considerable extent by the increased domestic consumption. Moreover, the demand is expected to improve, as jute mills in Pakistan are reported to be fully booked for some months to come. As a result, orders from Australia and Burma, which recently obtained part of their requirements from Pakistan, are expected to be received in this country. Statistically also, the outlook for sackings is encouraging, as the disposal of present production may not present any difficulty.

RAW JUTE

Prices in the Raw Jute section, after ruling initially firm, developed a reactionary tendency towards the close of the week. The initial firmness was helped by a number of factors. In view of the stern measures proposed against excess sowing of jute in Pakistan, it was thought that the outturn of jute in Pakistan might be lower in the coming season. The seasonal decline in imports into the upcountry centres also strengthened the hands of sellers. Also, new crop reports were not considered as favourable as before, with the result, Assam Bottoms were generally pushed up at one time to Rs 21.25 from Rs 20.50 per maund.

But, the firmness in prices has proved short-lived. From the beginning of this week, prices have been developing a reactionary tendency with Assam Bottoms marked back to Rs 20.50 per maund, thanks to the reports of rains in many of the jute-growing areas. Sellers now seem to be anxious for business and are even inclined to reduce their rates.

Following were the price trends:

	May 21st	Highest	May 27th
	Rs	Rs	Rs.
Hessian:			
40" x 10 Ozs.			
Ready	40.50	41.00	40.90
June	40.40	40.90	40.85

WORLD OF TEA

Revival of ITA Stressed

IN reviewing the various aspects of the Tea industry, the President of the Tea Association of India, has stressed the need for the revival of the International Tea Agreement in the light of the increasing world production of tea. In this connection, he has pointed out that India's tea production has already exceeded the Second Plan target of 700 million pounds by about 12 million pounds.

As regards exports, he has mentioned the severe competition which Indian teas are facing in foreign markets from teas of Ceylon, East Africa and more recently of China. In the context of increasing production and foreign competition, he has suggested the need for the intensification of propaganda for Indian teas in foreign markets and expansion of the home market for absorbing the surplus. In this connection, the prospects of increasing our exports to the USSR are bright and this can be done only at the Government level, as the Russian economy is controlled by the State.

Adverting to the revival of the ITA which ceased to operate in 1955, the President has pointed out that voluntary regulation of crop by India alone will not solve the problem of supply outstripping demand. It is necessary that the ITA is revived with suitable modifications and embracing the major tea-producing countries.

With regard to the recent concessions granted by the Government to the industry by way of a reduction in the export and excise duties, the President has pointed out that these have not been adequate to improve the overall position of Common teas. He says that there is little possibility of reducing the cost of production of these teas and has suggested that the only way in which they can be made competitive is to lighten the burden of taxes on them and that revenue considerations alone should not be allowed to prevail in this matter. He has also suggested the need for a re-examination of the pros and cons of the tea export duty as also the West Bengal Entry Tax and the Assam Road Tax.

Meanwhile, it is interesting to note that, while North India has harvested a bumper crop of 19.8 million pounds in April, exports have dropped sharply to 14.6 million pounds. The corresponding figures for April last year were 16.3 million pounds and 27.3 million pounds respectively. With the exception of the Continental

countries which have increased their offtake from 924.170 pounds in April 1958 to 1.11 million pounds last month, shipments to all other destinations have recorded a decline. The largest decline has occurred in exports to the UK, which has taken only 4.51 million pounds in April against 12.06 million pounds in the same month of last year. The decline is attributed to the marked fall in shipments due to the shortage of tea in the country. Otherwise, the overseas demand for tea is good and prices, realised during the period under review, have been generally higher than last year.

In the Internal Sale, offerings consisted of 22,784 packages of Dusts and 224 packages of Leaf grades. There was again only a fair demand for Dusts, orthodox types being sold at 4 nP and sometimes 6 nP per pound below last rates. Legg-cut Doors teas, though irregular, generally shared in the easier tendency and were about 4 nP easier.

There was a good general demand for the medium CTC teas, which were upto 6 nP easier at the start. But, as the sale progressed, the demand declined by upto 10 nP below last rates. The few best CTC teas met with less demand and generally sold at upto 15 nP below valuations. Following rates were quoted:—Medium Doors Dust Rs 1.72 to Rs 1.76; Medium Assam Grainy Dust Rs 1.68 to Rs 1.72; Medium Assam CTC Dust Rs 1.90 to Rs 2.10 and Best Assam CTC Dust Rs 2.50 to Rs 2.80 (nominal). There was a good demand for Leaf grades, which were generally sold at dearer rates.

In the Colombo market, offerings totalled 5,302,565 pounds. There was a dealing in quality and high-grown teas from western districts. Medium Broken and Uva teas were generally about 10 to 15 cents per pound lower, while low-grown teas remained steady.

In the Cochin market, over 7 lakh pounds of Leaf tea was offered for export. The quality showed a further decline and all teas, with the exception of high-grown Broken, were neglected. There was, however, a fair enquiry for similar Fannings at lower rates than last week's prices. There was a useful enquiry for low-medium and medium teas, which were fully firm; and, in this category, buyers showed particular interest in Fannings grades. Good Medium Broken were, however, irregularly 10 to 20 nP per pound easier although similar Fannings did not register the same decline.

Whole Leaf grades, particularly flowery Pekoes, were well-supported. Following were the rates: Low Medium Rs 1.80 to Rs 1.90; Medium Rs 1.95 to Rs 2.15; Good Medium Rs 2.50 to Rs 2.70 and Quality Rs 2.30 to Rs 3.04.

In Mincing Lane, tea brokers are reported to be fairly confident that, when tea sales are resumed in London, the recent rise in best North Indian tea prices will be maintained.

US Notes

IN foreign trade, no less than domestically, the performance of the United States economy has been exceeding all expectations.

Again this past week, government experts were busy revising upward their estimates of US merchandise imports for 1959. They now look for a record total of more than \$14,000 million worth of foreign goods to enter the country this year. The more optimistic, in fact, are talking about a possible \$14,500 million total.

What makes these estimates all the more remarkable is the fact that they are far above those drawn up just a few months ago. Earlier this year, there were some experts in and out of the government who were categorising a 1959 import forecast of \$13,500 million as highly—even extravagantly—optimistic.

But now the available data show that total imports during the first three months of 1959 came to an all-time quarterly high of nearly \$3,600 million. On a seasonally adjusted basis, this means that US imports in the first quarter of this year reached a record annual rate of \$14,100 million.

Just how far imports have come is seen in the fact that the existing annual record, set in 1957, is less than \$13,000 million. In 1953, imports attained the creditable total of nearly \$12,800 million, even though the year's early months were slow and economic recovery marked only its later months.

The upsurge in US imports, which is the notable contrast to the faltering level of US commercial (non-military) exports promises to reduce the US trade surplus to the lowest level since 1953. In the past years, this surplus—the excess of exports over imports—has ranged from a low of \$2,600 million in 1954 to a high of \$6,500 million in 1957, when exports admittedly were abnormally high. On the basis of current trade trends, the outlook this year is for an export surplus of no more than \$2,000 million, and possibly as little as \$1,500 million.

The US import rise this year is truly an across-the-board performance. Purchases are up for all categories of merchandise and from every continent of the world. These trends are expected to continue throughout the year, with only two possible exceptions—oil and coffee. And in the case of coffee, a decline in import value, if it materialises, would be caused more by falling prices than by reduced volume.

On the other hand, no let-up is foreseen in the surging imports of finished manufactures, any significant rises are expected during the year in purchases of raw materials and semi-manufactures. Especially noteworthy are anticipated increases in the importation of such products as non-ferrous metals and minerals, steel and timber products, reflecting the sustained rise in US industrial activity.

This does not mean, of course, that some import difficulties may not arise. One cloud on the horizon, for instance, is the possibility of a nation-wide strike in the steel industry, which has helped push steel mill imports to new highs this year. A prolonged shutdown of US steel production this summer, however, could with its effect on industry in general cut into the over-all level of basic product imports.

The import rate, with or without a steel strike, will hardly follow an even course. A slight dip during the second quarter of the year is possible, and the third quarter invariably sees a seasonal letdown, not only in imports but in US industrial activity generally. But the experts believe that if all goes well, the import rate in the final quarter of this year could soar to well over \$14,500.

Sweden

IN many respects the Swedish economy is better balanced today than it has been during most of the post-war period. Prices have remained stable for almost a year, wage increases have been more in line with the development of production and the country's reserves of gold and foreign exchange continue to creep slowly upward. This state of relative balance has been achieved at a time when both the domestic economy and foreign trade and exchange transactions are largely free from direct control. Only in two important respects can shortages be said to be hindering the establishment of free market conditions: the housing shortage remains a crucial problem in many parts of the country—at least as regards apartments of popular size—and there is still a marked shortage of long-term capital. The issue of bond loans is therefore strictly rationed by the Riksbank.

Whereas inflation has been halted and exchange reserves have developed favourably difficulties have arisen in fulfilling another important aim of economic policy, i.e., the maintenance of a satisfactory rate of progress. The total volume of production, which has been rising at the rate of 3-4% per annum since the war, was only 1% up in 1958. This stagnation has led to increased unemployment and, during the past few months, the numbers out of work have reached a post-war peak.

To some extent, this slowing-down in production is due to the reduction in the working week; according to a law passed in 1957 the earlier 48-

hour week is to be reduced to a 45-hour week at the rate of one hour per week per year, and in 1958 the first stage of this process was effected. However, it is probable that shorter working hours in 1958 had little effect on output and served mainly to keep unemployment at a lower level than would otherwise have been the case. It is interesting to note that the other great post-war increase in "official leisure"—the change-over from a 2-week to a 3-week minimum holiday with pay in the years 1952 and 1953—also coincided with a recessionary period. In this case, too, the immediate result was to reduce unemployment.

The main reason for the stagnation in production and the rise in unemployment last year was that the earlier marked increase in exports was replaced by a minor decline. Thus, the Swedish recession was mainly due to reduced demand from abroad. The obvious solution in such a situation would appear to be to endeavour to replace the lack of demand on the export side by stimulating domestic demand, and much has been done in this respect. Official estimates are that Sweden would have 50,000 more unemployed today if steps had not been taken to create work. It may be asked why this policy is not pursued even further by taking additional steps to reduce unemployment to the previous low level and thereby breaking the lull in production.

There are two reasons why this "bolster" policy has not been adopted on a larger scale. Firstly, domestic demand is not as valuable as foreign demand in one essential respect: it does not produce foreign exchange. The redundant labour from the export industries can be employed on such useful projects as road construction etc., but the results of this effort cannot be exported and give no payment of foreign exchange. On the contrary, boosting domestic activity increases the demand for imported goods and results in a loss of exchange. The Swedish exchange reserves are not large and could hardly withstand any long-term pressure. The fact that the reserves could be held intact last year—even increased to a slight extent—despite the decline in exports and the reduced income from shipping was due to our consuming some of the stocks of imported goods.

The other explanation is the unwillingness to inflate domestic demand during a period of temporary set-backs to the extent of paving the way for a new wave of inflation. Sweden has had two other periods of relative price stability since the war, viz: 1948-1949 and 1952-1953, and both of these were followed by periods of marked inflation. It is true that some people consider the current recession to be of a different kind. According to their view, we are experiencing a new type of business cycle in which the risk of inflation is not as imminent as during the earlier post-war periods. Time alone will provide the answer but, in the meantime, the Government is displaying the symptoms of "once bitten, twice shy."

Full employment is, of course, still the prime aim of the economic

policy. However, the policy of full employment has never been based on any precise declarations of what would be the acceptable amount of unemployment. During the post-war boom period we have become accustomed in Sweden to unemployment not exceeding 1% of the total working population even during the winter months. The current figure is between 1.5% and 2%. It is not at all certain that unemployment should be pressed back to the level prevailing during the years of over-full employment. Certain doubts as to the sagacity of trying to keep unemployment at the absolute bottom level of the boom years have emerged both in Sweden and abroad. The main reason is probably the difficulty involved in combining over-full employment with stable value of money.

Britain

There was a marked recovery in United Kingdom retail sales in April, it was revealed in London on May 19 in a Board of Trade announcement giving a provisional estimate of retail trade in that month.

The total value of retail sales in April is provisionally estimated at about 6 per cent higher than a year earlier, as compared with a 2 per cent increase in March and 3 per cent in February. In the preceding four months (October to January) sales had been, on an average, some 5 per cent higher than a year earlier.

It is noted in London that although the increase for April should, to some extent, be discounted because sales in April last year were rather subdued, the provisional results for April this year nevertheless indicate a pronounced upturn in sales. A major factor was the Budget, which came in the first week of the April sales period and which contained purchase-tax reductions in the expectation of which purchases had probably been postponed in the preceding weeks.

A total of more than 593,000,000 coins, amounting altogether to a weight of 1,940 tons were struck by the Royal Mint in London during 1958. This output is some 85,000,000 pieces higher than that achieved in 1957, and has only twice been exceeded. To achieve it, some departments had to work night shifts.

About half the production was of United Kingdom coins. Among the coins minted on behalf of Commonwealth countries were over 200,000,000 for Ghana, where an entirely new coinage was required to replace British West Africa coins. Preparations were also begun for the striking of over 1,000 million coins for Nigeria, where a new coinage will be introduced on the attainment of independence. The striking of the order will be spread over 1959-62.

Orders completed on behalf of non-Commonwealth countries totalled some 10,000,000 pieces. Coins were struck for Iceland, Iraq, Jordan, and Muscat & Oman.

May 30, 1959

THIRD Plan tremors are increasing in their intensity, and, not unnaturally, the seismograph of public opinion is recording a violent dither. None can say that I have shown myself unsympathetic to the efforts of the planners—the complaints have, in fact, been the other way round. But I must confess to a recent feeling that the planners are living in a world of their own. Take, for instance, the additional tax effort reportedly envisaged by them for the Third Plan period. Extra taxation of the order of Rs 2000 crores could be thought of lightly only by people who have become figure-drunk. It could not have been conceived by anyone who has before his mind's eye the magnitude of the "value" embedded in the sum. Nor could the blithe gentleman who thought of this nice round figure have visualised the act of tax paying. (I would not go so far as to say that he has not paid any tax in his life). Certainly, he did not imagine clearly who was going to pay this extra Rs 2,000 crores. If he had done, he would have been a little less free with his crores.

First, a little arithmetic. The total tax revenues of the Centre and States are roughly over Rs 1,000 crores annually. The increase envisaged is roughly 40 per cent or about Rs 400 crores per year. Both in absolute terms and as percentage of increase the figures are staggering, especially when it is realised that the country has already responded to the Second Plan's call of additional tax effort of Rs 900 crores over the period. I am not by any means suggesting that no further increases in tax revenue are possible. Indeed, the ordinary dynamics of planned expenditure should yield more taxes and the netting of the evaded tax would add substantially to tax receipts. The technical and administrative gaucheries of the integrated tax system would have been overcome before the Third Plan gets into its stride, making this more than a pious hope. And since the Income-Tax Act gives authorities power to go as far as they like (in cases of substantial tax evasion), the scrutiny of data collected by the several tax returns should enable the department to unearth not only current but past evasion. The accretion to revenue by this process should be considerable. There is still scope for increase in the rate and number of indirect taxes, though the vanishing point in this is not very far either. Moreover, the States could shed some of their coyness by insisting on the agriculturists paying for the benefits they have derived for the new projects. I can give no precise figures of what all this is likely to add up to. A recent estimate I read puts it at no more than

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Rs 775 crores for the Third Plan period, with the following break up: (a) Normal increases due to increase in national income: Rs 250 crores; (b) Receipts from increases in rates and new taxes (all indirect): Rs 300 crores; (c) Revenue from the abolition of salt tax and prohibition: Rs 225 crores. This estimate is, in my view, modest at least in regard to the increased receipts from evaded income which it puts at a hundred crores. Taking an overall view, it is perhaps possible to estimate tentatively the additional receipts more hopefully at a round Rs 1,000 crores. And if we take the figures of surplus from current revenues from existing taxes as finally appraised by the Planning Commission in May 1958 as valid, we shall have a total availability of Rs 1,759 crores for the Third Plan from tax sources. Assuming that the current tendency for non-Plan expenditure to eat up the tax gathered for the Plan is reversed, we would still be farther away from the estimated tax target for the Third Plan by about a thousand crores of rupees.

Hence it is that it becomes necessary to ask for a certain amount of restraint in the formulation of expectations from tax revenues for the Third Plan. For, the point of diminishing returns has definitely been reached in regard to most taxes. Thinking on resources has, therefore, necessarily to be along other channels. Some of the more conventional sources, like greater receipts from borrowing, bringing into the open hoarded wealth and a well-thought out export programme have been canvassed in these columns often enough. There are others which Government should consider carefully. There is, for example, the possibility of State owned enterprises making profits and in some measure start paying their way in more tangible forms than they have done hitherto. Obviously, there are snags in the idea. In a note submitted by him to the Plan Sub-Committee of the AICC, Dr V.K.R.V. Rao has made some interesting suggestions. He says that the State must increasingly rely on its own resources as "distinct from taxing personal incomes of its citizens". The idea is not exactly new. Readers will recall that the Nagpur resolution on resources included projects from State enterprises as one of the

principal sources of funds for the Plan. The theoretical implications of the idea have been discussed in socialist circles of the world for some time now. Socialists in advanced countries like Great Britain have come to see how little room there is for further taxation and have veered round to the view that social services will in future have to be financed by profits from State enterprise. Indeed, such a conclusion is inherent in any socialist logic. The extension of the public sector at the expense of the private sector will automatically reduce the area of taxable enterprise. The consequent loss of revenue has to be made good if a welfare State should remain viable. Secondly, the claims of socialised industry as a more efficient agency of production will have to be proved and the only acceptable measure of efficiency is the profit earned. There is thus poetic and practical justice in this situation.

In the Indian context, Dr Rao's note is an indication of the partial displacement of what I might call the Kaldor view by the Balough view. In an article I read some months ago, Professor Balough had indicated his preference of the State relying on profits it made out of its enterprises rather than on taxes, always unwillingly paid. He also objected, incidentally, to the disproportionate absorption of

scarce administrative talent in the essentially sterile occupation of tax gathering. Both as a socialist and as an economist, he preferred that people must save by the regulated scarcity of things available to spend money on rather than by making them pay high taxes on things produced unregulated.

Dr Rao's note deserves careful study. They are more sophisticated than may appear at first sight. In a sense, Dr Rao and Professor Balough are more socialistic than Dr Kaldor. Dr Kaldor's ideas, unfortunately, have come to be seen in this country through the distorting prism of current Indian taxation. His notion of a stiff expenditure tax as a substitute for super tax in combination with a 45 per cent maximum income tax was at least in theory softer to the capitalist. But Dr Rao's ideas involve, as he himself says frankly, a "quicker evolution of the present mixed economy into a socialistic society". For, logically, if the State enterprises are to yield anything like a sizable portion of our needs for funds, there will have to be a substantial increase in the area of their operation. You can take your choice—would you rather yourself to be taxed out of existence, or would you be agreeable to less and less tax, but on the condition of having less and less on which to pay it? Its logical extreme, of course, will never be reached—in the same way as the point of ultimate taxation out of existence will not be reached—is that the only taxes that we shall be paying will be on our salaries as State employees.

All this perhaps is a little remote and Dr Rao's ideas are not

really thought out in detail in regard to its more distant implications. His immediate preoccupation is naturally funds for the Plan, the need for self reliance by Government, and the need for minimising the vexatious modes of raising resources. "The share of the profits of the public enterprises in financing the investment and maintenance of the Government must keep on increasing. It is not only the expenditure on the public sector as such that will indicate the march of economy toward a socialist goal. Even more important is the increasing role the public sector must play for finding the resources needed for meeting both the maintenance and investment expenditure." Dr Rao makes no bones about his idea involving more than commercial profit making—profit as a coefficient of productive competence, though he agrees that is the least that a public undertaking should aim at. He does not approve of the popular socialist fallacy that some mythical

altruism is involved in the running of public enterprises and therefore "profit motive" should be eliminated from it. This is a most transparent evasion of plain duties. The abandonment of this criterion will make impossible the verification of the socialist claims of being the more efficient system of production. But Dr Rao wants for the State enterprises something more than mere commercial profit. For, their products will not be content with "an economic price—which would cover the cost of production including an allowance for replacement plus a normal profit that would include an allowance for capital formation and an allowance for maintenance and non-investment activity of the State". He wants that these enterprises should "also get the community sufficient resources for financing a part of the investment and maintenance expenditure of the Government".

Put thus, several objections would readily occur, besides those

that will derive their sanction from an objection in principle to the expansion of state in economic spheres. But, if the choice were really between taxes and profits from State enterprises, and if the latter could be made without unduly distorting the economy otherwise—by the monopolistic price manipulations by the State, for instance—most people would not mind whether you call it Socialism or something else. The other reservations would be about the extent of possible profits from existing governmental enterprises. In many cases, the profit will be "book profits", for, the chief purchaser will be, for a long time to come, Government. Some Government enterprises like the machine tool factory are doing well, but there are others whose capital cost would prohibit anything like a profit for years to come if the price that is fixed is competitive.

Dr Rao must have been slightly troubled by the element of special pleading in his "pricing system" for the public sector products. As an economist, he is averse from making price depend too obviously on non-productive factors. Hence it is that he insists that productive "norms" should be prescribed for both public and private enterprises. He implies that there is as much arbitrariness in the pricing of products of the private sector as in his suggested pricing of public sector products. He attributes a "wind-fall" quality to much private sector profits now made and attributed it to what he tersely calls the "social conjuncture". There is thus an "unearned element" in the profits of private enterprise. Whatever one may say about this exercise in "Tu Quoque", one can seriously quarrel with the desire to "tie up" prices "psychically and technically with productivity". Dr Rao wants the "unearned" part of private sector profit severely curtailed. The least that will be asked by the citizen in his capacity as consumer is that the "unearned profit" of state enterprises should be kept to the minimum.

EAVESDROPPER

S. E. RLY. TENDERS

Sealed tenders are invited for (i) Tender No. CON/GM/33/WP/B/59 for supply of 4 No. Horizontal Split Casing centrifugal pump, as per details to be obtained from tender schedule. Earnest money is Rs. 1000/-. Tenders will be opened on 23-6-59 at 3 P.M.

(ii) Tender No. CON/GM/30/F2/59 for supply of Electrical Signalling material as per details to be obtained from the tender schedule. Earnest money is Rs. 1000/-. Tenders will be opened on 29-6-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs. 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta-23 by local firms.

Tender should accompany the receipt for depositing the earnest money as stated above with this Railway's Chief Cashier, without which tenders are liable to be rejected. Approved Contractor having a permanent deposit of Rs. 1000/- with the Controller of Stores, S. E. Rly., Garden Reach Calcutta are exempted. Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GENERAL MANAGER
S.26

GATEWAY GOSSIP

I WOULD like to add my voice to Mr A. N. Haksar's, in regard to his forceful plea for Government action being suitably orientated so as to foster an increase in the export of manganese ore. The occasion was the annual general meeting of the Shivrajpur Syndicate Limited, of which Mr Haksar is Chairman. As far as the organised trade is concerned, manganese ore and Shivrajpur Syndicate are in India synonymous. So, Mr Haksar could speak with authority when, as he has done, he reviewed manganese ore trade during the last year, related the experience of Indian manganese ore in the perspective of world trade and peered into the future as to the prospects before this industry.

For a start, Mr Haksar inevitably referred to the experience of his own company. The total output, during the year ending November 1958, fell somewhat to 91,626 tons from 92,742 tons. Shipments and sales fared more badly in dropping by nearly 23,000 tons to 91,462 tons. Demand for low grade ore was conspicuous by its absence. There was a veritable depression which afflicted the manganese ore trade for, I think, the second year in succession. The company was compelled to achieve economies, going so far as even to retrench some part of the labour force in August last year.

We have long been soft-soaping our anxieties, caused by the decline in manganese ore exports, with the pious declaration and in the altogether erroneous belief that the shrinkage in Indian shipments of manganese ore stemmed mainly from the recession experienced in the American steel industry. Mr Haksar would have none of this complacency and he is the sort of man to call a spade a spade. Subsequent events, he says, "have proved that the intrinsic cause for the poor demand for Indian ores is the tremendous headway which Brazilian manganese ore has made in that country in recent years". Brazil is charging ahead, elbows thrust out, pushing poor competitors like India well out of the running. In what is obviously a typographical error, Mr Haksar is reported as saying that Brazil has increased its share of total American

"exports" from 8 per cent three years ago to 7 times that figure at present. Of course, the word within quotations in the last sentence should be "imports".

It should be of interest to the Indian Government to learn how Brazil went about pushing Indian Manganese Ore out of the gigantic market that America is. First of all, and it really does not affect the Government so much, the prices of Brazilian Ore are competitive. Secondly, and here, too, Government in India may be helpless, the sea freight rates are lower. But what is of significance to the authorities is the fact that the Brazilian Government offer an export subsidy "in the form of bonus payment in local currency on dollar earnings of exporters". In due course, which means considerable delay, Government recognised the fact that the Brazilian competition was seriously jeopardising the prospects of manganese ore exports to America. Export duties on all grades of manganese ore were abolished. Mr Haksar's complaint is that other relief measures have not been forthcoming. One relief that Mr Haksar has in mind is that the enhanced railway freights, which have been effective since October 1958, and the present royalty rate, should both be reduced "forthwith". There has been no dearth of assurances from Government of some relief in this regard, but there has been a lack of an official announcement to this effect. Shivrajpur's Chairman wants that the way to increase production should be opened up by allowing liberalised import of sufficient machinery and spares. I wonder why Mr Haksar has not thought of the Export-Import Bank credit which the official complaint seemed to be, is lying practically unutilised. I am sure Government will recognise the manganese ore industry to be key to exports, and the mining industry, if I recall correctly, is one of the items which, under the credit, may be imported. So, it is up to the private sector to start negotiations with both the Indian Government and the Import-Export Bank authorities to import such machinery as may be required. I do not see, consequently, why it should be necessary to allow manganese exporters to regain a portion of their foreign exchange earnings, as Mr Haksar has asked.

I shall not take up space here with reviewing the company's accounts, to which Mr Haksar has naturally devoted some time and space. Suffice it to say that, although profits appear to be lower by Rs 2.63 lakhs, it is to be noted that this is after providing Rs 2.75 lakhs for Development Rebate Reserve in the latest year's accounts. That the company has done well is obvious from the fact that the dividend recommended is one of Rs 5 per share, in addition to a bonus of Rs 3 per share that is being paid.

Mr Haksar then returns, as we do, to the future prospects. Shivrajpur Syndicate's Chairman hedges his re-

Manganese Ore

marks by saying at the outset that "it is difficult to assess the future prospects with any degree of accuracy"—because of the various difficulties which confront the industry. Mind you, with American recovery from its recession, steel production, rising steadily, is currently running at 90 per cent of its capacity. But this has not induced any additional demand for manganese ore, presumably because the steel industry is now working on its accumulated stocks of manganese ore as well as ferro manganese. A threatened autumnal strike in the steel industry makes consumers of manganese ore reluctant, as the market analyst might put it, to extend their commitments. Then, there is also the fact that Russia, which is generally held to be the largest producer in the world of manganese ore, is a potential supplier of this strategic mineral. Japan has already received Russian manganese ore, and present indications are that Russia will try to sell some to the USA as well. Fortunately, the prosperity of manganese ore is tied up with the good health of the steel industry; and, with the relentless search for a higher standard of living, the targets planned for steel production are considerable. Thus, if, by 1970, steel production reaches presently anticipated targets, the Western demand for manganese

ore in this behalf would rise by over 50 per cent from the 1957 figure of 6 million long tons to 9.3 million long tons.

It appeared early this year as if Government were going to allow the manganese trade a free hand; the export policy enunciated in a Government Notification in January seemed to hint at the trade being permitted to secure bulk business on a long term basis. Less than two months later, there was a rider to the notification in a clarification issued by the Joint Chief Controller of Exports and Imports, which pointedly required exporters to secure approval as to price from him before confirming a contract. Mr Haksar calls this "tantamount to a blanket control on the export of manganese ore." Mr Haksar feels that the exports will be badly affected, and this is the more regrettable because it occurs at a time when India is facing a severe foreign exchange shortage. While Mr Haksar finds it encouraging that the authorities appear to be appreciating the difficulties that the trade is contending with, he deplores the fact that all representations have tended to be treated by Government "in a dilatory manner." If we want to export more, the measures suggested by Mr Haksar have to be adopted.

MORE PIPES

to meet the nation's needs

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

Textile Closure

The problem presented by closure of textile mills has defied a proper solution and, with few exceptions where the Government had reopened mills under their aegis, there are no signs of early reopening. Bombay being the major centre of the cotton textile industry, was hardest hit by the textile crisis. The number of mills that had fallen in the crisis was the largest in this State and it was in this State that the Government took steps to reopen some of the closed mills as a rehabilitation measure.

However, the scale of closure was such that it was not to be brought down by the Government working by themselves without co-operation from the other interests concerned. While the Government continue to evince concern delay in reopening all the closed mill had only served to stir the discontent of the workers who were thrown out of their work by closure and who remain unabsorbed elsewhere. The resultant situation is being exploited by interested parties to create further hostility between employers and employees of closed mills.

The workers of the Madhav Mill one of the cotton textile units to have suffered in the crisis and to have closed, have threatened hunger strike some time in June in case the mill is not started by then. This had been announced by a spokesman of the Mumbai Girmi Kamgar Union which represents the workers of the Madhav Mill. The workers' demands are being sponsored by all the leading opposition parties in the State such as the Communists, the PSP, etc. While it is contended that the problem faced by the Madhav Mill employees is "symptomatic of the situation in the cotton textile industry in particular and the national economy in general", the specific reasons for the closing down of the mill are put down as misappropriation and mismanagement on the part of the mill-owners. In much the same way, delay in reopening closed mills is taken as deliberate inaction on the part of the mill-owners.

Mismanagement and misappropriation by mill-owners have to be rejected as having led to the present situation in the cotton textile industry, since it is unthinkable that such mismanagement and misappropriation should have found an exclusive field in cotton textile industry alone. The fact of the matter is that cotton textile industry has, in view of many adverse factors, become a high cost industry. It is the impact of the unfavourable cost structure on demand both internal and external which is reflected in the current difficulties faced by the industry and therefore a solution to the problem has to be sought in terms of measures to bring down cost of production.

The closure of mills is considered by labour spokesman as a violation

of the decisions arrived at the tripartite conferences held in Delhi and Naini Tal. The Government are also charged with inability to implement the decisions of these conferences and to give protection to the workers affected by closure of textile mills. Similarly the delay in taking over the closed mills or investigating mills showing symptoms of distress is attributed to the pressure from mill-owners.

★

Trade Unionism

A training course of a week's duration organised by the Western Railway Employees' Union and the National Railway Mazdoor Union (Central Railway) for the office bearers of the trade unions affiliated to the organisations, was inaugurated last week, by Mr. Shantilal Shah, Minister for Revenue in the Bombay Cabinet. The course has attracted officials from almost all parts of the country and will be concerned rather exclusively with the problems of trade unionism in the railways. However, the problems of trade unionism in the railways are not in any way different from trade union problems in their general setting in the country, and therefore, the light that would be shed at the training course, should be useful in reorienting the general course of trade union movement.

Mr. Shantilal Shah in his inaugural address condemned the present character of trade unions in the country and especially its bias towards the instrument of law to solve disputed points. This emphasis on law and lawyers had necessarily diverted attention from more desirable ways of trade union action such as collective bargaining. In fact there is very little dependence on collective bargaining. This is one of the important points of difference between trade unions in this country and trade unions in the industrialised countries of the West. The attitude of the employers who are open to the same criticism of going to court on each and every occasion, has also not been helpful in developing trade unions along proper lines.

The orientation of trade unionism along political lines to coincide with the ideologies of the political parties is another basic weakness of trade unions and the blame for this will have to be owned by the politicians. This feature is a legacy of the past when during the British days trade unionism and politics became inevitably linked in the country's struggle for freedom. This hold of the politician in the trade union movement had since then been perpetuated.

These basic weaknesses had naturally affected trade union policy and action which have not touched anything on the constructive line being mainly concerned with agitational approach. Deploring this tendency, Mr. Shantilal Shah advised the trade unions to take up welfare activities which he said could be financed by higher membership fees. Mr. Shah also made an appeal to keep the national interests foremost and warned against the machinations of political parties whose interests and loyalties lay outside the boundaries of this country.

GATEWAY MARKETS

Mixed Trend in Non-Ferrous Metals Prices

PRICES of Non-Ferrous Metals have been developing a firmer tendency on the London Metal Exchange during the past few days. Copper has advanced to £241½ from £234½ per ton, thanks to a good demand, which the trade feels, will persist for some time to come. As a result of the rise in price, the Rhodesian Government feel that the economic climate has sufficiently improved to relax credit control.

Zinc has firmed up to £78½ from £78, while Lead is hovering narrowly around £70½ per ton. As compared to copper, the rise in the prices of these two metals is not sharp, mainly due to reports of over-production. Canada plans to cut her refined lead output from 122,000 metric tons to 115,000 metric tons and her zinc production from 229,000 to 214,000 tons. Australian lead production is expected to drop by some 20,000 tons.

It is expected that lead supplies will be reduced by about 45,000 tons during the second half of the year, while there will be a comparable fall of 52,000 tons in the quantities of zinc made available. As a result of these cuts, which are being made voluntarily by the countries concerned, the surplus of lead and zinc will largely disappear by the end of the year, provided that the recent tendency for consumption to improve is maintained with industrial recovery in most leading countries.

The Tin market, however, has been ruling very steady with the rates moving between £784 and £785 per ton. Considerable interest has been created in the forthcoming Tin Council meeting at Copenhagen. Producing countries are eager to see the quotas increased. Having worked at 50 per cent of capacity for about a year, their first consideration is to get equipment working again rather than see tin prices go higher. Since the tin market has looked very sound for some time now, their demands are going to be difficult to refuse.

Meanwhile, prices in India have been showing an easier tendency, in the Bombay market, Copper scrap is quoted at 220; Zinc at Rs 98; Lead at Rs 78 and Tin at Rs 142 (per quarter). The easiness in copper is attributed to the sale of imported virgin copper by those who had secured recent releases of copper from the Government. The sagging tendency in zinc prices is mainly due to expectations of considerable releases. Steadiness in London and Singa-

Indian Finance

pore has failed to enthrone local tin prices following adequate stocks against falling demand.

★

Oils & Oilseeds

Conditions on the Bombay Oilseeds Exchange remained generally quiet with prices developing a slightly easier tendency due to bull liquidation. The Castorseed section suffered a sharp setback following the absence of response from the USA in respect of offers of Indian castor oil. After having already acquired a substantial quantity in recent weeks, American buyers seemed to be reluctant to pay more than 14 cents per pound for the commercial quality, while the prices in the UK declined by about £4 per ton to £113. Again the easier tendency in prices was accentuated by the weakness of the spot section. Ready Castor was quoted at Rs 32.37 and Castor Oil, commercial quality, at Rs 16.50.

The Groundnut section encountered the first major setback in recent weeks. With the approach of the monsoon, supplies from Saurashtra tended to come out. With the result, acute paucity of supplies was relieved to some extent. Groundnut Bold was quoted at Rs 40.50 and Groundnut Oil ready at Rs 21.69.

Gold & Silver

The Bombay Bullion Exchange, after opening a promising note, failed to make headway due to profit-taking. Calcutta was a buyer of silver at low rates, while Delhi supplied contracts at bulges.

Prices in the Gold section showed marked irregularity on alternate buying and selling. Spot rates moved between Rs 121.44 and Rs 121.81, to finish at Rs 121.50. Sovereign remained steady at Rs 78. Arrivals and offtake were estimated around 4,000 and 3,000 tolas respectively.

Fluctuations were wide in the Silver section. Spot rates moved between Rs 194.56 and Rs 195.12 to finish at Rs 194.59. Arrivals and offtake were estimated around 22 and 12 bars respectively.

★

Yarn

The Bombay Yarn market turned easy in the absence of any support, being influenced by the reports of poor offtake of rayon cloth all over the country. Besides, some mills at Coimbatore appeared to be eager sellers of staple-fibre yarn at even declining prices. Nylon yarns lost about 25 nP per pound following the reports of heavy arrivals of imported yarns.

The Government of India have set up a Committee to scrutinise pending applications for import licences for art silk yarn under the export promotion scheme. Under the scheme which was suspended on the 6th March 1959, licences for the import of art silk yarns were being issued to exporters of Indian art silk fabrics, sarees, garments, hosiery and other art silk manufactures.

May 30, 1959

WORLD OF COTTON

THE Government of India's announcement of a further import quota of 2.40 lakh bales of foreign cotton for the remaining period of the current season is welcomed by the cotton textile industry although this decision had been delayed too long. These imports are to be canalised through the export entitlement schemes, which have been announced from time to time. This announcement will have a salutary effect on domestic cotton prices.

It may be noted here that the quantity of cotton licensed for imports into India during the period from 1st September 1958 to the 9th May 1959 amounted to 404,306 bales, while the arrivals totalled 231,795 bales. Quantity licensed and arrivals include quantity carried forward from the previous season. Particulars of licensed and actual imports for the above period are as follows (figures in bales of 400 lbs):—

	Licences	Actual Imports
Egyptians ..	61,598	37,625
Sudans ..	81,487	42,943
E. Africans ..	175,620	111,071
Americans ..	81,159	38,599
Others ..	4,442	1,552
Total ..	404,306	231,795

Under the new procedure for the import of cotton to exporting mills which comes into force from 1st July 1959, mills, which export cotton cloth, yarn or both will be entitled to 66 2/3 per cent of the f.o.b. value of such exports. In respect of exports of fine and superfine cloth and yarn of counts 60s and above, the percentage will be the full value of entitlement provided it is shown to the satisfaction of the Textile Commissioner that such exported cloth was manufactured out of the foreign cotton imported by the mill. In other cases, it will be 20 per cent of the value of the entitlement. Mofussil mills, located at a distance of more than 200 but less than 400 miles from the Ports of Bombay, Madras and Calcutta, may import and retain for their own use 22 per cent of the value of the entitlement. In the case of other mofussil mills located at a distance of more than 400 miles, it will be 25 per cent of the value of entitlement.

The entitlement licences on the export of cotton textiles in the first quarter of this year are expected to aggregate about one lakh bales. Licences for this quantity will be issued in the next few weeks and will provide for imports from different sources. Presumably, his will be from the sterling area countries. As for the balance of 40 lakh bales, it will largely be of American aid cotton.

Tanganyika will be able to sell more cotton to the Indian mills

A Further Import Quota

this year if the Government of India agree to extend the shipment period to October 1959 in respect of the new import quota. The four-man delegation of the Lint and Seed Marketing Board from Tanganyika has already made such suggestion to the Union Ministry of Commerce and Industry.

While the increase in incentive is welcomed generally, mills producing coarse and medium cloth point out that they are still unable to appreciate why, at the expense of their exports, fine and superfine mills should be allowed to benefit by getting an assured supply of good foreign cotton at only a modest premium. The contention of these mills (producing coarse and medium cloth) is that, if they are allowed to use more foreign cotton, they will be able to manufacture and export fine and superfine cloth and become entitled, in their turn, for cent per cent entitlement benefit.

×

FUTURES MARKET:

Irregular price movements characterised trading in the Cotton futures market, mainly due to alternate buying and selling. The ICC May delivery went off the board at Rs 730.

×

SPOT MARKET:

The Spot section remained steady although there was no price rise in popular growth. With the end of the marketing season in sight, textile mills have started buying their raw material on a larger scale at all terminational markets. The marketing has been almost over in the Broach-Surat areas and that, in north Gujarat and Saurashtra, is expected to come to a close within about a fortnight.

On the export front, there was good demand on expectations that Japan would buy a large quantity from India next month.

×

CLOTH & PIECEGOODS:

Textile circles have generally welcomed the series of new measures announced by the Union Minister for Commerce and Industry for boosting the export of cotton fabrics. The consensus of opinion is, that the shipments of cloth will tend to improve in the coming months. There are indications that the protracted lull in India's cloth trade with the Sudan will end shortly. Meanwhile, exporters are eagerly awaiting the outcome of the current negotiations between India and Burma in respect of imports of Burmese rice. It is believed that Burma's interest in Indian cloth will revive once the deal is completed.

The production by the cotton textile mills in India, during March 1959 amounted to 141 mil-

BOMBAY REVIEW

lion pounds of yarn and 406 million yards of cloth equivalent to 2.71 lakh bales. Total production, during the first quarter of 1959, amounts to 429 million pounds of yarn and 1,228 million yards of cloth as compared with 450 million pounds of yarn and 1,372 million yards of cloth in the first quarter of 1957 and 420 million lbs of yarn

and 1,234 million yards of cloth the first quarter of last year. Production in the current month provisionally placed at 140 million pounds of yarn and 409 million yards of cloth. The estimate, as at the end of this month is of the order of 4.29 lakh bales of cloth including 1.99 lakh bales of cloth sold but not lifted.

DELHI REVIEW

THE report of the seven-man Trade Mission under the auspices of the US Department of Commerce that toured Eastern India this spring has been released in Washington. Details of the report available here have roused considerable interest among those who have been looking out for opportunities for Indo-American cooperation in industry. One chief obstacle in the way of such co-operation has been a certain Napoleonism or gigantism afflicting the thinking of both planners and organised business interests. It is automatically assumed in certain quarters that industrialisation necessarily implies a large capital structure, and a vast complex of specialised technical endeavour. This is so, especially, in contexts in which we think of co-operation or assistance from developed countries. To some extent this notion is not without justification, and that for two reasons. Industrial self sufficiency within a short period is possible only if we strengthen our industrial base, and this involves vast outlay both financially and technically. This we cannot do without foreign help. Therefore it is assumed that priority in the matter of foreign assistance should be given to those attempts in which our deficiency is well known. In spheres where we have been "jogging along", we may allow the ordinary dynamics of economics to work itself out. Technically, they may not be as "efficient" as we may like them to be, but they will in course of time increase in efficiency. Outside help is more readily available for larger enterprises. For historical and other reasons, response to requests for industrial collaboration comes easily from people who have world wide interests, like the oil companies, steel producers and machinery producing interests. They have the necessary financial capacity, bargaining power, experience of international risk-taking. They are less "insular", less frightened by "socialism" and "nationalisation" and their own internal economics is geared to global expansion. Thus, from both ends, ideas of cooperation for mutual advantage, have but fitfully been discussed in less grandiose contexts.

This is a pity. For one thing, negotiations on such astronomical scales are necessarily involved and bargaining is hard. Often, these negotiations have to be abandoned after some progress because of some hitch or the other. Secondly, there is a vast area of fruitful co-operation in which less exalted but highly practical results can be quickly achieved. In fact, it is now freely agreed on all hands that, in the Third Plan, it is necessary to expand considerably the industrialisation of the secondary and tertiary sectors. This is necessary

Indo-American Opportunities

both from the point of view of employment and from the point of view of not unduly postponing the fruits of basic industrialisation achieved by the Second Plan. "Rural industrialisation", accepted as necessary even for the Second Plan, has not made much headway, but it is necessary that it should, if the assumptions behind planning are not to go awry. We must therefore, think seriously of how best to expand opportunities of small scale industries and how best to bring the fruits of science and research to endeavours on a small scale. The need and opportunity for technical cooperation from abroad in these spheres are considerable. It is these opportunities that the American Trade Mission set out to survey and they have produced a report which is very encouraging.

The Mission hit upon an ingenious idea in the carrying out of their programme. Unlike the usual run of such surveyors, they decided that they had something to show as well as something to see. If it was necessary for them to apprise themselves of opportunities in India, it was equally necessary for Indians to acquaint themselves with what the Americans had to offer by way of cooperation. This is surely the most vivid way of bringing home to Indians what they had to offer. The US Small Industries Exhibition held in Calcutta was a great success because the aims of the exhibition as a well conceived public relations job were more than fulfilled. Of the many thousands of people who daily visited it, quite a few must have returned with a revelation of the possibilities of industries with a small capital base. Inquiries about the possibility of US co-operation in expanding or starting new ventures on the scale have increased.

The Americans, on the other hand, have been busy informing themselves of the conditions of the small-scale engineering firms in East India. The composition of the Mission gives some idea of the range of interests available. It included "experts in export and import trade practices, steel fabrication, tool and dye industry, international banking and investment, US markets and distribution techniques, electric power, industrial and area development methods and a typical American manufacturer who had extended his company's operations abroad through licensing and joint venture agreements". Their exploration was confined to Eastern India—the Ruhr of India. West Bengal with its basic industries and coal "is almost a virgin territory for industrial development, offering vast opportunities for steel, and other metal foundries, ceramics, cement, chemicals and plastics". Bihar's industrial potential has been assessed by the Mission as

"limitless" and Orissa and Assam have been considered as highly promising. With the products of the steel mills becoming more plentifully available, the scope for fabrication industries is vast. Various tools and implements needed for farms and small industries can be mass-produced on a small capital base. To provide the necessary tools for these fabricating units, it is necessary to equip machine tool plants that "can reproduce themselves". (Some of these machine tool plants were shown in the exhibition organised.) It is necessary to give detailed thought to how we could utilise credit lines and offers of cooperation in the equipping of these tools and dye cast industries.

Some of the other concrete suggestions of the Mission are worth equally close scrutiny. They envisage a "tremendous field for collaboration between American Engineering concerns and Indian consulting engineers in furnishing complete lay outs of machinery and techniques of various types of manufactures like foundries, machine shops, tool and dye shops, plywood, cardboard and paperbox mills, etc., etc." They also suggest schemes of training by a system of "apprenticeship of the Indian workers" and in this they ask for cooperation of Engineering associations and universities and government.

Specific opportunities for cooperation between Indians and Americans were discerned by the Mission in the manufacture of the following: Air compressors, automobile spares and accessories, bearings, brick-making machinery, chemicals and pharmaceuticals, coal mining machinery, coal tar and dye stuffs, dairy processing machinery, electric equipment, gas engines, gears, hand and power tools, industrial paints, machinery and machinery parts, and a host of other things.

The Mission forcefully dispels the erroneous, but hard-dying, impression that Indian socialism is an obstacle in the way of American collaboration:

"Despite statements which appear frequently in the Indian Press about the growth of the socialist system in the country, it is quite evident that the field for the private sector is increasing. The record of American firms operating in India has been favourable. Reasonable profits, comparing favourably with US rates, can be earned and transferred in dollars."

Licensing arrangements and "even Royalty agreements" are acceptable to the Indian Government, though it prefers actual capital participation. For the rest, in a tip to us, they say that we must make more widely known the expanding opportunities available in our country. They also

suggest revision of the tax structure in a way that will offer incentive without reducing tax receipts. They suggest that the expanding productivity will more than make up for any loss through concessions offered as incentives. They draw the attention of the American audience to the substantial existing inducements under the present tax system and suggest that Dr Lokanathan's future suggestions in this regard may fruitfully be adopted by us.

As regards finance, they suggest that it would be wrong to saddle commercial Banks with the risks attendant on medium-term financing. They suggest that the Government should work out a sound plan by which certain types of venture capital and developmental loans for projects that will benefit the economy will be processed on a "guarantee basis". The Mission probably is aware of the Refinance Corporation—in which there is an indirect American association—which is a financial agency of this kind. The various governmental financial corporations, not to mention the ICIC, are also rendering the same kind of assistance.

Nevertheless, it is resources which appear to be the main bottleneck. In this regard, I would again like to draw attention to the existence of something like Rs 35 crores in counterpart funds which are lying idle. This amount is the allocation made in terms of the Cooley Amendment to Public Law 480. According to the Cooley Amendment, a specific portion of counterpart funds needs to be reserved for one of three uses. The specified purposes are: loans to American enterprises working in the country to which Public Law 480 assistance has been given; loans which will result in the expansion in exports from America of surplus commodities; and loans to corporate bodies in which, perhaps under a licensing system, there is cooperation between an American manufacturer and an Indian entrepreneur. There is no reason why Cooley Amendment funds should not be pressed into service to bring about the expansion in Indo-American cooperation that the Mission have rightly envisaged. And this is an important manner in which the problem of resources, in so far as relating to the growth of small business in India with American collaboration, can be solved.

The entire report is permeated with both hope and sympathy for Indian development. The Mission see in India a laboratory for fruitful international economic cooperation and call upon American interests to grasp opportunities now offered in India. Both for its factual objectivity and its warm human understanding of the issues involved, the report is an important document.

OLYMPUS

NORTH INDIAN NOTES

Third Plan

Addressing the Patna Rotary Club, on the "Perspective of the Third Plan" Mr B. R. Bhagat, Union Deputy Minister for Finance, stated that under the Third Plan the country should aim at securing investment of the order necessary for realising two objectives namely, doubling the per capita income by 1973-74 and evolving a pattern of investment which will make future development less dependent on external resources. However, it was necessary for stepping up the pace of development that the unutilised energies of the people especially in the rural areas should be tapped.

Mr Bhagat also gave the impression that there was nothing to be pessimistic about the current state of the economy. The economy has in recent months begun to register some improvement from the adverse effects of the foreign exchange crisis, rise in prices etc. The decline in the foreign assets of the country had become less acute, while a downward trend in the wholesale prices is also noticeable in recent months Working Class consumer price indices had also started falling. Some of the investments in the public and private sectors, had begun to bear fruits and foodgrain production is likely to find a record mark of 70 million tons. With industrial production expected to fare better the inflationary pressures of the economy could be brought under control. On the whole the outlook for the immediate future appeared satisfactory.

While all these are encouraging symptoms for the completion of the Second Plan, in respect of the Third Plan it was necessary to find more internal resource. In this connection Mr Bhagat pointed out that under the Second Plan, the major part of finance was contributed from foreign assistance and deficit financing. These two accounted for nearly two-thirds of the Plan resources in the first three years of the Second Plan, while under the First Plan their contribution worked to a share of about one-third. As against this, the rate of domestic savings had shown little increase and had remained at a low of 8 per cent, while the rate of investment hovered between 7 to 11 per cent.

While large-scale foreign borrowing in the initial stages were inevitable, continued dependence on foreign countries was undesirable. Such dependence could be obviated only by stepping up rate of development to a point at which economy would become self-sustaining.

Mr Bhagat also pointed out that the increase in the per capita income under the Second Plan would be only about 20 per cent against the original estimate of 25 per cent. Mr Bhagat also stated that for doubling the National income by 1973-74 the investment under the Third and subsequent Plans would have to be higher than assumed earlier.

Rural Education

The Committee appointed by the Ministry of Education, to study the working of rural educational and training institutions, has, in its report, urged the need for steps to make rural education subserve all the needs of the farmer for a better and fuller life. The Committee has recognised the key role assigned by the Government to the Community Development Programme for development and improvement of rural economy. The Committee's recommendations in respect of rural education are therefore designed to ensure efficiency and success of the Community Development Programme. This the Committee sees, could be done only by provision of training facilities to villagers to improve in their own vocation, for extension personnel to do specific jobs and for promotion of local leadership.

On the basis of these criteria, the Committee has urged the need for reorientation of agricultural courses in the multi-purpose higher secondary schools. The Committee points out that the syllabus, standard of teaching and other facilities should be designed to make the agriculturists' sons progressive farmers, train a variety of agricultural extension workers and enable persons to carry on research in agriculture. The Committee has indicated a number of openings for students who qualify themselves in such schools. The Committee has recommended the same status and importance for the post-Basic schools as that given in the multipurpose higher secondary schools.

In respect of basic agricultural schools, while students completing a course in such schools are considered eligible for admission into agricultural colleges as also for appointment to several posts in agricultural department, an year of intensive education in agriculture followed by six months orientation training in extension is recommended for Gram Sevikas. The separation of basic agricultural schools from extension training centres, as contemplated by the Government is considered undesirable.

The Committee has disfavoured the two year certificate course in agricultural science in rural institutes and points out that these institutes should primarily be educational institutions rather than vocational training centres. The rural institutes, should in the view of the Committee lead to rural universities. The Committee, however, cautions against any hasty move being set up in developing such universities. The introduction of a short course of rural engineering combining civil and public health engineering with a little of mechanical and electrical knowledge is advocated.

The Janata colleges are found to have failed to work satisfactorily having assumed the character of formal institutions and become too expensive to be useful. The objects of these colleges, the Committee feels, could better be attained through Community Development Programme, while the Janata colleges could be retained to provide training for village school teachers for the development programme.

NORTH INDIAN MARKETS

Sugar Licensing Order

TO check profiteering, the Bombay as well as the West Bengal Governments have promulgated a Sugar Dealers Licensing Order. Sugar dealers have not been surprised by this order since such a measure was considered overdue. It has, however, tended to exercise a favourable psychological effect with more dealers willing to release their supplies. The general belief is, that the provision calling for regular stock returns from the dealers will discourage hoarding.

Hitherto, only the ex-factory prices of sugar were fixed by the Government, and wholesale and retail prices were sought to be regulated through judicious release of stocks. This method has evidently failed to achieve its objective. For, unscrupulous elements in the trade continue to exploit the slight reduction in sugar production this year to create a psychology of scarcity and to push up prices.

If dealers are licensed, it will be possible to regulate stocks. An important advantage of having licensed dealers will be, that supplies can be channelled through them, so that stocks are not cornered by speculators and hoarders. It is, however, pointed out that the future trend of prices will depend on the Government's policy regarding release of sugar from the factories for free sale.

Dealers believe that the Government should also look into the question of sales of North Indian sugar by tenders. Few Bombay dealers have been able to augment their supplies by submitting tenders in the recent past, because of the rejection of such tenders. It is, therefore, felt that the Government should ensure supplies at least to such dealers as are licensed under the new order, which is scheduled to come into force from June 1, 1959.

Meanwhile, sugar production, during April, was 1.73 lakh tons, bringing the total production to 18.70 lakh tons upto 30th April 1959 as against 19.11 tons in the corresponding period of last season. The offtake of sugar from factories, during April, was 1.84 lakh tons as against 1.83 lakh tons in April last year. Total despatches from the factories, during the first six months of the current season, were 10.46 lakh tons as against 9.92 lakh tons in the corresponding period of last season. The closing stock, as on the 30th April 1959, was 11.57 lakh tons as against as much as 13.49 lakh tons on the corresponding date of last year.

In the Hapur market, sugar prices have continued to rule firm.

The trade is anxiously awaiting fresh Government's policy regarding export of sugar in these changed circumstances.

The Kanpur market is ruling firm in spite of heavy arrival. While spot prices moved between Rs 110 and Rs 11 per bag, the ex-mill delivery section was completely devoid of activity. Demand from Madhya Pradesh continues to be very active.

In the Muzaffarnagar market steady conditions have prevailed in response to good demand from the consuming centres against depleted stock position. Mills are reported to have exhausted their quotas and no rates are quoted for mill-delivery.

★

Gur

In the Hapur market, Gur prices have recorded modest gains. Despite good daily arrivals out of stocks retained by producers at an average of 500 maunds, the demand for the dry quality from the consuming centres is fairly good. Pansera quality is quoted at Rs 21.25 per maund.

In the Muzaffarnagar market, arrivals of gur and shakkar amounted to 19,000 maunds making the total, from the start of the season, to 15.27 lakh maunds as against 9.34 lakh maunds this time last year.

Khandsari prices have also recorded sharp gains in the Hapur market in sympathy with crystal sugar. The rates moved between Rs 37 and Rs 40 per maund, according to quality.

★

Foodgrains

Steady conditions prevailed in the Hapur Foodgrains market as arrivals were still meagre. Efforts are being made to induce the producer to bring his produce in the market. The State Government Marketing Department has released half of the recently acquired wheat stocks for sale to retailers, keeping half for the Government Reserve. Such released wheat is being sold at Rs 18.50 to Rs 19.50 per maund. Although the controlled price on which wheat is to be purchased by the State Government is fixed at Rs 13 to Rs 15 per maund, wheat prices are still ruling higher at Rs 18.50 to Rs 19.50 per maund in the open market. This is mainly due to the fact that fresh arrivals from the producing areas have continued to be meagre.

Rice prices have developed a hardening tendency and so also of Gram as supplies in the market are not up to the demand. Although Gram is reaching the market in large quantities from the Punjab, the supply position of Barley and Bejhar continued to be tight in the face of increasing consumer demand. The market for Peas is ruling steady due to good outside demand from East Uttar Pradesh and Bihar. Sentiment in the Arhar section remains rather depressed due to restricted loading facilities for dal.

MADRAS REVIEW

OTTON textile, had, by virtue of the persistence of crisis conditions, become a problem industry. Few industries, had such a continuous run of bad period. Notwithstanding all the attention that had been bestowed by the industrialists and the Government, the difficulties of the industry are far from being completely got over. In the general slackening of industrial production in the last year, the fall in the production of cotton textiles had the biggest impact. This could not have been otherwise in view of the dominant position occupied by the cotton textile industry.

The rehabilitation of the industry is therefore of considerable importance both for its influence on industrial production in general as well as for stepping up

S. E. RLY TENDERS

Sealed tenders are invited for (i) Tender No. CON[GM] 28[F]159 for supply of 1 No. 96" dia. Vertical Pressure Filter, Capacity 5000 GPH with a Test Pressure of 100 lbs. per sq. inch complete with Chlorinator. Earnest money is Rs 1000/-. Tenders will be opened on 25-6-59 at 3 P.M.

(ii) Tender No. CON[GM] 29[D]59 for supply of Bolts etc. Details to be obtained from the tender schedule. Earnest money is Rs 1000/-. Tender will be opened on 26-6-59 at 3 P.M.

(iii) Tender No. CON[GM] 31[F]159 for supply of P.S. Tanks and M.S. Staging as per details to be obtained from the tender schedule. Earnest money is Rs 1000/-. Tenders will be opened on 30-6-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta-23 by local firms.

Tender should accompany the receipt for depositing the earnest money as stated above with this Rly's Chief Cashier, without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores, S. E. Rly., Garden Reach, Calcutta are exempted. Firms not on Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GENERAL MANAGER

824

Cotton Textile Industry

foreign exchange earning which had considerably dwindled due to fall in exports. The continuing adverse situation has kept the interests alert to the problems faced by the industry. This is evident from the frequent discussions that are being held by both Government as well as the private sector on the problems of the industry.

The All-India Textile Conference held at Bangalore, provided the best opportunity for an exchange of views between the Government and the private interests concerned on the problems of the textile industry and on ways and means of helping the industry tide over its present difficulties. Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, who inaugurated the Conference, stated that the main problems of the textile industry at present were modernisation of the mills and adoption of adequate steps for improvement of exports.

Dwindling markets for Indian textiles in foreign countries had materially affected the prospects for the textile industry in the country. Exports of Indian textiles, had dropped from the average of about 800 million yards during 1955-57 to 600 million yards in 1958. Restoration of exports is therefore of prime importance for the achievement of normal conditions of working for the industry.

Mr Shastri has in the course of his speech stated that for facilitating the attainment of the old export level, the Government have in mind liberalisation of export incentives. The allotment of foreign cotton is also expected to be liberalised to allow a quantity of 66 per cent for use by the industry. How far these measures would go in pulling the industry out of the present rut in the export front remains to be seen. However, it has to be pointed out that export promotion will not, in the present context of growing competition in the international market, yield to measures that touch only the surface of the problem.

This problem is essentially one of reducing the cost of Indian goods which have to compete against cheaper goods that are offered by India's competitors. Japan, China, and Hongkong had emerged as powerful rivals of India in the international textile market. The attempts of some of the importing countries to set up their own cotton textile industries to meet their requirements of cotton cloth, is also certain to affect Indian exports. Low production costs offer the only means of achieving an increase in Indian exports in the narrowing market for cotton textiles.

This consideration holds good for the internal market as well. In fact it was the decline in internal consumption of cloth coupled with

overproduction of certain varieties of cloth which made up for the major part of the troubles of the industry. While all these direct attention to the need for balancing the cost structure of the industry, this poses a very difficult problem in terms of finance and adverse effects on employment. The imbalance of the cost structure is directly related to the existence of outworn machinery and the high prices of Indian cotton. While therefore, replacement and rehabilitation of machinery have to be achieved, prices of cotton have also to be brought down.

Mr Shastri is inclined to find fault with the management for failure to maintain machinery in proper condition and good order. Whatever might be one's views on this matter, rehabilitation and replacement would require money of the order of Rs 66 crores as estimated by the Bombay Cotton Textile Industry (Rehabilitation) Enquiry Commission. Rehabilitation requirements in respect of buildings have been estimated at Rs 39 crores. Taking the rehabilitation of machinery alone, it will not be easy going for the industry to put its house in order. However, Governmental assistance in this matter could considerably lighten the burden of rehabilitation and the services of the National Industrial Development Council could be usefully extended to salvage the industry from the present straits.

In this connection, Mr Shastri referred to the role of technicians especially with reference to the question of keeping the machinery and plant in good order. From this point of view the technicians' share in ensuring efficiency in production was great and it devolved on them to give periodical advice to the management in respect of proper maintenance of machinery. The suggestion of Mr K. Srinivasan, of the Southern India Textile Research Association, for providing for participation by technicians in the management of industry is not without value or importance. Since the idea of workers' participation in management had gained acceptance, there is no reason why technicians should be excluded from this field.

While underlining the importance of research and the role of technicians, Mr Shastri also stressed the need for developing their own organisations for designing and preparing project reports through the help of experts and specialists inside the country. Mr Shastri disapproved the present attitude of dependence on foreigners for specialised advice on technical problems and pointed out that it was the desire of the Government to pool and organise the talents available in the country in different fields of industry both from amongst officials and non-officials

so that they might to a large extent reduce dependence on foreigners for solving their problems.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED (INCORPORATED IN ENGLAND)

5% Rupee Debenture Stock 1970
Interest for the Half-year ended
30th June, 1959.

Notice is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st July, 1959 to Debenture Stockholders registered in the books of the Company on 23rd June, 1959. Applications for transfers received at the Company's Office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 23rd June, 1959 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 24th June, 1959 to 30th June, 1959 both dates inclusive.

By Order of the Board,
D. H. P. HENDERSON
AGENT.

Victoria House,
Calcutta, 22nd May, 1959.

THE PUBLICITY SOCIETY OF INDIA, LIMITED.

NOTICE
NOTICE IS HEREBY GIVEN that the Thirty-second Ordinary General Meeting of the Shareholders of the Company, will be held at the Registered Office of the Company No. 1, Waterloo Street, Calcutta, on Monday the 22nd June, 1959 at 3 P.M.

To receive and approve the Directors' Report and the Audited Accounts for the year ended 31st March, 1958 and to declare a dividend.

To elect Directors.

To appoint Auditors, and fix their remuneration, and

To transact such other business as may be properly transacted at an Ordinary General Meeting.

The Share Transfer Books of the Company will be closed from 8th June, 1959 to 22nd June 1959 both days inclusive.

By Order of the Board,
P. S. NILAKANTAN,
Director.

Dated the 23rd May, 1959.

N.B. The member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote in place of himself and a proxy need not be a member.

May 30, 1959

SOUTH INDIAN NOTES

Development of Madras

Addressing the third general meeting of the Southern-India Chamber of Commerce at Madras, Dr P. S. Lokanathan, Director-General, National Council of Applied Economic Research, outlined the possibilities for the industrial development of Madras. Dr Lokanathan estimated the financial requirement for industrial development in the next ten years at Rs 300 to Rs 350 crores. The total investment in all sectors of economy required to attain a self-sustaining process of growth is placed at about Rs 1,000 crores in the next ten years.

Dr Lokanathan considers the engineering industries as holding the key to rapid industrialisation of the State. The development of these industries to a respectable size had enabled Madras to enter the "take-off" stage in economic growth. If therefore, Madras could seize the opportunity and promote the engineering industries on a vigorous scale, the process of industrialisation could be speeded up and the State could become one of the most highly industrialised States in the country. Measures, at whatever cost, will, therefore, have to be taken to end the present stagnancy in engineering industries that had resulted from raw material shortage.

In the deposits of iron ore at Salem and Nilgiris there are prospects for setting up small-scale steel plants on the pattern of such plants in China. The Neyveli lignite project had opened up prospects for development of some heavy industries in the State. Exploitation of the marine resources of the State also offered fruitful ground for activity and Tuticorin offered excellent opportunities for development of an industry based on the marine resources of the State.

Lack of irrigation potential, a major part of which had already been harnessed for irrigational purposes, presents a major problem not only for ensuring adequate production of foodgrains for the growing population of the State but also for operating industries based on commercial crops such as sugarcane, cotton, etc. Dr Lokanathan has therefore pleaded for a regional approach which would provide for common exploitation and sharing of the water resources of the Southern region by the State Governments.

In the industrial field itself, the inadequacy of raw material resources such as iron ore, coal, and the consequent long haulage of such materials from the North are the other handicaps of the State in industrial development. The exhausting potentials of hydro-electric energy is perhaps the most discouraging element in the prospects for industrialisation of the State. Zonal co-

operation has therefore significance. In this connection, Dr Lokanathan referred to the possibilities of setting up atomic plants in the State to supplement the power requirements of the State. In view of the availability of monozite in the Kanyakumari district of the State, the setting up of such plants in the Madras State should not present a difficult problem.

Rural Development

The importance of efficient administration for attainment of Plan targets was emphasised by Mr V. T. Krishnamachari, Deputy Chairman, Planning Commission, in his address to the District Collectors, assembled at Ootacamund. From this standpoint, he explained the role of village officers in promoting agricultural production by establishing contacts with every family in a village and by provision of the requisite needs of an intensive system of cultivation. While the community development blocks had been the official agency for implementing the agricultural development schemes in the villages, the success has not been uniform and while much leeway has to be made in the provision of all that go to make agriculture really intensive, it cannot also be denied, that the administrative aspect of the problem has left much to be desired for reasons of want of proper personnel as also their inadequate equipment. With agricultural production, especially foodgrain production, continuing to be deficient the country cannot afford to take risk by neglect of any factor that conditions production.

The administrators' role is equally important for the proper development of cottage industries, for mobilising the rural manpower for building the social capital as also for tapping the savings of the rural folk. While Mr Krishnamachari underlined the importance of work on all these lines, he has also stressed the other side of the picture which reflects the obligations of the administration to the rural areas especially in respect of water supply, roads, schools etc. Without assuring these basic amenities it would be impossible to enlist the support and co-operation of the villagers for national regeneration.

In such circumstances the decision taken at the Madras Collectors' conference to put one block under the personal charge of the collector is to be welcomed. This would facilitate the evolution of the best scheme for mobilising village co-operation for tackling national problems.

The failure of the small-savings movement in the villages has brought out the ineptitude of the existing machinery. This has persuaded the collectors assembled about the need for reorganisation of the existing set up. It has been decided that the scheme should be implemented under the direct control of the district collectors. More powers to the collectors in respect of agricultural production is also contemplated.

SOUTH INDIAN MARKETS

Coffee Prospects

IN the London market, Coffee prices have been developing a downward tendency in recent weeks, largely under the influence of rumours of a large sale made by Brazil to the General Foods Corporation of America at prices below those prevailing for Robustas. At the same time, the Uganda Coffee Industry Board is reported to have lowered its price to meet buyers' ideas and is delivering well over 4,000 tons of coffee this month.

These factors suggest that there is a overall position of surplus, and the need for some kind of world regulation looms large. Market sentiment has, so far, tended to support the view that prices will, in fact, fall further; and the bulls have been able to buy on a considerable scale without any impact on prices.

Meanwhile, the latest estimate of the 1958-59 season's coffee crop in India, as revised by the Coffee Marketing Committee on May 1, 1959, stands at 45,430 tonnes, comprising 19,059 tons of Plantation; 7,020 tonnes of Arabica Cherry and 19,360 tonnes of Robusta. This is the biggest Robusta crop picked so far, the previous record being 14,710 tonnes picked in 1957-58.

Internal offtake of coffee in April 1959 amounted to 2,501 tonnes, bringing the total, for the first four months of 1959, to 10,000 tonnes as against 8,340 tonnes for the same period last year. During the same period, 6,903 tons were sold for export. This includes 1,600 tonnes sold to the German Democratic Republic and 80 tonnes sent to London under the quality-control programme.

Ginger

Ginger prices have been showing an easier tendency and the rate, in the Alleppey market, has gone down to Rs 387.50 from Rs 400 per candy. This setback is attributed to negligible demand from abroad and a steady fall in domestic consumption. Moreover, the demand for exports, this season, has not been good. Exports, during the first five months ended March 1959, amounted to only 34,501 cwts as against as much as 62,466 cwts in the corresponding period of last year. It is reported that, presently, foreign buyers are getting African ginger at about £120 per ton against the Indian rate of about £130.

The Indian price would have touched still lower levels, but for the 40 per cent decline in the crop this time. With foreign buyers obtaining supplies from other sources at lower prices and in the absence of any evidence to suggest that domestic demand will pick up

considerably in the near future, it may be difficult to maintain India's ginger exports at past levels unless prices are revised downwards to around those quoted by our competitors in world markets.

Pepper

Pepper markets are also ruling quiet. In the Alleppey market, the rate is quoted lower at Rs 637.50 against Rs 650 per candy for the superior Palai variety. In the New York market also, values are a shade lower in some positions. Malabar-Lampong spot is quoted at 24½ cents per pound. In London, Black Sarawak is quoted at 19½d per pound with sellers at this level.

In the London market dealers now consider that black pepper is a better speculation than white. A point has now been reached where black pepper may be becoming in short supply. Moreover, the flavour of black pepper, it is pointed out, is preferred in the USA and some other important consuming countries. Thus, the market for white pepper has now become weak.

Groundnut

Prices on the Madras Groundnut market maintained a steady trend although the oil section showed a declining tendency. Arrivals averaged about 40 tons per day, mostly in the form of summer crop and these were taken up by small crushers. The rate for superior oil-quality seeds is quoted around Rs 190 per candy. Meanwhile, some good showers are reported in the Pollachi area and these will benefit the standing crop.

In the Groundnut Oil section, the rate for the ready position has declined to Rs 374 from Rs 380 per candy in the absence of any large-scale activity on lower advices from Calcutta and Bombay.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides remained unchanged and moderate quality was taken up at the previous week's levels. There was no change in Buff hides. In the Calf section, arrivals were restricted.

On the export front, trading was restricted as buyers adopted a "wait and see" policy. There was, however, better demand for medium and heavy weights at 42d and 38d respectively. Business in Cow Calf for forward was irregular and extremely patchy.

In addition to the six demoniations of Ghanaian coin, two coins were struck to entirely new designs. These were the special five-shilling piece for Bermuda, issued this year to commemorate the 350th anniversary of the first settlement on the island, and the one-rial piece for Muscat & Oman. Both coins were minted in silver.

As well as coinage, the Mint issues some 99,000 medals. In addition, a new Public Seal was manufactured for the Government of Ghana, and an Official Seal was prepared for the Government of Tanganyika.

A Real Shake-Out

Watch-Dog Writes:

ONCE again, nervous conditions have developed in stock markets during the week under review and values have receded sharply on panicky unloading. Rumours of the possibility of removal of Indian Irons from the forward list of the Bombay Stock Exchange have induced heavy selling pressure in the scrip, both on Bombay and local accounts. This had an adverse effect on other scrips too. A sizable section of the market operators is, however, inclined to welcome this debacle; because it has provided them an opportunity for diverting trading to more healthy lines than hitherto. This may probably be the reason that prices have shown a mild recovery at the close of the week.

The Calcutta Stock Exchange experienced another dull session and equities, after suffering a further setback from last levels, staged a mild recovery towards the close under the lead of speculative issues.

After a landslide in values in mid-week, the Bombay Stock Exchange attempted a moderate recovery towards the close on shortcovering.

On the Madras Stock Exchange, business was restricted.

Wall Street closed very steady.

*

Calcutta

Calcutta, Friday Evening.

EQUITIES on the local Stock Exchange developed a distinctly easier trend in prices last week due to sustained bull liquidation and bear hammering although the closing tone was better, thanks to some replacement buying coupled with short-covering. Apart from a general feeling that a reaction was overdue in the context of the sustained bullish trend during the past many weeks and the suggestion of additional taxation for financing the Third Plan having a bearish impact on sentiment, it was thought that there would be a lack of investible funds in view of the new issues announced by various companies.

But, a halt was cried to the steady and sharp decline in values on Thursday, thanks to the emergence of support at lower levels. A section of the operators held the view that the tax effort involved in the Third Plan did not hold out any great threat of increased direct levies. This factor caused a slight improvement in general sentiment, on Thursday. This was, however, short-lived and the market had a jolt again on Friday due to weaker Bombay advices.

In the Giltedged section, business continued to be restricted although

some interest was shown in certain directions. Short-dated and medium-dated issues were the focal point of interest. 3 per cent 1986 Conversion Loan opened at Rs 73.55 and, after firming up to Rs 74.00, receded at the close to Rs 73.75.

Bank shares were unchanged with little or no business passing. Punjab National changed hands at Rs 22.37 to Rs 22.44.

Sentiment in the Jute section continued to remain depressed with prices touching fresh lower levels for the week. Apart from the general feeling that the present levels had been fairly over-valued, doubts were expressed in certain quarters with regard to the size of the dividends in future in view of the lower level of profits expected after making fully provision for taxation. The closing levels for the week were slightly better in sympathy with the general trend of the market. Howrah were pushed down at one time to a new low of Rs 22.75 from Rs 23.75; National to Rs 23.25 from Rs 24.00; Megna to Rs 15.06 from Rs 15.37; Nuddea to Rs 54.75 from Rs 57, to close at Rs 22.87; Rs 23.25; Rs 15.25 and Rs 56.50 respectively. Alliance were, however, nearly maintained at Rs 118, while Anglo-India turned quiet at Rs 226 against Rs 230.

Except for a few firm spots, Coal shares were generally listless. It was thought that the Government was not much concerned about an increase in the price of the commodity. Moreover, it was feared that the inordinate delay in the announcement would hamper the expansion scheme. The only two firm features were Amalgamated and Bengal having sustained support upto Rs 26.75 and Rs 311 from Rs 26.50 and Rs 308 respectively. Burrakur moved between Rs 16.87 and Rs 17.94, to finish at Rs 17.00, while East Indian were cheaper at Rs 23.75 against Rs 25.50; Equitable at Rs 31.75 against Rs 32.12 and Central India at Rs 7.37 against Rs 7.50.

Tea shares continued to remain quiet on lack of support and dealings were few and far between. The setback in prices was attributed to suggestions that the 1958 dividends might be only around 1957 levels. The sharp drop in April exports was also a contributory factor. Brooke Bond changed hands at Rs 20.50 to Rs 20.94; East India at Rs 20.87 to Rs 21.00; Hantapara at Rs 132 to Rs 135; Jutilibari at Rs 24.37 to Rs 24.56; Rungamattie at Rs 78 to Rs 80 and Tezapore at Rs 18.25 to Rs 18.31.

Sugar shares developed an easier tendency following the Government decision to place the entire production of all the sugar mills at their disposal for direct allotment. Even scrips of those companies, manufacturing distillery products, which met with sustained demand till the end of last week, came in for some selling pressure. Carew were marked down to Rs 8.87 from a high of Rs 9.53 and Raza/Buland to Rs 13.56 from Rs 14.12. Cawnpore were, however, maintained at Rs 11 with Darbhanga meeting with some enquiry upto Rs 18.87 from Rs 17.56.

Textile scrips lacked sustained support, resulting in a slightly easier tendency in prices. The only steady

features were Jayshree having buyers at Rs 8.69 to 8.87. Elgins, however, eased off to Rs 13.37 from Rs 15 and Kesoram to Rs 14.25 from Rs 14.62. New Victoria were quiet at Rs 1.34 against Rs 1.43.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till Wednesday. After opening better at Rs 24.31, Indian Irons improved further to Rs 24.40 at which level renewed selling pressure caused the scrip to slip down to Rs 23.88, to improve again towards the close to Rs 23.93. In sympathy, TEXMACO were marked down to Rs 25.35 from Rs 25.35; Braithwaite to Rs 29.12 from Rs 30.75 and Marshalls to Rs 6.06 from Rs 6.19. Indian Galvanizing were, however, a firm feature at Rs 18.31 with Kumardhubi ruling unchanged at Rs 8.75.

Miscellaneous issues moved with the general trend of the market. Orient Paper receded at one time to Rs 35.30 from a high of Rs 36.65 (35.30); Indian Cable to Rs 30.06 from Rs 30.87 (30.06); Indian Aluminium to Rs 20.06 from Rs 20.87 (20.06); Indian Copper to Rs 4.02 from Rs 4.12 (4.04); India Steamship to Rs 14.00 from Rs 14.44 (14.00); Alkali Chemicals to Rs 22.62 from Rs 22.94 (22.69); Dunlop Rubber to Rs 31.19 from Rs 31.69 (31.25); Rohtas to Rs 21.62 from Rs 21.81 (21.81); National Carbon to Rs 29.25 from Rs 30.37 (29.25); NICCO to Rs 33.50 from Rs 39.87 (33.62) and Sirpur to Rs 12.56 from Rs 12.81 (12.56). Figures shown within brackets were the closing rates for the week. Indian Oxygen were on offer at Rs 26.25 against Rs 27.69.

*

Bombay

TWO-SIDED fluctuations in prices characterised trading on the Bombay Stock Exchange last week. Prices moved up at the start on renewed bull support; but vague rumours about the possibility of Government measures to control company dividends suddenly depressed the market considerably and selling orders caused a veritable landslide in values. Towards the close, however, the market attempted a moderate recovery on short-covering.

STEELS: Steel shares started on a promising note and improved modestly. But, fears regarding the Government's adverse decision on steel retention prices imparted weakness to the market, resulting in a considerable decline in values. After starting at Rs 192.25, Tata Ordinaries steadily improved at one time to Rs 193.50 at which level selling pressure brought down the scrip to Rs 185.75. There was, however, an improvement towards the close to Rs 190.25 due to some replacement buying coupled with short-covering.

TEXTILES: Some of the scrips in this section touched new high levels. Bombay Dyeing was the only share which registered a significant spurt after earlier hesitancy. The inspiration came from the reported measures to boost up exports, of textiles. After starting at Rs 63.80, Bombay Dyeing were taken upto Rs 74.70, to finish the week at Rs

64.40. Century closed at Rs 544; Kohinoor at Rs 279.25 and Svadeshi at Rs 227.25 after touching high levels of Rs 550; Rs 286 and Rs 234 respectively. Sholapur remained steady at Rs 422.50 with Podar being in demand upto Rs 176 following the increase in dividend. Indu Ordinaries were done at Rs 7.92.

MISCELLANEOUS: Prices in this section followed the general trend of the market. Tata Locomotives and Premier Construction provided the bright spots, having buyers upto Rs 209.50 and Rs 323 from Rs 205 and Rs 316 respectively. Sugar shares developed a slightly reactionary tendency, reflecting the Government's decision to place the entire production of sugar mills at their disposal for direct allocation. Belapur shaded to Rs 295.50 from a high of Rs 305, while Phalton was offered at Rs 155 against Rs 159. In the Cement group, ACC came back to Rs 152.50 and Digvijay to Rs 154 from Rs 154.25 and Rs 155 respectively. Chemical shares were rather quiet with Tata Chemicals quoting Rs 17.96 against Rs 18.04. In the miscellaneous group, Bombay Burmah climbed to a new high level of Rs 548 from Rs 535, to suffer a setback to the latter level on long liquidation, which scared away buyers. National Rayon, after touching a high of Rs 313 from Rs 304, finished better at Rs 307.50.

*

Madras

BUSINESS on the Madras Stock Exchange was restricted and price movements were rather irregular on lack of sustained support.

TEXTILES: On this section, there were free offerings of Travancore Rayons at Rs 21.30 c.d. Maduras slumped to Rs 26.50 due to the closure of the mills. Buckinghams and Bangalore Woollens met with some enquiries at the market rates. Palani Andavars moved up to Rs 190 following the news of a 20 per cent dividend. Anglo-French were quoted around Rs 89.

PLANTINGS: Planting shares were dull with an irregular trend in prices. Among Tea shares, Periakaramalais declined to Rs 4.20 due to renewed selling pressure with Peermades closing lower at Rs 19.35. Chembra met with some business at the lower rate of Rs 4.30 with Haileyburias quoting around Rs 19.65.

In the Coffee group, Consolidated Coffees declined to Rs 21.80 with sellers at this level, while Blue Mountains noted some sellers at Rs 3.55. Oucherlony just maintained the level of Rs 5.15. Coffee Lands were quoted at Rs 24 and Shevroys at Rs 1.85.

Among Rubber shares, TRTs dropped down to Rs 7.15, although Vaikundams were in demand upto Rs 26.

MISCELLANEOUS: Good enquiries for Mysore industrial shares provided a feature in this section. FACTS were dull at Rs 9.06 sellers. Aluminium Industries maintained interest around Rs 20, while Ashok Leylands were stagnant at Rs 9 c.d. Cement shares were a steady feature.

DEVELOPMENT OF NARMADA WATER RESOURCES.

For co-ordinated development of the water resources of the Narmada, the Central Water and Power Commission has undertaken investigations in catchment areas of this river in Madhya Pradesh and Bombay.

The investigations, to begin shortly, will pave the way towards the formulation of multi-purpose projects which will include construction of dams, canals and power houses. The total power potential of these projects is estimated at 1,838,000 k.w. and it will ultimately ensure irrigation for large areas in the deltaic regions of the Narmada, Tapi and other Central Indian rivers in Madhya Pradesh and Bombay States.

By introducing a system of navigational locks at four dams and formation of a cascade of lakes, it will also be possible to open up an inland waterway from Broach, a port on the Arabian Sea, to Hoshangabad in Madhya Pradesh.

The benefits of the project will be available to people in the northern part of Bombay and western part of Madhya Pradesh, accelerating the tempo of economic development of this region.

Under the present arrangement, the cost of investigations will be shared jointly by the two States in proportion to the benefits derived by them.

Punasa Project.

The key to the harnessing of the large potentials of the Narmada is the proposed Punasa project in the middle stretch of the river in Madhya Pradesh. Here, the river—one of the principal waterways draining Central India—traverses through a gorge, which, geological investigations indicate, provides an excellent site for a dam.

At this point, a dam across the river, with a height of about 300 ft. from the foundation, and length of about 2,400 ft. at the crest, will enable storage of about 10 million acre feet of water. By regulating the flow here, about 375,000 kw. can be generated at a power station located at the toe of the dam. The discharge, of the order of 21,000 cusecs of water, can then be utilized profitably to the extent possible for irrigation in the lower reaches.

In the upper reaches of the Narmada, there are possibilities for developing irrigation and relatively smaller blocks of power, affording a power potential of about 338,000 kw.

Moreover, the upstream power projects would regulate a portion of the water supplies of the Narmada, and irrigation schemes would correspondingly deplete the water flow at Punasa. The net result of implementation of all the upstream projects would be to increase the power potential at Punasa from 375,000 kw. to about 450,000 kw.

Four Lifting Dams

With the tremendous regulated flow from the Punasa power station, it would be economical to construct four additional lifting dams in the gorges lower down in the Satpura range, in order to utilise for power generation the entire head of about 450 ft. between Punasa dam and the delta.

These dams at Barwaha, Hariphal, Keli and Broach (an irrigation project near Broach has already been included in the Second Five-Year Plan), would afford a total ultimate power potential of about one million kw., the bulk of it lying extremely close to the important load centres of the Gujarat area of Bombay State.

The lifting dams creating four reservoirs with locking devices will make the Narmada river navigable from the Arabian Sea up to Hoshangabad, a distance of about 350 miles.

CONDENSED COURSES OF EDUCATION FOR WOMEN.

Literary House in Lucknow is one of the 120 voluntary institutions existing all over the country, which have been selected for a grant by the Central Social Welfare Board for running condensed courses of training for women.

The key figures in the implementation of the schemes for uplift of women and children in rural areas are the women gram sevikas and craft instructors. They are also the principal agents of the State Social Welfare Boards in educating village women and children to derive the benefits of welfare services available for these groups in the rural welfare projects of the Board.

To find a sufficient number of such women for employment in the Welfare Projects in different States has been a matter of concern for the Central Social Welfare Board. The main reason is that women with a rural background and the aptitude for service do not, in many cases, possess the prescribed minimum educational qualifications to enable them to get the benefits of the training as village rural workers.

Grants to Institutions.

In the attempt to overcome this difficulty, the Central Board had formulated a scheme which is intended to tackle the problem at its roots. Under the scheme suitable grants are provided to well established voluntary organisations prepared to start condensed courses for training women between the age of 20 and 35 with a knowledge to attain the minimum educational qualification of a middle school or 8th class pass in a period of two years.

The aesthetically simple buildings of Literary House on the Lucknow-Kanpur Road provide a suitable venue for running this special programme. 22 women are here taking advantage of the scheme sponsored by the Central Social Welfare Board. They are taught the syllabus leading to the 8th class examination, in which they have to appear as private candidates after about 2 years' coaching. This would qualify them for recruitment as gram sevikas and primary teaching. The Board has given a grant of Rs 28,000 to the institution for conducting the course. Rs 35 per month is spent on each trainee, of which five rupees is given to each as pocket money.

Eagerness to Learn.

The bright faces of women undergoing the course, their eagerness to learn and the pride they show in their personal appearance—all bear testimony to the fact that it was not lack of ability but lack of opportunity which had kept them back from pursuing their studies and kept them backward so long.

It is pleasant to see the eagerness of the students and their progress in all fields of activity. Some specimens of their handiwork, which include knitting, cutting, embroidery, sewing, etc., make it difficult to believe that only four short months ago these women had scarcely held a needle for turning out a wearable garment.

For the trainees the day begins early. They clean their rooms, which are adequate in size for the two occupants, and are well ventilated. Next come the kitchen chores when the cook must be helped with the cutting of the vegetables, in the washing of the plates, serving of breakfast, etc.

Heavy Schedule.

After the morning prayers in the many-sided thatched roofed building which occupies the centre of the campus, the heavy schedule for the day begins.

This includes classes in Arithmetic, in Social studies, Sewing, Home Science, General Science and Agriculture. Games and preparation for a variety performance to be put up soon occupy the leisure hours.

Many of the girl trainees have an educational level of anything between the second and the fifth classes. All are taught together, but special attention is paid to those who are backward by holding special tutorial classes for their benefit in the evenings. Since January 1959 when the first batch was admitted, one examination of the 5th class standard has been held in March, as a result of which 13 out of the 22 girls have been promoted. Those left behind are being given intensive coaching and will be tested again after a month.

The test for the 6th class will be held in December and some of the students are, according to the organisers, ready to appear for the 8th class examination next May. This will mean a saving of one year, even over the allotted span of two years that is prescribed for the completion of the course.

A special advantage of the course is the training in community living that the trainees are receiving. The matron, a *motherly soul*, who take obvious pride in the progress of her charges, said that there are irritations to mar the smooth relations prevailing among the inmates of the women's hostel.

Literature for Neo-Literates.

Literacy House, run by a voluntary organisation for a number of years from private donations, has been the training ground for men and women interested in bringing the blessings of education to the villagers. About 3,000 persons have been trained here during the last five years in a one-month course for teachers in adult literates. The institution publishes books and charts for neo-literates using a vocabulary of 1,500 words in

Hindi; it also publishes a weekly paper "Ujala" for the same category of people. Trainees in audio-visual aids from this Institution have been set to places like the Tata Institute of Social Work and the Kasturbi Niketan in Varanasi for teaching the use of audio-visual aids in the promotion of adult literacy.

SUMMER SCHOOL IN ADVANCED PHYSICS PRIME MINISTER'S MESSAGE.

The Prime Minister, Shri Jawaharlal Nehru, has given the following message on the occasion of the inauguration of India's first Summer School in Advanced Physics at Mussoorie on May 22, 1959. The four-week school, which has been organised by the Union Ministry of Scientific Research and Cultural Affairs, will be inaugurated by Shri Humayun Kabir, Minister of Scientific Research and Cultural Affairs. The message reads:

"I am glad to learn that a Summer School of Theoretical Physics is going to be held in Mussoorie under the general direction of Professor Satyen Bose. I think this is a very good idea and I send it my good wishes.

"Physics is one of the fields of scientific knowledge in which Indians have distinguished themselves in recent years. We have to-day some very distinguished physicists and I am glad to find that there are, among the younger generation, men who have already shown great promise.

"Science to-day demands more team work and planned co-ordination in research than it did previously. Therefore, this attempt in bringing together some of our eminent physicists as well as some from the younger generation to discuss the matter and develop a team spirit and planned approach is to be welcomed".

WORKING GROUP ON CO-OPERATIVE FARMING

Government of India have decided to set up a Working Group to make definite recommendations on ways and means for efficient development of co-operative farming in the country.

Although co-operative farming has figured both in the First and Second Five Year Plans, there still exists a considerable vagueness and confusion about its details. Following the acceptance of joint co-operative farming on a voluntary basis as the ultimate agrarian pattern in India, the Working Group will help the Government in the formulation of an action programme based on available experiences.

The Group will have a prominent person in public life as its Chairman. The membership will include a representative each of the Reserve Bank of India, the Planning Commission, the Department of Community Development and the Department of Co-operation in the Centre, a Development Commissioner and a State Registrar of Co-operative Societies. Amongst non-officials in the Group will be one M.P., and a person connected with co-operative farming.

The Group will visit different parts of the country to study suc-

cessful experiences as also the problems encountered in the field. It will review the work done, methods adopted and techniques evolved in co-operative farming.

It will have to make specific suggestions particularly with regard to types and methods of organisation, and financial as well as administrative requirements for a countrywide programme.

In order to facilitate the study of the Working Group, the Union Ministry of Community Development and Co-operation are asking the State Governments to collect and keep ready well in advance information and data relating to the existing co-operative farming societies.

The Group is expected to submit its report within two months from the date it starts its work.

BASIC EDUCATION LITERATURE COMMITTEE SET UP

The Union Ministry of Education has set up a "Basic Education Literature Committee" to advise the Ministry on the production of suitable literature and material on basic education. The Secretary, Union Ministry of Education, will be the chairman of the committee.

Besides the Chairman, the members of the Committee are: The head of the Basic and Elementary Education Division, Ministry of Education (ex-officio member); Shri T. S. Avinashilingam, M.P.; Shri Dwarika Singh, Secretary, Basic Education Board, Patna; Dr. Salamatullah, Principal, Teachers' Training College, Jamia Millia, Delhi; Shri R. Srinivasan, Principal, Post Basic School, Gandhinagar; Shri G. A. Mukhtar, Director of Education, Jammu and Kashmir; Shri L. R. Desai, Principal, A. G. Teachers' Training College, Navarangpura, Ahmedabad; and Dr. J. K. Shukla, Director, National Institute of Basic Education, New Delhi. The Assistant Educational Adviser in charge of the work in the Education Ministry will be the Secretary of the Committee.

INDIGENOUS SYSTEMS OF MEDICINE.

A sum of Rs 53,13,712 has been sanctioned so far during this Plan period by the Union Ministry of Health for the development of indigenous systems of medicine, including homoeopathy. The total provision in the Second Five-Year Plan for this purpose is Rs 100 lakhs. Financial assistance is given to private organisations and State Governments for research in indigenous systems and for upgrading teaching institutions.

During 1958-59, Rs 20.55 lakhs were also advanced to various State Governments as the Union Government's matching contribution to the expenditure incurred by them on the establishment/upgrading of teaching institutions in indigenous systems of medicine, including homoeopathy. For the current financial year, a provision of about Rs 30 lakhs has been made for grants to State Governments and private organisations for research and upgrading.

The institutions to whom grants are given are engaged either in research work or in teaching of indigenous systems of medicine.

Research is generally confined to clinical trials of various Ayurvedic, Unani and Homoeopathic drugs and medicines. To some institutions grants have been sanctioned for plantation of medicinal herbs used in Ayurvedic and Unani treatment. To others grants have been given for publishing works on Ayurvedic and Unani systems of medicine.

During the First Five-Year Plan, the Union Government spent a sum of Rs 12,82,710 against the provision of Rs 37.50 lakhs. The response during the First Five-Year Plan was not encouraging as most of the State Governments had not made sufficient provision in their own Plan schemes for promotion of indigenous systems of medicine.

EXPORT PROMOTION FOR COTTON TEXTILES

In an Import Trade Control Public Notice, the Government of India have announced a further modification of the export promotion scheme for textiles under which licences are issued for import of certain coal tar dyes, textile chemicals and gums against exports of cotton textiles (other than handloom cloth) and yarn.

Under the revised scheme, which comes into force from the quarter July-September, 1959, mills whose cotton textiles are exported will be eligible for import licences equal to two per cent of the f.o.b. value of exports of grey cloth or dyed or processed cloth.

Registered processors processing cloth whether in bond or duty paid will be given import licences equal to four per cent of the f.o.b. value of exports of dyed or processed cloth. Exporters will be entitled to import licences equal in value to two per cent of the f.o.b. value of exports of grey cloth or dyed or processed cloth.

Mills whose yarn is exported will be granted import licences equal in value to two per cent of the f.o.b. value of the exports of grey yarn. Registered processors processing yarn will be entitled to import licences equal in value to two per cent of the f.o.b. value of exports of processed yarn. Exporters will be given import licences equal in value to two per cent of the f.o.b. value of the export of grey yarn or processed yarn.

Any party who perform more than one of the functions of manufacturing, processing and exporting will be entitled to claim licences equal to those admissible under the respective categories whether manufacturer, processor or exporter.

Applicants should apply for import licences to the Joint Chief Controller of Imports and Exports, Bombay, for mill cloth and yarn as specified in Appendix XXIII of the Import Policy Book for April-September, 1959 after obtaining certificates of the import entitlement from the Textile Commissioner. Licences will be granted only once in a quarter on the basis of exports effected in the preceding quarter.

DRAFT STANDARD FOR ENGINEER'S FILES.

The Indian Standards Institution has issued a draft specification for engineer's files.

The draft standard covers general requirements and methods of tests, and specific dimensional and test requirements for files commonly used by engineering and similar industries, and saw files.

The instrument files, generally used by instrument makers, jewellers, etc., file blocks, die sinker's files and the high alloy content, steel files, normally called 'high speed steel files' have not been included.

Separate additional parts or separate standards, covering such files, are expected to be issued by the Institution later on.

Comments on the draft standard may be sent before July 6, 1959 to the Indian Standards Institution, New Delhi.

SUPPLY OF PIG IRON

The Government have decided that users of pig-iron may now indent for their requirements either directly or through controlled registered stockists to the Iron and Steel Controller, Calcutta, under advice to the sponsoring authorities. The measure will further simplify the procedure for the supply of pig iron. The issue of quota certificates was suspended some time back and users were allowed to indent for pig iron through their sponsoring authorities.

The new procedure will come into force with immediate effect.

The Iron and Steel Controller, Calcutta, will plan indents on the producers of pig-iron in the usual manner. Allocations and planning of pig iron will be done as heretofore for each quarter i.e., the quarters beginning January, April, July and October.

In order to enable the planning of the requirements of the users in time, users who indent directly or controlled/registered stockists, who indent on behalf of the users, are requested to send their indents to the Iron and Steel Controller, Calcutta, at least a month before the beginning of each quarter.

Any clarification necessary may be obtained from the Iron and Steel Controller, Calcutta.

With the commissioning of new blast furnaces at Rourkela and Bhilai the supply position of pig iron has been progressively improving. The Government of India, have, therefore, been considering for some time simplification of the procedure for the supply of pig iron.

INDIA TO PRODUCE HIGH TENSILE STEEL WIRE

The Government of India have licensed several units for the manufacture of high tensile wire for various purposes including prestressed concrete construction.

The capacity licensed so far is about 40,000 tons, India requires about 8,000 tons of high tensile steel wire annually. The entire demand is imported.

In view of the capacity already licensed, the Government of India do not propose to manufacture the same type of wire in the three steel plants in the public sector.

The present production of high tensile structurals, bars and plates is about 300 to 400 tons per month. The public sector steel plants are expected to meet the demand for

Indian Finance

high tensile structurals, bars and plates in the country.

TEA-CHEST PLYWOOD PANELS

The Indian Standards Institution has granted a licence for the use of ISI Certification Mark in respect of tea-chest plywood panels to M/s. Himalayan Plywood Industries Private Ltd., Assam. With this, forty-nine licences for tea-chest plywood panels have been granted so far to different manufacturers.

Some time back, the Government of India decided to prohibit the export of tea except in tea-chests, the to the specification laid down by ISI.

Following this decision, more and more indigenous manufacturers of tea-chest plywood panels have been obtaining licences from ISI to use the ISI Certification Mark.

Under the provisions of the ISI Certification Marks Act, 1952, the Institution has been empowered to issue licences to manufacturers, whose products rigidly conform to relevant Indian standards.

The presence of the ISI Certification Mark on the panels is an independent third-party guarantee that the plywood panels have been manufactured under controlled conditions, and conform to the requirements as laid down in IS: 10-1953 Indian standard specification for plywood Ministry of Commerce and Industry, Inspector of the Development Wing, tea-chest (revised).

The Standard Mark is stamped on the plywood panels under the supervision of the Development Wing, Ministry of Commerce and Industry, Government of India.

Any complaint regarding the quality of tea-chest plywood panels bearing the Standard Mark may immediately brought to the notice of the licensee, the Development panels of which are certified by an Wing and the Institution.

JOINT UNESCO-INDIA TRUST FUND CREATED

A joint 'Unesco-India Trust Fund' with contributions both from the Government of India and the Unesco has been created for publishing translations of classics under the Unesco's Major Project scheme to foster mutual appreciation of the Cultural values of the Orient and the Occident.

India has so far contributed a sum of Rs 75,000/- to this Fund in five yearly instalments of Rs 15,000/- each commencing from the year 1953-54. The Unesco has also been contributing a similar amount and has so far paid a sum of \$13,253 (Rs 65,000) from its own budget towards this Fund.

Out of this Fund, so far Rs 97,000 approximately have been utilized and a further sum of Rs 43,000 is expected to be spent during this year.

The fund is operated by the Unesco.

Of the 51 Indian Classics covered under this Project, the Unesco has so far initiated action on the translation of 36 classics. Five of them are to be translated into English and French both and the remaining into either language. Of these, five classics have since been published, four in French and one in English.

Because you value your car

you should use **Mobiloil**

A VALUABLE investment — your car! Naturally you want to protect it. Keep it in top condition for a long, long time.

MOBIL OIL gives you full protection. From the moment you start your car, to top operating temperatures, MOBIL OIL separates moving parts with a tough, protective film. Also, MOBIL OIL cuts down on power-robbing friction. All this results in increased power and longer life for your car's engine.

Mobiloil

FIRST IN PROTECTION — FIRST IN WORLD SALES

STANDARD-VACUUM OIL COMPANY (Incorporated in the U.S.A. with limited liability)

INVESTOR'S SUPPLEMENT

A Severe Jolt to Prolonged Bull Phase

ALTHOUGH stock markets gave an encouraging performance till the middle of May, they suffered a severe shake-out during the last two weeks of the month when prices dropped down precipitously over a wide front. On the whole, a halt was cried to the steady rise in prices noticed till the middle of the month. Apart from a general feeling that a reaction was overdue in the context of the sustained bullish trend and a technical correction was essential for keeping the market in a healthy condition, the reports suggesting additional taxation of Rs 2,000 crores for financing the Third Plan and the rumours of the possibility of Indian Irons being removed from the forward list of the Bombay Stock Exchange had a bearish impact on trading sentiment. Thanks to some replacement buying and scattered bear-covering, a mild recovery in prices was recorded towards the close.

In general, till the end of the second week, the market was completely in the grip of the bulls who found no difficulty in pushing up prices; and the confidence in the investment outlook was expressed by the continued demand for equities with growth potentialities. Also, there was a feeling that there was no possibility of any sharp break in equity values so long as the investment climate would remain favourable. Encouraging reports from the industrial front and good corporate news provided additional encouragement.

But, higher levels met with considerable resistance. Apart from a general disposition to book profits before entering into fresh commitments, there was a complete lack of buying interest on the part of investors who felt that even the low yields, now obtainable on equities, might not be obtained under the new pattern of corporate taxation. Above all, it was thought that, in the event of the Government's borrowing programme and the number of new issues in the offing, there would be siphoning off large sums, resulting in a lack of investible funds. Thus, popular industrials, which had been manipulated to peak levels on individual speculative operations, suffered substantial losses due to scarcity of buyers at the middle of the month. But the decline in prices was interpreted by a few operators to be a passing phase, as the undercurrents were still bullish as indicated by the fact that support was forthcoming at lower levels. This could not, however, sustain for long.

In fact, the market suffered a severe shake-out during the third week of the month when prices registered a sizable all-round decline as a sequel to sustained bull liquidation coupled with bear hammering following indications of a massive tax effort to finance the Third Plan's estimated outlay of

Rs 11,000 crores. It was even feared that the proposed company taxation would greatly cripple the capacity of the companies to maintain their rates of dividends. This decline in prices was carried a stage further during the last week of the month on renewed liquidation following rumours of the possibility of the removal of Indian

in handy for a technical correction of the market, it was conceded by some that there was nothing like a pronounced slump in sentiment. While the precise dimensions of the Third Plan and the resources position were yet to be determined, it was presumed that the steady growth of industrial production would yield substantially higher

Irons from the forward list of the Bombay Stock Exchange. Thanks to the support lent by a section of the operators, the steady decline in prices was halted towards the close of the month.

Although it was true that the reports about the Third Plan came

revenues by way of indirect taxes. Further, it was felt that the scope of excise duties might be made more broadbased than hitherto. An influential section of the market, therefore, held the view that the size of the Third Plan, as indicated and the necessary tax effort

that it might involve, might not hold out any great threat of increased direct levies. But for these views held by the operators, the market would have finished at the worst levels for the month.

In the month's dealings, the worst affected were the speculative issues which, under the lead of Indian Irons, fell precipitately to register substantial losses over the month on heavy liquidation, although scattered bear-covering pared extreme decline at the close.

Sentiment in the Jute section remained generally depressed and the trend of prices was downward due to the predominance of sellers in view of growing fears of competition from the Pakistani mills in the international markets and on the feeling that the long-term outlook for the industry would depend on how India could sell her products abroad. Doubts were also expressed in certain quarters with regard to the size of dividends in the future in view of the lower level of profits expected after making full provision for taxation.

Coal shares were generally listless due to the inordinate delay in the announcement of the price increase for the commodity, which, it was felt, would not enable the collieries to proceed with their expansion schemes.

Tea shares, after giving a good performance till the middle of the month, developed a reactionary tendency due to considerable profit-taking on reports from certain quarters that there was no reason to be enthusiastic about the new season's prospects and the dividends might not be much better since the increased prices obtained for the commodity last year had been largely offset by higher costs.

Sugar shares, which had been ruling moderately steady during the first three weeks of the month, came in for heavy offerings following the Government decision to retain the entire production of sugar mills at their disposal for direct allotment. There was a general disposition to await further developments on the sugar front.

Textile scrips were no exception to the general trend of the market although a few scrips emerged with only minor losses on balance, thanks to the reports of improved conditions in the cloth market.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons.

Miscellaneous issues, after ruling initially firm, developed an easier tendency towards the close of the month on lack of sustained buying support. Most of the scrips finished the month with major losses on balance.

(a) After transferring Rs 6,26,601 from Depreciation, Renewal and Extension Fund and Rs 80,000 from Reserve Fund.

(b) After transferring Rs 45,153 from General Reserve; Rs 25,000 from Machinery Replacement Reserve and Rs 6,008 from provision for taxes.

(c) After transferring Rs 525,000 from General Reserve and Rs 500,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 120,000 from Reserve Fund Rs 268,000 from Reserve for Taxation and Rs 23,888 from excess provision not required.

(f) After transferring Rs 730,179 from Reserve for Taxation and Rs 299,043 from General Reserve.

(g) After transferring Rs 2,656,522 from General Reserve.

(h) After transferring Rs 80,000 from Reserve Fund.

(i) After transferring Rs 919,667 from General Reserve.

(j) After transferring Rs 842,193 from General Reserve.

(k) After transferring Rs 70,000 from General Reserve and Rs 37,500 from Dividend Equalisation Reserve.

(l) After transferring Rs 205,000 from Dividend Fund.

(m) After transferring Rs 3,03,261 from General Reserve.

(n) After transferring Rs 8,02,125 from General Reserve.

(o) Includes Rs 250,000 being adjustment on account of changes in stock valuation.

(p) After transferring Rs 5,27,512 from General Reserve.

(q) After transferring Rs 21,22,414 from General Reserve.

(r) After transferring Rs 2,50,000 from Income-tax Reserve and Rs 3,70,712 from Raw Materials Fluctuation Reserve.

(s) After transferring Rs 3,22,599 from General Reserve and Rs 75,000 from Depreciation Reserve.

(t) After transferring Rs 9,50,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 100,000 from General Reserve.

(w) After transferring Rs 670,000 from General Reserve and Rs 76,805 from Excess Provision for taxation.

(x) After transferring Rs 1,814,832 from General Reserve and Rs 592,584 from Dividend Equalisation Reserve.

(y) After transferring Rs 1,25,000 from General Reserve and Rs 40,000 from Dividend Equalisation Fund.

(z) After transferring Rs 25,000 from Dividend Equalisation Fund.

(a1) Includes Rs 688,325 being amount drawn from extra excess provision made for depreciation on plant and machinery for the year ended 31-3-53.

(a2) After transferring Rs 9,00,000 from Reserve for taxation.

(a3) After transferring Rs 2,50,000 from General Reserve.

(a4) After transferring Rs 350,000 from General Reserve and Rs 165,000 from Machinery Rehabilitation Reserve.

(a5) After transferring Rs 4 lakhs from Reserve for fall in price.

(a6) After transferring Rs 109,648 from General Reserve.

(a7) After transferring Rs 255,000 from General Reserve.

(a8) After transferring Rs 882,000 from General Reserve.

(a9) After transferring Rs 2,300,000 from Dividend Equalisation Reserve and including Rs 665,246 being profit of previous years on sale of Govt. Securities.

(a10) After transferring Rs 250,000 from General

FOR THE INVESTOR

Weak Now—But Cheerful Soon

Investment Gossip:

THE past week has been distinguished by lacklustre trading and easier tendency. Even the substantial improvement in production figures of the Indian Iron & Steel Company Limited failed to enthuse operators, and the steadiness toward the end of the week was owing to another firm of speculative activities, bearing covering.

All sorts of rumours, I find, are being canvassed; and I use the word advisedly. For, I cannot bring myself to believe half of the content of half of the gossip that is being passed by word of mouth on Lyon's Range and Dalal Street. You suddenly hear, for example, that the Tata Steel dividend will be reduced. The next moment, you will have somebody else asserting that even more onerous taxation will be considered by Government for the Third Plan. Sir Chintaman Deshmukh's recent statement in this regard will be quoted, as also the press report of a week ago or so, which maintained that, as

against the resources that had to be raised for the Third Plan, as much as Rs 2000 crores had to be found by way of additional taxes. Such, the sum and substance of the market activity last week.

Against this, we have to set the fact of the extremely satisfactory response to three major new issues that were offered on the market. Colour-Chem was a thundering success, Indian Rayon and Khandelwal Ferro Alloys are no less successful. This proves, it seems to me, that the investor's market is in no way weak or infirm. It is the speculative market which has all the attributes of having succumbed to such a bout of rumour mongering that it was found possible to depress prices.

For, otherwise, we cannot reconcile the weakness in share market prices with the extremely good reception to what are new issues and not merely rights issues. How long the speculative hold on the stock exchange will last, I will not venture to say.

But the present weakness in stock exchange prices is a blessing in disguise. It offers the opportunity for the investor with some spare resources to pick and choose among the very many blue chips that are today available at bargain prices. He will not go wrong, for example, who invests in any of the paper shares or many of the engineering scrip.

What is more, the prospect is that, even over the short term, prices should improve. For, it is scarcely likely that the bears will have undisputed and uninterrupted sway over stock exchanges. They will find it particularly hard to go against the slack season influences, which are already making available considerable resources in the money market. Indeed, if the new loan programme of the Central Government, to be announced soon, has proper regard for the money market easiness, the resulting firmness in the gilt-edged market should induce a sympathetic rise in share values.

Thus, over even the short term future, I expect much improvement in market sentiment, cheerful and upward.

ER

Investment Notes:

According to the statement issued by the Indian Iron & Steel Company Limited, saleable Steel production has risen by 9,319 tons to 49,470 tons in May as compared to 40,151 tons in April. Pig Iron production has also risen to 94,105 tons from 86,826 tons, while Steel Ingots have declined to 57,483 tons from 61,182 tons. Despatches of saleable steel are higher at 52,105 tons from 40,405 tons.

An agreement has been reached between the Investment Corporation of India Limited (a Tata concern) and W. T. Henley Telegraph Works for the manufacture of certain types of cables in India. A

new company will shortly be formed in which Henley's will have a 60 per cent interest and Tata 40 per cent. The necessary industrial licence has already been granted by the Government of India for the project.

The scheme for the amalgamation of the Magnesite Corporation of India Limited with the Dalmia Cement (Bharat) has, for the present, been dropped.

Transfer Books of Larsen & Toubro Limited, both for dividend as well as right issue, will be closed from the 11th June to the 16th July. The shareholders, whose names are registered as on the 16th July, will get the right issue.

Mettur Chemical & Industrial Corporation of Madras has proposed to issue third series of Debentures for Rs 15 lakhs, ranking pari passu with the existing Debentures, in favour of the Industrial Finance Corporation of India towards a loan of Rs 15 lakhs agreed to be given to the company. In this connection, a general meeting of the debenture-holders will be held on the 13th June for approving the Trust Deed.

ERS

Excellent Results of TRAYONS

Balance-Sheet Reviews:

THE viscose Rayon today occupies a place only next to cotton in the world's consumption of textile fibres and is also the cheapest of all man-made fibres. This is fully reflected in the uniformly good working results announced by different units of the rayon industry in this country. The year 1958 especially has witnessed excellent results.

In keeping with this trend, the Travancore Rayons Limited shows a rise of nearly Rs 37 lakhs in gross profit to Rs 97.12 lakhs, while sales have gone up from Rs 2.55 crores to Rs 3.28 crores. The dividend on the Ordinary shares is raised from Re 1 to Rs 1.25 per share.

After providing Rs 1.08 lakhs for Wealth Tax for 1957 (Rs 1.05 lakhs); Rs 37.39 lakhs for Depreciation (Rs 34.54 lakhs); Rs 5.80 lakhs for Development Rebate Reserve (nil) and Rs 6.66 lakhs for managing agents' remuneration (Rs 3 lakhs), the net profit has been more than doubled to Rs 46.19 lakhs from Rs 21.64 lakhs. As the profits have become taxable, the unabsorbed depreciation has been wiped out. The directors have provided Rs 1 lakh for Gratuity Reserve (nil) and Rs 30 lakhs for General Reserve (10 lakhs). The tax liability for the accounting year 1958 will be met out of the Deferred Taxation Reserve of Rs 30 lakhs. A sum of Rs 12.5 lakhs has been repaid to the Kerala Government and all the borrowings from banks have been fully repaid.

The company has received the Government's permission for setting up a plant for producing cellulose film with an annual capacity of 2,000 tons. This plant is expected to go into production by the middle of next year. Besides, a sulphuric acid plant with a daily capacity of about 50 tons has already been received and is now in the process of erection. This is expected to be commissioned in August this year. Regarding rayon yarn, the company is in correspondence with the Government of India for expanding the capacity by about 5 tons a day to 13.6 tons.

ERS

Bhartia Electric

Reduced sales from the Khardah Works are fully reflected in the working results of the Bhartia Electric Steel Company Limited for the year ended 31st December, 1958. Sales have declined to Rs 1.92 crores from Rs 2.06 crores; but the net profit, after providing for Depreciation and Taxation, amounts to Rs 10.81 lakhs against Rs 10.25 lakhs in the previous year. Apart from providing a sum of Rs 5.00 lakhs for General Reserve and Rs 1.83 lakhs for Development Rebate Reserve, the Depreciation amount is reduced to Rs 6.00 lakhs from Rs 15 lakhs and Taxation provision to Rs 14 lakhs from Rs 15 lakhs. Reduced supplies of billets and the go-slow policy adopted by workers are reflected in the production figures, liquid steel being shown at only 15,063 tons against 16,280 tons; steel castings at 4,847 tons against 5,562 tons and rods and bars at 17,625 tons against 22,263 tons. The dividend is, however, maintained at Rs 1.25 per share.

ERS

Jeewanlal (1929) Ltd.

For the seventh year in succession, Jeewanlal (1929) Limited has not paid the dividend to the shareholders for 1958. Sales have risen to Rs 2.29 crores from Rs 2.26 crores; but the net profit, after providing for Depreciation and Taxation, amounts to only Rs 3.52 lakhs as against as much as Rs 7.29 lakhs in the previous year. This is mainly due to the rise in the cost of raw materials in conse-

quence of suppliers' higher rates in the climate created by the controlled economy of the country and the rise in the fabricating cost by reason of higher wage bills and other facilities granted to the employees. The Depreciation amount is raised to Rs 1.47 lakhs from Rs 1.31 lakhs and Taxation provision to Rs 44,987 from Rs 40,893.

The present profit is applied to the past accumulated losses which, as a result, stand reduced to Rs 1.70 lakhs. According to the directors' report, the current operations are going on steadily and they expect to reach shortly a stage whereby they may be enabled to pay some cash dividend in the not distant future.

£ RS

In the Duncan Brothers group, the Okayti Tea Company has reported excellent results for 1958. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 1.58 lakhs as against only Rs 1,629 in the previous year, thanks to the rise in crop output to 179,694 lbs from 149,376 lbs and in the average price realised from Rs 3.90 to Rs 4.80 per lb. Apart from providing a sum of Rs 85,000 for Taxation; Rs 50,000 for General Reserve; Rs 37,500 for Hail Reserve; Rs 1,500 for Development Rebate Reserve and Rs 50,000 for Building and Machinery Reserve, the Depreciation amount is reduced to Rs 8,488 from Rs 9,243. A dividend of 32½ per cent is recommended on the Ordinary shares against nil in 1957.

£ R 9

The Runglee Rungliot Tea Company, in the same managing agency group, has raised the dividend from 25 to 30 per cent for 1958, thanks to an increase in the net profit from Rs 26,007 to Rs 54,508. The Depreciation amount is raised to Rs 11,944 from Rs 7,924. After transferring Rs 18,653 from Depreciation Reserve, the directors have allocated Rs 57,547 (Rs 28,251) to Taxation and Rs 18,000 (nil) to Building and Machinery Reserve. Crop output is higher at 196,080 lbs against 156,960 lbs; but the average price realised is slightly lower at Rs 3.45 against Rs 3.49 per lb.

The Kunchunpore Tea has, however, incurred a loss of Rs 85,793 against a loss of Rs 1.59 lakhs in the previous year. The Depreciation amount is raised to Rs 17,071 from Rs 10,339. Crop outturn is higher at 359,776 lbs against 288,137 lbs and the average price realised at Rs 1.71 against Rs 1.68 per lb.

£ R \$

Brushware Limited of the Begg, Sutherland group has reduced the dividend from $\frac{7}{8}$ to 5 per cent for the year ended 30th November, 1958. Sales are shown higher at Rs 5.15 lakhs against Rs 4.99 lakhs, while the net profit has gone down to Rs 4,777 from Rs 7,006. A sum of Rs 3,400 (Rs 3,600) is provided for Depreciation and Rs 5,580 (Rs 12,000) for Taxation.

According to the directors' report, the company continues to receive satisfactory business from the trade in general; but business from the Government has not been forthcoming any longer in consequence of their policy to give preference to the small-scale industries. This matter is receiving their attention.

£ R \$

The Kamani Engineering has done well during the year ended 30th September, 1958. After providing for management agents' commission Rs 1.19 lakhs (Rs 50,000) and for Gratuity Rs 40,000 (same), the profit comes to Rs 10.54 lakhs against Rs 2.34 lakhs. Out of this, a sum of Rs 4.05 lakhs (Rs 25,000) is provided for Taxation; Rs 3.62 lakhs (nil) towards Depreciation arrears for previous years and Rs 24,603 (nil) for Development Re-bate Reserve. Transfer to General Reserve is Rs 80,000. A dividend of 50 pP is recommended on the Ordinary shares. Sales have risen to Rs 2.84 crores from Rs 1.53 crores.

According to the directors' report, the company has still a considerable production capacity available and it is making efforts to secure more orders. In order to better utilise the existing capacity, new machinery has been ordered to balance certain operations in order to reduce the cost of production and diversify the production.

NEW will find satisfactory, or derive satisfaction from, the conflicts and contradictions as between the reports of the three investigating bodies into the LIC transactions; and Government's assessment, in the light of the three reports, merely makes confusion worse confounded. The Vivian Bose Board of Enquiry held the charges against Mr H. M. Patel proved; the Union Public Services Commission have violently disagreed with this view; Government's disposition is in favour of the latter, and Mr Patel, rightly in our opinion, is deemed to be above reproach. On the other hand, there is a little better semblance of unanimity as to the opinion about Mr G. R. Kamat's role in this ill-fated deal; but, again rightly in our view, it has been decided that the "penalty of censure" will suffice. Thirdly, Mr T. T. Krishnamachari is absolved of having provided the impetus for the transactions, or even of approving of them, though the UPSC have thought that Mr Patel could have honestly believed that he had kept the Finance Minister fully informed. Fourthly, both the Chagla Commission and the Vivian Bose Board did not accept the proposition that the Mundhra shares were, at the time, acting as a drag upon the Calcutta stock exchange; and, in consequence, they have considered as unnecessary the intention to remove this drag, so that stock market prices could be stabilised. Finally, both the Chagla Commission and the Vivian Bose Board have concluded that the purpose of the transaction was to help Mr Mundhra. The UPSC have, again, disagreed with the Commission and the Board about these last two issues; and Government seem to be in agreement with the UPSC, since their communicative asserts that it was possible for the two officers concerned to have thought that there was a continuing threat to the Calcutta stock exchange, and emphatically denies that there was any intention to rush to the help of Mr Mundhra. In this regard, we may also note that the Board, on the basis of Mr Mundhra's known donations to the Congress party as also his acquiescence in keeping open his Kanpur mills at the behest of Government, has suggested that the possible motive was a desire on the part of Government to return a favour to Mr Mundhra; and

We believe that the conclusions of the Chagla Commission and of the Board of Enquiry have been vitiated by the fact that they did not realise that there was a crisis of sorts on the Calcutta stock exchange, and that this alone could be the true motive for the LIC transactions. But, then, Government themselves did not, in December 1957, admit to such a motive; and it was their failure to confess that the LIC's funds had been used for open market operations, to stabilise stock exchange prices, that must be held largely, if not wholly, to blame for the unfortunate series of unsatisfactory investigations. Nevertheless, even though the UPSC's advice runs counter to the findings of the two earlier investigating bodies, and in spite of the fact that Government have accepted the UPSC's recommendations, the investigations have had a salutary effect.

The autocracy of the administrative services, if indeed autocracy there was, will not be allowed easily to hold sway; Ministers will shy away from giving too free a hand to their secretarial staff; and the latter, in turn, will be less forward in their "enterprise". At the same time, the justness with which Mr Patel's case has been disposed of will mean that initiative at the secretarial level, so necessary for expeditious action, will not be unduly curbed.

Then, there is the recognition, belated though it is, that what Mr Patel embarked upon was a species of open market operations; and there is hope now that, in the national interest, there will evolve a clear policy about LIC's role in keeping up market sentiment.

Most important of all, the various investigations have proved that Mr Krishnamachari's part in the deal was such as to draw no more than constitutional responsibility. Even the IPSC report does not contradict Mr Krishna-

THE Nagpur Congress Resolution which stressed the role of cooperatives in bringing about the economic and social transformation of the countryside has precipitated a furious controversy. The ideological bias of partisans on either side has not helped an objective examination of the basic point at issue, namely whether the cooperatives could be depended upon to deliver the goods. The record of the cooperative movement in the country can throw useful light on the prospects of success of joint cooperative farming. A wealth of information on the progress of the Cooperative Movement which comes handy at the present juncture is contained in the Statistical Statements published by the Agricultural Credit Department of the Reserve Bank of India.*

The statements relate to the year 1957-58. All data concerning cooperation have been brought together in one volume, including tables relating to cooperative banks which were till now presented in the Reserve Bank's annual publication known as the Statistical Tables relating to Banks in India.

The growth of the cooperative movement can be gauged from the growth in the size of the statistical tables and the increase in the categories under which data are presented. The publication has been enlarged to nearly thrice its usual size and contains more complete data from the annual accounts of cooperative societies. Instead of classifying information relating to non-credit societies under six broad categories as in the past, the publication gives data separately for marketing societies, sugarcane societies, milk supply societies, farming societies, general insurance societies, cotton ginning and pressing societies, sugar factories and other processing societies. This classification will give an idea of the protection of consumers' stores, housing societies, weavers' societies, other industrial societies, spinning mills and fishery societies. The variety of the classification will give an idea of the protean growth of the movement which has now entered into practically all sectors of economic or industrial activity other than the heavy and basic industries.

machari, nor disbelieve him; all that the UPSC have stated is that, on his evidence, Mr Patel could honestly have thought that he was keeping his Finance Minister fully, or at least adequately, informed. This means that Mr Krishnamachari has already paid the price for his constitutional responsibility. Hence, since there is a precedent for a Minister who resigned for similar reasons to return to the Cabinet, we should think that the last obstacle has been removed from the path of Mr Krishnamachari's rejoining the Cabinet.

We may recall that, when Mr Nehru accepted Mr Krishnamachari's resignation, he stressed that India would no doubt call again upon his valuable services. This country has been denied Mr Krishnamachari's talents long enough, and we hope that the ringing down of the curtain on the LIC affair will see Mr Krishnamachari reappear on the New Delhi stage.

The Cooperative movement in India has made all-round progress since the attainment of independence. At the end of June 1953, there were 2.58 lakhs of cooperative societies of all types in the country. It is estimated that by the end of 1957-58, about 10.75 crores, or nearly 27 per cent, of the population were served by cooperatives compared with 25 per cent at the beginning of the period.

The figures which illustrate the growth of the movement during the last one decade would suggest that the purely organisational problems of setting up 'service cooperatives' in all villages, to be followed later by joint farming societies, is not so formidable as it may appear at first sight. Agricultural Credit cooperatives constituted the most important sector of the movement. There were 1,66,543 societies with a membership of 102.21 lakhs and working capital of Rs 133.75 crores of which Rs 78.42 crores represented borrowings from State or central financing agencies, while deposits held by these societies stood at Rs 8.63 crores. Loans advanced by them during the year amounted to Rs 96.08 crores compared with Rs 67.33 crores in the previous year. Outstanding loans amounted to Rs 107.13 crores at the end of the year. Other categories of societies, namely marketing societies, have also made good progress. There were 554 marketing societies engaged in processing activities at the end of June 1958.

It is also of particular interest to note that there were 3,637 farming societies, of which 1,212 were joint farming societies. The farming societies of all types had brought under cultivation an area of 4.58 lakh acres. The experience of these societies should be carefully studied in chalking out the detailed programme for the establishment of joint farming as the standard pattern of agricultural organisation.

The Structure of Interest Rates in India-I

By B. KRISHNA RAO

INTRODUCTION:

IN this paper an attempt is made to study the movement of interest rates in India. The rate of interest is the price that borrowers pay on their debts. In practice there are manifold rates of interest though in theoretical abstraction economic writers refer to a single rate of interest. Published statistics of interest rates deal very often only with certain types of borrowers and certain types of loans. In point of fact an interest rate exists whenever a loan is transacted. Hence many difficulties arise in the assessment of the rates of interest in a country. To overcome these difficulties by the collection of appropriate data a survey with a proper design may be used. The Rural Credit Survey Committee did indeed conduct such a survey on the basis of area sampling for the purpose of estimating the levels of interest. In a number of countries the survey method was resorted to with a view to estimating the influence that interest exerts on investment decisions. Indeed, as Robertson said neo-Keynesian thinking on the question has been determined by surveys in connection with econometric investigations. Because of the varying features of economic development overlying great geographical diversity in India, the rates of interest do not display a uniform pattern in different regions. Even in monetary and financial institutions the interest rates do not show uniformity. What the actual rates of interest are in rural areas, how they are affected by public policy, how they change in different areas and how in the same institutions the pattern of interest rates is affected by different circumstances cannot be satisfactorily analysed till reliable information becomes available to a larger extent than now. Case studies such as those proposed by the Rural Credit Survey Committee* may reveal some of the peculiarities of the interaction of various economic forces in these areas and the institutions. In Bombay, Calcutta and Madras there are three centres where the money and capital markets are relatively more developed than in the rest of the country and on the basis of the information available in these centres as well as the surveys made by the Reserve Bank with reference to the deposits, advances and investments etc. of the Commercial banks it is possible to trace the influences acting on the rates of interest in India. It is however, necessary to recognise that the organised money market plays a relatively smaller part in India than in other countries like UK and USA.

RATES OF INTEREST IN AGRICULTURE:

In general, the price paid by the agriculturist in India on his debts is very high. The money market and banking development have little effective influence in rural areas. One geographical area differs from another in credit organisation and even within the same area there may be several types of organisations. A backward region devoid of transport facilities and a highly developed region with a considerable degree of monetisation would be apt to have different types of credit systems as the Rural Credit Survey Committee has pointed out. The relations between landlords and tenants have also to be given due weight in consideration of the problems of the agricultural credit. Broadly, the credit re-

quired by the agriculturist can be classified* as (i) short term credit, (ii) medium term or livestock credit, (iii) long term or mortgage credit, and (iv) marketing credit in which would be included processing, transportation and warehousing credit. In the private system of money lenders and indigenous bankers it might happen that no clear or marked difference is made between short term or medium term and long term lending. The interest rate pattern in view of the prevalent economic conditions shows a great diversity in the rural areas. Banking is relatively more developed in urban areas. The rates of interest in these areas diverge conspicuously from those in the rural areas. Very few banks finance agriculture directly. Some of the joint-stock banks however finance agriculture indirectly by financing merchants who give advances to the small village dealers or to the agriculturists. The Rural Credit Survey Committee has pointed out that production credit granted by commercial banks was only 4 per cent of the total bank credit. The larger part of this amount was advanced towards the commercial crops only. The Committee has estimated that private credit agencies such as the money lenders, the relatives of agriculturists and traders and the landlords supplied about 93 per cent of the total amount borrowed by the cultivators.** The combined contribution of the government and the co-operatives was only about 6 per cent. As for commercial banks 1 per cent represented the part played by them in the direct financing of the cultivators. The private money lender dominates the agricultural scene, the supply of credit respectively from the professional money lender and from the agriculturist money lender nearly being 45 per cent and 25 per cent. The ascertainment of the rate of interest and the period and the amount of borrowing is by no means easy so far as money lenders and other private agents are concerned; and unless these are known it is impossible to weigh the rates of interest by the amounts borrowed at those rates and ascertain the prevalent tendencies. Borrowing at the rate of interest as high as 25 per cent is not at all infrequent in India and in spite of the money lending legislation passed in various states, the money lenders do not exercise much restraint upon themselves. Even the rates charged by the Cooperative societies are high, in some cases as high as 12½ per cent.† The high administrative costs and the scanty deposits in the cooperatives are the reasons for such high rates of interest on agricultural loans. The Reserve Bank has been not only offering financial assistance to cooperative societies at concessional rates but also liberally participating in the National Agricultural Funds to improve the system of rural credit. At present the agriculturist pays a high rate of interest on his debts and is also subject to impositions of various kinds from his creditors in the private sector. An area-study made by the Rural Credit Survey Committee§ on the basis of a classification of districts into "monetised and commercialised districts", "monetised districts" and "subsistence tracts" revealed that the rates of interest were the lowest in the monetised and commercialised districts and the highest in subsistence tracts.

RATES OF INTEREST IN THE ORGANISED MONEY MARKETS:

The call money rates, the deposit rates, the rates charged on bank advances, the rates of bazaar bills discounted by shroffs, the treasury bill rates, and the rates on first class trade bills, viz., Hundi bills, discounted by the State Bank of India are the prominent short term rates in India. The yield on the industrial debentures, and that on Government loans with a long period of maturity represent the long term rates of interest. In India preference shares with the right to participate in profits are not much common and preference share-holders derive in effect a fixed rate of dividend on their investment. The yield of the preference securities may also be taken as approximating to interest under these conditions, allowing for the fact that the risk involved in preference securities is higher than in debentures. It is in government bond however that the element of risk is the least and it is the yield of these bonds more than the yield of any other type of security that approximates to the true rate of interest. Bank rate plays an important role in the interest rate structure. It is the rate at which advances are made available to the banking system ultimately. The bank rate is relatively more stable than other rates and has the economic function of equilibrating the short term rate with the long term rates and vice versa. The rates on Reserve Bank advances against treasury bills and promissory notes under the bill market scheme are closely related to the Bank rate. The assistance given by the Reserve Bank to the Co-operative agencies charged at a lower rate than the Bank rate is a matter of concession with a view to improving those institutions.

A series of short term rates are implied a given long term rate of interest. The long term rate may also be viewed as emerging from the short term rates because of the effect of speculation. A short term loan often raised to meet temporary capital requirements. A long term loan on the other hand is used to finance capital equipment, purchase of land etc. This distinction is however purely empirical. The rate of interest is closely connected with the time element involved in loan. The essence of the time element, denoted by the concept of "duration", is not revealed by the maturity of the loan alone.* Maturity merely indicates the last date when the loan is paid off; it does not refer to the other payments on the loan and the dates on which they are made. According to F. R. Macaulay the duration of the bond may be considered function of the separate payments of which the bond may be said to comprise. The duration of any bond involving more than one future payment may be assumed to be a sort of a weighted average of the maturities of the separate payments. The concept of duration throws light on the fluctuations of bond yield in the actual market and a mathematical expression for it can also be found. In weight the maturities of the separate payments represent values of the various payments or have to be chosen, as otherwise absurd results may be obtained.** The theoretical justification for weighting by present values exclusively is however difficult to find. It is valid only in theory but also empirically that rate of interest are positively correlated with time element involved in a loan. Speculation forces however might upset the correlation bringing about disharmony in the interest rate structure.

Conference

In his inaugural address to the 2. Seminar on Planning, the Minister has placed the problem in its proper perspective. The background of objections to the background of objections. Both the supporters and the critics, who are now actively playing the ideological game, would do well to bear in mind that the field of choice in the matter of setting up of targets for the implementation of policy is not limited. The rate of change of population sets the inalterable lower limit to the rate of growth, unless we are prepared for a progressive decline in the standard of living. Then there is the practical task of the mutual adjustment of targets and resources. The targets set should be as high as to facilitate the mobilisation of resources.

In a country where the vast majority of the population lives on a margin of subsistence, Planning if it is to be sustained by the enthusiastic support of the people, must be designed to produce a steady and tangible improvement in the living conditions of masses. It is in this last respect that the First and Second Plans, though sound enough in principle, have found wanting. Conception of investment in pro-

jects which take long to yield results, can lead to a depression in living standards in the interval as has happened in the case of the Second Plan. The most striking indication of this trend is the addition to the already heavy backlog of unemployment. The growth in the number of beggars and destitutes in the cities is another visible indication of the urgency of the problem.

If these basic factors are kept in mind in all discussions on the Third Plan, it is possible that differences of approach, so long as they are not inspired by irreconcilable opposition to the Socialist pattern, whether open or camouflaged, can be reconciled on the basis of practical programmes. In this respect it is very heartening to note that the Prime Minister has emphasised the importance of a practical and flexible approach which keeps in view at all times the importance of carrying out the programmes in a way which will be broadly acceptable to the people.

The Seminar itself is a get-together of economists with leaders responsible for the administration of the country and organisation of the party. It is eminently fitted for the dual task set before it by the Prime Minister, namely, objective appraisal of the economic situation and prospects and adjustment of the techniques of planning to the limitations imposed by immediate circumstances.

Taxes and the Plan

In his reply to the address presented by the Coimbatore Indian Chamber of Commerce, Mr Morarji Desai had something to say, though in general terms, both about the Third Plan and about taxes. While much about targets and the resources available to meet them remains uncertain, it is also clear that while mistakes that have been made in the past should serve as a warning, they should not be allowed to grow into an inhibition against taking reasonable risks for the economic advancement of the country.

It is also equally clear that a rate of advance that can be regarded as satisfactory will call for the maximum effort and mobilisation of resources. Though he did not mention any figure of additional taxation, the Finance Minister almost suggested that it was not fair on the part of those who now pay the lion's share of taxes to grudge paying more or to ask for redistribution of the burden. In this connexion the Union Minister referred to the heavy burden of indirect taxes and, in the case of agriculturists, direct taxes too, on the masses of the population living below the margin of subsistence. While all this does not afford a firm basis for speculating on the future pattern of taxation, at any rate it can be regarded as

a reliable pointer to the Finance Minister's reaction to proposals to increase the share of indirect taxes.

While Mr Desai was not willing to hold out any hope of relief in direct taxes, he was prepared to do what was possible to eliminate difficulties attending the change in the pattern of corporate taxes introduced in the last budget. He was also for rationalising the system of indirect taxes by substituting Central Excise for State Sales Tax, wherever, the State Governments were willing to cooperate.

Swords into Ploughshares

Of late there are several indications of furious rethinking, at policy making level, on the question of US foreign aid, which, in turn, may lead to a significant shift in the pattern of the aid programme. So far military assistance, in the form of supply of the "hardware of war" and defence support grants to enable the recipient countries to meet the cost of the establishments, has constituted over two thirds of the total aid programme. The utility of military assistance of this magnitude has increasingly come under critical scrutiny. While the positive addition to defensive strength that is aimed at is a dubious proposition, it has become clear that maintenance of top-heavy military establishments imposes a severe strain on the economies of underdeveloped countries and distorts their pattern of development. The feeling is apparently gaining ground that reduction of the military assistance, which mostly goes to waste in the form of rusting equipment, and diversion of the funds to economic assistance will be necessary to meet the Soviet competition in the field of foreign assistance.

A fortnight ago Senator Mansfield, assistant Democratic party leader in the Senate and a member of its Foreign Relations Committee, called for an end of all United States foreign aid within three years. Clarifying his point, he observed that he favoured continuing to give loans for economic development to foreign countries, but wanted to end grants for economic assistance and defence equipment. More recently the House Foreign Relations Committee has decided to cut \$367 million out of \$2.8 billion asked for military aid and to add \$100 million to the \$700 million asked for the Development Loan Fund.

The problem has been brought to focus by the examination of military assistance to Pakistan and its impact on that country's economic development as well as on neighbouring non-Communist countries. In his testimony before the Senate Foreign Relations Committee, Defence Secretary McElroy was obliged to concede that Pakistan was maintaining a defence es-

tablishment that was larger than considered necessary by the US Chief of Staff. A Presidential Committee studying the military aid programme was particularly asked to find out if the Pak army build-up was aimed against Soviet Union or India. Mr William Draper, Chairman of the Committee, told the House of Representatives that the committee had found that "some part of Pakistan's fears had to do with India, and conversely, the same is true of India". It is also being more clearly realised that an outside military establishment, even if it is initially built up with free equipment and grants, hampers economic development by diverting funds towards military expenditure for purposes of maintenance.

The realisation of the economic and other consequences of military assistance has provided the impetus for the proposal to amend the Mutual Security Act so that military aid in future will be more selective. In particular, the amendments seek to impose safeguards against strains in the internal economy or in the relations with neighbouring non-Communist countries.

Against the larger context of world affairs, the move away from swords to ploughshares, even in a very limited sphere, is an encouraging pointer. It also gives added significance to Mr Adlai Stevenson's call to the beneficiaries of the Marshall Plan to club with Canada and the United States in extending similar help to India.

Interest Rates Move Downward

THE busy season months have now passed; the inter-bank call money rate, which had been firmly sustained owing to pressure experienced by the banking system as a result of an expansion in Advances at a pace faster than the increase in their Deposit resources, last week showed perceptible signs of decline. Conditions are comfortable, borrowers over, inter-bank call money is at $3\frac{1}{2}$ per cent, with stray transactions being reported at $3\frac{3}{4}$ per cent. The slack season has, as we showed last week, started making headway and it is to be anticipated that, except for the interruption which will occur during the Central Government and State Government borrowing programmes, money will tend generally to be easy. Various consequences arising from the money market easiness and the decline in short-term money rates may briefly be discussed.

In the first place, the gilt-edged market should display a show of strength. During the last week, there was a not unappreciable improvement in the prices of selected Government securities, the average rate of allotment at the last week's public auction of Treasury Bills also moved down. Further decline in short term money rates and further improvement in gilt-edged prices may be confidently expected.

In the second place, this will constitute auto-grooming of the money market for the Government's borrowing programme during 1959-60. The easiness now prevailing and the greater easiness in prospect should both enable the new loan being on much more favourable terms and conditions to Government. As such, we may have to make some revision in the kind of new loan borrowing programme that 1959-60 should witness.

In the third place, Scheduled Banks are increasingly reluctant to bid for high cost Deposits at a time when there is monetary slackness. Competition for Deposits should abate considerably, and this is likely to be coupled with a continuing accretion to bank Deposits and a continued decline in Scheduled Bank Advances.

In the fourth place, the current easiness in the money market and the prospect of sustained easiness for another six months or so should impel the Indian Banks Association expeditiously to revise downward the maxima which, in terms of the inter-bank agreement, member banks may pay on their Deposits.

It is a very welcome sign that the 1959 slack season is making its presence so soon and so considerably felt.

Foreign Balances : Below 200 Crores

FOR the fourth week in succession, as the returns of the Reserve Bank for May 29 show, there has been contraction in Active Note circulation. Strangely, in each of the last three weeks, the decline has been around Rs 13 crores. In the latest week, Notes in circulation are Rs 13.69 crores lower at Rs 1738.65 crores. Rupee Coin has also returned from circulation for Rs 0.35 crores. Consequently, the Reserve Bank's cash in the till has moved up by Rs 14.04 crores to Rs 32.87 crores.

In the Banking Department, with Investments slightly lower by Rs 0.47 crores at Rs 288.70 crores, there is no indication of deficit financing. However, the balances of the Central Government have improved considerably by Rs 17.34 crores to Rs 71.74 crores. Although this might be the period of the year during which Government expenditures may be at a slightly lower level, the size of the improvement in the Centre's Deposits would strongly suggest that recourse has been had to ad hoc Treasury Bills. Some light in this regard is available in the return of the State Bank for May 29, wherein it is to be noted that Rs 10 crores of securities have been purchased. This purchase has obviously been effected from the Reserve Bank. Hence, the Reserve Bank's holdings of Rupee Securities or of Investments should have declined by such a figure. Since no such decline, in fact, has been registered, it is legitimate for us to conclude that the sale of securities by the Reserve Bank has been offset by the institution by Government of deficit financing for like amount. This would also explain the considerable accretion to the balances of the Centre. In this context, we may also note that Deposits of State Governments have declined by Rs 1.83 crores to Rs 15.96 crores; this being additional to an increase of Rs 1.48 crores to Rs 34.10 crores in their indebtedness. Some element of inter-governmental transactions,

with the Centre being the recipient, is not to be ruled out.

While the contraction in Active Note circulation offers evidence of the smooth progress of the 1959 slack season, testimony in this regard is also available in the figures relating to Scheduled Banks. For, although the Reserve Balances of member banks have declined by Rs 6.48 crores to Rs 73.85 crores—with the State Bank accounting for Rs 2 crores odd of this—it is significant that the Other Loans and Advances of the Reserve Bank have also moved down by Rs 5.70 crores to Rs 61.15 crores; and none of this latter fall is attributable to the State Bank. Therefore, it may be inferred that the decline in borrowings of other Scheduled Banks was greater than the drawing down by them of their Reserve Balances. The low level of Scheduled Bank borrowings is indicated by the fact that advances against usance bills of the Reserve Bank have been practically halved to Rs 3.33 crores.

Lastly, Balances Held Abroad, which, in conjunction with Foreign Securities in the Issue Department, had stubbornly remained above the Rs 200 crores mark, have declined in the latest week by Rs 3.29 crores to Rs 21.00 crores, so that the Reserve Bank's holdings in the two departments have fallen to Rs 199.01 crores.

As anticipated in this column last week, the State Bank, in its return for May 29, reports a fresh increase of Rs 10.28 crores to Rs 302.42 crores in gilt-edged investments. For this purpose, Other Assets were, in a manner of speaking, drawn down by Rs 4.03 crores. Then, the State Bank experienced an augmentation to its resources, firstly, by an increase of Rs 2.89 crores to Rs 529.94 crores in Deposits and, secondly, by a decline of Rs 1.34 crores to Rs 198.15 crores in Advances. As an end result, cash in hand and with the Reserve Bank is marked down by Rs 2.01 crores to Rs 26.46 crores.

Again as anticipated in this column, the Deposits of Scheduled Banks, as at May 22, have, in rising by Rs 13.54 crores to Rs 1752.69 crores, overtaken Active Note circulation. It may be recalled that Deposits had in this wise drawn ahead of Active Note circulation in the 1958 slack season; but the expansion in currency circulation during the 1958-59 busy season outpaced accretions to Deposits, as a consequence of which Active Note circulation again forged ahead of Bank Deposits. Now, with a considerable improvement in the new Deposits of Scheduled Banks and with the slack season causing a sustained decline in Active Note circulation, Bank Deposits, we repeat, have edged past Active Notes. We may also state that, of the rise of Rs 13.54 crores during the week, the State Bank accounts for Rs 5.77 crores. On the other hand, the total of Advances is, unexpectedly in our view at least, not contracting at a fast

enough pace; during the week ended May 22, for example, the total of Advances is lower by Rs 2.20 crores, with the State Bank being fully responsible for this. Nevertheless, the improvement in resources has enabled Scheduled Banks to reduce their indebtedness to the Reserve Bank by Rs 8.39 crores, of which Rs 5 crores is on account of the State Bank. The other Scheduled Banks have, meantime, cut their borrowings from the State Bank by Rs 1.34 crores to Rs 8.07 crores. There is a fractional change in Investments and, in the result, Cash Balances are marked higher by Rs 7.41 crores at Rs 168.53 crores, the State Bank's share being Rs 2 crores odd.

Thus, the next return of Scheduled Banks will presumably bear further evidence of the progress of the 1959 slack season. Deposits should again be higher, Advances should decline, borrowings from the Reserve Bank should be sizably lower—but Cash Balances need not necessarily rise. This last is due to the fact that the fresh investments in gilt-edged of the State Bank and the considerable reduction in the indebtedness of the other Scheduled Banks would presumably have been enabled by a drawing down of Cash Balances.

Dollar Imports

By Paul Einzig

CONTROLS on the import of many consumer goods from the dollar area are to be removed. The announcement of this decision did not come as a surprise, for during recent months the Government showed great determination in resisting pressure against further concessions in this direction. Those opposed to such concession insisted that they should not assume the form of unilateral liberalisation so long as the rising tide of economic nationalism continues to prevail in the United States. It was pointed out that recent unilateral concessions in favour of American exporters were not appreciated. They were followed by the rejection of several important British tenders in the United States in spite of the lower prices they quoted and that the Government should seek an assurance against the recurrence of such incidents before making further concessions.

The Government was not prepared to give any such undertaking, even though it repeatedly reaffirmed its determination to insist on fair treatment of British tenders. Some of the official answers to Parliamentary questions on the subject implied the possibility of further concessions in the near future.

The majority of the items which can now be imported from the dollar area have been on the free list for Western Europe. America's meat will be, therefore, Western Europe's poison. Henceforth the Western European exporters will have to face American as well as British competition in the British markets.

But the principal consideration that must have influenced the deci-

sion was the desire to contribute towards relieving the pressure on dollar due to the unfavourable change in the balance of payments of the United States. In British official circles the utmost importance is attached to the maintenance of the strength of the dollar, as it is considered to be one of the foundations of the free world's superior economic strength in its rivalry with Communist countries. It is considered to be worth while to make some sacrifice by increasing dollar imports for the sake of contributing towards the strengthening of the dollar.

Many of the household appliances, radio and television sets, gramophone records, recording tape &c. will be competing against the corresponding British goods, and in some instances at any rate the American prices are distinctly lower. So in addition to its effect on the balance of payments with the dollar area, the concessions are likely to affect employment in some British industries, at a time when unemployment is still considered to be abnormally high. The decision was taken on the assumption that in return the United States would abstain from increasing the visible and invisible tariff walls against British goods. Should there be such increase, or should there be further evidence of discrimination against British tenders, the Government might find it difficult to resist pressure in favour of reversing its policy.

The liberalisation of dollar import had a favourable reception in the Press. It is interpreted as an indication of the Government's confidence in the strength of sterling and in the prospects of the British economic recovery. Obviously the Government feels it can afford to give away some dollars through agreeing to an increase in American and Canadian imports to Britain. Even a few months ago this would have been considered a very bold move. Now it is felt that the recent improvement of the gold reserve position warrants confidence based on strength.

As for the effect of the concessions on the domestic industrial position, there too the recent improvements and the prospects of further improvements justify a certain degree of optimism. An increase in dollar imports is not likely to mean an increase in British unemployment. It will probably mean a slowing down of the pace at which unemployment will continue to decline. A stage has not yet been reached in British economic recovery at which the Government would begin to think in terms of applying the brake to prevent inflation. But a moderate increase in imports, might not be considered to be an unqualified disadvantage, if it means a decline in prices. And after all, American goods will only be imported if they are cheaper than the corresponding British products. This means that British firms may feel compelled to lower some of their prices in order to compete with American imports. As a result there may well be a decline in the cost of living index which has been stable for the past six months; or at any rate American competition might prevent an increase which would have taken place otherwise.

Such a decline would go some way towards offsetting the inflationary effect of the business recovery. It would remove the need for applying the brake which might otherwise have to be applied in due course. In April the proportion of the unemployed declined to 2.2 per cent. There is a widely held theory that when the proportion declines below 2 per cent the authorities would feel that the time has come for taking steps to slow down further expansion of production, in order to avoid the return of inflationary boom.

Yet another aspect of the freeing

of dollar imports is that it is expected to reduce the tendency for American industrial interests to seek to buy up British firms, with the object of establishing themselves in British markets. American take-over bids of British industrial firms have been looked upon with mixed feelings in Britain. The Government rightly refused to yield to preserve in favour of measures to prevent such take-overs, but it promised to keep a watchful eye on the situation which has been causing widespread uneasiness. Since most American industries will now have access to the British market,

one of the main reasons for take-over bids will cease to operate. Admittedly this will tend to reduce the dollar influx on capital account. But such an influx is regarded in any case as because the dividends on the equities acquired by American firms will become a permanent charge on the British balance of payments.

It is necessary to point out in conclusion that the concessions were yet another manifestation of the free-trade mentality which is deeply ingrained in the British character.

The wheel of the wagon is broken

How many wheels and axles break during a year in each village?

We don't know.

But we do know that there are 5,58,089 villages in India.

And that each wheel takes time to repair. And money.

For want of a nail, the battle was lost.

Faulty road surfaces damage motor transport too.

And that means heavier repair charges—an estimated Rs. 10 crores each year.

Good roads mean a direct reduction in the cost of vehicle operation.

And they bring indirect benefits, expressed in terms of a higher standard of living.

Road construction demands topmost priority.

That's why everything to do with roads is so important.

Bitumen for example.

One of the better road-building materials.

Inexpensive. Easy to handle.

Long-lasting. Hard-wearing.

Supplied by Burmah-Shell.

Burmah-Shell Bitumen is backed by a technical service, staffed by skilled engineers, whose job it is to assist in the creation of roads. Good roads. Cheaper roads. THE BULK METHOD OF DELIVERY, RECENTLY INTRODUCED BY BURMAH-SHELL, NOT ONLY ELIMINATES DRUMS AND SAVES STEEL, BUT ALSO LENDS ITSELF TO MECHANIZED ROAD CONSTRUCTION. REMEMBER, BULK BITUMEN IS MUCH CHEAPER IN INITIAL COST.

BURMAH-SHELL BITUMEN FOR BETTER ROADS

2,000 tons steel railway sleepers available for export suitable reuse—
Specifications on request metallurgical products of all kinds.

WORLD OF JUTE

Jute Goods Firm: Raw Jute Subdued

THE Jute Goods market has continued to display a firmer tendency with prices forging ahead from last levels under the influence of various factors. Although the actual business done is reported to be small, there appears to be a fair amount of overseas enquiries, both for hessians and sackings.

First, there are rumours of a fresh Government tender for B. Twills. Secondly, some business is reported done in Hy. Cees with Indonesia and in Cornsacks with Australia. Thirdly, a tender has been received from Burma, although the result is awaited with much interest in view of the fact that Pakistan was able to secure a substantial part of the recent Burmese tender. Fourthly, there are reports of the Egyptian Government having invited a further tender for 8,000 bales for June-July delivery. Above all, good shipments made last month coupled with the prospects of broadening overseas enquiry in the near future have aided the bullish trend in the market.

Category-wise, the outlook for Hessians is considered to be bright in view of their sound statistical position, although enquiries received from overseas buyers have been on a small scale. It cannot be denied that hessians have been faring well all along the season. The rate of offtake is keeping as fast as output is being stepped up.

With growing economic activity, US demand for hessians is expected to increase rapidly. Again, there are reports of improved demand prospects from other hessian markets, notably the Argentine. Although the foreign exchange shortage there does not appear to have eased, the need to relieve the situation through increased export efforts should make retention of the present import duty on hessians indefensible. As Argentina exports mainly agricultural commodities many of which have given excess production this season, it is quite possible that the Indian jute industry will, in due course, be asked to supply that country's normal requirement of 200 million yards of hessians.

Although the prospects for Sackings are clouded by the possibility of greater competition from Pakistan due to her increasing output and exports, there is still a belief that the demand for this category

may improve soon. This belief is based on the reports that the jute mills in Pakistan are fully booked for some months to come and, as a result, some orders from Australia and Burma may be diverted to India.

Meanwhile, difference of opinion existed between the contract committee of the IJMA and sellers' associations over some clauses of the new Transferable Specific Delivery Contracts. TSDC in raw jute and jute goods were exempted from regulation initially for a period of six months and subsequently for a further period of eight months. The exemption was granted to enable the East India Jute & Hessian Exchange to complete the necessary preliminaries in connection with the trading in such contracts in consultation with the different interests concerned and in accordance with the directions of the Forward Markets Commission.

Now, these necessary preliminaries have been completed. The Government of India have, therefore, decided to terminate the existing exemption and to bring TSDC in raw jute and jute goods also within the purview of Section 15 of the Forward Contracts (Regulation) Contract 1952 with effect from 1st June 1959. Such contracts will hereafter be illegal, unless they are entered into between members or with or through a member of the EIJHE, Calcutta.

Thanks to the reports of widespread rains in the jute-growing areas, conditions in the Raw Jute section have turned quiet. Sellers, who remained reserved so long, have become anxious for business. But, mills are not showing much interest in view of their comfortable stock position and on expectation of a further fall in prices in the coming weeks. Although prices have eased slightly on this account, the undertone remains steady in sympathy with the firmer trend of manufactured goods prices. Assam Bottoms old crop was done at Rs 20.50 per maund for June-July delivery and the new crop at Rs 22 for August-September delivery.

Following were the price trends:

WORLD OF TEA

Growing Competition

WHILE the output of Tea in India is increasing, the prospects for exploring new markets for absorption of the surplus tea are not bright. There is ample evidence to show that tea is now having a buyers' market. The whole position should be judged from a long-term point of view, especially when the trend of world output is upward and consumption is not keeping pace with it.

The rate of expansion of the tea acreage in Africa continues apace and it is reported that 4,000 acres have come under tea annually since the war-years, bringing the present total up some 100,000 acres, while half of this acreage will be planted out in the next 10 years. It is estimated that, by 1965, Tanganyika and Kenya will produce 180 million pounds of tea annually. But, it is not on quantity alone that African producers have concentrated. With the passing of each year, the quality of the tea produced becomes better.

Thus, the competition offered to teas of other countries of origin, previously affecting only Common teas, is now spreading to affect teas of higher qualities. This is clearly indicated by the fact that, during last year, UK buyers paid 2d per pound more for African teas than in 1957. Apart from the result of expansion in acreage, the rise in African production will be more rapid now by virtue of the fact that much of the tea planted out several years ago is only just coming into bearing.

Production in Africa rose to about 80 million pounds in the 1958-59 season from 73.2 million pounds in the previous season. In the first quarter of the current year, production in British East Africa is placed at 24.7 million pounds against 20.1 million pounds in the corresponding period of last year.

The Ceylon Government have also taken measures to help Common teas, which face keen competition in the international markets by reducing the burden of duty on them and, at the same time, to encourage more and more people to grow quality teas. The new scheme of duty on tea exports from Ceylon will come into force from June 1, it has replaced the present flat rate of 70 cents per pound levied on teas exported by a uniform rate of 35 cents per pound with an additional ad valorem levy on quality teas. Teas fetching up to Rs 1.85 cents per pound in Colombo auctions will be exempt from the additional levy; but those

priced higher will pay, by way of levy, 50 per cent of the excess levied, subject to a maximum of 70 cents.

Meanwhile, in the Export Sale "B" of Darjeeling teas held this week, offerings were 11,104 packages. Quality was somewhat disappointing and showed a decline against in Sale "A". There was only a fair demand, which eased as the sale progressed and there were numerous withdrawals with prices generally easier for all grades.

In the Internal Sale, offerings were 21,156 packages of Dusts for which there was a fair demand and the market eased towards the close. Orthodox teas were sold at up to 6 nP per pound below last rates, while the smaller types met with poor demand. The few leg-cut Doars, on offer, followed the general trend and were 4 to 6 nP easier. Medium CTC Dusts were irregular and were generally upto 10 nP easier; and there were some withdrawals in this category. There were very few of the best CTC teas on offer this week and these were virtually neglected. Following rates quoted:—Medium Doars Dust Rs 1.68 to Rs 1.72; Medium Assam Grainy Dust Rs 1.64 to Rs 1.70 Medium Assam CTC Dust Rs 1.80 to Rs 2.05 and Best CTC Assam Dust unquotable.

In the Colombo market, 3 1/2 lakh pounds of Dusts were offered for internal consumption. Against fair demand at easier rates. Low Medium were 5 to 10 nP per pound easier, while better sorts were 15 nP to 20 nP easier.

This week's auction, held in Colombo, was the first at which the ad valorem sales tax became applicable in conjunction with the reduction in duty from 70 to 35 cents per pound. Quality showed a further decline and good demand was shown for higher and medium-grown sorts. Demand waned as the sale progressed and prices declined. Consequently, the benefit of the 35 cents reduction in the duty was largely discounted by the inferior quality and the weaker demand. Demand for low-grown teas was also quieter; but prices of these sorts advanced by about 20 to 25 cents per pound as the result of the cut in duty. Offerings totalled 6,998,186 pounds.

Tea exports from Indonesia declined to 76.12 million lbs last year from 78.54 million pounds in the previous year. Though the shortfall in exports was hardly 2.5 million pounds, the destination-wise shipments showed marked variations.

In London, tea auctions were resumed with offerings totalling 71,147 packages. However, the previous week's respite failed to produce any accumulated demand. Buyers were more selective than ever with those teas that wanted selling at fully steady to sometimes dearer rates, the balance moving irregularly easier. A small quantity of new season's Doars teas attracted interest and were sold above valuations.

Indian Finance

June 6, 1959

BY the time that the Chagla Commission, the Vivian Bose Board of Enquiry, the Union Public Services Commission and the Government had got through their several appreciations of transactions that resulted in the purchase by the Life Insurance Corporation of large parcels of shares in companies controlled by Mr Haridas Mundhra, all that had been proved was that a crime had been committed. Many persons have been suspected, many motives have been adduced. But, for the life of me, I am unable, as Government have been unable, to fix the blame squarely or to search out the motive accurately. We have, thus, a crime without criminal or motive, a meaningless exercise in illegality. This apparently is because each of the entities that sat in judgment has arrived at different conclusions, and what we have to deal with is a welter of confusion. What is more, in going through the published summary of the Vivian Bose Report, as well as the text of the advice of the UPSC, I find myself harking back to the views that I held when first the Mundhra affair began to be talked about. Frankly, I see little reason now to change the conclusions that I had then come to.

We have, in point of time, to start with the Chagla Commission, that is, in our study of the investigations conducted in the matter of the Mundhra transactions. What happened before, in Parliament, is of importance, but I shall be saving for the last my consideration of the significance of what was said on the floor of the Parliament in December 1957. Consequent upon the debate in the Lok Sabha, Government appointed Mr Justice M. C. Chagla as a one-man Commission to enquire into and report on these transactions. After examining a host of witnesses, the Chagla Commission submitted their report to Government in February 1958, the matter being discussed later in the month in both Houses of Parliament. Whether as relating to the evidence of the chief characters in this LIC drama, or in reference to the testimony borne by characters who belonged to the periphery of this story, one formed the inevitable impression at the time that what was said was by no means "the truth, the whole truth and nothing but the truth". Now, Mr Chagla was in the unenviable position of passing judgment on the basis of incomplete evidence. The Chagla Commission found to the effect that the transaction was not entered into in accordance with business principles and was also opposed to propriety on several grounds. Mr Chagla neither imputed motive nor searched for the culprit. How-

ever, the Chagla Commission came to certain conclusions which in effect are assumptions. For example, Mr Chagla did not accept Mr H. M. Patel's contention that the Mundhra shares were operating as a drag on the Calcutta stock exchange; and that the purchase of these shares by the LIC would be a solution has been described by him as unsound. Hence, again without apportioning blame, Mr Chagla ended up by saying that the object of the transaction was to help Mr Mundhra. (This, perhaps, might be considered as imputation of motive; but, of this, more later).

Government then appointed a Board of Enquiry in May with Mr Justice Vivian Bose as Chairman and Mr Sukumar Sen and Mr W. R. Sathianadhan as members. This was consequent upon charges being filed against Mr Patel and Mr G. R. Kamat, from whom, by that time, explanations had been received. In brief terms, Mr Chagla conducted a coroner's inquest to determine whether a crime had been committed. Crime there was, he said, and the next step was for the most likely suspects to undergo the rigours of a trial, although all evidence was circumstantial. It is the Board of Enquiry which was asked to determine whether, in fact, there was sufficient evidence to pass the verdict of guilty upon one or the other or both the suspects. The Board submitted its report in September 1958. It came to the finding that there were sufficient grounds for holding both the suspects to be guilty. It would be useful, at this stage, briefly to analyse the logic of the findings of the Vivian Bose Board of Enquiry.

Mr Patel is deemed to be guilty of abuse of authority and negligence, Mr Kamat guilty of failing to discharge his duties with due care and caution—this is the Board's finding. In reaching such a conclusion, the Board rejected the defence's contention that the transactions were entered into in the light of the Mundhra drag and in pursuance of Government's general directive to support the stock market. The Board has rejected Mr Patel's plea that he acted under the direction and with the approval of the then Finance Minister, Mr T. T. Krishnamachari.

It is fantastic to argue that the fact that Mr Mundhra did give some money to the Congress party means immediately that Government felt obliged to help him out—or that they did so. It is just as fantastic to suggest that Mr Mundhra did Government a favour by keeping the Kanpur Mills open, and that Government in turn, when they could, helped out Mr Mundhra. So, this is a far fetched motive that the Bose Board has contrived to find.

The Board then considers the charges of which Mr Patel is found guilty. I do not have the space to list them here (as it is, I am trespassing upon Gateway Gossip), but two points need to be made. Firstly, the approved investment policy of the Corporation—for my part, I do not know of the existence of such approved investment policy—has been defined by the Board as being based on the following considerations: "Interests of the policyholders as laid down in the law, the interests of national development as envisaged in the Five-Year Plan, and the investments should be in 'blue ships'". The Mundhra transaction is stated to contravene this investment policy. Secondly, the Board does not believe Mr Patel's explanation of having reported to his Minister. In the case of Mr Kamat, the Board says that he was "over-awed and frightened by Mr Patel". However, Mr Kamat is not thought to have gone into the transaction with a view to helping Mr Mundhra. The gravamen of the charge against Mr Kamat is that, in fixing the prices, he did not exercise due care and caution and that he allowed his judgment to be influenced by Mr Patel.

CALCUTTA BOMBAY MADRAS NEW DELHI

I shall shortly have something to say about Mr Krishnamachari's part in the LIC affair. What we have now to consider is whether the Vivian Bose Board could reasonably conclude that there was sufficient evidence pointing to the culpability of Mr Patel and Mr Kamat in regard to the charges preferred against them. Because I mainly agree with the findings of the UPSC, I shall let their arguments be equivalent to my view point. The most important conclusion of the UPSC is in regard to the Mundhra drag. According to the

UPSC, "while it could possibly have been argued that there existed no immediate danger to the Calcutta stock exchange arising from the Mundhra drag, the officers concerned were fully justified in coming to the conclusion that the threat to the market had not passed". Another basic issue on which the UPSC differ from the Chagla Commission and the Vivian Bose Board is in regard to the benefit derived by Mr Mundhra, which, they say, "was an incidental consequence inherent in the decision, but by no means its main

purpose". Another point on which the UPSC differ from the two earlier investigating bodies is in regard to whether or not the formal approval of the Finance Minister was obtained by Mr Patel. The UPSC have asserted that Mr Patel had "reasonable grounds for honestly believing that he had the Minister's authority for the transaction". It is intriguing to note, incidentally, that the Vivian Bose Board has contradicted itself. On the one hand, the purpose of the transaction is held to be to help Mr Mundhra; on the other hand,

Mr Krishnamachari is cleared in the sense that Mr Patel did not obtain his approval for the transaction. It would follow, logically, that Mr Patel would have been responsible for a politically inspired act of assistance to Mr Mundhra; and this is hardly tenable, since, if the help to Mr Mundhra was in the nature of quid pro quo, the impetus must have been Government-derived. It is in similar strain that the UPSC have disposed of Mr Patel's part or responsibility in the matter. The UPSC accept as fact the existence of the Mundhra drag; they accept as plausible the honest belief by Mr Patel that he had kept the Finance Minister fully informed. And, therefore, while answering individually the various criticisms of the Vivian Bose Board, they clear Mr Patel of all charges, though they have suggested that Mr Kamat may suffer the penalty of censure because of proved negligence in the fixing of prices.

Mr J. Sivashanmugam Pillai has given a minute of dissent to the report of the UPSC. He feels that sufficient proof has been adduced by the Vivian Bose Board squarely to fix the blame on Mr Patel. With copious extracts from the Vivian Bose Report, he seeks to prove the case against Mr Patel. It may thus be stated that the reasons for holding Mr Patel guilty are much the same, in the indictment of the Vivian Bose Board, on the one hand, and of Mr Pillai, on the other.

We come, finally, to the Government's decision. The Government resolution confirms that they accept the Chagla Commission's finding that the transaction was not in accordance with business principles and opposed to propriety. As far as the Mundhra drag in the market is concerned, Government have avoided committing themselves by pointing out there may be difference of opinion, but they have gone on to stress that due regard should be paid to whether or not Mr Patel "genuinely and bona fide felt that his appreciation of the situation was correct and that the remedy proposed by him was required in the public interest". As for the charge of quid pro quo, Government consider that there is no possible justification for such a suggestion regarding the probable motive. Then, in respect of the role of Mr Krishnamachari, the Government resolution states that, from the evidence, the initiative clearly "did not emanate from the Finance Minister". Secondly, in regard to the transaction, "only the constitutional responsibility of the Minister was attracted and as a consequence he resigned". In such a light, Mr Patel is exonerated, the UPSC advice in this regard being accepted by Government. Similarly, the penalty of censure is being imposed on Mr Kamat in line with the UPSC recommendation.

Indian Finance

June 6, 1959

In the way of concluding remarks, the Government resolution deplores the fact that the Vivian Bose Board of Enquiry made certain observations about individuals who had no opportunity to reply, before the Board, to the criticism levelled against them. Furthermore, it is not at all certain that it was within the competence of the Vivian Bose Board of Enquiry to have sat in judgment over any individuals other than those arraigned before it.

I think that is more than enough about the published documents on the LIC affair. As it is, the situation is sufficiently confused and complexing. One investigating body finds a man guilty, the other exonerates him. One says there was a drag in the Calcutta market, the other says there was not. One says that the intention was primarily to help Mr Mundhra, the other denies that such is the case. One says the formal approval of the Finance Minister was not obtained, the other holds that Mr Patel could honestly believe that he had fully apprised the Finance Minister. Where do you go from there? The crime, the fact of the Mundhra transaction having been improper, is proved. But there are apparently no culprits. Mr Krishnamachari is cleared, since all evidence shows that the initiative for the transaction did not come from him. Mr Patel is cleared because the UPSC have held, and Government have agreed, that he was in no sense guilty of abuse of authority. Mr Kamat alone is apparently to be some sort of sacrificial goat, since he is held not to have exercised due care in the fixing of prices. But all this is overlooking the main issue. We have to find the motive, and then only can we apprehend the criminal. If the Chagla Commission's report, if the report of the Vivian Bose Board of Enquiry and if the advice of the Union Public Services Commission are all inadequate, it is because none of these bodies has sufficiently gone into this matter of motive. I would like to try to solve this case, as far as it lies in my ability.

We may at once discount all possible political motivation for the transaction, since any imputation of a quid pro quo act by Government is to be ruled out. So, perhaps, the intention was to help out Mr Mundhra. Was this the case? The facts would seem to be that, in June 1957 and in the immediate months preceding, the Calcutta stock exchange was not in very good form. This is partly because of the mid-May Budget of the Finance Minister with its shock for the stock exchanges. But in Calcutta, it was the talk of the town that Mr Mundhra was in serious difficulties. That Mr Mundhra was in financial embarrassment, there can be no doubt. And it is also a fact widely known among Calcutta stock exchange interests that Mr Mundhra sought

to alleviate his position by borrowing against shares. The lenders in such case, or at least a specific set of them, were brokers on the Calcutta stock exchange. There were what are known as Badla transactions, whereby Mr Mundhra sold shares for spot delivery to these brokers, at the same time entering into a forward contract for the re-purchase of the shares six months thence. It was around June that matters came to a head, because it was known, again, that Mr Mundhra would not be honouring his forward contract to re-purchase shares. It is also a fact that, if the brokers had had no alternative, these Mundhra shares held by them would have been dumped in the market. It is in this sense that the Mundhra shares were a drag in the Calcutta stock exchange. So, there was a threatening crisis in Lyons Range. A landslide in share values would have affected adversely the interests of the Life Insurance Corporation as the largest holder of industrial shares in the country. The motive, therefore, could well have been to eliminate the Mundhra drag in the Calcutta market lest a landslide occurred. Now, as to proof whether there was a drag. The index number for variable dividend industrial securities fell from 113.7 (base: 1949-50) in January 1957 to 102.6 in June 1957. Thereafter, almost in every month, for a period of many months the index number improved steadily. Of course, I grant that factors other than the removal of the Mundhra drag were responsible for this more cheerful behaviour of the stock exchanges. But it is not at all an unfair assumption that it was the removal of the Mundhra drag which enabled such recovery.

We come, next, to the question of whether or not Mr Mundhra was sought to be immediately benefited. True, some of the share purchases were from Mr Mundhra direct. But Mr Mundhra himself did not really have an embarrassment, in the sense that he would not have otherwise purchased these shares from brokers. Then, this is not the least embarrassment being experienced by Mr Mundhra at that time, what with company law difficulties, etc., that he was embroiled in. So, it is perfectly reasonable to argue that, if any benefit accrued to Mr Mundhra, it was entirely incidental.

So, we now have the position where the motive was to stabilise prices on the Calcutta stock exchange, but this itself is not a crime. The crime is in the bungling that accompanied the purchase of shares, the hesitancy and lack of courage in announcing what the motive for the transaction was. On the evidence, no defence is possible about the manner in which the prices were fixed. On the other hand, the charge that the LIC paid too much is not quite correct. For, it is common market experience that the purchase even of a few thousand scrip in prominent industrial companies serves to take up the prices thereof. If the LIC had purchased in the open market, instead of by negotiation with Mr Mundhra, the prices that it might have paid for the Mundhra shares might have been much higher. Nevertheless, the fact remains that the method by which the price formula was worked out was faulty. And it is here that both Mr Kamat and Mr L. S. Vaidyanathan

have been found to have exercised less care and caution than they should have. But the real culprit of the piece is cowardice. What was there to prevent a firm Government iteration that the LIC transaction was in the way of open market purchases with a view to stabilising stock exchange prices? After all, that was the Government's intention and, whether rightly or wrongly, the Government view of the time was that the funds of the LIC would be available for lending stability and strength to share markets. I remember that, before the Chagla Commission, one of the counsels said that the light of courage had failed. That is indeed the truth and much washing of dirty linen would have been avoided if courage had not failed on that fateful day in December on the floor of the Lok Sabha. But justice has not only now been done, but is seen to have been done.

EAVESDROPPER

Big Boost for the Big Ambassador

New super-efficient

OVERHEAD VALVE ENGINE
makes it the Best Buy in India today!

Exciting pick-up, surging power for safe overtaking, superb performance and remarkable economy are what you get from the big Ambassador, now equipped with the vigorous new OVERHEAD VALVE Engine.

The introduction of the new OHV engine puts the beautiful Ambassador way out in front, giving added significance to its many proved and exclusive assets: More room to relax in; more comfort to make long journeys pleasurable; more space in the luggage boot; and now, more efficiency and more economy.

Everyone agrees, and you will, too: In India today, the Big Ambassador is the best buy.

How does your performance rate?

Is there wasteful or avoidable expenditure on your plant?

Let us do the worrying for questions like these...and help you find the answers. It's not just enough, if you compare current costs and performance with what these have been in the past or with what are accepted as normal. Do costs and performance compare with what these should really be? That's the acid test...and we conduct it.

acbi diagnoses and prescribes... you are not only told why wasteful expenditure occurs, but precisely what-remedial action you should take.

acbi is currently assisting industries in both public and private sectors. If you have problems relating to cost control, labour-management relations, job evaluation, work study, production control, quality control, material handling, office reorganisation etc., you'll do well to.

Bombay's Plan

With only two more years to go for the Second Plan to run its full course, there are few States in the country which had not begun to think in terms of the probable nature and size of their respective Third Plans. In common with the general trend of opinion in favour of an ambitious Third Plan with vastly greater outlay than provided under the Second Plan, most of the State Governments also would have their targets of outlay under the Third Plan pitched higher than under the Second Plan. In the Bombay State, already a provisional target of Rs 525 crores had been fixed as the target of outlay for the Third Plan period, which is in excess of the Second Plan figure by Rs 175 crores. This was revealed by Mr S. K. Wankhede, Minister for Planning and Development in the Bombay Cabinet, while inaugurating a meeting of the Nagpur Divisional Development Council. The exact size of the Plan could be fixed only after coordinating the findings of the study groups and the recommendations of the District Development Boards and the Divisional Development Councils.

Mr Wankhede also indicated a list of priorities under the Third Plan and pointed out that food-grain production should have the

top priority. This was necessary for achieving self-sufficiency while imports which were a regular feature were a mere drain on the foreign exchange resources of the country. The saving in foreign exchange which would follow the achievement of self-sufficiency in foodgrain production is about Rs 100 crores, and considering that imports of all types into the country, exceed exports by about 50 crores, the gain on account of stoppage of foodgrain imports would make a vast difference to the balance of payments position and go a long way in stepping up the rate of economic growth itself. The importance of minor irrigation for achieving such an increase in foodgrain production is only obvious and therefore, more outlay would have to be diverted for minor irrigation works.

Power generation has also to be stepped up considerably for meeting all the current and future demand arising from growing industrialisation. The Bombay State Plan, as revealed by the Minister, is expected to take into account the present hunger for electricity both in the rural and urban areas and provide larger funds for its development than under the Second Plan. In this connection, Mr Wankhede pointed out that electricity generated, would be stepped up at the end of the Third Plan to 12.8 million k.w. from the present figure of 3.4 million k.w.

Referring to the progress of the Second Plan, Mr Wankhede said that the progress was satisfactory.

There were, however, shortfalls and spillovers here and there which were attributed to lack of trained personnel and machinery.

★

Development of Bombay

All-round development of the Bombay division is envisaged under the Third Plan in terms of the recommendations of the Development Council for the Division. Equal emphasis has been laid on industrial development as on development of agriculture. Food-grain production will have primacy of place under the Third Plan and the Council has, with a view to facilitating an increase in production, stressed the need for undertaking irrigation schemes, major, medium and minor during the Third Plan period. Priority is recommended for such of those works regarding which preliminary works had been started but execution of which had been delayed due to paucity of funds. For areas in which major works are not possible, sinking of wells, supply of boring machines survey of under-ground water resources, and tubewells had been suggested.

Development of horticulture is considered important and the districts of Ratnagiri, Kolaba, Thana, West Khandash, and Surat etc, are considered as offering scope for the development of horticulture. Development of plantations of mango, cashewnut, bananas and betel-nuts and establishment of research stations are also recommended. The establishment of a new agricultural college either at Thana, or in Kolaba district and agricultural schools at Ratnagiri and Surat and an extension training centre at Kosbad, are also demanded.

In the field of industrial development, the scope for development of cottage and small-scale industries has been pointed out and a case has been made for the establishment of industrial estates in the important districts. Decentralisation of industries is therefore inevitable. A comprehensive geological survey of the region is also recommended to explore and exploit the mineral wealth.

In view of the importance of fisheries which offer the main occupation for the people in the coastal areas, development of fisheries is also necessary and the establishment of boat building yards is recommended. Milk schemes for twelve towns have been proposed with a view to providing ancillary industries to cultivators.

Development of all modes of transport is also considered important for the progress of the area covered by the division, and consideration of a number of railroad projects is urged. In view of its vast sea-coast, the region also offers plenty of scope for the development of sea communications. The Council has recommended construction of at least two all-weather ports between Bombay and Vengurla besides general development of all ports to facilitate transport of agricultural produce and passenger traffic.

Indian Finance

GATEWAY MARKETS

Outlook for Oils and Oilseeds

THE overall behaviour of the markets, both for oils and Oilseeds, has been generally steady. The outlook for Castor Oil is considered to be quite encouraging during the current year. The feeling of disappointment at the lack of response from the US buyers, which led to a sharp fall in prices last week, has once again given place to cautious optimism as US buyers are now inclined to pay higher prices. The USA is reported to have bought nearly 7,000 tons during the past month and indications are that she may be obliged to buy almost her entire requirements of oil from India. The minimum requirements of this country are placed at around 50,000 tons of oil per year, while the maximum quantity is put at 80,000 tons. On this basis, she will have to buy Indian castor oil at the rate of, say, 5,000 tons a month from now on.

In view of the fast recovery in the US economy of late, observers think that she will have to buy her maximum requirements of oil during the current year elsewhere than in Brazil, as the supply position in that country is said to be difficult due to severe damage to the crop on account of floods there. It is doubted whether Brazil will at all be in a position to supply any quantity of oil to the USA, at any rate, for the next three to four months.

Once the market is relieved of the pressure of the existing stocks, estimated at around 6,000 tons of oil, it should be possible for India to strike a bargain. The competitive capacity of Indian oil has been strengthened by the reported enquiries from the Iron Curtain countries which are likely to absorb about 5,000 tons and also from the UK which may take about 6,000 tons. On balance, the prospects for Indian castor oil have undergone a remarkable change.

In the Groundnut section, prices have continued to display a firmer tendency following the Government's decision to extend the validity of shipments of groundnut oil and expeller cake. It is stated that this decision will enable the exporters to fulfil their commitments and avoid distress sales abroad. The revival in activity has been accompanied by the usual spate of rumours regarding large business with the East European countries, particularly with Rumania. Some shippers were reported to have sold 1,500 to 2,000 tons of groundnut oil to Rumania at £122/123 per ton f.o.b. and chances of further business were rated high.

June 6, 1959

have bought a substantial quantity at £127/128 per ton. Besides, the exporters reported a sustained interest in expellers with a sizable business materialising at £31½ to £31¾ per ton.

Although trading the Linseed section was devoid of interest, the over-all tendency of the market was better in line with the improvement in other oilseeds. Reports of a limited business in linseed oil with Australia aided the sentiment.

There was little activity in the Cottonseed section.

★

Gold & Silver

The Gold section, on the Bombay Bullion Exchange, displayed a fairly steady tendency. Offtake was reported to be satisfactory, while arrivals were small. This induced a little speculative buying and prices went up. However, the spot section eased somewhat on lack of fresh enquiries.

Fresh speculative buying from Calcutta helped the white metal to gain more than a rupee on balance. A leading operator purchased nearly 1000 bars at Calcutta and this gave impetus to the bullish activity in the local market.

★

Yarn

Listless conditions continued to prevail in the Bombay Yarn market and prices moved narrowly irregular on alternate bouts of buying and selling in the absence of fresh developments. The Government of India are, it is reported, busy scrutinising the pending applications for the import of Art Silk Yarn under the export promotion scheme. Rumours were also current that the authorities were trying to formulate an interim export promotion scheme for rayon fabrics, which was likely to be announced within two weeks.

Meanwhile, enquiries from abroad have been pouring in; but the exporters are not in a position to book business in the absence of export incentives. It is feared, in the circumstances, that India will lose the foothold that it had acquired in foreign markets unless the new scheme is announced without delay.

As judged by the figures of shipments during April, the export trade in Rayon textiles has registered a further sharp decline. The value of exports from Bombay, during the first 25 days of April, has amounted to only Rs 21.97 lakhs, while exports during the whole of the previous month were as high as Rs 36.07 lakhs and those in February Rs 75.90 lakhs.

The setback in respect of export from Calcutta has been equally serious with the shipments during April amounting to only Rs 6,444 as against Rs 34,725 in the previous month. In the case of Madras, shipments have fallen from Rs 1.81 lakhs in March to Rs 1.49 lakhs in April.

WORLD OF COTTON

Futures Buoyant: Good Mill Demand

THE Bombay Cotton futures market witnessed a sharp rise in prices last week. The strength was largely due to the tight statistical position coupled with encouraging offtake in the spot market. Sentiment was enlivened by the improvement in the conditions of the cloth market, which reported brisk activity. With the result, Jharilla August delivery spurted to Rs 712.50 per candy from Rs 702 in the previous week.

The Government decision to grant permission for the installation of 2,500 automatic looms annually for a period of three years in replacement of ordinary looms aided the bullish fervour in the market. Moreover, there were reports that export sales of cotton had been satisfactory during the past three weeks. Japan had already bought about 10,000 bales of Bengal Deshi and other short-staple varieties last month and it is expected to buy more cotton in the near future in view of the closure of the cotton market in Pakistan.

The Spot section continued to be lively in the wake of mill demand for quality cottons, thanks to the delay in the announcement by the Government with regard to the countrywise import quota. There is an insatiable demand for good quality cotton as more and more mills are switching over to indigenous growths. This switch-over to Indian cotton from foreign growths is largely due to the uncertainty of the Government's import policy and the foreign exchange difficulty in obtaining and maintaining the continuity of supplies to the mills.

This is evident from the falling consumption of foreign cotton by the mills which has dwindled to around 37,000 bales a month on an average as compared with 48,700 bales a month last year. This is also borne out by the stocks held by the mills which, as at the close of 31st March 1959, disclosed an almost 100 per cent decline. Under the export incentive scheme, the fact, that non-exporting mills have been allowed to part with their quota on a profit margin of 20 per cent, has made foreign cotton costlier by 20 per cent.

There were no developments in the Cotton Yarn section. Despite reports of improved offtake of yarn in the North Indian markets, prices remained mostly unchanged. Rs 16.50 per bundle. Among 40s. Among 20s, Modern had buyers at Meenakshi had buyers at Rs 25.37.

Meanwhile, uncertain conditions are prevailing on the import front. The upward trend in Sudanese cotton has cried a halt; but the prices of both Tanguis and Pima new crop have advanced sharply.

Import houses have put through some business in Gezira Sudans and central line Tanganyika, subject to licences and cancellation at par. The trade is, however, awaiting the procedural details in respect of the new import quotas before making any large-scale commitments. The details are likely to be announced shortly.

According to the latest advices from Egypt, the discount on sales of Egyptian cotton to India has been retained at 32.5 per cent. This has been extended to the new crop sales for payment in transferable currencies and for shipment before end-August, 1959. Meanwhile, the delay in the announcement of procedural details and composition in regard to the recent release of an import quota of only lakh bales has been causing some anxiety in the minds of the Indian buyers, who are hesitant to enter into commitments in respect of Egyptian cotton. It has resulted in a substantial rise in the prices of foreign cotton. The Sudanese cotton has gone up by nearly Rs 200 per candy, while the appreciation in the African variety is as much as Rs 60 to Rs 100 per candy.

On the export front, shippers showed active interest in the market on reports that Japan was likely to buy cotton from India as the market at Karachi remained closed.

★

KARACHI COTTON MARKET

The futures section of the Karachi cotton market continued to remain closed. Listless conditions prevailed in the spot market. Export interest was low, while mill activity was confined mostly to covering immediate requirements.

★

ALEXANDRIA COTTON MARKET

Prices in the Alexandria cotton futures receded last week. The export demand, which followed in the wake of the recent raising of

the discount rate, slackened. New crop progress report was encouraging.

×

LIVERPOOL COTTON MARKET:

Prices in the Liverpool Cotton futures market recorded handsome gains. Trading was active on improved trade buying in distant months and firm mill support to near months. Sudan contracts ruled quiet and values were unchanged.

×

NEW YORK COTTON MARKET:

Prices in the New York cotton futures market suffered a setback, thanks to fairly large commission house liquidation and selling by New Orleans interest. The main influencing factor was the growing concern in the Congress over the high cost of the price support and loan programmes. The report, that the Senate had approved of a ceiling on price support for farm product, aggravated selling. The majority of traders were inclined to discount the efforts being made in Washington to put through movement of surplus agricultural legislation designed to quicken the commodities into export channels.

×

CLOTH AND PIECEGOODS:

Trading the Bombay Cloth market was subdued. In the domestic sector, the demand tapered off due to the approach of the monsoon. There were few buying enquiries from upcountry dealers and the demand for superior varieties of cloth was maintained at the previous week's levels. However, dullness prevailed in the market for coarse and medium varieties.

On the export front, Singapore was active with moderate business reported done. Fair business was put through with West Africa. Business with Sudan was restricted according to the value of import licences issued. Burma was practically quiet though business was reported to have been concluded in anticipation of licences. The buying tempo from the UK was maintained with a fair offtake in grey shirtings.

DELHI REVIEW

SO many morals have been drawn in the last two years from the Mundhra episode that I may be forgiven if I draw another, though it is perhaps a little cynical. It is about the limitation of human judgment, its ability to draw inferences from facts. The facts relating to the affair have been sifted at length by the best available judicial and administrative wisdom: by men whose daily job has for years been to assess facts and evaluate character. At the end of it, they come to

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON[COS] 45[F1]59 for supply of 64 Nos. Water Tank G. I. 4' x 4' x 4' x Cubic Capacity 400 Gallons. Specification as per T.E.T's P336, Ref. SWF30L of 1933 edition Catalogue or similar. The thickness of the Galvanised sheet should be 11 or 13G or $\frac{3}{8}$ " thick. Tank should be Revetted and Fitted with Manhole cover. Galvanised sheet should be as per ISS 277-51. Earnest money is Rs 300/-. Tenders will be opened on 2-7-59 at 12 noon.

(2) Tender No. CON[COS] 46[GB]10/59 for supply of 110 cwt. Rope Manila Best white $1\frac{1}{2}$ " cir. to D.G.S. & D's G/ Tex-H.7B (ordinary). Earnest money is Rs 220/-. Tenders will be opened on 6-7-59 at 12 noon.

(3) Tender No. CON[COS] 47[F1]59 for supply of 180 cwt. Galvanised Lacing Wire 24 S.W.G. as per IS 280-1951. Earnest money is Rs 260/-. Tenders will be opened on 7-7-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S.E.Rly., Garden Reach, Calcutta-23 by local firms.

Tenders should accompany the receipt for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES

S27

The Whole Truth

widely differing conclusions about the truth. Of course, we are all familiar with the fact of judicial differences of opinion, but such differences have oftenest been on questions of law. It is also true that decisions on questions of fact in a court of law are governed by certain rules of evidence. In the present inquiry, these rules were made not applicable, ironically enough, because it was thought that, this way, the ascertainment of truth would be easier. The consequence has been a most confusing welter of different opinions on every question of crucial importance. Sorting out the differences is itself an operation of considerable complexity, for, each of the three august bodies who evaluated the evidence has differed from one another and the other two on important questions. Even within the UPSC, there has been no unanimity, since Mr Shivashanmukham Pillai has appended a note of dissent differing from his colleagues on one of the most crucial issues before them.

Let me first take the question of the motives behind the transaction. Both the Chagla Commission and the Bose Commission hold that the theory of a "drag" on the Calcutta Stock Market by floating Mundhra shares is untenable. Therefore, they say, these shares could not have been purchased for restoring the stock market to health. The UPSC, on the other hand, holds differently. It says: "While it could possibly have been argued that there existed no immediate threat to Calcutta Stock Exchange arising from the Mundhra drag, the officers concerned were fully justified in coming to the conclusion that the threat to the market had not passed. . . . And if Mr Mundhra benefited by the transaction, it was an incidental consequence inherent in the decision but by no means its main purpose."

It will be recalled that this was precisely what was argued by Eavesdropper in his columns when he discussed the Chagla Commission's report. He argued that, in trying to get at Mr Patel's motivation at the time of purchase, what needed consulting was, not charts and tables, but the rumours and gossip in the market. For, these were what Mr Patel says made him take the decision he did. The President of the Stock Exchange testified to his having talked to Mr Patel about the effect of the Mundhra shares on the stock market and the possibility of the LIC doing something on the stock market about it. There was also independent contemporaneous evidence (e.g. the confidential report of the Reserve Bank testifying to the existence of such a selling presence on the stock market Mr Patel, on his own admission, did not consult any charts to satisfy himself about the drag. Logically, therefore, in judging his motive, they are of only secondary relevance. Of course, if there was other evidence, of a different motivation, the charts and graphs will assume

importance, since, in that case, Mr Patel may have been merely making convenient use of the rumour of a "drag." But there is no such evidence. Indeed, in trying to fix the alternative motivation, the Bose Commission and the Chagla Commission differ significantly. The Chagla Commission think that the motivation was personal and a desire to help Mr Mundhra. This is a mere assumption, and the further question of why Mr Patel should want to help Mr Mundhra should be answered before this can be accepted as valid. The Bose Commission, on the other hand, think that the motivation was political, and the deal was a sort of "quid pro quo for the donation given by Mundhra to the Congress party. For this fantastic assumption, all that the Bose Commission have is the fact of Mundhra or his representatives having met Mr Morarji Desai and certain others. If everybody who met Mr Mundhra should automatically come under suspicion, then very few people in the commercial, industrial and governmental circles could escape unscathed. It must be remembered—though it takes some effort to do so today—that Mr Mundhra was not treated as an outcast in those days and, as the con- troller of some of the most important sectors of the economy, had quite legitimate business with the people he met. Again, if certain members of the Government tried to persuade him to keep the Kanpur Mills open, they were not doing anything criminal. After all, that is not the only mill that Government have tried to prevent from closing down. As for donations to political parties, there is hardly an industrialist of any standing in this or any country in the world who has not made contributions to political parties from time to time.

The bizarre nature of this finding will stand out even more clearly in the light of certain other findings of the same Commission. Now, the Bose Commission, differing interestingly from both the UPSC and the Chagla Commission, reject Mr Patel's contention that he acted under the direction and approval of the Finance Minister, Mr T. T. Krishnamachari, in this matter. "If the facts he (Mr Patel) has told us are true, then he has acted on his own responsibility, however improbable that may appear to be. . . . Even accepting his version of his consultations with Mr Krishnamachari in Bombay, we find that this important matter was sprung on just as he was walking out of a meeting. . . . If that is what was said, then, surely a Minister is entitled to assume, as Mr Krishnamachari says he did, that he was not being asked to make an important policy decision but was merely being informed about a matter which the LIC had yet to process and examine."

If this is so, and Mr Krishnamachari was not responsible factually for the deal, then where does

the political angle come in? Sure it is not the Commission's suggestion that Mr Patel was sticking his neck out for some services that Mundhra rendered the Congress party? Or could it be that he was more royalist than the King himself or a fanatic Congressman at heart? There is absolutely no evidence for any of these assumptions. On the contrary, Mr Patel's antecedents as a member of the Indian Civil Service even in pre-independence do not make such assumptions entirely gratuitous. And unless such assumptions are made, it is not possible to link causally these transactions with Mundhra's donations to the Congress. It is true that the Bose Commission mention this only "possible motive," but even as a possible motive, it does not hold much water. The Commission's "every person connected with the deal has hedged, has not told the whole truth, has shied away from associating himself with the deal even in a remote way, as much as he possibly could. No one connected with the deal has told the whole truth." It is a curious thing to say since in matters like this, it is not to expect people to rush forward with data incriminating themselves. It is the duty of the Commissioner to find the truth. It cannot be that they were at a greater advantage in finding it than, say, a policeman investigating a case of murder or even of petty larceny. And yet, courts have not made allowances for the prosecu- tor's helplessness.

The UPSC's majority report completely clears Mr Patel. It is that, so far as Mr Patel was concerned, "the transaction was neither improper nor contrary to business principles nor one resulting in investments that should not have been made." The unbusinesslike nature of the transaction is limited in its view, "to the extent of fix- ing of prices" and the blame for attaches to Mr Kamat. The senting member, Mr Shivashanmukham Pillai, completely dis- agrees with his colleagues and holds all the charges against Mr Patel have been proved. The Government of India agree that there "some force in the minute of sent" but have decided to exonerate Mr Patel in view of "the long distinguished record of Mr Patel's service, complicated post-budget- ionic situation at the time the was put through, the absence of mala fides and the weight attached to the advice of the UPSC." particular form of Mr Patel's defence is sure to rake some polemical fire, especially in view of the Government's inability to "endorse the reasonings" of the UPSC. Some political capital also be sought to be made of Government's rejection of the finding on the factual responsibility of TTK for the deal. Whether the whole truth has come out of it, despite three probes, it is certain we have not heard the last of the matter.

OLYMPUS

June 6, 1959

NORTH INDIAN NOTES

Lack of consideration for merit in the recruitment of candidates to professional educational institutions, had been pointed out by Dr C. D. Deshmukh, Chairman, University Grants Commission. In this connection, Dr Deshmukh referred to the wide disparity in the minimum marks required by candidates for reserved seats on the one hand, and by candidates for unreserved seats on the other for admission. In such circumstances, it should not be a matter of surprise if the candidates to the reserved seats take longer time for completing the educational course than candidates to the unreserved course. Dr Deshmukh has himself given the example of an engineering college where candidates to the unreserved seats regularly passed whereas the candidates to the reserved seats took eight to ten years to finish their course. In such cases, the disparity in the minimum marks for admission not only results in waste of resources, but also lowers the record and status of the educational institutions. A proper relation between the two without putting candidates to the reserved seats to a disadvantage in the matter of higher education is therefore necessary. A difference of ten marks is considered preferable by Dr Deshmukh.

A change in the present system of examination is another desirable line of reform viewed as essential by educationalists. In the present system, which offers only a cumbersome test to the memory of the student, the real merits and talents of the students remain unrecognised and are therefore allowed to waste. Steps in this direction are expected to be taken by the University Grants Commission after the team of experts which is to study the system of teaching in different subjects like science, humanity, etc prepares and submits its report. About the existence of too many examinations, Dr Deshmukh said that it was not to be condemned in view of the discipline it would impose on the student mind which would only prepare them to face any and every challenge that they might be faced with.

A very pressing problem of university authorities, is the great rush to universities of students who seek higher education after the higher secondary stage. Scope for expansion of facilities is not unlimited. A restriction on admission to universities, though desirable, will only lead to frustration for students denied the opportunities of higher education unless provision is also made to divert part of the rush to other channels. Dr Deshmukh has in this connection expressed the desirability of starting polytechnics, which could, by absorbing part of the matriculates, also stop the current rush for university education.

University Education

public Cooperation

One of the basic assumptions for the success of the Second Plan is public cooperation in the implementation of important projects. This is especially true of projects in the villages. However the Government's programme in enlisting such cooperation from the public could not be considered a success as would be evidenced by the lagging progress of most of the projects connected with the development and improvement of rural areas and villages. This has been recognised by the Government and consequently more vigorous attempts are envisaged to secure public participation in the execution of Plan schemes in the villages.

The Planning Commission National Advisory Committee on Pub-

lic Cooperation, at a recent meeting, has underlined the need for measures for enlisting greater public participation in the implementation of Plan programmes especially for increasing foodgrain production. The Committee has suggested that voluntary organisations and local institutions should effectively harness the initiative and resourcefulness of the people for all developmental works. They are also to guide and assist the people in raising green manure and maintaining compost pits, in the matter of multiplication of improved seeds and their distribution, in the marketing of agricultural produce.

One of the important suggestions for raising foodgrain production is close integration of all minor irrigation schemes undertaken by the

public works, revenue and community development departments. The Committee also envisages the need for utilising the services of ex-servicemen, pensioners and students in the execution of the village schemes.

A corollary to the need for such public participation is the need for an effective propaganda machinery which could undertake publicity schemes and familiarise the people in the villages with the contents and purpose of the development activities in which their cooperation is sought. In this connection the Committee has suggested that literature on green manuring, compost pits, and soil conservation might be prepared in regional languages and supplied to voluntary agencies to enable them to assist the agriculturists in these matters.

SQUARE PATH

ALTERNATORS

Switch on to the comforts of electricity

KIRLOSKAR ELECTRIC COMPANY have now taken up the manufacture of ALTERNATORS—a new addition to the already familiar range of KIRLOSKAR products.

These Alternators when coupled to KIRLOSKAR Diesel Engines are called GENLITE SETS, which can bring light and power to your home, firm, plantation or small workshop. Therefore, with KIRLOSKAR Alternators, you can now enjoy the comforts of electricity.

BQMAS-217

DELHI REVIEW

THE Government of India's decision to acquire control over the entire output of sugar mills in the country has imparted a bearish tone to the Sugar markets. Although the full reactions to the latest policy are not known, prices of some popular varieties are reported to have declined by 75 nP to Re 1 per bag. As it is, there is no price control on sugar except in certain specified areas like Uttar Pradesh, North Bihar and the Punjab.

The consensus of opinion is, that the new step taken by the Government is drastic in that it deprives the industry of its limited freedom. The nervousness is aggravated also by the absence of details about the announcement. For instance, it is not clarified whether the Government propose to dispense with the practice of realising the monthly

Control Over Sugar Output

sugar quota in future. The arrangements for distribution and the prices at which sugar is to be acquired from the mills, especially those in the Deccan and South India, are issues which need clarification.

So far, the quantity of sugar reserved for direct Government allocations was limited to 25 per cent of the production. By taking over the entire production, the authorities will now be in a position to allocate sugar to needy areas. In other words, they have now assured control over the entire distribution from the factory-end to the markets. No longer need the dealers dependent on some sugar mills be uncertain of getting their requirements if their region is starved of sugar. Nor can any mill hold these dealers to ransom as has been alleged.

However, an unnecessary scare has been created all over the country, which only go to accentuate the present trend of soaring prices. Despite the reduced output, stocks in the country are not sufficient to meet the demand during the next four months. Meanwhile, the standing cane crop is reported to be in good shape and there is no fear of any fall in the output.

Khandasari prices have continued to rule steady in sympathy with crystal sugar following good demand for the marriage season. Rates are moving between Rs 37 and Rs 40 per maund, according to quality.

Gur

In the Hapur market, Gur prices are ruling steady due to good outside demand for dry quality.

However, in Muzaffarnagar, Chakku quality has declined by 50 nP to 75 nP per maund to Rs 22 on lack of buying interest. Lack of support from Rajasthan, an important consumer, is another contributory factor.

Foodgrains

Steady conditions have prevailed in the Hapur Foodgrains market. Despite Government efforts, arrivals of "rabi" grains have not improved very much. The Uttar Pradesh Government have declared that wheat procurement will continue in the surplus districts of the State for the whole of the year at rates fixed for the purpose, while producers have been advised to bring grain to the market before the advent of the monsoon. Dealers will, however, be allowed to move their released stocks on permit to the deficit areas and sell them at prices which can be Rs 1.50 to Rs 2.00 per maund higher than the procurement prices.

On the other hand, the total yield of last "rabi" crops in Uttar Pradesh is in the neighbourhood of about 83 lakh tons. This works out to about 17 lakh tons more than the corresponding yield of 66.05 lakh tons during 1957-58. Production figures, this year, of both "kharif" and "rabi" crops come to about 131 lakh tons, which means an overall increase of about

23 lakh tons over last year when the total yield was 109.37 lakh tons.

The all-India final estimate of Ragi for 1958-59 puts the area and production of the crop at 5,930,000 acres and 1,722,000 tons respectively as against the partially-revised estimate of 5,731,000 acres and 1,665,000 tons respectively for 1957-58. This shows an increase of 199,000 acres in area and 57,000 tons in production during the current year as compared with the previous year.

Meanwhile, in the Hapur market, Wheat prices have continued to rule steady in the open market, to be quoted at Rs 18 to Rs 19.50 per maund, according to quality as against the Government procurement prices of Rs 13 to Rs 15. Arrivals from the villages have continued to be meagre, which are privately lifted by consumers at fancy prices. As a result, consumers are finding it difficult to meet their requirements of wheat even at higher rates. Government purchases, under these circumstances, are also small.

The market for Rice is also ruling steady with prices showing small gains over last levels. The Uttar Pradesh Government are reported to have procured 74,000 tons as against a target of 1.5 lakh tons for the whole year. Gram is reaching Hapur in heavy quantity from the Punjab and prices, as a result, have eased slightly during the week under report.

In the Delhi grains market, Gram prices have declined further on improved arrivals coupled with the reports of railway loading restrictions, while Wheat prices have tended to increase further on increased retailers' demand. Gram prices are quoted at Rs 12.37 per maund against Rs 13.75 in the previous following the Northern Railway's announcement to stop fresh registration of wagons in Code (E) class and to stop loading to stations on the Central Railway and in Code (B) class to Howrah and Moradabad, Kanpur and Mughalsarai. The rate for Bajra has improved by Re 1 per maund. Jowar has not shown any market change, while the market for Pulses is ruling quiet. Moong has improved slightly on lack of fresh arrivals.

THE PENINSULA

THE automobile industry is a relatively late comer in the industrial field; but, in the course of a short period, had made tremendous progress not only in stepping up production of automobiles but also in raising the proportion of components manufactured within the country. Though the industry has some way to go to be able to manufacture all the components within the country itself, by virtue of the progress already made, the prospect of self-sufficiency in component production has become nearer. In this progress of the industry the contribution made by Messrs Ashok Leyland Limited has been of no small order since it is one of the five firms licensed by the Government for entering into the production line.

The story of Ashok Leyland since its birth nearly a decade ago is one of interrupted progress in providing for the early realisation of the programme of complete manufacture of all the components for the vehicles in the production of which the Company specialises. The activities of the company in 1958 were geared to bringing this to fruition within the time fixed as the target date. These were mainly concerned with raising the Indian content of the commercial chassis produced by the Company, and necessarily involved increasing expenditure on machines, plants and expansion of factory site and area. Addition to the area of the factory of about 125,000 sq feet is estimated to have cost about Rs 29.33 lakhs, while plant and machinery installed in the year are estimated to have cost about Rs 46.55 lakhs which brought the total of investment for the three years 1956-58 to Rs 101.5 lakhs. The outstanding achievement of 1958 is the completion of practically the whole of the first phase of the building construction.

The beginning of engine production by the Company is to be reckoned as another remarkable development in 1958. Though full-scale production of the Comet engine is expected to start only by 1959, all the requisite plant and machinery needed for the manufacture of cylinder heads and most of that required for cylinder block had been installed and there should therefore be no uncertainty about the target date for the production of Comet engines.

While these are achievements of tall order, Dr Ramaswami Mudaliar has taken care to point out that there was going to be no slackening in the efforts of the Company in connection with its future production and expansion programme. On the contrary, Dr Mudaliar has pointed out that, in view of the unfinished programmes that are in the future, the efforts of the Company will have to be redoubled so that all the difficulties could be tackled effectively, to make smooth way for the Company's progress. Many such difficulties have cropped up to affect not only the prospects for the automobile industry but also the economic situation in the whole country.

The foreign exchange shortage is the common enemy to progress in the automobile industry as well as other sectors of the national economy. The impact of the foreign exchange shortage on the automobile industry had been particularly severe in view of the heavy dependence of the industry on imported components. It was a sad predicament for the industry to be faced with increasing demand for automobiles on the one hand and with a foreign exchange shortage which affected import of components on the other. Considerations of potential saving in foreign exchange against liberalised allocation in the present, which were urged on behalf of the automobile industry produced no effect on the Government. The automobile industry suffered sadly in consequence, and the programme of Ashok Leyland for increasing the output of chassis three-fold suffered a setback.

Though the foreign exchange shortage is likely to continue for some more years, Dr Ramaswami Mudaliar is optimistic about the outlook for the programmes of the Company, and in the increasing realisation by the Government of the country's urgent need for more transport vehicles, he sees the symptoms of a more favourable Governmental attitude to the automobile industry especially in respect of allocation of requisite foreign exchange for such raw materials, components and finished materials as must be imported at this stage of the country's development.

Another matter of concern for the company's authorities in respect of the smooth progress of the programmes is the lack of trained personnel to man the newly installed machinery and equipment. This difficulty could however be resolved when the additional training facilities that are now provided would begin to have their effect. The problem is therefore not expected to last beyond 1959.

If the foreign exchange shortage were to present no problem to the industry which is possible only if the Government pursues a liberal policy of foreign exchange allocation to the automobile industry, the realisation of the objective of making comet chassis including its engine and also the '600' and '680' types engines which are alternative power units in the 'Titan' and 'Tiger' chassis not less than 75 per cent in Indian content, is a matter for confident prediction. The company had already taken some im-

Ashok Leyland

MADRAS REVIEW

portant preliminary steps towards this by preparing a scheme for the manufacture of high quality castings. The Company is reported to have submitted the scheme which was prepared under the technical guidance of Mr W. West Chairman of West Yorkshire Foundries and Vice-Chairman of Leyland Motors to the Government. The foundry

which is to be located at Ennore is expected to be equipped for the manufacture of all types of quality castings required by the automobile industry. Referring to the need for such a line of production, Dr Mudaliar, said that continued dependence on imports for high quality iron castings would involve large scale loss of foreign exchange.

THE INDIAN STANDARD WAGON COMPANY LTD.

NOTICE is hereby given that a General Meeting of the members of the Company will be held at the Company's Registered Office, 12, Mission Row, Calcutta, on Friday the 26th day of June 1959, immediately following the termination of the Annual General Meeting of the Company called for 11 a.m. on that day to consider and if thought fit to pass with or without modification the following resolutions, the first of which will be proposed as an Ordinary resolution and the second as a Special resolution.

Ordinary Resolution:

1. That the proposed re-appointment and the draft agreement (which has for the purpose of identification been subscribed by the Chairman of the Board of Directors) submitted to this Meeting setting forth the terms and conditions on which it is proposed that Martin Burn Limited be re-appointed the Managing Agents of the Company for a period of 10 years from the 15th August 1960, be and is hereby approved and an application to the Central Government for its approval to this proposal under Section 326 of the Companies Act 1956 be and is hereby directed to be made.

Special Resolution:

2. That the Articles of Association of the Company be altered in manner following:—

- (i) Articles 131, 132, 133, 134, 135, 136, 137, 138 and 139 shall be deleted and for Article 131 the following shall be substituted—

"131. Subject to the approval of the Central Government Martin Burn Limited shall be the Managing Agents of the Company upon such terms and conditions as may from time to time be agreed upon between the Company and the Managing Agents and embodied in an agreement in writing between the parties."

- (ii) The first two sentences in lines 1 to 12 of Article 114 shall be deleted and

the following substituted therefor—

"Unless otherwise determined by the Company in General Meeting each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Directors a fee of Rs. 100 for each meeting attended by him. Each Director shall also be entitled to receive a share of a commission (to be divided among the Directors in such manner as the Directors may determine and in default of such determination equally) of one per cent of the net profits of the Company computed in the manner referred to in sub-section (1) of Section 198 of the Companies Act 1956 in any financial year in which such profits shall exceed the sum of Rs. 5,05,050. The commission payable to the Directors shall be payable for a period of five years up to and including the financial year ending on the 31st March 1961, but this provision may be renewed or reviewed from time to time in accordance with the provisions of any statutory enactment from time to time in force and applicable thereto."

By Order of the Board,
MARTIN BURN LIMITED,
A. G. Gidley,
Secretary,
Managing Agents.

12, Mission Row,
Calcutta,
Dated 1st June, 1959.

Note: (i) A member entitled to attend and vote at this Meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a member of the Company.

(ii) An Explanatory Statement is annexed to the Convening Notice issued to members of the Company.

SOUTH INDIAN NOTES

South Food Zone

The plea of the Madras Government to the Centre for the dismantling of the South Food Zone and for constituting the State into a separate zone by itself has been finally rejected by the Centre. This should have caused considerable disappointment to the Madras Ministers, since the continuance of the present arrangement was considered by the Madras Government to have only worked to the disadvantage of the State in the matter of foodgrain supplies.

The decision of the Centre was indeed surprising in view of the fact that their spokesmen had been talking in terms of constituting each State into a zone by itself, for movement of foodgrains, and it was held that this was necessary for the smooth and successful working of the State trading scheme in foodgrains. In the light of these declared intentions, the concurrence of the Centre to the proposal of the Madras Government remained almost an automatic assumption. What had motivated the Centre, in deciding in favour of continuing with the present arrangement is however not clear.

Speaking to pressmen Mr Bhaktavatsalam, the Madras Minister for Agriculture expressed his disappointment at the decision of the Centre. At the same time, he made it clear that the State Government could reconcile themselves to the continuance of the South Food Zone provided steps were taken by the Kerala Government for introducing price control. The absence of such price control made it possible for the Kerala merchants to offer tempting prices for rice from Madras which could only be expected to lead to large-scale diversion of rice from Madras to Kerala. The difficulties of the Madras State in the matter of foodgrain supplies had been caused by such dubious diversion to Kerala, and it was on the need for stopping such abnormal diversion that the Madras Government built up their case for the abolition of the South Food Zone.

The difficulties of the Madras Government in ensuring adequate supplies from internal production would only be aggravated by the Centre's decision against the constitution of the Madras State into a separate zone, in view of the fact that production of foodgrains in the current year is feared to have suffered a sharp decline consequent on unfavourable seasonal factors. While even in the best of years, production is only slightly above the needs of the State, what the state of supplies would be with production below normal level and with scope for diversion of foodgrains from out of the State remaining unchecked, could easily be imagined. The State would in

such circumstances need outside supplies to supplement its own stocks. It is however, to be doubted whether even the guarantee of such supplies could stabilise the situation in view of the possibility of the effects of such outside supplies being negated by greater diversion from Madras.

Textile Research

Addressing the South India Textile Research Association, at Coimbatore Mr Morarjee Desai, Union Finance Minister underlined the importance of research for tackling the problems faced by the cotton textile industry at present. Such research is of particular significance for improvement of quality and for the ultimate reduction of cost of production. In retrospect, it appears that had sufficient attention been paid to this aspect of industrial work, the industry would not have been in the present straits. Mr Morarjee Desai made this point very clear in order to drive home the benefits and advantages of industrial research.

Mr Morarjee Desai expressed his appreciation of the work that is being done in the institution and pointed out that the co-ordination of the works done in the three institutions in the country had eliminated the element of redundancy that was otherwise inevitable in the existence and disparate functioning of three institutions specialising in the same field of work. That the Madras Institute had justified its utility was made clear by Mr G. K. Devarajulu, Chairman of the Council of Administration in the course of his welcome address. It was pointed out that the services of the institute were being increasingly utilised by various industrial and financial corporation in inspecting machinery and economic survey of mills in the southern region. The institute is just in the process of development and out of a total capital of Rs 40 lakhs that is envisaged for its complete development only about Rs 25 lakhs had been invested so far. For meeting the balance of outlay it has been suggested by the Chairman that the Government should make a lump sum grant on the basis of their budget at the beginning of the year. This, Mr Devarajulu pointed out, would eliminate the difficulties of keeping a substantial fund in reserve and the delays experienced in realising the grants. Since the Finance Minister had been convinced of the utility of the institute it is to be hoped that there would be least reluctance on the part of the Government in extending aid to the SITRA.

While stressing the role of technicians in the industrial development of the country, Mr Morarjee Desai also laid emphasis on the human problem in industry. The fact that industrial psychology had been included in the subjects of study in the institute is to be appreciated.

SHREE GOPAL PAPER MILLS LIMITED

NOTICE

NOTICE is hereby given that the next Annual General Meeting of the Shareholders of the Company will be held at its registered office at 12, India Exchange Place, Calcutta on 27th June 1959 at 11 A.M. to transact the following business. Your presence in the meeting is requested.

AGENDA

- To receive the Directors' Report and to pass the audited accounts of the Company for the year ended 31st December, 1958.
- To declare dividends.
- To elect Directors in place of those who retire. M/s. H. P. Poddar and R. P. Agrawal, Directors of the Company being longest in office retire by rotation and being eligible offer themselves for re-election. S. B. Mohan Singh and Shri R. S. Khemka who were co-opted on the Board of Directors of the Company on 14-8-58 also retire under Section 260 of the Companies Act and being eligible offer themselves for election.
- To appoint Auditors and to fix their remuneration.
The present Auditors, M/s. Price, Waterhouse, Peat & Co. retire and are eligible for re-appointment.
- Special Business:—
To consider and if thought fit to pass the following resolutions with or without

PURCHASES:

Name of the Share	No. of Shares	Purchase rate	Date of purchase
Karamchand Thapar & Bros. (Coal Sales) Ltd.	1,000	Rs. 106/-	31st January, 1958.

SALES:

Name of the Share	No. of Shares	Sale rate	Date of sale
United Collieries Limited.	8,000	Rs. 10/-	18th March 1958."

- To transact any other business that under the Articles may be transacted at the Annual General Meeting.

NOTE:

- The Share Transfer Books of the Company will be closed from the 17th to 27th June, 1959 both days—inclusive.
- A member entitled to attend and vote at the Meeting is entitled to appoint a proxy who need not be a member to attend and vote instead of himself.

modification as Special Resolutions:—

- "That pursuant to Section 314 of the Companies Act 1956 the Company hereby consents to Dewan Dina Nath who is proposed to be nominated on the Board of the Company by the Managing Agents, continuing to hold an Office of Profit as a Director of the Company".
- "That the Directors of the Company be and they are hereby authorised to take on rent such portion or portions of premises No. 25, Brabourne Road, Calcutta, belonging to Messrs. Indian City Properties Ltd. as may be necessary for the purposes of the Company either exclusively or in common with one or more of their allied companies on the terms and conditions as to rent and air-conditioning levy as set out in the explanatory notes hereto according to the areas occupied exclusively and in case of areas occupied in common as above, such proportion of rents and air-conditioning levy payable for the area so occupied as the Directors of the Company may agree with the said other companies from time to time".
- "That the contracts between the Company and the Managing Agents for the purchase and sale of the following shares at the rates noted against their names be and are hereby approved and confirmed—

(iii) The Explanatory notes of the above resolutions have been sent to the shareholders along with the notice of the Meeting. It can be inspected at the Registered Office of the Company at 12, India Exchange Place, Calcutta during usual office hours on any working day.

By Order of the Board
KARAMCHAND THAPAR & BROS. (Private Ltd.)
Managing Agents.
Calcutta, the 2nd June, 1959.

SOUTH INDIAN MARKETS

THE markets, both for Hides and Skins, remained generally dull last week. In the Tanned Hides section, arrivals of Cow hides were fair and there was a fair clearance at 3 nP to 6 nP per pound lower than the previous week. There was, however, no change in the Calf section.

On the export front, whatever enquiry there was, was mainly confined to 8/8½ lbs fifths and inferior fifths upto 49d and 41d respectively. There was some demand for inferior 10/12 lbs around 37d; but sellers were reported to be asking a higher price and were unwilling to part with their stocks at lower levels.

In single tannages, business was reported in light weights run premium marks on 85d basis. In the Calf section, there was some enquiry for 1½/2 lbs and 2½/4 lbs Buff Calf thirds of secondary marks and a small business was recorded at 66d to 68d for thirds.

THE INDIAN STANDARD WAGON COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting (being the fortieth Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Friday the 26th June 1959, for the following purposes:

- To receive and adopt the Audited Accounts for the year ended 31st March, 1959 and the Directors' and Auditors' Reports thereon.
- To declare Dividends. The dividends if declared, will be paid to the shareholders whose names appear in the Company's books on the 26th June, 1959 or to their mandatees.
- To appoint Directors in place of those retiring.
- To appoint Auditors and fix their remuneration.

The Share Registers and the Transfer Books of the Company will be closed from the 17th June, 1959 to the 26th June, 1959, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. Liversedge,
Managing Director,
Managing Agents.

Calcutta,
2nd June, 1959.

Hides and Skins Markets Dull

In the Tanned Skins section, there was no change in the arrivals and clearances. Prices remained unchanged.

In the export section, there was little or no enquiry from buyers. Even offers made at a reduction of 3d to 6d met with no response from overseas buyers.

Groundnut

Conditions in the Madras Groundnut market remained generally firm with prices shown an upward tendency on higher advices from Bombay. Although crushers were inclined to take up the stocks at slightly lower levels, sellers seemed to be determined not to sell stocks in view of their holding capacity. Arrivals averaged 40 to 45 tons per day. The rate for the summer crop is quoted higher at Rs 187 per candy.

In the Groundnut Oil section, however, activity was somewhat restricted. While the high price prevailing for groundnut was deterring crushers from offering or selling at lower levels, Calcutta interests also were not showing any greater interest due to the lower prices ruling in Bengal. Even then, the rate for the ready position improved to Rs 380 from Rs 373 per candy quoted in the previous week.

Coffee

At the end of April, the Coffee Pool was reported to be holding the largest stock to be held at any one time, viz, about 34,000 tons. Home consumption is increasing steadily and provides a stabilising factor, this year's offtake being placed at about 30,000 tons.

Rubber

Thanks to the sudden entry into the market by China and Russia, conditions akin to a boom are prevailing in the world Rubber market. The price at the Singapore market has touched Rs 168 per 100 pounds.

In the UK, consumption of natural rubber amounted to 15,271 long tons in March 1959, while imports of natural rubber totalled 13,819 long tons and re-exports 2,510 long tons. Stocks of natural rubber, held by the manufacturers and in warehouses, at the end of the month under review, amounted to 33,290 long tons.

According to the latest reports, world demand for rubber has risen by about 1.2 million tons in about ten years. Production of natural rubber, during the same period, rose by only 120,000 tons and almost the whole increase in demand was met by synthetic. Indian production is insignificant, being about 25,000 tons, while she needs

about 56,000 tons, the difference being met by imports.

If the price of rubber abroad continues at the current rates, India's foreign exchange bill on rubber account is expected to be Rs 5 to Rs 6 crores higher. Meanwhile, plans for synthetic production are being made and the estimate of capital investment has increased from Rs 10 to 15, 20, 25 and now Rs 30 crores.

Bangalore Silk

Unlike in the previous week, prices of Charka silk tended to move up a little in the Bangalore Silk market during the week ended 28-5-59.

Filature silk continued to be unchanged excepting for Kisan, which registered a rise of Rs 0.50 to quote Rs 41.00 per lb. It has been reported that the supply of raw silk was very meagre and that weavers were unable to get the qualities of silk suitable to their requirements. This was particularly noticeable in coarser varieties of Charka raw silk.

In the case of Reeling Cocoons, slight variations in prices were noticed. The rate for Mugur Cocoons closed the week 25 nP

higher at Rs 2.25. Mysore Seed Cocoons ranged between Rs 7.00 and Rs 15.00 as against Rs 5.00 and Rs 9.00 in the previous week.

Copra

While prices for Copra in India have been showing an easier tendency, those in foreign markets have been rising due to shortage of the commodity. In the Cochin market, the rate is quoted lower at Rs 420 per candy. In London, the rate is pushed up by nearly 100 dollars per ton over the last nine months.

The current price for early delivery Philippines copra is quoted around 288 dollars a ton. The Philippines crop usually contributes about 70 per cent of total world supplies. This season's crop from this area is about 800,000 tons against one million in the previous year. In addition, political disturbances have interrupted supplies from Indonesia, which provides 15 per cent of the world's copra. Many consumers, particularly in Europe, were reported to be running down their stocks before the shortage began to develop. These explain the very sharp rise in prices in the foreign markets.

NATIONAL AND GRINDLAYS BANK LIMITED

(Incorporated in England under the Companies Act of 1902 and the Companies Act of 1947. Registered in London under the Companies Act of 1902 on the 23rd March, 1966. The liability of members is limited.)

Ashok Leyland Limited

Sir A. Ramaswami Mudaliar's Review

Addressing the 10th Annual General Meeting of Messrs Ashok Leyland Limited, on the 22nd May 1959, Sir A. Ramaswami Mudaliar said—

Ladies and Gentlemen,

I have great pleasure in extending to you a cordial welcome to the Tenth Annual General Meeting of your Company.

The Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1958 have been circulated to you and, with your permission, I shall take them as read.

PROGRESS IN 1958:

During the year we continued to make steady progress in our twin objectives of continuously increasing the Indian content of the commercial vehicle chassis we produce and, at the same time so improving the sale of our products that our revenue shall keep pace with expenditure. The latter must necessarily increase as buildings continue to be constructed, plant and machinery is installed in them and labour to operate the machines recruited. Your Directors were pleased to find that the financial result of these endeavours during 1958 justified their recommending the payment of a dividend at the rate of 6% per annum free of Income-tax.

FURTHER EXPANSION:

I have referred to the continuous expenditure on buildings, plant and machinery. The phased Manufacturing Programmes in which we are engaged require that your Factory shall continue to expand for some considerable time. We have to provide not only for a substantial increase in the output of Comet chassis but also for the addition of other models to our range of products. We therefore applied in 1957 for Government's approval to the inclusion of the Leyland Tiger' and Titan' chassis in our Manufacturing activities; and we received a Licence to do so in March 1958. During the year we applied for a licence to produce the industrial versions of the three Leyland Diesel engines which are now included in our Manufacturing range.

Part of the 1958 achievement was the completion of practically all of the first phase of our building construction. It is, therefore, appropriate to review the financial implication of this work. When the Manufacturing Programme was commenced in 1956, it was immediately obvious that buildings then in existence, which covered about 3 acres, would be inadequate. Plans were made to add a total of 125,000 square feet as the first phase of a long term building pro-

gramme. This first phase has been completed at a total cost of Rs. 29.03 lacs; and of this amount Rs. 21.22 Lacs was spent in 1953. During the year plant and machinery to a total value of Rs. 46.55 Lacs were installed, bringing the total for the three years 1956 to 1958 inclusive to Rs. 101.5 Lacs.

The completion of the first phase of a building programme and the installation of plant and machinery as Workshops became available to house it, does not mean that we can slacken in our endeavours. On the contrary we must redouble our efforts to ensure that by the end of 1960 we achieve our objective of making the Comet chassis including its engine and also the '600' and '680' type engines, which are alternative power units in the Titan' and Tiger' chassis, not less than 75% Indian in content. This remains a formidable task in relation to the amount of foreign exchange available for allotment to the automobile industry.

EXCHANGE SHORTAGE:

It is unfortunate that at the time when the demand for our products has increased so greatly that we ought to increase our output of chassis three-fold, the foreign exchange made available to us for the import of raw materials and components made it impossible to do so. Nevertheless, as the figures in the Directors' Report indicate, a substantial improvement in the sales volume took place. It must be our constant endeavour in the future so to progress with manufacture that we shall be able to meet the full demand for our products, making output from the Factory keep pace with our sales so that all those who desire to operate Leyland vehicles may be satisfied. I am certain that there is increasing recognition by the Government of India that if the country's urgent need for road transport vehicles is to be met, automobile manufacturers should be allotted adequate foreign exchange for such raw materials, components and finished materials as must be imported at this stage of the country's development. There is a practical limit at this stage to the increase in production which can be secured by reduction of foreign content per chassis produced, with a given amount of foreign exchange. Beyond that limit the only solution to meeting a rapidly increasing demand for motor vehicles is to increase the foreign exchange allotments to manufacturers.

ENGINE PRODUCTION:

Another important development in 1958 was the beginning of Engine production in your Factory. It will probably be the end of 1959

before the 'Comet' engine can be considered made in India but 1958 saw the installation of all the plant and equipment needed for the manufacture of the cylinder head and most of that required for the cylinder block. Recruitment of labour and supervisory staff to provide for the efficient operation of the machine tools and other equipment has presented some difficulties. Men competent to do such highly skilled work are not readily available. It has, therefore, been necessary to augment training schemes and to take other steps to ensure a supply of skilled workmen. We hope the results of these actions will bear fruit in 1959 and onwards.

HIGH QUALITY CASTINGS:

Reference to the beginning of engine manufacture brings to mind the very important issue of the production of the high quality iron castings for the cylinder blocks and heads. If these were to be machined only, the castings being imported indefinitely, the nett saving in foreign exchange would not be appreciable. Your Directors, therefore, decided to request Messrs. Leyland Motors, who include in their Group the West Yorkshire Foundries, well-known specialists in the production of high quality castings for the automobile and other industries, to advise them on this important question. In December, 1958 Mr. W. West, Chairman of West Yorkshire Foundries and Vice-Chairman of Leyland Motors, visited India and as a result of this visit a proposal has been submitted to Government for the erection at Ennore of a modern Foundry capable of producing all types of quality castings required by the Automobile Industry. We confidently expect that Government will be pleased to approve this scheme.

AXLE WEIGHT THE BASIS:

Last year I referred to difficulties experienced by your Company on account of restrictions on the gross laden weights of motor vehicles. Some States have removed restrictions which hamper the sale of 'Comet' goods vehicles, which are designed for 12 tons gross vehicle weight. But there are still a majority of States in which this vehicle cannot be utilised with its full load capacity as a carrier of goods. Moreover, the habit continues of making restrictions on gross weights instead of on axle weights although the latter being a more scientific basis, was proposed by the Indian Roads Congress long ago. We shall continue our efforts to secure the removal of these difficulties.

Looking forward, much remains to be done but we shall strive to achieve our goals. The greatly increased demand for commercial vehicles in general, and for the 'Comet' in particular, offers a bright future if we can continue to make satisfactory progress with our Manufacturing Programmes, and make our output of chassis

equal to the demand for the. This involves the courage to continue with our rapid capital development in regard to buildings and equipment, confident that we can increase our resources to meet the inevitable and continuous rise in expenditure.

THANKS:

Once again I must express my gratitude to Messrs. Leyland Motors who have assisted us to the maximum possible extent. I am sure it will be your wish that I should convey to Sir Henry Spurr, Mr. W. West and Mr. D. G. Stokes our thanks for their personal help and guidance. I should also like to compliment the executives and staff and all the employees of the Company for their good work and loyal service throughout the year.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

KAMARHATTY COMPANY, LIMITED

NOTICE is hereby given that the One Hundred and Sixtieth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 11 a.m. on Friday, the 10th July, 1959, for the following purposes:—

- (1) To receive and consider the Audited Accounts for the year ended 31st December 1958 and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditor thereon.
- (2) To declare Dividends.
- (3) To appoint a Director in place of one retiring.
- (4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 1st July, to the 10th July, 1959 both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED
I. F. MORRISS,
Acting Secretary,
Managing Agents
4, Clive Row,
Calcutta-1.
29th May, 1959.

Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 10th day of July, 1959, or to their Mandatees.

A State of Uncertainty

Watch-Dog Writes:

DEALINGS in stock markets have been characterised by a state of uncertainty during the week under review. Operators seem to be hesitant to enter into fresh commitments either way, as they have preferred to await the results of the seminar, to be held Ootacamund. The only relieving feature is the replacement buying noticed at lower levels on days that, in view of the sharp decline in values, the market may steady up shortly.

Jute shares changing hands at improving levels highlighted trading in the Calcutta Stock Exchange. Conditions elsewhere were fully steady.

Two-sided movements in prices characterised trading on the Bombay Stock Exchange.

On the Madras Stock Exchange, prices were marked down on a wide front due to the predominance of sellers.

There was a further advance in prices on the London Stock Exchange under the lead of Industrials.

Wall Street closed barely steady.

★

Calcutta

Calcutta, Friday Evening.

AFTER last week's shake-out, the local stock market was in an unsettled state with periods of nervous selling predominating recovery phases. Unfounded rumours had a full play. Rumours of lower TISCO dividends, reduction in steel retention prices, curb on forward markets by way of margins, heavy tax on unearned incomes from forward markets, reconstitution of the Planning Commission—all these factors set the operators to rethink about the outlook. Thus, with the speculative issues receding sharply on long liquidation coupled with hammering by bears, a panicky atmosphere prevailed.

Even the news that the Indian Iron & Steel Company had agreed to the listing regulations of the Bombay Stock Exchange had no effect on sentiment. The only relieving feature of trading was a handsome recovery in prices at the close of the week, thanks to some replacement buying being influenced by the prospects of increased foreign aid or the Third Plan.

The improvement, noticed in the hiltedged market last week, became more pronounced with demand concentrated on short and medium-term issues. Sellers were, however, reserved and prices developed a hardening tendency. 3 per cent

1986 Conversion Loan opened at Rs 73 and, after improving at one time to Rs 74.20, receded at the close to Rs 73.90 on profit-taking.

Bank shares were quietly steady with Punjab National changing hands at Rs 22.00 to Rs 22.56.

After a lapse of few weeks, Jute shares met with a revival of buying interest, thanks to firmer advices from the gunny market. Apart from the sound statistical position of the industry, there was a belief that the working results of the mills would improve to a great extent in view of the bright prospects of demand from overseas buyers. Anglo-India were taken upto Rs 243 from Rs 228; Howrah upto Rs 23.87 from Rs 23.12; Megna upto Rs 15.62 from Rs 15.25; Nuddea upto Rs 62.50 from Rs 55.75 and New Central upto Rs 16.75 from Rs 15.44. The news of a 5 per cent dividend against nil pushed up Kamarhaty to Rs 203 from a low of Rs 190. National moved rather erratically between Rs 21.50 and Rs 22.50, to finish at Rs 22.37.

Although the inordinate delay in the announcement of the price increase for the commodity had an adverse effect on sentiment in the Coal section, selected scrips were well maintained in sympathy with the better turn of the market. Bengal remained very firm at Rs 308, while Central India moved up to Rs 7.53 from Rs 7.31 and Western Bengal to Rs 6.06 from Rs 5.91. Burrakur moved irregularly between Rs 17.25 and Rs 17.40, to finish at Rs 17.25.

Except a few selected scrips which met with special support at every setback in prices, trading in the Tea section continued to be restricted. Reports of a sharp fall in exports coupled with the rise in output in April led to fears that supplies of tea in the coming months might be excessive and there would be a consequent fall in the domestic prices. Prominent, amongst the few dealings recorded, were Brooke Bond, changing hands at Rs 20.37 to Rs 20.55; Grob at Rs 17.50 to Rs 18.25; Killcott at Rs 20.37 to Rs 20.75; Tezapore at Rs 18.50 to Rs 18.62 and Methoni at Rs 24.87 to Rs 25.25.

Although Sugar shares came in for selective enquiry, there was a general lack of buying interest following the recent decision made by the Government to retain the entire production of sugar mills at their disposal for direct allotment. Operators were inclined to await further developments on the sugar front. Carew met with sustained demand upto Rs 9.00 from Rs 8.87 and so also SKG upto Rs 9.94 from Rs 9.75. Champarun were, however, on offer at Rs 16 against Rs 17.06, while Balrampore turned quiet at Rs 7.12 against Rs 7.25.

Textile shares were a steady feature, thanks to the improved conditions prevailed on the cloth front. Jayshree changed hands at Rs 8.69 to Rs 8.81; Elgins at Rs 13.19 to Rs 13.62; Kesoram at Rs 14.06 to Rs 14.69 and New Victoria at Rs 1.25 to Rs 1.34.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian

Irons which, in turn, were subjected to alternate buying and selling. After opening steady at Rs 24.12, Indian Irons receded at one time to Rs 23.90 due to selling pressure, to improve moderately towards the close to Rs 24.00 on some replacement buying. Marshalls were at one time taken upto Rs 6.25 from Rs 6.12; Jessop upto Rs 30.69 from Rs 30.37 and TEXMACO upto Rs 25.65 from Rs 25.40, to finish the week at Rs 6.12; Rs 30.62 and Rs 25.40 respectively. Indian Galvanizing were nearly maintained at Rs 18.69.

Miscellaneous issues moved with the general trend of the market. Orient Paper moved between Rs 25.70 and Rs 35.90 (Rs 35.75); Indian Cable between Rs 29.94 and Rs 30.69 (Rs 30.37); Indian Aluminium between Rs 20 and Rs 20.78 (Rs 20.44); Indian Copper between Rs 4.04 and Rs 4.12 (Rs 4.10); NICCO between Rs 33.25 and Rs 33.50 (Rs 33.25); Hindustan Lever between Rs 20.37 and Rs 20.56 (Rs 20.44) Rohtas between Rs 21.87 and Rs 22.12 (Rs 22.12); Dunlop between Rs 31.19 and Rs 31.44 (Rs 31.31); Alkali Chemicals between Rs 22.56 and Rs 22.75 (Rs 22.62); India Steamship between Rs 14 and Rs 14.19 (Rs 14.12) and Metal Box between Rs 36.75 and Rs 37.12 (Rs 37.00). Figures shown within brackets were the closing rates for the week.

★

Bombay

PRICE movements on the Bombay Stock Exchange were rather irregular due to alternate buying and selling, being influenced by various rumours. After opening steady, the market developed a weaker tendency and some of the major counters registered a significant decline in values under the impact of bull liquidation. Unsubstantiated rumours regarding likely Government control over corporate dividends, reports of lower production by the TISCO in May, tax on earned incomes and the likelihood of lower dividend on Tata Iron & Steel shares influenced tired long liquidation. Towards the close of the week, there was a sudden reversal in the trend, as fresh speculative buying and replacement demand aided a handsome recovery all along the line.

TEXTILES: This section remained generally active on reports of improved conditions in the cloth market. Dealings were prominent in Century and Svadeshi, which were taken upto Rs 540 and Rs 229.50 from Rs 529.50 and Rs 222 respectively. Bombay Dyeing changed hands at Rs 63.80 to Rs 65.00; Kohinoor at Rs 271.50 to Rs 277.50 and Nagpur at Rs 97 to Rs 98, to finish at Rs 64; Rs 277 and Rs 98 respectively. Finlay were quoted steady at Rs 266 and so also Central India at Rs 98.

STEELS: Steel shares created a mild flutter, but failed to force any discernible improvement. Apart from the reports of lower production in May, weakness in other sections seemed to have its effect here too. Tata Ordinaries opened at Rs 187.75 and, after improving at one time to Rs 189.25, receded to Rs 186.76, to

improve again towards the close to Rs 188.50 on bear covering.

MISCELLANEOUS: This section followed the general trend of the market. Cement shares showed small losses on balance. ACC closed at Rs 153.25 and Digvijay at Rs 152.50 after touching high levels of Rs 154.75 and Rs 155 respectively. Shipping shares remained almost steady with Scindia having support upto Rs 17.84 and Great Eastern upto Rs 22.00. Of the Automobile shares, Premier closed lower at Rs 108.25. Mining shares were subjected to some selling pressure, with Shivrampur Syndicate being offered at Rs 78.80 to Rs 80. Tata Chemicals were a firm feature at Rs 18.12. Among others, National Rayon changed hands at Rs 304.50 to Rs 309; Bombay Burma at Rs 518.50 to Rs 525.50; Belapur Sugar at Rs 292 to 295; Walchandnagar Industries at Rs 281.25 to Rs 282.50; Premier Construction at Rs 296.50 to Rs 304.50 and WIMCO at Rs 201.50 to Rs 203.50.

★

Madras

ACTIVITY on the Madras Stock Exchange was subdued last week and business was confined to only a few selected scrips.

Textiles: Travancore Rayons were the star feature in this section and the scrip was taken upto Rs 21.20. Maduras were, however, on offer at Rs 26.18 and so also Metturs

KANKNARRAH COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Fiftieth annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 11-30 a.m. on Friday, the 10th July, 1959, for the following purposes:—

- (1) To receive and consider the Audited Accounts for the year ended 31st December, 1958, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To appoint a Director in place of one retiring.
- (3) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 6th July to the 10th July, 1959, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
I. F. MORRISS,
Acting Secretary,
Managing Agents.

4, Clive Row,
Calcutta-1,
29th May, 1959.

Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

at Rs 403. Anglo-French changed hands at Rs 88 and Virudhunagars at Rs 39. Buckingham were keenly sought after and business was done at slightly higher levels.

Plantings: Plantation shares were generally stagnant and rates were marked down slightly from last levels, although some enquiry was noticed in a few selected scrips. In the Rubber group, TRTs were done at Rs 7.05, while Midlands, Thirumbadri and Cochin Malabars were weak with a decline in rates.

Among Coffee shares, Coffee Lands were enquired upto Rs 23.75, while Cowcoodys were quoted around Rs 7 cd. Consolidated coffees reacted to Rs 21.75 on profit-taking with Ouchterlony hovering narrowly around Rs 5.25.

In the Tea section, shares of the high-grown estates came in good support, Highlands being taken upto Rs 13.87 with buyers at this level. Chembras were done at Rs 4.26 and Neelamalais at Rs 4.40.

Miscellaneous: In this section, Aluminium Industries were marked upto Rs 19.90, while Brunton Engineerings were marked down to Rs 4.30 sellers. Enfields were wanted upto Rs 10.50. Andhra Scientifics looked upto Rs 7.50. Textools, India Cements and Mettur Chemicals were on offer at the market rates.

★

London

THERE was a further advance in prices on the London Stock Exchange under the lead of Industrials. Investment and speculative buying was stimulated by good business and company news with higher Wall Street advices also helping sentiment. The main exception was provided by Gilt-edged securities, which reacted with small losses on balance. In Shipping shares, British and Commonwealth were a poor market following a sharp fall in profits. There was renewed demand for Gold shares with Diamond and Platinum shares also showing some improvement in prices.

★

New York

CONDITIONS on Wall Street remained generally steady with price changes either way ranging to a dollar or so. However, towards the close of the week, considerable profit-taking was noticed in assorted goods, aircrafts, rails and electronics shares.

★

In Briefs

In Calcutta, Bowreah and Dunbar Cotton mills have again Passed over the dividends for 1958.

In Madras, Radio & Electricals have reduced the dividend from 9 to 7½ per cent for 1958.

Balanoor Tea and Devon Tea have reduced the dividends to 15 per cent each from 17½ per cent, for 1958.

BHARTIA ELECTRIC STEEL COMPANY, LIMITED

NOTICE

Notice is hereby given that the thirtieth Annual General Meeting of the shareholders of the Bhartia Electric Steel Co., Ltd. will be held on Tuesday, the 7th July, 1959 at 4 P.M. at the registered office of the company, 4, Old Court House Street, Calcutta to transact the following business:—

- To receive and adopt the Directors' Report and the audited balance sheet and profit & loss account for the year ended 31st December, 1958.
- To declare dividend.
- To elect a director in place of Shri B. P. Khaitan who, being longest in office, retires by rotation.
- To elect a director in place of Rai Bahadur Moongtulal Tapuriah who being longest in office retires by rotation and in this connection if thought fit to pass the following special resolution of which special notice has been received.

"Resolved that Rai Bahadur Moongtulal Tapuriah, an associate of the Managing Agents, who has attained the age of 72, be and is hereby re-appointed a director of the Company notwithstanding that he is an associate of the managing agents, and has attained the age limit imposed by Section 280 of the Companies Act, 1956 and that the said age limit shall not apply to him."

- To appoint auditors for the year 1959 and to fix their remuneration.
- To consider and pass with or without modification the following special resolutions of which special notices have been received:—

(i) "Resolved that Shri R. L. Bhartia, an associate of the Managing Agents, who was re-appointed as Director of the Company at the general meeting held on 8th July, 1958 be deemed to have been duly re-appointed with effect from that date."

(ii) "Resolved that Shri P. R. Bagri, an associate of the managing agents, who was re-appointed as Director of the Company at the general meeting held on 8th July, 1958 be deemed to have been duly re-appointed with effect from that date and the payment of remuneration to him is hereby ratified, approved and confirmed."

- To consider and if thought fit to pass with or without modification the following special resolutions:—

Sub-clause (iv):—

- Resolved that the Company approves of the modification of special resolution passed under Section 360 of the Companies Act in the share-holder's meeting held on 20th April, 1956 by addition of the following sub-clause (iv), such modification to be deemed to have been effective from the date of the original resolution.

Sub-clause (iv):—

"The payment shall be made to the Company within one month from the date of supply or sale of the goods or supply or rendering of the service as the case may be."

(2) "Resolved that the commission of 1% on the net profits of the Company computed in the manner referred to in Section 198(1) of the Companies Act, 1956 be and is hereby authorised to be paid to all the Directors whether whole time or not, and payments, if any, made in the above manner after 1st January, 1957 be and are hereby approved and ratified."

EXPLANATORY NOTE

Item No. 4.

Rai Bahadur Moongtulal Tapuriah is an associate of the managing agents and has also attained the age of 72 years which is beyond the limit prescribed by Section 280 of the Companies Act, 1956. Under Section 261 of the Companies Act, 1956, a special resolution is required for appointment of an associate as a Director. He was appointed Director by a special resolution at a meeting held on 4th June, 1956. Although the said section does not provide for special resolution for re-appointment, the management has been advised to approach the shareholders for a special resolution so that there may not be any room for doubt. A special notice has been received by the Company in this regard wherein it is proposed to move the resolution as a special resolution approving the re-appointment of the said R. B. Moongtulal Tapuriah, and specifically declaring that the age limit imposed by Section 280 shall not apply to him.

Item No. 6.

Shri R. L. Bhartia and Shri P. R. Bagri who are also Directors of the managing agents and as such associates of the managing agents, were appointed Directors of the Company by a special resolution

at a meeting held on 4th June, 1956. They were re-appointed Directors of the Company on the 8th July, 1958. Although Section 261 of the Companies Act, 1956 does not provide for special resolution for re-appointment, the management has been advised to approach the shareholders for ratification of the appointment by a special resolution so that there may not be any room for doubt. Special notices have been received by the Company purporting to move the said Resolutions as Special Resolutions.

Item No. 7(1).

In an Extraordinary general meeting of the shareholders held on the 20th April, 1956 certain contracts between the Company and the associates of the managing agents were approved by a special resolution as required under Section 360 of the Companies Act, 1956. Through the inadvertence the mention of the period of one month within which payments are required to be made to the Company by the associates under the said Section was left out from the resolution. However, the Company in all its transactions with the associates of the managing agents has been strictly adhering to the statutory period of payment as required by Section 360(2)(b). In view of the said omission, the Company has been advised and, therefore, proposes to modify the said special resolution passed on 20-4-56 by addition of another sub-clause being sub-clause (iv) to the said resolution in order to bring it in line with the requirement of the law.

Item No. 7(2)

Article 73 of the Articles of Association of the Company authorises payment of 1% of the profits as commission to its Directors. Sub-section (4) of Section 309 requires that the payment to Directors who are neither whole time nor Managing Directors, should be approved by the shareholders by a special resolution.

Note: (1) The Share Transfer Register of the Company will be closed from 23rd June to 7th July, 1959 both days inclusive.

(2) A member of the Company entitled to attend and vote at the above meeting of the Company shall be entitled to appoint another person as his proxy to attend and vote instead of himself and proxy need not be a member.

By Order of the Board,
BHARTIA COMPANY LTD.
Managing Agents.

4, Old Court House Street,
Calcutta-1,
Dated the 25th May, 1959.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA (REVISED SERIES)

Review for the Week Ended May 9, 1959.

The official wholesale price index (with the year ended March, 1953 as 100) rose by 1.1 per cent to 115.5 during the week ended May 9, 1959 as compared with 112.3 (revised) for the earlier week. The index was higher by 1.1 and 5.3 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago.

The index for 'Food Articles' advanced by 1.9 per cent to 115.4 as compared with 113.3 (revised) for the earlier week owing to an increase in the prices of Milk in Calcutta (+33%), Potatoes at Farrukhabad (+20%), Arhar at Nagpur (+17%), Bajra at Jodhpur (+1%), Gur (+11%), Jowar at Ujjain (+9%) and at Mohal and Rohtak (+6% each), Maize at Bahraich, Mustard oil at Delhi and Eggs (+7% each), Barley at Moga and Gram (+6% each), Rice at Hailkandi and at Nagpur and Masur at Patna (+5% each) and Groundnut oil, Gingelly oil and Tea for internal consumption (+1% each) although the prices of Jowar at Coimbatore (—11%), Onions in Calcutta (—9%), Fish (—7%), Rice at Trivandrum, Wheat at Bahraich, Ragi at Bangalore and Chillies at Madras (—6% each), Wheat at Abohar, Urad at Bombay, Milk in Bombay and Pepper Black in Calcutta (—5% each), Betelnuts (—2%) and Mung, Cashewnuts and Turmeric (—1% each) showed declines.

The index for 'Tobacco' moved up by 0.9 per cent to 97.4 as compared with 96.5 (revised) for the previous week as a result of an increase in the price of raw tobacco. Flue cured redried at Guntur (+5%).

The index for the 'Fuel, Power, Light and Lubricants' group stood at 115.06 as against 115.5 for the last week. Castor oil (+3%) went up during the week under review.

An increase in the prices of Mustardseed at Kanpur and Cottonseed (+5% each), Groundnuts and Castorseed (+2% each), and Wool raw and copra (+1% each) raised the index for 'Industrial Raw Materials' by 0.8 per cent to 119.0 although the prices of Lac at Balarampur (—6%) and Jute raw (—1%) exhibited a fall.

Lower Prices of Rayon yarn (—5%), Coir yarn and Brass (—1% each) brought down the index for 'Intermediate Products' by 0.4 per cent to 107.8 despite an advance in the prices of Lead (+8%) and Zinc (+2%).

The index for 'Finished Products' remained stationary at its previous week's level of 108.0 during the week under review.

Index Number of Wholesale Prices by Groups and Sub-Groups of Commodities.

IRON ORE PRODUCTION IN INDIA

The total output of iron ore during the month of March 1959 was estimated at 609,000 metric tons as against 632,000 metric tons during the preceding month according to the Indian Bureau of Mines.

The largest output was reported from Bihar and Orissa with 268,000 and 171,000 metric tons respectively.

Among the minor producing States Mysore, Madhya Pradesh and Bombay accounted for 80,000, 40,000 and 30,000 metric tons respectively.

During the month despatches of iron ore to iron and steel plants and export market were 471,000 and 142,000 metric tons respectively.

CARBON AND ALLOY STEELS

The Indian Standards Institution has issued five draft schedules for carbon and alloy steels used in various industries.

These draft schedules have been prepared by the Alloy Steels and Special Steels Sectional Committee of the institution, on which are represented the Ministries of the Government of India, important manufacturers, consumers and testing organizations in the country.

India has not had an established alloy and special steel industry, although during the Second World War manufacture of steels covering practically the entire range from carbon tool steels to quality aircraft steels and ordnance steels was undertaken in this country. The country's requirements for alloy and special steels have, therefore, been largely met from imports.

In order to encourage the establishment of an alloy and special

steels industry in the country on a sound footing, it was necessary, as a first step, to reduce the number of such steels used by the various industries to ensure their manufacture in economical quantities.

Secondly, since India does not possess resources for some of the most important alloying elements for steel, such as nickel and molybdenum, due regard had to be given for their conservation and as far as possible, to the development of steels using indigenously available alloying elements.

With these objects in view, the Committee collected all available data in the country with regard to the present and future requirements of various types of steels in terms of tonnage, specifications and where possible, forms, shapes and sizes.

A detailed investigation of the information which had been collected, indicated that instead of restricting the scope of work of the Committee to the rationalization of alloy and special steels it would be advantageous to include in its programme of rationalization all types of steels which are referred to in Indian standards or are likely to be referred to in future.

Accordingly, the subject of rationalization of carbon and alloy steels was covered under two broad headings: (i) steels used on the basis of mechanical properties without specifying detailed chemical composition, and (ii) steels used on the basis of chemical compositions which were further subdivided into: (a) carbon steels including tool steels, (b) free-cutting steels, (c) alloy steels other than stainless and tool steels, (d) high alloy steels other than tool steels, and (e) alloy tool steels.

After giving due consideration to the need for international co-ordination with standards being followed in different countries of the world, five draft schedules (except that for alloy tool steels) have been prepared on the basis indicated above.

In the preparation of these schedules, an attempt has been made to cover the requirements of most of the steel consuming industries. However, steels for specialized applications are not covered in these schedules.

Comments on these schedules may be sent before July 31, 1959 to the Indian Standards Institution, 9 Mathura Road, New Delhi.

SPECIFICATIONS FOR BICYCLE PARTS

The Indian Standards Institution has published four specifications on bicycle parts and accessories.

These form part of a series of Indian standards, undertaken at the instance of the Tariff Commission and the Development Council for bicycle industry.

The first standard, (IS: 960-1958), covers the requirements for cotton and rayon bicycle rim tapes and buckles.

The second standard (IS: 1282-1958), covers the requirements for bicycle cotter pins, their washer

(spring and flat) and nuts for two sizes of bicycles, namely 22 in. and 24 in.

The third standard, (IS: 1281-1958), covers the requirements for cranks and chain wheels intended for the chain drive, and fitted on the centre axle of bicycles of two standard sizes, namely 22 in. and 24 in.

The last standard, (IS: 1283-1958), covers requirements for bicycle free wheels for two sizes, i.e. 22 in. and 24 in.

Copies of the standards, published in English, are available from the office of the Indian Standards Institution, Manak Bhavan, 9 Mathura Road, New Delhi, and from its branch offices at Calcutta, Bombay and Madras.

RAISINGS AND DESPATCHES OF COAL DURING MARCH 1959

The production of coal during March 1959 from all fields in India was 3,955,143 tons. The amount of coal despatched was 3,487,375 tons.

The comparative figures for the preceding month were 3,845,860 and 3,044,583 tons respectively.

The average daily loading for the month of April from the West Bengal and Bihar fields was 4,114 wagons as against 4,052 wagons in the month of March 1959.

The highest loading on any day during the month of April 1959, was 4,703 wagons.

The approximate tonnage shipped during April was 1,52,730 tons in 25 ships, out of which coastal shipping accounted for 89,011 tons in 15 ships, whereas foreign accounted for 63,719 tons in ten ships.

A daily average of 203 wagons was allotted for shipment traffic during April 1959, as against 240 in March 1959.

About 87,186 tons of coal despatched to Pakistan in April 1959. A daily average allotment of 132.10 wagons was made during the period, for export to Pakistan.

SPECIFICATION FOR ELECTRIC SOLDERING IRONS

An Indian standard, (IS: 959-1958) covering the requirements and tests for electric soldering irons, suitable for use on direct or alternating current circuits of voltages not exceeding 250 volts, has been issued by the Indian Standards Institution.

This standard is one of a series of Indian standard specifications for domestic electrical appliances which prescribe the minimum safety and performance requirements of such domestic electrical appliances.

With a view to minimizing the number of different types of soldering irons and formulating interchangeability of bits, this standard recommends certain sizes of bits and the corresponding wattages and voltages for the soldering irons.

Copies of the standard, published in English, are available from the offices of the Indian Standards Institution at New Delhi, Bombay, Calcutta and Madras.

Men and Oil . . . 8

The Fire Officer

Tremendous fires blaze all day long in the oil industry—under steam boilers, inside heaters and in refinery units. All these fires are kept under control by trained operators. It is for the other kind of fire that the industry's fire brigades are on the watch day and night; the accidental blaze that flares up quickly, silently, and without warning. For a spark in an oilfield can cause an outbreak of fire disastrous to life and property. A chance error in a refinery could put the whole plant out of action. Oil fires, because they spread so quickly, must be fought with special apparatus, and the industry's firemen, under their Fire Officers, are specially trained for the job. In the Assam oil industry, fire brigades are on constant duty at all important centres, ready at a moment's notice to tackle this most treacherous enemy. Indian run, the brigades perform a vital service to an important Indian industry.

THE CHARTERED BANK
(Incorporated in England by Royal Charter 1853).
(Liability of Stockholders Limited).
Affiliated Institution:—
THE ALLAHABAD BANK LTD.
Head Office:
38, BISHOPSGATE LONDON, E.C.2
West End Branch, London:
28, CHARLES II ST., S.W.1.
and at
MANCHESTER, LIVERPOOL, NEW YORK and HAMBURG.
Branches of the Bank are established at most centres of commercial importance throughout Southern and South-Eastern Asia and the Far East.
Branches of The Eastern Bank Limited, a wholly-owned subsidiary of The Chartered Bank, are established in Iraq, Bahrain, in the Persian Gulf at Qatar and Sharjah, Lebanon and Hadramaut and in India, Pakistan, Ceylon, Aden, Singapore and Malaya.
Calcutta Office:
4, Netaji Subhas Road.
Sub-Branch: **L. G. THOMSON,**
31, Chowringhee Road, Manager.

UNITED INDUSTRIAL BANK LIMITED
A SCHEDULED & CLEARING BANK
(Established 1940).
Head Office:
7, WELLESLEY PLACE, CALCUTTA
Phone: 23-3481 & 23-3482
Banking Business of all Description Transacted.
Chairman:—
Sri JADU NATH ROY
Branches:
Burra Bazar, Shambazar, Hatkhola, Ballygunge, Dum Dum, (Calcutta), Patna and Narayangunge
M. K. BHATTACHARYA,
C.A. I.B. (Lond.)
General Manager.

Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need—jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

The INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

THE INDIAN OVERSEAS BANK LIMITED, Madras

Branches at: AHMEDABAD, BOMBAY, CALCUTTA, CUTTACK, HYDERABAD, MADRAS, NEW DELHI and throughout South India.

Overseas Branches: BANGKOK, COLOMBO, HONGKONG, IPOH, KLANG, KUALA LUMPUR, MALACCA, PENANG, SINGAPORE.

Agents and Correspondents all over the world

AN ENCYCLOPAEDIA OF INVESTMENT

Calcutta Stock Exchange Official Year Book 1959

More Comprehensive Than Others

The Press and the Public alike endorse the Calcutta Stock Exchange Ex Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Government, the Reserve Bank of India, all Exchange and Schedule Banks, Insurance and other Financial Institutions, and leading business houses use it, is a proof positive of its superiority over any other publications of a similar nature.

Contains full particulars relating to the stocks, shares and debentures of all companies and Government Securities and Public Bodies' Loans quoted on the Stock Exchange. Also contains information of general interest to investors including rates of Income and Super Taxes, Wealth and Expenditure Taxes, Capital Gains Tax, Bonus Share Tax, and Estate Duty. Price Rs. 12.50 nP. Postage Rs. 2/- Add 50 Naye Paise to outstation cheques. Available from the Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta-1.

FOR THE INVESTOR

Uneventful and Unexciting Week

Investment Gossip:

IT is my privilege to report one of the duller weeks on record as having been experienced during the week past on Lyons Range. Nor should this be put down, by such of my readers as are critical readers, to my predilection for that which is cheerful; for, the movement generally in prices was downward, and this might be taken by some to be sufficient pretext for me to utter a word of disapproval about the week's trading.

The fact of the matter is that activity itself has been of pitifully small proportions. There was, of course, no bull pressure; but neither was there any preceptible attempt at pushing down prices. It is therefore that I conclude that it has been an uneventful, unexciting and desultory period that I am supposed to write about.

What were the influences at work, which may be said to have had a bearing upon the small, extremely small, two-way fluctuations? Well, first of all, there was the investment gossip that a prominent personality was bearing the market; and it was not until the week drew to its close that some measure of firmness was forthcoming, with support emanating from Bombay.

Is there a second, valid reason? No: the latest production figures for Indian Iron have been particularly good; in Bombay, on Dalal Street, there should be excitement about, if only the rights issue to be announced by Tata Steel is to be considered by shareholders by the end of the month.

However, rumour is rife that the borrowing programme of the Central Government may come upon the market rather sooner than had earlier been anticipated. Current expectations are that the Central Government announcement will be made in the course of the next week or two.

This is held to be a bearish factor for, the simple reason that government borrowings will to the extent of public subscriptions drain money from the stock exchanges. I can't readily deny this.

On the other hand, the slack season has got well into stride. The rise in the Deposits of Scheduled Banks is more than of merely cheerful proportions. The decline in the Advances of the banking system, while not being of large dimensions, is nevertheless of significant size.

I still maintain that the 1959 slack season should prove to be a period in which, generally, the trend in stock exchange prices should be upward. I can't find an adequate explanation for the latter-day weakness in prices. I can only surmise that it is the speculative proclivities of the speculative fraternity, in particular their penchant for bear activities, which is responsible for such weakness as to be discerned both on Lyons Range and in Dalal Street.

£ 2 3 4

Investment Notes:

The very widespread response from the public to the issue of 34,937 equity shares and 50,000 7½ per cent tax-free Redeemable Cumulative Preference shares of Messrs Khandelwal Ferro Alloys Limited has resulted in heavy oversubscription. The list, which was opened on the 30th May 1959, was closed immediately on completion of the minimum stipulated period on the 3rd June 1959.

The National Rayon Corporation, Bombay, has now received the opinion of the Counsel and the Commission payable to the Managing Agents, as per advice of Counsel, has been calculated. The commission payable to the Managing Agents for the year 1957, comes to Rs 8,60,664, as against Rs 10,88,833, provided and paid for. The commission for the year 1958, i.e. for the year under report, comes to Rs 12,58,718 as against Rs 16,01,450 provided for. A refund of Rs 2,28,169 is, therefore, due from the Managing Agents for the year 1957 and they have agreed to pay the same. This refund, together with the amount of Rs 3,42,732 by which provision for the year 1958 exceeds the actual commission payable to the Managing Agents, aggregating to Rs 5,70,901, is thus available as additional amount for appropriation which the Directors propose to utilise as hereunder: Rs 2,70,901 as additional provision for Taxation, raising the total provision for taxation to Rs 72,70,901 and Rs 3,00,000 to General Reserve, raising the total of General Reserve to Rs 49,00,000.

Alembic Chemical Works Limited has decided to issue new 20,000 equity shares of Rs 100 each. The shares will be offered to the shareholders whose names are registered as on the 30th July in the ratio of one new share for every four shares held. The consent of the Controller of Capital Issues has been obtained. This, however, requires shareholders' sanction.

The Radio Lamp Works Limited is to issue 12,500 equity shares, at par, subject to the sanction of the Controller of Capital Issues.

Investment Briefs:

Clive Row Investments have announced an interim dividend of 25 nP per share for the year ended 31st March, 1959.

Bengal Potteries have maintained the dividend at 10 per cent for 1958.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

Seebpore Coal Repeats

Balance-Sheet Reviews:

THE Seebpore Coal Company has maintained the dividend at Rs 1.75 per share despite a slight rise in the net profit, after providing for Depreciation and Taxation, from Rs 99,488 to Rs 1.24 lakhs for 1958. Apart from providing Rs 2,526 for Development Rebate Reserve; Rs 12,318 for Capital Reserve and maintaining Taxation provision at Rs 2.10 lakhs and Wealth Tax at Rs 6,500, raised General Reserve to Rs 30,000 from Rs 20,000. The depreciation amount is, however, reduced to Rs 45,500 from Rs 60,500.

Raisings are lower at 77,909 tons against 78,937 tons, while despatches have risen to 80,894 tons from 76,326 tons.

£ 2 3 4

Dunbar Mills

The difficult conditions generally experienced by the cotton textile industry and the mills in West Bengal in particular, are fully reflected in the working results of the Dunbar Mills Limited for 1958. Sales are shown at Rs 1.84 crores against Rs 1.74 crores, while the net profit amounts to Rs 5.37 lakhs against a net loss of Rs 5.37 lakhs incurred in the previous year. After transferring a sum of Rs 80,000 from General Reserve, the directors have provided Rs 82,700

for Development Rebate Reserve. The dividend is, however, passed over again.

£ 2 3 4

Indian Wood Products

The Indian Wood Products Company Limited has reported a net profit of Rs 5.35 lakhs for the year ended 30th September 1958 as against Rs 4.83 lakhs in the previous year, sales being shown at Rs 49.59 lakhs against Rs 46.17 lakhs. The directors have, after providing Rs 93,491 (Rs 80,030) for Depreciation; Rs 8.75 lakhs (Rs 9.23 lakhs) for Taxation and Rs 7,325 (nil) for Development Rebate Reserve, reduced the dividend from 27½ to 25 per cent for the year.

According to the directors' report, several new Katha factories have gone into production and competition in this product has become more intense. Also, since the close of the year, there has been a noticeable decline in Cutch exports to the UK and the Continent, partly due to increased competition from the Far East and partly to less consumer demand from the fishing industry. These factors coupled with fact that the price of Khair trees is continually being raised by the State Government have led the directors to take a cautious view of the prospects for the ensuing year.

passed over the dividend for 1958. The accounts reveal a net loss, after providing for Depreciation Rs 12,139 (Rs 10,608), of Rs 1.10 lakhs against a loss of Rs 1.72 lakhs in the previous year. After transferring Rs 95,000 from various Reserves, the directors have provided Rs 3,500 for Development Rebate, leaving debit balance of only Rs 14,156 to be carried forward to 1959.

Alcock Ashdown

The working results of Alcock Ashdown for 1958 have turned out to be disappointing. Though sales and work done have increased to Rs 1.03 crores from Rs 85.53 lakhs, the profit, after providing for Depreciation Rs 1.95 lakhs (Rs 1.51 lakhs); for Taxation Rs 50,000 (Rs 4.75 lakhs), has amounted to only Rs 61,477 against as much as Rs 4.06 lakhs in the previous year. To this is added Rs 4 lakhs being the excess provision for taxation in respect of past years no longer required and Rs 1.58 lakhs transferred from Investment Depreciation Reserve and Rs 24,846 from Reserve for Bad and Doubtful Debts and the last year's carry-over of Rs 25,010. This makes a total Rs 6.69 lakhs. Out of this, Rs 2.27 lakhs has been transferred to Reserve for Pensions and Gratuities as against Rs 75,000. The dividend is, however, maintained at Rs 12.50 per share.

According to the directors' report, competition in structural work is becoming increasingly keener and they are searching out new avenues of profitable work. This is, however, hampered by rigid import licence restrictions, both in agency lines and for production machinery.

Pickers Limited

Pickers Limited of Ahmedabad has maintained the dividend at Rs 7 per Ordinary share for 1958. Sales are shown at Rs 11.04 lakhs against Rs 11.59 lakhs, while sale of Hides and Hide Cuttings brought in are Rs 87,898 against Rs 60,358. After providing for Depreciation Rs 47,444 (Rs 45,372) and Development Rebate Reserve Rs 11,663 (Rs 7,992) and after providing for Taxation Rs 92,000 (Rs 98,000), the profit comes to Rs 42,203 against Rs 71,244. To this has

been added Rs 41,000 transferred from reserve as against Rs 60,000.

The directors have pointed out that, due to keen competition, selling price of pickers have to be reduced, while the increase in wage roll has also adversely affected the results.

Raymond Woollen Mills

The Raymond Woollen Mills Limited has done well during the year 1958. After a lapse of several years, a dividend of Rs 8 per share on the Ordinary shares has been recommended by the directors. Though net sales are maintained at Rs 2.01 crores, the gross profit has increased to Rs 23.84 lakhs from Rs 14.89 lakhs.

The directors have provided Rs 1.48 lakhs (Rs 1.16 lakhs) to agents' commission; Rs 4.60 lakhs (Rs 3.20 lakhs) for Depreciation; Rs 2.25 lakhs (nil) for arrears of depreciation; Rs 4.00 lakhs (nil) for Development Reserve; Rs 40,000 (nil) for Investment Depreciation Reserve; Rs 2.92 lakhs (Rs 1.03 lakhs) for Taxation and Rs 6.50 lakhs (nil) for General Reserve. It may be added that the dividends, both on the Ordinary and Preference shares, will be paid by transferring Rs 7.25 lakhs from Reserve Fund No. 1, so that the dividends will be free of income-tax.

Jyoti Limited

Jyoti Limited of Baroda has reported a rise in sales from Rs 91.61 lakhs to Rs 1.10 crores for 1958. After providing for managing agents' commission at Rs 1.01 lakhs (Rs 83,188); Taxation at Rs 6.30 lakhs (Rs 6 lakhs); Depreciation at Rs 2.51 lakhs (Rs 1.67 lakhs) and Development Rebate Reserve at Rs 1.62 lakhs (Rs 57,528), the net profit comes to Rs 5.38 lakhs against Rs 4.82 lakhs in the previous year.

Out of the profits, the directors have transferred Rs 1.42 lakhs (Rs 46,818) for General Reserve; Rs 50,000 (same) for Gratuity Reserve and Rs 50,000 (Rs 1.5 lakhs) for Rehabilitation Reserve. A dividend of 12 per cent is recommended. It may be added that the capital of the company was increased to Rs 30 lakhs from Rs 20 lakhs on the 1st July, 1958.

Tea: Performance & Prospects

THE problems of Tea in recent times have been discussed threadbare at the annual meetings of the different organisations of the industry, as well as on the occasions when tax reductions were announced, so that it will be more profitable to turn aside from problems as such to the industry's performance and future prospects. In this as in other matters, it is possible to lose sight of the wood for the trees. The constant preoccupation with problems, such as high level of taxes, the burden of labour welfare measures, the low margin of profits and erratic fluctuations in prices, has created the impression that the Tea Industry is a chronic invalid, always in need of blood transfusion to keep it going. In any case it is time that spokesmen of the industry switched over from harping on problems to an objective survey of the position of the industry against the background of the general economic and industrial development of the country. The factual basis for such a survey, which might indicate a way of circumventing the difficulties, is provided by the annual report of Messrs J. Thomas & Co., Private Limited for the 1958-59 season which was released last week. The industry put up an outstanding performance last year, and on all counts a better season is in prospect.

The 1958 North Indian crop at 555.8 million lbs shows an increase of 27.4 million lbs over the previous year's figure and of 85.1 million lbs over the figure for 1947. During the last decade, the South Indian crop has also increased from 98.1 million lbs to 157.7 million lbs. The total Indian production in 1958 was 713.5 million lbs, of which 500.7 million lbs were exported as compared with 437.6 million lbs in 1957. The larger exports from India coincided with a period of record world production and larger shipments to consuming countries. Considering the easy supply position, it should be a matter for satisfaction that sale prices showed a definite improvement over the previous year. The final sale average for all Darjeeling Teas sold on the Calcutta market was Rs 3.22 as compared with Rs 2.83 in 1957. The low and medium grades also showed improvement though only to a slight extent.

It may be mentioned in this context that Government announced tax reductions on three occasions during the 1958-59 season. The effects of these successive reductions in taxes have been variously assessed. The Government's intention was to encourage exports by lightening the burden of export duties on costlier grades and at the same time to afford relief to the common grades through a system of excise duties assessed on a zonal basis. In the estimate of the spokesmen of the industry, the relief afforded to common teas through reduction of excise duties has been inadequate, a view which was emphasised at the last annual meeting of the Tea Association of India. Government circles also seem to feel that the tax concessions, which were meant to benefit the industry and foster exports, have not done either to any significant extent.

While considering the prospects of the industry and especially of the growers of common grades, it is relevant to take note of

remarkable change in the pattern of demand and prices, namely the rising trend in internal consumption. This has been brought about, not as a result of tax reliefs, but as the result of extension of the tea habit to new strata of population and increase in consumption by those already initiated. This change, which is likely to persist and grow in strength, is the most significant fact determining the fortunes of the industry in the future. The tea industry can now look forward to a substantial degree of stability in prices, if it is prepared to take note of the signs of the times.

It has been a weakness of the national economy that, of the three major industries, namely Jute Tea and Cotton, the first two have for long been mainly export industries. The internal market did not count at all in determining the level of prices and production. Recent years have seen a substantial increase in the domestic consumption of jute which has affected the export surplus. A similar change is taking place in respect of internal consumption of tea, though it might take a longer time to make a noticeable dent in the quantity available for export.

On the strength of statistics of internal consumption available, which are broad estimates including several unknown factors, it is not safe to erect a forecast of prospects for the immediate future. Internal consumption is estimated by deducting exports from total production. Figures arrived at in this fashion for any particular year can be misleading if used to forecast the level of consumption in the succeeding year. But the figures of the averages over a period should, however, give a more reliable indication of the secular trend.

The triennial average of the balance of production retained in India has, over the last twenty years, increased from 89 million lbs, in 1939 to 235 million lbs in 1958. A striking increase took place during the war years, when a substantial section of the population, apart from those recruited for the fighting and auxiliary services, were for the first time in a position to afford a cup of tea. During the six years of the war, the triennial average, which can be regarded as a reliable index of internal consumption, more than doubled itself, from 89 million lbs in 1939 to 184 million lbs in 1945. The end of the war and the war effort was marked by a sharp decline to 143 million lbs. The level of internal offtake during the next few years seem to have been determined by the level of prices. The figures for the last five years, however, indicate a steady upward trend.

Year	Triennial average of Retention million lbs.
1954 ..	173
1955 ..	173
1956 ..	207
1957 ..	222
1958 ..	235

It is relevant, in this context to point out that the years to which the above figures relate were also the years during which developmental activities under the Five Years Plan actually got under way. With the

Indian Finance

Established 1928

June 13, 1959

'The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right'—The Analects of Confucius.

level of outlays on planning envisaged for the future, it should not be surprising if the internal demand increases at the same rate as during the war years. The programmes for the industry in respect of production, exports, grading etc should be drawn up with this prospect in view. It might also be suggested that the attitude to taxation should also be governed by the same consideration, a point of view which was effectively presented by Mr A. B. Chatterjee Chairman of the Tea Board, at the annual meeting of the Tea Association of India. It is legitimate to expect a growing industry to contribute its share to the cost of development from which it can be sure of benefiting by an expanded domestic market.

A growing domestic market will be a factor making for stability of the industry which is now very much at the mercy of prices fetched in export sales. Already, the internal demand has established an effective floor price for common teas, so that prices for these varieties ruled well above the world price level throughout the last season. It will be to the decided advantage of the industry to develop domestic market by adoption of appropriate sales policies. For instance greater amount of good quality teas should be made available for the internal market. This was suggested by Mr M. K. Sinha in his presidential address to the annual meeting of the Calcutta Tea Merchants Association held in November last. He said that sales in Calcutta should be spread all the year round and offerings between Calcutta and the London auctions should be so divided that both centres have adequate amounts of quality teas at any one time. On the other hand it has been pointed out that, under conditions obtaining at present, a greater amount of quality teas at reasonable prices can be made available for internal consumption, only at a loss to producers, that is unless Government is ready to lower the level of taxes. Even otherwise, much can be done to improve the quality of the teas for internal consumption through adoption of better manufacturing methods and strict control of goods sold ex-factory to prevent residual teas from finding their way to the consumers.

With increase in internal demand of the order that appears likely, there is no point in canvassing proposals for restricting production with a view to maintain prices. The role of the International Tea Agreement as a stabilising factor can be taken over by a large and growing internal market. Export earnings can be maintained, simultaneously with the measures to foster internal demand, if export is confined to quality teas. Both for meeting requirements of domestic consumption and for ensuring supply of quality teas for export, it will be necessary to think in terms not of restricting, but of stepping up of production, and to pay particular attention to replanting. Spokesmen of the Government have not concealed their feeling that the industry has been negligent in this matter which vitally affects its future. It is possible that Government's assessment is based on facts which are not quite up to date, for much has been done since the Plantation Enquiry Committee submitted its report.

Oil: The Future and A Disturbing Factor

By GEORGE ADAMS

THE Fifth World Petroleum Congress held at New York has spotlighted the many factors involved in putting a great natural resource to work.

Thousands of oil men from around the world—scientists, technicians, executives—have discussed technical and scientific aspects of the industry, from geology to atomic physics.

In addition to exemplifying the marvellous possibilities of research and technology, the petroleum industry affords an outstanding example of economic interdependence, between producing and consuming countries and between governments and private industry.

A representative of a Middle Eastern oil-producing country once summed up the interdependence between host countries and oil companies by pointing out that without the massive investment of risk capital by western oil companies, the rich oil resources of the area would still lie buried below the ground where they would have been of no benefit to anyone.

Men long associated with the oil business observe that with all the changes in the industry, one factor remains constant and that is the necessity for taking chances and risking money. To explore, produce and market oil requires a tremendous investment both in money and technical knowledge.

The Structure of Interest Rates in India—II

By B. KRISHNA RAO

A DISCUSSION OF THE EFFECTS OF THE RATE OF INTEREST:

The distinction between the rate of interest and the rate of profit is neither clear nor consistent in classical writing such as Ricardo's but the corpus of economic theory which developed around the rate of interest tends to regard this factor price as a very effective instrument in the initiation of economic change. Indeed attempts were made by Hawtrey and Fisher to explain business cycles on the basis of interest variations. J. M. Keynes advocated low interest rates to increase investment to the full employment level. Interest costs, according to Schumpeter, act as a tax on profit. As Haberler pointed out, the changes in the long term rates of interest are interrelated with changes in the structure of production according to Aftalion and Haybek. Riefler studied the changes in interest rates in the United States during the period 1918-28 and came to the conclusion that long term rates varied in the same proportion as variations in the short term rates. A. T. K. Grant* took the view that there are large gaps between the long and the short term rates in England and that a large volume of resources lies on the margin. These resources flow into either short or long term investments according to Grant, and without waiting for the sympathetic reactions of long term rates enlarge or narrow the volume of employment. J. R. Hicks felt that 'interest is too weak for it to have much influence in the near future; risk is too strong to enable interest to have much influence on the far future'. In a similar strain A. F. Meade has stated that interest policy plays a significant part when the risk elements are less in enterprise and also in cases of major reorganisations of capital in fairly stable industries. "The long-lasting reorganisations which give their full yield on the capital involved only in the fairly distant future are profitable only if the rate of interest is low." "At high rates of interest what remains profitable is the type of capital expenditure

*A study of the English capital market. A.T.K. GRANT.

As for the future of the industry, it was noted here this week that world oil trade has increased from \$4 billion in 1948 to almost \$10 billion last year. Expectations are that it will again more than double within the next ten years.

A paper read to the Congress for A.P. Krylov, Director on the All-Union Research Oil and Gas Institute of the Soviet Union, said Russia had doubled its crude oil production between 1952 and 1957 and expected to triple its output by 1975.

Increasing quantities of Soviet petroleum have been offered for export. In 1950, the Soviet bloc exported no oil. In 1958, it exported ten million tons. It is probable Soviet exports will rise further in the future.

This presents the likelihood that Soviet bloc petroleum will have the capacity to try to capture a progressively larger share of the West European market. Thus cutting into existing markets for Middle East oil.

Considering the known Soviet willingness to ignore economic considerations in the interest of immediate political gains, the prospect takes on added implications. There is plenty of evidence that Moscow will cut prices temporarily, often below cost, in order to enter a politically important market or to achieve political leverage in competing countries.

which is not too expensive but will make a large and quick difference to output or to costs even though the improvement may not be long-lasting."** Prof. Meade pointed out that the use of the rate of interest for the purpose of controlling investment involves that social priorities which should be observed may be left out of account. The effects of changes in interest rates on production plans were analysed by J. R. Hicks under two categories of effects, viz., the income effects and the substitution effects. The income effect for an individual depends upon the relative movements in the capital values of his previously planned stream of expenditures and of his expected stream of receipts in a given period. The substitution effect in a given expenditure period is seen when individuals tend to substitute future expenditure for the present or vice versa because of the changes that were brought about in the discounted prices of future purchases by the changes in the rate of interest. If the income and substitution effects work in the same direction in the capital market a rise in the rate of interest will reduce current expenditure and a fall will increase it. The income effect and the substitution effect may work in opposite directions; "there is plenty of opportunity for all sorts of cross effects, and all sorts of complementarity to muddle things up."*

In a number of countries empirical studies were made to assess the influence of the rates of interest on investment. The statistical testing of the business cycle theories with reference to the data in the U.S.A. led Tinbergen to conclude that the influence of interest rates, in the restricted sense of discount rates and other short term rates, on goods is very small.*** He however has added that although statistics are incomplete it is nevertheless probable that movements in commodity stocks were dependent in a small

Indian Finance

degree on interest rates. "The influence of long term interest rates on investment activity in durable goods is found" says Tinbergen "to have been moderate, the influence of profits and in the case of residential building, the shortage and abundance of houses being much larger." On the basis of statistical investigation into the interest-elasticity of the investments made by business firms in Britain, during the pre-war period, R. S. Sayers says, "it is quite clear from our enquiry that in so far as their investment policy is affected by capital market conditions (in a broad sense at all) firms are more affected directly from the policies of the banks than they are affected indirectly through the long term securities market. What slight power the banks have, to damp their own hands, is not to any degree dependent upon the banking policy on the securities market."* Other surveys in France and the U.S.A. have not borne out the significance of the rate of interest in the investments made by business firms. Klein has however recently found high interest elasticity of investment demand in electric utilities and railroads in the United States. In general, the increased dependence of firms on self-financing and the tendency of banks and insurance companies to switch over to private securities and take on more risk etc have restricted the freezing—in effect of rising interest rates.

The following conditions peculiar to India have to be given due weight in the evaluation of the effects of the rates of interest in this country. Some of the rates of interest are effective only on a small number of transactions and are confined to certain areas only like the Bazaar Bill Rates in Bombay and Calcutta. Joint Stock Banking activity has been of a small order and banking expansion has been uneven in the country so that the effect purveyed by the banking system does not embrace the whole economy. Further, the contact between the Central Bank and the Commercial Banks has not been so close as to make monetary policy fully effective. On account of ignorance undeveloped investment habit and an irrational desire for safety the investible resources do not align in competition among themselves. Banks are heavy investors in public debt and with assured liquidity they are not thwarted easily in their credit operations by a high interest rate policy. The Indian Joint Stock Companies resort to self-financing on a considerable scale. The Indian Taxation Enquiry Committee has pointed out that retained profits were a larger source of capital than subscribed capital for the financing of expansion of industry. The Reserve Bank's study of the Balance Sheets and Profit and Loss Accounts of 750 Joint Stock Companies for the period 1950-55 also confirms the conclusion that the ploughing back of profits was resorted to by the companies on a large scale. Incentives for this practice are afforded by the grant of development rebates by the tax authorities. As a result of auto-financing the effectiveness of changes in interest on investments may prove to be small. The interest rates show little coordination between urban and rural areas and as within these sectors the rates are by no means uniform. The credit mechanism in India is undeveloped. The Central Banking Enquiry Committee remarked, "The fact that a call rate of ½% Hundi rate of 3% a bank rate of 4%, Bombay Bazaar rate for bills of small traders of 10% can exist simultaneously indicates extraordinary sluggishness in the movement of credit between various markets." Even today the fact stands that the movement of credit in the country taken as a whole is to a certain extent

Co-operatives in West Bengal

While the Nagpur Congress resolution on land reforms has made "cooperation", which for its success should be kept clear of controversy, the topic of a raging political debate, the specific issue, namely the implications for agricultural production of the extension of the cooperative principle to the organisation of cultivation, is wrapped up in confusion. This is not a question which can be decided on the basis of ideological preference and pre-suppositions. A careful sifting of the known facts about the record of the cooperative movement in general, as also what little data is available regarding cooperative farming societies, should necessarily precede the formulation of a programme of action for replacing familiar methods of cultivation by individual proprietors by joint cultivations through cooperative societies. Those who are anxious that the programme that is ultimately drawn up should be based on an objective evaluation of data will, therefore, welcome the very lucid presentation of the relevant facts in so far as they relate to West Bengal, in a broadcast by Mr A. K. Dutta, Registrar of Cooperatives, West Bengal, from AIR, Calcutta.

When cooperatives are discussed, the wide variety of organisations

included in that generic description is not always kept in view. Even among cooperative farming societies, there are four types functioning in the country, and one type is frequently confused with another. These four types vary in respect of the extent and nature of the hold of the members over the lands they cultivate, their relations with the society and the manner of disposal of the produce. The lucid exposition of the nature and functions of these different societies by Mr Dutta should be helpful in clearing the atmosphere for fruitful discussion of the potentialities of joint farming.

Joint farming, it may be mentioned in this connexion, is not a radical innovation in West Bengal. As on June 30, 1958, there were 167 cooperative farming societies in the State, with total membership of 7,032 and covering an area of 13,037 acres. Of these 109 were Better Farming Societies, 18 Joint Farming Societies, 5 Tenant Farming Societies 29 Collective Farming Societies and 6 composite types. The Administration has rightly decided on an experimental approach to the problem of institutional changes in the agricultural set up. While the original programme for cooperative development under the Second Plan called for the establishment of 500 cooperative farming societies, at the rate of hundred each year, the target was later revised, with more emphasis on quality than on number. That would improve the chances of tackling the difficulties of internal administration which as Mr Dutta indicated have yet to be overcome.

More interesting is the assessment of the conditions in which the cooperatives may be expected to function with success. It has been found from experience that cooperative farming societies flourish only where irrigation facilities, scope for procuring better seeds and fertilisers, availability of credit, technical guidance etc are above the average. This experience suggests, that institutional changes by themselves may not lead to desired results. Careful preparation of the ground will be necessary, if the programme to raise cooperatives all over the country is not to lead to disillusion and discontent.

Bright Prospects

With the rise in the tempo of industrial development, the demand for paint, both for industrial and domestic purposes is bound to increase and the paint industry is not likely to languish for lack of markets so long as it is able to deliver the goods. Hitherto shortage of iron and steel has held back the natural expansion of the engineering industry which has an insatiable appetite for paint. Now that production has started at Bhilai and Rourkela, engineering industries will be enabled to go ahead at a rapid pace. It should not, therefore, be surprising if the

Second Plan target for paints, of 60,000 tons by 1960-61, is found inadequate.

The industry, so far, has a satisfactory production record. Output last year rose 5033 tons to 47,309 tons. Considering the difficulties occasioned by shortage of materials, some of which have to be imported, the increase achieved last year is certainly gratifying, and if this rate is maintained, it should not be difficult to reach the target by 1960-61. But the question which has now to be considered is whether this target will leave an adequate margin for a sizable level of exports.

In his presidential address to the Indian Paint Manufacturers' Association, Mr M. L. Basak has stated that, though Indian paints have to make their way against keen competition from the USA and UK, there is considerable scope for increasing export of Indian paints to neighbouring countries. A Panel for the paint industry has been constituted under the Export Promotion Council for Chemicals and Allied Products which was set up a year ago. The success of the efforts of the Panel will be limited by two factors, namely the level of output and the cost of production.

In the short run, the level of production will be determined by the facility with which imported raw materials are available, and the responsiveness of the Import Control authorities to the needs of the industry. For increased output in the long run, as well as for reduction of manufacturing costs, the industry must look to the ability of its technicians to utilise indigenous materials without detriment to the quality of the final product. This underlines the need for continuous research on materials and processes. One of the most fruitful development, to which Mr Basak has referred in his address, is the formation of the Indian Paint Research Association jointly by the members of the two organisations of the paint industry in the country.

The New Party

What appeared like an exercise in political theorising, when Mr Rajagopalachari first mooted the idea of a Conservative party, has reached fruition much earlier than its most ardent supporters expected. The conservative party has been born as the party of individual enterprise as opposed to the Congress pattern of socialism, and has been provided by its sponsor with a catchy slogan. "For the Freedom of the Farm and Family".

Even a few months ago the emergence of such a party in the political arena would have been regarded as fantastic. Though the advantage of having a party to the Right of the Congress, without compromising commitments, has been recognised by intellectuals addicted to political introspection, the objective conditions for the formation of such a party simply

did not exist. Except for those on the extreme Left on the one hand and the revivalists on the other, the vast majority of the population could not conceive of a better alternative to the Congress party which successfully comprehended the political and economic urges of the generality of the people. None of the Congress policies seemed a threat to the economic interests of any substantial section of the population. The socialist pattern was viewed by the people through an utopian mist. But the Nagpur Resolution on Land Reforms and the decision on State Trading in food have completely transformed the situation.

For the first time a conservative party has the chance of enlisting a following of respectable size. The agriculturists in regions where ownership of land had for long been widely distributed, as well as the small traders, who hitherto formed the hard core of Congress supporters are inclined to pay attention to an alternative programme to that presented by the Congress. The organisers of the new party have shown a shrewd sense of timing in seizing the psychological opportunity to launch their venture. And the sponsorship of Mr Rajagopalachari has given it a powerful impetus.

The weakness of the party is uncertainty about its first port of call. Mr Rajagopalachari himself does not expect it to function at least for the time being, as more than a pressure group or lobby acting as a brake on the Congress. But the dynamics of politics may force the pace and the party may emerge much sooner than anticipated, either by its sponsors or its critics, as a genuine political opposition.

New Loan Imminent?

WITH money conditions turning insistently easier, owing both to an increase in the Deposit resources of the banking system and to a decline in the Advances of Scheduled Banks, the Central Government's new loan for 1959-60 may be said to be imminent. Although there are no perceptible signs of the Reserve Bank grooming the gilt-edged market in preparation for the new loan, the fact remains that the steady conditions in the gilt-edged market, as well as the easiness in the money market, not to speak of the anxiety of the State Governments to put through their own borrowing programmes, will all dictate the new loan announcement being made sooner rather than later. It is probable that, by the middle of June or the third week, the Central Government will make known the composition of the new loan for 1959-60, though the subscription lists may not be open until in July.

We may recall that, some three weeks ago, we had attempted an assessment of what the new loan programme should be. We had suggested that it should be a two-tier programme, one being a short medium $3\frac{1}{2}$ per cent 1966 and the other being an issue of the existing $3\frac{1}{2}$ per cent 1974. We see no valid reasons for changing the maturity period of the two loans or of the interest voucher that they would carry. But we feel that the issue price can be somewhat higher than we had deemed possible on the last occasion. Thus, the $3\frac{1}{2}$ per cent 1966, should, we feel, on no account be issued at discount exceeding 25 nP. We realise that this is substantially higher than the quotation for the $3\frac{1}{2}$ per cent 1967 at Rs 99.25. Nevertheless, we must bear in mind the fact that the gilt-edged market is just in process of gaining new strength and, as such, we have revised downward the extent of discount from 50 nP to 25 nP.

Then, as far as the $3\frac{1}{2}$ per cent 1974 is concerned, as against the current quotation of Rs 98.85, we feel that the issue price should be pegged, say, at Rs 99.25.

These are two suggestions as to the issue price which we have made because we believe that it should be possible for the Central Government, in spite of a fairly severe 1958-59 busy season, to borrow from a position of strength.

BEGINNING of the month disbursements have interrupted the

smooth progress of the 1959 slack season, in causing, as evidenced in the return of the Reserve Bank for June 5, a sharp rise of Rs 16.73 crores to Rs 1755.43 crores in Active Note circulation. Furthermore, outflow of Rupee Coin, at Rs 2.15 crores, has been heavy. Minor adjustments have been made in Rupee Securities and Foreign Securities are unchanged, so that the expansion in currency circulation is reflected in a sharp drawing down by Rs 18.94 crores to Rs 13.93 crores in the Reserve Bank's cash in the till.

In the Banking Department, it is to be noted that the impact of month early disbursements is confined to the Balances of the Central and State Governments, with the Scheduled Banks apparently feeling but little strain in meeting this periodic demand. For, the Balances of the Central Government have been run down by Rs 18.70 crores to Rs 53.04 crores. However, part of this was apparently due to the need experienced by the Central Government to meet the commitments in regard to Treasury Bills held in the Banking Department of the Reserve Bank which matured during the week; the relevant portfolio showing a drop of Rs 9.55 crores to Rs 0.75 crores. However, Investments are higher by Rs 10 crores, in round figures, at Rs 298.32 crores. Thus, deficit financing for Rs 10 crores may be said to have been instituted for meeting this maturing liability on account of Treasury Bills. Hence, the whole of the decline in the Central Government's Balances is to be attributed to the heavy net disbursements of the Centre in respect of month early disbursements. In the case of the State Governments, their Balances are shown lower by Rs 2.73 crores at Rs 13.17 crores; however, they have reduced their indebtedness by Rs 1.87 crores to Rs 32.22 crores.

The Reserve Balances of the member banks have improved by Rs 0.16 crores to Rs 74.02 crores. But there may be some rise in indebtedness of Scheduled Banks to the Reserve Bank, since the latter's Other Loans and Advances are higher by Rs 2.06 crores at Rs 63.20 crores.

The drain on Foreign Exchange Reserves continues, with Balances Held Abroad registering a decline, during the week, of Rs 1.09 crores to Rs 19.91 crores.

That beginning of the month disbursements did not put Scheduled Banks to much strain is suggested by the return of the State Bank for June 5, in which, significantly, the total of Advances has declined by Rs 3.74 crores to Rs 194.41 crores. However, this is accompanied by a fall of Rs 4.61 crores to Rs 523.33 crores in Deposits, suggesting that constituents met their month early disbursements by drawing on their bank accounts. With little else by way of important changes, Cash in Hand and with the Reserve Bank

has declined by Rs 0.85 crores to Rs 25.61 crores.

Another sharp increase in Deposits, one of Rs 13.08 crores to Rs 1765.77 crores, has been noted up in the return of the Scheduled Banks for May 29. The State Bank was responsible for Rs 2.89 crores of this rise. Secondly, the total of Advances has fallen by Rs 7.62 crores to Rs 1011.46 crores, the State Bank's share being Rs 1.34 crores. This accretion to resources by way of additions to Deposits and decline in Advances is testimony to the good progress made by the 1959 slack season. This two-way improvement has enabled Scheduled Banks to reduce borrowings from the Reserve Bank by Rs 7.47 crores to Rs 10.52 crores; and this fall is wholly on account of banks other than the State Bank. Investments have been marked up by Rs 10.20 crores at Rs 635.10 crores, this being wholly due to the State Bank. Consequently, with the State Bank having figured as drawing on its cash balances during the week, the Cash Balances of the Scheduled Banks have been marked down by Rs 1.28 crores at Rs 166.25 crores.

London Stock Exchange Trend

By Paul Einzig

THE British economic situation viewed in isolation from international influences would justify a Stock Exchange boom. Most factors seems to be in favour of such a boom. During the last two months unemployment has been declining sharply. It is now under the 500,000 mark and it is expected to be under 2 per cent when the next figures are published. The demand for both consumer goods and capital goods is on the increase. Profits are increasing, and so are dividends of many figures. In spite of the rise in equities, yields are still considerably below the corresponding yields on American equities.

After the recent deflation scare, which diverted investment from equities into Government loans, the trend of investment now favours equities once more. Progress is being made towards the popularisation of equities among small investors, which will result in a gradual increase of demand from quarters which have barely touched equities in the past. Over and above all, it seems certain that in a matter of months inflation will once more rear its ugly head.

In addition to all these influences, there has been a revival of take-over bids during recent months. Although these bids only affect the equities of a few firms, they indirectly influence the attitude of boards of directors in a large number of firms. Take-over bids stand a chance of succeeding because dividends are too low in relation to earnings and because the assets of most firms are not

Indian Finance

adequately valued in balance sheets. Recent take-over bid activities taught this lesson to directors who are now inclined to play for safety by removing the inducement for take-over bids. This can be done by increasing their dividends and by re-valuing their assets.

Many conservative boards are reluctant to go too far in either direction. They are anxious to plough back into their firm a large proportion of the earnings. They are equally anxious to retain in hand a reserve by undervaluing their assets of this firm. On the other hand they realise that if, as a result of their conservative attitude, take-over bidders were to assume control, the reserves of their firm would be plundered for financing further take-over deals. So they are inclined to feel that in such situation conservatism is not in the best interest of the shareholders. A number of dividend increases and revaluations of assets are therefore likely to take place, such revaluations would give the public better idea of the true value of the equity capital so that equities would rise to a level at which they cease to attract take-over levels.

In face of the prospects of increased demand, both cyclical and institutional, the Stock Exchange displays a hesitant trend for equities. During recent months their trend has been balanced so to say, on a razor's edge. Almost any piece of news, or anticipation of news, has been sufficient to tip the balance one way or other, to an extent rather in excess of the intrinsic significance of the news. But some news pointing in the opposite direction usually intervenes and reverses the trend.

The London Stock Exchange follows slavishly the ups and downs of Wall Street. There is no basic reason for this. Yet the closing prices in Wall Street almost invariably affect next day's opening prices in London and continue to influence the trend during the day, unless offset by some other influence. To some extent the increased interest taken by American operators in a small number of leading British equities justifies sympathetic movements. Each decline in Wall Street American causes demand to be diverted from London equities to the corresponding class of American equities.

Operators on the London Stock Exchange eagerly seize upon any good news, or even rumour of good news, affecting individual firms. Dividend increases, bonus payments, higher profits etc are liable these days to affect the prices of the equities concerned in excess of the extent justified by the favourable news. This is because investors and speculators like to believe that a boom is just round the corner, and, even if they do not dare to back their convictions in a general way, they go for equities of firms whose progress seems to justify this optimism.

June 13, 1959

'No fresh business in either . . .'

THE jute market reports are daily depressingly repetitive: no day passes, when the information is not vouchsafed at the end of the afternoon's activities that no fresh business has been reported in either hessians or in sackings, though prices, from the consumer point of view, are very attractive. What is wrong with the World of Jute, that the prospect should fail to please? This is an extremely general question that I have posed, and one which, I may frankly confess, I have no intention (or even capacity) to answer.

What, instead, I should like this week to discuss, albeit briefly, is the vista that I see in my mind's eye as existing for the Indian jute goods industry. These are not views that are new; but they bear a restatement, particularly as the new jute year is about to start.

The greatest hope for our jute mills lies in the expansion of agricultural production. Thoughts on the food target for the Third Plan, and as freshly emphasised in the report of the Ford Foundation team, indicate categorically and unambiguously that very great efforts at increasing output is necessary, if India is at all to achieve even a modicum of improvement in the standard of living of the masses. More food means more jute goods to store them in. And it is a sharply rising internal consumption that can, as it were, "save" the Indian jute goods industry.

The experience of immediate years past is not discouraging; far from it. As in the case of tea, and as prospectively in respect of cotton textiles, a balancing between output of jute goods and demand therefor has been made possible mainly by a resurgence of internal consumption.

But few circles will with any confidence accept the proposition, that if it is put to them, that the time is not far off when Indian needs will be so substantial as to leave a smaller surplus available for export. For, the present is so bleak: the jute mills are working well below capacity, a surplus has been registered even in the production of raw jute, Pakistan is emerging as a considerable producer of jute goods—and world competition shows little signs of relenting; and, all the time, the ceaseless switch to bulk handling methods and the unending search for packaging substitutes are continuing.

But I maintain that the decade between the middle of the 'fifties and the middle of the 'sixties is an interruption, an interim, in the even prosperity of the industry based on the golden fibre.

It cannot be, I submit, that, in an expanding world economy, the only area where stagnation reigns will be in regard to jute goods. Indeed, the development that is in store, that must be in store, will be such as to result in a great augmentation in the use of jute goods. The masses of the underdeveloped world will not and cannot wait long for improvement to come their way. The undernourished and the near-starvation cases will be wooed, and all assistance will be rendered to them; of that, there does not seem to be any possibility of doubt. Bulk handling is all very well for the industrialised West, where labour is costly; bulk handling will be a luxury in the regions where labour is unemployed and plentiful. So it is that, for many decades to come and commencing from the time when there is a more concerted attempt to bring succour to the have-not nations and peoples, demand for jute goods must prevail.

I am afraid that what started out as a simple statement of my beliefs has taken on the aspect of a dogma of truth—at least, truth as I see it. Let us now turn our mind to more immediate matters.

Reports go to show that the current jute crop will be satisfactory, if so weak a word will find acceptance among my readers. Reports are also not contradicted that American consumption is being well-maintained. On the one hand, thus, the pressure upon raw jute prices should tend to be downward—always with the proviso that, already, the forthcoming bumper crop has already been "discounted" in terms of prices. On the other hand, any emphatic revival in American purchases of jute goods—by which, of course, I mean hessians mainly—should cause an upward trend in prices. The two may mostly cancel each other out. In the result, it may well happen that, over the next few months, prices in the raw jute and jute goods markets will remain largely stable.

There will no doubt be renewed pleas for exports of raw jute on a larger scale during the next jute year; this may be easier asked for than implemented. But it needs to be recognised that the presently experienced surplus in raw jute will surely be no more than a temporary phenomenon, much as has happened in respect of sugar. However, it is important that, in order to ensure that raw jute production, so bravely brought to a level sufficient to meet our needs, does not fall to a level lower relative to Indian requirements, prices for the raw jute market are maintained. This, indeed, is the immediate problem for the World of Jute to tackle—and find an answer for.

1009

First Export Sale Disappointing

THE first Export Sale of the 1958-59 season's teas was held this week and the results were disappointing as there were heavy withdrawals. It appeared that buyers were influenced by output trends and fears of growing competition from East Africa. It was thought earlier that, as the 1958 teas had been sold, the new season's sales would start well. Contrary to expectations, there was a poor and disappointing demand.

It looks as if that buyers may not take their requirements in any haste and that the pattern of discrimination in buying, which has been noticed during the past few years, is likely to be repeated in the months ahead. It is, however, believed that the demand for quality teas will be maintained as they are in short supply.

Exports from Africa have continued to rise, while China has announced a three-year Plan to step up her tea exports to 200 million pounds by 1962. Production and shipments from Ceylon show no signs of flagging, while Pakistan has recently stipulated a minimum exports of 20 million pounds per year. These bearish factors may, to a certain degree be offset, as far as the Calcutta market is concerned, by the increasing internal consumption and the expanding trade which India has developed with the Communist countries. The fact, that the UK now seems willing and able to maintain its stocks at a higher level than in recent years, must also augur well for the future; and this alone should be a stabilising influence on the market for the coming months.

In this connection, the latest annual report, issued by Messrs J. Thomas and Company, states that "fine plucking and careful manufacture by any method must pay a handsome dividend and the best teas may well realise prices comparable with some of the highest in recent years. However, when the bulk of plain teas are being offered, the finance available to the buyers may control the prices more noticeably than heretofore". The report conclude by stating that it is only on the basis of a reduced cost level that India can, in the face of mounting competition, expect to hold on to her present export trade.

Meanwhile, offerings in the export sale were 31,703 packages. Only the few bright liquoring teas

from the Dooars and Cachar met with any support at 20 to 30 nP per pound below valuations, the remainder being withdrawn. There was a fair weight of Legg-out teas on offer; but prices were from 30 to 40 nP below valuations with heavy withdrawals. There was only very little interest shown in Assam tea of orthodox manufacture; but the few bright liquoring CTC teas received some support. Whole Leaf grades were 20 to 30 nP easier, while Darjeelings, which showed a decline in quality, were upto 30 nP below last rates. As only very few representative teas were sold, no rates were given.

According trade sources from Ceylon, teas exports from Ceylon have declined to 87.83 million pounds during the first quarter of the year from 99.43 million pounds in the corresponding period of last year. Shipments to the UK dropped down from 33.53 million pounds to 30.25 million pounds and so also to the Continental countries from 5.55 million pounds to 3.48 million pounds. Exports to the USA, on the other hand, have improved to 11.44 million pounds from 11.09 million pounds. Egypt has also increased her offtake to 2.52 million pounds from 1.62 million pounds, while shipments to other countries have improved to 18.19 million pounds from 17.43 million pounds.

In the first internal tea sale held in Chittagong on Wednesday, off-rates were 13,908 packages. Pakistan Brokers offered 11,535 packages, while Ahmad Agencies auctioned 2,384 packages. Leaf offerings were 11,910 packages and Dusts 1,908 packages. There was a supplement of 76 packages.

In London auction, the offering of 73,670 packages was somewhat larger and comprised North, South Indian, Ceylon and other miscellaneous growths. Buyers were selective where quality was concerned; but generally demand was good throughout and prices showed, in the main, no significant changes either way.

CALCUTTA SHELLAC MARKET REPORT

The undertone though steady but inactive, a small business is reported to have been done.

Following are the quotations, on the 10th June.

Quotations,	Buyers.	Sellers.
Rs.	Rs.	Rs.

WORLD OVERSEAS

US Notes

AS does any national monetary manager, the US Federal Reserve Board (FSB) prefers to keep potential inflationary pressures under control before, not after, they arise.

An example of this preventive approach was evident against last week, when the Board, on the fourth occasion since the current US economic upturn picked up speed last summer, raised its discount rate, this time from 3 to 3.5 per cent.

The new rate equals the highest level of recent years, which prevailed during the latter part of 1957, and compares with the mid-1958 low of 1.75 per cent when the FRB began to shift from a policy of credit ease, instituted to counter the brief 1957-58 recession, to one of greater credit restraint.

The discount rate can play an important part in a flexible monetary policy. It is the interest charge at which Federal Reserve Banks lend money to commercial banks which are members of the Federal Reserve System. This means that the higher discount rate is likely to be passed along by the commercial banks to business

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following items:—

(1) Tender No. PC/GM/3/59/55/CS/SHM/D of 58 for supply of 537 Nos. plates fish combined drop forged 90 lbs. RBS and 85 lbs. BN to CE's Drg. No. 13260, Sheet 5.

Tender forms are obtainable from the Controller of Stores, (P. C. Section) South Eastern Railway, Garden Reach, Calcutta—23, on remittance of Rs. 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23, by local firms. Earnest money against the tender is Rs. 1000/-. Closing date of the tender is 8-7-59 at 3 p.m. Firms not on the Rly's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest money deposit receipt with the Tender.

GENERAL MANAGER

S 29

borrowers in the form of higher lending rates. In this way, an increase in the discount rate constitutes a means of credit tightening.

Actually, the latest discount rate increase was partly technical, being viewed by experts as an adjustment to the higher rates prevailing in private money markets. The raise followed by ten days a prior boost in the "prime" rate from 4 to 4.5 per cent. The prime rate is the interest that major commercial banks charge on loans to their biggest borrowers with the best credit ratings. Other bank lending rates usually are scaled upward from the prime rate.

Thus, the new discount rate increase had been widely anticipated in financial circle, and its effects on the rates which businessmen pay for credit may turn out to be relatively small.

In other sense, however, the discount rate boost may be viewed as a signal for greater restraint in the use of money and credit. This may be understandable in the face of the vigorous and sustained advance under way in the American economy for the past year. It may be recalled that last March an FRB spokesman said that the Board would have been pursuing a more restrictive credit policy even then were it not for the fact that the employment rise was not keeping pace with the production upsurge.

In the past several months, however, the employment situation has undergone marked improvement. Beginning in March, both the increase in the number of jobholders and the decrease in the number of jobless have far exceeded normal seasonal expectations.

As further evidence of the strong economic upturn, economists note that since last December there has been only a modest decline in the volume of business borrowers, although seasonal trends normally call for rather substantial reductions. And lately the loan curve, while it has not soared, nonetheless has turned upward, and in prospect now is the usual seasonal rise in credit, which normally begins in June.

Also, there has been an increase in consumer credit extensions. Recently, and the consumer price index advanced last month, to a record level. Neither of these movements, it should be noted, has been of exceptional magnitude. The rise in consumer credit, particularly for home mortgages, is well within the financial means of borrowers and is far from being excessive. And the consumer price index, while at its highest level, still is no higher than it was in July and November of last year.

It is to be noted that the latest FRB action boosting the discount rate has not gone uncriticized, particularly in Congress. Several Senators took the occasion to attack the FRB's "high interest rate

policy," claiming that it is holding the economy back.

On the other hand, many experts note that the board, acting in line with money market movements, is using its influence to make borrowing more selective as a means of keeping the current economic rise within sound proportions.

Britain

The gold and convertible-currency reserves of the Sterling Area fell by £47,000,000 during May and stood at £1,114 million on May 31, the Treasury announced in London on June 2.

It is pointed out in London that the May result was reached after the special payment of £58,000,000 in gold to the International Monetary Fund (IMF), representing an increase in the United Kingdom's subscription to the Fund. This additional gold subscription to IMF has the effect of increasing the United Kingdom's potential drawing rights on the Fund by five times the amount of additional subscription, making a substantial increase in second-line reserves. Were it not for the IMF payment, the reserves would have risen by £11,000,000 in May.

The fall in the reserves because of the special payment to IMF was anticipated by the Economic Secretary to the Treasury, Mr F. J. Erroll, in a speech at Nottingham on June 1.

STRENGTH OF ECONOMY

Britain's economy, said Mr Erroll, was stronger than for many years. "First, inflationary pressures have dwindled, and the overstretch of our resources has gone. A sign of the changed economic times in which we are living was provided the other day by the retail price index; it was the same this April as in April 1958." This, said Mr Erroll, was "good news; and I hope it is the sort of news on prices with which we are going to become familiar."

RIISING PRODUCTIVITY

The second strong point in the economy, declared Mr Erroll, was "that we have the capacity in industry to raise output without getting back to an overload—such a feature of our post-war history. Industry has been investing heavily in recent years, and now, with growing markets at home and abroad, we are very well placed to get productivity rising."

"We had, in fact, a modest rise at the end of last year, a forerunner of bigger gains this year. High productivity would bring with it lower costs of production. Thus, industry should have an excellent opportunity to get prices down."

The third point the Economic Secretary made was that "reserves of gold and convertible currency have risen steadily since September 1957, if allowance is made for heavy payments on the American and Canadian loans in December, and for our repayment, in March, this year, of over £70,000,000 to the

Indian Finance

International Monetary Fund. In this connexion, I should mention that we made a further payment last month to the International Monetary Fund of £58,000,000, which is the gold payment on our increased subscription to the Fund.

"We must expect, therefore, that the reserve figure for May, will show a substantial fall. But this is a payment which we are glad to make. In full agreement with the other countries concerned, and especially the United States, we have been working for this increase in the Fund."

WORLD CLIMBING OUT OF RECESSION

Referring to the world economy, Mr Erroll said it was now climbing out of the recession which affected nearly all countries, to some degree, last year. In Europe and North America, production and employment were rising again and expansion was under way.

"This will raise the purchasing power in the primary producing countries, which suffered from a big drop in export earnings from their products when demand by industrial customers fell. Already there are signs that commodity prices are hardening."

The United Kingdom, declared Mr Erroll, "is second only to the United States as an importer. Our policies here have a big effect on the world economy. Ours are expansionary policies, and they are giving an important push to the world economy. The Budget will still be fresh in your minds, but it is important to remember that it was only one of a number of gradual easements in 1958-59."

S. E. RLY. TENDERS

Sealed tenders are invited for tender No. CON/COS/48/D/59 for supply of 600 cwt. Spikes Dog 5/8" sq. x 6 1/2" long as per Drg. No. IRS(T)-T-276 IRS T2-1953. Tenders will be opened on 8.7.59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta—23, on remittance of Rs 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta, by local firms.

Tenders should accompany the receipt for depositing Rs 520/- as Earnest money with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned is exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

sure that that is a prejudice confined to myself—most people seem to act upon it in practice, even in America. But I not only recognise the fact, I approve the ideal of inequality. I don't want myself to be the equal of Darwin or the German Emperor; I don't see why anybody should want to be my equal. I like a society properly ordered in ranks and classes. I like my butcher or my gardener to take his hat off to me and I like, myself, to stand bareheaded in the presence of the Queen... In America, I am told, everyone is always informing you, in everything they do and say, directly or indirectly, that they are as good as you are. That isn't true, and if it were, it isn't good manners to keep saying it."

There is much else besides what I have quoted both in Lord Cantilupe's defence and in Conservatism. Hazlitt, though a radical by temperament, has given what seems to me the acutest description of the sources of Burke's conservatism and those words apply equally aptly to Rajaji's. Burke took his idea of political society from the pattern of private life, wishing, as he himself expressed it, to incorporate the domestic charities with the order of the State, and to blend them together. He strove to bind the analogy between the compact that binds together the community at large, and that which binds together the several families that compose it. Thus, the reason why a man ought to be attached to his wife and children is not, surely, that they are better than others (for, in that case, everyone else ought to be of the same opinion), but because he must be chiefly interested in those things which are nearest to him. Burke was so far right in saying that "it is no objection to an institution that it is founded in prejudice, but the contrary, if that prejudice is natural and right; that is, if it arises from those circumstances which are properly subjects of feeling and association, not from any defect or perversion of the understanding in those things which fall strictly under its jurisdiction." On this profound maxim he took his stand. "The inequality of the different orders of society did not destroy the unity and harmony of

the whole. The health and well-being of the moral world was to be promoted by the same means as the beauty of the natural world; by contrast, by change, by light and shade, by the variety of parts, by order and proportions."

For a temperament nourished on such sources, colonialism is as reprehensible as revolution, for, both outrage the essential pieties of man. Faith in what Shakespeare calls "order and degree" in tradition and continuity, in hierarchy and fealty, noblesse oblige and sense of responsibility constitutes the core of Conservatism.

In the same essay on Burke, Hazlitt made it a touchstone of sense and candour of a radical whether he allowed Burke to be a great man. It is a crucial test and anyone who sees in Rajaji's move the resurgence of mere reactions—as some Congressmen have been doing—is apparently incapable of looking beyond his political nose. But what are the real chances, political and philosophical, of Conservatism? As I said earlier, as a temperament, it is likely to endure for ever, though such a temperament will find the environment less and less endurable as time goes on. But as a conscious political philosophy, it has had its day and where practiced, it is a minority cult and a kind of amiable eccentricity. It is said, for

instance, that there is a revival of conservatism in its Burkean sense in the US. Mr Russell Kirk, an American, has written a brilliant book called the "Conservative Mind", which is "pure Burke". But there is something essentially incongruous in America, with its general belief in "quick obsolescence", espousing conservatism. The symbol of conservatism is vintage Rolls Royce and not the latest model of the solid gold Cadillac. Anyone who has read Professor Galbraith's "The Affluent Society" will easily see how Conservatism for Americans can only be a form of exotic thrill like the small car craze that is giving Europe its much needed dollars. In its practical manifestations, it can lead to such absurdities like Professor Kirk's notion that the school lunch programme is a "vehicle of totalitarianism", that the social security system bears "nearly all the marks of remorseless collectivism".

In England, I do not suppose there is any real conservative left except for Mr Evelyn Waugh. There are the men of "Suez", but conservatism is as dead as Lord Cantilupe. The conservative party is as "sold" on the Welfare State as the Labour party. Mr Macmillan will sooner abandon bi-partisanship in foreign affairs than on the National Health Service. This is not to blame the conservative party, but only to draw attention to a fact that Mr Nehru often describes as "social dynamics"—(a phrase, I suspect, Rajaji would reject as claptrap, or at any rate a jargon word for a very ordinary idea). But it none the less describes a fact. One need not be a Marxist to believe that changes in social structure over the centuries have been such as to corrode precisely those pieties that gave conservatism its sustenance. Moreover, history is irreversible, and exigencies of governing impose their own res-

triction. The very class hatred that Rajaji abhors will be let loose if the apparatus of the Welfare State is dismantled.

Rajaji may feel that things have not gone so far yet in our country and it should still be possible for us to do something before the "mores" of our people are similarly eaten away by what he fancies to be a paternalist state at best and totalitarian oppression at worst. I have a feeling that Rajaji underestimates the basic "unsettling" that has taken place in our social structure. I agree, our population is not yet the

admass of the West; and, in the villages, the old foci of loyalty are still operative to some extent. But it is only a matter of time before these will disintegrate, and the reason will not be solely State Socialism. Rajaji knows very well how the economic friction between the landlord and the tenant in the South has overtones of a purely communal character and how the decencies of socio-political life of the South have been outraged by this factor. And yet a conservative party taking its stand on traditions and continuity will have to combat this massive assault on factors that

have been responsible for the "stability of society."

The truth is, Rajaji's conservative party is something of a historical freak. All over the world, the conservative party comes first and the "progressive party" is something of an upstart trying to oust it. It is, in its own estimation, the "natural order of things". Its best virtue is poise, its worst vice is complacency. A conservative who is worked up, who is filled with fanatical zeal, is something of a paradox. An active "reactionary" is a contradiction in terms, for, the

Indian Finance

conservative's "humour" is "phlegm" and not "blood". It is part of the topsy turveydom of things that we are having a resurgent conservatism shrilly denouncing smug state socialism.

Similarly, a land party has always preceded one that tries its expropriation. The Tory preceded the Whig, which brings me to another curious—from the historical point of view—feature of the new party. It is an alliance of landed interests and what has now come to be known as "free enterprise".

Of course, Rajaji will be justified in considering all this as entirely irrelevant. He may say, "If the times demand a party like this, what does it matter that your history books have not recorded a similar party in the past?" He would ask you to read its manifesto and to assess for yourself its reasonableness and lend your support. It is a document admirable in many ways, though somewhat vague in details. With power and responsibility at some distance, this was perhaps inevitable. Assessing the political chances of its being heard, one will have reluctantly to come to a pessimistic conclusion. Mass following, it is unlikely to get in any substantial measure, since, except for the peasant proprietors whose cause it espouses, its promises to other have-nots are not very extravagant. And these latter form the majority of the electorate. The intangible support for it will come from those who are disillusioned with individual Congressmen and with individual acts of the administration. But if the party merely gathers within its fold malcontents of dubious antecedents, it will not make much headway. Of course, such undesirables will wilt under Rajaji's steady gaze and slink away. But Rajaji will not be always there to guide it.

Coming as it does after his recent announcement of a desire to retire from controversial politics, Rajaji's association with this new party is significant. There was a certain stoic despair in some of his earlier speeches, not unlike that of Burke's in the sombre pages of the "Reflections". Now, apparently, he feels that there is something he can still do about our present problems. If all that the new party does is to put the Congress on its mettle, it would have rendered an important service. After all, that is the most important duty of an opposition.

Intriguing, nevertheless, is the welcome that has been accorded by The New York Times to the formation of this new party. I suppose this approval is in line with the "democratic" view that, for "democracy" to thrive in India, a party needs to come up which will set itself in opposition to the Congress. If it is for this reason that this distinguished American newspaper greets the new party, I am afraid that, at least on the present estimates that can be made, it is doomed to be disappointed. As far as I can see, a Conservative party has as much chance to survive as a snowball in the nether regions.

GATEWAY GOSSIP

LEAVING through the Reserve Bank of India Bulletin for May, I was struck by the sustained effort that has been made to provide more and varied information. For a start, there is, as usual, the monthly review of financial and economic conditions. This is rather routine stuff, and there is not much in it that would excite comment, apart from the fact that the review takes due note of such things as the price of gold rising to a new peak "owing mainly to rumours of further official action to curb smuggling of gold". It is this attribute of the monthly review which renders it both more interesting and more useful than might have been expected in what is essentially an official assessment. For, there can be no doubt that the behaviour of both stock and commodity markets depends not a little upon dame rumour and what she is said to be whispering about.

For—I think—it is the second time, the Bulletin undertakes a survey of international monetary and credit trends. This is an article which has been prepared in the division of International Finance of the Economic Department. The previous survey was for the quarter ended December 1958 and the latest makes you au fait with developments during the quarter ended March 1959. I do not readily accept the proposition that credit developments abroad

have much meaning for us. The Indian economy is in many ways insulated, and it has long been a contention of this journal that mimicking of the Bank of England's decisions was not necessary. The last major occasion on which this journal had pointed out the lack of any necessity for the Indian monetary authorities to have followed blindly the lead given by the Bank of England was when the United Kingdom raised its bank rate in November 1951. But, though the Indian money market is insulated, it is upon developments abroad that the prospect of India obtaining foreign assistance depends.

From such a point of view, the latest article is most heartening. There was, according to the Bulletin, "a clear cut phase of recovery in the economy of the United States and the emergence of expansionary indications in the economies of the United Kingdom and other countries in Western Europe". Then, at some length, economic conditions in a selected number of foreign countries have been analysed.

We have next a section which is devoted to what are called News and Notes. This, however, if I may say so, has become somewhat of a misnomer, since what is included is most often too long to be styled as just a Note; nor do the items always comprise news. For ex-

The RBI Bulletin

ample, aside from an economic classification of the Central Government's Budget for 1959-60, the section includes a study of corporate finances for the period January to March 1958. This is a compilation which the Reserve Bank has been doing for the last two years. Its value is such that, every time the Bulletin is published, PTI usually carries a long dispatch. Trends are significantly to be adduced from such news as to profits and dividends. Thus, the accounts of 260 selected public limited companies show that their profits fell by over Rs 7 crores in 1957 as compared with the previous year. But, what with depreciation and other allowances under the Income-Tax Act, the provision for tax is lower almost exactly by the same amount, so that the profits have fallen only from Rs 23.08 crores to Rs 22.53 crores. The amount absorbed by dividends is higher at Rs 14.51 crores against Rs 12.79 crores. One disturbing fact is that retained profits have fallen by Rs 2.27 crores to Rs 8.02 crores, though, in extenuation, it may be noted that provision for depreciation has gone up by Rs 2.69 crores.

The third item in the section is a summary of the report on the activities of the Life Insurance Corporation.

Finally, there is a short note—and this is really a note—on the

Reserve Bank of India Amendment Act, 1959.

We then move on to a series of charts, very elegantly presented, before we come to the section devoted to statistics—there are no fewer than 60 tables in the latest Reserve Bank of India Bulletin. Statistics on employment exchanges make their debut, and a random glance through the tables persuades me to point out two or three interesting facts.

Firstly, the number of applicants on employment exchanges seeking employment is seen to have risen month by month, with a break in November 1958. As at the end of January 1959, nearly 1.2 million applicants had their name on the so-called "Live Registers" of employment exchanges.

Another strange fact relates to the very steady rise, both in number and in amount, of cheque clearances at centres other than where the Reserve Bank manages Clearing Houses. A word now about small savings, and I am done with a potpourri of Gateway Gossip. That is, the small savings campaign realised Rs 72 crores during 1958-59. This compares with the Budget Estimate made in February last year of Rs 100 crores, and the Revised Estimate of Rs 75 crores given by Mr Morarji Desai in February this year. There has, it would seem, been a shortfall of Rs 3 crores.

Excise Administration

INAUGRATING the first convention of Central Excise Non-Gazetted Officers at the Sundarbai Hall, Mr B. Gopala Reddi, Union Minister for Revenue and Civil Expenditure, disclosed the decision of the Government to merge the Central Excise and Customs with a view to bringing about closer coordination between the two wings of administration. The need for the merger arose from the similarity of duties performed by the two bodies. However, it was explained by Mr Gopala Reddi, that in the initial stages the merger would be effected only at the Gazetted officers' level, though later, non-gazetted officers would also be brought together.

This move of the Government intended to enhance efficiency of administration, has, however, not gone unchallenged and opposition had been voiced by the President of the Non-Gazetted Executive Officers' Union. Referring to such criticism, Mr Gopala Reddi pointed out that criticism from these quarters was totally unwarranted since it was for the Government to decide what steps to take to improve administrative machinery in the customs department. The opposition to the setting up of an additional Excise Collectorate in Bombay State at Poona was also meaningless since this would only relieve the pressure of work at the Bombay Collectorate.

Another suggestion that came for the Minister's criticism was a demand that the Government employees should have a share in management. Mr Gopala Reddi ridiculed the suggestion and pointed out that it was for the parliament which was at the helm of affairs, to take policy decisions about administration. It was not for the non-gazetted officers to demand participation in management. Mr Gopala Reddi advised them to be more attentive to their duties, especially in dealing with complaints received from the public.

In respect of the convention's demand for improvement in service conditions, Mr Gopala Reddi, was uncommitted and preferred to say nothing about it. This was understandable for the reason that the Second Pay Commission is already seized of the matter. It is for the Pay Commission to submit its recommendations to the Government which the latter could

either accept or reject, or even modify. As rightly pointed out by Mr Gopala Reddi, any action by the Government before submission of report by the Commission would be inappropriate and might be construed as trying to influence the Pay Commission.

Sholapur Mills

The decision of the Bombay Government to reopen the Narsingirji Mills at Sholapur, will be welcomed by all interests concerned and more particularly by the workers who had been thrown out consequent on closure by the Government. However, the developments that led to the closure of the mill and the subsequent decision of the Government to reopen it are interesting for the light they throw on particular aspects of industrial relations.

The Sholapur Mill was one of those which succumbed to the crisis that swept the cotton textile industry in 1958 and was taken up for management by the Bombay Government in March 1958 by way of unemployment relief measure. On resumption of working under Government auspices the workers were paid in the initial period two-thirds of the wages due to them under the awards applicable to the Sholapur textile industry. Full basic wages were restored subsequently, on a permanent basis, while, dearness allowance for the period ending August 1958 was also restored in November.

In the midst of this smooth running the workers precipitated a new crisis in the mill by resorting to strike with a view to enforcing their demand for full dearness allowance for the period from September 1958 to March 1959. The press note issued by the State Government in this connection, states that this was done by the workers without giving due notice and in spite of persuasive efforts by the representatives of the management. The closure of the mill was inevitable in such circumstances and was decided on by the Government. Though the Government have now announced the reopening of the Mill, the reinstatement of workers is made contingent on their tendering apology for participation in the illegal strike.

The strike has clearly demonstrated how irresponsibly labour could behave even without the least provocative factor. The fact that the very question on which labour precipitated a strike, was being held for consideration by the Advisory Board, deprived the strike even the semblance of a justification. The precarious financial conditions under which the Mill resumed working and the

GATEWAY MARKETS

Sharp Setback in Oilseeds Prices

PRICES on the Bombay Oilseeds Exchange suffered a sharp setback during the week under review due to nervous bull liquidation and bear selling, being inspired by an earlier start of monsoon and lower up-country advices.

In the Castorseed section, the tendency of prices was distinctly easy, as a large section to the bulls was disappointed by the absence of response from the USA in respect of castor oil. According to indications, USA was not interested in Commercial oil at prices higher than 14 cents per pound and this fact strengthened the view that business would not revive appreciably till the buyers absorbed the impact of the recent heavy purchases. Conditions in the UK, the Continent and the Communist countries were also not helpful to India. On the domestic front, the pressure of supplies from Gujarat, Bihar and Kanpur discouraged the buyers, especially in view of the subdued demand from crushers and shippers.

In the Groundnut section, too, prices suffered a sharp decline, as local and upcountry dealers, who were withholding stocks, were inclined to unload supplies, while vanaspathi interests preferred to await further developments. There is, however, a growing feeling that the Government should announce immediately their export policy in respect of the new crop of HPS groundnut. Meanwhile, competition is increasing in world markets. It is reported that South Africa has started offering its new crop around £93 per ton against £100 in the last season for shipment during June/November. According to a well-known firm of Rotterdam brokers, India can easily sell about 15,000 tons out of the new crop if the Government of India announce the export policy forthwith. It is feared that foreign buyers will divert their attention to other sources of supply in the event of a delay in the announcement.

In the Linseed and Cottonseed sections, trading was dull and featureless and prices generally followed the pattern set by groundnut and castorseed. Shippers have reported slackness in overseas enquiry for linseed oil. With the result, speculative support has been at a low ebb.

need for a smooth transition to normalcy were considerations which should have impressed on the workers the need for more co-operative approach and to adopt more persuasive tactics in settling their problems. That the workers resorted to strike even in the face of mitigating circumstances, has been attributed to the instigation of irresponsible elements. This is another aspect of trade union weakness in the country that has to be looked into and remedied.

Indian Finance

Meanwhile, with the approach of the monsoon, the centre of interest in the oilseeds market has shifted to the prospects of hedge trading in the new crop contracts. There are indications that trading in the new crop positions may commence two or three weeks earlier than usual. It appears that the Forward Markets Commission is inclined to permit trading earlier this year since it agrees to the general view in the market that such a step will be conducive to the prices at lower levels. The actual commencement of trading will, however, depend considerably on the unanimity between the Commission on the one hand and the trade on the other regarding certain major issues such as margins and ceilings.

The Sub-Committee, appointed by the Bombay Oilseeds and Oils Exchange, is reported to have come to a conclusion that, as far as possible margins should be avoided if the futures are also to be subjected to ceilings. It is submitted that the ceilings for castorseed and linseed whose prices largely depend on the trend of exports of their oils, should be fixed at prices lower by Rs 14 than those for groundnut.

Gold & Silver

Seasonal slackness in spot demand and larger arrivals accounted for weakness in the Bombay Bullion Exchange, more particularly in silver. In the Silver section, arrivals were reported to be heavy, while the offer was comparatively small. Advices from upcountry centres were also discouraging due to reports of continued arrivals. Stocks in the Bombay market were estimated at 500 bars and the average daily offtake at 15 bars.

The Gold section, which maintained a steady front for the greater part of the week, also eased towards the close. Floating stocks in the Bombay were estimated at 20,000 tolas, while the average daily offtake is placed at 2,000 to 3,000 tolas.

Conditions in the Bombay Yarn market remained dull with prices developing an easier tendency due to selling pressure in art silk yarn on fears of heavy arrivals in the coming months, being induced by rumours that the Government of India would soon announce the export promotion scheme for the art silk industry. Thanks, however, to revival of enquiry from the consuming centres, a further setback in prices was averted. In Stable-Fibre yarns there was a setback in prices on account of selling pressure from the South Indian mills.

Sentiment in the Cotton Yarn section remained depressed, although the rates for coarse varieties ruled better due to some enquiries from Burma.

Non-Ferrous Metals

Prices of Non-Ferrous Metals, which declined last week on prospects of early supply of zinc to consumers from stocks held by the State Trading Corporation, have firmed up again on reports that the issue of quotas to consumers might be delayed. Copper Scrap is quoted at Rs 219 per cwt; Zinc at Rs 99 per cwt; Lead at Rs 77.50 per cwt and Tin at Rs 140.50 per quarter.

June 13, 1959

WORLD OF COTTON

THE announcement of details in regard to the import of one lakh bales of cotton was greeted with relief by the textile industry and cotton import houses. Of this new crop contracts. There are indications that trading in the new crop positions may commence two or three weeks earlier than usual. It appears that the Forward Markets Commission is inclined to permit trading earlier this year since it agrees to the general view in the market that such a step will be conducive to the prices at lower levels. The actual commencement of trading will, however, depend considerably on the unanimity between the Commission on the one hand and the trade on the other regarding certain major issues such as margins and ceilings.

The Sub-Committee, appointed by the Bombay Oilseeds and Oils Exchange, is reported to have come to a conclusion that, as far as possible margins should be avoided if the futures are also to be subjected to ceilings. It is submitted that the ceilings for castorseed and linseed whose prices largely depend on the trend of exports of their oils, should be fixed at prices lower by Rs 14 than those for groundnut.

Seasonal slackness in spot demand and larger arrivals accounted for weakness in the Bombay Bullion Exchange, more particularly in silver. In the Silver section, arrivals were reported to be heavy, while the offer was comparatively small. Advices from upcountry centres were also discouraging due to reports of continued arrivals. Stocks in the Bombay market were estimated at 500 bars and the average daily offtake at 15 bars.

The Gold section, which maintained a steady front for the greater part of the week, also eased towards the close. Floating stocks in the Bombay were estimated at 20,000 tolas, while the average daily offtake is placed at 2,000 to 3,000 tolas.

Conditions in the Bombay Yarn market remained dull with prices developing an easier tendency due to selling pressure in art silk yarn on fears of heavy arrivals in the coming months, being induced by rumours that the Government of India would soon announce the export promotion scheme for the art silk industry. Thanks, however, to revival of enquiry from the consuming centres, a further setback in prices was averted. In Stable-Fibre yarns there was a setback in prices on account of selling pressure from the South Indian mills.

Sentiment in the Cotton Yarn section remained depressed, although the rates for coarse varieties ruled better due to some enquiries from Burma.

Prices of Non-Ferrous Metals, which declined last week on prospects of early supply of zinc to consumers from stocks held by the State Trading Corporation, have firmed up again on reports that the issue of quotas to consumers might be delayed. Copper Scrap is quoted at Rs 219 per cwt; Zinc at Rs 99 per cwt; Lead at Rs 77.50 per cwt and Tin at Rs 140.50 per quarter.

Import Quota Welcomed

While the domestic sector displayed the usual seasonal slackness, the export front did not register any appreciable change. In the domestic sector, there was some enquiry for the products of few of the popular mills. In some cases, the required varieties were reported to be not available at all. Some of the mills were able to enter into forward deals at slightly better prices. On the export front, only stray enquiries were received.

FUTURES MARKET:

The cotton futures market suffered a sharp setback with Jharilla August delivery declining to Rs 688 per candy from its seasonal high of Rs 712.50. Although there was a recovery to Rs 692.50 at the close of the week, sentiment in the market continued to be bearish. The sudden break in prices was attributed to heavy bear selling, being inspired by an earlier start of the monsoon. Reports of heavy tenders of cotton at Ahmedabad also unnerved bull operators, many of whom tried to safeguard their positions by liquidating a part of their previous commitments.

SPOT MARKET:

Prices in the Spot market also shared the general trend in all commodity markets. Although there was good potential demand for all popular growths, prices came down by about Rs 10 per candy, mainly due to the fact that many mills preferred to defer their purchases in view of the weaker trend in the forward market.

On the export front, the demand for Bengal and other short-staple varieties appeared to have subsided. Many shippers were reported to have covered their nearby requirements with foreign buyers. Rumours were, however, current that Japan would soon enter the market again to buy 30,000 bales of Bengal Deshi more from India at the current rates.

CLOTH AND PIECEGOODS:

Conditions in the Bombay Piecegoods market were noticeably dull.

BOMBAY REVIEW

HERCULES INSURANCE COMPANY LIMITED (Incorporated in India)

NOTICE IS HEREBY GIVEN that the TWENTY FOURTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Friday the 10th July 1959 at 4 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1958.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring. And, in this connection notice is hereby given that Special Notices as defined in Sec. 190 of the Companies Act, 1956, have been received by the Company under Sec. 281 of that Act to move the following resolutions at the meeting.

"That Sir Badridas Goenka, the Chairman of the Company, who has attained the age of 75 years and is retiring at this meeting, be and he is hereby re-appointed a Director of the Company and the age limit prescribed by Sec. 280 of the Companies Act, 1956, shall not apply to him."

"That Rai Bahadur Moongtu Lall Tapuria, a Director who has attained the age of 72 years and is retiring at this meeting, be and he is hereby re-appointed a Director of the Company and the age limit prescribed by Sec. 280 of the Companies Act, 1956, shall not apply to him."

4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. Sanctioning the payment of Rs. 32,150 to the Directors as their fees for services rendered during the year ended 31st December, 1958.

The Share Transfer Books will be closed from the 1st July to the 10th July 1959, inclusive.

By order of the Board
E. K. Srinivasan
Managing Director
Calcutta, 5th June, 1959.

Note—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not to be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 10th July 1959.

Explanatory Statement as required by Sec. 173 of the Companies Act, 1956.

Item 3.—Sir Badridas Goenka has been connected with the Company almost from its inception, first as a Director then as a Chairman and your Directors recommend that the Company should continue to have the benefit of Sir Badridas' long experience and guidance which have been of great value of the Company by his re-appointment as a Director.

No other Director is interested in this resolution.

Rai Bahadur Moongtu Lall Tapuria has been a Director of the Company since 1938. His long experience has been of great value and the Directors recommend that the Company should continue to have the benefit of his advice by his re-appointment as a Director.

No other Director is interested in this resolution.

Item 5.—Under Section 309 (1) of the Companies Act, 1956, shareholders' sanction is necessary for payment of fees to the Directors. The sum of Rs 32,150 is computed on the same scale as in previous years namely:

At Rs. 200/- p.m. per Director for 12 Directors of whom Mr Lokumal Kishinchand was up to 24th April, 1958	Rs. 27,150/-
Extra for the Chairman and Deputy Chairman @Rs. 2,000/- each per annum	Rs. 4,000/-
Extra for Investment Committee constituted by the Chairman and Deputy Chairman @ Rs. 500/- each per annum	Rs. 1,000/-
Total	Rs. 32,150/-

The Directors are interested only to the extent of the fees receivable by each.

2,000 tons steel railway sleepers available for export suitable reuse—
Specifications on request metallurgical products of all kinds.

DELHI REVIEW

OBSERVERS here are deeply troubled by recent developments in Kerala. Prospects at the moment appear to be of the gloomiest and everybody is keeping his fingers crossed over the proposed 'direct action' sponsored by the opposition parties. The rights and wrongs of the respective attitudes are so mixed up that it is difficult to disentangle more rationalisations from genuine convictions. Both the Communist party and the opposition are attaching crucial significance to the coming 'struggle' and public opinion in the rest of India is being mobilised by both. So far, it would appear, that the Communist Party with its higher organisational discipline, have done the job much better. They have organised Kerala Week in Calcutta and other places: Mr Nambudiripad has undertaken a visit to all the important centres of articulate public opinion and explained his Government's stand both at public meetings and press conferences. Despite these attempts at bringing the issues into focus, public opinion outside Kerala, when not committed one way or the other, is confused.

In one sense, the present discontents are merely the manifestations of a deeper malaise. Kerala's distinction of being the first communist governed province is no accident. It flows directly from the nature of its problems and its socio-economic milieu. Over-population and its twin brother unemployment, scarce resources with consequent competitiveness for the merest survival, an exceptionally quick-witted people with a high degree of literacy and a deep sense of frustration constitute explosive political material. As is well known, Kerala has more newspapers per town than any other part of India and its bus conductors, who are often Masters of Arts, speak excellent English, though with strong Malayali accent. Despite considerable migration to other parts of the country, the scene is crowded with a vast army of educated men and women, unemployed or when employed, inadequately rewarded. The professions are so terribly overcrowded that it is said that there are more lawyers than litigants in Kerala. As though all this were not enough, Kerala has a delicate minority problem on its hand. There is a sizable Christian population and a fair amount of business interests are in their hands. Moreover, education, which has become recently the plaything of politics here, is the special interest of many Christian Missionaries here, who have been doing excellent work in this field for generations. There is, and has always been, widespread popular suspicion about the missions' religious and

political intentions, a good deal of it quite unfounded. Latterly, however, the communists have been alleging political motivation and covert political activity to them. The Catholics have been deeply agitated over certain provisions of the recent Education Act and have openly said so. Besides, the Church's implacable opposition to communism on grounds of religion is well known. It is difficult to say when opposition ceases to be unpolitical in these circumstances. The Kerala Education Minister is himself a Christian and there has been some interesting exchange of political fire between him and the Catholic educational authorities.

Another aspect of Kerala's minority problem is the considerable political power exerted by Muslims. This is a legacy of the old Madras State to Kerala, for along with the Malayalam speaking districts, they ceded Kerala to the communal politics of the 'Muslim League'. That the political power wielded by this group is real has been again demonstrated. In the first place Kerala's Muslim League was the only part of the pre-independence Muslim League that survived partition. It has also resisted a variety of pressure brought to bear upon it and is still there. The reasons for its continued existence are various. First, it has considerable financial resources, being backed largely by merchants of the area. But this might not have availed the party, if political respectability had not been conferred on it by other political parties had not wished to curry its favours for the sake of office (or of a quiet time, while in office). The Congress has not been blameless in this respect and the PSP's record has been even worse. The communists, despite their professions, have been careful to have at least the acquiescent cooperation of the Muslim League.

The circumstances in which the communists came to power are also indicative of the volatile nature of the politics of the State. The record of the Ministries before have been dismal, and the political instability there has necessitated the imposition of the President's rule. The second general election gave the communists a narrow, but stable majority. This does not necessarily indicate popular approval, for they secured, according to one estimate, only 35 per cent of the total votes polled. But, the victory was certainly momentous and since then the communists have been at great pains to acclimatise themselves to the demands of parliamentary conventions. In fairness, it must be said that they have made a fairly good job of it. But politically they have been having almost continual rough weather. The opposition parties

The Situation in Kerala

allege—and this is the principal item in their 'charge sheet'—that the Communists have steadily corroded the roots of political life in the State by infiltrating party men, and that there is widespread sense of insecurity. This particular charge was aired in Parliament two sessions ago and it resulted in a privilege motion against Mr Nambudiripad, which was later dropped. But enough was said then to make people in the rest of India uneasy about what was happening in Kerala. Meantime, the Education Bill was stirring up fresh unrest and had to pass the Supreme Court's scrutiny. The Bill was suitably modified and was recently passed and has obtained the President's assent. When it was in the process of implementation, there were fresh troubles, which in their turn have got merged with the wider discontent.

Apparently, the quarrel over the Education Act cuts across party lines, because it has its alignments along 'Caste lines'. It would appear that certain concessions granted to the Ezhava community have made the 'Nair community' uneasy and the latter are deeply agitated over it. On the face of it, it is a trivial enough reason, but it is argued that the communists were the first to introduce the caste angle by giving the so-called concessions to the Ezhavas. The communist answer is, of course, that they were doing nothing more than lend a helping hand to a backward community. Meantime, the management of private schools, whose discretion in the running of their schools was considerably curtailed, refused to open their schools. The Government was faced with a situation in which the majority of schools will remain closed, and anticipating further trouble, tried to gain time by postponing the date of reopening of the schools. Meantime, the various sources of discontent have joined in a 'direct action' threat that has its aim at nothing less than the dislodgement of the present ministry.

The attitude of the Indian National Congress to these developments has naturally been the subject of much lively interest. Obviously, there are pulls and pushes in various directions. On the narrow question of the Education Act, the Congress could not openly associate itself with a clash of interest which was frankly communal in its orientations. Mr M. Padmanabhan, the President of Nair Education Society is a Congressman, but Mr Narayanan who is also in the Congress is an Ezhava and his attitude is just the opposite. The Congress at first temporised and said that the Congress as such should not associate

itself with the struggle against the Education Act, but as individuals they can act as they deemed fit. This certainly was a vital equivocation and is a measure of the confused nature of the situation and the state of mind of the high command. Subsequently, however, the Education Act itself apparently receded into the background and the 'charge sheet' of many acts of commission and omission of the present Government became the basis of the agitation. The high command's approval of this was sought and obtained at Ootacamund and now the Congress is officially associated with this action.

One crucial factor in all this has been the inevitable embroilment of the Central Government in any decision the Congress as a political party might take. Mr Nehru, who, by implication, has approved of the present move of the opposition, has been at some pains to explain himself. His thesis is that 'there is a considerable upsurge among large masses of people against the Government there', and this movement is but an expression of such an upsurge. He hopes that violence would be eschewed and the more undesirable among 'all kinds of forces' at work in Kerala do not get the upper hand. The communists consider this a rather equivocal attitude and pose the basic question as follows: 'Is it consistent with the principles of Parliamentary democracy to rely not on the ballot box but on direct action to change a government which enjoys a majority in the legislature?' Coming as it does from the communists, it has a certain disingenuous ring, especially when one remembers their almost automatic association with every kind of 'direct action'. But the question is none the less worth asking and answering. The answer will be in some such terms as follows: Normally, and when the game is played according to the rules, the ballot box should be left to regulate changes in Government. But, to say that there is no conceivable circumstance when other modes of dislodging government cannot be adopted is clearly wrong. It is true that direct action should not be thought of lightly, for it is the nuclear weapon of parliamentary politics. The question, therefore, is whether the situation in Kerala is grave enough to warrant its use. The second question will be whether the welter of motives behind the present move can with propriety be described as a high-minded and help-less attempt at using the extreme weapon of democracy? There is hardly any impartial observer who will give an automatic answer in the affirmative to both these questions.

OLYMPUS

NORTH INDIAN NOTES

Low Income Housing Scheme

THE state of uncertainty that had stood against the progress of low income housing in the various States because of the delay taken by the Centre in announcing their decisions concerning the size of allocations, has now been removed and the Centre have now made a number of suggestions calculated to implement the low income housing programme according to schedule. While it has been made known that the State Governments could enter into commitments up to the original provision of Rs 120 crores, it has been advised that actual expenditure under various housing schemes, during the Second Plan period, should be restricted to Rs 84 crores. However, the revised State-wise break-up of Rs 120 crores and Rs 84 crores is yet to be worked out. No reduction in the allocations already made to individual States for the low income group housing scheme is contemplated.

In their suggestions for expediting the programmes in connection with the low income group housing scheme, the Centre have laid special stress on the acquisition and development of land by the States. The State Governments have been asked to utilise a substantial part of the housing outlay for this purpose. It has further been pointed out that such lands acquired or developed with short-term loan assistance under the scheme should, as far as possible, be disposed of by the State Governments or their agencies on lease-hold basis instead of outright sale. This, it is pointed out, would enable the State Governments to participate in future appreciation in the value of sites, besides facilitating control of disposal of those sites by beneficiaries to other parties.

In order to facilitate the sale of houses on a hire-purchase basis and to save the State Governments from investing 20 per cent of the cost initially from their own resources, it has been approved that the State Governments might try the experiment of building of houses up to 80 per cent of the estimated cost leaving the balance to be completed by the prospective purchasers. The maximum amount of loan permissible under the low income group housing scheme, has been fixed at the present level of Rs 8,000 per house during the remaining period of the Plan.

In addition to and distinct from the provision made under the low income group housing scheme, the State Governments have been asked to make special provision in their development plans, for construction of houses for the Government employees. The benefit of

the rental housing scheme, formulated by the Ministry of Works, Housing and Supply with funds from the Life Insurance Corporation, has been extended to the State Governments.

★

Oil Exploration

OIL exploration has become one of the important subjects of pre-occupation with the Government and this testifies to Government's concern on the continuing dependence on imports which involves a huge drain on the foreign exchange resources. There has been some intensification of the efforts in this field and extensive prospecting business has been entrusted to the Geological Survey of India. Mr K. D. Malaviya's visit to the Soviet Union, to open negotiations with the Soviet Government for Soviet aid in connection with the country's oil exploration programme was the latest expression of the concern felt by the Government for exploiting the oil resources of the country.

The success that had attended the efforts of the Government in its oil exploration programme in the Punjab should encourage them to more intensive efforts in the same direction. Out of the four shallow and one deep well drilled round about Jwalamukhi information about traces of gas had been obtained in respect of three. Further testing of the deep test hole is expected to give more certain information about the extent of oil resources in the area. The selection of further sites is held to depend on the result of the experiments that are now being held in these places.

Indications of gas and oil are also reported to be available in the Hashiarpur region of the Himalayas, following tests conducted in this region. This has become another region marked out for intensive exploration with a view to ascertaining the prospects for oil.

Speaking at a press conference at Chandigarh, Mr K. D. Malaviya, Union Minister for Oil and Mines, defended the policy pursued by the Government in this field and further affirmed the determination of the Government to carry on intensive oil exploration work even in the face of the criticisms that had emanated from certain quarters against the Government's policy. Mr Malaviya in this connection, pointed out that the oil exploration programme in the public sector would not be costlier, than what it would be if it was undertaken by the private companies and maintained the Government's oil exploration policy was correct.

However, Mr Malaviya pointed out that the approach of the Government was not doctrinaire, and that the Government were willing to consider proposals from any foreign company for undertaking oil exploration in India provided the offer was attractive, and consistent with Government's policy.

NORTH INDIAN MARKETS

Sugar Prices Ease

THANKS to the revision of the sugar policy by the Government of India by deciding to keep entire production at their disposal for direct allotment and larger free sale quota announced recently, Sugar markets have turned quiet with prices developing an easier tendency. Traders are now cautious in their dealings on fears that any rise in prices may induce the Government to take more drastic measures. In fact, a section of the trade is inclined to avail of the current improvement in view of the approaching slack season. The possibility of a substantial, although temporary, increase in supplies has also weighed with them.

Steady conditions prevailed in the Muzaffarnagar market due to good demand from different consuming centres. Only a few mills were sellers in the market. Following rates were quoted (per maund):—Bijnore (D-20) Rs 39.76; Lhaskar (B-29) Rs 41.62; Mansurpur (C-29) Rs 41.37; Dhampur (D-29) Rs 40.00 and Rohana (B-29) Rs 41.62.

Khandsari markets have been ruling quiet as demand has slightly gone down.

Meanwhile, sugar traders in London expect the International Sugar Council to decide on further cuts in export quotas at a meeting to be held in London on the 16th June. The sugar market has still not responded to the 1½ cents cut in export quotas which the Council imposed last February. Prices in New York are reported to have fallen to about 2.90 cents per pound—well below the Sugar Agreement's minimum of 3.15 cents.

This suggests that the Sugar Council was over-optimistic when it persisted in claiming that the February export-cuts would be enough to halt the decline in sugar prices. The trade generally has, with equal persistence, maintained that the export-cuts were not enough, in themselves, to alter the course of prices.

The statistical position certainly seems to justify the trade's view; but there is a major uncertainty in Cuba, which has surplus stocks of about one million tons. If Cuba decided against joining the ISA and were to release these stocks, the market would collapse.

Despite indications that Cuba will eventually join the Agreement, there is clearly something to be said for postponing a decision until later this year in the hope of selling the huge surplus at higher prices than are presently available.

★

Foodgrains

Quietly steady conditions prevailed in the Hapur Foodgrains market. Despite Government's exhortation, arrivals of "rabi" grains continued to be small. Cultivators have been induced to bring their produce to the market, as they are free to sell at the prevailing market prices to the

consumers directly. But, if they sell to licensed traders for stocks, half of it will be purchased by the Government at controlled prices.

Besides wheat, the Uttar Pradesh Government also aim at purchasing 50,000 tons of coarse grains from the open market. For this purpose, they have recently enhanced the price of Gram from Rs 11.75 to Rs 12.50 per maund and Barley from Rs 10 to Rs 11. But, as prevailing market prices are still higher, no purchases on Government account could be made.

At Hapur, wheat prices have continued to rule steady with the rates quoted at Rs 18.50 to Rs 20 as against the Government purchase price of Rs 13 to Rs 15 per maund. It is understood that the daily arrivals, on average, amount to about 50 to 100 maunds, which are being lifted by consumers at rates higher than those fixed by the Government. Trade interests say that, if the Uttar Pradesh Government had followed the same policy of wheat purchases as is done by the Punjab Government beginning purchases only when wheat prices tended to touch Government-fixed level, things would have been far better, both for consumers and for the Government.

The market for Rice continued to rule quiet. Gram continues to flow in heavy quantity from the Punjab and prices are ruling easy. Prices of coarse grains are unchanged. The market for Peas remains quiet due to poor outside support, while Arhar prices are steady following some demand from stockists.

Quiet conditions are witnessed in the Delhi grains market. Arrivals and despatches are on a moderate scale and the turnover is satisfactory. Wheat farm quality prices have improved slightly from Rs 17.50 to Rs 18 per maund on good local and outside demand, while the average quality remains unchanged at Rs 14.50 per maund. Rice prices have eased slightly by 50 p to Re 1 per maund on reports of increased arrivals of smuggled rice from Uttar Pradesh. Bajra prices remain unchanged at Rs 13 to Rs 15. Gram Dal has shown a loss of Re 1 per maund in sympathy with gram coupled with poor demand from Madras and other consuming centres. Other pulses remain generally unchanged with minor changes in values.

BRIDGE & ROOF CO. (INDIA) LIMITED.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of the following dividends:—

Dividend of 7½% for 1954.

Dividend of 10% for 1956.

Final Dividend of 2½% for 1953.

By Order of the Board,
BALMER LAWIRE & CO. LTD.
D. MANSON

Secretary,
Managing Agents.

9th June, 1959.
Calcutta.

MADRAS REVIEW

IT augurs well for the successful initiation of the Third Plan that discussions on it had started sufficiently early to enable the working out of a final draft that would receive a wide measure of public support. While the attention it had received from the Ministers at the Centre had been rather sporadic, the Congress Party had found it necessary to organise a Seminar to discuss the broad strategy of the Third Plan, lay down the objectives and indicate in a rough way, the means to

S. E. RLY. TENREDS

Sealed tenders are invited for Tender No. Con/GM/35/GB1/59 for supply of M. S. Sq. head and spring washers. M. S. Bent Square washers, High Modulus packings and Grooved Rubber Pad. Details to be obtained from the tender schedule. Tenders will be opened on 9-7-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta—23, on remittance of Rs. 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of Cash Receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing the earnest money of Rs. 1000/- with this Rly's Chief Cashier at Garden Reach, Calcutta—23 without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Third Plan

achieve the aims. The Seminar was not entirely a party affair, and professional economists were also invited and participated in the proceedings.

The first task in connection with the Third Plan was to indicate a broad system of priorities, and it was with this task that the Congress Seminar chiefly concerned itself. These broad principles that are to govern the allocation of priorities in the Third Plan, are more or less the same as in the Second Plan. In fact, the Third Plan would be a continuation of the Second Plan carrying forward the broad policy already laid down under the Second Plan.

The Seminar has indicated the ultimate goal to be one of eliminating poverty and backwardness and industrialisation is suggested as the way to this, so that there would be more production as well as new opportunities for employment. However so far as the Third Plan is concerned a simultaneous increase in agricultural production is also held to be of extreme importance and this is necessary not only from the point of view of ensuring more foodgrains to meet the needs of the people but also to ensure a sufficient supply of raw materials for agricultural-based industries. The failure of agriculture to rise to expected levels under the Second Plan so far, would have made such emphasis on agricultural production under the Third Plan almost an automatic assumption. Even apart from this the stress on agriculture could have been anticipated, in view of the extremely depressed character of agriculture which it would take concentrated measures spread over a fairly long period of time to remedy. The Second Plan had in this connection, pointed out that an increase in agricultural production would for a long time to come remain a major desideratum.

Along with intensification of agricultural production, expansion of basic capital good industries is also to receive the highest importance. Thus in the course of the Third Plan, the aim is to lay down the basic foundations for the future industrialisation of the country. In this the Third Plan would be an extension of the Second Plan since setting up of basic capital goods industries was accorded top priority in it for the first time.

While these are the important objectives, the achievement of these alone is not considered sufficient to meet the aspirations of the people, for an improvement in the standard of living. A national minimum of social services, reduction of inequalities of income and wealth, and provision

of maximum employment opportunities are also included in the broad strategy of the Third Plan. The Plan would therefore provide for largescale expansion of cottage and small-scale industries preferably on cooperative lines. Such small-scale and cottage industries would also provide an outlet for the utilisation of the productive capital of the masses of the people lying idle and unutilised at present. The aim is in short to give a wider and broader dispersed industrial and technical base for the economy. The attainment of this aim is considered to depend on the supply of technical personnel adequate both as to quality and quantity. The provision of facilities for training such technical personnel would therefore have an important place in the aims and objects of the Third Plan.

These objectives and principles conform to the ideal of the socialistic pattern of society that has been adopted as the goal of the country. However the socialism of the Congress will have its roots in the spiritual and cultural values and traditions of the country and the advance to such socialism would not involve the infringement of the fundamental values such as the liberty of the individual or development of human personality. The adoption of Gandhian means for the achievement of socialism is consequently stressed.

While these objectives and principles are matters of general acceptance, the Congress has not the entire of public opinion with it in the total investment envisaged or in some of the policies and programmes contemplated by it. The Seminar seems to have favoured an ambitious Third Plan with a total target of about Rs 10,000 crores, two-thirds of it being allotted to the public sector and the balance to the private sector. Anticipating such ambitious targets, questions had been asked in critical circles, whether, since it had not been possible to meet even the much smaller outlay under the Second Plan, it would be wise to fix a financial outlay that would bear no relation to the capacity of the country to meet. Private sector has been particularly perturbed by the ominous forebodings of new tax measures that are inevitable in the event of the Third Plan targets being pitched high. The Congress seems to be only overoptimistic in expecting that the required resources could be raised through public and private savings and a reasonable measure of external borrowing. For the same reasons, the savings target of 14 per cent at the end of the Third Plan which is considered necessary for a six-

per cent increase in the national income seems unrealistic.

The Seminar sanctions the institution of price control in strategic places and particularly for foodgrains and suggested that apart from State trading in foodgrains, appropriate action might be taken in respect of prices of other essential articles, commonly used by the masses. A definite price policy for cottage and small-scale industries products is also recommended in the view that this would stimulate expansion of market for the products of these industries.

A national wages and salaries policy applying both to the public and private sectors, is one of the most important suggestions of the Seminar. On the basis of this policy there would be definite maximum except in the case of persons with specialised qualifications. A workable policy in this field would obviate much discontent among the wage and salary earners of the low category, and remove causes that not unoften stand in the way of increase in production.

S. E. RLY. TENDERS

Sealed tenders are invited for (1) Tender No. CON/GM/32/F2/59 for supply of Mechanical Signalling materials as per list to be obtained from tender schedule. Earnest money is Rs 1000/-. Tenders will be opened on 6-7-59 at 3 P.M.

(ii) Tender No. CON/GM/34/D/59 for supply of 60 Nos. Jim Crow as per IRS Drg. No. Y-74. Earnest money is Rs 1000/-. Tenders will be opened on 7-7-59 at 3 P.M.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S.E. RLY., Garden Reach, Calcutta—23 by local firms.

Tenders should accompany the receipt for depositing Earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

THE PENINSULA

SOUTH INDIAN NOTES

Cooperation

EVER since the Nagpur Congress resolution laid stress on cooperative farming and service cooperatives, the subject of cooperation especially as it pertains to agriculture, has been taken up for ceaseless refrain by Ministers and other Government spokesmen. While this enthusiasm for cooperatives stems from the anticipated advantages which implementation of the cooperative programmes would bring about, precipitating circumstances, like the projected imposition of ceilings on individual holdings, and other measures of land legislation, seem to have given an impetus to thinking on this subject. For example cooperative farming was accepted as the corollary to the decision to enforce ceilings on individual holdings, being conceived as a check on the trend toward fragmentation of individual holdings which was inevitable in the enforcement of ceilings on land. While cooperative farming was something new to the country and the farmers, in view of the benefits and advantages of the scheme, the way towards their formation was to be paved by the opening of service cooperatives throughout the country in the course of the next three years.

The establishment of service cooperatives in the course of the next three years, is one of the formidable tasks faced by the State Governments. In the implementation of this programme, the State Governments have varying prospects being differently placed in respect of the growth of cooperative movement as it has come to evolve in the whole country with the main stress on credit cooperation. The Madras State along with perhaps one or two other progressive States like Bombay, is far ahead of others in the area covered by credit cooperatives and the volume of credit dispensed. It was revealed by Mr R. Venkataraman in the course of his inaugural address to the 14th Tam'l Nad Cooperative Conference held at Madras, that the State had already exceeded the target of Rs 13.50 crores to be provided by way of agricultural credit by the end of the Second Plan. All the 300

BALMER LAWRIE & CO. LTD.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 15% for the year ended 31st December, 1958.

By Order of the Board,
D. MANSON
Secretary.

21, Netaji Subhas Road,
Calcutta. 9th June, 1959.

agricultural banks proposed to be started under the Plan had also been registered. Though the cooperatives in the State operate on a narrow basis being predominantly concerned with provision of credit to members, the popularity of the idea as evidenced from the widespread existence of credit cooperatives, should make the transition to service cooperatives more smooth than in other States where the cooperatives had been in a state of anaemic existence.

Handloom Industry

Addressing the two-day Seminar on Handloom Industry at Madras, Mr R. Venkataraman, Minister for Industries, Madras, made out a case for the continuance of the rebate in Handlooms. The difficulties faced by the industry in marketing, having been not entirely got over, in spite of the enjoyment of concessions, withdrawal of such concessions will have adverse consequences on those engaged in it. The nearly 27 lakhs of handlooms that exist in the country provide employment and means of livelihood to about eight million people. In fact there is a case for special consideration of the interests of the handloom industry on the basis of the employment potentials of the industry.

It was also pointed out by Mr Venkataraman that the entire claim for rebate must be kept out of the ceiling share of States and must be administered as a Centrally Sponsored Scheme. In the alternative it has been suggested that instead of the present practice of allowing rebate on every sale of handloom cloth, either wholesale, or retail by the Cooperatives, the primary societies might be allowed to market their cloth without any rebate at the prices to be fixed by them, to any agency they chose. There was also need for creating a fund to which could be credited all the amounts allotted under rebate. Rebate at a higher or a lower rate could be made to the apex society in any year depending on the amount available in the fund and the need for such assistance. This arrangement is considered preferable to the present scheme.

Though the cooperatives is the accepted pattern of organisation for running the handloom industry, the growth of such cooperatives is considered to have been hindered by inadequate support from the cess fund. Mr Venkataraman has therefore, pleaded for greater assistance from the cess fund and in turn raising the cess on mill cloth. The need for giving assistance to weavers outside the cooperative fold has also been stressed.

In regard to the question of powerlooms Mr Venkataraman pointed out that the question had varying significance for different States. In Madras and Andhra Pradesh, where there was considerable concentration of handlooms, the introduction of powerlooms is fraught with peril for the handloom sector.

SOUTH INDIAN MARKETS

Rubber Market Reacts

RUBBER prices in world markets have developed a reactionary tendency from the peak levels established in early May. This is mainly due to cautious buying, induced by the fact that, at this time of the year, output is high and consumption is low. The London price has fallen by over a penny per pound in a week, largely in sympathy with the New York market where the weakness is inspired by the American consumption figures for April. Consumption is placed at only 40,850 tons as against 51,991 tons in March.

Buyers in both the London and New York markets have naturally become cautious in their dealings, as the annual period of high production and low consumption is now at hand. Users are not anxious to buy when any shipments leaving Malaya now will arrive during annual holiday periods.

Behind these factors lurks the possibility that, with natural rubber prices at or near a peak, more users may be tempted to change over to synthetic. Some European consumers are already enquiring into synthetic supplies, which are quoted at around 15h 10d per pound.

On a longer view, there is reason to think that the natural rubber price trend may be upward, provided if Russia and China begin to buy. Moreover, stocks of natural rubber in the producing countries are reported to have declined to 252,500 tons at the end of March against 292,500 tons at the beginning of the year. Total stocks are also reported to have fallen this year from 735,000 tons to 692,500 tons.

Cashewnut

Thanks to keen demand from the USA, prices of Cashewnut have developed a firmer tendency, the rate being quoted at 50 cents per pound. USA is reported to have already bought about 75,000 cases from Cochin and Quilon so far this year. Against 46 to 48 cents the US buyers were offering for shipments to September previously, they are now reported to be buyers upto 40 cents for shipments up to December.

Optimism prevails that the USA may lift substantial quantities during the rest of the year at still higher prices. West Germany is mentioned to have taken about 3,000 cases recently and prospects of this country as well Russia entering the Indian market very soon are rated high.

Prices in India are, therefore,

likely to rise further, mainly due to the fact that the supply position of raw nuts is not very comfortable. Sources close to the trade state that not more than 12,000 tons of raw nuts can be expected before October/November, from Africa. This quantity is too small to meet the growing demand for finished nuts from abroad.

Coffee

With some good and timely showers after an anxious draught, Coffee interests in the South are optimistic about a record crop in 1959-60 season. Some sections estimate the size at about 50,000 tons as against an output of 45,430 tons in the previous season.

While production in India has risen from 8,000 tons in 1940 to 45,430 tons in 1958-59 world output has also been rising substantially. The world crop is now estimated at 56 million bags against 50.5 million bags in 1958-59, comprising 30 million bags from Brazil; 14.5 million bags from other Latin American countries and 11.5 million bags from Asia.

Despite the fact that the world market is faced with the problems of higher surpluses, the India Coffee Board decided to allocate at least 10,000 tons of Plantation variety from the 1959-60 crop for export. Of the 1958-59 crop, exports have, so far, totalled 6,903 tons.

Groundnut

Prices in the Madras Groundnut market have continued to display a firmer tendency, although prices in the Oil section have been ruling easier on lower advices from Bombay and Calcutta. Arrivals of seeds averaged 25 to 30 tons per day; but crushers were unwilling to operate due to the unworkable rates prevailing for oil. Superior oil-quality seed was quoted nominally at Rs 195 per candy with sellers at this level.

According to the latest reports, arrivals of summer crop in the up-country centres are reported to be steady. The standing crop in the Pollachi area is reported to be good.

In the Groundnut Oil section, business done was small as Calcutta interests did not show much interest. The rate for the ready position is quoted at Rs 375 per candy.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were on the same level as in the previous week and there was moderate clearance at unchanged prices. Arrivals of Buff hides were moderate.

On the export front, activity was restricted. Whatever business done was confined to lower selections in certain classes and higher selections in others.

In the Tanned Skins section, arrivals of sheep skins showed no change and there was a good clearance at steady to a little higher levels. There was no change in goat skins.

Not Bear Week, But Weak Week

Watch-Dog Writes:

THE dominating note, as far as the Indian stock exchanges were concerned, was one of dullness. The trend was definitely easy, and few would venture to predict when the tendency would be reversed.

In Calcutta, there was no investment activity to speak of, though a strong feature, in the affections of investors, was National Carbon; activity was strictly speculative and even such activity was limited.

On Dalal Street, the prevailing mood was one of uncertainty. There is no conjecture as such about the meeting to be held at the end of the month to consider the Tata Steel rights issue, but, equally definitely, there was no desire to extend speculative commitments.

In Madras, there was relative steadiness in share prices, though textile shares continued to be largely neglected. But, as distinct from the two major stock exchange centres, there was evidence of selective investment support.

Profit-taking characterised movements on the Delhi stock exchange, with bulls preferring to remain quiet for the moment and realising what they could before prices slid further down.

Ahmedabad was a plainly uninteresting arena for stock exchange interests; cotton textiles have yet to regain the confidence of the investor.

THE INDO-BURMA PETROLEUM COMPANY LIMITED.

NOTICE is hereby given that the Preference Register of Members of the Company will be closed from the 22nd June 1959 to 1st July 1959 both days inclusive for the purpose of payment of the dividend for the half year ending 30th June 1959 on the 2nd July 1959.

By Order of the Board
STEEL BROTHERS & COMPANY LTD.
Managing Agents.
Gillander House
Netaji Subhas Road,
Calcutta.
6th June, 1959.

On Wall Street, there was a fresh setback in prices, though hopes were entertained that the bottom has been touched in this new phase of a bear market.

In London, the trend in Wall Street failed fully to be reflected. Selling seemed to have abated, and, in its place could be discerned a fresh wave of selective purchases.

Thus, overall, not altogether a bear week, but nevertheless a weak week.

Calcutta

Calcutta, Friday Evening.

NO PERCEPTIBLE improvement in the tone or tenor of the Calcutta Stock Exchange was discernible as the week drew to its close; nor did there emerge any developments of significance to cause a definite trend in prices either upward or downward. True, a brief news report that the cooler plate of one of the blast furnaces at Burnpur had burned did affect the speculative counters, but there was soon the indication that the repair involved would not take up much time. Hence, it is not correct to assert that there were, in fact, valid reasons for stock exchanges to wear a bleak and gloomy aspect.

Prices moved within narrow grooves; some improvement, of a fractional nature, was soon wiped out when settlement considerations induced a note of caution; then, as the week ended, Bombay's lack of cheer, for reasons to be indicated later, was responsible for the function to spread to Lyons Range.

In a market otherwise "unnoteworthy", firmness characterised the gilt-edged section. 3 per cent 1986 opened at Rs 73.60, went up in small lot transactions to Rs 74, then relapsed at the week's end to Rs 73.70. 3 per cent 1970-75 improved from Rs 91.30 to Rs 91.65, with small lots changing hands even higher at Rs 91.85. 3½ per cent 1974 also showed improvement, as did gilts generally.

There was not much activity in banks' shares, Punjab National quoted unchanged throughout the week. However, Bank of Bikaner were a spot, the quotation going up from Rs 30.19 to Rs 30.75. It is possible that, with the half-year results due to be announced in less than a month's time, more interest will be shown in bank shares during the next few weeks, particularly since results for the first half of 1959 are likely to be much better than the experience in the corresponding period of the previous year.

There was consistent interest in jute shares. National Jute moved

up from Rs 22.37 to Rs 23. Howrah and Megna were unchanged over the week, but New Central moved up to Rs 16.37 from Rs 16.12. In the anticipation that demand for jute goods will be satisfactory, market interest in the jute section, long dormant as it has been, revived during the last fortnight.

Coals were rather dull; the number of transactions was few and far between. Burrakur, put on 12 nP to close the week at Rs 17.31.

Teas opened on a fairly cheerful note, but the lack of enthusiasm shown at the first auction of the season was immediately reflected in dampening what interest there had earlier been. Bishnauth opened at Rs 20.06 and closed around the same level. Jayashree, on the other hand, dropped 13 nP to Rs 12.62. Scrip that changed hands at the beginning of the week included Dibrugarh at Rs 33.56, Grob at Rs 17.75 and Hantapara at Rs 125; transactions on Friday were restricted to five counters.

Sugars were a cheerful spot, and market men seem to be taking a much more hopeful view about prospects. Carew opened at Rs 8.87, and pushed steadily upwards to Rs 9.56. Sitalpore moved up 27 nP to Rs 5.87. SKG were quoted at Rs 9.94, and Raza Buland at Rs 13.81.

Stray transactions were reported in textiles, with Bengal Nagpur at Rs 4.37, Sutlej at Rs 66.25 and New Victoria at Rs 1.21.

Among the Engineerings, the movements in Indian Irons did not unduly influence other counters. Calcutta Stock Exchange's barometer opened the week at Rs 23.96, and closed, after small two way fluctuations, at Rs 24.02. Texmaco were well supported and rose from Rs 25.40 to Rs 25.70. Kumurdhubi, however, reacted from Rs 8.62 to Rs 8.50. BIC closed at Rs 28.25, Indian Galvanizing at Rs 19.37, Jay at Rs 211, JK Steel at Rs 120 and Marshall at Rs 6.44.

Miscellaneous counters attracted much greater attention. Balmer Lawrie, reported done at Rs 161 in a small lot cross-transaction, rose by the week's end to Rs 174. Britannia Biscuit put on half a rupee to Rs 21. Indian Cable went up from Rs 30.37 to Rs 30.81. National Carbon were an outstanding feature, in rising sharply from Rs 30.25 to Rs 34.62. Hindustan Motor hovered between Rs 8.59 and Rs 8.69. Indian Oxygen were another firm feature, being marked up by Rs 1 to Rs 27.25. Among other counters, Aluminium Corporation were at Rs 14.50, Imperial Tobacco at Rs 11.75, Metal Box at Rs 43.37 and Rohtas Industries at Rs 12.12.

Finally, among paper shares, Orient improved somewhat from Rs 35.70 to Rs 35.90; and Titagur rose from Rs 41.50 to Rs 42.50. India Steamship did not deviate from its course, the quotation being practically unchanged around Rs 14.

Bombay

THERE were net losses on the generality of shares on the Bombay Stock Exchange during the week past. This was because there was a gathering doubt in stock exchange circles as to whether Government would permit the Tata Steel rights issue to be made at par. Conjecture of this sort is both needless and unwarranted. After all, recent rights issues have been permitted at par, and there is no reason to think that Government will insist on a premium only in case of the steel companies. The week, however, opened with a firm undertone, the diffidence creeping in only as it drew to a close.

Excepting for a gain of Rs 12 in Standard, textile shares generally closed the week with but small net losses or gains. Ahmedabad Advance were at Rs 140, Century at Rs 548.50, Finlay at Rs 266 and Swan at Rs 375. Kohinoor were done at Rs 276.50 and Sholapur at Rs 422.50.

Tata Steel opened the week at Rs 191.25, moved both ways, and settled down Rs 2 lower. Indian Iron fared no better, in losing 12 nP over the week to Rs 23.92. Mukand, however, showed a reverse trend, in putting on 32 nP at Rs 18.08.

As in Calcutta, Miscellaneous counters fared best of all. Bombay Burmah old improved by Rs 11 to Rs 544.50. Ceat Tyres improved further to Rs 152.50. Hindustan Level were quoted at Rs 30.00 against the week's opening of Rs 29.25. National Rayon put on Rs 4 at Rs 322. There was a substantial rise in West Coast Paper, which shot upto Rs 143.50 from Rs 135. WIMCO were a steady feature at Rs 204.

THE MODERN MILLS LIMITED.

NOTICE OF 18TH DIVIDEND.

NOTICE IS HEREBY GIVEN THAT A Dividend of Rs. 3/- per share of Rs. 50/- for the year ended 31st October, 1958, sanctioned by the Shareholders at the Twentyfifth Annual General Meeting held on the 9th June 1959, is made payable at the State Bank of India, Bombay, on and after Monday the 22nd June 1959 to those Shareholders whose names stood on the Register of Members on the 12th May 1959. The dividend warrants are made negotiable at par at the State Bank of India, Bangalore.

EIGHTH EDITION OF LAW OF INCOME-TAX IN INDIA

(With the Indian Finance Act of 1959)

By V. S. SUNDARAM

(Late of I. A. & A. S.)

The eighth Edition of this comprehensive treatise on income-tax brings it up-to-date in the light of statutory changes and recent rulings of Court, of both of which there has been an abundance since the last Edition was brought out in 1954. The book has been thoroughly revised, several portions re-written and some condensed, while all matter now obsolete or superfluous or of little practical importance has been excluded or referred to briefly. The Index has also been expanded. This Edition will therefore be found to be even more useful than its predecessor as a standard book of reference on this intricate and abstruse subject.

"On the whole this is a most exhaustive, most comprehensive, and most elaborate commentary on the Income-tax Act" — Bombay Law Reporter.
Orders may be placed at an early date either with the Publishers or through their local agents.

FOR THE INVESTOR

Profit-taking at Week's End

Investment Gossip:

RENEWED rumours about a lower Tata Steel dividend and fresh apprehensions that Government would insist on a premium for the Tata rights issue set off a flutter in Dalal Street, which in turn caused Bombay advices to Calcutta being weak; then, aided and abetted by Bombay selling orders, the reactive trend was complete, and as a week that witnessed both firm and active conditions drew to its close, profit-taking pared gains.

No more, now, about the Bombay rumours. Until there is official word, it is inescapable that there will be gossip about the attitude of Government. For my part, all I can say is that it would be extremely unfair, if the authorities did insist on a premium issue; and if recent experience is any guide, Government in this regard are not likely to be intractable.

Corporate news has been good, very good. Even the jute section has continued to make headway. Rights issues continue to be announced week after week. It is now realised that the Central Government's new loan will not siphon off much money from the market. It is therefore recognised that, in broad terms, the prospect before markets is sound.

But I welcome the consolidation of gains that has taken place. This renders the market slightly less vulnerable to speculative onslaughts. Meantime, there is a continuing scarcity of scrip, especially of blue-chips. It is thus that miscellaneous issues are maintained at levels which show inched-up gains.

For the Investor, the 1959 slack season should prove to be a period when a steady improvement in prices is registered. Even on the short-term view, except perhaps when the governmental decision on the Tata Steel rights issue is made known, there is no reason to fear that much of a reactionary trend can take firm hold of Stock Exchanges.

ER

Texmaco's Fine Results for 1958

Balance-Sheet Reviews:

With sales touching a new peak, in rising by Rs 1.14 crores to Rs 5.31 crores, Texmaco's net profit,

before tax and depreciation, is over the Rs 1 crore mark for the second year in succession. However, with raw material and stores and spare parts consumption also rising, there is no increase in the net profit, which is indeed slightly lower at Rs 1.06 crores against Rs 1.08 crores.

But the provision for depreciation is sizably lower at Rs 24.50 crores against Rs 36.28 crores; and sundry provisions absorb Rs 6 lakhs against Rs 5 lakhs. The smaller charge of provision automatically rendered the tax liability higher, which is placed at Rs 38 lakhs as against Rs 29.15 lakhs. Wealth Tax, moreover, absorbs Rs 3 lakhs as compared with Rs 1.36 lakhs. While the Reserve for Development gets less at Rs 4.90 lakhs (Rs 7 lakhs in 1957), the transfer to General Reserve is Rs 1 lakh higher at Rs 6 lakhs. The dividend is maintained at Rs 1.50 on the ordinary shares, taking up Rs 22.50 lakhs and leaving Rs 36,726 to be carried forward against Rs 53,854 brought in.

As against the paid up capital of Rs 1.90 crores, of which Rs 10 lakhs is in tax free 5½ per cent cumulative preference shares and Rs 30 lakhs in taxable redeemable preference shares also carrying an interest of 5½ per cent, the Reserves and surplus amount to Rs 51.21 lakhs. There are debentures outstanding to the tune of Rs 40 lakhs, but, no doubt, an issue of capital will be made for meeting this liability maturing in 1960. On the assets side, the gross block of Rs 3.90 crores is shown at a net value of Rs 2.18 crores.

According to the Directors' Report, the working of the Cotton Textile Machinery Division was not satisfactory during the year under review; but "it is confidently hoped that this Division will show improved results during the current year." Mass production of U.D. Ring Frames, Drawing Frames and Simplex Frames is expected to commence during the current year. Manufacture of indigenous components for Capstan Lathes is also expected to begin this year. Wagon production was satisfactory. Other miscellaneous works are also being completed efficiently. It would not be wrong to infer that the performance of Texmaco during 1959 will be even better than in 1958.

ER

The Malhati Tea Syndicate

The Malhati Tea Syndicate Limited had a very good year in 1958, with an improvement in the crop amounting to 2,078 maunds, while the average sale price realised in respect of export sales was unchanged at Rs 1.97, the internal price improved from Rs 1.66 to Rs 1.78. Consequently, sale proceeds of tea, after adjusting for opening stocks and estimated value of unsold tea, rose from Rs 17.03 lakhs to Rs 20.14 lakhs. On the whole, expenses were kept down,

so that the net profit rose substantially from Rs 2.20 lakhs to Rs 4.08 lakhs. Provision made for depreciation has risen from Rs 0.95 lakhs to Rs 1.01 lakhs, and tax, including Wealth Tax, has mounted from Rs 0.47 lakhs to Rs 1.21 lakhs. The transfer to Capital Reserve has been trebled to Rs 75,000, though General Reserve receives slightly less at Rs 50,000 against Rs 75,000. The Employees Benefit Fund gets slightly more at Rs 2,000 against Rs 1,000. In the result, Malhati Tea was able to double its dividend payment to 10 per cent, absorbing Rs 90,000. The amount carried forward is Rs 1.06 lakhs against Rs 1.37 lakhs brought in.

The balance sheet shows a paid-up capital, all in ordinary shares of Rs 10 each, of Rs 9 lakhs. The Capital Reserve Fund, by dint of the current year's transfer, rose to Rs 5.77 lakhs. The General Reserve works out to Rs 15.05 lakhs, that is to say, the Capital and General Reserves together work out to more than double the paid-up capital of the company. The Fixed Assets of Malhati Tea are shown at a net of Rs 18.97 lakhs, whereas the gross block exceeds Rs 28 lakhs.

As for the next year, the company has made its estimate on the basis of a somewhat smaller crop of 12,000 maunds at a total cost of Rs 16.94 lakhs, of which Rs 15.57 lakhs will be deemed to be Revenue and Rs 1.37 lakhs will be deemed to be Capital. If the accounts of Malhati Tea are any indication, the crop of tea balance sheets for 1958 should be very good indeed.

ER

The Bijoyagar Tea Company

Malhati Tea's sister company, The Bijoyagar Tea Company Limited, has, however, not fared as well in 1958 as in 1957. This is because, at both Subhasini Tea Estate and at Bijoyagar Tea Estate, the crop realised shows a substantial shortfall, the setback at Bijoyagar being due, as the Directors' Report points out, "to the failure to effect proper irrigation owing to a temporary obstruction of the channel by the Railway Authorities". Thus, though the sale price realised compares well, the sale proceeds as such declined from Rs 29.22 lakhs to Rs 28.54 lakhs. The net profit, before tax and depreciation, consequently fell from Rs 6.10 lakhs to Rs 4.70 lakhs. Depreciation absorbs more at Rs 1.54 lakhs against Rs 1.34 lakhs. The provision for tax is, on the other hand, lower at Rs 1.23 lakhs against Rs 1.80 lakhs. The transfer to funds has been reduced from Rs 2.52 lakhs to Rs 1.52 lakhs. The dividend distribution is maintained at Rs 2 per share, or 8 per cent, absorbing Rs 69,530. The carry forward is slightly lower at Rs 1.70 lakhs against Rs 1.98 lakhs brought in.

The balance sheet shows an ordinary capital of Rs 8.69 lakhs, in Rs 25 shares. The Capital Reserve and the General Reserve together

amount to Rs 25.70 lakhs. The prospect for 1959, as far as the estimate is concerned, is for a smaller crop of 14,000 maunds to be realised at Subhasini and for a slightly larger crop of 3,800 maunds from Bijoyagar.

ER

Sen-Raleigh Industries

Although sales of Sen-Raleigh Industries of India Limited for the year ended September 1958 rose from Rs 1.97 crores to Rs 2.13 crores, this was mainly on account of an improvement in components sales which, as the Directors' Report points out, left practically no margin to the company in the period under review, since prices were rationalised only toward the close of the year. Secondly, production itself tended to be intermittent, as the availability of foreign exchange for import of raw materials was uncertain and spasmodic. As such, the net profit declined from Rs 23.17 lakhs to Rs 19.57 lakhs. Depreciation receives Rs 8.29 lakhs against Rs 7.26 lakhs. The reserve for repayment of loan gets Rs 2.75 lakhs, the Development Rebate Reserve receives a transfer of Rs 2.45 lakhs, and the provision for Wealth Tax is Rs 62,500. After meeting the preferential dividend, the ordinary dividend has been maintained at 6 per cent, absorbing Rs 4.20 lakhs.

The balance sheet shows a capital of Rs 1 crore, comprising Rs 30 lakhs in 5 per cent cumulative preference shares and Rs 70 lakhs in ordinary shares. The Reserves and Surpluses are placed at Rs 23.52 lakhs. The gross block of Rs 2.34 crores—additions to block during the year amounted to Rs Rs 76.89 lakhs—has a book value of Rs 1.23 crores.

ER

Bengal Assam Steamship

Bengal Assam Steamship Company Limited, under the Managing Agency of Messrs. Andrew Yule & Co., Ltd., has just published its accounts for the year ended October 1958. The accounts show that income by freight has risen from Rs 25.93 lakhs to Rs 29.65 lakhs. On the other hand, fleet operating expenses have been kept fully controlled, so that the net profit, before taxation and depreciation, has risen considerably from Rs 2.33 lakhs to Rs 6.01 lakhs. The provision for tax, being nil in the previous year, is Rs 2.80 lakhs. After payment of preferential dividend, the Directors have proposed a distribution at 6 per cent on the ordinary shares, absorbing Rs 1.20 lakhs. The carry forward is rather higher at Rs 88,927 against Rs 36,387 brought in.

Bengal Assam Steamship has a paid-up capital of Rs 23.01 lakhs, of which Rs 3 lakhs is in 7 per cent cumulative preference shares of Rs 100 each, of which only Rs 60 per share has been paid up. The Reserves and Surplus are at the considerable figure of Rs 1.00 crore. On the other side of the ledger, the gross block of Rs 1.23

crores has a net value of Rs 1.02 crores.

The Directors' Report points out that the company's entry into the Assam trade has now been established. It is expected that Assam traffic will become the main business of the company. However, the Directors' Report urges a note of caution, in pointing out that "the next few years are bound to be difficult for the company, as the Assam trade route is highly competitive".

₹ 23

Kanknarrah Company Ltd.

For the first time since 1955, the Kanknarrah Company Limited, under the Managing Agency of Jardine Henderson, Limited, has, in its accounts for 1958, reported a profit. However, the earnings before tax and depreciation, at Rs 18.91 lakhs, have been insufficient to cover the size of the debit balance carried forward from 1957. It may be recalled that, in 1957, the company suffered a loss of Rs 10.21 lakhs before providing Rs 10.01 lakhs for depreciation, with sales at Rs 2.96 crores. Thus, after depreciation, the debit carry forward increased to Rs 41.59 lakhs from Rs 21.37 lakhs brought in.

In 1958, Kanknarrah's sales rose considerably to Rs 3.49 crores. A provision of Rs 24,000 had, in the latest year, to be made for Wealth Tax. The charge of depreciation receives slightly less at Rs 8.75 lakhs. There was, moreover, the statutory provision for Development Rebate amounting to Rs 10,466. With the current year's earnings, the debit balance has been reduced to Rs 31.78 lakhs.

The balance sheet shows a complicated capital structure, with Rs 10 lakhs in the form of 6 per cent cumulative preference shares, Rs 4.23 lakhs in 6 per cent redeemable cumulative preference shares, Rs 30 lakhs in ordinary shares of Rs 100 each and Rs 24 lakhs in 'B' ordinary shares, issued as bonus shares of Rs 100 each. Moreover, there are 5½ per cent debentures outstanding to the tune of Rs 12.79 lakhs. Against this, the Reserves and Surplus are placed at Rs 8.85 lakhs. On the other side of the ledger, the gross block of Rs 1.76 crores is shown as having a book value of Rs 70.58 lakhs.

The Directors' Report points out that the improved performance during 1958 reflects "a sustained effort to improve manufacturing efficiency and to reduce working costs". There is, apparently, scope still left for a further increase in the production capacity of mill labour. It is intended, with a view to effecting further economies, to revert in the near future to single shift working on all old machinery. It is significant that, while the company's trading so far during the current year has been satisfactory, the considerable size of the debit balance prevents the Directors from giving any indication "regarding the likelihood of payment of arrears of preference dividends and the resumption of dividends on the equity capital".

₹ 23

Bharat Carbon & Ribbon Manufacturing Co., Ltd.

The accounts of the Bharat Carbon & Ribbon Manufacturing Company Limited for 1958 show that sales have risen from Rs 37.20 lakhs to Rs 45.31 lakhs. Though expenses also rose somewhat, the net profit, before tax and depreciation, has nevertheless gone up from Rs 2.10 lakhs to Rs 2.85 lakhs. Tax receives Rs 1.20 lakhs against Rs 75,000. The provision for depreciation rises slightly to Rs 57,817. There is a transfer of Rs 25,000 to Reserve for Rehabilitation of Machinery, and a dividend at 9 per cent has been paid on the ordinary shares.

According to the Directors' Report, capital worth Rs 3.64 lakhs was sold by private sale during the year. The consent of the Central Government was obtained for further issue of capital to the tune of Rs 4.70 lakhs at par, this issue having been offered to holders in March this year and the entire issue being over-subscribed.

The ordinary capital of Bharat Carbon is now placed at Rs 5.90 lakhs, in addition to which there is preference capital of the order of Rs 5.80 lakhs, part being in 6½ per cent cumulative preference shares and part in 7½ per cent cumulative preference shares. The gross block of Rs 12.67 lakhs is shown at a net of Rs 8.22 lakhs.

Government Borrow from Strength

THE monetary authorities of the country deserve to be congratulated on an exceedingly well reasoned new loan programme for 1959-60. The timing is excellent, for, to have announced the new loan as early in the year as was the case last year would have meant that the money market would psychologically have felt that sufficient resources would not be available for supporting it in a big way; and to have delayed the announcement would have meant that the other borrowers standing in queue for tapping the capital market would have had much less of the slack season in which to complete their efforts. The terms and conditions are admirable, in the sense that they are more favourable to Government than are the existing issues on the basis of their present quotations. Thus, the new loans, instead of causing a decline in the gilt-edged market, will have the tonic effect of instituting a fresh upward movement in prices. The target is eminently proper. Although the amount sought is Rs 175 crores, plus the usual 10 per cent of over-subscription that Government have the right to hold on to, the strain on the market will be negligible for two reasons. Firstly, there are outstandings of Rs 113 crores in the maturing 3 per cent 1959-61, and these are eligible for conversion into the new loans. Secondly, the net money thus sought will be well within the capacity of institutional investors whose spare resources, in any case, would be earmarked for gilt-edged. But, then, we must also remember that the new loans are for Rs 175 crores as against the stipulated target, as mentioned in the Budget, of Rs 225 crores. Does it follow that Government have either decided that they no longer need to depend upon market borrowings for balancing their Budget or come fatalistically to the conclusion that their original target was rather too optimistic?

We have reason to believe that neither of these considerations influenced the monetary authorities to restrict their July borrowing programme to Rs 175 crores. On the contrary, the technique of borrowing from strength has, it seems, at long last been learnt. This technique consists, to put it simply, to place on the market less than the market has the capacity to absorb, and also to make available the gilt-edged issues on terms slightly less favourable to the lenders. It is in such a background that the idea both of a short-dated and of a short-medium loan has been discarded, although, in all conscience, the heavy maturities during the Third Plan, to which Indian Finance has repeatedly been drawing warning attention, urged strongly against the desirability of a short-term issue. But, then, as a palliative to banking investors, Government might have decided upon a short-medium, in a year—1966—when maturities were none too heavy; that Government have resolutely decided against any such issue, speaks of their determination to borrow from strength. For, the first of the issues is a medium-term, 10 year, 3½ per cent 1969 to be issued at a discount of Rs 1.15. The redemption yield is 3.64 per cent and, as far as Government are concerned, compares favour-

ably with the 3.66 per cent available on the existing 3 3/4 per cent 1968. It may be noted at this stage that, as in the last year, the medium-term matures in 10 years; but there, the comparison ends. The interest coupon has been pruned from 3 3/4 per cent to 3½ per cent; at its issue price, the last year's medium-term offered a rather higher redemption yield of 3.82 per cent; and, with the elimination of the short-term issue, banks with spare resources will be compelled to go in for the 3½ per cent 1969.

The second of the new issues is momentous, a 20 year 4 per cent issue at par. Not since during the war, we believe, have Government been persuaded that they are strong enough borrowers as to be in a position to hope to make a success of a 20 year loan. Last year's long term issue had a maturity of 15 years, and it was also issued at par. It is certain that strong institutional demand, not merely

Present US Economic Trends

By THOMAS J. MARSHALL

IT requires little prescience today to pronounce the American economy healthy to the core: that much even the economically untrained is bound to recognize from a mere reading of newspaper headlines.

But this week the mere fact that the 1957-58 recession has receded into the past, has been replaced by another story. It is the story of how that third recession since World War II has been overcome, and how much of the current plan is born of the country's own inner momentum.

To understand this story—and it is one of political and ideological as well as economic meaning—one must first realize the magnitude of today's upswing and then place it into the context of post-war economic history.

In the last 30 days—usually days of a slowly beginning summer ebb—a prosperity cycle of considerable vigour appeared in virtually all reports on economic activity:

Employment rose by 1,000,000 to a record of 66 million—not only an increase of unseasonally high proportions but also one that corrected much of the early-year employment lag in the manufacture of "hard" goods (appliances, automobiles and such).

Unemployment, usually pretty stable at this time of year, dropped by 238,000. Statistics reveal a sharp decline in the number of those out of work for more than 15 weeks (which is a little more than half the average length of unemployment payments), and also a strong influx of new job seekers such as housewives who work when earnings are good, or youngsters newly out of school.

Nor is this all. Factory employment, which usually drops in May, this year increased by about 100,000; average factory earnings for the first time exceeded \$90 a week, even though living costs remained stable.

Retail sales set a new record for May (\$18,255 million) and this, too, without benefit of significant price increases. Money set aside by confident businessmen for new factories and machines—an all-important economic weather

Indian Finance

Established 1929

June 20, 1959

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius

from the LIC but from provident fund institutions, etc., as well, is responsible for Government deciding upon a 20 year issue.

The success of the borrowing programme is assured. On the magnitude of the success will depend Government's fresh forays into the gilt-edged market later in the financial year. For our part, we believe that a second tranche of Government borrowings should be possible in late August or early September. We also believe that the target at that time should be Rs 100 crores, so that the gross realisations from borrowings during 1959-60 should exceed Rs 275 crores. Finally, we would suggest that, for the second tranche, conversion facilities in advance be offered for the 4 per cent 1960-70 loan, so as to reduce the interest liability on the Rs 63.30 crores outstanding on this loan. Such manoeuvre would greatly facilitate the borrowing programme for the last year of the Second Plan.

vane—is now reported to come to a total of \$32,565 million for the year.

There is no need for citing reams of other high figures on gross national product, private income, company earnings and such. For the conclusion quite evidently is that the upward trend that began a little more than a year ago, is in full swing and recovery from recession has long changed into a full measure of prosperity.

This being so, another conclusion immediately comes to mind: it is that this change-over from recession to recovery to prosperity has been accomplished with less governmental intervention than many had clamoured for.

Some housing and road building programmes were increased. But there has been no massive "make-work" legislation. No major general revision of the tax system, no tax relief specifically for business and no great increase in federal spending. In fact, the administration's emphasis has been on conservatism in applying corrective measures.

Yet, recovery has been swift, and it has now decidedly changed into a new era of prosperity. To say that thereby the tempered economic and fiscal philosophy of the administration and of the moderate rather than the ambitious "spenders" in Congress has been vindicated, is only part of the story.

Thirteen years ago, Congress passed the so-called employment act. That act made it an obligation of the government to create conditions in which production, income and employment can maintain high levels. Since then, the act was applied in three recessions. But it is fair to say that in no instance all means at the disposal of government had to be thrown into the breach.

The economy's own recuperative powers and stabilizing legislation long in effect, together with such normal regulatory means as monetary and fiscal policies and a modicum of spending, sufficed.

To put it another way, there has now been in operation for well over a decade, and under administrations of different partisan denomi-

nation, an economic system that kept on expanding with what is generally considered moderate rather than drastic governmental intervention.

That is perhaps the most important fact to

The Structure of Interest Rates in India—III

By B. KRISHNA RAO

CALL MONEY RATES IN BOMBAY, CALCUTTA AND MADRAS:

The call money rates are the lowest market rates and are mainly related to interbank borrowing in India. The rates among the larger scheduled banks are different from those among the smaller banks and are generally lower. In the matter of borrowing, the Indian banks still show strong notions of prestige. The call money rates have been rising steadily since 1951 indicating an increase in the costs of interbank borrowing. At higher rates the volume of borrowing usually becomes less and on this assumption of the demand curve for funds within the banking system is downward sloping and elastic. However, a few kinks in the demand curve are possible in view of the opportunities available for banks to increase their income earning assets. Thus in 1955 and 1957 interbank borrowing shows increase even though the call money rates are very high. The factors affecting the amount of interbank borrowing and the call money rate are (i) the bank rate, (ii) the market policy of the Reserve Bank, (iii) the return flow of money into the banking system during the slack season (iv) the price level of government securities (v) the seasonal demand for bank advances (vi) the degree of competition among the banks (vii) the prevalence of tacit agreements among the banks regarding the call money rate (viii) the bankers' ideas of prestige etc. (ix) the active rate at which advances are made available by the Reserve Bank under the bill market scheme, and finally (x) the Reserve Bank policy of varying reserve ratios. As between different markets the call money rates show considerable differences. It is said that the short term rates in Bombay move to the extent in sympathy with the discount rate prevailing in London. Such external influence arises from the fact that the foreign exchange banks sometimes obtain overdrafts from their head offices in London. Another fact which explains this external influence is that the Indian banks rediscount export and import bills of exchange in the London market and this in due course influences their lending policy in India.

The rise in the Bank rate in November, 1951 and the restrictions imposed by the Reserve Bank in the purchase of government securities from the open market immediately brought about a marked rise in the call money rates in all the markets. The upward trend in the call money rates during 1951-57 is due to the impact of several factors on the banking system. The monetary requirements of the public increased after the restoration of freer commodity trade by the removal of many fiscal controls imposed earlier. The rising demand of industrial production and better harvests during the First Five Year Plan period had a similar effect. The more rapid growth in the secondary and tertiary sectors in relation to the primary sector and the higher tempo of economic activity in general led to the impetus of the First Five Year Plan further added to the demands made upon the banking system. During 1954-57 the effect of deficit financing resorted to by the government in the money supply was restricted by the fall in foreign assets in the balance of payments. In a view to restraining inflation the Reserve

emerge from the current impressive economic statistics. For it has meaning beyond the moment and is apt to relegate to oblivion some theories that have never been more outdated than they seem today.

Bank has also followed a changed policy of discriminating purchase of securities since 1952-53. In these circumstances the call money rates increased, and the banks tended to borrow larger amounts from the Reserve Bank and the Imperial Bank than was usual.

DEPOSIT RATES:

The main business of the banking system is to attract current savings and time deposits and to finance short term internal trade and industry. The interest paid on deposits and that charged on loans and advances differ from bank to bank and from one area to another area. The indigenous bankers do not try to attract deposit. There is no connection between the indigenous bankers and the commercial banking system. Even the commercial banking system is not homogeneous. The rate differentials in short term deposits can be viewed in this light. It is often stated that the movement of deposit rates does not show any marked sympathetic movement with the Bank rate. Prof. Muranjan however suggests that the fixed deposit rates and the long term bond yields are positively correlated for at least the bigger banks. The banking system seeks to regulate the supply of deposits by fixing the short term rate on deposits on the basis of their debt position with the Reserve Bank and even other banks. The fact that debts of this form and rediscounts from the Reserve Bank can be incurred only for a short period creates a tendency for the banks to fix their interest rates in such a way as to avoid such debts. The effect of the Central Bank on deposit rates is weakened to the extent that banks resort to borrowing from other sources on a large scale. When commercial banks hold the bulk of short term savings of a country short and long rates may indeed hold together. The banks in India largely control short term funds, and these funds are replenished only to a limited extent from supplies of long-term capital. The ratio of deposit money to the total money supply with the public has been less than 35 per cent during 1951-58 and this indicates the relatively small impact of the banking system on the economy.

The hardening of the deposit rate structure since 1952 has not significantly altered the proportion of the fixed and savings deposits held in the banking system. The following table shows composition of the deposits during 1953-56.

Year	Fixed Deposits	Savings Deposits	Current Deposits
1953	34%	18.5%	48.0%
1954	34.5%	17.2%	48.3%
1955	35.5%	17.3%	47.2%
1956	35.8%	17.7%	46.5%

Source: Bulletin of the Reserve Bank of India July, 1958.

Though the composition of the deposits held by the banking system as a whole is more or less stable it is worthy of note that the amount of time deposits held by business concerns during 1951-57 has shown a remarkable rate of growth as compared to the demand deposits.

* Vide Monthly Bulletin of the Reserve Bank of India, July, 1958.

Indian Finance

The savings deposits and much more the time deposits have increased in the accounts of individuals during 1951-57. These facts are brought out in the following table. It may also be noted that seasonal influences are likely to be felt in demand deposits though the extent of such influences may differ from bank to bank.

Classification of Business Deposits

End of	(In crores of Rupees)		
	Demand	Savings	Time
1951	235.79	1.65	64.59

Source: Bulletin of the Reserve Bank of India July, 1958.

The total volume of deposits is dependent on the degree of the monetisation of the economy, the spread of the banking system, the habits of spending and saving of the people, the level of prices, the size of the national income and other factors. A rise in deposit rates moderates the velocity of circulation of money. A fall in the deposit rate might discourage savings or alter the form of the savings. The effect of a falling deposit rate on long term rates may be small if banks operate more on the short term market than on the long term market. In general terms if short term borrowing is not significant in financing fixed capital as indeed it is not; if manufacturers pay less heed to interest than to other economic factors in holding stocks, and if the marginal disadvantage of holding stocks decreases with an increase in stocks, the savings of business men are not adversely affected by falling short term rates. This is true again when the fall in the short term rates does not cause sympathetic movements in the long term rate and when the manufacturers consider the movements in the long term security prices in deciding their investments. The tighter money market conditions during 1951-57, the rising Bank rate and the call money rates have intensified the competitive conditions among the banks in attracting deposits and the banks have sought to enforce a system of fixed rates by concerted action through the Indian Banks' Association. Such action might bring a measure of uniformity in different banks. To what extent the long interest rates are affected by this measure depends on the volume, the direction and the nature of the impact of the funds which may now seek alternative opportunities for investment instead of flowing into the banking system. The funds which seek investment outside the banking system may lower the rates of interest on private bills as Meade argued* but because of the absence of a developed discount market in India such an effect may be negligible. Either the small elasticity of deposits or the rapid increase of money supply under deficit financing might enable the banks to stand by their policy of lower deposit rates.

EDITORIAL NOTES

P. M. On Planning

At his monthly press conference last week, the Prime Minister referred in passing to the Ooty Seminar and annotated some of the conclusions which had been reported in the Press. The Prime Minister made it clear that, when a discussion on private or public sector came up, they had only the largescale industries in mind. They were not bothered about the corner pan shop. They had laid down, said the Prime Minister, that big industries should be in the public sector. This was because most of them were so big that they were beyond the scope of the private sector. The discussion at Ooty was only relevant to largescale industries. In this respect, while they had no intention of touching existing undertakings, and they may even use their resources for expansion, as regards establishment of new centres, each case should be considered on its merits. This is the impression gathered from the report of what the Prime Minister said at his press conference. The use of the term 'big industries' by the Prime Minister is possibly unintentional. Perhaps he has used it in the sense of basic or key industries which are also big industries. There is an understandable case for reserving the basic strategic or key industries for the public sector, in order to accelerate the pace of development. To this

category belong power generation and the manufacture or extraction of the basic raw materials of industry. These may be properly regarded as forming part of the economic infra-structure. When, as is the case in under-developed economies, private enterprise is not in a position to build the infra-structure and cannot expand further in its absence, the State has necessarily to intervene. But adoption of mere size as the criterion for including an industry in the public sector will introduce a quite unnecessary, complicating factor. If an industry grows in size, it should be regarded as a sign of efficiency. Many industries will hesitate about using their resources for expansion, if the penalty of size is nationalisation. Such a policy will also inhibit enterprise in fields which have potentialities of growth. In either case industrial development in the country will receive a set back. And the suggestion that existing industrial undertakings in the largescale sector will be allowed to open new centres only as a special case will also impose a restriction which cannot be justified on economic grounds. For, it will mean that an industrial unit will not be allowed to invest its resources in the field in which it has proved its competence, but will be compelled to seek investment in industries of which it has no previous experience. The spreading out of interests that may result, instead of adding to efficiency of operations, may lead to undesirable concentration of control in the hands of a few entrepreneurs.

★

Dizzy Target

It was reported from Ooty last week that the AICC Seminar was discussing the high strategy of planning, which apparently is to include a blitzkrieg on the taxpayers, for targeted outlay of Rs 10,000 crores in the Third Plan. According to some reports the total will be Rs 10,000 crores including expenditure of Rs 1,000 crores met out of revenue. It is not merely the Ooty Seminar that was thinking in terms of a Plan of such dimensions. The reports of the different working groups set up by the Planning Commission and by the States seem to have taken for granted a total outlay of the order of Rs 10,000 crores. But how this figure has been arrived at has nowhere been made clear. The total outlay is broken down into Rs 6500 crores in the public Sector and Rs 3,500 crores in the private Sector. Leaving the private sector investment out of consideration for the moment, it is difficult to see how a target of Rs 6,500 crores for the public sector can be taken seriously. The problem of resources, it may be readily conceded, need not intimidate us into adopting a timid approach to planning. The resources can always be found if we have a workable plan. But where are the projects

to absorb the investment of Rs 6,500 and the trained personnel to man them?

The experience of the Second Plan can throw useful light on what is possible. The biggest single item of investment in the Second Plan, apart from Railways, is Steel. The investment on steel has also determined the magnitude of investment on ancillary projects. Even after original estimates had been scaled up on a number of occasions, the total investment does not exceed Rs 550 crores. In the Third Plan, by present indications, the investment on steel production will be of smaller dimensions. The target of four million tons additional production that is now envisaged will be achieved by expansion of existing plants and establishment of one new plant. As the fourth plant is to be home made, the cost should work out less than was the case with Rourkela or Durgapur. Even allowing a large allotment for oil exploration and development, and giving Mr M. M. Shah all that he wants for Small Industries, the scope for investment in the public sector does not seem likely to absorb all of Rs 6,500 crores. That is of course on the assumption that a clear distinction is maintained in all cases between investment and mere expenditure.

Pandit Kunzru went to Poona last week and unburdened himself on the subject of cooperatives. If he says that cooperative farming is impracticable in our country at the

present time, many will be inclined to agree with his conclusion. Even if that is not the case, and Pandit Kunzru stands alone in a world of cooperative farming enthusiasts, he will still be entitled to express his views. If he chooses to give the reasons on which he has based his judgment, he will be listened to with respect. But when he goes further and says that Congressmen "have given in to the Prime Minister in public, but if you meet these people in private they have grave doubts about the success of cooperative farming" and does so without mentioning the names of the Congressmen who have such doubts, he is less than fair. He is unfair to the Congress, the country and to his own reputation for non-partisan approach to public affairs. If Pandit Kunzru had belonged to a political party opposed to the Congress, we could have understood and made allowance for the tactics of sowing doubt and dissension in the enemy camp. But the country expects higher standards of political controversy from Pandit Kunzru.

The country has a right to know the Congressmen who, lacking the grit to stand up for their convictions, will always be a liability when crucial decisions have to be taken. The Prime Minister has already invited those Congressmen who have no faith in cooperative farming to get out. They will then be free to apply for admission to the Swatantra party, that is, if the new party will have them.

UCOBANK'S RUPEE TRAVELLERS' CHEQUES

SAFE AND CONVENIENT MEANS OF CARRYING YOUR TRAVEL FUNDS

- ★ Instantly accepted
 - ★ Refunded if lost or stolen
 - ★ Spendable like cash

WORLD OF FINANCE

Hopes Hearten- ingly Exceeded

WHILE our anticipation that the new loan announcement would be made by Government by the middle of June has materialised, our hopes in regard to the composition of the programme have, it is heartening to record, been exceeded. In every respect, the details in regard to the new loan are such as to inspire the feeling that Government today have recognised the fact that they are in a position to borrow from strength. It is not, in this context, a sign of weakness that subscriptions are to be limited to Rs 175 crores, as compared with the Budget figure for the new loan at Rs 225 crores. For, weakness it would be only if the decision to seek a relatively smaller amount was based on the Government impression that the market would not be able to support a larger offer. This, clearly, is not the case, because the composition of the loans is such as to assert stridently that the terms favour the borrower rather than the lender. Thus, firstly, the idea of a short-term loan has been given up, whereas, in each of the previous three years, a five or six year issue has formed an essential part of the new loan programme. What is more, in each of these three short-term issues, the subscriptions, presumably mainly from the banking system, were substantial. Thus, the decision not to offer a short-term loan is in effect a statement of confidence on the part of the Government that they have no need to woo the banking system by offering an alluring short-term issue. Secondly, the medium term also conforms to the pattern of the previous three years, in that the maturity period is 10 years. But, whereas, in both 1957 and in 1958, the interest offered was 3½ per cent, the new loan carries an interest of 3¼ per cent. Moreover, at its issue price, the redemption yield is rather lower than has been the case in the previous three years. Finally, it is after a pause of 13 years that Government have felt sufficiently self-confident about the issue of a loan which matures in 20 years. It may be recalled that the last occasion on which a long-term loan as such was issued by Government was in September 1946, when the 3 per cent 1986 created history by inducing holders of Rs 248.91 crores of undated paper to convert into the new loan. Incidentally, the 4 per cent 1979, which is announced, is the longest

dated security of the Central Government with a fixed date of maturity.

The following table places the new loans within the structure of yields of existing Government issues:

Securities	Price	Current Yield	Redemption Yield
3½% 1965	99.75	3.54	3.45
3½% 1967	99.30	3.52	3.58
3½% 1968	99.30	3.54	3.59
3½% 1968	100.65	3.73	3.64
3½% 1969	98.85	3.54	3.64
4% 1972	101.70	3.96	3.82
4% 1973	101.65	3.96	3.85
3½% 1974	98.90	3.81	3.83
2½% 1976	83.25	3.30	4.09
4% 1979	100.00	4.00	4.00
7% 1986	73.70	2.78	...

Conversion facilities are offered in respect of the 3 per cent 1959-61 loan, with outstandings of Rs 113.66 crores, and the 2½ per cent Hyderabad Loan 1954-59 with outstandings of Rs 7.55 crores. Thus, if there is full conversion, the new cash that may be obtained by Government may amount barely to Rs 55 crores.

It may be taken as certain that, later in the slack season, the Central Government will come on to the market again with a second tranche of their borrowing programme for 1959-60. It is too early to predict what the composition of that loan might be, but we may state here that it should be possible for Government to realise at that time Rs 100 crores, so that the net new cash is of the order of Rs 150 crores. Even at this level, new cash from 1959-60 borrowing programme will fall short of realisations in this regard during 1958-59, when the relative figure was placed at Rs 202 crores.

It will be seen from the table that both the current yield and the redemption yield available on the medium term issue is lower than yields presently offered on existing issues. The 3½ per cent 1969 may consequently be expected to tone up the rest of the gilt-edged market, particularly since the class of investors who would go in for this loan may not be permanent holders thereof. On the contrary, it will be seen that, except for the redemption yield on 2½ per cent 1976 and the current yield on the 3 per cent 1986, the terms of the 4 per cent 1979 are such as to be more attractive to the investor. Since investors in the long-term issue, being largely Provident Fund Institutions, will be intending to hold on to the loans till maturity, the impact of the new long-term loan on the gilt-edged market should be such as to cause it to quote at a premium immediately.

There can, we feel, be no question either of the success of the borrowing programme or of the position of strength from which Government are borrowing this year.

Impact of Month Early Disburse- ments

WITH some possibility that beginning of the month disbursements spilled over into the second week, the Reserve Bank returns for June 12 show that there has been a small fall of Rs 1.64 crores to Rs 1753.79 crores in active note circulation and a small return of Rs 0.30 crores in Rupee Coin. Both Rupee and Foreign Securities are unchanged, so that the Reserve Bank's cash in the till improved by Rs 1.94 crores.

Figures in the Banking Department are equally featureless, with little to show by way of evidence of the onward march of the slack season. The Centre's Deposits are lower by Rs 0.48 crores at Rs 52.56 crores—and there is, with Investments fractionally lower by Rs 0.77 crores at Rs 297.55 crores, no indication of deficit financing. The balances of State Governments are lower by Rs 3.24 crores at Rs 9.93 crores, though their indebtedness to the Reserve Bank has declined by Rs 0.69 crores to Rs 31.53 crores. The Reserve Balances of member banks have declined by Rs 1.35 crores to Rs 72.67 crores, but this is due wholly to the State Bank. It would seem that banks have at the same time been able to reduce borrowings, since the Reserve Bank's Other Loans and Advances show a shrinkage of Rs 3.43 crores to Rs 59.77 crores.

The import surplus, uncovered by foreign assistance, continues: Balances Held Abroad, in declining by Rs 1.90 crores to Rs 18.01 crores, have fallen for the fifth successive week.

The return of the State Bank for June 12 also suggests the possibility of spillover of month early disbursements into the second week. The total of Advances is lower only by Rs 0.60 crores at Rs 193.81 crores. However, Deposits have risen by Rs 2.89 crores to Rs 526.22 crores. Though gilt-edged investments are unchanged, the fact that Other Assets have been marked up by Rs 6.57 crores would suggest that further purchases from the Reserve Bank are on the cards. In the result, cash in hand and with the Reserve Bank fell by Rs 1.80 crores to Rs 23.82 crores. It may be remarked that, with the new loan announcement, the ability of the State Bank to support position, problematic. It is true that the "hidden" resources under Other Assets may be pressed into service for subscribing to the new loan. Other than that, unless there is a combination of rise in Deposits and decline in Advances, the extent of State Bank support is likely to be small. However, we cannot rule out the possibility of the State Bank, just prior to the new loan, selling gilt-edged—in manner similar to last year—to the Reserve Bank. Nevertheless, it

may be stated here that the State Bank is unlikely to be able to subscribe to the new loan this year as much as it did last year.

The view that constituents probably met their month early disbursements by drawing down Deposits is confirmed in the return for Scheduled Banks for the week ended June 5. Deposit liabilities of member banks fell by Rs 12.53 crores to Rs 1753.24 crores, though part of this decline has occurred under the head of borrowings. The State Bank's share, incidentally, was Rs 4.61 crores. The total of Advances, unusually for the beginning of a month, has fallen by Rs 5.43 crores to Rs 1006.03 crores, with the State Bank responsible for Rs 3.74 crores of this. Borrowings from the Reserve Bank have again been reduced by Rs 1 crore. In the result, cash balances are slightly lower by Rs 0.05 crores at Rs 166.20 crores.

The magnitude of support that the Scheduled Banks may be able to extend to the new loan this year is likely to be rather smaller than was the case in 1958. It may be recalled that, in broad terms, the member banks were seen to have put in Rs 55 crores last year at the time of the new loan, Rs 35 crores of this being attributable to the State Bank. It is to be stressed that it is the subscriptions of the State Bank which are in some doubt; the other Scheduled Banks should again be mustering something like Rs 20 crores without much difficulty.

Capital Invest- ment Dilemma

By Paul Einzig

MANY industrial managements have to make a very difficult decision, whether to forestal the expansion of the demand for their goods and expand their plant now, or whether to defer this as long as possible by using existing plant to the full extent. There are cases in which it is safe to assume that demand will expand in the course of the next few years. Even in such cases the decision is no simple matter. It is arguable that since the chances are that in a few years' time the cost of building and equipping a new plant will be much higher, the sooner it is done the better. In reality the problem is very complicated, there are many arguments in both senses.

Of course there can be little doubt about the prospects of higher costs in a few years' time. In this life of ours, so full of uncertainties, there are only two things which are absolutely certain—death and inflation. The almost continuous rising costs in general and of the cost of building and equipping factories in particular, is beyond doubt. Indeed it seems practically certain that the latter will increase to a larger extent than the general price level. It is a pity that there is no reliable index showing the increase in the cost of capital in-

June 20, 1959

vestment. Any experienced industrialist would confirm, however, that in Britain at any rate such costs have increased considerably more than in proportion to the rise in the cost of living. They are certain to continue to increase at a higher rate.

Therefore, we can safely assume that the erection of a factory in May, 1965 will cost a great deal more than the erection of the same factory this year. How much the increase will be is of course anybody's guess. Likewise it seems reasonably safe to assume that the interest charges on capital raised in five or six years will be higher than those on capital raised in 1959. In the meantime the investing public will become increasingly inflation-conscious and will expect to be compensated for the decline of the purchasing power of the fixed yield of debentures. The chances are that by then most capital schemes will have to be financed through the issue of additional equities, convertible debentures. This would mean that existing shareholders would have to share the firm's profits with the newcomers—a very costly method of financing from the point of view of old shareholders.

Yet, if the factory is erected before it is really necessary it would have to work well below its full capacity for a number of years, pending the expansion of demand for the goods it produces. That may mean higher overhead charges per unit of output; it would certainly mean loss of interest on the capital invested. No firm would of course put up a plant and keep it idle for years in order to save the increased cost of its erection and equipment. Should this be done, the loss of interest would offset, and possibly more than offset, the saving effected on the cost of putting up the plant. But if the new plant is employed to some extent from the outset and is employed increasingly as time goes on then the comparison of loss of interest with saving becomes a matter of involved arithmetics.

The argument which is of decisive importance is the possibility of technological progress during the next few years. Even if the commercial managements are in favour of carrying out the investment now, the technical managements are certain to be opposed to it on the ground that in a few years a plant put up today might well become quite obsolete as a result of new inventions. Few firms could afford to take that risk, even if recent inventions have resulted in extensive modernisation and automation of the works. There is always a possibility of further inventions. Technological experts can never claim that the last word has been said in any particular sphere. Firms which defer their capital project to the very last moment are liable to score over their rival which carried out its project prematurely,

by being able to produce at lower current cost thanks to technical progress in the intervening years. This may considerably more than offset the difference in the capital cost involved, allowing even for higher cost of raising funds. And after all, the demand for the products concerned may not expand. The requirements and tastes of consumers are liable to change in the course of time. It would be wasteful to have to re-tool the factory erected prematurely in anticipation of continued demand for the same product. In given

situations it is hardly feasible at all, if the change in demand is such as to call for totally different goods.

Evidently the answer to the question whether to invest now or later in cases where investment expenditure is optional is to defer the operation as long as possible. Admittedly, it must be exasperating for executives to watch the costs of capital investment operations go up and up, knowing for certain that the work will have to be carried out sooner or later. But there is a solution to this problem.

To hedge against the increased cost of capital investment, the firm would have to borrow the money now and invest it in safe equities which are bound to benefit in the long run by the rise in prices. Quite possibly the present prices of ordinary shares are too high, and a setback may be overdue. But thinking in terms of a number of years, it is safe to assume that the level of equity prices will be higher. The increase in costs would be covered by the capital gains on the equities.

Aristotle had once described his pupil, Alexander the Great, as many in one: man of action, man of logic, romantic dreamer, believer in magic and so on. Like Alexander, we too have become many in one. At birth, we were christened Textile Machinery Corporation Limited, or makers of textile machinery, and over the years we have made many such machines. But we did not stop here. The 4,500 strong Texmaco, today manufactures a wide range of engineering products—cotton and jute textile machinery, industrial and locomotive boilers, pressure vessels, steel structurals, railway rolling stock, sugar mill machinery steel castings and so on. With the implementation of our new projects, now under way, we would become yet many more in one. Whatever Alexander did, he was inspired by the thought of adding fresh glory to the name of Macedon. Whatever we might do, there is a single aim that directs our activities—the proper utilisation of all our resources, to manufacture quality machinery—machinery to help India industrialise and bring prosperity to her teeming millions.

TEXMACO

serves India's basic industries

Electric Lamp Industry

THE Electric Lamp Industry has made phenomenal progress since it was started in this country twenty five years ago. In the jubilee year of the industry, there were eleven manufacturing units under the banner of the Indian Lamp Factories Association. Production has increased not only in volume but also in the diversity of products. The types of lamps manufactured cover a wide range, including GLS lamps of 15 to 1000 watts in clear, frosted, inside white and daylight finishes, reinforced construction lamps, ornamental lamps, loco headlight lamps, cab and train lighting lamps etc. Manufacture of fluorescent lamps was started in 1952. The tubes are available in two colour shades. Production of miniature bulbs was also started in 1952.

Actual production of GLS including all types other than fluorescent tubes has increased from 7.62

million pieces in 1947 to 32.13 million pieces in 1957. Output of fluorescent tubes has increased from 73,000 pieces in 1952 to 10,24,322 in 1957 while miniature lamps production has increased from 1,42,500 lamps in 1952 to 67,81,264 which was the peak year for the industry as a whole. Production of lamps in 1958 was 29.44 million pieces GLS, 9,85,785 fluorescent tubes and 88,09,911 miniature lamps. Production has shown a slight decline except in respect of miniature lamps, and this is attributed to heavy accumulation of stocks in the previous year and the cessation of operation by one of the major units.

Reviewing the growth of the industry in his address to the Thirteenth Annual Meeting of the Indian Lamp Factories Association held in Calcutta on June 1, the President, Prof. S. K. Roy, observed, that the progress of the industry has enabled the country to dispense with the import of glow lamps and drastically cut down import of fluorescent and miniature lamps. The import of lamps now, he pointed out, is mainly restricted to special types like photo flood lamps, studio lamps, photo flash lamps etc., which are yet to be manufactured in the country. He also forecast that it would be possible, within a couple of year's time, to eliminate entirely the import of many of the important types of lamps which still figure in the import list and at the same time meet the increasing demand.

Analysing the trend of production, Professor Roy also drew attention to certain unsatisfactory features in the structure of the industry. The industry is composed of heterogeneous units of different size some of which are fully automatic, but none are of economic size, judged by the standard of industrially advanced countries. The minimum capacity for a economic unit organised on modern lines, he said, should be 12 million pieces per annum. Another problem is the existence of unused capacity which has resulted in increased overhead costs and impaired competitive strength. In order to re-

medy the imbalance between production and rated capacity, as well as to allow the existing units to attain economic size, Prof Roy urged on the Government that no new expansion, either through fresh installation or operation in double shift, should be allowed till the existing units have utilised about 90 per cent of their installed capacities. Such a policy, he was convinced, would promote national interest and would fit in well with the industrial policy of the Government.

In this context, Prof Roy also mentioned that the experience of the industry as regards production and demand had borne out earlier apprehensions that the Second Plan targets for capacity and production were on the high side. He, however, hastened to add that the immediate prospect should not in any way dampen the enthusiasm of the lamp manufacturers. Considering the increase in power potential likely to be achieved during the Third Plan period, he estimated that the annual additional demand for GLS lamps would be about 2.5 million pieces, while the demand for fluorescent lamps would increase yearly by half a million pieces. On this basis, the production targets for electric lamps by the end of the Third Plan should be fixed at 48.5 million pieces for GLS and other sorts, four million pieces for fluorescent lamps and 30 million pieces of miniature lamps.

Regarding the problems of manufacture and materials, the industry, it may be noted with satisfaction, is now almost self-sufficient in its requirement of glass shells. Only coloured shells are at present imported. Manufacture of these items is already in hand. Manufacture of other important components like rods and tubes of approved quality is also expected to start very soon. But certain items like filaments, miscellaneous gases, lead-in-wires or electrodes, molybdenum wire etc have still to be imported, and the import bill is likely to increase as a result of growth in production. Regarding raw materials, the President of the Lamp Manufacturers' Association put forward the interesting suggestion for organisation of a joint venture for manufacture of such materials.

Companies in the South

Statistics relating to changes in the corporate pattern of the Southern region are given in the report of the Regional Director in his review of the working of the Companies Act for the quarter ending March 31, 1959. During this period 72 new companies were formed with an authorised capital of Rs 215.73 lakhs. Total new investment by way of increase of paid up capital amounted to Rs 340.61 lakhs.

Majority of the new companies are private limited companies.

Indian Finance

Only seven out of the 72 are public companies limited by shares and these have total authorised capital of Rs 13.20 lakhs. Companies classified under the group, "Transport, Communications and Storage" account for the largest number of registrations. "Commerce" comes next with 17. "Processing (Metals & Chemicals)" have ten new registrations. The distribution of the new companies among the four States comprising the Southern Region is as follows.

State	Public	Private	Total
Madras	4*	41	45
Andhra Pradesh	1	6	7
Mysore	—	**	8
Kerala	3	9	12
Total	8	64	72

* (One company limited by guarantee).

While 72 new companies have come in, 33 companies, including a banking company, have gone into liquidation. Another 121 companies were struck off the Register of Companies as defunct. The total figures of paid-up capital involved are respectively Rs 61.53 lakhs and Rs 19.36 lakhs.

During this period two companies have changed their names, one Government Company has dropped the word private, two private companies have converted themselves into public companies and four public companies have been converted into private companies. Two insurance companies in Andhra have also merged under orders of the High Court. One company transferred its head office from Andhra to Madhya Pradesh and another from Kerala to Madras.

It is of melancholy interest to note that 100 prosecutions were launched during the quarter against companies and their officers for failure to hold annual meetings and for not filing annual returns and balance sheets. Out of 53 cases disposed of, 34 cases resulted in convictions. The total of fines imposed was Rs 1035.

The Ambassador Arrives

The arrival of the popular "Hindustan Ambassador" Car was signalled by an attractive display in the showroom of Messrs: India Automobiles Calcutta, on the first day of this month. The car should be in great demand, for, without raising prices, it offers all the requirements of an ideal family sized car—space, equipment and road worthiness, not to speak of a posh appearance. The Overhead Valve Engines, with which the Ambassador is equipped, it is claimed, are more economical on fuel consumption, easier in maintenance and efficient in operation. Demand should be keen as the availability of the new model is still limited, but the manufacturers promise that supply will improve in the not too distant future.

June 20, 1959

Need to Unseal More Looms Soon

THE production of jute goods during May showed a small improvement of 2,400 tons to 86,890 tons, though this could be ascribed solely to an increase of 5½ hours in hours worked. The output of hessians rose from 38,100 tons to 39,700 tons, sacking unchanged at 37,900 tons and other varieties accounted for 9,200 tons against 8,400 tons. This is a small improvement, but the decision to unseal 1½ per cent of the total loomage should result in adding to production at a monthly rate of roughly 1,500 tons.

With the last week's decision to unseal 1½ per cent of the loomage, the industry will revert to what was long the normal basis of its working, namely, 12½ per cent of the loomage being sealed. But I do not think that there can be any doubt that the extent of the unsealing decided upon is, relative to the prospective demand for jute goods as it may emerge during the imminent busy season of this industry, far too small. As it is, in hessians, a squeeze position has already developed. It is well within the realms of possibility that the USA, which has been reporting heartening consumption figures, will be a purchaser on a worthwhile scale during the next six months. If, in addition, as is not unlikely, the Argentine should also interest itself in Indian hessians, the statistical position in this lighter construction of jute goods may reach a parlous state by the end of October. In such a situation, we would have to hark back seven years to find a parallel, and the danger is that the disastrous developments of November 1952 may be repeated in 1959. Nor is there much room for switch over in production from sackings to hessians. So, it seems clear beyond any doubt that the present and prospective statistical position should dictate a decision by the IJMA much more bravely to plan an increased production.

The trouble, unfortunately, is that an earlier attempt at liberalisation in the production programme of Indian jute mills ended in fiasco. But, if I remember right, the decision then taken was in the early part of the calendar year, or the tail end of the busy season in jute goods. There, the only determinant was the then current statistical position. Today, on the other hand, there are a number of factors which can be taken into account in proceeding, without much risk,

on an enlarged production programme.

Firstly, we have the greatly improved raw jute situation. Our reliance on Pakistani jute is minimal. We found possible in the course of the present jute year to export some quantities of the indigenously produced raw material. There are no indications as yet that raw jute availability during the jute year 1959-60 will show an untoward fall. So, there is no need to apprehend that the supplies of raw jute will be inadequate to take care of a larger volume of jute goods production.

Secondly, I repeat, hessian stocks are at a low level on the eve of the seasonal demand for the commodity.

Thirdly, I also repeat, the stock position in regard to sackings is not such as to leave any considerable elbow room for diverting capacity to hessians.

Fourthly, prices of raw jute are attractive, in the sense of the margin that they will afford on the jute manufactures.

Finally, the firm tendency in the jute goods markets is always an incentive for consumers to enter into rather than keep themselves away from the market.

To all this, I would add the necessity for avoiding a recurrence of what happened in the November 1952 Phatka when stocks had fallen so low and demand was so keen as to have enabled members of the speculative fraternity to indulge in their activities to their heart's desire. If I remember right, again, on settlement day alone, hessians rose by something like Rs 6 per hundred yards to Rs 54. What the November 1952 Phatka did was to kill activity in jute goods markets and, consequently, business accruing to India in this behalf for something like six to nine months.

This, indeed, is the real reason why I urge immediate consideration being paid by the IJMA further to unseal looms in the very near future.

The jute goods market, especially the hessian section, has firmed up during the past week. There has been some improvement in the heavy goods section also where reports of a substantial order from Peru for B Twills has been a helpful factor apart from a sympathetic rise that is to be expected when the hessian section is in the limelight. The reasons for the upsurge in the hessian section are not far to seek. In the first place the low level of hessian stocks in spite of the increased emphasis that is placed for some time now on the production of this construction of goods by transferring loomage from sacking to hessian. Secondly, there are indications that the Argentine will soon enter the Calcutta market. In view of the rising trend of burlap of production the US may also be ex-

1039

pected to increase its purchases. Thirdly the increase in production that will ensure as a result of the unsealing of the 1½ per cent looms is not expected to make much difference to the supply position in the present context of good enquiries for jute goods.

The jute goods market opened the past week on a rather subdued mood in the absence of fresh enquiries. 40" x 10 oz Hessian Jute was done at Rs 41.15 while B Twills for the same position was placed at Rs 95.55. Conditions were quite steady on Monday with prices all along the line moving up on bear covering. Reports that a fair quantity business was done with overseas countries in B Twills also imparted strength to sentiment.

40" x 10 oz Hessian Jute steadied up further to close the day at Rs 41.45 while B Twills gained more than a point to be placed at Rs 96.85. Fresh reports of foreign enquiries pushed up prices in the market in early dealings on Tuesday Hessian moved up briskly but closed somewhat subdued at Rs 41.90. B Twills however, could not retain the gains in full and closed at Rs 97.35 on profit taking. The reactionary tendency in heavy goods gathered further momentum on Wednesday and by close of the day was pushed down to Rs 97.10. The hessian section, however, ruled firm on persistent reports of imminent enquiries from the Argentine. The quotation consequently at the end of the day stood at the high level of Rs 42.30.

The raw jute market after a dull start improved in later dealings in sympathy with the good section. Toward close of the week there were indications that sellers were not very anxious to part with their stocks at current levels presumably in view of rising tendency in the goods section coupled with paucity of supplies. Assam Bottoms which was quoted at Rs 26.50 at the beginning of the week was done upto Rs 21.25 by close.

The Shellac market in Calcutta continued to rule dull during the past week with business passing at a low ebb. The table below gives quotations in the Calcutta market as on June 16.

US Notes

ONE of the sure signs of exuberance in the American economy has been the tendency for capital spending, particularly for new plant and equipment, to outstrip earlier estimates. It should come as no particular surprise, then, given the strength of the current US economic upsurge, to find that each succeeding survey of business spending plans this year has shown a bigger increase over 1953 than the last.

Actual business expenditures for new plant and equipment rose from an annual rate of \$29,600 million in the third quarter of last year to \$31,200 million in the first quarter of this year, according to US Government estimates. Now, another rise in the current quarter to an annual rate of \$32,000 million or more is anticipated. And further gains during the second half of this year and in 1960 are being freely predicted.

Fortune magazine, respected business journal, expects plant and equipment outlays to rise 8 per cent this year over last, to a total for all of 1959 of about \$33,000 million. Moreover, fortune predicts that 1960 plant and equipment spending will match or exceed the \$37,000 record set in 1957.

More than 60 per cent of the current spending is going into modernization, as against expansion, of productive facilities. This ratio is expected to shift toward the expansion side in 1960 and 1961.

At present, of course, there is ample capacity in most industries, following the large plant and equipment expansion programme of 1955-57. But as the economy continues to advance and business and consumer demand for goods continues to grow, increased spending for new plants will be required.

Foreign investments are taking a slightly heavier share these days of American industry's new plant spending. This is because of the opportunities for growth in consumer goods and other industries being found in many other countries around the world. These opportunities have led American automobile, chemical, machinery and rubber companies, for instance, to divert some of their investments to plants abroad.

The bulk of capital spending by American industry, of course, still is in the United States. The increasing magnitude of these outlays demonstrates that the US economy has lost none of its vitality

and that the opportunities for continued US economic growth are excellent.

This is reflected not only in the large-scale expansion and modernization effort now going on, but also in the ambitious relocation programmes being undertaken by many American manufacturers. Many small and medium-sized companies, in particular, are finding it desirable to build new plants, usually a single story in height, in the rapidly developing "industrial parks," or planned industrial districts, that are springing up throughout the country.

At a time when the technological advances and the burgeoning economic activity of the past decade have demanded that industry expand, too often there has not been enough land within cities available for this expansion, nor has it always been feasible to convert old multi-storeyed structures into the efficient work areas demanded by modern industry. As a result, expansion has been taking place to an increasing degree outside the cities, in specially zoned suburban areas, where industry has found space that is both ample and conveniently situated.

The zoning regulations governing these carefully chosen industrial sites, which normally are 100 acres (40 hectares) or more in size; generally are designed to protect the community as a whole, and to prevent the encroachment of undesirable, haphazard industrial development. Protective provisions usually require that the industrial plants have large set-back areas from streets, minimum land-to-building ratios, off-street parking for workers' automobiles, and adequate public utilities and other facilities.

Thus, the protective provisions insure the long-term value of the site and buildings, and guarantee that the surrounding and nearby residential areas will neither be harmed nor unduly disturbed.

And one of the big advantages gained by the suburban communities from the development of industrial parks is financial, largely in the form of tax revenue from the land improvements and building assessments.

Australia

OVERSEAS interests have invested some £900,000,000 in Australian industries since 1956. Australia's ability to attract overseas investors was still growing, the Minister for Trade, Mr J. McEwen, said in Canberra recently.

The continued capital inflow from abroad not only reflected the confidence of overseas investors in Australia's economic future, but it had also played a significant part in Australian development over the post-war years, he said.

During the ten years to 1956-57, private overseas investment in Australian companies amounted to over £700,000,000, and the net

annual inflow was estimated now to be more than £100,000,000. United States investors were contributing almost one-third of this.

A feature of American investment had been the large plough-back into local industry of undistributed profits, Mr McEwen said. In 1956-57 undistributed income from North American investments in Australia amounted to nearly £20,000,000. This clearly pointed to the high regard the U.S. investor held for Australian secondary industry as a sound proposition for investing private capital.

The Minister, who was releasing a new edition of the booklet "United States Investment in Australian Manufacturing Industry" said that of the 880 American firms listed in the booklet, some 200 had established Australian subsidiaries or were affiliated with Australian companies. The remainder, together, had licensing or royalty arrangements with 450 Australian companies. In some instances Australian manufacturers had manufacturing agreements with two or more United States companies.

"Australia welcomes overseas investment, particularly where it is of a kind likely to help in the balanced development of Australia's resources and bring with it the skills and 'know-how' needed for the successful fulfilment of the project in which the investment is made," Mr McEwen said.

"In 1956-57 the United Kingdom invested private funds of £58,400,000 in Australia including £35,600,000 in undistributed income. Other countries are showing increased interest in Australia as a field for investment, notably West Germany and other continental countries."

Mr McEwen said that overseas capital would be encouraged to play a continuing role in the expansion of industry in Australia, and the Government was pursuing a policy of providing an economic climate attractive to business initiative and enterprise. That this policy had been successful could be seen from the impressive upward trend in the inflow of private capital.

In a broad sense, overseas capital was being joined with domestic capital in partnership to develop the vast natural resources of Australia.

He hoped that future overseas investors would become increasingly aware of the advantages of fostering that partnership when considering the capital needs of individual enterprises.

Sharp rises in the profit of Monsanto Chemicals (Australia) Ltd., in recent years, reflect the healthy growth of the Australian plastics industry which depends on the Monsanto group of companies for many of its basic raw materials.

In 1958 the Monsanto group's turnover totalled £7,900,000 and profits increased more than 50 per cent to £502,585. The 1957 profit of £331,128, in turn, was more than double that of 1956.

The plastics industry is now producing an extensive range of products, including many items for the agricultural, horticultural, electrical and building industries, household

equipment and a wide variety of smaller items like pens, pencils, and knitting needles. A recent Government survey showed that the plastics industry is producing at least 44 different types of small items of varying sizes.

Plastics manufacturing began in Australia in 1917 when plastic buttons were moulded from imported phenolformaldehyde. Between the wars development was steady. For a decade from 1946, however, there was a rapid expansion with the number of factories increasing from 107 to 276, and employment by 110 per cent to 7,500 persons.

Brown coal from Victoria's vast deposits in Gippsland are to be used in a big new industry to be established to make hardboard for the building trade. Victoria's brown coal, already the basis of so much of Victoria's great industrial development, is proving a suitable fuel for all kinds of new industries.

The new venture involves an investment of £2,000,000 by its sponsors, the Colonial Sugar Refining Company, which will be located near Melbourne.

Big life assurance companies like the Australian Mutual Provident Society continue to play an important part in the country's development by investing funds in housing loans, and in other projects for community growth. The Society increased its investment earnings by 14.7 per cent in 1958, and announces new records for income, assets, new business, payments to policy holders, and amount of reversionary bonuses to be distributed.

The Society placed £14,400,000 on mortgage during the year, lifting the total to £163,900,000.

£5,700,000 was invested in Commonwealth loans, increasing the total holding to £134,000,000, and £6,000,000 was invested in Australian debentures and shares, bringing the total of such holding to £43,000,000.

An amount of £1,300,000 was invested in freehold property to bring the total in this field to £16,600,000.

Loans on policies increased by £1,800,000, to a total of £18,800,000.

The Society's net income from its investments generally rose by £2,100,000 to £17,100,000, and the profitable outlet that it has found for its capital illustrates what can be gained by both overseas and Australian life assurance companies through placement of available funds in Australian development.

Under licence from the Budd Co. of the United States, the Commonwealth Engineering Co. Ltd., is to build 91 stainless steel railway carriages for the Queensland railways at a cost of £2,000,000. The cars will be built at Rocklea, Brisbane. They will be corridor types, each to carry 150 passengers, and will feature modern safety, sound-deadening, and heat-insulation provisions.

Commonwealth Engineering Co. Ltd., has a controlling interest in a big South African enterprise. Union Carriage and Waggon Works, of Nigel, which has orders valued at over £7,000,000 for about 700 different types of railway carriages for the South African railways.

Indian Finance

June 20, 1959

THE whirligig of Time brings its own revenge on ideological bullying. The precise mode of such vengeance is often terrible to watch, and Time's hands are often violent and bloodstained. Hitler and Mussolini and a hundred other tin pot dictators have been made to eat the dust after years of bluster. Stalin's successors do not mention his name if they can help it. In Poland and Hungary, the bully was knocked down, though, in the latter, he is up and about, but not quite with the old assurance.

But it is not always in a gory fashion that Time gets even. Often, it is no more than a wry satisfaction at the incongruities of earlier and later stances. Thus, people get into power by shrilly denouncing slavery and, once in the seat of power, themselves forge fresh links in the chain. The explanation they give will almost always be found to be specious. Often, Time's satisfaction is not malicious, for, the discrepancies are due no more than to the compulsions of unbending facts. In such cases, it throws a mischievous wink at the dogmatist—a gesture whose significance he fails to comprehend—and passes on.

Take, for instance, the almost concerted assertion on all sides about the need for enterprises in the public sector to make profits. Dr V. K. R. V. Rao speaks of it with a missionary enthusiasm. The members of the AICC seminar on planning discuss it avidly with just a glint of greed in the corner of their eyes. Professor Galbraith has given it his blessing. And the Krishna Menon Committee on State enterprises discusses the implications without beating about the bush. And yet, not so long ago, "Profits" was a dirty word. I remember Mr J. R. D. Tata once telling the TISCO shareholders that there was nothing wrong with profit motive and that it had provided mankind with a good deal that it would not have had otherwise. I thought then that Mr Tata was protesting too much. But apparently he was not and what he said needed saying. Now, Mr Tata will see that he has succeeded beyond his wildest expectations, since Government, too, are discovering the virtues of a nice little profit. Of course, there is as yet no complete acclimatization to the idea, for, every now and then we have contradictory and confusing pronouncements from different quarters of Government. For instance, on the question of state trading in food, it is sometimes stated that it will be on a "no profit, no loss" basis. At other times, just the opposite is implied. Of course, the audience to whom these

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

contradictory statements are addressed are different. In the first case, it is intended to assuage the fear of those who think that state trading is likely to push up prices. It is also intended to win support for the idea by implying that the cost to the consumer will actually be less than what it is since the profits of all the middlemen are eliminated. (In actual practice, even if the Government did not make any profit, it may still be selling at a higher price, since, often, they buy their rice from the very middlemen they are supposed to displace).

But the audience to whom the possibility of profit from state trading is confined—or at any rate the frame of mind to which it is addressed—is the one which is bothered about resources for the Plan. Then, in the frenzy of adding up to the pre-determined figure, credit is taken for staggering profits from the trading operations of Government. Thus the papers report of "one leading economist's" estimate based on "very rough series of guess work" of profits from state enterprise at Rs 500 to Rs 700 crores. (Since this gentleman also puts the additional receipts from taxes at Rs 2400 crores to Rs 3150 crores, his guess work must be very rough indeed). In any case, it is clear that the idea of profit has gained respectability because of the need for resources for the Plan.

There is, of course, nothing surprising in socialists wanting state enterprises to make a profit. Indeed, the State being the capitalist to end all capitalists, there is strict, though a little ironic, logic in it. Indeed, certain theoretical analyses of socialism have been conducted on the basis of the strictest monopoly conditions in the same way as some of the classical economic analyses have been made on the basis of the most perfect competition. Nevertheless, if you read some of the earlier discussion of socialist doctrine, especially of the Fabian and the milk and water type, you may feel that the idea of state trading making a profit out of the citizen somewhat jarring. And if you are Morrisian socialist, you will find the idea even more odd. If your socialism has not proceeded beyond shrill denunciation of the Gradgrinds of the

world, the very idea of profit will have unpleasant associations for you.

Of course, all this is irrational. There is a difference between the state and private citizens making a profit out of you, though the difference is not as self evident as some people seem to imagine. Again, utopian socialism is all very well, but socialism, especially in an undeveloped country, costs money and it looks as if, as time goes on, the only way to find it is the old fashioned way of making it. In the old days, our parents took the odium of a slave driver in order to afford us the luxury of the social conscience with which to denounce them. Nowadays, it would appear that even this function will have to be taken over by the State. Even our neuroses have these days to be provided by the State. The welfare state is the father symbol of our times, and no wonder the angry young men denounce it with the same frenzy with which Shelley denounced his father.

One can recognise the justice and inevitability of the State making profit out of us and yet see the comic side of it. In all the recent discussion of the subject, I was struck by a rather odd fact: people worrying about the profits of state trading seem unconsciously to

speak the same language, use the same gestures and have the same problems as any ordinary businessman.

Take some of the recommendations of the Krishna Menon Committee. It says that state undertakings must make necessary provisions for depreciation and reserves for unexpected contingencies. Many a company executive will recall sessions with the auditors when he reads this particular recommendation. Likewise, the committee's preoccupation with the labour management relationship is one of the crucial worries of entrepreneurs in the private sector. Often in the past, there was an ambiguity in authority's attitude to labour disputes. Its generosity with other people's funds has been in embarrassing contrast to its parsimony with its own funds. Expedients like the Pay Commission were only face saving devices. Such embarrassments may increase when the State comes more into its own as an industrial power, and when this forces present equivocations into the open. They will have to be shed either by a more overt commitment to generosity to labour, or (what is more likely with the Plan's hunger for funds) by a more realistic attitude toward demands by labour. The Krishna Menon Committee has suggested that there should be more direct association of labour with management. In making this suggestion, it is merely drawing on the practice of the more progressive among the private sector. Indeed, it will be found that resistance to the idea is more firmly entrenched among some Government undertakings than in enlightened "free enterprisers".

Calcutta Madras New Delhi

But the crowning piece of irony comes when the Krishna Menon Committee complains of high taxation of State undertakings! And the particular form the complaint takes is interesting. The Committee says: "Since the Government is the only shareholders of such companies, the taxation on profits is always at the highest slab". Does it not take your breath away? For all we know, it could be that fictional monster—the earner of unearned income—complaining of "penal personal taxation". And if Government

companies were not mercifully exempted from the operation of Section 23A of the Income-Tax Act, we would have had the weird spectacle of Government being denounced by State undertakings as impeding ploughing back of profits by insisting on improvident distribution of dividend to—Government! An even more probable absurdity would have been a zealous income-tax officer imposing penal supertax on a Government company for non-distribution of dividends! Though all these delightful (though inconvenient)

possibilities have been removed, we may yet live to see the spectacle of the income-tax department in a deathly grapple with State enterprises! In any case, complaints about high taxes have the ultimate hall mark of successful businessman. There can thus be no further doubt about State trading having come of age. One only hopes that these undertakings will not start complaining of irksome Government controls and the strangling propensities of red tape.

In fact, reading the complaint about taxation, I was reminded (with some injustice, I agree) of the last scene of Orwell's *Animal Farm*: As the animals outside gazed at the scene, it seemed to them that some strange thing was happening... They looked from pig to man, and from man to pig, and from pig to man again; but already it was difficult to say which was which. Of course, the point has been made before. The great divide is not capitalism and communism but the power elite and the admass, the executive and the rest.

I must not be understood as taking anything of value from the various suggestions on state trading made in all these reports. Indeed, as I said the week before last, I firmly believe that it is not only permissible, but obligatory for a State enterprise to make profits. It is not only a measure of its efficiency—as Mr Galbraith points out, both the US and the Soviet Union recognise this as a legitimate test—but it is also a source of funds for the Plan. Along with a good deal of socialist opinion at home and abroad, I would much rather that the profits of State undertaking provides the funds for welfare than tax.

One suggestion of the Krishna Menon Committee is worth serious consideration. It is that the workers of a state undertaking and other members of the public should be encouraged to have a financial stake in such concerns. The Committee adduces three benefits from this step: first, it will find the capital for the concern, secondly, it will mop up additional earning and thus arrest inflationary pressures; and, lastly, it will enable the "community to participate in the profits of a Government undertaking or share its burden". These are excellent reasons, the last particularly so. I know, the idea has worked in the US, though, in India, it has been found rather difficult to make workers accept bonus and other windfall receipts in the form of national savings certificates. Of course, a share in a Government concern is slightly different, but then, the return has to be adequate for one to put his money here rather than in a private sector undertaking. But the idea is full of promise.

From the point of view of evolving a truly mixed economy, this will be an admirable device. From the Government point of view, it will be a case of taking the war into the "enemy's own camp" and fighting him with his own weapons, while, from the point of view of the public, exposing the Government to the hazards of a general meeting of a company is a far more effective way of keeping them on their toes than periodic washing of dirty linen in Parliament.

EAVESDROPPER.

GATEWAY GOSSIP

MR H. V. R. IENGAR, Governor of the Reserve Bank, has seen fit to address a communication to the Scheduled Banks in which he has called for a contraction of at least Rs 100 crores in their Advances during the course of the current slack season. He also revealed that, though he had considered issue formal instructions, presumably in the form of a directive, he had ultimately decided that it would be much better if the Scheduled Banks by voluntary action could be induced to effect such a reduction in the accommodation they extend to constituents. The question that arises, which has been exercising the minds of those in the Gateway money market, is whether there was any need for Mr Iengar thus to have made an exhortation, containing in it a veiled threat, to the Scheduled Banks.

The answer, it seems to me, is that there was no compelling necessity for Mr Iengar, at this stage at least, to have called for a reduction in Advances. After all, in the four weeks since the peak of Advances was touched on May 8, 1959, there has already been contraction for an amount of Rs 21.23 crores; and this compares with the fall, over the corresponding period last year, of Rs 28 crores. With over four and a half months still left to the credit of the 1959 slack season, it should be obvious that, even as a matter of course, Advances would have shrunk by the figure that Mr Iengar has in mind.

Mr Iengar on Bank Advances

But, while necessity there was not, Mr Iengar may very rightly have considered it his duty to draw the attention of bankers to the pivotal role of bank Advances in the Indian economy and the unfolding of developments therein. It is certainly no accident that, at around the same time, Mr Iengar has, in each of the three years that he has been the Reserve Bank Governor, addressed himself to this matter. If my memory serves me right, his theme in 1957 was the need for the banks to distinguish between productive Advances and accommodation in respect of commodities which were in short supply. Then, after referring to the severity of the 1956-57 busy season, he called upon Banks so to effect a reduction in Advances as to facilitate financing during the next, or 1957-58, busy season. What concerns, or gives Mr Iengar concern now, is the steep size of expansion in Advances in the last busy season as well as the paradoxical behaviour of prices in food-grains.

The credit expansion during the 1958-59 busy season has been the sharpest in the last four busy seasons. Then, in spite of very good food crops in the current season, foodgrain prices "have shown a tendency to rise again." While credit for productive purposes was not only justified and even necessary, the Reserve Bank Governor is not sure that all of the

increase in Advances was in this sense justified. So it is that he calls for a contraction in Advances of Rs 100 crores, as against the actual fall during the last year's slack season of Rs 118 crores. This is necessary partly so that bank accommodation would not be utilised for the speculative withholding of stocks, and mainly because, with such reduction in Advances, banks would, by the end of October this year, be in much better position to take on the responsibilities of financing the 1959-60 busy season.

Mr Iengar, I'm sure, has valid information on which to base his view that the sharpness of the credit expansion during 1958-59 busy season insinuated the possibility of banking finance being used for speculative purposes. But again and again the Reserve Bank attitude to the relationship between a developing economy and the banking system is being stressed. Even such contraction in Advances would leave bank credit at a figure 10 per cent higher than the level obtaining a year earlier. This "cushion" is intended to take care of the legitimate rise in industrial Advances.

In the ultimate analysis, Mr Iengar cannot be faulted for reverting, at the eve of each slack season, to the need for caution in respect of bank Advances. For, it was the unpreparedness, until a

late stage, during the 1956 slack season which led to the rigours experienced by the banking system during the 1956-57 busy season. The Reserve Bank was compelled to make preparations for extending assistance to banks on an unprecedented scale, so as to enable them to meet the demand for money that ensued. Both 1957 and 1958 have shown that the exercising of caution during the slack season can make matters relatively easy for the busy seasons that followed. It is in this sense that Mr Iengar has been perfectly correct in asking for a "significant reduction" in bank Advances.

However, we may take it for granted that banks will find no difficulty in effecting such a reduction. But the creation of such idle resources in the hands of banks, in this day of high-costing Deposits, will cause banks to increase their investments in gilt-edged. While this is a good thing both for banks and the Indian economy, the net result of such "voluntary" scaling down of Advances, coupled with keenness for investing in gilt-edged, will be to leave the banking system with less of "free" resources by the time the 1959-60 busy season gets under way. So, it may be that, even after a significant reduction in Advances, the banks might have, if they added to their gilt-edged portfolio as significantly in the slack season, to rely considerably upon the Reserve Bank for the 1959-60 busy season.

Criss-crossed by rivers, the rich alluvial soil of Bengal yields crops early—when Nature is kind.

The easy pace of life helped to develop a tradition of folk art, music, and rituals steeped in Nature-cults. In literature and music, painting and the making of images, dolls, textile designs, West Bengal has manifested a rich culture. The spirited toy horses of Bankura and the life-like dolls of Krishnagar are utterly different in style, but equally interesting examples of a living tradition. Here were produced the famous 'Bazaar' paintings of Kalighat and the brass images which are still the delight of collectors.

Wherever You Go in India, viewing the diverse customs and beliefs of this ancient land, there is the full, rich flavour of Wills' GOLD FLAKE, to lend added pleasure to your travels.

Wherever you go... they're good

GATEWAY NOTES

Cooperative Farming

Not all the arguments advanced by the supporters of cooperative farming have served to stop the almost incessant criticism that is being voiced against it from some quarter or other. Pandit H. N. Kunzru took up the subject of cooperative farming for criticism while addressing a public meeting held in Poona to commemorate the 54th anniversary of the founding of the Servants of India Society.

One of the chief arguments made by the supporters to meet the points of the critics had been that cooperative farming would be introduced on a voluntary basis and therefore, it was as innocuous a measure as could be conceived. Obviously if farmers were to take to it of their own accord without outside pressure it could not be held that cooperative farming could do any mischief to Indian agriculture. However it is exactly this point that is questioned by the critics and Dr Kunzru has pointed out, that cooperative farming societies organised even on voluntary basis would "degenerate into something very undesirable". Dr Kunzru believes with other critics of cooperative farming that though now the idea has been accorded a voluntary basis, outside pressure was inevitable at some time or other and therefore, ultimately cooperative farming would lead to totalitarianism.

While one of the main arguments advanced in favour of cooperative farming is that it would result in increased production it is pointed out on the other side that this could be done simply by assuring the requisites of scientific agriculture to the farmers. In this connection Dr Kunzru refers to the examples of Poland and Yugoslavia where encouraging results had been obtained by providing necessary incentives to the farmers though the lands were left in private individual ownership and cultivation. In Indian conditions easy credit facilities better and organised marketing facilities assurance of fair return for farm produce and the assured supply of the needs of the farmers would according to Dr Kunzru go a long way in increasing agricultural produce.

Dr Kunzru also doubts the possibility of reorganising the countryside as envisaged under the programme of cooperative farming since lack of trained personnel makes conditions impossible for the rapid growth of such societies. And it is wholesale introduction that is contemplated by the Government. This would only disorganise agriculture.

Textile Exports

The Committee of the Indian Cotton Mills' Federation has taken issue with Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry about the possible causes for the inability of the Indian textile industry to compete with Japan and Hongkong. The Minister had gone on record as saying that "wholly unsatisfactory" management in the industry and "unsatisfactory" labour relations were responsible for the failure of the Indian industry. This is at best an exaggeration for the reason, that besides management there are also other factors operating on cost of production and price and consequently on the ability to compete with other countries.

The Committee would not accept inefficiency of management as having anything to do with failure in exports. On the contrary, it is pointed out, that the halting policy of the Government in respect of the installation of automatic looms left very little scope for effecting improvements in quality or for bringing down cost of production, and naturally this could not but affect ability to influence foreign markets.

However, the difficulties of the industry did not spring from one source alone. The impact of the rise in the basic wages and dearness allowances on production costs, cannot also be overlooked in judging the capacity of the industry to stand against the competition offered by better and cheaper goods of other countries. And with a cost of production which is now considered the highest in the world, it is hardly possible to expect improvements in exports in any substantial measure, unless the way is prepared for reducing cost of production also.

Apart from high wages and dearness allowance, the high price of Indian cotton is another material element in the high cost of production. India has been particularly unfortunate in this respect in view of the fact that while the price of cotton in the country had tended to go up, the trend in the international market has been just the reverse. The slump in the international market for cotton textile which did not spare any exporting nation, explained for part of the fall in Indian exports of cotton textiles in the last year.

In the light of these facts, the Committee has sought to refute the contention of the Union Minister about inefficiency in management being responsible for the troubles of the industry. While the Committee admits that there might have been stray instances of mills suffering from mismanagement, it maintains that it is totally untrue to relate it to fall in exports. It is the view of the Committee that modernisation of the outdated machinery would alone go a long way in improving prospects for Indian cloth in the foreign countries.

GATEWAY MARKETS

Oilseeds Subdued

BUT for occasional interest the oilseeds market displayed a subdued trend during the past week. The groundnut section was, however, an exception with prices developing a hardening tendency towards close. Trading in the groundnut section in earlier dealings was largely influenced by weather reports. The higher advices from the ready section, the spurt in oil prices and the revival of overseas demand for oilcakes imparted strength to the market during the second half of the week. Groundnut August contract steadied up to Rs 201.2 in the initial stages as reports at that time indicated lack of rains in most of the growing areas. But the trend was reversed in the course of the next one, two days on news of rains in the Hyderabad region. The price level fell to Rs 198.75. On Monday prices recovered on bear covering following firmness in the ready and oil sections to close at Rs 200.50.

The castor seed section continued to rule easy in the absence of buying interest. It is reported that shippers had not been successful even in putting through business at the prevailing low level. Perhaps the main deterrent to higher levels is the growing pressure from spot supplies. Castor seed September idled round the opening levels except for a short-lived smart spurt in mid-week on news of business with the US. The contract closed on Monday at Rs 163.00.

The linseed section ruled dull in the absence of incentives. September linseed improved to Rs 34.36 but by close on Monday was quoted at Rs 34.12. Trading in the cotton seeds section was featureless and September cotton seed finished on Monday at Rs 133.50 after having been done upto Rs 133 in earlier dealings.

It was pointed out last week that the prospects of early commencement of hedge trading in the new crop contracts would depend largely on an agreement between the Forward Markets Commission and the trade on certain major issues such as margins and ceilings. It is learnt that the Commission are not in favour of fixing ceilings in lieu of margins. But they have already indicated to the Board of the Bombay Oilseeds and Oil Exchange that a liberalisation of margins may be possible while the present exemptions available to exporters as regards margins against their export commitments will be continued. Under the revised system there will be no raising of margin during the period of delivery and purchases of 300 candies may be totally exempted

Indian Finance

from margin provided the total commitment of a member does not exceed 500 candies.

Bullion

In marked contrast to the previous week, conditions in the bullion market firmed up, particularly in silver. Despite reports of fresh heavy arrivals sentiment continued to improve throughout the past week on persistent bear covering. Initially the bear covering was necessitated by higher advices from Calcutta. Later on the uptrend was aided by reports of shrinkage in ready stocks. Toward close bear covering gained momentum on reports of heavy buying from Calcutta Silver Jeth opened at Rs 192.81 and after a set back to Rs 192.44 during midweek moved up again to touch a high of Rs 195.44 on Friday to be finally placed at Rs 195.62. A margin at the rate of Rs 1,000 per bar became payable from Saturday last under the Bombay Associations' by law 33D as the carryover charges exceeded one rupee.

The gold section also displayed a firm trend though the initiative was upsurged by silver. The conditions which induced the uptrend in gold were generally similar to those that obtained in the case of the white metal—paucity of ready stocks, bear covering etc Gold Jeth opened steady at Rs 118.56 and after a slight set back in midweek again advanced to close at Rs 120.56.

Yarn

Except for some demand for certain counts of cotton yarn, the yarn market was listless with prices in the staple fibre section tending to move to lower levels. It would appear that the recent announcement by the State Trading Corporation regarding arrangements for the supply of viscose art silk yarn from the German Democratic Republic, Hungary and Egypt is not entirely to the satisfaction of the trade. The decision to entrust the import to three authorised agents only in Bombay will, it is felt, be detrimental to the interest of other importers. According to the STC arrangements prospective importers will have to book orders of their requirements against 24 per cent of their quota licence directly with the three agents.

S. E. RLY. TENDERS

Sealed Tenders for Tender No. CON/GM/27/WP/F/59 are invited for supply of 3 Nos. Steel Staging 16' x 16' x 8' tank and not for steel staging 38'-0" height as previously advertised in this paper.

The opening date of the tender is 24-6-59 at 3 P.M.

WORLD OF COTTON

FACTORS of mixed significance developed during the last week in the World of Cotton, and their resultant impact on markets is, as was supposed to be expected, rather confused. First of all, there was the announcement of a new incentive scheme for the promotion of export of cotton textiles; and this announcement may be said to be in fulfilment of a promise given in this behalf by the Minister of Commerce and Industry. The scheme, which is to come into force from the first of next month, will be effective till the end of the year. Market gossip has it that, in terms of the scheme, a mill will be permitted to import raw cotton to the extent of two-thirds of FOB value of its exports; but of such imported raw cotton, only a quarter will be available for its own use, the balance being passed on to the Pool. However, the scheme is an improvement on the existing procedure in that, till of date, only 10 per cent of imported cotton could in this wise be retained.

In the case of fine and superfine mills, it is reportedly stipulated that they may retain 100 per cent of their cotton entitlement. Of course, it is not very clear how the new scheme as such will prove to be helpful to the promotion of cotton textile exports. For, it is noticed that the complaint is valid that there is a great inadequacy in local supplies of longer staple. So, the scheme at best offers the allure of foreign cotton to persuade mills to expand exports. Is it to be inferred that, without the assistance of such incentive, mills were not too keen about exports? This charge, if made, is palpably untrue. What today stands in the way of Indian exports of cotton textiles is really the competition that is being faced in international markets. Thus, over and above the vigorous ability of Japan to undercut other textile manufac-

Managing Agents.

Calcutta,
The 16th June, 1959.

Confused Impact on Cotton Prices

slow in taking advantage of it. As for the rupee capital, it is to be hoped that the prospect of the industry will so improve in the near future as to make it more attractive to the Indian investor.

Obviously, fortunately, we have had some sign during the last week. Stocks of cotton textiles, which had so long been an embarrassment to the industry, have been showing heartening signs of decline. The estimated stock of of cloth with mills at the end of May amounted to 3.78 lakh bales, against 5.05 lakh bales at the end of May last year. The reduction in stocks during the last week has amounted to 61,000 bales. But, then, production, too, has been declining. In the first four months of 1959, output of cloth worked out to 1,635 million yards, as against 1,836 million yards in the corresponding period of 1957 and 1,642 million yards in the corresponding period of last year. Nevertheless, the improvement in stocks is a welcome sign that the tribulations of the industry are in sight of their end.

If, as we have reason to believe, the record of foodgrain production in the current year sparks off a record demand for cotton textiles, especially in September/Second World War, it has today 240,000 spindles and 14,000 looms. So, essentially, it is overseas competition that has to be tackled, and tackled vigorously. We cannot at all be happy about the drop in cloth exports, which Mr Lal Bahadur Shastri characterised as owing to "wholly unsatisfactory" management of the textile industry. The answer, clearly, lies in reducing the cost of manufactures so as to imbue Indian textiles with greater competitiveness. The Indian Cotton Mills Federation has indeed drawn pointed attention to this need for the encouragement of the installation of automatic looms. As the Committee points out, "foreign markets cannot be expected to buy goods of indifferent quality when better ones are so readily available from other competing countries", but, surely, Government have given indication of their solicitude as regards the cotton textile industry. It was not long ago that a ministerial announcement was given to the effect that the National Industrial Development Corporation would make available sources for the rehabilitation of a cotton textile industry on the same lines as it did not to help the jute mill industry.

The limiting factor to this programme of modernisation is going to be capital, both foreign and internal. As far as foreign exchange is concerned, arrangements should be possible for utilising the Export/Import credit—which, the official complaint is, India is so

BOMBAY REVIEW

October this year, boom like conditions in the cotton textile market should be expected. In such a situation, with the internal market recovering robustly, prospects of the cotton mill industry of finding the wherewithal for putting through modernisation should be more hopeful.

For the rest, during the week, the raw cotton market suffered a bad hammering at the ends of bears. Short-selling was the order of the day, though no reason could be adduced for this bear proclivity. In the mid-week, the Jharilla August, opening at Rs 690, somewhat rapidly declined to Rs 683. The spot section tended to be quiet, and mills were on a hand-to-mouth basis. However, cotton has tended to be in greater demand.

It may be that the early start of the monsoon holds out the promise of a more substantial crop, and this might have induced bear sales on a considerable scale. If, as we now expect, the market for cotton textiles improves, then, the current weakness in the raw cotton market should prove to be short lived.

In the New York market, prices were rather firmer, and cotton futures, opening higher, closed with further gains recorded.

DELHI REVIEW

CONSIDERABLE detailed thinking is going on in official and planning circles on the principles that ought to govern the running of enterprises in the public sector. There is probably some duplication of effort, but on a matter like this, concurrent discussion in various forms and at various levels is not necessarily wasteful. Thus, the AICC seminar on planning has recently discussed these principles, with particular reference to their pricing policy, earning of profits and utilisation of such profits. Readers will recall the recent publication in the press (and discussion in this journal) of Dr V. K. R. V. Rao's note to the Planning Sub-Committee of the AICC on the subject. There have been other studies and papers both by Indian and foreign experts all of which are under scrutiny.

Among the more interesting suggestions are some by Professor Galbraith, whose interest in Indian planning has been both keen and continuous. His new suggestions are mostly of interest for their concern with details, and are in consonance with his known general views on the subject. He believes in the expansion of the public sector in an underdeveloped economy trying to pull itself up by the boot-strap. He suggests that this compulsion be frankly recognised. But he also suggests, interestingly, that the expansion of public sector should increasingly rely on profits by State undertakings and, by implication, correspondingly less on taxes. As regards future expansion, he divides the subject into three broad categories: (i) initiation of new projects; (ii) operation, expansion and financing of existing projects; and (iii) those requiring generation of initiative and effort at local levels. Different criteria of tutelage and, obversely, comparative freedom will apply to these three categories. Professor Galbraith suggests that the first claim on the

A Policy for State Enterprises

profits of an undertaking should be its own schemes of expansion. It should go to Government for finance only when its own earnings are inadequate. Where an existing concern has no scheme of expansion, or where its profits are abundant enough to allow a surplus after providing for expansion, such surplus should be utilised to repay its capital so that the capital thus released may be used elsewhere. Alternatively, he suggests the pooling of profits of similar industries, so that the surplus may be utilised for schemes of expansion according to a scheme of priorities. From this, to the notion of a public development bank, is but a step. It is an interesting suggestion worth detailed thinking.

There are, of course, some objections to a scheme of profit-making by the public sector. First, from the consumer, who may think that the profit is being made at his expense. Second, the employees of State undertakings may want a larger share of the earnings of the enterprise. In other words, precisely the embarrassment that the private sector feels today, may tomorrow be that of public enterprises seeking to make a profit. There can be no complete answer in advance to this possible development, but Professor Galbraith is right in hoping that a more overt commitment to development of the profits made would assuage consumer-grouses and employee-frustrations.

Another important document on the subject is the report of the Sub-Committee of the Congress Parliamentary party, with Mr V. K. Krishna Menon as Chairman. The Committee starts with the now generally accepted view that State enterprises can, without impropriety, make profits. They should also make the usual prudential reserves from profits toward depreciation and other imponderables of business. The Committee also suggests that, where two

or more units produce the same or similar commodities, prices must be made uniform by the machinery of an equalisation fund. Such a fund will be available exclusively to the more efficient units and thus provide the usual incentives and rewards for efficiency. Indeed, the Committee suggests that part of the benefits thus gained should be made available to the workers and employees of the efficient unit, so that a palpable incentive may be there before them.

The Sub-Committee does not confine itself to a price and profit policy for State undertakings. It also deals with general organisational questions. In particular, it has made a number of interesting suggestions touching on labour-management relationship. Indeed, it would appear that the Committee considers that public sector undertakings should be used as a sort of testing ground for evolving a satisfactory labour management relationship. One suggestion, often canvassed and sometimes adopted, is to give workers a stake in the undertaking as a shareholder. The advantages claimed for such association of employees with the capital of the undertaking are: first, this is one way of finding capital for the undertaking; secondly, it will mop up additional earnings of the lower income groups and thus act as an anti-inflationary agent; and, finally, it will enable "the community to participate in the profits of a Government enterprise or share its burdens". The extent of capital available for participation by the public and workers has been recommended to be at 20 per cent of the total share capital. Workers are to be allowed to subscribe to this capital up to specified monetary limits: there will be some restrictions on the transfer of shares, since it will be difficult to keep alive the worker's interest in the efficiency of the undertaking.

Secondly, public sector enterprises should be model employers and be "progressive in matters of housing, education, sanitation and welfare of the workers". It should be the constant endeavour of these undertakings to make the workers feel a sense of identity with them. The management should take a personal interest in the welfare of the workers. This can be done, for instance, by watching out for talent in the children of the workers and making a point of encouraging it. Thus, the provision for education should not be confined to the usual routine primary schools, but should extend to the establishment of technical schools. Where possible, the undertaking should encourage by underwriting specialised training for gifted children. In the families of workers.

Yet another suggestion, again one which has been discussed in the context of the private sector enterprise, is the more direct association of workers with the managerial part of the enterprise. Workers should be associated with works committees and production committees. This

OLYMPUS

association will not, of course, take away anything from the workers' right of collective bargaining, but will, at the same time, instil a greater sense of responsibility in them.

Dealing with certain problems arising out of Government undertakings making use of the company structure for carrying out their duties, the Krishna Menon Committee has some important and interesting suggestions. For instance, it says that Government companies should not be limited companies. The argument is that it would "be contrary to public policy for Government to seek to escape liability by limiting it to the capital invested. The resources of the Government are understood and accepted by the public as being behind whatever actual nominal capital may be attributed to the company." This suggestion is presumably for the reassurance of those who may be Government company's creditors in the course of its operation. Government should not, according to this reasoning, fail to honour the company's commitments, merely because the company itself has no assets to match. There is some danger of this provision blurring the principal aim of approximating government undertakings to the structural pattern of ordinary commerce, since a company assured of inexhaustible funds at the back is hardly likely to be anxious to husband its resources efficiently.

The Committee also draws attention to certain taxation anomalies that have arisen in the taxation of profits of Government companies. These are at a handicap vis a vis privately owned companies, since, as the sole shareholders (or, if the Committee's recommendations are adopted, the dominant shareholder), Government are taxed at the highest slab. The Committee recommends the removal of this anomaly, especially, since, in its view, the Government have to maintain higher social service standards. There is a certain amount of shadow-boxing in all this, since the whole thing will be merely a matter of book-keeping. Either as tax or as profit, the Government are the beneficiary. On the other hand, it may be argued that the particular enterprise loses control over the funds if they are taken away as tax and to that extent its plans for expansion are thwarted. There is a certain amount of ambiguity in all these arguments. If profits from public undertakings are to form one of the important sources of funds for the plan as a whole, then this unwillingness to pay taxes is somewhat anomalous. But from the point of view of the particular undertaking, this is an unexceptionable position.

The Committee has other suggestions to ensure a fair degree of autonomy for those undertakings. These deserve careful study. In its entirety, the report forms a useful starting point for the discussion of a subject that is sure to assume increasing importance in the Third and subsequent Plans.

NORTH INDIAN NOTES

The fourth Annual Report of the Madhya Pradesh Financial Corporation, records an improvement in the working of the Corporation during 1958-59 as compared with the previous years. Thus against Rs 93,251-10-11 and Rs 160,000 for 1956-67 and 1957-58 respectively by way of amount available for payment of guaranteed dividend, the figure for 1958-59 stands at Rs 1,85,000. As a result, the subventions from the State Government to cover the guaranteed dividend at 3½ per cent has progressively come down from Rs 2,15,814-2-1 in 1956-57 to Rs 1,90,000 in 1957-58 and to Rs 1,65,000 in 1958-59.

In its loan operations also the Corporation has given a better account of itself. Against 27 applications for a loan amount of Rs 52,68,000 in 1957-58, the applications for loan during 1958-59 totalled 29 for Rs 65,39,000. There were nine other applications pending as on 1st April 1958 for an amount of Rs 16,05,000. However the Corporation has sanctioned loans only for about 8 industrial concerns for an amount of Rs 18,75,000. Against this, the number of acceptances during 1957-58 stands at 20 and the amount sanctioned at Rs 71,90,000. The total loans sanctioned to date is thus Rs 90,65,000 against which disbursement at Rs 48,15,000 works out to 53.1 per cent.

In view of the fact that repayment of the principal of some of the loans had already started the outstanding loans of the Corporation is less than the disbursement, being Rs 43, 26,500. The textile industry accounts for the largest

Madhya Pradesh Financial Corpn.

share of the loans sanctioned by the Corporation, being Rs 50,00,000 in the period upto March 31, 1958 and Rs 10,00,000 during the year ended March 31, 1959. Other industries to have benefited from the operations of the Corporation are potteries & tiles, strawboard mills, sugar factory, rice & dal mills, cycle parts, and cycle manufacturing, umbrella factory, agricultural implements etc. The Corporation has thus helped the promotion of new industries as also modernisation of the existing industries to a considerable extent.

The Corporation has not only tried to accommodate applications for loans subject to the criteria laid down, but has also tried to understand the difficulties of the borrowing concerns, with a view to make it easier for the latter to obtain financial assistance from the Corporation. At the request of the Corporation, for example, the State Government had waived the payment of Stamp duty on documents executed by the borrowers in favour of the Financial Corporation for a period of two years in the first instance.

Manganese Ore

The heavy decline in the production and exports of manganese ore in the last year has been a source of great concern for the country in so far as manganese ore has been one of the important foreign exchange earners. Under the impact of the world recession in the steel industry coupled with the favourable position of stocks held by all the principal importing countries, demand for Indian manganese ore declined bringing off a fall in exports. Exports of manganese ore declined to 0.96 million tons in 1958 from 1.72 million tons in the preceding year. The fall in the value of exports of manganese ore was to the tune of Rs 163 million. The United States, France, Netherlands, the United Kingdom, Japan and Italy accounted for a substantial fall in the exports of Indian manganese ore.

The fall in demand for Indian ore, had naturally unsettling effects on the state of the industry, production in which decline from 16.5 lakh tons in 1957 to 12 lakh tons in 1958. The reaction on the price for the product was also drastic. From a level of Rs 210 per ton (f.o.b. Calcutta) in the beginning of the year, the price for manganese ore fell to Rs 160 towards the end of the year. Another adverse effect of the fall in demand, was the closure of a number of manganese mines during 1958-59.

These adverse developments in the manganese industry have forced the Government to think in terms of special measures for stepping up the production and sales of manganese ore. A Sales

Promotion Council consisting of the representatives of the State Trading Corporation and various mineral associations is to assist in the programme for higher sales. The Government of India have also abolished the export duty on all grades of manganese ore from November 1958. Mine owners and exporters have been permitted to enter into longterm contracts for a minimum period of three years with foreign buyers while shippers have also been assured that any change in the future export policies of the Government will not deprive them of the export and

movement quota.

Liberalisation of policy in respect of exports handled by the State Trading Corporation is also announced, and under the new policy exports of low grade ores by private traders could be arranged by the STC against its own quota, in case exporters and quota-holders do not have adequate quotas themselves.

Link arrangements under which manganese ore would be provided on a barter basis against other commodities from other countries is conceived to stimulate demand for Indian manganese ore.

DELHI REVIEW

GOVERNMENT OF INDIA

3½ per cent. Bonds 1969 Issue Price Rs. 98.85 per Rs. 100 (Nominal). Repayable on 1st July 1969.

4 per cent. Loan 1979 Issue Price Rs. 100 per Rs. 100 (Nominal). Repayable on 1st July 1979.

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs 175 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 3 per cent. Second Victory Loan 1959-61 or 2½ per cent. Hyderabad Loan 1954-59, which will be accepted for conversion at the following rates:—

3 per cent. Second Victory Loan 1959-61—Rs 100 for Rs 100 (Nominal).
2½ per cent. Hyderabad Loan 1954-59—Rs 85.50 for Rs 85.71 or O.S. Rs 100 (Nominal).

Interest will be paid on the 3 per cent. Second Victory Loan 1959-61 and 2½ per cent. Hyderabad Loan 1954-59 tendered for conversion upto 30th June 1959 inclusive.

The new bonds and loan will bear interest from 1st July 1959. Interest will be payable half-yearly on 1st January and 1st July.

Subscription lists will open on 1st July 1959 and close on 3rd July 1959 or earlier without notice.

Applications for the bonds and loan will be received at:—

- Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
- Branches of the State Bank of India at other places in India, except at the places mentioned in (c) and (d) below;
- Branches of the State Bank of Hyderabad conducting Government business and those at Nagarjunasagar and Saliu; and
- Branches of the Bank of Mysore Ltd., in the State of Mysore except at Bangalore.

For full particulars apply to any of these offices or branches or treasuries.

EIGHTH EDITION OF LAW OF INCOME-TAX IN INDIA

(With the Indian Finance Act of 1959)

By V. S. SUNDARAM

(Late of I. A. & A. S.)

The eighth Edition of this comprehensive treatise on income-tax brings it up-to-date in the light of statutory changes and recent rulings of Court, of both of which there has been an abundance since the last Edition was brought out in 1954. The book has been thoroughly revised, several portions re-written and some condensed, while all matter now obsolete or superfluous or of little practical importance has been excluded or referred to briefly. The Index has also been expanded. This Edition will therefore be found to be even more useful than its predecessor as a standard book of reference on this intricate and abstruse subject.

"On the whole this is a most exhaustive, most comprehensive, and most elaborate commentary on the Income-tax Act"—Bombay Law Reporter. Orders may be placed at an early date either with the Publishers or through their local agents.

DELHI REVIEW

QUIET conditions were witnessed in the foodgrain prices during the past week. Arrivals of rabi grains in the market were still meagre, but the UP State Government has tightened its wheat procurement operations by extending the Wheat Levy Order to commission agents also who will now be required to sell 50 per cent of the wheat stocks coming into their possession in any manner to Government at fixed prices. Total wheat production in the country, however, has recorded another peak height at 9.69 million tons in 1958-59 which is an increase of 14.1 per cent over the average for the previous five years, the corresponding increase in area is 4.9 per cent.

Wheat prices at Hapur ruled unchanged at Rs 18 to Rs 20 per maund in the open market as against Government purchase price at Rs 13 to Rs 15 a maund. Wheat is not openly reaching the market here and daily arrivals at an average of 50 to 100 maunds are being lifted in private by consumers at fancy prices. The State Government purchases here are small, but the State Government is reported to have purchased about 10,000 tons of wheat by June 9, in the State. Prices of rice continued steady and the UP State Government has decided to make rice available at fair-price shops in the urban areas of eleven more districts. The Central Government's procurement

Foodgrain Prices Rule Quiet

plans for rice are working satisfactorily and about 12 lakh tons of rice and paddy has already been obtained against a target of 20 lakh tons. Latest prevailing prices of rice here were:—sela basmati Rs 33 to Rs 36, mainpuri Rs 22.50, raimunia Rs 27, gadda Rs 22.50 a maund.

Gram prices registered fractional fall during the week, thanks to heavy arrivals from Punjab and a bumper crop in the country. Gram production in 1958-59 has touched a new height at 68,26,000 tons, which is an increase of 37.1 per cent over last year and 27.1 per cent over the average production of last five years. Barley production in the country in 1958-59 was also heavy at 26,40,000 tons which is an increase of 18 per cent over last year. Barley and bejhar prices also sought lower levels, while jowar and guwar prices were unchanged as demand was reported fair for seed purposes. Weekend prevailing prices (in rupees per maund) were:—gram 13.25, barley 12.75, bejhar 12.25 to 12.87, jowar 13.75 to 16 'guwar black 12' white 15.37.

Good demand from O.T.R. destinations coupled with easy loading facilities accounted for quietly steady conditions in peas prices during the past week. Local arrivals were at an average of 750 to 1,000 maunds daily and local stock is put at 42 khatties as against 193 khatties on this date last year. Total arrivals during the current season upto date were about 1.05 lakh maunds, as against 1.19 lakh maunds in the corresponding period of last year and local stocks on this date last year was 193 khatties. Arhar prices ran down fractionally during the week for want of outside support and with daily arrivals averaging 500 maunds, local arhar stock is now put at 26 khatties as against 147 khatties on this date last year. Prices of other pulses stayed quiet and weekend prices (in rupees per maund) were: peas dara 12.87, farm white quality 13.40 to 14.50, peas dal 14.37, arhar 17.25 to 17.50, arhar dal 22, to 23, urad 19.25, moong 20.50 to 22.50, masoor 15/- to 19.25.

Sowings of kharif-maize crop has begun in some areas, while large scale sowings will begin with the onset in monsoon, which is expected here in the first week of July.

After early slight fall following the change in Government's sugar policy, sugar prices again recorded a firm trend and have now touched new heights for some quality in mill delivery section. Wholesale trade in sugar is to be licensed, but the delay in issue of sugar licenses under the State Government's Sugar Licensing Orders has also lent weight to the bullish trend. Arrangements have, however been made at some places to supply

NORTH INDIAN MARKETS

sugar at controlled prices, but the uptrend is perfectly bullish.

Sugar prices spurted by Rs 2 to Rs 2.50 per maund in the Muzaffarnagar market during the last week and were now quoted at Rs 5.62 to Rs 7.50 per maund higher than the controlled prices fixed by the Government. There is reported to be good bull support from Punjab and Rajasthan. Latest prevailing prices were:—crystal spot delivery Shamli D29 Rs 36.75, Deoband D29 Rs 38.25, wholesale mill delivery controlled B29 Rs 37.12, C29 Rs 36.37, D29 Rs 36, market quotations FOR mill stations Meerut D29 Rs 42.75, Lhaksar B29 Rs 43.62, Bhampur D29 Rs 42/-, Amroha D29 Rs 41.62, Bijnore D29 Rs 41.62, Saharanpur D29 Rs 43.25, Mansurpur C29 Rs 43.87, Daurala C29 Rs 43.37. Sugar prices in the Kanpur market also recorded a hardening trend during the past week as supplies in the market were restricted.

Khandsari prices ruled quietly steady during the week to be quoted now at:—superior Rs 37 to Rs 39.50, inferior Rs 35 to Rs 37 a maund.

Ready gur prices ruled quietly steady during the week and daily arrivals continued at an average of 500 maunds as producers who had retained their stocks until now for better prices are now rushing their supplies to the market before the onset of monsoons. Total arrivals of gur during the season were above 6.50 lakh maunds as against about 4 lakh maunds last year and local stock is now put at 65,000 maunds. Condition of the new cane crop is reported fair, but much will depend on coming rainy season. Prevailing prices were:—pansera Rs 21 to Rs 21.27, shakker Rs 22.50 a maund.

Ready gur prices were quiet in the Muzaffarnagar market due to want of outside support and local stock is about 3 lakh maunds. Shakker prices improved slightly due to good demand from Rajasthan and Gujerat.

Gur future trading has been sanctioned here by the Central Government and will soon start under new regulations put by Forward Market Commission.

THE PENINSULA

NE of the important objectives for realisation by the Government when Planning was initiated, 'as the provision of medical and health facilities in the villages. However, the very nature of the problem which is of vast dimensions, combined with the limited resources at the disposal of the Government makes it impossible that any substantial measure of success could be registered in the short run. Notwithstanding the progress that had been made in the First Plan and the first three years of the Second Plan, the problem had lost none of its rigour or intensity and will, consequently, remain for many more years to come a fairly formidable one for effective tackling. In the circumstances, the best use of all the limited facilities existing in the country is of paramount importance if medical benefits are to be given to the largest possible number of people.

It is in such faith that pleas had been made for pressing into service the indigenous systems of medicines such as the Ayurveda, Unani, and the Sidha system, all of which had been practiced in the country since ages past. However it is on the spread of the allopathic system and on the expansion of facilities for its practice that hopes are set for ensuring proper and adequate medical aid to the millions in the countryside. Establishment of rural hospitals, expansion of facilities for medical education etc are some of the important planks in the Government's programme of public health.

Both these programmes had been lagging behind in meeting the needs of the rural people for more

Medical Aid

and better medical aid. The dearth of doctors has become so evident and persistent especially in the village that it is in the provision of more facilities for medical education that attention will chiefly have to be concentrated. The effect of shortage of doctors has further been aggravated for the villages by the reluctance of doctors to set up practice in the villages and it is towards urban centres that doctors, especially newly graduated medical practitioners tend to flock in the hope of better material prospects.

Naturally it is the importance of medical service in the rural areas that is being emphasised on every occasion when the subject of public health and medical aid comes for discussion. President Rajendra Prasad, echoed the same sentiments when he laid the foundation stone of the Library Hall of the Bangalore Medical College this week. Referring to the continuing lack of medical aid in rural areas, Dr Prasad observed that it was of extreme importance that not only more medical institutions should be set up but also that these institutions should be well-equipped to be able to give the necessary qualifications and instructions to the students.

Medicine being a growing science with tremendous changes being witnessed almost everyday, it was also essential that education in it should keep abreast of the latest developments in that branch of study. As an illustration of the profound changes that had taken place in the field of medical science, Dr Rajendra Prasad referred to the lengthy and complicated prescriptions that are now being dispensed against the small prescriptions dispensed some thirty years ago.

Dr Prasad also referred to the rather complicated and complex turn that medical science had taken and especially to the lengthy and longdrawn out process of diagnosis involving the use of specialised and intricate instruments. Without meaning to go back to the old things when diagnosis was a simple process of feeling the pulse, Dr Rajendra Prasad has made a plea for simplifying things in the medical profession. What scope there is for such simplification, is a matter to be investigated by the medical men. However it is to be pointed out that the use of complicated instruments etc have come as the result of attempts to gain more precise knowledge of the subject and therefore, has conferred only more benefits on humanity. How far the process of simplifying is consistent with this need for precision is also a matter that will have to be investigated. Dr Prasad has put down the slow progress in the provision of modern allopathic medical facilities

to their being expensive. It is for this reason that he pleads for research for simplifying medical practice without sacrificing the advantages of new discoveries and inventions in the science. It is to be conceded that a simplified system is best suited to conditions in India where the people are too poor to afford expensive medical treatment. On this consideration it should be more appropriate for the Government to give encouragement to the indigenous systems of medicine. It is only recently that the worth and utility of these systems of medicine have come to be accepted and recognised by the Government, and the latter are now committed to rendering such assistance to these systems as might be required for their popularisation. Research facilities are first in the list of requirements for making them popular and for getting better results from their practice. The mutual exclusiveness of these systems and their resistance to new ideas are also barriers that have to be laid aside if they are to become popular with the public and acquire a status comparable to that of modern allopathy. These matters are just beginning to be recognised and quick results are therefore not to be expected.

Dr Rajendra Prasad also deplored the present day tendency to look toward the Government to do everything. This was true not only in respect of medical facilities but also in respect of almost all other activities not excluding sports. Dr Prasad interprets this as a sign of weakness in view of the fact that this tends to overlook the scope for action on private initiative and consequently has a restrictive effect on progress. In this respect, the efforts of the authorities of the Bangalore Medical College in rearing up the institution on the basis of donations made by students and other means of private contribution are praiseworthy. It was in this connection pointed out that a sum of nearly Rs 6.3 lakhs was collected by way of donations from the students seeking admission to the college.

Mr Mangaldas Pakvasa, the acting Governor of Mysore, in his address said that either through rule or convention, the doctors must be made to work in the rural areas and affording medical relief to the people there. He suggested that a certain portion of students coming from the rural areas, should be asked to go back to their areas and render medical service.

A new level of excellence in fan design

Here is the fan that combines beauty, comfort, performance and durability that every one looks for. Orient Fan, replete with many features, is a technical masterpiece—a result of a new level of excellence in design and technique that is achieved by the vast fund of engineering 'know-how' accumulated over the years.

Its pressure die cast, dynamically balanced rigid rotor, complete die cast casing, centreless ground shaft, stove enamelled paint are the reasons for its remarkable performance and incomparable finish.

Here is the fan created by Orient's highly skilled technicians backed by their modern designers, tool engineers and other specialists to meet the exacting demand of the users all over the country and abroad.

Years ahead in look and performance

MADRAS REVIEW

While the need for the development of small-scale and cottage industries, which is held out as the way for achieving rapid industrialisation of the country, has been accepted and provided for by the Government, it does not appear that all the necessary steps had been taken for ensuring their rapid progress. Many adverse factors such as too rigid application of the rules under the Factory laws, shortage of finance as also of raw materials particularly iron and steel still exist to impede the progress of these industries. This was revealed by Mr R. Venkataraman, the Madras Minister for Industries while inaugurating the third anniversary celebrations of the Small-scale Industries Association.

Only in the measure in which success is achieved in tackling these problems could progress be ensured for the small-scale industries, and it needs no pointing out, that these are bottle-necks of a sufficiently serious nature to claim the sympathetic consideration of the Government with a view to their elimination. It is gratifying to hear from Mr Venkataraman that Government are in no complacent mood about ensuring favourable conditions for the progress of the cottage and small-scale industries. He has given an assurance that the case of the small-scale industries for relaxation of some of rigorous rules of the Factory law, would be sympathetically considered by the Government even without waiting for

the recommendations of the Committee that is now engaged in investigating it.

With regard to finance also, Mr Venkataraman has made promises of sympathetic State action and said that provisions had already been made under the State Aid to Industries Act for affording liberal finance. In this connection he referred to the pilot scheme started to help small-scale industries financially in such places as Madras, Coimbatore and Tiruchirappalli. What is however needed is the extension of such facilities to other areas and places in the State.

Raw material shortage especially in respect of iron and steel could not continue for long and the needs of the industry could before long be met from Indian production. In respect of other machinery also, Mr Venkataraman is inclined to be optimistic and has pointed out that no great difficulty could be felt in ensuring adequacy for the small-scale industries. Marketing is another important problem before the small-scale industries and it is from this standpoint that the development of small-scale industries on ancillary basis to large-scale industries is of extreme importance. It is on this basis that most of the small-scale industries operate in the advanced countries of the West.

Handlooms

The two-day Handloom Seminar, of the Southern States held in Madras last week, had served to

Small-scale Industries

spotlight the problems faced by the handloom industry. The Seminar has made a number of proposals for promoting the interests of the handloom industry and save it from the attacks of the more organised mill sector of the industry.

The pegging of mill production at 4,000 million yards for internal consumption has been suggested to safeguard a fixed share of the domestic demand for the handloom industry. The Seminar has looked with disfavour the contemplated expansion of the powerlooms in the country and had called for a review of the Government's policy in this sphere especially in the light of the shrinking demand for cloth in the country. Impositions of restrictions on powerlooms in regard to the production of reserved categories of cloth is also urged.

The Seminar has called for imports of long staple cotton so that the handloom industry will have sufficient yarn supplied to it by the mill to enable it to meet part of the rising demand for finer varieties of cloth. Imports of necessary machinery to enable the manufacture of superfine variety is also urged. Until such time as indigenous production of these types of yarn picked up, the import limited quantities of these yarn required by the handloom industry has been recommended. A case has also been made for greater supply of art-silk yarn to the handloom industry.

The disparity in the price of yarn available to the handloom industry and the weaving mills, with the latter enjoying a price advantage is considered anomalous and its removal has been urged. In

SOUTH INDIAN NOTES

order to enable the cooperative spinning mills to withstand the competition of established joint stock mills set up at much cheaper cost, the Seminar requested the all-India Handloom Board to examine with sympathy the question of extending financial assistance to cooperative spinning mills in the first five years of their establishment.

The need for setting up a finance corporation to give financial assistance to weavers outside the cooperative fold has also been stressed. The formation of industrial cooperatives to assist this class of weavers is envisaged.

Another important suggestion of the Seminar relates to the need for running training course in designs for the benefit of weavers working in the evenings with financial aid from the Cess Fund.

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE is hereby given that the Twentysixth Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee Road, Calcutta, on Thursday the 16th day of July 1959 at 12.30 p.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1959 and the Reports of the Directors and Auditors thereon.
 2. To declare a Dividend.
 3. To elect Directors.
- Special Notice of intention to propose the re-election of Mr K. C. Mahindra, who is 65 years of age, has been received.
4. To appoint a Chairman of the Directors.

SOUTH INDIAN MARKETS

IT is now fairly certain that the 1959-60 coffee crop will be a bumper one. According to an estimate of the India Coffee Board hopes of a 50,000 ton coffee crop have revived following sufficient late rains and the astonishing resilience shown by younger coffee. In a recent press note the Board said that the crop suffered a setback until late May owing to

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON[COS] 49[F1]59 for supply of 1327 Rft. Gutter G. I. 16G as per IRS Drg. No RA 234. Specn I. S. 277-51. Earnest money is Rs 200/-. Tenders will be opened on 14-7-59 at 12 noon.

(ii) Tender No. CON[COS] 50[F2]59 for supply of 11,210 ft. casing with capping single groove made of C. P. Teakwood 4"x14" overall, walls 1/2" thick base 1/4" thick in length of 6'-0" to D. G. S. & D's Specn. H-58D. Earnest money Rs 280/-. Tenders will be opened on 14-7-59 at 12 noon.

(iii) Tender No. CON[COS] 51[GB]59 for supply of 746 gallons paint red lead non-setting ready mixed. Specn. I. S. 102-50. Earnest money is Rs 500/-. Tenders will be opened on 15-7-59 at 12 noon.

(iv) Tender No. CON[COS] 52[F1]59 for supply of 2230 Nos. rain water asbestos pipes 4" dia x 6ft. long single socketed. Earnest money is Rs 240/-. Tenders will be opened on 15-7-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta —23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta-23 by local firms.

Tender Should accompany the receipt for depositing the earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES
S 34

Rise in Coffee Exports

scanty rains in Coorg, Chickmagalur and Hassan Districts. Record bumper crop are expected from Shevroys and Nilgiris in particular.

Receipts of 1958-59 crop to the pool until the end of May 1959 amounted to 44,885 tons comprising 17,697 tons of Plantation, 7,332 tons of Arabica Cherry and 19,856 tons of Robusta. The Board said that the home market continued to maintain the upward trend in its offtake and upto the end of May the release amounted to 12,412 tons as against 10,799 tons for the same period last year.

There has been a significant rise in exports. A total quantity of 9,293 tons was sold for export upto the end of May. This includes 1,600 tons to German Democratic Republic and 600 tons to Russia. Last year the sales for export amounted to 5,679 tons for the corresponding period. Since the latest revised crop-estimate stood at 46,045 tons as against an earlier estimate in January of 43,660 tons the exportable surplus was placed by the Board at nearly 17,000 tons as against 14,494 tons estimate earlier.

Oils and Oilseeds

The oilseeds market ruled firm during the past week largely due to lower levels of Groundnut prices recorded a steady advance though the improvement was not always related to increase in the demand; for only small purchases were reported from crushers who seemed to be reluctant to increase their offtake in view of the lower oil prices. The steadiness in groundnut prices is therefore to be attributed to arrivals which were reported to be on the decline in almost all the markets. Arrivals in South Arcot markets generally in Madras, while in Madras, showed a decline, while in Madras, arrivals were of the order of about 350 bags a day. Though scattered rainfall has been experienced more rains will be required for the standing crop as well as for the winter crop for which preparatory cultivation is already in progress. The standing crop in Pollachi is reported to be good and the recent rains there should be further helpful to the crop there. An adverse factor in the uptrend in groundnut prices during the past week has been the fall in oil prices which eased on lower offerings from the smaller rotary units.

Groundnut oil ruled easy on lack of buying support. Though earlier in the week both Calcutta and Andhra evinced some interest, there were few bids from these quarters by the close of the week.

Hides and Skins

In the Madras tanned hides market arrivals of cow hides continued to be on the same level as in the previous week. Clearances were

a steady level at unchanged prices. Arrivals of Buff Hides were on a fair level with demand steady. Prices however showed no appreciable change from previous week's levels. While cow calf met with a better market buff calf ruled steady. Arrivals in both continued on the same level as last week.

In the export section, after earlier dullness a firm tendency was noticeable on rumours of enquiries from East European countries. Business done during the week was however selective.

In the tanned sheep skins section, arrivals were again on the same level as in the previous week and there was a fair clearance at unchanged prices. Goat skin arrivals were at a meagre level.

Bangalore Silk

Indicative of gradual picking up of demand for silk fabrics, in view of the marriage season in the South, prices in the Bangalore Silk Market, during the week ended 11-6-1959, showed a perceptible rise especially in Charka and Cottage Basin silk. But the supply position of raw silk has not changed for the better.

Limited supply is also reported about cocoons. However, following the occasional showers reported from some of the sericultural areas in Mysore, it is expected that cocoon supply position would improve in about a month's time.

As compared to the previous week, there has been a decline in the price of Mysore Seed Cocoons which quoted at between Rs 8.00

and Rs 10.00 as against Rs 10.00 and Rs 15.00 while Foreign Race Seed Cocoons continued to range between Rs 5.00 and Rs 10.00

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON[GM]36[HC] 59 for supply of (1) 6000 ft. cable V. I. R. 7 core 1/.064 armoured; (2) 6000 ft. Cable V. I. R. 4 core 1/.064 armoured. Tenders will be opened on 16-7-59 at 3 P.M.

Tender forms are obtainable from the Office of the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Tender should accompany the receipt for depositing Rs 1000/- as earnest money with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

STOCK EXCHANGES

Revival of Interest

Watch-Dog Writes:

THE past week witnessed a broadening of activity in the Stock exchanges with the undertone steady to firm on revival of buying support. Apart from the fact that the terms of the New Government loans are much more favourable than earlier anticipated investors seem to have veered round to the view that prevailing price levels are attractive considering the brightening prospects for industry in general.

In the Calcutta Stock Exchange prices moved up after a steady opening sentiment having been aided by strong support for a number of miscellaneous industrials.

The Bombay Stock Exchange ruled quite steady in earlier dealings but toward close rumours about Government insistence on a premium for the proposed new issue of TISCO imparted a subdued trend.

The Madras Stock Exchange developed a firm trend with plantation issues in the forefront. Selected textile and Miscellaneous issues also participated in the uptrend in later dealings.

Conditions in the London Stock Exchange were firm as sentiment was favourably affected by the record May export figures. Widespread gains were recorded by many industrials.

Wall Street also witnessed a firm trend following a broadening of interest. Significant gains were recorded in a fairly large number of counters.

Calcutta

Calcutta, Friday Evening.

TRADING in the Calcutta Stock Exchange during the past week was on a cheerful note though toward close the more speculative counters were somewhat subdued. The main encouraging influence came from the terms of the New Government Loan announced early in the week. The fact that the amount of the two loans is well below earlier official indications is expected to aid the uptrend in equity prices as it is generally believed that the subscriptions to the loans may not result in any large diversion of funds seeking investment in stock markets. Though it is admitted that Government may decide to seek public subscription to a further loan later in the year it is pointed out that the moderate size of the present borrowing is indicative of a desire on the part of the authorities to fix the amount of the loans in such a way as to make the outflow of funds to have no serious repercussions on the money market. The subdued tendency

noticeable toward close especially in the more speculative counters is presumably due to rumours about Government's insistence on a premium for the new issue from Tata Iron and Steel Company Limited.

Bank shares were a steady market. Punjab National was well maintained at Rs 22.25. Bank of Bikaner was done at Rs 31.

In the textile section prices where changed were slightly better on balance. The improvement in sentiment is to be attributed to the better advices from the cloth market where stocks are reported to have declined in recent weeks. Kesoram improved from Rs 14.50 to Rs 14.75. Jayshree was steadier at Rs 8.81 while New Victoria moved upto Rs 1.31 from Rs 1.19.

Though there was a slight broadening of interest in the coal section toward the close price fluctuations were confined to a narrow margin. Bengal changed hands at Rs 306. Burrakur opened the week at Rs 17.37 and closed slightly lower at Rs 17.25. Central India was steady at Rs 7.62. Raneegunge met with some enquiry and closed higher at Rs 16.31. Western Bengal showed slight improvement at Rs 6.16.

Jute shares were an active market with selected shares meeting with support at increasing levels. The encouraging statistical position of jute goods coupled with hopes of fresh overseas enquiries was mainly responsible for the revival of interest in jute shares. Empire advanced from Rs 18 to Rs 18.31. Megna opening at Rs 15.94 moved up to Rs 16.44. Birla was done at Rs 21.75. Anglo-India advanced to Rs 250 from Rs 247. Nellimarla was in request and closed higher at Rs 14.87. Howrah opened at Rs 23.87 and steadily advanced to close at Rs 24.50.

In the Engineering section Indian Irons opened at Rs 24.21 and moved upto Rs 24.46 before closing at Rs 24.25. Indian Galvanizing was a bright spot in this section. This scrip on Wednesday moved up briskly from Rs 21.25 to Rs 22.50. Among other Engineerings TEXMACO closed at Rs 25.60 as against the week's high of Rs 25.90. Jessop was finally placed at Rs 31.25.

Several significant advances were noticeable in the Miscellaneous section. Dunlop Rubber opened at Rs 33.12 and after opening at Rs 34.31 on Wednesday closed slightly lower on Friday at Rs 34.25. Guest Keen Williams was a steady counter at Rs 39.12. Indian Aluminium opened the week at Rs 21.19 and after some steadiness on Tuesday closed the week at Rs 21.56. Indian Cable opened at Rs 31.19 and closed better on balance at Rs 31.56.

Among other miscellaneous industrials Orient Paper was a prominent spot and closed at Rs 37.10 after having been done upto Re 37.55 as against previous week's closing of Rs 35.90. Sirpur Paper was in request and appreciated to Rs 13.06 from Rs 12.75. Titagur Paper had buyers upto Rs 45 as compared to its previous closing of Rs 43. Alkali Chemical came in for investment support and advanced to Rs 24.50 from Rs 22.87. Indian Oxygen

attracted a good deal of attention and consequently was taken up to Rs 28.75 by close. Indian Copper closed at Rs 4.11.

Tea shares continued to be listless in the absence of support. It would appear investors are reluctant to extend commitments in view of the disappointing results at the new season's first export sale. It is, however, believed that prospects for good quality teas are good and this fact may in course of time result in selective buying support in this section. Among the few transactions reported were Banarhat at Rs 305, Bishnauth at Rs 20 Bhatkawa at Rs 23.25, Brooke Bond at Rs 19.78 and Sungma at Rs 19.12.

Sugar shares were generally a dull market. An exception has been Carew which moved upto Rs 10.50 from the previous week's closing level of Rs 9.56. The scrip was done upto Rs 10.87 in later dealings. Raza Buland was almost unchanged at Rs 13.69 as were SKG at Rs 10 and Sitalpore at Rs 5.94.

Bombay

After earlier cheerful trading conditions in the Bombay Stock Exchange turned rather subdued toward close. It was clear from the start that Dalal Street continued to be preoccupied with the day to day reports about the new Tata issue. It would appear that operators had somehow gained the impression that a premium would be insisted upon by Government. Rumours regarding the possibility of the authorities deciding in favour of a premium gained especial strength on Friday with the result the market displayed a depressed mood with widespread small losses.

In the Steel section, Tata Steel reacted to Rs 189 on Friday from the previous day's closing of Rs 192.25. Indian Iron was also subdued in sympathy at Rs 24.20.

Selected textile shares were in request in earlier dealings presumably on reports of decline in cloth stocks. Central was better at Rs 99. Century was well supported in earlier dealings but moved back by close to Rs 544.50. Kohinoor attracted some attention and was finally placed at Rs 280 as against its opening rate of Rs 276.50. Simplex was easier on lower dividend rumours and closed at Rs 170.52. Standard was better at Rs 513 though the week's high levels could not be maintained. Swadeshi met with good support on Friday and gained nearly 10 points during the day's trading to be placed at Rs 243. Bombay Dyeing was done at Rs 64.

The Miscellaneous section provided some bright spots. Voltas was in demand and appreciated to Rs 175 from Rs 162. Bombay Burmah spurted to Rs 561 from Rs 533.50 but part of the gain was erased toward close and the scrip was finally placed at Rs 551. After having been higher Premier Construction closed at Rs 313. National Rayon was done at Rs 320.50.

BRIDGE & ROOF CO. (INDIA) LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the seventy-fifth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road Calcutta, on Monday, the 13th July, 1959, at 11.45 A.M. to consider the Accounts of the Company for the year ended 31st December, 1958 and to transact other ordinary business and the under-noted special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as a Special Resolution:—

"That the following contract between the Company and The Bengal Paper Mill Co. Ltd., an Associate (as defined by Section 2(4) of the Companies Act, 1956) of Balmer Lawrie & Co. INDUSTRIAL INFORMATION

MOVEMENT OF WHOLESALE PRICES.

Review for 1958-59.

The official index of wholesale prices in India (with the year ended March, 1953 as 100) showed a rising trend from the beginning of 1958-59, the year under review, when it stood at 107.4 and reached the level of 116.5 in September 1958. The three months from October to December, 1958, however, witnessed a period of gradual fall and the index declined to 111.4 in December, 1958. It depicted an irregular tendency in the last quarter of the fiscal year and closed at 112.3 in March 1959.

The annual average index for the year 1958-59 worked out to 112.9 registering a rise of 4.2 per cent over the average of 108.4 for the earlier year. This rise in the 'All Commodities' index was caused by an increase in all the constituent groups and except Industrial Raw Materials and 'Finished Products'. 'Food Articles' was higher by 3 per cent at 169.4. Among 'Other Articles', the following commodities witnessed significant variations during the year: Jira (+85%), Turmeric (+37%), Betelnuts (+33%), Cloves (+73%), Black Pepper (+9%), Salt (—5%), Cardamoms (—10%) and Chillies (—%).

FOOD ARTICLES.

The index for 'Food Articles' rose from 105.2 in the beginning of the year to attain the highest level of 121.2 in September, 1958. At the end of the year, however, it was at a level of 113.8. The annual average for 1958-59 stood at 115.2 as against 106.4 for the previous year indicating an advance of 8.3 per cent. Almost all the sub-groups shared in this increase —'Pulses' went up by 28 per cent to 103.9, 'Sugar and Gur' by 18 per cent to 127.2, 'Other Food Articles' by 15 per cent to 151.3, 'Fish, Eggs and Meat' by 11 per cent to 108.4, 'Cereals' by 6 per cent to 106.8, 'Fruits, and Vegetables' by 3 per cent to 117.0 and 'Milk and Ghee' by 2 per cent to 107.3 while 'Edible Oils' showed a fall of 1 per cent to 124.3.

The monthly index for 'Cereals' moved up from 97 in April 1958 to 115 in September and then fell gradually to 102 at the end of the year under review. The index for Rice advanced from 10 in the beginning of the year to reach the level of 118 by August 1958 and then came down to 92 in March 1959. The yearly average for Rice stood at 105.6 for the period under consideration as against 104.8 for the earlier year. Wheat which stood at 85 in April 1958 advanced sharply and reached 125 by January 1959, but thereafter showed a downward movement and was at 114 at the close of the year under review. The annual average

index for Wheat for 1958-59 stood at 105.4 as compared with 87.7 for 1957-58. The average index of Barley for the period under review showed an increase of 30 per cent to 123.9. Maize went up by 12 per cent to 124.6 while Jowar and Ragi receded by 8 and 3 per cent to 104.5 and 102.3 respectively. Gram showed a rise of 42 per cent to 96.2. Among 'Other Pulses', Arhar rose sharply by 48 per cent to 114.9. Mung went up by 36 per cent to 115.8 and Masur increased by 7 per cent to 107.6. Urad, however, went down by 3 per cent to 95.4. In the case of 'Fruits and Vegetables', Cashewnuts showed a fall of 17 per cent to 68.3. Onions went down by 14 per cent to 118.6 and Oranges drifted down by 5 per cent to 155.5, while Bananas advanced by 12 per cent to 115.7. Milk and Ghee both increased by 3 and 1 per cent to 112.7 and 100.8 respectively. Among 'Edible Oils', Coconut oil moved up by 25 per cent to 148.5, Groundnut oil by 3 per cent to 107.3 and Vanaspati (Daida) by 1 per cent to 115.2, while Mustard oil came down by 9 per cent to 148.3 and Gingelly oil by 7 per cent to 113.8. Regarding 'Fish, Eggs and Meat', Fish index was up by 12 per cent at 107.8, Eggs by 13 per cent at 114.1 and Meat by 9 per cent at 105.9. Sugar was up by 11 per cent at 120.8 and Gur advanced by 22 per cent to 131.0. The average index for Tea for 1958-59 was higher by 3 per cent at 169.4. Among 'Other Articles', the following commodities witnessed significant variations during the year: Jira (+85%), Turmeric (+37%), Betelnuts (+33%), Cloves (+73%), Black Pepper (+9%), Salt (—5%), Cardamoms (—10%) and Chillies (—%).

TOBACCO.

The average for Tobacco during the year under consideration exhibited a rise of 1.6 per cent to 93.8 as compared with 92.3 for the last year. The rise was due to an increase of 2 per cent in raw tobacco and 1 per cent in tobacco manufactures.

FUEL, POWER, LIGHT AND LUBRICANTS.

The average for the group for the period 1958-59 was higher by 1.8 per cent at 115.4 as against 113.4 for the earlier year. Prices of Coal (+5%), Aviation Spirit and Electricity (+2% each), Diesel Oil (+1%) and Castor Oil (—11%) showed fluctuations during the period. The prices of Kerosene oil, Petrol and Lubricants oil did not report any noticeable variations.

INDUSTRIAL RAW MATERIALS.

The index for 'Industrial Raw Materials' showed an irregular trend during the year under review. It went down from 114.2 in the beginning of the year to 113.5 in May 1958. Thereafter it witnessed a rising trend to September 1958, when it stood at 119.0. Afterwards the index fell gradually to 112.5 by December 1958. It then started moving up and stood at 116.2 at the end of the year. The yearly average for 1958-59 worked out to 115.6 as compared with 116.5 for the last year. The index for Cotton Raw which was 103 at the end of the last year continued its downward trend and reached 94 in

November 1958, but rose thereafter and closed at 102 at the end of the year at 99.4 as compared with 106.1 for year under review. Its average level for 1958-59 was lower by 6 per cent the earlier year. Jute Raw witnessed a downward trend during the year. From 126 in April 1958, it finally came down to 114 in March 1959. During the year under review the average level of Jute Raw went down by 11 per cent to 117.7 when compared with 132.8 for the earlier year. Hemp Raw also witnessed a fall of 7 per cent to 89.3 during the course of this year. The financial year average for Wool Raw worked out to 112.8 as against 121.3 for the previous year showing a net fall of 7 per cent. Silk Raw registered an increase of 8 per cent to 156.5 during 1958-59. In the case of Groundnuts, the fiscal year average went up by 8 per cent to 116.9 as compared with that of the earlier year. The index rose from 107 in April 1958 to 132 in September 1958. Thereafter it showed a declining trend during the next three months and stood at 105 by December 1958, but rose again to 121 at the close of the year under review. The fiscal year average for Linseed also increased by 11 per cent to 122.6 as compared with the previous year average of 110.9. The index for Gingelly seed went down from 112 in April 1958 to 109 in May and thereafter moved in an irregular manner and finally closed at 106 in the year under review. The annual average for 1958-59 stood at 111.2 as compared with 117.8 for 1957-58 showing a fall of 5 per cent. Rape-seed also receded by 6 per cent to 150.1 as compared with 159.2 for the previous year. The average for Copra was higher by 15 per cent at 134.3 as compared with 116.8 for the last year. Cottonseed was also higher by 16 per cent at 148.5 over its last year's average of 127.8.

The other items which showed significant changes in the year under review were: Hides Raw (+7%), Skins Raw (+6%), Bamboos (+3%), Logs and Timber (+2%), Iron Ore (—17%), Tanning Materials (—16%) and Lac (—16%). The prices of Sugarcane and Rubber remained unchanged.

INTERMEDIATE PRODUCTS.

The index for 'Intermediate Products' which stood at 108.9 in April 1958 moved up gradually to 112.2 in August and thereafter it showed a downward trend. At the close of the year, the index stood at 109.4. The average for 1958-59 worked out to 110.3 depicting a rise of 2.8 per cent over its last year average of 107.3. This rise was caused by an increase in the prices of Rayon Yarn (+37%), Zinc (+15%), Aluminium, Linseed Oil, Brass and Tin (+7% each), Lead (+5%) and Semis (+2%). The 'prices of Cotton Yarn (—7%) and Leather (—1%) were, however, marked down during the year under review.

FINISHED PRODUCTS.

The index for the 'Finished Products' group did not show any noticeable changes during the year under review; it opened at 107.6 in April 1958 and rose to 108.6 by November and finally closed at 108.0 in March

1959. The average for the year worked out to 108.0 as compared with 108.2 for the previous year. The index for Cloth (Mills) which stood at 118 in the beginning of the year displayed a decline and stood at 113 at the close of the year under review. The average for 1958-59 for Cloth (Mills) was lower by 5 per cent at 114.3, when compared with 119.9 for the earlier year. The fiscal year average for Cloth (Handloom) also went down by 1 per cent to 104.3 as compared with 104.9 for the preceding year. The index for Jute Manufactures showed a fall of 9 per cent to 86.5 during the year under review. Woollen Manufactures closed at 105 as compared with 104 at the beginning of the year. Rayon and Silk Manufactures opened at 93 and reached 96 by August 1958, but came down to 90 by December and stood at 95 at the close of the year. On the whole, the fiscal year average showed an increase of 9 per cent to 93.2 as against 85.7 for the earlier year. The index for Aluminium utensils witnessed a rise of 3 per cent to 124.2 in the year. Other commodities which exhibited advances during the year were: General Chemicals (+23%), Oilcakes (+19%), Cycles (+11%), Bricks and Tiles (+7%), Drugs and Medicines (+10%), Coal Tar Products (+7%), Shoes (Rubber) (+5%), Paper and Newsprint (+6%) and Iron and Steel Manufactures (+1%). The index for Rubber Tyres and Tubes which stood at 79 in the beginning of the year remained unchanged till February 1959, but went up by 8 per cent to 85 in March 1959, due to an increase in excise duty. The index number for Fertilisers stood stationary at 96,

"Pratap, isn't that shirt
too big for you?"

"MUMMY says my clothes get torn so fast that this is all
I can have."

"Poor lad! Ask your mummy to buy BINNY'S
cloth. BINNY'S Quality Control* their production."

"Quality Control? Can you tell me what that means,
uncle?"

"If you go to a textile mill, you will see machines
that turn cotton into cloth work at terrific speeds and
often small defects which we
cannot see with our naked eyes
get into the cloth. Cloth that
contains these defects gets torn
easily. At BINNY'S they have
a special department which is
continuously looking out for
these defects and preventing
them from getting into the
cloth. That's why their cloth
lasts so long."

"Thanks a lot, uncle. I must
ask mummy to buy BINNY'S
cloth straightaway."

BINNY—
a great name
in textiles

*Testing the fineness of cotton fibres

This instrument measures the
fineness of the cotton fibres and
enables the technician to select
the right type of cotton suitable
for the various qualities of
cloth BINNY'S makes. Only
specially selected cotton goes
into BINNY'S fabrics. That
is why BINNY'S cloth lasts
so long.

BINNY'S manufacture nearly 90 million
yards of cloth every year. Here are some
of the varieties they make:
Shirtings - Khaki Drills - Bleached and
Dyed Drills - Towels - Anticrease
Suits - Tussore - Union Fabrics -
Silk Saris - Rugs - etc etc

Are You a Small-scale Industrialist?

This will interest you

To help small scale industries fulfil their
role in the country's developing economy,
the State Bank, in collaboration with other
interested institutions, put into operation in
1956 a Pilot Scheme at a few selected centres
to make available to them co-ordinated
credit facilities.

The scheme has worked well and the Bank
is now in a position to offer, at all its
branches, liberalised facilities which were
originally made available only at the Pilot
centres.

If you require financial assistance, why not
talk things over with the Agent of our
nearest Branch? He will welcome the
opportunity of assisting you and will be
glad to forward your application, if need
be, to the appropriate Governmental and
other authorities.

STATE BANK OF INDIA
INDIA'S LEADING BANK

FOR THE INVESTOR

The Deferred Tata Issue

Investment Gossip:

ONCE upon a time, and not so
long ago at that, the cynosure of
speculative eyes were Tata Defer-
reds. Today, both on Dalal Street
and in Lyons Range, it is the de-
ferred Tata issue that is the centre
of attraction and interest.

It was announced in the middle
of the week that the meeting to
consider the rights issue was being
postponed, because Government
had not as yet indicated their atti-
tude in the matter of: Premium or
Par?

Some say that the authorities
intended that the Government bor-
rowing programme be completed
before they committed themselves
on the Tata rights issue—especially
if what their decision was could
have had a bearish connotation for
the stock exchanges.

Others assert: nothing of the
sort. This just shows Government
in their usual form, with the usual
magnitude of delay and dilatori-
ness.

But the fact that the Tata issue
was deferred was enough to set off
a chain reaction in rumour. Prices
fell sharply, on the reasoning that
Government delay could only mean
an insistence on a premium issue.

Soon thereafter, however, there
was a smart recovery; bear cover-
ing of course, helped.

Meantime, here in Calcutta, the
fact that the blast furnace, thrown
out of commission a few days ago,
is back to work served to lend
some strength to prices.

In any case, it is perhaps a good
thing that, albeit for the moment,
the Tata rights issue has been
shelved. For, it will mean that

much more of time for the inves-
tor to get his money ready.

As of now, current stock ex-
change interest is riveted on the
Government's new loan: lists are
to open in the middle of next week.
If the borrowing programme should
turn out to be more of a success
than at present expected, a subtle
upward pressure on share prices
is, in sympathy, to be anticipated.

While, generally, for the tenure
of the 1959 slack season, prospects
are for share prices to be well
maintained, the period till the Tata
rights issue's terms are announced
is likely to be uncertain.

But there can be no doubt that
the 1959 slack season is offering
choice new and rights issues For
the Investor.

₹₹

Investment Notes:

The Tire Cord scheme of the
National Rayon Corporation is now
being implemented according to the
Chairman of the company. The
company's top technicians would
shortly proceed to the USA to confer
with the Consultants. Production on
the plant is expected to commence
sometime in 1961. The total cost of
the Plant is expected to be in the
neighbourhood of Rs 3 crores, out of
which an amount of about Rs 1.2
crores would be available by way of
credit under deferred terms payment.

The expansion programmes of Tra-
vancore Rayons are going on accord-
ing to schedule. The company has
received permission from the Central
Government for setting up a third
Cellulose Film Plant, with capacity of
about 2,000 tons per year. This
plant is expected to go into produc-
tion by the middle of 1960.

Balance-Sheet Reviews:

Although sales of Balmer Lawrie
& Co Ltd fell during 1958 from
Rs 11.77 crores to Rs 11.66
crores, the other sources of income
showed a substantial improvement.
Thus, firstly, service rendered re-
alised Rs 88.98 lakhs against Rs
81.08 lakhs. Secondly, income
from trade investments rose from
Rs 5.52 lakhs to Rs 7.65 lakhs.
Profit on sales of fixed assets fet-
ched Rs 2.17 lakhs against Rs 0.21
lakhs. Finally, remuneration as
Managing Agents and Secretaries
and Treasurers and miscellaneous
income rose from Rs 17.88 lakhs to
Rs 21.69 lakhs. After adjustments
for items relating to the previous
years, the net profit of Balmer
Lawrie, before taxation and depre-
ciation, rose significantly from Rs
32.28 lakhs to Rs 49.08 lakhs. The
transfer to General Reserve has
been raised substantially from Rs
2 lakhs to Rs 5.50 lakhs, though
the transfer to Reserve for pen-
sions, at Rs 1.74 lakhs in 1957, has
been skipped. There is, more-
over, a transfer to Development

Rebate Reserve of Rs 0.61 lakhs.
In view of the fine results, the
company has increased its dividend
distribution from 15 per cent in
1957 to 20 per cent in 1958, includ-
ing an interim dividend paid in
December last year of 5 per cent.
The balance carried forward at
Rs 5.03 lakhs is slightly higher
than the amount brought in of
Rs 5.01 lakhs.

The paid-up capital of Balmer
Lawrie is placed at Rs 80.01 lakhs.
Against this, Reserves and Surplus
amount to Rs 84.46 lakhs. The
gross block of the company is
Rs 74.47 lakhs, and the book value
of fixed assets is Rs 35.70 lakhs.
The trade investments of Balmer
Lawrie are placed at Rs 1.14 crores.
The quoted investments, with a
book value of Rs 1.09 crores, had
a market value at the end of 1958
of Rs 1.56 crores. This is the size
of the hidden reserve which ac-
crued to the company as a result
of the very fine year for industries
generally during 1958.

All in all, the company had ex-
ceedingly good year in 1958.

₹₹

Mettur Industries

Although the sales of Mettur
Industries Limited during the year
ended March 1959 showed an im-
provement from Rs 1.51 crores to
Rs 1.56 crores, the profit after tax
and depreciation is shown to be
lower. But this is mainly because
the provision for taxation has been
marked higher by Rs 10.60 lakhs
at Rs 28.90 lakhs. Thus, with
depreciation getting Rs 1.95 lakhs
against Rs 1.91 lakhs, the profit
appears to have declined from Rs
14.51 lakhs to Rs 7.42 lakhs.

But the taxation liability is it-
self heavy because the company has
decided that there is no justifica-
tion for maintaining, at the present
time, the reserve at a high level;
consequently, a transfer has been
made from general reserves for
the payment of a special dividend
at Rs 50 per share. Thus, the Pro-
fit and Loss Appropriation Account
receives a transfer of Rs 29.75
lakhs from General Reserve and
of Rs 10 lakhs from Dividend
Equalisation Reserve. Over and
above the special dividend, which
absorbs Rs 30 lakhs, the routine
dividend has been paid at 25 per
cent, absorbing Rs 15 lakhs, against
20 per cent in the previous year.

The balance sheet shows that, as
against the ordinary share capital
of Rs 60 lakhs, the Reserve and
Surplus are placed at Rs 29.54
lakhs, even after the transfer this
year to the Profit and Loss Account
of Rs 39.75 lakhs.

On the assets side, the Gross
Block of Rs 60.14 lakhs is shown
as having a net value of Rs 18.62
lakhs.

₹₹

The Kamarhatty

The Kamarhatty Company Lim-
ited, under the Managing Agency
of Jardine Henderson Limited, has

fared even better during 1958 than
did the sister company, Kank-
narrh, whose accounts we re-
viewed last week. Kamarhatty,
on sales which rose from Rs 3.39
crores to Rs 3.90 crores, has re-
ported a profit of Rs 33.93 lakhs
against the loss last year of Rs
18.02 lakhs, and was sufficient to
enable arrears of dividend being
paid on the preference shares for
1956 and 1957 and also to pay the
dividend for 1958. Depreciation
receives Rs 10.21 lakhs against Rs
4.24 lakhs. There is a provision of
Rs 43,000 for Wealth Tax, and an
amount of Rs 20,203 has been
transferred to Development Rebate
Reserve. It was still possible for
the company to pay a dividend of
5 per cent on the ordinary shares
—the first such payment since 1953.

The balance sheet shows that,
against the capital of Rs 59.20
lakhs, of which Rs 16 lakhs is in
6 per cent cumulative preference

bills produced the desired effects on the short term money rates. In India there are considerable excess reserves with the banking system, and rediscounting is not widely practised. The treasury bills therefore instead of deciding the pattern of money rates in India are influenced in turn by them. The issue of the treasury bills has been discontinued often in India because the market rates were found to be too high. With regard to the advances provided to the private sector the commercial banks vary their rates of in-

terest according to the size of the loan, the nature of the collateral and the state of the money market. The larger the loan, other things concerning collateral and the state of the money market being equal, the lower the rate of interest. Where government securities are offered as collateral, the actual rate charged by the banks is higher than the yield of the bonds; the rate against stock exchange securities is greater than the rate charged against government securities; and the rates on stocks of merchandise is greater still. The volume of loans granted at relatively low rates is not significant because the banks themselves hold a very large part of the public debt and also because other types of financial assets available as collateral are limited in supply on account of the underdeveloped character of the Indian economy.

The amount of advances granted by the banking system to commerce has been one-half of the total advances; nearly a third is made available to industry and about one-eleventh for personal and professional purposes. Production credit for agriculture has been only 3 per cent of the total advances recently. Of late the amount advanced to industry has been increasing relative to the advances made to commerce. The demand for bank advances arises from the income motive and the speculative motive. The amount of bank advances is interrelated with the price level and the interest rate charged. It is also affected by expectations regarding the future course of movement of the prices of commodities and shares and the rates of interest. In the boom phase the rate of interest is looked upon as too low by the business classes. In a depression the interest rate appears to them too high. Temporary fluctuations in advances arise from the bearish or bullish sentiments prevailing in the market, quite apart from the ordinary seasonal fluctuations; and, either of these two influences may be strong enough to exert pressure on the long term market. A discriminating and a well designed open market policy followed by the Reserve Bank has now been in vogue to protect the capital market against these adverse effects of merely seasonal influence that occur in the short term market. Speculative disturbances are irregular in character. When speculation is increasing in the purchase of shares, the proceeds of bank advances obtained for the purpose forms a supplement to the resources of the long term market and this may involve an increase in money supply and an enlargement of capital expenditure beyond the amount of current savings in the economy. When speculation is on the decline, the resources diverted to the long term market decline and this may reduce the demand for capital outlay below the amount of current savings. Inflation and deflation may be thus caused by speculation. But speculation may be intense even when the amount of advances remains unchanged. Speculators are not directly sensitive to changes in the short term rate of interest for they hope for relatively large capital gains in a short time, compared with which the burden of even a high rate of interest for a few weeks is negligible. If the short term rate is raised at a time of expanding demand for commodities when the share prices may be subject to speculation, the rise in the rate may not cause any substantial reduction in the bank advances diverted to the capital market; the consequence is inflationary despite the rise in the short term rate. If this is to be checked by the Bank rate it will not be through the deterrent effect upon the cost of borrowings of the speculators but through the effect produced on the availability of credit as such. However if the prices of the securities fall in sympathy with the rise

in the short term rates the scope for inflationary speculation becomes restricted. The disturbance that sets in the alignment of the long and short term rates on account of speculation can be evened out by the Reserve Bank by an appropriate regulation of credit. Sec. 21 of the Banking Companies Act which gives the Reserve Bank elaborate powers to regulate the volume of advances and the rates of interest to be charged on them. Particular classes of transaction can also be prohibited, under Sec. 36 of the same Act, by the Reserve Bank.

POLICY OF THE RESERVE BANK:

The inflationary conditions of the post-war period and in particular the inflationary expansion brought about by the Korean war made it impossible to finance development in India on the basis of cheap money. Actually, the Reserve Bank of India raised the Bank rate from 3 per cent to 3½ per cent in the middle of November 1951 and from 3½ per cent to 4 per cent in May 1957. The Bank rate was supplemented by an appropriate open market policy. In the organised money markets the interest rate structure has adjusted itself to a higher level relative to 1951. The rise in the long term bond yield, the higher yield of industrial debentures and the upward movement of short term rates since 1951 have brought about dear money in the country. The government-sponsored Industrial Finance Corporation therefore raised the rate of interest on its loans from 5½ per cent to 6½ per cent during 1951-57. The rise in the money supply due to deficit financing in the later years of the first plan, in so far as it could affect interest rates, was offset to some extent by the adverse balance of payments in the private sector and the two sets of factors viz. the growth of the time liabilities of banks and the lower velocity of income circulation during 1951-54 and 1955-57 which indicate increased liquidity preference on the part of the public. In the period 1951-53 the Reserve Bank attempted to control the post-Korean inflationary boom and raised the Bank rate augmenting it by a tighter policy of open market purchases. The subsequent rise in the Bank Rate has the objective of controlling the inflation generated by a large public investment programme under the Second Five Year Plan in which deficit financing has loomed large. Since 1951 the Reserve Bank has acquired many powers for the effective regulation of credit and as there exists an intimate relationship between the amount of money supply and the interest rates, the powers of the Reserve Bank are full of significance for the pattern of interest rates. The methods of moral suasion and variation of cash reserves, used in a restrictive manner by the Reserve Bank, have a freezing-in effect on credit and hardening the interest rate structure. Selective credit control by the Reserve Bank regulates the volume of credit available in specific directions and hence may cause banks to bring about relative variations in the interest rates charged on advances. Such control exercised by the Reserve Bank on the aggregate level of advances* on sugar and food grains might raise the rates of interest on

loans against these goods. However, in view of the small amounts advanced on these goods the effect on the pattern of interest rates as a whole might be of a small order. The Reserve Bank can increase government securities in its portfolios, under the Reserve Bank Amendment Act 1957, when the foreign assets decline but the effect on money supply is neutral when domestic government bonds merely replace foreign securities. The diverse strands of credit management by the Reserve Bank have to be taken into account in studying the effects of monetary policy on interest rates. The sympathetic movement of the short term and long term rates during 1951-53 does not suggest a disequilibrium in the interest rate structure in India.

Bank rate policy for the regulation of economic activity was under a cloud for a long time. It is only recently that there is a tendency to resort to flexible interest rate policies. Thus during 1957 Central Bank discount rates were revised in eighteen countries not less than twenty-five times. In the war and the post-war period the revision of the Bank rate was not favoured because it might interfere with the management of public debt on a low cost basis and also with the promotion of a stable market for government securities. In the USA the question of raising the Bank rate was once a matter of controversy between the Treasury Department and the Federal Reserve System. Recently the possible psychological effects of a higher Bank rate and the necessity to match anti-inflationary policy caused many countries to resort to the Bank rate. In the efficacy of the interest rate policy as such however contrary opinions are still held widely.

With a view to enforcing dear money, nearly sixteen years after its inception the Reserve Bank of India announced the tightening up of its open market policy and the raising of the Bank Rate to 3½ per cent in November 1951. The banking system immediately reacted to these policies by raising the money rates all round and subsequently when prices began to fall, it insisted on further collateral security so that the margins against the existing loans could be maintained. There was a steep fall in the gilt-edged market and the Reserve Bank supported the 3 per cent conversion loan of 1946 at Rs 80 in December 1951. The policy of the Reserve Bank has been one of permitting a controlled expansion of credit in the context of development and it is in the light of this policy that open market operations and other monetary measures have been enforced in India. The disinflationary measures of 1951 worked themselves off by 1953 for since 1954 there has been an increase in money supply. In the last three years of the First Five Year Plan an increase of Rs 420 crores took place in the amount of money supply partly due to large scale deficit financing and partly due to expansion of bank credit. By 1957-58 not only was there an increase in the money supply but the price level too rose to 107.2 in April, 1957 from 89.6 (1954-55). The Reserve Bank resorted to increasing the Bank rate again as a general measure of credit control during May 1957.

EDITORIAL NOTES

“Shaktiman”

The Defence Ministry and, especially, the Ordnance factories may derive legitimate satisfaction from the rapid implementation of the programme for manufacture of army trucks in the defence establishments. The satisfaction is all the greater because of the chorus of adverse criticism with which the proposal was greeted when it was mooted last year. No wonder that the first three-tonner to roll off the Assembly lines at the Gun Carriage Factory at Jabalpur was greeted with fanfare of trumpets and thunderous cheers from the happy workers.

There is no mistaking the note of exhilaration in the short speech made by the Prime Minister on the occasion. Those responsible for the conduct of public sector undertakings and Indian technicians will treasure the Prime Minister's enthusiastic tribute to their competence and adaptability. For it may be taken as a guarantee that Indian talent will not be relegated to the back seat in planning and implementation of projects in future. And that is all to the good. For while steel and machines are no doubt important, it is the men behind the machines who will ultimately determine the pace of progress.

It is characteristic of the Prime Minister that he saw the achievement of the Ordnance factories

against the background of India's industrial development and the respective roles of the private and the public sectors. Few will dispute the importance he has assigned to the basic and machine-building industries. And all except those who are opposed to the very concept of planning for industrial development will agree with the four “musts” which he laid down as conditions of progress, namely steel, machine building, power and trained people and above all increased food production.

Expressing the hope that the private sector will grow more effective, the Prime Minister invited its representatives to have a look at the working of the public sector and learn efficiency from it. For the latter it may be said that readiness to take advantage of all opportunities of improving efficiency is the condition for staying in business. But they can also legitimately claim that, if they had all the facilities enjoyed by the Ordnance factories in this particular instance, with no bother over import licences, foreign exchange or technical assistance, they too would not be found wanting. As things stand at present, most of the time of, business executives is spent in quest of permits and licences and in chasing the papers through the prolonged operation of processing in different establishments in New Delhi and elsewhere. What time they have left after getting permits and licences is spent in following the complicated amendments of company legislation. In the circumstances, if private sector is to play its role and make its contribution to industrialisation and national revenues, the Prime Minister might pay some attention to the laws, rules and regulations which hamstring enterprise in the private sector.

Retreat from Control

Dr B. C. Roy and his Cabinet have shown rare political courage in announcing the decision to suspend price control on rice which has been nominally in force from the beginning of the year. We say nominally advisedly, for at no time since the promulgation of the price control order was rice available at scheduled prices in the open market. In fact, the Price Control Order, and the action taken under it, have led to an impossible situation. Rice had practically disappeared from the open market and the resulting pressure on Government stocks had brought the ‘modified rationing’ system to the verge of breakdown. A breakdown of ‘modified rationing’ would have been an unmitigated disaster and had to be averted at all costs.

The Government's decision is based on a realistic assessment of the actual state of affairs regarding availability and requirements of the different grades of food grains. The Government was faced with a difficult choice. They could either accede to the leftist clamour for

stricter controls and impose compulsory procurement and rationing, or relax controls retaining ‘modified rationing’ as a check on profiteering. These who advocate stricter controls leading to rationing and compulsory procurement pay little regard to the effects of compulsory procurement on production and supplies in the long run. They forget the experience of the war-time and immediate post war period when every extension of control and rationing was accompanied by a reduction in the quantum of the ration. Government have shown wisdom in choosing the lesser evil.

Under the new system, the requirements of the low income groups will be met through the modified ration shops, while those who are ready to pay more for quality will be able to get their requirements from the open market. Whatever politicians may say in their public utterances, the general public will welcome the Government's decision as the only sensible one in the circumstances. Those who have doubts will be convinced if they take the trouble to go through the full and frank statement of the Chief Minister.

A great responsibility now rests on the trade who have the chance of reaping windfall profits. Wisdom would dictate a policy of deliberate restraint of prices.

Pisciculture

The opening of the new laboratory building of the Central Inland Fisheries Research Station in Calcutta, last week, served as an appropriate occasion to emphasize the importance of fisheries to the country's food economy. Dr B. C. Roy who inaugurated the function spoke with undisputed authority on the nutritive value of fish as a constituent of diet. Mr M. V. Krishnappa, Union Deputy Minister of Agriculture, who presided, gave facts and figures regarding Government's plans for the development of fisheries.

Mr Krishnappa drew attention to the limited area of cultivable land available in our country. At the most liberal estimate this works out to less than one acre per head. As land resources are limited, water resources should be exploited to find food for the growing population. Speaking with particular reference to Bengal, he said that the problems of shortage of rice, fish and of rehabilitation could be solved at one stroke by the development of fisheries.

A realistic approach to the problem of development of fisheries should be based on accurate estimates of the extent of inland water resources and the scope for increased production through intensive development. Mr Krishnappa referred to ten crore acres of inland water resources. It will be necessary to know how this vast area is made up, what part of it is available for pisciculture and how much of it remains unutilised at

present, in order to arrive at a reliable estimate of the scope for additional development.

It will not be correct to assume that water resources are not being utilised, though research can show the way to improved methods of fish culture. Already India, with a production of over a million tons of fish a year, ranks eighth among the fishing nations of the world. And inland fisheries, it is estimated, contribute about one-third of the total production.

In Bengal at any rate, it is hardly likely that any area suitable for fisheries remains unexploited, especially in view of the high prices fetched by fish. In fact the complaint is the other way. The leftists allege that large areas of paddy fields in 24 Parganas and the Sunderbans have been converted into fisheries by the landlords and they say this is one of the principal reasons for the prevailing scarcity of foodgrains. Such conversion, if it has taken place, only aggravates the hardships of the poor, without adding to the total food supplies.

Mr Krishnappa complained that the allotments made for development of fisheries under the First and Second Plans were very meagre. He also pointed out that, out of the allotment of Rs 4 crores for State schemes in the First Five-Year Plan, only Rs 2.3 crores were actually utilised. Against this experience, the allotment of Rs 8.86 crores in the Second Five-Year Plan cannot be considered inadequate.

WORLD OF FINANCE

Interest Rates Decline Sharply

THE slack season is now in full wing. Deposits of Scheduled Banks, as well as their Advances, show every evidence of the return of funds from busy season financing. Partly, it is true that the contraction in Advances has not as yet reached a tempo which could bear testimony to really easy conditions in the money market. On the other hand, the improvement in Deposits is of significantly large proportions. Also, the main index of money market activity is to be found in the inter-bank call money rate, which, in Bombay, has slid down to 1½ per cent. Thus, it is a valid conclusion that we may arrive at, that the slowness in the rate of decline in Bank Advances is owing to reasons that have no connection with any presumed continuance of busy season influences.

The small size, and the slow rate, of the fall in Advances is the more difficult to understand, since, with cotton textiles stocks declining recently in most heartening manner, the quantum of financing for stocks should now be less. Moreover, it is not as if import restrictions have been relaxed, and that, consequently, there is larger volume of imported commodities and articles that require bank finance. Lastly, there seems little reason to doubt that here is already the beginning of the return of agricultural financing or the last busy season. It is by inference and elimination that we can get at the probable reasons why Advances continue to be at levels higher than should be expected—or, as Mr H. V. R. Iengar, the Reserve Bank Governor, has hinted, warranted.

We would suggest that there has been a resurgence of industrial production. By this, we mean that the upward curve in the index of industrial production, which for some time had been static, has now presumably been resumed. Therefore, the first reason may be that enlarged industrial production now requires a greater volume of bank financing. The second reason, that Mr Iengar has indirectly adduced, is the probability of "camouflaged" bank credit being utilised for other than productive purposes. At one stage, we were reluctant to accept such a view. However, there seems little doubt now that withholding of stocks does constitute a

reason why bank Advances are almost static at higher levels.

In regard to what we may call industrial advances, prospects are that, if our hypothesis of rising production is correct, that the experience during the 1959 slack season will be a part parallel of the 1956 slack season. But there are important differences between the two slack seasons. The most significant of the differences is that, in 1956, a very steep import surplus—and a considerable part of this on private sector account—had to be financed by the banking system. This demand was superimposed on the demand arising from increasing industrial production. In the result, by the time the 1956 slack season had ended, banks found themselves in an over-extended position. In 1959, there is little import surplus to speak of on private sector account. Secondly, while industrial production may be rising, this is partly offset by a likely decline in Advances against stocks, especially of cotton textiles. Thirdly, from the point of view of resources of the banking system, Deposits will not suffer from being spent on imports. So, the prospects are that, though Advances may not decline by any considerable figure—the best that may be hoped for is likely to be the Rs 100 crores that Mr Iengar has called upon the banks to manage—a more strident increase in Deposits will set the seal on the 1959 slack season being truly slack.

Again, the first tranche of Government's borrowing programme will not impose a strain either on the banking system or on the money market. It is in such background that we expect the money market easiness to gather strength, as it were. At this juncture, some reference to the disappointing Treasury Bill Auction results is necessary. It is, we think, obvious that the new loan announcement has inhibited interest being shown in Treasury Bills. In spite, therefore, of falling interest rates, Treasury Bills are not at the moment popular, because banks are waiting for the new loan to be out of the way. Thereafter, applications should rise robustly, and the average rate of allotment should decline to just above the inter-bank call money rate. Banks, which this year have not been given a short or a short-medium dated loan, may be compelled to go in on a larger scale for Treasury Bills.

The decline in interest rates has made the new loan much more attractive. The success of the 3½ per cent 1960 and the 4 per cent 1970 has now been guaranteed. Since the first tranche of the borrowing programme has not offered anything specific for banks, we expect—and would strongly urge—a bank-orientated Government loan for the second tranche. This is a subject that we shall revert to on a future occasion.

Currency Contracts

A steep decline of Rs 16.00 crores to Rs 1737.79 crores has been registered in Active Note circulation in the returns of the Reserve Bank for the week ended June 19. Rupee Coin has also returned from circulation for Rs 0.87 crores. With a small adjustment under Rupee Securities, this decline in currency circulation is reflected in a substantial rise of Rs 16.86 crores to Rs 32.73 crores in the Reserve Bank's cash in the till.

In the Banking Department, there is, as was to be expected, evidence of inter-governmental transactions. A rise of Rs 4.80 crores to Rs 302.35 crores in Investments is indicative of deficit financing incurred by the Central Government during the week. This replenishment of resources was necessary, as we can see it, owing to the Centre meeting its commitments to the State Governments. Balances of State Governments have improved by Rs 8.36 crores to Rs 18.29 crores, and, at the same time, their indebtedness to the Reserve Bank has declined by Rs 4.35 crores to Rs 27.13 crores. The Central Government were able, after deficit financing, to meet their liability in respect of State Governments by drawing down their balances by Rs 2.74 crores to Rs 49.82 crores.

The progress of the slack season is evidenced in the fact that the Reserve Balances of the Scheduled Banks improved by Rs 7.11 crores to Rs 79.88 crores. This, however, was likely mainly to have been on account of the State Bank, whose cash in hand and with the Reserve Bank rose by Rs 5.91 crores in the relevant week. It would appear as if there has been a slight rise in the borrowings of Scheduled Banks from the Reserve Bank, as the Other Loans and Advances of the latter have increased by Rs 1.93 crores to Rs 61.70 crores.

The import surplus continues unabated, with Balances Held Abroad decreasing, during the week, by Rs 2.39 crores to Rs 15.62 crores.

According to the return of the State Bank for June 19, slack season influences have helped in an increase of Rs 4.52 crores to Rs 530.74 crores in Deposits. However, the total of Advances, instead of declining in conformity with the march of the slack season, is fractionally higher by Rs 0.31 crores at Rs 194.12 crores. With a small decline in Other Assets, cash in hand and with the Reserve Bank has risen by Rs 5.91 crores to Rs 29.73 crores.

The statutory statement of Scheduled Banks for June 12 shows that there has been a considerable rise of Rs 14.55 crores to Rs 1766.79 crores in Deposits—the highest

level of Deposits touched so far. Since the beginning of the year this means that Deposits have risen by over Rs 140 crores. Of the latest week's increase, Rs 2.89 crores are attributable to the State Bank. Meanwhile, the total of Advances has declined by nearly Rs 5 crores to Rs 1001.12 crores from Rs 1006.03 crores—and only Rs 0.60 crores of this can be seen to be on account of the State Bank. There is a fractional change in Investments. Borrowings from the Reserve Bank have been further reduced by Rs 4.57 crores to Rs 4.95 crores. Also, borrowings from the State Bank have been marked down by Rs 0.59 crores to Rs 6.88 crores. In the result however, Cash Balances of Scheduled Banks are just a bit lower at Rs 165.72 crores against Rs 166.20 crores. But we must remember that, in the week under review, the Other Assets of the State Bank rose by over Rs 6½ crores. There is reason to believe that what had been intended as an increase in the Investments of the State Bank prior to the new loan will now stand deferred.

From the point of view of the position of the Scheduled Banks as at June 12, 1959, it is difficult to guess at the possible capacity of Scheduled Banks to support the new loan programme of Government, the subscription lists for which are to open next week. Certainly, the State Bank's cash in hand is not such as to inspire confidence that it will be in a position, as last year, to put in Rs 35 crores. On the other hand, it is not at all unlikely that the other Scheduled Banks put together will be able to muster Rs 20 crores on July 1. Again, it is not possible to predict what may be the extent of subscriptions of other institutional investors which will stand reflected in the figures of Scheduled Banks. Nevertheless, it may be taken as certain that a decline of fair dimensions will occur in the Time Liabilities of Scheduled Banks in new loan week. The minimum decline that we expect is around Rs 15 crores—the maximum may be anything around Rs 35 crores.

Then, as far as the Scheduled Banks are concerned, on net Deposits of Rs 1692.32 crores as at April 24, 1959, their Balances with the Reserve Bank at Rs 87.99 crores exceeded the statutory minimum by Rs 29.91 crores. The net Deposits of Scheduled Banks as at June 12 amount to Rs 1712.26 crores. Balances with the Reserve Bank are placed at Rs 67.82 crores. Therefore, it would seem as if there is not much room for Scheduled Banks to use their Reserve Balances for purposes of subscribing to the new loan programme. Nevertheless, we continue to adhere to the view that the subscriptions of Scheduled Banks other than the State Bank will be placed around Rs 20 crores. Part of this no doubt, will be reflected in a decline in the Reserve Balances

Indian Finance

June 27, 1959

amounting, perhaps, to Rs 10 crores.

As far as the impact of the new loan on Reserve Bank returns is concerned, it is difficult to say whether the new loan will result, as it has been doing in each one of the recent years, in considerable reverse ad hocs being instituted by Government. Last year, the extent of cancellation of Treasury Bills during the new loan week amounted to the very considerable figure of Rs 100 crores. All that can be predicted at the

moment is that reverse ad hocs should in any event be not less than Rs 50 crores in the current year's new loan week.

United Industrial Bank

The accounts of United Industrial Bank Limited for 1958 show that Deposits and other accounts fell from Rs 1.48 crores to Rs 1.36 crores. Investment in Government securities was practically unchan-

ged at Rs 55.79 lakhs. The total of Advances was also changed but fractionally at Rs 1.02 crores, against Rs 1.01 crores. Cash Balances fell from Rs 17.59 lakhs to Rs 16.42 lakhs.

The income from interest and discount was marked lower at Rs 6.56 lakhs against Rs 7.25 lakhs. Commission, exchange and brokerage, however, have fetched more at Rs 0.78 lakhs against Rs 0.69 lakhs. Unfortunately, the difficult banking conditions during 1958, and especially the high cost of

Deposits, caused interest paid by United Industrial Bank to rise to Rs 3.57 lakhs from Rs 3.43 lakhs, in spite of decline in Deposits during the year of Rs 12 lakhs. Salaries and allowances also absorbed more at Rs 3.99 lakhs against Rs 3.62 lakhs. Thus, as against profit in 1957 of Rs 7,081, the bank experienced a loss in 1958 of Rs 44,810. However, after taking into account the amount brought forward from the previous year of Rs 48,917, the credit balance carried to the balance sheet is Rs 4,107.

A valuable investment... your car! Naturally you expect your money's worth — in terms of fine performance. To get such performance, you should give your car complete protection. MOBILLOIL gives your car full protection. From the moment you switch on the ignition, to top operating temperatures, MOBILLOIL separates moving parts with a tough, protective film. Europe's Two Free Trade Areas

By Paul Einzig

THE Stockholm negotiations for the establishment of a "Little Free Trade Area" consisting of Britain, the Scandinavian countries Switzerland, Austria and Portugal have been successful beyond the most

optimistic expectations. They have resulted in a virtually complete agreement as far as an industrial Free Trade Area is concerned, and by the time the Ministers of the seven countries will meet next month an agreement is likely to be reached also in respect of the inclusion of agriculture into the arrangement. It seems, therefore, probable that Western Europe will possess in the near future two free trade areas. Effort to unite Western Europe in one single comprehensive free trade area having failed for the time being, the next

best thing is to have two large territories within which trading will become increasingly free during the next few years as and when quotas and tariff are dismantled. There is, moreover always a possibility that these two territories might amalgamate into one free trade area in the not too distant future.

It would be absurd to claim that the possible advantages of the "Little Free Trade Area" bear comparison with the anticipated adventures of the greater area originally planned, or even with the actual advantage of the Common Market consisting of Western Germany, France, Italy, and the Benelux countries. Geographically the Common Market countries constitute a compact territory in the heart of Western Europe, while the countries of the Little Free Trade Area constitute, so to say, the outer ring around the Common Market countries. Moreover the economies of the outer "seven" are not nearly as complementary as those of the inner "six".

Even though the new arrangement provides opportunities for expansion of foreign trade between the seven participants, there is very little scope for an integration of their industries so as to derive the maximum benefit from that international division of labour which has been regarded, ever since Adam Smith, the main advantage of multilateral free trade. But Adam Smith would turn in his grave at the thought of achieving international division of labour, not through the free play of economic forces but through planned integration.

It is this planned integration that is regarded in London to be the potential source of considerable disadvantages for British industries. British official circles are not unduly worried about the effect of the gradual reduction of quotas and tariffs within the Common Market. The arrangements between French and German industries to become complementary to each other instead of being rivals are considered to be much more dangerous. Many French and German firms have agreed to specialise in certain products, with the result that they are in a position to mass-produce a smaller range of articles at a lower cost. It may take some time before the effects of such arrangements on international competition become visible, but they are expected to be much more substantial than the effects of quota and tariff reductions. And the arrangements are not likely to be confined to Franco-German relationship.

From this point of view the prospects of the "seven" are not nearly as promising as those of the "six". It is difficult to visualise integration between their industries comparable with that of the French and German industries. Indeed the view is held in British official and industrial circles that the proposed agreement between the "seven" is worth while, not so much for its own sake as for the

sake of paving the way towards an amalgamation between the two free trade areas. There will be an organisation in a position to negotiate on behalf of its member countries with the organisation representing the Common Market.

The Common Market in general and France in particular does not seem to be worried by the change in the situation that will arise when the Little Free Trade Area has been established. Until now the reactions have not been hostile, possibly because it is assumed in Paris and in other capitals of the Common Market that the new area will not be sufficiently effective to be really dangerous. The satisfactory improvement in the position and prospects of France under de Gaulle's regime may possibly mitigate the intransigence of the French attitude towards closer association with Britain and other countries left outside the Common Market. France has prevented the creation of a larger free trade area because French industries felt they could not cope with British competition in their domestic markets in addition to German competition. Once the effect of German competition has become an accomplished fact French industries may feel in a position to face additional British competition in return for the advantage of a larger free trade area.

Over and above all, political considerations point towards a better prospect for the extension of the free trade area over the whole of Western Europe. The existence of two rival free trade areas does give the appearance of a divided free Europe. Politically-minded French statesmen may be more impressed by this consideration than by economic argument.

Uneasiness over the Berlin position is also likely to reinforce the desire in Paris for preventing the Soviet Union unit a united front. Had the Geneva discussion proceeded smoothly the need for Western unity might not have appeared to be nearly so urgent. But, the deadlock and the prospective war scares may go a long way towards overcoming French opposition to an economic arrangement that would include Britain and a number of other countries. The chances are that Mr Khrushchev will go down in history as the real creator of the European Free Trade Area. If so, the right thing would happen for the wrong reason.

WORLD OF JUTE

Irregular Trend

PRICE movements in the jute markets last week have shown an irregular pattern as the two principal categories in the goods section have been subjected to alternate bouts of selling and buying. Though sentiment in the raw jute section has often been sympathetically affected by the trends in the goods section, the undertone here has been steadier in comparison. It is, however, gratifying to note that the outlook for jute goods has further improved during the past week. The statistical position of hessian is a powerful influence in maintaining the price level and as noted in these columns its prospects in the USA in view of the rising trend of burlap consumption there are generally considered good. There is every indication that the Argentine will make substantial purchases in the near future, though now some anxiety has come to be entertained as regards the offtake from this source following reports of political tension. A point to be borne in mind about the Argentine business is that that country has perforce to buy hessian goods to move its produce to consuming countries overseas.

Perhaps the most encouraging factor that has emerged in the industry in recent months is the revival of overseas interest in sacking. It may be remembered that this category of goods has been causing considerable anxiety till recently in view of its mounting stocks with mills. The situation has been sought to be met by switching over sacking looms to the production of hessians which have been in good request. True the rate of accumulation of sacking stocks has been slowed down, but the main problem has continued to be very much with the industry. The situation has, however, taken a turn for the better during the past three, four months thanks to the revival of interest in Indian sackings from a number of consuming countries. In recent weeks there have been reports about enquiries from Indonesia, Burma, Egypt and Peru. It is believed that the demand from Australia which still continues to be meagre may pick up in coming months as the lack of interest is attributed to the late rains. During the week under review reports had it that China had made enquiries for near delivery heavy goods. It will be clear, therefore, that there are already strong indications of a substantial increase in demand for both the principal varieties of jute goods.

One such indication is in the figures for despatch of jute goods from mills during last (May) month. Total despatches are nearly 7000 tons higher than in the previous month and what is significant is that almost the entire increase has occurred in despatches for export.

The jute goods market opened the week on a steady note. Though the volume of business passing was not large prices were well maintained mainly due to covering in ready hessian. Hessian 40"x10 oz June was done at Rs 42.75 on Saturday while B Twills was maintained at Rs 97.05. Sacking prices declined by 65 nP in the course of the trading on Monday as B Twill's June was finally placed at Rs 96.30.

The reactionary tendency was due to selling pressure in the futures market. Hessian 40"x10 oz, however, did not sustain much loss and was placed at Rs 42.60.

The trend in sacking was completely reversed on Thursday when following reports of business with China in heavy cees for delivery next month operators revived their support for B Twills which as a consequence recovered to close at Rs 97. The hessian section, however, came under selling pressure on the news of political upheaval in the Argentine. As marketmen were expecting sizable business from this quarter the news about the disturbance there had a disturbing effect on sentiment in the hessian section. Toward close there was some support at the lower

levels in sympathy with the heavy goods section. Hessian closed at Rs 42.50. Wednesday found the market slightly easier all along the list as trade except for some covering business in the sacking section was meagre. Hessian was particularly weak as selling pressure continued from the futures market. Hessian 40"x10 oz was finally placed on Wednesday at Rs 42.30 with B Twills at Rs 96.85.

In the raw jute market sentiment was rather subdued in earlier dealings in sympathy with the goods section but in later dealing there was some improvement. Assam Bottoms which closed at Rs 22.50 on Saturday came back to Rs 22 on Monday. The rate recovered by Wednesday to Rs 22.25.

Bonus announcement

The Life Insurance Corporation has pleasure in announcing the results of the First Valuation of its Assets and Liabilities as at 31st December 1957. The valuation covers all policies issued by the Life Insurance Corporation as well as those issued by the erstwhile insurers whose assets and liabilities have vested in the Corporation. These comprise 56,83,414 policies assuring a sum of Rs. 1,472,81,31,684 including bonuses and 11,539 annuities for Rs. 72,80,120 per annum. The valuation discloses a gross profit of Rs. 33.04 crores.

The Life Insurance Corporation Act vests the Corporation with the power to classify policies for the purpose of declaring differential bonuses wherever necessary. The Corporation has formulated a provisional scheme of differential bonus and has grouped the policies issued by the different insurers into 7 Groups for the purpose of declaring differential rates of bonus according to the financial strength of the insurer concerned.

PAYMENT OF BONUS: Pending finalisation of the scheme of differential bonuses, bonus at the rates given in the table below would be payable only in respect of policies becoming claim by death or maturity after the date of valuation and before the final scheme of differential bonus is approved by Government. The Corporation hopes to work out this final scheme of differential bonus shortly and get Government's approval to the same. As soon as the scheme is finalised the Government's approval is obtained, bonus according to that scheme would vest in the policies. It is expected that the rates of differential bonus finally declared would not differ materially from the rates now declared on policies becoming claims by death or maturity.

The rates of bonus applicable to the various Groups are given in the following table:

GROUP	Rates of Bonus per annum per thousand sum Assured:	
	Endowment	Whole Life
	Rs.	Rs.
1. Special Group	16.80	21.00
2. Group I	14.00	17.50
3. Group II	11.20	14.00
4. Group III	8.40	10.50
5. Group IV	5.60	7.00
6. Group V	Nil	Nil

In addition, there is a Miscellaneous Group of policies which will be dealt with in a special manner in view of the different methods of distribution of profits adopted by the old insurers concerned. Detailed information giving names of the insurers included in each Group will appear in Leading Newspapers on June 20th, 21st and 22nd.

WORLD OF TEA

Demand Still Slack

The results of the Second Export sale held this week in Calcutta has strengthened the belief that buyers may not be in any haste to take their requirements because they know that supplies will be plentiful. For, apart from the continued good output in the principal tea growing countries, there are indications that competition from the new entrants in the export field is stiffening. It would appear that as far as our country is concerned energetic steps have to be taken if the export performance in tea is to be maintained at least at the previous year's level. If the export figures for Non-Indian tea for last month are any guide the position as far as can be discerned so far and as compared to last year is not of a variety that can be viewed with much enthusiasm. Tea exports from North India during May are placed at only 8.35 million lbs as against 27.82 million lbs in the corresponding month of last year. The total for the first five months of the current year at 89.41 million lbs is against 129.43 million lbs for the same period last year. While a decline in off-take has occurred in almost all cases, the steep fall in exports last month is mainly brought about by the poor off-take by UK which took only 2.84 million lbs as against 8.6 million lbs in May 1958.

The disappointing figures for the first five months of the year should not, however, be taken to mean that the export performance in the coming months may not record much improvement. While it is true that internal off-take will have to be considerably stepped up to cope up with the new situation that is fast developing in the world of tea, it is not as though the outlook for exports is bleak. India's expanding trade with the Communist countries may be expected to offset to some extent the decline elsewhere. Moreover, our efforts to popularise Indian tea in consuming countries are already meeting with success. For instance last year Indian tea has made considerable headway in Canada. Off-take of Indian tea by that country has increased to 19.1 million lbs as compared with 16.9 million lbs in the previous year.

Though offerings at this week's export sale (sale No 2) were lower at 27.119 packages demand was found to be again at a disappointing level. Barring the few bright useful liquoring descriptions which

met with some demand, the rest of the offerings encountered a quiet market with the result that rates declined from 10 to 16 nP from previous levels. There were many withdrawals especially in Fannings which recorded considerable decline with Cachar and Dooars Broken also fetching lower prices. While Bright Leggcut Dooars had buyers at the lower levels, enquiries for the more ordinary sorts was very poor resulting in some withdrawals. Fair support was forthcoming both for whole leaf grades and Darjeelings but prices fetched were generally below valuations. The latter were frequently easier with rates up to 30 nP and more lower on occasions. Demand was good for the few useful CTC teas and bright Assam BOP's Other descriptions and all orange Fannings met with an easier market with rates showing

a decline upto 30 nP. There were some withdrawals in these offerings.

Quotations: Clean Black Pekoe Rs 2.10; Plain BP Rs 1.60 to Rs 1.66; Plain Fannings not quotable; Medium BP not quotable; Medium Fannings not quotable; Best Assam CTC BP Rs 3.20 to Rs 3.40; Best Assam CTC Fannings Rs 3.60 to Rs 4.00.

At the export sale held in Cochin on June 16, prices were generally easier. The quality of the majority of the offerings which totalled 2 million lbs. was rather poor. Whole leaf grades met with a firm market with the well made types in this category taken at slightly higher rates. Fannings were well supported but buyers mainly followed quality in high grown teas. Among Low Medium and Medium, the latter met with better demand but prices were

generally easier in both categories. Though demand was good for tippy teas rates were easier.

At the internal sale held on June 18 Cochin 7 lakh lbs of dusts were offered and demand was generally good. Prices, however, were easier with low medium and medium dusts lower by 10 to 15 nP. High grown teas displayed a hardening tendency as did milled dusts.

Offerings at the London auction continued to be large as those at last week's sale were placed at 73,456 packages. A decline in quality was noticeable in the price ranges. This was to be expected because the offerings comprised end-season manufactures from North India and Ceylon. Though demand was good earlier support lessened thereafter with prices steady only around good quality types.

This expert has won the trust of millions in the label 'Sanforized'

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

This is how

he does it:

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications before it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed everywhere in the world!

Look for

on the label

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay-5

SAN. 59.1A

WORLD OF BUSINESS

Rubber Manufacture

The rubber manufacturing industry has now grown to a stage when the country is not only self-sufficient in respect of most of items, but there is surplus manufacturing capacity in some lines which can be profitably utilised for developing exports. The consumption of raw rubber can be taken as a reliable index of progress of the manufacturing industry. During the ten years from 1948 to 1958, the consumption of raw rubber has increased from 19,719 tons to 38,052 tons, an increase of 92 per cent. While the progress of the industry as regards growth of production and manufacturing capacity is very encouraging, exports in recent years have met with an unfortunate set back. From the peak level of Rs 176.20 lakhs in 1953-54, the value of exports has dropped to Rs 15.71 lakhs in 1958. To the extent that the decline is the result of the establishment of tyre factories by international companies in countries which formerly used to take their requirements from India, long and strenuous effort will be required to reach the tentative target of Rs 156.59 lakhs suggested by the Rubber Panel of the Chemicals and Allied Products Export Promotion Council. Better results could be attained by concentrating on new items.

In his address to the annual meeting of the National Rubber Manufacturers' Association, Mr K. N. Mookerjee has listed five difficulties in the way of export of Indian Rubber products. These are: (1) Irregular supply of some raw materials; (2) Inadequate import licences for others; (3) unport economic Shipping Freight; (4) Higher cost of indigenous rubber (5) Unfavourable competition in export markets. He has made the reasonable suggestion that facilities of drawback of custom duty and rebate of excise duty on raw materials/components used in the manufacture of export commodities should be made available to rubber products as well.

Maintenance of production by the manufacturing industry depends on steady supply of raw rubber at economic prices. Mr Mookerjee has drawn pointed attention to the fact that the position of raw rubber has been steadily deteriorating. The gap between industrial off-take and the widening from year to year. The deficit has increased from 37 per cent of total consumption last year to 50 per cent during the first

quarter of the current year. In this connexion Mr Mookerjee has also drawn attention to the unsatisfactory progress of the replantation scheme and regretted that the substantial amounts collected from Rubber Manufacturers in the form of development cess and the difference between the price of imported rubber and Indian Controlled rates which accrues to the Rubber Board, have not been properly utilised.

In order to enlarge the sources of indigenous supplies, Mr Mookerjee has suggested that every effort should be made to encourage rubber cultivation in the Andaman and Nicobar Islands. This will not only be useful in filling the gap between indigenous supplies and requirements, but also help in speedy rehabilitation of the economy of the islands. Mr Mookerjee has also referred to the regrettable hold-up in the plans for establishment of synthetic rubber plant in India as a result of shortage of foreign exchange. As the country is now importing about

four crores worth of rubber, both natural and synthetic every year and the import bill is likely to increase, even from the point of view of saving foreign exchange it will be advisable to speed up the proposed plant at Bareilly. The same argument will apply in regard to the proposals for the manufacture of certain other important rubber chemicals, including carbon black.

Steps indicated above for ensuring supply of raw materials and ingredients are essential for maintaining the rate of progress of a manufacturing industry catering to a rapidly expanding market. In this respect, the progress made by National Rubber Manufacturers Limited is outstanding. Over the last ten years, sales have increased fourfold. Satisfactory progress has been made in the implementation of the expansion schemes of the Company which has recently started manufacture of cycle tyres and has installed the latest model of automatic Cycle Tyre Unit which will go into production shortly.

AIMO Directory

AIMO Directory of Indian Manufacturers:—Second Edition (1958) Published by The All-India Manufacturers' Organisation, Cooperative Insurance Buildings, Sir Pherozshah Mehta Road, Fort, Bombay-1.

The Second Edition of the AIMO Directory of Indian Manufacturers is, as is to be expected, an enlarged and improved version of the First edition that came out in 1952, and would be welcomed as perhaps the only exhaustive and up-to-date book of reference for the business public. The Directory gives almost all the information that would be expected from a publication of its kind, namely, exhaustive list of the names of manufacturers of different products covering about 37,000 industrial establishments, particulars of individual industrial establishments, statistics relating to installed capacity and production of various industries, etc. The Directory thus fills a major gap in the field of industrial statistics.

WORLD CHAMPIONS CHOOSE Firestone

..SO SHOULD YOU

because—in the world's foremost racing events, Firestone tyres prove their safety year after year in standing up to the tortuous twisting, pounding and heat without a single tyre failure. You, too, can have this same safety and dependability because the Firestone tyres for your car are built with the same safety construction features as racing tyres. Firestone tyres are Safety-Proved by performance.

Glen Roberts, winner of the Ninth Annual '500' race at Darlington, South Carolina, said that his wonderful performance was mainly due to his Firestone tyres, which had to withstand a track temperature of 121 degrees.

TUBELESS OR WITH TUBE

US Notes

An official government report issued last week confirms what private estimates have been indicating for some months: namely, that the capital spending revival in the United States is hitting an even faster pace than expected. Moreover, the trend toward larger business investment in new facilities seems to be accelerating, pointing to further substantial gains in 1960.

Last week's joint report by the securities and exchange commission and the Department of Commerce estimates that business investment in new plant and equipment, which has been on the rise for the past six months, should reach \$32,600 million for all of 1959. This is an increase of nearly \$800 million over the total projected by the same agencies in their previous survey last March, just three months ago. This means that this year's by 7 per cent, instead of the 4 per cent estimated in March.

The quarterly breakdown for 1959 supplies a graphic illustration of the upward trend, in the annual rate of spending for new plant and equipment. In the first quarter, it was \$30,600 million. For the second quarter, now drawing to a close, the estimate is \$32,300 million. For the third and fourth quarters, rates of \$33,400 million and \$34,100 million, respectively, are projected.

This new government report parallels closely the results of two recent private studies. One by the McGraw-Hill Company, Publisher of Business Journals, also showed a 7 per cent increase in over-all capital spending plans this year as compared with last.

The other, by the National Industrial Conference Board (NICB), showed an even larger gain. It would be noted, however, that the NICB study was concerned not so much with current spending programmes as with appropriations—that is, money set aside by companies for later investment in plant and equipment. As such, these appropriations normally would not show up as actual spending for six months to a year—another strong indication that the growth of capital outlays will continue into 1960.

Further substantiation of the trend is found in two key business barometers: new orders for machinery and new contracts for industrial construction, both of which are obviously bound up to a large degree with plant and equipment planning.

As noted by "Business Week" magazine, a McGraw-Hill publication, new orders for machinery have been rising markedly since the end of last year. In the first four months of this year, these orders were running nearly 40 per cent above the 1958 pace and topped the record rate of 1956 and 1957 by 15 per cent.

The index for new construction, based on data gathered by "Engineering News-Record," another McGraw-Hill journal, has lagged behind the upturn in the machinery index, and is well below the heights reached in 1956. It has, nevertheless, more than doubled in recent months.

What is more, McGraw-Hill economists say that it is going higher still. They base this conclusion on another "engineering news-record" statistical series covering "proposed projects"—industrial projects that are in their initial planning stages, but have not yet been translated into firm construction contracts. This indicator, which moves some six months ahead of the new contracts index, is swinging up strongly at the present time.

Government economists see the rise in plant and equipment outlays as a favourable and healthy sign, reflecting both business confidence and the steady rise in retail sales. They do not, however, see in the making a capital spending rush of 1957 proportions, when plant and equipment expenditures reached a record \$37,000 million.

Even if this record should be approximated next year, it would have to be considered in the context of an economy significantly larger than in 1957. Right now, the US economy is turning out some 4 per cent more in the way of goods and services than it was in 1957, and its output is likely to increase further later this year and next.

Additionally, it is generally agreed that a good part, perhaps the major part, of the planned capital outlays currently is being earmarked for modernisation rather than expansion of capacity. This may well explain, as business week points out, why new machinery orders are soaring to new heights while industrial construction contracts, though climbing, are rising more slowly.

Sweden

A draft plan for a Trading Association among the "Outer Seven" was drawn up by officials from Austria, Denmark, Norway, Portugal, Sweden, Switzerland and the United Kingdom meeting at Saltsjobaden outside Stockholm on June 1-13. It is expected that there will be a meeting of ministers of the Seven countries in Stockholm at the beginning of July to consider the report and take decisions on it, it was said in a communique from the meeting.

The officials had been charged by their governments to discuss the

problem of economic cooperation in Europe and to examine, on a non-committal basis, methods of reopening negotiations with the Six Nation Group and the other members of OEEC in order to remove trade barriers and establish a multilateral association embracing all members of OEEC.

In particular, they had been charged with examining the problems involved in creating intimate trading arrangements between the Seven countries, what the rules and institutional arrangements should be and whether it could be so devised as to promote negotiations for a wider European settlement.

The new plan, in respect of industrial products, deals with the abolition of tariffs and quantitative restrictions, rules to ensure fair competition and rules for identifying the goods which would move freely between the members. The immediate objective would be a reduction of tariffs by 20 per cent on July 1, 1960.

The plan further provides for special agreements on agriculture and fish.

It is understood that there will be no supranational authority but a steering board and a relatively small secretariat.

The value of Swedish exports in the first quarter of the current year exceeded that of the same period 1958 by 5 per cent, while the value of imports dropped by 14 per cent, according to a survey by the Swedish Institute of Economic Research. Breakdown figures for exports show a fall in prices of close on 2 per cent and an increase in volume of 8 per cent while for imports the fall in prices was close on 5 per cent and the decrease in volume 9 per cent.

An analysis of the increase in the export volume shows a rise of 26 per cent for timber shipments and of 23 per cent for pulp shipments in the first quarter of 1959 compared with the same period last year. Paper exports went up by 2 per cent, including a heavy rise for newsprint, unchanged shipments of fibre-board and some decline for other kinds of paper and board. Forest products, taken together, showed a rise of 16 per cent.

In the metal sector there was a decrease of 16 per cent for iron-ore exports, while shipments of merchant iron and steel went up by 15 per cent.

Machinery and instrument exports registered a drop of about 10 per cent, whereas means of transport rose by approximately 40 per cent, largely due to a temporary rise for ship exports but also to a continued upswing for car exports.

The comparatively heavy decline in the volume of imports should be viewed against the background of the unusually large imports in the first quarter of 1958, the Institute says. However, there was a decrease for all major commodity groups except agricultural products.

Indian Finance

Export prices dropped by an average 2 per cent from the last quarter of 1958 to the first quarter this year. Within this average iron ore prices went down by 1 per cent and timber prices by 7 per cent. Average import price remained unchanged.

The heavy increase in stocks in the Swedish mining, steel and engineering industries in 1955-57 amounting to about Kr 800,000,000 900,000,000 per annum, was followed by a decrease in stocks, a current prices of some Kr 60,000,00 in 1958, according to a recent survey. Total stocks in these industries at the end of 1958 are estimated at Kr 8,400,000,00 (£ 579,300,000; \$1,650,000,000).

However, in terms of volume stocks in the industries concerned rose by just over 1 per cent. This compares with an annual increase of 11-12 per cent during the preceding three years.

Britain

United Kingdom exports rose in May to £299,200,000, just beaten an all-time record reached in May 1957, according to provisional figures issued by the Board of Trade in London.

Imports fell from their high level in April, and the visible trade deficit was £1,500,000, the smallest ever recorded.

Exports follow the improvement shown in April, when they were valued at £295,600,000. In April and May together they were 13 per cent above the rate for the first quarter of this year, and 9 per cent above the corresponding months of 1958.

Imports amounted to £310,900,000—£35,000,000 less than in April. In April-May together they were 4½ per cent above the rate for the first quarter and 7 per cent above the corresponding months year ago.

Re-exports were £10,200,000 in May—£1,000,000 less than in April.

Excess of imports (c.i.f.) over exports and re-exports (f.o.b.) was £1,500,000 in May, compared with £39,000,000 in April.

Commenting on the figures, Sir David Eccles, President of the Board of Trade, said: "The trade results for May are good news. The visible deficit was at a record low level. I do not think it will stay so low, as with expanding trade we shall import more."

"On the other side of the account, the export figures make an excellent showing. The rise in April is continued in May and with the world pulling out of trade recession, exports are already expanding in a satisfactory way."

"This is due to the vigorous search for markets abroad which our business men made when home trade was not good. Now they will be able to sell more at home and abroad."

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

which instead of living, they are domiciled. They are not cattle, they are not ciphers, they certainly are not human beings; they are personnel."

Sir Ernest Gower, from whose delightful book I am quoting this passage, has gathered hundreds of similar nuggets. Meant primarily for officials, he warns them against srares hidden in words like "backlog" and "bottleneck". The latter is a particular favourite in this country officials as well as leader writers obliged to follow the fortunes of the Plan find it useful as a portmanteau word for every kind of difficulty. It is no longer a special kind of constriction preventing a free flow. Consequently, bottlenecks are not "narrow" but "big"—in which case I cannot see what there is to complain about. But since the man using the metaphor does not visualise it, he can go on to talk without any sense of incongruity of "ironing out bottlenecks". It is clear that the other metaphor taken from the launderer's trade is equally dead to him. So dead is it that it is possible to speak of a "bottleneck in bottles". Since this was a newspaper headline, it may have been intended as a witicism, but other examples quoted by Sir Ernest Gower cannot be dismissed so lightly. Bottlenecks are not only, as we may in our innocence imagine, narrow; they are also "drastic", "far reaching and decisive". There are "overriding bottlenecks" and "world wide bottlenecks" and the most menacing of all—a "vicious circle of interdependent bottlenecks"—a phrase that many a leader writer may find useful in describing our embarrassment over the Plan!

In most cases, jargon is no more than an amiable foible. "Under the impression," said Mr Micawber, "that your peregrinations in this great metropolis have not as yet been extensive, and that you might have some difficulty in penetrating the arcana of the Modern Babylon..... in short," said Mr Micawber in a burst of confidence, "that you might lose your way....." The Micawbers of the world are pretty free with verbal coins (presumably because they are short of the other kind). "They do not," as a leader in the Times once querulously complained, "go, they proceed. They do not have, they are (or more often, are not) in possession of. They do not ask, they make application for.....Once they either kept things or gave them up; now they must retain or surrender them. Want (it is true) they do not know, nor need; but deficiencies and requirements are just as inconvenient. They cannot eat, they can only consume. They don't wash, they only perform ablutions; instead of homes, they have places of residence.....In

the spiritual potential of man", we know that using the language it does, it will fail to do what it presumably wants to do. A few days ago, I read in the papers of a conference of publishers referring to books as "spiritual goods"; I could, for the first time, see the justice of sales tax on books and of customs authorities looking for contraband among them. Curiously, the conference, after describing books in this fashion, demanded special treatment for them. After this, it is a mercy that booksellers do not describe themselves as licenced spiritual victuallers. One should not be surprised if, one of these days, priests are described as God's salesmen since there is no reason why there should not be sales promotion for salvation as for nylon socks.

Oftenest, however, the pleasures of running jargon down to earth are less grim. Panjandrums, great and small, find in it a distorting mirror of their own importance. When a man writes, "it is also of importance to bear in mind the following considerations.....", he is doubtless weighed down with the burden of the important things he has already borne in his gigantic mind and which he doubts whether the other minds will be able to support. In the following example, the analytic powers of the "scrutinising authority"—an useful vague enormity to strike terror in the hearts of people—have got paralysed in coils of passive voice: "The pro-

posals made in response to this request show differences of approach to the problem which relate to the differing recommendations of the Committee' report and include some modification of those recommendations". A man who "can only deal with application of a highly essential nature" and in a position to disapprove of "importations from the USA unless there is a compelling case of essentiality" must be very "essential" person indeed! He is, therefore, in a position to inform a farmer that "it is confirmed that as a farmer you are granted high essentiality" Fancy that! What an important matter this important man must be if he is in a position to grant mankind's most indispensable man a certificate of "high essentiality"!

Almost all the vices of jargon can be traced to a desire to bully from the public a disproportionate homage to its user. Latinisms and learned words (often misused, like repercussion, anticipate, dilemma, envisage, implement, optimum) and abstract nouns ("the actualisation of the motivation of the forces must to: great extent be a matter of personal angularity") and, of course, the passive voice are used to displace the human voice by an oracle. Authority with capital A can hardly be expected to do things, it can only "achieve". In a democracy, quite a lot of time will have to be wasted by attempts to bring home to the public "the desirability of attaining unanimity". Jargon is really incantatory in its effects, like the abracadabra of witless doctors. You will not think much of the Finance Ministry if it told you that it wants to stop tax evasion by making it difficult for a man to lie about his income, expenditure and savings at once. But if you are told about the "integrated tax structure" you are vaguely impressed by the presumably uncanny mysteries behind the phrase. "Perspective plan

... a medium of progress

JAXFLEX POLYETHYLENE PIPE

in cold water services

Ask Jacks about it

William Jacks & Co. Ltd.

(Incorporated in England. Liability of Members Limited)

CALCUTTA BOMBAY MADRAS NEW DELHI

ning" means nothing more than that we should look a little beyond our economic nose. But used skilfully, it can stir up a feeling of something terribly important going on in the offices of the Planning Commission. Integrated tax structure stirs the memory and brings up vague irrelevances from the psychological and mathematical sciences. Phrases like "integrated personality" and "integral calculus" operate subliminally and the very incomprehensibility of their esotericisms gives you a sense of awe. Likewise, the word "perspective" makes you uneasily aware of the arts and unconsciously you impute some-

thing tremendously above your head going on. And since bourgeoisie is ashamed of nothing so much as its alleged philistinism, the phrase perspective planning wangles a respect composed partly of secret shame and partly of ignorance. Incidentally, mixed metaphor is a very common trick of jargon. "Social Engineering" and "dynamics of the economy" are vogue phrases (and vague) that were striking enough when they first came to be used, but have become dusty clichés by daily use.

★ The real viciousness of jargon consists in the humbug it hides. A

All roads lead to home

Yes. But not enough homes have roads leading to them. Think what this means. Cut off from the world outside. Every journey a major undertaking. Isolated from new ideas... new influences. Out of touch with progress. Pleasant enough for a holiday. But for a lifetime? Miles away from medical aid. Miles away from school. Miles away from the nearest market. Miles away from everywhere. Millions of people live like that in India. Today.

That's why roads must have topmost priority

And that's why everything to do with roads is so important.

Bitumen, for example.

One of the better road-building materials.

Inexpensive. Easy to handle.

Long-lasting. Hard-wearing.

Supplied by Burmah-Shell.

**BURMAH-SHELL
BITUMEN
FOR BETTER ROADS**

Burmah-Shell Bitumen is more than an important material—it's a service. Burmah-Shell make available skilled engineers, whose job it is to assist in the construction of roads. Good roads. Cheaper roads. BURMAH-SHELL BITUMEN CAN BE SUPPLIED IN BULK. THIS IMPORTANT DEVELOPMENT, PIONEERED BY BURMAH-SHELL, SAVES VITAL STEEL BECAUSE IT MAKES DRUMS UNNECESSARY. BULK BITUMEN IS PARTICULARLY SUITABLE FOR MECHANIZED ROAD CONSTRUCTION—AND IT IS MUCH CHEAPER IN ITS INITIAL COST.

Indian Finance

and knowledge of all vibrations which are thoughts and its vibrations of infinite velocity are expressed in the media of graduated molecularity at reduced speeds".

★

But the greater danger is not so much of humbugs fooling us as our being unable to understand genuine experts. This is either because of the expert's inarticulateness or because of the obscurity inherent in the truth he is trying to explore. Mr Cooke quotes the following example from The New York Times: "The three project 'Angus' detonations involve relatively small-yield nuclear devices in a virtual vacuum, more than three hundred miles high. The force of each detonation is believed to have been in the kiloton rather than the megaton range. The purpose of the test, to put it in a very much oversimplified form, was to determine whether the electronic radiations, released in the upper altitudes by nuclear detonations, represent a fraction of the existing high altitude radiation or vice versa." Mr Cooke informs us that another expert assured him that this account was really as over simplified as claimed. But, despite Mr Cooke and the expert, I believe the purpose of the test could have been clarified better if the nature of radiation and the mode of measuring it had been explained in simple terms. In fact, I have read such explanations elsewhere. There are, to be sure, aspects of reality that are hidden from the unconstructed eye. But any expert worth his name should be able to explain in intelligible language the practical consequences of his intuitions and experiments. If he does not do it, the reason can only be that he is either a fraud or a freak.

★

Distinguished journalist—you have heard the phrase before; a great servant of the country, yes, and similar phrases came in last week for over-worked use. Not surprising at all, when you realised that Kasturi Srinivasan, after a rich and full life, had gone the way of all mortal men. There is not much that remains to be said of him, that has not already been said by some one else. His achievement, of course, was that he transformed what was his rich legacy from his father into a national institution; no leader can afford these days not to read The Hindu. But, if I may, I would like to refer to what may have been considered a blemish, but which in effect was inestimable service to the community. At a time when, in South India, opportunities for the down-trodden Brahmin were few and far between, the organisation that Kasturi Srinivasan built up was a cherished and esteemed source of employment opportunities. If, today, the South Indian is ubiquitous in the newspaper industry, it must be not a little due to the fact that The Hindu was inestimable and priceless training ground. In a very real sense, therefore, an important facet of his services was the duty he discharged, not to the nation, but to the community.

GATEWAY GOSSIP

T was, readers may recall, oughly 2½ years ago when I had occasion to panegyris Sir B. Rama Rao when, with changes afoot in the Reserve Bank hierarchy, his somewhat premature retirement was announced. Although I have not him since, now and then, nothing materially developed, except perhaps for a series of articles that he wrote for The Times of India, which merited my taking up the ex-Governor of the Reserve Bank as topic for Gateway Gossip. Last week, in an address to the Rotary Club here, Sir Benegal again showed that, as an old civilian, he is rich in the virtues of tact and diplomacy, and last week's speech gives me a welcome opportunity, to accord what place I can and what effort I am capable of to an old friend.

Mind you, I was in some trepidation when I learnt that Sir Rama Rao was going to address himself to the task of assessing the achievements and failures—the Dids and Didn'ts of the Congress Party. I am sorry to confess that betokens, on my part, a failing in confidence or in trust. There is little that he said which is not unexceptionable. There is scarcely anything in his criticism that is not just or fair; there is neither bitterness nor resentment, but only plain objective analysis as one man's objectivity can see the Indian scene as a whole after having been himself in a seat of great responsibility.

Sir B. Rama Rao had no hesitation in drawing attention to the "magnificent record of achievement" of the Congress for some years after independence. The political and economic integration of the Indian States; the establishment of a secular State, the enunciation of a foreign policy based on tolerance; the evolution and implementation of a policy of non-alignment and co-existence; the prosecution of fiscal and monetary measures that made possible the development with stability; the expansion of banking facilities; and a clearly defined industrial policy resolution—these sum up the achievements of the Congress, which could be described as "the foundation for the functioning of a democratic system and for the development of the country by democratic methods". But, suddenly, the ex-Governor of the Reserve Bank seems to sense achievements yielding place to failure, successes which merely left—the phrase is mine, not his—a bitter taste in the mouth. The trouble is, that the vast masses of the people will find satisfaction only from tangible evidence of some relief for them in their long struggle to satisfy their elementary physical necessities. It is here that Sir B. Rama Rao charges the Congress with failure.

An Assessment of the Congress Party

He starts out with a denunciation of the fact that, so long after the phrase began to be mooted in Congress circles, what the socialistic pattern of society, which is the Indian object, is remains yet to be defined in clear and unambiguous terms. Is it a mixed economy? Yes, in so far as the impression the Indian leaders have sought to foster in the international context. But, within the country itself, Sir Benegal says that "the emphasis has recently been on the expansion of the public sector and removal of inequalities in wealth and income by fiscal and other measures".

Not that Sir B. Rama Rao is against the establishment of a socialistic pattern of society. But I may infer that, just as Mr Nehru has said often enough that the age old concept of capitalism is dead and buried, so too as archaic is the traditional concept of a welfare state. Sir Benegal seems to hint that it is very necessary for a welfare state not to depart from an individualistic outlook.

Sir B. Rama Rao goes on to list what may have been the reasons for Congress policy of recent years being somewhat misguided. Firstly, a strict regard for priorities has been lost sight of. Where was the need to pay such great attention to the Directive in the Constitution in regard to prohibition, when that same solicitude for that Directive made greater the task of achieving another Directive, that in regard to education? India, he

says, "is one of the most illiterate and also one of the most sober countries in the world". With the high priority given to prohibition, each crore of rupees lost in revenues could have been used to maintain 10,000 teachers. I cannot help but agree with Sir B. Rama Rao on this question.

Secondly, he says, "the Government have committed themselves to policies and they have formulated plans without carefully considering their practical implications or their administrative feasibility". He has given no instances, no examples of a government which acted high-handed and it is here that I would beg leave to differ with him. For every step that has gone awry, nine have been successes. Both for means and for ends, the Government have held the highest and keenest regard. Prohibition may have been wrong—but did not the Centre utter a word of caution against it? The Plan most certainly is not wrong, and are the taxation policies to be criticised? Just where is it that you could assert that Government have been guilty of Himalayan blunders? Modification of policy is necessary, but where have Government shown themselves reluctant to revise? Was not the Second Plan itself re-appraised and revised and does not even the tax policy of Government show a flexibility and pragmatism?

The third issue that Sir B. Rama Rao has raised concerns what he calls the private profit and power

psychosis. He has, quite rightly, taken up arms against the sustained campaign by Congress followers against the profit motive. But, as we have recently seen, it is as necessary for Government enterprise as for industries run by the private sector that they should yield a profit. What needs to be criticised here is the irresponsible mongering not of those in power, because they are responsible enough, but of those who constitute the camp followers. Somewhat vaguely, Sir B. Rama Rao flings a veiled barb at politicians, asserting that the craving for power is worse than the craving for profits. I am not sure that the Indian politicians are more guilty of the abuse of power and authority than any else in other parts of the world. I am not sure either that the politician has a superior attitude to the business man, but, certainly, I am in entire agreement with one who was a distinguished Governor of the Reserve Bank when he says:

"We require the idealism and drive of the politician, and also the enterprise, the creative urge, the practical outlook and the organising capacity of the better type of businessman in the formidable task of reconstruction. Without a vast and country-wide development of industries, which must mostly be in the Private Sector, the problems of unemployment and a higher standard of living cannot be solved."

THIS IS A YOUNG FIRM

but with some of the
oldest business houses
for its clients!

Four years ago, **acbi** was founded upon two ideals; *first*, absolute sincerity with our clients; *second*, absolute objectivity in our approach to problems, including those of labour-management relations.

Surprisingly, if significantly enough, we found that this approach was welcome to managements. Indeed our forthrightness has made more friends for our firm than we thought it possible!

Well, we have grown—not spectacularly, perhaps—but, then, we are still growing! And we are proud of the fact that our roster of clients includes some of the best and oldest business houses in the country.

acbi is currently assisting reorganisation of industries in both the public and private sectors.

Let **acbi** assist you in finding answers to your problems. We specialise in problems relating to labour-management mediation; job evaluation; work study; office reorganisation; production control; waste control; stores control; incentive schemes; layout and material handling; and budgetary control.

BOMBAY REVIEW

GATEWAY NOTES

Bombay State Financial Corpn.

The Third Annual Report of the Bombay State Financial Corporation reveals the growing volume of business done by the Corporation to assist the setting up of new industries as well as the expansion of existing ones both in the large-scale sector as well as small-scale sector. The Corporation has today sanctioned a sum of Rs 3,83,60,000 to 181 concerns inclusive of a sum of Rs 3,75,000 representing the amount subscribed to the Debentures of one concern. Against this, Rs 2,23,92,450 has been actually disbursed of which a sum of Rs 69,74,993.48 has been recovered by way of repayments leaving the present outstanding at Rs 1,54,17,456.52 as per balance sheet as at 31st March 1959.

The number of applications received during 1958-59 totalled 97 at was for Rs 3,22,52,881 while the number of applications sanctioned was only 27 for Rs 62,40,000. Of these, 4 applications were for new projects by existing units, 6 for setting up new concerns, 11 for completing programme of expansion and for manufacturing new products by existing constituents and 6 for new applicants for the same purpose.

The industries to benefit from the operations of the Corporation were, general engineering, spinning and pressing, pharmaceuticals and chemicals, and textiles. General Engineering with a figure of Rs 27,35,000 claimed the largest share of loans sanctioned by the Corporation, while textiles accounted for Rs 9,70,000.

The working of the Agency Arrangement with the Bombay Government for disbursing financial assistance to the small-scale and medium industries is also considered satisfactory and the Corporation reports encouraging response from the small-scale concerns throughout the State. Under this arrangement the Corporation has considered 235 applications for Rs 1,20,69,525 while only 32 were recommended for sanction the amount involved being Rs 11,89,000.

The financial results of working of the Corporation for 1958-59 disclose a total profit of Rs 7,78,252.22. However the balance available for distribution as dividend is only Rs 1,03,052.22 and is short of the amount needed to cover the guaranteed dividend at 3½ per cent by Rs 5,96,947.78, which would therefore have to be paid to the Corporation as subvention by the Government.

The report claims that the Corporation has adequate funds to meet the commitments with a small surplus from existing sources. However, an expansion in the activities of the Corporation may entail the need for raising additional resources for the Corporation.

ities of the Corporation may entail the need for raising additional resources for the Corporation.

Handloom Rebate

Speaking at the 13th meeting of the All-India Handloom Board, in Bombay, Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry disclosed that the Government had decided to reduce the rebate on handloom cloth from 6 nP to 4 nP. Even this special rebate would be given only during the Handloom week and one additional week.

The decision would have come as a shock to many weavers in the handloom sector who had been pressing for continuation of the rebate at the old level and will without doubt adversely affect their interests. Mr Lal Bahadur Shastri admits that the rebate at the old level had done the industry good; but, at the same time, points out that continuance would not strengthen the industry. In this connection Mr Shastri points out that the real solution in the field of marketing was for the weavers to work hard and efficiently.

However, it is not to be overlooked that the decision of the Government to reduce the rebate is most inopportune in view of the fact that the industry faces a hard task ahead for reaching the target fixed for it under the Second Five Year Plan. Presently the total production is only of the order of 1,865.06 million yards whereas the target of production at the end of the Second Plan is 2,219.08 million yards. With a view to attaining this level of production, Mr Shastri has asked the industry to raise production year by year. But, how this could be possible now that the incentive to greater sales has been removed by the reduction in rebate is difficult to know.

Exports should provide a useful outlet for the products of the handloom industry, and Mr Shastri has laid special stress on promoting exports. In this connection, he has stated that a team would be sent to foreign countries to make an assessment of the export possibilities for handloom in the neighbouring markets. What the foreign markets hold forth for an increase in Indian exports of handloom could be ascertained by such a team. But it should be evident that an increase in exports is something which would require special measures from the Government to raise the quality and to influence the other factors which condition marketability of Indian handloom goods. Organisation of cooperatives for the handloom workers would certainly place the workers in the industry in a better position to face questions arising in connection with marketability both at home and abroad. But the organisation of such cooperatives and their smooth and efficient running require careful planning with special reference to the provision of finance and competent personnel.

GATEWAY MARKETS

Firm Sentiment in Gold

THE bullion market experienced another steady week with prices especially in the gold section recording further improvement following good support for the spot market from outside markets. The steadiness of the market in view of the generally expected off season decline in demand in coming months is to be attributed to the grip the bulls have managed to keep on the market in spite of the midweek weakness in silver.

In earlier dealings silver prices were well maintained but thereafter the tendency became somewhat irregular though the undertone continued to be steady. The encouraging influences of better advices from Calcutta and bearing covering were somewhat offset in later dealings by easier advices from the ready market. The fact that very steady conditions prevailed in the gold section enabled this section also to close on a steady note. Rate of offtake was lower than that of arrivals. The stock is placed in the vicinity of 500 bars. Silver Jeth after opening around Rs 195 moved both ways within a narrow groove and closed quiet at Rs 193-7 on Monday. Silver Ashad and Shravan closed at Rs 193-5 and Rs 192-10 respectively. Silver Ready was finally placed at Rs 193-13.

Remarkable steadiness was displayed by the gold section where prices were steadily pushed up during the course of the week's trading. Sentiment was aided by the increased demand for the yellow metal in outside markets as well as paucity of ready stocks. The latter factor was perhaps mainly responsible for inducing the uptrend. It would appear that bull operators were encouraged by the indication that the addition to the supplies in the market from unauthorised sources such as smuggling would dwindle further in view of the strict vigilance of the authorities and the effectiveness of the steps taken so far to arrest the flow from this source. With supplies at a low ebb and an increase in demand bulls had little difficulty in turning the market in their favour. Offtake was almost on a level with arrivals which amounted to about 3,000 tolas per day. The size of the stock is estimated at about 20,000 tolas. Gold Jeth opened at Rs 119.9 and after having been done upto Rs 121-10 was finally placed at Rs 120-8. Ashad closed at Rs 117-9 while Shravan eased towards close to Rs 116-14.

Oils & Oilseeds

In the oilseeds markets conditions were rather listless with

prices showing a sagging tendency. In the absence of incentives buyers were not keen to conclude business at the prevailing levels. Though the delay in the onset of the monsoon continued to exert an upward pressure on prices, the general belief that once the rains begin to fall the bullish sentiment would become untenable had put an effective check on the uptrend in prices. Moreover, bull operators could not also derive much encouragement from overseas markets which appeared to be inclined more toward lower prices rather than lend support to prevailing price levels.

The groundnut market was cheerful in the first half following better advices from the spot markets where seed and oil were in good demand from crushers and Vanaspati interests. With the decline in such demand later, prices in the futures section were marked down and groundnut August came back to Rs 198-12 from Rs 201-8 touched at one time during the week. Castor seeds lacked interest in the absence of support both from domestic as well as overseas buyers. On the export front the position is rendered difficult because overseas prices are lower than in our country. Business with USA showed little sign of improvement even at the low level of 13.60 cents, while that with the UK and other consuming countries was no better. The expectation that business with Communist countries would improve considerably is yet to be fulfilled. Castor September closed at Rs 162-12 after having been done upto Rs 163-14. Cottonseed was better with the September contract done at Rs 134-8 while Linseed September was rather quiet at close at Rs 33.14.

Yarn

A steady undertone prevailed in the yarn market especially in staple fibre and rayon yarn on revival of buying from weaver interests. The Government of India announced during the week the export promotion scheme for rayon cloth and import policy for yarn. According to an Import Control Trade notice artificial silk yarn and thread will be allowed to be imported by established importers on a quota of five per cent during the current licensing period.

Non-Ferrous Metals

Firm conditions were noticeable in the metals market especially around Zinc and Lead. While Copper was rather weak Tin ruled easier. The spurt in zinc and lead prices seems to have stemmed from the paucity of stocks in the principal markets. With hopes of fresh imports receding there has been no opposition to the uptrend. Zinc is quoting around Rs 106 per cwt some seven points higher than last week while lead shows a rise of nearly four points at its current rate of Rs 79 per cwt.

WORLD OF COTTON

COTTON futures continued to display a declining tendency during the past week. The new contract Jarilla March 1960 commenced on Monday this week at Rs 672.25 which is some 11 points lower than the existing contract. Conditions in the futures market eased considerably on Tuesday following lack of support and selling pressure. The new contract contains some slight modifications in the basis of certain varieties of cotton with a view to improve the quality of the cotton that is tendered by traders as well as to bring about greater awareness as to quality among cultivators. The subdued trend in the market seemed to have stemmed from the expectation that supplies in the coming season will be plentiful. An idea as to the traders' ideas about the size of the new crop may be had from the fact that the price decline has occurred notwithstanding the prevailing anxiety about the new crop as a result of the delay in the onset of the monsoon and the anticipated smaller carry-over of cotton from the current season. Evidently traders have taken into account the increase in the acreage under cotton in this country as well as the crop prospects elsewhere in the world. Reports from Sudan indicate cotton output, unlike in the previous season, may show a sizable increase in the current season. Similarly output is expected to record an increase over the previous year in other cotton growing regions of Africa. Another possible reason for the slackened interest in cotton futures is the belief that with the busy period in the cloth market almost over mills may not show much interest in the raw material.

During the past week the cotton futures market met with a steady market in earlier dealings following bear covering encouraged by the delay in the onset of the monsoon coupled with some mill interest. In later dealings several bearish influences such as possibility of larger imports, gloomy prospects for cloth exports, commencement of sowing of the new cotton in the Punjab etc., came into play and prices were inevitably pushed down. Jharilla August was done upto Rs 690 but was pushed down to Rs 679.50. The quotation improved to Rs 683.50 on Monday in sympathy with the new contract but by the next day was once again hammered down to Rs 679 on bear pressure. The new contract Jharilla March opened at Rs 672.25 and soon was done upto Rs 674.50 on bull support. The next day, however, the rate eased on selling pressure and was finally placed at Rs 670 after dipping further lower to Rs 668.50 at one time during the day.

SPOT MARKET:

The trend in the spot market followed that in the futures section. In earlier transactions the more well-known types were characterised by moderate offtake and unchanged prices. Paucity of good quality growths was a bullish factor but the trend was reversed in later dealings as sentiment was adversely affected by the easier trend in the futures section.

Among foreign cottons, Sudanese cotton was in keen request. Prospects for the import of Egyptian cotton have now brightened, with the indication from the Egyptian Government that they will allow the Indian mills discount of 35 per cent under the Indo-Egyptian Payments Agreement. It may be expected that interest in Egyptian

cottons may revive when the official announcement is made.

LIVERPOOL:

The trend was better following increased offtake. The incentive had evidently been provided by the cloth market where demand had picked up.

The improvement in offtake has stemmed from the fact that mill consumption has been higher. No great anxiety is felt as regards the cotton supply position because of the proximity of shipments and the movement of the new American crop.

NEW YORK

A slightly easier trend was noticeable in the New York futures market due to scattered selling.

Cotton Futures Depressed

BOMBAY REVIEW

The lack of buying support had stemmed from a tendency on the part of operators to await further developments in the farm legislations and the prevailing uncertainty with regard to the impact of the new export subsidy which will come into force from August.

PIECEGOODS

In the cotton piecegoods market demand continued to be rather disappointing in medium and coarse varieties, but fine and superfine categories, bleached longcloth and null and seasonal goods met with a satisfactory level of demand. It was, however, evident that demand was closely related to immediate requirements. In the export section moderate business had been reported done with a number of countries.

Bessemer Converter and new Blast Furnaces at the Burnpur works of The Indian Iron & Steel Company Limited

This is the heart of a giant industry. Here converges an endless stream of raw materials—coke, limestone and iron ore to feed the roaring blast furnaces. Here blows the Bessemer converter with its charge of molten metal, engines drawing ladles come and go, cranes clank and swing, men toil and sweat, here begins the ordeal by fire—the first step in the making and shaping of Steel.

DELHI REVIEW

THE old controversy over control vs decontrol is rearing its head once again in the context of the discussion of the Third Plan's organisational structure. The Planning Commission are grappling with the question at the moment and the subject figured prominently in the recent Congress party's planning seminar at Ooty. The discussion at the seminar was inconclusive for obvious reasons. Either way, the final decision will have to reckon with political and mass psychological factors. And even here, either decision will leave a large number of people discontented, since, on this question, the division of opinion runs on parallel lines. The country has had experience of both control and decontrol of essential commodities in the last two decades, but, unfortunately, the morals to be drawn from such experience are confusing. It would be comforting to be able to say that the lessons learnt point all one way—but scarcely true.

The case for 'regulation, control and restriction' of movement and

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON[COS] 53/WP/GB159 for supply of 200 cwts Holding down bolts long x 1.1" dia to BSS 916, as with nuts and washers 5"-0" per sketch to be seen in this office. Material M5 Class II. Earnest money is Rs 220/-. Tenders will be opened on 21-7-59 at 12 noon.

(ii) Tender No. CON[COS] 54/F2/59 for supply of 1461 Nos. Foundation Type 'B' plate as per Drg. No. S3536. Earnest money is Rs 530/-. Tenders will be opened on 16-7-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach Calcutta by local firms.

Tenders should accompany the receipt for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved Contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES

The Great Debate

supply of essential commodities is simply stated. In a developing economy, stresses and imbalances at particular points are likely to arise owing both to temporary factors and to the more permanent strain from the need to make the effort for the big leap forward. The most effective, as also the most equitable, way of dealing with these stresses is to have a firm control over the available supply and direct it along desired channels. Since there is no way of predicting the precise shape the imbalances will take, it is better to have an apparatus to control and regulate. And with inflationary pressures impinging constantly on the economy because of production not catching up with money supply, it is necessary to have control and even statutory rationing. This is particularly true of foodgrains, where pressure of population and uncertainties of agricultural production have given rise to periodical food crises in various parts of the country. A firm price policy is essential, if the advantages accruing from increased national production are not to become illusory by increased prices and inflation. Secondly, from the point of view of investment in the economy, this would be necessary, for there will be hardly anything left with the citizen after he has paid the higher prices for his essential requirements. Such a situation would hit particularly the fixed income group like the salary earner and the wage earner, for whom the Planning Commission are busy planning schemes of compulsory savings. It would be ironical if higher wages should lead to further reduction in consumption standards for these people.

So, for the success of the Plan—so the argument runs—it would be necessary to be prepared for price control of essential commodities accompanied, if necessary, by statutory rationing and firm policy of enforcement. Crucial to the success of the policy of control would be the readiness to deal ruthlessly with black marketeers, irrespective of their social, economic, financial or political status.

There is then the other argument about the egalitarian implications of a policy of control and rationing. It is true that in a period of scarcity, the rich are in decidedly better position to look after themselves and the sight of "conspicuous consumption" is sure to exacerbate social friction. Theoretically, therefore, control of essential articles and the ensuring of equitable distribution thereof, will be the nearest to the socialist ideal of sharing and sharing alike. Therefore, controls should be popular with the poor provided its other irksome concomitants are not present.

Here it is that the most formidable objection to control comes in. Control has in the past been very unpopular even with the poorer section, because of the administrative inadequacy to the tasks. The truth

is, there is no half way house about control. Either it is total, or it fails. All kinds of alternative devices that have been attempted have failed. The latest confession of failure is the West Bengal Government's abandonment of price fixation for rice. The trouble was, partly, that the fixation of price was only for certain types of rice and there were alternative, though expensive, sources of supply. Devices like fair price shops would work only when there is energetic readiness to track hoarders down and also to flush the economy with fresh supplies when there is any scarcity felt. This really reduces control to a farce. For, control is needed only when there is scarcity and if you have stocks to keep the modified ration-system going, then, there is no need to have the system at all. Of course, as far as West Bengal is concerned, it does not have the stock and it has to depend upon the Centre for the success of the modified ration scheme. Hence it is we see the spectacle of an almost chronic, dependence on the Centre by West Bengal.

If control is to succeed, it has to have an adequate administrative machinery that will see the whole thing through. Everyone will have to be under rationing and the supply should be both steady and regular. Movement of commodities will have to be firmly dealt with. There are almost insuperable difficulties in the way of setting up an apparatus of the sort needed for the purpose for the whole country. The war time and post-war rationing experience has not been uniformly happy. Experience of countries like England, which is often quoted in favour of statutory rationing, is not very much to the point, because of the vastness of our country and comparative lack of sophistication among our people.

The opponents of control will point to the profound psychological revulsion among large sections even of the poor to the idea of rationing. (There is some evidence that this revulsion can be overcome if the administration of controls is humane, efficient and impartial). They will also point to the fact of almost universal evasion of control orders and the unwitting breaking of law by many during the days of control. They will also argue that tracking down malpractices will require the most elaborate and detailed stock records, and an enormous checking and policing squad. These officials have to be above the blandishments that the dishonest trader has to offer. There will have to be a certain amount of centralisation of the food administration, in which case bureaucratic delays will be inevitable.

The remedy in their view would be an empirical approach based on the attendant circumstances at any particular time. Government should equip themselves with sufficient stock to act as cushion when a crisis develops in a particular area. They

should also have a watchful eye over the movement of prices and try to bring them down by the deployment of sufficient stock and, if it becomes really necessary, fixing prices. Of course, these devices have their own drawbacks—some of which were mentioned earlier—but it is argued that this will be better than the alternative of complete control and rationing.

There is some evidence that the general public attitude to the question is based not so much on the intrinsic merits of the two rival positions, but to the situation at any particular point of time. For instance, when Rajaji, Chief Minister of Madras, struck the first blow on behalf of decontrol of foodgrains, experts were horrified and were keeping their fingers crossed. But there was no mistaking the popular enthusiasm for the step, for, nearly a decade of control had made people weary of it. Soon after, Rafi Ahmed Kidwai extended it to the whole of India, and none of the dire predictions of experts came true. It is true that, since then, we had for a few years a series of good monsoons and harvests were good. If one is to go by overall impressions, there is as yet no readiness to get back to control. Even authority is reluctant to erect the edifice of control which it was only too relieved to dismantle at that time.

There is one puzzling feature about all this discussion of controls, especially with regard to foodgrains. It is true that these discussions are related to the Third Plan period, but still there is a certain element of oddity about it. The food position in the country at the moment is, to put it mildly, intriguing. Mr Nehru claimed, in his last press conference, an all time record of foodgrains production for 1958-59, which is placed at 73 million tons. Three million tons of imports are planned for this year. This itself is somewhat strange, since, despite an increase of about 11 million tons over last year's internal production, the reduction in import is negligible. And yet, the wholesale prices index for the first two months of the current year stands at 114.3 and 115.6 against 111.9 of last year, (base 1952: 100). West Bengal is in the throes of a crisis. Madras is having difficulties. Now, if the figures of production are correct, then, after making allowances for seeds and wastage, 60 million tons should be enough to give 16 ounces for a population of 397 million. Since the Third Plan's principal task will be to boost agricultural production significantly, all this preparedness for control and rationing seems a little out of place. Of course, we must be prepared for all eventualities, but that does not appear to be the sole reason for this preoccupation with controls. There is perhaps more in the puzzle of scarcity in the midst of statistically determined plenty than meets the eye.

NORTH INDIAN NOTES

Rural Man-power

The proper utilisation of the idle rural manpower by directing it to productive uses to yield tangible benefits to the country, is one of the riddles confronting the Planners and is being given serious consideration by the latter. An estimated addition of about 14 million to the labour force of the country in the course of the Third Plan is expected to aggravate the problem of providing useful employment to the unemployed and the under-employed whose number is already at a swollen figure of about 7 million. The problem would therefore call for careful consideration of all the alternative ways of putting the idle labour force through productive channels, based on the capacity to meet the livelihood means, as well as the addition that could be made to the productive wealth of the country especially in the villages.

A number of suggestions had been made in this regard with a view to turning this mass of idle manpower to useful work of a constructive kind. Investment projects of a purely local character have been suggested as the way to solve the problem of dealing with the idle manpower. It is also insisted that if such projects were to succeed in mobilising idle manpower for local productive work, such projects should be essentially labour intensive in character.

The application of the idea of industrial estates to each village or group of villages is another suggestion calculated to utilise the manpower. Under this scheme, simple machines would be installed in villages or group of villages with villagers working on these machines and turning out productive work realising in consumer goods marketable in the villages or nearby areas.

A third alternative envisages the utilisation of such manpower for productive work of purely local character such as irrigation work, reclamation of land planting of trees, work on community lands and other projects capable of adding directly to income and wealth, at wages below the market levels but covering the basic minimum needs of an individual. The emphasis is both on productive work as well as on sub-market wage levels. The payment of wages at market rates is held to involve a huge financial outlay which is beyond the capacity of the country to meet out of its present resources. However, employment with no monetary reward to cover the minimum requirements would be dangerous and labour would not be forthcoming to contribute to the productive wealth of the country. Whether this scheme would be practicable would depend

on the capacity of the village community to enforce payments even if in kind on families who benefit directly from the creation of productive assets by the idle manpower. A final decision on this could be expected to be taken before the Third Plan gets on its start.

Chinese Methods in Agriculture

After Japan, it is now China that is to provide inspiration for stepping up agricultural output in the country. The Chinese, it has been known, have made fantastic claims about their achievements in increasing agricultural production. Though the Chinese claims would not be taken at their face value, that China has made more rapid strides than India in raising agricultural production is a fact that would not be contested. What should be more appropriate in such circumstances than that an Indian delegation should be asked to make a study of Chinese achievements to indicate such of those methods which could lend themselves to adoption in our own country?

The three-member Team which was led by Mr Mahavir Prasad Irrigation Advisor in the Central Ministry of Food and Agriculture had got ready its report incorporating the elements of Chinese agricultural practices considered suitable for implementation in our own country. Chinese practices with silt, soil conservation and amelioration, outturn of earthwork, soil survey work, and publication of agricultural information for the benefit of the farmers are some of the outstanding aspects of Chinese agriculture which had struck the Indian delegation and naturally the recommendations of the team concern essentially these matters.

The use of silt of tanks, ponds and channels being one of the important measures adopted by the Chinese for preserving the fertility of the soil through the ages, the same practice has been recommended by the Team for adoption in India also.

Concentration on soil conservation work is also recommended; for the Team has been impressed with the success of the work done by the Chinese farmers, who had dotted even mountainous regions with pits, contour ridges, terraces, gully plugs, etc. Success on the Chinese scale is however precluded in view of the centralised system of planning that is in vogue in China and which is to be eschewed under any circumstances in India. All the same it is noted that by extending limited financial assistance to the farmers for work of this type, the tempo of the soil conservation work could be raised in this country.

The Team had also stressed the need to mobilise all the rural manpower for community construction work during periods when agricultural operations are at a standstill or are negligible.

NORTH INDIAN MARKETS

Spurt in Sugar Prices

FOLLOWING apprehensions about shortage of supplies, sugar prices were pushed up last week. With good enquiries on the one hand and a tight supply position on the other, prices appreciated by several points and a bag of sugar which was quoted at Rs 113 previous week-end was quoted as high as Rs 121 toward last week. Reports indicated that the position was actually very acute as sugar retail was very difficult to obtain. Ideas of shortage apart, sellers had derived fresh strength from the keen premonsoon demand for the commodity. Sugar statistics released this week by the Indian Sugar Mills Association, however, do not seem to lend much support to the scarcity view. According to the Association, sugar production during the month of May, 1959, was 32,000 tons bringing the total production to 19,04,000 tons upto May 31, 1959, for the season 1958-59 as against 52,000 tons in May 1958, and 19,63,000 tons upto May 31, 1958 for the season 1957-58. The off-take of sugar from factories during the month of May 1959 was 1,83,000 tons as against 1,82,000 tons during the corresponding period of the last season. The total despatches from factories during the first seven months of the season 1958-59 were 12,29,000 tons as against 11,74,000 tons during the corresponding period last season. The total closing stock of sugar with factories on May 31, 1959, was 10,06,000 tons as against 12,12,000 tons on the same date last season.

A slightly better tone prevailed in the gur markets and prices were quietly steady. Good outside demand coupled with decline in arrivals which totalled an average of 250 maunds were the aiding influences. Gur stock is placed at 65,000 maunds. In the Muzaffarnagar market gur prices ruled quiet on lack of demand though arrivals declined to an average of 500 maunds. Government of India have accorded sanction for forward trading in gur and such trading is expected to commence in Hapur shortly.

Foodgrains

Foodgrain prices at Hapur showed a quiet trend during the past week largely because of the improvement in the supply position. Apart from the fact that total wheat production in the country in 1958-59 has recorded an increase at 9.69 million tons which are 14.1 per cent higher than the average for the previous five years, the UP Government's decision not to make any change

in their wheat procurement scheme has further lessened the possibility of any shortage of supplies. A fresh step taken by the State Government to increase wheat availability in the markets is that roller mills will continue to be prohibited from buying wheat from the open market and to meet their requirements from imported stocks that are held in reserve by the Government. A quantity of about 13,000 tons has been reported to have been purchased by Government. Though arrivals in the markets are small it is generally expected that these will increase in coming weeks. At Hapur prices recorded a small decline due to the better supply position. Arrivals in the open market were meagre last week but reports indicated that wheat reaching privately in the market at an average of 75 to 100 maunds which quantity was sufficient to meet the current demand. The price of wheat was slightly lower and was quoted between Rs 17.75 and Rs 19.25 per maund. Rice continued to rule steady as the supply position was satisfactory.

Though the demand for Gram had been fair, prices showed a quiet trend. This was mainly because of heavy arrivals from Punjab. Further increase in arrivals may be anticipated because gram production in the country during 1958-59 has recorded an increase of 37.1 per cent over the previous year and 27.1 per cent over the average production of last five years. Gram was quoted at Rs 13.25 per maund. The trend in barley was also quiet for similar reasons. Barley production in 1958-59 has totalled 26,40,000 tons showing an increase of 18 per cent over the last year. Bejhar prices were also quiet. Barley was quoted at Rs 12.62 and Bejhar at Rs 12.37. Prices of pulses were generally quiet.

Shellac

Conditions in the Shellac market in Calcutta continued to be dull with business passing at low ebb. Shipments during June until the 17th were 24,077 packages comprising Shellac 11,200 pkgs, Seedlac 9,775 pkgs, Buttonlac 977 pkgs and others 2,125 pkgs.

The prevailing situation in the lac trade has been summed up this week by Mr H. P. Lohia, Vice-President of the Indian Lac Exporters Association at the General Meeting of the Association. He has pointed out that "the situation of lac is really precarious and it may not survive a single round of price fluctuations". To meet this situation he had advocated the immediate creation of an institutional stock holding authority. Mr Lohia has however, noted that the "long term prospects are that in industrially advanced countries, lac is likely to be supplanted by synthetic products and in the centrally planned and Far Eastern Countries, the import of Indian lac is likely to be replaced, if not wholly then very largely, by indigenous production."

MADRAS REVIEW

THE annual meeting of the mayors of municipal corporations bids fair to become a regular and permanent feature of the municipal administration in the country and is to be welcomed in view of the common problems faced by the municipal corporations throughout the country and the opportunity afforded for a mutual discussion and exchange of views. South India provided the venue for the mayors' conference in this year also, the meeting being held at Ooty while last year it was Hyderabad that was the host town to the mayors.

The trend towards urbanisation inherent in the process of economic development involving rapid industrialisation, and the growth of new municipal units have emphasised the extreme importance of a well organised and efficiently run municipal administration for avoiding and correcting the social evils that inevitably crop up. There is enough in the existing conditions of the big towns and cities of the country to demonstrate the evil consequences of lapses in the provision of civic amenities as also the results that follow the unregulated growth of cities. Most of the big cities are already finding the task hard to maintain an

efficient and thoroughly satisfying civic service. To such unmanageable proportions had the problems of civic administration been allowed to grow by indifference and neglect that marked the attitude of authorities in the past. Further, the concept of welfare State had magnified responsibilities in new directions.

It was to these new responsibilities and to the need for taking all steps to help them discharge their duties efficiently that Mr D. P. Karmarkar Union Minister for Health drew the attention of the Mayors when he inaugurated the All-India Mayors' Conference at Ooty last week. Mr Karmarkar drew particular attention to the staggering rate at which urbanisation was proceeding and the problems which this had created for the municipal corporations. Since most of the problems faced by corporations at present spring from the unregulated growth of cities, it is on town planning that the Corporations will have to concentrate their attention. Neglect of this would only reproduce the chaotic conditions existing in the big cities at present, in the new townships. Mr Karmarkar has therefore, called on those in

Civic Progress

charge of municipal administration to take special steps to prepare themselves to meet the problems that would grow in the new cities and townships.

The most onerous of the duties that had devolved upon municipal corporations recently, relate to the provision of free and compulsory education to all children up to the age of 14, measures for improvement of public health especially by means of adequate water supply, and finally housing. The common feature of all these problems is their formidable dimensions which preclude an easy and smooth road to their solution.

The provision of free and compulsory education, programmed for achievement within a period of ten years after the commencement of the Constitution, seem to be attended with more difficulties than was anticipated at the beginning, with the result that even after the lapse of the first ten years, the attainment of the objective within a reasonable period of time remains a matter hard to predict. The responsibility in this field, no doubt, rests with State Governments. But municipalities have also a share of the responsibility in view of the fact that they have custody of primary and secondary education in the areas bounded by their authority. Referring to the role of municipal corporations, Mr Karmarkar said that the mayors could help evolve suitable measures to meet the situation by constructive suggestions.

Public health also presents a wide and varied assortment of problems. The problem has wide ramifications and so also the responsibility of the corporations. It would require inordinate investment in men and money for a measurable degree of success in improving the present conditions. This inevitably points to the need for a discerning policy which would take into account different aspects of the problem, paying particular attention to the need to eliminate the source of greatest danger. Small-pox and cholera, are still diseases which take a heavy toll of human lives in the country and naturally it is in respect of these two that special measures are required so that it would be possible to get permanent riddance from their deadly hold. Efforts will necessarily have to be intensified in both these directions.

The provision of an adequate and protected water supply is perhaps the most vital need and has very important bearing on the state of public health in cities and townships. Though one of the most important obligatory functions of municipal corporations, it is only palpably evident from the unmitigated impact of diseases and grow-

ing volume of complaints from urban citizens about water scarcity, that not even a single city in the country is properly served by adequate protected water supply. Adequacy in this alone, would go a long way in raising the standards of hygiene and public health in the urban centres. Neglect of this need in the past is having aggravated effects because of the growing population in the urban centres.

Mr Karmarkar has also referred to the responsibility of corporations in raising the standard of living of the people and has pointed out the scope for action by corporations in this field by prevention of adulteration of food and drugs under the provisions of respective legislative enactments. The corporations have also responsibility for providing nutritious food to the people in the cities and steps for prevention of anti-social activities in the marketing and sale of food assume added importance.

Finally corporations are faced with heavy responsibilities in connection with the provision of housing accommodation to the people living in cities. Referring to the housing problem, Mr Karmarkar, said that it had already assumed alarming proportions and that any delay in tackling it would be extremely dangerous. Rural migration to urban centres in the post-independence period, had greatly aggravated the problem. The housing conditions in the major cities, at present, are sufficiently dismal to call for early and effective steps to secure worthwhile results. Mr Karmarkar has, in this connection, urged the need for properly worked-out urban and regional plans for providing for the building of sufficient houses to relieve the present extreme congestion.

The financial implications of implementing these programmes are forbidding and as pointed out by Mr Karmarkar it would require herculean efforts on the part of the authorities to meet the challenge. Each and every item of these programmes would involve for thorough implementation, colossal outlay. The formidability of the problem is gaugable from the fact that the Bombay Corporation alone have estimated that a sum of Rs 144 crores would be required for tackling the existing 144 slum areas in their jurisdiction. Already the local authorities are finding it hard to meet even their present scale of expenditure which would work out only to a fraction of the outlay needed for discharging their new swollen responsibilities. Delay in examining the question of the capacity of the municipal corporations to undertake their new tasks would only hinder civic progress.

THE PENINSULA

June 27, 1959

SOUTH INDIAN NOTES

Third Plan for Madras

Madras State has taken credit for the best performance in respect of expenditure under the Second Plan, it being now clear that before the end of the full course of the Plan, the State would have safely exceeded the total targeted Plan outlay. It is only natural in such circumstances, that the State Government should turn their thoughts on the task that lies ahead in connection with the Third Plan assessing the scope and prospects for development.

On the basis of the achievements already made, and the deficiencies that continue to impede the all-round progress of the State, the lines of development under the Third Plan have been more or less clearly demarcated by the State Government. It has now become evident that power generation would get high priority under the State's Third Plan, since, any substantial progress in both the agricultural and industrial sectors is held to depend to a considerable extent on the additions that could be made to the power resources of the State.

The stress on power development follows the fear that the State is nearing the limiting point in the power potentials. Even the most sanguine estimates put the additional power potentials of the State at only slightly over one million kilowatt from the present and potential hydel resources. The setting up of atomic power plants is therefore considered absolutely essential for meeting the requirements of power from expanding agriculture and growing industries. The Government are sparing no efforts to get an atomic power plant set up in the State in the course of the Third Plan.

Fabrication of machinery, heavy and light from iron and steel imported from production at the three centres in North India comes next in the order of priority to atomic power plant. The location of such heavy industries near the raw material producing centres is not held necessary since it is felt, that dispersal of production, would while involving movement of raw material to the producing centres obviate the movement of the finished products which in the case of heavy industries, poses no less a problem in transport as the movement of raw material.

The State is already launched in a realistic assessment of the prospects and scope for development under the Third Plan. A technical survey to ascertain the resources position of the State and to indicate the lines of development

has already been entrusted to Dr P. S. Lokanathan, the eminent economist. Further, working groups are also engaged in studying the State's resources and fixing priorities for the Third Plan. On the basis of the progress already made under the Second Plan, it is now expected that investment in the first year of the Third Plan would approximately be 15 to 20 per cent more than in the last year of the Second Plan.

*

Marketing of Tobacco

Following an excess production of unmanufactured country tobacco, the Andhra Pradesh Government seem to be helpless to find a useful outlet for the unmarketed stock that is estimated at 45,000,000 lbs. This unprecedented situation has been created by the inability of the existing channels to absorb the whole of the output of tobacco grown in the current year. The Leaf Tobacco Development Co, the main purchasers of this type of tobacco, have reduced their purchases in the current year by nearly half. Against about 30 million lbs purchased by the Company in the last year, only about 15 to 16 million lbs had been taken this year. Efforts to persuade the Company to purchase at least as much quantity as was purchased last year had proved ineffective it being pointed out by the Company authorities that the purchases made last year itself represented an excess in relation to their requirements.

In their efforts for affording relief to the distress-stricken growers, the Andhra Pradesh Government have invoked the help of the Centre with a view to helping the disposal of the current stocks of country tobacco. It has been suggested in this connection that the Centre should start a new cigarette factory or in the alternative take over the existing factories in the State.

Starting of additional cigarette factories would only shift the problem to another level. For it has to be pointed out that the market for cigarettes in India is already well served by the production from the existing factories and therefore, any addition to the number of factories would only result in unmarketable stocks of cigarettes, while, exports present no easy outlet for internal production. Since tobacco is an important source of revenue to the Centre, it could be argued that the Centre must see to it that the affected growers do not suffer unduly from the present adverse situation. The need for the State Trading Corporation to adjust their purchases of tobacco on the basis of stocks with the growers is also obvious and such a policy would ward off the recurrence of such a situation in the future.

The situation faced by the growers of country tobacco has also brought to the fore the need for

SOUTH INDIAN MARKETS

Groundnut Prices Firm

PRICES in the groundnut and oil markets continued to maintain a firm trend during the past week though business passing was at a meagre level. The main incentive to higher price indications was provided by the decline in arrivals which recorded a further fall both in the Madras and South Arcot markets. While sellers strengthened by the paucity of ready stocks put up prices buyers were not keen to follow the up-trend as the advance in oil prices lagged behind the price movements in the seeds section. Presumably buyers' reluctance to lend support to higher price levels has stemmed from the absence of any fresh development in overseas markets indicating the possibility of support for the improved rates coupled with a feeling that the shortage of supplies will not persist for long.

With a further decline in arrivals in Madras groundnut prices tended to harden and during the week some small business was reported done in good qualities at two, three points above previous week's levels. Prices in the South Arcot Markets were another two, three points higher as arrivals had dwindled in those centres also. In the oil section the comparatively higher prices for seeds kept buyers on the side lines and only scattered business done from Calcutta and local interests were reported during the week.

*

Hides and Skins

Trading was on a dull note in the hides and skins markets as transactions were restricted due to Bakrid holidays. In the tanned hides section arrivals of cow hides were poor and business passing was at a meagre level. Elsewhere in the market also conditions were dull. The trend, however, was steady.

The holiday mood was in evidence in the hides export section where the dullness was further accentuated by the indications of lower rates by UK buyers. Enquiries

proper adjustment of cultivation by the growers in accordance with possible demand. The inability of the growers to design their crop pattern to the requirements of the manufacturers is advanced as one of the causes for the accumulation of stocks with the growers. Advance intimation of the quantity and quality of tobacco required by purchasers would help keep a proper balance between production and demand and would be mutually beneficial.

ries continued to be selective and prices were generally unchanged from those at the previous week.

In the tanned skin section arrivals of goat and sheep skins were on a moderate level and prices showed a slight improvement in some cases and were unchanged in others. In the export section goat skins met with some enquiry and sellers' prices were a little higher than last week. A similar situation prevailed with regard to sheep skins also.

*

Coffee

The Coffee Board has released for export a quantity of 8,01,000 kilo grams of coffee from out of 1958-59 crop. The quantity consists of 54,000 kgs of Arabica Cherry Flats A/BC, 66,000 kgs of Arabica Cleanings Flats/A, 9,000 kgs of Arabica Shippings Flats, 1,59,000 kgs of Robusta Parchment A/Flats/BC and 5,13,000 kgs of Robusta Cherry A3Flats/Bc. Tenders are due on July 5.

*

Pepper

Pepper prices in Allepey recorded a decline in later dealings last week though rates were well maintained in earlier transactions. The easier trend seemed to have been touched off by lower advices from overseas markets, especially from those in the USA where extremely quiet conditions prevailed in the absence of interest from grinders.

*

Bangalore Silk

Excepting for nominal variations in price, conditions in the Bangalore Silk Market during the week ended 18-6-1959 were akin to those that prevailed in the previous week.

Prices of filature silk continued to remain unchanged with Kanakapura quoting Rs 42.85 and T. Narasipur between Rs 37.25 and Rs 38.75 per pound.

Among Charka silk, while Superfine was quoted throughout the week at between Rs 31.50 and Rs 34.50, 1st, and 2nd and 3rd Qualities showed minor variations closing the week within a range of Rs 29.00 to Rs 31.50, Rs 27.30 to Rs 29.25 and Rs 26.00 to Rs 27.50 per lb, respectively. Cottage Basin ruled between Rs 35.50 and Rs 37.00.

As regards Reeling Cocoons, there was a general rising trend underlining the limited supply of cocoons reported last week. Among Seed Cocoons, while Foreign remained unchanged between Rs 5.00 and Rs 10.00, Mysore declined by two points to be placed at between Rs 8.00 and Rs 10.00.

Your goods have a ready market in South East Asia

EXPORT NOW

INDIA produces the very commodities which the South East Asian countries need—jute, textiles, tea, handlooms, handicrafts, cycles, sewing machines and many other manufactured goods. Export them now—they'll buy them.

THE INDIAN OVERSEAS BANK LIMITED has made a special study of this important, growing market. Our network of overseas branches, agents and correspondents are at your service for on-the-spot advice.

THE INDIAN OVERSEAS BANK LIMITED, MADRAS

Branches at: AHMEDABAD, BOMBAY, CALCUTTA, CUTTACK, HYDERABAD, MADRAS, NEW DELHI and throughout South India. Overseas Branches: BANGKOK, COLOMBO, HONGKONG, IPOH, KLANG, KUALA LUMPUR, MALACCA, PENANG, RANGOON, SINGAPORE.

National Rubber Manufacturers Limited

Outstanding Progress Over Last Decade

Expansion Scheme Progresses Satisfactorily

Mr K. N. Mookerjee, the Chairman, on the manufacture of Synthetic Rubber in India

The following is the speech of Mr K. N. Mookerjee, the Chairman of the National Rubber Manufacturers Limited, delivered at the 13th Annual General Meeting of the Company held on 26th June 1959:—

Gentlemen,

I extend to you all a hearty welcome to the 13th. Annual General Meeting of your Company. The Directors' Report and the Audited Accounts for the year ended 31st. December, 1958 have been in your hands for some time now and, with your permission, I take them as read.

ACCOUNTS

The Accounts for 1958 indicate that the steadily rising trend of sales over the past few years has been maintained, reaching the level of Rs. 1,63,45,653 in 1958. The net margin of profit, however, is lower for reasons stated in the Directors' Report. For an expanding and developing Company like yours this is not an unusual phenomenon. When the resources of an organisation are fully harnessed and substantially concentrated in executing major expansion of its activities, normal working is to a large extent handicapped so that the expected results are difficult to be achieved. In this context the actual results for the year under review must be regarded as quite encouraging. It is anticipated that an appreciable increase in sales and a rise in net profits will be achieved in the coming years.

PROGRESS OF EXPANSION

Road and Rail transport have been expanding considerably in recent years with a consequent rise in the demand for certain products of your Company like Cycle Tyres and Tubes and Rubber Fittings for Railways and Automobiles. Besides, the overall progress of industrialisation, particularly the expansion of major industries like steel, coal, etc. has substantially enlarged the scope for the production of Conveyor and Transmission Belting, V-Belts and other mechanical rubber products in which your Company specialises.

You have noticed from the Directors' Report that the Company made satisfactory progress in the matter of implementation of its expansion schemes so planned as to fit in with the general trend of industrialisation indicated above. The latest model automatic Cycle Tyre making unit installed by the

Company will go into production shortly and will turn out Cycle Tyres of an entirely new design.

Manufacture of Cycle Tubes has also commenced and is likely to increase considerably during this year. It gives me great pleasure to inform you that your Company is now the largest single producer of hoses and beltings in India and that further expansion in these lines is contemplated. Another Belt Press has been ordered to meet the rapidly growing demand for the rapidly growing demand for Belting, particularly Conveyor Belting. Production by this unit is likely to commence by the end of 1959.

Your Company has made outstanding progress over the last 10 years as will be evident from the fact that sales increased by more than 400% from Rs 31.75 lakhs in 1948 to Rs. 163.45 lakhs in 1958. Taking raw rubber consumption as an index of progress of the rubber manufacturing industry as a whole in India, the percentage of increase was slightly more than 92% as raw rubber consumption has risen from 19,719 tons in 1948 to 38,052 tons in 1958. The achievement of your Company is, therefore, particularly encouraging against the background of overall progress of the Rubber Manufacturing Industry as a whole.

LOAN FROM I.F.C.

The Industrial Finance Corporation of India has sanctioned a loan of Rs. 35 lakhs to your Company to finance the capital expenditure envisaged under its expansion programme. Out of this, the earlier loan from the West Bengal Financial Corporation has been repaid. I hope, you will join me in acknowledging our sincere thanks to both the Corporations for the valuable help they have extended to your Company.

CAPACITY AND DEMAND

At present practically all the items made of rubber are produced in this country which is self-sufficient in respect of most of these products. Rather, the manufacturing capacity for certain items is likely to be appreciably higher than the potential demand for many years ahead. To take an instance, while the demand for Cycle Tyres and Tubes in 1960 is estimated at 160 lakhs Nos. each, the total manufacturing capacity already existing and/or licensed at the end of 1958 was 180.60 and 188.50 lakhs Nos. respectively. Evi-

dently, capacity licensed by the Government is such as to enable the manufacturing units to meet the country's full requirement at any stage. Actual production in 1958 was appreciably lower than the installed capacity, and it now appears that the demand will not reach even the estimated figure of 160 lakhs in 1960 so that a substantial portion of manufacturing capacity is likely to remain idle unless a determined export drive is undertaken by the manufacturers with all possible help from the Government. This is also true of many other items.

In view of the large expansion in the production capacity for Cycle Tyres as already implemented by your Company and other manufacturing units in this country, the attention of the Government has been drawn to the necessity of enforcing rigid control on the import of Cycle Tyres. At this stage, when the manufacturing units have already set a production programme commensurate with rising internal demand, import of Cycle Tyres cannot but seriously affect the indigenous industry with resultant adverse effects on economy of the country in general and employment potential in particular. Besides, such imports would be inconsistent with the present policy of maximum conservation and earning of foreign exchange resources.

EXPORT PROMOTION

Every expanding industry in India, like the one represented by your Company, should seriously think of export of its products, after meeting internal demand with the object of making full use of its installed capacity as well as earning valuable foreign exchange. It is however, unfortunate that the value of export of Indian Rubber products which reached the level of Rs. 176.20 lakhs in 1953-54 steadily declined thereafter and was worth only about Rs. 14.55 lakhs in 1957 and Rs. 15.71 lakhs in 1958. Evidently, the Rubber Industry has the potential to enhance its exports and to become a large foreign exchange earner. The Rubber Panel of the Chemicals and Allied Products Export Promotion Council has tentatively suggested a target of Rs. 156.59 lakhs for export of Indian Rubber Products in 1959-60 including, inter alia, some important items manufactured by your Company, which has already em-

barked upon a programme of exports. The response received so far appears to be quite encouraging as your Company has been able to export some new items to neighbouring countries for the first time. In particular, your Company has already indicated to the Government, through the Chemicals and Allied Products Export Promotion Council, its intention to export substantial quantities of Cycle Tyres. It is expected that an all-out effort will be made in developing the export market in the coming years.

The main difficulties standing in the way of export of Indian Rubber Products, as analysed by the aforesaid Rubber Panel, are irregular supply of some raw materials and inadequate import licences for others, uneconomic shipping freight, higher cost of indigenous rubber and unfavourable competition in export markets. It is high time that all rubber manufacturers launched a vigorous export drive in collaboration with the Export Promotion Council and the Government. It is also necessary to extend to rubber products the facilities of drawback of custom duty and rebate of excise duty on raw materials/components used in the manufacture of export commodities.

RAW MATERIALS

Although the supply position with regard to raw materials was generally satisfactory during 1958 there was an increase in the cost of materials and stores. Besides the position of raw rubber has been steadily deteriorating. While consumption by the manufacturing industry increased, indigenous production of rubber lagged behind with the result that the gap between offtake by the industry and output of the plantations has been widening. The actual deficit in 1958 was of the order of 13.72 representing about 37% of the total rubber consumption of the year, while the gap is reported to have been more than 50% of consumption during the first quarter of 1959. Selling prices for India rubber are controlled by the Government of India, the statutory prices were enhanced five times between March 1951 and August 1955, the net increase in price since 1950 being about 72%. These prices include a cess for raising funds for rehabilitation replanting and development rubber plantations and also for securing higher yield per acre

with a view to raising production in order to meet the ever growing demand for rubber. Besides, consumers of rubber are obliged to pay to the Rubber Board large sums of money, covering the difference between the high Indian Controlled rates and lower prices of imported rubber. It is indeed regrettable that the substantial amounts collected from Rubber Manufacturers every year have not yet been utilised for the purpose intended, to any great extent.

During the first two years of the adoption of a replanting scheme, i.e. 1957 and 1958, only 6520 acres were replanted against the target of 14,000 acres; the yield per acre is also very poor, being only 270 lbs. In this context, it is rather deplorable that there is a fresh move by planters for a further increase in the controlled prices of rubber; this question has already been referred to the Tariff Commission, although the Government have admitted that "the rehabilitation element which was included in the prices fixed for raw rubber has not been utilised adequately by the producers". There seems to be no limit to the tendency of increasing raw rubber prices although the plantation industry failed to expand rubber production sufficiently in spite of Government protection enjoyed since 1947, at the cost of the manufacturing industry. It is interesting to note that possibilities of extension of rubber cultivation in the Andaman and Nicobar Islands are being examined by the Government. In my opinion, every effort should be made to encourage rubber cultivation in these islands in order to

meet the acute shortage of the commodity in the country and to help the speedy rehabilitation and economy of the islands.

The proposed scheme for the manufacture of synthetic rubber in India to meet the deficit of indigenous rubber production, though planned some years ago, has so far made little progress due, inter alia, to paucity of foreign exchange. Meanwhile, the country has been incurring heavy foreign exchange commitments on account of imports of natural and synthetic rubber which amounted to 11,878 tons and 3,523 tons respectively in 1958, valued at more than Rs 4 crores. The situation is thus paradoxical. It is however, gratifying to learn that the Government of India have approved the scheme for setting up in the public sector the proposed synthetic rubber Plant at Bareilly, in Uttar Pradesh, with a very large capacity at an estimated cost of Rs. 30 crores and that its construction is likely to commence during the remaining period of the Second Five Year Plan. This project should be given topmost priority.

Equally vital is the question of manufacture in India of certain important compounding ingredients for rubber thereby effecting substantial saving of foreign exchange on account of imports of these items at present. The value of imports of certain important rubber chemicals including Carbon Black, Tyre Cord, rubber chemicals etc. amounted to about Rs. 4.5 crores in 1958. The current estimated consumption of Carbon Black is approximately 10,000 tons and of Accelerators and Anti-oxidants 600/700 tons annually.

Conditions in the Madras Stock Exchange were steady with Rubber and Coffee shares in the lead.

An irregular trend prevailed in the London Stock Exchange with gold shares meeting with realising pressure.

After earlier listlessness Wall Street developed an improved undertone toward close on revival of interest with a wide variety of issues recording moderate gains.

Calcutta

Calcutta, Friday Evening.

Activity in the Calcutta Stock Exchange during the past week was at a low ebb as marketmen had been preoccupied with the reports about the new Capital issue by TISCO. The announcement early in the week that the issue had been postponed and the further information vouchsafed later in the week that the proposal would be considered early in September if in the meanwhile Government decision was known served to remove the uncertainty as regards the issue. The delay in the Government's decision has led to a variety of speculation as to the attitude of Authority toward the new issue.

It has been generally believed that the change noticeable in ac-

These figures are likely to increase considerably in coming years with the rise in rubber consumption. It is encouraging to note that certain schemes are under consideration in this respect. Apart from the interest shown by an American firm in establishing a Carbon Black plant in India under the auspices of the National Industrial Development Corporation, a team of Rumanian experts visited this country in 1958 for a fresh project survey and their recommendations are awaited. A few proposals for the manufacture of rubber chemicals in the private sector are also reported to have been approved. Active steps should be taken to finalise and implement these projects.

IMPORT POLICY

Import licensing policy for raw materials has been somewhat liberalised during the current period i.e. April to September, 1959. Besides, a new system of licensing on a long term basis in respect of raw materials/components for certain specific industries has been introduced; this is expected to facilitate better production planning and is likely to result in a larger level of output in future years. So far as the rubber industry is concerned, only the tyre section has been included in the long term licensing scheme. I feel that this benefit should be extended to other sectors of the rubber products industry with immediate effect.

RESEARCH

The Indian Rubber Manufacturers' Research Association, referred to in my last year's speech, has

made considerable progress during the past year in finalising its organisational and administrative set-up and is expected to commence research work in collaboration with the National Chemical Laboratory, Poona at the earliest possible opportunity. The service to be rendered by the Association is likely to be significant for the rubber industry in general and smaller units in particular as the are unable to maintain their own research establishments.

LABOUR RELATIONS

I am glad to say that labour relations were very satisfactory throughout 1958 and full co-operation of all categories of employees was extended to the management in achieving higher levels of production envisaged by the Company's expansion plans. In fact the Productivity Agreement with the Workers' Union mentioned in my last year worked very well.

THANKS

Before I come to the formal business of this meeting I sincerely thank all of you who have taken the trouble of coming here today and other Shareholders, Officers, Staff and Workers and also the Dealers and Customers of the Company for their valuable co-operation and active support readily extended. I also take this opportunity of expressing our sincere thanks to Messrs. Goodyear Tyre and Rubber Company India Private Limited for the ungrudging help and co-operation extended to your Company during 1958.

Dull But Steady

Watch-Dog Writes:

STOCK Exchanges in India have been somewhat subdued during the past week. The undertone has been steady but the rather depressed conditions of the steel shares has been an impediment in the path toward higher price levels.

In Calcutta sentiment has been fairly steady despite the reaction in Indian Iron. Settlement considerations, and disappointing news as regards the selling price for coal and the demand at the second export sale in North Indian tea held this week were other restraining factors.

Dalal Street continued to be dominated by the proposed new capital issue by TISCO. Toward close, however, sentiment improved on emergence of bull support for selected industrials.

cording sanction to capital issues has come to stay. There have been several instances in the past one year or so when issues have been allowed to be made without a premium. There is no reason now why an exception is to be made in the case of TISCO. While there is no indication from Authority it is pointed out that the delay need not necessarily mean that Government are thinking in terms of a premium. There is some justifiable reason for the delay and the announcement when it comes may not be found to be at variance with earlier hopes of marketmen. A probable reason for the delay is the desires on the part of Government first to see the new Central loans through. In view of the fact that the strong belief that no premium will be insisted upon in respect of new capital issues has been one of the powerful bullish influences, it is to be expected that the undercurrents especially in the more speculative counters may remain disturbed till the Government decision on the TISCO issue is known.

Sectionwise also there had been some disappointing developments. Coal shares were neglected following reports that Government's opinion on the question of selling price of coal did not tally with

that of the recommendations of the Coal Prices Enquiry Committee. The tea section was depressed because of the poor demand at the first two tea auctions of the new season.

Bank shares were marked somewhat higher with Unit Commercial Bank Rs 62.25 a Punjab National Bank at Rs 22.

Textile shares were generally unchanged. Elgin closed at 14.25 with Jayshree and Kesari placed at Rs 9 and Rs 14.75 respectively.

The continued uncertainty about selling price for the commodity imparted a subdued tendency to the coal section. Burrakur opened at Rs 17.31 and its settlement was fixed at Rs 16.75 as compared with its previous settlement of Rs 17.25. The scrip finally closed at Rs 7.12. Central Iron was unchanged at Rs 7.25. In neengunge after having been down to Rs 17.25 closed at Rs 16.6.

In tune with the general trend of the market jute shares displayed a sagging tendency. But the two forward counters in the section ruled steady. Howrah which opened the week at Rs 24.37 was done up to Rs 24.69 before its settlement rate was fixed at Rs 24.50. Its previous settlement rate was Rs 23.50. National open-

ed at Rs 24.00. Its settlement rate was Rs 23.62 as against the last settlement rate of Rs 23.00. Howrah and National were finally placed at Rs 24.62 and Rs 23.50 respectively.

Engineering shares were generally slightly easier in sympathy with Indian Iron. The market leader opened the week at Rs 24.33 and sagged to Rs 24.20 before its settlement rate was fixed at Rs 24.25 as against the last settlement rate of Rs 24. A slightly better tendency prevailed on Friday and the scrip closed that day at Rs 24.31. TEXMACO began at Rs 25.70 and its settlement rate at Rs 25.55 which was the same as at last settlement. 16th June, 1959.

BALMER LAWRIE & CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, the 15th July, 1959, at noon, to consider the Accounts of the Company for the year ended 31st December, 1958 and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 24th June, 1959 to 13th July, 1959, both days inclusive.

By Order of the Board,
D. MANSON,
Secretary.

21, Netaji Subhas Road,
Calcutta,
17th June, 1959.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

was done at Rs 28.62. Indian Galvanizing at Rs 22.50. Kumardhubi at Rs 9. JK Steel at Rs 128, and Jessop at Rs 31.

Among sugar shares Carew continued its uptrend to be placed at Rs 11. SKG was unchanged at Rs 10. Raza Buland was better at Rs 13.81. Cawnpore was placed at Rs 11.31, Champaran at Rs 15.62 and Samastipur at Rs 12.81.

Teas were neglected. Hantapara was done at Rs 120. Jayshree at Rs 12.37, Patrakola at Rs 136 and Hattikhira at Rs 12.56.

Miscellaneous shares displayed an irregular trend. Among the paper mill shares Orient eased to Rs 36.60. This was also the settlement rate and compared with the previous settlement rate of Rs 35.80. Sirpur was active in earlier dealings but closed lower at Rs 12.81. Titagur closed at Rs 44.37. India Paper Pulp was steady at Rs 22.56. Elsewhere Indian Copper opened at Rs 4.11 and closed at Rs 4.10.

Dunlop Rubber improved to Rs 34 from Rs 33.62. Hindustan Motors firmed up to Rs 9.75 on dividend rumours. Indian Aluminium opened at Rs 21.62 and was finally placed at Rs 21.56. Indian Cable began the week at Rs 31.62 and closed at Rs 31.50. Balmer Lawrie gained nearly 10 points at Rs 192.50 on publication of satisfactory report by the company. Alkali Chemical was finally placed at Rs 23.56. National Carbon was done at Rs 34.31 and Indian Oxygen at Rs 27.56.

Among shippings Indian Steamship was well maintained at Rs 14.12.

Bombay

SUPPORT for selected Industrials and textiles was noticeable on the Bombay Stock Exchange although general sentiment was adversely affected by the sagging tendency in the steel section. Apart from the fact that fluctuations in TISCO have a powerful influence on the market as a whole, the inordinate delay in accord-ing sanction to the proposed new capital issue has raised fresh doubts about Government policy regarding new Capital issues. It was announced by the Company on Monday that the resolution pertaining to the new issue would not be considered at the Extraordinary general meeting later in the week. And from the further details made available on Thursday the feeling is gaining ground that the company may drop the proposal atleast for the present.

In the Steel Section Tata Iron opened the week at Rs 190.50 as against previous closing of Rs 190.25 and after having been done down to Rs 187.25, the scrip was finally placed on Thursday at Rs 190.00. Indian Iron opened unchanged at Rs 24.36 and was finally placed at Rs 24.28.

Textile section was selectively better. Bombay Dyeing advanced to Rs 65.70 as against previous week's closing of Rs 64.20. Century moved up to Rs 551 from Rs 548. Kohinoor was taken up to Rs 285 from Rs 282. Central India was done at Rs 105 and Tata Mills after spurring to Rs 42 from Rs 36 closed at Rs 40.

In the Miscellaneous section Premier Construction advanced smartly to Rs 336.50 on Thursday from its opening rate of Rs 328. Telco was taken up to Rs 211.50 on buying support. National Rayon was done at Rs 332. Sugar shares met with support in later dealings, with Belapur moving to Rs 303.50. Phaltan to Rs 160 and Walchandnagar to Rs 327.50.

Madras

BUT for some dullness in midweek presumably due to lower advices from Calcutta and Bombay, the Madras Stock Exchange ruled steady last week. Trading on Monday commenced on a steady note with selective interest developing in plantings, sugars and textiles. The undertone turned somewhat quiet in the next two days but on Thursday active conditions returned with the more speculative counters in the lead. Sectionwise plantings were prominent with rubber and coffee shares claiming most of the attention.

Thursday's closing prices in the forward list are as follows: The figures in brackets are Tuesday's closing rates: Deccan sugar Rs 12.37 (12.27), Blue Mountain Rs 3.45 (Rs 6.53), Cochin Malabar Rs 6.87 (Rs 6.43), Consolidated Coffee Rs 22.20 (Rs 22.35), Ouchterlony Valley Rs 5.48 (Rs 5.42), Periakaramalai Rs 4.08 (Rs 4.10), Lakshmi Rs 124 (Rs 124), Madura Rs 27.75 (Rs 27.60), Travancore Rayon Rs 22.20 (Rs 22.10), Aluminium Industries Rs 21.70 (Rs 21.25).

Among sugar shares E.I.D. was steady at Rs 38.25, Mysore at Rs 51.25 and Travancore at Rs 12.05.

In the textile section, Bangalore Woollen was slightly lower at Rs 177 as was Buckingham at Rs 185. Mettur came back to Rs 397 from Rs 402. Both Madura and Travancore Rayon were better at Rs 27.75 and Rs 22.20 respectively.

Among Plantings, Consolidated Coffee was in good request in earlier dealings but part of the gain was erased toward close and the scrip closed at Rs 22.20. Among teas Haileyburia was steadier at Rs 20.25.

In the Miscellaneous section India Cements was well maintained at Rs 6.20 on maintenance of dividend. Aluminium Industries was wanted up to Rs 21.70.

Indian Rayon Corporation

The Rs 3.50 Crore Rayon Plant of the Indian Rayon Corporation, it is learnt, will go into production by the end of 1960. This factory with 10-ton capacity will be put up on a 170 acre land at Varaval. The foundation stone of the factory was laid on Sunday the 21st June, 1959 by Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry.

As the demand for Rayon yarn in India has far outstripped indigenous capacity the production from the new plant will be easily absorbed by the home market. The company has made arrangements for obtaining technical and financial assistance. Messrs Von Kohorn International Corporation and the Financial and Development Fund Inc of USA are collaborating with the Indian Rayon Corporation. It may be recalled that the company's recent stock issue has been heavily over subscribed.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA (REVISED SERIES) REVIEW FOR WEEK ENDED JYAISTHA 9, 1881 (MAY 30, 1959)

The official wholesale prices index (with the year ended March 1953 as 100) stood at 114.6 during the week ended May 30, 1959 as against 114.7 for the previous week. The index was higher by 2.0 and 5.1 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago. The monthly average for May 1959 worked out 114.0 as against 111.9 for April 1959 and 108.2 for May, 1958.

The index for 'Food Articles' receded by 0.3 per cent to 116.9 due to a fall in the prices of Potatoes (—18%) and Onions (—17%) at Delhi, Milk at Bombay (—14%), Bajra at Jodhpur and Masur at Patna (—10% each), Gur at Muzaffarnagar (—7%), Gram (—4%), Barley, Tea for internal consumption and Chillies (—3% each), Black Pepper and Turmeric (—2% each) and Gingelly oil, Coconut oil, Fish and Eggs (—1% each) although Meat at Bombay (+12%), Potatoes at Kanpur (+10%) and at Patna (+5%), Masur at Bombay (+9%), Ragi at Ghoti (+7%), Arhar at Madras (+6%), Gur at Madras (+5%), Urad (+3%), Jowar and Mung (+2% each) and Wheat, Maize, Mustard oil and Coffee (+2% each) showed advances.

A fall in the price of Tobacco raw (—5%) was responsible for bringing down the index for

BURN & COMPANY LIMITED.

NOTICE.

The Board of Directors has sanctioned payment of dividends on the 6% and 7% Tax free Preference Shares in the Company for the half-year from 1st January 1959 to 30th June, 1959 in accordance with the provisions of Section 9(iv) of the Finance Act 1959. Payment will be made after deduction of tax at the prescribed rates on or after the 10th July, 1959 to those Preference Shareholders who are registered as such on the 30th June, 1959, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDEGE,
Managing Director,
Managing Agents.
12, Mission Row,
Calcutta,
24th June, 1959.

'obacco' by 3.8 per cent to 94.8 as compared with 98.5 (revised) for the earlier week.

Despite a rise in the price of astor oil (+1%) the index for the 'Fuel, Power, Light, and Lubricants' group remained stationary at the previous week's level of 116.4.

The prices of Bamboos (+19%), Rapeseed at Calcutta (+6%) and Groundnuts (+1%) moved up while Rapeseed at Delhi (—8%), Tanning materials (—4%) and Wool raw, Cottonseed and Copra (—1% each) showed declines and the index for the 'Industrial Raw Materials' group fell by 0.2 per cent to 120.3 as against 120.1 (revised) for the earlier week.

The index for 'Intermediate Products' remained unchanged at its previous weeks revised level of 108.5. Items which showed variations during the week were: Lead (—3%), Rayon yarn, Zinc and Tin (—2% each) and Cotton yarn (+1%).

Higher prices of Soap (+5%), Bricks and Tiles (+2%) and Oil-akes (+1%) caused an advance of 0.3 per cent to 108.6 in the index for 'Finished Products' notwithstanding a decline in the price of Glass (—1%).

MOVEMENT OF COMMODITY PRICES (REVISED SERIES) REVIEW FOR APRIL, 1959

Wholesale prices as measured by the official index (with the year ended March 1953 as 100) declined by 0.4 per cent to 111.9 during the month of April 1959 as compared with 112.3 (revised) for March 1959. The index was, however, higher by 4.2 per cent when compared with 107.4 for April 1958. During the month under review, the index for 'Food Articles' receded by 0.6 per cent to 113.1, Tobacco by 3.2 per cent to 95.8 and 'Manufactures' by 0.2 per cent to 108.0 while 'Fuel, Power, Light and Lubricants' advanced by 0.1 per cent to 116.2. The index for Industrial Raw Materials remained unchanged at its previous month's revised level of 116.2.

FOOD ARTICLES

The index for 'Cereals' went down by 2.7 per cent to 99.0 as a result of lower prices Wheat, Jowar, Bajra, Barley and Maize; the prices of Rice and Ragi indicated a rise. A sharp fall of 15.2 per cent to 96.2 in the sub-group index for 'Pulses' was caused by a general fall in the prices of all the pulses except Urad which showed a slight increase. Higher prices of Onions, Oranges and Cashewnuts raised the index for Fruits and Vegetables by 2.7 per cent to 121.61 the prices of Potatoes and Bananas, however, showed a decline. Milk and Ghee went up by 7.6 per cent to 115.0 and prices of both of them recorded an increase. The index for 'Edible Oils' moved up by 1.9 per cent to 25.6 as a result of a general rise in the prices of all oils except Coconut oil which showed a fall

during the month under review. An increase in the prices of Fish, Eggs and Meat was responsible for a rise of 1.9 per cent to 106.9 in the index for 'Fish, Eggs and Meat.' A decline in the price of Gur brought down the index for 'Sugar and Gur' by 0.2 per cent to 128.0. The index for 'Other Food Articles' witnessed an increase of 0.5 per cent to 50.8 due to a rise in the price of Chillies, Cardamoms, Betelnuts and Salt notwithstanding a decline in the prices of Tea and Coffee.

TOBACCO

A fall in the price of raw tobacco was responsible for bringing down the index for 'Tobacco' by 3.2 per cent to 95.8.

FUEL, POWER, LIGHT AND LUBRICANTS

Higher Prices of Coal caused a rise in this group by 0.1 per cent to 116.2 although there was a fall in the price of Castor oil during the month under review.

INDUSTRIAL RAW MATERIALS

The index for 'Fibres' rose by 0.1 per cent to 108.0 because of advances in the prices of Raw Wool and Raw Cotton despatch a fall in the prices of raw Jute and Raw Silk. Prices of Linseed, Castor-seed and Copra registered a fall while those of Groundnuts, Rapeseed and Cotton-seed exhibited increases and the sub-group index for 'Oilseeds' went down by 0.2 per cent to 127.4. The index for 'Minerals' drifted down by 1.5 per cent to 101.4 owing to a fall in the price of Manganese ore. Higher prices of raw Hides, Raw Skins and tanning materials raised the sub-group index for 'Other Industrial Raw Materials' by 0.4 per cent to 111.7; the prices of lac and bamboos, however, showed declines.

INTERMEDIATE PRODUCTS

Lower prices of Linseed oil, Coir yarn, Zinc, Brass tin and Lead brought down the index for this group by 0.9 per cent to 108.4 during the month under review.

FINISHED PRODUCTS

An increase in the prices of jute manufactures (+1.6 per cent to 83.6) and silk and rayon manufactures (+0.7 per cent to 95.7) raised the index for 'Textiles' by 0.1 per cent to 102.2, notwithstanding a fall in the prices of cotton manufactures (—0.2 per cent to 110.8) and woollen manufactures (—1.1 per cent to 104.2). The sub-group index for 'Metal Products' maintained its previous months level of 143.3. Lower prices of general Chemicals caused a fall of 1.2 per cent to 109.4 in the sub-group index for 'Chemicals'. The index for 'Oilcakes' moved down by 0.6 per cent to 139.2. A slight fall in the prices of Cycles was neutralised by a rise in the prices of vehicles and the index for 'Machinery and Transport Equipment' stood unchanged at the last month's revised level of 106.1. A decline of 0.3 per cent

to 112.9 in the index for 'Other Finished Products' was caused by a fall in the prices of bricks and tiles and glass. On the whole, the index for 'Finished Products' remained unchanged at its earlier month's level of 108.0.

IMPORT OF TRACTORS: GOVERNMENT POLICY ANNOUNCED

The policy for import during the current licensing period of wheeled and crawler tractors has been announced in an import trade control public notice.

Wheeled and crawler tractors up to and including 50 draw bar horse power will be licensed to established importers on a quota of 17½ per cent soft during April-September, 1959.

The validity of the licences will be for a period of 12 months.

Up to 20 per cent of the face value of quota licences can be utilised for import of spare parts of agricultural tractors of all sizes but excluding such spares as ball bearings etc.

Applications for import licences may be made to the Chief Controller of Imports and Exports, New Delhi, by July 31.

STATE TRADING CORPORATION TO EXPORT SEA SALT

In view of the declining export of sea salt and having regard to the pattern of the trade abroad, the Government of India, after consulting manufacturers and traders, have come to the conclusion that if export of sea salt is to be maximised it will be necessary to canalise its export through a single agency. This would, besides, facilitate bulk exports. It has accordingly been decided to entrust the responsibility for canalising the exports of sea salt to the State Trading Corporation of India Ltd. with immediate effect.

GRAM TOO REACHES NEW RECORD PRODUCTION IN 1958-59 BEST

Gram, besides rice and wheat, has reached a new "high" in production this year, thus materially contributing to the 1958-59 all-time food production record of 73 million tons.

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India final estimate of gram puts the current year's area and production at 24,840,000 acres and 6,826,000 tons, respectively. The corresponding figures for 1957-58 were 22,862,000 acres and 4,979,200 tons. Thus, the 1958-59 estimated show an increase of 1,978,000 acres, or 8.7 per cent area 1,847,000 tons or 37.1 per cent in production.

Compared with the average of the preceding five years, there is an increase this year of 2,073,000 acres or 9.1 per cent in area and 1,454,000 tons or 25.1 per cent in production.

The higher production of gram this year has been due more to an increase in the per acre yield than to increase in acreage. The

per acre yield works out to 616 lbs as against 488 lbs in 1957-58, showing an increase of over 26 per cent. It also represents an increase of about 17 per cent over the average yield per acre for the five years ended 1957-58, indicating that the increase is not attributable to seasonal factors alone.

The higher production this year has been shared by all the principal gram-growing States. The increase over last year is particularly marked in Madhya Pradesh (3,14,000 tons), Punjab (5,47,000 tons), Rajasthan (5,44,000 tons) and Uttar Pradesh (3,37,000 tons). Among the factors contributing to this increase was the rabi campaign.

BARLEY PRODUCTION ALSO UP

The all-India final estimate of barley for 1958-59 puts the current year's area and production at 8,164,000 acres and 2,640,000 tons respectively. The 1957-58 figures were 7,549,000 acres and 2,238,000 tons respectively. This shows an increase of 615,000 acres or 8.1 per cent in area and 402,000 tons or 18 per cent in production during the current year.

Increased production is noticeable in all the principal barley producing States and is attributed, among other factors, to the rabi campaign.

In Uttar Pradesh the increase in production this year over last year comes to 126,000 tons, in Madhya Pradesh 97,000 tons, in Rajasthan 90,000 tons and in Bihar 60,000 tons.

The yield per acre of barley in 1958-59 works out to 724 lbs as compared with 664 lbs in 1957-58 indicating an increase of about 9 per cent.

SPECIFICATION FOR MASTIC ASPHALT FOR FLOORING

A standard specification for mastic asphalt for flooring, suitable for use in industrial buildings, storage houses, foot paths, etc. has been published by the Indian Standards Institution.

The standard covers the requirements for mastic asphalt for flooring, and provides for a wide range of grades, from light duty floors for foot traffic to heavy duty floors for factories. It does not, however, cover mastic flooring to withstand exceptional conditions, such as those experienced in cold storages, or those required to withstand the effects of high temperature, industrial liquors or chemicals for which special mastic asphalt is required to be used.

Copies of the standard are available from the office of the Indian Standards Institution, Manak Bhavan, 9, Mathura Road, New Delhi, and from its branch offices at Bombay, Calcutta and Madras.

WROUGHT ALUMINIUM ALLOYS, BOLT AND SCREW STOCK

A standard specification for wrought aluminium alloys, bolt

and screw stock has just been published by the Indian Standards Institution.

This standard is one of a series of 10 Indian standards for wrought aluminium, in various forms for general engineering purposes. Included in the standard are a number of appendices covering the determination of 0.1 per cent proof stress, heat treatment, summary of mechanical properties, characteristics, forms and uses of some grades of wrought aluminium and aluminium alloys.

Copies of the standards are available from the office of the Indian Standards Institution, New Delhi, and from its branch offices at Bombay, Calcutta and Madras.

SPECIFICATION FOR HURRICANE LANTERNS

The Indian Standards Institution has published a standard specification for hurricane lanterns. It prescribes the requirements for cold-blast, storm-proof hurricane lanterns, burning kerosene at atmospheric pressure from a wick. The standard, it may be recalled,

has been prepared at the instance of the Tariff Commission and the Development Wing of the Ministry of Commerce and Industry. It covers two popular sizes of the hurricane lanterns, either tinned, or painted.

Due to the very nature of the use to which a hurricane lantern is out, some of the components, which have frequently to be replaced, even though manufactured by different manufacturers have to be interchangeable. To ensure this, certain mating dimensions have been specified in the standard.

Copies of the standard, published in English, are available from the office of the Indian Standards Institution, Manak Bhavan, 9 Mathura Road, New Delhi, and from its branch offices at Calcutta and Madras.

DRAFT SPECIFICATIONS FOR ESSENTIAL OILS

The Indian Standards Institution issued two more draft standards for essential oils.

The first draft standard prescribes the requirements and methods of test for the material

commercially known as celery seed oil. The oil is used mainly for flavouring of all kinds of food products, such as meats, soups and sauces. It is also used in nerve tonics, because of its sedative and tonic effect on the central nervous system. Celery seed is produced in India in considerable quantity, but is mainly exported to Europe and USA for distillation of oil.

The second draft covers the requirements and the methods of test for the Himalayan cedarwood oil. It is used with other essential oils in soap perfuming, in perfumes, in sanitary supplies, polishes and as a masking odour in many other industrial products.

The oil is obtained from the Indian cedar which yields valuable timber, extensively used in making railway sleepers and for building purposes. During the process of making sleepers a lot of waste sawdust, chips and wood shavings of the heartwood are obtained, which, because of their high oil content, can usefully be employed for obtaining this oil by distillation.

Indian Finance

Of late, commercial production of these oils in the country has made some progress. It is expected these two draft standards, when finalised and issued, would serve as a guide to prospective producers of these oils and help the industry in laying down basic requirements for these oils and in ensuring uniform quality in their supply.

Comments on the draft standards may be sent before August 21, 1959 to the Indian Standards Institution, Manak Bhavan, 9 Mathura Road, New Delhi.

DRAFT SPECIFICATIONS FOR DIESEL FUELS AND KEROSINES

The Indian Standards Institution has issued two draft specifications for diesel fuels and kerosines.

The first draft standard prescribes the requirements of diesel fuels, used in low, medium and high speed engines. The second covers the requirements and methods of test for kerosines of four grades.

Comments on the draft standards may be sent before August 20, 1959 to the Indian Standards Institution, New Delhi.

The Field Engineer

Long before the oil drillers move in to start a new well, the Field Engineer is on the scene. One of his first tasks is to build roads and bridges to the new location so that the mass of drilling equipment and machinery can be brought safely to the site. He surveys the land for a suitable plot to take the derrick foundations, marks the route for pipe lines, and arranges water supplies, electricity and housing for the workers and the drilling operations. After his bulldozers and excavators have finally rolled away (perhaps to start all over again at a new location), he supervises the erection of the drilling engines, pumps, tankage and piping, and maintains them in first-class operating order during the period of drilling. For the Field Engineer is concerned with all engineering aspects of the oil search outside the drilling operation itself. The men who do this work possess a great deal of varied engineering experience, not only in oilfields but in general practice too. It is a long-established policy of the Assam Oil Company to select and train Indian men for specialised work of this nature; a policy that works well—for the men, for the company and for India.

ASSAM OIL a full-scale petroleum industry

a member of The Burmah Group of Oil Companies

Budget Supplement

The Doctor's Scalpel

IO say that Mr Morarji Desai's maiden effort at a Central Budget is unexciting is, we believe, to be unmindful of the nuances and deeper implications of the various changes, present and prospective, that the Finance Minister introduced last Saturday. In many ways, the budget for 1959-60 is likely to prove as epochal and revolutionary as was Mr T. T. Krishnamachari's for 1957-58. The difference lies merely in that Mr Krishnamachari, with his responsibility to set about evolving an integrated structure of taxes, had perforce to initiate a number of new proposals, the sum effect of which was greatly to enrich the Central Exchequer. Mr Desai's budget is, in this sense, not the bludgeon, but rather a scalpel wielded by a doctor with dexterity and finesse. And yet, essentially, the proposals for 1959-60 may be seen to arise partly from the budget for 1957-58 and also partly to be complementary to that budget.

We may first deal with the question of whether or no the budget may be considered good; and we are in difficulty here about the definition because good itself is a relative term. Certainly, from the point of view of the additional burden imposed, Mr Desai's budget is good, because it has touched much less spectacularly upon the purse strings of the Indian citizen. On the other hand, we are not sure that the impact of the budget upon the so-called investor will be favourable, in spite of concessions in the form of the abolition of the Wealth Tax on companies, of the Excess Dividends Tax and of the company Reserve Deposit requirements. For, in one vital aspect, the shareholder has been deprived, and his loss may be very considerable. But this is a question to which we shall address ourselves at a later stage.

It is also pertinent here to suggest that Mr Desai has successfully tackled what surely was a most difficult problem. At one stage, it appeared to us as if nothing that he could propose in the budget could be free of all element of criticism. This was especially so because the primary consideration in drawing up the Indian balance sheet has for some years been the necessity to prosecute the Second Plan. If the Second Plan has thus been an over-riding factor, we need to realise that it has not merely been a case of Government being compelled to seek and secure the additional resources for implementing it. Even more than the task of gathering resources, it has fallen upon the authorities in this country to be ever vigilant in tackling the problems which may be said to be a direct conse-

quence of the very undertaking of planned endeavours. For example, planning it is which has been responsible, already, for an improvement in the health of the Indian masses and, therefore, for an extension of longevity. This circumstance alone has added to the pressure upon foodgrains. Then, the process of planning not only releases new purchasing power but also inculcates a greater awareness of wants to be satisfied. Moreover, while planned disbursements take some time before they are reflected in additional production, the augmentation of purchasing power is much more immediate, the increase in demand for consumer goods is almost simultaneous and, as an end result, the threat of shortages occurring in the economy becomes very real. Thus, the Finance Ministers of India have ever to be walking a tight rope, balancing the need for larger revenues against the necessity of keeping up the tone of the investment climate; setting the injection of fresh purchasing power against measures intended to mop up the floating monies that might have an inflationary potential in them, and juxtaposing the need for austerity in imports due to shortage in foreign exchange against the desirability of permitting imports, so that the internal demand-supply equilibrium can be brought into some balance.

Fortunately for Mr Desai, and mercifully for the Indian citizen, the taxation effort during the first three budgets of the Second Plan has been large enough so as to obviate the need for any substantial fresh revenues being raised during the last two years of the Plan. Moreover, although the Finance Minister has not stated it explicitly, it seems reasonable to infer that the new production capacity established by dint of disbursements over the first half of the Plan will begin to be reflected in an expansionary trend being initiated in the Government's tax revenues. As such, Mr Desai had need to cover only a quarter of the anticipated revenue deficit through new imposts. It seems to us probable that the size of the revenue and overall deficits will turn out to be rather smaller than now envisaged, for reasons which we shall be setting out at some length. But, even in regard to new imposts, the Finance Minister did not have any scope worth mentioning in respect of direct taxes. Except that the Wealth Tax rate has been raised by half per cent on each slab, all the other new proposals are essentially readjustments in the excise and import duties. We have long thought as being inevitable reliance being mainly placed upon excise duties as a source of Government revenues, at least over the short term, for the simple reason that there is as yet an insufficient flexibility in industrial

Looking Ahead

By planned expansion, by fuller utilisation of resources in men and materials, by creating more opportunities, National Wealth is increased achieving better living standards for the people.

There are some serious objections to this new scheme. That the same profits which have once been taxed in the hands of the company are again being taxed in the hands of the shareholders when they receive these profits in the shape of dividends is a comparatively minor objection though it does involve the fundamental principle that there should be no double taxation. The more serious objection is, that as a result of this new scheme, shareholders will be incurring a heavy loss: for, they are deprived of their share of the tax paid by the company, and besides they have to pay tax on the dividend incomes. The

ment of Rs. 1 lakh. Now, let us see how he will fare under the new scheme envisaged in the Finance Bill. On its profits of Rs. 1½ lakhs the company will pay income-tax (at 20%) of Rs. 30,000/- and super-tax (at 25%) of Rs. 37,500/-, making a total tax payment of Rs. 67,500/-. The balance distributed by way of dividend will therefore be Rs. 82,500/-, and our shareholder being entitled to a tenth part of it will be receiving Rs. 8,250/-. Though tax will be deducted from this at 30% (as per Part III in the First Schedule to the Finance Bill), still, as his income-tax on this income will only be Rs. 333/- the excess deducted will be refunded to him by the Department. So, his net position will be Rs. 8,250/- minus Rs. 333/- which works out to Rs. 7,917/-. Thus, whereas under the existing arrangements this shareholder will be receiving a net return of over Rs. 10,000/-, under the new scheme, he will be receiving less than Rs. 8,000/-, in other words, a 20% loss, even where a company distributes the amount saved by its paying tax not at 45½% but at the reduced rate of 45%. If the companies do not distribute the amounts saved by the reduced tax, the loss will be much heavier to the shareholder, being as much as thirty to forty per cent. Examining next as to who gains by this change, it will be found that it is the Government which has benefitted thereby. Under the existing arrangements, in the example cited above, though the company is paying a tax of Rs. 77,250/- in the first instance, still by reason of the refunds to the shareholders the net retention in the hands of Government will be only about Rs. 50,000/-. But under the new scheme, Government will be collecting Rs. 67,500/- from the company and there is no question of any refund therefrom. Over and above this, the shareholders also will have to pay tax on the dividends, and in this example, the tax so collected may be about Rs. 3000/-. Thus, while there is a gain to the company by its paying a lesser amount as tax, there is a heavy loss to the shareholders, and to that extent Government is the better off. Not that this will be grudged, but the effects thereof on investment in the private sector will have to be carefully weighed. The new scheme will almost certainly act as check to the flow of further investment in industries in the corporate sector. The new scheme may also cause hardship to the large number of small shareholders among the middle classes, to some of whom dividend income is almost the sole means of sustenance. The Finance Minister has no doubt said in his budget speech that a scheme will be devised for issuing exemption certificates for small shareholders so that the question of re-imbursment does not arise in their cases. But on

looking into the Finance Bill it is found that as per the Proviso to the new Clause 3-D in Section 18 of the Act (i.e. in Clause 9 of the Finance Bill), this facility will be available only to persons not liable to income-tax. Thus a person with an annual income of four to five thousand rupees will not enjoy the benefit of this exemption in respect of that part of his income which consists of dividends. The climate for investment may be said to have received a set-back as a result of the change now proposed in regard to the income-tax treatment of dividend incomes. In our Five Year Plans, the emphasis is on industrialisation and increased production. - If the flow of investment to the Private Sector is retarded, this objective will be rendered more difficult of achievement. It would have better if the proposed change in regard to the income-tax treatment of dividend incomes had not been thought of at this juncture.

Before leaving this subject, a point may be mentioned by way of general information. Dividends declared on or after 1st April 1959, so long as they relate to an accounting year which ended on or before 31st March 1959, will continue to be treated under the existing system, that is to say, in respect of them 'grossing' will be allowed, and there will be no deduction of tax at source under Section 18 of the Act.

As already stated, the Finance Bill proposes to enhance the Wealth Tax rates by half a per cent at each slab in so far as they are applicable to individuals and Hindu undivided families. The Wealth Tax is a capital levy, and there is no justification for any capital levy except during times of emergency. However, having resorted to this objectionable tax, least that could have been done is, not to allow its rates to vary from time to time. If revenue were the only consideration, there were other means by which it could have been derived. As the Finance Minister himself said, for the present we should have concentrated on improving the administrative machinery, simplifying the existing procedures and plugging loop-holes. If this were done effectively, there might, perhaps, not have been any need to resort to fresh taxation, only the other day in reply to some questions, the information was elicited that the total income-tax arrears outstanding on 31st March 1956 were Rs. 234 crores. By March 1957 they had risen to 268 crores and in March 1958 it had reached the figure of 288 crores. This represents only tax assessed but not yet collected. If tax that could have been assessed, given proper machinery, were taken into account these figures would be much larger. These considerations are all the more important, since, if revenue were needed these would

seem to be the first steps, rather than resort to the Wealth Tax which savours of expropriation. Admittedly the tax rates in India on the higher slabs of Kaldor had mentioned the deleterious effects of the present high rates of Income-tax in India. To add to this by increasing the Wealth Tax rates, cannot but have harmful effects, when the impact of this proposal on savings and investment is considered. The prime need today is to increase production all round in order that the standard of living of the people may be lifted from its present low levels. This objective can be achieved only by rapid expansion of industries, particularly those producing consumer goods. Where is the capital for this going to come from, if not from the savings of the people? If whatever savings are there are mopped up by more and more taxation, these industries will be starved in regard to their capital requirements, and the desired expansion cannot take place. Our tax structure should therefore be so designed that (a) it leaves more amounts in the hands of people by way of net after-tax income; and (b) it gives positive inducements to the people to invest in gilt-edged's but also in those savings, and that too not merely in gilt-edged's but also in 'industrials'. With regard to the first of these two considerations, an important point to be borne in mind always is, that larger amounts of net after-tax incomes should be left in the hands of those income groups which may reasonably be expected not to divert the resultant surplus into consumption expenditure. This will automatically leave out persons with small incomes with many unsatisfied wants; any surpluses in their case will immediately be expended towards the satisfaction of those wants. But some increase in the surpluses in their case is no doubt necessary as otherwise the results of increased production cannot get absorbed. Surpluses in the hands of those sections of the community as have reached a reasonable consumption level may be expected to flow into investment channels, which, as stated above, means that the tax policy should be such as to (a) leave a surplus, and (b) induce the flow of that surplus into investment. Scrutinising the present tax structure in our country from these two angles, it is found it hardly fulfills the re-

	Rs
Value of properties ..	20 lakhs
Total Income @ 4½% ..	112,500
Income & Super-taxes ..	69,324
Wealth Tax ..	31,000
Total of Taxes ..	100,324
Tax as % of income ..	89%

From the foregoing it will be seen that individuals with large properties will have to dis-invest even to meet their living expenses: no question of investment arises. This is not a desirable tax struc-

1959-60 Budget Supplement

quirements. It leaves no surplus in the hands of individuals and families who may have large properties and large incomes. In fact, the net after-tax income in their case is such that they are worse off than persons with lesser incomes. For instance, let us take the case of a salaried officer with a monthly income of Rs. 5,000/- and compare his position with that of the head of a rich family with large properties to the tune of, say, Rs. 25 lakhs. The annual income of the salaried officer will be Rs. 60,000/- and that he will be paying income-tax and super-tax to the extent of almost Rs. 22,600/-. The net after-tax income in his hands will therefore be Rs. 37,400/-. Coming now to the rich family, its properties cannot be yielding a return of more than 4 to 5%. The properties may consist of buildings, lands, securities, gold and silver, ornaments and the like. Buildings may yield about 6% by way of rent, but the cost of maintenance has gone up so much these days, and the municipal taxation also is so high, that the net yield from buildings may be only somewhere around 4%. Lands also are unlikely to yield much more. The yield of Government securities, as is well-known is only round about 4 to 4½%. Jewellery are dead assets from the point of view of yield. The only attractive investment is in shares and debentures of joint-stock companies. These yield between 7 and 9% on an average. So, taking all these into account, it may be said that the family with property of Rs. 25 lakhs mentioned above has an annual income of Rs. 112,500/- (assuming an overall return at the rate of 4½%). Now, in respect of this income, the total taxes payable will be (a) income-tax with surcharge on unearned income, since dividend income is unfortunately regarded as unearned income despite the large risk element involved in it:—Rs. 30,174/-; (b) super-tax:—Rs. 39,150/-; and (c) wealth tax at the rate applicable to individuals (i.e. not a Hindu Joint Family):—Rs. 31,000/-. The aggregate of all these three taxes is Rs. 100,324/-. Thus our head of a rich family is left with a bare 12,000/- out of his large after-tax income of over Rs. 37,000/- left in the hands of the comparatively humbler salary earner; The expropriatory nature of the present tax structure is thus clear beyond doubt. The Table given below will make it clearer still:—

	Rs	Rs	Rs
30 lakhs	40 lakhs	50 lakhs	
135,000	180,000	225,000	
88,174	126,024	163,824	
41,000	61,000	81,000	
129,174	187,024	244,824	
95%	103%	109%	

ture for a developing economy which calls for more and more investment for productive activities. With Income-tax and super-tax at 84 per cent, and Wealth Tax at Rs. 20,000 for every ten lakhs above

1959-60 Budget Supplement

Rs. 22 lakhs, the total taxation can be kept at 100 per cent of the income only if the return on the assets is at the rate of 12½ per cent. In such a case, out of the income of Rs. 125,000, Rs. 105,000 will be taken away by Income-tax and super-tax and Rs. 20,000 by the Wealth Tax. Such a high rate of yield of 12½ per cent cannot be expected except from company shares. The Finance Minister has therefore to be congratulated on the proposal to abolish the Excess Dividends Tax. For, the only way to mitigate the expropriatory nature of the present high rate of personal taxation is to invest in securities with a high yield, and abolition of the Excess Dividends Tax may enable company shares to play this role. New industries and new units in established undertakings cannot however yield such high returns, and hence it is necessary that some relief should be given in respect of dividend incomes. Section 15-C of the Act, which gives exemption from tax of newly established industrial undertakings is not sufficient for the purpose. It has often been urged that dividend incomes should be treated as 'earned income' and if this were done there would be a seven per cent relief in the taxation at the highest slab. On a consideration of the factors mentioned above, it would appear that this relief, i.e. of treating dividend income as earned income, has now become imperative.

SOME CHANGES SUGGESTED:

Not only should the Income Tax Act be immediately amended so as to treat dividend incomes as earned income, but also, there are some other changes which are necessary or eminently desirable, and which could usefully be made at this juncture. We may begin this subject with a reference to the income-tax treatment of 'property incomes'. Under Section 9 of the Income Tax Act income from properties is to be assessed on the basis of the bona fide annual value of the property after deducting therefrom certain allowances in respect of repairs, collection charges, vacancy remission, insurance against damage or destruction, interest on mortgages and other capital charges, and tenants' share of municipal taxes where the same are borne by the owner. The quantum of these allowances was fixed many years ago, and has not been revised despite the changed conditions. The repairs allowance of one-sixth of the b.a.v. bears no semblance to reality. During the post-war period prices have shot up in all sectors, including the cost of building materials, these are three to four times what they were pre-war. The wages of Labour have also gone up similarly. Hence, the repairs allowance should not be one-sixth of the b.a.v. but should be something much more than that, keeping in mind the increased costs of repairs and renovation. The allowance of six per cent of the b.a.v. for collection charges needs also to be enhanced, seeing that the salary

levels of the collecting staff are three to four times what they used to be in the past. In the UK there has been strong agitation for sometime past for a depreciation allowance for residential buildings. Such an allowance is very necessary in our country, where we have many old buildings which, if suitably renovated may be expected to last for several years more. As there is shortage of housing everywhere such renovation and modernisation of old buildings should be encouraged. If during the post-war years our tax policy had included provisions for depreciation allowance in respect of residential accommodation, a fund would have been built up wherefrom the cost of renovation of old buildings could have been met. It is to be hoped that such a provision for depreciation allowance for residential buildings would be included in the Income Tax Act now at least, in order to meet the future requirements in this direction.

Next we may note a significant omission in the Finance Bill in regard to the assessment of business incomes. Under Section 10 (2) (vi-a) of the Act, new buildings erected, and machinery and plant installed, after 31st March 1949 are entitled to an additional depreciation equal to the normal depreciation allowance, for a period of five years from the date of erection or installation, but not beyond 31st March 1959. There appears to be no sound reason why this concession should not extend beyond 31st March 1959. On the other hand there are good reasons for making this concession a permanent feature in our tax system, in order to actively encourage industrialisation. The Taxation Enquiry Commission also had suggested it. But somehow the Finance Bill, 1959, contains no provision for extending this concession beyond 31st March 1959. It is not known whether the omission has been inadvertent or is intended. However that may be, it is desirable that Section 10(2) (vi-a) should be amended so as to make the additional depreciation allowed by it available for five years for all new buildings, machinery and plant, whenever they may be erected or installed.

The failure to appreciate the inequity of taxing the issue of bonus shares is another significant feature of the Finance Bill. Bonus shares can in no sense be regarded as income. They are merely the capitalisation of retained profits which have already been taxed once. Retained profits are an indistinguishable part of the total assets of the company. While the company is a going concern it is entitled, if it so desires, to draw upon the retained profits for the purpose of paying dividends to its shareholders. It is equally open to the shareholders to keep those profits permanently retained in the business, and in this case they are capitalised. By such capitalisation the total assets of the company remain unchanged. So far as the shareholders are con-

cerned also, the only change is that the profits which might have become their income have now become their capital. Though by the bonus issue they may own more ordinary shares than before, the issue has done nothing to add to their wealth: the issue has added nothing to the wealth of the company: the issue means no more than that whatever profits the company does decide to distribute in future will have to be distributed over a larger number of shareholdings. A claim to treat bonus shares as taxable income cannot therefore be supported. The Finance Bill, 1959 should therefore have dropped the existing provisions in regard to the taxation of bonus shares. Far from doing that, the intention has been announced to subject to tax with effect from 1960-61, bonus issues made out of share premium accounts. It is to be hoped that this proposal will not be proceeded with further.

The manufacture of khandsari sugar has been represented as being a loss of national wealth, since the recovery is considerably lower in this process of manufacture as compared to the crystal sugar factories. The heavy excise duty on sugar does not apply to khandsari sugar and this has been a source of loss of revenue. With the doubling of the excise duty on crystal sugar in May 1957, the margin in favour of the khandsari industry had gone up by an additional Rs. 8.93 per cwt. The necessary corrective measure has now been included in the Finance Bill, 1959, which proposes to levy a basic duty of Rs. 5.60 per cwt on khandsari sugar with an additional duty of 70 naye paise in replacement of the sales taxes.

As in the case of khandsari sugar, a similar step which could have been taken in respect of powerlooms has however not been taken. The policy of encouraging production of cloth by powerloom and handloom factories has been at the cost of the organised industry. Between 1952 and 1958 the production of cloth by powerlooms and handlooms has gone up from 1300 million yards to more than 2000 million yards (representing an increase of about 50 per cent), while in the organised textile industry the increase has been only from 4600 million yards to less than 5000 million yards. On the basis of production figures it has been estimated that the excise duty on cloth produced by powerlooms is only 15 per cent of that levied on cloth produced by composite mills. Such heavy weightage against the organised industry is not desirable to be continued. The excise duty concession now given to the powerloom and handloom industry needs revision.

FOREIGN CAPITAL

Before proceeding to deal with the several clauses of the Finance Bill as such, we may consider the effect of the budget proposals in their relation to foreign capital.

If our programmes of economic development are to be successfully pursued, it is necessary that we should be able to obtain substantial equity capital from abroad. The tax policy should therefore be such as to attract foreign equity capital. Foreign delegations which have visited India during recent years have time and again stressed that in order to induce foreign investment in India, it is essential that (a) there should be sufficient opportunities for growth; (b) there should be no discrimination against foreign capital; and (c) the various factors that acted as deterrents to the entry of foreign capital into India should be removed. In a note prepared in October 1957, the US Department of Commerce listed the Wealth Tax on companies as the most important amongst such deterrent factors. In his budget speech the Finance Minister has proposed to abolish from 1960-61 the Wealth Tax on companies and the Excess Dividends Tax, a step which is to be much appreciated, and to combine in the Income-tax and Super-tax rates the net incidence of the present taxes on income, excess dividends and wealth. The Finance Minister has also mentioned that on account of the withdrawal of the Wealth Tax on companies some adjustment is necessary in the income-tax rates applicable to foreign companies which declare dividends outside India. And he has proposed to raise the present rate of 61.5 per cent applicable to such companies to 63 per cent with effect from 1960-61. In the light of what has been stated this proposal cannot be considered as in any way discriminatory. Looking now into the rates of advance tax prescribed in Part II in the First Schedule to the Finance Bill, 1959, it is found that the quantum of tax borne by dividend income received from an Indian subsidiary company is the same, whether the parent company is an Indian Company or a foreign company. Suppose an Indian subsidiary makes a profit of Rs. 100/-. On it, the subsidiary will pay a total tax of Rs. 20/- as income-tax and Rs. 25/- as super-tax. The balance of Rs. 55/- will be received by the parent company. On this Rs. 55/- the parent company (irrespective of its being an Indian or foreign company) will be paying income-tax at 20 per cent pursuant to para (2) (a) (i) of Part III of the First Schedule, and super-tax of 10 per cent pursuant to para (2) (a) (ii) therein. Thirty per cent of Rs. 55/- will amount to Rs. 16.5. Thus the total tax borne is Rs. 45/- through the subsidiary and Rs. 16.5 through the parent company, making a total of Rs. 61.5. Thus in the matter of operation through subsidiaries foreign companies do not suffer any discrimination as compared to Indian companies. But if a foreign company operates through investment in shares of an Indian company which is not its subsidiary the position is slightly different. In this latter case, the Indian company would have paid 45 per cent tax. Out of the balance of 55 per cent, the foreign company will have to part with 63 per cent thereof pursuant to Para (2) (a) (i), (ii) and

(b) (ii) of Part II of the First Schedule. The total tax borne in this case will work out to 79.65 per cent. If it were an Indian company that had made the investment, the tax suffered would be 69.75 per cent. Operation through subsidiaries in India is thus encouraged for foreign companies as heretofore.

SOME CLAUSES OF THE BILL

We may now conclude with an examination of the more important clauses of the Finance Bill.

Clause 3:

Under the Third Prviso in sub-section (1) of Section 4 of the Income Tax Act, income which accrues or arises outside India but is not remitted to India in the same year is exempt up to a maximum of Rs 4,500/-. This concession is now withdrawn.

Clause 4:

It may be recalled that a scheme for the compulsory deposit with Government of a portion of the depreciation funds of companies was introduced in the latter part of 1956. This was one of the deterrent

factors to foreign investment in India. The scheme was held in abeyance since 1st April 1958. It has now been finally abolished under this clause.

Clause 5:

This clause clarifies the following:—

(i) any dividend declared by a company is to be deemed to be the income of the previous year in which it is declared;

(ii) any dividend distributed or paid by a company within the meaning of clause (6-A) of Section 2 of the Income Tax Act is to be deemed to be income of the previous year in which it was distributed or paid. These refer to distribution out of accumulated profits, distribution on liquidation, distribution on reduction of capital, and the like.

Clause 7:

This, together with Clauses 9 and 14, abolish the scheme of grossing up of dividends and introduce the new system proposed for tax treatment of dividend incomes: (see sub-clause (iv) of clause 9).

Clause 8:

As per Section 17 (7) of the Income Tax Act, capital gains of companies are exempted from super-tax. Capital gains of companies will, with effect from 1st April 1959, be subject to super-tax at the rate of 10 per cent. The clause has not clarified that in respect of capital gains made prior to 1st April 1959 companies will not be liable to super-tax.

Clause 9:

The scheme for deduction of tax at source in respect of dividend incomes is introduced by sub-clause (iv) of this clause, in the new sub-section (3-D). Only persons whose total income is less than the minimum liable to income-tax will be entitled to receive their dividends without deduction, but they must first obtain the requisite certificate from the ITO.

A point has to be noted under the new sub-section (3-E). This relates to preference shares carrying a fixed rate of dividend or a fixed rate of tax-free dividend. If the tax is deducted at source as

1959-60 Budget Supplement

required by the new scheme, the net amount of the dividend will be less than the contractual rate. The clause, in effect, therefore provides that the amount of the dividend in such cases, shall, for purposes of deduction of tax at source be deemed to be such amount which after deduction of 30 per cent therefrom leave an amount equal to the contractual rate (i. e. 143 per cent of the contractual rate).

The clause clarifies also that future the rate at which tax is to be deducted at source pursuant to Section 18 of the Income Tax Act will be prescribed each year by the Finance Act.

Clause 11:

Consequent on the reduced rate of tax applicable to companies (145 per cent instead of 51½ per cent) the balance of profits left in the hands of companies will be large. This clause provides that in the case of Section 23-A companies the minimum distribution shall be 50 per cent of industrial profits and 65 per cent of non-industrial profits, so that the surplus left with the companies may, in absolute terms, be nearly the same as before. On working it out it was found that in the case of companies which are required to distribute 65 per cent instead of 50 per cent the net amount left with the company will be 19.25 per cent in future as against 19.4 per cent at present. And in the case of industrial profits the net retained with the company will be henceforth 25.5 per cent as against 2 per cent at present.

CLAUSES 22 to 26:

These contain the changes proposed in respect of Expenditure Tax. The expenditure has been a dismal failure, and instead of admitting it an attempt is made to resuscitate it by tightening up provisions. As already noted, husband, wife and minor child are henceforth to be regarded as one unit for the exemption limit of Rs 30,000 in the matter of non-taxable expenditure and no separate assesses even if they have separate incomes in their own right. Another change is, present rent paid by an assessee for a residential house is his personal expenditure as also money spent by him on its maintenance or repairs. But in case of owner-occupied premises there is a saving as there is rent, and further the assessee is entitled to claim exemption in respect of expenditure incurred on repairs and maintenance of premises. There is thus an anomaly as between an assessee living in rented premises and living in his own premises. It would have thought that the logic way to remove this anomaly is to treat the expenditure incurred on an assessee in rented premises as way of rent, repairs etc., as a taxable expenditure. Instead that, the assessee living in his premises is called upon to pay expenditure tax in respect of expenditure on repairs to his premises!

1959-60 Budget Supplement

THERE was rejoicing on Lyons Range; there was jubilation in Dalal Street. But both rejoicing and jubilation proved shortlived. It lasted only as long as the special Budget sessions that were held on the evening of last Saturday.

The cheer and ebullience and exhilaration were in evidence for the simple reason that the creed flashed: The Finance Minister has abolished the Wealth Tax on companies and, to boot, the Excess Dividends Tax.

Than this, there could have been nothing more unexpected; than this, no investor could have expected a better Budget present. Indeed, it all looked too good to be true.

Such proved to be the case. The exaggerated cheer soon wore off—for cogent reasons. A clearer—but, as yet imperfect—understanding of the Budget produced second thoughts; and these were not happy or merry.

For, it looked as if, by some legerdemain, the Finance Minister had proved himself a master of illusion; where concession there seemed to be, the sudden realisation came that instead there was a heavier burden.

Very simply, Mr Morarji Desai—if I may use the expression—appeared to have robbed Peter to pay Paul; the Peter here being the shareholder, and Paul the corporate sector.

So came the relapse, and prices fell to their pre-Budget level or nearabouts. And there arose at once an outcry against the Budget, the gravamen of the charge being that the latest deprivation of the investor would make capital still more shy.

Then, in point of time, as I write this, a better sentiment—relatively—appears to have taken hold of the Stock Exchanges. But I can't say whether this, too, will prove ephemeral—as was the cheer that greeted the Budget proposals.

Let us now see what all this fuss is about. The original bullish fervour hardly needs any explanation. But the second thoughts arose, because the Finance Minister had made the dry remark that, with the reorganisation he proposed of the structure of corporate taxation, he did not anticipate any decline—or increase, for that matter—in Government's tax revenues as a result of the abolition of the two vexatious taxes.

Matters became clear when it was learnt that the Finance Minister had done away with the time-honoured practice in India of the "grossing-up" of dividends. This meant that shareholders would no longer get credit for tax deemed to have been paid by the company on the distribution to the shareholders.

Let us understand what exactly the process of "grossing-up" is—or, should I say, was? Corporate taxes comprise income tax, at a certain rate, and corporation tax, besides the sur-charge; and we are leaving out of the purview such

Jubilation—or Despair?

things as the taxation of Bonus Issues, the Wealth Tax and the Excess Dividends Tax. Till the Budget, that part of corporate taxes paid as income-tax was also deemed to have been paid on the dividends declared. So, when the shareholder received his dividend, it was free of income-tax. What was more, when the shareholder's income was assessed to tax, the authorities added back the tax paid on the dividends to arrive at the gross income; and credit was given to such an assessee for the tax paid by the company. When the maximum of income-tax rate was 25 per cent, the magical figure for grossing up was 33.3 per cent; when the effective rate of income-tax paid by companies rose to 31.5 per cent, the gross dividend was worked out by adding to the net a little over 45 per cent. In this way, the shareholder had the value or worth of his tax-free dividends raised by a third or nearly a half.

In the case of the small investor, this was a substantial benefit. Oftentimes, it meant that excess tax had been borne by the company, and hence the investor was due a refund. (However, this was a benefit that was vitiated owing to the considerable delay in obtaining a refund from the taxing authorities).

In the case of the large investor, it was, if I may coin the phrase, a "left-handed" advantage. While it was true that he had only to bear the super-tax on his dividend income, the grossing up meant that, perhaps, his tax bracket went up. And so it happened, so long as the holding of shares on blank transfer was none too difficult, that large investors were hardly interested in this notional income derivable on their dividends.

Since India undertook planned development, further complications have confounded and confused the have grossing-up. For, with a view to increasing internal resources with companies, this country has long been having most generous depreciation allowances. The depreciation on profits of allowable de-charge on profits (for tax purposes) re-precipitation (for tax purposes) reduced considerably the profit assessable to tax. With the rising

tempo in the installation of new plant and equipment, the provision for depreciation, in the eyes of the assessing authorities, has sometimes been so large as even to result in a "nil" or "minus" profit. Then came the introduction of the concession of Development Rebate, as an incentive to new production. By its provisions, a company could in the year of installation of new equipment claim an amount equivalent to 25 per cent of the value of such equipment as a deductible expense; and this could be, but usually was not, charged to expenditure in the profit and loss account. So, it came about that the taxing authorities found more frequently than before a series of "nil" or "minus" earnings.

Now, the companies which, owing to these allowances, had no tax liability were obviously in no position to declare a tax-free dividend. The bright idea occurred to some to declare dividends out of reserves built up of previous years' taxed profits. Unfortunately, the rate of tax may have varied, and there was, again, confusion.

There was the further difficulty because the registered office of the company and the habitat of the shareholder may be located at two distant places within the country.

Consequently, the assessment of a shareholder, particularly in relation to his grossed up dividend, had sometimes to wait upon the completion of the assessment of the company in which the shares are held. This is another factor contributory to delay.

For all these reasons, what Mr Morarji Desai has called the fiction of tax deemed to have been paid on dividends began to be exceedingly bothersome both for the taxing authorities and the tax paying public. The Gordian knot had to be severed, and the Finance Minister has done this bravely. This brings corporate taxation into conformity with the practice in the industrialised countries, with no confusion as between the tax liability of a company on its profits and the tax liability in the hands of the shareholder. The overall rate of company taxation is appa-

rently to be fixed at 45 per cent, though, for procedural reasons, the only stipulation that can be made by the budget for 1959-60 is in respect of the advance payment of tax. The two vexatious taxes, the Excess Dividends Tax and the Wealth Tax on companies, will cease to be applicable to any set of accounts which ends after March 31, 1959. But, at the same time, as from the dividends to be declared in respect of any period ending after March 31, 1959, companies will be compelled to deduct income-tax at source at the prescribed rates. Thus, the credit derived by shareholders in the past used to be an amount over and above that received physically as dividends and as represented as the rate of dividend paid. But, from now on, the dividend received physically by shareholders will be the rate of dividend declared less the income-tax deducted. It is this fact which has raised consternation among stock exchanges in the view that the shareholder will lose considerably.

But, if I may say so, the situation is not all that bleak. I now give the reasons why I think, in the long run, the Indian investor should welcome the changes in the structure of corporate taxation. Since the tax borne by a company has been reduced, the distributable surplus will be large. This may or may not be an inducement to companies to increase the rate of their dividends, so that the return to the shareholder is maintained. If the effective dividend paid to shareholders is maintained, no more need be said: the shareholder is not a loser. But, if the company chooses instead to utilise the opportunity offered of ploughing back more into the business, then, the effective return to the shareholder will undoubtedly be adversely affected. But, then, the retention of profits by a company is in the larger interest of the shareholder since, in these capital-shy days, the main source of finance for companies embarking on expansion programmes must be retained profit. In this wise, you might say that the new tax procedure and rates will make it easier for companies to plough back profits and, therefore, to prosecute their expansion programmes. Such ploughing back of profits will inevitably add to productive capacity and to earnings. In due course, thus, not only does the capital wealth of the investor's share holdings increase, but the company will also be enabled to pay a higher rate of dividend.

I hope that the stock exchanges will take cognizance of this fact. I am also hoping that the stock exchanges will pay due regard to what appears to be a change in the attitude of Government toward the removal of taxes which are a harassment. If my two hopes are borne out to be true, the stock exchanges must interpret the re-organisation of the corporate tax structure as an eminently bullish point.

Budget, 1959-60

Finance Minister's Speech

28th February, 1959

Sir.

I rise to present the statement of the estimated receipts and expenditure of the Government of India for the year 1959-60.

2. A detailed review of the major developments in the economy during the year now drawing to a close and an assessment of the emerging trends is given in the Economic Survey which is being circulated along with the budget papers. I shall confine myself to a brief review of the economic situation and draw the attention of the House to those important aspects of the situation that merit special attention.

3. The drop in agricultural production last year, which was the lowest in record since 1953-54, affected the availability of food-grains and other agricultural products during the current year. The rate of growth of industrial production also slowed down while prices showed an upward trend through a major part of the year. There was continuing pressure on the balance of payments in the first half of the year. The situation has eased somewhat in recent months. The kharif crop has been good and the prospects of the rabi appear to be fair. There has been some fall in prices and the decline in foreign exchange reserves has been halted; indeed there have been small accretions to these reserves in recent weeks but the overall shortage still remains. The requirements of foreign exchange for the remaining period of the Plan are sizeable and the current account in the balance of payments is likely to show continuing deficits. On the whole the economic situation is somewhat better than it was a few months ago; we are sensing the effect of the various corrective measures we have taken.

PRODUCTION

4. Agricultural production this year is, as I have just said, expected to be distinctly better both in regard to foodcrops and commercial crops. Industrial production also increased during the year but at a somewhat lower rate than in 1957. In some industries such as cotton textiles, finished steel, automobiles, power transformers and vanaspati, there was, however, a decline in output. The production of mill cloth, in particular, showed a sharp drop, the output declining from 5,317 million yards in 1957 to 4,900 million yards in 1958. Some industries have been handicapped by restrictions arising out of the current shortage of foreign exchange. On the other hand, there have been significant increases in production in a wide range of industries such as coal, pig iron, diesel engines, electricity, machine tools, newsprint and a

number of chemical and engineering industries. These increases have been made possible partly by the better utilisation of existing capacity and partly by increases in capacity resulting from the expansion programme undertaken earlier. Among the industries whose capacity increased in 1958 may be mentioned cement, caustic soda, sulphuric acid, super phosphates, oxygen gas and refractories. In the public sector the steel programme is proceeding more or less according to schedule. A significant step was taken during the year in the manufacture of heavy machinery in the country by the formation of the Heavy Engineering Corporation which will set up a heavy foundry, a forge, a heavy machine building shop and a factory for the manufacture of mining machinery. Construction of the plant at Bhopal for the manufacture of heavy electrical goods is also proceeding apace.

MONETARY TRENDS

5. A significant feature in the monetary situation during the year was the decline in the rate of increase in the money supply. The expansionary impact of Government transactions on the economy was mitigated by the contractionist effect of a decline in the foreign exchange reserves and a fall in the indebtedness of the private sector to the banking system. While in 1956 the increase in the money supply was Rs 131.5 crores and in 1957 Rs. 96.3 crores, it dropped to Rs. 74.9 crores in 1958. Deposits with the banks continued to increase but the expansion of bank credit has been relatively smaller. Banks have, therefore, been able to reduce their credit deposit ratio from 62.7 per cent at the end of 1957 to 55 per cent at the end of 1958. Borrowings of scheduled banks from the Reserve Bank have gone down while there has been substantial increase in the holding of Government securities by the banking system. Easy conditions prevailed in the money market until almost the end of 1958 when the onset of the busy season led to a hardening of interest rates.

6. The stock markets have shown a marked improvement as compared with the previous year. The index of variable dividend industrial securities rose from 120 at the end of 1957 to 145 by the end of September 1958. There has been some decline since then but, over the year as a whole, it has registered an improvement of about 14 per cent. Prices of securities have remained fairly firm despite large borrowings both by the Centre and the States.

PRICES

7. The index of wholesale prices has risen from about 106 a year

ago to 112 or so, the peak level of 116.5 having been reached last September. This rise in the wholesale index largely reflects the increase in the prices of foodgrains consequent on the shortfall in production. The index of prices of cereals rose from 98 in December, 1957 to 105 in December 1958 and the food articles from 104 to 113 over the same period. The other components of the wholesale price index, such as industrial raw materials and manufactures, have remained practically steady. The working class cost of living index (all India) rose from 113 in December 1957 to 122 in November 1958 but declined to 119 in the following month with food items coming down. The price indices in the current year are, to some extent, distorted by the rise in food prices due largely to the poor crop of the previous year.

BALANCE OF PAYMENTS

8. I shall now give a brief account of the balance of payments position of the country and of the steps taken to ease the difficulties which we have been facing since the beginning of the Second Plan. It is not necessary for me to give more than a factual account of the recent developments because this problem which has been engaging the continuous attention of Government has been considered by Parliament more than once in some detail. From almost the commencement of the Second Plan, we have been drawing rather heavily on our reserves and between April 1956 and February 1959 they dropped by Rs 535 crores, from Rs 746 crores to Rs 211 crores, despite substantial foreign assistance and draws from the International Monetary Fund. The reasons for this are well known. The

decline was very largely due to larger imports, in the main, of plant, machinery and industrial raw materials for development, though imports of foodgrains and Defence equipment and the decline in export earnings also contributed to it. A number of measures were taken to cut down foreign expenditure to the minimum necessary to maintain the economy and implement the projects in the 'core' of the Plan and to promote exports under difficult trading conditions in the world as a whole. As a result of these measures and the arrangements made to obtain credits and loans from friendly foreign countries and the World Bank, the rate of draws from the reserves declined appreciably from the third quarter of 1957-58. The average monthly drawal was Rs 23.3 crores in 1956-57 and Rs 34.7 crores during the first half of 1957-58; in the following six months the rate of drawal dropped to Rs 14.2 crores a month. There has been a further improvement since then. During the first six months of the current financial year the reserves have fallen at a monthly rate of Rs 13.9 crores. In the third quarter there has been a slight increase in the balances. Ignoring fluctuations our reserves have more or less main-

11. In recent months the Sterling Area, of which India is a member, has grown further in strength and its gold and dollar reserves rose to \$3215 million at the end of November, 1958—the highest level attained since September, 1951. During December, 1958 the reserve declined by \$146 million to \$3069 million but this was due to the payment of \$196 million on account of end year service on the US and Canadian loans, but for which there would have been a small rise in the reserve. As the House is aware, some of the West European countries, including the United Kingdom, announced further relaxations of restrictions on convertibility of their currencies with effect from December 29, 1958. From that date sterling held or acquired by nonresidents of the Sterling Area has become freely transferable at the official rate of exchange. Honourable Members will recall that, at the Commonwealth Trade and Economic Conference held at Montreal in September, we, in common with other participating countries, had affirmed that it remained our objective to work for full sterling convertibility as soon as the necessary conditions can be achieved.

tained their level in the last six months.

9. The year 1957-58 ended with a current account balance of payments deficit of Rs 451 crores. The payments deficit during each of the 4 quarters of the year was Rs 159 crores, Rs 148 crores, Rs 72 crores and Rs 81 crores, respectively. Imports during the year reached a record level of Rs 1,175 crores, showing an increase of Rs 79 crores over the previous year. This increase in imports, despite the efforts to conserve foreign exchange, partly reflects the heavy backlog of past commitments which came in for payment during the year and partly the massive import required for implementing the core of the Plan. The year witnessed larger imports on Government account, which rose from Rs 201.5 crores in 1956-57 to Rs 492.8 crores in 1957-58. Private imports during the year declined by Rs 122.3 crores to Rs 682 crores as a result of the strict import control measures adopted since the beginning of 1957. Total exports during the

year amounted to Rs 594.5 crores, about Rs 40 crores less than in 1956-57. A general weakening of foreign demand and a fall in the prices of primary commodities in foreign countries account for this decline.

10. The adverse trend in the country's balance of payments has continued in 1958-59. During the first two quarters of the year the payments deficit on current account was of the order of Rs 120 crores and Rs 91 crores respectively. As against a total deficit of Rs 210.8 crores on current account during the first half of 1958-59, the foreign exchange reserves fell by Rs 86.3 crores; the balance was made up by foreign loans and credits and other capital transactions.

11. In recent months the Sterling Area, of which India is a member, has grown further in strength and its gold and dollar reserves rose to \$3215 million at the end of November, 1958—the highest level attained since September, 1951. During December, 1958 the reserve declined by \$146 million to \$3069 million but this was due to the payment of \$196 million on account of end year service on the US and Canadian loans, but for which there would have been a small rise in the reserve. As the House is aware, some of the West European countries, including the United Kingdom, announced further relaxations of restrictions on convertibility of their currencies with effect from December 29, 1958. From that date sterling held or acquired by nonresidents of the Sterling Area has become freely transferable at the official rate of exchange. Honourable Members will recall that, at the Commonwealth Trade and Economic Conference held at Montreal in September, we, in common with other participating countries, had affirmed that it remained our objective to work for full sterling convertibility as soon as the necessary conditions can be achieved.

1959-60 Budget Supplement

FOREIGN ASSISTANCE

12. In the statement I made in this House on November 19, 1958, I had referred to the conference convened by the World Bank in August, 1958 to discuss India's foreign exchange situation and the manner in which India could be helped. Following the conference, the participating countries and the World Bank announced their intention to provide further assistance to India totalling \$360 million (Rs 171.4 crores) during the current financial year. Canada would give a grant equivalent to seventeen million dollars, West Germany a loan equivalent to forty million dollars, Japan a loan equivalent to ten million dollars, the United Kingdom an advance payment under the pension settlement of ten million pounds and a loan of £28.5 millions, the United States a loan of \$100 million from the Development Loan Fund and the World Bank a loan of \$85 million for the Railways. The procedure for operating the above loans and grant have since been settled and agreements signed with the countries concerned where necessary.

13. During the current financial year, the World Bank sanctioned four loans aggregating \$153 million (Rs 72.9 crores) for the development of the Calcutta Port, the Madras Port, the third D.V.C. Project and the third Railway Development Programme. The World Bank has played a most helpful rôle both by sanctioning loans for individual development projects and by mobilising a co-operative effort by some of its member-countries to help us meet our essential foreign exchange requirements. The Bank proposes to convene another similar conference next month to explore how India could be helped in meeting her foreign exchange requirements for the next two years of the Plan. It is expected that negotiations with the World Bank for further loans for the Koyana Project and the Railway development programme will take place in the near future.

14. An important outcome of the last annual meeting of the Board of Governors of the International Monetary Fund and the International Bank for Reconstruction and Development was the decision to increase the resources of these institutions. A general fifty per cent increase in the quotas of members of the Fund has been made with special ad hoc increases in the quotas of some of the members whose currencies it will be advantageous for the Fund to hold in larger amounts. Our quota in the Fund will be raised from \$400 million to \$600 million. We have to pay a fourth of this increase in the form of gold and the balance in rupee securities and necessary provision is being made in the budget for this purpose. So far as the World Bank is concerned, it is raising its capital stock by \$10 billion and its authorised capital by \$1 billion. Our subscription will be raised from \$400 million to \$800 million, but this will not involve any payment

on our part as the general increase in members' subscription is to remain 'uncalled', the object of the increase in capital stock being only to enhance the borrowing power of the Bank.

15. I referred earlier to the assistance provided by the countries which participated in the conference sponsored by the World Bank last August. In addition to this assistance we have also received in the current year financial and technical assistance from the United States, Colombo Plan countries and the Ford and Rockefeller Foundations. Two agreements were signed this year with the United States Government under the P.L. 480 programme for the import of foodgrains valued at about Rs 140 crores. This will raise the total amount of supplies under this programme to us to about Rs 313 crores, of which Rs 183 crores will be made available to us as loans and Rs 43 crores as grants, for expenditure on mutually agreed development projects. The United States Government have also agreed to defer the payments due to them on the 1951 wheat loan for the next nine years giving us a relief of \$7 million a year and to give a loan of \$20 million for the integrated project for export of iron ore to Japan, for which the Japanese Government will provide a yen loan of \$8 million for the development of iron ore mines. Assistance has also been provided for the purchase of fertilisers and tube well equipment abroad and for the eradication of malaria, aggregating in all to \$14.2 million. Canada has made a special grant of wheat worth \$8 million and sanctioned two loans amounting to \$33 million for the purchase of wheat. Australia and New Zealand have also continued their assistance.

16. Other friendly countries have also continued to help. Negotiations are in progress with the U.S.S.R. who are already assisting us for the Bhilai steel plant and for certain other industrial projects, for a credit for establishing a new project for drugs. An agreement has been entered into with the Government of Rumania who will provide machinery and technical skill costing about Rs 5.2 crores on deferred payment for an oil refinery to be set up in Assam. The Government of Czechoslovakia have also signed an agreement for establishing a forge foundry costing about Rs 8.5 crores.

17. I should like to express the gratitude of the Government of India to all the countries and institutions which have given us economic assistance so valuable and timely for our development.

18. We on our part have also continued our contribution of technical aid under the Colombo Plan. Up to September 1958, we had arranged for the training of 1086 persons from the South and South East Asia Region. We made available seven experts this year to Burma, Ceylon and Viet Nam. We have continued to assist Nepal and the expenditure incurred by us on development schemes to assist Nepal and the provision of technical personnel to that coun-

try is expected to be Rs 1.38 crores this year.

CHANGES IN THE BUDGET

19. Before I deal with the estimates of revenue and expenditure, I would like to mention certain changes which have been made in the budget documents presented to the House. For some years it has been the practice to present the Demands of Defence Services and the Posts and Telegraphs Department in separate self-contained publications. The question of extending this arrangement to other Ministries has been under consideration for some time and, more recently, the Estimates Committee also suggested that the estimates relating to individual Ministries should be presented in self-contained volumes. This suggestion has been accepted and the Demands for Grants for the budget year are being presented by individual Ministries to Parliament. Along with the Demands for Grants, the notes on the expendi-

ture estimates and on the important schemes under the control of each Ministry will also appear together with the accounts and balance sheets of industrial undertakings. The Explanatory Memorandum on the Budget will now be confined to a general review of the revenue and expenditure estimates and the Capital Budget and will contain various annexures of general and financial interest dealing with the budget as a whole. Opportunity has also been taken to transfer to the Economic Survey, presented along with the Budget, data and statistics of economic interest which used to appear in the Explanatory Memorandum. I am sure the House will welcome the revised arrangement which, for the first time in the history of Government, will bring together for each Ministry the estimates relating to it and will facilitate the disposal of these estimates by the House. We are also giving, for the first time, the estimates relating to Plan expenditure separately from the estimates on non-Plan items in the Demands for Grants. This segregation of Plan expenditure in the Accounts and Estimates will, I feel, make for a more efficient control of expenditure on the Plan. While making these changes, care has been taken to see that, as far as possible, the material now available to Parliament in the Hindi version of the Budget, is not curtailed in any way.

FINANCIAL YEAR 1958-59

20. Against the budgetted revenue of Rs 767.99 crores the actuals this year are likely to amount to Rs 728.20 crores while the expenditure met from revenue is placed at Rs 788.15 crores against the original estimate of Rs 796.01 crores. In the result, the deficit of Rs 28.02 crores provided in the Budget is likely to rise to Rs 59.95 crores.

21. The increase of Rs 31.93 crores in the revenue deficit for the year is entirely due to a fall in the anticipated revenue, mostly in the revenue from Customs. The total revenue for the year is now

expected to fall by Rs 33.22 crore. Customs duties are expected to show a drop of Rs 34 crores; the effect of restrictions on import on revenue appears to have been far more rigorous and the backlog from past licensing not as much as was originally anticipated. Also, during the year adjustments were made in export duties on scale not visualised when the Budget was framed. The revenue from Union Excises is now placed at Rs 3.61 crores less while the yield from the Wealth Tax, the Expenditure Tax and the Gift Tax will, together, be Rs 5.3 crores less than anticipated. A drop of Rs 1 crore is anticipated in the grant from the U.S. Government under the P.L. 490 programme and of Rs 1.86 crores in the receipts from Currency and Mint, but these will be more than off set by large receipts of interest, sale proceeds of evacuee property and an increase of Rs 3.04 crores in the contribution from the Posts and Telegraphs Department.

22. Civil Expenditure this year is now estimated at Rs 521.2 crores against the original budget of Rs 517.87 crores and Defence Expenditure at Rs 266.87 crore against the original estimate of Rs 278.14 crores.

23. The increase of Rs 3.4 crores in Civil Expenditure is the net result of a number of increase and decreases. Debt Services are expected to show an increase of Rs 2.66 crores, reflecting the growing volume of the public debt. Currency and Mint Rs 64 lakhs owing to increased provision for the loss on the destruction of uncurrent coin. States' share of Union Excise duties Rs 4.02 crores, reflecting the increase in the revenue from the shared duties during the year and a small carry over from last year, and Miscellaneous Expenditure Rs 11.34 crores due mostly to an increase of Rs 6 crores in payments to State Governments to assist them to meet the additional expenditure on the raising of the emoluments of the low paid employees and Rs 4.27 crores in the provision for the transfer of the sale proceeds of evacuee property which is taken in reduction of the capital expenditure on the payment of compensation to displaced persons. A part of the additional expenditure will be counter-balanced by a saving of Rs 13 crores in the provision for the transfer to the Special Development Fund of the grant received under the P L 480 programme for subsequent use on development plans; and a shortfall of Rs 2.73 crores in expenditure under various heads grouped under Civil Administration.

24. The decrease of Rs 11.27 crores in Defence Expenditure occurs largely in the Army and Air Force estimates. The expenditure on the purchase of stores is likely to be less than estimated; in the case of the Air Force, the decrease is also due to the fact that payments on account of purchase of aircraft and other equipment from abroad are expected to be less than was anticipated when the budget was framed.

FINANCIAL YEAR 1959-60

25. For the coming year, at the existing level of taxation, I am budgeting for a total revenue of Rs 757.51 crores and an expenditure of Rs 831.18 crores, leaving a deficit of Rs 81.67 crores.

26. With the continuing restriction on imports the downward trend in the revenue from customs is likely to continue and for next year I am taking credit for a sum of Rs 130 crores against the current year's revised estimate of Rs 136 crores. The revenue from Union Excise Duties next year is likely to show an improvement of Rs 5.85 crores and the receipts from Corporation Tax and Income-tax an improvement of Rs 6.50 crores. Under the other principal heads of revenue, the receipts next year will be more or less the same as in the current year. The principal heads as a whole will thus show an improvement of Rs 7.2 crores. Receipts under other heads next year will in all be Rs 25.26 crores more than in the current year. This is the result of three major changes. Firstly, the grants under the PL 480 Programme are expected to amount to Rs 15 crores against Rs 1 crore this year. Secondly, the profits from the Reserve Bank next year have been placed at Rs 40 crores against Rs 30 crores this year. This is a purely temporary arrangement; the stabilised amount that should be paid by the Reserve Bank in subsequent years will be discussed during the course of next year. Thirdly, the profits from the circulation of coin for which credit has been taken next year amount to Rs 13.15 crores against Rs 2.75 crores this year. This increase is mainly due to the transfer of Rs 10 crores from out of the accumulated surpluses in the past on the circulation of rupee and small coins which had been kept under suspense. Till 1956 the practice had been to keep all profits from the circulation of rupee coin, whether silver or nickel, in suspense and also to accumulate under a suspense head the net profits on the circulation of small coin, the transfer to revenue being limited to the net expenditure in a year on the running of the Mines plus a fixed sum of Rs 45 lakhs. This later arrangement was introduced during the last World War so as to even out the impact of the fluctuating profits on circulation on the revenue budget. These accounting arrangements were reviewed in 1956 in consultation with the Comptroller and Auditor General and it was decided that, with effect from 1956-57, the actual profits on coinage and the loss on the destruction of off-uncurrent coin should be adjusted directly as revenue and expenditure. The accumulated sums held in suspense which amounted to a little over Rs 50 crores were to be treated as a deficit neutralisation reserve and, the original intention was to draw upon this reserve in the course of the year, I have decided, in view of the size of the revenue deficit, to take credit for Rs 10 crores from this source in the budget itself. These increases will be

partly balanced by a drop of Rs 4.41 crores in the receipts from the surplus cement account of the State Trading Corporation and Rs 3.31 crores in the receipts on account of Steel Equalisation Fund. The contribution from the P & T Department will be Rs 1.13 crores less. The contribution from the Railways creditable to revenue will also be Rs 42 lakhs less. As Hon'ble Members are aware, the Railways pay General Revenues dividend at a fixed rate of 4% on the Capital at charge, which is partly adjusted as revenue but mostly taken in reduction of expenditure under interest. Next year's dividend from Railways will amount to Rs 54.41 crores against Rs 50.03 crores this year. Of this, Rs 48.43 crores will be taken in reduction of expenditure under interest and the balance of Rs 5.98 crores taken as revenue.

27. Payments to State Governments on account of their share of income-tax, estate duty and tax on railway passenger fares next year, on the estimates of revenue taken for these taxes, will amount to Rs 92.22 crores against Rs 89.07 crores in the current year. Provision for the States' share of divisible excises is made in the expenditure estimates.

28. Civil expenditure next year will amount to Rs 596.5 crores and expenditure on Defence Services to Rs 242.68 crores.

29. The main reasons for the increase of Rs 75.22 crores in civil expenditure may be briefly mentioned. The grants received under the PL 480 programme and initially credited to revenue have to be transferred to the Special Development Fund and used through it for subsequent expenditure. The provision for this transfer next year, following the estimates adopted on the revenue side, is Rs 15 crores against Rs 1 crore in the revised estimates this year. Expenditure on debt services which rise with the growing public debt, will absorb Rs 15.82 crores more than in the current year. Expenditure on administrative services, such as on General Administration, Audit, Administration of Justice, Jails, Police, External Affairs and so on, is likely to amount to about Rs 2½ crores more in all. Under heads covering Development and Social Services, which include substantial provision on Plan outlay, the total expenditure next year is estimated at Rs 168 crores roundly against Rs 145½ crores this year. The provision for Community Development will also be Rs 6.17 crores more than in this year. Increased provision has also been included in the budget for grants to States for the welfare of Scheduled Tribes and areas and Backward classes amounting in all to about Rs 5½ crores. These increased provisions mainly account for the rise in Civil Expenditure. Detailed explanations for other minor variations are given in the notes on the expenditure estimates circulated with the Demands for Grants.

30. The net expenditure on Defence Services in the coming year

will be Rs 24.13 crores less than in the current year. This improvement is the result of a reduction in the gross expenditure by Rs 19.55 crores and an increase in receipts and recoveries of Rs 4.64 crores.

31. The expenditure on the Army will be roughly on the same scale as in the current year, but credit has been taken for a special item of Rs 5 crores on the receipt side. A sum of Rs 14.56 crores representing the custodial charges recovered on Defence surplus Stores borne on capital has been lying in suspense. This sum which is actually of the nature of reimbursement of expenditure incurred from revenue is properly creditable to revenue and not to capital. It has been decided to write it back to revenue in three instalments, commencing with the budget for next year and a round sum of Rs 5 crores has been taken on this account.

32. Navy estimates show a small increase of Rs 1.84 crores for normal development. The real saving occurs in Air Force estimates which show a drop of Rs 23.84 crores due to reduced provision for payment on account of the purchase of aircraft spares and other equipment, as a substantial portion of the payments for this purpose would have been made in the current year. Expenditure on service pensions will be Rs 2 crores higher as it is proposed to sanction to military personnel drawing small pensions an increase on the analogy of that sanctioned to civil pensioners this year.

CAPITAL EXPENDITURE

33. I shall give a brief account of provision included in the budget for capital outlay.

34. Excluding the adjustment for the transfer of capital assistance from the United States to the Special Development Fund which is technically treated as capital expenditure, the current year's budget provided Rs 412 crores for capital outlay. The corresponding figure is now expected to amount to Rs 395 crores. The Railways are expected to draw Rs 18 crores less for their capital requirements which are not met from their Development and Depreciation Reserves. Investment in the three Steel projects will be Rs 14 crores less as the total equity investment of Rs 300 crores in Hindustan Steel Limited would have been complete with this reduced investment; the balance of the finance required by the Company will be provided in the form of loans. Food purchases are likely to involve a net additional outlay of Rs 24.26 crores. The total capital outlay would have been higher than the figure mentioned by me but for the receipt of an additional sum of Rs 13.33 crores (£10 million) from the UK Government as advance payments under the Sterling Pensions Arrangement.

35. The corresponding provision for capital outlay next year is Rs 420 crores. It includes a sum of Rs 95.24 crores for the payment of the additional subscription to the International Monetary Fund which

1959-60 Budget Supplement

I explained in some detail earlier in my speech. The Railways will be drawing Rs 122 crores next year against Rs 121 crores this year while Defence capital outlay is estimated at Rs 32.74 crores, an increase of about Rs 5 crores over the current year. Capital outlay on Posts & Telegraphs is expected to be Rs 4½ crores more and the net capital outlay on food purchases may be Rs 2 crores higher. Increased provision has been made for investment in the various industrial concerns and for Civil Aviation, Civil Works, the Dandakaranya Project and development grants. The total provision which is mostly for development schemes or for inescapable expenditure would have been much higher but for fact that, as explained earlier, the entire requirements for the steel plants will be met by loans.

36. To complete the picture of the capital requirements of Government, mention should be made of the provision for loans and advances. In the coming year, loans to State Governments, mostly for enabling them to finance their development schemes, will amount to Rs 313 crores against Rs 327 crores this year. In addition, loans to Port Trusts, Statutory Corporations, Government companies, etc. will absorb Rs 123 crores this year and Rs 212 crores next year. Provision has been made for the grant of a loan of Rs 52 crores to Hindustan Steel this year and Rs 12 crores next year. The Railways will also take a loan of Rs 10.98 crores this year and Rs 10.88 crores next year for their Development Fund to be repaid later. Details of the various loans proposed to be given are shown in the Explanatory Memorandum.

37. The House may like to have some idea of the total provision included in the budget for the implementation of the Plan and the magnitude of the total Plan outlay next year. The budget includes a total provision of Rs 843 crores for implementing the Plan, Rs 15 crores in the revenue budget and Rs 693 crores in the capital budget. Out of this, Rs 63 crores from the revenue budget and Rs 195 crores from the capital budget will be given as assistance to the States. In addition, the Railways will be spending Rs 39 crores from their own resources and the States Rs 239 crores. Thus, the total Plan outlay, including interest on loan on River Valley Projects which are added to Capital during the period of construction and short term loans, will amount to Rs 1,11 crores.

38. As Hon'ble Members are aware in view of the strain on resource internal and external, it has been decided to limit the five year outlay on the Plan to Rs 4,500 crore. The estimated expenditure in the first three years of the Plan is about Rs 2,450 crores, leaving a balance of Rs 2,050 crores to be incurred in the next two years. The budget provision at the Centre at the States is, as I explained just now, of the order of Rs 1,120 crore. The resources position for the next two years will continue to remain difficult and a considerable further

1959-60 Budget Supplement

effort to augment the resources available for development will be necessary. With all the effort we have made, the proportion of the national income accruing to the public exchequer still remains small. While with the substantial external assistance we have been receiving, the bulk of the Second Plan will go through, we have to remember that we shall have sizeable repayments to make in the period of the Third Plan. This underlines the necessity for a determined effort to increase production and savings.

39. Thinking has already started on the Third Plan. It is obvious that the objective should be to accelerate as much as possible the tempo of development the country would have reached by the end of the Second Plan. It is, in my view, premature to speculate on the size of the Plan; questions regarding the over all size, the allocations, methods of raising resources, the quantum of external assistance required and likely to become available are inter-linked and are all under study. But it is clear that we should explore every avenue to ensure that the Third Plan does take us decisively forward and not keep the country at the level of development it has reached. We have to aim at creating within the economy conditions which will make the process of growth continuous and self-supporting.

WAYS AND MEANS

40. The overall deficit for the current year is now estimated at Rs 255 crores against Rs 200 crores assumed in the Budget. The increase of Rs 55 crores is the result of a number of factors. The Revenue deficit is now expected to be Rs 32 crores more than was estimated at the time of the budget, reasons for which I have given in the earlier part of my speech. Foreign loan assistance, for a variety of reasons, is actually likely to be Rs 46 crores less than the amount for which credit had been taken. We had to give to the States additional loans amounting in all to Rs 42 crores, mainly arrears of loans promised to them, and Rs 52 crores to Hindustan Steel. Food debts are also expected to be higher by Rs 24 crores than the sum provided in the budget. The total increase of Rs 196 crores on these accounts will, however, be partly counterbalanced by some savings in the loan provision for miscellaneous loans, increased receipts from internal borrowing and by probable shortfalls in expenditure spread over a large number of heads. In the result, the net deficit to be covered by the expansion of Treasury Bills is likely to amount to Rs 255 crores.

41. Public borrowing in the current year has been far more satisfactory than in the last two or three years. The budget had assumed a market loan of Rs 145 crores but the actual loan receipts amounted to Rs 202 crores. During the year three new loans were floated, the 3½ per cent Bonds 1963, the 3½ per cent National Plan Bonds (Fifth Series) 1968 and the 4 per cent Loan 1973, the maturi-

ties offered having a sufficient spread for meeting the varying requirements of the market. The total amount offered for all the three loans was Rs 135 crores but the subscriptions accepted amounted to Rs 142 crores. The market demand for investment, however, continued and in August 1958 we issued a new 3½ per cent Loan 1968 for Rs 30 crores and created a further issue of the 3½ per cent National Plan Bonds 1967 for another Rs 30 crores. These securities were, in accordance with the usual practice, issued to the Reserve Bank to be sold by them to the market. The net receipts from regular loans this year will be Rs 181 crores against the original estimate of Rs 125 crores.

42. There was a welcome revival in the market demand for short-term investment through treasury bills. In July last, the Reserve Bank of India renewed the weekly auctions of treasury bills after a lapse of over two years. They also revived the practice of selling intermediate treasury bills to the market, an operation which had been in abeyance for over fifteen years. It is expected that the total outstanding treasury bills with the public at the end of the current year would amount to Rs 25 crores.

43. Under Small Savings, the Budget had taken credit for a net receipt of Rs 100 crores. This has turned out to be over-optimistic and, although there has been an improvement in the collections this year as compared with the previous year, the net collections are not likely to be anywhere near the figure taken in the Budget. The net collections from Small Savings have been steadily rising from a figure of Rs 37.57 crores in 1951-52 to a figure of Rs 69.6 crores in 1957-58. In the first ten months of the current year, the net collections have amounted to Rs 47 crores against a little under Rs 38 crores in the corresponding period of the previous year. In the last two months of that year, the collections were somewhat exceptional owing to the special drives undertaken by some of the State Governments. After allowing for this and on the trend of actuals this year, I do not think it wise to take credit for more than Rs 75 crores for this year. Postal Savings Banks are still not doing as well as in the past, but there has been an improvement in the sales of National Plan Savings Certificates and Treasury Savings Deposit Certificates.

44. While on this subject, I should like briefly to mention the various steps taken during the course of this year for intensification of the savings movement. To revive the popularity of the postal savings banks, facilities for withdrawal by cheques which were tried out as an experiment in Bombay are being extended to a large number of post offices at a number of big towns, the intention being to provide the facility in all post offices as early as possible. It has been decided to allow sales of Treasury Savings Deposit Certificates through agents on a commission basis. The National Savings Certificates Rules

have been rationalised and re-issued and a concentrated drive for the recruitment of more authorised agents and the formation of more savings groups undertaken. Publicity has been largely decentralised in consultation with the State Governments who will now be in charge of this work in the States except, to a limited extent, where it has been found desirable to retain the work with the Centre. Publicity will now be largely in the regional languages at the State level and this should assist in the further development of the movement. The question of replacing the multiple agency system which has grown up with years by a uniform system is also under consideration. Government have accepted the principle of allowing investors in small savings to nominate the persons to whom the investment should be repaid on the lines of the assignments made of insurance policies and the necessary legislation to permit this will be undertaken shortly. The progressive diversification of investment has been taken a step further by the introduction with effect from the 2nd January this year, of the Cumulative Time Deposit Scheme under which small monthly payments can be accumulated at post offices for periods of five or ten years at attractive rates of interest.

45. The National Savings Organisation has been keeping in close touch with the State Governments in developing the savings movement. The State Governments' interest in the movement has been further emphasised by a modification in the arrangement for the sharing of the net receipts with them. When the States' share was raised to two-thirds, a condition was laid down that, in any year in which a State Government floated, a market loan, it should surrender to the Centre one-third of the loan proceeds. This condition has now been withdrawn so that the States now receive two-thirds of the net receipts from small savings while retaining the whole of their market borrowing.

46. For next year's Budget, I have taken credit for a market borrowing of Rs 225 crores, taking into account the fact that the market will receive a repayment of Rs 110 crores from the maturing 3 per cent Second Victory Loan—1959-61. I have also taken credit for a further small expansion of Rs 15 crores in the treasury bills with the public. For small Savings I have taken a net credit of Rs 85 crores, a modest increase of Rs 10 crores over the likely receipts this year. On the best estimate that can be made at present, I expect that foreign assistance next year would amount to Rs 337 crores.

47. I may now summarise the overall budgetary position next year. At the existing level of taxation and expenditure, there will be a revenue deficit of Rs 82 crores. Capital outlay will amount to Rs 420 crores, loans to State Governments and others to Rs 525 crores and debt repayments to Rs 130 crores. This total outgo of Rs 1,157 crores will be met to the extent of Rs 111 crores by repay-

ments of loans to Government, Rs 240 crores from public borrowing in India, Rs 85 crores from small savings, Rs 337 crores from foreign assistance, Rs 95 crores from the issue of special securities to meet the payment of the additional subscription to the International Monetary Fund and Rs 44 crores from miscellaneous receipts under Debt and Deposit heads, leaving a deficit of Rs 245 crores which will be met by the issue of treasury bills.

48. I now come to my proposals for dealing with the revenue deficit for the coming year.

PART B

49. The deficits in the current and the ensuing years are somewhat exceptional, the significant contraction of revenue coinciding with an increase in the quantum of development expenditure met from revenue. Although in the past we have been realising surpluses on revenue account every year, I feel that it would be unwise to leave the deficit in the coming year wholly uncovered. In past the comfortable revenue position was partly due to the resilience of revenue and partly to shortfalls in expenditure inevitable while the country is in the process of gearing its administrative machinery to implement an expanding development plan. Both these factors are ceasing to operate. The buoyance of revenue in the past was mainly under Customs but because of the drastic cuts in imports and the progressive freeing of our exports from export duty, Customs revenue has suddenly contracted and is likely to remain static for some years. The administrative machinery is now better equipped for implementing the Plan and budgetary provisions are likely to be spent more fully than in the past. For all these reasons I think that a part of the deficit next year would have to be covered. This would also be consistent with our policy of continuously mobilising additional resources for the Plan.

50. In determining the extent to which the prospective deficit should be covered, I have taken into account the amount by which taxation has been increased in the last two years. Our record in the matter of raising additional resources by way of taxation for the Plan has, I venture to think, been quite impressive since the Second Plan came into operation. In 1956-57, taking the proposals in the original and the supplementary budgets together, the total taxation raised was of the order of Rs 90 crores. In the following year, we did even better and touched nearly a hundred crores. In the current year, the net additional taxation was not significant but, taking the three years of the Plan together, the additional taxation has been quite substantial. Having this in mind, I propose to cover only about a fourth of the anticipated deficit of Rs 82 crores in the coming year.

51. The next problem is how to distribute this additional taxation

between direct and indirect taxes. We have only just achieved an integrated scheme of direct taxation and I think that for the present we should concentrate on improving the administrative machinery, simplifying the existing procedures and plugging loop-holes. By these methods we should be able to improve our revenue from these sources without many major changes. They cannot, however, produce immediate results and, although my proposals include certain changes in the rates in this field also, the bulk of the additional revenue next year will, I fear, have to come from indirect taxes. I shall first deal with indirect taxation and then proceed to direct taxation.

INDIRECT TAXATION

52. In the field of indirect taxation my proposals are mostly by way of readjustments of rates and concessions in the existing duties of excise. These are described in some detail in the memorandum circulated with the budget papers and I shall only mention them briefly here.

53. The duty on refined diesel oils and vapourising oil is being raised from 40 naye paise per imperial gallon to 80 naye paise. There is at present a price advantage in favour of diesel oil of which we have to import substantial quantities. Both as a measure of increasing revenue and conserving foreign exchange the proposed increase is justified. As a consequential adjustment, the rate of duty on low-speed diesel oil is also being increased from Rs 40 per ton to Rs 50 per ton. The total yield from these two measures will be Rs 7.85 crores a year.

54. The duty on art silk fabrics is being raised from 6 pies per square yard to 6 naye paise per square yard. Simultaneously the exemption in the present form in respect of products of the first nine looms will be reduced to four looms. The increased levy is amply justified by the large profits which are made by the industry. The estimated yield will be Rs 1 crore a year. The lowering of the exemption will also bring in Rs 20 lakhs by way of additional duties which accrue to the States.

55. The effective rates of duty on rayon yarn and staple fibre are also being raised by 60 per cent to yield an additional Rs 50 lakhs.

56. The duty on motor vehicles tyres is being raised from 30 per cent ad valorem to 40 per cent ad valorem. There will be no change in the rate of duty on cycle tyres. The additional revenue is estimated at Rs 1.75 crores.

57. An increase is also being made in the duty on vegetable product which will increase from Rs 7 per cwt. to Rs 8.75 per cwt. with a corresponding adjustment in the exemptions in favour of the small producers. The additional revenue will be Rs 95 lakhs.

58. Vegetable non-essential oils were first subjected to excise in 1956, but some preference to medium and small scale producers

was given by exempting production up to 125 tons per annum on a slab basis. In 1957 the free slab was brought down to 75 tons and a lower rate of duty levied on production between 75 tons and 125 tons. These concessions have been reviewed and it is now proposed to withdraw the exemption from all power driven units and limit the concessional levy to only the first 75 tons of production. These changes, which will be made by notification and will not affect village ghanis in any way, are expected to yield Rs 4.4 crores.

59. Khandsari sugar is now exempt from excise duty but pays the usual sales taxes. There has always been a fiscal preference in favour of this sugar but, with the recent substantial increases in the duty on crystal sugar, this preference has further widened resulting in the shift of production to this form of sugar. There are cogent reasons for reducing the margin and this is being done by the levy of the basic duty of Rs 5.60 per cwt., with an additional duty of 70 naye paise in replacement of the sales taxes. The basic duty will yield Rs 1.82 crores and the additional duty, which will accrue in its entirety to the States, Rs 25 lakhs.

60. Certain adjustments are also being made in the duty on various kinds of cigarettes involving an increase of 16 per cent in the level of duties for cigarettes taken as a whole. These adjustments are expected to yield a revenue of Rs 1.5 crores.

61. Incidentally, the present tariff on unmanufactured tobacco has led to some diversion to biri-making of tobacco which was previously used for hookah. I am taking powers to assess at the higher rate such varieties of tobacco as may be specially notified and as are actually used for the making of biris.

62. The incidence of excise and export duties on tea has been under continuous review. It has been decided to readjust the rate of excise duties on the teas grown in certain areas of the country and to reduce, at the same time, the effective rate of export duties from 26 naye paise per lb. to 24 naye paise per lb. These changes will result in an additional revenue of Rs 58 lakhs under Union excise and a reduction of Rs 93 lakhs in the yield from the export duty. In the net, the industry will benefit to the extent of Rs 35 lakhs.

63. The total additional revenue from the various measures I have just mentioned will amount to Rs 20.35 crores from the basic duties and Rs 45 lakhs from the additional duties in replacement of sales taxes which accrue to the States. As Hon'ble Members are aware, the basic duties on tobacco, vegetable product, tea, sugar and vegetable non-essential oils are shared with the States in accordance with the award of the last Finance Commission. Twentyfive per cent of the net additional revenue from these commodities will have to be distributed to the States,

after deducting the cost of collection. This payment will be of the order of Rs 2.27 crores. Allowing for this and for the additional duties to be paid to them, I am taking the net additional revenue from changes in Union excise duties at Rs 18.08 crores.

64. I propose to make no major change in regard to customs duties. But there will be a countervailing increase in the import duties on the commodities on which excise duties are being increased and this by itself will bring in an additional revenue of Rs 3.65 crores. The reduction in the export duty on tea will, however, involve a drop of Rs 93 lakhs in revenue as I have mentioned earlier. I propose to make a small increase in the duty on unexposed cinema films to yield Rs 5 lakhs a year for the benefit of the Film Finance Corporation which is being set up. With this small addition, the net additional yield from customs duties next year will amount to Rs 22.77 crores.

DIRECT TAXATION

65. I propose to increase, with effect from 1959-60 the Wealth tax payable by individuals and Hindu undivided families by half a per cent at each slab. The new rates of wealth tax on individuals will be 1 per cent on wealth in excess of Rs 2 lakhs but upto Rs 12 lakhs, 1½ per cent on the excess between Rs 12 lakhs and Rs 22 lakhs and 2 per cent on any excess above that. For Hindu undivided families, corresponding changes will be made. The extra revenue on this account will be Rs 2.5 crores.

66. The revenue from Expenditure tax has been quite disappointing this year. It is a new tax, not tried anywhere else in the world, and in the first year of its imposition in our country, it is only right that we should have proceeded cautiously. I think, however, that the time has come to tighten the existing law to some extent. I propose, therefore, to withdraw some of the exemptions now available and, in particular, to provide that the husband, wife and minor children should be regarded as one unit for the exemption limit of Rs 30,000 in the matter of non-taxable expenditure and not as separate assesses if they have incomes in their individual rights.

67. Coming to income tax, I propose to make no change in the present rates and structure of personal income tax. I have, however, some proposals for changing the present system of taxation of company profits and dividends. At present, an Indian company is generally required to pay income tax at 30 per cent plus a sur-charge of 1.5 per cent and super tax at 20 per cent on its total income. When dividends are declared out of the balance after payment of these taxes, a portion of the income-tax paid by the company is deemed to have been paid by the shareholders themselves. In the assessments of the latter, the dividends received by them are included in their income after being "grossed" and they are credited with the amounts

1959-60 Budget Supplement

deemed to have been paid by the company on their behalf. This process of grossing is somewhat complicated. For one thing, the rate of grossing depends on the effective rate at which the company's profits are initially subjected to tax. The effective rate in its turn depends upon the composition of the income of the company. The dividends themselves may be paid out of reserves accumulated over some years, which again complicates the determination of the effective rate at which the profits have been taxed. Further, the assessments of shareholders have to await the completion of the assessments of the companies. All these lead to considerable inconvenience to all concerned, and the scheme I propose seeks to avoid this.

68. The main points of the scheme are briefly these. The legal fiction of deeming the income-tax paid by the company to have been paid by the shareholder and the complicated process of grossing the dividend received by the latter will be abolished. The overall tax rate hitherto applicable to Indian companies will be so fixed that the yield will be equal to the present annual gross yield less the annual credit now given to the shareholders. The tax liability of the shareholders will no longer be related to the tax borne by the companies. So far as the shareholders are concerned, companies will deduct tax at a prescribed flat rate and credit it to Government. This tax will be reimbursed to the shareholders at the time of their assessment as is done today in the case of interest on Government securities. I hope to devise a scheme for issuing exemption certificates for small shareholders so that the question of reimbursement does not arise in their cases.

69. The scheme will be implemented in two stages. In the first stage, that is, during 1959-60 income-tax will be deducted from the companies at the same rate for Government securities from dividends distributed by them only from dividends declared in the year the profits of which were assessed to tax in 1960-61; for example, dividends declared in the year ending 30th June, 1960. Dividends declared for any early year, the profits of which were assessable in 1959-60 (for example, dividends for the calendar year 1958) will not be subject to deduction and will continue to be assessed under the existing provisions. During the second stage that is during 1960-61, the overall tax rate applicable to the companies under the scheme will come into operation. The present scheme of grossing of dividends will cease to operate from April, 1960 in respect of dividends declared for the accounting year relevant to the assessment year 1960-61 and subsequent years.

70. As part of the scheme simplification of company taxation I propose to combine in the income

1959-60 Budget Supplement

tax and super tax rates of companies, the net incidence of the present taxes on income, dividends and wealth. For purposes of advance payment of tax by companies under Section 18-A of the Income Tax Act, I propose a rate of 20 per cent for income tax and 25 per cent for super tax, that is to say, a total of 45 per cent. This rate will secure the same revenue as is at present derived from the taxes on the wealth and profits of companies and I propose, therefore, to abolish the Wealth Tax on companies and the Excess Dividends Tax.

71. The changes in company taxation will not affect the divisible pool of income tax in the coming year. In 1960-61 a part of the tax now accruing to the pool may not, for technical reasons, be treated as divisible. It is Government's intention to secure that, until the matter has been examined by the next Finance Commission, the State Governments continue to receive as their share of income tax about the same amount which they would have received had this change not been made.

72. Foreign companies which declare dividends outside India will, of course, not be subject to the scheme I have described. However, some adjustment is necessary in the rates applicable to them on account of the withdrawal of the Wealth Tax on companies. The present rate applicable to such companies is 61.5 per cent and I propose to raise it to 63 per cent with effect from 1960-61.

73. Before leaving the subject of company taxation, I should like to mention one further change. While ordinary bonus issues are subject to tax, bonus issues which are made out of share premium accounts are not now taxed. With effect from 1960-61, I propose to subject these issues also to taxation like other bonus issues.

74. A few more changes in the Income Tax Act will be necessary as a corollary to the new scheme. I will not, however, tire the House with a detailed description of these changes. They are incorporated in the Finance Bill and are explained in the Memorandum on the Bill circulated with the Budget papers.

75. The Finance Bill also contains some other minor changes. These have no significant effect on revenue and I would like to mention to the House only two of them; one of them withdraws the concessions now available to incomes earned abroad but not remitted to India upto a limit of Rs 4,500 and the other provides for certain allowances to be given in pursuance of the agreement entered into with an oil company for the exploration of oil in the West Bengal area.

NET EFFECT OF PROPOSALS

76. I would now summarise the net effect of the taxation proposals. The changes in the Union excise duties, excluding the shares

that accrue to the States, will yield Rs 18.08 crores. The changes in Customs duties will bring in Rs 2.77 crores and the increase in the Wealth Tax Rs 2.5 crores, a total of Rs 23.35 crores. This will reduce the deficit on revenue account from Rs 81.67 crores to Rs 58.32 crores, about the same amount as in the current year which I propose to leave uncovered. The overall budgetary deficit will also be reduced from Rs 245 crores to Rs 222 crores.

CONCLUSION

77. The annual budget is now something more than a simple account of Government's house-keeping. Each budget marks a stage in the country's development and has to be judged by the contribution it makes to this development. In a sense therefore, the stage that has been reached in the implementation of the Plan conditions this budget. So far as the Plan is concerned, I think it is accepted by every one that subject to such minor adjustments as may be necessary and were made at the time of the recent reappraisal by the National Development Council, we have to go forward with the Plan. For me, as for my predecessors in this place, this has been the major factor round which the budget has to be built. In doing so, I have kept continuously in mind the main considerations necessary for the successful implementation of the Plan. If I may repeat them, these are the maximum mobilisation of resources by taxation and borrowing, firm control over the growth of non-development expenditure and minimum recourse to borrowing from the Central bank for the finance required for development. In regard to the raising of resources, although the quantum of additional taxation next year is moderate compared to what was raised in the first two years of the Plan, it is still substantial. As regards the growth of expenditure, Hon'ble Members will notice that the next year's budget provides for a substantial drop in Defence expenditure and that the bulk of the increase in Civil expenditure is on account of larger provision for development. We are doing our best to see that there is no avoidable increase in non-development expenditure and in the Finance Ministry and in the Planning Commission, we have machinery for securing economies in non-Plan and Plan expenditure. An account of the work of the economy units is given to Parliament from time to time and I need not dilate on it here. I would, however, assure the House that I am fully conscious of the imperative need for tightening control over such expenditure and it is our constant endeavour to achieve utmost economy without sacrifice of efficiency or output. As regards borrowing from the central bank, although the overall budgetary deficit for the coming year is smaller than in the current year and very much smaller than the

deficit in 1957-58, it is still somewhat higher than I myself would have wished and Government had in mind some months ago. The House will appreciate that to a large extent this deficit reflects the outlay on the Plan which cannot be cut down without accentuating unemployment and leading to stagnation. Nevertheless, I may assure the House that Government do not take a complacent view of the situation and it is my intention to see how far the deficit could be reduced by appropriate measures during the course of the year.

78. In recent months, we have been passing through a difficult period and as the Prime Minister summed it up so aptly when he presented the budget last year, our crisis is a crisis of development, crisis is a crisis of resources. I feel we have passed through the most difficult phase and that there is no reason for taking a pessimistic view of the situation. Many of the major development schemes will be completed in the course of

remaining period of the Plan and will start yielding results. The country's foreign exchange difficulties are being steadily surmounted and the overall budgetary deficits have started moving down significantly. Although the price situation is still a matter of some concern, there is no reason to doubt the inherent soundness of the country's economy and its ability to weather the current difficulties. These difficulties are purely transitional and should act as a spur to greater effort on the part of the community. There can, in any case, be no question of looking back or of slowing down the country's economic development. This would require greater production, greater saving and more restraint in consumption—in other words, greater efforts and more sacrifices by the community for ensuring a better future for the country. I am certain that these efforts and sacrifices would be forthcoming and that we could go forward with a stout heart and with confidence in our high destiny.

*Effect of budget proposals.

16. In section 51 of the Income tax Act, in clause (b), the words "or by section 20" shall be omitted.

AMENDMENT OF SECTION 52

17. In section 52 of the Income-tax Act, after the words, brackets and figures "or sub-section (3) of section 33" the words, brackets and figures "or furnishes a certificate under sub-section (9) of section 18" shall be inserted.

AMENDMENT OF SECTION 58

18. In section 58 of the Income-tax Act,—

(i) in sub-section (1), the word and figures "and 20" shall be omitted;

(ii) in sub-section (2), the brackets, figures and letter "(3A)," shall be omitted.

COMMENCEMENT OF THE AMENDMENTS TO ACT II OF 1922

19. (1) The amendments to the Income-tax Act made by—

(a) sub-clause (a) of clause (i) of section 3, in so far as it seeks to omit the third proviso to sub-section (1) of section 4 in its application to income chargeable under the head "Salaries";

(b) sub-clause (b) of clause (i) and clause (ii) of section 3; and

(c) clause (i) of section 8; shall, for the purpose of making any deductions of income-tax and super-tax under sub-section (2) of section 18 of the Income-tax Act, have effect on and from the first day of April, 1959, and for other purposes shall have effect on and from the first day of April, 1960.

(2) The amendments to the Income-tax Act made by section 9, section 10, section 16 and section 18 shall be deemed to have come into force on the first day of April, 1959.

(3) The amendments to the Income-tax Act made by section 5, section 7, clause (ii) of section 8, section 11, section 12, section 13, section 14 and section 15 shall have effect on and from the first day of April, 1960.

(4) Notwithstanding anything contained in sub-section (2) or sub-section (3), in relation to dividends declared or payable by a company in respect of any previous year relevant to any assessment year prior to the assessment year 1960-61, the Income-tax Act shall have effect as if the amendments contained in section 5, section 7, section 9, section 10, section 14, section 15, section 16 and section 18 had not been made.

AMENDMENT OF SECTION 27 OF 1957

20. In section 2 of the Wealth-tax Act, 1957 (hereinafter referred to as the Wealth-tax Act), in clause (m), the following amendments shall be made and shall be deemed always to have been made, namely:—

(i) in sub-clause (i), the word "and" shall be omitted;

(ii) in sub-clause (ii), the word "and" shall be inserted at the end; and

(iii) after sub-clause (ii), the following sub-clause shall be inserted, namely:—

34 of 1953
29 of 1957
18 of 1958

"(iii) the amount of the tax, penalty or interest payable in consequence of any order passed under or in pursuance of this Act or any law relating to taxation of income or profits, or the Estate Duty Act, 1953, the Expenditure-tax Act, 1957, or the Gift-tax Act, 1958,—

(a) which is outstanding on the valuation date and is claimed by the assessee in appeal, revision or other proceeding as not being payable by him, or

(b) which, although not claimed by the assessee as not being payable by him, is nevertheless outstanding for a period of more than twelve months on the valuation date;"

AMENDMENT OF SCHEDULE 21. In the Schedule to the Wealth-tax Act,—

(i) in the rates of tax specified in paragraphs (a) and (b) of Part I, for the figures "1%", "1½%" and "1½%" in both the places where they occur, the figures "1%", "1½%" and "2%" shall respectively be substituted;

(ii) in Rule 2, for the figures and words "1.5 per cent", the figure and words "2 per cent" shall be substituted.

AMENDMENT OF SECTION 22. In section 2 of the Expenditure-tax Act, 1957 (hereinafter referred to as the Expenditure-tax Act),—

(i) in clause (g), for sub-clause (i), the following sub-clause shall be substituted, namely:—

"(i) where the assessee is an individual, his or her spouse or minor child, and includes any person wholly or mainly dependent on the assessee for support and maintenance";

(ii) for clause (n), the following clause shall be substituted, namely:—

"(n) 'previous year', in relation to any assessment year,— (a) in the case of an assessee having a source of income, profits or gains in respect of which there is no previous year under the Income-tax Act, means the twelve months ending on the 31st day of March immediately preceding the assessment year;

(b) in the case of an assessee having different previous years under the Income-tax Act for different sources of income, profits or gains, means that previous year of twelve months determined as the previous year under sub-clause (a) of clause (11)(i) of section 2 of the Income-tax Act or such period determined as the previous year under sub-clause (b) of clause (11) (i) of that section, whichever expired last;

(c) in the case of any other assessee, means the previous year as defined in clause (11) of section 2 of the Income-tax Act if an assessment were to be made under that Act for that year: Provided that where an assess-

ment has been made under this Act for any assessment year in respect of the expenditure incurred by an assessee in the previous year, the meaning of the expression "previous year" as then applicable to him shall continue to apply in respect of any subsequent assessment year unless the assessee is allowed to vary it with the consent of the Expenditure-tax Officer who may, in allowing any such variation, impose such conditions as he may think fit."

AMENDMENT OF SECTION 23. In section 3 of the Expenditure-tax Act, for the proviso to sub-section (1), the following shall be substituted, namely:—

"Provided that no expenditure-tax shall be payable by an assessee for any assessment year if the income from all sources derived by the assessee and his dependants during the previous year as reduced by the amount of taxes to which such income may be liable under any law for the time being in force does not exceed rupees thirty-six thousand.

Explanation.—Income derived by an assessee or any of his dependants shall include—

(i) income which a trustee or any other person receives or is entitled to receive during the previous year on behalf of the assessee or any of his dependants, or both, as the case may be; and

(ii) in the case of an assessee being an individual who is a member of a Hindu undivided family or of any association of persons, any sum in money or money's worth spent or disbursed for the benefit of the assessee or any of his dependants during the previous year from or out of the income or property of the Hindu undivided family or the association, as the case may be."

AMENDMENT OF SECTION 24. In section 4 of the Expenditure-tax Act,—

(a) in clause (i), the words "which, but for the expenditure having been incurred by that other person, would have been incurred by the assessee," shall be omitted;

(b) for clause (ii), the following clause shall be substituted, namely:—

"(ii) where the assessee is an individual, any expenditure incurred by any dependant of the assessee, and where the assessee is a Hindu undivided family, any expenditure incurred by any dependant from or out of any income or property transferred directly or indirectly to the dependant by the assessee."

AMENDMENT OF SECTION 25. In section 5 of the Expenditure-tax Act,—

(i) in clause (e), for the words "or in the construction, repair, maintenance or improvement of any immovable property belonging to him", the words "or in the construction of any building" shall be substituted;

1959-60 Budget Supplement

(ii) for clause (f), the following clause shall be substituted, namely:—

"(f) any expenditure incurred by the assessee by way of investment in deposits, loans, shares and securities";

(iii) for clause (g), the following clause shall be substituted, namely:—

"(g) any expenditure incurred by the assessee in the purchase of products of any cottage industry in India or any work of art, where the price of any such article exceeds rupees one thousand, and any expenditure incurred by the assessee in the purchase of books."

AMENDMENT OF SECTION 26. In section 6 of the Expenditure-tax Act, in sub-section (1),—

(i) in clause (a), after sub-clause (ii), the following sub-clause shall be inserted, namely:—

"(iii) taxes paid to a local authority in respect of any property in the occupation of the assessee or any of his dependants or both";

(ii) in clause (d), for the words "on the purchase of furniture and other household goods", the words "on the purchase of bullion, precious stones, jewellery, furniture and other household goods" shall be substituted;

(iii) for clause (h), the following clause shall be substituted, namely:—

"(h) a basic allowance— (i) where the assessee is an individual, of Rs 30,000 for himself and all his dependants; and

(ii) where the assessee is a Hindu undivided family, of Rs 30,000 in respect of the karta and his wife and children, and a further allowance of Rs 3,000 for every additional coparcener: Provided that the basic allowance for the Hindu undivided family as a whole shall not exceed Rs 60,000 in any case:

Provided further that the allowance of Rs 3,000 for any additional co-parcener shall not be allowed where the coparcener is separately assessed under this Act and is entitled to the allowance of Rs 30,000 under sub-clause (i)".

AMENDMENT OF SECTION 27 OF 1958

27. In section 2 of the Gift-tax Act, 1958, in clause (xx),—

(i) in sub-clause (a), after the words "in the case of an assessee", the words "having no source of income, profits or gains or" shall be inserted;

(ii) after sub-clause (c), the following provisos shall be inserted, namely:—

"Provided that where a person who has not been assessed under this Act for any assessment year makes a gift on a date which does not fall within a previous year as defined in sub-clause (a) or sub-clause (b) or sub-clause (c), the previous year shall be the twelve months ending on the 31st day of March immediately preceding the assessment year;

1959-60 Budget Supplement

Provided further that where an assessment has been made under this Act for any assessment year in respect of gifts made by an assessee during any previous year, the meaning of the expression "previous year" as then applicable to him shall continue to apply for any subsequent assessment year unless the assessee is allowed to vary it with the consent of the Gift-tax Officer who may, in allowing any such variation, impose such conditions as he may think fit."

AMENDMENT OF ACT 32 OF 1934

28. The Indian Tariff Act, 1934 (hereinafter referred to as the Tariff Act), shall be amended in the manner specified in the Second Schedule.

AMENDMENT OF ACT 1 OF 1949

29. In the Indian Tariff (Amendment) Act, 1949, in sections 4 and 5, for the figures "1959", the figures "1960" shall be substituted.

AMENDMENT OF ACT 1 OF 1944

30. In the First Schedule to the Central Excises and Salt Act, 1944,—

(a) in Item No 8, for the entry in the third column against sub-item (2), the entry "Five rupees and sixty naye paise per cwt" shall be substituted;

(b) in Item No. 9,— (i) in sub-item I(5), for the description of goods in the second column, the following shall be substituted, namely:—

"if other than flue-cured and not actually used for the manufacture of (a) cigarettes or (b) smoking mixtures for pipes and cigarettes or (c) biris—

(i) stems of tobacco larger than ½ inch in size,

(ii) dust of tobacco,

(iii) granule ('rawa') of tobacco capable of passing through a sieve made of wire not finer than 24 S.W.G. (0.022 inch diameter) and containing not less than 18 uniform circular or square apertures per linear inch,

(iv) tobacco cured in whole leaf form and packed or tied in bundles, hanks or bunches or in the form of twists or coils.

Explanation.—Such varieties of unmanufactured tobacco used in the manufacture of biris as the Central Government, by notification in the Official Gazette, specifies in this behalf shall not be deemed to fall within this sub-item but shall be deemed to be unmanufactured tobacco, not otherwise specified, within the meaning of sub-item (6)."

(ii) in sub-item II(2), for the entries in third column against sub-items (vii), (viii) and (ix), the entries "Three rupees and fifteen naye paise", "Two rupees" and "One rupee and twenty naye paise" shall respectively be substituted;

(c) in Item No. 10, for the entry in the third column against sub-item (1), the entry "40 per cent ad valorem" shall be substituted;

DISCONTINUANCE OF SALT DUTY 1 OF 1944
32 OF 1934

31. For the year beginning on the 1st day of April, 1959, no duty under the Central Excise and Salt Act, 1944, or the Tariff Act shall be levied in respect of salt manufactured in, or imported into, India.

Declaration under the Provisional Collection of Taxes Act, 1931.

16 OF 1931
It is hereby declared that it is expedient in the public interest that the provisions of clauses 28, 29 and 30 of this Bill shall have immediate effect under the Provisional Collection of Taxes Act, 1931.

THE FIRST SCHEDULE.

(See Section 2)

PART I.

Income-tax and surcharge on income-tax

PARAGRAPH A.

(i) In the case of every individual who is married and every Hindu undivided family whose total income does not exceed Rs. 20,000 in either case—
Rates of income-tax.

	Where the individual has no child wholly or mainly dependent on him or where the Hindu undivided family has no minor coparcener.	Where the individual has one child wholly or mainly dependent on him or where the Hindu undivided family has one minor coparcener.	Where the individual has more than one child wholly or mainly dependent on him or where the Hindu undivided family has more than one minor coparcener.	
	Rs.	Rs.	Rs.	
(1) On the first ...	3,000 of total income.	3,300 of total income.	3,600 of total income.	Nil
(2) On the next ...	2,000 "	1,700 "	1,140 "	3%
(3) On the next ...	2,500 "	2,500 "	2,500 "	6%
(4) On the next ...	2,500 "	2,500 "	2,500 "	9%
(5) On the next ...	2,500 "	2,500 "	2,500 "	11%
(6) On the next ...	2,500 "	2,500 "	2,500 "	14%
(7) On the next ...	5,000 "	5,000 "	5,000 "	18%

(ii) In the case of every individual who is not married and every individual or Hindu undivided family whose total income in either case exceeds Rs. 20,000 and in the case of every unregistered firm or other associations of persons, not being a case to which Paragraph B or Paragraph C or Paragraph D of this Part applies:—

	Rs.	
(1) On the first ...	1,000 of total income	Nil
(2) On the next ...	4,000 "	3%
(3) On the next ...	2,500 "	6%
(4) On the next ...	2,500 "	9%
(5) On the next ...	2,500 "	11%
(6) On the next ...	2,500 "	14%
(7) On the next ...	5,000 "	18%
(8) On the balance of total income ...	...	25%

Provided that for the purposes of this Paragraph—

(i) no income-tax shall be payable on a total income which does not exceed the limit specified below;

(ii) the income-tax payable shall in no case exceed half the amount by which the total income exceeds the said limit;

(iii) the income-tax payable by an individual who is married or a Hindu undivided family whose total income exceeds in either case Rs 20,000 shall not exceed the aggregate of—

(a) the income-tax which would have been payable if the total income had been Rs 20,000;

(b) half the amount by which the total income exceeds Rs 20,000;

The limit aforesaid shall be—

(i) Rs 6,000 in the case of every Hindu undivided family which as at the end of the previous year

satisfies either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or

(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other and who are not lineally descended from any other living member of the family;

(ii) Rs 3,000 in every other case.

Surcharges on income-tax

The amount of income-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) A surcharge for purposes of the Union equal to the sum of—

(i) five per cent of the amount income-tax; and

(ii) where the earned income included in the total income exceeds Rs 1,00,000, five per cent of the difference between the amount of income-tax which would have been payable on the whole of the earned income included in the total income if such earned income had been the total income and the amount of income-tax payable on a total income of Rs 1,00,000;

(b) A special surcharge on unearned income at fifteen per cent of the difference between the amount of income-tax on the total income and the amount of income-tax on the whole of the earned income, if any, included in the total income if such earned income had been the total income:

Provided that—

(i) no surcharge for purposes of the Union shall be payable where the total income does not not exceed the limit specified below;

(ii) no special surcharge on unearned income shall be payable in the case of an assessee whose total income does not include any income from dividend on ordinary shares if his total income does not exceed the limit specified below, and where the total income includes any dividends on ordinary shares, such limit shall be increased by Rs 1,500 or the amount of the said dividends, whichever is less: Provided further that—

(a) where the total income includes any dividends on ordinary shares, the surcharge for purposes of the Union and the special surcharge on unearned income shall not in each case exceed half the amount by which the total income exceeds the respective limits applicable in either case;

(b) the surcharge for purposes of the Union and the special surcharge on unearned income, both together, shall not exceed half the amount by which the total income exceeds the limit specified below;

The limit aforesaid shall be—

(i) Rs 15,000 in the case of every Hindu undivided family which satisfies as at the end of the previous year either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or

(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other and who are not lineally descended from any other living member of the family;

(ii) Rs 7,500 in every other case.

Explanation.—For the purposes of this Paragraph, in the case of every Hindu undivided family governed by the Mitakshara law, a son shall be deemed to be entitled to claim partition of the coparcenary property against his father, or grand-father notwithstanding any custom to the contrary.

PARAGRAPH B

In the case of every company and local authority,—

Rate of income-tax	
On the whole of the total income	30%
Surcharge on income-tax	
The amount of income-tax computed at the rates hereinbefore specified shall be increased by a surcharge of 5 per cent thereon.	

PARAGRAPH C

In every case in which under the provisions of the Income-tax Act, income-tax is to be charged at the maximum rate,—

Rate of income-tax	
On the whole of the total income	25%
Surcharge on income-tax	
The amount of income-tax computed at the rate hereinbefore specified shall be increased by a surcharge of 20 per cent thereon.	

PARAGRAPH D

In the case of every registered firm,—

Rates of income-tax	
(1) On the first Rs 40,000 of total income	Nil
(2) On the next Rs 35,000 of total income	5%
(3) On the next Rs 75,000 of total income	6%
(4) On the balance of total income	9%

PART II

Super-tax and surcharge on super-tax

PARAGRAPH A

In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which any other Paragraph of this Part applies,—

Rates of super-tax	
(1) On the first Rs 20,000 of total income	Nil
(2) On the next Rs 5,000 of total income	5%

(3) On the next Rs 5,000 of total income	15%
(4) On the next Rs 10,000 of total income	20%
(5) On the next Rs 10,000 of total income	30%
(6) On the next Rs 10,000 of total income	40%
(8) On the balance of total income	45%

Surcharges on super-tax
The amount of super-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

- A surcharge for purposes of the Union equal to the sum of—
 - five per cent. of the amount of super-tax; and
 - where the earned income exceeds Rs 1,00,000, five per cent. of the difference between the amount of super-tax which would have been payable on the whole of the earned income included in the total income, if such earned income had been

1959-60 Budget Supplement

the total income and the amount of super-tax payable on a total income of Rs 1,00,000;
(b) A special surcharge on unearned income at fifteen per cent of the difference between the amount of super-tax on the total income and the amount of super-tax on the whole of the earned income, if such earned income had been the total income

PARAGRAPH B

In the case of every local authority,—

RATES OF SUPER-TAX
On the whole of the total income 18 per cent.
SURCHARGE ON SUPER-TAX
The amount of super-tax computed at the rates hereinbefore specified shall be increased by a surcharge of 12½ per cent thereon.

PARAGRAPH C

In the case of every association of persons being a co-operative society as defined in clause (5B) of section 2 of the Income-tax Act,—

RATES OF SUPER-TAX
(1) On the first Rs 25,000 of total income Nil
On the balance of total income 16 per cent.
SURCHARGE ON SUPER-TAX
The amount of super-tax computed at the rates hereinbefore specified shall be increased by a surcharge of 12½ per cent thereon.

PARAGRAPH D

31 OF 1958

In the case of the Life Insurance Corporation of India established under the Life Insurance Corporation, Act, 1956,—

RATE OF SUPER-TAX
On the whole of its profits and gains from life insurance business. 11 per cent.
In the case of every other company,—

RATES OF SUPER-TAX
On the whole of the total income 50 per cent.

Provided that,—
(i) a rebate at the rate of 40 per cent on so much of the total income as consists of dividends from a subsidiary Indian company and a rebate at the rate of 35 per cent on the balance of the total income shall be allowed in the case of any company which—

(a) in respect of its profits liable to tax under the Income-tax Act for the year ending on the 31st day of March, 1960, has made the prescribed arrangements for the declaration and payment within India of the dividends payable out of such profits and for the deduction of super-tax from dividends in accordance with the provisions of sub-section (3D) of section 18 of the Act; and

(b) is such a company as is referred to in sub-section (9) of section 23A of the Income-tax Act with a total income not exceeding Rs 25,000;
(ii) a rebate at the rate of 40 per cent on so much of the total income as consists of dividends from a subsidiary Indian com-

1959-60 Budget Supplement

pany and a rebate at the rate of 30 per cent on the balance of the total income shall be allowed in the case of any company which satisfies condition (a) but not condition (b) of the preceding clause;

(iii) a rebate at the rate of 40 per cent on so much of the total income as consists of dividends from a subsidiary Indian company and a rebate at the rate of 20 per cent on the balance of the total income shall be allowed in the case of any company not entitled to a rebate under either of the preceding clauses:

Provided further that,—
(i) the amount of the rebate under clause (i) or clause (ii) shall be reduced by the sum, if any, equal to the amount or the aggregate of the amounts, as the case may be, computed as hereunder:—
The whole amount of such part 11 of 1958.

(a) on that part of the aggregate of the sums arrived at in accordance with clause (i) of the second proviso to Paragraph D of Part II of the First Schedule to the Finance Act, 1958, as has not been deemed to have been taken into account, in accordance with clause (ii) of the said proviso, for the purpose of reducing the rebate mentioned in clause (i) of the said proviso to nil;

At the rate of 30%
(b) on the amount representing the face value of any bonus shares or the amount of any bonus issued to its shareholders during the previous year with a view to increasing the paid-up capital except to the extent to which such bonus shares or bonus have been issued out of premiums received in cash on the issue of its shares; and

(c) in addition, in the case of a company referred to in clause (ii) of the preceding proviso which has distributed to its shareholders during the previous year dividends in excess of six per cent of its paid-up capital not being dividends payable at a fixed rate—
(A) in the case of a company which is not such as is referred to in sub-section (9) of section 23A of the Income-tax Act—

At the rate of 10%
on that part of the said dividends which exceeds 6 per cent but does not exceed 10 per cent of the paid-up capital;
At the rate of 20%
on that part of the said dividends which exceeds 10 per cent of the paid-up capital;

and (B) in the case of any other company—

At the rate of 10%
on that part of the said dividends which exceeds 6 per cent but does not exceed 10 per cent of the paid-up capital;
At the rate of 20%
on that part of the said dividends which exceeds 10 per

cent but does not exceed 18 per cent of the paid-up capital;

At the rate of 30%
on that part of the said dividends which exceeds 18 per cent of the paid-up capital;
(ii) where the sum arrived at in accordance with clause (i) of this proviso exceeds the amount of the rebate arrived at in accordance with clause (i) or clause (ii), as the case may be, of preceding proviso, only so much of the amounts of reduction mentioned in sub-clauses (a), (b) and (c) of clause (i) of this proviso as is sufficient, in that order, to reduce the rebate to nil shall be deemed to have been taken into account for the purpose;

Provided further that the super-tax payable by a company, the total income of which exceeds rupees twenty-five thousand shall not exceed the aggregate of—

(a) the super-tax which would have been payable by the company if its total income had been rupees twenty-five thousand, and
(b) half the amount by which its total income exceeds rupees twenty-five thousand.

Explanation.—For the purposes of this Paragraph,—

(i) the expression “paid-up capital” means the paid-up capital (other than capital entitled to a dividend at a fixed rate) of the company as on the first day of the previous year relevant to the assessment for the year ending on the 31st day of March 1960, increased by any premiums received in cash by the company on the issue of its shares, standing to the credit of the share premium account as on the first day of the previous year aforesaid;

(ii) the expression “dividend” shall be deemed to include any distribution included in the expression “dividend” as defined in clause (6A) of section 2 of the Income-tax Act;

(iii) where any portion of the profits and gains of the company is not included in its total income by reason of such portion being exempt from tax under any provision of the Income-tax Act, the “paid-up capital” of the company, the amount distributed as dividends (not being dividends payable at a fixed rate), the amount representing the face value of any bonus shares and the amount of any bonus issued to the share-holders shall each be deemed to be such proportion thereof as the total income of the company for the previous year bears to its total profits and gains for that year other than capital receipts, reduced by such allowances as may be admissible under the Income-tax Act which have not been taken into account by the company in its profit and loss account for that year.

PART III

RATES OF DEDUCTION OF TAX UNDER SECTION 18 OF THE INCOME-TAX ACT AT THE PRESCRIBED RATES

In every case in which under the provisions of section 18 of the In-

come-tax Act tax is to be deducted at the prescribed rates, deduction shall be made from the income subject to deduction at the following rates:—

	Income-tax		Super-tax	
	Rate of Income-tax	Rate of Surcharge	Rate of Super-tax	Rate of Surcharge
1. In the case of a person other than a company—				
(a) in every case, on the whole income (excluding interest payable on any security of the Central Government issued or declared to be income-tax free), and	25%	5%		
(b) in addition, where the person is one whom the person responsible for paying the income has no reason to believe to be resident in the taxable territories, on the whole income.			Super-tax and surcharge on super-tax in accordance with the provisions of clause (b) of sub-section (1) of section 17 of the Income-tax Act.	
2. In the case of a company—				
(a) in every case—				
(i) on the whole income (excluding interest payable on any security of the Central Government issued or declared to be income-tax free); and			20%	
(ii) on the whole income (excluding dividends payable by an Indian company referred to in section 56A of the Income-tax Act); and				10%
(b) in addition—				
(i) where the company is an Indian company or a company which has made the prescribed arrangements for the declaration and payment of dividends within India, on the whole income (excluding dividends payable by its subsidiary Indian company, if any, or by an Indian company referred to in section 56A of the Income-tax Act)				15%
(ii) where the company is neither an Indian company nor a company which has made the prescribed arrangements for the declaration and payment of dividends within India, on the whole income (excluding dividends payable by its subsidiary Indian company, if any, or by an Indian company referred to in section 56A of the Income-tax Act)				33%

THE SECOND SCHEDULE

(SEE SECTION 28)

In the First Schedule to the Tariff Act,—
(i) in Item No 29, for the existing entry in the fourth column, the entry “Rs 2 per 100 linear feet” shall be substituted;
(ii) for Item No 39 (1), the following items shall be substituted, namely:—

Item No.	Name of article	Nature of duty	Standard rate of duty	Preferential rate of duty if the article is the produce or manufacture of			Duration of protective rates of duty
				The United Kingdom	A British Colony		
29(1)	Rubber, manufactures, not otherwise specified, excluding apparel.	Revenue	35 per cent. ad valorem.	...	...	...	...
39(2)	Rubber tyres and tubes for motor vehicles.	Revenue	40 per cent. ad valorem.	...	...	...	...
39(3)	Rubber tyres and tubes not otherwise specified.	Revenue	35 per cent. ad valorem.	...	...	...	...

STATEMENT OF OBJECTS AND REASONS

The object of this Bill is to give effect to the financial proposals of the Central Government for the next financial year and to provide for certain connected matters. The notes on clause explain the various provisions contained in the Bill.

MORARJI R. DESAI.
NEW DELHI;
The 28th February, 1959.

NOTES ON CLAUSES

Clause 2 continues for the financial year 1959-60 the rates of income-tax and super-tax prescribed by the Finance Act, 1958, and pres-

cribes the rates for deduction of tax at source from interest on securities, dividends, etc., and also the rates for advance payment of tax by companies during the financial year 1959-60.

Clause 3 makes the following amendments in section 4:—
Sub-clause (1) (a) withdraws the exemption up to Rs 4,500 allowable to taxpayers resident in India in respect of their unremitted foreign income.

Sub-clause (1) (b) has the effect of bringing under taxation salaries paid by Government to its officers serving abroad.

Sub-clause (1) clarifies the extent to which exemption from tax is available to the officials of the

of
vital
importance
to
india's
industries

foreign diplomatic missions in India and their staff, and also makes a change consequential upon the amendment made by sub-clause (i) (b).

Clause 4 makes the following amendments in section 10:—

Sub-clause (i) enables certain specified allowances to be granted in pursuance of agreements entered into by the Central Government with concerns engaged in the exploration for and production of mineral oil in association with the Government.

Sub-clause (ii) abolishes the scheme of compulsory deposit for companies introduced by the Finance (No 3) Act, 1956, and held in abeyance since 1st April, 1958. Clause 5 makes a clarificatory amendment to section 12, consequential upon the omission of section 16 (2) by clause 7, and provides that dividends declared by companies will be treated as the income of the shareholders in the previous year in which they are declared.

Clause 6 amends section 15C with retrospective effect to clarify that the exemption is not available to

undertakings set up with buildings, plant and machinery which were previously used in any other business.

Clause 7 deletes sub-section (2) of section 16, thereby abolishing the scheme of grossing up of dividends in the assessment of share-holders of companies consistently with the changes proposed by clauses 9 and 14.

Clause 8 makes the following two amendments to section 17:—

Sub-clause (i) provides that Government servants posted for service abroad, who will become liable to tax hereafter on the salaries drawn by them abroad, will be charged to tax at the rates applicable to their total world income, and not at the flat rates normally applicable to non-resident taxpayers.

Sub-clause (ii) provides for the levy of tax on capital gains of companies at a total flat rate of 30 per cent. (10 per cent super-tax in addition to 20 per cent income-tax) against the existing rate of 30 per cent income-tax

and 1.5 per cent sur-charge thereon.

Clause 9 makes the following amendments to section 18 which deals with deduction of tax at source by persons responsible for making payments of certain kinds of income:—

Sub-clauses (i), (ii) and (iii) make formal amendments to section 18 (2B), (3A) and (3B) relating to deduction of tax at source on salary payments to non-residents on securities and other sums, so as to make these provisions simpler and uniform.

Sub-clause (iv) amends section 18 (3D). At present, companies are not required to deduct income-tax on payments of dividends to shareholders as the shareholders are deemed to have paid income-tax through the companies. By this amendment, income-tax has to be deducted at prescribed rates on all dividend distributions. The existing provision for deduction of super-tax on dividends paid to non-resident shareholders will, however, continue to operate.

Sub-clauses (v) to (vii) forma-

1959-60 Budget Supplement

lly amend certain other provisions of section 18 consequential upon the amendments referred to above.

Sub-clause (viii) inserts two new sub-sections in section 18 in order—

(a) to obviate deduction of tax on dividends which are payable on shares held by Government; and

(b) to clarify that the rates for deduction in all cases will be the rates specified in the Finance Act for the purpose from year to year.

The rates for deduction of tax during the financial year 1959-60 on interest on securities, dividends and other sums, which vary according as the recipient is a company or not a company and whether resident or not resident in India are specified in Part III of the Schedule to the Bill.

Clause 10 omits section 20 which provides for the issue of a certificate to the shareholders receiving dividends as, in view of the changes proposed by clause 9, the certificate provided under section 18 for tax deductions will cover dividends also.

Clause 11 refixes the percentages for minimum distribution of dividends prescribed under section 23A for certain companies, consistently with the changes proposed in company taxation, so that the companies can continue to retain the same amount of net profits which they could have retained under the existing law without being subjected to the penal tax under that section.

Clause 12 makes a formal amendment to section 23B consequential upon the abolition of tax credit to the shareholders on their dividend income proposed by clause 9.

Clause 13 makes the following amendments to section 35:—

Sub-clause (i) makes section 35 (9) inapplicable to dividends payable in respect of any previous year relevant to any year after the assessment year 1959-60, as the provision for recovery of refunds granted to shareholders in respect of dividends in cases where the company fails to pay up its tax will no longer be necessary in view of the changes proposed by clauses 7, 9 and 14.

Sub-clause (ii) makes the provision relating to recovery of rebates of income-tax granted to companies on their undistributed profits prior to 1956-57 inapplicable after the system of grossing of dividends is abolished.

Clause 14 amends section 49B, so as—

(i) to abolish, consistently with the changes proposed by clauses 7 and 9, the legal fiction in the existing scheme under which a shareholder is deemed to have paid income-tax on dividends received by him from a company; and

(ii) to retain in a suitably modified form the existing provision for adjustment of any agricultural income-tax by the company in the assessment of the share-

1959-60 Budget Supplement

holder receiving dividends from out of agricultural profits of the company.

Clause 15 omits section 49C dealing with adjustment of double taxation relief obtained by a company in the assessment of shareholders, which will become necessary on the abolition of grossing of dividends.

Clause 16 makes a formal amendment to section 51 consequential upon the omission of section 20.

Clause 17 amends section 52 to penalise the furnishing of false tax deduction certificates in the case of dividends and other incomes on which tax is to be deducted at source.

Clause 18 makes formal amendments to section 58 consequential upon the omission of section 20.

Clause 19 contains formal provisions with respect to the commencement of the various provisions in this Bill relating to income-tax.

Clause 20 amends section 2 of the Wealth-tax Act, 1957, with retrospective effect to make it clear that taxes which are disputed and taxes which are in arrears for more than a year are not to be deducted as debts in the computation of the net wealth of an assessee.

Clause 21 enhances from 1st April, 1959, the rates of wealth-tax in the case of individuals and Hindu undivided families.

Clause 22 amends section 2 of the Expenditure-tax Act, 1957.

Sub-clause (i) seeks to make it clear that the requirement that a person should be wholly or mainly dependent on the assessee for support and maintenance for the purpose of being a dependent has no application in relation to a spouse or minor child.

Sub-clause (ii) clarifies the meaning of the expression "previous year".

Clause 23 amends section 3 of the Expenditure-tax Act, 1957, in order to secure that for computing the income of the assessee during a previous year, income received for the benefit of the assessee or any of his dependants or both during that year is taken into account. Similarly it is sought to provide that where the assessee is a member of a Hindu undivided family or any other association of persons, any expenditure incurred for his benefit or for the benefit of any of his dependants from and out of the property or income of the family or association, as the case may be, is treated as his income.

Clause 24 amends section 4 of the Expenditure-tax Act, 1957.

Sub-clause (i) omits certain words from clause (i) of section 4 which appear to be unnecessary.

Sub-clause (ii) makes it clear that expenditure incurred by any

dependant of the assessee (including, in the case of a Hindu undivided family, expenditure incurred by any member of the family from and out of the property or income of the family) is included in the taxable expenditure of the assessee.

Clause 25 amends section 5 of the Expenditure-tax Act, 1957.

Sub-clause (i) removes an exemption allowed in the case of certain expenditure in relation to owner-occupied properties because the expenditure in such cases is really in the nature of personal expenditure.

Sub-clause (ii) omits from section 5 (f) references to bullion, precious stones and jewellery as they are now being included in section 6 (i) (d).

Sub-clause (iii) amends section 5 (g) so as to restrict the exemption to purchases of the more valuable products of cottage industry and works of art.

Clause 26 amends section 6 of the Expenditure-tax Act, 1957.

Sub-clause (i) provides that municipal taxes in respect of owner-occupied properties are not to be deducted in computing the taxable expenditure.

Sub-clause (ii) amends section 6 (i) (d) so that bullion, precious stones and jewellery are treated in the same manner as furniture and other household goods.

Sub-clause (iii) amends section 6 (i) (h) so as to make it clear that the allowance of Rs 3,000 for a co-parcener is not allowed for him again where he is separately assessed and is entitled to the allowance of Rs 30,000 under section 6 (i) (h) (i).

Clause 27 amends section 2 of the Gift-tax Act, 1958, in order to clarify the meaning of the expression "previous year".

Clause 28, read with the Second Schedule, proposes certain changes in the Import Tariff:—

(a) The rate of duty of Rs 1.75 per 100 linear feet on unexposed cinematograph films is proposed to be changed to Rs 2.00 per 100 linear feet. The change is necessary to provide funds for the Film Finance Corporation.

(b) Item 39 (1) of the Indian Tariff Act is being split up so as to provide for an increased rate of duty, equal to the excise duty, on tyres and tubes for motor vehicles only.

Clause 29 seeks to maintain for another year the status quo in regard to commitments under the General Agreement on Tariffs and Trade.

Clause 30—

Sub-clause (a) proposes an increase in the excise duty on khandsari sugar from Rs 0-8-0 per cwt to Rs 5.60 per cwt.

Sub-clause (b) (i) seeks to make certain clarificatory amendments in sub-item 1 (5) of Item

No 9 relating to unmanufactured tobacco.

Sub-clause (b) (ii) proposes an increase in the excise duty on certain categories of cigarettes.

Sub-clause (c) proposes an increase in the excise duty on motor tyres from 30 per cent ad valorem to 40 per cent ad valorem.

Sub-clause (d) proposes an increase in the excise duty on vegetable product from Rs 7.00 per cwt to Rs 8.75 per cwt.

Sub-clause (e) proposes an increase in the excise duty on art silk fabrics from Rs 0-0-6 per sq yd to 6 naye paise per sq yd.

Sub-clause (f) proposes an increase in the excise duty on refined diesel oils and vaporising oil from 40 naye paise per imperial gallon to 80 naye paise per imperial gallon.

Sub-clause (g) proposes an increase in the excise duty on diesel oil, not otherwise specified,

from Rs 40.00 per ton to Rs 50.00 per ton.

Clause 31, like section 18 of the Finance Act, 1958, provides that salt shall be duty free for another year.

FINANCIAL MEMORANDUM

The Bill seeks to levy a basic excise duty of Rs 5.60 per cwt on khandsari sugar. Though the Central Excise Tariff provided for an excise duty of Rs 0-8-0 per cwt, this duty was withdrawn by notification, with effect from 19-7-1952. With the re-imposition of the excise duty at a higher level all the khandsari sugar factories will have to be brought under excise control. This will necessitate the employment of some additional staff. The increase in staff together with incidental expenses of administration, is estimated to cost Rs 2.67 lakhs.

I.—VOLUME OF WORK

There are about 800 khandsari sugar factories which are now to be brought under excise control.

II.—REQUIREMENTS OR PERSONNEL AND FINANCE.

	No.	Annual emoluments	Cost Rs.

			or Rs. 2.67 lakhs

MEMORANDUM REGARDING DELEGATED LEGISLATION

Clause 9 (iv) of the Bill, read with section 59 of the Income-tax Act, provides for rules being made with respect to the grant of certificates to shareholders of companies who are not liable to income-tax, in order to enable them to obtain their dividends without deduction of tax. The rule-making power is of a normal character.

LOK SABHA A BILL

to give effect to the financial proposals of the Central Government for the financial year 1959-60.

The President has, in pursuance of clauses (1) and (3) of article 117 and clause (1) of article 274 of the Constitution of India, recommended to the Lok Sabha, the introduction and consideration of the Bill.

M. N. KAUL,
Secretary.
(Shri Morarji R. Desai,
Minister of Finance.)

Memorandum Explaining the Provisions in the Finance Bill, 1959

(Clauses Referred to are Clauses in the Bill)

I. INCOME-TAX.

1 Rates of tax for financial year 1959-60.

It is proposed that the current rates of income-tax and super-tax be continued for the next financial year 1959-60, for all classes of taxpayers, including companies.

[Clause 2, Parts I and II of First Schedule]

2 Reform of the scheme of taxation of Company profits and the dividends declared therefrom.

(1) The Finance Bill includes certain proposals for amending the Income-tax Act with a view to introducing a change in the existing scheme of assessment of company profits and dividends. Under the existing scheme, in general, an Indian company is required to pay income-tax at 30 per cent (plus surcharge at 1.5 per cent) and super-tax at 20 per cent on the whole of its taxable profits. When the company declares dividends out of the taxed profits, each shareholder is deemed to have himself paid on the dividend he receives a proportionate amount of income-tax (but not super-tax) through the agency of the company. In other words, the shareholder is deemed to have received not only the net amount mentioned in the dividend warrant but also a portion of the income-tax paid by the company. He is credited with the amount of income-tax attributable to the dividend received by him at the time of his assessment. As the tax credit is given at the company rate of income-tax, which is higher than the personal rates of income-tax applicable to the shareholder, the tax credit always exceeds the income-tax payable on the dividend by the shareholder, and the excess is set off against the other tax liabilities of the shareholder or is refunded to him. The process of increasing the dividend by a notional amount, which is known as "grossing", and giving tax credit to the shareholder involves several complications in actual practice. The complications arise out of the need to make a determination of the following factors which affect the rate at which grossing is to be done:—

- the composition of the profits of the company which have been availed of by it for declaring the dividends, that is, how much of the dividends have come out of the profits subjected to tax and how much out of exempted profits; and
- the composition of the profits taken to reserves in earlier years, in cases where the company draws upon these past reserves for declaring dividends.

Further, as the determination of these factors will be possible only after the completion of the assessment of the company, the shareholder's assessment inevitably gets delayed.

(2) It is therefore proposed to revise the pattern of taxation of companies suitably in a manner which, while obviating the complications mentioned above, will maintain the status quo in all material respects with regard to revenue and the liability of the shareholders and the companies taken as a whole.

(3) The following are the main features of the scheme:—

- The present legal fiction of deeming a portion of the income-tax paid by the company on its profits as having been paid by the shareholder on the dividend he receives, and allowing the amount as tax credit against the shareholder's tax liability will be abolished.
- Consequently, the process of grossing the value of the dividends received by the shareholder will become unnecessary and will, therefore, be given up.
- As a corollary to (a) and (b), the tax rates for the companies themselves will be so modified as to produce the same amount of annual net revenue, i.e., the annual gross revenue now obtained from the companies less the annual credit given to the shareholders.
- Companies will deduct tax at prescribed flat rates from the dividend payable to the shareholders, by way of advance recovery and pay it to Government. When the shareholders' assessments are made, the tax deducted at source from the dividends received by them will be made good to them either by way of set off against their tax liability or by way of refund.

(4) The new scheme is proposed to be applied to the profits of companies which will be assessable to tax in 1960-61 and to all dividends declared out of such profits. The profits of companies for the accounting years ending on 31st March, 1959 or earlier which will be assessable in 1959-60, and the dividends declared by the companies in respect of such accounting years, will continue to be dealt with under the existing scheme. In order to ensure its smooth and effective working from the beginning, it is necessary to implement the new scheme in two stages.

(5) In the first stage, i.e., during the financial year 1959-60, the provisions relating to deduction of tax at source on dividends will be put into operation. This will, however, relate, as already stated, only to those dividends which are distributed by the companies out of their profits chargeable to tax in the assessment year 1960-61. Thus, in the case of a company closing its accounts on the 30th of June, dividends declared by it for the year ending on 30th June, 1959, will be subjected to deduction of tax. In the case of a company closing its accounts for the calendar

year, dividends declared by it for the year ended 31st December, 1958, will not be subjected to deduction of tax and will continue to be dealt with under the existing scheme. However, if, in such a case, interim or preference dividends are declared after 1st April, 1959, for the accounting year ending on 31st December, 1959, the new scheme for deduction of tax will apply to those dividends.

(6) In the second stage, i.e., during the financial year 1960-61, all the parts of the scheme will come into operation. In particular, companies will be subjected to the revised rates of income-tax and super-tax, and the process of grossing of dividends in the assessment of the shareholders will be abolished, except in regard to dividends declared by a company for a year the profits of which are assessed in its hands in the assessment year 1959-60. Further, all the dividends declared after 1st April, 1960 (which will generally be only in respect of profits for account years relevant to assessment year 1960-61) will bear tax deduction at source.

(7) The proposed scheme will not, however, apply to foreign companies as they declared dividends outside India and the question of grossing those dividends does not arise.

(8) As mentioned by the Finance Minister in his Budget Speech, as a part of the programme for simplification of company taxation, this occasion is proposed to be availed of for replacing from 1960-61 the existing taxes on excess dividend distributions and on the wealth of companies, by a suitable increase in the rates of company super-tax.

Provisions necessary for introducing the revised scheme of taxation of company profits and dividends.

3. Amendments relating to the taxation of shareholders on their dividends.

ABOLITION OF TAX CREDIT

Deletion of Section 49B(1).

(1) Section 49B(1) of the Income-tax Act which incorporates the legal fiction under the existing scheme of deeming a portion of the income-tax paid by the company as having been paid by the shareholder himself, is to be deleted. Section 49B(2) provides for the grant of appropriate relief to the shareholders receiving dividends from out of agricultural profits of companies subjected to agricultural income-tax by any State Government. As this relief will not be affected by the revised scheme of company taxation, it will continue to be granted. However, some verbal changes are necessary in the existing provision in the context of the new scheme, and for this purpose, section 49B(2) is proposed to be redrafted.

ABOLITION OF ADJUSTMENT TO TAX CREDIT.

Deletion of Section 49C.

(2) Section 49C of the Income-tax Act provides for the reduction in the

amount of tax credit due to the shareholder on his dividend income in a case where the company obtains relief in India on account of double taxation, in India and in another country, of the profits from which the dividend has been declared. This provision is linked to the legal fiction under the existing scheme and is, therefore, to be deleted.

[Clause 15]

ABOLITION OF GROSSING OF DIVIDENDS.

Deletion of Section 16(2).

(3) Consequent on the abolition of the legal fiction under which tax credit is given to the shareholders, Section 16(2) of the Income-tax Act, which provides for the grossing of dividends in the assessments of the shareholders, is to be deleted. However, that portion of the existing provision which defines the time of accrual of the dividend income for the shareholder is proposed to be embodied in Section 12(1A) of the Act which deals with dividends.

[Clauses 5, 7 and 9(v)]

ABOLITION OF RECOVERY FROM SHAREHOLDERS ON ACCOUNT OF NON-PAYMENT OF TAX BY COMPANY.

Amendment of Section 35(9).

(4) Section 35(9) of the Income-tax Act provides for the recovery of refund wrongly granted to a shareholder on his dividend income under the existing legal fiction in cases where the company concerned has failed to pay its income-tax dues within a period of 3 years. As under the new scheme the legal fiction is abolished, it is proposed to restrict the application of Section 35(9) only to dividends declared by companies in respect of accounting years relevant to assessment year 1959-60 or earlier years.

[Clause 13(i)]

DEDUCTION OF TAX AT SOURCE ON DIVIDENDS.

Amendments to Section 18.

(5) The provisions of Section 18 of the Income-tax Act at present provide for deduction of tax at source from all payments in respect of interest on securities, and only from payments to non-residents in respect of dividends and other sums chargeable to tax. Consistently with the new scheme, it is now proposed to enlarge these provisions so as to provide for the following:—

- deduction of tax at source by Indian companies on all dividends declared by them, and payment of the tax so deducted to Government, and
- issue of tax deduction certificate by the company to the shareholder to enable him to claim refund or obtain the necessary adjustment against his tax liability at the time of his assessment.

1959-60 Budget Supplement

The tax deduction is to be made by the principal officer of the company before the cheque or warrant for payment of dividend is issued to the shareholder.

It is also proposed, for the sake of convenience of reference, to specify separately in the First Schedule to the Bill the rates for deduction of income-tax and super-tax under section 18, on interest on securities, dividends, etc. during the financial year 1959-60.

Some small consequential amendments are also proposed to be made to the other provisions in section 18 for the sake of uniformity of application.

[Clauses 2(4) and 9, Part III of First Schedule to the Bill]

ABOLITION OF EXISTING FORM OF DIVIDEND CERTIFICATES.

Deletion of Section 20.

(6) At present, under section 20 of the Income-tax Act, companies are required to furnish certificates of payment of tax by them in order to enable the shareholders to get their dividends grossed and obtain tax credit. Under the proposed scheme there will be no need for the issue of such certificates and so section 20 is proposed to be deleted. Certificates for deduction of tax from dividends will now be covered by section 18(9) of the Act.

[Clause 10]

VERBAL AMENDMENTS TO SECTIONS 51 AND 58.

(7) Consequentially, references to "section 20" in sections 51 and 58 of the Income-tax Act are also to be deleted.

[Clauses 16 and 18]

Account year of company	Relevant assessment year for the company	Date of declaration of dividend by the company for that accounting year in col. 1	Whether the dividends will be "grossed" or not in assessments.
(1)	(2)	(3)	(4)
Year ended			
30-9-58	1959-60	1-5-1959	Will be grossed.
31-12-58	1959-60	1-6-1959	—do—
31-3-59	1959-60	1-9-1959	—do—
30-6-59	1960-61	1-12-1959	Will not be grossed.
31-12-59	1960-61	(Interim or half-yearly Preference dividend) 1-7-1959	—do—

4. Provision relating to taxation of companies.

ADVANCE PAYMENT OF TAX DURING 1959-60.

Modification of section 18A.

(1) As stated earlier, the rates of tax on company profits will be suitably revised from 1960-61, keeping in view the changes in the pattern of taxation, including the abolition of wealth-tax and excess dividends tax. Consistently with this proposed revision of rates of tax from 1960-61, it is necessary to modify the rates for advance payment of tax by companies during 1959-60. The rates proposed are:—

- for Indian companies: 20 per cent income-tax and 25 per cent super-tax.
- for foreign companies: 20 per cent income-tax and 43 per cent super-tax.

[Clause 2(5)]

PUNISHMENT FOR FALSE DEDUCTION CERTIFICATES

Amendment of section 52.

(8) Furnishing of a false certificate in respect of deduction of tax at source on payments of dividends or other kinds of income referred to in section 18 of the Income-tax Act will be treated as an offence punishable with fine or imprisonment.

[Clause 17]

PROVISIONAL ASSESSMENT.

Amendment of section 23B.

(9) Section 23B(4) of the Income-tax Act requires that the tax credit due to the shareholders on dividends under the present scheme should be taken into account at the time of making provisional assessments. This will be unnecessary under the new scheme and the provision is, therefore, proposed to be amended.

[Clause 12]

APPLICATION OF THE NEW PROVISIONS TO THE SHAREHOLDERS.

(10) The new provisions relating to the deduction of tax at source from dividends and the assessment of shareholders under the revised scheme will become effective in relation to dividends declared by companies for accounting years the profits of which are liable to be assessed in the assessment year 1960-61 and later assessment years. The existing provisions will, however, continue to be operative even after the introduction of the new scheme in regard to dividends declared by companies for accounting years the profits of which are assessable in the assessment year 1959-60 or earlier assessment years. The following will exemplify the position:

provisions of that section, to distribute as dividends at least 45 per cent of industrial profits and 60 per cent of the non-industrial profits remaining after payment of tax. It is proposed to raise these percentages to 50 and 65 respectively, with a view to ensuring that the profits retained by these companies after the introduction of the new scheme, without being subjected to the penal tax, remain at the same level as before its introduction.

[Clause 11]

ABOLITION OF RECOVERY FROM COMPANIES OF REBATES PREVIOUSLY GRANTED.

Deletion of section 35(10).

(4) Section 35(10) provides for the recovery of income-tax rebates granted to a company in years prior to 1958-59 on its undistributed profits (when such a scheme of income-tax rebate was in force) in cases where the company distributes dividends in subsequent years out of those past profits on which it had obtained the rebate. This will become unnecessary when the new schemes of company taxation takes effect, and is, therefore, to be deleted.

[Clause 13]

APPLICATION OF THE NEW PROVISIONS.

The above amendments relating to taxation of companies themselves will come into force from 1st April, 1960, that is, in respect of profits made by companies in account years which will be assessable in 1960-61 and later years.

[Clause 19]

5. Other proposals for the amendment of the Income-tax Act.

DELETION OF EXEMPTION OF Rs. 4,500 FOR UNREMITTED FOREIGN INCOME.

Amendment of section 4(1).

(1) Under the existing law, income which accrues or arises outside India but is not remitted to India in the same year is exempt upto a maximum of Rs. 4,500. In the present context of the economic development of our country, this concession is unnecessary and is, therefore, proposed to be deleted.

[Clause 3(i)(a)]

TAXATION OF SALARIES PAID TO NON-RESIDENT GOVERNMENT SERVANTS.

Insertion of new explanation in Section 4.

(2) Under the existing law, a person who is not resident in India is not taxed on the income which arises outside India. So Government servants who are posted abroad and become technically non-residents after some time are not liable to tax on the salaries drawn by them abroad. It is proposed that such salaries paid out of the public revenues of India (exclusive of all allowances and perquisites granted to meet the cost of having to stay abroad) be subjected to tax, irrespective of the period of the Government employee's stay abroad.

[Clauses 3(i)(b), 3(ii) and 8(i)]

TAXATION OF THE REMUNERATION OF HONORARY CONSULS AND CERTAIN OFFICERS OF FOREIGN MISSIONS IN INDIA.

Amendment of Section 4(3)(x).

(3) At present, the Income-tax law specifically exempts from tax the remuneration received by consuls, vice-consuls, Trade Commissioners and similar official representatives of foreign Governments in India. Ambassadors and accredited Ministers of foreign Governments enjoy similar exemption on account of their diplomatic privileges recognised by international convention. It is now proposed to re-write the provisions of the income-tax law so as to cover all such exemptions in one place and to clarify that the exemptions are intended only for full-time official representatives and the members of their staff who are citizens of the foreign State concerned and not for persons who are working only in an honorary capacity.

[Clause 3(ii)]

ABOLITION OF COMPANY DEPOSIT SCHEME.

Deletion of section 10(2B) and (2C).

(4) The company deposit scheme which was in operation during 1957-58 but was suspended during 1958-59 is proposed to be abolished.

[Clause 4(ii)]

GRANT OF SPECIAL ALLOWANCES TO MINERAL OIL UNDERTAKINGS WITH WHICH GOVERNMENT IS ASSOCIATED.

Insertion of new section 10(2AA).

(5) The Government has entered into an agreement with an oil company for the purposes of prospecting for, extraction and production of mineral oil in India in association with it. This agreement provides for certain special allowances to be granted on account of exploration expenses, intangible capital expenses and depletion. It is now proposed to obtain the necessary legislative sanction in Income-tax Act itself enabling Government to give effect to the agreement and grant these special allowances.

[Clause 4(i)]

DENIAL OF TAX HOLIDAY FOR NEW INDUSTRIAL UNDERTAKINGS CREATED OUT OF THE ASSETS OF OLD BUSINESSES.

Amendment of section 15C(2).

(6) It is proposed to clarify the Government's intention underlying the five year tax holiday for new industrial undertakings, that the exemption will not be available to undertakings which are formed by the transfer to such undertakings of assets previously used in any other business.

[Clause 6]

APPLICATION OF THE AMENDMENTS.

(7) The above six amendments to the Income-tax Act will come into force on 1st April, 1959.

[Clause 19]

II. WEALTH TAX DENIAL OF DEDUCTION OF TAX ARREARS AS DEBTS.

Amendment of section 2(m).

Ordinarily, debts owing by the assessee have to be deducted in com-

putting his net wealth for purposes of Wealth-tax. To remove any doubt in regard to the treatment of tax arrears as deductible or otherwise, for this purpose, it is proposed to clarify with retrospective effect that taxes.

(i) which are outstanding and are disputed by the assessee in appeals; and

(ii) which are otherwise outstanding for more than one year on the valuation date

will not be regarded as debts owing by the assessee for the purpose of deduction in computing his net

wealth. This is only desirable, as otherwise tax payers will be getting an unjustifiable relief under Wealth-tax resulting from their own defaults. [Clause 20]

RATES OF WEALTH-TAX FOR 1959-60.

2. With effect from the financial year 1959-60, the rates of wealth-tax for individuals and Hindu undivided families are proposed to be increased by $\frac{1}{2}\%$ throughout. The existing rates and the new rates proposed are as follows:

Individuals and Hindu undivided families. On the slab—	Existing rates	Proposed rates
upto Rs. 2 lakhs for Individuals	Nil	Nil
upto Rs. 4 lakhs for H. U. Fs.		
Rs. 2 lakhs and upto Rs. 12 lakhs for Individuals	$\frac{1}{2}\%$	1%
above Rs. 4 lakhs and upto Rs. 13 lakhs for H. U. Fs.		
Rs. 12 lakhs and upto Rs. 22 lakhs for Individuals	1%	1½%
above Rs. 13 lakhs and upto Rs. 23 lakhs for H. U. Fs.		
Rs. 22 lakhs for Individuals	1½%	2%
above Rs. 23 lakhs for H. U. Fs.		

For companies, the existing flat rate of $\frac{1}{2}\%$ on wealth in excess of Rs. 5 lakhs will continue to apply during 1959-60. [Clause 21]

III. EXPENDITURE-TAX.

1. Amendment of definition of "dependant".

At present, the wife and children of an individual are regarded as dependants only if they are wholly or mainly dependent on him for support and maintenance. It is now proposed to dispense with this requirement in their cases. Any other person, who is actually dependent on the assessee for support and maintenance, will also be regarded as a dependant. [Clause 22]

2. Clarification of the scope of charge.

Proceedings under the Act lie only against a person whose net income after payment of taxes exceeds rupees thirty-six thousand. It is proposed to make it clear that for this purpose all income to which he or his dependants will be beneficially entitled should be taken into account, but the tax liability itself will continue to be determined solely with reference to taxable expenditure. [Clause 23]

3. Expenditure incurred by dependants to be included in assessee's expenditure.

Even at present, expenditure incurred by a dependant is included in the assessee's expenditure, if it has been met out of any gift, donation or settlement on trust made or created by the assessee, whether directly or indirectly. Since the basic allowance of rupees thirty thousand is meant for the assessee's family as a whole consisting of himself and his wife and minor children, it is only proper to take into account their aggregate expenditure, without looking into the source from where it has been met. In the case of a Hindu undivided

family, expenditure incurred by a member will be treated as the family's expenditure, only if it has been met from the resources of the joint family. [Clause 24]

4. Modification of certain exemptions and deductions.

Clause 25 curtails some of the exemptions at present admissible under section 5. The principal change is in respect of expenditure on repairs and maintenance of buildings. Under the Expenditure-tax Act, rent paid by the assessee for a residential house is his personal expenditure as also any monies spent by him on its maintenance or repairs. On the other hand, in the case of an assessee who resides in his own house, not only is no adjustment made for the saving of rent in the computation of expenditure, but he is also entitled to claim exemption for personal expenditure against repairs and maintenance of the house under the existing Act. To remove this anomaly as between persons who reside in rented premises and others who reside in their own properties, it is proposed to treat expenditure by way of repairs, maintenance etc. in respect of the owner-occupied property, as personal expenditure. [Clauses 25(i) and 26(i)]

5. Expenditure on bullion, precious stones or jewellery is at present completely exempt, while expenditure on household goods and other articles for personal use is charged to tax with

(e) Art Silk Fabrics.

	Rate of basic duty	Estimated revenue (Rs. lakhs)
(i) Proposed	(a) 6 nP per sq. yd.	1,80

sitated by the persistent attempts which are being made by certain sections of the trade to use granule of tobacco assessable at the lower rate of 47 nP per lb., in increasing quantities, in the manufacture of biris, the tobacco for which is normally assessable at Re. 1 per lb. The other amendment provides for assessment, at the higher rate, of notified varieties of tobacco, otherwise assessable at the lower rate, when actually used for the manufacture of biris. [Clause 30(b)(i)]

	Existing rate of duty (Rs.)	Proposed rate of duty (Rs.)
Per powerloom per month:	27/-	50/-
(a) First shift	18/-	35/-
(b) Second shift	10/-	20/-
(c) Third shift		

increased. Simultaneously, by notification, the effective rates of duty on the first six categories (i.e., costlier varieties) are also raised.

The estimated total additional yield will be Rs. 1.50 lakhs.

[Clause 30(b)(ii)]

	Existing rate of duty (Rs. lakhs)	Proposed rate of duty (Rs. lakhs)
(i) Proposed	Rs. 112/- per ton.	Rs. 112/- per ton.
(ii) Existing	Rs. 112/- per ton.	Rs. 112/- per ton.
(iii) Estimated additional yield		8,80

will be no increase in the existing rate of duty on cycle tyres.

	Existing rate of duty (Rs. lakhs)	Proposed rate of duty (Rs. lakhs)
(i) Proposed	Rs. 112/- per ton.	Rs. 112/- per ton.
(ii) Existing	Rs. 112/- per ton.	Rs. 112/- per ton.
(iii) Estimated additional yield		8,80

continue with appropriate adjustments in the rates of duty.

[Clause 30(d)]

	Existing rate of duty (Rs. lakhs)	Proposed rate of duty (Rs. lakhs)
(i) Proposed	Rs. 112/- per ton.	Rs. 112/- per ton.
(ii) Existing	Rs. 112/- per ton.	Rs. 112/- per ton.
(iii) Estimated additional yield		8,80

1959-60 Budget Supplement

The Tariff Commission have reported that the industry is making excessive profits and that the exemption in the present form in respect of the production of the first 9 looms is said to have induced fragmentation of units. With a view to mop up part of these profits as well as to arrest the present tendency towards fragmentation of units, it is proposed to raise the duty and to reduce the exemption limit from 9 looms to 4 looms. [Clause 30(e)]

	Rate of basic duty	Estimated revenue (Rs. lakhs)
(i) Proposed	80 nP per I.G.	16.90*
(ii) Existing	40 nP per I.G.	9.40*
(iii) Estimated additional yield at the proposed rate		7.50

While there is a surplus in motor spirit, considerable quantities of refined diesel oils are being imported to meet the increasing demand in the country since the local production is insufficient to meet the requirements. This preference for refined diesel oils is largely due to the advantage in price which these oils have over motor spirit. With a view to conserve foreign exchange and discourage excessive consumption of these oils, it is proposed to increase the duty on refined diesel oils and vaporising oil. [Clause 30(f)]

	Rate of basic duty	Estimated revenue (Rs. lakhs)
(i) Proposed	Rs. 50.00 per ton	2.15*
(ii) Existing	Rs. 40.00 per ton	1.80*
(iii) Estimated additional yield at the proposed rate		35

*Includes revenue from additional duty of excise.

Simultaneously with the increase in duty on Refined Diesel Oils, the duty on Diesel Oil, Not Otherwise Specified, is also being re-adjusted. [Clause 30(g)]

II. Changes made by Notification

In addition to the changes made by the Finance Bill, 1959, referred to above, the following further changes are made by executive notifications.

	Existing rate of duty (Rs.)	Proposed rate of duty (Rs.)
Per powerloom per month:	27/-	50/-
(a) First shift	18/-	35/-
(b) Second shift	10/-	20/-
(c) Third shift		

The rates of duty for warp knitting machines will be double the rates for powerlooms. There is no change in the rates of additional excise compounded duty.

	Rate of excise duty	Estimated revenue (Rs. lakhs)
(i) Proposed	Zone III-A 8 nP per lb.	7.38
(ii) Existing	Zone III-B 12 nP per lb.	6.80
(iii) Estimated additional revenue		58

The teas grown in the gardens situated in certain high altitude areas are reported to have been affected adversely by the existing rate of duty because of their high cost of production. It has, therefore, been necessary to re-adjust the rates of duty in Zone III as shown above. The net effect of the proposals is that teas grown in certain parts of Darjeeling and Nilgiris will get relief of 4 nP per lb. in excise duty.

	Existing rate of duty (Rs. lakhs)	Proposed rate of duty (Rs. lakhs)
(i) Proposed	Rs. 112/- per ton.	Rs. 112/- per ton.
(ii) Existing	Rs. 112/- per ton.	Rs. 112/- per ton.
(iii) Estimated additional yield		8,80

It is reported that there is unfair competition from the exempted sector and even evasion. It is, therefore, proposed to withdraw the exemption and bring all the power-driven units into the excise net. Village ghanies, which are not power-driven, will continue to enjoy the exemption from duty.

	Existing rate of duty (Rs. lakhs)	Proposed rate of duty (Rs. lakhs)
(i) Proposed	Rs. 112/- per ton.	Rs. 112/- per ton.
(ii) Existing	Rs. 112/- per ton.	Rs. 112/- per ton.
(iii) Estimated additional yield		8,80

(k) Rayon and Synthetic Fibres and Yarn.

	Existing rate of duty (Rs. lakhs)	Proposed rate of duty (Rs. lakhs)
(i) Proposed	Rs. 112/- per ton.	Rs. 112/- per ton.
(ii) Existing	Rs. 112/- per ton.	Rs. 112/- per ton.
(iii) Estimated additional yield		8,80

The justification for the increase is that the industry is making excessive profits.

*Includes revenue from additional duty of excise.

VI. CUSTOMS

Only two changes to the Indian Tariff Act have been proposed in the Bill. They are set out in the Table below. Their impact on revenue is negligible.

TABLE I

S. No.	Reference in the Second Schedule to Bill (sub-item No.)	Item in the tariff schedule.	Brief description of the article.	Present rate of duty.		Proposed rate of duty.		Additional revenue expected (in lakh Rs. to nearest lakh).	Remarks.
				Standard rate of duty.	Preferential rate of duty, if any	Standard rate of duty.	Preferential rate of duty, if any		
1	(I)	29	Cinematograph films unexposed.	Rs. 1.75 per 100 linear feet.	...	Rs. 2.00 per 100 linear feet.	...	5	The increase in duty is being effected to provide funds for the Film Finance Corporation which is being set up.
2	(II)	39(2)	Rubber tyres and tubes for motor vehicles.	35% ad valorem.	...	40% ad valorem.	...	2	The existing Item 39(1) is being split up into three separate items so as to provide for an increased rate of duty, equal to the excise duty proposed in the Bill, on rubber tyres and tubes for motor vehicles.

2. It may be mentioned that an additional Customs revenue of nearly Rs. 3.60 lakhs is expected purely as a consequence of the changes effected in the Central Excise Tariff, by way of countervailing increases in duties on various items. These changes together with their revenue effect are set out in Table 2 below.

TABLE 2.

S. No.	Brief description of article.	Item in the tariff schedule.	Rate of duty.	Present rate of excise duty.	Proposed rate of excise duty.	Additional revenue expected (in lakh rupees).	Remarks.
1	Diesel oil not otherwise specified (Industrial fuel oil).	27(7)(b)(i)	16% ad valorem plus the excise duty.	Rs. 40.00 per ton.	Rs. 50.00 per ton.	210	There is an additional excise duty,† which is also a countervailing Customs duty; these rates are not changed.
2	High Speed Diesel Oil.	27(5)	20 nP per I.G. or 16% ad valorem whichever is higher plus the excise duty.	40 nP per I.G.	80 nP per I.G.	110	There is an additional excise duty,* which is also countervailing Customs duty; these rates are not changed.
3	Art Silk Fabrics.	48(4) etc.	(Various rates).	6 pies per sq. yd.	6 nP per sq. yd.	Negligible.	
4	Staple fibre.	46(6)	25% ad valorem plus excise duty.	2 annas per lb.	20 nP per lb.	Negligible.	
5	Art Silk yarn.	47(2) I.C.T.	(Various rates).	...	...	40	Changes are being effected in Central Excise duties on different varieties of rayon yarn by way of amending an existing notification. Similar corresponding changes are being made in existing rates of customs duty on similar varieties of yarn, also prescribed by notification.

(*The present rate is Rs. 11.64 per ton).

(†The present rate is 7 nP per I.G. on HSD and 3 nP per I.G. on Vaporising Oil).

Total 3.60 lakhs

3. The export duty on tea is being reduced by notification from 26 nP to 24 nP per lb. as a measure of relief to common teas and to improve the competitive position of Indian teas in foreign markets. The loss of revenue is estimated at Rs. 93 lakhs.
