Calcutta Stock Exchange

Overall Performance Encouraging

THE overall performance of the Calcutta Stock Exchange was encouraging last year. The upward trend in prices became more pronounced since June and, except for temporary setbacks on technical considerations, the bullish tone was maintained, although confidence was somewhat shaken towards the close of the year. The only exception to the general trend were Textile scrips, which did not follow fully the inspired lead given by other sections. The market finished the year on a cautious note.

In general, the year just ended was a memorable one in several respects. The remarkable transformation of market sentiment, which was the most outstanding feature, was difficult to express in satisfactory terms. To say, for example, that Indian Irons rose from Rs 18.70 at the end of December 1957 to Rs 27.70 in the first week of November was striking enough for those who were aware of the excitement caused by even Re 1 change in the price of this cell-weather of the market. Such a change in sentiment was brought about by a somewhat realistic approach of the Government towards the economic problems of the country, better prospects of foreign aid, the most comfortable conditions in the money market and expectations of bonus issues by some of the leading companies. Again, as a result of very tight import control, funds were directed, to some extent, to the stock exchange. Thus, frustration, which had taken deep roots during the preceding year, gave place to an air of confidence, resulting in a broadening of activity and a consequent improvement in prices.

But, the investment psychology, which had thus been created during the greater part of the year, gave way to gloomy forebodings about the shape of things to come. The extent of the damage to confidence could be gauged from the course of the market leader, Indian Irons, which slumped down to Rs 24.75 on December 15. That was the day when the market heard of the Congress Working Committee's proposal for a restriction of profits. Again, that was the culminating point in a succession of developments, which were interpreted as a worsening of the investment climate. But for a general feeling that the Government might not give serious consideration to the proposal to control profits and the sizable buying by the LIC, the market would have finished the year on a subdued note.

The main issue, that confronted the capital market at the beginning of the year, was how to revive

investment enquiry. The uncertain policy of the LIC following the muddle in the commitments of the Mundhra group of shares scared away the investors, who met with heavy depreciation in their portfolios. Apart from the anxiety to await the outcome of the findings of the Chagla Commission, Budget fears dominated operations. However, in view of the absence of any fresh tax proposals and generally bright prospects for foreign aid, operators were inclined to take a more favourable view of the future. But, the main fillip to the market came from the reduction in the excise duty on cloth and the suspension of the compulsory deposit scheme. These measures were interpreted as indicative of a welcome change in Government's attitude towards the private sector. Thus, the general downward trend in prices, that began as long as September 1958, was halted and reversed from March-end.

The upward movement in prices gathered further momentum in April following the drastic cut in imports and the consequent hope that it would give fillip to domestic industries, the major concessions granted to the coal industry in respect of royalty rates and mine leases and the relaxation of proposals regarding the grant of development rebate. Although a temporary setback to the recovery movement appeared in May due to reports of labour trouble strike at the TISCO Works, the threatened strike in West Bengal and Bihar coalfields and by the Port and Dockworkers from the 16th June, there were no signs of any nervousness on the part of operators, who were inclined to judge things in their proper perspective.

As a matter of fact, conditions akin to a boom witnessed from the beginning of July to the middle of November despite profit-taking at bulges, thanks to various favourable factors. Mainly amongst these were, the long-wanted announcement of a reduction in the rates of excise duties on coarse and medium cloth, the increase in cement prices, the removal of the export duties on castor and groundnut oils the Select Committee's recommendation to reduce the Estate Duty, the prospects of the country being able to resolve its foreign exchange difficulties with large-scale aid from abroad, the proposal by the Indian Iron & Steel Company to issue bonus shares in the ratio of 1:5 the announcement of a further increase of Rs 14 per ton in steel retention price and the continued easy conditions in the money market. With the result, operators succeeded in pushing up the rates to the highest levels for the year in the first week of November.

However, a number of new factors combined brought about a restriction of business, a gradual recession of prices and a state of uncertainty in the market from the middle of November. While the main damper was provided by the Finance Minister's statement that no relief in taxation was possible in the 1959-60 Budget, the decision by the National Development Council to maintain the financial outlay of

the Plan at Rs 4,500 crores gave rise to a fear that there might be a possible addition to the existing tax burden. Uncertainties hanging round the political situation in Pakistan, the unloading of a big block of Indian Iron shares by the Dalhousie Holding Company and the consequent difficulties experienced by a few prominent parties in the matter of payments at the settlement dates, the Finance Minister's speech at the ASSOCHAM meeting and ceilings on land holdings—all these factors added to the feeling of shakiness in the market. Above all, the Congress Working Committee's resolution for the controlling of profits in the private sector had a disastrous effect on sentiment during the last two weeks of the year. But for the LIC who came to the rescue by making fair purchases, prices would have recorded steep declines from the best levels attained in November.

Sectionwise, Engineering shares maintained their popularity throughout the year, although price movements were mostly influenced by the speculative activity in Indian Irons. The atmosphere of buoyancy in this scrip was maintained during the major part of the year, being influenced by the prospects of increased earnings for the company in the coming years after the completion of the expansion programme and the hope of the dividend being maintained on the enlarged capital resulting from the recent bonus issue.

After a dull start, Jute shares gave an excellent performance despite the demand for gunnies being at a low ebb. There was a growing confidence that, with the progressive modernisation and rationalisation carried out from 1957, the consequent hope of a reduction in manufacturing costs, the improved statistical position and the prospect of getting adequate supply

Annual Reviews

of raw material at reasonable prices, the industry had passed the worst phase and might be able to pay handsome dividends for 1958.

Thanks to an increase in the selling price of the commodity, the expectations of the Plan targets set for the private sector being likely to be fulfilled according to schedule, the Government decision to permit the export of metallurgical coal to the extent of 5 lakh tons in 1959, Coal shares fared better during the major part of the year. Even investors showed sustained interest in the section on the belief that increased coal production was essential for the success of the Second Plan if the target for industrialisation was to be achieved.

Except for some activity noticed during the third quarter of the year following the announcement of reductions in excise and export duties, turnover in the Tea section was generally disappointing in view of the obscure outlook for Common grades, the supply of which remained excessive.

Sugar shares, after ruling generally quiet till the end of June, displayed a firmer tendency from July when the announcement of the sugar policy was made. The news of the increase in the export quota from 50,000 tons to one lakh tons for the current season, the consequent rise in internal prices and hopes of increased profitability, were the main contributory factors.

Textile scrips struck a bad patch amidst better conditions prevailing in most other sections, mainly due to the obscure outlook for the industry.

The Miscellaneous section provided several bright spots and scrips of those companies, having expansion schemes, came in for substantial investment demand at every setback in prices.

Thanks to continued easy conditions in the money market, activity in the gilt-edged section remained better. There was an expansion in the volume of business, although trading was, at times, curtailed by the paucity of offer-

But, the only encouraging factor is that the LIC, in its newly defined role of market stabiliser, may be relied upon to bring its massive support to bear, should any pronounced weakness appear in the market, as was done by the Corporation when the market experienced a near nose-dive in mid-December. Although it is difficult to say whether the purchases made by LIC were intended to halt the

ings. Large-scale enquiries had to be satisfied even by purchases from the Reserve Bank and, as a result, authorities were able to assist the rise in the market through their operations.

In sympathy, Bank shares showed a good recovery, although prices showed a slightly easier tendency towards the close of the year on fears of lower profits for 1958 in view of the slack demand for funds and the easy conditions prevailing in the money market.

The general outlook for stock markets in the New Year is considered to be one of cautious optimism. The reactionary tendency in share prices from the middle of December has set investors wondering whether the bull phase is over and a downswing is on the way. No doubt apprehensions about a reversal of the change in the Government's attitude towards the private sector have created defeatist is the risk of capital loss which frightens the investor when sentimentality in the investor minds. It ment changes. It remains to be seen as to how confidence can be revived, especially when confidence is a sensitive plant which can grow and flourish only on congenial soil.

decline in prices or were being made with a view of taking advantage of the attractive yields now available, hopes can be entertained that there will not be any serious setback in prices, especially when there are indications that the current level of industrial development will be maintained. It is also hoped that the Nagpur Congress will not recommend any disastrous policy to the Government, as the present tax system already act as a drastic restriction on profits.

1958—1959

1958 has proved to be a transitional year for the world as such and more particularly for this country. In America, the recession with which 1958 started was, before it could wreak much havoc, tamed into submission by the middle of the year. In the West European countries, the fore-warning of recessionary trends in America and the beginnings of a softening in the economy induced a quick institution of measures intended to prevent any depression of the economy. In India, 1958 has been a testing time, the first half of the year causing anxiety and concern. As 1958 ended, recession had quite clearly been shrugged off, and, in the rocket race, America appeared to have caught up with the Soviet Union with its attempts to hit the moon. It does not belong properly in this article, or at any rate at this juncture, to point to the success achieved last week by Russia in this regard as juxtaposed against the failure of the American attempts. But this, too, has a significance attached to it as far as the short term future of India is concerned.

In India, crisis was heaped on crisis as, with an all too swift depletion of foreign exchange reserves, and the second failure of foodgrain crops in succession, the price situation appeared to have got out of hand. It had generally been argued that, if, in the first two years of the Plan, the Indian economy had been able to withstand deficit financing on a substantial scale, it was because the import surplus which this country experienced had a contractionist effect on currency circulation. But, during 1958, India did not possess the foreign exchange reserves and was unable therefore to rely upon an import surplus as a safety valve against created money. It was in such a situation that there occurred the failure in the agricultural front, which, while causing a rise in foodgrain prices, seemed to throw up irrefutable evidence of the tightening grip of inflationary pressures. Against such a background, with the difficult balance of payment situation, and in view of the poor agricultural crop, there then began a heated discussion of whether or not the Second Plan had been correctly drawn up, and whether the Second Plan now stood in need of substantial revision.

But, if the first half of 1958 witnessed a mounting sense of crisis, the last six months have hearteningly produced the solution for most of our difficulties. In the first place, it soon became clear that what India was experiencing was not a general inflation in the sense that all prices tended to rise, but that there were merely some areas of shortages. With the effective steps taken by the Reserve Bank, and notwithstanding a substantial moderation of the balance of payment deficit, the price situation slowly came to be controllable by the end of the year, a very satisfactory decline in prices had been registered and there no longer was any apprehension of undue inflationary pressures remaining to be experienced. Thus, the first gain for 1958 was the holding of the price line.

In the second place, the foreign exchange situation, bleak as it had appeared, suddenly became more hopeful. Friendly foreign coun-

tries were conscious of the needs of Indian development, and responded spontaneously to India's cry, voiced and unvoiced, for assistance. In particular the World Bank convened a conference in Washington where were represented countries that were anxious to help India, and the second gain of 1958 for this country was that that conference decided to vouchsafe the foreign exchange requirements of India for seeing the Second Plan through.

Nevertheless, reappraisal of the Plan was essential, and second thoughts indicated that the resources available would not finance a Rs 4800 crores Plan. The target of expenditure was reduced to Rs 4500 crores, but, more importantly, and here lies the third gain during 1958, there came the realisation that much greater attention had to be paid to agriculture than had been set down in the Second Plan. By the end of the year, fortuitously, India was in sight of a bumper crop.

Then, there were the historic annual meetings of the International Monetary Fund, the International Bank for Reconstruction and Development and the International Finance Corporation. India played host to the member countries, and there could be discerned in the speeches made on the floor of the Vigyan Bhavan a realisation of what the need for development is in the under-privileged countries. Indeed, Mr Eugene Black of the World Bank was constrained to say that, after seeing the conditions in India, he wondered whether the Bank in its assessment of a loan application should not have regard for what he called the human element. The 1958 session could claim to be historic because decisions were taken to augment the resources of the world credit institutions.

As already remarked, there were areas of shortages in the Indian economy, but what is significant about 1958 is also the emergence of areas of surpluses. Chiefly, cotton textiles, cement and sugar were industries which experienced a level of production that was higher than indigenous demand. Meantime, owing to the difficult foreign exchange situation, the raw material position was tight, and the light engineering industries especially felt the pinch. The level of industrial production, which had risen so satisfactorily during the period of the First Plan, now showed signs of levelling off. Thus it was that, in 1958, a plateau both of production and consumption appeared to have been reached.

But the most noteworthy economic fact about 1958 is the metamorphosis of the money market. Conditions which had been stringent since the beginning of the Second Plan suddenly turned easy. The Deposit resources of Scheduled Banks rose steadily, but, by dint both of the import restrictions and the pleatoux of demand and production, the level of Advances tended to be static. In the result, the Advances-Deposits ratio, which had been uncomfortably high since 1956, fell steadily and week by week.

This improvement in the position of Scheduled Banks had an immediate significance for

Indian Finance

Established 1928

January 10, 1959

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

Government. The borrowing programme in respect of the Second Plan had till then achieved lukewarm success, but, as from the middle of the year just ended, there was a tremendous increase in the interest shown in gilt-edged. Banks began to enlarge substantially their gilt-edged portfolio. Prices of gilt-edged rose spectacularly. The Central and State Governments were able to raise considerable sums from the open market.

Side by side with the improved tone of the gilt-edged market, the Stock Exchanges generally and for most of the year displayed a firm trend. The Budget did not contain any concessions, but, thereafter some of the anticipated reliefs did materialise. As such, the atmosphere in the stock markets was fairly cheerful until, toward the end of the year, with the framing of the draft resolution on planning for consideration at the Congress session now being held at Nagpur, some reaction occurred. While, lately, authority has deemed it necessary to reiterate the role of the public sector in industrial development, a factor helping investment sentiment is the implied desirability of Government welcoming private foreign capital.

Such, then, was the state of the Indian economy during 1958. It would be pertinent here to peer some way into the future and see what 1959 may have in store.

We believe that the most important development during the year just started will be a revival of the upward trend in demand for consumer goods. This would be because the current agricultural crop should release primary purchasing power, and this should seek cotton textiles, etc., as a consumption outlet. Thus, the cotton textile industry should, this year, steer clear of its two years' becalming in the doldrums.

Then, raw material availability should improve. It would follow that, with the raw material position more comfortable and with resurgence of demand, industrial production should again resume its upward trend.

As against the anticipated higher level of demand, indigenous supplies should also be better. Especially because of the bumper agricultural crops, the price situation during 1959 is unlikely to get out of hand.

The outlook for gilt-edged absorption should be cheerful, and demand from banks is likely to be sustained, although at perhaps a somewhat lower level.

The stock markets should evidence firmness, and, if the Budget for 1959-60 is "conciliatory", some significant gains may be recorded.

Summing up, it may be stated that, though 1958 appeared to be a year of crisis, it really represented a period during which there was general consolidation. Difficulties were overcome and problems solved. On the other hand, 1959 should be a year of achievement, with production and demand rising during a period of stable prices.

Annual Reviews

Sterling Convertibility, Franc Devaluation

By Paul Einzig

1958 will long be remembered as having witnessed two events of first-rate importance in the international monetary sphere—the restoration of the convertibility of sterling and the devaluation of the French franc. On the face of it, neither step appears to be very dramatic. Sterling's approach to convertibility has been very gradual, and the announcement made on December 27, 1958, does not complete the process. For sterling is only convertible for non-residents and only for current requirements. British residents remain subject to exchange restrictions, and overseas residents remain restricted in respect of investment transfers. As for the franc, it was devalued a number of times since the end of the war. Nevertheless, both events are of outstanding importance.

For all practical purposes sterling was already convertible before this latest move, ever since the Government decided to support the market quotations of transferable sterling in the close vicinity of the official parities. As a result of this policy foreign holders were able to sell their sterling at rates which differed only slightly from the London market rates. The difference is that until now the Government would have been in a position to discontinue supporting the "unofficial" rates at a moment's notice. But now the "unofficial" rates have been unified with the "official" rates, and the Government is under obligation to support the unified rates between \$2.78 and \$2.82 in relation to the dollar. Until now the unofficial rates could only be allowed to decline as a matter of routine.

Now the unified rates could only be allowed to decline as a matter of major policy decision amounting to an admission of defeat. The Government committed to the sup-

port of the unified rate as a gesture indicating strength. It indicated its confidence not only in the strength of sterling but also in the prospects of a Conservative victory at the general election. For the anticipation of a Socialist victory would produce a landslide in the foreign exchange market during the period between the announcement of the election date and the announcement of the election result. It is doubtful whether the Treasury's gold and dollar reserves, reinforced as they are, would be sufficient to withstand a flight from sterling if there should be a widespread anticipation of the advent of a Labour Government which would revert to exchange restrictions and would embark on inflationary policies.

A few months ago this confidence in Conservative victory might have been considered foolhardy. Today it is considered reasonable. Likewise, the Government's confidence in the economic soundness of sterling now appears to have a great deal of justification—even though the correct conclusion is reached on the basis of the wrong reason.

Prospects of wage inflation are as gloomy as ever, and in the long run the future of sterling will depend on the relative extent of wage inflation in Britain and other major industrial countries. But during the course of 1959 the adverse effect of excessive wage increases in Britain is likely to be offset by the continued pressure on the dollar. From this point of view the circumstances of the devaluation of the franc are of considerable significance, because it is likely to cause substantial repatriations of French capital from the United States.

Previous devaluations of the franc failed to produce such effect on a really noteworthy scale because even at its devalued level the franc failed to command confidence. This was largely the result of the political instability inherent in the constitution of the Fourth Republic, as a result of which no French Government was in a position politically to resort to drastic steps to ensure the stability of the franc. Today General de Gaulle's position is strong enough to enable him to take the necessary measures.

For this reason a relatively moderate devaluation of the franc is likely to induce many French holders of dollar balances or dollar securities to repatriate their capital. The extent of the devaluation is incomparably more moderate than was that of 1928, so that there is no reason for expecting such a spectacular reflux of Franc funds as was witnessed during the late 'twenties and the early 'thirties. Moreover, the political situation in Europe and in North Africa is such as to discourage many French holders to realise their dollars. On the other hand, given the higher degree of domestic political stability in France, and the resulting prospects of sounder financial policies, many French holders will repatriate their funds, and this is bound to result in persistent pressure on the dollar. The extent of this pressure is not likely to cause major embarrassment to the United States. On the other hand, it will be sufficient to assist sterling during the initial period of its convertibility.

If convertibility had been restored earlier, its immediate effect might have been a large scale transfer of funds from London to New York, owing to the prevailing world-wide scarcity of dollars. During 1959, however, dollars are not likely to be scarce, owing to French selling. So the dollar's poison is likely to be sterling's meat. Indeed, provided that convertible sterling will inspire confidence abroad it will attract funds to London. Geographically London is a more convenient financial centre for Europeans wishing to keep balances abroad, and it seems probable that after a Conservative victory continental sterling balances will increase.

Taking a long view, however, the prospect of sterling will depend on the Government's ability to resist inflation. The Leader of the Labour Party, Mr. Gaitskill, was right in pointing out that as a result of the return to convertibility sterling has become more vulnerable, and that in consequence there will be increased pressure in favour of disinflationary measures. At the moment such measures will not be called for, as sterling is likely to remain reasonably firm.

But another financial or political crisis would be followed by an even more sweeping flight from the point than those witnessed on repeated occasions since the end of the war, and would call for even more drastic measures than those taken in September 1957. Much will depend, of course, on the degree of inflation in the United States and other industrial countries.

As far as the United States are concerned, any weakening of the dollar as a result of withdrawals of French capital and of London's competition as a world banking centre would make it more important than before to resist inflation. The Washington authorities can no longer afford to disregard the up and downs of the balance of payments in determining their monetary policy. If the pressure on the dollar should reinforce disinflation in the United States Britain too

would feel impelled to adopt a similar policy. Otherwise sterling would come under strong pressure. In the changed situation the need for a strong British gold reserve has become more imperative than ever. British experts and the public must acquire the habit of comparing the gold figures with the figures of short-term external liabilities, to avoid dangerous unwarranted optimism. —Copyright.

Bombay Stock Exchange

1958—A Memorable Year

1958 was a memorable year for the Bombay Stock Exchange in several respects. Sustained buoyancy on a widespread scale prevailed for some months throughout the year, indicating new strength in the market. The marked revival in investors' confidence reached its climax in the latter part of October; but since then, the tendency of the market, especially during the last two months of the year, remained generally downward. This acceleration of the lower tendency gathered momentum following the Finance Minister's observations on taxation at the annual meeting of the Associated Chambers of Commerce on the 5th December. Talks of land reforms, putting ceiling on urban incomes and the Congress Working Committee's resolution for controlling the profits in the private sector broke the backbone of the market.

During the start of the year, the market staged a moderate rally on the feeling that the worst was over. The Pedestrian Budget dispelled fears of additional taxation. Hopes for any relief in the corporate taxation structure could not materialise. However, a psychological change for the better took place in view of the promises made by the USA, UK, West Germany, Russia and Japan to grant loans to meet the foreign exchange gap for the remaining period of the Second Five-Year Plan. The main impetus for the market, during the latter half of the year, was furnished by the very comfortable conditions in the money market and the change in the ideas of yield pattern.

Section-wise, the Gilt-edged market, after ruling quiet during the first half of the year, staged a sharp rebound during the months of July and August, reflecting plethora of funds in the money market. The institutional investors remained active buyers.

Bank shares were dull during the initial stages; but subsequently made steady headway. Appreciation in the value of the investment portfolio of government securities had a healthy effect and most of the shares touched new high levels.

Insurance shares were also better off.

Shipping shares remained in limelight on encouraging corporate news. Chemical shares fared generally well.

Paper shares were in good demand.

Rayon shares, after early subdued tone, were in good demand.

Indian Finance

January 10, 1959

sequently reacted on the Tariff Commission's recommendations for additional excise to mop up the extra profits.

Interest in Sugar shares broadened due to hopes of higher earnings and better dividends.

Steel shares remained favourites with the professionals as well as the investors, in view of the inducements offered on account of expansion programmes.

Cement shares were generally in doldrums on over-production, while offtake was slow.

Although Engineering and Automobile shares were in good form, they reacted sharply during the closing months of the year.

Textile scrips gained some ground in sympathy with the buoyant conditions elsewhere. But, there was little inclination to follow the rise on account of the depressed condi-

tions prevailing in the cloth market and accumulation of stocks with the mills.

On the whole, the general tendency of the market, during the year just ended, remained diffident with about 50 per cent of the gains having been wiped off. The outlook for the market depends on the new economic policies, which are being moulded and the investment climate. It cannot be said that all industries have done uniformly well. On the contrary, the cost of production has gone up almost in all industries due to higher raw material costs as well as productivity of labour remaining relatively low despite higher emoluments and other amenities. It is to be seen as to how confidence can be revived in the market.

The following table shows the price trends of a few active scrips during the year:—

Madras Stock Exchange

Impressive Rise in Cash Shares

SO far as the Madras Stock Exchange was concerned, the rise in cash shares was quite impressive last year. With the impediments in the export trade removed, prospects of foreign aid definitely encouraging and extremely comfortable money conditions, the stage was set for a smart upswing in gilt-edged and equity prices. Since September, however, a corrective phase had been in progress. The position worsened in December on talks of ceiling on unearned income and curb on profits in the private sector. The worsening Indo-Pakistani relations also added to the misgivings of the investor. The year ended on an uncertain note.

At the beginning of the year, the market was bidding time with inconsequential trading, awaiting the Union Budget and the budgets of the Southern States. But the Budget came as a disappointment to the market, not for what it con-

tained, but for what it failed to contain by way of tax reliefs. But, soon after, the market responded to gestures from New Delhi. The reduction in the excise duty on cloth was received with enthusiasm and this was followed by the news that the compulsory deposit scheme would be suspended during the year. Thus, the market was cheerful with an improvement in prices and turnover, also with the budgets of the Southern States containing nothing to upset the market.

Towards the middle of the year, however, the market became slightly weak with prices going down. It was only after the lapse of some more weeks that a buoyant tone was established. This was short-lived, as the niggardly relief to the tea industry affected trading sentiment. Also, the strike wave in plantations in Kerala added to the despondency. Towards the close of the year, the statement by the Union Finance Minister that increased taxation was inevitable and the Congress Working Committee's six-point programme of austerity touched off panicky conditions and landslide in values. The closing of

Annual Reviews

ing the lowest levels towards the close.

In general, the Indian jute industry passed through one of the depressing periods in many years. Signs of recession came to be felt and the demand from overseas buyers was not aggressive, as there was an inclination to test the market for further decline in prices noticed towards the end of 1957. The setback in business activity and the rising trend of unemployment in the U.S.A. had their impact on burlap consumption. Even enquiries from Australia slackened due to the partial failure of the wheat crop in that country. Again, with no marked expansion in internal consumption, stocks with the mills had accumulated. Although stocks were still lower than those a year ago, the uncertainty about the business recession was exploited by the speculators and prices were depressed to unduly low levels. At this stage, it will be of interest to study the market trends during the past year.

The weakness in the market, that was noticed towards the end of 1957, persisted during the first quarter of the year when prices did nothing to encourage operators to indulge in active dealings in view of the little or no interest shown by overseas buyers, who were on the belief that there would be a prospect of a recession in world commodity prices and a consequent contraction in demand for packing materials. Anxiety was also expressed over the programme of expansion of the jute industry in Pakistan and the nervousness displayed in the raw jute section.

Although the announcement of the decision made by the I.J.M.A. to fix up minimum prices (Rs 39.50 for 100 yards 40" x 10 Ozs hessian; Rs 29.75 for 100 yards of 40" x 7½

ozs hessian and Rs 100 for 100 bags of B. Twills) helped the market to recover sizably in March, confidence among operators was not restored. This was due to the fact that overseas buyers, who had already been showing limited interest at the low levels prevailing before the announcement, withdrew completely from the market. As a matter of fact, the market developed signs of weakness with the rates falling back to below the I.J.M.A.'s minima. Genuine operators were, therefore, unable to obtain a clear picture of the future trend of the market.

Following were the price trends:				
	Year's Opening Rs.	Year's High Rs.	Year's Low Rs.	Year's Closing Rs.
Hessian:				
40" x 10 Ozs. ...	39.50	44.60	37.80	41.75
40" x 8 Ozs. ...	32.50	35.40	30.75	32.37

Raw Jute, Bottoms Basis:				
Assam ...	27.00	28.00	20.50	20.50
Indian Northern ...	26.75	28.00	20.00	20.00
Daisee Mesta ...	23.75	26.75	16.25	16.25
Bimli ...	22.00	24.50	17.50	17.50

Thanks to the inauguration of the futures market, conditions took a turn for the better from April when the smooth working of the East India Jute & Hessian Exchange restrained gambling to a considerable extent, resulting in a steady upward trend in prices. Even the reports of a threatened strike by the All-India Port and Dockworkers' Federation from the 16th June had no effect on sentiment, which was aided by the news of the Argentine Government having lifted the ban on imports.

The main feature of trading, during the third quarter, was the remarkable firmness in hessians,

which touched the year's highest levels in July. As the demand for Sackings was poor, prices ruling for this category were still below the minima. As a matter of fact, the market, during this period, was maintained by the strength of hessians, stocks of which were only half of the monthly production. However, overseas buyers refrained from displaying any large interest as they were content to keep away from the market following the heavy purchases made after the Middle East crisis. Thus, the general undertone contained an air of expectancy with prices developing

Bimli ...	22.00	24.50	17.50	17.50

a steady downward trend towards the end of September.

The steady decline in prices would not have been halted in October, but for the I.J.M.A. Committee reaffirming their decision to maintain the minimum prices and the declaration of emergency by the E.I.J.H.E. Although overseas buyers continued to operate on a hand-to-mouth basis following the political events in Pakistan, the market staged a gradual recovery till the end of November. However, prices displayed a reactionary tendency in December following the slump in raw jute prices, although there was a slight recovery towards the close, thanks to the reports of

Indian Finance

some business done with the U.S.A., Australia and Egypt.

Conditions in the Raw Jute section remained generally dull during the first quarter of the year when prices showed an easier tendency. Mills were practically out of the market due to lack of demand for finished goods, while sellers became anxious to liquidate their stocks with a view to cut their losses as a large part of their funds was blocked in stocks brought at higher levels.

Weather played a dominant part in keeping the price movements during the second quarter. The news of scanty rains in most of jute-growing areas, poor arrivals and higher upcountry advices enabled sellers to adopt a reserved attitude on the feeling that the mills would have to enter the market, irrespective of the price, to maintain their stock position. They were also influenced by the news of the sealing of the Tripura border by Pakistan and the expectation of a general rush for raw jute.

With the result, prices maintained a firmer tendency in July when the highest levels for the year were touched. However, the market turned quiet from August due to lack of sustained interest from the mills, who held the belief that there would be a bumper crop and that the Indian supply would be nearly adequate for their requirements. Sellers, therefore, started their offerings more freely, while buyers continued to sit out.

As a result, the market developed a gradual weakness from the beginning of October and the decline in prices was much more rapid and appreciable—not seen in the last 10 years. Various factors contributed to this state of affair. Mainly amongst these were, the expectation of the highest production of 5.2 million bales in 1958 as against 4.1 million bales in the previous year, reports of heavy arrivals at most of the upcountry centres and the consequent accumulation of stocks with the stockists. As mills were not inclined to build up stocks at the declining levels, offers were even made at still reduced rates without attracting buyers. Even the imposition of heavy margins by the E.I.J.H.E. on sales below certain specified levels and the news of the Government sanction for exporting raw jute, had little effect on sentiment. To make matters worse, came the news of the possibility of competition from China and Thailand in the export market. For obvious reasons, the market finished the year on a weak note.

The present decline in jute goods prices, which is quite unwarranted by the statistical position, is a direct result of the persistent activity on the part of speculators. Apart from the fact that such a steady decline in prices is causing grave embarrassment to genuine traders, the confidence of overseas buyers is being completely undermined. An immediate action is, therefore, necessary to restore a measure of stability to the market; because one of the prime factors governing exports, is that

January 10, 1959

prices, besides being competitive, should be stable. Unless prices are competitive, any large expansion in offtake by overseas buyers cannot be expected.

Then there is the allied question of raw jute prices. The present low level of prices may be attractive to mills; but they are not so for jute-growers. Unless prices improve, cultivators will be tempted to divert their lands to growing more remunerative crops. It will be interesting to watch further developments in the coming year following the measures now taken by the Government and the industry to bring stability to both the raw jute and gunny markets.

Following are the vital statistics relating to production, exports, internal consumption, total despatches from mills, stocks and US burlap consumption for the 11 months ended November 1958 as compared to the corresponding period of 1957 (figures in Tons):—

PRODUCTION			
	Hessian	Sackings	*Total
1958	367,000	533,200	965,300
1957	382,200	494,000	937,100

EXPORTS			
	Hessian	Sackings	*Total
1958	356,200	360,700	746,000
1957	353,800	404,200	795,200

INTERNAL CONSUMPTION			
	Hessian	Sackings	*Total
1958	18,700	137,600	183,200
1957	21,300	120,300	160,300

TOTAL DESPATCHES FROM MILLS			
	Hessian	Sackings	*Total
1958	374,900	498,300	929,200
1957	375,100	524,500	955,500

STOCKS			
	Novr-end	Novr-end	Novr-end
1958	17,300	75,500	105,400
1957	26,000	35,200	71,300

BURLAP CONSUMPTION			
	Til Nov. 1958	Til Nov. 1957	
In USA	761m yds	760m yds	
*Includes also Other Varieties.			

Tea

A Satisfactory Season for Tea

DESPITE generally gloomy prospects for Common teas, conditions in the Tea market presented a cheerful picture last year. Prices of all grades, after touching the highest levels in July, showed a steady decline till the end of the year, the weakness of the market being more pronounced from mid-November. The market for Export teas finished at the lowest levels, and that for Dusts and Leaf grades at slightly above the lowest levels for the year.

It is true that Indian tea had a satisfactory season last year, with an expansion of exports and a rise in prices. But, this should not lead one to take a complacent view of the outlook, as the fore-said trends conceal some basic facts, which have an important bearing on the future of the industry. While it is estimated that the volume of exports, so far, has risen

by more than 65 million pounds as compared to the corresponding period of 1957, the value realised is appreciably less.

Even if one assumes that the present trend of exports will be maintained during the coming months, it must be remembered that it is not the only factor on which the fortunes of the industry has to be judged. While the prices obtained in the export auctions held in India have been higher, prices in London have recorded a downward trend in recent months. Moreover, in view of the prospect of larger supplies, the demand from blenders has slackened. Again, the peak quality season for North Indian teas is over and it is only the exceptionally good quality teas that are able to obtain higher prices.

Another important factor on which the fortunes of Indian tea depend is the competition from other producing countries. Of the total production in India, nearly 60 per cent is accounted for Common tea and most of this goes for export. Consequently, the effect of competition from East Africa, which also produces common tea, is more keenly felt. There are also reports that Chinese black teas have been pouring into the London market. Fears are, therefore, entertained that producers of Common tea in this country cannot compete with producers elsewhere in world markets, because of the rise in formers' production costs.

With the result, during the current season, prices of tea, except for the Common grades had, despite production costs, been maintained. However, teas of certain areas fared worse than in 1957, while prices fetched by Common grades grown in other areas were hardly remunerative. It was, in this context, that the Government of India introduced certain modifications in the excise and export duties. They decided to replace the present uniform excise duty by differential excise duties, to be imposed according to areas of output; but there would be no refund of the excise duty except in the case of package tea. But, these changes in duties did not show promise of any material benefits for producers of Common teas. The reason was that, in formulating the complicated new structure of duties, no attention was given to the basic problem of higher production costs, especially of low-grade producers.

Naturally, the general behaviour of the market was fully reflected in the trend of prices. The first sale of the year opened on a strong note and prices of all descriptions moved in sellers' favour. In February, the demand for Common tea was surprisingly good and the re-entry of the USSR after a lapse of some months, caused even medium and low medium BOPs to appreciate. As a matter of fact, there was a comparative shortage of Common teas in the market and, as a consequence, "teas for price" were keenly competed for. In March and April, the demand con-

tinued to be strong and well-sustained.

The first export auction for the 1958-59 season, held in May, got off to a good start, as was expected. There was good support from foreign countries, especially the UK and Russia, thanks to the interruption of supplies from Ceylon due to disturbed labour situation there and the political upheaval in Indonesia. However, subsequent developments, viz., the declaration of strike in five major ports from the 16th June and the persistence of the dock strike in London, somewhat obscured the outlook, as buyers in London were not much concerned about any interruption of supplies. They were inclined to buy cautiously and live on stocks on hand in the expectation that prices were unlikely to rise further and, when the strike was settled, supplies would begin to press on the market.

As a result, prices did not show much improvement in June. Although keen bidding for quality teas continued to be in evidence, buyers were not particularly anxious to chase rising prices. What was worrying the trade was the possibility of excessive supplies of Common grades. Even the Government announcement with regard to the reduction in export cess from Rs 4 to Rs 2 per 100 lbs and a cut in excise duty on tea in packages exceeding 60 lbs, had no

effect on sentiment. It was felt that the reduction in export cess would contribute very little towards rendering Indian tea competitive in foreign markets.

In July, the market was unsettled and, in consequence, there were fairly heavy withdrawals. The month of August did not turn out to be as good a cropping month as was generally anticipated. With the result, sale offerings became heavier, the rate for Common and low medium teas declining steadily to Rs 1.70 from Rs 1.85 quoted at the beginning of the season. However, the general trend of prices was firm in September and there was a further recovery during October when there was little tea on the market below Rs 1.75 as compared to Rs 1.60 in 1957. But, depressed conditions set in from mid-November. The substantial increase in North Indian crop figures, both for October and November, gave rise to a fear that there would be little prospect of any material decline in the final crop for the year.

At this stage, it will be interesting to study the production trends of the major producing countries. Following are the latest available figures (in million pounds):—

Countries:	Upto	1958.	1957.
North India ...	November	539.3	516.5
South India ...	October	135.3	125.6
Pakistan ...	November	50.5	43.6
Ceylon ...	October	341.3	333.5
Indonesia ...	September	73.6	73.5
East Africa ...	September	46.0	43.1
Total ...	...	1,186.0	1,135.8

It is clear that the world crop figure shows an increased of more than 50 million pounds over that of 1957. In addition, the London "stock and afloat" figure is at the highest level since the war. Naturally, everything, therefore, points to a surplus of tea from the producing countries and buyers will be cautious, especially in taking Common grades. As prices are not expected to improve much, a considerable amount of Indian tea may have to be sold at unremunerative prices. India will, therefore, have to rely on her internal market to absorb the large quantity of

Common tea that will inevitably be offered during the next few months. Again, it is obvious that, if Indian tea is to be marketed on competitive terms with output of other countries, steps will have to be taken to reduce costs substantially. Considering that a large proportion of the production costs is statutorily determined, a substantial reduction in both export and excise duties can be of great help to the industry. However, against the depressing background, there is one bright light on the horizon, and this is the increase in exports. Following were the price trends.

Year				
	Opening Rs. n.P.	Highest Rs. n.P.	Lowest Rs. n.P.	Closing Rs. n.P.

Sugar

Control Imposed: Little Headway in Exports

AN important feature of trading in Sugar markets last year was the imposition of control on ex-mill prices of the commodity in Northern India in a bid to curb the rising trend in prices. D-29 quality sugar price was fixed at Rs 36 per maund. Besides this, the Government of India announced a scheme, offering as much sugar as would be necessary to traders against tenders. Within two weeks of the commencement of the tender system, sugar prices started moving down and were below controlled prices since the second week of September. The price control was applicable to factories of North Bihar, Uttar Pradesh and the Punjab. Units in the rest of India were exempt from this order.

The crushing season for 1957-58 started on a promising note on renewed export prospects. After considering the trends of production, consumption and supply position, the Government decided to release a quantity of 50,000 tons for export during the season ending 31st October, 1958. All sugar factories in the country were required to deliver their export quotas to the Indian Sugar Mills Association, which was appointed as the export agency for the purpose. Any factory, which failed to deliver its quota in whole or part, would have to pay an additional excise duty of Rs 17 per maund on the quantity of sugar in respect of which default took place before it was released for sale in the internal market. Moreover, the ISMA warned all factories not to raise prices and also to obtain an undertaking from their respective dealers not to charge higher prices to consumers.

But, sentiment in the sugar markets remained depressed since the imposition of control on prices. No deals in ex-factory section took place due to a state of suspense over the control. The main

grouse of the factories in North India was against the fixation of low rates for their sugar and the millowners wanted the control to be removed. The Government's policy in regard to sugar exports, out of the production for the 1958-59 season, was also anxiously awaited.

But, the Government's decision to release one lakh tons for export, during the current season, imparted strength to the market towards the close of the year, when prices rose by nearly a rupee per bag. However, a section of the industry received the Government's bid to double the country's exports with a feeling of caution, since it was feared that increased exports would tend to push up internal prices.

The total supply, during the current season, is estimated at about 24 lakh tons, including a carryover of about 3.5 lakh tons. The domestic consumption is expected to be somewhat higher around 20.5 lakh tons. With exports of one lakh tons, the balance, at the end of the season, will thus be smaller at about 2.5 lakh tons. This quantity is not considered sufficiently large for a country of India's size and there are apprehensions that it may render the market more sensitive to any changes that may take place with the progress of the season.

Moreover, it is felt that the industry will suffer unbearable losses if it is compelled to export such a large quantity of one lakh tons. The Government would have done better to release a smaller quota to start with, especially as there still remains a balance of 10,000 tons to be exported out of the last season's quota of 50,000 tons. It is also too early to assess the current season's likely output. It is, therefore, not advisable to commit the country to a big quota like this. Any export now will necessarily have to be made out of the carryover from the previous season.

As a matter of fact, there are reports of lower production in some mills in Northern India in view of their difficulty in getting adequate cane supplies following the recent price controversy; but the Centre has eventually refused to raise sugarcane prices. Meanwhile, the industry continues to agitate for raising the control prices, which have been enforced six months ago. The ISMA has already put up the case before the Tariff Commission on behalf of the factories, while the Tariff Commission is still to go through the enquiry before interim recommendations can be submitted to the Government.

Total production for the 1957-58 season was only 19.74 lakh tons as against as much as 20.25 lakh tons in the previous season. The fall in production was partly due to the irregular monsoon in the North. Total despatches from factories, up to the 15th October 1958, amounted to only 19.74 lakh tons as against 20.27 lakh tons during the corresponding period of the previous year.

Production, during the current season, which has recently started,

is not expected to be more than that of the 1957-58 season. In this connection, the Chairman of the Belapur Company Limited has expressed the view that there may be a further fall in White sugar output in Uttar Pradesh, unless the Government rectify the undue advantage which Khandasari has been enjoying; but this fall may be offset by an improvement in production in the Bombay-Deccan and South India.

Foodgrains

Rise in Prices Checked

PRICES of Foodgrains rose faster than "all commodities" last year, which showed how the farmer were out of the step with the general trend of prices. What made the rise in prices particularly disturbing was, that it occurred despite the fact that arrangements for large imports of foodgrains had been successfully completed and the Government of India took several measures to check the upward trend in prices, including imposition of restrictions on movement of foodgrains, credit squeeze by banks on advances against foodgrains stocks, opening of fair price shops and, above all, imposition of ban on forward trading in coarse grains and pulses. Though these steps helped curb speculative activity and hoarding, prices continued to rise. More than anything else, the rise in prices, following smaller crop of rice and wheat in 1957-58, proved to be a most disquieting feature and cause of much worry to the Government.

Production figures (in thousand tons) of individual crops for 1957-58 as compared with the revised estimate for 1956-57 are as follows: Rice 24,821 (28,282); Jowar 8,056 (7,429); Bajra 3,565 (2,885); Maize 3,064 (3,009) and Ragi 1,716 (1,715). The rice crop accounts for a decrease of 3.5 million tons and is almost equal to the average for the first Five-Year Plan period; but the shortfall has been made up partially by the increase in production of other kharif cereals, especially of the two major millets, jowar and bajra. These two millets account for an increase of 1.5 million tons.

It has been computed by the experts of the Union Food Ministry that India's food requirements may go up by a million tons per annum, because of an increase of about 5 million per year in its population. As against this, production of foodgrains in 1957-58 at 62.03 million tons is 6.63 million tons less than in 1953-54. Actually, it ought to have been more by 4 million tons, that is, at 72.70 million tons, to cover the increase of 20 million in population since then. The Union Food Minister has also proposed to intensify internal procurement to supplement imports, so that he may be in a better position to ensure equitable distribution of available supplies among all the States and to thwart the attempts of speculators and hoarders.

A modest rise in food prices is not necessarily a matter for alarm. But the increase, that has now taken place, is certainly not modest. The Index Number of Wholesale

Prices of Food Articles (Base: 1952-53=100) was 115.1 for the week ended 29th November 1958 as against 106.7 a year ago, the corresponding index numbers for cereals and pulses being 107.1 and 112.1 against 101.0 and 82.4 respectively. Thus, over a period of one year, the cost of food has gone up by 10 per cent. The situation, therefore, deserves to be watched in order that it may not deteriorate further. At this stage, the recent trends in Rice and Wheat markets in North India make an interesting study.

With the new marketing season in full swing, the customary fall in foodgrains prices was reported from all over the country till the end of April when there was a tendency on the part of growers to dispose of their stocks as early as possible. However, the market developed a firmer tendency from May when the wheat crop all over Uttar Pradesh was admitted to be lower than the previous year. Producers, therefore, retained their stocks in anticipation of getting better prices later. Moreover, the advance in wheat prices was helped by higher advices from Rajasthan and Madhya Pradesh. The rise in prices was also aided by the sharp decline in arrivals. Another contributory factor was the increased holding power of farmers, who showed no hurry to dispose of their stocks.

Conditions in the market, however, turned quiet from the middle of June following the Food Minister's warning to traders that the Government would seize grain stocks under the Essential Commodities Act, the opening of more fair-price shops and the stopping of bulk purchases by flour mills. Another factor, that had a stabilising effect on prices, was the satisfactory progress of the "kharif" crop. The third factor was that the Government took steps to supply foodgrains to counteract shortage in various parts of the country by rushing supplies to deficit regions. Above all, with their intervention in the form of a ban on forward contracts on coarse grains and pulses, the market sentiment turned easy.

The effect of the import measures taken by the Government to check undue rise in the prices of commodities was fully reflected in food grains prices in August. The immediate result of the ban on forward trading in coarse grains and pulses was a break in the prices of these cereals. The fact, that the Government had banned the purchase of wheat by flour mills in Uttar Pradesh, Madhya Pradesh, Rajasthan and Bombay, was responsible for bringing about a steady decline in prices, as millers were far the biggest purchasers of wheat in the open market. Again, the decision of the Reserve Bank to direct all scheduled banks to limit their advances against wheat and other foodgrains to 80 2/3 and 1 per cent respectively of the average credit arrested the upward trend in prices. Except for a slight steadier tendency in prices in October due to dwindling stocks and poor supply position, prices generally displayed a downward trend; the decline in that total. But it during the rest of the year.

Cotton

Comfortable Supply Position

TRADING conditions in the Bombay Cotton market remained generally depressed last year, reflecting the absence of any improvement in the textile trade. Higher production along with lower consumption, the apathetic attitude of the mills in buying their requirements due to difficulties of financial accommodation, withholding of export quotas during the crop movement, the slow movement of exports and a large carry-over in the new season with prospects of bumper crop this year—all these factors had a depressing effect on sentiment.

If raw cotton prices could not advance, it was because of the general behaviour of the world prices. Compared to average holdings in recent years, stocks were on the high side and there were prospects of a marked increase in production. Against this, free world consumption had declined distinctly during the last two seasons.

Cotton consumption in Indian mills, during the 1957-58 season, was lower at 4,998,889 bales as compared to 5,233,049 bales in the previous season. The carry-over into the new season, as on the 1st September 1958, amounted to 22.54 lakh bales as against 20.15 lakh bales on the 1st September, 1957. Cotton crop in 1957-58 was estimated at 51.5 lakh bales and imports at 4.29 lakh bales. Thus, the total supply came to 75.94 lakh bales in 1957-58. With consumption at 49.38 lakh bales and exports of 2.92 lakh bales, the carryover, as on the 1st September 1958, amounted to 22.54 lakh bales. With crop estimate revised downward to 52.5 lakh bales and possible imports of 4 lakh bales, the total supply for the 1958-59 season will come to about 79 lakh bales.

The mill consumption during the 1957-58 season was estimated around 49.50 lakh bales, while the offtake by the Khadi Board was placed at 50,000 bales. Estimated shipments, out of the total export quotas, aggregating 646,500 bales (146,500 bales of the 1957-58 crop and 5 lakh bales of the 1958-59 crop) would, according to present indications, work out to 3.50 lakh bales, leaving a likely surplus of 25.43 lakh bales at the season-end.

The far-reaching world trends in cotton and textiles have left an indelible mark on the Indian cotton market, with prices of raw cotton wobbling steadily downward—ICC Jharilla March 1959 contract touching a low level of Rs 593 towards the end of October. The trend in the other three expired contracts was no better. ICC May 1958 contract touched a high of Rs 691.25 and a low of Rs 648; August contract a high of Rs 694.50 and a low of Rs 649 and the March 1958 contract a high of Rs 693 and a low of Rs 652, to finish at Rs 649; Rs 647.25 and Rs 688 respectively.

In contrast to previous year, there was a marked change in the official attitude towards cotton and textiles. In their anxiety to earn the much-needed foreign exchange,

the Government practically abolished the export duty on raw cotton and allowed liberal export quotas even in the beginning of the season, so that the trade might plan its export programme ahead.

Exporters, however, found it difficult to sell abroad, mainly because of increasing competition from other countries. Another major difficulty was the availability of foreign exchange with the importing countries.

The outlook for cotton, in the New Year, is largely dependent on mill consumption. An increase in the offtake is likely following the bumper crop this year, which means that the offtake of cloth should improve in the long run.

Bullion

Record Rise in 7 Years

THE year 1958 proved eventful for the bullion trade. Except for a short period earlier in the year, the market ruled buoyant and touched peak level, not witnessed since 1951. On balance over the year, Gold gained about Rs 5 per tola and Silver Rs 6 per 100 tolas.

The sustained firmness in the market was attributed to small floating stocks of both the metals and sustained spot demand. Thanks to the strict vigilance by the Customs authorities with a view to check the smuggling activity, bulls had, for almost all the time, an upper hand. As a result, arrivals in the market were affected and the prices soared higher in April and May. However, they developed a reactionary tendency and touched the bottom levels in July. This setback was attributed to several factors. Mainly amongst these were

the reports of increased arrivals of Tibetan silver coins, imposition of heavy margins by the bullion authorities with a view to curbing bullish enthusiasm and the fixation of a margin of Rs 500 per bar of silver and Rs 7 per tola of gold, if the rates crossed the fixed limit. With the steady flow of Tibetan coins, floating stocks of silver began to mount up, while the gold receipts were also higher.

During the third quarter, the market showed an irregular tendency, reflecting the growing impact of the slack season. After July, the recovery set in with gold and silver moving up to new high levels every month, mainly due to reports that the Tibetan authorities would ban the export of silver. There were also reports that the Government would take strong measures to curb smuggling. Consequently, both the metals were lifted up by prominent Calcutta and local operators.

Bears were so badly bitten in the process that the Bullion Association had to step in and enforced stricter margin on silver at the rate of Rs 1,000 per bar if the carry-forward charges exceeded one rupee and Rs 2,500 per bar if "buddi" exceeded Rs 2. Similarly in gold, a margin of Rs 10 per tola was payable whenever either backwardation charge or cantango charge varied from 50 nP to Re 1.

Yet, the prices did not look like coming down. For, it was at this stage that reports gained currency that the Government were considering the proposal to mobilise hoarded gold and issue gold bonds, which had a bullish effect on the market during the last quarter of the year.

The following table shows the price trends of both gold and silver during the years:—

		Gold		Silver	
		High Rs. nP.	Low Rs. nP.	High Rs. nP.	Low Rs. nP.
1958:					
January	...	111.62	107.56	190.19	186.31
February	...	113.06	110.62	192.87	187.56
March	...	113.12	111.00	196.00	189.00
April	...	113.00	109.91	199.87	193.12
May	...	113.50	106.06	197.37	182.44
June	...	109.19	106.12	187.12	181.31

October	...	111.41	107.00	190.87	187.37
November	...	114.87	110.37	190.81	186.75
December	...	115.19	112.25	194.75	191.06

Oilseeds

Groundnut Firm: Castor Lacked Demand

THE markets for Oils and Oilseeds began the year 1958 on an easy note. Under the leadership of castor futures, all the rest of the seeds saw lower levels. Later, however, the trend on the whole, appeared to have changed for the better with groundnut and cottonseed futures closing with fair gains. Castor and Linseed were, however, subdued.

In general, prices movements remained irregular, depending mainly on the export performance of the individual commodity. The Government was determined in not allowing exports of groundnut

oil or even HPS groundnut during the first six months of the year, bearing in mind the interests of the domestic consumers. When the quotas were announced and export duties were removed, foreign buyers were not willing to oblige our produce in view of the relatively higher levels. Thus, the all-out export offensive in vegetable oils and oilseeds by the Government came too late in the day during the year, as overseas buyers adopted an apathetic attitude.

In Castor seeds, US continued to be reserved buyers, while the Indian shippers continued to meet with Brazilian competition even after the entire abolition of export duty on castor oil. In view of lower world export of linseed, export of linseed oil received some fillip on the whole. Cottonseed oil exports

Annual Reviews

suffered a setback during the latter part of the year. On the whole, past year's experience provided a lesson that, if India wanted to maintain her traditional export markets, the export policy had to be somewhat consistent as well as based on long-range.

Commodity-wise, a downward trend in prices was evident in the groundnut section early in the year due to larger arrivals of seeds and oils; slack demand from crushers and the wait-and-see attitude of vanaspathi manufacturers. A reversal in the trend was, however, observed from March onwards when the authorities announced an export quota for oilcake. The firm trend continued until the first half of the year. The main factors, which aided sentiment, were the scarcity of rains in Saurashtra, lowering of the crop estimate to 21.50 lakh tons as against the earlier estimate of 24.50 lakh tons and the abolition of the export duty of Rs 230 per ton on groundnut oilcake. But, towards the year-end, prices sagged due to liquidation following reports of a higher crop of about 24 lakh tons for 1958-59.

In the Castorseed section, the trend, during the major part of the first half of the year, was easy. The demand for Indian castor oil from the USA was practically nil. Later, however, in sympathy with the firm trend in groundnut and following good demand from Communist countries, prices moved up. The abolition of the export duty

Annual Reviews

on all the oils gave a further fillip to the market and prices advanced steadily up to the end of August. Thereafter, due to the imposition of margins, operators turned cautious and prices gradually declined towards the close of the year.

The trend in the Linseed section was mainly influenced by internal consumption early in the year and, later, by the very satisfactory export demand. Thereafter, sentiment was subdued.

Cottonseed prices ruled higher during the year, mainly due to firm advices from Gujarat and the Punjab. With more demand for seeds in the interior for cattle feed and increased purchases by vanaspathi manufacturers, prices rose gradually.

★

Yarn

Restricted Business Due to Import Policy

TRADING conditions in the Bombay Yarn market, during the past year, were largely influenced by the restrictive import policy for Art Silk and Staple-fibre yarns, the system of fair distribution of indigenous rayon yarn and the complete control on the production, supply and price of staple-fibre yarn. The market for Cotton yarns remained depressed throughout the year due to stiff foreign competition.

Starting the year on a quiet note, the market for Art Silk Yarn developed a slightly hardening tendency, thanks to the Government policy not to grant import licences to established importers and the tight supply position. The recovery in prices, however, proved shortlived due to fears of heavy arrivals of yarn against the licences issued to actual users. There was therefore, a slackening in demand from weavers. There were also reports of heavy arrivals of imported yarn, while the tendency on the part of the upcountry consumers was to postpone purchases on expectations of a further fall in prices.

In the case of Staple-Fibre Yarn, the Government announcement of

an export quota of 1.5 million pounds of staple-fibre yarn, at the beginning of the year, pushed up the prices and the consumer demand from important places also helped sustain the recovery. Bills, therefore, rigged up the prices to their advantage and this resulted in the prices reaching dizzy heights. Even the imposition of a margin of Rs 100 per case by the Exchange failed to bring down the prices. The Exchange again fixed up a ceiling of Rs 715 for June and Rs 730 for August contracts. Besides, a penalty of Rs 10 per bale was fixed for non-delivery.

To some extent, the market reacted to these measures. But, the announcement of free exports of staple-fibre yarn within a ceiling of 1.5 million pounds during the six months ending 31st December 1958 on a first-come-first-served basis coupled with the reported cut in power supply in the South caused a sharp upswing in prices. The Exchange again raised the ceiling to Rs 800 per bale and imposed a margin of Rs 50 per bale on the net outstanding purchases or sales exceeding 100 lbs of any trader on any day with a penalty of Rs 10 per bale for non-delivery.

Prices, however, turned easy after some time on reports that the Government would issue licences to the indigenous producers to increase the output of staple-fibre from 40 to 60 tons per day. This resulted in substantial selling pressure from stockists.

The Government decision to export Cotton Yarn freely up to 70s with a ceiling of 60,000 bales, at the beginning of the year, had no effect on the market, because of poor foreign and domestic enquiries. With the growing competition from Pakistan, Japan, Italy and France, the outlook for exports appeared bleak. However, with the improvement noticed in the piecegoods section and some enquiry from overseas buyers, there was some recovery in prices. But, this trend was again halted following the decision of some of the spinning mills to revise downward the prices of yarn and the distress sales made by a few mills to the handlooms caused a setback. Thus, the trend continued bearish till the close of the year.

★

Coffee

Outlook Getting Dimmer

COFFEE is one of the very few commodities, which have suffered from over-production in recent years. World output of coffee, which was 42.2 million bags (of 132.276 lbs each) in 1954-55, rose to 51.9 million bags in 1957-58, representing an increase of 9.7 million bags within a short span of three years. This is not all. The 1958-59 crop, according to the US Department of Agriculture, bids fair to be yet another bumper one, at 58.6 million bags. If this estimate proves correct, the expansion in world output, during 1958-59, will be equal to that in the previous year.

Existing coffee stocks now equal about one year's world consumption. The latest production figures suggest that the position is worsening. Brazilian output in 1957-58 amounted to 24 million bags, an increase of 6 million bags over the previous year. A further addition of 5 million to 29 million bags is expected in 1958-59. Rumours are even circulating that the Brazilian Government intends to lower their minimum price levels for the proper qualities of exportable coffees. If this move materialises, the effect will be to release greater quantities of the cheaper coffees on the market, further reducing the prices after six months of decline.

Against this background of world coffee situation, the outlook for Indian coffee is getting dimmer, particularly in view of the rising output in this country, too. Despite unfavourable weather during November and December, the estimate of the current season's crop of 44.810 tons is expected to be fully maintained. The picking of the next crop (1958-59) has also started in several estates. If the planters' ideas are any guide, the 1958-59 season will see yet another bumper crop of over 50,000 tons—the highest on record.

Two things happened in cultivation to lift production to such a high level. One was the adoption of progressive practices and manuring. The other was the progressive selection of high-yielding strains. Planters, who were considered reckless in their spending on spraying and cultivation and manuring, have become production heroes in the coffee world and some of the estates have chalked up average yields of very nearly one ton per acre. The planters hold the view that, for the next few years, the crop will continue to show similar spectacular increases, as the new plantings of high-yielding strains are getting matured. It will, therefore, be no wonder if the Indian production of coffee reaches the 60,000 tons-mark within the next five years.

No doubt, India possesses a large internal market; but the exportable surplus is, at the same time, growing. The coffee growers have, therefore, to depend on the external markets, which fetch a higher price than the internal market. They have been demanding a re-orientation of the coffee Board's marketing policy in view of the steady increase in production, as the present policy was adopted at a time when crops were low and hardly sufficient for the internal market and when various expedients had to be resorted to in an effort to control prices in the internal market. The present requirement is to export the maximum possible to earn the much-needed foreign exchange.

An emergent point, arising from the fall in world coffee prices, is of considerable importance to growers and consumers alike. For the past ten years, it was generally possible to hold down internal prices well below the world level. It was made possible by the extra earnings from the exports of our surplus. Now, we have ever-in-

creasing surplus with the margin vanishing as a result of the steep fall in world prices. Thus, with an ever-increasing surplus, the chances of Indian coffee establishing a foothold in the export market depends on quality, regularity and supply, competitive prices and good trade connections.

★

Rubber

Growing Demand for Rubber

INDIA is one of the very few countries having a plantation industry co-existing with modern rubber manufacturing industry. Even though the rubber producing industry has been expanding, production has not been able to catch up with

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON[COS] 48[F]158 for supply of 760 sets C. I. Air Stack 2½" dia × 10' ft. in two pieces complete with Cowl and Bend as per item 23A of C.E's Drg. No. 13468 sheet No. 2/1 and as per B.S.S. Specification 416 Medium grade. Tenders will be opened on 28-1-59 at 12 noon. Earnest money is Rs 340/-.

(ii) Tender No. CON[COS]49[P&M]596[HA]58 for supply of 2 Nos. Horizontal type high pressure Dressing Sterilizer as per specification to be obtained in the tender schedule. Tenders will be opened on 30-1-59 at 12 noon. Earnest money is Rs 480/-.

(iii) Tender No. CON[COS]50[P&M]518[B]58 for supply of 2 Nos. pump capacity 11,000 G.P.H. with suitable diesel engine as per specification to be obtained in the tender schedule. Tenders will be opened on 31-1-59 at 12 noon. Earnest money is Rs 480/-.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tender should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES

January 10, 1959

consumption and there has been deficit year after year and, every year, the deficit is being covered by imports of both natural and synthetic rubber. Considering the progress of industrialisation, there is bound to be large deficit in the country as years go by, unless measures are taken to step up production rapidly.

The main problem is, therefore, one of ensuring adequate raw rubber supplies to manufacturers, who have to rely on larger imports. The Dunlop factory in Calcutta is expanding production capacity by 22,800 units per annum. The same company's Madras factory, now under construction, will increase production by 134,000 units. The Firestone factory at Bombay has already gone into production for an additional 252,000 units. These three factories will begin to absorb at least another 8,000 tons from the second quarter of 1959 over and above the normal expansion from the other sections of the expanding industry. Again, consumption of rubber has been steadily moving up. It is also feared that the recent strike in Kerala has further affected the level of production. The process of rehabilitating the estates has also been impeded by procedural delays in regard to the import of high-yield rubber seeds from Malaya.

The gap between production and consumption is expected to widen considerably in the next three years, the estimated consumption requirements for 1961 being placed at 60,000 tons, whereas output may be just 36,000. Such a huge gap has to be filled in by large imports from abroad. But every ton of rubber bought overseas, entails a foreign exchange of about Rs 3000. It is, therefore, clear that larger imports will mean a drain on the foreign exchange which India can ill afford at the present moment.

It may be added here, that India had to step up its imports of rubber last year by 50 per cent i.e. from 6,463 tons to 9,671 tons, as the domestic output did not go up very much. During the current year also, imports have been stepped up further, as the pace of increase in consumption is higher than that in production. If a contingency arises, India will have to import a much larger quantity of raw rubber and that too at a higher price than it paid during the past few months. For, the price of natural rubber abroad has considerably gone up, consequently on the widespread buying of all grades in the Malayan market by the USA, Russia, the UK, China and the Continental countries.

Although the outlook for Indian rubber is rosy in the context of the rising demand for rubber in a developing economy, the increasing costs have told upon the profitability of the industry since the price of rubber, fixed by the Government, is only Rs 155.75 per 100 lbs, which has been in force for some years now. There is urgent need, therefore, for revising this price to enable the industry to stand on its own feet. It is felt that, even after the establishment of the proposed synthetic rubber plant in the

near future, the production of natural rubber products will still fall short of the country's requirements. Planters are emphatic that a re-examination of the industry's cost structure by the Tariff Commission and an increase in the price of rubber cannot be postponed any further. They feel that, unless an economic price for the produce is assured, rubber-growers may not be interested in stepping up production. Such a stagnation in the industry will naturally aggravate the current shortage of the raw material.

Every effort must, therefore, be made to ensure a progressive rise in the production of natural rubber. Prices should be fixed at a reasonable level so as to give an incentive to producers to augment output to do extensive replanting and to establish new plantations with a view to meeting the vast expanding requirements of the rubber manufacturing industry in the country.

It is true that the entire gap between production and consumption cannot be closed by stepping up production of natural rubber. It is also true that the capacity of the Indian raw rubber industry is not large and cannot be expanded overnight. For it takes at least a decade from the date of planting for a rubber tree, to yield latex. Unless an appropriate price policy is followed from now onwards, the situation will become more and more difficult in the years to come.

★

Hides and Skins

Competition in Kips

THE year 1958 opened with a firm market for Hides and Skins in Madras, accompanied by a shortage of stock and high raw hide prices. Buyers in the UK were, however, resisting the upturn in prices, due to the fact that they were unable to get the boot manufacturers to pay higher prices. Moreover, the E. I. Kip market was badly affected by the large quantities of full-chrome leathers available at very competitive prices. A further unsettling factor was the large stock of Kips held by the UK Government, which were being sold at very low prices.

The worst feature of the market was 10/12 lbs average with the exception of fifths. Buyers were generally committing themselves against specific requirements and were in no mood to speculate. The difficult conditions on either side with shortage of supplies, firmness of raw hides, restriction of slaughter in Madras and the dressers in Britain finding it unworkable to accept business at Madras-asking prices, continued well into July.

The position improved in the latter part of July following a strike in the tanneries and frantic covet-er by shippers against their previous commitments. With the result, enquiries from the UK improved in nearly all weights and grades. In medium and heavy weights, the demand was more for market quality. Inferior fifths were in good request with supplies

insufficient to meet demand. In tanned Buff Calf and Cow calf, the demand was more for thirds and fourths. Although the arrivals of Kips improved in September, the demand from the UK slackened and enquiries were mostly confined to lower grades.

The dull conditions continued well in October and attempts by the UK buyers to depress prices proved futile as arrivals in Madras were restricted on account of the monsoonish weather and the local prices being steadily held. Arrivals of Kips continued to be restricted in November and December.

Inferior fifths were again in keen demand from North Indian dealers, who were paying prices higher than the UK limits. Cow Calf and Buff Calf skins, too, ruled firmer. With the result, the UK buyers were compelled to buy their requirements at higher levels. At the close of the year, prices advanced further due to the continued shortage of supplies and fair offtake by shippers. In the export section, too, there were increased enquiries.

★

Labour Relations in Retrospect—1958

M. SUR

THE year 1958 saw no major changes in central labour legislation. The accent, as frequently reiterated by the Central Labour Minister, has been on implementation and consolidation of the existing machinery. Model Rules under the amended Industrial Disputes Act of 1956 have been drawn up by the Centre and by some States also, but on the whole the implementation of the new clauses regarding Notice of Change and Protected Persons has been slow. The Ministry of Labour first set up a cell, and later a tripartite Central Implementation and Evaluation Committee to assess the progress made in the implementation of labour enactments, awards and agreements, and for putting into effect the Code of Discipline in Industry agreed the previous year by the Indian Labour Conference. The States have been asked to establish similar bodies.

There has been a fair amount of State legislation on labour matters, for instance on hours and other conditions in shops and establishments, and Madras State has introduced a Catering Establishment Act. In Madras also an obligation has been imposed on employers of more than 1,000 workers to provide housing for 4% of their employees each year, and at a recent conference of Housing Ministers it was urged that similar compulsion should be applied in other States. In Assam the Tea Plantation Provident Fund scheme has been extended to include clerical and medical staff in gardens of 50 acres or more. In Bombay State the Payment of Wages Act has been applied to shops and establishments in the main cities, and in Madras State a Bill has been intro-

Annual Reviews

duced to provide for 7 paid holidays each year in industrial establishments.

In Kerala a comprehensive Industrial Relations Bill is being drawn up, on the basis of the report of a special State committee, and will make provision for a minimum wage, an annual guaranteed bonus

of 6½% of total annual earnings, and a profit-sharing bonus also. A compulsory gratuity in addition to provident fund is also contemplated.

On the social security side, the Employees' State Insurance scheme has been extended to further industrial areas, and in certain areas in Mysore, Bihar, Punjab, Assam and Orissa medical benefit is being extended to the families of insured persons. Old age pensions for certain destitute persons is an innovation which has been introduced in U.P. The Standing Labour Committee have recently suggested that Government should consider converting provident funds into pension schemes, and that all social security measures (i.e. provident fund and ESI schemes) should be brought under one agency, with a consolidated contribution of about 13% of wages in the case of employers and 10% in the case of employees. The Provident Fund Act is to be applied shortly to the public sector.

Reviewing the work of the industrial courts during 1958, the number of appeals to High Court and the Supreme Court seem as great as ever. Although the trade unions usually blame the employers for taking cases on appeal, roughly

25% of the recent appeals seem to have been preferred by the unions themselves. It is also noticeable that a large number of appeals were set in motion by Government Departments as the employer. Many people agree with Shri V. V. Giri that the present system of compulsory adjudication is a hindrance to the development of sound trade union leadership and to collective bargaining, but few would go as far as he does in demanding the total abolition of the industrial courts. Shri Gulzarilal Nanda, Central Labour Minister, made an offer to suspend adjudication for a given period as an experiment, but the State Labour Ministers' Conference would not hear of it, and at the tripartite Indian Labour Conference the consensus of opinion was that the time was not appropriate for such an experiment. It seems, therefore, that—whatever they may say against the present system—the unions still lean heavily on adjudication. This is at once an admission of weakness on their part and a recognition of the cause of their weakness. Their assessment of the situation is probably correct, for until employers recognise representative unions and are prepared to negotiate with them, they cannot develop into responsible bodies, and as the weaker party they naturally look to the State for support.

One or two outstanding decisions on industrial cases may be briefly commented on here. The Supreme

Court, in its judgment in the Crown Aluminium Co. case, has nailed a further plank in the coffin of the common law conception of master and servant, by declaring that no industry has right to exist if the employer cannot pay at least a basic minimum wage to his employees. And the Bombay High Court has declared that an employer cannot deprive employees of the benefits of past service merely by transferring his business to another. A major award covering the engineering industry in the Calcutta area has introduced a new form of incremental scales, which is a compromise between the unions' demands for automatic increments and the employers' claim that increments should lie in the discretion of the management. Who is a 'workman' under various labour laws continues to agitate the courts, but it has now been declared that professional firms such as solicitors are not an 'industry' according to the Industrial Disputes Act and that an industrial doctor is not a workman (though it is not clear if he might be so considered if he earned less than Rs 500).

Although the number of references to adjudication does not seem to be appreciably less, there are changes in the kind of reference. There are, for instance, fewer references of disputes on bonus, as the principles on which the courts will award bonus have now become fairly well established. Companies and unions alike have in many cases become disgusted with the long delays involved in adjudication, and there is a growing opinion in favour of settlement by negotiation, often through the intervention of the labour adviser or one of the employers' associations. That this has not yet noticeably affected the total number of references may be due to the fact that new cases have been coming up from companies hitherto not affected by industrial disputes.

The pattern of industrial unrest also seems to be changing. Recently the two most serious causes of unrest have been closures or retrenchment, and inter-union rivalry. The problem of closures and retrenchment has been exercising the mind of Government, and the Labour Minister at the last Indian Labour Conference expressed his dismay at the shrinkage in the volume of employment. A Working Group was set up to study closures and recommend measures to be taken, and now a Committee has been formed to review employment data and assess trends with a view to recommending measures to expand employment opportunities. Government has taken powers to run textile mills closed down by private employers in order to keep the workers in employment. In the jute industry a tripartite committee made unanimous recommendations regarding rationalization leading to closure of mills and transfer of loom hours. The Minister threw out the suggestion at the Indian Labour Conference that an unemployment relief fund should be built up with a levy from in-

dustry, but this idea was not taken up at the time. More recently however, the Standing Labour Committee have recommended further consideration of unemployment relief.

Inter-union rivalry, as the Labour Minister put it, has continued to be "the bane of the labour movement", and the "major factor in the disturbed condition of industrial relations in many places." It was clearly the major cause of the disturbances both in Jamshedpur and in the Kerala plantations, and played a considerable part in the docks strike and the Calcutta tramway strike. The Indian Labour Conference in May 1958 agreed that inter-union rivalry was at the bottom of many disputes, but was against the compulsory recognition of representative unions. In pursuance of the Labour Minister's policy of dealing with industrial relations problems by the establishment of tripartite conventions, the Indian Labour Conference drew up two important declarations: Criteria for Recognition of Trade Unions, and Code of Inter-Union Harmony. So far there is little evidence of the effect of these conventions, but it is at least a step in the right direction that the national bodies should agree as to how the problem should be tackled. The Standing Labour Committee is now considering how the parties should discipline the constituent members to observe the agreed codes, including that on discipline in industry.

Increasing unrest in the public sector has also been causing anxiety to Government, and an Inter-Departmental Standing Committee to co-ordinate policy on labour disputes has been set up. In U.P. special Conciliation Board for State undertakings has been formed. The demand for increased pay to meet the increasing cost of living led the Government to set up a further Pay Commission, whose report is expected in May 1959. In the meantime certain concessions have been made in the matter of pensions, leave and medical facilities to bring Class IV Central staff on a par with other classes of Government employees.

It is encouraging to note the increasing number of long-term collective agreements reached by bipartite negotiation. Some cover wide range of conditions of employment and lay down the principle for management-labour co-operation. Others deal with some specific problem, such as bonus. Agreements to set up joint councils for workers' participation in management have also been reached in number of industries, including the public sector, but at the last meeting of the Standing Labour Committee disappointment was expressed at the slow development of workers' participation in management. It is probably too early to express any opinion as to the effectiveness of this latest attempt to bring about joint consultation and co-operation in industry.

EDITORIAL NOTES

Conservative Opposition

Rajaji has again drawn attention to the importance of a 'strong and efficient opposition' for the efficient functioning of a democracy. He has recognized that the Communist party is already there in opposition to the Congress. But most persons would readily agree that the Communist party hardly fills the bill, though not for the same reasons as those advanced by Rajaji. The hope that the PSP would develop into a strong opposition as only led to disappointment and frustration. The non-emergence of a national opposition will bear investigation.

Approaching the problem from a new angle, Rajaji has made out a plausible case that only a party of the Right has any chance of functioning as opposition to the Congress, for the latter has moved so far in the opposite direction as to leave hardly any room for other parties on its left. An opposition, as Rajaji recognizes, cannot be made to order. The success that will attend efforts to form a conservative party of the sort that Rajaji desires will obviously depend on the objective factors of population and distribution of wealth and power. Rajaji pleads for the formation of a Conservative party—"a party that openly and boldly stands for and is guided by the principle of conserving what we have and what is good, before proceeding to change the status

quo." This was just the role that the Congress was expected to play after the attainment of independence and, especially, after the Congress Socialists had felt obliged to leave the fold. And if the massive national organization, with a tradition of seventy years, was obliged to shift its ground, doubt naturally arises whether the territory vacated by it is at all a suitable camping site for new political parties. In this context it is relevant to point out that the election manifesto of even the Jan Sangh had a distinct leftist flavour. The conservative party favoured by Rajaji cannot serve as anything more than a pressure group and pressure groups invariably tend to split on parochial issues.

A political party which desires to function on the national plane must have a platform whose appeal is not limited by sectional or regional considerations. Its programme must be such as will appeal to the politically active section of the population in all parts of the country. With their eyes fixed on the future, the Congress and the leftist parties have been able to draw up programmes which satisfy this condition. But the programme of a conservative party, when one comes to brass tacks, will be inspired by the past and will naturally reflect the obstacles to unity which are the consequences of our chequered history. The attempt to form political parties of the Right, we fear, will only help to reinforce fissiparous forces that threaten national unity.

Dynamic Concept of Law

The rule of law, which through long habit is almost taken for granted, has come under expert scrutiny. The International Congress of Jurists, which opened in Delhi last week, is expected to make the first attempt to draw up a Declaration on the Rule of Law which will offer guidance to some of the major problems of modern Government. The formulation of the Declaration will involve a definition of the concept and the respective roles of the Legislature, the Executive and the Judiciary in maintaining it.

The very fact that a definition has become necessary draws attention to the changes that have taken place in society since concept was embedded in the political thought of democratic peoples. A working paper prepared for the Congress by the former Secretary General of the International Commission of Jurists, points out that acceptance of the spiritual and political freedom of the individual will not meet the requirements of the rule of law in the modern age. Respect for human personality which is the basis of the rule of law requires, in addition, that attention should also be paid to the provision of minimum standards of education and economic security.

The significance of social change and the need for renewal of legal concepts to keep them up-to-date was emphasised by the Prime Mi-

nister in his inaugural address to the conference. Nothing undermines respect for law so much as a system that serves as a bulwark of ancient injustices. But, on the other hand, too rapid a pace of reform can also weaken the basis of the rule of law. The main purpose of the rule of law is to restrain the exercise of arbitrary power, so that the citizen knows what are his rights and duties. It makes little difference whether the power is exercised by the Executive acting under the orders of an absolute monarch or dictator, or in the name of a sovereign legislature. Modern law-making involves a considerable volume of delegated legislation. The extension of the sphere of governmental activity has led to the creation of administrative tribunals. Both increase the scope for arbitrary exercise of power.

A Delegation with a Difference

With so many delegations going abroad on a variety of missions, it is a pleasant surprise to come across a state delegation that has been formed on the assumption that something useful can be learned by visiting other parts of the country. A delegation from Assam led by Capt. Williamson A. Sangma, Minister for Tribal Areas, Transport and Publicity, and including a batch of Assamese cultivators, are currently in South India, visiting research stations and farms in the area, and collecting information on cash crops. The delegation is interested in the techniques of growing cash crops like coffee, pepper, cashewnut etc. as well as in the industrial and commercial use of tapioca. The delegation's itinerary in Coimbatore included a visit to a local Sago factory. The delegation has visited the coffee and cardamom growing areas in Mysore as well as the research station of the Coffee Board. In Kerala they visited the Pepper Research station at Tali-paramba and the Tapioca station at Trivandrum. The party also saw fruit research stations, potato cultivation and soil conservation work in the Nilgiris. Such delegations from one part of the country to another can be of great value in disseminating techniques and information especially in the field of agriculture. There is little mobility in agricultural labour so that useful processes and techniques of cultivation developed in one part of the country remain almost unknown even in neighbouring States. Climatic differences and soil conditions impose an obvious limit to interchange of crops and cultivation methods. In this field research can be of help in indicating scope and limitations.

Supply of Steel

Addressing a press conference in Madras, Sardar Swaran Singh, Union Minister for Steel, Mines, and Fuel,

declared that from the point of view of supply, the position of steel in 1959 is likely to be better. The Minister's optimism is based on what is claimed to be the satisfactory pace of progress in the erection of blast furnaces at Bhilai, Rourekela, etc. The two blast furnaces in these steel centres are expected to start production of pig iron in 1959, both plants being expected to be ready for test production by the end of January.

Production of pig iron would further be augmented when the first blast furnace at Durgapur becomes ready, as is now expected, before 1959. With the addition to pig iron production that could now be expected from all these sources, the supply position with regard to steel to Indian industries should be less a matter of concern than it was last year. On the contrary, the Government seem to be thinking in terms of exports of pig iron and with this object have invited foreign quotations. This is a measure of the improvement in the supply position that would follow the inauguration of the production programmes for pig iron at the steel townships.

Though the prospect of easier supply position for steel should be a matter for gratification, one cannot at the same time, get over the feeling of uncertainty about the scheduled implementation of the steel projects. It has in this place to be pointed out that the commissioning of the first blast furnace at Bhilai, and Rourekela had been long awaited and their completion after the lapse of so much of delay naturally gives cause for doubts about the further progress of these steel projects. However, with respect to the Bhilai steel plant, the Union Minister has cleared doubts about anticipated difficulties with regard to technical personnel and other matters. This naturally should augur well for the timely implementation of the project.

S. E. RLY. TENDERS

Sealed tenders are invited for Tender No. CON/COS/1/178-HE(b)/58-59 for supply of 4 Nos. Generating Plant Petrol or Diesel driven, 10 KVA, 230 Volts, single Phase A. C. 50 cycle and 16 V at 20 amp. D.C. as per specification to be obtained in the tender schedule. Tenders will be opened on 27-1-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing earnest money of Rs. 500/- from this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance certificate with the tender.

Firms not on the Rly's list of approved contractors must enclose a valid income tax clearance certificate along with the earnest money deposit receipt with the tender.

GENERAL MANAGER
S157

The Minister also disclosed the Government's decision to send a team to China to study the production of pig iron and steel in that country. The decentralised basis on which the flourishing Chinese steel industry is organised and the tremendous success that had attended the Chinese Government's efforts at increasing steel production has naturally attracted world-wide attention. Whether the Chinese method would lend itself to adoption in this country would depend on a variety of factors, technical as well as others such as the extent of raw material dispersal. Sardar Swaran Singh has in this connection pointed to one difference between India and China. Against the concentration of such raw material sources in this country, in China, the coal and iron ore deposits are dispersed, besides being found in close proximity to each other.

★

Small Savings

The inauguration of the National Savings Cumulative Time Deposit Scheme all over the country, marks

an important step in the drive to intensify small savings. The new scheme is mainly intended for the needs of small investors, who would be enabled to save in small sums instead of lump sums for investment.

The scheme consists of two types of accounts—five year and ten year, and permits a maximum monthly deposit of Rs 100 for ten year period or Rs 200 per month for five year period. The total deposit that could thus be accumulated at the end of the period could not exceed Rs 12,000. Deposits are of various denominations ranging from Rs 5 with a maximum of Rs 200 per month. The income-tax free interest on the deposit works out to 3.3 per cent on the five year account and 3.8 per cent on the ten year account.

Inaugurating the scheme in Madras, Mr R. Venketaraman Minister for Industries and Labour, pointed to the need for increased savings from the middle-income people to sustain the development plans in various spheres. The fact that there has in recent years been a considerable dispersal of incomes among the middle class people, brought about by various de-

velopment schemes undertaken by the Government, points to great scope for tapping the savings potential of these classes of people. On the other hand, the traditional sources of capital for industries have been dried up with the introduction of newfangled tax measures. Scope for increasing internal resources for financing the Plan therefore lies in stepping up the small-savings collections from the rural as well as the urban middle income classes.

In the present estimates of resources for the Plan outlay of Rs 4,500 crores there is an uncovered gap of Rs 280 crores. Means have therefore have to be found to acquire additional internal resources for maintaining the total financial outlay on the Second Plan at Rs 4,500 crores. With taxation having already reached the point of diminishing returns, attention would have to be directed towards stepping up collections from small savings which in the past have failed mainly for lack of proper devices which would appeal to the small investors. The new scheme therefore fills up a vital gap in the small savings machinery

Covering every phase of operation from the winning of ore to the rolling of finished steel, the expansion will be virtually completed by the end of 1958. The capital investment on expansion and annual replacements by Tata Steel over the five years 1955-60 is estimated at Rs. 1,330 million—more than one-fifth of the total outlay by organised industries in the private sector.

TATA STEEL

ON TO TWO MILLION TONS

THE COMMISSIONING OF THE NEW Rs. 70-million Blast Furnace in Jamshedpur in October marks the beginning of the end of the expansion programme started in December 1955 to double Tata Steel's capacity to two million tons a year.

One of the largest in the world, the new Blast Furnace will produce 1,650 tons of molten iron per day. Completed earlier was the third Steel Melting Shop with its seven open hearth furnaces, which alone will produce 1.3 million tons of steel ingots a year. Also in operation now is the new Rs. 100-million Blooming Mill with a primary rolling capacity of two million tons.

January 10, 1959

Interest Rates Still Maintained

THE annual review of the money market has had to be held over to the next week due to limitations of space, but a few general remarks on the state of the money market as the new year has begun will be in order. Press releases relating to banking profits in 1958 appear to be delayed. Indeed, the only results to hand are those of the Devkaran Nanjee Banking Company Limited, whose expeditious publication of results for 1958 can be attributed to the fact that, with a smart rise of nearly Rs 7 crores, its total Deposits have passed the Rs 25 crore mark, to be placed at Rs 30 crores. But the profit experienced, as was to be expected, is somewhat disappointing. However, none of the appropriations has been adversely affected, since the provision for taxation could be reduced to Rs 5 lakhs from Rs 8 lakhs. The dividend has been maintained at 6 per cent, the transfer to Reserve Fund is half a lakh higher at Rs 6 lakhs, the carry forward is placed at Rs 3.02 lakhs against Rs 2.80 lakhs brought in, and bonus to staff absorbs Rs 1.80 lakhs against Rs 1.60 lakhs. Thus, in Dena Bank's case, the reduction in profit has been offset by a lower tax provision.

It is, we suggest, because of the delay in the release of the accounts that interest rates continue to be firm. The break in interest rates that we had anticipated has not so far materialised, because the warning constituted by poor bank results for 1958 is yet, as it were, to be made public. While, therefore, a downward adjustment in interest rates has been delayed, we may expect such decline to take place in the course of the next few weeks.

The returns of the Reserve Bank for January 2 reflect the demand generated by month early disbursements, with Active Note circulation rising by Rs 12.57 crores to Rs 1602.00 crores. There has also been an outflow of Rupee Coin for Rs 0.74 crores. Currency has been expanded against Rupee Securities by transfer from the Banking Department, and, in the result, the Reserve Bank's cash in the till is lower by Rs 3.31 crores at Rs 11.08 crores. The Central Government's balances are lower by Rs 2.89 crores at Rs 52.99 crores. On the other hand, balances of State Governments showed an improvement of Rs 1.30 crores, but, then, their borrowings from the Reserve Bank are also higher by Rs 1.28 crores. Reserve Balances of member banks have, in order

that the banking system might be enabled to meet the demand for month early disbursements, been drawn down by Rs 4.36 crores to Rs 76.56 crores. Side by side, there has been a sharp increase of over Rs 12 crores to Rs 77.43 crores in the Other Loans and Advances of the Reserve Bank. Balances Held Abroad show a rise for the fifth week in succession in being marked up by Rs 0.35 crores at Rs 24.52 crores. Finally, by dint of transfer to Issue Department, Investments are lower by Rs 11.36 crores at Rs 265.67 crores.

The return of the State Bank for January 2 indicates the demand of month early disbursements and the busy season pressure being experienced by banks. In spite of an improvement of Rs 4.46 crores to Rs 476.84 crores in Deposits, the State Bank has been compelled to increase its borrowings from Rs 0.64 crores to Rs 2.85 crores. This is partly because of a decline of nearly Rs 11 crores to Rs 4.54 crores in Other Liabilities, a head under which the accrued profit of the State Bank might have figured. In any case, with a rise of nearly Rs 4 crores in Advances to Rs 174.23 crores, and even with disinvestment in gilt-edged for Rs 1.56 crores, notwithstanding the increase in borrowings, the State Bank's cash in hand and with the Reserve Bank is lower by Rs 4.41 crores at Rs 30.85 crores. This suggests that the drawing down in the Reserve Balances of member banks, as shown in the Reserve Bank statement, is to be attributed to the State Bank.

In the return of the Scheduled Banks for December 26, there is evidence of the onward march of the busy season with a rise of Rs 5.73 crores to Rs 865.78 crores in the total of Advances. Investments have dropped by Rs 5.22 crores to Rs 637.57 crores; this is at least partly due to the fact that, during the week, no Treasury Bill auctions were held, and the maturing bills stood cancelled. Deposits are more or less unchanged at Rs 1628 crores, but there has been a switch back of fairly large dimensions from Time Liabilities to Demand Liabilities. In the result, cash balances have improved by Rs 8.37 crores to Rs 175.54 crores.

+

Monetary Changes By Paul Einzig

The first reaction to the important monetary changes announced during the Christmas weekend was unfavourable to sterling. Before very long, however, second thoughts prevailed on the foreign exchange market. Sterling recovered from its initial weakness and remained steady during the first week of its new status. Indeed, quite unexpectedly security sterling rose above parity for the first time in its existence. This type of sterling is not affected by the convertibility decision because the proceeds of foreign investments remain technically inconvertible. Since however, it is now possible

to sell these proceeds at a shade above par and only a shade under the market rate for sterling, for all practical purposes security sterling is also convertible.

December 29, 1958 was a red letter day for the London foreign exchange market. Convertibility made arbitrage much easier and even though it is premature to judge by the experience gained since the change, it is reasonable to expect that the result will be a permanent increase in the turnover of the London foreign exchange market. There are already indications that London's influence in determining international exchange rates has increased to the detriment of New York, Zurich, Frankfurt, Amsterdam and other centres.

In London banking circles it is widely assumed that the change in the status of sterling will attract an increased volume of deposits from abroad, Continental and other overseas banks and business firms may now hold sterling as an alternative to holding dollars on the safe assumption that they can switch into dollars at a moment's notice.

As for the effect of the franc devaluation it would be premature to form a very definite opinion. There were some repatriations of French funds not only from New York but also from London where French holders sold South Africa gold mining shares. But most French holders of funds abroad prefer to sit on the fence and await the effect of the devaluation on the industrial situation.

There is an outcry against the effect of the devaluation on the cost of living and against the removal of food subsidies. On the other hand, the Government has also adopted measures against the middle classes and the wealthier

classes so that the industrial workers have no genuine grievance. In France, as in Britain and the United States, they have been thoroughly pampered and spoiled during the post-war period. They consider it to be their privilege to be exempted from any sacrifice however necessary in the national interest. It remains to be seen whether under the pressure of public opinion, which is behind General de Gaulle, the French trade unions will adopt a reasonable attitude. If not, a series of strikes and enforced wage demands might nullify the beneficial effects of the changes and might weaken the prospects of the franc.

As far as sterling is concerned the effect of convertibility is likely to be delayed by uncertainty of election prospects. It is true, the leader of the Opposition, Mr Gait-skell while criticising the return to convertibility, disclaimed any intention to reverse the change if a Labour Government should assume office. This undertaking is however, in conflict with the frequently repeated declaration of Socialist intention to strengthen exchange restrictions.

Many quarters view with misgivings the prospects of an inflow of foreign balances as a result of convertibility. It is realised that the strength of sterling resulting from such influx of "hot money" is liable to become reversed and is therefore an additional source of potential weakness. While the influx continues it will obviate the necessity for resisting inflation because the demand for sterling resulting from the influx will tend to offset the adverse effect of inflation on the balance of payments. Taking the long view, it is therefore probable that Britain stands to lose rather than gain through such influx of funds.

Britain

The prospects for the United Kingdom economy in 1959 are soundly based on the achievements of the previous year. Externally, the strength of sterling has been restored, the reserves have risen every month since October, 1957, and the balance-of-payments surplus on current account during the first half of 1958 was larger than in any full year since the war. At home, inflation has been checked, and there are good prospects for continuing price stability in the months ahead.

Admittedly, there was a temporary pause in the expansion of the British economy, because of the strong measures taken in September 1957

to restore foreign confidence in sterling and halt domestic inflation and to the recession in world trade, which for a time curbed the demand for United Kingdom exports. But investment has further increased in 1958, and since March the Government has been able gradually to relax the restrictions imposed earlier, thereby creating the conditions for a renewed expansion of demand and production.

NEED FOR PRICE STABILITY.

If renewed expansion is to proceed on a firm basis, price stability must be maintained. It augurs well that wage increases were limited to 3 to 4 per cent this year. As the general public is now more aware of the inflationary effects of excessive rises in costs (of which wages, of course, form an important part), there is good reason to hope that future wage increases will correspond more closely to the rise in productivity than did the wage settlements of earlier years.

During 1958, investment, the basis of economic progress, has continued to rise. Changes in consumption were of little significance in the first

three quarters of the year before the removal of the restrictions on hire-purchase, but exports showed a moderate decline up to September. The decline in exports was reflected in a fall in total industrial production, which led to some increase in unemployment. This now stands at 2.4 per cent of the working population—and the Government estimates that with the adverse seasonal trend it may rise to 2.8 per cent before the improvement begins in the spring.

RELAXATION.

Thus 1958 has been a year of adjustments for the United Kingdom economy rather than one of "recession". In these circumstances, the Government rightly decided that there was no need for dramatic action to provide a stimulus for renewed expansion since such action might have led to a revival of inflation and endangered the regained strength of sterling.

Throughout the year, the Government followed (as the Chancellor of Exchequer called it) a policy of "cautious reflation"—relaxing restraints step by step. These relaxations have been designed to stimulate investment, consumption, and exports.

With what results? The Bank Rate has been brought down from 7 per cent to 4 per cent. Investment allocations have been increased. The banks have regained freedom of their activities through the abolition of the restrictions on advances, and the control of capital issues has been eased.

The banks have shown a spirit of enterprise not expected by some people since the end of the "squeeze", especially by introducing new facilities to small borrowers (personal loans, to be repaid in fixed instalments) and by forming close connections with hire-purchase companies. Hire-purchase controls have been completely removed.

As I mentioned earlier, investment has continued to rise—a sure sign of the confidence prevailing in British business community. After the last expansion of investment during the "boom" of 1954-57 a decline in private investment would not have been surprising, and public programmes were kept down to the level of the previous year as part of the anti-inflationary measures of September 1957. In fact, total fixed investment rose by 3 per cent in the first half of the year.

There was a slight fall in the investment of manufacturing industry alone, mainly because the motor industry had completed its large expansion programmes. These programmes have been a complete success, as the record output and record exports of cars in recent months amply demonstrate.

Although at present no clear indications of the investment programmes of private industry for 1959 are available, there is no doubt that investment as a whole will be kept up since public investment is now being increased again. (The crease will be £125,000,000, £150,000,000 from a level of £1,100 million in 1957-58).

INDUSTRY FULLY COMPETITIVE

In spite of the recession in world trade and the continuing low level of commodity prices, which reduce the buying power of its customers among the underdeveloped countries inside and outside the Commonwealth, the United Kingdom maintained its share in the world trade of manufactured goods. The continued rise of its exports, especially of cars, to the United States proves that British industry is fully competitive in the markets of the world.

The new special loans to Commonwealth countries, announced at the Montreal conference, will provide stimulus to exports to the underdeveloped countries of the Commonwealth. The measures to encourage credit and increase international lending (through the increase of quotas of the International Monetary Fund and the World Bank) agreed upon at the New Delhi conference will promote international trade on an even wider scale.

Thus fortified by the knowledge that the Government places strength of sterling first in its economic policies, British industry confidently looks forward to renewed expansion without inflation—in 1959.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

FOR some reason, the 64th annual session of the Indian National Congress now taking place at Nagpur is sought to be invested by some with a climacteric significance. This is being done as much by some Congressmen as by those opposed to the policies of Congress. It is said that Abhyankar will go down in history as an even more significant turning point than Avadi. While Avadi merely avowed Socialism, Abhyankar will put teeth into it. Colour is being lent to this reading by certain recent controversial exchanges between the public and private sectors. The somewhat frenzied effort to catch up with land reforms by fixing deadlines for fixation of ceilings and so forth has also revived fresh hopes and fears.

To my mind, these attempts at dramatics are a measure of the failure to grasp firmly the roots of present discontents. The Congress Party has been acutely uncomfortable at the pervasive air of frustration in the country. Instead of setting about analysing its causes, some Congressmen try to break through the emotional impasse by dramatising the present situation as the approach of an ideological climax. There is wide-spread cynicism about the Congressmen's public spirit: nothing that he does seems to make any difference to the rather casual (often unverified) assumption of the man in the street that the Congressman has his eye on the main chance. Meantime, standing on the side lines, the communists are queering the pitch. With a lot of distress around, they find the wherewithal to feed their political fortune. In such a predicament, to many Congressmen it seems a logical thing to profess a more strident socialism and a more uncompromising commitment to ideological solutions. They feel, instead, that they should, if they are at all to cut any ice with the public, steal the communists' thunder.

It seems to me that Congressmen who fall for this way out are being short-sighted. It would be far more sensible to analyse the various strands of present frustration and then attempt to deal with them. In the first place, it is important to realise that not all of the current frustration has a basis in any genuine sense of deprivation or hurt. Some of it at least is just reaction against an earlier exhilaration. It is not unlike the so-called "seven-year itch" that is supposed to embarrass a happily married man. After several years of unclouded felicity, he gets restless. He is still deeply loyal to his wife, but the first fine careless rapture is gone for ever. Secondly, there is the fact that the nation is trying to readjust itself to a whole

series of transvaluation of values. Try to "comprehend" the profound changes in social and communal attitudes that have taken place in the last ten years; you would be amazed at the resilience and adaptability that our people have shown. Everywhere around you, you find the debris of the old and the new structures are only half-finished. No wonder that the whole place is very untidy. But that does not mean that the outlook is bleak. Again, it is important to realise that our present discontents are the sum of often contradictory grouses that ought in theory to cancel each other out, but which, paradoxically, add to the shrillness of the protest. The urban middle class, for example, is vociferous in its indignation at soaring prices. And when, in an effort to keep them in check, some form of regulation of wholesale trade is attempted, there is a hue and cry from another class. The private sector, so called, is loud in its complaints and yet there are others who think that this class is especially pampered. The agriculturist, for instance, is annoyed that Government should want to fix a ceiling to agricultural holdings without apparently wanting to fix a similar ceiling to urban wealth. Since disenchantment is not palpable and opposite grouses are not

capable of being confronted with each other and eliminated, the general atmosphere is depressing.

In a situation like this, the first requisite of a mature attitude is not to be too susceptible to the vagaries of public feeling. Personally, I have always found that public enthusiasm is fickle, and not often a suspect. Whenever I read of popular enthusiasm in totalitarian countries, I am slightly sceptical both of its performance and its spontaneity. In all democracies, it is the public's privilege to grouse and it does it with spirit. "That blunt monster with uncounted head", as Shakespeare once bitterly complained, is an unpredictable and ungrateful creature. While it is necessary to work up public enthusiasm for desirable social aims, he would be a poor public servant who gets too easily daunted by lack of public enthusiasm or is too easily intimidated by public opposition. This does not mean that we can carry through any programme of amelioration without cooperation from the people, but to expect everything to be smooth-sailing is Utopian.

Having developed a certain detachment about the reaction of the public, it is necessary to pursue

a policy that is well considered and designed to promote the general welfare of the public. This way, you have the approbation of your own good sense and eventually of the public. Indeed, that is what the Congress, acting through the various Governments in the country, is, by and large, doing.

At the moment of writing, I do not have the address of the Congress President and, therefore, am unable to indicate precisely whether kite flying references to a change in Congress policy have a basis in fact. But, if deductions of a more overt commitment to doctrinaire socialism are being made from the resolutions of the Working Committee, I must say that they are fallacious. In my view, it is entirely gratuitous to assume any abandonment of gradualism or any snapping of continuity with previous policy by the Congress. Those who argue that the Congress is abandoning its previous empirical approach and is getting more rigid in its approach to socialism cannot have read the resolutions in their entirety. I discussed these resolutions in their draft form some weeks ago and showed that there was nothing in them which would make them in their broad outlines unacceptable. The one clause in it which caused a flutter was that relating to "control of profit", which was rendered by many as a "ceiling on profit". This, as I said on the last occasion, was a gloss that was wholly unwarranted. Indeed, in a different context, Mr Nehru ruled out a ceiling on urban income for the time being. And in the context in which it occurred in the resolution, it was clear that it was linked

When Dunlop first opened an office in Bombay at the end of 1898, there was no fanfare, no handouts, no headlines.

Just about 10 years earlier, John Boyd Dunlop, a veterinary surgeon, had invented the first practicable pneumatic tyre. With the opening of the Dunlop office in Bombay the pneumatic tyre had come to India.

The old century was about to say its quiet farewell. Tagore had not yet started work on "Gitanjali" and Jamssetji Tata was yet to launch his epic search for iron ore. There was nothing, then, of the furious bustle that marks our days.

Soon, very soon, all these were to change as India was caught up in the swift currents of 20th-century history.

Dunlop has moved with the times and in 60 years it has become a familiar and intimate name throughout the country. The Dunlop factory at Sahaganj has grown to become Asia's largest rubber manufacturing enterprise, and this sixtieth year of Dunlop in India is marked by the setting up of a new tyre factory at Ambattur.

with wages and salaries being dependent on work done and on production. Indeed, control of profit in the private sector was added almost as an after-thought. Reading it in the way it was drafted, it seemed nothing but a version of "Butskellism". Playing off "wage restraint" against "curb on dividends and capital gains" is by now a hoary item in any Finance Minister's bag of tactical tricks.

Another clause that is supposed to have brought nearer the day of doctrinaire socialism is a recent addition made to the draft. The last paragraph of its resolution, as adopted by the Working Committee in Nagpur the other day, says: "The creation of a democratic and socialist state should be clearly and unambiguously placed before the nation as the objective of planning and all the implications of socialism in terms of individual and co-operative effort it requires should be explained to the people". The change is supposed to consist in the

fact that the objective of socialist pattern of society has yielded place to the objective of "socialist society". It passes one's comprehension how a society can be of a socialistic pattern without being socialist in its essentials. Nor is it very clear what calamitous potentiality is smuggled in by the dropping of the word "pattern". And if one is going to treat the whole thing as a matter turning on words, surely, the references to the "democratic and socialist society" as also the "individual and cooperative implications" referred to in the resolution deserve as much attention as the dropping of the word "pattern". To infer from the addition of this sentence a basic departure in policy is rather naive.

The truth seems to be that a series of recent events have given rise among non-Congress circles to renewed speculation about the possible changes in Congress policy. In my view, the coming together of these circumstances is entirely fortuitous. Take, for instance, the sud-

den spurt of interest in some of the more controversial measures relating to land reform. Now, urgency was lent to these measures because of the comparative failure on the food front of the Second Plan. One of the main reasons for the wobble that the Second Plan developed was this failure. It was, therefore, inevitable that the party should have been exercised deeply over it. And in the context of formulating its basic ideas for the Third Plan, it should have wanted to bestow particular attention on this question. There were a number of reasons why the target of food production was not reached. These include failure of monsoon, non-utilisation of resources and facilities and so on. It may be arguable whether fixation of ceiling on holdings is the best method of increasing production. But what is not arguable is that this quarrel is not something new. The Congress has been committed to it for a long time and, what is more important, the Planning Commission of the various State Governments have

been committed to it too. This was the position not only when the objective was a socialistic pattern of society, but even before. But, because a section of the people (and Congressmen) has suddenly realised that there are objections to the idea of a ceiling (including the objection that it involves a certain amount of iniquity vis-a-vis other kinds of wealth), it does not mean that the Congress is suddenly speaking with a new voice. I can understand arguments, on pragmatic grounds, against the idea of ceiling and a dead line for its implementation. Doubtless, as a recent convention of agriculturists in Bangalore argued, there is a case for the creation of land party and for fighting the very idea of ceiling. But that would be pitting idea against idea and not quarrelling about labels.

Likewise, the quarrel about the squeezing of the private sector out of existence has been given a fresh lease of life by the decision of Government over licensing wholesale trade in foodgrains. This was an expedient that has been resorted to, rightly or wrongly, because of soaring prices in foodgrains. This as Mr Nehru tartly remarked some time ago, is a step that had nothing to do with socialism. Any Government with an elementary sense of its obligations to the public would have taken it. Here again there is room for argument about the inevitability of such a policy but what is not worth arguing whether it is a socialistic act or whether its adoption signifies more strident socialism.

The truth is that there is very little in the statement of policy of the Working Committee that either new or objectionable. In sense, it is easy to draw our pla since the alternatives available us are so few. The basic facts of our economy even today are an increasing population at a very low level of subsistence. For political and moral reasons, it is unthinkable that this state of affairs should be allowed to continue. As it is such increase in prosperity as have been able to wrest out of the economy, is neutralised by an ever increasing population. As the Queen told Alice, it takes all the running we can do to stay in the same place. If we want to go somewhere else, we must run at least twice as fast. This is the grim logic behind the need for increasing the rate of investment. It is also undeniable that a greater proportion of the investment must have to be in the public sector. Various modes of finding the necessary resources mentioned in the Working Committee's resolution, such as any one, whatever his political or ideological affiliation, would have been obliged to list. If these compulsions add up to the pursuit of a policy that can properly be described only as "socialist", I for one have no objection to its being called so.

EAVESDROPPER

GATEWAY GOSSIP

INAUGURATING the Bombay State businessmen's Convention, Mr Y. B. Chavan, has noted that in a growing economy there is scope for both public and private sectors to expand simultaneously. This view of the role of the two sectors, however, does not seem to tally with what the Prime Minister has to say on the matter a few days later in his monthly press conference. From Mr Nehru's declaration it is clear that he does not think in terms of "an interpenetration of the public and private sectors" but treats them as two separate and mutually opposing sectors. Elaborating his point he has averred that the Government's policy of a socialist pattern of society has necessitated priority being given to the public sector and goes on to add that "private enterprise may come in the way and does come in the way of the functioning of the democratic apparatus". In other words private enterprise is just being tolerated because it is useful for the time being. As matters stand at present there is a large field left to the private sector and it is the policy of Government not to impede it but to encourage it to function in its own field.

It is rather surprising that such an assessment of the private sector has come from the Prime Minister himself. For, his view is bound to be reflected in Government's attitude toward private enterprise. Moreover, this is not in conformity with the spirit of the Industrial Policy Resolution. The question also arises whether Government will be able to take up all the tasks that are now entrusted to the private sector. Even with the great fillip given to the public sector in the past one decade, a major part of the national activities is still being carried on by private enterprise and it is yet to be proved that it is not doing the job entrusted to it efficiently and economically. There are, however, indications in the statements of the Prime Minister to show that his remarks about private enterprise at the press conference refer largely to those who attempt to belittle the importance of the public sector or try to propagate the view that only private enterprise can deliver the goods.

But, private enterprise complains that in actual practice, it has found that Government's policies are far from helpful in enabling it to work smoothly and to shoulder the responsibilities given to it. In the first place the continuous addition to taxation has rendered it impossible for private enterprise to obtain enough resources even to carry on its day to day working let alone its expansion programme. Furthermore the numerous controls and regulations that have been imposed in the past few years have reduced the freedom of action of private enterprise. That the effects of the

Private Sector and Democracy

restrictive measures have been detrimental to the growth of the private enterprise has been brought prominently to the attention of the people in the shape of slowing down of the tempo of industrial activity in the country in recent months.

If, therefore, Government are sincere in their contention that private enterprise should play a big role in the economic development of the country, they should take immediate steps to remove the impediments that are in its way now. It cannot be said that if Government have deemed it necessary to place the emphasis on the growth of the public sector it is because they have found that private enterprise has not been able to discharge its responsibilities in the past. It is common knowledge that it is private enterprise that has been responsible for the establishment of most of our major industries. And more recently during the First Five Year Plan its record has been quite impressive. Though the two Five Year Plans gave special attention to the public sector, the private sector has demonstrated without a shadow of doubt that it is capable of undertaking big tasks. As a matter of fact during the First Plan private enterprise has bettered the performance of the public sector.

It would appear that the difficulty in recognising the proper role of private enterprise has stemmed from some preconceived notions. One such notion is that the motive force for private enterprise is profit and that such a body of people have no place in a socialistic pattern of society. Therefore, it is necessary for businessmen to bring home to the people at large that the nation has accepted the concept of "mixed economy" which means the existence of the public and private sectors side by side. But the importance of the private sector arises from its admittedly vital role and that is that, unless it is fostered and enabled to work efficiently the planned development as envisaged in the Five Year Plans will not be possible.

The main line of education of the public about private enterprise should be to emphasise that private enterprise of the right type is by no means contradictory to the concept of a socialistic pattern of society. The public must be told that private enterprise is in fact the people's own sector where large numbers of people join together to utilise their savings and talents to the good of the community at large. But it must be noted that due to the irresponsible behaviour of a few amongst this section, private enterprise as a whole has come to be regarded with distrust. So it is the primary responsibility of each and every businessman in the country to keep the affairs of the concern under his

control above suspicion. He has responsibilities not only to the people who have put their money in his venture but also to the consumer of his products and the State. By carefully husbanding the concern's resources he can win the confidence of the shareholders. He must take steps to convince the consumer that the products he gives him are of good quality and are fairly priced. He can demonstrate his patriotism by honestly paying all the taxes due to the State. Of course he has every right to criticise the Government but such criticism must be constructive. A businessman who satisfies these conditions cannot but win the support of the public and Government.

On their part Government should realise that if private enterprise is complaining about hardships it is not because it is worried about its profits only but largely because its difficulties are genuine. Enlightened Private Enterprise wants to play its part efficiently in the patriotic endeavour to build a prosperous India. It wants the fullest scope within the framework designed for it under the national policies to work without let or hindrance so that the nation can progress rapidly towards its goal.

Government should take careful note of the fact that many able businessmen whose honesty and

patriotism are unquestionable sincerely believe that the restrictive policies toward private enterprise are detrimental to the very interests that Government so loudly proclaim that they are wedded to. By lessening the tax burden and going back on some of the restrictions Government can restore the confidence of the investor in the private sector and capital formation which is now at such a low level will be brought to the pace to which it should be. The force of this argument is bound to appeal to Government sooner or later. But in the meantime private enterprise has to show by practice that it has nothing to hide and that it is in tune with the changed situation in the country.

It is, therefore, gratifying to note that Mr G. P. Kapadia, President, General Committee of the Businessmen's Convention has made it clear that the business community has taken firm note of the fact that the nation has set before it the objective of a socialist pattern of society. But it must be remembered by the powers that be in the country that it has also been declared in unambiguous terms that the goal is to be attained through "an efficient and proper functioning of a mixed economy in which both the public and the private sectors would be complementary parts".

STEEL AND YOU

Day and night you are using steel. Steel builds your houses, roads and bridges, spins your thread and weaves your garments. Steel tames the raging rivers to bring water to your fields, power to industry and light to your homes. Steel carries you and even your words across vast distances. But India needs more of these modern amenities—her per capita consumption of steel is amongst the lowest in the world.

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

DELHI REVIEW

THOUGH domestic issues dominated Mr Nehru's Press Conference on Saturday last, the question that elicited a lot of interest was the one that tried to draw Mr Nehru out about certain animadversions in communist journals abroad about his views on Socialism. Mr Nehru himself did not seem to attach much importance to these criticisms, but it cannot be denied that observers in India have been concerned to note a certain amount of peevishness in Soviet and communist comment, especially in ideological contexts on India. Of course, as practising democrats, it would be odd if we were, in turn, peeved at criticism of our attitude by any one. But one's relation to the Soviet Union and the communist world is so peculiar that even supposedly academic discussion in a journal assumes political significance. It was not unnoticed by observers here that the most important of these articles was written by Mr Yudin, the Soviet Ambassador in Peking. A variety of tangled motives operate, or are assumed to operate in the communist world's attitude to the neutral world and especially India. There is the cold war, which makes it necessary to be friendly to neutrals. As against this, there is supposed rivalry between India and China. Since everyone in the West has

Communist Criticism of Mr Nehru

endowed this competition with ideological interest, it is not unlikely that communists with Chinese background would be more inclined to fall foul of the Indian brand of socialism than those who are not identified with a direct and immediate comparison. Secondly, it is now no secret that communist orthodoxy has now firmly entrenched itself in Peking and in some respects the Chinese consider the Russians as too dangerously liberal in their attitude. Indeed, it is the general view that Mr Khrushchev is manfully trying to soften the rigours of ideology and is impeded in this endeavour by Chinese inflexibility. It was even rumoured that Mao wanted Molotov and others rehabilitated. It was also said that Mao has become alarmed at the ideological casualness of Mr Khrushchev. Mao's enthusiasm for a hundred flowers blooming simultaneously in the communist garden was short-lived. Even if one discounts the theory that it was cynically designed for making the liberals put their necks out, it is clear that Mao was frightened of the implications of his own sudden enthusiasm. It would seem that this perplexing alternation between liberalism and ideological rigidity is due to the uneasy adjustments between the rival groups in the Soviet Union as also in the

whole of the communist world. These adjustments were not only ideological but also personal and national. For instance, until Stalin died, there never was any question about who was the big brother in the communist family. Once Stalin died, the very stresses of power politics inter se among the Soviet leaders led to their letting up their automatic seniority in the communist family. And Mao's prestige, built up with only less assiduity than that of Stalin, was far higher than that of the second line of leadership in the Soviet Union itself. Indeed, in the interest of Stalin's own aura, lesser leaders in the Soviet Union must have been kept in the background. Therefore, one of the reasons for the zig zag of communist policy since Stalin's death is the uncertainty about who was the elder brother. Seeming contradictions both in Chinese and Russian attitudes may stem from natural attitudes alternating with those that are adopted as a concession to the opposite point of view. For instance, the Soviet attitude to Yugoslavia has had a chequered career. And it is no secret that, left to himself, Mr Khrushchev would be more friendly to Marshal Tito and it is only the Chinese that are forcing him to get tough with Marshal Tito. Similarly, the pressure of Chinese communists is held by many competent observers to be responsible for the Soviet Union deciding to deal firmly with the Hungarian rising after being conciliatory in Poland.

It is only the unquestioned technological supremacy that has made it possible for Mr Khrushchev to keep the Chinese in their place. It is evident that communist orthodoxy stemming from China would have been more strident and harshly assertive, if China was not so dependent for its development on the Soviet Union. As against this, Mr Khrushchev has to be careful not to seem too cavalier about ideology, for that would give a handle to the old guard who may overthrow him any moment. This is the explanation of the rather curious phenomenon of a deep freeze following a thaw in the Soviet Union.

It is in this context that the criticism of Mr Nehru in the Soviet and other communist journals should be viewed. Moreover, cold war invests what ought to be a somewhat unimportant academic argument with overtones that are foreign to such arguments. In point of fact, Mr Nehru's article was a series of disjointed reflections originally intended for private circulation among the members of the party. These reflections were printed in the AICC's Economic Review. Of course, the AICC's Economic Review has come to enjoy a certain official status as the fortnightly journal of the rul-

ing party. But unlike in communist countries, discussion of ideology is not taken too seriously in India, as in other democracies. Mr Nehru was not discussing specifically communism or even ideology in this article. Among other things, he also discussed the need for evolving our own economic ideology. He pointed out the shortcomings of capitalism and then suggested that communism too had its shortcomings. He referred to "the growing contradictions within the rigid framework of communism itself" and reiterated his familiar objection to its "association with violence." He, therefore, pleaded that it will not do for us to adopt uncritically any particular ideology. It was necessary that we should find our own solutions for our special problems.

Now, these somewhat general reflections gained a publicity quite disproportionate to their immediate political or ideological relevance. It was printed in full in the US and from there travelled across to Europe and, finally, a Hungarian paper printed it. (In the same article, Mr Nehru had repeated his familiar thesis about Hungary, viz., the desire for freedom is something that no ideology can succeed in suppressing forever). It is not unlikely that this ostentatious playing up in the West of Mr Nehru's supposed objections to communism was what riled the communist ideologists. It may also be the oblique support of the Hungarian revolution in the article made it even more than usually galling. And they felt called upon to subject Mr Nehru's observations to severe critical scrutiny.

It is very likely that we in India may be making heavy weather of nothing. But then we have bitter memories of the days of communism. The fact that the criticism appeared in the pages of "Problems of Peace and Socialism" has lent some plausibility to the fear that this may be the beginning of an ideological offensive. For, this journal is supposed to be the successor to the old cominform journal called "Towards a lasting peace and democracy in the World" (of some such name). In a sense, it is good that a communist journal should discuss in temperate, though critical language, what it considers to be ideological aberrations. And when the man criticised is one to whom the common people of the Soviet Union have an immense admiration, then, it may well be that the article may be the beginning of silent revolution in the Soviet scene itself. For, the common man may conceivably start wondering whether Mr Nehru whom he has always considered (and been taught to consider) his friend is not right about communist ideology as he is about co-existence.

OLYMPUS

THE PENINSULA

PROGRESS in housing construction is one of the important indices of improvement in the welfare of the poorer sections of the population. Judged by this standard, the improvement in the status of the lower income classes could not be said to have been material. Progress that has so far been attained would seem to have only touched the fringe of the total demand for housing from the lower income classes. This only points to the intractability, in the short run, of the problem which, in its varied aspects, is of a magnitude calling for colossal sums for a final and ultimate solution. Speaking at a press conference at Bangalore, last week, Mr. K. C. Reddi, Union Minister for Works, Housing and Supply pointed out that all resources in the country, would have to be mobilised, in order to make a worthwhile advance in respect of housing during the years ahead.

The problem is complicated by its diversity. There is for instance the demand for sufficient accommodation from the industrial workers, which with the consciousness of industrial labour of their rights for decent living conditions has become more urgent than ever before. Besides, considerations of productivity of labour, demand prior attention to this aspect of labour welfare. The widespread existence of slums in all the major industrial centres in the country has evoked concern from the Government. However, plans drawn for gradual elimination of slums, have been even more gradual than anticipated in their execution. The report of the team appointed by the Government to study the progress of work in the clearance of slums has revealed a uniform state of neglect in all the big centres.

Rural housing, is, by virtue of its magnitude, the most important aspect of housing in the country, and for this very reason, progress in this field has been far slower than even in industrial housing. So much so that rural housing, in spite of the attention it had claimed from the Government, wears, almost, a picture of neglect.

For reasons of lack of sufficient internal resources and the colossal size of the problem, progress in housing has necessarily to be slow. Mr K. C. Reddi, has, in the course of his press conference, pointed out that even to make what would be called a decent beginning in rural housing alone, a sum of Rs 2,000 crores would be required. Against this the allocation for housing under the First Plan was a meagre Rs 35 crores. What was even worse, expenditure in the course of the First Plan on housing fell short of the sum allocated by about 50 per cent. The progress that could have been made under such conditions, could well be imagined.

Under the Second Plan, however, housing has claimed a larger outlay at Rs 120 crores. At the rate of progress in expenditure that has

so far been maintained, the story of the First Plan bids fair to be repeated. It has been estimated that, so far, only about Rs 40 crores had been spent by both the Centre and the State Governments in the first three years of the Second Plan on housing schemes. A shortfall of a major dimension has, however, been saved by the scaling down of the total allocation for housing at the recent meeting of the National Development Council. Against an original allocation of Rs 120 crores, consequent on the general revision of the Plan outlay, it is, now, not considered possible to reach more than a target of Rs 84 crores for housing at the end of the Second Plan. Even, with outlay at this level, the balance of expenditure remains, on an average, at a higher level than the average for the preceding three years.

It would but be trite to point out that headway in housing could be made only if more resources could be found for it. Housing is being sought to be encouraged on the basis of loans granted by the Government to private individuals in the lower income classes. Co-operative efforts have also come for strong emphasis as the key for more rapid progress. But, at all levels, progress is restricted by limited financial resources. The decision of the Government to tap institutional sources for providing finance for housing schemes is, in such context, to be hailed as an important step which would not fail to have favourable effects on the pace of housing construction in the country. Funds for housing schemes are now expected to be available from the Reserve Bank, State Bank, private Banks and finally the Life Insurance Corporation. It is further learnt that the Life Insurance Corporation would, by itself, provide a sum of Rs 3 crores every year, from out of its funds, for the middle class income people for house construction. In addition, a sum of Rs 1 crore is expected to be available from the Life Insurance Corporation's funds for granting loans to housebuilding co-operative societies.

Private finance had not, so far, had any conspicuous role in housing construction. Reluctance to lock up their money in long term schemes such as housing has been reinforced by the lack of adequate securities for the loans and funds that would have been available from such private sources. Mr K. C. Reddi has in this connection, pointed out that such private and bank funds could not be properly canalised unless the Governments both at the Centre and the States, guarantee the loans and debentures that might be issued. An early decision on this, therefore, might enable more funds being available for financing housing schemes by private individuals or co-operative institutions.

Mr Reddi, also, referred to the housing schemes that fall under

Housing

the responsibility of the other Ministries such as Ministry for Home Affairs, Commerce Ministry, Labour Ministry, etc. While the Ministry for home affairs undertakes housing schemes for the benefit of the scheduled classes and tribes, the Labour Ministry has to look after the needs of the miners and mine workers. The functions of some of the other Ministries, also, at some point or other, overlap with that of the Ministry for Works, Housing and Supply in that they have to spend on housing. A higher rate of progress could therefore be sustained if, in addition to what the Ministry for Works, Housing and Supply could set apart for housing, these other Ministries could find it possible to spend more on housing.

Mr Reddi himself confessed that the subsidised industrial housing scheme of the Government has made satisfactory progress only in a few States like Bombay, Mysore, West Bengal etc. The reason for the shortfall in expenditure under the First Plan and in the first three years of the Second Plan thus becomes clear. To avoid further shortfall in expenditure would, therefore, call for higher rate of expenditure in these other States. Concern at the meagre progress, has been evident in some of the States. In Madras for example the Government have in view the

MADRAS REVIEW

extension of the jurisdiction of the State Housing Board to all the areas in the State which are looked after, at present, by the municipalities. Mr Reddi has, besides, called upon the State Governments to give priority in their State budgets as well as in their Plan budgets, on housing schemes.

In the pre-occupation with ambitious plans in the sphere of rural housing, the immediate needs of the rural areas seem to have been neglected. According to Mr Reddi himself, the ambitious nature of the rural housing plans undertaken precluded any effective attention being given to the problems of environmental hygiene. Mr Reddi, has, in this connection pointed out that the present scheme involved the rebuilding of the whole village after a socio-economic survey which necessarily involve time and delay.

In regard to slum clearance, the Government have moved ahead by raising the subsidy for slum clearance schemes from 25 per cent to 37½ per cent. The idea of the Government is not only the clearance of slums, but also their improvement and work in connection with the latter is expected to be taken up vigorously in all important areas. It is further gratifying that slum clearance work is to proceed on the basis of a system of priorities.

PSY 213

Calcutta Tramways Company

A Year Beset by Difficulties

Problems of Fares & Wages

Mr David Webb on the Position

The annual general meeting of The Calcutta Tramways Co., Ltd., was held on December 18 at 30, Cursitor Street, Chancery Lane, London, E.C., Mr. D. E. Webb, F.C.A. (chairman of the company) presiding.

Mr. B. H. Clark, representing the secretaries (Messrs Hays, Akers & Hays) read the notice convening the meeting and the report of the auditors.

The chairman said:

Gentlemen, the accounts before you are in respect of the year ended 31st December, 1957, and your Board regrets that it has not been possible to present them to you earlier. The current year has been one beset with difficulties and it was not until the end of October that a decision could be arrived at as to the payment of a dividend.

RESULT OF YEAR'S WORKING

There is little to comment on the accounts, and they are by now purely of historical interest. On Revenue Account, receipts increased by £61,000 and expenditure by £63,000. Once more, the bulk of the increase in expenditure was in payments to the staff amounting to £44,000. The balance on trading account was £255,313 compared with £257,451 last year. After charging London office expenditure, placing £80,000 to Renewals and Replacements Account and charging £21,859 to Development Account against £6,892 last year, there is a surplus carried to Revenue Appropriation Account of £137,041 against £157,196 last year.

In the Appropriation Account, there is a new heading of Wealth Tax. This will be referred to again later. Otherwise, after making the usual appropriation and transferring £87,457 to shareholders account, there is a deficit of £22,622 transferred to Special Reserve Account. In the shareholder's account, Debenture Stock redemption allocations have been made, the Preference Share Dividend has been charged and an ordinary share dividend has been recommended. This again will be referred to later.

BALANCE SHEET ITEMS

Turning to the Balance Sheet, there is little that calls for comment. Fixed Assets remain where they were, and Liquid Assets show a further contraction. There is one new heading, Expenditure on realignment of Dalhousie Square

£12,757. This is represented on the liabilities side of the Balance Sheet by a loan from Government of £15,000.

This expenditure will eventually amount to about £75,000 and will, of course, have to be repaid. The period of repayment suggested by Government is 3 years from 1959, but this will clearly depend on our resources.

THE CURRENT YEAR

The opening of the current year was inauspicious, in addition to a full year's charge for Wealth Tax which had been introduced during 1957 and which is a tax based on the net assets of the Company every year, an electricity tax was introduced. These two together, in 1958, will cost the Company a further £40,000. Normal increases in wages and the cost of raw materials will account for a further £40,000 this year and, when the maintenance and upkeep of the undertaking as a whole were considered, it became apparent that the question of increasing the fares was becoming of paramount importance if the system was to continue for any length of time.

In April, 1958, the findings of the Tribunal set up to enquire into our fare structure were published. These recommended an increase in fares although not by the amount which was necessary, and a minority report recommended a further increase. In spite of this, Government, influenced by opposition politicians, still refused to give their support to any increases.

FARES INCREASE AND WAGE DEMANDS

In May, therefore, the board decided that, in accordance with their powers defined in the Tramways Act, the fares would be increased in the autumn, whether support for this was received from Government or not. Two members of the board were to join Mr. Poddar in Calcutta at that time. In addition to the fare increase, the wages structure of the men and their provident fund contributions were also to be reviewed and increases agreed. There were, at the time, the usual list of demands made by the unions, and a number of these had been referred to an industrial tribunal.

Unfortunately, the union leaders, backed by opposition political interests, persuaded the men to come out on strike in August. This confused the whole situation from the point of view of the fare increase,

but nevertheless, it was decided that Sir Percival Griffiths and I should still proceed to Calcutta early in September with the additional object of endeavouring to end the strike. It soon became apparent that the leaders of the strike were acting far more in the interests of the opposition politicians than in the interests of the men, and, from the beginning they were adamant that their wage demands should be met without an increase in fares. Accordingly, when deadlock had been reached with Government and the Unions, an increase in all fares by one Naya Paisa was announced. At the same time, increases in wages and provident fund contributions for the men were announced amounting to approximately £100,000 per annum as and when they decided to return and work the new fare structure.

A letter was sent to Government, informing them of the increase and the reasons which necessitated it. In addition I stated, "We would direct your earnest consideration to the suggestion made to you that, in view of the many political aspects which from time to time arise in connection with the running of Public Utility Undertakings, it might be a propitious time for your Government to consider taking over the undertaking. We make this suggestion not from any desire to hand over to you a Company for which we have a great affection, nor to escape our obligation to that Company, but simply that we appreciate that in running a Public Utility Concern, considerations arise which are in conflict with the normal running of a Limited Company."

ATTITUDE OF UNIONS

Meanwhile, the Unions still refused to recommend a resumption of work as long as the increase in fares remained. Their stated grounds for this were that their men would be unpopular with the public if it was thought that the fares had been increased in order to pay the men more and that, in fact, the Company had sufficient funds. It was pointed out that the increase in fares had been decided upon by the Board long before the Unions had brought their members out on strike, but they remained adamant.

Another deadlock having been reached, it was agreed with the Unions that both the increases in fares and in emoluments to the men should be postponed until the

matters in dispute had been referred to an independent Court of Inquiry. Regrettably, terms of reference which had previously been agreed with Government were disputed, and finally a tribunal under the Industrial Disputes Act was appointed by Government to investigate the whole position. That tribunal is now sitting, and we await the results.

NEW AGREEMENT WITH GOVERNMENT

It is interesting to look back into the history of the present opposition to an increase in fares. In October 1951 the Company had entered into a new agreement with Government, under the terms of which:—

- The shareholders in any one year could not receive more than 4% on their capital employed in the undertaking after payment of all taxes.
- The Government could take over the undertaking in 1972 at a price agreed in 1951, so that any improvements or extensions to the undertaking in those twenty years would accrue to the benefit of Government and the travelling public without payment.
- Any surplus earned in any year, over and above the 4% payable to the shareholders, would be placed in a special reserve which would also accrue to the benefit of Government in 1972.

SHAREHOLDERS' BENEFIT FIXED

One of the main objects of this agreement was to stop once and for all the idea that fares would be increased for the benefit of shareholders. Whatever surplus or trading was made, the amount due to the shareholders could not exceed the figure laid down by the Act. Further, any improvements, extensions, or schemes of modernisation could only accrue to the benefit of the people of Calcutta and their Government. It was felt with some justification I think, that these terms should enable the Company, the travelling public and the Government to work in close harmony. The opposition of certain political leaders, however, prevented the fulfilment of this hope. With what result. In July 1953, we endeavoured to increase fares of which the second class were still at the same level as 1922, in order to provide funds for a long term programme of

equipment and modernisation. The increase, approved originally by Government, was met by physical resistance organised by the self-styled Tram Fare Enhancement Resistance Committee. After fourteen days of civil disturbances, our employees were persuaded to strike by picketing, intimidation and assault. During all this period no adequate assistance was forthcoming from the authorities. At the end of July, Government withdrew their support and insisted on referring the matter to arbitration. As I said in November, 1953, in my statement to you, it was an instance of a few persons seizing power for political ends and with a view to creating trouble and embarrassing the Government.

TRIBUNAL FINDINGS NOT PUBLISHED

The Tribunal sat, and its findings were never published by Government. It is understood that it recommended no increase at that time, and in 1954 I said, "As a result we have had to postpone for the time being our plans for further modernising and extending the undertaking." And again, "With the least delay, this Company must be restored to a position when it will be possible once more to place sums to reserve. Only by this means can the normal development of the system be maintained and only from that source can the necessary funds be provided for ensuring that the efficiency of the undertaking continues unimpaired and progressive."

In November 1954, I returned to Calcutta to try once more to obtain Government's support to an increase in fares. Once more that support was lacking and in September 1955, after commenting on the lack of funds to place to reserve, I said "Any increase in these figures can only come from an increase in fares. And yet, we are still unable to propose such an increase because the political extremists in Calcutta still take any opportunity to stir up trouble and civil disturbances." In October 1958, there was included in my remarks the following. "Once more I would reiterate how badly we need an increase in fares... Even the smaller projects for realignment of tracks to conform with the city's all important traffic problems, and the provision of cars of an improved design affording greater comfort and travelling facilities for the public, cost sums vastly in excess of the present scale of fares."

Finally, in 1957, yet another tribunal was set up to examine the whole question of the fare structures, not only of the Trams, but of the State-run and privately owned buses. This was the Tribunal mentioned earlier, whose findings were published in April 1958.

A SEVEN YEARS' FIGHT

And so, for seven long years in spite of adverse political considerations, we have been fighting to get the fares increased not for the benefit of the shareholders but for the benefit of Calcutta and its travelling public. The majority of the Press are on our side and the public are sick and tired of periodically being made to walk to work all for the sake of 1 Naya Paisa, less than 1-5th of a penny. As for our own employees, they are always the losers. Already this year they have been denied an increase in wages since the middle of September because certain politicians considered that a controversy over an increase in fares was a good rod with which to belabour the Government.

One thing, however, is certain. Either a substantial increase in fares is agreed to within the very near future or, within a very few years the city of Calcutta will have no trams. The attitude of the opposition may be summed up in that they would rather have a deteriorating tramway system which would be an embarrassment to Government than a flourishing concern which would be a benefit to all the travelling public.

TRIBUTE TO EXECUTIVE STAFF

One can well imagine that, during times such as these, extra burdens are thrown on to the shoulders of our senior executive staff. We are fortunate indeed in having a first class team who are well able to look after the interests of the Company. From the Agent, Mr. Blease, downwards, our thanks are due to them for their loyalty and hard work, and I know that shareholders would like me personally to carry their expression of thanks with me when I return to Calcutta in January.

The report and accounts were adopted and the dividend, as recommended, was approved.

The retiring directors, Mr. B. H. Clark and Mr. Harold Hobson, B.Sc., M. Inst. C.C., M.I.E.E., were re-elected.

The above statement is published for information and does not purport to be a report of the proceedings of the Annual General Meeting referred to.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. PB/28/COS/798-Hb(58) for supply of 14 sets of Turbo Generator Sets, Compact, Self contained unit, Weather proof totally enclosed except for ventilation ducts and with sealing provision to prevent unauthorised interference, with adjustments. It should be of robust design so as to meet the severe conditions encountered in Locomotive operation and should be rated for a continuous output of 500 Watts, at 32 volts. The Complete unit should be suitable for mounting on a standard platform as per C.S.L. Drawing No. 702 and generally conforming to I.R.S. specification No. E9-53.

Tender forms are obtainable from the Office of the undermentioned, Garden Reach, South Eastern Railway, Calcutta-23 (PB Section) on remittance of Rs. 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt form this Railway's Chief Cashier by local firms. Closing date of the tender is 20th January 1959 at 12 Noon. Firms not on the Railway's list of approved contractors must deposit in cash Rs. 425/- as Earnest money with this Railway's Chief Cashier, and enclose his deposit receipt together with a valid income tax clearance certificate along with the Tender.

THE TINGAMIRA TEA SEED COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Tingamira Tea Seed Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 29th January, 1959, at 12-15 P.M. for the following purposes:—

- To receive and consider the Profit & Loss Account for the year ended 31st March 1958, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
- To declare a Dividend.
- To appoint a Director in place of Mr. S. M. Smith, the Director retiring by rotation at the Meeting.
- To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS:

- To consider and, if thought fit, to pass the following resolution:—

"That Mr. J. R. Hollander be and is hereby appointed a Director of the Company liable to retirement by rotation."

The Share Transfer Books of the Company will be closed from 20th January, 1959 to 29th January, 1959 both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. Hockley,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
29th December, 1958.

NOTE: Payment of the proposed Dividend, if declared, will be made on or after 7th February, 1959, only to those members whose names are registered in the Books of the Company on 29th January, 1959, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

Mr. J. R. Hollander was appointed by the Board as an Additional Director in March 1958 and vacates office at this Annual General Meeting under Article 112 of the Company's Articles of Association and Section 260 of the Companies Act, 1956. The resolution mentioned in Item No. 5 of the above Notice is intended to effect the appointment of Mr. Hollander as a Director of the Company liable to retirement by rotation.

DORCHESTER PRINTING WORKS

PRINTERS OF DISTINCTION

116, LOWER CIRCULAR ROAD, CALCUTTA

World of Bank:

Proposed Increase of Capital

THE Executive Directors have submitted to the Board of Governors of the World Bank a Report recommending a major increase in the Bank's capital in order to strengthen its capacity to borrow funds for financing economic development in its member countries.

Under the proposal, authorized capital would be increased by \$11 billion, from \$10 billion to \$21 billion, provided that members subscribe \$7 billion of new capital by September 15, 1959. This increase would permit member governments to double their present capital subscriptions and would still leave a margin of unsubscribed capital for admission of new members and for possible subsequent increases in individual subscriptions.

No cash payments on the new subscriptions would be made to the Bank as an addition to its lendable funds. The new subscriptions would be left subject to call, and the Report recommends that the Board of Governors decide that calls shall be made only when needed to meet obligations arising from the Bank's borrowings, by sales of its bonds and other securities, and from its guarantees of loans made by other investors.

In addition, certain further increases in subscriptions are proposed for three countries, Canada, Germany and Japan, whose economic strength has grown markedly in the post-war period.

The Report was submitted in response to a resolution adopted by the Board of Governors at its Annual Meeting held last October in New Delhi, which called on the Executive Directors to consider the question of enlarging the Bank's resources through an increase in the Bank's capital.

In considering the Delhi resolution, the Directors weighed the adequacy of the Bank's present capitalization against borrowing and lending prospects. Current authorised capital is \$10,000,000,000 of which \$9,521,500,000 has been subscribed by the 68 member countries.

In accordance with the Bank's Articles of Agreement, 20% of subscribed capital has been paid in. The remaining 80% can be called only to meet obligations arising from the Bank's borrowings or from its guarantees of loans. This 80%—amounting to \$7,617,200,000—is in effect a guarantee fund securing the investors holding the Bank's bonds and guarantees. It has always been contemplated, the Report points out, that the Bank would raise the bulk of its lendable funds through borrowings. The 80% portion of the capital, says the Report, "is an essential factor in the Bank's ability to borrow."

To date, the Bank has undertaken loan commitments in 49 countries equivalent to \$4,250,000,000, and it has sold the equivalent of \$2,300,000,000 of its bonds and other obligations in leading capital markets, in order to finance a part of these loan commitments. Currently outstanding bonds and notes

amount to the equipment of \$1,800,000,000, and are held by investors in at least 35 countries.

After expressing satisfaction with this record the Executive Directors express the opinion "that in today's conditions the present capital structure does not give the Bank the borrowing capacity needed to enable it to meet the reasonable requirements of its lending operations in the near future."

To support this view, the Report cites the 75% increase in lending in the last fiscal year and a continuing high rate of lending in the current year. The Report also holds it prudent to assume that Bank lending will continue at or above recent levels in the foreseeable future. To finance continued lending at the current rate, the Bank will have to borrow on a greater scale than before.

While the Bank has raised about half of its borrowed funds from investors in other countries, the United States is the principal market for Bank obligations, and institutional investors in that country are the main source of its long-term funds. The Report notes that the soundness of the Bank's loans and the guarantees of members other than the United States have been of great importance in marketing the Bank's obligations. Nevertheless, in the opinion of the Executive Directors, "most . . . U.S. institutional investors and many of the non-U.S. investors in the Bank's dollar securities have been willing to take up, at reasonable rates of interest, the increasingly large and frequent offerings of the Bank's bonds chiefly because the bonds have the backing of the \$2,540,000,000 guarantee of the United States."

The Executive Directors express the belief that investors may in future attach increasing importance to the guarantees of members other than the United States. But to take no action now to increase the Bank's capital, they conclude, would be to run the risk of a curtailment of lending.

The Executive Directors concluded that the proposed increase should be sufficiently large to avoid the necessity of seeking frequent changes in the Bank's capital structure in the future, and emphasized that the responsibility for strengthening the Bank's resources should be shared generally by the members. Accordingly, they recommended that authorized capital should be increased by 100 per cent, conditional on the actual subscription of at least \$7 billion. The Directors also recommended a further increase of \$1 billion, as a margin of authorized but unsubscribed capital for future members or possible later individual increases or subscriptions.

The recommendation for special additions to the capital subscriptions of Canada, Germany and Japan would provide for increases, over and above the general 100 per cent increase, of \$100 million for Canada, \$390 million for Germany and \$166 million for Japan. Half of these special increases would be left uncalled, on the same basis as the subscriptions under the general increase; of the other half, 20 per

cent would be paid in on subscription.

The recommendations of the Executive Directors are embodied in a series of resolutions submitted to the Board of Governors for a vote without a meeting. The Report sets September 1, 1959, as the date for completion of voting.

EXPORT QUOTA 1959-60

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the years 1st April 1959 to 31st March 1960 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February 1959. No export quota will be allotted unless an application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 1-A, Vansittart Row, Calcutta-1, and in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin-1, South India.

P. V. Govindan.
Controller of Licensing.

HOWRAH MILLS COMPANY, LIMITED

NOTICE is hereby given that the Directors of this Company have today declared the following interim dividends payable to those Members whose names are registered in the Books of the Company on the 31st January, 1959 or to their mandatories.

An Interim Dividend on the Preference Shares @ Rs. 3.50 nP (Rupees three and naye Paisa fifty only) per share for the year ending 31st March, 1959.

An Interim Dividend on the 'A' Preference Shares @ Rs. 3.5 nP. (Rupees three and naye Paisa fifty only) per share for the year ending 31st March, 1959.

An Interim Dividend on the Ordinary Shares @ Rs. 0.50 nP (Fifty naye Paisa only) per share for the year ending 31st March, 1959.

The Share Transfer Books of the Company will be closed from the 24th to the 31st January, 1959.

By Order of the Board,
JARDINE HENDERSON, LIMITED.

D. SMALEY,
Chief Accountant,
Managing Agents.

4, Clive Row,

Market Listless in December

Listless conditions prevailed on the Calcutta Stock Exchange during December. After a steady opening the market developed an easier trend on heavy selling pressure. Though in later dealings the downtrend in prices was halted, equities closed the month generally lower on balance.

There have been a number of factors to disturb the even tenor of trading. In the first place the early part of the month was spent in speculation over the probable trend of the Finance Minister's speech at the important annual meeting of the Associated Chambers of Commerce in Calcutta. In view of Mr Morarji Desai's earlier reference to taxation in Bombay, market-men expected that he would say something definite about Government's attitude toward the private sector's plea for a tax reduction. Though the eagerly awaited speech disclosed nothing new on the all important question of taxation, it contained many a disturbing hint. In the first place Mr Desai made it clear that there would be no relief in taxation and went on to add that in a developing economy there would be increasing need for resources to implement development plans. His reference to the inevitability of a bigger Third Plan was also interpreted to mean that the day of any sizable relief in taxation was far off. Though second thoughts on the Finance Minister's speech seemed to have allayed earlier apprehensions, some of the gloomy thoughts generated by it continued to persist. This was largely due to the fact that the speech lent itself to varied interpretations when set in the context of current developments in the country.

The Finance Minister's rambling remarks on the nature of a Welfare State inevitably reminded one of what the Prime Minister had to say about a section of Private enterprise some time earlier. The Government's decision on State Trading in foodgrains and the Defence Ministry's decision to put up its own automobile plants revived the fears about back door nationalisation. An idea of the strength of the reactionary forces at work in the investment situation could be had from the manner in which the market treated the very encouraging information that Government had approved the issue of bonus share by the Indian Iron and Steel Company.

With the publication of the draft resolutions of the Congress Working Committee there was a sharp decline in equity prices. The reactionary tendency seemed to have stemmed from indications of a radical change in Government's attitude toward private enterprise as the draft resolutions were taken to foreshadow coming changes in Government's industrial policy. One of the proposals put forward by the Committee for mopping up

internal resources was a ceiling on profits in the private sector. After the first shock which resulted in a sharp decline in prices, values tended to stabilise at the lower levels; operators, however, continued to be reluctant about extending commitments.

The slight improvement in sentiment might have been due to the expectation that Government could not possibly accept a proposal for imposing a ceiling on profits because of its serious implications. In the first place it is common knowledge that already profits in the private sector are limited to a very low level by heavy taxation and other regulations. Moreover, the Congress Working Committee had also pointed to the need

Government's policy toward private enterprise. Moreover, there was also the Central Budget just about two months away. The Budget is awaited with considerable anxiety because of Government's need for further funds to fill the gap in internal resources.

Toward the close of the month sentiment showed some slight improvement again on reports of further LIC interest in selected equities; but with the intervention of Christmas and New Year holidays the market closed the month on a dull note.

Sectionwise, jute shares were quietly steady. In earlier dealings profit taking was in evidence in sympathy with the general trend of the market. As a consequence

delay in the publication of the report of the Coal Prices Revision Committee kept interest at a meagre level. Toward close sentiment was further adversely affected by rumours that Government was considering a proposal to fix a uniform price for industrial coal throughout the country. Amalgamated was a steady feature during most part of the month.

Interest in tea shares continued to be at a low ebb during the month as operators were reluctant to extend commitments in the section in view of the obscure outlook for common grades which obtained low prices at the auctions. News of a further increase in Northern Indian tea output was an additional depressing factor. It was also expected that the tea market would show a further decline in the coming months due to increase in offerings.

Sugar shares ruled dull most of the time as marketmen were awaiting the Tariff Commission's recommendations with regard to fixation of a fair price for the commodity. Toward close, however, selected shares came in for some enquiry on expectations of better working results of sugar companies for the season just ended.

Engineering shares were irregular as price movements in the section were largely influenced by fluctuations in Indian Irons. This scrip benefited only slightly when news of the Government's sanction for the issue of bonus share was received. A probable reason for the lack of sustained interest in the scrip after bonus issue news was the report that the company had to wait for the sanction of the Reserve Bank of India for the issue of bonus shares to the non-residential shareholders. In their announcement pertaining to the bonus issue the Company stated that a further notification covering procedural arrangements in connection with the bonus issue would be issued. The scrip suffered a severe setback about the middle of the month on the publication of the Congress Working Committee's draft resolutions in which a proposal has been made for placing a ceiling on profits in the private sector. Though there had been a tendency for the price to stabilise at the lower levels in later dealings on the hope that there would be no major change in the industrial policy of Government, sentiment at close of the month was rather listless as trading had been interrupted by holidays.

Textile shares came in for some support toward the close of month on encouraging advices from the cloth market. A broadening of interest, however, did not materialise in view of the continued uncertain outlook for the industry.

Bank shares were a quiet market on reports of lower profits for the year.

for stepping up the rate of capital formation in the country. It was argued that if Government were serious about increasing the rate of investment they could not accept the proposal pertaining to a ceiling on profits in the private sector; for a ceiling on profits would further slow down the rate of investment. In this view the draft resolution by the time they are finalised, would lose all their stings. As pointed out above the listlessness of the market was also partly due to some other developments that had taken place during the month. Those developments lent themselves to be pieced together to make a plausible story about an impending radical change in Gov-

price levels at the close of the month were lower on balance. However, there was no indication of selling pressure and this was probably due to expectations of profitable working of jute companies during the current year. The recent decline in gunny prices was no doubt a disturbing factor but it was generally expected that in view of the keen interest taken by Government in the jute situation, mills would be enabled to obtain an equitable price for their manufactures.

Coal shares were a listless market throughout the month. In earlier dealings apart from the general disturbed condition of the rest of the market, the inordinate

Men and Oil . . . 4

The Rigbuilder

The frameworks of steel that rise above the jungle landmark the sites where oilmen are at work. These towering derricks, which are used to lower and raise the drill pipe and drilling tools in the hole of a new well, are put up and taken down by rigbuilders. A rigbuilder and his crew can erect a 136-foot-high derrick, weighing 45 tons, in a few days, and the finished framework will be strong enough to support a load of 350 tons. A rig of this capacity, equipped with powerful engines and pumps to match, is used for deep drilling (over two miles) but lighter rigs are employed where the oil deposits are expected to be nearer the surface. When a new well strikes oil, the rigbuilder replaces the drilling derrick with a production derrick. And if the well is a failure, he dismantles the rig and re-erects it elsewhere for another attempt to be made. Indian rigbuilders and their crews play an important part in the operation of the Assam Oil Company.

ASSAM OIL a full-scale petroleum industry

a member of the Burmah Group of Oil Companies

(a) After transferring Rs 3,00,000 from Development Rebate Reserve, Rs 1,65,000 from Reserve for Taxation Contingencies and Rs 63,186 from Jute Stock Reserve. (b) After writing back Rs 107,889 being excess provision for taxation and including Rs 26,890 being refund of taxes. (c) After writing back Rs 1,26,328 from provision made for loss on stock of jute at mill. Afloat and forward jute purchases, etc. (d) After transferring Rs 1,14,000 from Reserve for taxation contingencies and Rs 70,000 from Jute Stock Reserve. (e) After writing back Rs 172,315 being provision against anticipated loss on raw jute stock and work in progress; and after transferring Rs 5,65,000 from General Reserve and Rs 63,000 from Dividend Equalisation Reserve. (f) After transferring Rs 3,45,000 being the balance at credit of Machinery Renewal Account on completion of the Mill Modernisation Programme. (g) After transferring Rs 3,00,000 from Reserve for Machinery Renewal and Replacement. (h) After transferring Rs 573,255 from General Reserve. (i) After writing back Rs 38,000 being excess provision for taxation; and after transferring Rs 3,90,000	from General Reserve and Rs 32,500 from Dividend Equalisation Reserve. (j) After transferring Rs 525,000 from Reserve and writing back Rs 30,000 from Workers' Provident Fund shown in excess in previous half-year and Rs 61,000 from provision for possible loss on forward contracts. (k) After writing back Rs 1,21,392 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,161 being provision against anticipated loss on jute contracted for; Rs 14,000 being excess provision for taxation and Rs 1,95,000 from Dividend Equalisation Fund. (m) After transferring Rs 103,000 from General Reserve and Rs 70,000 from Dividend Equalisation Reserve. (n) After transferring Rs 120,000 from General Reserve. (o) After writing back Rs 59,017 from Taxation Reserve. (p) After transferring Rs 1,06,985 from Jute Stock Reserve; Rs 62,400 from Reserve for Tax contingencies; Rs 21,000 from Development Rebate Reserve; and writing back Rs 52,371 from provision for taxation and Rs 10,000 from Ild liability. (q) After transferring Rs 7,50,000 from General Reserve.	(r) After transferring Rs 5,00,000 from provision for contingencies and Rs 1,00,000 from provision for taxation. (s) After transferring Rs 8,23,000 from Reserve for Tax contingencies; Rs 2,30,000 from Jute Stock Reserve; and Rs 1,47,000 from Development Rebate Reserve and including Rs 1,89,365 being Requisition claim realised. (t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative. (u) After transferring Rs 38,026 from Jute Stock Reserve. (v) After transferring Rs 3,28,000 from Tax contingencies reserve; Rs 2,50,000 from Jute Stock Reserve and Rs 5,000 from Development Rebate Reserve. (w) After transferring Rs 425,000 from General Reserve; Rs 85,000 from Dividend Equalisation Reserve; and Rs 19,500 from provision for taxation. (x) After transferring Rs 2,80,000 from General Reserve and Rs 25,000 from Dividend Equalisation Reserve. (z) After transferring Rs 2,70,000 from General Reserve; Rs 25,000 from Dividend Equalisation Reserve and Rs 34,500 from Investment Realisation Surplus.
--	--	---

31% Debenture

(a1) After transferring Rs 77,558 from provision against anticipated loss on raw jute stock and work-in-progress; Rs 5,25,000 from General Reserve and Rs 27,000 from Dividend Equalisation Reserve and Rs 27,000 from provision for taxation.

(a2) After writing back Rs 78,896 being provision against anticipated loss on raw jute and work in progress and Rs 40,894 being excess provision for gross and Rs 4,00,000 from General Reserve.

(a3) After writing back Rs 1,00,000 from provision for taxation and Rs 36,889 from over provision of liability and Rs 6,470 from provision for doubtful debts.

(a6) After writing back Rs 66,357 from provision for possible loss on forward contracts; Rs 19,373 from Excess provision for taxation; and after including Rs 94,805 being recoveries of sales tax; Rs 48,365 being income-tax on dividends refundable and Rs 34,781 being dividends forfeited.

(a7) After writing back Rs 125,000 from Reserve to meet loss in jute

(a8) After writing back Rs 1,32,433 from provision for loss on forward contracts; Rs 67,446 being excess provision for taxation; Rs 3,00,000 from Contingency suspense and after including Rs 1,73,892 being recoveries of sale tax and Rs 12,609 being dividends forfeited.

(a10) After transferring Rs 1,66,000 from Reserve for Tax contingencies and Rs 80,000 from Jute Stock

(a11) After transferring Rs 299,129 from General Reserve and Rs 72,729 from provision for Sales Tax Contingencies.

(a12) After transferring Rs 52,500 from General Reserve and Rs 27,834 from provision for Sales Tax Contingencies.

(a13) After transferring Rs 215,000 from Plant Renovation Reserve; Rs 986,129 from General Reserve; Rs 84,000 from Welfare Reserve; and Rs 21,145 from provision for Sales Tax Contingencies.

(a14) After transferring Rs 9,50,000 from General Reserve,

(a15) Includes Rs 1,932,513 being profit on sale of Assets; Rs 42,474 being profit on sale of stores and Rs 205,345 being scrap sale.

(a17) After transferring Rs 75,000 from General Reserve.

(a18) After transferring Rs 29,000 from General Reserve and Rs 64,393 from provision against anticipated loss on jute contracted for.

(a19) After transferring Rs 8,000 from General Reserve and Rs 63,000 from Dividend Equalisation Reserve.

(20) After transferring Rs 1,00,000 from Dividend Equalisation Fund and Rs 78,000 being Inv. Realisation surplus.

(a21) After transferring Rs 72,000 from General Reserve.

(a22) After transferring Rs 2,50,000 from General Reserve and Rs 2,30,000 from General and Dividend Equalisation Fund.

(a23) After transferring Rs 3,00,000 from Machinery Replacement Reserve.

(a24) After transferring Rs 18,00,000 from General Reserve.

(a25) After transferring Rs 50,000 from General Reserve and Rs 7,530 being over provision of liabilities in previous year.

(a26) After transferring Rs 100,000 from General Reserve and including Rs 25,000 being Surplus of Investment Realisation.

(a27) After transferring Rs 1,62,000 from Reserve for Tax contingencies; Rs 33,365 from General Reserve; and Rs 75,000 from Jute Stock Reserve; and including Rs 17,100 being excess depreciation and Rs 1,78,325 being excess depreciation and Rs 1,78,325 being refund of Income Tax and after providing Rs 1,60,366 for Income Tax for 1952-53.

(a28) After transferring Rs 1,60,000 from Jute Stock Reserve; Rs 1,10,000 from Development Rebate Reserve; Rs 50,000 from Dividend Equalisation Reserve and writing back Rs 10,494 from provision for taxation.

(a29) After transferring Rs 11,33,438 from General Reserve; Rs 65,000 from Welfare Reserve; Rs 7,000 from Tax contingency Reserve; Rs 28,864 from Jute Stock Reserve and including Rs 8,379 being refund of Income Tax.

(a30) After transferring Rs 750,000 from General Reserve.

(a31) After writing back Rs 191,298 being over provision of Sales Tax liabilities.

(a32) After transferring Rs 82,000 from General Reserve.

(a33) Includes Rs 678,542 being profit on sale of Assets; Rs 127,834 being profit on sale of stores; Rs 494,165 being Scrap sales and Rs 4,500 being profit on Redemption of debentures.

A Great Sound of Machines...

When Balbir Singh came to Jamshedpur from Bahrain in 1957, the site for the new Rs. 100-million Blooming Mill—a key unit of Tata Steel's Two Million Ton expansion programme—had just been cleared after levelling a large hillock.

Today this new 46" Blooming Mill, the largest of its kind in India, with a rolling capacity of two million tons, is all set to produce the blooms and slabs from which rails, structurals, plates, sheets and many other products will be rolled.

Despite the Suez Crisis which delayed vital supplies and other difficulties, the

rapid completion of the Blooming Mill was made possible by the devoted service of men like Balbir Singh. He and hundreds of other Indians, assisted by American and German technicians, worked round-the-clock on this major expansion project to produce more steel to strengthen India's economy.

Green Signal

Investment Gossip:

CONTRARY to expectations, the lull in the Stock Market had been broken even before the Nagpur Congress was in session. It was generally believed that the feeling of uncertainty engendered by the draft resolutions of the Congress Working Committee could be resolved one way or the other only when the resolutions were given a final shape at the Annual Session of the Congress at Nagpur.

Presumably Prime Minister Nehru has not been immune to the reactions of the investors to the draft resolutions. For in his press conference almost on the eve of the Congress Session he has chosen to refer to the matter that has been uppermost in the mind of every stock-market operator and investor. Referring to the proposal for a ceiling on profits in the private sector, Mr. Nehru has pointed out that such a measure at the present juncture will be detrimental to the larger interests of the nation. With such a statement from the Prime Minister himself market men can no longer stay their hands. Once again the green signal for the forward move of equities is given and the result is what we are seeing in the Stock Market now.

As anticipated Mr. Nehru's view has been duly echoed by the Congress and now nothing is farthest from the operators' mind as apprehensions about a ceiling on profits.

It is amazing how the stock market fraternity is capable of transforming what has been dubbed only the other day as a bear factor into a highly encouraging development when it is in a buoyant mood. Till yesterday the market was full of people mourning over Government's decision on state trading in foodgrains. Today the same set of people go about telling whomever they meet that this very same decision is a blessing in disguise to the stock market. Some one has already calculated that with the grain-trade taken away from the private sector there will be Rs 30 to Rs 40 crores seeking new lines of investment. It is their contention that a sizeable part of it will have to find its way to the stock market.

₹₹₹

Investment Notes:

THE Managing Director of the Indian Aluminium Company has announced the start-up of operations at the new smelter at Hirakud in Orissa. The smelter has an installed production capacity of 10,000

tons of aluminium ingots per annum which, at a stroke, more than doubles India's production of the metal. Production at the company's Alupuram smelter in Kerala is about 5,500 tons of ingots per annum. The company plans to further increase its production of aluminium by expanding the Hirakud smelter to 20,000 tons annual capacity; and construction of the additional capacity is expected to be taken in hand as soon as negotiations with the Orissa Government for the additional power requirements are completed. Shares are presently quoted around Rs 16.37.

The Board of Directors of the National Carbon Company have decided to defer the question of issuing bonus shares until completion and consolidation of the company's current expansion projects have taken place and a more accurate picture of growth and earning capacity is available.

It is understood that the Caltex Oil Refinery (India) Limited, Vizagapatam, has proposed to raise Rs 1.5 crores by issuing 1,50,000 Cumulative Preference shares of Rs 100 each, at par. The shares are taxable and will carry interest at 6½ per cent per annum. The company has applied to the Controller of Capital Issues for necessary action.

The Coimbatore Kamala Mills have proposed to issue, at par, 5,000—8½ per cent (subject to tax) Redeemable Preference shares of Rs 100 each to the existing holders of equity shares in the proportion of one for one. The last date for the receipt of application is 26th January, 1959.

Indian Bank Limited has decided to issue bonus shares in the ratio of one for every four shares of Rs 100 paid and one for every five shares of Rs 80 paid, to those shareholders whose names are registered as on the 2nd February, 1959.

Balance-Sheet Reviews:

Sugar Mill Results

THREE Sugar mills—Champarun of the Begg, Sutherland group and Oudh and New Swadeshi of the Birla group—have presented their latest reports and accounts. The working of the Champarun Sugar Company is encouraging and the improved financial results for the year 30th June 1958 have been largely due to the improved quality of sugarcane supplies to the Barrah and Chanpatia factories. Although the Oudh Sugar Mills Limited and the New Swadeshi Sugar Mills Limited have reported lower earnings, the dividends have been maintained.

₹₹₹

Champarun Sugar

The Champarun Sugar Company Limited has reported excellent results, thanks to the efforts made under the company's Cane Development scheme. The total quantity of cane crushed amounts to 54.17 lakh maunds against 52.93 lakh maunds in the previous year,

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

while the quantity of sugar manufactured is shown at 5.33 lakh maunds against 5.60 lakh maunds. Sales have, however, increased to Rs 2.13 crores from Rs 1.78 crores, mainly due to the improved quality of cane supplies to the factories.

The net profit, after providing for Depreciation and Taxation, amounts to Rs 5.70 lakhs as against a loss of Rs 5.88 lakhs incurred in the previous year. Apart from providing a sum of Rs 40,000 for Rehabilitation Reserve, the Taxation provision is raised to Rs 1.00 lakh from Rs 55,000. The Depreciation amount is reduced to Rs 3.25 lakhs from Rs 3.70 lakhs. The directors have recommended a dividend of Re 1 per share against nil.

According to the director's report, the efficiency of the company's factories is well maintained and, in the season under review, a considerable increase in the crushing capacity, at the expense of technical efficiency, was introduced.

₹₹₹

Oudh Sugar

After providing Rs 5.22 lakhs (Rs 5.56 lakhs) for managing agents' commission; Rs 9.41 lakhs (Rs 12.75 lakhs) for Depreciation; Rs 2.39 lakhs (nil) for Development Rebate; Rs 25.85 lakhs (Rs 25.58 lakhs) for Taxation and Rs 42,581 (nil) for Contingency Reserve, the net profit of the Oudh Sugar Mills Limited has turned out to be lower at Rs 14.90 lakhs as against Rs 19.75 lakhs. Out of this, the directors have transferred Rs 5 lakhs to Ge-

neral Reserve against Rs 9.52 lakhs. The dividend on the Ordinary shares is, however, maintained at Rs 12.50 per share.

The directors have, in their report, stated that, due to short supply of cane by reason of inadequate rains and diversion of cane to gur and Khandasari, the cane crushing season, during the year under review, was poor. The coverage recovery was, however, better. The production of the distillery suffered as a result of the poor off-take, while the working of the Vanaspathi factory was on the whole satisfactory.

₹₹₹

New Swadeshi Sugar

Sales by the New Swadeshi Sugar Mills Limited amount to only Rs 1.11 crores against Rs 1.34 crores in the previous year. The profit in this concern is also slightly lower. After providing for managing agents' remuneration at Rs 1.80 lakhs (Rs 2.39 lakhs) and for Development Rebate Rs 24,281 (nil), the profit works out to only Rs 7.55 lakhs as against Rs 8.87 lakhs in the previous year. The directors have provided for Taxation Rs 4.25 lakhs (Rs 5.81 lakhs) and for Welfare & Charities Rs 41,000 (Rs 34,000). Dividend is maintained at Rs 20 per share.

₹₹₹

Sirpur Paper

The outlook for the Sirpur Paper Mills Limited is reported to be encouraging. Although the results of the company, for the year end-

ed 30th June 1958, have not yet been announced, reliable reports indicate that the company's working will be better on account of an all-round improvement in production.

The output of paper, during 1957-58, is expected to be of the order of 20,000 tons against 17,406 tons in the preceding year. The output, during the current year, is likely to reach still higher levels in view of the recent increase in the productive capacity from 60 to 110 tons per day. When the expansion targets are fully achieved, the production will be in the neighbourhood of 30,000 to 38,000 tons a year.

£ R S

Associated Cement

The Associated Cement Companies Limited was able to produce as well as despatch higher quantum of cement during the year ended 31st July 1958; but its net profit showed considerable decline. Despatches of cement, during the year, increased to 34.62 lakh tons as against 32.05 lakh tons, while sales fetched Rs 24.34 crores against Rs 22.62 crores.

The net profit, after providing for Depreciation, Taxation and Development Rebate, dropped down to Rs 1.81 crores from Rs 1.90 crores. The net profit would have shown a further decline to the tune of Rs 48 lakhs, but for the fact that the directors have drawn Rs 29.38 lakhs from Deferred Taxation Reserve as well as Rs 21 lakhs from excess provision made in the previous year to meet the taxation liability of Rs 1.36 crores for the year under review against Rs 1.17 crores. The directors attribute the drop in net profit to further increase in the various elements of costs coupled with the very high incidence of taxation.

The directors have provided Rs 1.80 crores (Rs 1.56 crores) for Depreciation; Rs 1.47 crores (Rs 1.17 crores) for Taxation; Rs 21 lakhs (nil) for Development Rebate Reserve and Rs 34 lakhs (Rs 55 lakhs) for Plant Reinstatement Reserve. Taxation, in fact, has been made at Rs 1.96 crores; but this has been reduced to Rs 1.47 crores as Rs 29.38 lakhs have been transferred from Deferred Taxation Reserve and Rs 19.40 lakhs from excess provision made in the previous year. The dividend in the old shares has been reduced to Rs 8.50 from Rs 9 from per share, while the dividend on the new shares is Rs 6.375 as they became fully paid from 1st February, 1958.

£ R S

Structural Engineering

The Structural Engineering Works Limited has shown a profit of Rs 6.82 lakhs for the year ended 30th June 1958 as against Rs 6.48 lakhs in the previous year. The profit has been arrived at after providing Rs 1.71 lakhs (Rs 1.77 lakhs) for managing agents' remuneration; Rs 4.22 lakhs (Rs 3.78 lakhs) for Depreciation; Rs 8.80 lakhs (Rs 9.50 lakhs) for Taxation and Rs 1.156 (nil) for Development Rebate Reserve. The directors

have recommended a dividend of Rs 18 per share.

The company has proposed to increase its authorised capital from Rs 50 lakhs to Rs 1 crore by the creation of additional 5,000 new Ordinary shares of Rs 100 each and 45,000 unclassified shares of Rs 100 each. The company has, at present, 20,000 unclassified shares of Rs 100 each, which are proposed to be issued as Redeemable Preference shares. The company has applied to the Government for their consent to the issue of 20,000 Redeemable Preference shares of Rs 100 each. The new shares will carry a fixed cumulative preferential dividend of 6½ per cent per annum. The shares are to be redeemed at the end of 10 years from the date of allotment.

£ R S

Shevroy Estates

The net profit of Shevroy Estates Limited, for the year ended 30th June 1958, has increased to Rs 3.03 lakhs from Rs 2.11 lakhs for the previous year. The amount set aside to Depreciation is Rs 17,364 (Rs 14,663) and Taxation Rs 1.3 lakhs (Rs 95,000). The dividend is maintained at 7½ per cent.

The coffee crop harvested is much larger at 4,373 cwt against 2,116 cwt. The estimate for 1958-59 provides for a crop of 2,800 cwt. The subsidiary company, the Yercaud Coffee Curing Works Limited, is reported to be making steady progress.

£ R S

Textool Company

The Textool Company Limited has reported a considerably lower level of earnings for the year ended 30th April 1958 due to an increase in working expenses and interruption to production on account of a shortage of raw materials. It is, however, satisfactory to note that sales are higher at Rs 1.41 crores against Rs 1.32 crores. The net profit, before providing for Depreciation and Taxation, works out to Rs 7.53 lakhs against as much as Rs 21.62 lakhs for 1956-57. The amount provided for Depreciation is lower at Rs 3.03 lakhs against Rs 4.67 lakhs. A sum of Rs 30,750 is transferred to Development Rebate Reserve. The provision for Taxation is very much lower at Rs 2 lakhs against Rs 10.50 lakhs. The dividend is, however, maintained at 12 per cent.

An Ambassador's Duty

IF cordiality in Indo-American relations has survived many a situation wherein there seemed to be a complete lack of understanding between the two countries, we owe this fact not a little to the dedicated work done by a succession of Ambassadors at Washington and in New Delhi. Each diplomat has brought to his job an eagerness to interpret his own people to the country to which he is accredited; more than this, each ambassador has sought to explain to his Government actions of the other, which, not properly understood or seen in its proper perspective, might have been misunderstood. Last week, Mr Ellsworth Bunker, in an address to the Calcutta Rotary Club, offered proof that India continues to be fortunate in having an Ambassador who reckons his task to be such. There is in him a vibrant recognition of India's own objectives and ideals. This moves him to consider it important that, "for the future of freedom and democratic institutions in the world", it was necessary for Indians and Americans to learn to work closely together. For America's part, and it is essential that we also realise this, the differences that exist are merely "a quality of friendship." The American Ambassador has quoted Mr Chagla as saying that a complete identity of thought and ideas "is not possible between two individuals, much less between two independent nations." What counts, instead, is that the "shared beliefs" are common to America and India: the jealous espousal of democracy, the adherence to the rule of law, the due regard for means as much as ends, and this above all, the vouchsafing of the inalienable rights of man. It is these shared beliefs which have prompted a politically sensitive America not to neglect or overlook an India that avows a strict and honest neutrality.

What could the world's richest democracy do for the world's largest democracy? Mr Bunker uses humble words:

"We of the United States during the past six years have been privileged to participate in the great adventure of India's economic development, one of the great efforts in man's history to raise the lowly and the under-privileged to a place where they can stand erect as free men economically as well as politically."

In the last year alone, the total of US assistance to India has been in the environs of \$600 million. There are, firstly, the agreements under Public Law 480, against which US surplus commodities are made available to us for rupees, and the proceeds whereof are at our disposal in the form of grants or long-term loans. Mr Bunker revealed that another agreement, in an amount of roughly \$50 million, is now under negotiation. Secondly, a credit was given from the Export-Import Bank; the fact that the \$150 million from this source may be disbursed only within the US is not a condition that we can or should cavil against; all that India needs to do is to utilise the credits in capital purchases which, in any case, would have had to be made in America. Thirdly, a sum of \$175 million has been made available from the Development Loan Fund; and this money possesses the advantage that assistance under Public Law 480 has, and it does not have the restrictions imposed on Export-Import Bank credit; Mr Bunker has

emphasised that Development Loan Fund assistance "may be repaid in rupees and can be spent by the Government of India on world-wide tenders and not necessarily in the United States." There were, besides, some other heads of assistance.

The last year provided evidence to the American Ambassador of a quickening in interest among US businessmen in India. It would appear that "an increasing flow of requests" is being received at US consulates about investment potentialities in this country. Then, there was the excitingly successful Small Industries Exhibit which, according to the leader of the mission, has already resulted in over 100 specific proposals for joint enterprises between US and Indian businessmen. Thirdly, Mr Bunker revealed that the eminent American personages in the financial sphere, who had attended the Fund Bank Conferences, had told him that they were "tremendously impressed" by the picture of the India they saw; and they felt that US private capital could play "an important role" toward Indian industrial development. Finally, the American Ambassador suggested that the investment guarantee agreement, recently negotiated, and current negotiations over avoidance of double taxation will both "certainly encourage American venture capital to invest in India's growth."

At this stage, we should like to remark that the utilisation of aids and credits by this country has lagged behind the rate at which assistance is being obtained. For example, it is astonishing that nothing more than a bare start has been made in drawing upon the

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

Export-Import Bank credit. Similarly, the counterpart funds built up against Public Law 480 Agreements are lying idle, and have still to be released to India. Furthermore, so-called Cooley Amendment funds, comprising a portion of Public Law 480 counterpart funds, in a substantial amount are available for joint Indo-US enterprises. We make bold to suggest that this is a state of affairs that calls for the immediate appointment of some administrative-cum-financial expert to expedite aid utilisation.

It is also here that we should like to pay tribute to the generosity that has characterised and activated the American Government programme of economic assistance. But, if US generosity has been unparalleled in the world's history, it is as true that what India is attempting to do is unique. It is therefore fitting that the closest cooperation should typify Indo-US relations. And now, let us leave the last word with Mr Bunker:

"We believe that the aspirations of people for a fuller, more significant life can best be achieved under democratic institutions: That democracy is a force which holds possibilities of unlimited progress for mankind. It is in this belief and in this spirit that we are ready to join hands with other democracies so that we can bring our joint efforts to bear to achieve a better life for their people. It is this which gives to my Government and people a feeling of pleasure and satisfaction that we are able to work as partners with you in this great effort in which you are engaged."

Nagpur Congress

THE Congress session which concluded in Nagpur last week inevitably recalls the momentous session held in the same city thirty-eight years ago. The Congress of 1920 gave the country the leadership of Mahatma Gandhi and blazed the trail of a great movement. In a public speech at Nagpur, Prime Minister Nehru was sure that 1959 would also blaze a similar trail which will lead the country out of the morass of poverty. Certain aspects of similarity between the two sessions may be noted. At the earlier Congress, Mahatma Gandhi gave the call which brought the masses of the people into the struggle for freedom. The 1959 session has drawn up a policy which is designed to harness the energies of the masses more effectively in the fight against poverty. The Gandhian approach to politics is preserved in the resolution on External Affairs. While points of similarity are there, it will not do to labour them too hard. There are also significant points of difference. The Congress of 1920 marked an abrupt break with the old traditions and methods of the Congress. The adoption of a new objective and new methods for its attainment led to furious controversy and the withdrawal of the dissidents, among whom the most prominent was the late Mr Jinnah, from the national organization. The Congress today is a more homogeneous body. Even the most controversial resolutions are unanimously adopted in the open session. While dissent is

permitted so far as is necessary to maintain the debate, the differences are resolved by the time it comes to the point of voting. One cannot be sure that such convenient conformity is a sign of political health.

The resolutions themselves, for all the heat and dust raised over them, only mark the continuation of the policy adopted at Avadi. There is little in the operative part of the resolution on Planning which can be regarded as a radical change of direction. The only new point is the emphasis on the problem of population which makes it essential to step up the rate of investment during the Third Plan period. But for the scare raised on a misreading of the Working Committee's draft last month, the resolution might have passed almost unnoticed by the public. The behaviour of the stock market after the adoption of the resolution confirms the view that the earlier apprehensions were without justification. The suggestion has been made in some quarters that the mention of democratic and socialist society in the last para of the resolution on Planning quietly introduces a radical change of objective. There is little to support this interpretation, for the socialist pattern has been with us for years as the objective of national endeavour. The Planning Commission have incorporated it in the chapter on the approach to the Second Plan. It is now too late in the day to quarrel with this objective

which has been endorsed by all those in the legislature and outside who have extended support to the Second Plan. What is really significant in the new terminology adopted to define the objective is the emphasis on democracy—an affirmation of faith in democratic values and the resolve to preserve them—which in the context of developments in this part of the world is both timely and necessary.

Similarly, the proposal to relate work to wages, which forms one of the seven points for mobilising resources, is the more significant part of a paragraph which also mentions control of profits. The latter is already there in the form of the integrated system of taxes. On the other hand, the labour policy pursued by the Government will have to register a significant advance before it is able to evolve effective machinery and method for relating wage rates to work done and to the level of production.

The presidential address of Mr U. N. Dhebar has made a pointed reference to the apathy of the people and the conspicuous lack of enthusiasm for the practical tasks necessary to secure economic progress. In this respect, 1959 offers a striking contrast to 1920. In a space of months, the Mahatma was able to mobilise an unarmed people in opposition to a powerful Government. But the circumstances are of course different. The fight for freedom acted for the time being as a solvent of class differences, whereas the programme for economic progress sharpens the mutual antagonism of the economic and social classes. And, perhaps, to a people with their traditional negative attitude to life, the call to non-cooperate with the Government made a more powerful appeal than the injunction to form cooperative societies for joint farming. Moreover, before Mahatma Gandhi presented the Congress and country with a revolutionary policy, he had perfected the appropriate technique and, simultaneously with the adoption of the resolution by the Congress, the programme of action was also ready. What is most disturbing about the policy resolutions adopted by the 1959 Congress is not so much their content, as the lack of concrete evidence of adequate preparation to put them into action. Nowhere is this more clearly apparent than in the resolution on land reform. The resolution provides for (1) ceilings on agricultural holdings (2) Cooperative farming, preceded by service cooperatives (3) vesting of surplus land in village panchayats (4) management of these surplus lands by co-operatives consisting of land-less persons (5) a deadline for land reform legislation.

Since the question of land reform came up before the last AICC meeting, which handed it over to a sub-committee, it has been subject to contrary pulls. The resolution as it has finally emerged at the Congress leaves the impression that the sponsors are being driven by unknown forces to destinations of which they themselves have no clear idea. While the resolution only provides for ceiling and strands of thought have gone into the policy on joint farming, Mr C. Subramaniam, one of its principal architects, is reported to have told the Subjects Committee that, for the present cultivators would enjoy property rights in joint cooperative farms. But he thought that ultimately the ownership of land must vest in the community.

On the question of ceilings, neither Mr Subramaniam, nor Pandit Govind Vallabh Pant who moved the resolution in the plenary session, is very clear regarding its justification. The only argument that Mr Subramaniam advanced in support of the idea was that the Congress was committed to the principle of ceilings. Pandit Pant admitted that, formerly, he had some doubts whether it was advantageous to fix ceilings, but now realised that any

delay in taking this step would prove harmful to the country. To judge by published reports, he has not explained the reasons for his present assessment of the desirability of imposing land ceilings. The resolution has called for early completion of legislation on land reforms in order to end the feeling of uncertainty which interferes with production. But there are good reasons to think that implementation will be delayed until the complicated machinery for the purpose—a system of three types of cooperatives—has been set up and is ready for operation. While legislation for land ceiling has to be completed by the end of this year, three years are allowed for establishment of service cooperatives, described as the first step towards cooperative farming. The surplus land available after fixing ceilings will vest in the panchayats and be managed by cooperatives consisting of landless labourers. No time limit has been mentioned for the formation of these two bodies. We can only hope that the time lag between legislation and its implementation

US Antitrust Laws Found Beneficial to American Industry

THE nation's antitrust laws have helped to maintain both equality of opportunity and a free environment in which new industry can grow, according to a major study just published by the Twentieth Century Fund, a leading nonprofit foundation for economic and social research.

The study, which examines how antitrust laws have worked in leading US industries, is titled "Antitrust Policies: American Experience in Twenty Industries." It was written by Dr Simon N. Whitney, former Chief of the Research Department of the Fund and Professor of Economics at New York University. Since writing the study, Dr Whitney has become Chief Economist and Director of the Bureau of Economics of the Federal Trade Commission.

Dr Whitney said in his study that the antitrust laws, particularly since they were strengthened in 1950, have made significant contributions to the well-being of American industry and have received nearly unanimous support from American industry.

In addition to providing fair business opportunities and a more fertile soil for the establishment and growth of new businesses, the antitrust laws have set up barriers against the cartelization of American industry and have discouraged attempts to create giant monopolies, according to Dr Whitney. In fact, he said one has to go back before 1911 to find attempts at monopolization like those promoted at one time in the steel and harvester industries.

Dr Whitney also noted a paradox in the antitrust field. He stated:

"Three classic examples of government defeat were the failures to break up American Can Company in 1916, US Steel in 1920 and International Harvester in 1927. In each case the share of the industry in the hands of the big firm declined during the ensuing decades, although each of these firms remains the leader of its industry and is recognized as an efficient organization."

From this he drew the following conclusion: "Judging by these three examples, a dominant firm is not likely***to retain its original share of the market even if it is not dissolved by antitrust action. This does not necessarily mean that the smaller concerns are more efficient, although often they may be. It means rather that there are psychological, political and managerial obstacles that prevent

will not create chaos in the countryside. It also not clear how these important organizations, which will have a vital role in the maintenance of food production, will be insulated from the baneful influence of village faction or its bigger brother, party politics. The peasants in the countryside, and certainly the landless labourers, cannot be expected to form cooperatives on their own initiative. Who is to help them in setting up and running the cooperatives? Is this to be an additional responsibility of the officials of the revenue department officials or of the C. D. Blocks?

To conceive of 'cooperatives' as the principal agency of agricultural production in our country calls for a great act of faith. If the success in filling their allotted role, Mr Nehru will be fully justified in claiming that the Nagpur session will stand out as "a mighty peak in our history" and that the resolution passed at the session would change the face of India and "give her people living under the shadow of poverty a new life, a new world."

a giant firm from growing at the same percentage rate as smaller firms."

Dr Whitney expressed the opinion that without the antitrust laws there would doubtless be more attempts to create monopolies, merger or otherwise. He continued: "Competition from outside firms, from new-comers and from substitute products might eventually whittle away the monopolist's share of the market, but this process may be forestalled by quick action of the antitrust agencies."

Dr Whitney points out that one ironic effect of the nation's antitrust laws is that progress often results from attempts to outwit them. The laws, of course, are a barrier against the formation of monopolies and Dr Whitney says:

"While monopolies have been shown to possess grave defects—ranging from uneconomic allocation of productive resources to the endangerment of free private enterprise—a representative government—the hope of winning profits which certain kinds of monopolistic position provide is a driving force for both business firm and individual within which our economy might stagnate."

"The firm or the individual may seek profitable patent, the success that comes from making the most popular product, or the reward of special skill and efficiency; both are inspired to their efforts by something different from the hope of earning a 'normal return' under pure competition. Not competition alone, but the combined force supplied by competition and by ambitions of a non-competitive nature, will make a progress economy."

Structurally, the new study is devoted to case-history examination of how the antitrust laws have worked in eight major fields such as oil, coal, steel, chemicals and meat-packing together with studies of 12 notable cases in other industries.

One great unknown in weighing the effect of US antitrust laws, says the study, is how to evaluate the deterrent effects—how to gauge to what extent the mere existence of the laws was responsible for the failure of an industry to engage in certain actions or practices that it might otherwise have tried.

The Fund study concludes that the antitrust laws "are effective as well as cause of the competitive spirit in the United States. A country without such a spirit would not have passed such laws, or would not enforce them."

EDITORIAL NOTES

Landmark in Industrial Relations

The establishment of the Joint Consultative Council of Management at the Tata Iron & Steel Co. Limited is a landmark in industrial relations in our country. The formation of this Council puts the coping stone on the structure of employees' participation in management, which was initiated with the establishment, in August 1957, of 27 joint councils at departmental levels. This was followed up by the setting up of a Joint Works Council in March 1958 and a Joint Town Council in November, 1958.

The question of labour participation in management has been engaging the attention of the Indian Labour Conference for the last three years. A tripartite body set up by the Conference approved in August 1957 a list of ten industries in the private sector, and eight undertakings in the public sector where the scheme could be introduced. The Committee also drew up the draft of an agreement to be executed by the employers and the trade unions before setting up Councils of management; it also defined the subjects on which the Councils of Management would be consulted. An experiment in employees' participation in management was also initiated in Madras in two undertakings, one in the public and the other in

the private sector. The three-tier structure of Labour participation in management at TISCO has been set up in pursuance of an agreement between the Company and the Tata Workers' Union. It is also likely to have a far greater impact on the general pattern of industrial relations in the country.

The success of any such scheme, as Sir J. J. Ghandy explained in his speech at the inaugural function, will depend on an appreciation on the part of all concerned of the terms of reference within which the Joint Councils have to function. The new pattern of joint consultation in Jamshedpur is however being launched under the most favourable auspices. It has behind it the experience of several years of successful working of orthodox methods of joint consultation. The organisation for the purpose has also been built in stages. The ground for the final stage has been prepared by the successful functioning of the departmental joint councils. One feature which augurs well for the future, is the shift of emphasis from welfare to production in the working of these councils.

Tatas have been pioneers in many fields of enterprise. The great contribution made by the Tata Iron and Steel Works at Jamshedpur to the growth of the engineering industry in our country has been acknowledged on all hands. The step they have now taken of associating Labour in the tasks of management is even more significant as a contribution to the solution of problems of social engineering. Professor J. Henry Richardson was not indulging in hyperbole when he described the occasion as an historic one, marking the launching of a great experiment in industrial democracy.

Employment Trends

The employment exchange statistics do not give an exact estimate of the volume of unemployment in the country. Registration is on a voluntary basis and applicants include both unemployed as well as persons already in employment. Nevertheless, the figures give a measure of the growing volume of unemployment in the country, and have been taken by the Planning Commission as the basis for their estimate of the total number of unemployed in urban areas. An investigation by the National Sample Survey a few years back had suggested a relation between the number unemployed and the number of applicants on the live registers of Employment Exchanges. It was found on the basis of a preliminary sample survey in urban areas that twenty-five per cent of the unemployed register themselves. It is not unlikely that the ratio of the number of persons registering at the Exchanges to the total number unemployed has changed in the interval and it will be necessary to make an independent estimate of the total of unemployed in time for the Third Plan.

The study of different types of applicants for jobs and the openings available to them undertaken by the National Employment Service, however affords additional confirmation of the impression that the growth of employment opportunities under the two Plans has not kept pace with the growth in the size of the labour force. During the period covered by the study, from 1953 to 1957, there was a steady increase in the number of applicants on the live registers which, by September last had topped the one million mark. While the number of vacancies notified by employers has also increased, the number of applicants available per 100 vacancies was throughout this period above 2000.

Nagpur to Hyderabad

The Nagpur Plan, which held the field for the last sixteen years as the last word in planning for roads, is likely to be replaced by a successor, even before its full term is completed. The outlines of a new plan, drawn up by the Indian Roads Congress Council, were indicated by Mr W. X. Mascarenhas, in his presidential address to session of the Indian Roads Congress which met in Hyderabad in the first week of this month. The new plan envisages construction of over three lakhs miles of new roads during four five-year plans beginning with the Third. Of the total mileage of 6,57,000 miles of roads at the end of 1980-81 two-fifths, will be surfaced. And when the plan is completed, every 100 square miles of area would have a network of 52 miles of roads.

The Nagpur Plan in 1943 had proposed a programme of road construction at a cost of Rs 370 crores which, over a period of twenty years, would ensure that no village in a well-developed agricultural area would remain more than five miles from a main road. The slow progress in the implementation of the plan in the early stages has made the Government an easy target of criticism. But when it is considered that implementation of the programme on a comprehensive basis was actually taken up only after the inauguration of the first five-year plan, the actual performance will not appear very unsatisfactory, though even the full realisation of the target will not meet the country's requirements. By the end of the first plan, one-third of the target was achieved. With the completion of the second plan programme, two-thirds of the target of the twenty year plan will be achieved within a period of ten years of actual implementation. The performance will appear even more creditable if rising cost of construction, which has nearly doubled the original estimate, is also taken into account. The targets of the new plan, therefore, which aims to double the road mileage in twenty years cannot be regarded as unreasonable, when set against resources and the requirements of expanding road traffic.

Realisation of the target will be facilitated if the road engineers, in addition to drawing up plans for new roads, will also apply their talents to devise new techniques of economic construction. A study of the costs of building construction in Central Government projects had revealed large scope for economy. Construction of roads as pointed out at the Congress, is only part of the story. Regular and competent maintenance is of equal importance, if the roads, especially those built in a fit of popular enthusiasm in Community Development Blocks, are to serve their purpose. In this connection it may be pointed out that the methods of financing roads also require reconsideration. In view of the undoubted benefits to the economy as a whole from the expansion of roads and road traffic, there is a case for meeting the costs of new construction out of general revenue. In any case, there is little justification for throwing the entire burden on motor transport. The expediency of taxing motor vehicles to the limit is also doubtful, when it is remembered that the heavy traffic overflowing from the railways will have to be carried by motor transport.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON[COS] 51/P&M/521/B/58 for supply of 2 sets Pump Capacity 18,000 G.P.H. with suitable vertical Diesel Engine as per specification to be obtained in the Tender schedule. Tenders will be opened on 3-2-59 at 12 noon. Earnest money is Rs. 500/-. (ii) Tender No. CON[COS] 52/H/58 for supply of 1370 Nos plug 3 pin 5/10 amps type—E outer Socket similar to Reyrolle catalogue Ref. No. 3012. Tenders will be opened on 4-2-59 at 12 noon. Earnest money is Rs. 280/-.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 2/- (not refundable) per copy tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Deficit Financing touches new high

BANKING results for 1958 are already somewhat overdue, the only major banks to have made public a summary of their performance being, so far, Dena Bank and the Bank of India. (Two more have since followed). An assessment of the money market situation during 1958 indicates why banks are in no hurry about announcing their results. For, what typified the banking situation during 1958 is the continued growth of Deposits, the while that for a variety of reasons, Advances had been contracting. The picture that the money market statistics afford of 1958 suggests that a considerable decline would have been registered in the profits of the banking system. Having stated this, we may now proceed to an analysis of the various monetary indicators.

Taking up, first, the Reserve Bank figures, it is noteworthy that the expansion in Active Note circulation is double the respective figure for 1957. This, of course, is a phenomenon the explanation for which is partly to be found in the trend in the Reserve Bank's holdings of foreign securities. The import surplus, as measured by the decline in the foreign exchange holdings of the Reserve Bank in the two departments, has been

very much smaller in 1958 than was the case in the preceding year. An import surplus, of course, exerts a contractionist pressure on currency circulation and, hence, the moderation in the balance of payments deficit has indirectly had the effect of a much smaller contractionary impact upon Active Note circulation. In this context, it is also noteworthy that, in the three years since 1956, 1958 is the first year in which there has been an outflow of rupee coin into circulation. For, although Rupee Coin figuring as assets in the Issue Department of the Reserve Bank seems to be Rs 3.53 crores higher, we must remember that this portfolio registered a rise of Rs 5 crores in the second week of April 1958 owing to the Government exercising their option to tender rupee coin for Rs 5 crores and receive credit therefor from the Reserve Bank. Then, on the face of it, the extent of deficit financing seems to be much smaller during 1958. The rupee investments of the Reserve Bank have risen only by Rs 219 crores in 1958 against nearly Rs 400 crores in the preceding year and Rs 258 crores in 1956. In other words, because of a considerable decline in the magnitude of deficit financing, the conclusion should normally be that created money as a cause of expansion in currency was a less telling factor in 1958 than in 1957. Such a conclusion would, however, be incorrect. For, the increase in the rupee investments of the Reserve Bank does not necessarily constitute the whole of the deficit financing incurred during the year, since there are other entities which take up ad hoc Treasury Bills. Furthermore, the rise in rupee investments as shown in the table is net of the tap sales made by the Reserve Bank from time to time

during the year. Indeed, a study of the Treasury Bills outstanding suggests that there was larger recourse to deficit financing during 1958 as compared to 1957. Here, too, we cannot take the figures at their face value. As on the last Friday in December 1958, Treasury Bills outstanding amounted to Rs 1144 crores. As at the end of December 1957, the figure was Rs 1049 crores. Thus, deficit financing would appear to have amounted to Rs 95 crores. But this is to forget that, during the year just passed, Rs 300 crores of Treasury Bills were funded by the creation of a special issue of the 4 per cent 1973 Loan, which was turned over to the Reserve Bank in cancellation of ad hoc Treasury Bills for like amount. Thus, the long term obligations of Government increased by Rs 300 crores by the expedient of cancellation of Treasury Bills with a special issue thereagainst. Actually, therefore, the extent of deficit financing during 1958 is Rs 395 crores; this figure is as at the last Friday in December, and also includes the floating debt in respect of Treasury Bills sold through the auctions. It would follow that, with a slightly higher magnitude of created money during 1958, the expansionary bias given to currency circulation would have been slightly stronger than in 1957. At this juncture, another reservation that we must make is that deficit financing during the current fiscal year has been of very much smaller proportions. By the end of March, 1958, Treasury Bills outstanding had risen to Rs 1295 crores; and deficit financing in the first three months of 1958—or the last quarter of the fiscal year 1957-58—amounted to Rs 246 crores. Thus, created money during 1958 is seen to be at its high level mainly because of the considerable recourse to deficit financing during the last quarter of the last fiscal year.

As far as the Deposits of the Central and State Governments are concerned, the changes that have occurred do not require much by way of explanation. On the one hand, the Central Government's balances are higher by only Rs 2 crores, and that after a substantial dose of deficit financing. On the other hand, the balances of State Governments with the Reserve Bank have improved by Rs 4 crores—but that, too, only because, over the year, the Central Government had advanced vast sums of money. The Reserve Balances of member banks are higher by Rs 10 crores, and this is clearly on account of the easy banking conditions. The rise of Rs 5 crores in the Other Loans and Advances of the Reserve Bank must not be interpreted as indicative of increased utilisation of central banking credit by Scheduled Banks. Indeed, as we shall see, Scheduled Banks' borrowings from the Reserve Bank are at a very much lower level. Instead, the rise in Other Loans is to be explained as indicative of the rise

being played by the Reserve Bank in granting accommodation to State Cooperative Banks, etc., which are also included under this head. That the Scheduled Banks have not been eager borrowers from the Reserve Bank is confirmed by the fact that outstandings of borrowings against Usance Bills by Scheduled Banks during 1958 fell by Rs 19 crores to a level under Rs 2 crores. Lastly, as regards the Reserve Bank figures, Other Liabilities have been marked higher by Rs 3.62 crores as compared with the figure for the last Friday in 1957. It may be suggested that this increase in Other Liabilities may presumably represent a higher level of Reserve Bank earnings arising from the funding of Rs 300 crores of ad hoc Treasury Bills by the sale to the Reserve Bank of Rs 300 crores of 4 per cent 1973.

In summing up the Reserve Bank figures, there are a few remarks which we should like to make. In the first place, in spite of the fact that 1958 has been known to be a period during which slack monetary conditions predominated, the expansion in Active Note circulation has been comparatively higher. This is due, as we have seen, both to a higher level of deficit financing and to a lower volume of import surplus. Secondly, the moderation of the import surplus is due, we suggest, to a number of causes: the import restrictions imposed in 1956 have at last arrested, or at least reduced, the pace at which foreign exchange reserves were being drained; then, it is also likely that receipts of foreign assistance during 1958 have been fairly considerable; moreover, exports have taken a turn for the better during the last quarter of 1958, when the foreign exchange holdings of the Reserve Bank actually showed a rise for five successive weeks. Thirdly, we have seen that, while deficit financing was of the order of Rs 395 crores, the rupee investments with the Reserve Bank rose only by Rs 219 crores. It is at this point that we must remember that, during the year, two special issues of 3½ per cent 1967 and 3½ per cent 1968 in an amount of Rs 60 crores were created and sold to the Reserve Bank. Thus, apart from this element of Rs 60 crores, the rise in the rupee investments of the Reserve Bank traceable to deficit financing would have scarcely been of the order of Rs 160 crores. It is extremely unlikely that the balance of the deficit financing, amounting to over Rs 230 crores, could have been absorbed by entities which are in a position to take up ad hoc Treasury Bills. The conclusion, thus, is clear that the Reserve Bank must have, during 1958, sold a very considerable volume of Government securities. The open market sales of the Reserve Bank in 1958 may be anywhere in the environs of Rs 200 crores. The significance of this development, whereby the Reserve Bank has been able to place on the market, over and above the securities sold directly at the time of the new loans, gilt-edged for an

amount exceeding Rs 200 crores, is, we suggest, momentous.

We may now turn to a study of the State Bank figures. The rise in Deposits is somewhat lower than in 1957, but we can ascribe this to a somewhat smaller accrual of counterpart funds in respect of the Public Law 480 Agreements with America. What is significant is that the State Bank's Advances at the end of 1958 are slightly lower than the level obtaining on the last Friday in 1957. As a result, the State Bank has been compelled—and we use the word advisedly—to increase its gilt-edged portfolio by almost the same magnitude as the rise in its Deposit resources. This is because the counterpart funds placed with the State Bank are in Fixed Deposit Accounts; and, in order that the interest thereon could be paid, it became necessary for the State Bank correspondingly to improve its earnings from gilt-edged, since Advances tended to be rather slack.

The one conclusion that we may here reiterate about the State Bank figures is that, in the future as in the past, the State Bank is likely to invest in gilt-edged, as a sort of "contra transaction," any special Deposits under the head of counterpart funds.

Turning, finally, to figures relating to Scheduled Banks, we may note that the rise in Deposits is rather smaller at Rs 222 crores against Rs 292 crores in 1957. But, then, as against the net rise over the year of Rs 69 crores in Advances during 1957, the relative figure, in 1958, is marked higher by only Rs 9 crores. The inference is permissible that some element of increase in Deposits has been "camouflaged" in being used to reduce Advances. But, from the view point of the banks, this means that

Advances did not serve as an outlet for the additional Deposits secured by banks during 1958.

What has rendered the banking situation fantastic is the fact that all of the rise in Deposits has, during 1958, taken place under the head of Time Liabilities. That is to say, all of the rise in Deposits during 1958 has been in the form of higher interest bearing Deposits. So, with a very considerable increase in Deposits, and all such increase relating to the higher interest bearing Deposits, and with the very small rise in Advances, it is inevitable that Scheduled Banks' profits during 1958 should have been adversely affected. Recognition of this profit squeeze dawned on the Scheduled Banks only around the middle of 1958. At the end of March 1958, investments in gilt-edged of Scheduled Banks were placed at Rs 444 crores, marking a rise, in the first quarter of 1958, of only Rs 11 crores. In the nine months since then, investments in gilt-edged of Scheduled Banks have risen by a further Rs 193 crores, the total increase in 1958 amounting to Rs 204 crores. Let us briefly go over the figures again. Deposits rose by Rs 222 crores. The increase in Advances amounted to Rs 9 crores. Rs 12 crores were utilised in reducing borrowings from the Reserve Bank. And cash balances increased by Rs 3 crores. The bulk, then, of the additional resources of the Scheduled Banks were utilised in enlarging the gilt-edged portfolio.

It remains to add that the magnitude of the rise in the Deposits of Scheduled Banks during 1958 is equivalent to the level of the State Bank's Deposits at the end of 1955. At the moment, the Scheduled Banks are somewhat over-invested in gilt-edged. At the moment, too,

some busy season pressure has been felt. At the moment, lastly, Deposits appear to be static. But if there should be, as we believe there must be, an upward trend in Deposits once again, then Scheduled Banks will again face the problem of what to do with their money. It is in such conditions that we anticipate the prospects for gilt-edged as being cheerful during 1959—certainly, as cheerful as 1958 has proved to be.

Busy Season Marches Ahead

The progress of the busy season lay evidenced in the following changes in banking statements:

(1) Active Note circulation, during the week ended January 9, rose by Rs 25.36 crores to Rs 1627.36 crores; (2) Rupee Coin went out into circulation for the sizable amount of Rs 1.74 crores; (3) the Reserve Balances of Scheduled Banks declined by Rs 7.17 crores to Rs 69.39 crores; (4) the Other Loans and Advances of the Reserve Bank rose sharply by Rs 12.56 crores to Rs 89.99 crores; (5) the Advances of the State Bank rose considerably by Rs 5.68 crores to Rs 179.91 crores; (6) at the same time, the State Bank's Deposits were drawn down by nearly Rs 12 crores to Rs 464.87 crores; (7) as a result, even after increasing its borrowings by Rs 12.83 crores to Rs 15.68 crores, the State Bank's Cash in Hand and with the Reserve Bank fell by Rs 6.81 crores to Rs 24.04 crores; (8) then, during the week ended January 2, the total of Advances of Scheduled Banks rose sharply by Rs 16.36 crores to Rs 883.16 crores; (9) Scheduled Banks' borrowings from

the Reserve Bank more than doubled to Rs 22.82 crores from Rs 10.95 crores; (10) and, finally, Cash Balances of Scheduled Banks fell by over Rs 7 crores to Rs 168.47 crores.

Such, the progress of the busy season. For the rest, Balances Held Abroad in the Reserve Bank returns showed a further rise of Rs 2.52 crores to Rs 27.04 crores. Also discernible in the Reserve Bank returns were inter-governmental transactions which resulted in an increase in the Central Government's Deposits and a decline in the Deposits of the State Governments. Then, in the State Bank return, investments in Government securities, after a lapse of several weeks, showed a rise of Rs 1.58 crores to Rs 273.27 crores. Finally, in the return of Scheduled Banks for January 2, a further fall of Rs 3.56 crores to Rs 634.02 crores in gilt-edged investments was to be noted, this presumably being due to the fact that no Treasury Bill auctions were held during that week and the maturing bills were repaid.

We understand that the State Bank of India, with a view to providing facilities for international passengers, has opened two exchange bureaux at Dum Dum airport. These bureaux will work round the clock on every day of the week. This, one more facet of the increasing banking services being rendered by the State Bank.

Bank Profits

Bank profits are as expected—rather, as apprehended. Bank of India, Central Bank and United Commercial have announced their results; and brief analyses follow.

Bank of India's profit has declined from Rs 93.47 lakhs to Rs 85.77 lakhs, subject to audit. The dividend has been maintained the provision for tax has been cut by Rs 5 lakhs to Rs 25 lakhs; and the carry forward, which is subject to bonus, is placed at Rs 28.71 lakhs against the corresponding figure of Rs 31.02 lakhs.

The balance of profit of Central Bank has fallen from Rs 108.7 lakhs to Rs 101.42 lakhs. The dividend has been maintained; the provision for tax is higher by Rs 3 lakhs at Rs 16.50 lakhs; the amount transferred to Staff Gratuity Fund is sizeably higher by Rs 3½ lakh at Rs 10 lakhs; bonus to staff also absorbs Rs 2 lakhs more at Rs 1 lakhs. The carry forward is little over Rs 1 lakh lower. The provision for investments account (Rs 15 lakhs) has been skipped.

United Commercial's profit has come down to Rs 45.38 lakhs from Rs 59.90 lakhs. The dividend maintained, bonus to staff absorbed slightly more at Rs 7.25 lakhs, transfer to Reserve is Rs 5 lakh lower at Rs 14 lakhs, and the provision for tax is more than halved from Rs 18.50 lakhs to Rs 9 lakhs.

Government Loans vs. Equities

By Paul Einzig

THE rising trend in equities that was proceeding with few interruptions throughout 1958 came to an abrupt halt soon after the turn of the year. There was a surprisingly sharp reaction which could not be explained solely on the ground of profit taking after a prolonged rise. What was even more unexpected simultaneously with the setback in

equities there was a sharp rise in the market for Government Loans especially in long-dated and irredeemable stocks.

Evidently there was a certain amount of investment switching from equities to Government Loans, as a result of the narrowing of the difference in the yield on the two types of securities.

Circumstances might well arise in which the difference could disappear altogether and in which the yield on Government Loans could rise permanently and substantially above the yield on equities. The present assumption that the exist-

ing difference is too narrow would be justified, however, if 1959 proved to be a year of deflation. That would mean a lowering of interest rates causing a rise in the gilt-edged market and a decline in industrial profits causing a fall in equities. Beyond doubt a further decline in short-term interest rates in Britain may safely be anticipated. Following on the successful return to convertibility the authorities may now consider it safe to reduce the bank rate once more.

At the same time, second thoughts about the immediate prospects of equities are not altogether un-

reasonable. Beyond doubt the year 1959 will be a year of inflation and will witness a further rise in prices. During the next few months, however, it is not certain whether industrial firms will be able to pass on to the consumer the increased costs resulting from wage increases.

The influence of wage increases on consumer demand is bound to prevail in due course. Industrial firms will be once more in a position to pass on to the consumer all the increases in their costs and to serve a wider profit margin. This will lead to an increase in the demand for equities and to renewed unpopularity of Government Loans.

In the long run there can be no reprieve for Government Loans and other fixed interest bearing securities. Wage inflation has condemned them to depreciation not only in terms of money but much more in terms of purchasing power. Holders are doomed to be hit both ways. They will have less pounds, dollars etc. to spend and the purchasing power of their monetary unit will decline.

While it may be profitable in the short run to take advantage of temporary rallies in Government loans, investors who are concerned with the long view are gradually switching over to equities. In 1953 the Church Commissioners of England held British Government loans to the amount of £89 million and equities to the amount of £21 million. By 1958 their holding of British Government loans declined to £20 million and their holdings of equities increased to £73 million. If a highly conservative investor such as the Church of England undoubtedly is deemed it advisable to transfer the bulk of its capital into equities there can be little hope for a sufficient permanent demand for Government loans to maintain them at reasonably high prices.

Let us now consider its political aspects. If, as seems possible, the Berlin situation should lead to a crisis during the spring it is bound to affect both equities and Government loans. On the other hand, should the political factor assume the form of a Socialist victory at the General Election the immediate reaction is bound to be more unfavourable to equities. Fears of nationalisation without adequate compensation, additional taxation and other anti-capitalist measures are liable to cause a fall in equities even before the election unless the Gallup Poll and other indications point clearly towards a Conservative victory.

Taking a longer view, however, a change of Government need not necessarily be adverse to equities. Cheap money and the abandonment of the resistance to inflation is liable to increase industrial profits. Moreover, it is the declared intention of the Labour Party to buy up the control of a large number of leading industrial firms and this demand is bound to put up the prices of equities. At the same time the rise in Government loans is likely to be checked as and when Socialist policies lead to payments crises.

January 17, 1959

Hessian Stocks at New Low

THE jute markets have ruled weak during the past week in the absence of fresh foreign interest. In earlier dealings the hessian section maintained a steady front largely in view of its satisfactory statistical position as disclosed by the figures for stocks of jute goods at the end of December 1958. Total stocks show a rise of 4,500 tons over the previous month at 109,900 tons. But the increase has been shared by sacking goods and other varieties only. Hessian stocks stand at the new low level of 15,800 tons as compared with 17,300 tons at the end of the previous month and 25,200 tons at the end of December 1957. Stocks of sacking have gone up to 80,400 tons from 75,500 tons in the previous month. They compare with 38,400 tons at the corresponding date of the previous year. Other varieties are at 13,700 tons as against 12,600 tons and 11,400 tons respectively.

Now that the figures for production of jute goods for the last month are made available, it is possible to have an approximate idea of the conditions prevailing in the jute goods industry and trade during 1958. Production of jute goods during December has amounted to 96,500 tons as compared with 87,000 tons in the previous month. During December 1957 production amounted to 92,800 tons. The difference in the three figures is to be attributed to the difference in the number of hours worked by mills during the three months in question. The hours worked are 217.5 for December 1958, 197.5 for November 1958 and 209 for December 1957.

Taking the year 1958 as a whole it will be found that production of jute goods has totalled 1061,800 tons as compared with a total of 1029,900 tons recorded during the previous year. Output of hessian has amounted to 407,100 tons as against 414,300 tons while output of sacking has increased from 548,700 tons to 582,400 tons. It is evident, therefore, that the shifting of the emphasis from sacking production to hessian production which has been made by mills during the year has not become quite effective during most part of the year. During the last month the increase in production has been quantitatively equal in both the main sections. For output of hessian has increased to 40,100 tons from 35,800 tons while that of sacking has increased to 49,200 tons from 44,900 tons.

The higher output is, however, not accompanied by a correspond-

ing trend in despatches. From the two sets of figures for the month of December 1958 it can be deduced that despatches have been in the neighbourhood of 92,000 tons. Adding this to the figures for the 11 months ending November the figure that will be obtained will be 1021,200 tons. This will approximately represent the despatches for the whole year 1958. This compares with the total despatches for 1957 of 1043,500 tons. The lower despatches during the past year are largely due to the fall in the exports of heavy goods. A further analysis of the figures will disclose that despatches of hessian have been at a higher level than in the previous year. It is interesting to note that during December 1958 despatches of hessian have exceeded the month's production.

In marked contrast to hessian, sacking is in a position to cause considerable anxiety to the industry. It may be recalled that stocks of this category of goods have begun to show a rising trend from as early as March 1958. This trend remained unchanged up to the end of July. From August a steady decline has been recorded up to the end of November when stocks stood at 75,500. The trend has again been reversed as at the end of last month stocks have been placed at 80,400 tons. The contrast between the two sections can be better appreciated if it is noted that current stocks of hessian are less than half a month's production while those of sacking are about two months' output.

The jute goods market opened the week last Wednesday on a quietly steady note but the undertone became weaker still in later dealings on the publication of the stock figures. The hessian section, however, continued to rule steady due to the satisfactory statistical position of this category of goods. A contributory factor for the reactionary tendency has been the sales by some mills at the prevailing levels. Hessian Ready was done at Rs 42 while B Twills Ready was placed at Rs 94.55. The fact that demand in the hessian section is still confined largely to ready delivery goods is brought out by the sizable difference in rates between ready and even near delivery positions. For Hessian January was done on the same day at Rs 40.65.

Trading was somewhat active on Friday as there were reports that Government had invited tenders for the supply of a sizable quantity of heavy cees. However, in view of the continued absence of foreign enquiries prices showed little improvement by close. All sections benefited to some extent on Saturday with price levels showing an upward tendency. This trend however proved short-lived as on Monday the market ruled quiet except for the ready position in hessians. The reactionary tendency became well pronounced by Wednesday when reports of a decline in burlap consumption in US during December were added to other adverse factors.

The raw jute market ruled dull and generally unchanged during

Export Types Dearer

THERE has been a substantial improvement in demand at the Tea auctions held in Calcutta during the past two weeks. This is mainly due to a number of favourable developments. Egypt has operated on a larger scale and she is to buy 10 million pounds in the next few weeks. The UK, Russia and Ireland have also bought the usual quantities. The trade thinks that, under the recent trade agreement, Russia will accelerate her purchases. Secondly, there are official indications that Assam Carriage Tax and West Bengal octroi duty might be relaxed for interior grades produced in the Cachar and Tripura areas.

Considering that there is likely to be surplus amounting to over 50 million pounds in 1958 as compared with 1957, no spectacular improvement in the price is expected. But, if indications of an increase in consumption prove correct, it is possible that the longer-term trend will remain steady. In any event, the price of superior grades looks like being maintained by a shortage of supplies.

In this connection, it is encouraging to note that tea consumption in the USA has reached the second highest level in history, in 1958, and is expected to continue to rise next year. The industry's overall optimism for the current stems from stepped-up promotion and advertising plans collectively through the Tea Council and individually by the brander packers.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 64,367 packages. There was a strong and general demand, plain and Medium BPs and Fannings being fully firm and often dearer. Some of the cleaner sorts were sold above valuations. Medium Assam BOPs and Tippy types were a comparatively weak feature and were 10 to 20 nP per pound easier, while OFs in this category came in for less competition and eased by 10 to 15 nP, a number of lots being withdrawn earlier in the sale.

There was a stronger demand for CTC Assams and, while prices for the best were irregular showing little change on balance, cheaper sorts were generally sold above valuations. Whole Leaf grades were firm

the week under review. In the absence of mill interest prices tended to sag but in view of Government's active interest in the welfare of growers, sellers seemed to be less inclined to discount rates than some time ago.

to dearer, especially the more stylish ones. There was a fair demand for Darjeeling teas. Non-wither legg-cut teas were rapidly absorbed at firm to dearer rates. Following rates were quoted:—Clean Black Pekoe Rs 2.00 to Rs 2.04; Plain Broken Pekoe Rs 1.68; Plain Fannings Rs 1.72 to Rs 1.76; Medium BP Rs 1.58 to Rs 1.62; Medium Fannings Rs 1.76 to Rs 1.84; Best Assom CTC BP Rs 2.15 to Rs 2.20 (nominal) and Best Assam CTC Fannings Rs 2.30 (nominal).

In the Internal Sale offerings consisted of 17,470 packages of Dusts and 1,859 packages of Leaf grades. There was a strong general demand for Dusts. Prices for clean leaf orthodox grades ruled fully firm to dearer with black leaf exportable types and the smaller colour grades fetching up to 10 nP per pound above last rates. The strongest feature of the sale was the enquiry for CTC grades which ruled irregularly dearer. The poorer and medium sorts fetched rates up to 10 nP above last, while the better sorts advanced by up to 20 nP and sometimes more. Following rates were quoted:—Medium Dooars Dust Rs 1.78 to Rs 1.80; Medium Assam Grainy Dust Rs 1.74 to Rs 1.80; Medium Assam CTC Dust Rs 2.00 to Rs 2.15 and Best CTC Assam Dust Rs 2.50 to Rs 2.90 (nominal). There was a good demand for Leaf grades at dearer rates.

In the Export Quota section, business was reported done at rates varying from 3 to 3½ nP per pound.

In the Cochin market about 1.3 million pounds of Leaf teas were offered for export in the first sale of the New Year. Quality was rather irregular although some few medium and medium teas showed improvement. High-grown were a little disappointing and some of these declined slightly in quality. A feature of the sale was the demand for clean black leaf broken and fannings. Following rates were quoted:—Low Medium Rs 1.50 to Rs 1.60; Medium Rs 1.65 to Rs 1.80; Good Medium Rs 1.90 to Rs 2.25 and Quality Rs 2.10 to Rs 3.65.

In the Colombo market, offerings were 6,440,477 packages. There was a good demand. High-grown teas were lower, particularly the best liquoring kinds, which were considerably lower. Medium teas were about steady, while low-grown teas were slightly dearer.

In the Chittagong market, offerings consisted of 5,734 packages of Dusts and 16,392 package of Leaf grades. The market for Leaf grades opened As 4 to As 6 per pound dearer and, except for Whole Leaf grades, strengthened throughout the sale. Commonest kinds were in keenest demand, while legg-cut teas found ready buyers at around Rs 2-7-0. In the Dust section, prices were quoted As 5 per pound dearer. Plain Sylhet Dust was quoted at Rs 2-3-0.

In Mincing Lane, offerings were 75,000 packages. Buying was selective, because of the indifferent quality of much of the tea catalogued. A lot of "rains" teas are now being marketed from North India, while quality of the Ceylon offerings was generally lower.

MUKAND
serves
the Cement Industry...

MUKAND makes both Carbon and Manganese Steel Castings in a variety of specifications, sizes and shapes for the Cement Industry. These include Lining Plates, Hammers, Beaters, Grate and Grizzly Bars, Diaphragm Walls and many, many others; also Manganese Steel Jaws, Digger Teeth, Corner Shoes etc. for Excavation, Quarrying and Crushing Machinery and Equipment.

For your needs of Carbon and Manganese Steel Castings, large or small, call in MUKAND to ensure a high standard of quality and prompt delivery.

Exports in September

Tea earned the biggest amount of foreign exchange for India in September last. Its exports during the month were valued at Rs 16.41 crores representing about 28 per cent of the value of total exports.

It was followed by jute fabrics. Rs 6.41 crores worth of which were exported. Exports of bags and sacks of packing, both new and used, and cotton fabrics were estimated at Rs 4.95 crores and Rs 3.84 crores respectively. The value of other principal articles of exports was: Leather Rs 1,66,66,195; raw cotton (other than linters) Rs 1,65,41,066; edible nuts Rs 1,54,09,269 and manganese ore and concentrates Rs 1,05,46,674.

Imports of rice during the month were valued at Rs 2.55 crores, wheat and spelt at Rs 2.17 crores and iron and steel at Rs 1.99 crores. Some of the other main articles of imports were milk and cream, copra, fuel oils, vitamins and antibiotics.

The United Kingdom was the main source of India's imports and was also its best customer. The volume of trade with that country was about 25 per cent of India's total trade—the balance was in India's favour. With Pakistan, India had a favourable balance of Rs 18,11,000.

The following is the break-up of India's foreign trade (merchandise) for September in principal commodities and with principal countries, according to information available with the Department of Commercial Intelligence and Statistics, Calcutta.

EXPORTS	
Principal Articles	Value in Rs.

20. Mica, uncut or unmanufactured, in sheets or blocks, films and splittings; scrap mica, unground or ground	73,70,822
21. Iron ore and concentrates (except pyrites not roasted)	94,20,115
22. Iron and steel scrap	20,76,322
23. Manganese ore and concentrates	1,05,46,674
24. Bones, ivory, horns, hoofs, claws and similar products	13,72,052
25. Plants and parts of plants for use in dyeing and tanning whether ground or not	6,61,928
26. Natural gums, resins, balsam and lacs	52,82,273
27. Coal (anthracite, bituminous, sub-bituminous, lignite)	60,83,367
28. Mineral jelly and waxes (incl. petroleum)	9,84,779
29. Linseed oil (crude, refined or purified)	23,64,810
30. Cottonseed oil (crude, refined or purified)	7,091
31. Castor oil (crude, refined or purified)	23,67,679

Principal Articles	Value in Rs.
32. Hydrogenated oils and fats	2,82,810
33. Essential vegetable oils	20,01,483
34. Leather	1,66,66,195
35. Cotton yarn and thread, grey (unbleached) not mercerized	27,20,539
36. Cotton yarn and thread, bleached, dyed (coloured) or mercerized	17,93,290
37. Cotton fabrics, grey (unbleached)	1,74,84,162
38. Cotton fabrics, other than grey (bleached, dyed, mercerized, printed, or otherwise finished)	2,09,16,212
39. Fabrics of jute	6,41,25,730
40. Ribbons (other than of silk and of synthetic fibres) trimmings tapes and bindings of all fibres except elastic	8,89,113
41. Cordage, cables, ropes, twines, and manufactures thereof (fishing nets, rope makers wares)	10,19,893
42. Bags and sacks for packing, new or used	4,95,68,975
43. Blankets, travelling rugs and coverlets of all materials	12,97,950
44. Bed-linen, table-linen, toilet-linen, and kitchen-linen	19,42,198
45. Carpets, carpeting, floor rugs, mats, matting and tapestries of wool and fine hair, excluding artware	49,47,988
46. Carpets, carpeting, floor rugs, mats, matting and tapestries of textile fibres, other than wool and fine hair	12,13,696
47. Bricks, tiles, pipes and other products of brick-earth or ordinary baked clay	40,748
48. Manufactures of mica (built-up mica products and articles made from sheet mica and built-up mica)	6,53,462
49. Jewellery of gold, silver and platinum group metals, and goldsmiths silversmiths wares including set gems (except watch cases) other than artware	45,626
50. Foot-wear, wholly or mainly of leather (not including slippers and house footwear)	9,30,084

IMPORTS	
Principal Articles	Value in Rs.
1. Milk and cream (including butter milk, skim milk and whey)	1,27,01,513
2. Fish: fresh, chilled or frozen	35,93,112
3. Wheat and spelt (including meslin unmilled)	3,17,98,699
4. Rice not in the per and pimento, and broken rice	2,55,11,596
5. Edible nuts (including fresh coconuts), other than nuts chiefly for the extracting of oil	83,06,032
6. Dried fruits, including artificially dehydrated	37,18,077
7. Beet sugar and cane sugar, refined	763
8. Spices, except pepper and pimento, whether unground, ground or otherwise prepared	48,05,673
9. Tobacco unmanufactured (including scrap tobacco stems)	9,41,377
10. Copra	1,48,30,650
11. Natural rubber and similar natural gums	29,36,572
12. Raw silk (not thrown in hanks or in skeins)	2,60,775
13. Wool or fine hair carded or combed, incl. tops	68,41,043
14. Raw cotton other than linters	1,31,17,563
15. Jute (including jute cuttings and waste)	14,12,823
16. Synthetic fibres in staple length suitable for spinning and waste	62,390
17. Fertilizers-Natural phosphate, ground or unground	20,00,049
18. Sulphur	28,10,079
19. Asbestos, crude, washed or ground	8,06,960
20. Non-ferrous metal scrap	6,74,253
21. Natural gums, resins, balsam and lacs	5,82,510
22. Motor spirit (gasoline and other light oils for similar uses) including gasoline blending agents	14,39,921
23. Lamp oil and white spirit (kerosene and illuminating oil)	1,97,39,467
24. Gas oil, diesel oil and other fuel oils	1,96,12,567
25. Lubricating oils and greases including mixtures with animal and vegetable lubricants	55,448,223
26. Coconut (copra) oil	8,38,540

Indian Finance

US Notes

It is not only the manifest economic and defence interdependence of the United States and other free world nations that give this year's presidential state-of-the-union message to the new American Congress unusual meaning for the world at large.

First, it deals with the state of the world as with the state of the union itself.

Second, in its domestic passages it comes to grips with a duality of fundamental problems which many nations face:

How to cope with the demands of a burgeoning population and with the challenges of ever-widening possibilities of economic growth: how to master the continuous social, economic and cultural changes that are part of current history, and yet provide at the same time for adequate national defence.

It goes without saying that these are problems akin to those of many other nations, even nations at a stage of industrial development far different from the United States or with defence problems immeasurably simpler.

Why then is President Eisenhower's prescription for the United States?

As the communist military threat is continuous, Mr Eisenhower expressly rejects feverish planning toward glibly predicted moments of "maximum peril"; he rejects ups and downs, vacillation between extremes, and precipitous utilization of every technological innovation, even at the price of early obsolescence.

As the possibilities of economic growth also are continuous, long term guides, for five or ten years ahead, must be established and goals defined for both private and public policies.

To that end, the President plans to entrust a committee of educators and representatives of labour, management, finance, the professions and other social strata with appraising "national potentials" and setting "national goals".

Much as was a similar committee appointed in 1931 by President Hoover, the new committee would be concerned with living standards, health, education, civil rights and social and civic opportunities for the individual.

The committee would also seek to determine whether and what government action is advisable in any of these fields, and on what level—local, state or federal.

While it is true that federal expenditures for health, education, science, water resources development, urban renewal, highways and other things have been on the rise, it needs to be said—less misunderstandings occur—that the far-reaching governmental planning programme does in no way, foreshadow departure from the basic principle of confidence in private, competitive enterprise.

What Mr Eisenhower has in mind is more clearly indicated in those parts of his message which deal with problems of the day.

Take the rise in living costs with which he deals rather extensively. His fiscal antidote is to submit to Congress (in about a week) a balanced budget for the Fiscal Year 1953-60. Second, he foresees the need for tax revision and asks the treasury to prepare plans for execution "at the proper time". He asks for prompt new legislation, sharply reducing the high cost of farm price supports which, he says, cannot be carried forever.

On a broader scale he proposes amending the Employment Act of 1948 (which charges the government with maintaining conditions of economic prosperity) to the effect that government be obligated to protect the buying power of the dollar—something it has in fact sought to do for several years.

The President also plans to set up a "continuing cabinet group of price stability and economic growth," to study private and governmental policies on costs, prices, wages and productivity. And he calls for private as well as public self-discipline, especially to stop the wage price spiral.

To this must be added the other tasks outlined for the civil leadership committee on social trends. Mr Eisenhower cites as an example the establishment of "national standards" in school curricula, teacher qualification and teacher pay—standards with which, once they are legislated, local school authorities presumably would have to conform.

All told, the message projects a programme that is ambitious as well as reasonable and looks far beyond the constitutional end of Mr Eisenhower's tenure. And it certainly carries the hallmark of the President's philosophy.

It is pertinent to note that there are many proposals in the state-of-the-union message which coincide with some broad ideas mentioned by the democratic majority leader in the Senate, Lyndon Johnson, the other day.

Among these are proposals for new ways of monetary control; tax revision; anti-inflation measures; educational improvements; an appeal to what the Senator called "great minds" of all walks of life to help seek "new solutions" for the next decade.

There is, of course, no telling what timing and details each—the President who heads the Administration and Senator Johnson who has far reaching influence on Capitol Hill—had in mind.

But at the beginning of a new two-year Congressional session, during which the executive branch of government will be in the hands of one party and the legislative branch will be dominated by another party, it is of enormous importance that their respective programmes—far from galloping off in opposite directions—have fundamentally much in common.

A comprehensive analysis of foreign trade trends by the US Department of Commerce confirms what earlier estimates had indicated: US merchandise imports were well maintained during 1953, despite the effects of the August 1957-April 1958 recession, and despite a sharp reduction in US exports.

While both exports and imports reached their recession lows in the first quarter of the year, exports have remained more than \$4,000 million below the \$20,500 million peak annual rate reached in the first quarter of 1957. Imports, however, have regained more than two-thirds of their earlier losses, climbing back by the third quarter of 1958 to a seasonally adjusted annual rate of more than \$12,800 million.

This means that the value of all US merchandise imports during 1958 dipped only moderately below the record \$13,000 million total of 1957. But even more interesting is the fact that after adjustment for 1958's lower prices, the volume of US imports during 1958 actually proved to be about 2 per cent higher than in the record year of 1957.

The Commerce Department analysis points out that exports and imports have played different roles in the 1957-58 recession from the ones they played in the preceding 1953-54 business decline. Slumping exports contributed to the 1957-58 downturn in domestic business activity; nor have foreign sales been a factor in the strong recovery of the past eight months. On the other hand, expanding exports during the 1953-54 recession helped to limit both the extent and the depth of that decline and played an important part in the subsequent upswing.

Imports, for their part, displayed a far lesser sensitivity to the 1957-53 recession than they did to the 1953-54 decline, when they dropped about 10 per cent in value, or well over twice the 1957-53 percentage dip.

In fact, the Commerce Department analysis reveals that substantial increases were recorded during 1958 in imports of food and non-food consumer items, and of materials and equipment associated with farm production. However, as might be expected from their closer sensitivity to business activity, imports of industrial supplies and materials declined in response to the economic downturn, offsetting the advances scored in other major categories.

Imports of materials associated with durable goods production, which comprise about 40 per cent of total imports of industrial materials, accounted for four-fifths of the decline in that total. But it is noteworthy that the drop in imports of these materials from their high point in 1957 to their low point in 1958 was less than the comparable decline in output of domestic industries using them.

The vigorous upsurge in residential construction in the US during 1958, especially in the latter part of the year, provided the impetus for a particularly startling pick-up in imports of lumber. By September, lumber imports were fully 46 per cent ahead of the 1957 pace,

far outrunning the recovery in domestic lumber production.

Paced by automobiles, imports of finished (non-food) consumer goods in 1958 continued their long-term upward movement, but at a diminished rate. For the first time since 1954, this rate is now moving about parallel to the rate of growth in disposable income of all Americans—their income after payment of taxes and certain other obligations, and hence available for spending as they wish. This is in contrast to a much steeper advance in the import rate in preceding years.

This change is not without its compensations, however. For with domestic automobile output in 1958 proceeding at a somewhat lower rate than in many earlier years, European automobile manufacturers were able to carve out a 7.5 per cent share of the total new car market in the US during the year, as against a 3 per cent share in 1957.

In the past year, Moscow has stepped up its economic pressures against other nations through "dumping," withholding trade, and using economic assistance for political purposes.

"Dumping" means the sudden unloading of a commodity on the international market by a nation or combination of nations, at a price under the home market price or under the establishing international market price. Dumping can drastically affect the economies of other nations producing the same commodity—and if those other nations are struggling to develop their economies, the effects may be disastrous.

Yet in 1958, the Soviet Union deliberately dumped enormous quantities of tin on the market, thereby directly endangering the economy of Bolivia and severely affecting the economies of Malaya and Indonesia.

The full implications of the Soviet manoeuvre were not at first realized. In June, it was reported only that Soviet tin exports had increased sharply, but by mid-August it was clear that a deliberate dumping campaign was under way. By mid-September the world price had dropped 12 per cent.

Bolivia, hardest hit, was deprived of most of her foreign exchange income, and saw her monetary reserve drop to a bare minimum. Mines closed down and unemployment in Bolivia spread. In the U.N. General Assembly, Bolivia, Malaya, Indonesia and Thailand called attention to the Soviet dumping, with the Bolivia delegate accusing the Soviet of "economic aggression...designed to bring about the collapse of the international market."

"Only a few weeks ago the world was given a chance to see how the Soviets could employ the device of withholding trade in order to affect the political affairs of another country. The country in this case: Finland.

The Soviets, displeased with the make-up of the Finnish Cabinet which took office in August of 1958, refused to renew trade agreements critical to Finnish economy. They also refused to accept—and pay for—some goods already ordered from Finland.

Indian Finance

January 17, 1959

Twenty per cent of Finland's trade is with the Soviet Union, and with the coming of winter unemployment was increasing in Finland. On December 4 the Finnish Cabinet resigned. When the news broke, observers recalled the statement made by Nikita Khrushchev to a visiting group of U.S. Senators in September, 1955, to the effect that "we (Soviets) value trade least for economic reasons and most for political purposes."

Not only trade but economic aid as well are utilized in Soviet strategy to gain political footholds or to enlarge political influence in the country receiving the Soviet aid. The Soviets contribute very little to United Nations assistance organizations, but are willing to contribute to specific countries in which they have political objectives—even to the point of sending commodities which are in short supply in the Soviet-controlled area. Such tactics can be particularly effective in countries which need assistance for economic development.

In October, 1956—not long after Soviet bloc shipments of arms to Egypt had begun—Dr. Citrad Sarka, former Deputy Director in the Czechoslovakia Ministry of Foreign Trade—declared that Soviet economic policy was "aimed at political control of the Middle East."

But, just as the Soviets grant economic assistance for political purposes, so they also withhold it—as they withhold trade—for political purposes. The outstanding example here is Yugoslavia.

In spite of the fact that President Tito's government is also Communist, the Soviets deliberately reduced their economic assistance to Yugoslavia in 1958 because the Yugoslav communists differed from them on "ideological matters." A prominent Indian newspaper, the *Hindustan Times*, remarked on that occasion that Moscow "seems bent on pulling the invisible strings of economic aid to realize its political ambitions in Yugoslavia."

It may be argued that economic manoeuvre of this type—dumping, withholding trade, calculated economic assistance—do not actually increase international tensions. In point of fact, however, their political effect can be far-reaching; economic manoeuvring can cause governments to fall.

This, of course, is one of the basic aims of Soviet economic strategy: to undermine the governments of free countries in the hope that national Communist Parties will be able to gain control.

The more one studies the incoming 1958 statistics, the more interesting—and in some respects, paradoxical—appears the behaviour of the American consumer. Already a matter of note in these columns and elsewhere is the fact that estimated consumer spending has hit a new annual high despite the effects of the recession in the early months and despite the first yearly dip in installment buying since World War II.

Now another trend of similarly paradoxical proportions has emerged. "It is that savings institutions across the United States are closing their books on what also has been the biggest year for individual savings

since World War II. This, of course, represents another contradiction of so-called "normal" expectations, what with 1958 having been a year not only of partial recession but also of having record consumer expenditures.

Beyond that, the savings trend should help allay the concern of some experts over a so-called "flight from the dollar"—a concern that the possible emergence of inflationary pressures in the wake of the current vigorous economic recovery might induce people to convert cash assets into goods, securities, real estate and similar holdings. But so far, at least—there has been no discernible rush from the dollar because of an inflation threat, real or fancied.

Adding up all the money put away in the nation's major savings media—commercial banks, savings and loan associations, mutual savings banks, life insurance, U.S. Government savings bonds, credit unions—one finds total new individual savings for 1958 exceeding \$19,000 million. This is a 50 per cent jump over the total saved in 1957, and easily surpasses the previous postwar record—the \$15,000 million stacked away in 1956, a year of rising prosperity.

As a matter of fact, not since World War II years, when the nation's resources were diverted to the war effort and consumer goods production was severely curtailed, have individual savings approached the 1958 total.

What is behind this public passion for savings is something that puzzles the experts, from bankers to government economists. Many have an explanation for developments in the early part of the year. Then the recession may have led anxious consumers to put money aside until the economic weather cleared. In addition, a drop in the yields of government securities may have caused big investors to shift some holdings to bank deposit, on which higher yields were being offered.

But this explanation obviously cannot be accepted so readily for the latter part of the year, a period of strong business recovery. Even now, with over-all economic activity and consumer spending rising to new highs, the savings flow continues apace.

A survey of major savings institutions throughout the country by the reputable magazine *Business Week Reviews* only a slight slackening of the inflow on new savings in the past few months. In fact, *Business Week* has found a widespread confidence among the experts that the high rate of savings will continue during most of 1959. They expect rising personal incomes, generated by the business upturn, to offset to a considerable degree the anticipated large increase in consumer spending, especially for automobiles and home appliances.

The 1958 savings record already is having a significant effect on the thinking of the nation's economists. They generally agree that more money will be available in the coming year not only for consumer spending, but also for business investment. And this is causing government agencies here to revise some of their forecasts for next year.

The Federal Home Loan Board,

for instance, says that the steep—30 per cent—rising in savings and loan accounts this year (1958) means ample mortgage funds will be on tap almost everywhere in the country, thereby further stimulating the strong residential construction market.

The Securities and Exchange Commission says the savings growth will provide more money for capital spending as well as housing.

The Federal Reserve Board, the nation's chief monetary manager, is heartened by prospect that the increased savings will permit less inflationary financing of new plant and equipment, and also will tend to curb interest rate rises.

Britain

SOME politicians in Britain—and others, too—cannot peer forward into 1959 without having their gaze heavily overshadowed by thoughts of an early General Election. They may be right. They may not.

For the independent, or uncommitted, observer, the safe thing to note is that the Government has proposed a programme for the year that could well keep Parliament busy until the last day of July, 1959. It is true that the Government could break off at any moment that the Prime Minister thought fit; and, no doubt, if he did he would adjust the legislative programme accordingly.

But meanwhile there is the programme, and on that a pretty solid amount of work has been begun already.

The most important parts of it all are social legislation: proposals to increase retirement pensions which have already been published in a White Paper and will shortly be embodied in a Bill. Very broad and promising proposals for secondary and technical education are also announced; and there is important new provision being made to put Government money at the disposal of the building societies, to enable them to make loans that their practice and present resources do not allow for to people without capital for buying their own houses.

In the last parliamentary days before the adjournment, the Government published also the Street Offences Bill to deal with prostitution. This arises from recommendations made by the Wolfenden Committee, which studied homosexual offences as well. The latter are not yet dealt with in proposed legislation.

By now there is a wide range of Bills before Parliament. One would renew for a term of five years only the last five of the wartime Defence Regulations of substance, out of 13 currently in force.

The Opposition claims to have discovered some politics in this. Government spokesmen remark that if any future government wants emergency powers it will have to seek the sanction of Parliament for them. Opposition spokesmen have argued that here is an unnecessary attempt to hinder a new government by dismantling, in advance, financial and other controls that the national inter-

est might require it to use. The Government looks upon the affair as "an exercise in constitutional propriety".

Other Bills to be dealt with over the first weeks and months of the session that is to begin again on January 20 include:

(1) A measure, somewhat controversial, to put an end to compulsory arbitration in industrial disputes, because the system, the Government says, is not in accordance with the general tradition of British industrial relations and because also, it says, the Industrial Disputes Tribunal no longer commands the support of the majority of employers.

(2) A factories Bill, to which the Opposition does not in general object; to develop voluntary co-operation between the Government and industrial organizations in matters of safety, health and welfare in factories, to deal with certain temporary provisions touching the hours of work of women and children and to look to the prevention of fire in factories. It is an odd thing that, hitherto, factory legislation, while it has dealt with the fighting of fires after they have begun, has not dealt with their prevention.

There is another interesting Bill going through Parliament to alter the law touching cases where compensation is needed because an individual interest in real property has to be overridden for the welfare of the community. The proposal is to enable public authorities to pay compensation at market value, instead of at technically computed values which have often been unfair to the owner.

Since the end of World War II, 12 new towns have been built in England and Wales, and three in Scotland, under special legislation. Their future governance has to be considered. If they were handed over to the local authorities, that would mean almost 100 per cent municipalization of them, with all their houses, factories, shops, offices, and amenities. Together they represent between £250,000,000 and £300,000,000 of taxpayers' money. The Government proposes to put the future management of the 12 in England and Wales under a permanent commission, which will delegate much of its work to local committees.

Then there is a Bill to raise from £3,250,000 to £5,000,000 the limit of Government money that can be advanced to the Agricultural Mortgage Corporation Ltd., so that, in future it will be able to lend in the region of £70,000,000. The Corporation raises most of its money by issuing debentures on the London stock market. It has advanced some £57,000,000 during its life, more than half of it in the last eight years. Loans average between £4,000 and £5,000, for the purchase of farms, the financing of new buildings and of fixed equipment, and they go to farmers on both small and large scale.

All that is the major part of the domestic matters of the legislative programme. Parliament will be sharp to call for debates on foreign affairs, but that kind of business can scarcely be predicted, any more than foreign affairs themselves can be pre-

dicted. There will be more predictable debates on defence.

These also may well be more illuminating than might be expected. For now, while the Defence Estimates are being made up, the Service departments are able to feel secure about co-operation with the United States and they can plan ahead, on a reasonably economical basis.

In short, there is much work to do. Parliament's winter and early spring show every sign of being among the most interesting of recent years.

★ The British Treasury's recent announcement that all sterling

held or acquired by non-residents of the Sterling Area was to be freely transferable throughout the world and could, therefore, be converted into dollars at the current rate of exchange was fore-shadowed by the Chancellor of the Exchequer at last year's Commonwealth Conference in Montreal and International Monetary Fund meeting in New Delhi. Observers of the financial situation, however, had expected that this step would be taken some time in 1959, and the actual date (December 27) of the announcement came, therefore, as a surprise.

The United Kingdom Government has been able to take this step earlier than expected because sterling has regained a position of strength. Three conditions necessary for the introduction of external convertibility (convertibility for non-residents) have been fulfilled.

First, thanks to the drastic measures taken in September 1957, inflation has been checked in the U.K. Restrictions have been progressively eased or removed since last spring and it is confidently expected that economic expansion in the U.K. will be resumed in

1959 without danger of new inflationary pressures. Secondly, after an uninterrupted rise, from October 1957 to November 1958, the reserves of the U.K.—which, in fact, are the reserves of the whole Sterling Area—are now adequate to bear any temporary strain which unpredictable changes in the international situation may impose. Lastly, U.K. exports kept up better during the recession of world trade in 1957 than was expected and, partly as a result of the end of the American recession, the prospects of international trade are now satisfactory.

The new system of external convertibility does not mean an end to exchange control, and the policy regarding capital transfers to countries outside the Sterling Area remains unchanged. There is no immediate relaxation in import restrictions and payments for services. Thus neither the man-in-the-street nor the business man in the U.K. and the rest of the Sterling Area is directly affected by the new move. But indirectly he will benefit from the advantages that foreign holders of sterling now enjoy.

Non-resident convertibility completes the process of amalgamating the different types of non-resident sterling (sterling held by non-residents) which has been going on since the end of the war. These different types arose from the special exigencies of the war and the immediate post-war period. By March 1954, only two main types were left—official sterling and transferable sterling.

Holders of official sterling (U.S. and Canadian account sterling) were permitted to use this sterling for payments to any part of the world, or to convert it into dollars at the official rate. Holders of transferable sterling could use it for payments to all countries outside the dollar area, but were not permitted to convert it into dollars at the official rates. There had developed, however, unofficial markets for transferable sterling, mainly in Zurich and New York, and since 1955, when the U.K. authorities began to support the rates in these markets, the discount at which transferable sterling could be exchanged into dollars was very small.

This "informal" convertibility marked great progress towards formal external convertibility. Under the new system, holders of sterling in all countries outside the Sterling Area (both the former dollar area and the transferable sterling countries) may use their sterling for payments to the Sterling Area and to all "third" countries, or convert it into dollars at the official rate.

This will contribute to the further strengthening of sterling's use as an international trading currency. (It already finances probably about 40 per cent of world trade). If foreigners hold more sterling, they will be inclined to buy more from the sterling countries.

Indian Finance

January 17, 1959

EXCEPT from the extreme left and the extreme right, there will be much sympathy for the Congress party in its agonies of framing an acceptable land policy. No other economic problem confronting us has comparable twists and turns and apparently unresolvable conflicts of interests. No problem of ours has been so bedevilled by cross purposes between long term and short term urgencies, by clashes of interests that are not easily assimilated into a pat opposition of good and evil. Now that Zamindaris have been abolished in most of the States, choice of sides in the dispute is no longer automatic. In no other problem, therefore, has the pursuit of the will-o-the-wisp of ideological solutions been so persistently impeded by practical difficulties that arise at every turn. Humane men shrinking from the horrors of plying ideological steam rollers—the familiar solution of totalitarians in such contexts—have been forced to think of more acceptable alternatives. As against this, the economic and political arguments for speedy reforms are such as no political party, having to face an electorate on adult franchise, can ignore with impunity for long.

★ In its latest resolution on the subject, the Congress makes no bones about its envisaging an entirely new pattern of rural life. But it is a pattern that has become steadily inescapable for historical and other reasons. Rajaji must be among the very few persons of perspicacity who feel that a species of laissez faire is still a possible policy in the matter. (Rajaji's arguments in this regard must read strange to many who were affected by his limited but vigorous interference with contractual relationships between tenants and landlords in his brief tenure as Chief Minister of Madras). In any case, it is clear that, despite the formidable administrative problems that are likely to be thrown up, realignment of the pattern of rural life cannot be indefinitely postponed.

★ The latest Congress resolution is a programme of such a readjustment. Broadly, it conceives the country's future agrarian pattern in largely cooperative terms. The institution of the village economy is to be the village panchayat and the village cooperatives, both of which are to have immensely enlarged powers and resources. Since it is likely that the resources of a single village cooperative may still be insufficient, it provides that several cooperatives may form themselves into a union. Several types of cooperatives are envisaged and the functions of these co-operatives are to be wide and comprehensive, including provision of credit, storage and marketing

facilities; joint farming co-operatives are to be encouraged with villagers retaining ownership in their land and getting return both for their ownership and work done. As a first step toward cooperative farming, service cooperatives are to be organised within the next three years.

★ The resolution also envisages the fixation by various States before the end of 1959 of ceiling on present and future holdings. Wisely, the actual quantum of the maximum holding has been left for decision by local governments. The ceiling, the resolution makes it clear, is on the size of the holding and not on income. This has been done with a view to assuaging misgivings that the Congress is discriminatory in its attitudes to rural and urban wealth.

★ The resolution also recommends the generally acceptable suggestion for the fixation of a floor price for agricultural produce reasonably in advance of the season so that the tiller may be assured of a fair return. The controversial policy of state trading in foodgrains is also given a blessing in passing.

★ But, in my view, the most interesting suggestion in the resolution is with regard to the way in which land in excess of the prescribed ceiling is to be dealt with. There were revealing shifts in emphasis at the various stages the proposals were discussed, and, in its final form, it is significantly different from what it was at the original stage. These amendments at various stages show, by the way, the different pulls to which thinking on the subject has to submit.

★ As it emerged from the agricultural production sub-committee of the party, the ownership of the surplus land was to vest in the panchayat, and its management was to be in the hands of the village cooperative. As many members were not slow to point out, this idea itself was a departure from various election pledges of the party. These pre-election promises had held out land for the landless in terms that implied exclusive and absolute individual ownership. Many delegates argued as though the change implied active bad faith. And, ironically, they actually repeated arguments that opponents of land

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

cooperative to landless labour only.

★ It is interesting to examine the motivation for successive changes and to speculate on the possible effect of the idea in its final form on the shape of the village economy. There can be little doubt that the successive changes were motivated by second and more compassionate thoughts about the "little man". Though, as I shall presently show, some confusion over the overall pattern has been created by these changes, it is clear that the Congress felt that a village cooperative may still be dominated by the comparatively affluent landowners. In fact, in some parts of the UP and the Punjab, the so-called village cooperatives have been scandalously misused by the bigger fry to whom the landless still look up with the same old abjectness. So, it was necessary that a cooperative with no "class friction" (as a member, in commendation of the idea, euphemistically put it) should be formed. But the further change excluding the small landholder from the cooperative for the excess land is rather hard to defend on equitable grounds. The position of a small landowner is hardly different from that of the landless. It is probable that the second amendment was by way of a gesture really intended to assuage the sense of guilt about not having gone far enough in the promises to the landless. There were excellent economic reasons for not taking these pledges literally, and indeed it would be in the interests of the landless themselves to be part of larger cooperatives than to be eking out a miserable pittance on half an acre each. But there is an emotional streak in the Indian National Congress which manifests itself at unexpected moments. And the small landholder has been the vicarious sacrificial goat for the Con-

reforms employ. For instance, they were eloquent on how pride of possession would provide the erstwhile landless an incentive for greater production.

★ There can be no doubt that this particular argument against the change was rightly rejected. Indeed, one of the most serious objections to the election pledges was that their implementation would encourage fragmentation. It would be ironical if a measure of land reform should accentuate further one of the worst features of Indian agriculture—uneconomic holdings. One of the mitigating factors that make expropriation of holdings over an arbitrary maximum acceptable to the country is the possibility that the expropriated land will be efficiently organised and scientific agriculture will be possible on a substantial scale.

★ But this suggestion of the sub-committee underwent further transformations. The vague reference to the surplus land being cultivated by the village cooperative was clarified further by limiting the membership of this cooperative to landless labourers and small landholders. This, again, was changed almost at the last moment at the open session, by an amendment moved by Mr Nehru. The effect of this amendment was to confine the membership of this particular

gressmen getting rid of their sense of sin.

But, apart from this, the significance to the future agrarian pattern of the emergence of this kind of cooperative farm owned entirely by the erstwhile landless is stupendous. It is true that the picture of the future agricultural pattern is somewhat confusing after the incorporation of these various amendments. For instance, if the surplus land is to be the exclusive preserve of the landless, then, do the others form another cooperative, since the resolution envisages the final adoption of the cooperative principle for all agriculture? But it seems rather unlikely that one village can support two cooperatives; and, even if it did, it is not likely that old class orientations will get more firmly entrenched by this polarisation. If, on the other hand, there is to be only one cooperative in the village and that will be that of the landless, what is to happen to the small landholder who wants to join a cooperative? These and other familiar conundrums will have to be answered and doubtless will be when the details are worked out.

But the truly striking thing about the idea of the landless operating the surplus land is that, overnight, the landless will become, so to speak, the biggest landlord in the village. Of course, I do not have the necessary statistics with me at the moment and conditions are bound to differ from village to village. But even if there is one substantial zamindar in a village, on the basis of current ideas of ceilings, it is clear that the available surplus, after his holding is cut to size, will be far larger than what will be with the rest of the village put together. In that case, for the first time in history, the landless labourer will have come into his own in an unmistakable way.

There is a sense in which there is not only social but poetic justice in this transformation. I am sure that must have been the principal attraction of the idea. Indeed, it is not unlikely that it is the patness of the reversal that might have killed such qualms as might have been felt about the exclusion of the small landowner from the membership of this particular cooperative. Once an owner of land, however pitifully small, is in the picture, then the image of the "meek inheriting the earth" in this strikingly concrete way would be spoiled. I would strongly recommend Congressmen attempting to popularise the programme to remember this aspect of the changeover and present it in this fashion to the public. It is not only the landless but also those about to be expropriated who will see, in this image of an ancient wrong righted, justification of the policy, however personally irksome it may be.

But there is more to it than mere symbol manipulation. Many opponents of reform claim that the so-called idle landowner is far from idle, since he contributes his managerial and scientific skill for pro-

moting good agriculture. This is not universally accepted. But the claims of those who picture the landlord as an idle parasite and the labourer as the true agency of production have now an opportunity of being made good. If their assertion is true, then production in these lands should show a spectacular increase.

If the whole country is to be dotted with cooperatives of the landless successfully cultivating the surplus land, impulses of cooperation on the whole agricultural front will be quickened. Other familiar objections to cooperative farming will also disappear. For instance, one such objection to joint farming has been that it asks for the renunciation of the sense of ownership from those who already own lands. This objection is obviously untenable in the case of a cooperative whose members have never had any lands before and thus have nothing to renounce. (This is an additional reason for not taking the election pledge too literally. If that had been done, it would be well nigh impossible to persuade the erstwhile landless to pool their lands together again. Indeed, older owners may be quicker to renounce their title than these, the members of a new privileged class). A second familiar objection to cooperative farming was difficulties of equitable sharing. Where both criteria of ownership and labour enter in the calculation of one's share in the common produce, there is bound to be heartburn about the precise importance, inter se, of ownership and work. This is eliminated in the cooperation of landless, since the only measure of your due is the work you put in. Indeed, it seems to me that, to begin with, it would be an excellent idea to confine cooperative farming to these cooperatives till the psychological and other barriers between the erstwhile landless and the comparatively privileged disappear by the undoubted increase in the pace of economic amelioration of the former. If the landless make a success of the cooperative idea, they would have served the country and their sympathisers well.

In many ways, these ideas are an act of faith. Those who quarrel with them, fear that such a faith may be misplaced. Certainly, the record of cooperation in this country has not been such as to inspire automatic assent to the idea. The peasants in R K Narayan's novel, *The Financial Expert*, who prefer the informality of the money-lender under the Banyan tree (whose capital is provided by the very cooperative society he prevents them from approaching) are archetypal. Therefore, the administrative tasks involved in making cooperatives are truly staggering. But to argue that the status quo can meet the needs of the time is to be hopelessly out of touch with the larger economic reality. Scientific agriculture, better seeds and implements, fertilisers, cheap electric power, easy credit, a firm price policy and better storage and marketing facilities, it is argued,

will serve agriculture better than tampering with the traditional agencies of agriculture. There are two fallacies in this argument. Firstly, all these aids to better agriculture will be available to the new pattern as well. Their availability does not depend upon the pattern of agriculture, and therefore argumentatively, they neither add anything to the virtues of the old, nor take away anything from the attractions (or, for that matter, the deficiencies) of the new. The second fallacy is more serious because it has a more plausible front. It is said that the imposition of the new pattern may, by diversion of energies, interfere with production. I shall, for argument's sake, accept this position. But the compulsions behind the reforms are not solely those of a desire for increased production as such. The blunt truth is that if the millions of landless labour do not get a square deal and are to live in the squalor in which they live now, it would be an even greater confession of failure than fall in production. The amelioration of their conditions within a reasonable time is no ideological fad but an economic and political necessity. With democracy falling to pieces all around us, and with the attractions of communism so insistently hawked, it would be folly to temporise on this question. This is the real *raison d'être* of the land reform proposals of the Congress.

GATEWAY GOSSIP

SPEAKING at the inaugural session of the Bombay State Businessmen's Convention recently Mr G. F. Kapadia, President, has pointed out that even in a mixed economy, the private sector has to play a very important role over a wide range. It is generally accepted that Government's industrial policy is based on such an assumption. In this view it is to be expected that nothing will be done by Authority to hamper the process of the natural growth of the private sector. On the contrary one would expect Government to do their best to bring about conditions conducive to its efficient working. In their actual working, however, Government's policies pertaining to private industry and trade seem to have laid the emphasis on the regulatory aspect rather than on the main objective of fostering the growth of industry in general.

This tendency on the part of Government to go on increasing the hurdles in the way of private enterprise in the shape of ever increasing rules and regulations has, it is claimed by the business community, contributed in a large measure toward putting the private sector in an unenviable position. It cannot be said that curbing of private enterprise has become inevitable because it is opposed to Government's industrial policy. Mr Kapadia has made it clear that "there is a large measure of agreement between those who guide the destinies of the country and the business community in regard to the ultimate objectives of the economic policy of the country". The main aim of the businessmen's convention is to contribute "to a clear understanding of the position and difficulties of the private sector in industry and trade".

Mr Kapadia thinks that an impartial inquiry into the effects of the industrial policy, the trade policy and the labour policy of Government will go a long way toward bringing about this understanding. The need for such an enquiry arises from the fact that at present these three spheres of policy are operating independently and naturally the main aim is lost. A committee which takes up the three spheres of policy will be in

Businessmen's Convention

a position to know the actual state of affairs in the private sector because these three are the main determinants of growth of the private sector in the country today.

In asking for an enquiry into the working of the three policies Mr Kapadia is not concerned with a reexamination of the basic policy. He has made it clear that his object in referring to them is only to focus attention on the results that have followed the impact of these policies on industrial and economic life in the country. The private sector has accepted a policy of planned development and in this connection Mr Kapadia has pointed out that the first objective plan for industrial development has been drawn up by spokesmen of the private sector. If therefore a reexamination of the effects of the working of the policies of Government pertaining to the private sector is asked for it is only because there are unmistakable indications to show that these policies have retarded instead of helped the growth of industry in general.

There is first of all need for a review of the Industrial Policy Statement in the light of actual performance in the two spheres so far. The idea of keeping a rigid line of demarcation between the two sectors is to be changed allowing more scope for the private sector. Government should also make it a point not to encroach upon the sphere of private enterprise once it has been allotted to it. The various rules under the Industries (Development & Regulation) Act have to be so altered as not to retard the smooth growth of the private sector.

The increasing incursion by the State into the trading activities has caused grave concern to the large number of traders in the country who are in the line for quite a long time. Though it was pointed out at the time when the State Trading Corporation came into being that it was only intended to supplement the normal trade channels, its activities have been extended greatly in the course of the past two years. Recently Government have decided to take over the wholesale trade in foodgrains though it is clear that the food shortage in the country has been brought about by the cumulative effect of various factors without conclusive proof to the effect that traders have also contributed toward bringing about the shortage by their unsocial activities.

Government's labour policy is another restraining influence in the sphere of industrial activity and if the pace of industrial development in the country is to be maintained at the present level it is imperative that early steps are taken to bring about a proper relation between the wage bill and labour productivity. This matter is of vital importance to Government also be-

cause by virtue of the rapid expansion of the public sector, Government are themselves emerging into a big employer. Another important point to be noted in regard to labour policy is that due to the sizeable increase in wages in the country without a corresponding increase in productivity, Indian manufactured goods are becoming quite costly. With the cost of production high our goods when they are placed in foreign markets are finding themselves in a disadvantageous position. This is a serious handicap to a country which is now making great efforts to maximise its exports in a bid to increase its foreign exchange earnings.

The enormous increase in the tax burden during the past three four years has depleted the resources of industries to such an extent as to make them helpless even to meet

their day to day expenditure. Mr Kapadia has pointed out that a dispassionate examination of the taxation policy of Government as applied to the private sector, will reveal that this sector is being made to bear a burden which is absolutely beyond its capacity.

Mr Kapadia has rightly noted that on their part the business community have also to take energetic measures to regain the confidence of the general public. It cannot be denied that the fair name of the business community has been tarnished by misdeeds of a few unscrupulous elements among them. It is true that the large majority of them have continued to adopt fair trade practices. But this fact will not be clearly seen so long as there are a sizeable number of unscrupulous elements among the business community.

Is your ceiling a wet blanket...

GATEWAY NOTES

State Financial Corporations

ACCORDING to a study published in the latest bulletin of the Reserve Bank of India, there has been an increase in loans and advances sanctioned by the State Financial Corporations from less than Rs 1 crore by two Corporations in 1953-54 to nearly Rs 5 crores by twelve corporations during 1957-58. Though the rise in the amount sanctioned since 1955-56 is partly attributable to the increase in the number of corporations in that year, it is evident that the spurt in loans sanctioned also reflects the rising tempo of economic activity in the country. During the five-year period 1953-54 to 1957-58 as a whole the amount of loans sanctioned aggregated Rs 16.1 crores, out of which Rs 10.1 crores or over 60 per cent were distributed. Loans outstanding at the end of the period amounted to Rs 9.4 crores.

It is to be noted that the loan facilities made available by the State Financial Corporations are for the benefit of the small and medium scale industries in the private sector. It has long been realised by Authority that if the industrial development of the country is to make rapid progress, adequate credit facilities should be made available for all classes of entrepreneurs. Accordingly several credit institutions have been established during the past few years with their scope of activities clearly marked. The Industrial Financial Corporation together with the State Financial Corporations may be said to constitute one group.

While it is true that the State Financial Corporations have made commendable progress during the past five years in respect of providing facilities to small and medium scale industries, they are yet to reach a stage wherein they can meet their commitments in full from their own earnings. For during the last five years all the Corporations have been compelled to have recourse to subventions from their respective Governments in order to meet their dividend commitments under the State Financial Corporations Act. The Reserve Bank Study, however, notes that the magnitude of recourse to such subventions has been declining in the case of some of the Corporations.

★

Import Policy

WHILE it is true that the present import policy has brought some difficulties, it cannot be maintained that there is any suitable alternative to a drastic reduction in imports under the prevailing conditions in the country's economy. It

is, however, to be noted that in applying the policy Government should ensure that enterprises are not denied such of their essential requirements as are not available from indigenous sources. It is also incumbent on Government to see that the established trade channels are allowed to participate to a large extent in the import that is allowed so that unemployment as a result of the closure of import firms may be brought down.

It is, therefore, gratifying to note that Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, has assured the All India Importers' Association that these two factors are receiving due attention at the hands of Government. Mr Shastri has broadly defined the import policy as one with three main considerations. Firstly, it will be the earnest endeavour of Government to reduce imports through indigenous production and increase exports so that there is a favourable trade balance for the country. In the second place it is clear that imports of essential raw materials will have to be continued and not further reduced if the development of the economy has to be maintained. Mr Shastri has noted that it will be most unfortunate if the shortage of raw materials leads to a decline in production. He has also made it clear that such a situation has to be avoided at all costs. The third consideration that is to be borne in mind is that imported goods are properly distributed at reasonable prices.

Elucidating the policy further, Mr Shastri has said that in future it will be the aim of Government to liberalise imports in regard to certain commodities and to restrict imports of others whose indigenous production steadily increases. It is also not to be forgotten that the drastic import cut has been a blessing in disguise to industries having new lines of production. Already there are definite indications that many manufacturers have taken advantage of the present shortage of certain types of goods and have embarked upon their indigenous production with success. As far as industries still dependent on imported raw materials are concerned, it is the policy of Government to remove the handicaps in their way toward full utilisation of installed capacity. In this view it will be incumbent on Government to ensure uninterrupted flow of foreign raw materials wherever required. At the same time indigenous industries should take energetic steps to reduce as much as possible their dependence on foreign raw materials. In this connection Mr Shastri has pointed out that in regard to supplies of two important materials, steel and pig iron, the position has shown much improvement in recent months. The problem of pig iron has been solved more or less fully while there is every indication that the supply of steel from indigenous sources will show sizable improvement in about a year's time.

GATEWAY MARKETS

Groundnut touches new high

PRICES on the Bombay Oilseeds Exchange continued to display an upward trend, Groundnut and Castor futures advancing further on bear-covering and speculative support, thanks to reports of business done in groundnut oil with Hong Kong and Burma. Some deals were also reported in groundnut oilcake at higher rates. In the ready section, Groundnut Bold quality was quoted at Rs 33.50 and Groundnut Oil at Rs 17.62.

When news was received that the shipping lines, operating on the India-Atlantic ports, had decided to reduce the freight on FPS groundnut from 305 shillings to 235 shillings, fresh support developed in the groundnut market and the disparity in prices was narrowed down. Then came the export promotion measures from the Government.

The Government decided to grant licences to groundnut oil exporters for the export of oilcake equal to their oil exports. This, however, did not give much cheer to the trade; because the one-to-one ratio failed to offset the loss incurred in oil exports at the current world parity. But, the Government decision to release a further export quota of 20,000 tons of groundnut oilcake for the period ending March 1959, has been greeted by the market by a rise of Rs 15 per ton to Rs 300 for the expeller variety of oilcake.

Shippers are happy as the timely release of the quota will enable them to honour their advance commitments with foreign buyers. London prices for the expeller oilcake have also hardened to £37 per ton. Shippers are optimistic of completing the entire quota within the stipulated period, thanks to sustained overseas demand.

Prices in the Castor futures section developed a hardening tendency in sympathy with groundnut. There were also reports of business done in castor oil with the UK and the USA. Castor ready was quoted at Rs 28.37 and Castor Oil, commercial quality, at Rs 14.44.

Prices in the Linseed section followed the general trend. To some extent, sentiment was helped by rumours that Australia might enter the Indian market shortly. Ready was quoted at Rs 35.50 and Linseed Oil at Rs 17.94.

Cottonseed futures showed a firm trend owing to paucity of supplies in upcountry centres.

★

Gold & Silver

The markets for both Gold and Silver, after ruling initially quiet, developed a firmer tendency towards the close in sympathy with

other commodities. The support for Gold came mainly from the Punjab and Rajasthan on rumours of an imminent demonetisation of 10 rupee notes by Pakistan and a consequent fall in arrivals of smuggled gold from that country. The rumour was, however, contradicted later on. Spot rates moved between Rs 115.62 and Rs 115.94, while Sovereign was quoted at Rs 73.00.

The seasonal demand for Silver appeared to have started in Bengal and Gujerat. There was also a belief that the trade between India and Tibet had considerably declined in recent months and might suffer more on account of the winter season. Speculators were, therefore, trying to take advantage of the situation and pushed up rates. Spot rates moved between Rs 194 and Rs 194.50.

★

Yarn

The Government's decision to allow export of Staple-Fibre Yarn on a first-come-first-served basis during the January/June 1959 period within a ceiling of 1.5 million pounds has been generally welcomed by the trade. Doubts are, however, expressed whether it will be possible to export any staple-fibre yarn at the prevailing high prices. At present, the difference between the imported yarn and the indigenous yarn is as much as 8 per pound for 2 x 40s. Presumably, the Government have allowed exports of staple fibre yarn in view of the anticipated increase in the output of indigenous staple-fibre yarn from 40 to 60 tons per day.

It is not known whether the Government will link up the present export of staple-fibre yarn with some incentive scheme, such as the import of art silk yarns. Unless this is done, the concerned interests feel that it will not be possible for the country to achieve any progress in the export of staple-fibre yarn. As there is a shortage of art silk yarn in the country today, the Government can allow exports of staple-fibre yarn against the import of artificial silk yarn or any synthetic fibre not manufactured in India. If this procedure is followed, the trade will be in a position to compensate for the loss sustained in exports of staple-fibre yarn by selling the imported yarn.

It is pointed out that export of staple-fibre yarn will be costlier than the Japanese product by at least six to eight annas per pound. Mills stress the need for extending the export incentive scheme to staple-fibre yarn. The export permission, however, indicates a change in the supply position of yarn in the country. With a rise in production, prices have already come down by about a rupee per pound during the past few months.

★

Non-Ferrous Metals

Conditions in the Bombay Non-Ferrous Metal market remained generally quiet in the absence of fresh activity. Copper Sheet Cuttings were quoted at Rs 250 per cwt; Zinc at Rs 102 per cwt; Lead at Rs 99 per cwt and Tin at Rs 153 per quarter.

January 17, 1959

WORLD OF COTTON

BOOM-LIKE conditions were evident on the Bombay Cotton futures market during the week under review. Despite intermittent profit-taking and selling by spot houses, the futures prices made an uninterrupted upward march on heavy and persistent short-covering. A leading speculator, who had sold short in expectation of a reaction, nervously covered his outstandings to the tune of about 20,000 bales. Revised lower cotton crop estimates and encouraging advices from the cloth market were also contributory factors. Jharilla March contract closed higher at Rs 655 as against Rs 638 quoted in the previous week.

The volume of arrivals in up-country markets was also a factor determining the price changes. Reports from Vidarbha indicated that all markets in that region were closed till January 11 on account of the Congress session at Nagpur. Moreover, rumours were current in the market that the Government was considering bilateral payments arrangements with some countries to promote cotton exports.

The impressive recovery in cotton futures is based essentially on the encouraging performance of the spot market. Stocks with the mills are still small. Good quality cot-

tons are not easy to obtain. Arrivals are still below normal for this time of the year, which has led many observers to suspect whether the crop will turn out to be even around 50 lakh bales.

Consumption figures for December are expected to show a big rise over November. Cloth offtake is picking up. Overseas enquiries for cloth have been broadening of late. Stocks with the trade in upcountry centres are said to be small. It is generally believed that increased agricultural production, this season, will lead to a sizable increase in the offtake of cloth.

And, if the demand for cloth revives appreciably, there can be little doubt about the trend in cotton prices, particularly when the crop is now estimated around 50 to 51 lakh bales. Prices realised in the previous week's export sales to Japan and Hong Kong hold out the promise of better business in due course of time.

Increase in the pressure of arrivals by about the middle of February may have a depressing effect on the spot market and also unsettle sentiment in futures. But, it bears repetition that Mogila Jharilla March is quoted substantially below the spot market rates.

The Spot market ruled steady in the absence of fresh support from mills. Spinners' demand for domestic styles was moderate.

In the foreign cotton section, business done was moderate in volume. However, despite higher prices, mills bought Egyptian Karnak for immediate shipment since Gezira Sudan of equivalent spinning value was not available. No business was reported done in US styles.

The quantity of foreign growths, licensed for import from September 1, 1958 to 20th December amounted to 98,991 bales. Actual arrivals, during this period, were 76,890 bales of 400 lbs each, consisting of 19,983 bales from Egypt; 36,610 bales from East Africa and 15,762 bales from the Sudan. Arrivals from the USA were only 4,263 bales.

On the export front, there were no developments.

Shipments of cotton from India, during the first four months of the current season, have amounted to 118,988 bales. About 72,210 bales have gone to Japan and 25,911 bales to Hong Kong. China's share is limited to 6,446 bales and that of the UK to 3,310 bales. Export prospects for the coming months are, however, not bright, as Indian cotton is about 3d per pound higher than that of Pakistan and Burma.

According to provisional figures, Indian mills consumed during November 1958, 362,331 bales of Indian cotton and 30,558 bales of foreign growths as against the October consumption of 394,558 bales of Indian and 41,303 bales of imported cotton.

BOMBAY REVIEW

Futures Flare Up

NEW YORK COTTON MARKET:

Conditions in the New York cotton futures market ruled generally steady. There was an early renewal of liquidation in the March contract based on fears of heavy tenders against that position as a result of the steady build-up in the certificated cotton stocks.

Scattered hedging and New Orleans selling added to the pressure. Commission houses, however, supported the new crops and this was attributed to expectations that the mid-January parity price might move up rather sharply. Middling Spot was quoted at 35-70 cents per pound.

DELHI REVIEW

THE sixty-fourth annual session of the Indian National Congress has just ended after nearly a week's deliberations on the state of the nation. Summing up the achievements of the session is rather difficult for various reasons. First of all, except in one case, the policies as finally formulated did not significantly differ from their early tentative shapes, and these early ideas have already been discussed at length by the public. Secondly, the real test of the session is yet to come. It is only in the practical results of the week-long deliberations that one can discern success or failure, as the case may be. Such an assessment will have to await a future occasion. Such an occasion can arise as soon as a few months or as remote as three years from now. The injunction to Congressmen to take a more active part in endeavours of increasing agricultural production is something that will have to be acted upon fairly soon. The nation will have an opportunity of judging how far the Abhyankarnagar session has succeeded in imparting a sense of urgency over this to Congressmen. It is true that exhortation to participate for a week in canal-digging has an embarrassing resemblance to the various "weeks" that Government departments promote as a gesture of public relations. But the week may yet offer a clue to the real success of the present session. It should be possible to judge if this week is just another stunt or if it is observed in the true spirit of its sponsors. If it is a symbol of a continuous concern, it will not fail to make its impact. If, on the other hand, the trumpets and the fanfares are in greater evidence than hoes and ploughs, then we shall all know that it is all a sham. An even truer picture will be provided by watching the activities of the bigwigs in the week after the big event, when the press photographers and the films division men have packed up their kits and disappeared.

A rather more remote test of the success of the present session will arise when 1959 comes to an end. For, one of the most important recommendations of the present session has been the completion of legislation by various States for fixing ceilings on land holdings. The enthusiasm of some members so far ran away with them as to make them suggest that the deadline should be March 1959. This, of course, was an impractical notion, and even the end of 1959 may involve rushing through the measures. But the fixing of a deadline is sure to impart a certain immediacy and we shall know how far the ideas of the present session have been translated into action.

For the most important assessment of the real significance of the

The Congress Session in Retrospect

Nagpur session will come at the end of three years from now and will really be a matter for historic judgment. The resolution on agrarian policy passed in the current session envisages the switchover to cooperative principles in the rural economy. Within the next three years, a large number of service cooperatives will, toward this end, come into being as a first step. The resolution in its final shape has also envisaged a large number of farming cooperatives consisting of wholly landless labour in charge of all the lands in excess of the ceiling. Though fixation of ceiling itself is completed by the end of this year, the administrative tasks of enforcing the ceiling may take some more time. But three years from now, the contemplated farming cooperatives of the landless should be functioning satisfactorily, if Congressmen take the resolution on the subject seriously enough. So, by the time the sixty-seventh session of the Indian National Congress takes place, it should be possible to arrive at a fairly accurate estimate of the real achievements of the sixty-fourth session.

And yet, it is but fair to add that the final formulation of ideas on the shape of rural life of the future is an important gain of the Nagpur session. The picture, as it emerged at the end of various amendments to the original resolution, is not very clear. But the entrusting of the cultivation of excess lands to landless labour is sure to release new forces that might conceivably change the whole structure of the rural economy. The idea of cooperation in farming will get an uninhibited try out in these cooperatives, since complications arising from prior ownership having to be renounced will not arise in these cases. It is interesting that an almost last minute amendment has laid the foundation for a rather interesting new experiment.

On the subject of planning, the Nagpur resolution was substantially the same as the one that the Working Committee had released for public discussion some time ago. The only important addition was to the last paragraph. The addition reads: "The creation of a democratic and socialist state should be clearly and unambiguously placed before the nation as the objective of planning and all the implications of socialism in terms of the individual and cooperative efforts it requires should be explained to the people". A great deal more is being read into this than would seem warranted by the words themselves. It is said that the Congress ideal is no longer a "socialist pattern of society", but a "socialist state". This, it is urged, implied a greater rigidity in any future approach. This interpretation completely ignores Mr

Dhebar's presidential address. Mr Dhebar, if anyone, ought to know. "It is our good fortune," he says, "that the country has at last ceased to think that there is any contradiction between democracy or democratic values and planning.... The shouting against nationalisation, on the one side, and against the existence of the private sector, on the other, is dying out.... The rightists recognise that the State must have a hand not only in planning the industrial future of the country but also in implementing it. Similarly, the communists have also recognised the possibility of the simultaneous existence of a private sector in the conditions of India.... The so-called conflict between a private sector and socialist pattern of society has ceased to confuse our thinking. There is only one economy in India, whether it is financed privately or publicly and that is the planned national economy."

Many may think that Mr Dhebar is being rather optimistic about the confusions and quarrels about the private and public sectors having actually become a thing of the past. Indeed, there has been a recrudescence recently of the old bitterness in this admittedly futile controversy. Mr Nehru himself was sharp in some of his recent utterances on the subject. But there can be no doubt that the proper view to take of our economy is the one admirably rendered by Mr Dhebar. Quarrels about the public and private sectors ought to be, whether they are at the moment or not, a thing of the past. In any case, the Congress thinks through its supreme executive head that the only sensible attitude toward our economy is the one that views it as an integrated economy attempting to "level up" the lives of our people.

What a stupendous enterprise this process of levelling up was, was indicated by Mr Dhebar himself in his address. Giving estimates of the increase in population in the next seven years, he calculated the magnitude of tasks of finding jobs for the increasing labour force, and of providing bare necessities of vast majority of people whose per capita income was as low as Rs 109 a year. In such a context, a massive increase in investment during the Third Plan becomes an inescapable necessity.

On the subject of foreign policy, there was practically nothing new that was said. The really embarrassing questions of our relations with Pakistan and Goa were skirted round with obvious reluctance. Though Bakshi Ghulam Mohamed spoke vehemently about Pakistan's designs—and he was applauded with spontaneity,—there was no inclination to exacerbate relations with Pakistan by wordy warfare. On the question of Goa, Mr Nehru once again

patiently explained the need for practising what one preached. Panch Sheela was as much for practising at home as for broadcasting abroad. You cannot wear the halo of a peace lover abroad without paying the price for it in self-discipline at home.

Organisational matters, too, came up for a half hearted discussion. Dissidents, who came with set faces, relaxed on receiving informal assurances. An attempt by Mr Hanumanthayya of Mysore to make the Working Committee an elected body failed, despite his invoking the practice of the Labour party in Britain. Mr Dhebar himself was more preoccupied with the grass roots of the organisation than with the apex. He spoke about the Mandal Committee with dewy-eyed enthusiasm. There can be no doubt that, unless the Congress recaptures its leadership at the village level, much of the tasks of the next few years it has charted at Nagpur will go completely awry.

One remarkable thing about the session was the complete eclipse of political questions. The accent was almost wholly on economic issues. But the avoidance of one particular political question was remarkable, considering the venue of the session. The question of deliberate bi-lingual Bombay was not so much as mentioned in the Congress session, but elsewhere the question was very much in every body's mind. The near future will provide another opportunity for public opinion declaring itself on the subject. The Congress has put up as its candidate Mr Aney in an ensuing bye-election. Mr Aney's affiliation with the Vidharba Maharashtrais (opposed to Samyukta Maharashtra) is well known. A straight fight between the enthusiasts of linguistic states and their opponents has been made possible by a third candidate withdrawing in favour of the former. In private, Congressmen are not very optimistic about their success.

But, as they rightly point out, the results of a bye-election prove nothing. It is also true that the idea of a bilingual Bombay has not been allowed an honest trial by its opponents. But despite almost continuous harassment, the present Government of Bombay has carried on magnificently. And, if only calm reason prevailed, the Maharashtrais will try to work the idea. But that seems rather a forlorn hope.

And so the curtain was rung down on the 64th session of the Indian National Congress. It may, for reasons I have set out earlier, in history's retrospect prove to be a momentous one. But, to know whether it was really so, it will be necessary for us, albeit with some impatience, to wait for the next three years to unfold themselves.

NORTH INDIAN NOTES

Administration of Delhi

Excellent results are reported to have followed the efforts that were launched in December 1957, to clean up the mess that had collected in Delhi's administrative setup and its Secretariat. Rationalisation without tears, cutting of red-tape, avoidance of delay in the day-to-day administration, and decentralisation of powers were some of the important facets of the drive for streamlining the administrative machinery.

The reorganisation drive included the regrouping of various departments for the purpose of achieving economy in administration as well as for improving the efficiency of work done. Already achieved with respect to some departments, the regrouping is being extended to the offices of heads of departments. All the taxation departments including sales tax, excise, stamps, entertainments tax, and registration etc are being integrated under the direction and control of the Sales Tax Commissioner. Apart from efficiency and better co-ordination of work, this step is expected to result in an economy in expenditure to the tune of Rs 40,000 a year. All other important departments are also to be subjected to a scrutiny on similar lines.

As part of the efforts to effect economy in administration, an Economy Board has been constituted in 1957, and the results that have already been achieved have justified the constitution of such a board. Between April 1953 and September 1958 a saving of about Rs 55,000 has been effected while, between September 1957 and March 1958 the saving in economy was of the order of Rs 5,74,000.

One encouraging feature of the administrative expenditure is the growing ratio of expenditure on social welfare which is shown to have gone up from 59 per cent in 1945-46 to 62 per cent in 1957-58. This reflects not only absolute increase in expenditure on social welfare but also the drastic reduction in avoidable expenditure achieved under the economy drive.

Decentralisation of administration is being sought to be achieved by eliminating interposition of secretaries in the matter of sending files to the Chief Commissioner. Cutting of red tape and avoidance of delay in the transaction of business are other incidental benefits claimed for this reform measure.

Vigilance against corruption and professional misconduct is also stressed and efficiency of work is being strenuously sought after. The working of the Vigilance and

Anti-corruption department has revealed the existence of undesirable elements in the administrative organisation and the need to weed out such elements. Action against culpable cases of inefficiency and misconduct has also been prompt.

*

Education of Women

Concern at the continuing disparity in the education of girls and boys, has been voiced by the National Committee on Women's Education. With a view to achieving parity, the Committee has urged priority to schemes for the education of women. The Committee has also made a number of recommendations for speeding up women's education and has called upon the Centre to take up additional responsibilities in this connection.

The ways, the Committee has suggested for speeding up women's education, include, besides direct Central responsibility for achieving parity, prescription of targets by the Centre, overall guidance to the States in the matter of preparation of development plans for education of girls and women in their areas, and financial assistance.

Other steps recommended by the Committee are appointment of a senior officer of the rank of Joint Educational Adviser at the Centre to look after the education of women, creation of a separate unit in the Ministry of Education to deal with the problem of women's education, establishment of State Councils by State Governments for the education of girls and women, and appointment of a woman as Joint Director to be placed in charge of the education of girls and women.

The scale of financial outlay that the implementation of these recommendations would entail is necessarily of a larger order than at present provided for women's education. The Committee has itself called for the need to set apart an amount of no less than Rs 10 crores for the remaining two years of the Plan in addition to provisions that already exist under the Plan scheme. The Centre is called upon to assume the entire financial responsibility for the programme for accelerating women's education. The system of matching grant, it is pointed out, should be dropped in the case of the education of girls and women. A special fund of no less than Rs 1 crore for the remaining period of the Second Plan under the University Grants Commission, is also recommended.

The Committee is in favour of a special programme for the development of women's education under the Third Plan and has suggested the outlay of about Rs 100 crores for this. With this object, the Committee has called upon the State Governments to prepare in advance plans for women's education for the Third Plan period.

NORTH INDIAN MARKETS

Firmer Tendency in Grains Prices

FOLLOWING brisk demand from consumers and nearby rural areas, prices of foodgrains have touched new high levels in the Hapur market. Wheat is quoted at a record high level of Rs 26.24 per maund for the dara quality and Rs 27.50 for the farm variety. In retail, the commodity is being sold upto Rs 29 per maund. Arrivals are scanty and sales through the fair-price shops are inadequate.

Rice price have also recorded gains due to restricted supplies following the ban on export from surplus districts of the Uttar Pradesh and Punjab States. Gram has improved by about Re 1 per maund on former Punjab advices, while Barley has sought higher levels. In sympathy, Malze and Bajra have developed a hardening tendency, while Urad and Moong have recorded modest gains.

In the Delhi grains market, too, prices have shown a firmer tendency in response to brisk consumer demand in the face of poor stocks. Rice prices have improved slightly following the Government decision to ban the export of paddy from the Punjab. Gram prices have shown a rise of about 50 nP per maund, while Pulses have been ruling quietly steady.

*

Sugar

Conditions in the various Sugar markets remain generally firm; and the recent export announcement has had a bullish effect on sentiment, especially when there is a shortage of supplies due to relatively small arrivals during the past few weeks.

Meanwhile, a section of the industry fears that increased exports will tend to push up internal prices. The total supply, during the current season, is estimated at about 24 lakh tons, including a carryover of about 3.5 lakh tons. The domestic consumption is expected to be somewhat higher around 20.5 lakh tons. With exports of one lakh tons, the balance at the end of the season will, thus, be smaller at about 2.5 lakh tons. This quantity is not considered to be sufficiently large for a country of India's size and there are apprehensions that it may render the market more sensitive to any changes that may take place with the progress of the season.

It is only two months since the crushing season has started. Moreover, due to the sugarcane price controversy for Northern India factories, production in Uttar Pradesh, Bihar and the Punjab, so far, is reported to be below normal. It is true that the Government are anxious to earn

foreign exchange; but it would have been better if the Government had waited for some time to gauge correctly the trend of production before declaring such a large quota at one stroke.

*

Gur

Gur markets are ruling steady. At Hapur, arrivals have been modest at an average of 3,000 maunds daily. Crushers have started producing gur in view of the rising trend in ready gur prices and are buying cane up to Rs 1.21 per maund. The rates for khandari are moving between Rs 30 and Rs 34.50 per maund, according to quality.

The Muzaffarnagar market is also ruling steady and arrivals here are on an average of 10,000 maunds daily.

Khandari arrivals average 2,000 maunds daily. Following are the rates quoted (per maund):—Ready Chakku Rs 16.75 to Rs 17.37; Pansera Rs 16.25 to Rs 16.75; Shakkara dara Rs 16.50 to Rs 17.50.

The market for Khandari rules quiet as demand is slack.

In Delhi, a joint meeting of traders, brokers and directors of the local commodity exchanges transacting hedge trading in gur expressed great concern over the persistent rumours of a likely ban on forward trading. Since the ceiling and floor prices in gur have been fixed and ready prices are higher than futures, rumours of ban on forward trading seem to be baseless.

*

Shellac

Conditions in the Calcutta Shellac market remained unchanged. Pure TN quality was quoted at Rs 65 per maund.

According to the Indian Lac Cess Committee, India has produced 252,000 maunds of lakki lac last year as compared to 233,000 maunds in 1957. Madhya Pradesh has produced 108,000 maunds; Bihar 80,000 maunds; Bombay 32,000 maunds; West Bengal and Assam 10,000 maunds each; Uttar Pradesh 5,000 maunds; Orissa 2,000 maunds and other Indian States 5,000 maunds. The progress of the crop is reported to be satisfactory and the quality is expected to be good in West Bengal and average in Bihar and Madhya Pradesh.

According to the general preliminary report on the Kusmi lac crop for 1958, the total production is expected to be 27,000 maunds as against 40,500 maunds in 1957 and 64,000 maunds in 1956. It is reported that the Kusmi crop has failed this year.

Out of the total production of 27,000 maunds of the Kusmi crop in the Indian Union, Bihar is expected to account 11,500 maunds; Madhya Pradesh 11,000 maunds; Orissa 2,000 maunds; West Bengal 1,500 maunds and other Indian States 1,000 maunds. The crop is reported to be of average quality in all the States.

THE PENINSULA

THE importance of road transport, and the need to take vigorous measures to promote it were stressed at the Twenty-third session of the Indian Roads Congress which met at Hyderabad, last week. The Conference has further spotlighted the major role that road transport has to play in the development of the country by a long term plan of 20 years duration it has drawn for the development of road transport in the country. When implemented, the Plan drawn by the Roads Congress is expected to increase the total road length from 3,31,000 miles to 6,57,000 miles by the end of 1980-81, giving a network of 52 miles of road for every 100 square miles.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON/COS/3/P&M/497/B/59 for supply of (a) 12 Nos. Rock Drills Pneumatic dry type—piston dia. 2½", stroke 2" approx. Approx. weight 48 lbs./52 lbs. shank size ½" hexagonal×4½". The machine should be capable of drilling 12" deep holes in hard rock. Machine to be similar to consolidated pneumatic tool Coy's model C.P. 32P. (b) 12 Nos. Air line lubricators for above. Earnest money is Rs 360/-. Tenders will be opened on 6-2-59 at 12 noon.

(2) Tender No. CON/COS/4/H/59 for supply of 116 Nos. Dou-flux light fittings pole to mounting (3" dia. pipe) complete with G.E.C. holder suitable for 500 Watt. Lamp, similar to G.E.C.'s Cat. F69001. Earnest money is Rs 360/-. Tenders will be opened on 7-2-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipts from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing earnest money as stated above from this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES
S166

Road Transport

Whatever might be the view of the Government spokesmen or their explanation for it, the fact cannot be escaped that road transport development has long lain under relative neglect in comparison with other means of transport like, railways and shipping etc. The question is not whether the Government have erred in over-emphasising the importance of railways and shipping, but whether, considering the importance of road transport which is extremely undeveloped, it should not have been given like treatment in point of allocation of funds along with railways and shipping. The transport plan of the Government is sadly lacking in a proper assessment of the role of road transport in the economic development of the country.

Unless amends are made and steps taken to ensure its rapid development, the indifference to the needs of road transport, is bound to recoil on the economy in the years ahead. A shortfall in traffic capacity at the end of the Second Plan period has been already forecast. Mr. W. X. Mascarenhas, Chief Engineer and Executive (Engineering) Director of the Life Insurance Corporation of India, has in the course of his Presidential address to the Roads Congress, pointed out that there would be a shortfall of between 20 to 25 million tons, in railway capacity alone at the end of the Second Plan period. This could have been absorbed by road transport; but there was need for a programme for accelerating road development.

The present undeveloped nature of road transport in the country is to be traced to the policy pursued by the Governments both States and Centre in levying all kinds of taxes on road transport especially on motor transport without consideration for their restrictionist effects on road traffic. But that was not the only aspect of the road policy of the Government, to have detrimental effects on road transport. A matter of more vital concern was the niggardly treatment meted out to road transport in the provision of funds for development. Mr. Mascarenhas has in this connection pointed out that road development in the country has so far been financed solely out of the user taxes collected by the Centre and the States. What was even more distressing, the expenditure so far as the Centre was concerned, was even less than the actual contribution to Central revenues.

The first and essential step for an accelerated road transport development programme, is therefore, the allocation of sufficient funds. If road transport is to meet its share in the anticipated heavy demand that the economic development of the country would make on transport capacity, it is

necessary, funds on a more liberal scale than at present should be found for it. Mr. Mascarenhas has in this connection, suggested that half of the revenue for the development of road transport should be met from the general revenues. It is needless to say that scope for relief for the road operators should also be found in such an arrangement. High taxation of road vehicles is one of the contributory causes for the retarded development of road transport.

In the context of the confusing systems of road taxation that now obtain in the various States, a co-ordinated policy of road finance remains a major desideratum. Mr. Mascarenhas has suggested centralisation of all the taxes at present levied on motor transport, such as licensing or registration fee, customs or excise duties, sales tax on motor lubricants, motor fuel, spare parts, tyres etc. Allocations to States would be on the basis of the existing State taxes distributed according to the number of vehicles operating in the State for expenditure solely on road development. Further, it has been suggested that the States should be required to match the share thus received, by equal allocations, from their general revenues. Taxing of cart traffic is one of the important suggestions that has been made by Mr. Mascarenhas. This according to him would bring in nearly Rs 10 crores annually for expenditure on road transport development.

An improvement in road transport could be conceived only in terms of a new attitude on the part of the Government, which would embody the suggestions made at the Roads Conference for maximising funds as well as for reducing the present high burden on private operators. There have been some developments in recent times which augur well for the future development of road transport. The Centre has for example set up a transport development council, road and inland transport committee and central transport co-ordination committee. This step however only fills the gap at the organisational level.

The striking of oil at Cambay is another event which marks a favourable turn of factors for the development of road transport in the country. Mr. Mascarenhas has in this connection suggested that part of the addition to the Government's revenues that would be made by the commercial exploitation of this source, should be utilised for the development of road transport.

Mr. Mascarenhas has also emphasised the need for a strong cadre of qualified engineers. In view of the expanding field of road transport, technical personnel has also to be turned out in a continuously increasing stream. Mr. Mascarenhas is very critical of the

treatment meted out to the engineers by the Government. The lack of correlation between their professional worth and their service conditions is an anomaly which Mr. Mascarenhas says should be reversed in the interest of road development. What is needed to attract the best engineering talent to the engineering profession is the revival of the now defunct Indian Service of Engineers and putting the engineering branch on a par with other departments of the administration in point of pay scales.

Above all, there is the overriding need for increasing facilities for training engineers in larger numbers. The present facilities are far inadequate to the future needs of the country. A shortage in the supply of engineers is a currently felt bottleneck in various spheres of development.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. PB/30/GM/WSP/963/A/EA1(58) for supply of 555 Nos. of Element Super Heater Shape I, HSM class as per (Alt.3) of Con. Engineer's Drg. No. 3589/454 and to IRSS R-23-42. Closing date of the tender is 9-2-59 at 3 P.M. Earnest money is Rs 1,000/-.

(2) Tender No. PB/31/GM/WSP/964/A/EA1(58) for supply of 698 Nos. of Element Super Heater Shape II, HSM Class as per (Alt. 3) of Con. Engineer's Drg. No. 3589/45A and to IRSS R-23-42. Closing date of the tender is 9-2-59 at 3 P.M. Earnest money is Rs. 1,000/-.

(3) Tender No. PB/32/GM/WSP/965/A/EA1(58) for supply of 718 Nos. of Element Super Heater Shape III, HSM Class as per (Alt.3) of Con. Engineer's Drg. No. 3589/45A and IRSS Specification R-23-42. Closing date of the tender is 9-2-59 at 3 P.M. Earnest money is Rs. 1,000/-.

Tender forms are obtainable from the office of the Controller of Stores (PB Section) on remittance of Rs 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Firms not on this Rly's list of approved contractors must deposit earnest money in cash as stated above with this Rly's Chief Cashier and enclose his deposit receipts together with a valid Income Tax Clearance Certificate with the tender.

GENERAL MANAGER

MADRAS REVIEW

SOUTH INDIAN NOTES

Arecanut Output

Inaugurating the tenth annual meeting of the Indian Central Arecanut Committee, at Trivandrum, Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, appealed to the arecanut growers to take to intensive methods of cultivation and increase production of arecanuts. Self-sufficiency in arecanut has become desirable in view of the continuing dependence on imports for part of the country's requirements. Imports in 1955-56 had totalled 11.37 lakh maunds, valued at Rs 4.36 crores. Imports had in the next two years declined and stood at 8.28 lakh maunds valued at Rs 2.98 crores in 1957-58. This fall in imports does not, however, reflect any improvement in internal production, being more the result of restrictions on the import of arecanuts and the imposition of import duty on their imports.

The imposition of the import duty and the restrictions placed on the import of arecanuts had the salutary effect in improving the prospects of the indigenous growers of arecanuts by making the price for arecanuts attractive for the growers. Protection that is thus sought to be given to the growers would lose its justification if it does not, in the final analysis, lead to increase in internal production of arecanuts, for which there is vast scope in the country, notwithstanding slight climatic disadvantage in the growing areas.

If production is to be increased, there is need for both bringing more acreage under arecanut cultivation as well as for adopting intensive methods to raise the acreage yield. The great damage done to arecanut palms by pests, lack of good seedlings and lack of irrigation facilities indicate the methods for approaching the problem of raising the yield per acre. The responsibility of the State Governments concerned is great in this task of rationalising arecanut growing. The conduct of the State Governments in encouraging arecanut growing has however left much to be desired.

Research opens new ways for developing arecanut growing under prosperous conditions. The minimum that is desirable in this regard is the full utilisation of the sums provided for the purpose. The Second Plan has provided a sum of Rs 26.5 lakhs for intensifying research on arecanut.

Existence of intermediaries in the chain of marketing is a factor which tends to deaden the incentive of the grower to improve production. The adoption of co-operative marketing by the growers should be the answer to this. Mr. Krishnappa has urged the State Governments to consider proposals for establishing co-operative marketing centres.

Handloom Industry.

The question of protecting the handloom industry has again been brought to the fore by certain adverse developments which threaten the stability of the industry in the country. A decline in exports that had set in since 1953 had kept the people engaged in the industry in a precarious level of subsistence. Against a quantity exported in 1953 at 63.2 million yards, exports in 1957 amounted to no more than 37.51 million yards. Value of exports has also correspondingly declined from Rs 10 crores in 1953 to Rs 5.56 crores in 1957. Exports for 1958 is expected to be even lower than the figure for 1957 actual exports for the first eight months of the year being placed at 21.3 million yards valued at Rs 3.09 crores.

The industry was on the brink of a near crisis when the Ceylon Government announced the ban into that country of Indian sarongs. However, with the subsequent decision of the Ceylon Government lifting the ban, what would otherwise have been a grave situation, has now been averted. The industry is still not past the critical stage, and there is imperative need for measures to stabilise the industry and assure security of earnings to those engaged in the handloom industry.

Inaugurating a conference of the Madras State Handloom Industry and Trade, Mr. R. Venkataraman, Minister for Industries and Labour, has stressed the need for more exports to rehabilitate the industry. In view of the great decline that had occurred in the export of Indian handloom goods, export promotion suggests itself as the obvious solution to the problems faced by the industry. Export promotion, so far as Indian handloom goods are concerned, to be effective, has to concern itself not only with the price factor, but also with the quality of the handloom products. Quality has not been a strong point of the Indian handloom products. Here the difficulties faced by the handloom producers in obtaining quality cotton and other materials have to be recognised and measures taken to ensure adequate supply at reasonable price. In the absence of good cotton produced in the country, imports of Egyptian cotton is a necessity. The decision of the Government to extend facilities for the import of raw materials like cotton yarn, rayon yarn, chemicals, and dyes to exporters of handloom goods outside the co-operative fold is a timely step to encourage production and stimulate exports.

Mr. Venkataraman has discounted the suggestion for limiting the production of mill-made cloth so as to ensure a stable home market for handloom goods. Such a limitation on production in the mill-sector, would stimulate the handloom industry only by making workers at present engaged in the mill sector change place with the handloom workers in their present position and status. Mr. Venkataraman has instead suggested a cess to be levied on mill-made cloth to subsidise the handloom industry.

SOUTH INDIAN MARKETS

Prospects for Coffee

THE Chairman of the Consolidated Coffee Estates Limited has observed that there is every indication that Coffee production in the country may increase at a pace entirely unanticipated. Already, there are thoughts of a possible 60,000-ton crop within the next few years. The current consumption in India is in the neighbourhood of 30,000 tons per annum. Unless this is increased, it must necessarily mean that a home must be found for the balance in the foreign markets. This, in other words, will mean the doubling of present exports.

But, the export prices have been falling steadily and the margin between export and internal prices is so small that the minimum return to the grower can be ensured only by releasing domestic supplies without subsidy. This will naturally put up coffee prices in the internal market and nobody can be sure how the market may react to it.

Quite apart from the uncertainty of future world prices, one cannot help wondering whether it will, in fact, be possible to find a market which will take this extra quantity of coffee, bearing in mind that Indian coffee is, in modern times, a new entrant to world markets, which are already more than adequately supplied by other producing countries.

A stable and expanding market for the produce in India itself is, therefore, a supreme necessity for the continued existence of the coffee industry. At the same time, it is, of course, of equal importance that the country should acquire a more permanent place in the world markets than it will appear at present to occupy.

The year 1958 has established another record in receipt to the Coffee Pool, the highest so far, namely 44,149 tons. It is stated that, despite the untimely rains last month, the yield for the current year may be at least equal to that of the last year. Total exports out of the 1957-58 crop amounted to 14,281 tons as against 15,472 tons sold out of the 1956-57 crop and 8,081 tons out of the 1955-56 crop. The decline in quantity is due to lack of adequate Arabica Cherry coffee suitable for export.

Rubber

The Natural Rubber Bureau, Washington, forecast that Malaya's programme to expand natural rubber output will result in her output rising to 850,000 to 900,000 tons by 1965—a gain of over 30 per cent in seven years. World rubber production in the current year is estimated at 3,425,000 tons

comprising 1,485,000 tons of synthetic and 1,940,000 tons of natural rubber. The USA will produce 1,185,000 tons of synthetic rubber, while the rest of the world 300,000 tons. The natural rubber output will be 680,000 tons by Malaya; 670,000 tons by Indonesia and 659,000 tons by the rest of the world.

Total consumption in the current year is estimated at 3,405,000 tons, while synthetic rubber use is placed at 1,435,000 tons and natural rubber at 1,970,000 tons. Of synthetic rubber, the USA will require 955,000 tons; Britain 80,000 tons and the rest of the world 400,000 tons.

Pepper

Of late, there has been an increase in demand for Indian Pepper from the USA and Russia. Fresh export business is reported to have been booked with the USA for January and February shipments at 22 to 22½ cents per pound. Italy and some of the European countries have also shown an inclination to purchase further quantities.

The sudden demand for the commodity is attributed to scarcity of pepper in Singapore and Indonesian markets. The new crop in those countries will start arriving only after February. With the result, enquiries for Indian pepper are expected to continue for at least two months more. The reduction in freight rates has also aided the bullish sentiment in the market. In Alleppey, the rate is quoted at Rs 543.75 per candy.

Ginger

According to the trade estimates, India's export trade in dry Ginger has suffered a substantial setback during the past season. The quantity shipped between November 1957 and October 1958 has been estimated at only 115,875 cwts as against as much as 193,875 cwts in the corresponding period of the previous season. The sharp fall is attributed to smaller purchases made by the traditional buyers.

A country-wise analysis of exports shows that Aden is the largest buyer at 31,235 cwts or 26.95 per cent of the entire shipments. Saudi Arabia absorbed 15,178 cwts and the UK 13,014 cwts.

Bangalore Silk

Excepting for nominal variations, there has been no marked change in the prices of Silk and silk products in the Bangalore Silk market during the week ended January 8. In Filatures, all varieties maintained previous week's high levels. Among Charka types, second and third qualities moved up by one point each. Cocoons in general exhibited a declining trend. Prices of Reeling Cocoons ranged between Rs 1.50 and Rs 2.44 as against Rs 1.50 and Rs 2.50, while those of Seed Cocoons moved between Rs 3.50 and Rs 10 against Rs 3.50 and Rs 15 in the previous week.

Cheerful Sentiment

Watch-Dog Writes:

STOCK markets have presented quite a cheerful appearance during the week under report. Operators seem to have disregarded the implications of the A.I.C.C. resolution on control of profits and have pushed up rates, although higher levels are not maintained due to some profit-taking. There is, however, an inclination on their part to await the forthcoming meeting of the LIC Investment Committee, scheduled to be held on the 22nd January.

Although profit-taking erased some of the extreme gains, conditions on the Calcutta Stock Exchange remained generally firm.

In broadening activity, equities on the Bombay Stock Exchange were marked up further; but buyers turned cautious towards the close.

The Madras Stock Exchange ruled fairly steady.

Prices on the London Stock Exchange developed a firmer tendency, being influenced by a number of favourable factors.

Wall Street finished the week on a firm note.

Calcutta

Friday Evening.

AFTER a rather long spell of dullness or weak trend, the local Stock Exchange came into its own with operators gaining confidence in the outlook following the proceedings at the Congress session held at Nagpur. There were distinct signs of broadening interest. With the Prime Minister's speech ruling out any imposition of ceilings on urban incomes at the present stage and with sellers becoming reserved, prices developed a rising tendency. Operators were, however, inclined to book profits at higher levels, mainly due to an anxiety to await the outcome of the forthcoming meeting of the LIC Investment Committee, scheduled to be held on the 22nd instant.

Gilt-edged securities provided an outstanding feature in the week's dealings and prices advanced on a broad front. The main support came from the LIC. 3 per cent 1986 Conversion Loan, after opening at Rs 73.70, developed a hardening tendency, to quote Rs 74 at the close.

In sympathy, Bank shares remained steady with Punjab National changing hands at Rs 23 to Rs 24.25 and United Commercial at Rs 67.50 to Rs 67.75.

In the week's dealings, the Jute section attracted the utmost attention and most of the scrips, despite profit-taking, emerged with handsome gains on balance, thanks to sustained support. It was felt that mills might be making a larger margin of profit in view of the low level of prices ruling for the raw commodity and that the minimum prices, now suggested for exports of jute goods, would help maintain remunerative mill working. In this respect, the announcement of an interim dividend of 50 p.p. share by the Howrah Mills Company for the current year as against nil in the previous year confirmed the view held by the operators. Alliance were taken up to Rs 127 from Rs 123 (Rs 125); Budge-Budge up to Rs 150 from Rs 141 (Rs 150); Champdany up to Rs 131 from Rs 125 (Rs 127); Gourepore up to Rs 375 from Rs 363 (Rs 375); Howrah up to Rs 20.50 from Rs 19.24 (Rs 20.50); India up to Rs 16.25 from Rs 14.75 (Rs 16.25); National up to Rs 26.50 from Rs 25.50 (Rs 26.12); New Central up to Rs 13.25 from Rs 12.94 (Rs 13.19) and Nuddea up to Rs 59.50 from Rs 58 (Rs 58.75). Figures shown within brackets were the closing rates for the week.

Although there was an anxiety on the part of operators to await the release of the Price Revision Committee's report, Coal shares moved up slightly in sympathy with the general trend of the market. Burrakur were pushed up to Rs 17.75 from Rs 16.56 due to speculative activity, while New Beerboom were enquired up to Rs 20.25 from Rs 19.44; Central India up to Rs 7.19 from Rs 7.00 and Western Bengal up to Rs 5.94 from Rs 5.81 Bengal scored Rs 2 at Rs 275.

Textile scrips came in for selective enquiry on the hope that the demand for cloth might improve with a fall in commodity prices. The only two bright spots were Jayshree and Kesoram, having sustained support up to Rs 8.12 and Rs 12.31 from Rs 7.94 and Rs 12.25 respectively. New Victoria moved narrowly between Rs 1.19 and Rs 1.25.

Tea shares were devoid of interest and only a few dealings were recorded. Speculation was, however, rife as to whether the Government of India might relax the Assam Carriage Tax and West Bengal octroi duty in order to provide relief for producers of inferior grades, especially in the Cachar and Tripura areas. Hopes were also entertained that, under the recent trade agreement, Russia might accelerate her purchases. This might probably be the reason that there was absence of any selling pressure. Baghmari changed hands at Rs 17.81 to Rs 18; Bhatkawa at Rs 19.87 to Rs 20; Brooke Bond at Rs 15.75 to Rs 15.87; Hasi-mara at Rs 20.12 to Rs 20.25; Jayshree at Rs 11.37 to Rs 11.50 and New Samanbagh at Rs 19.50 to Rs 19.75.

Sugar shares met with scattered interest in view of the obscure outlook for the sweet commodity. Renewed agitation over higher cane

prices and the fear of competition from Khandasari production were the main depressing factors. Carew were marked back to Rs 19.19 from the recent high of Rs 9.56, while SKG met with good demand up to Rs 10 from Rs 9.37; Darbhanga up to Rs 19.75 from Rs 18.25 and Belsund up to Rs 12 from Rs 11.69.

Engineering shares displayed generally a firmer tendency under the lead of Indian Irons which, in turn, forged ahead despite settlement considerations. Against the week-end closing of Rs 25.76, Indian Irons opened at Rs 25.69 and advanced steadily to Rs 26.33 at which level profit-taking brought down the scrip at the close to Rs 26.34. In sympathy, TEXMACO were taken up to Rs 21.10 from a low of Rs 20.65; Marshalls up to Rs 6.00 from Rs 5.69 and Kumardhubi up to Rs 8.31 from Rs 8.12 Britannia changed hands at Rs 10.25 to Rs 11.12.

The Miscellaneous section provided several bright spots, although higher levels could not be retained till the close due to general profit-taking. Orient Paper advanced at one time to Rs 31.10 from Rs 30.05 (Rs 31.00); Titagur to Rs 41.75 from Rs 40.75 (Rs 41.75); Sirpur to Rs 13.81 from Rs 13.44 (Rs 13.56); Indian Cable to Rs 29.44 from Rs 28.31 (Rs 29.44); Indian Aluminium to Rs 16.87 from Rs 16 (Rs 16.37); Indian Oxygen to Rs 23.75 from Rs 23.44 (Rs 23.56); Sone Valley to Rs 5.44 from Rs 5.23 (Rs 5.44); Indian Copper to Rs 3.65 from Rs 3.52 (Rs 3.64); India Steamship to Rs 14.19 from Rs 14.06 (Rs 14.00); Rohtas to Rs 19.44 from Rs 18.62 (Rs 19.44); Dunlop to Rs 30.81 from Rs 30 (Rs 30.81) and Alkali Chemicals to Rs 17.81 from Rs 17.62 (Rs 17.62).

Bombay

THE stock exchange displayed an irregular trend with the undertone quietly steady. In earlier dealings sentiment brightened up on revival of buying support in selected shares coupled with sustained speculative interest in the pivotal counters. It would appear that operators had shed their apprehensions about a ceiling on profits on the belief that Government would not agree to such a step in view of the felt need for fostering the pace of investment in the country. The immediate incentive for the upswing however seemed to have been derived from indications of LIC interest in equities. In later dealings prices developed an irregular trend on alternate bouts of buying and selling.

In the Steel section Tata Iron which closed rather quiet last Friday at Rs 174 opened on Monday higher on overnight support at Rs 175.25. By close of the day's trading the scrip suffered fractional loss to be finally placed at Rs 175. Tuesday found the scrip on a rising trend and by close a gain of one rupee was recorded which pushed the rate to Rs 176. Another half a point was added to the quotation as a result of trading on Wednesday but by close on Thursday the scrip was back at Rs 175.50 on profit taking. Indian Irons opened at Rs

25.65 and closed higher on balance at Rs 26.

In the textile section sentiment brightened up toward midweek but by close part of the earlier gains was wiped out. However most of the shares closed with an on balance gain. Bombay Dyeing has moved up to Rs 56.30 from Rs 55.90. Century was a bright feature having been finally placed at Rs 431.25 as against Rs 424.50 a week ago. Central was likewise a prominent spot and improved to Rs 91 from Rs 87.80.

In the miscellaneous section ACC was in good request toward close on bonus rumours and closed at Rs 156 as against Rs 151.25 a week ago. Premier Construction after setback made a smart advance but closed quietly steady at Rs 239.

Madras

STEADY conditions characterised trading on the Madras Stock Exchange; but business was rather restricted due to the cautious attitude of the operators.

TEXTILES: Travancore Rayons took the pride of place in this section. With reports of a better performance and anticipations of a higher dividend, the rate for the share was taken up to Rs 16.40 from Rs 16, although there were some sellers at the former level at the

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/COS/5/P&M/544/CME/59 for supply of (a) 4 Nos. 'ALCOSA' British type 2-SP-1½" or similar Motor driven 8" pressure Blower fan as per specification to be obtained in the tender schedule and (b) 2 Nos. 'ALCOSA' British type No. 6 SP-7½" or similar Motor driven 18" pressure Blower fan as per specification to be obtained in the tender schedule. Earnest money is Rs. 240/-. Tenders will be opened on 10-2-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender should accompany the receipt for depositing earnest money as stated above with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the Tender.

CONTROLLER OF STORES
S168

January 17, 1959

close. Madras, however, continued to be on offer at Rs 27.90 on reports of unsatisfactory working conditions. Lakshmi met with some business at Rs 94.50, while Krishnarajendras were quoted around Rs 60.50.

PLANTINGS: Activity in this section was confined to a few selected scrips. The uncertainty regarding world prices and record high production were factors contributing to the subdued sentiment. Rubber shares were featureless. Cochin Malabar Rubber met with some enquiry up to Rs 6.80.

Among Coffee shares, Ochterlony declined to Rs 5.37 due to more selling. Consolidated Coffees were on offer at Rs 21.76 against Rs 22.50 and Coffee Lands at Rs 24 against Rs 24.50.

MISCELLANEOUS: In this section, buying interest was shown in a few chemical, sugar, transport and engineering scrips. Aluminium Industries met with support at Rs 18.15. Mettur Chemicals continued to be in good demand at the market rate. Parry's Confectionery were quoted at Rs 3.77 and Ashok Leylands at Rs 6.06.

London

GENERALLY cheerful conditions prevailed on the London Stock Exchange and prices advanced on a broad front. Industrial equities displayed marked strength with all sections participating in the upward movement. Sentiment was influenced by a number of favourable factors including the sharp rally on Wall Street and the news of improving business at home.

Leading Oil shares were mainly lower; but Anglo-Egyptian advanced sharply. Rubber shares ruled firm, while Tea shares were dull. South African Gold shares were quietly firm; but Coppers reacted after a firm opening. Though demand for gilt-edged securities was on a reduced scale, a firm tone was maintained.

New York

PRICES on Wall Street displayed a firmer tendency with gains ranging mostly to a dollar or so. Anaconda Copper was quoted at \$64 7/8; General Motors at \$50 1/2 and US Steel Common at \$38 1/2.

In Briefs

Tractors (India) Limited has raised the dividend from Rs 2 to Rs 2.25 per share for 1957-58. Transfer Books are closed from the 2nd to the 16th March, 1959.

Hindustan Sugar has maintained the dividend at Rs 15 per share for the year ended 30th June, 1958.

A. V. Thomas & Company has again passed over the dividend for the year ended 30th June, 1958.

INDUSTRIAL INFORMATION

House of Godrej

Truly Indian and worthy of India is the service rendered by Godrej who pioneered half a century ago in steel equipment and in vegetable toilet soaps. The variety of goods manufactured by Godrej, without protection and often with patented features, have through self-reliance not only saved many crores of rupees to the country but have brought down prices often to one-third the level prevailing when these goods were imported.

The Godrej service to the nation has been manifold, extending to National Welfare, Working Life, Industry and the Home—besides guarding the nation's wealth. Its culmination is the manufacture of a precision job like the all-Indian Typewriter, Sheet and Plate Metal Working Machinery, now followed by Refrigerator, and of the truly perfect soap CINTEOL.

The most modern and technically efficient plants with flow-production systems, all-India distribution and, of course, enlightened employment to increasing thousands are concomitants of this service.

SECURITY

Godrej started in 1897 with service to SECURITY when the founder, pained by the huge amounts being drained out of the country, felt that it was time for India to stop being dependent on foreign countries. Godrej began manufacturing Locks on systematic lines, experimenting and devising improvements on imported ones. The range was increased and the foundation of a large scale industry was laid. Their newly invented Padlock, fittingly named KILLA—fort—with its fully-protected horizontal shackle, its unique locking system and its solid rivetless construction is another step forward in ingenuity.

In 1900 Godrej turned to the manufacture of Safes which were ultimately to reach the peak of skill in Security Engineering by the construction by Godrej of Safe-Deposit Vaults. It is fact widely acknowledged that Godrej Safes have emerged unscathed from the severest and most unforeseen of trials, as in 1944 when out of the devastation by conflagrations produced by the War-time ammunition explosions in the Bombay docks, which wiped out a vital section of the city, the Godrej safes alone emerged with the contents saved.

The practical study of the behaviour of safes in such catastrophes as dacoities, fire and falls from top storeys inspired Godrej to find means to withstand Man's foul ingenuity and Nature's fitful caprice. In 1935 Godrej built the first

Safe-Deposit Vault. Before the advent of Godrej only 3 Safe-Deposit Vaults were built by foreign makers in our country—since then no more—, though 600 patent Safe Deposits and Vaults have been built by Godrej as routine jobs. This remarkable progress is evidence that given the will and persistent effort, there is in this country skill enough to be harnessed and trained to industrial achievement. Although India is a backward country, Godrej have shown in this highly technical line that Indians are second to none in the design and workmanship and in the initiative and extent of the organisation, as compared to well-known names in the security line in advanced countries. This is one field in which India is entirely self-sufficient and it is not necessary to pay any royalties to foreign manufacturers.

Godrej provided security for the ballot papers by supplying over 16 lakhs of ballot boxes incorporating patented inventions. These steel boxes were turned out by Godrej at an amazingly low price for the various States for free India's General Elections in 1952 and 1957 at the rate of more than 15,000 a day, in less than 4 months, without affecting the normal production.

WORKING LIFE

By the introduction of Steel Shelving in 1923 Godrej extended their service to WORKING LIFE. Godrej made Steel Shelving so superior in quality and so preferable in prices and economy that the outmoded wooden counterparts have almost disappeared.

By 1937, Godrej manufactured a range of steel equipments for the office including Steel Tables, Chairs & Accessories; up-to-date, finger-tip Filing Equipment with ingenious mechanical devices and Systems like Card-index and VISADDEX for easy, quick and accurate reference.

The manufacture of the all-Indian Typewriter in 1955 was a glorious addition. Its birth at a time when even established firms were not in favour of manufacturing typewriters completely here is another proof of Godrej's ability for such high precision jobs. What makes this achievement all the more remarkable is that, in typewriter manufacture, India is the first in Asia.

THE HOME

Although Steel Furniture is now standard equipment in all progressive countries for offices and institutions, Godrej were the first to design and manufacture in 1923 steel cupboards for the home. They are now made in different models to fulfil different purposes and, of them, the STORWEL is the best known and most widely used single piece of furniture in our country.

Godrej service to the HOME today comprises complete suites for living, dining and bedrooms. There is also the cheaper folding furniture like beds, and tables and chairs which can be stacked and re-arranged as and when required. Steel shortage, however, has cut short many such lines.

Godrej in 1958 are rendering a further service to the HOME, as

EXPORT QUOTA 1959-60

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the years 1st April 1959 to 31st March 1960 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February 1959. No export quota will be allotted unless an application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 1-A, Vansittart Row, Calcutta-1, and in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin-1, South India.

P. V. Govindan.
Controller of Licensing.

BIRDS INVESTMENTS LIMITED.

NOTICE is hereby given that the Twenty-second Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, 4, Lyons Range, Calcutta, at 12 noon on Wednesday, the 18th day of February, 1959, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th September, 1958, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the dividends recommended by the Directors.
3. To elect Directors in place of Sir Walter Michelmore and Mr. D. N. Kapur who retire at this meeting.
4. To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member of the Company.

The Share Transfer Registers of the Company will be closed from 4th February, 1959 to 18th February, 1959, both days inclusive.

By Order of the Directors,
LOVELOCK & LEWES,
Secretaries.
NOTE: Dividends, if declared, will be paid to Registered Shareholders or their mandatees only.
Calcutta, 15th January, 1959.

also to Chemists and others, by the manufacture of their Refrigerator—their latest achievement. Designed for convenience and durability and streamlined for beauty, the Godrej Refrigerator incorporates features that make it incomparable to any to-day. Extensive use of stainless steel for inside fittings makes it distinctive.

NATIONAL WELFARE

The manufacture of a range of Hospital Furniture for wards, theatres and other departments and Steel Library Stacks in 1936 designed to keep up with modern library methods, Canteen Equipment made to latest designs in 1951 and Auditorium Chairs in 1954 mark the Godrej contribution to NATIONAL WELFARE.

INDUSTRY

In 1953 Godrej specialised in service to INDUSTRY by manufacturing Tool Cribs and Cabinets for systematic, adaptable, fully-accessible storage.

In the same year Steel Tubing—tested to British Standard Specifications—for bicycles, besides other uses, was manufactured.

To these were added in 1954 Steel Composing Room Equipment. In order to meet the growing needs of industries, Godrej entered another progressive phase in 1957 with the manufacture of Sheet and Plate Metal Working Machinery. For their own use, Godrej have been making machines for well over a decade.

On their current programme of manufacture are: Press Brakes, End Wheel Eccentric Presses and Inclined Eccentric Presses. The designs of these models have been fully tested and proved under actual working conditions over a period of years and have been found preeminently suited for economical manufacture of sheet-metal parts requiring punching, blanking, forming, drawing, perforating and bending operations under the most rigorous conditions of service. Their proven design, coupled with careful selection of materials and workmanship of the highest order, ensure that these indigenous machines can stand comparison with the best of their kind made anywhere in the world.

Another class of Sheet and Plate Metal Working machines, viz. Shearing machines, is shortly to be added to their manufacturing programme.

These few models are but a nucleus around which will be developed a comprehensive range of Sheet and Plate Metal Working Machinery.

In keeping with modern architecture, Godrej also make rust, weather, fire-resisting Steel Windows, Doors and Ventilators, and Steel Partitions, for a variety of projects.

STEEL SHORTAGE

Unfortunately, the steel shortage which the industry is facing today—these Godrej lines depend on steel—makes it difficult for Godrej to continue employing their 5,000 workers. Due to serious national difficulties, any expansion, which would mean further employment, is out of the question for the present.

Useful as they are, Refrigerators or Typewriters can hardly take the place of other mass-produced Godrej products for which there is a large and consistent growing demand from existing concerns as well as from the new projects coming up and without which business cannot function.

Godrej are of course trying to surmount the difficulties and are willing to manufacture anything within their capacity to keep their men employed.

SOAP & TOILETRIES

The first soap ever to be manufactured by Godrej was the Washing Soap Bar in 1918.

In 1920 Godrej had the distinction of producing the first toilet soap to be made wholly from vegetable oils. The experiment succeeded in spite of the doubts of the soap experts and the popular notion that soaps could only be made from animal fats. Economically, it was a sound proposition because plentiful supplies of vegetable oils were than available from within the country. Socially, the experiment was blessed because it respected religious sentiment by displacing animal fats from which foreign soaps were made.

People showered praises of praise on the pioneers. Typical of the sentiments expressed are those from Gandhiji, Dr. Rabindranath Tagore, Dr. Annie Besant and Sri Rajagopalachari.

Godrej were the first in India in 1932 to manufacture Shaving Soaps successfully and also the first in 1950 to manufacture pure Washing Soap in powder form.

It was the Godrej enterprise again that gave India in the year 1952 CINTHOL Soap and other toiletries with worldfamous G-11 (Patent Hexachlorophene U.S.P.), a scientific discovery stated to be akin in importance to penicillin.

Godrej manufacture a variety of Chavi (Key) Brand toilet, washing, shaving soaps and toiletries to cater to the taste of as many people as possible, combining high quality with reasonable prices.

For industries requiring soap to be used at high temperature, Godrej made Steam-Washing Soap in 1954.

Godrej also produce vital raw materials for various industries. Textile mills, pharmacies, confectioners, industries like rubber, paint and varnish, ink, cosmetics and cigarettes are a few to which Godrej supply Glycerin (1942) which is manufactured to B. P., U.S.P. and other specifications.

Godrej Stearic Acid (1953) is supplied to textile, rubber, grease, paint, metal polish and metallic stearate industries.

Other Fatty Acids are used for speedy and low-cost manufacture of soap.

Godrej could have served the country much better in these lines were it not for the setback caused by the unequal competition in soap. Full exploitation of the idle soap capacities by firms with good Indian names, would give Indians the opportunity to show that they can run bigger businesses in other lines also. Thus our nationals

could contribute more to the industrialisation of India.

INDUSTRIAL TOWNSHIP

What of the thousands of workers Godrej employ? Considering human relations the first responsibility of management, Godrej were ahead of legislation in labour benefits and introduced such benefits as holidays with pay, provident fund, bonus, gratuities, medical and canteen facilities for factory workers. Modern, well laid-out factories make the work of the Godrej employees less arduous and more rewarding.

In a rural setting at Vikhroli a new Godrej project has taken shape. More and more factories are rising along with comfortable and sanitary houses at subsidised, low rents for the workers. Welfare work is receiving due attention. 'Pragati Kendra' (Educational and Cultural Centre) provides, in addition to adult literacy and child education, training in gainful spare-time occupations.

The construction of the giant factories and housing is being executed by Godrej themselves along with land development and landscaping, including quarrying and drainage. Vikhroli is now more than a mere industrial centre; a new modern township is created where once was a wilderness.

EXPORTS

Godrej started token exports of their products long ago, gradually stepping up to a number of countries, principally to the Middle East, the countries of British East and West Africa, and countries of the Far East.

Godrej are specially manufacturing steel cupboards and filing cabinets in Knocked-down condition for export.

Government are giving several inducements for export, but a prerequisite is that production in India should be maintained or increased. The main limitation today is the non-availability of adequate supplies of raw material.

As for soap, the main difficulties facing Godrej and the Indian soap industry in general are: (1) Factories of giant concerns all over the world, (2) Adverse freight rates, (3) Import restrictions in foreign countries, (4) Lack of effective publicity and (5) Difficulty in having influential and enterprising selling agents.

★

FURTHER MEASURES TO PROTECT INTEREST OF RAW JUTE PRODUCERS

In order to impart strength and steadiness to the jute market and to help the manufacturing and trading sector to so organise themselves as to protect the interests of the raw jute producer, who has succeeded in helping the country to achieve the target of raw jute production, Mr C. S. Ramachandran, Joint Secretary, Ministry of Commerce and Industry, and Mr D. Sandhya, Managing Director, State Trading Corporation of India, have had a series of discussions with representatives of the jute trade and industry. They have met the

representatives of the Indian Jute Mills Association, the Calcutta Baled Jute Association, Jute Balers' Association, Bengal Jute Dealers' Association and the Bharat Jute Sellers' Association.

As a result of these discussions, the Indian Jute Mills Association have agreed to make a further improvement on their stocks of raw jute by proceeding immediately to buy raw jute so that their total physical stocks will cover four months' requirements of their member mills.

The jute Commissioner will be furnished at stipulated intervals by the member mills with information showing details of their stocks, the purchases effected from time to time etc. The Jute Commissioner is arranging to verify these returns so as to enable the authorities to take appropriate action against mills who fail to carry out the understanding in regard to advance purchases of their requirements of raw material.

FORWARD TRADING

At a meeting of the East India Jute and Hessian Exchange further measures to regulate the futures market were decided upon. The Exchange decided that the minimum prices fixed by the Indian Jute Mills Association should be the level below which a margin will be leviable and such margins have also been increased. At the same time the prices below which margins will be collected have been increased in the case of raw jute.

The Chairman of the East Indian Hessian Exchange has also been assured by Government's representatives that suitable measures will be taken to deal effectively with units responsible for undesirable practices.

GOVERNMENT TO ENTER MARKET

Apart from mill purchases, Government also propose to enter the market to purchase raw jute from the producer and to stock it for mill consumption and also for export.

The State Trading Corporation have discussed this matter with the representatives of State co-operative organisations and have made arrangements to enter primary markets as substantial buyers. These purchases will soon be made in the markets at Forbesganj, Golapbag, Kishanganj and Kathihar in Bihar. Similar action in other markets is also contemplated.

Wherever possible, these purchases will be effected through apex co-operative societies or primary co-operative societies.

JUTE MANUFACTURES

The Government of India are also keen to ensure stability and steadiness in the markets for jute manufactures. It is hoped that the steps already taken or contemplated to be taken by the Indian Jute Mills Association and the East India Jute and Hessian Exchange will help to achieve the desired result. It is considered that stability and steadiness of prices of jute manufactures is essential in the interest of the users of Indian jute products abroad and also of Indian manu-

January 17, 1959

facturers and the producers of raw jute.

Government are keeping a close watch on the situation and will not hesitate to take such further measures as will be found necessary to ensure a fair return to the producer and smooth flow of goods to foreign markets.

These measures will, if necessary, be taken in consultation with normal commercial channels and with their help.

EXPORT OF GROUNDNUT OIL CAKE

A further quota of 20,000 tons of groundnut oil cake (Expeller Variety) will be released for export during the period ending March, 1959 to all permissible destinations other than Portuguese possessions in India, says an announcement by the Joint Chief Controller of Imports and Exports, Calcutta.

Established shippers will be given a quota equal to 20 per cent of their basic year exports, subject to a maximum of 400 tons per shipper from all the parts. Shipments will be allowed upto the end of March, 1959.

EXPORT OF MADRAS/MYSORE SILK WASTE

Export of Madras/Mysore silk waste will continue to be licensed freely on shipping bills without quantitative restrictions until further orders to all permissible destinations excluding the Portuguese possession in India, announces the Joint Chief Controller of Imports and Exports, Calcutta.

Established shippers who have completed shipment of their quotas of groundnut oil allotted to them and who wish to make further shipments, will be granted repeat quotas equal to their entitlement. Such established shippers are advised to submit bill of lading and export invoice along with their application for repeat allotments. Export against the repeat quotas will be valid up to June 30, 1959.

EXPORT OF CRUSHED BONES AND NONE GRIST

Established shippers and bone crushing mills who will fully utilise their allotments before March 30, 1959, and apply for a supplementary quota, will be granted supplementary allotments equal to the quantity originally allotted. If any party utilises the supplementary allotment also, a third allotment equal to the original allotment will be granted on request. The supplementary allotments will be granted provided it is established by production of satisfactory documentary evidence that the previous quotas have been fully utilised.

The licences will be issued by the Iron and Steel Controller, Calcutta, on receipt of the recommendations of the port import licensing authorities and the Development Wing of the Ministry of Commerce and Industry.

The machinery and equipment covered by these agreements include weaving machinery, finishing machinery, blow room equipment, carding engines, drawing frames, combing sets, speed frames, ring frames, complete cotton waste spinning plant, winding and warping machines, automatic looms, etc.

The import of this machinery will be subjected to the import trade control regulations current from time to time. The supplies available from these countries through the agreements may cover bulk of the requirements of the textile mills which may require modernization and rehabilitation in pursuance of the public notices issued by the Government of India on October 31, 1958 and November 5, 1958.

For fuller particular, the prospective importers may contact the Regional Manager, State Trading Corporation of India Ltd., 159 Churchgate Reclamation, Bombay-2.

IMPORT OF STAINLESS STEEL

The Government of India have decided to permit import of stainless steel sheets, rods, strips and wires, under the export promotion scheme, against export of utensils, watch straps and other manufactures, predominantly made therefrom.

Manufacturers of such materials, watch straps and other products who, for making these, desire to obtain import licences for stainless steel sheets, rods, strips and wires under the scheme, should get themselves registered with the Joint or Deputy Chief Controllers of Imports and Exports at Bombay, Madras, Calcutta, Cochin or central licensing area, New Delhi.

Imports licences under the scheme will be issued to the manufacturers duly registered with the port import licensing authorities subject to certain conditions.

One of the conditions is that the registered manufacturer-cum-exporter should undertake to export within six months of the importation of the licensed articles, finished goods and bring foreign exchange to the extent not less than 133 1/3 per cent of the value of raw material or half the value of the finished goods which can be made from the imported material, whichever is higher.

The licences will be issued by the Iron and Steel Controller, Calcutta, on receipt of the recommendations of the port import licensing authorities and the Development Wing of the Ministry of Commerce and Industry.

TRADE AGREEMENT WITH INDONESIA EXTENDED

Letters have been exchanged in Jakarta between the Ambassador of India to Indonesia on behalf of the Government of India and the Secretary General of the Ministry of Foreign Affairs, on behalf of the Government of the Republic of Indonesia, extending upto June 30, 1959, the validity of the Trade Agreement between the two countries, together with the schedules attached to it.

The principal commodities listed for exports from India to Indonesia under the agreement are cotton textiles and yarn, jute goods, to-acco, linseed oil, hardware, pharmaceutical products and chemical preparations, tea chests, sports goods, rubber tyres and tubes, porcelainware, paper and boards, machinery including agricultural implements, Diesel engines, sugarcane crushers, textile machinery, electrical equipments including motors and batteries, sewing machines, hurricane lanterns and household utensils.

Among the items listed for exports from Indonesia to India are copra and coconut oil, palm kernels and oil, essential oils, spices including betel nuts, timber, tin, rubber hides and skins, tanning materials, sisal fibre and tobacco wrappers.

NUMBER AND TYPES OF EMPLOYMENTS-SEEKERS; STUDY OF TRENDS DURING 1953-57

A study of trends in the number of types of employment-seekers during the period 1953-57 has shown that employment opportunities generated by the Five-Year Plans have helped reduce the volume of unemployment. Although the number of applicants on the live registers of Employment Exchanges had been increasing steadily throughout this period, the rate of increase went down from 8,344 per month in 1955 to 6,012 in 1957.

The findings of the study, however, support the general belief that the number of job opportunities that are occurring is failing to keep pace with the growing labour force of the country. Though the number of vacancies increased, the number of applicants available per 100 vacancies was throughout the period at a level higher than 2,000.

The study was carried out by the National Employment Service of the Ministry of Labour and Employment.

OCCUPATIONAL GROUPS

For the purpose of the study, applicants on the live register were classified broadly into seven occupational groups: industrial supervisory, skilled and semi-skilled, educational clerical, domestic service, unskilled and others.

As regards the industrial supervisory groups, the study showed that applicants belonging to this group were absorbed in employment fairly readily, thus preventing the live registers from swelling up. It also brought out the fact that the supply of applicants in this group was limited. During 1957, the percentage of vacancies cancelled due to non-availability of suitable applicants in this category was as high as 40 per cent as against 12 per cent in the case of all other categories of personnel.

The live register in respect of skilled and semi-skilled personnel increased, but the rate of increase slowed down after 1955 until 1957. This indicated a comparatively

high rate of absorption of technical personnel entering the labour market. There was quite a pronounced shortage in respect of this category of applicants, the percentage of vacancies cancelled due to shortage being 40 per cent during 1957. The bulk of the registrants in this group were semi-skilled and often did not answer to the specifications laid down by employers.

TEACHING PROFESSION

The number of persons desirous of taking up teaching and other allied occupations showed a rapid rise during the period under study. The increase was particularly marked during 1957. This rapid growth could be partially attributed to the continuous increase in the out-turn of various institutions imparting training to teachers. In fact, the rate of increase in respect of trained teachers was much greater than in the case of untrained personnel.

A more fundamental reason for the rapid increase in the number of persons wanting to take up teaching seemed to be that the profession was becoming more popular among applicants of the 'white-collar' group. The swelling live register in respect of educational personnel should not therefore lead one to the conclusion that unemployment among these applicants was necessarily on the increase.

Next to the unskilled group, the clerical group formed the largest component of the live register. The size of the clerical group increased steadily except for a short period in the middle of 1956. The study showed that this rate of growth would not change so long as young persons preferred 'white-collar' jobs or until alternative occupations were open to them.

As regards the domestic service group, the live register showed a steady upward trend during the period. The applicants registered for domestic service, however, had in mind work in establishments under public ownership and not under private individuals.

UNSKILLED CATEGORY

The unskilled category constituted the largest single group on the live register and as such the trend of the total live register was largely governed by variations in the size of this group. The unskilled group constituted about 50 per cent of the total live register.

An interesting finding was that the live register exhibited seasonal fluctuations, January and August being the peak months and April and November the trough.

During the period under study, the rate of increase in placements was greatest in regard to the educational group, followed by the clerical group. There was practically no increase in the level of placements of skilled and semi-skilled personnel through the Employment Service. In regard to unskilled persons, there was a slight fall in the number of persons placed every month.

BANK PROFITS

DENA BANK.

Profits for the year 1958.

The net profit of Devkaran Nanjee Banking Co., Ltd., for the year ended 31st December, 1958, after providing Rs. 1,80,000 for bonus to staff and including Rs. 2,80,319.54 brought forward from last year's account, amounts, subject to audit, to Rs. 17,02,014.77. Out of this, the Directors have made the following appropriations:

To ad-interim dividend paid for the half-year ended 30th June, 1958 at the rate of 2 1/2 per cent (5 per cent per annum), free of income-tax, i.e. Rs. 1.25 per share on 1,00,000 shares	1,25,000.00
To Reserve Fund	6,00,000.00
(Raising the Reserve Funds to Rs. 46,00,000.)	...
To Provision for Taxation and propose to appropriate the balance as under:	5,00,000.00
To pay a final Dividend for the half-year ended 31st December, 1958, at the rate of 34 per cent free of Income-tax, i.e. Rs. 1.75 per share, on 1,00,000 shares making in all 6 per cent per annum for the whole year	1,75,000.00
To Carry Forward	3,02,014.77
Total	17,02,014.77

THE HONGKONG AND SHANGHAI BANKING CORPORATION.

The Directors of the Hongkong and Shanghai Banking Corporation announce that the profit for the year ended 31st December, 1958, after providing for taxation, etc. amount to HK-\$2,466,049.97. It is proposed to write off HK-\$4,000,000 off bank premises and to pay a final dividend of £1-17-6 per share leaving a balance to be carried forward of HK-\$2,085,475. These figures are subject to audit.

THE UNITED COMMERCIAL BANK LIMITED.

The net profit of the United Commercial Bank Limited, for the year ended 31st December, 1958, subject to audit is Rs. 45,37,665.38, and including the sum of Rs. 49,432.18 brought forward from the last year's account, the disposable profit amounts to Rs. 45,87,097.56. The Directors have transferred Rs. 14,00,000 to the Reserve Fund, provided Rs. 9,00,000 as Reserve for Taxation, and Rs. 7,25,000 for bonus to staff, and, in respect of the balance of Rs. 15,62,097.56, propose to recommend to the Shareholders at the next Annual General Meeting payment of a dividend at Rs. 3.75 per share (7 1/2 per cent per annum), free of income-tax, which will absorb Rs. 15,00,000, leaving Rs. 62,097.56 to be carried forward to the next account.

FOR THE INVESTOR

Renewed Doubts

Investment Gossip:

THE main feature of trading in the stock market this past week has been the resistance to higher levels. A probable reason for this is the tendency to await the outcome of the meeting of the investment committee of the Life Insurance Corporation scheduled to take place on Thursday evening. Some special significance seems to have been attached to this meeting as this is the first time that the committee is holding a meeting at Calcutta. The general expectation that the committee would evince interest in the market leader, however, seems to have been responsible for the extra-ordinary interest shown in the meeting.

(From Friday's kerb rate of Rs 25.92 of Indian Irons, it is to be inferred that the expectations about LIC purchase of this scrip have not materialised).

That the investment committee meeting is not the only factor which has been engaging the attention of marketmen cannot have escaped the notice of any careful observer. It is clear that there is a section of people who are not prepared to dismiss the resolutions passed by the Congress at Nagpur as of no immediate consequence to the stock market. These people seem to believe that the coming Central Budget is sure to bear the impress of the Nagpur decisions of the ruling party. In this view the present would be too early a time to rejoice over the Prime Minister's reassuring statement regarding ceiling on urban incomes.

Moreover, this year's Budget deserves to be watched with more than usual caution. For one thing, the working of the taxations measures during the past year or two has not tallied exactly with Authority's expectations. Further, there is the unfilled gap in internal resources which cannot escape the attention of the Finance Minister.

Thus the Budget seems to have begun to cast its shadow on the market this year even when it is full five weeks away. Once the discussion on the shape of things to come in the budget is initiated in the market place, it can provide enough material to keep marketmen fully engaged till Budget Day.

But as I have been saying all along, the investment situation as it obtains at the present juncture does not call for any undue pessimism on the basis of what may be revealed by the Finance Minister in the shape of his Budget proposals. Even as regards these, reason would show that Govern-

ment will not do anything that will retard the growth of industries not excluding those in the private sector. It is true that Government want the public sector to take rapid strides. But as things stand at present the private sector is shouldering great responsibilities in the development of the country. As such it will be incumbent on Government to ensure that they function efficiently. Viewed in this light the coming budget will lose much of its terror.

£R\$

Ruby Rubber (Madras) Ltd.

Investment Special:

I invite the attention of readers to an announcement of Ruby Rubber Works (Madras) Limited, appearing elsewhere in this issue. It is hardly necessary to emphasise that in a country which has embarked on a programme of industrialisation, a company whose range of manufactures include a wide variety of industrial rubber goods will have a ready market for its products. This will be particularly true of Ruby Rubber Works (Madras) Limited as this company is to manufacture various industrial rubber parts for automobiles, motor cycles, railways, sugar factories etc., besides such items from latex foam rubber as seat cushions, mattresses, pillows, etc., and also cycle tubes.

A significant feature of this new company is that it will be in a position to commence production directly it obtains its commencement certificate as it is acquiring a running factory from Ruby Rubber Works Ltd., Changanacherry. Moreover a close link is being established between the new company and Ruby Rubber Works Ltd., Changanacherry who are already well-known as manufacturers of industrial rubber goods, as the latter are subscribing to Rs 1,40,000 of the equity capital of the new company. Ruby Rubber Works Ltd., Changanacherry will also give all the necessary help to the new company. In this connection it may be of interest to note that Ruby Rubber Works Ltd Changanacherry are paying a dividend of 9 per cent tax free to their shareholders.

Ruby Rubber Works (Madras) Ltd is being promoted with a capital of Rs 5,00,000—Rs 2 lakhs 7½ per cent tax free preference shares and Rs 3 lakhs equity shares. The subscription list will open on Monday, 2nd February 1959 and will close on 7th February or later at the discretion of the Directors.

£R\$

Investment Notes:

The Hind Cycles Limited has decided to issue 5 per cent tax-free Cumulative Redeemable Preference shares of Rs 100 each to those shareholders whose names are registered as on the 31st January, 1959, in the ratio of two shares for every three old Ordinary shares or three Preference shares held. The proposed issue is redeemable after 12 years. The Ordinary shares are quoted at Rs 108.75.

National Rayons are now quoted around Rs 240. Preliminary reports indicate that the company has far- ed well last year in view of the

substantial increase in the gross earnings. It is generally felt that there will be no difficulty in maintaining the dividend at Rs 14 per share.

Full details of the financial structure and the manufacturing programme of the ACC-Vickers-Babcock Limited are now available. The company will have an authorised capital of Rs 10 crores of which Rs 5.4 crores is expected to be issued by the time the company goes into production. The company is also expected to raise Debenture capital to the extent of Rs 4 crores by private negotiations.

BBTC Results Balance-Sheet Reviews:

THE Bombay Burmah Trading Corporation Limited has reported a decline in earnings for the year ended 31st May, 1958. The gross profit for the year is substantially lower at Rs 74.96 lakhs as against as much as Rs 151.38 lakhs in the previous year. It may be mentioned here that a total amount of Rs 13.98 lakhs has been transferred to profit and loss account for the year from the provisions no longer required as against transfer of Rs 1 lakh only in previous year. Otherwise, the profit would have been lower to this extent.

In the timber account, earnings have dropped sharply to Rs 20.07 lakhs from Rs 1.02 crores, while, on plantations account, the profit has gone up from Rs 39.97 lakhs to Rs 49.21 lakhs. Thanks to lower provision of only Rs 9.19 lakhs for Taxation as against Rs 68.87 lakhs, the effect on net profit has not been as much as the drop in gross profit. No provision has been made for Indian income-tax, as it is calculated that there is no taxable profit.

After providing for Depreciation and Taxation, the net profit comes to only Rs 31.88 lakhs as against Rs 52.16 lakhs in the previous year. Out of this, Rs 8.72 lakhs (Rs 16.48 lakhs) has been transferred to various Reserves. Apart from the additional dividends (Rs 7.50 on Old and Rs 3 on new shares) declared on the 8th August 1957, the dividend at the rate of 18 per cent on increased capital (6 per cent interim and final 12 per cent) for the whole year has been recommended.

Madura Mills

In a circular letter addressed to the shareholders, the directors of the Madura Mills Company Limited have indicated that the company has been obliged to suffer a heavy loss of about 56 lakhs in 1958 on account of the difficult conditions in the industry and the trade. It is stated that, as suppliers to the low-priced handloom market, the company has suffered more heavily than composite units.

The loss is mainly due to the need for paying lay-off and retrenchment compensation "in bringing the company's scale of operations into line with current demand". Lay-off compensation amounts to Rs 10.90 lakhs and retrenchment compensation to Rs 21.35 lakhs. It is, therefore, felt that no dividend can be distributed on account of the last accounting period.

It has been pointed out, however, that energetic steps are being taken to improve the working results. A large-scale scheme of rehabilitation and modernisation has been put in hand. Application has been made to the National Industrial Development Corporation for a loan of Rs 1.25 crores to help towards the implementation of this scheme, while a government investigation into the further improvement of mill workloads is nearing completion.

Bhopal Sugar

The working of the Bhopal Sugar Industries Limited, during the year ended 30th September 1958, has resulted in a profit of Rs 11.5 lakhs as against Rs 14.58 lakhs in the previous year, after providing Rs 1.23 lakhs (Rs 1.60 lakhs) for managing agents' commission and Rs 2.98 lakhs (Rs 2.27 lakhs) for Depreciation and Development Rebate. Out of the profits, a sum of Rs 6.50 lakhs (Rs 7.55 lakhs) is provided for Taxation, while there is no transfer to General Reserve against Rs 3 lakhs. The dividend on the Ordinary shares is maintained at Rs 2 per share.

The total quantity of sugarcane crushed is 99,782 tons (98,951 tons) producing 97,086 (95,491 bags) of sugar, which has been the highest figure achieved since the starting of the factory.

The company has applied to the Central Government for permission to expand the crushing capacity of the factory from 750 to 1,250 tons per day which has, however, been refused due to foreign exchange difficulties. Negotiations are going on for securing a foreign exchange loan; but such arrangements will also require the approval of the Centre.

Spencer & Company

The continued restriction on imports is fully reflected in the working results of Spencer & Company Limited for the year ended 30th June, 1958. Sales are lower at Rs 2.97 crores against Rs 3.19 crores, while the net profit, before providing for Depreciation and Taxation, has declined to Rs 23.75 lakhs from Rs 28.65 lakhs in the previous year. The charge on account of Depreciation, including the amount transferred to Fixed Assets Depreciation Reserve, is Rs 3.45 lakhs (Rs 2.99 lakhs). The provision for Taxation is lower at Rs 10.90 lakhs against Rs 13.65 lakhs. The dividend on the Ordinary shares is, however, maintained at 15 per cent.

Remembrance Week

THIS is a week of commemorations. We honour now the birthday of one who proved to be, in India's new history, an heroic military leader. We pay homage to one that this week made a martyr of. And it is fitting that, between these two dates, we celebrate the anniversary of India as a Republic.

What new heart and courage Indians found in the feats of daring of Netaji Subhas Chandra Bose, can be a matter only for conjecture. But history is likely to confirm that it was Netaji's influence which prevented war over-running India, and this is our debt to him.

What new morality Mahatma Gandhi taught the world, is, in today's cold war days, obscure. But it was his bloodless revolution that won

us freedom, and it is proper that we again disavow the violence that killed him.

Courage and kindness make of us a respected Republic. Let us dedicate ourselves afresh to the qualities that gained this independence for us.

For our part, with this issue, we complete 31 years of existence. We hope our constant interpretation of what planning endeavours should be will go some little way toward consolidating our political freedom by ensuring our economic independence.

This week, then, belongs to Netaji and the Mahatma, the martyrs who gave their life that India may be free.

What Have We Done at Bhilai?

By K. N. SUBBARAMAN

BETWEEN November 1954 and April 1955 a team of Russian Experts led by the Chief Engineer of Gipromez, their design organisation at national level, toured almost all over India to locate a second Steel Plant, the first having been decided at Rourkela. The region round about the rich iron ore deposits of Dalli-Rajhara in Madhya Pradesh had been a close rival to Rourkela and they saw for themselves that Bhilai, about 530 miles from Calcutta on the Calcutta-Nagpur Railway line was the best suited for the second million ton Steel Plant. The Russian Government was invited to build it and they submitted a detailed Project Report in November 1955. Ore with an average of 63 to 65 per cent iron content was only 60 miles away, limestone within 20 miles, water on the boundary in a thousand cusec canal; the soil was good, hard moorland with 20 per cent iron, capable of taking high foundation pressure. The climate was dry though hot, the area chosen for the works under-populated and reasonably plane. If anything it was too flat and drab without vegetation. Only coal was too far, nearly 500 miles from Bokaro and Jharia which must supply over 80 per cent of the requirements, even Korba caking coal to make up the balance being 150 miles; and coal was yet to be produced there. Electricity had to be found, the Railway lines to the ore and limestone laid, a forest belt between the Works and the Town to shield it from the gas and heat of Steel making plants. The State Government wanted to put up a 90,000 KW Power Station at Korba, feeding its boilers with the coal dust at the pit heads and supply about 50,000 KW of energy to the Steel Plant. Doubts about water resources the State agreed to set at rest by building more tanks connected to the existing one called Tandula lake. This has been done; the Korba thermal station is getting ready. The Railways have laid their lines to Rajhara, the iron ore mines and to Nandini the limestone mines, and ore and limestone are on the move. Washed coal from Bokaro-Kargali the move. Unwashed from Jharia daily strain the works, not yet freed of construction pressure. Other raw materials like manganese, quartzite, sand etc are small in quantity and are no

problem either from the trade or from virgin developments undertaken by the Project. Dolomite is not immediately required, and a mine at Hirri near Bilaspur is being opened up.

The immediate requirements of power are met by the 24,000 KW station incorporated in the works, as a standby supply. The Korba system not yet commissioned, for the immediate production of iron this becomes the main source, the construction power supply station of Madhya Pradesh Electricity Board being the dual supply that cuts in automatically should there be a temporary failure of the present main source. This power house is of Russian design and manufacture—even as the entire Steel Plant is. Like other units, it was built under Russian supervision by Indian hands, assisted wherever needed with their own. For the core of the agreement between the Governments for setting up this million ton plant is that by its completion, Indian technicians should gather the know-how and confidence for similar tasks in future, unaided or with but little aid. All the major equipments are of Russian design and manufacture. They supply about Rs 630 million worth on credit terms carrying 2½ per cent interest, repayable in 12 instalments, one twelfth payments for this year supplies falling due next year. They have supplied over 80 per cent. Correspondingly, nearly 150 million worth of goods from Indian markets have been ordered, though less than thirty per cent have materialised. With Indian goods and Russian, Indian hands and Russian, the most difficult works being always the first have been completed and iron from the first Blast Furnace has come out. The odds were many.

Sudden demands deepen scarcities and lower qualities. It is no surprise in any economy that at the impact of a large scale public expenditure, even common goods should prove difficult to procure. To presume that, overnight, the demands created would spur up production, is a mistake. The anxiety of various trades to grab orders and fill their books is understandable, but to permit them to exert pressures against measures to provision the works in time is disappointing and drives those who are judged by progress in the

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

field to a state of doubt. A worsening foreign exchange position justifies the closest checks on imports, but it is necessary to see if a type of indigenous production has all the variations demanded and is adequate to ensure supplies at the rate required. Sponsors of indigenous growth are apt to derate the importance of these factors and articles like bearings or belts or tyres or cables are denied in time. Though steel of different sections is obtainable only on protracted deliveries, the installed capacity for fabrication of steel structures is allowed to determine the quantum of fabricated imports. Fire resisting bricks are many kinds and for many duties. The totality of production of all kinds restricts initial orders abroad. Later as each field is surveyed in detail, in the course of work, the holes in planning are spot lighted. Time lost initially is hard to make up. As indigenous materials move in'o godowns in wagon loads, after many threats of penalties and pressures of influence, the engineers pray for the day when there would be a powerful standards organisation, whose seal could be accepted as the guarantee of quality. It would be too long to wait for standards imposed by an abundance of production. Heavy industrialisation plans would not be deferred so long and such a production surplus is more likely only to succeed industrialisation not precede it. The stamp of quality on the production lines needs immediate enforcement.

Indian purchases so far for the Bhilai Project have mounted to Rs 150 million excluding cement and steel. The goods range from screws and nails to shovels and pick-axes, from wires and cables to lamps and transformers, sand and fireclay to refractory bricks and glazed ware, emery paper and grinding stone to machines and machine tools. Not one item could be had at the scheduled time and there were constant rounds of improvisations and emergency purchases. Even cotton waste and spun yarn, hinges and bolts, paints and brushes, electric lamps and switches could not escape the scarcity created by the staggering requirements of this colossal project pursued simultaneously with many similar ones. Quantities suppressed the importance of class quality. The choice was between "make do" and "stop".

While with indigenous goods there had to be a constant vigil to ensure timely supply, with the materials and equipment ordered on USSR, the problem was to keep pace with their rapid arrival. Wisely what were clearly not procurable in India had, even in the initial contract for the setting up the Steel Plant in Bhilai, been given to USSR to supply. As more materials were found absent in India, they too were preferably secured from that country so that construction progress would suffer the least. Their industrial might was switched over to fulfil these contracts phased to serve a construction schedule at site on the basis of their past performance, where ready armies of experts and workers in the diverse branches await only marching orders to pound the field with machinery and man power. Clearly such a pace of work in the first Steel Project with so much Indian responsibility was not at least immediately possible. Men had to be gathered, machinery assembled, the various

rules followed. Whereas the construction should have commenced in August 1956, the detailed information on which tenders could be invited for the work was available from the Soviet consultants only in July 1956 and a contract could nominally be awarded on the last day of October. Working drawings were just arriving for one section after another according to a construction phasing they had drawn. Contractors preparatory work followed and only early in March 1957 did any construction worth naming start. The consultants were long unconvinced about the importance of such detailed information for letting out a work on contract and why it should take 3 months thereafter to build labour camps, procure machines and tools, recruit the man power and open up the building material sources. Inexperience takes longer to reach the tempo, and this too was incomprehensible except to a few who had memories of their first constructions over thirty years back.

It is probably the bane of a contract that it should set a discount on realistic readjustments. A schedule of supplies designed on the immediate usage in the works allowing but only a small cushion in view of the long lines of communication, is clearly unsuitable for adherence when the site proclaims its unpreparedness to receive them in their permanent places, the best storage, to save storing spaces. A three months stock soon grows four times or more and all plans for storage and handling get completely upset by the stampede of arrivals. To sort out from this melee what is immediately required is labour and time consuming and the difficulties increase every day as the materials that move in from Ports outstrip what go for erection three to four times. A contract seems to have only two sides, failure and performance. Postponement is feared as construable later into a failure, and deferment of supplies is considered even unmentionable. Several good reasons are proclaimed against the course, like exposing inconsistencies of emphasis on the supplies performance elsewhere, admission of inability to use goods secured in aid agreements and a range of other factors of the same character, the fact of an impossibility of immediate use and therefore later troubles alone brushed aside. It is then for those on the work amongst their many other problems to devise the best means of tackling the situation. New areas were found, new roads and rail lines laid, more unloading and transporting equipment arranged and in sorting and resorting for weekly needs experience gained.

Trained personnel were as scarce as correct materials and here too, recruitment standards had to be progressively lowered to get a reasonable number of hands. Though among the technicians and engineers there are many who have handled particular aspects of the complex construction with diligence and skill, few have had the practical knowledge of the difficulties that arise in a branch set in the chequer of many others. The ease or difficulty depends on the circumstances in which a work is to be done amidst others, and only familiarity with like context ensures quick and correct performance. Responsibility alone ingrains a past familiarity as knowledge, and seldom had engineers been entrusted with such tasks. Likewise, technicians were wont to carry out instructions and not work out solutions. It was no good lamenting for the skill that did not exist and only in 1957 it was decided to train the men on the work. In 6 months, ordinary masons could be entrusted with refractory masonry work in Coke Oven and Blast Furnace, ordinary welders with strength welds that had to pass isotope tests, Khalasis with chipping welds, helpers with operating tower cranes and heavy diesel machinery. Simultaneously, mechanical and electrical engineers—more correctly engineering graduates fresh from College—learned the principles

of concrete and masonry. An year later civil engineers learnt to erect machines, and steel structures as the pressure of work shifted from foundations and buildings to steelwork and equipment. Other projects will have what Bhilai could not get.

The absence of the requisite skill in integrated works had been covered in the technical agreement with USSR for setting up the million ton Plant. Designers of such works there were many and it was agreed that for Rs 25 million, USSR would provide the design and the drawings after a thorough investigation of the site. With but the theoretical knowledge and intelligence and not the first hand contacts with such construction, the engineers would take considerable time to study and understand the 70,000 drawings in which the experience of over thirty years is put down by the Soviet Steelworks designers. A system of partnership in the daily work was therefore decided on. A large team of Soviet Engineers would be available, at Indian cost, to guide and correct the daily translation of the drawings into concrete works. They would suggest the sequence of constructions, methods of execution envisaged in the designs and ensure these as the necessary base on which they could guarantee the performance of the Steel Plant. These suggestions were not the best suited to our conditions of contract or climate. The variations their engineers and designers on the spot thought necessary to suit the soil exposed and weather conditions encountered could not be so quickly enforced as they involved new materials and new methods of work, not covered in earlier planning. The solution to minimise such troubles theoretically argued by Indian Engineers were not clear to them against the opacity of their intense experience. Correctly experience claimed got the support and won the day and consequent adjustments materials and psychological, followed as best they could. Guidance and correction tended to be controlled, but still remained as education with critical faculties opened up for independent conduct when those who count would show full confidence in the engineering ability in the country.

The volumes of work were of staggering magnitude. Nearly 5 million cubic metres of earth had to be moved and 660 thousand cubic metres of concrete poured. 100 thousand tons of structural work have to be erected, 25 thousand tons fabricated in the country. 100 thousand tons of equipment are to be installed. Electricity is carried to them through 2400 KM of high tension and low tension cables going through 350 KM of conduits in walls and foundations, 5 KM of man size cable tunnels and 35 KM of multicore precast concrete cable blocks. 51 sub-stations sectionalise the feeds to over 8000 motors compressing 290,000 horse power. 45 thousand cubic metres of process water are circulated every hour in pressures ranging from 12 to 60 metres head through 60 KM of cast iron and steel pipes. 1500 million tons of waste and rain water flow through about 80 KM of concrete and ceramic pipes, laid at depths upto 10 metres so that they flow entirely by gravity. This saves pumping costs, which may otherwise add Rs 15 per ton of steel, but increases the construction effort. Within the time available for each facet of work even in a more realistically framed construction time, the daily outputs of work demanded are 30,000 c. metres of earth work, 1000 cm of concrete, mostly in frames and slabs, 500 tons each of structural and equipment erection, 400 metres of pipe-line, 4 KM of cables. During the 2 years, work had to go on simultaneously on all these. The excavations in trenches for pipe lines and cables, in pits for foundation, narrow working areas and cut off approaches and in the monsoons, the ponds and canals they form and the treacherous subsidence that occur on fills convert the works site into an impassable mire and yet

work must go on if the staggering daily demands of outputs are not to swell more. Two monsoons that have passed showed unabated activity.

These physical difficulties were surmounted, else the hot iron would not be flowing out now. But a sense of depression, almost disgust, created by studied slander and calumny is hard to get over. Uninformed criticism is understandable as existent probably in any society, busy bodies pretending to more than that they know being an inherent part; And by the very differentials of knowledge between groups and groups, such criticism pervades above and below and even in the horizontal plane of the group, being an average of the individuals, again, differing to a material extent. But purposive campaigns of vilification stand apart. Such have always a ready reception and to this coarse taste of Society, the interested pander. Thus were tirades of provincial feelings whipped, of corruption and nepotism. Figures were twisted, statistics manufactured torn from their contexts. Tired physically by the exacting daily routine of inspection and execution, strained by the problems of scarcities, the sensitive wondered what they were striving for; it seemed, the harder such strife the deeper they were enmeshed by these tales; for solutions are out of the ordinary, the situations and demands being extraordinary. But steeling their hearts against much damage by seeing only the distant lustre of the molten iron, they have taken the giant works over the first hump. Yet a pain suffered can never be erased because it was of the past, in a plane no longer accessible from any plane of continuing present. The ability that the youth has acquired smarts under this pain, and it would be bad if that creates a neurotic reflex. For men's characters depend above all on the circumstances they are placed in, the understanding they are given. They alone are capable who can sense quickly the variations in the parameters that determine a problem: they are hurt most. Working under such continual harassment, seems too big a price to sustain any illusion.

Against this background of scarcities, inexperience and frustration, the achievements are not mean by any standards. Iron is being produced, 1000 tons a day. This does not mean the mere completion of one Blast Furnace to smelt the iron ore with the coke made in one Coke Oven. The entire water supply system with the storages, pumps and pipe lines, the power house with its full 24000 KW generation, the substation to draw 50,000 KW power from Korba, the coal handling system to receive 2 million tons coal from Jharia, Bokaro and Korba fields and grind them to sizes, the machines to cast the pig iron, the storage to keep them, the many repair shops, all stand complete behind the first Blast Furnace. Iron ore, limestone and quartzite supplies are ensured from the mines and quarries developed by the Steel Works and are growing to meet bigger demands. In volumes of work 400,000 cubic metres of concrete have gone into foundations and buildings after digging and levelling three million cubic metres of earth and covering 100 KM of pipe lines laid deep. 50,000 tons of refractory masonry has been done, 40,000 tons of steel work and equipment erected, 2000 KM of cables laid to energise a dozen substations and a thousand motors and instruments. Physically the tempo has been built up to produce steel billets in 1959 and rolled steel in 1960. Staggering volumes of work remain in the six Open Hearth furnaces, before they can give 1 million tons of steel ingots they promise, and in the Rolling Mills which will give the desired shapes to these in rails, joists, channels, angles, bars and rounds—770,000 tons in all. But the construction lies tamed. The loyal band of engineers and technicians have conquered its fury. Bhilai stands now as a proof of ability.

January 24, 1959

EDITORIAL NOTES

Scientific Research

THREE important points have been stressed in the presidential address of Dr A Lakshmanaswami Mudaliar to the 46th session of the Indian Science Congress. Dr Mudaliar has administered a timely corrective to the tendency to place exaggerated emphasis on applied science. This is natural in a country anxious to industrialise itself in a hurry, but it can lead to costly neglect of research in fundamental sciences. Scientific progress in India has been handicapped for different reasons at different times. In the past it was lack of well equipped laboratories and incentives for scientific workers. Now, thanks to the vision of the Prime Minister, the country has a chain of magnificent laboratories but there appears to be a shortage of personnel of the requisite calibre to make use of the facilities provided for them. This calls attention to the need for adjustment of the educational pattern of science. In this connexion it is interesting to note Dr Mudaliar's warning, that opportunities for the development of creative talent in science should not be diminished by any limited idea of parochial or provincial patriotism. Dr Mudaliar specifically referred only to parochial and provincial patriotism. Even more blighting is the limitation of opportunities based on communal considerations as Dr Mudaliar has best opportunities of knowing.

As a very distinguished medical practitioner, Dr Mudaliar can speak with authority on the close connexion between health and nutrition and of the need to eradicate ignorance before it is possible to make progress in public health. The campaign to be effective should start in the schools. The Central Council of Health which met last week in Shillong has expressed the hope that priority would be given to formulation of a scheme for a comprehensive school health service in the Third Five Year Plan.

Religious Approach to Science

The dual aspect of science as an instrument for good as well as for evil, which was touched upon in the presidential address, was dealt with more elaborately in the Prime Minister's inaugural address. Science today has brought humanity to the cross-roads of destiny. Though the choice is not entirely in the hands of the scientists, they cannot disclaim all responsibility for the manner in which the vast forces which they have unleashed are utilized. The choice now made will provide the answer to the question posed by the Prime Minister: "Are we at the dawn of a new civilization or is it the twilight of the Old?" And he urged on the assembled scientists to adopt what can be justly described as the religious approach to the problems of Science. This prescription must have come as a surprise to the chairman of the Reception Committee, who recently berated scientists for imperfect application of the Scientific approach to Religion.

The First Stage

The best news to come out of New Delhi last week was the announcement by Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, that the first stage in the programme of steel production in the public sector is almost completed. The blast furnace at Rourkela will be started by President Rajendra Prasad on February 3 and he will perform a similar ceremony at Bhilai the next day. Once the furnaces are started, each will be producing 1000 tons of pig iron every day. By the end of the year, five blast furnaces are expected to be in operation with a daily output of 5000 tons of pig iron. There will be a time lag between the production of pig iron and its conversion into steel. Steel production is expected to commence both in Rourkela and in Bhilai by the middle of the year and the first rolling mills will start producing saleable steel towards the end of the year.

The progress of construction at Bhilai and Rourkela and especially at the latter, has been beset by various difficulties which have upset the time schedule more than once in the past. Transport bottlenecks have been the principal causes of delay. From time to time reports have appeared of essential equipment held up at the

ports, awaiting landing facilities, rail transport, or customs clearance. There will be widespread satisfaction that the interruptions unavoidable in an undertaking of this magnitude have not put out the schedule to any considerable extent. The engineering industry, which has been languishing for over twelve months for lack of material, will have this year as much pig iron as it can utilise. Steel supplies are also expected to be easier, with increased production both at Burnpur and Jamshedpur.

Neutral Round

President Tito's recent visit to this country has provided an opportunity for an authoritative clarification of the principles of coexistence which is of particular relevance to the present context of world affairs. The speeches made at the various receptions to the distinguished visitors have all stressed the common approach of India and Yugoslavia to the problem of the world, and this is being strengthened by close cooperation in the fields of trade, commerce and technical assistance. One of the most welcome features in the growing pattern of trade between the two countries is the market that Yugoslavia provides for India's new engineering products. Recently a direct cargo service between India and Yugoslavia was inaugurated by the JSP line which is controlled by the Government of Yugoslavia.

President Tito's visit this time is an informal one. But he has come to India in the course of a round of the uncommitted nations in this region. Before his arrival in India, he had already visited Egypt, Indonesia, and Burma. The remainder of his itinerary covers Ceylon, Ethiopia, Sudan and again Egypt. The discussions that President Tito had with the leaders of the Government in these countries should be helpful in strengthening the bonds of mutual cooperation in the interests of world peace.

Speaking at the banquet given by President Rajendra Prasad in his honour, President Tito said that, while the situation was still clouded, there were hopeful signs of easing tension, and added: "It is only necessary that all the peace-loving forces strengthen their activity and their persistent efforts for the preservation of peace, for peaceful cooperation among nations on the basis of equality, that they intensify their struggle against colonial oppression and against interference in internal affairs of other nations."

Sorry Sensation

It had been evident for some time that there was a determined group of people out for the scalp of Mr M. O. Mathai, who last week provided the country with its latest sensation. The case of Sherman Adams in the United States was seized upon for dark insinuations before frontal attacks on Mr Mathai were published in a section of the press. The develop-

ments so far have whetted the appetite of the professional scandal-mongers who are licking their chops in greedy anticipation of more juicy morsels. Mr Mathai, according to his statement, has resigned his post in order to be free to take up cudgels against his detractors. He has traced the source and inspiration of the attacks to the communist party on evidence which does not appear to be indubitable. The letter naturally has been written under severe emotional stress. That explains the inclusion of statements of dubious wisdom, which in no way serve to fortify him for the ordeal "under the sun".

The great courage shown by Mr Mathai in stepping down from his official position to meet his critics will be conceded even by his worst enemies. And of these, during his thirteen years with Mr Nehru, he has an assorted collection. But the necessity for resigning, in order to fight out his case in law courts, is not clearly evident from the record. If every Government servant who becomes the target of slanderous attacks is obliged to resign before seeking relief under the law, the administration of the country will be at the mercy of scandal mongers. If a particular pressure group does not like an officer holding a position of trust or influence, all it has to do, in order to get rid of him, will be to start a whispering campaign in drawing rooms and night clubs. Sooner or later it is bound to find its way into columns of the yellow journals.

The smear campaign is one of the least savoury developments in the current Indian scene. Perhaps it is not without significance that the victims so far have been individuals on whom the Prime Minister had come to rely for real assistance in carrying out his policies.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. PC[COS]8/983 IP-1002/GB4 for supply of Bar Round Phosphor Bronze (Hollow Cast) 2 1/2" x 1 1/2" x 22" to IRS Specn. No. N6-1949=2288. 1080 Kilogram.

Tender forms are obtainable from the office of the under-mentioned (PC Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms. Earnest money against the tender is Rs 238/-. Closing date of the tender is 2-2-59 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the earnest money deposit receipt with the tender.

Busy Season Gets into Stride

THE busy season, which by all accounts got off to a late start, appears to have gathered, in the course of recent weeks, a very considerable momentum. Active Note circulation has expanded, Rupee Coin has gone out into circulation, Scheduled Bank borrowings from the Reserve Bank have been very considerable and the total of Advances has, during the week ended January 9, crossed the Rs 900 crore mark. Thus, in a brief space of weeks, the expansion in Scheduled Bank Advances has exceeded Rs 60 crores. Does this mean that the 1958-59 busy season, though off to a late start, is likely to evidence a demand for funds on a par with recent years? For, it has been generally thought that the rigours of the current busy season would have been less severe, because industrial production had appeared to have reached a plateau. Of course, the primary cause of busy season demand stems from crop financing and, in this sense, it is possible that the current bumper crops account for the busy season making its appearance in its present strident form. At the same time, we should like to remark that it is also likely that the upward trend in industrial

production is in process of being resumed.

The onset of the busy season in this wise has caused a measure of stringency in the money market, such that money rates have been fully maintained. The anticipated decline in the structure of interest rates has failed to materialise, partly because of the emergence of the seasonal demand for funds. Nevertheless, while, on the basis of the current money market situation, a firm inter-bank call money rate is defensible and justifiable, we see no reason why banks should continue to pay what 1958 results have clearly shown to be suicidal rates for Deposits. But it is interesting to note that, despite the firming up of inter-bank call money rates, gilt-edged is not presenting a weak front; nor, again, has there occurred any worthwhile disinvestment in gilt-edged. Thus, banks are clearly reluctant to sell their gilt-edged holdings in order to raise resources for meeting busy season needs. This lack of selling pressure presumably accounts for the prevention of any backsliding in gilt-edged prices.

If banks are reluctant to secure additional resources from sale of gilt-edged, they seem to be as reluctant to obtain their needs by borrowings from the Reserve Bank against usance bills. The bulk of Scheduled Bank borrowings are against Government securities. This is partly because the cost of borrowing against usance bills is slightly higher and partly because the total of Inland and Foreign Bills is today much lower than the figure for the corresponding week of last year. Be that as it may, the mechanism of borrowings against usance bills is, at the moment, tending to fall into disuse, and it is therefore we suggest that,

as from the next slack season, the Reserve Bank should quote a lower rate of interest as being chargeable in respect of borrowings against usance bills.

The money market situation is a bit obscure, but we fancy that the busy season pressure for funds will continue to be in evidence until the end of March. Around that time, end of fiscal year disbursements by Governments should relieve the monetary stringency.

Sharp Rise in Bank Advances

The returns of the Reserve Bank for January 16 are notable in that they record the first sizable accretion to Balances Held Abroad. For the rest, the onward march of the busy season is indicated by the rise of Rs 2.34 crores to Rs 1629.70 crores in Active Note circulation. There has been an outflow of Rupee Coin for Rs 0.10 crores, and the Reserve Bank's cash in the till has, as a result, declined by Rs 2.43 crores to Rs 6.54 crores.

Large-scale inter-governmental transactions are also to be discerned, with the Central Government instituting deficit financing for an amount around Rs 30 crores in order to pay monthly and quarterly instalments to the State Governments. Investments in the Banking Department have risen by Rs 29.21 crores to Rs 268.78 crores, this indicating the probable magnitude of ad hoc sold in favour of the Reserve Bank during the week under review, with marketable securities for like amount transferred from the Issue Department to the Banking Department. Despite deficit financing of this size, the Central Government's balances are lower by nearly Rs 14 crores at Rs 52.23 crores against Rs 66.15 crores. That the other Governments have been the beneficiaries is suggested by the rise of Rs 36.26 crores to Rs 47.14 crores in the Deposits of the State Governments. The State Governments have, besides, been able to reduce their indebtedness to the Reserve Bank by Rs 7.54 crores to Rs 24.40 crores. The continued busy season pressure is suggested by the further rise of nearly Rs 5 crores to Rs 94.94 crores from Rs 89.99 crores in the Other Loans and Advances of the Reserve Bank. However, the Reserve Balances of Scheduled Banks have improved slightly by just under Rs 3 crores to Rs 72.20 crores.

Finally, Balances Held Abroad have improved considerably by Rs 5.58 crores to Rs 32.60 crores. This we may presume to be the size of the export surplus recorded during the week, since this is the time of the year when exports are at their peak. That, in the course of recent weeks, there has been an upward trend in Foreign Balances

without break is a heartening development.

According to the return of the State Bank for January 16, Advances are slightly lower by Rs 1.38 crores at Rs 178.43 crores. Deposits are practically unchanged at Rs 464.82 crores. Nevertheless, there has been a slight rise of Rs 2.32 crores to Rs 18.00 crores in borrowings, and this is fully reflected in a rise of Rs 3.18 crores to Rs 27.22 crores in the State Bank's cash in hand and with the Reserve Bank.

The return of Scheduled Banks for January 9 shows that Deposits are lower by nearly Rs 10 crores at Rs 1618.23 crores against Rs 1628.04 crores. At this level, Active Note circulation, after a lapse of several months, is again at a figure in excess of the Deposit Liabilities of Scheduled Banks. We are to presume that this drawing down on Deposits and the rise of Rs 18.36 crores to Rs 901.52 crores in the total of Advances are both indicative of busy season pressure being experienced by banks. While there has been no disinvestment in gilt-edged of any magnitude—investments are lower only by Rs 0.36 crores at Rs 633.65 crores—the Scheduled Banks have been compelled to increase further their borrowings from the Reserve Bank by Rs 12.48 crores to Rs 35.29 crores. At this level, Scheduled Bank borrowings are fractionally higher than the figure for the corresponding week of last year. What is interesting, however, is that borrowings against usance bills are placed at only Rs 2.24 crores as compared with Rs 30.29 crores in the corresponding week of last year. In the result, Cash Balances have also been drawn down by nearly Rs 10 crores at Rs 158.55 crores from Rs 168.47 crores.

Hopes and Fears for 1959

By

Paul Einzig

WHILE towards the end of 1958 a revival of trade free of inflationary exaggerations, was widely anticipated, since the beginning of January doubts have developed both about business prospects and about prospects of monetary stability. It is now feared that business revival will be slow this year and that it will be accompanied by a degree of price increases quite out of proportion to its extent. Uncertainty is accentuated also by political influences. There is growing concern about the difficulty of settling the Berlin problem. The outcome of the coming General Election is also considered doubtful. Either of these two factors is liable to bring about a setback in

business recovery, though if all goes well it could create an atmosphere of optimism that would encourage investment and consumption. One of the reasons why the London Stock Exchange has adopted a cautious attitude towards equities since the turn of the year is the anticipation of unfavourable political events.

The revival of pessimism is difficult to understand on purely economic grounds. There are indications of a distinct increase in consumer demand. The removal of restrictions on instalment selling has resulted in a sharp rise in the demand for consumer durable goods. Judging by the occasional increase in the note circulation during the Christmas season, and the annual sales in January also appear to be satisfactory. According to the latest estimates capital expenditure by privately owned industry is only expected to be slightly lower than in 1958 and the difference will be more than offset by the increase in investment in the public sector of the economy. Over and above all hardly a week passes without a major wage increase and the cumulative effect of these increases is bound to stimulate consumer demand.

But because of these wage increases it is feared that a rise in prices will exceed the extent of a business revival. There is no reason why this should be so considering that there is much unused manufacturing capacity, so that it would be possible to increase the output by between 10 and 15 per cent even in the complete absence of any net capital investment. The capacity is there and the output could be increased through the re-employment of the unemployed and the working of longer hours. Most business firms are reluctant, however, to increase their output. This is partly due to the existence of unsold stocks in many industries, though in this respect the situation has improved. It now seems reasonable to assume that the growing consumer demand would be able to absorb an increased output.

Business firms are not sufficiently certain, however, of the prospects to embark on an increase in their production. In fact in many instances the tendency still points in the opposite direction. Dismissals through redundancy continue. The explanation of this attitude lies largely in growing resistance of the trade unions to redundancy dismissals. During the boom this resistance did not matter very much and most firms were quite willing to hoard superfluous labour. The recession induced them, however, to reverse their attitude. They now encounter strong resistance but in existing conditions they are inclined to take a firm line in face of threats of strikes or redundancy dismissals. In one isolated instance a small industrial firm actually dared to turn tough and closed down a sec-

tion of its works affected by such a strike.

Most business firms are afraid of increasing prematurely the number of their employees. What they fear is that should there be a relapse they would encounter once more difficulties in their efforts to reduce their staffs. They will have to be much more certain about prospects before they would feel justified in re-employing labour.

In the absence of a corresponding increase in production the increase of wages alone should be a sufficient cause for further rise in the cost of living. Cost inflation continues and as a result of wage increases and increases in the demand for consumer durable goods on the instalment system there is

also once more some degree of demand inflation.

Very few people are prepared to admit to themselves the facts of this situation. Pressure on the Government to reinforce its reflationary measures continues unabated. The threat of a slump frightened most people into playing for safety by putting up with much inflation to remove the risk of deflation. Apart from bank chairmen who in their annual addresses to their shareholders lay stress on the need for resisting inflation, most public pronouncements point in the opposite direction.

Over and above all, the slowness of the business recovery not only in Britain but also in the United

States and other countries, reinforced the argument of those who believe that unhampered inflation is the smaller of the two evils. The number of people who have come to believe that on the basis of recent experience it is dangerous to resist inflation too firmly on the increase. Moreover, those who still believe that taking a long view inflation is by far the graver danger, are considerably less vocal than they were until recently. There are nowadays hardly any letters in the correspondence columns of newspapers about inflation. Recovery will have to proceed much further before its inflationary aspects will come to be noticed adequately.

Price Support for Jute

THE entry of the State Trading Corporation as a buyer of raw jute is a major step by Government in the direction of ensuring an equitable return for the jute grower. It is reported that the STC has already started purchasing jute in quantity in all the jute growing States as a measure of price support. Acting as agents to the Corporation, co-operative societies are said to have lifted a sizable quantity of jute from the primary markets in Bihar and Orissa. A similar procedure is expected to be followed in West Bengal also. It is understood that the STC in its jute purchases will offer slightly higher prices than the current market levels. It would appear that the present policy of the Corporation is to implement the price support scheme in areas where cultivators have been hard hit by the recent slump in jute prices. The Corporation is also said to have initiated negotiations with the Indian Jute Mills Association for the sale of jute to the jute mills as it will be acquiring much more than what will be required for its export programme.

While it is true that the price support scheme will go a long way in bringing much needed stability to the raw jute market, it is not yet clear whether Government have taken adequate precautions to ensure that the emergence of the STC as a buyer of raw jute does not have adverse reactions on other sections of the jute industry and trade. Moreover, it is pointed out that in the absence of adequate warehousing facilities, the STC may find it impracticable to implement its present price support scheme fruitfully for any appreciable length of time.

Except for some earlier steadiness due to speculative support, the jute goods market has ruled quiet during the past week. Even the encouraging news of a smart rise in the burlap consumption in US has largely been ignored. This is rather surprising because rumour had it last week that burlap consumption in US last month had recorded a decline over that of the previous month. It is now announced that US burlap consumption during December 1958 amounted to 74 million yards. This figure compared with 65 million yards in the previous month and 71 million yards during the corresponding month of last year, that is, December 1957. Stocks of burlap at the end of last month are placed at 235 million yards comprising 113 million yards spot and 122 million yards afloat. End of November stocks totalled 223 mil-

lion yards. Stocks at the end of December 1957 were placed at 223 million yards. Presumably the large increase in stocks has largely offset the encouraging effect of the smart rise in consumption.

It will however, be seen that burlap consumption in US during the past year has been on a level with that of the previous year. Consumption totalled 833 million yards in 1957 and it has amounted to 833 million yards during the past year. The outlook for hessian, therefore, is quite bright as the Indian industry is currently having only stocks which are less than half a month's production. In the Calcutta jute goods market sentiment is rather depressed with the little interest that is noticeable being confined to hessian. Even here support is forthcoming for ready delivery goods only.

The market opened on a dull note in the absence of overseas enquiries, but soon firmed up in sympathy with the futures section. At close on Friday prices were quoted as follows: Hessian 40" x 10 oz Jan Rs 41; April-June Rs 39.40. B Twills Jan Rs 94; April-June Rs 95.30. Ey Monday the undertone became easier due to selling pressure in the futures section. The worst affected was B Twills which after having been done down to Rs 92 closed at Rs 92.20. Hessian however was comparatively in a better position with its closing rate for the day placed at Rs 40.75. The undertone continued to be easier in the heavy goods section again on Tuesday due to renewed selling pressure in the futures market. The near delivery hessian however was well maintained on revival of interest.

The raw jute market has ruled almost unchanged during the past week with Assam Bottoms quoted at Rs 20.75 throughout. In earlier trading sentiment was steady though business passing was on a meagre level presumably due to reports of STC purchases of jute. It would appear that the belief that in the absence of adequate storage facilities, the new policy of price support which has already been put into effect by the STC will not be able to achieve its objective has been largely responsible for the continued absence of interest in the market. Later in the week it was reported that the STC had released some jute export quotas but even that news failed to make much impression on the market.

Trading in the futures section was on an irregular trend. On Friday prices showed a steady trend with Hessian Feb at Rs 39.80 and sacking Feb at Rs 94.20. Sentiment was much depressed especially in the heavy goods section on Monday when B Twills Feb was hammered down to Rs 92.35 by close. Hessian Feb however was quietly steady at Rs 39.50. The downtrend gathered further momentum on Tuesday and the closing rates were as follows: Hessian Feb Rs 39.34 and B Twills Feb Rs 92.10. Assam Bottoms March closed better on balance on Friday at Rs 22.72. The rate however was pushed down to Rs 22.40 on Monday and again to Rs 22.28 on Tuesday.

Outlook

ACTIVE demand at the recent export sales in Calcutta has infused some confidence in the tea trade that, despite a larger output this season here and all the world over, foreign demand for quality Indian teas will continue. Competition in superior grades is attributed to fears of shortage of better teas.

Judging from the crop figures released so far, it is certain that there will be an adequate supply. The total crop in Northern India, up to the end of December is 22.71 million pounds higher at 551.07 million pounds as compared with the same period of 1957. Total production in South India, for the eleven months of last year, at 148.1 million pounds compares favourably with 139.4 million pounds for the same period in 1957. Total production in Ceylon, for the same period, is higher by 5.7 million pounds as compared with that for the corresponding period of 1957. Production in East Pakistan, during last year, has established a new record of 54.11 million pounds as against 46.48 million pounds in 1957.

The Indian surplus may not be too big, taken by itself. But, it is worrying if one considers the growing competition from other producing areas. East Africa is not only increasing her output, but also improving quality. China has hopes of becoming a major exporter. Pakistan is planning a major expansion programme.

Meanwhile, stocks in London are expected to reach their peak shortly and a bigger quantity of tea is to be made available to the trade each week during February. It remains to be seen what effect this will have on auction prices. Buyers may feel that there is not much risk in continuing to take up additional supplies at today's prices, especially as world consumption is reported to have increased and the apparent surplus production may not turn out to be so big.

It is, however, clear that India's inferior grades may have to be sold at unremunerative prices, unless vigorous steps are taken to reduce costs of production. In fact, even producers of good teas cannot expect to obtain high prices as at present, if the forecast of a bigger world supplies prove correct.

In this context, the request of the tea trade and industry to abolish the export duty altogether deserves careful consideration, especially to save the Common tea producer from disaster. If quality tea producers in India and Ceylon are having some price advantage now, it is due to the shortage of supplies. This advantage will be diminished if, in the next two or

three seasons, good weather ensures a larger output of better grades.

In this connection, the latest monthly report, issued by Messrs J. Thomas & Company, states that, in the coming month, indications are that prices may show a slightly upward trend. The report adds that offerings will contain teas with improved seasonal characteristics which should receive good support from the UK. Moreover, the entry of Egypt into the Calcutta market appears imminent and this, along with continued support from Russia, Turkey and Iran, should help to sustain prices at relatively satisfactory levels.

In the Export sale held in Calcutta this week, offerings consisted of 66,325 packages. There was a good general demand although prices showed a rather irregular tendency. Plain and Medium BPs were often dearer, particularly the leafy sorts. Similar Pekoe Fannings received rather less enquiry and the better medium kinds were often easier. There was rather more demand for orthodox BOPs; but at often easier rates apart from the few bright liquoring sorts which were sold well. Orange Fannings were a comparatively weak feature of the sale and were generally easier.

CTC Assams were well supported, the best at about valuations and the poor sorts being often dearer. Legg-cut descriptions were sometimes 2 to 4 np per pound easier. Whole Leaf grades received a fair enquiry and those with style and well-made BFPs were often dearer. Darjeeling teas were sold well at generally dearer rates. Following rates were quoted:—Clean Black Pekoe Rs 2 to Rs 2.04; Plain BP Rs 1.80 to Rs 1.82; Plain Fannings Rs 1.72 to Rs 1.78; Medium BP Rs 1.60 to Rs 1.64; Medium Fannings Rs 1.74 to Rs 1.80; Best Assam CTC BP Rs 2.25 (nominal) and Best Assam CTC Fannings Rs 2.30 (nominal).

In the Internal Sale, offerings consisted of 17,456 chests of Dusts for which there was a good general demand. Orthodox types were sold readily, but at rates which were up to 4 np per pound below valuations. The very few lines of Darjeeling teas, on offer, were irregular, while legg-cut manufacture was generally easier. The strongest feature of the sale was again the competition for all CTC grades. The poorer and medium sorts were rather irregular at generally firm to dearer rates, with more interest being shown on medium descriptions and the smaller powdery kinds. Prior sorts were irregular around valuation with the best kinds selling well and often realising prices above last rates. Following rates were quoted:—Medium Dooars Dust Rs 1.74 to Rs 1.78; Medium Assam Grainy Dust Rs 1.74 to Rs 1.78; Medium Assam CTC Dust Rs 2.0 to Rs 2.20 and Best Assam CTC Dust Rs 2.50 to Rs 3.00 (nominal). There was a good demand for Lea grades which were sold at generally dearer rates.

In the Export Quota section, business was done at 2½ np. At the close, there were buyers at 2½ np with sellers at 2½ np per pound.

Indian Finance

January 24, 1959

US Notes

SALES of imported automobiles which have been rising markedly for several years, last year hit a new high of 383,000—a gain of 9.15 per cent over 1957. As a result, foreign-made cars increased their share of the US market to 8.2 per cent from 3.3 per cent the previous year.

But this interest in foreign-made automobiles is only one manifestation of a trend toward imported merchandise which is sweeping the United States. Indicative is the announcement here last week that the national retail merchants association will encourage European manufacturers to visit the United States, so that they may study the American market and see what the American consumer wants to buy.

A more direct—and a more human than strictly economic—evaluation of the impact made here by merchandise from all parts of the world comes from Sylvia Porter, one of the ablest economic writers in the United States. In a recent article, she observes that "a couple of years ago at Christmas our daughter received a most treasured gift—an American-made bicycle. This past Christmas her best friend received her heart's desire—a Japanese-made bicycle." She notes, too, that her mother now wears a pair of Italian-made walking shoes instead of the American shoes she used to wear.

"Suddenly, this past week," Mrs. Porter continues "the realization hit me that in recent months we have bought or received as gifts glasses made in West Germany, a radio and steak knives made in Japan, a set of breakfast dishes and two sweaters made in England, gloves made in France, a salad bowl made in Holland, ashtrays made in South Africa, and this is only a partial list."

The fact is that finished consumer goods from abroad are no longer considered extravagant or longer considered specialty items, but have found a regular place on retail shelves throughout the United States.

Trade statistics can tell only part of the story. In the past decade, the value of U.S. merchandise imports has nearly doubled. A decade ago, however, about 70 per cent of all U.S. imports represented raw materials, largely essential to the U.S. industrial economy. Another 20 per cent represented purchases of semi-finished products, and only 10 per cent consisted of finished goods.

Today, however, imports of finished merchandise—often items

similar to those manufactured by American companies—have jumped to 20 per cent of the total. This does not mean that purchases of raw materials or semi-finished product have declined; indeed, they have expanded, but not as nearly as fast a rate as have purchases of finished goods.

In assessing this trend, it is not enough to say that Americans are demonstrating a growing interest in foreign goods. Equally, if not more important, is the fact that other free countries have made remarkable economic progress, and to an increasing degree have the factories, the materials and the know-how to turn out products for sale abroad.

The United States, of course, has nurtured these international economic advances. It has done so with thousands of millions of dollars in loans and grants, with a liberal trade programme, with technical co-operation and exchange.

As Mrs. Porter sees it, the "internationalizing of the pantry and closet shelves" of American homes is a notable result of these U.S. policies which have economic progress everywhere as a prime objective.

In her words, it "symbolizes the birth of a new boom, a new cycle of world trade. There is room enough in this boom for all of us."

Britain

LABOUR IN BRITAIN

By JOHN WALTON

IN the bigger trade unions in Britain, officials' pay takes a larger slice of working expenses than in the smaller bodies. But the smaller unions find they have to pay out proportionately more on running their offices and holding committees and conferences.

These findings emerge from a sample survey of union spending by the man who checks the yearly accounts of most British unions. He calculates that in the bigger unions the average cost of salaries and allowances comes to nearly three-fifths of all working expenses; maintaining and running the office, about a fifth; and holding committees and conferences, less than a tenth.

In smaller unions, with less than 100,000 members, only half of working expenses goes on officials' salaries; more than a fifth on running the office; and about an eighth on holding committees and conferences.

Working expenses, however, continue to rise. During 1957 they went up by seven per cent; the year before, the increase was much the same.

The man who produces this pattern of spending by organized labour in Britain is a Government official who, by Act of Parliament, has power to register trade unions. His title is the Chief Registrar of Friendly Societies.

Though no union is bound by law to register, today the Registrar reckons that organizations covering

nine British trade unionists in every 10 are on his books. They are there because they find it helps them to be.

One gain to registered unions is exemption from tax on income from investments used solely in provident funds to finance such benefits as, for example, sickness, accident and death. Another is that a registered union may switch its property from one trustee to another without paying legal fees—a boon to many bodies which hold yearly elections.

In his London office, the Registrar files the detailed accounts which the unions send him every year. On payment of a small fee, anyone can inspect them.

All accounts must reach the Registrar promptly after the close of the year. Every item of income, expenditure, assets and liabilities must appear in detail. If the accounts are late or irregular, the Registrar can take action through the courts; and none of these provisions excuses the unions from making separate auditing arrangements of their own.

Registration also brings another safeguard for union members. The treasurer and other officials must give a full account and deliver to the trustees all property and effects belonging to the union. Should there be deficiencies, the trustees can take court action against offending officials.

A feature of the most recent report from the Registrar was the rise of 10 per cent, in union income—the biggest for years. But bigger spending on union administration and on dispute benefit absorbed the extra revenue.

For one group of unions, registration of at least one of their funds is compulsory. Under the law governing union spending on

party political activities, all unions with political funds must file them with the Registrar, even if they do not become fully registered.

Today he reports 125 trade union organizations with political funds, though three of them still wait to collect their first contributions. Most unions with established political funds back the Labour Party, which in 1958 reported a total affiliation of more than 5,500,000 trade unionists.

Before the Registrar accepts the registration of a political fund, he must satisfy himself that all members have had the chance to vote in a union-wide ballot, and that there has been a clear majority in favour of adopting political objects. Furthermore, he has to ensure that members' political contributions go into a separate account.

Political rules must give any member who wishes it the chance to contract out of paying a political contribution. And the Registrar reports that one in eight of the 8,000,000 members in unions with political funds use this right.

Members who feel aggrieved about the use of their union's political fund can take their complaints to the Registrar, who can give a legal ruling. In 1957 he dealt with three cases.

Contributions to political funds tend to be low; according to the Registrar, they are about 1/25th of the total yearly contribution for all purposes.

Registration has nothing to do with affiliation to the Trades Union Congress (TUC), nor does it affect a union's standing in law. By registration a union gains rights and takes on obligations, but by choosing not to register it loses none which it already has.

Among TUC unions some are not registered, and a number which

do affiliate are federations in the eyes of the Registrar; he counts their constituent parts separately. Among such organizations are the National Association of Card, Blowing and Ring Room Operatives and the Amalgamated Weavers' Association, both in the cotton industry and both made up of several local bodies.

This difference in counting largely helps to explain why there are 400 registered unions and only 185 affiliated to the TUC. Another reason is that a few registered unions are not affiliated to the TUC. At the end of 1957 the total membership is registered unions was nearly 8,600,000. That affiliated to the TUC was 8,337,000.

Sweden

SWEDEN'S State Budget Estimates for the fiscal year 1959-60, submitted to the Riksdag at the opening of its spring session on January 12, show total revenues of Kr. 12,896,000,000 (£890,000,000; \$2,522,000,000) under the operating budget, while expenditures amount to Kr. 13,495,000,000. Since Kr. 150,000,000 will be covered by the Budget Equalization Fund the deficit under the operating budget will be Kr. 499,000,000 (£34,400,000; \$97,000,000).

The estimated State revenues are Kr. 163,000,000 larger than in the current operating budget, while expenditures show an increase of Kr. 974,000,000.

Expenditures under the capital budget are estimated to call for additional funds of Kr. 1,786,000,000. The deficit in the overall budget would thus amount to Kr. 2,470,000,000 (£170,000,000; \$480,000,000). This compares with an estimated deficit of Kr. 2,219,000,000 in the 1958-59 overall budget.

Social welfare accounts, as in previous years, for the largest share of appropriations under the operating budget, Kr. 3,908,000,000, or close on 30 per cent of the total. The increase compared with the current fiscal year is Kr. 267,000,000, most of which will be used for various ways of fighting unemployment. Defence expenditures account for a further 20 per cent of the operating budget, appropriations totalling Kr. 2,836,000,000, or Kr. 136,000,000 more than in 1958-59. Appropriations to the Ministry of Communications will rise by Kr. 235,000,000 to Kr. 1,136,000,000 and to the Ministry of Education by Kr. 136,000,000 to Kr. 1,697,000,000.

The question of a universal service pension scheme is likely to be the most salient issue of this year's Riksdag session. The Social-Democrat Government will submit a Bill to the effect this spring.

Should not a compromise be reached, the voting in the Second Chamber of the Riksdag will probably result in a stalemate, as the Social-Democrats and the Communists together rally 115 votes against 115 for the Conservatives, the Liberals and the Centre Party.

Economic developments in Sweden in the nearest future are expected

to be about the same as in 1958, according to the preliminary National Budget report for 1959 submitted together with the State Budget. Total production is likely to rise at a relatively slow pace and the average number of employed will remain largely unchanged, while the reduction of the working week—from 47 to 46 hours in 1959—is continuing according to plan.

The stagnation in exports is likely to persist at least during the first half of 1959, whereas private consumption and public activities are estimated to rise at about the same rate as during the past year. Private investments, which rose heavily in 1958, may remain at an almost unchanged level.

The background of the forecast for production and employment is an assessment of the economic climate abroad during the nearest future. While the improvement in the United States is likely to continue it is not believed to proceed at the same rapid pace as in the latter half of 1958. At the same time the economic situation in Western Europe presents a rather diffuse pattern, the report says. The demand for some Swedish engineering products may be affected by a continued decline in investments in Western Europe, whereas an improvement is foreseen for most of Sweden's forest products.

By and large, the economic climate abroad indicates an unchanged volume for Swedish exports in 1959. At the same time, however, imports are expected to rise somewhat, as 1958 was marked by a depletion of stocks and a consequent reduction in imports. Both import and export prices are likely to show some decline in 1959.

Industry's investment plans for 1959 indicate a decline in investments for plant and machinery compared with 1958 when they received a heavy stimulus following the abolition of the investment duty. Investments in housing, on the other hand, are likely to show a continued increase over the high level attained in 1958 when some 65,000 units were completed. Trade and merchant navy investments are also likely to rise in 1959.

Private consumption this year will largely depend on the outcome of the current wage negotiations. In 1958 total wages rose by 3-4 per cent. The increase may be smaller in 1959, although this does not necessarily mean a decrease in real wages, as consumer prices are expected to rise more slowly than between 1957 and 1958. Even a moderate rise in cash wages may thus entail an increase in the volume of private consumption of about 2 per cent, i.e. the same as in 1958.

The gross national product, which rose by 1 per cent in 1958, is likely to show the same rise this year. Most of this increase will probably be accounted for by housing and services, whereas industrial output may remain largely unchanged, the National Budget report underlines.

Indian Finance

ACC-Vickers-Babcock Heavy Engineering Project

The idea of establishing a large Heavy Engineering Works in India for the manufacture of a wide variety of heavy industrial plant including boiler-plant, cement-making and coal mining machinery, was conceived nearly three years ago. Before actually establishing a project of this magnitude, however, detailed consideration of a large number of problems was necessary. This naturally took some time. Thanks, however, to the continued encouragement and guidance received from the Government of India, it has now been made possible to go ahead with the project.

The new Company, ACC-Vickers-Babcock Limited, whose abbreviated name "AVB" is already familiar to many, was incorporated on 16th January 1959, with an Authorised Capital of Rs 10 crores, of which Rs 5.40 crores is expected to be issued by the time the Company goes into production. The Company is also expected to raise Debenture Capital to the extent of Rs 4 crores by private negotiation. The share capital will be held as under:—

The Associated Cement Companies, Ltd.—49.8 per cent, Vickers Ltd., London—24.9 per cent, Babcock & Wilcox Ltd., London—24.9 per cent, Killick Industries Ltd.—0.1 per cent, F. E. Dinshaw Ltd.—0.1 per cent, Tata Sons (Private) Ltd.—0.1 per cent, and Mulraj Khatau & Sons (Private) Ltd.—0.1 per cent.

The Company will be directly controlled by a Board of Directors consisting of:—

(1) Mr Dharamsey M. Khatau, (Chairman); (2) Sir Kenneth Hague; (3) Mr A. H. Hird; (4) Mr E. D. Sheppard; (5) Mr S. Moolgaokar; (6) Mr P. S. Mistry; (7) Mr T. A. H. Harrison; (8) Mr J. Stewart Robertson; (9) Mr John Marks; (Managing Director); (10) Mr G. R. Tongaonkar, (Deputy Managing Director).

In his comments on the State Budget, Finance Minister Gunnar Strang says that additional State revenues of Kr. 500,000,000-1,000,000,000 (approximately £34,500,000-69,000,000; \$100,000,000-200,000,000) may probably be necessary for the 1959-60 fiscal year. However, he does not take a stand on the question how these additional funds are to be secured but finds it more appropriate to wait until the spring when a safer assessment can be made of economic developments.

Sir Chunilal V. Mehta, K.C.S.I., has also been invited to join the Board.

The first Board Meeting of the Company took place on Tuesday 20th January. Lord Knollys, the Chairman of Vickers Limited, has been visiting Bombay specially for the purpose of being present.

Thanks to the assistance of the Government of West Bengal, arrangements have been completed for acquiring land and other necessary facilities at Durgapur where the Company's Works will be located.

The A.V.B. Project is an outstanding example of collaboration within the Commonwealth not only in finance but also in technical know-how in the field of Heavy Engineering, and is a big step forward in India's industrial development and progress towards self-sufficiency. It is, in fact, one of the largest heavy engineering projects in the private sector to be started in the post-war period. A.V.B. will manufacture machinery for cement-making, general mining and coal-mining, as well as the well known "Babcock" water-tube boilers, pressure-vessels and ancillary items. A.C.C.'s own Engineering Workshops, which have been manufacturing cement-making machinery for the last 15 years, will form an integral part of the new project inasmuch as an appreciable portion of the products envisaged will be manufactured in these Workshops for A.V.B.

The construction of the A.V.B. Works will commence immediately and it is expected they will be completed in 1961. When in full production, the project will provide additional employment for over a thousand workers.

The setting up of the project will involve no expenditure of Foreign Exchange from Indian resources, as all the Foreign Exchange required for this purpose will be covered by the funds provided by the Overseas participants. Apart from this by manufacturing certain items of heavy engineering equipment which are now imported, the project will also save for India a substantial recurring drain of foreign exchange. Furthermore, when the project is in full production, it is hoped that it will be possible to earn foreign exchange for the country by exporting a portion of the production to nearby countries after meeting India's own requirements and so strengthen India's position in international trade.

A.V.B. will have at its disposal the expert 'know-how' and wide experience of three well-known firms, namely, Vickers Ltd., London, who are internationally famous as builders of ships, aircraft and heavy machinery for cement, mining and other industries, Babcock & Wilcox Ltd., London, who are world-renowned as designers at manufacturers of Boiler Plant Nuclear Installations and ancillary equipment, and The Associated Cement Companies Ltd., who are the pioneers in India not only in the manufacture of cement but also of cement machinery.

January 24, 1959

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

I HAVE been watching with lively interest, as students of the Indian economy have no doubt been doing, what seems to be a deliberate attempt by Mr H. V. R. Iengar, Governor of the Reserve Bank, to draw, in a series of speeches spaced out over the past year or so, a word picture of economic conditions as transformed and in process of metamorphosis as a result of developmental endeavours. What seemed at first to be a stray assessment of the foreign exchange situation can now be seen to form a pattern with Mr Iengar's subsequent analyses of such economic phenomena as the price situation and the role of deficit financing. Except that, around the middle of last year, Mr Iengar appeared to be perturbed about the trends in prices, the attitude he has taken has been exemplified by an altogether heartening combination of an ability to see the brighter side, while, at the same, paying due heed to abnormalities that were obtaining. I should like this week to read, if possible, between the lines of the latest in this series, which was a talk early this month in Bombay.

The note on which Mr Iengar starts out is that, as against the parlous state of foreign exchange reserves six months ago when he last talked on the subject, it could now be assumed that, in the light of the friendly assistance that has since been assured to this country, the external payments situation in respect of the Second Plan has been stabilised. This leaves him free conveniently to take stock of the internal economic situation. Even here, it is hardly to be expected that the Reserve Bank Governor would be able, in the course of a brief talk, to deal with all aspects of the internal economy. Thus it is that Mr Iengar has chosen to deal with some aspects of the problem of resources "from the point of view of the functions and responsibilities of the Reserve Bank". It is at this stage that it is necessary for us, before we proceed to study the problem of resources from the standpoint of a central banker, to define for ourselves what the role of the Reserve Bank should be in an economy such as India's and at the present time.

Less than three decades ago, and the Reserve Bank had not come into existence at that time, a central banking institution was, in a manner of speaking, a law unto itself, but, then, its activities were also greatly restricted. As Mr Iengar points out, so long as the era of the gold standard lasted, "the central bankers largely operated as high level technical experts, keeping themselves largely aloof from the problems affecting the common people". For once and for

all when what I may call the gold standard economy collapsed, the pedestal on which central banking had so long perched was suddenly removed. Mr Iengar says that, thereafter, "central banks became increasingly aware of their responsibilities to meet situations posed by business fluctuations and fall in employment levels". I think this will not be denied, but the root cause of such a broadening in the attitude of the central banks is to be sought and found in what Barbara Ward has called the acceptance of governmental responsibility; that is to say, no democratic government can now afford a prolonged recession and, in this realisation, there has perhaps evolved a deliberate policy in which the central banking institution became an instrument whereby correctives to the state of the economy were sought to be implemented. We have seen how, in particular, the mechanism of bank rate has been called upon to reduce or to increase investment, according as inflationary or recessionary trends were discernible in an economy. Then, there is also the fact that, during the Second World War, this aspect of keeping in check inflationary potential as well as of garnering resources for prosecuting the war fashioned a new central banking activity. The borrowing programmes of governments were immense in the period of the Second World War. The technique of borrowings on a scale that till then could not even have been imagined was, thus, perfected. There is the school of thought which maintains that such borrowings were inflationary, since governments which received loan subscriptions in this manner immediately disbursed them again in defence expenditures, and these were not, shall we say, "productive" disbursements. I do not know that I will subscribe to such a view. For, every fresh release of purchasing power in this manner was followed up by a fresh and bigger new loan on the part of governments. I need hardly add that it was a "cheap money" war, and I maintain it was because the rates of interest were kept down that governments succeeded so admirably in their borrowing programmes. In such a reading, I would go so far as to say that, but for the cheap money policy and the vast Government loan programmes, inflationary pressures

during the war would have been even greater than was the case. But I am digressing, and the point that I am trying to drive home is to confirm Mr Iengar's thesis that the great depression of the 1930's revolutionised the character, ambit and scope of central banking. What the Second World War did was to indicate the extent and magnitude to which monetary policy could be made to supplement fiscal policy in the raising of resources for governments. Once the war ended, the needs of rehabilitation and reconstruction necessitated one more new direction in which the central banks had to function. On the one hand, the pent-up demand over the period of the war was clamouring for consumer goods. On the other hand, the war shattered economies had to set about diverting production from munitions to consumer goods. In brief, inflationary pressures had to be kept in abeyance, the while that production and supplies could catch up with the accumulated demand. There is, in this, a parallel between the situation in which war-torn Europe found itself and the conditions in which the under-developed countries today are trying to industrialise their economies. Thus it is that, just as central banking was called upon through monetary policy to aid in the rehabilitation of Europe, so, too, is the central banking

institution required to contribute in the fashioning of an economy of growth. Mr Iengar has aptly stated that, in this manner, a further dimension has been added to the functions of central banks in under-developed economies. But the parallel of which I have just talked is not quite the correct one. After all, in West Europe, the skills were already there, the labour was already experienced and, in many cases, the factories already existed. What, instead, should be the parallel is, may I suggest, between the conditions of war which required a mobilisation of national resources and the conditions of growth wherein, too, we require this effort at securing the necessary resources to maximise the rate of development. Indeed, this parallel is seen to be perfectly appropriate, were we to realise that an under-developed country is today at war—a war against poverty. What, then, should be the role of a central banking institution in an underdeveloped economy?

As Mr Iengar points out, "it is no longer the maintenance of stability in the value of the national currency alone nor even the prevention or correction of economic fluctuations, but also the rendering of positive assistance to the growth process which has assumed importance". Of course, it does not at all follow that the central banking institution, in such conditions, should concentrate on the provision of credit for development without due regard to currency stability. On the contrary, development is a process which has to take place while the economic equilibrium is maintained. It is this fact of simultaneous and paradoxical policies of credit expansion for production and credit restraint in areas of the economy where shortages

... the synthesis of elegance
and utility

CALCUTTA MADRAS NEW DELHI

are being experienced which renders the task of the central banking institution more arduous than it ever was before. But what Mr Iengar says here is not something new, since he has long been insisting that the objectives of the Reserve Bank are twofold, one of them being to ensure that the effort at increasing production is not hampered and the other being to prevent the additional purchasing power generated thereby from adding to the inflationary pressure. In short, what a grown economy needs from a central banking institution is a species of selective monetary control such that the objective of development is unimpeded, the while that monetary devices are used to reduce inflationary or speculative pressure in scarce commodities. In India, thus, central banking policy, or monetary policy, has to conform to the needs of the Second Plan. The Governor of the Reserve Bank is quick to draw our attention to the fact that this linking of the activity of the central banking institution with the Second Plan does

not mean that "the Reserve Bank has in any sense abdicated or been called upon to abdicate its power and responsibilities in relation to monetary stability". It is the reverse which is true, that the Reserve Bank will have a greater responsibility in its traditional role of vouchsafing economic equilibrium. After all, in India, planning has necessitated a considerable recourse to created money or deficit financing. The Reserve Bank has to mitigate or prevent the inflationary repercussions, if any, of such deficit financing. We have seen sufficiently the Reserve Bank in action to know that the Reserve Bank is expeditious in clamping down restrictions in the matter of bank credit whenever untoward price increases manifest themselves in any sector of the economy. The Reserve Bank Governor does not claim that it has been this selective monetary control alone which has succeeded in imparting a measure of remarkable stability to Indian price trends. But it is, I think, quite clear that the directives issued by the Re-

serve Bank from time to time have been an important factor in preventing any runaway tendencies in prices. The price situation in India, since the First Plan began, bears testimony to the success of both governmental and Reserve Bank measures to keep prices on an even keel. There have been fluctuations in prices, but the two way movements are patently due to shortages or surpluses in supplies of particular commodities. It has to be stressed that the movements have been both ways, and also that it is not as if the purchasing power of the rupee as such has depreciated. After all, with 1952-53 as the base, the index number of wholesale prices is lately at 111; and an upward movement, net of 11 points in six years is by no means an alarming rise.

★ Then again, I am beginning to wonder whether some element of price rise is not inevitable in a developing economy. The Reserve Bank Governor puts forward the idea that, for a time, "a reasonable price increase... may actually be

desirable if it stimulates increased production". If an increase in foodgrains prices arouses an ominous mutter in the press, it is because an articulate section of the people residing in the urban areas is put to hardship. But, if you take the agriculturalist, a price increase in foodgrains it is which brings him greater prosperity. It puts more money in his hands with which he is able to afford more necessities. And it is the agriculturalist who accounts for the bulk of India's population. So, a price increase particularly in foodgrains may be said to indicate an improvement in the standard of living of the masses constituted by the agriculturalists. We have necessarily to draw a line somewhere, and this is why Mr Iengar has emphasised that the price increase should be "reasonable". However, the fixed wage earner or the urban dweller has to be insured against any hardship resulting from a general depreciation in the value of the currency. That would happen if there were a sustained price increase all along the line—it is that which would be inflation. This is not the juncture at which I should bring in the plight of the middle classes who particularly feel the pinch. After all, labour has had its interests solicitously looked after, and legislation of various sorts has brought it new amenities and higher wages. So, it does not lie in the mouth of the industrial worker to complain against an economic phenomenon which benefits even more of a "have-not" than the worker himself ever was. Furthermore, we have to admit that it is the actuality of higher prices obtaining at any given time which provides the incentive for the farmer to sow a larger crop for the next season. Thus, if agricultural production is to go up, and that it must go up is the very basis of our planning endeavours, some element of increase, reasonable increase, in agricultural prices will be seen to be desirable. Such an increase in foodgrain prices will not, I repeat, be tantamount to inflation. At particular times, in particular sectors of the economy, as a spur to the increased production sought, higher prices will necessarily obtain. From the evidence of the recent past, with the rapid decline that has been registered in foodgrain prices, Mr Iengar concludes that it was not inflation, but other than monetary causes which were responsible for oscillations in the price levels. What the Reserve Bank has to guard against is any general tendency for prices to rise; and, says Mr Iengar, the value of the rupee must not be "allowed to be eroded".

★ I am afraid that I shall not be able to finish my interpretation of Mr Iengar's talk, and I have necessarily to hold over to the next week the rather interesting conclusions which have been drawn by Mr Iengar as regards the performance and role of the private sector.

EAVESDROPPER.

GATEWAY GOSSIP

THE importance of small scale industries stems from the fact they are at once capable of reducing the unemployment problem to manageable proportions and of helping to increase production. There are also other good reasons why small industries should be fostered in the underdeveloped areas. It is through the development of small scale industries that Japan has been able to obtain a place among the comity of industrially advanced nations of the world. In recent times China has greatly strengthened its economy through an intensive development of small scale industries. The lack of adequate transport and other facilities render it an uphill task for backward economies to embark upon a programme of industrialisation by setting up large scale industries. In these regions small scale industries can play a vital role as they can be set up easily wherever minimum facilities are available. It is, therefore, no surprise to hear Mr Manubhai Shah Union Minister for Industries, describe the small scale industries as the real highways for the industrialisation and development of the our economy.

The need for giving a fillip to the small scale industries has been well recognised in the Second Plan as will be seen from the sizable provision of Rs 200 crores made in this regard. Mr Manubhai Shah has said that the entire provision for different small scale industries in the Plan will be fully utilised during the plan period. Already the impact of the progress of the programme for the development of small scale industries is visible throughout the length and breadth of the country. Most of the machinery required by small-scale industries are being indigenously manufactured and the industrial spirit is slowly pervading the rural areas. The small industries service institutes are playing an important role in purveying scientific knowledge. There are now only four regional institutes but Mr Shah is confident that all the 14 States will have full-fledged institutes by 1959.

One of the important steps taken by Government toward fostering the growth of small industries is the establishment of industrial estates. Twenty-eight of the 81 industrial estates that are being set up in different parts of the country have already started working. It is expected that the remaining units will start working in the near future. During the rest of the current plan period 70 more such estates are likely to be sanctioned. Mr Shah has revealed that of these more than 20 estates will be in rural areas developing agro-industries. Mr Shah has further pointed out that with its larger industrial bias it may be confidently expected that there may be a three-fold increase in the financial provision for the development

Small Scale Industries

of small-scale industries under the Third Plan.

Industrial estates are generally of two kinds, large estates near big cities and urban areas and small ones in Community Development Blocks. The larger Estates cost roughly Rs 20 to Rs 30 lakhs each while the smaller ones are estimated to cost roughly Rs 2 to Rs 3 lakhs each. The object of setting these estates is to remove small industrial units from crowded urban areas and thus reduce the pressure on the latter. Except for the two estates at Okhla and Allahabad which have been constructed by the National Small Industries Corporation, the rest are all being built by the State Governments. The State Governments acquire and develop land, construct roads, put up factory buildings, arrange for the supply of water and electricity and also set up common service workshops. The factory buildings are then let out at concessional rates or sold on hire-purchase basis to small industrialists. The Central Government advance to the States the entire cost of the estates as loan.

The establishment of the National Small Industries Corporation is yet another important step toward stimulating the growth of small industries. The main functions of the Corporation besides the management of the Industrial Estates at Okhla and Allahabad, are the procurement of Government contracts for execution by small industries, rendering marketing assistance and the supply of machinery on hire-purchase basis to small industries. An important feature of the scheme for technical assistance to small scale industries is practical demonstration of the working of modern machines at places where small units are located.

The total expenditure on village and small industries during the first two years of the current Plan has amounted to Rs 59 crores and by the end of the third year, it will increase to Rs 91 crores. Khadi and village industries account for more than a quarter and handloom and powerlooms for about a fifth. It is stated that for the handloom programme substantially larger annual outlays than were provided in the first three years would be needed if a target of 700 million yards of additional production from mill yarn is to be achieved. In their "Appraisal and Prospects of the Second Plan", the Planning Commission have pointed out that allocations for sericulture and coir are likely to be utilised to the extent of more than 80 per cent. The Commission further observe that altogether, if funds are available, an actual outlay of Rs 170 to Rs 175 crores, could be achieved against Rs 200 crores provided and if commitments are limited to Rs

160 crores, the requirements of some programmes such as handloom, small scale industries and industrial estates might not be fully met.

The Planning Commission note that in coming years not only will funds provided in annual plans be utilised more fully but demand will be pressed for an increase in allocations. Programmes like industrial estates are in increasing favour and there are also indications that in respect of other programmes also the tendency will be to accelerate the pace of activity. Commitments in respect of industrial estates are being rapidly made by the States within the existing ceilings. The Commission however, feel that as the funds required for completing all the approved estates within the Second

Plan period may not be available, quite a few estates may have to be carried over to the Third Plan.

Though the Planning Commission have opined that in view of the limited funds which the Centre and the State Governments could make available for the implementation of the programmes under village and small scale industries, the target of expenditure of Rs 200 crores may not be achieved, Mr Manubhai Shah is confident that the target will be achieved. Presumably Mr Shah thinks that it will be incumbent on Government to find the necessary resources for the fulfilment of the original target. One factor that may be expected to weigh heavily with Government in the matter of a rapid development of small industries is their employment potential.

Over 5,500,000 tyres ago

Year by year expansion of Firestone-India keeps in step with nation's requirements

It was in 1939 that the original Firestone Plant in Bombay went into operation. But from the commencement, plans were envisaged for a series of expansions, and staff training programmes were prepared in order to meet the production needs of the years to come.

Through the critical war period, and the years that followed, the Firestone plant continued to expand, and introduced the first balloon tyre; the first

double white sidewall tyre, the first earthmover tyre and the first Nylon tyre manufactured in India.

And now the Firestone plant reaches the final stages of the original expansion programme. With a proud record of producing over five and half million tyres in India, Firestone aims to keep the wheels of transportation moving, still retaining the original policy which is now a tradition—"Best Today—Still Better Tomorrow".

Textile Industry

The present difficulties of the textile industry have been brought about mainly by two factors. While there has been a decline in domestic offtake, exports have also recorded a sharp setback. Referring to the present situation in the industry, the Committee of the Indian Cotton Mills' Federation traces the current predicament to the imposition of a heavy additional excise duty on mill made cloth in September 1956 and the adoption of other restrictive measures along with it. Already the industry was groaning under the heavy burden in the shape of an increase in the wage bill and the high price of other articles used by it. The effect of all the adverse factors was an enormous accumulation of stocks with mills and as exports had also shown a sharp decline, the position became quite untenable for the industry. The Federation points out that exports are not likely to reach even the low figure of 600 million yards in 1958. It is now evident that if exports have to be stepped up Indian textile goods should not only be good in quality but should be competitively priced. This can be achieved only by modernising our mills.

It may be recalled that the Textile Enquiry Committee have pointed out that consumers overseas prefer flawless cloth produced on automatic looms. Most of our competitors in foreign markets are placed in a more advantageous position than our industry as they are already using automatic looms extensively. It is therefore evident that if our textile goods exports are to increase it is imperative that our mills also install automatic looms as quickly as possible. A decision in this regard seems to have been taken now. It is said that at the recent meeting of the representatives of the Textile Enquiry Committee and the trade, it has been decided that 2,500 automatic looms be installed annually in the country's textile mills during the next three years beginning from the current year. The manner in which the rationalisation programme is sought to be implemented seems to be quite realistic. The provision for giving preference to units having established trade connections and sizable exports and to those which will provide evidence that they can show good results in their export programme, if equipped with automatic looms, is clear proof of Government's anxiety to achieve results as quickly as practicable.

*

Electricity Industry

It is often complained by private enterprise that Government are giving a preferential treatment to the public sector to the disadvantage of the industries in the corporate sector. Such a tendency will

be indicative of a lack of understanding on the part of Authority regarding the needs of the situation in the country and the nature of the methods devised by themselves to attain the national objective. The Industrial Policy Statement and the innumerable pronouncements of the spokesmen of Government in the past few years have unambiguously shown that the economic development of the country is to be achieved with the two sectors working side by side and in close cooperation with one another. In this view it is incumbent on Government to make no discrimination in meeting the requirements of either sector. Though Government spokesmen do maintain that there is no discrimination, the manner in which the working of the private sector is sought to be controlled has inevitably raised the apprehension that Government may not be as interested in the private sector as in the growth of the public sector.

It is, therefore, gratifying to note that there are sections among private enterprise whose experience shows that there is no such bias in Government's policies. Speaking at the Annual general meeting of the Association of Electrical Undertakings, Bombay Province Mr N. N. Adajania, Vice-President, has pointed out that Government have amply recognised the need for financial assistance to the undertakings in the Licensees' sector in the matter of rural electrification. In this connection he observes that "this trend is evidence of a policy free from doctrinaire considerations, the emphasis being that whichever party is best situated to develop a given area should be permitted to do so."

Referring to the requirements of the Licensees' sector of the industry Mr Adajania has pointed out that there are two factors with which the industry at large has to reckon with. In the first place, the rapid strides in the economy as a whole make it necessary for the nation to embark on schemes to augment the generating capacity as well as the transmission and distribution facilities. Secondly, the industry has to take note of the fact that there is an increasing demand for electrical energy both by industries and homes. While it is true that the industry comes under the regulation of Union Laws, it is with the State Governments that the industry has largely to deal with. In this view it is necessary that there is close understanding between the industry and the regulatory authorities.

Another handicap of the Licensees' sector of the industry stems from the "undue preference" in the matter of tariffs. Though there has been a slight downward revision, the differential as between the rates applicable to the direct high tension consumers of the Bombay State Electricity Board and to the Licensees continues to be appreciable. Mr Adajania rightly contends that there is "little justification for the Licensees' areas being loaded with a burden which should be rightly the responsibility of all the consumers deriving power from the Board's power system".

GATEWAY MARKETS

Bullish Tone in Oilseeds Markets

ON the Bombay Oilseeds Exchange, there was an all-round flare up from the start of trading last week due to buying by Delhi and the Punjab operators and frantic covering by unnerved shorts. The firmness in Groundnut seeds was attributed to reports current in the market that the Government would soon announce further export quota for groundnut oilcake for which there is a good demand overseas. Some business in groundnut oil was also reported done with Burma and Hong Kong. Business for more than 2,000 tons of HPS groundnut has been done with Hong Kong around \$110 per ton. These factors appeared to have favoured bulls to a considerable extent.

The export quota of 20,000 tons of groundnut oilcake (expeller variety) announced last week appears to have been almost exhausted. Prospects for exports of HPS groundnut to Canada have brightened as a result of further reduction in freight rates for groundnut on the India-Atlantic ocean ports run. There are, however, indications that most of the exports will be made through Saurashtra ports, as the commodity is cheaper there by about Rs 30 per ton.

While arrivals of the new crop from Saurashtra and Hyderabad areas have been limited, shippers, vanaspathi interests and Delhi speculators are reported to be supporting the market on hopes of higher export business in cake, oil and HPS groundnut in the coming months.

In the Castorseed section, the rise in prices was helped by the rumours of sizable business in castor oil with the USA. Reports also spread that exports of castorseed might be allowed.

In the Linseed section, whims of the North Indian operators moulded the trading sentiment.

The sharp rise in Cottonseed futures over the past few days gave rise to fears that the Forward Markets Commission might soon use its restrictive power. In fact, a representation has already been made to the Commission by cottonseed crushers that the high prices are stifling the industry. This explained for the quiet tone of the section after initial firmness.

*

Gold & Silver

Steady to firm conditions prevailed on the Bombay Bullion Exchange. The underlying tendency in the Silver section continued to be satisfactory on expectations of increased demand for the metal with the progress of the busy season. Supplies, both fine and

unrefined, amounted to 22 bars as compared to an offtake of only 10 bars. Spot rates moved between Rs 193.19 and Rs 193.69.

In the Gold section, the demand for spot remained brisk. With the supply position tight due partly to the vigilance of the authorities to check inflow of smuggling gold, bulls dominated the market throughout the week. Receipts totalled 4,000 tolas against an offtake of only 2,500 tolas. Unrefined metal receipts were 2,500 tolas. Spot rates moved between Rs 116.50 and Rs 116.75, while Sovereign was quoting at Rs 73.25.

Yarn

Listless conditions prevailed on the Bombay Yarn market, with prices moving within a narrow range in the absence of support. Staple-Fibre yarn showed a distinctly easy trend, while Rayon yarns were barely steady. There were little enquiries for Cotton Yarn. Prices were, however, maintained on account of a firm trend in raw cotton prices.

According to the latest figures, all varieties of yarn imports have shown a notable decline during the year 1958. This is mainly due to the tight import policy. The comparative figures for import of various kinds of yarn during the past two years are as follows (in pounds):—

Yarn:	1958	1957
Art Silk ...	27,484,859	36,037,195
Synthetic ...	1,888,591	...
Staple-Fibre ...	16,699	290,481
Spun Silk ...	4,572	32,035
Woollen ...	25,865	2,277,383
Cotton ...	1,463,872	1,498,674

Raw Material:		
Staple-Fibre ...	Nil	8,367,214
Raw Silk ...	50,782	102,288

Imports of raw silk yarn country-wise are as follows (figures in million pounds):—

United Kingdom ...	5.92	6.67
France ...	2.04	4.14
Italy ...	7.06	8.45
Japan ...	4.80	6.03
Germany ...	4.57	7.16
Holland ...	2.24	1.96
Belgium ...	0.55	0.97

*

Non-Ferrous Metals

Conditions in the Non-Ferrous Metal market were generally quiet with prices showing a slightly easier tendency. Copper Scrap was quoted lower at Rs 207 on the expectation that the State Trading Corporation might soon be releasing enough imported copper. Zinc was marked down to Rs 99 from a high of Rs 102 on reports that the STC would release the metal by the end of this month. Thanks to the demand of a routine nature and a healthy supply position, Lead prices came down to Rs 88 from Rs 90. Tin was also quoted lower at Rs 152 against Rs 155, as established importers were continuous sellers due to expectations of heavy arrivals.

WORLD OF COTTON

THERE are indications that the Government of India might soon announce an additional import allocation for 1 3/16" staple cotton to the tune of 30,000 to 50,000 bales from the sterling area countries. This probably follows the discussions which the cotton trade had with the Union Minister for Commerce and Industry and the Egyptian trade delegation last week. The import allocation of this staple variety, since the beginning of the current season, amounts to only 75,000 bales of which 55,000 bales were issued on the 13th December, 1958. Fifty per cent of the total allocation has been reserved for imports under the "textile export incentive scheme" and 27,500 bales have been allocated on a quota basis to mills. The balance awaits the finalisation of the textile export incentive scheme.

It will be possible for Indian cotton interests and the mill industry to enter into fresh commitments with Egypt only if a fresh quota is granted by the Government. Out of the total import quota of 3.20 lakh bales announced so far this season, 75,000 bales are for the imports of the Sudanese and Egyptian varieties. In view of the reports that commitments have already been made for the import of the stipulated quantity of Sudanese and Egyptian growths, it is felt that fresh business for cotton with Egypt can be made only if a new quota is granted.

The major hurdle in the way of importing a larger quantity of Egyptian cotton is the higher level of prices. Compared to the Sudanese cotton, the equivalent Egyptian growths are dearer by about 20 per cent per candy. Moreover, till recently, there was no uniform international price for Egyptian cotton as that country was offering varying discounts to different countries. The situation has, however, slightly altered with the enforcement of 15 per cent a few months ago. From the trend of talks held so far, it appears that Egypt is willing to offer cotton at such prices as will enable India to absorb more cotton from that country.

On the export front, no developments are reported. There have been no enquiries for Indian cotton from Japan and Europe at current rates. Shippers have, therefore, preferred to mark time, pending a clearer picture of the Government's

SOUTH EASTERN RAILWAY

Cancellation of Tender Notice

Tender notice for tender No. PC/COS/81983/1P/1002/GB4 for supply of Bar Round Phosphor Bronze (Hollow Cast) 2 1/2" x 1 1/2" x 22" to IRS specification N6-1949 for 2286.1080 kilograms, published in this paper recently, is hereby cancelled.

CONTROLLER OF STORES
S173

Rumours of Additional Import Quota

export incentive scheme for cotton. It is felt that export prospects will not brighten unless Indian cotton is made cheaper to overseas buyers by way of a reduction in duty or by offering other monetary incentive to shippers.

*

FUTURES MARKET:

The cotton futures market opened on a very steady note and flared up on firmer advices from the terminal markets. Encouraging advices from the cloth front were also a contributory factor. The bullish fervour was also fanned by rumours of a damage to the crop in some areas on account of the current cold season. Jharilla March delivery touched a new high of Rs 668 against Rs 657 quoted in the previous week.

*

SPOT MARKET:

The Spot market was equally buoyant with spinners showing interest in certain quality styles, which were quoted around the ceiling levels fixed by the Government. Ahmedabad mills appeared eager to buy high-spinning count cotton in the ready market, while operators from that centre were going long in Jharilla futures following the downward revision of the crop estimate to 50 lakh bales.

Figures are now available of cotton consumption of textile mills for the first three months of the 1958-59 season. At 1,264,208 bales, it compares with 1,311,446 bales of the corresponding period of the previous year. There has thus been a decline of 51,238 bales. This was, of course, expected in view of the steady decline in cloth and yarn production in the country during these months, especially after September last year. In the coming months, the consumption of American cotton is bound to increase with greater availability of such cotton following the recent allocations.

With regard to the stock position, stocks of 1 3/16" cotton with the mills, at the beginning of the season, stood at 48,132 bales, while the average monthly rate of consumption of this staple variety is a little more than 15,000 bales. In view of the precarious stock position of this cotton with the mills at present, it is now reported to have been agreed to do away with the present arrangement of providing for import of cotton to mills under the "textile export incentive scheme" and to issue import licences for the balance of the allocation remaining in suspense on the usual quota basis.

*

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market, after ruling firm, developed a slightly easier tendency towards the close following the disappointment over the latest weekly loan figures, which showed that slightly less than 345,000 bales were impounded during the week ended January 9. A further increase in the certificated cotton stocks to

77,300 bales was an additional unsettling factor. Middling Spot was quoted at 36.55.

*

LIVERPOOL COTTON MARKET:

Trading on the Liverpool cotton futures market was dull. Business was mostly professional. The Sudan contract closed quiet.

*

CLOTH AND PIECEGOODS:

The Bombay Cloth market displayed a perceptible improvement during the week under report. In the domestic sector, demand was particularly noted in certain varieties. It is reported that merchants

have entered into forward contracts even at slightly higher prices. The main consuming centres were Kanpur, Uttar Pradesh, Madhya Pradesh, Delhi and Bihar.

On the export front, trading conditions were better. The spotlight was again on Burma and the UK. Sizable business was reported to have been done with these countries. There were also enquiries from West Africa on a limited scale. Afghanistan was also reported to have done some business. Enquiries were also received from Ethiopia, Saudi Arabia and Persian Gulf.

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank provides from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

DELHI REVIEW

THE seemingly unequal battle of wits between authority and tax evaders continues its wayward course. On Saturday, the 17th of January, the President has promulgated an ordinance seeking to amend further certain sections of the Income Tax Act. The amendments have been necessitated, as the press note accompanying the text of the ordinance confessed, by "certain difficulties arising from Courts and the Supreme Court". It is true that it is not always possible so to legislate as to meet every conceivable situation. For, after all, the livelihood of lawyers depends upon this inability of the legislature to give precise shape to its wishes. Therefore when "judge made" law seems to go against social policy as envisaged by the legislature, the latter is perfectly within its rights to set matters right. But the history of income tax amendments of the last few years has been such as to give the impression that the legislature is very clumsy in its dealing with situations arising out of judicial decisions. To the ordinary citizen, these frequent amendments, almost always as a result of some decision of a High Court or the Supreme Court, give the impression of a continuous attempt to interfere with the spirit of the constitution. And the fact that some of these amendments are, in the first instance, brought about by the instrumentality of an ordinance seems to make matters worse. For, in effect, it is the executive that finds the courts irksome and is initiating the change, the legislatures tamely approving it post facto. As a matter of fact, however, these amendments are, on the whole, such as no reasonable or honest tax payer can quarrel with. And that is why it seems such a pity that the wrong impression should be created in the public mind.

There is another general impression which is equally unfortunate, especially since the impression seems on the whole to be well founded. It is that authority is getting the worse of the legal battle with tax-dodgers, largely as a result of its own ineptness. In the first place, it is generally believed that standards of draftsmanship have gone down deplorably in recent times. Even when the courts expose specific infirmities in the Act, and the amendments are intended to cure them, they are so carelessly worded as to leave them partially cured. For instance, the Supreme Court interpreted Section 10(2)(vii) of the Income Tax Act some four or five years ago. This section dealt with the profits on the sale of a business asset on which depreciation has been allowed over a period of years to the assessee. Normally, this would be capital profit, but the Act

The Income Tax Ordinance

provides for a sort of recouping by revenue of the tax relief as a consequence of the depreciation already allowed. For, by selling the asset at profit, the assessee had set right the intangible loss due to depreciation of the asset. Before amendment, more by accident of wording than by legislative intentment, two conditions had to be satisfied for bringing this notional profit to tax: one was that the sale should take place during the period when the assessee must have carried on the business. The second condition was that the asset must have been used for the purpose of the business during that year in which it is sold. The Supreme Court held against the Income Tax Department in a Bihar case on the ground that the assessee did not carry on any business at the time when the asset was sold and, therefore, the notional excess was not chargeable to tax. The grim potentialities of this decision are obvious enough, since any assessee can close down his business and sell his machinery at a profit. It is not just the loss of revenue that is at stake; the social and economic implications of this particular freedom from taxation are serious. Since profits on sale of old machinery are likely only in a period of stringency of capital equipment, the get-rich-quick businessman—who, alas, is by no means an exception on the Indian scene—will cheerfully destroy a prosperous business merely to rake in this untaxed profit.

Therefore, the legislature was quite justified in wishing to set matters right. But, the amendment seeking to do this has misfired, because it merely said that even if the asset is sold after the business is closed, the profit on the transaction will be taxable. In so doing, it lost sight of the second condition of taxability of this profit—viz. the asset must have been used in the business in the year in which it is sold. The position was, therefore, not improved one bit by the amendment, since with the business closed, the asset is hardly likely to be used for the purposes of the business, and the profit still escaped tax. The amended section is thus applicable only to the extremely exiguous group of assessee who carry on business for some time in a year and sell the assets later in the same year. This, surely, was not the intention of the amendment. And no reasonably careful draftsman could have missed the import of the Supreme Court's decision, which was clear and unambiguous in its exposure of the real infirmities of the section.

There is another aspect of this matter of draftsmanship. Amendments intended to plug loopholes are themselves riddled with lacunae and fresh ambiguities. Amendments intended to get over com-

plaints of discrimination themselves create new forms of discrimination. The consequence is, the section is once again subject to the same pressure and fresh amendments are necessitated. Amendments to Section 34 of the Income Tax Act offer more than one example of this shape of affairs. Indeed, one of the reasons for the ordinance is to deal with such a predicament.

But the most serious complaint against authority is not so much in regard to draftsmanship, but in regard to the larger question of strategy in its war against tax evasion. The fate of the Income Tax Investigation Commission is a woeful example of the naivete of authority in its anticipation of the kind of problems that are likely to arise in this connection. The moment the constitution came into force, all the resources of wealth—much of it untaxed—were mobilised to set at naught the patient but comparatively successful activities of the Investigation Commission. It was sad to watch these efforts succeeding at every step and authority clumsily and unsuccessfully trying to salvage something out of the legal wreckage. First, it was Section 5(4) of the Investigation Commission's act, which dealt with (in effect) comparatively minor fry that was struck down. No one really believed, or could have believed, that it was anything but the beginning of a resolute effort to undo the other more serious work of the Commission. The situation really called for heroic measures for nipping the mischief in the bud. What needed to be done at that stage was to amend the constitution, declaring that the Investigation Commission's activities were immune from attacks on ground of fundamental rights and discrimination. Squeamishness about doing it seems strange when we see how the constitution has, both before and since, been tampered with for much less respectable reasons. The whole series of subsequent litigation would have been rendered impossible and the investigation would still have been functioning effectively much to the advantage of the fund hungry Second Plan, if this had been done. Instead, an attempt was made to bring within the net of the ordinary income tax act, fish which were really too large for it. Section 34 of the Act was amended to take in cases that came under 5(4) of the Investigation Commission's act. It was only a matter of time before the hard core of tax evasion, the primary responsibility of the Commission, came rushing to the Supreme Court complaining of this new discrimination between themselves still dealt under the Investigation Commission Act and the others who had just been released from the embarrassing attention of the Com-

mission. Put this way, of course the Supreme Court was bound to say that there was discrimination. But authority, for some perplexing reason, took the easier course of bringing everybody under the amended Income Tax Act, whose powers were far less extensive and rigorous than those of the investigation Commission Act. The Investigation Commission was thus rendered completely harmless, but its ceremonial internment was still some distance away. And, sure enough, some two months ago, Section 5(1) of the Investigation Commission Act was declared intrinsically bad in the same way in which Section 5(4) was.

The consequence of this decision was more far reaching than would appear at first sight. It was more than the final and complete verdict of the Coroner of the death of the Commission. As a consequence of the recent Supreme Court decision even cases already settled were ripped open. Indeed, in a case that was decided after the Supreme Court's judgment, (Bishwernath Vs. Commissioner of Income Tax, Delhi and Rajasthan), the Court held that taxes due under settlement under Section 8-A of the Investigation Commission act—that is to say taxes that the assessee agreed to pay on his admitted concealed income—could not be recovered. This fantastic state of affairs lent point to the comment of the year that a wit has made—Supreme Court should be considered the biggest gift tax assessee of the year since it has made—albeit without desiring to do so—a gift of crores of rupees to self-confessed tax dodgers. The height of bizarrerie is reached when taxes already collected under the Investigation Commission Act are to be refunded to the assessee. It is from this predicament that the latest ordinance tries to extricate the Government. A new section has been introduced in the Income Tax Act by the ordinance by which no claim for refund of amounts paid under settlement under the Income Tax Act or otherwise shall be entertained on the ground that such settlement is invalid.

The second important change envisaged by the ordinance is directed to remedy the lacunae pointed out by some High Courts regarding the amended section 34. Briefly, the effect of the decisions were to abridge considerably the powers of the income tax department to go as far back as it chose to bring concealed income to tax. The ordinance expressly provides that a notice under Section 34(1A) may be issued at any time notwithstanding that at the time of the notice the period of eight years specified in that sub-section before its amendment had expired in respect of the year to which the notice relates.

OLYMPUS

January 24, 1959

NORTH INDIAN NOTES

Programmes for Health

Addressing the seventh meeting of the Central Council of Health, Shillong, Mr. D. P. Karmarkar, Union Minister for Health, stressed the need for stepping up expenditure on health schemes under the Second Plan. Expenditure on health for the first three years of the Second Plan has revealed shortfalls in almost all the States, from the ceilings fixed by the Planning Commission. According to Mr. Karmarkar, the overall average of utilisation of provision made in the Central Plan for assistance to the States for the various schemes was 49 per cent ranging from 4.5 per cent to 74 per cent. There is great variation in the utilisation of funds by the different States, only one State having incurred an expenditure of over fifty per cent by the end of the first three years. More than half of the States have a balance of expenditure left, which works out to more than 70 per cent for the rest of the plan period. Lower financial allocation than the ceilings fixed by the Planning Commission is supposed to be responsible for the slow progress of expenditure on health schemes in the States. The tempo of activity will necessarily have to be stepped up if the Plan targets were to be reached.

Lack of facilities for the training of personnel is also mentioned as a possible cause for the lag in expenditure. This in turn is the result of inadequate appreciation of the problem of personnel, and the failure to take timely action to provide personnel in the required size.

Set against the Government's programmes for improving health and eradicating diseases, the recent trends towards higher incidence of smallpox and cholera which are diseases which could have been brought under control with proper care and attention, are baffling. In regard to other familiar diseases which take a heavy toll of human lives also, there is a lot remaining to be done to reduce their impact on human lives. Mr. Karmarkar has held out hopes that malaria would be brought to heels, within the next two to three years. The TB control programme has been noted to be lagging and the States have been called upon to take special efforts to keep the disease under check.

Mr. Karmarkar made a special reference to the Primary Health Centre and its place as the corner stone of the health-care activity for the rural population. Such centres are primarily intended for preventive work and the possibility of such centres degenerating to mere dispensing centres is a risk that Mr. Karmarkar says, will have to be guarded against, in the interests of rural health.

Sugar Price

The price of sugar has been the subject of some controversy in both the press and the Parliament, it being sought to be established that the present price is unwarrantably high in relation to the cost of production of sugar per maund. The cane-growers' agitation in Uttar Pradesh for a higher price for sugarcane supplied to the factories has given further currency to this view and, has, further, tended to blur the facts connected with the present price for sugar in the country. In all the criticisms about the present price for sugar there is an insinuation against the mill-owners the high profits appropriated by them being supposed to be at the root of the high price.

At a press conference held at New Delhi, the prominent members of the Indian Sugar Mills Association have sought to refute the criticisms which are inclined to lay the charge of profiteering at the door of the mill-owners. And the facts about the present price of sugar as made out by these people would not support any charge of profiteering by the mills at the expense of the consumers or the cane-growers. In this connection, the President of the Indian Sugar Mills Association, Mr. P. M. Hadfield, has pointed out that out of every rupee which the consumer spends for sugar, 33 per cent went by way of States and Central taxation, 36.5 per cent by way of cane, and 10 per cent by way of transport and retail distribution, leaving the industry with a bare 20 per cent to cover manufacturing charges, reserves and profit. The industry's clean record is a matter of confirmation by the Reserve Bank of India which in one of its studies into the comparative profits earned by different industries, has found the sugar industry to come last in the order of profits earned.

The comparative facts about cane prices, Government taxation, manufacturing charges, for over a period, while they reveal an increasing trend in regard to all these, point to a decline in the gross profit margin of the industry. While between 1946-47 and 1957-58, the percentage increase in Government taxes, Central taxes, and cane cess was as high as 342 per cent, and the increase in manufacturing expenses 61 per cent, the overhead charges, according to the spokesmen of industry, amounted to 0.5 per cent only. In the light of these facts, it would be very difficult to sustain or substantiate any charge of profiteering by the mills. Scope for reduction of price for sugar has to be sought in improving the yield of sugarcane per acre and by reducing the heavy fiscal burden at present levied on the industry.

Mr. Hadfield has also drawn attention to the large-scale growth of khandsari units near factory areas and the resulting shortage of sugarcane supplies to the vacuum pan factories. The Government of India have, after representation made to them by the factory authorities in Uttar Pradesh, issued an order prohibiting the opening of khandsari units near the factory areas.

NORTH INDIAN MARKETS

Prospects for Shellac

SHELLAC prices have been ruling firm during the past many weeks. In the Calcutta market, the rate for Pure TN quality shellac is quoted at Rs 65 per maund with sellers at Rs 70. The firmness in prices is mainly due to increased shipments during the past two months. There is a feeling of optimism that prices may improve further and that the minimum export price scheme, agreed among exporters in November last, might be extended beyond March, even raising the price levels slightly.

Various factors have contributed to a change in market sentiment. First, the supply position of the commodity, this season, is expected to be very tight as the 1958 crop, in some parts of India, is said to have been a complete failure. Secondly, Siam has had another extremely poor crop this time; and this reflected in the huge shipments from India in November.

Despite London stocks at December-end being high at 22,449 packages (against 26,359 packages in November-end) sufficient enough to meet normal consumption in the UK for six months, the trade in India expects the seasonal buying from this country in the immediate future. Already better grades are well above the minimum export prices and, with a smaller Kusmi crop and improved enquiry from abroad due to lack of supplies from Siam, the near-term outlook for the commodity is definitely bright.

The Shellac Export Promotion Council has been collecting an export cess of Rs 2 per maund since November 11 in order to provide funds to publicise shellac and support the minimum price scheme. Although there is no indication of any buffer stock having been formed, there is always the possibility of its being created from out of the export cess funds, which should be sizable enough to make a beginning now.

If London prices have been steady at around £174 per ton during November and December, despite the minimum export price scheme in India, it is probably because much of the stocks held are bought at prices below the minimum. As a result, dealers in the UK can claim that their prices are the cheapest in the world, being 7½ sh below Calcutta parity.

But, with supplies from Siam unsatisfactory this time, London will have to revise its price ideas and come to Calcutta levels when it begins buying. Therefore, if even the minimum export prices are raised, the scheme should work well and London prices will prove proportionately, probably even to the level of about £200 that prevailed in mid-January last year.

Sugar

Steady conditions have been prevailing in Sugar markets. Prices, in some centres, are quoted above the control price fixed by the Government. This is mainly due to fears that the production season will not last long as in previous years due to fall in cane supplies following good prevailing prices of gur and crushing in heavy quantity of cane for gur. Because, production this season, till the 22nd December, is mentioned lower at 3.48 lakh tons as against 3.73 lakh tons in the corresponding period of the previous season.

According to industry sources, Khandsari units, set up in factory areas, have taken off vital supplies of raw materials, while white sugar factories are left with less than enough cane for economic crushing. This reduces the quantity of white sugar produced apart from raising the cost.

In the Kanpur market, prices are well maintained in the ex-mill delivery section, as the share of Uttar Pradesh mills in the last quota has been found short of requirements. Mills have practically exhausted their allotments from the last quota. Sales, therefore, remain poor and buying enquiries are few. The trade is awaiting the release of a new quota for restarting its buying operations. An announcement about its release is expected shortly.

Gur

Sentiment in the Gur market rules easy, and prices have fallen by about 75 nP per pound in the Hapur market.

In the Muzaffarnagar market, conditions remain quiet as demand has fallen due to heavy despatches on previous commitments. Arrivals, from the start of the season, are put at 7.66 lakh maunds as against 5.40 lakh maunds during the corresponding period of last year. The present stocks are estimated at 20,000 maunds against 30,000 maunds last year.

Foodgrains

Firm conditions are witnessed in the Hapur Foodgrains market. Wheat prices have registered further sharp advance, to quote Rs 27.50 per maund for dara quality and Rs 30 for the farm variety. Arrivals are very small and the sales through the fair-price shops are reported to be insufficient to meet demands. Rice prices have also recorded an improvement of about Rs 1.50 per maund in sympathy with wheat. Gram prices have also recorded an advance of Rs 1.50 due to paucity of stocks and firmer advices from the Punjab and Delhi. Barley and Maize prices moved up in sympathy.

Normally this is lean period for wheat and gram, and appreciable advance in prices in the Punjab has also added the bullish trend. The condition of the standing "rabi" crop is fairly good; but the new crop will not be available before the end of March.

MADRAS REVIEW

The coconut industry is largely based in the Kerala State which accounts for about 70 per cent of total production of coconuts as against 70 per cent of the total area under coconut. Further, State accounts solely for most of the copra that is milled in the State, 80 per cent of the power used for crush copra being generated in the State. With the coconut industry being Kerala's exclusive preserve, the concentration is complete in all its aspects. The coconut derives its name from the fact of preponderance of coconut growing in the State. In view of its dominating position of coconut industry in the State, the development of the industry along its lines assumes major importance, if only for the reason that the lives of lakhs and lakhs of people in Kerala are inextricably tied up with the fortunes of coconut industry.

The problems with which the coconut industry is at present confronted came up for discussion at the 26th Annual Session of the Indian Central Coconut Committee which was held at Trivandrum last week.

One of the most important of these, is the development of self-sufficiency in production of coconuts, present production being inadequate to

meet internal demand. The country is importing coconuts and coconut products worth about Rs 15 crores per annum. Increase of internal production with a view to achieving self-sufficiency should therefore be the basic objective before the industry. Considering that consumption is running at a faster rate than production, rate of increase in production has to be proportionately higher to catch up with consumption and achieve self-sufficiency at a dynamic level.

The problem would admit of approach along two lines, namely bringing in more acreage under coconuts and increasing the per acre yield. Outside Kerala, coconut is grown in Madras, Mysore, West Bengal, Assam etc. Though coconut growing is restricted to certain regions with proper climate and rainfall, in these States, if not in Kerala, there should be scope for bringing in more area under coconuts. But immediate prospects for a significant increase in production, lie in the introduction of methods for raising the yield per tree or acre. As Dr B. Ramakrishna Rao, Governor of Kerala, pointed out in the course of his inaugural address to the session, there are a variety of ways for increasing production in the intensive way. These

Coconut Industry

include breeding of better varieties, eradication of pests and diseases, supply of quality seedlings, propaganda regarding better methods of coconut cultivation etc. In the execution of this programme, apart from the technical problems which they give rise to, the main difficulty is that of reaching the small growers, who dominate in the cultivation of coconuts.

Dr M. S. Randhawa, President of the Indian Central Coconut Committee in his address, suggested that the cultivation of coconut gardens and their manuring should be taken up on a campaign basis in the growing States. The planting of glyricidia near coconut gardens is desirable in the interest of assuring a proper supply of green manure. However the practice of planting glyricidia, has only made a beginning and needs to be further popularised. Dr Randhawa, would support compulsory planting of glyricidia by means of legislative enactment. Manuring is the most important aspect of the intensive work that would yield substantial result. However, so far, little attention has been paid to this matter. Though the efficacy of manure and fertilisers is now beyond doubt, it has to be seen that there is adequate supply of them to the small growers. Dr Randhawa has pointed out that in the drive for increasing production, attention would be concentrated on intensifying manuring work in the next fifteen years. A proper machinery for the distribution of manures and fertilisers to the small growers has therefore to be evolved if this manuring campaign is to succeed. Supply of credit is another condition for success.

Dr Randhawa has also urged attention being paid to the question of raising quality seedlings for distribution among cultivators. Selection of mother plants is, according to Dr Randhawa, the most important aspect of the work connected with the raising of good seedlings. Development of progeny gardens and private nurseries, are some of the other suggestions which reflect the importance of good seedlings for raising output of coconuts.

In the control of pests and diseases effective methods have been evolved at the Research Institute at Kayankulam. Further the Government of Kerala have also launched a comprehensive campaign of spraying to combat the leaf disease of coconut which has been noted to be causing great damage. The State Government have already incurred an expenditure of about Rs 20 lakhs on this programme. This spraying campaign has further highlighted the importance of manuring since spraying campaign in the absence of proper manuring is generally considered ineffective in increasing yield.

The plan for increasing coconut production envisages, besides introduction of intensive methods, also the extension of coconut growing to new lands. In this connection Dr

Randhawa pointed out, that in the working plan on coconut development during the Third, Fourth, and Fifth Five Year Plans, a total additional area of more than 50,000 acres would be brought under coconut cultivation. Madras Government have already taken some measures to plant 50,000 seedlings on the banks of canals in the State. If this target for additional acreage is to be attained, waste land suitable for the cultivation of coconuts has to be reclaimed. Dr Randhawa has also referred to the suitability of bunds of paddy fields, banks of irrigation canals and channels for the profitable raising of coconuts. West Bengal and Assam should in this light offer better facilities for extending the cultivation of coconuts than other areas, since these two represent important paddy growing States.

Timely translation of the fruits of research into the field, is another condition that has to be ensured for expediting progress. For this purpose Dr Randhawa has urged close coordination and cooperation between the Central Coconut Committee, and the State Department of Agriculture in Kerala. The holding of the session of the Central Committee in Trivandrum is itself significant and represents the initial first steps in strengthening the ties between the Central Coconut Committee and the State Department of the Agriculture.

More important, so far as the small cultivators are concerned, is the incentive factor which conditions production. 1958 has been, in this respect, a favourable season since the price for coconut and coconut oil, has remained fairly steady at a profitable level to the cultivators. There has of course been, of late, some signs of decline in the price to which Mr C. Achutha Menon, Kerala's Finance Minister referred in the course of his address. With a watchful Government at the Centre, which is sensitive to the needs of the small cultivators, such abnormal deviations which would adversely affect the cultivators could not be expected to be prolonged. Thus the price factor is auspicious for the cultivators to embark upon a programme of expansion of production. The object of the Import policy of the Government, as explained by Dr Randhawa has been to assist the cultivators by giving an incentive element in the price for coconuts and coconut products. However this should not shut the door for looking into the needs of the consumers. For, nearly 80 per cent of the country's production of nuts is being used for edible purposes 54 per cent as fresh nuts, 10 per cent as edible copra, and 16 per cent as edible oil. It is therefore necessary to see that the price for coconut products, while it contains an element of incentive for the growers to increase production, does not at the same time impinge unduly upon the limited means of the consumers.

THE PENINSULA

SOUTH INDIAN NOTES

Private Sector

Speaking at Madras, Mr G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation, sought to remove some misconceptions entertained by the business community about the industrial policy of the Government of India. The policy of the Government has generally been understood by the business community to have been restrictive of the role of private sector in the country. This impression has been strengthened by the imposition of new tax measures by the Government on industries, and some of the recent steps taken by the Government in spreading the tentacles of the public sector over fields that had remained free for the private sector. The encroachment made by the State Trading Corporation into a few channels of private trade and the recent decision of the Government to socialise wholesale trading in foodgrains, are in the eyes of the private sector, signs of a shift in the attitude of the Government towards the private sector.

Against such steps which the Government have been constrained to take in the interest of the country as a whole, and which have been adversely interpreted out of context by the private sector, Mr Mehta, has pointed to the general tenor that underlines the industrial policy of the Government as it has been enunciated and put into execution by the Government. In interpreting the industrial policy of the Government, Mr Mehta has drawn particular attention to the policy of the Government in granting protection to a number of industries against foreign competition, as also the direct help rendered by the Government to deserving and needy industries. The Government have for instance, given financial assistance of about Rs 20 crores to two industries in the private sector namely the Tatas and the Indian Iron and Steel Company. The shipping industry is another to have received assistance of a similar order. Again, the Government have guaranteed four world Bank loans to the Private sector. As Mr Mehta points out these are not steps which a Government seeking to restrict the fields of private sector would willingly take.

Mr Mehta further pointed out that for the private industry to grow and expand, it is necessary that businessmen should reconcile themselves to the fundamental objectives of the country's Constitution which aimed at building up a Welfare State, promote social justice and prevent concentration of means of production and wealth in the hands of few people.

In view of the fact that the private sector has been assured a legitimate place in the mixed economy of the country, the fears entertained by the spokesmen of the bu-

siness community about the future of private sector appear exaggerated. However, the utility of the private sector, would be vindicated not by the failures of the public sector but by positive achievements in its own field.

Agricultural Cooperation

Inaugurating the 30th annual conference of representatives of the Central Cooperative Banks in Madras, Mr C. Subramaniam, Madras Minister for Finance and Education, stressed the need for the people to pool local resources for financing various schemes under the cooperative movement including that of extending loan facilities to agriculturists. One of the reasons for the slow progress of the cooperative movement in the country could be said to be the relative failure to attract deposits from the local people. The tendency has, so far, been to look towards the State Governments and the Reserve Bank to come to the help of the cooperative societies for financial accommodation.

Mr Subramaniam has pointed to increasing scope for Governmental assistance to the cooperative societies and has assured that to the extent to which the resources position of the Government and the Reserve Bank allowed, such assistance would be rendered. But considering the enormous amount involved in extending credit facilities to agriculturists through institutional means, no great progress could be made by depending on external sources of help alone. Cooperation already stands discredited as lacking sufficient internal vigour of its own.

However in Madras the success of cooperative credit is of a far higher order than in most other States with perhaps the possible exception of Bombay. In respect of both the number of societies and the amount of loan facilities offered to agriculturists, the State takes the top place. However the problem of replacing usurious credit could, by no means, be said to have been solved notwithstanding the better record of the State in respect of developing cooperative credit. It is to the extent to which local effort could supplement the assistance rendered from outside sources that progress could be accelerated.

In thus mobilising local resources on a cooperative basis, the first essential step is the formation of cooperative societies to reach each and every village. At present cooperative societies serve only a fraction of the agricultural population, the majority being left out because of the absence of cooperative societies to look after the needs of each and every village. This question has in recent times engaged the attention of the National Development Council as well as the Planning Commission and the goal of one society for one village has been set to be achieved with the least possible delay. Large-sized societies serving a number of villages have been found to be unwieldy to manage and operate with efficiency.

SOUTH INDIAN MARKETS

Coffee Statistics

COFFEE Pool receipts for the year 1958 amounted to 44,149 tons, which is the highest so far. The coffee plants are reported to be in such good shape that the 1959-60 crop is expected to be even bigger, despite untimely rains last month.

With a release of 2,639 tons during December in the internal market, the calendar year 1958 recorded a total release of 27,563 tons as compared with 26,662 tons in 1957 and 24,189 tons in 1956. The total exports, out of the 1957-58 crop, amounted to 14,281 tons as against 15,472 tons sold out of the 1956-57 crop and 8,081 tons out of the 1955-56 crop. Despite the heavier crop in 1957-58, the decline in quantity is due to lack of Arabica Cherry coffee, suitable for export.

The carry-over stock out of the 1957-58 crop, on January 1, 1958, is only 8,218 tons. It should have

been lower still, but for the accumulation of Arabica Cherry, which is not of exportable standard and which normally moves slowly even in the internal market.

Groundnuts

Prices in the Madras Groundnut market developed a firmer tendency during the week, thanks to short-covering and sustained rise in prices in Bombay. Arrivals were small and local crushers took up small quantities. The rate for the new crop moved up to Rs 167 from Rs 160.

In the Groundnut Oil section, small quantities were taken up by Calcutta interests from local and Southern-side mills and the rate for the ready position improved to Rs 324 from Rs 310 per candy. In the forward section, March commanded the greatest attention and a substantial volume of business was reported done at rates varying from Rs 320 and Rs 327 per candy.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were on the same level as in the pre-

vicious week and prices were unchanged to a shade easy. Clearances were slow as there was not much support from the UK at the prevailing levels of prices. Arrivals of Buff hides were normal, while those of Cow Calf and Buff Calf were restricted.

In the export section, trading was dull. Enquiries from the UK were confined to only light and medium weight fiftths. Here, too, buyers were bidding 1d to 2d per pound lower compared to last month's closing levels. In the Calf section, prices were stationary with only very small support.

In the Tanned Skins section, arrivals of both goat and sheep skins were on the same level as in the previous week. There was moderate clearance at unchanged prices.

On the export front, business was restricted as overseas buyers were not able to follow the high prices which Madras sellers were asking. On the whole, enquiries were mostly for cheaper lines. There was absence of any enquiry from France and it is felt that future business with this country is difficult in view of the devaluation of currency, which has put up the prices of Madras skins in Paris by about 17½ per cent. German buyers have not shown any interest at current levels of prices.

Conditions in the Sheep section remained stagnant, although some business was reported done in heavier averages at workable levels. In general, buyers were bidding a further reduction of about 3d per pound.

★

Ginger

There has been a steady rise in the price of Ginger during the past few days. In the Calicut market, old quality is quoting around Rs 325 showing a rise of more than Rs 75 per candy within a period of one week. New quality is quoted at Rs 360 per candy. The reason is attributed to active purchases by the USA. Heavy purchases are therefore being made by local exporters in anticipation of further orders, especially in the face of poor arrivals in the market.

★

Bangalore Silk

There has been no change in the prevailing high rates for filatures in the Bangalore Silk market during the week ended 15-1-1959. The price of Kisan has risen to Rs 42 from Rs 41 per pound. Among Charka Silk, however, while Super-fine Quality declined by more than two points, First and Second Qualities quoted Rs 29 to Rs 31.50 and Rs 27 to Rs 28, as against Rs 29 to Rs 29.50 and Rs 26 to Rs 27, respectively.

Prices for Reeling Cocoons for Mugur and Channapatna indicated a rise while the prices for reeling cocoons of Sidlaghatta area remained unchanged. The price range for reeling cocoons of Mugur and Channapatna was from Rs 1.25 to Rs 2.18 and that for Sidlaghatta was from Rs 2 to Rs 2.44 a pound.

This is only an announcement and not a Prospectus.

Applications are invited for shares on the basis of the Prospectus dated the 20th day of January 1959 (a copy whereof has been filed with the Registrar of Companies, Madras, with all the necessary documents attached thereto) copies of which can be had from the Registered Office or from the Brokers for the issue.

Application will be made to the Madras Stock Exchange Ltd., for permission to deal in and for an official quotation of the shares of the company.

The subscription list will open at 10 A.M. on Monday 2nd February 1959 and will close at 5 P.M. on Saturday 7th February 1959 or later at the discretion of the Directors.

OBJECTS:

The main objects of the Company as contained in the Company's Memorandum of Association are:—

(1) To produce, manufacture, purchase, refine, prepare, process, import, export, sell and generally to deal in rubber and rubber products and in connection therewith to acquire, erect, construct, establish, operate and maintain rubber factories, workshops and other works and to purchase, take on lease or otherwise acquire the undertaking, business and property or any part thereof of any Company or Companies carrying on business as manufacturers of rubber and rubber products in India or elsewhere or any other business which the Company is entitled to carry on.

efficiently serve its various clients in Madras City and Suburbs and the Branch Factory with all its new equipment, moulds, etc. is proposed to be acquired by this Company for Rs. 1,53,000/- which is the value of the assets in the books of the vendor company subject to an encumbrance of Rs. 6,000/- in respect of land and subject to the condition that all stocks and stores shall be paid for separately at their market value as on the date of taking over. The Agreement regarding the purchase of the assets mentioned above is for the purchase of the specified assets of the vendor company and no portion of its business is being acquired.

The Vendor Company is expected to transfer the orders of its Madras Clients to this Company without receiving any consideration. Hence from the date of commencement of business this company may be expected to be in a position to work on a profitable basis. The Tiruvottiyur Factory is about to start production of various Industrial Rubber parts for Automobiles, Motor Cycles, Railways, Sugar Factories etc. The Company also intends the manufacture of items of Latex Foam Rubber like seat-cushions, mattresses, pillows etc. Subject to the grant of licence by Central Government the Directors also contemplate starting manufacture of cycle tubes in the Tiruvottiyur Works. For Starting production of cycle tubes a part of the machinery is already existing and the balance is available in India and hence no import of capital equipment is necessary. Cycle tubes are much in scarcity in India than Cycle tyres as the replacement demand for tubes is more than that of tyres and therefore there is ample scope in the manufacture of tubes. Ruby Rubber Works, Ltd., Changanacherry will lend all the necessary technical assistance and being well experienced in the production of the items of rubber goods mentioned above, with a well equipped laboratory and a team of experienced technicians, will make all the facilities available to this company for reasonable charges to be mutually agreed upon and at the two companies will be under the same management and the said Ruby Rubber Works, Ltd., Changanacherry, are subscribing for a substantial part of the Equity Capital of the company; there will be proper co-ordination in successfully working the Factory and in marketing the products. As the company's manufacturing lines are paying ones, assuming present profit margins to continue, the Company is expected to be in a position to pay reasonable dividends to shareholder after making provision for depreciation, taxation etc.

MINIMUM SUBSCRIPTION:

The minimum subscription in respect of the present issue on which the Directors will proceed to allotment is shares of the face value of Rs. 2,50,000/-.

BROKERAGE:

The present issue is not underwritten. Brokerage of 2½% will be paid to recognised brokers on share allotted on applications bearing the stamps of such brokers.

January 24, 1959

Demand for Selected Scrips

Watch-Dog Writes:

ALTHOUGH the general rise in prices is less marked than in the previous week, selected equities have continued to enjoy renewed support and to gain fresh ground. Apparently, operators feel that, having done its worst to the private sector, the Congress Party cannot do any more damage to it. Moreover, it was hoped that the LIC would decide to make large-scale purchases at the meeting to be held on Thursday evening. There is, however, a general anxiety to wait till the Budget Day before making fresh commitments.

Apart from a few selected scrips which met with some demand at improved levels, conditions in other counters on the Calcutta Stock Exchange remained generally dull.

Equities on the Bombay Stock Exchange closed generally lower except for a few selected scrips which firmed up on speculative buying.

Activity on the Madras Stock Exchange was restricted; but prices tended to remain steady.

The London Stock Exchange had another good week and finished on a firm note.

Wall Street closed firm with liberally distributed gains extending to a dollar or more.

★

Calcutta

Friday Evening.

DULL, but steady conditions were witnessed on the local Stock Exchange during the week under review. The speculative issues, after ruling initially firm, developed a slightly reactionary tendency towards the close due to profit-taking, while the Tea and Miscellaneous sections provided a few bright spots.

In general, sentiment in the market remained better although there was a reluctance to extend commitments, pending the outcome of the Central Budget on fears that the Nagpur resolutions might bring an unpleasant surprise.

Glitged securities continued to rule steady. Although business in the Central loans section was restricted owing to tight money conditions, the underlying tendency remained good. 3 per cent 1986 Conversion Loan opened at Rs 74 and, after improving to Rs 74.50, receded at the close to Rs 74.25.

Bank shares were generally steady on reports of the dividends being maintained by some of the banks despite lower profits. Punjab National changed hands at Rs 23.62 to Rs 24 and United Commercial at Rs 63.25 to Rs 69.00.

Despite profit-taking, Jute shares scored further gains over last

levels due to sustained support. This was mainly due to renewed hopes entertained by operators that the industry would be able to earn reasonable profits in view of the low level of prices prevailing for raw jute. Anglo-India were taken upto Rs 228 (Rs 225); Ganges upto Rs 79.50 (Rs 77.50); Megna upto Rs 14.87 (Rs 14.75); National upto Rs 26.12 (Rs 26.12), Nuddea upto Rs 61.50 (Rs 60); New Central upto Rs 13.50 (Rs 13.50) and Reliance upto Rs 8.06 (Rs 8.06). Figures shown within brackets were the week's closing rates. Howrah were a shade quieter at Rs 20.37 against Rs 20.50.

Coal shares shared the general trend of the market although higher levels could not be retained till the close due to profit-taking. Burrakur closed at Rs 17.50; Central India at Rs 7.31 and Western Bengal at Rs 5.87 after touching new high levels of Rs 17.62; Rs 7.37 and Rs 5.94 respectively. Bengal were Rs 4 lower at Rs 282 with New Beerbhoom having buyers at Rs 19.87 to Rs 20 and South Karanpura at Rs 12.25 to Rs 12.31.

A redeeming feature of the week's trading was the revival of interest shown in Tea shares after a lapse of several weeks. This was mainly due to hopes that the Government might grant relief to the producers of inferior grades, not to speak of an improvement in the prices obtained at the auctions. Baghmari changed hands at Rs 17.81 to Rs 18.19; Birpara at Rs 158 to Rs 160; Bishnauth at Rs 17.75 to Rs 18.50; Brooke Bond at Rs 16 to Rs 16.12. Dufflaghur at Rs 32.50 to Rs 32.62; Hantapara at Rs 120 to Rs 123; Jayshree at Rs 11.87 to Rs 12.06; Methoni at Rs 19.31 to Rs 19.81 and Sungma at Rs 14.31 to Rs 16.37.

Textile scrips came in for selective enquiry, as operators were inclined to await definite signs of improvement in the conditions of the cloth market. Most prominent were Jayshree having sustained support upto Rs 8.19 from Rs 8.06. Dunbar met with some business upto Rs 141 from Rs 139.50 and Kesoram upto Rs 11.87 from Rs 11.81.

Except Darbhanga which met with some buying upto Rs 20 from Rs 19.94 from special quarters, conditions in the Sugar section continued to rule quiet. Growing agitation for higher cane prices, reports of the decision to start strike at certain mills in Uttar Pradesh and the keen competition from khandasari production—all these factors had an adverse effect on sentiment. SKG were on offer at Rs 9.75 against Rs 9.81 and Carew at Rs 8.56 against Rs 9.19.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, after ruling firm, developed a reactionary tendency towards the close due to some pressure, locally as well as on Bombay account. After starting steady at Rs 26.15, Indian Irons advanced at one time to Rs 26.28 at which level profit-taking brought down the scrip to Rs 26.04, to finish the week better at Rs 26.16. In sympathy, TEXMACO were marked down to Rs 20.75 from a high of

Rs 21.05, to conclude at Rs 21.00. Guest, Keen, Williams changed hands at Rs 37.50 to Rs 38.35; Braithwaite at Rs 31.81 to Rs 32.00; Jessop at Rs 24.62 to Rs 24.75; Marshalls at Rs 5.75 to Rs 5.94 and Kumardhubi at Rs 8.31 to Rs 8.69.

Although the Miscellaneous section moved in sympathy with the general trend of the market, it provided a few firm spots on investment considerations. Most prominent were Alkali Chemical changing hands upto Rs 17.81 from Rs 17.62 (Rs 17.81); Indian Cable upto Rs 29.50 from Rs 28.94 (Rs 29.19); Indian Aluminium upto Rs 16.69 from Rs 16.25 (Rs 16.56); Sirpur upto Rs 13.65 from Rs 13.44 (Rs 13.37); Clive Row upto Rs 11.75 from Rs 11.69 (Rs 11.56); Rohtas upto Rs 19.56 from Rs 19.31 (Rs 19.19) and NICCO upto Rs 29.25 from Rs 29 (Rs 29.25). Figures shown within brackets were the week's closing rates. In the Paper section, Orient turned quiet at Rs 30.10 against Rs 30.80; Titagur at Rs 41.62 against Rs 41.87 and Shree Gopal at Rs 15.44 against Rs 15.81, mainly on lack of follow-up support. Among other scrips, India Steamship changed hands at Rs 13.50 to Rs 14.12; Hindustan Motors at Rs 7.19 to Rs 7.37; Indian Oxygen at Rs 23.50 to Rs 23.81; Indian Copper at Rs 3.59 to Rs 3.64 and Sone Valley at Rs 5.20 to Rs 5.34.

★

Bombay

QUIETLY steady conditions prevailed on the Bombay Stock Exchange during the past week in the absence of fresh incentives. After a quiet opening sentiment seemed to have improved a little on Tuesday on higher advices from Calcutta where Indian Irons met with some support. But toward close of the day prices began to drift lower, on lack of follow-through support at higher levels. Trading was on a dull note on Wednesday but on Thursday the undertone showed some improvement with the list showing scattered moderate gains on selective support by inspired reports about the meeting of the investment committee of the LIC at Calcutta. It would appear that the present reluctance of operators to extend commitments has partly to be attributed to the general tendency to await the Budget proposals.

In the steel section Tata Steel displayed an irregular trend with the undertone quietly steady. The scrip showed a loss of one point at the end of the first day's trading at Rs 175.50 as against previous closing of Rs 176.50. The scrip lost ground on Tuesday to be placed at close at Rs 174.75. By close on Wednesday it was further lower at Rs 174.50. By close on Thursday it had regained part of the earlier loss to be finally placed at Rs 175.50. Indian Irons after steadily moving down improved on the closing day to be placed at Rs 26.20.

Textiles were generally subdued and displayed an irregular trend. Bombay Dyeing was drifting lower most of the time but towards close steadied up to Rs 56. Kohnoor was easier in earlier dealings but recovered to close at Rs 239 as against previous week's closing to Rs 243.25. Likewise Central was

STATE BANK OF INDIA

A Meeting of the Central Board of Directors of the State Bank of India was held at Calcutta on Thursday, the 22nd January 1959.

The following is a note of the net profits declared at the Meeting for the year ended the 31st December 1958 and their distribution:—

Net profits for the year	Rs. 190,14,200
Brought forward from last year	Rs. 55,99,200
	Rs. 246,13,400

Dividend to Shareholders at the rate of Rs. 16/- per share (made up of Interim Dividend at the rate of Rs. 8/- per share Rs. 45,00,000 and Final Dividend at the rate of Rs. 8/- per share Rs. 45,00,000)	Rs. 90,00,000
Transferred to Reserve Fund	Rs. 37,50,000
Transferred to Pension Funds	Rs. 6,90,200
Bonus to Staff	Rs. 36,00,000
Transferred to Staff Welfare Fund	Rs. 5,00,000
Transferred to Staff Co-operative Housing Fund	Rs. 15,00,000
Carried forward	Rs. 55,73,200
	Rs. 246,13,400

ASHOKA CEMENT LIMITED

NOTICE is hereby given that the Third Annual General Meeting of the shareholders of the Company will be held on Tuesday, the 24th February, 1959, at 11.30 a.m. at the Registered Office of the Company at Dalmianagar to consider the Balance Sheet and accounts for the period ended March, 1958, to elect a Director in place of the retiring Director and to appoint the Auditors for the current year and to fix their remuneration. The Share Transfer Books of the Company will remain closed from 16th February, 1959 to 24th February, 1959, both days inclusive.

The Board of Directors in their meeting held on the 13th January 1959, have declared an interim dividend of 30 Naye Paise per share for the current year payable to those shareholders whose names stand registered in the books of the Company on 24th February 1959.

By order of the Board,

H. D. BISHNOI,
General Secretary.

Dalmianagar,
17th January 1959.

N.B: A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Ordinary Stock at the rate of £3½ per cent net (tax applicable at 8s. 6d. in the £) for the year ending 31st March, 1959. Payment will be made on 16th February, 1959, to those stock-holders whose names are registered in the Company's Stock Register on 31st January, 1959.

Applications for transfers received in this Office before 12 O'Clock noon on Saturday, the 31st January, 1959, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
D. H. P. HENDERSON,
Agent.

Victoria House,
Calcutta, 15th January, 1959.

NEW CENTRAL JUTE MILLS CO., LTD.

The Annual General Meeting of the shareholders of the Company will be held on Monday, the 23rd February, 1959 and 11.30 A.M. at the Registered Office of the Company at 11, Clive Row, Calcutta to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts of the Company for the financial period ended 31st March, 1958.
2. To declare dividends.
3. To elect Directors in places of Shri A. K. Jain and Shri M. L. Shah, who retire by rotation, but being eligible offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. N. C. Jain & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

As special business:

5. Resolved that the appointment of Messrs. Cathie Dempster & Co. Ltd., Nathan's Buildings, Grey Street, Wellington, C. 1., New Zealand, as sole distributors for New Zealand for the sale of Jute Carpet Backing and other jute speciality goods manufactured by the Company, as per draft agreement placed before the meeting and duly approved by the Board of Directors, be and is hereby approved in accordance with Section 294 of the Companies Act, 1956.

finally placed at Rs 90 as against Rs 92, Century at Rs 434.50 against Rs 437.50.

In the Miscellaneous section Tata Chemical met with support to be placed at Rs 15.44 against previous week's level of Rs 15.36. Voltas was a prominent feature on higher dividend expectations and advanced smartly to Rs 144 from Rs 138. TELCO was a steady feature at Rs 161.50.

★

Madras

ALTHOUGH activity on the Madras Stock Exchange was generally restricted, prices tended to remain steady.

TEXTILES: The only stronger counter in this section continued to be Travancore Rayons, which forged ahead to Rs 16.86 from Rs 16.40. Maduras turned sellers with the rate declining steeply to Rs 26 on reported loss of working for 1958. Buckingham's, Colmbatore Spinnings and Virudhunagars met with some enquiry at the market rates.

PLANTINGS: There was fair absorption in a few selected scrips. Among Tea shares, Nonsuch was

taken up at a high level of Rs 24.25, while Periakaramalais moved up to Rs 4.03 from Rs 3.88.

In the Rubber section, Valkundams were marked down to Rs 23.12 and Kallas to Rs 4.90 c.d. A small improvement was recorded by Thirumbadis.

In the Coffee group, Mysore, Rajendras, Consolidateds and Ouchterlony met with some enquiries at the market rates. Coffee Lands declined sharply to Rs 23.50.

MISCELLANEOUS: A bright spot in this section were Aluminium Industries which were keenly sought after upto Rs 18.70 against Rs 18 quoted in the previous week. Central Scientific, Rallis and United India Fire remained firm with good enquiry. Travancore Cements were, however, on offer at the market rate. FACTS were quoted around Rs 7.28 and Mysore Tobaccos at Rs 12.15.

★

London

SENTIMENT on the London Stock Exchange continued to remain buoyant with Industries establishing new high levels. Company news also helped, especially in the case of Associated Television and Bow-makers, both of which went smartly ahead. Breweries, Textiles, Newspapers and Stores were also supported. However, Oil shares provided disappointing and the leaders drifted to lower levels. Rubber shares were quieter after their recent rise, while Tea shares were dull. There was a revival of interest in Gold shares, being influenced by reported moves in America to secure a higher price for American-produced gold. Gilt-edged securities presented an irregular appearance.

★

New York

Conditions on Wall Street remained generally steady with prices changing either way, ranging to a dollar. Encouraging business news included increases in both industrial output and private housing—both key economic indicators. In addition, there was a report that a Bill would be introduced into Congress to double (to 70 dollars per fine ounce) the price which the Treasury must pay for domestically-mined gold. Anaconda Copper was quoted at \$68½; General Motors at \$49 7/8 and US Steel Common at \$97½.

★

In Briefs

It is learnt that the resolutions regarding the sale of Manimala Estate of Madras for a sum of not less than Rs 4 lakhs has been passed at the extraordinary general meeting held on the 15th January.

Among Banks, United Commercial has maintained the dividend at Rs 3.75 per share and Union Bank of India at 8½ per cent for 1958.

New Central Jute has maintained the dividend at 15 per cent for the year ended 31st March, 1958.

Ashoka Cement has recommended an interim dividend of 30 nP per share for the current year.

Birds Investment has raised the dividend from 5 to 7 per cent for the year ended 30th September, 1958.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA

The official wholesale price index (with the year ended March 1955 as 100) stood at 110.7 during the week ended January 3, 1959 as compared with 110.8 (revised) for the previous week. The index was lower by 1.2 per cent when compared with the corresponding week of last month but was higher by 4.1 per cent when compared with that of a year ago.

Higher prices of Milk at Bombay (+49%), Onions (+13%), Fish (Pomfret) at Bombay (+12%) Oranges, Bananas at Bombay and Eggs at Delhi (+8% each), Meat at Ludhiana (+7%), Gur at Muzaffarnagar (+6%), Wheat, Jowar, Malze and Gram (+2% each) and Bajra and Barley (+1% each) raised the index for 'Food Articles' by 0.3 per cent to 112.5 as against 112.2 (revised) for the earlier week although the prices of Catfish at Bombay (—16%), Eggs and Meat both at Bombay (—11% each) Chillies (—5%), Masur and Gingelly oil (—3% each), Rice, Coconut oil, Black Pepper and Betelnuts (—2% each) and Potatoes, Groundnut oil, Mustard oil and Coffee (—1% each) showed declines.

The index for 'Tobacco' also rose by 0.7 per cent to 97.1 due to an increase in the price of Tobacco raw-Motilher-medium at Calcutta (+3%).

The index for the 'Fuel, Power Light and Lubricants' group worked out to 115.0 as against 115.1 for the earlier week; Castor oil (—1%) showed a fall.

The index for 'Industrial Raw Materials' receded by 1.0 per cent

THE BRITANNIA BISCUIT CO., LTD.

Notice is hereby given that an Interim Dividend of 4% on Ordinary Shares and 4% on Preference Shares has been declared by the Directors for the year ending 31st March, 1959. The Dividend will be payable to those shareholder whose names appear on the Register of Members on the 11th February 1959. Warrants will be posted on or after that date to the addresses or in accordance with the instructions recorded in the Company's books.

The Register of Members of the Company will remain closed from the 4th February 1959 to the 11th February 1959 both days inclusive.

By Order of the Board,
A. P. CHANDA,
Secretary

15, Taratola Road,
Calcutta, 27
17th January, 1959.

to 111.1 as compared with 112.2 (revised) for the last week due to a decline in the prices of raw Jute at Barachakia and Cottonseed (—11% each), Bamboos (—9%), Copra (—2%) and Cotton raw, Castorseed and Rapeseed (—1% each). The prices of raw Skins at Delhi (+21%), Silk raw (+2%) and Tanning materials (+1%) however, moved up.

The index for 'Intermediate Products' stood at 110.1 as compared

with 110.2 for the previous week. The prices of Zinc (—2%) and Coir Yarn, Brass and Lead (—1% each) showed variations.

An increase in the prices of Jute manufactures and Silk & Rayon manufactures (+1% each) was neutralised by declines in the prices of Oil cakes and Bricks (Delhi) (—3% each) and the index for 'Finished Products' remained stationary at the previous week's level of 107.6.

Index Number of Wholesale Prices by Group and Sub-Group of Commodities. (Base: 1952-53=100).

DEVELOPMENT AND UTILISATION OF INDIA'S COAL RESOURCES

No industrial progress is possible without the development and proper utilisation of the country's fuel resources, of which coal constitutes a major portion.

Unfortunately, India's resources of coal, particularly of good quality coal, are not commensurate with her requirements. Obviously, investigations of coal resources will have to be pressed forward more intensively than ever, and ways found for a more economic and efficient utilisation of the available resources. In both cases scientific research has to play an important role.

Fuel research, chiefly coal research, is necessary from another point of view as well. Fuel leaves a variety of by-products valuable for the chemical industry. From coal are derived such important products as dyes, drugs, disinfectants, industrial explosives and fertilisers. Research enables us to extract them and other useful commodities from coal.

It was these and similar other considerations that led to the formation of a Fuel Research Committee in 1940. The Committee's chief

recommendation was the formation of a well-equipped Institute for fuel research. In 1946, the foundation of the Fuel Research Institute was laid at Digwadih, about nine miles from Dhanbad, situated in the heart of the Central Indian coal fields area. In April 1950, the Institute was formally declared open by the President of India, Dr Rajendra Prasad.

COAL SURVEY

During the eight years that have followed its establishment, the Fuel Research Institute in Dhanbad has made significant contribution to our knowledge of Indian coals. It is interesting to recall that prior to the physical and chemical survey of Indian coals carried out by the Institute's Coal Survey Organisation, only the most sketchy knowledge existed of the quality of coals in the various coal producing areas in the country. The availability of this type of data is naturally of great importance in plans for raising the production of coal in India to 300 million tons per year by 1975. This figure is ten times the annual production for 1946, the year in which the Institute's foundation was laid.

The Coal Survey Organisation of the Central Fuel Research Institute

consists of six regional Coal Survey Stations situated in the important coal producing areas of the country. These Stations have been collecting data which give a complete quality picture of the coals in each particular area, and from this emerges an overall national picture. This picture is not very attractive owing to the fact that most of the Indian coal reserves are not of the best quality and are also non-coking in nature. These very facts, however, constitute a challenge to the scientists engaged in fuel research. Hence also, the importance of the work being done at the Institute on upgrading and cleaning of coals.

UPGRADING OF COAL

Work done at the Institute and at the Coal Blending and Coking Research Organisation at Jamshedpur has shown that it is possible to obtain good metallurgical coke to meet the requirements of the iron and steel industry which needs coal of superior quality. Special processes have been developed at the Institute for converting ordinary coal into high quality coal. Apart from this, there are extensive fundamental studies in progress at the Dhanbad Institute to obtain a better picture of the nature of coal and what constitutes the essential difference between coking and non-coking coals. Attempts are also being made to devise suitable methods for pre-treating non-coking coals so that they yield metallurgy-grade coke on carbonisation.

The Central Fuel Research Institute has been a pioneer in the field of coal cleaning in India. This fact was amply recognised by the Government of India when it entrusted to the Institute the task of drawing up the specifications for new washeries in the public sector. These washeries are to be located at Kargali, Dugda, Bhojudih, Patherdih and Korba. In addition, the Institute will shortly take up investigations and planning for at least three more Central washeries for the Indian Railways. It is worthwhile here to point out that the Institute has done a lot to dispel the long prevailing notion that Indian coals are not amenable to cleaning.

SMOKELESS DOMESTIC FUEL

Since reserves of natural oil in India are considered insufficient for our needs, extra importance is attached to developing suitable methods for its production synthetically. The production of synthetic diesel oil is intimately connected with the fuel problems of the domestic sector, which still remains the largest consumer of coal. At present the bulk of domestic fuel need is fulfilled with cow-dung and fire-wood, with baneful effects on agriculture. To avoid the use of these fuels it is necessary to find a suitable alternative fuel. The work on the development of soft-coke done at the Fuel Research Institute is of great value in this connection. Research workers at the Institute have succeeded in developing a simple process for the production of soft-coke for domestic use.

This domestic fuel, which is obtained by low-temperature carbonisation of non-coking coal and washery middlings also happens to be smokeless. A wider utilisation of this fuel should help to eliminate smoke nuisance in big cities and coal fields.

Fuel research does not, however, end with the survey and selection of coals for different industrial or domestic uses. It also extends to such needs as utilisation of tars and to find uses for other by-products obtained from coal. Among the important by-products of coal obtained at the Institute are chemicals used in water softening and for the manufacture of glucose from starch; ashless carbon for the manufacture of electrode carbon and other moulded products; certain types of resins from Indian coal tars for paint, varnish, rubber and paper industry, floor coverings, printing inks and adhesives; montan wax from South Arcot lignite and pyrites from the washery rejects from coal. The great value of these products to Indian economy can be judged from the fact that large quantities of some of these materials were until recently imported from foreign countries.

METRIC SURVEYING CHAINS & BUBBLES

The Indian Standards Institution has issued, for eliciting comments, two draft Indian standards for metric surveying chains and bubbles.

The first standard, which is for metric surveying chains, covers the requirements for link type surveying chains of 20 m and 30 m lengths, used in land measurement.

This standard is one of a series of Indian standard specifications for surveying instruments, being prepared by the Institution in connection with the changeover to the metric system.

The other standards under formulation in the series cover levelling staves, prismatic compass, and metric scales.

The second specification, which is for bubbles, covers bubbles, ground, underground and moulded fabricated, either in cylindrical or circular form, intended for use in precision surveying, inspection and general levelling purposes.

The bubble is an instrument that defines a reference horizontal plane in levelling. It consists of a glass tube containing a filling liquid having low viscosity, and which can maintain its fluidity over a fairly wide range of temperature, thereby making its use possible at low temperature as well.

Comments on the draft standards may be sent before February 28, 1959 to the Indian Standards Institution, New Delhi.

Men and Oil... 4

The Rigbuilder

The frameworks of steel that rise above the jungle landmark the sites where oilmen are at work. These towering derricks, which are used to lower and raise the drill pipe and drilling tools in the hole of a new well, are put up and taken down by rigbuilders. A rigbuilder and his crew can erect a 136-foot-high derrick, weighing 45 tons, in a few days, and the finished framework will be strong enough to support a load of 350 tons. A rig of this capacity, equipped with powerful engines and pumps to match, is used for deep drilling (over two miles) but lighter rigs are employed where the oil deposits are expected to be nearer the surface. When a new well strikes oil, the rigbuilder replaces the drilling derrick with a production derrick. And if the well is a failure, he dismantles the rig and re-erects it elsewhere for another attempt to be made. Indian rigbuilders and their crews play an important part in the operation of the Assam Oil Company.

ASSAM OIL a full-scale petroleum industry

FOR THE INVESTOR

Steady Trend

Investment Gossip:

AFTER a shaky start the stock market has steadied up in later dealings to close on a cheerful note. The earlier reactionary tendency had stemmed from reports about a rather serious situation at the works of Indian Iron and Steel Company. The fact that the management had deemed it necessary to seal the blast furnaces was indicative of the magnitude of the dislocation caused even though the number of workers involved in the strike was said to be quite small. Operators were also inclined to take note of the management's statement that prior to the sealing of the blast furnace the smelting shop had been idle for seven days. It is no surprise therefore that the price level of Indian Iron fell considerably below the Rs 26 mark on Tuesday.

Good news about the reopening of the blast furnace was, however, not long in coming. When the market heard that the furnace had been unsealed on the afternoon of Tuesday, the scrip began to regain lost ground. In the last two days' trading further headway has been made and at the time of writing the rate is well above the Rs 26 mark.

The rest of the market has also displayed a steady trend with selected shares in the coal, jute and miscellaneous sections recording sizable gains over the week's trading. All this would seem to indicate that operators do not think that recent events have made any radical change in the investment situation.

As I have pointed out last week, it is idle to expect marketmen to lend sustained support to the speculative issues and consequently to the market as a whole till the Central Budget is out of the way. For more reasons than one this year's budget is awaited with anxious concern. Nobody in the country now believes that there will be reduction in taxes. On the contrary many expect that there will be fresh addition to the already heavy tax burden. There are also very many good reasons to believe that Government will deem it necessary notwithstanding their urgent need for augmenting their resources, to give sympathetic consideration to the private sector's plea for relief.

It is however to be expected that a fairly steady trend may prevail for another week or so provided there is no serious adverse development in the meantime.

With the commencement of the Budget session of Lok Sabha the market may develop an irregular tendency as price movements are bound to be swayed both ways by the tone and tenor of speeches that will be made in the Lok Sabha.

Investment Notes:

Full details are now available with regard to the Birla venture for the manufacture of aluminium ingots in collaboration with the American firm of Kaiser Aluminium & Chemical Corporation. The name of the company is the Hindustan Aluminium Corporation and the plant will be at Rihand, Uttar Pradesh. Of the authorised capital of Rs 20 crores, the company has proposed to issue Rs 10 crores in Ordinary shares of Rs 10 each, while Kaisers are investing 26 per cent of the capital. Part of the remaining amount will be taken by Birlas and part will be offered to the public. The first issue from the company is expected in May and the plant is expected to go into production by the end of 1961.

The directors of the Indian Iron & Steel Company Limited have convened a general meeting on the 24th February to consider the bonus issue. They have decided to capitalise a sum of Rs 2,07,34,830 out of the Share Premium Account and issue 20,73,483 Ordinary shares of Rs 10 each as fully paid in the ratio of one for every five Ordinary shares held to those shareholders whose names are registered as on the 22nd January.

The scheme of amalgamation entered into between the shareholders of the Andhra Insurance Company Limited and those of the Hindustan Ideal Insurance Company has been approved by the High Court of Andhra Pradesh. The Andhra Insurance has, therefore, been amalgamated with the Hindustan Ideal, effective from the beginning of this year.

The directors of the Vanguard Fire and General Insurance Company have proposed the reduction of the paid-up capital by refunding of Rs 4 on all issued and fully paid Ordinary and Preference shares, both of Rs 10 each.

Ceat Tyres have asked for the first call, to be paid before the 14th February, 1959.

Investment Briefs:

Bank of Baroda has announced a final dividend of 6 per cent, making a total of 12 per cent for 1958, on the capital increased by the issue of ordinary shares in pursuance of the amalgamation with the Hind Bank Limited. The dividend paid for 1957 was 14 per cent.

Premier Automobiles have recommended a dividend of only Rs 4 per share for the year ended 30th June 1958 as against Rs 6 in the previous year.

Scindia Steam Fares Well

Balance-Sheet Reviews:

THE Scindia Steam Navigation Company Limited has reported satisfactory results for the year ended 30th June, 1958. The gross profit has shown an increase of Rs

28.70 lakhs to Rs 3.99 crores, while freight and passage earnings have risen from Rs 12.26 crores to Rs 13.95 crores. The total cargo lifted has amounted to 20.72 lakh tons against 18.66 lakh tons.

The net profit is, however, less at Rs 91.21 lakhs against Rs 1.04 crores, mainly due to increased provisions made during the year. The amount set aside for Depreciation is higher at Rs 2.34 crores against Rs 1.87 crores. The Debenture Sinking Fund is maintained at Rs 10.00 lakhs. The Dividend Equalisation Reserve claims Rs 20 lakhs against Rs 24 lakhs, while the Special Survey Reserve, which absorbed Rs 10 lakhs in the preceding year, has been skipped. The directors have recommended a dividend of Rs 1.25 per share, the same as in the previous year.

According to the directors' report, the company has now two ships on order with the Lubeck Yard, the keel of one of which is already laid and the ship is to be delivered in the middle of the current year. The other ships are expected to be delivered some-time in April 1960. Out of the two ships on order with the Visakhapatnam Shipyard, one has been delivered to the subsidiary company—the Kamal Shipping Company (Private) Limited—while the other has been delivered to the company.

₹ Rs

B. B. Petrol

The British Burmah Petrol Company Limited has shown a substantial setback for the year ended 31st March 1958, the net profit, subject to taxation, having declined from

₹45,195 to ₹30,805. Of this, taxation absorbs ₹19,619 against ₹7,369. While the provision for South African taxation has declined from ₹1,376 to ₹454, Indian taxation accounts for ₹16,000 against nil. The dividend is reduced to 2 per cent from 5 per cent.

Income from dividends has recorded a fall from ₹53,399 to ₹44,895. The directors have, in this connection, stated that no progress has been made during the year in the claim against the Union Government of Burma for Compensation for the destruction of the company's assets as a war measure.

The balance sheet of the company gives details of the company's investment portfolio. Investments (unquoted) aggregate ₹667,145 against ₹141,620. Holdings in the Burmah Oil Company (1954) Limited remain the same as in the previous year, at ₹141,620. The increase in the investment portfolio is, therefore, fully accounted for by the acquisition of 525 redeemable shares of ₹1 each at cost and redeemable unsecured loan stock for an aggregate amount of ₹525,000, both of the British Burmah Petroleum Company and the South Africa Proprietary Limited. The Capital Reserve stands at ₹182,092, the same as in the previous year, while funds at call balances with bankers and cash on hand have dropped from ₹170,897 to ₹90,149.

₹ Rs

Kharchah Company

Despite an increase in the profit from Rs 5 lakhs to Rs 5.75 lakhs, the Kharchah Company Limited has maintained the Ordinary dividend

The lower profit for the year is attributed to the fact that, in previous year, the company received dividends in specie from Raza/Buland sugar companies as far as 16th January 1952. Total production of rectified spirit from molasses comes to 461,346 bulk gallons. Power alcohol production has decreased this year.

Mr Shastri agreed that everything possible needed to be done in the cause of increasing exports. But, with utter candour, he suggested that Government were slightly chary of giving incentives, because it had been his experience that a moiety of the concessions intended as they were to imbue products with greater competitiveness, was immediately nullified by abuses such as over-invoicing etc. The

Lala Shri Ram had, we suggest, the "middle" approach; the forum was not the Conference convened by the Federation, but Lala Shri Ram came out with a powerful plea that Indian manufacturers owed it to the country

THE annual meeting of the Science Congress has become an occasion to which the Indian intelligentsia looks forward to gather reassurance regarding the progress of science in this country. For, whatever the differences that divide public opinion and fragment corporate initiative, if there is one point on which there is unanimity, it is on the primary importance of science in regulating the pattern of national development. Fortunately there is nothing in India like the continuing controversy in the West between Science and Theology. On the other hand, the exponents of ancient wisdom regard modern science as an ally, and enlist modern physics to explain the obscure points of metaphysics. We like to believe that it is not merely the dazzling achievement of applied science that is responsible for the respect accorded to science and scientists in our country. On the other hand, it is the single-minded pursuit of truth, the passionate desire to unravel the mysteries of the Universe, that appeals to the national psyche. The nation which paid unreserved homage to the seers who, in their forest hermitages, perfected the technique of introspection which revealed the unity of the world in the realm of the spirit, now look to the seers in their laboratories to fill in the pattern already indicated in outline, with the details of the external world. In India of all countries the principle of Science for its own sake should make an instant appeal as the key to understanding of the universe in which we live.

It would, however, be wrong to take an altogether pessimistic view of export prospects. On the one hand, it needs to be remembered that, during the recent past, recessionary trends in the West were responsible for a diminished offtake of Indian goods and, with Western economies turning the corner, Indian exports during the last six months or so have been satisfactory. On the other hand, we have to look to the engineering industry for a modicum of the increase in export earnings; and it is only at the present time that the raw material position is improving. In brief, incentives are necessary; the national effort is imperative; and the prospect for higher export earnings is by no means bleak.

Calcutta can take a special pride in the growth of the Science Congress for it was in this city the organisation was formed and it was the Asiatic Society, now passing through lean times, that nursed it till the Science Congress came of age and set up house for itself. The first session of the Congress was held in Calcutta in 1934, under the distinguished presidency of Sir Ashutosh Mukherjee. This is a far cry from those days to the present when the Science Congress has grown into a vast organisation with a budget running into six figures. The first meeting, it is reported, was attended by 105 scientists and thirty-five papers were read on the occasion. Over

3000 delegates from all over India besides eighty-five distinguished scientists from foreign lands attended the latest session at which a total of fifteen hundred papers were read. That should give a measure of the progress that has been achieved during this period.

The Science Congress Association has been formed and is functioning on the model of the British Association, by providing opportunities of mutual contact among scientific workers both in their work and in the social sphere. Another important aim of the British Association has been to bring the results of scientific research to the attention of the Common Man. Scientific discovery plays such a large part in shaping the world in which we live, that an understanding of its significance is essential for ordered progress, especially at a time when the latest discoveries hold a threat to the continuance of life on this planet. All scientific discoveries may not be as dramatic in their consequences as the discovery of nuclear fission. But each one of them affects the fabric of human civilisation for good or ill. And it should be part of the functions of an organisation like the Science Congress, which represents the best scientific thought in the country, to bring the results of modern scientific research within the comprehension of ordinary people. The proceedings and papers read at the Congress are of course published in the leading daily papers, but these hardly serve the purpose. In the first place the papers are written by specialists for their colleagues, and when these are summarised for publication in the daily press, the recondite becomes unintelligible, useless alike to the expert and the layman. The Science Congress will be meeting an urgent need of the times, if it will take the opportunity of its annual meeting to publish a concise account, in plain language, of the main lines of scientific progress in the world during the previous year, which will also enable ordinary people, without any scientific background to speak of, to understand the consequences of scientific research. On these occasions it is now the practice to publish brief sketches of the careers of the sectional presidents. This is a necessary item of public relations. But it can be usefully supplemented by a factual report in plain language about the research work carried out in Indian laboratories by Indian scientists during the preceding year, underlining the important break-throughs. Such a publication in English and the principal languages will enable the general public to take a helpful and constructive interest in the activities of the scientific institutions and especially of the National Laboratories.

The Prime Minister referred in his inaugural address to the dual aspect of Science—that of creation and of destruction—and the dilemma in which it has caught the scientists of the Western Countries—whether to give up the pursuit of science or enhance its destructive potential. But thanks to his leadership in the conduct of the country's affairs, scientists in our country have been mercifully spared the ordeal of this difficult choice and can get down to the tasks of research and its application for the promotion of human welfare. Scientists in our country are not asked by the State to develop weapons of mass destruction against the promptings of conscience. All the Government and the people expect of them is that they will utilise their talents to the fullest extent in the hope that the discoveries and the processes developed by them will open the way to a better life for our people.

In former days, scientific research shared the poverty of the country and was hampered at every turn by lack of material facilities and equipment. But all that has been changed by the far-sighted vision of our Prime Minister, who presided over the Science Congress

in 1947. There is now a chain well appointed National Laboratories which challenge Indian scientists to show their mettle. These laboratories are designed not merely for research in fundamental science though that aspect must have its proper place in any programme of research. The laboratories are also designed to cater to the needs of industries by helping them solve their day-to-day problems. What the laboratories have done and can do in this respect should be brought prominently to the notice of industrial and commercial organisations, so that full use may be made of the costly facilities provided in these institutions. It will be a mistake to think that only epoch-making discoveries in pure science deserve publicity. It is true that these alone bring kudos to the individual scientific worker. But the fact remains that routine, unspectacular scientific work makes the most substantial contribution to the growth of scientific practice and a climate of research and inquiry which will make great discoveries possible.

Perhaps the State endowment of Science is not an unmixed blessing. For it leads to questions of what return the country is getting from investment in national laboratories and the personnel required to run them. And charges are made, with what justification it is not clear, that scientists are less interested in research than in cultivating Ministers and Officials and sometimes the Press. The critics

ignore that scientific research by its very nature cannot be carried on to show an accounting profit at the end of every year. The emphasis on profit can also react on the quality of research, for it may infect the scientists to such an extent that they adopt the values of the market place and only engage in work that yields a profit.

The provision of ample facilities of research can only be the beginning. Much more depends on personnel. The president of the Science Congress has drawn attention to the regrettable fact that, despite the liberal facilities provided to enable promising graduates to pursue a career of research, other services prove more attractive to our graduates in science. There is also the complaint that promising scientists who have made their mark in foreign countries prefer to remain there. And those who return, after proving their calibre, feel frustrated and spend their time in mutual denigration. The problem of attracting and retaining the best talent in the service of science is a matter of maintaining the proper atmosphere in research establishments so that every one can have the confidence that, while material rewards may not be lavish, real merit is sure to find recognition and encouragement. This is a matter which calls for the immediate attention of those at the top of the scientific ladder if scientific research in our country is not to end as an experiment in ploughing the sands.

Economic and Technical Cooperation with Free Nations

By GEORGE ADAMS

EACH of the three major Presidential messages to Congress this month has pointed up the importance the US administration attaches to economic and technical cooperation with other free nations.

These were domestic messages—on the State of the Union, the Budget and the Economy. An analysis of their contents, however, reveals points of particular relevance to nations of the Near East, Asia and Africa.

In the first place, President Eisenhower's remarks reflected the fact that US cooperation with developing countries in their efforts to raise living standards has become an accepted concept and a substantial feature of the annual US budget. The principle has long been supported by leaders of both political parties and the American people generally.

The President's messages indicated, too, that US cooperation with these countries will continue to take many forms—encouragement of further reduction in trade barriers, expanded private investment, increased subscriptions to the World Bank and International Monetary Fund.

The year-old US Development Loan Fund came in for special emphasis as a means of providing capital on more flexible terms than are normally available from the World Bank. The Fund already has made loans in substantial numbers, and top US officials made clear during the past year the importance they attach to this type of lending in assisting less developed economies.

The President's requests pointed to a possible increase in expenditures for technical cooperation. In this connection, the Budget Message emphasized expanding programmes in Africa. Also, foreshadowed were expected greater contributions by member nations to the new UN special fund for technical assistance projects.

President Eisenhower's remarks made clear that the United States regards the promotion

of trade and aid to developing countries as the concern of the entire free world. He welcomed the increasing participation of other industrial countries in the effort.

Possible US cooperation with other nations in regional projects was indicated. An Inter-American Development Banking Institution currently is under consideration, and Mr Eisenhower noted US readiness to contribute to an Arab-initiated and supported regional development institution.

The Presidential messages also pointed up what is generally recognized throughout America today. Success of the efforts of the newly-independent and other less developed nations to improve their living standards is vital not only to the people directly concerned but also to the freedom and well-being of the American people. It is of the highest importance to the US from the economic moral and political standpoints that these countries progress economically and at the same time remain free and independent.

It can be assumed that free nation requesting US military assistance in maintaining their freedom will continue to receive it. This part of the US aid programme is being studied by a top-level committee appointed late last year by Mr Eisenhower. The committee is appraising the relative emphasis which the US should place on military and economic aid. Accordingly, as the President noted, his projected mutual security programme is subject to later recommendations.

In any event, there will be no indication for several months of the final figure the US Congress will approve for the next fiscal year. Congressional authorizations and appropriations follow lengthy committee hearings with expression of numerous views, pro and con. Apparently, however, differences of opinion will be largely concerned with amounts and relative emphasis—not with the concept of continued US aid to independent countries requesting assistance.

January 31, 1959

EDITORIAL

NOTES

Power Programme

THE symposium on power development, sponsored by the Indian Science Congress, should help to focus attention, and in time, on an aspect of industrial progress which claims high priority in economic planning. The present situation in respect of availability of power for industry is a sharp reminder of the urgency of a revision of the scale of priorities which denied power projects a place in the 'core' of the Second Plan. For this reason, power development, during the Second Plan period, has not made as much progress as the original targets which aimed at doubling installed capacity led one to expect. In the not so distant past, supplementary programmes for the development of facilities for generation of electric power have been blighted by conservative estimates of load prospects. In the anxiety to ensure adequate load for DVC projects, some undertakings in the private sector which served the area in the past were obliged to close down or give up plans of expansion, because of denial of necessary facilities. But, contrary to anticipations, development of load has been consistently ahead of supply, leading to a chronic power famine which affects all parts of the country, not excluding even those areas which are most favourably situated. Industrial activity in Madras has been hamstrung by regular power cuts in the summer months. The relief afforded

by the hydel and thermal stations that have been recently commissioned is not expected to last beyond 1961. Only six weeks ago, the Chairman of the DVC was complaining about the inadequacy of the present programme of power generation in the region to meet the steady growth in demand which exceeded all expectations.

The pattern of power development that is actually adopted must be determined by the availability of natural resources and their distribution. On the basis of resources of low grade coal, estimated at 40,000 million tons, and hydro-electric potential of the order of 40 million kW, power development, as Mr Datta pointed out, would proceed mostly on large pit-head thermal stations and hydel stations, supplemented, in areas remote from coal and hydro electric resources, by nuclear stations. The unequal distribution of power resources among the different States in the Union makes it desirable that development of facilities for power generation should proceed on a regional basis, in order to ensure balanced growth of the national economy. This will be possible to the extent that statesmanship prevails over narrow parochial sentiment. As regards the techniques that might be adopted with advantage, the Union Minister observed that there was no reason why we should not adopt the most up-to-date techniques in our future programme. The choice of techniques in any realistic programme will be limited by the availability of resources, taking that term in its widest sense to include technical manpower. The projects approved should be such as to make fullest use of the available personnel and to minimise the expenditure of foreign exchange, though they may not conform to the latest fashion in more advanced countries.

Turn in the Tide

The Congress in West Bengal can derive legitimate satisfaction from the result of the recent by-election to the State Assembly from Bagnan, which returned the Congress candidate by a big majority of more than 7000 votes over his nearest rival, a communist. The event is more significant in that Congress has wrested a seat won by Communists at the last General Election. It marks a turn in the tide of leftist fortunes which flooded the Calcutta constituencies at the last election and seemed set to swamp a wider area in course of time.

The by-election followed the resignation of the communist sitting member who had to pay the price for his non-conformism by being expelled from the party. Though a rapprochement was effected in time for the polling, this circumstance perhaps contributed to the disillusionment of the electorate with the Party.

The Communist candidate at the General Election was supported by the united front of leftist parties. But leftist unity which led to earlier communist success cracked

up in the by-election, with the Forward bloc setting up its own candidate with the support of the P.S.P.

Apart from the defeat of the communist candidate, the low ranking of the Forward bloc candidate in the polling and the practical elimination of the Jan Sangh and Independent candidates who lost their deposits, are significant pointers to political trends in the country. Making allowance for division in the ranks of the opposition, the Congress has been able to make substantial progress in improving its standing with the electorate. In the 1951 election the Congress candidate won by a narrow head, the opposition being scattered over a number of contestants. In the last General Election the opposition parties by pooling their resources were able to defeat the Congress nominee, who got 14,177 votes out of a total poll of 38,053. This has been improved to 19,877 votes out of total of 40,925 votes polled in the recent by-election, coming very close to an absolute majority.

Friendly Lead

Even as the debate over the Third Plan, its size and objectives, has made a tentative start in this country, it is heartening to find that friends abroad are keenly alive to the importance of the Plan, and are active in enabling it to get off to a good start. Delivering the Mary Keatinge Das address for the year at the Columbia University, former U.S. Ambassador to India, Mr John Sherman Cooper, has stated the plain case for adequate assistance to India to enable it to make a success of its Third Plan. He has indicated certain important facts which augur well for the success of democratic planning in our country. Among these he has listed the leadership of Prime Minister Nehru, the existence of an able cadre of civil servants and an indigenous entrepreneurial class which has experience of modern industry. He has also underlined the fact in the attempt to lift itself by its boot straps, India is doing more than any other democratic country by channelling eleven to twelve per cent of national income to investment. The understanding of the rationale of planning displayed by friends like Senator Cooper should serve to dispose of the bogeys which are raised from time to time by seditious opponents of all sorts of planning in this country.

Kangsabati Project

There will be widespread satisfaction that it has been possible to make significant progress with the Kangsabati project in West Bengal, during the Second Plan period itself. Preliminary work on the project was started in 1956 with the digging of the canals on the left bank, but the main project was hanging fire, and it seemed for some time that further progress might be delayed on account of paucity of resources, both internal and external. The

project is estimated to involve an outlay of over Rs 29 crores which is bound to strain the resources of the State. But the perseverance of the Chief Minister, Dr B. C. Roy, has prevailed over odds and he was able to lay the foundation stone of the main dam on January 24. The project, the biggest of its kind undertaken in the State, is designed to provide irrigation to over eight lakh acres for the kharif and 150,000 acres for the rabi crops, in the arid regions of Bankura, Midnapur and part of Hooghly. The project is also designed for flood control and power generation and envisages the construction of another dam further upstream to serve the needs of Purulia. If all goes well, water for irrigation for one lakh of acres will be available by 1961, with the completion of the first stage of the project. It is eminently satisfactory to note that construction of the canal system serving a substantial area will be ready simultaneously with the completion of the reservoir, thus minimising the usual time lag between the provision of water for irrigation and its utilisation.

In this connexion attention may be drawn to the recent completion of the Valgal project ahead of schedule in Madras, and at substantially lesser cost than originally estimated. Though the Valgal project cannot compare with the Kangsabati in size or irrigation potential, the achievement of the engineers in Madras should put their colleagues in West Bengal on their mettle and spur them to establish a better record with the Kangsabati project.

The Best is Yet to be

Those who have occasion to visit the precincts of the Madras High Court, and even more, those who go there to watch the majestic process of the law, will miss the genial presence of Mr A. S. P. Aiyar. For, by a remarkable coincidence, Independence Day this year brought to Mr Aiyar freedom from the exacting duties of high judicial office—duties all the more arduous to a person like Mr Aiyar who drew inspiration and guidance in his conduct as a Judge from the maxims of Manu. It is not for us to comment on the contribution that Mr Aiyar has made to the corpus of case law. But all are agreed that his personality and human outlook made a profound impact on an establishment with the proud traditions of the Madras High Court, and that is praise enough. Mr Aiyar brought to his judicial task a mind refined by humanist disciplines and enlivened by creative activity in the field of literature. The Advocate General, in his farewell speech on behalf of the Madras Bar, referred with natural regret to the provisions of the Constitution, which oblige a person 'who is hale and hearty' an performing his duties to the satisfaction of every one, to retire from service on a fixed date. We would not have it otherwise. For, brilliant as his career has been, of Mr A. S. P. Aiyar we can say with assurance: "The best is yet to be

Banks and Gilts

The sustained firmness of the gilt-edged market at a time when there is perceptible money market tightness is a phenomenon that has interesting lessons to offer. Gilt-edged has in past years tended to be one of the first "casualties" when the banking system experienced an increased tempo in the demand for funds. Why, then, has it happened, this year that there is neither a selling pressure in gilt-edged nor any evidence of a decline in the prices of Government securities, what though the inter-bank call money rates have risen up? The situation is particularly mystifying if we remember that, during 1958, practically the whole of the increase in Deposit liabilities—and the rise has been considerable—has been invested in Government securities. So, it would have been logical for the Scheduled Banks, in the time of their need, to set about replenishing their cash balances by sale of gilt-edged. A number of factors account for this unswerving refusal on the part of banks to part with their gilt-edged holdings.

In the first place, it is probably reasoned that the inadequacy of resources being felt by them is of an ephemeral nature. The Scheduled Banks expect, possibly, that, in a matter of weeks, they will experience either an increase in deposits or a diminution in the

demand for Advances, or, again, a combination of both. In this view, the money market tightness would be held to be a purely temporary phase. Such a line of reasoning is not incorrect: on the one hand, the heavy governmental disbursements toward the end of the fiscal year have, the last year or two has shown, resulted in an almost immediate and direct accretion to banks' Deposits; on the other hand, the relatively heavy demand for funds can be seen as arising from the bumper agricultural crops, and this should shortly slow down.

In the second place, the level of Scheduled Bank borrowings from the Reserve Bank, as at the eve of the current busy season, were unusually low. There was, therefore, a considerable margin available for drawing upon the Reserve Bank. In the circumstances in which, in 1956-57, there was disinvestment in gilt-edged by banks, banks' borrowings were already pitched at a high level, and there might have been an inclination on the part of banks to mitigate if possible the extent of their reliance on borrowings. This year, there is no such "disincentive" operating to prevent the Scheduled Banks from having recourse to central banking credit or compelling them to raise resources by selling gilt-edged.

In the third place, in 1956-57, it seemed as if the demand for Advances would be sustained; nor was much hope nurtured in banking circles that new Deposits would accrue that would enable them to meet the increased demand for accommodation.

In the fourth place, both the disinvestment and the high level of borrowings that banks started the 1956-57 busy season with inevitably necessitated fresh borrowings being made mainly against

usance bills. Such advances given by the Reserve Bank were slightly costlier, but banks were not worried in this regard because the money could be lent at still more advantageous rates. (The limiting factor of borrowings on the security of usance bills has on previous occasions been discussed in this column). Today, the high level of gilt-edged holdings allows banks to "encumber" part of their portfolio, and there is no "compulsion" to utilise the more costly usance bills mechanism.

In the fifth place, the open market operations of the Reserve Bank have been and are being conducted in such manner as to make the banks believe that any short-term securities that they now might sell may not thereafter be available through the Reserve Bank tap. Banks will not be wishing to dispose of short-dateds which they may not be in a position to replace.

In the sixth place, the character and composition of Deposits with banks have changed. As at the end of 1956, the Deposit Liabilities of Scheduled Banks comprised more of "Demand" deposits than "Time" deposits. That is to say, the larger proportion of Scheduled Bank Deposits was in the form of lower interest bearing Deposits. Today, Time Liabilities—or higher costing Deposits—substantially exceed Demand Liabilities. Thus, banks have to be prepared for the contingency that the present demand for Advances will slacken off; and, in such a situation, banks must necessarily have "hedged" the high-cost Deposits—this precisely being what is accomplished by a high level of gilt-edged investments.

Finally, therefore, the relation that now may exist is between Time Liabilities and gilt-edged holdings.

While, thus, the busy season pressure is responsible for the fact that, for some many weeks now, banks have ceased to add to their gilt-edged portfolio, we are to anticipate that they will be in no hurry to sell any part of the gilt-edged that they so assiduously purchased during 1957.

Foreign assets rise

FOR the first time in some weeks, there has been contraction in currency circulation. According to the returns of the Reserve Bank for January 23, Active Note circulation has been marked down by Rs 5.83 crores at Rs 1623.87 crores. Moreover, there was an inflow of Rupee Coin for Rs 0.62 crores and, in the result, the Reserve Bank's cash in the till has practically doubled from Rs 6.54 crores to Rs 12.59 crores.

In the Banking Department, the one noteworthy feature is that the rise in Balances Held Abroad has continued, with an increase of Rs 0.76 crores to Rs 33.36 crores.

The Deposits of the Central Government are Rs 3 crores higher at Rs 55.23 crores. With Investments practically unchanged at Rs 268.55 crores against Rs 268.78 crores, we

may rule out the possibility of deficit financing. On the other hand, Balances of State Governments are lower by Rs 5.14 crores at Rs 42.00 crores. This, however, is accompanied by a small decline of Rs 0.46 crores to Rs 23.94 crores in the Ways and Means borrowings of State Governments. The Reserve Balances of Scheduled Banks are seen to have been marked down by Rs 4.02 crores at Rs 68.18 crores, and the Other Loans and Advances of the Reserve Bank are also sizeably lower by Rs 10.24 crores at Rs 84.70 crores. These are both changes mainly accountable by, as we shall presently see, the State Bank. Lastly, the Reserve Bank's advances against usance bills are higher by Rs 1.62 crores at Rs 4.53 crores.

The return of the State Bank for January 23 appears to have incorporated the allocations made from profits for 1958. The Reserve Fund and Other Reserves, for example, are higher by Rs 37½ lakhs at Rs 7 crores. It is interesting to note that Other Liabilities, the head under which presumably the profit of the State Bank was being kept, has been marked down by Rs 3.28 crores at Rs 1.08 crores. Then, Deposits and other accounts have improved by Rs 8.07 crores to Rs 473.88 crores. Since, at the same time, Advances have risen by the negligible amount of Rs 0.40 crores to Rs 178.93 crores, it was possible for the State Bank to reduce borrowings from Rs 18.00 crores to Rs 10.03 crores. This, then, accounts for the large sized decline in the Reserve Bank's Other Loans and Advances. In the result, however, the State Bank's Cash in Hand and with the Reserve Bank is marked down by Rs 4.34 crores at Rs 22.89 crores and this, too, was reflected in the Reserve Bank statement.

Continued busy season pressure is borne testimony to in the return of Scheduled Banks for January 16. Deposit Liabilities have again declined, this time by Rs 4.40 crores to Rs 1613.83 crores. (The next return of the Scheduled Banks, however, should, in view of the State Bank's accretion during the week, show an increase in Deposits). The total of Advances has again gone up by Rs 3.51 crores to Rs 905.03 crores. Borrowings from the Reserve Bank, in rising by nearly Rs 6 crores to Rs 41.26 crores from Rs 35.29 crores, are roughly Rs 8 crores higher than the figure for the corresponding week of 1958. This is a measure, not so much of a more strenuous busy season being experienced, but, rather, of the fact that the banking system, with its large scale investment in gilt-edged during 1958, is being compelled to have recourse to Reserve Bank credit. The investment portfolio is more or less unchanged at Rs 633.46 crores against Rs 633.65 crores. As an end result, Cash Balances have improved slightly by Rs 1.60 crores to Rs 160.15 crores.

The Treasury Bill auctions continue to be slightly less than

January 31, 1959

popular, and applications amount barely to what is on offer. The average rate of allotment has inched upward. No sales of intermediate bills are being effected. This state of affairs in Treasury Bills is, of course, attributable to the firmness in the inter-bank call money market.

Bank Profits

Almost all the major banks have now published their summary of results for 1958. Almost all the results have a dreary tale to tell. We don't doubt there is now a good deal of heart-searching. What surprises us is that no corrective action has as yet been taken. It is perhaps the fact that the busy season has got into stride, and the consequent firmness in the inter-bank call money rates, which has prevented what should have been a normal and automatic reduction in the rates offered on Deposits. And, in any event, it may not perhaps matter too much if, during the period of the rest of the busy season, interest rates continued at their present levels.

But it is certainly time for the Indian Banks Association—under whose auspices the voluntary agreement on interest rates presumably works—to elicit opinion about the desirability—and feasibility—of lowering the maxima that have so far been observed. Indeed, there may be not a few banks who would wish to reduce the rates they have to pay, but who do not have the courage to take unilateral action, although the intrinsic position of the particular banks would dictate such a step being taken.

We would like to emphasise that delay in this regard is suicidal. We would add that, "politically" speaking, a reduction in interest rates for the reason that bank earnings cannot support the present rates being paid, would reinforce what case the banks might have when the question of wages for bank labour, which is shortly to be taken up, is considered.

The profit of the Bank of Baroda, Limited, for the year 1958, subject to audit, including the sum of—Rs 4,10,730=69 nP brought forward, amounts to—Rs 31,53,522=16 nP, which the Directors have disposed of as under:

	Rs.
An ad-interim dividend was paid for the half-year ended 30th June, 1958 at the rate of 12 per cent per annum, free of income-tax which absorbed	7,50,000-00
Provision for taxation	5,50,000-00
Bonus to staff	8,00,000-00

The Directors now propose to pay final dividend for the half-year ended 31st December, 1958 at the rate of Rs 3 per ordinary share and at Rs 1=50 per "B" ordinary share, free of income tax, amounting to Rs 7,50,000 making in all 12 per cent for the year and to carry forward Rs 3,03,522=16 nP to the next account.

Political Factors in British Situation

By Paul Einzig

PUBLICATION of the latest figures of public opinion surveys provided an explanation of the sudden setback on the London Stock Exchange after the turn of the year. They indicated an unfavourable change in the Government's prospects at the coming General Election. While until recently the advantage was distinctly on the Government's side, according to the almost unanimous findings of three public opinion surveys the chances of Conservatives and Socialists are now more or less even. As a result of this change the optimism that was largely responsible for the rising trend on the Stock Exchange in December gave way to a certain amount of pessimism. There was a great deal of selling by investors and speculators alike, and the turnover on the Stock Exchange reached record figures. The actual decline of prices was not excessive, but it was sufficient to give rise to a widespread feeling that it is now safer to liquidate investments pending the outcome of the General Election. For unless the indications point quite distinctly towards a Conservative victory a large number of people are bound to prefer to be on the safe side between now and the General Election.

The sudden change in sentiments regarding election prospects is difficult to explain. Admittedly, unemployment figures are relatively unfavourable but not more so than was widely anticipated. As for the cost of living index, its increase during December was moderate. There were no major wage increases in recent weeks that would account for an adverse change in the attitude of the middle classes.

It seems possible that the reactions of the public to the return to convertibility may have had something to do with the change. The Labour Party is making the utmost use of the argument that as a result of this move sterling has become more vulnerable and British domestic economy has been placed at the mercy of New York bankers and Zurich speculators. In view of the disastrous consequences of the return to the gold standard in 1925 and of the failure of the convertibility attempt in 1947, the Socialist arguments sound fairly convincing to the public which is already worried about the persistence of the business recession.

Whatever may be the reason the anticipation of a Labour victory is bound to be detrimental from the point of view of the recovery from the recession. Industrial firms are liable to be influenced by this new element of uncertainty in the outlook, which will tend to discourage them from capital expenditure, and even from making full use of their existing productive capacity.

Unless there is a change in sentiment in the near future in favour of the likelihood of a Conservative victory a vicious circle will develop in which pessimism

about Conservative prospects tends to accentuate or at any rate prolong the recession while the accentuation or prolongation of the recession will tend to weaken further the chances of a Conservative victory. Another political factor which appears to be working in the same direction is the deadlock over Germany. Mr Mikoyan's visit to the United States appears to have brought no relief in the situation and the possibility of a severe international political crisis within a few months is now widely anticipated.

These clouds on the domestic and international political horizon are gathering at a moment when in their absence Britain would have attracted considerable amounts of American capital. Ever since the restoration of convertibility there has been a noteworthy increase in American demand for British industrial equities. Even if we disregard the American buying of British Aluminium shares, which was due to special circumstances, it seems evident that American investors had become encouraged by the convertibility position to acquire first-rate British industrial stocks the yield of which is considerably higher than those of the corresponding class of American securities.

The Government naturally welcomes the resulting American demand for sterling which must have been largely responsible for sterling's firm hold tone. British shareholders welcome this moderate buying pressure which tends to raise the value of their investments. On the other hand, leading industrial firms scrutinise the purchases with particular care to ascertain whether there are any indications of American attempts

to secure a controlling interest. In one or two instances indications to that effect are fairly distinct but in the majority of instances the purchases are widely spread.

Fears of the management of industrial firms that they might wake up one day and find themselves under American control are mitigated by hopes that the acquisition of substantial if not controlling American interests in their capital is liable to discourage a Labour Government from nationalising those firms, either by legislation or through acquisition of shares in the open market. It is remembered that, even though the British Ford Company was exactly in the same position as many British firms which came under the iron and steel nationalisation under the last Labour Government, it was left severely alone. It is assumed therefore, that history would repeat itself in respect of companies with substantial American interests in them.

American participation is regarded as a fairly safe insurance against the new form of socialist backdoor nationalisation by means of open market purchases. Such operations would entail a risk to owners who refuse to sell out because a Socialist Government in possession of substantial holdings might devise means to starve or force private holders into surrender. The risk of applying such devices would be materially mitigated if substantial private holdings were held in American hands. Even so, the growing possibility of a Conservative defeat is liable to discourage also American buying. High taxation and other anti-capitalisation measures would affect all firms regardless the nationality of their shareholders. —Copyright.

Steady Trend in Raw Jute

A FEATURE of the past week's trading in the jute markets is the steadier tendency noticeable in the raw jute section. Assam Bottoms which was quoting at Rs 20.75 a maund this time last week is now changing hands at around Rs 21.25 with sellers reserved. It would appear that the measures initiated by Government to bring stability to the jute markets have at long last begun to yield the desired results as far as the raw jute section of the market is concerned.

In this connection it may be noted that Mr C. M. Chopra President of the Jute Balers' Association, Calcutta, has welcomed the removal of the ban on export of raw jute. He has further said that the STC after discussion with the representatives of the Association has considered it proper to export raw jute through the balers and that it has already allowed some balers to enter into contracts with foreign buyers. He has pointed out that the export of raw jute has become possible only because there has been a sizable increase in jute production in the country. It is now estimated that the 1958-59 jute crop will be about 70 lakh bales. Referring to the success of jute production programme, he says that the large availability of jute in the country will enable us to regain our position in world markets as exporters of raw jute.

With the rising trend in prices in primary markets brought about by STC purchases and with balers evincing keen interest at the Calcutta market, prices have steadily moved up. Mills have also been showing some interest. Now that export has been allowed, the raw jute situation as far as the mills are concerned cannot be considered to be as advantageous as it had been some time ago. It is of course inconceivable that Government would be as short sighted as not to ensure that firstly our mills are left with adequate supplies and secondly that there is a sizable quantity to be carried over to the next season. Even so mills may find it necessary to step up their purchases.

The goods section has been quite steady in earlier trading but toward close has developed a quiet tendency. The improvement noticeable around midweek, especially in sackings, seemed to have stemmed from rumours about sealing of a portion of sacking looms. The rumour has evidently its origin in the fact that the industry is finding it difficult to dispose of its sacking production. Expectations of a broadening of interest in this connection have not yet materialised, and the industry sooner or later has to tackle this problem of mounting stocks of heavy goods. It is true that mills have already taken steps to reduce production of sackings by steadily switching over sacking looms to the production of hessian. But it would appear that more concerted measures will be required to bring sacking stocks to manageable levels.

As has been noted last week, the industry has little worry regarding its hessian production. The demand for this category of goods is quite satisfactory and indications are that this trend will continue. It is generally believed that the effects of the recession in US on burlap consumption in that country have been left far behind and the demand for burlap is picking up. Moreover, it is not as though the industry is burdened with heavy stocks of hessian. The statistical position of hessian is quite satisfactory and current stocks are less than half a month's production.

Though narrow price movements characterised trading on Thursday the undertone was steady at close in sympathy with the futures market. At close on that day Hessian 40"×10 oz January was done at Rs 40.50 while B Twills January was placed at Rs 93.05. Conditions were almost unchanged on Saturday in the absence of business reopening on Tuesday after the holidays the market developed a steady trend and with rumours about the possibility of the sealing of a portion of sacking looms, prices, especially in the sacking section steadied up. Prices at close of the day were Hessian 40"×10 oz January Rs 41.00, B Twills January Rs 93.60. The recovery in sacking, however, proved to be shortlived as on Wednesday selling pressure pushed down prices again. Wednesday's closing prices were Hessian 40"×10 oz January Rs 40.90, B Twills Rs 93.20.

In the futures section, Hessian 40"×10 oz February opened at Rs 39.44 last Thursday and closed slightly higher at Rs 39.50 on emergence of late support. The trend continued to be steady on Saturday with the day's closing rate placed at Rs 39.68. Prices made further headway on Tuesday to be finally placed at Rs 39.84. Prices remained almost unchanged on Wednesday around Rs 39.82. B Twills February opened at Rs 92.65 and closed at Rs 92.85 on the opening day. The rate made headway to close at Rs 93.20 on Saturday. The upward movement was maintained on Tuesday presumably due to rumours of a sealing of a portion of sacking looms by mills. After opening at Rs 93.20, the rate moved up by close to Rs 93.50. On Wednesday, however, selling pressure pushed down the rate by close to Rs 93.35. Assam Bottoms March opened at Rs 22.40 and moved up slightly to Rs 22.42 by close of the opening day. Saturday found the rate further higher at Rs 22.64. Thereafter the trend became irregular. After closing at Rs 22.64 on Tuesday, the rate was pushed up overnight to open higher at Rs 22.72 on Wednesday but by close it came back to Rs 22.44.

Post-War Record for UK Stocks

ACCORDING to the latest reports, UK warehouse and about to be landed tea stocks have totalled 190.20 million pounds in the week ended January 16 as compared with 187.70 million pounds in the previous week—the highest level in post-war years. British imports of tea from all sources, during 1958, totalled 588.39 million pounds as against 594.69 million pounds in 1957. According to the UK Board of Trade returns, re-exports were higher in 1958 at 32.04 million pounds against 29.39 million pounds in 1957, with India supplying more than half the 1958 imports.

The total afloat was 39.72 million pounds, including 30.52 million pounds from Calcutta; 1.53 million pounds from Chittagong; 1.82 million pounds from Cochin; 4.17 million pounds from Colombo and 1.68 million pounds from other Ports. The average realised at the auction, during the week ended January 16, was 48.52d per pound against 49.14d in the preceding week and 55.58d in the corresponding period of last year.

In the Export Sale held in Calcutta this week, offerings consisted of 64,927 packages for which there was a good but less general demand than in the last week. "Teas for price", plain and medium BPs and plain PFs were a strong feature and sold at fully firm to dearer rates. Medium PFs received fair support, but were often 2 to 4 nP per pound easier. Apart from the brighter liquoring sorts which were sold well, orthodox BOPs and OFs were generally easier, particularly the low medium sorts, and there were some withdrawals.

CTC types met with a good but irregular enquiry, the plainer mediums being sometimes easier. Legg-cut teas were sold readily; but prices were irregular and often 2 to 4 nP easier. Whole Leaf grades were well supported and often dearer, particularly those with style. Darjeeling teas met with a fair demand. Although irregular, these were sold at easier rates. Following were the rates:—Clean Black Pekoe Rs 2.00 to Rs 2.04; Plain BP Rs 1.62 to Rs 1.66; Plain Fannings Rs 1.74 to Rs 1.80; Medium BP Rs 1.60 to Rs 1.64; Medium Fannings Rs 1.74 to Rs 1.78; Best Assam CTC BP Rs 2.25 (nominal) and Best Assam CTC Fannings Rs 2.30 (nominal).

In the Internal Sale, offerings were 21,273 packages of Dusts and 2,262 packages of Leaf grades. The market opened with less demand than in recent sales, particularly

for CTC grades; but strengthened as the sale progressed. Orthodox descriptions of the poorer and medium sorts were sold at rates generally 2 to 4 nP per pound easier; but the better grades in this category and the small and powdery types were sold at fully firm and occasionally dearer rates. The poorer Darjeeling met with little competition; but those with quality were keenly sought after and ruled dearer.

CTC grades of the poorer and medium descriptions were sold at rates up to 10 and sometimes 15 nP below last levels, while the best sorts were sold at generally firm to dearer rates. Following rates were quoted:—Medium Doonars Dust Rs 1.72 to Rs 1.76; Medium Assam Grainy Dust Rs 1.72 to Rs 1.76; Medium Assam CTC Dust Rs 1.95 to Rs 2.15 and Best Assam Dust Rs 2.50 to Rs 3.00 (nominal). There was a good demand for Leaf grades and were sold at rates about valuation. The few lines of Green Tea, on offer, were sold at slightly easier rates.

In the Export Quota section, business was reported done at 2½ to 3 nP per pound.

With all centres operating fairly strong, improved demand prevailed on the Colombo market where offerings totalled 6,582,811 pounds. As the sale progressed, prices for coloury high-grown broken generally fetched firm to dearer rates; but light liquoring sorts were irregular though higher than last week's closing rates. Medium teas were 5 to 10 cents per pound dearer, while low-grown sorts were about steady. Prices for Commons were firm at the close of the sale. Following rates (cents per lb):—High-grown BOP 290; Good Medium BOP 220; Medium liquoring BP 150; Medium liquoring PF 210; Medium liquoring OP 170; Low Medium OP 160 and Low Medium Pekoe 167.

The Ceylon Government have, it is understood, a proposal to replace the existing flat rate of export duty on tea (70 cents per pound) by an ad valorem duty. Trade circles, however, believe that this proposal is not expected to be finalised for several weeks. The delay seems inevitable until the Government are sure that the new proposals will raise as much revenue as the old flat rate. It they do not, the present rates will well be changed.

In the Cochin market, a quantity of 814,533 pounds of Leaf tea was offered for export. Teas from the Anamallais district showed a marked improvement with a number of invoices having very useful quality. Nilgiri teas continued to show a seasonal improvement. The exporters competed strongly for the improved quality teas. Low Medium Broken were fully firm, but equivalent Fannings were dearer. The Medium, good Medium and best liquoring sorts met with useful competition and prices for these teas were higher following quality. Following rates were quoted:—Low Medium Rs 1.55 to Rs 1.65; Medium Rs 1.75 to Rs 1.90; Good Medium Rs 2.10 to Rs 2.40 and Quality Rs 2.35 to Rs 3.75.

Britain

There was some recovery in the closing months of 1958 in United Kingdom overseas trade. This becomes clear from the Board of Trade announcement in London on January 20 of the full trade figures for December. (The provisional figures were issued earlier this month.)

For December, exports are confirmed at £269,400,000, nearly £22,000,000 less than in November, and re-exports also fell by £2,500,000 to £10,400,000. Imports rose sharply by over £40,000,000 to £353,500,000. As a result, the visible trade deficit jumped from the extremely low level of November to an unexpectedly high one of £73,700,000.

For 1958 as a whole, the total value of exports was £3,208 million, 3½ per cent. less than in the previous year, but higher than in any other year. Re-exports rose by £14,000,000—a 10½ per cent increase—to £147,000,000, just higher than the previous record post-war year.

Imports totalled £3,780 million in 1958, seven per cent less than in the previous year. The fall was wholly accounted for by lower prices.

The visible trade deficit for the year was reduced by £189,000,000 to £425,000,000, the lowest figure since the war, apart from 1950.

The area pattern of trade shows that for 1958, exports to the United States were outstandingly successful, and this market was by a comfortable margin the largest one for United Kingdom exports. Total exports, including re-exports, amounted to nearly £300,000,000. More than one-fifth of the total was accounted for by motor-cars, which provided over one-half of the increase compared with the previous year. And in December the figure of exports to the United States was, for the third month running, a record.

★ Britain's great fund of experience in the field of nuclear energy—she has five consortia able and ready to export entire nuclear power stations—will be placed at the disposal of European nations on the threshold of the atom age when their industrial experts meet in Italy in the spring.

The European Nuclear Energy Agency, established within the framework of OEEC last February, is organizing a conference on "Industrial Prospects in Nuclear Energy" at Stresa in May. Sir Ralph Cochrane, of the Federation of British Industries, is a member of the committee organizing the four-day conference, which will bring together 500 industrial managers from Europe, Canada, and the United States.

The object of the conference will be "to evaluate the commercial

prospects for industry which are offered by nuclear energy, the probable markets in this field for material and equipment, the amount of investment required and its probable return".

Many of the problems to be discussed by the conference have already been tackled by British atomic experts. Since they put the world's first nuclear power station to produce commercial electricity into operation at Calder Hall, Cumberland, three years ago, they have had ample opportunity to explore these problems and, to a considerable extent, find solutions.

One of the conference discussions will probe the economics of nuclear power compared with power produced by conventional means. With the rapid advances being made in the development of nuclear power, prospects and plans are constantly changing, but British scientists have already determined that nuclear power stations can produce electricity just as cheaply as, if not cheaper than, conventional stations located in regions where fuel has to be imported.

Britain has 11 nuclear power stations in various stages of construction or planning. Improvements in design and technique as a programme progresses will no doubt cut the cost of electricity production.

Another topic for discussion is the question of financing national and international programmes for the development and production of nuclear energy. Here again, Britain can offer help because of her experience in the international market.

Of the five British consortia which have reduced the complex problems of nuclear power station construction to a commercial proposition, one has already concluded a contract with Italy, and another has a share in a Cuban contract to build the country's first nuclear power station. Three British consortia have tendered to build Japan's first nuclear power station, which will demand extra ingenuity from engineers since it will have to be earthquake-proof.

The delegates, by comparing various studies already made in particular countries in connection with specific projects, hope to arrive at forecasts of markets for materials such as nuclear fuels, for equipment, and for instruments used in the nuclear industry.

This covers a wide field in which the United Kingdom has considerable experience. For example, Britain is now the world's largest exporter of radiosotopes, a by-product of the nuclear energy industry which has vital applications in science, industry, and medicine.

Speakers at the Stresa conference will be drawn from industrial and governmental organizations in OEEC member countries, the United States and Canada, all with direct experience of the subjects treated.

★

Australia

THE promotion of overseas investment in Australian resources and expansion of the nation's overseas trade, both inward and outward, are currently the subject of ener-

getic drives by Government authorities in Australia.

In September, the Prime Minister, Mr R. G. Menzies, announced that the Government was reviewing matters related to co-ordinating, and where necessary, improving facilities and information abroad for prospective investors of private capital.

The Australian Department of Trade, which is expanding its overseas publicity, has been active in sponsoring trade missions to Asian countries, and recently a mission from the Singapore Chinese Chamber of Commerce came to Australia to make firsthand contact with local exporters and importers. The Government's recently established Export Payments Insurance Corporation has also assisted local manufacturers to develop new markets, as its cover facilities on shipments are more extensive than those provided by private underwriters.

This has encouraged manufacturers to experiment with trial shipments to markets that might otherwise be neglected. Under the stimulus of general Government activity exporters themselves chartered the DELOS, which carried a trade mission visiting Asian ports with a floating exhibition of Australian manufactures. The vessel had banking experts abroad to facilitate the business of exporters.

In the field of investment the State of Victoria has its own Promotion Committee, which recently visited the United States and Britain to obtain promises of several new industries. The States of Queensland and Western Australia have also been active in sending delegations abroad. The Premier of South Australia, Sir Thomas Playford, is himself active as an overseas salesman and he recently flew to the United States especially to negotiate for a large American plant in his State.

This competition between the States for industries has been matched by other stimulating factors. The trading banks came into the personal savings business and became linked with hire purchase, and the Melbourne Stock Exchange, perhaps the most conservative of the Australian Exchanges, now permits its members to buy shares for clients who will pay on a time-payment basis.

Recent moves by public companies in Australia indicate the continuing interest on the part of overseas investors in Australian investment. Rheem Australia Industries Ltd., with £A10,000,000 nominal capital, has been registered to replace an older company which makes steel drums, containers and hot water services. The majority of the shares are held by Rheem Manufacturing Co. of California.

The Oliver Corporation of Chicago has invested about £A90,000 in Britstand Industries Ltd., to assist in the distribution of Oliver machinery.

Corning Glass Works, which operates 22 plants in the United States, is also interested in a new branch plant to make television tubes at Liverpool, New South Wales.

The P. and O. shipping group of companies and the Orient and Pacific line expect to bring more than 40,000 British and American tourists a year to Australia in a few years, and P. and O.'s managing director, Mr A. G. Crichton, has urged greater publicity and more accommodation facilities.

He says that the companies have expanded services in the Pacific, where Australia is linked with services to Canada and the United States. A sum of £A30,000,000 is being invested in two additional super liners, the CanBERRA and ORIANA, which will be on the run within two years.

Great Boulder Gold Mines Ltd., one of the big Western Australian gold producers, earned a net profit from all sources of £A272,860 for the year to June, 1958, compared with £A258,812 for the previous twelve months.

The Chairman, Mr A. M. Coulson, commented to shareholders on the rejection by the United States of the proposal for a higher gold price, made at the recent meeting of the International Monetary Fund in New Delhi. Mr Coulson said that an increase would not be inflationary. The purchasing power of the dollar today was less than half it was in 1934, when the price of gold was fixed at \$35 an ounce.

If the price were raised to a reasonable level there is little doubt that the Australian gold industry would show revived activity, which would give impetus to the development of certain regions of Australia, he stated.

Use of fibre glass in industry is becoming more popular in Australia as new applications are found for the product. Latest is its introduction into the field of fluorescent sheet lighting.

Australian Electrical Industries Pty. Ltd. of Sydney is using fibre glass to replace aluminium in the body of lanterns for the lights. Sydney municipalities have ordered several of these lights for street illumination.

Australian plants also use fibre glass for boats, car bodies and electrical parts. It is made by re-inforcing plastic materials such as polyester resins, with glass fibres, and the product is then moulded to the required shape.

A big machine which combines in one operation the cleaning and painting of 18 inch-wide metal strip before it is rolled, pressed and soldered, has been installed in a Sydney factory. The 400-ft long unit is the only one of its kind in Australia, and is one of the most complete of its type in the world.

Its owners, the Hunter Douglas Corporation, had it made in the United States, by Gasway Corporation, of Chicago.

It will make metal strip for manufacture of Venetian blinds and awnings.

Bodies for Fiat motor cars are to be made in Australia by Pressed Metal Corporation, a Sydney company, at a plant at Enfield, one of Sydney's industrial suburbs. The vehicle will have an Australian content of 80 per cent. Manufacture of the Fiat model 600 begins this month and the model 1100 in February.

FRESHER really does mean BETTER

LETTERS TO BHAI SAHIB. This is the sixth in a series of 9 advertisements. Look for the seventh advertisement in this publication next month.

Dear Bhai Sahib,

Your charming letter about your visit to your father's village took me back to my childhood days. We all wish we could visit the places of our early days more often, don't we!

I am particularly pleased that you met our salesman. As you quite rightly say, he is a welcome visitor wherever he goes—and our salesmen serve, Bhai Sahib, not only your own village, but close on 20,000 scattered all over the country.

You may wonder why we distribute tea ourselves. It's because freshness in tea is all-important. A medium tea that's *fresh* tastes far better than the highest grade tea that's stale. You buy tea for its taste; if you don't get fresh tea you get a bad bargain. With Brooke Bond Tea you are guaranteed freshness and hence flavour and good value because our five factories are strategically located in different parts of the country—one in Coimbatore, one close to Secunderabad, another near Nagpur, one in Jamnagar and the fifth in Calcutta. Tea is sent from these factories to over 2,000 depots and sub-depots so that supplies can be made quickly and really fresh to dealers everywhere—there are

no delays in transit, no hold-ups in the middleman's godown—no time lost between our factory and your tea pot.

Since our salesmen sell directly to all dealers, our consumers get their tea almost at their doorsteps, at the same price everywhere, subject to local taxes.

Another important fact, Bhai Sahib—our tea is sold for cash to a dealer and so he never stocks more than he can sell within a few days. Our efficient system of distribution ensures that he is kept regularly supplied with tea that *really* is fresh.

I think you will agree, Bhai Sahib, that the fact that more dealers in the country sell Brooke Bond Tea than any other brand proves the superiority of our distribution system.

Yours truly,

(G. V. Krishnamurthy)
Chairman

Brooke Bond India Private Limited

Bhai Sahib reads out to his friends a letter received from the Chairman.

Some facts about Brooke Bond

Number of branches	...	30
Number of sales staff	...	3,641
Number of dealers regularly selling Brooke Bond Tea	...	5,24,643
Number of cups of Brooke Bond Tea enjoyed every day	...	65 million

WE have seen last week that a new dimension has been added to central banking with the inclusion, among the functions of the Reserve Bank, of the responsibility for ensuring or facilitating the growth process. On the face of it, the growth that the Reserve Bank has so far been able to contribute to lies essentially in the public sector by virtue of the large scale credit it has given to Government against sale of ad hoc Treasury Bills in its favour. Then, there is also the fact that, at the time of the Central Government's new loan floatations, the Reserve Bank had had, until last year, to subscribe in a big way in order to make the programmes a success. Next, during the time of monetary stringency, when there was disinvestment by Scheduled Banks, the Reserve Bank was further compelled to absorb this apparent excess of Government securities in the market. Finally, there is the advisory role of the Reserve Bank in regard to Government borrowings. In all these ways, the Reserve Bank can be seen as having been directly implicated in the raising of resources for Government or, to put it in another way, in finding the wherewithal for putting through public sector projects. Does this mean that, in the past, the Reserve Bank has had a negligible role to play in fostering the growth process in the private sector?

It is at this stage that I would like to draw attention to Mr H.V.R. Iengar's remark that "the scope for credit policy and hence central banking activity is to that extent greater in an economy where the private sector accounts for the largest or substantial part of economic activity". The Reserve Bank Governor has added that the prospect before private enterprise, as to range and scope, is immense. It follows, therefore, that, in the degree to which the private sector has a place in Indian development, correspondingly is there a positive role for central banking to play. But, before we try to delineate the broad pattern of central banking activity vis-a-vis private sector development, we might as well take stock of what, in fact, the Reserve Bank can already claim credit for having done to foster this development in the sphere of the private sector. I would put at the head of this list of achievements already to the Reserve Bank's credit, the activity that it has taken upon itself of providing assistance to agriculture. It may be recalled that the Reserve Bank of India set up two funds, the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund, some time during 1956. The setting up of these Funds was in pursuance of recommendations to that effect contained in the Gen-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

ral Report of the Committee of Direction of the All India Rural Credit Survey. These were the measures that were taken to bring about an integrated scheme of rural credit, and the nationalisation of the Imperial Bank, although we are not concerned with it at the moment, also was a step toward this end. But what is interesting is that the Reserve Bank has been an entity which has increasingly been drawn upon by State Co-operative Banks in the manner envisaged so as to give agricultural credit on an extensive basis. As at the end of 1954-55, or prior to the setting up of the two funds, the borrowings of State Co-operative Banks from the Reserve Bank were placed at Rs 9.74 crores. As on the last Friday in November 1958, the relevant figure had multiplied more than fivefold to Rs 51.89 crores. To look at it in another way, advances—as distinct from outstandings—extended by the Reserve Bank to State Co-operative Banks rose from Rs 17.69 crores in 1954-55 to Rs 57.12 crores in 1957-58 and, in the first eight months of the current fiscal year, the relative figure amounts to Rs 50.02 crores. I don't think it will be questioned that the figures tell their own story clearly of expanding utilisation being made of Reserve Bank facilities for the growth of, call it agricultural production or just the rural sphere. If I have dwelt at some length on these figures, it is because we do not realise often that the entire field of agriculture, accounting as it does for, I think, something like 44 per cent of the national income in 1955-56, is, as Mr Iengar has stressed, "in the hands of private enterprise". (The dominant role of private enterprise is, it is interesting to see, confirmed by the fact that 90.9 per cent of the net domestic income in 1954-55 was produced by the private sector.)

Aside from agriculture, there is industry, and we have now to see whether, and, if so, to what extent, the Reserve Bank can be shown as having participated in or contributed to development; and we are, of course, restricting ourselves at the moment to the private sector. There is not much that the Reserve Bank can do about fashioning the investment climate. Particularly during the last few years, it is the fiscal policy of Government which has profoundly affected both the

movement of prices on the stock exchanges and the atmosphere as regards the prospect for new share issues. But, even here, there is an indirect bearing that the activity of the Reserve Bank has on the tenor of prices. What I have in mind here are the open market operations of the Reserve Bank, and though they relate only to Government securities, it is obvious enough that any improvement in the tone of the gilt-edged market does evoke, shall we say, sympathetic improvement in stock exchanges. Of course, it is always open for the thesis to be advanced that it is the state of the equity market which has wrought a change in the conditions of the gilt-edged market. I hope, however, to show that the recent improved tone of stock exchange prices generally was anticipated and preceded by a healthier gilt-edged market; and I have no doubt in my mind that the Reserve Bank's open market operations were responsible for imbuing the gilt-edged market with new life. The index number of Government securities, with 1952-53 as base, was languishing at 98.2 in October 1957. At that time, the index number for variable dividend industrial securities, with the same base, was at 122.7. By the Budget month of March 1958, the index for Government securities rose to 98.6; and the index of variable divi-

dened securities also went up to 126.6, but what is important is that the rise in the index of Government securities was sustained, though gradual, whereas the index for variable dividend securities showed a fair sized drop before it improved to its figure for March. The second reservation is that an improvement in the index for Government securities in the decimal place is much more significant than a rise of, say, four points in the index of variable dividend securities. From its figure of 98.6, the index number of Government securities has risen sizably to 100.7 by the week ended January 17, 1959; and the rise has again been sustained. On the other hand, the index number of variable dividend securities touched a peak of 144.7 in September and, thereafter, with small fluctuations, the figure fell to its present 138.2.

How did this improvement in gilt-edged prices come about? Primarily, of course, it is the fact that the money market, for a variety of reasons, began to witness very much easier conditions which caused the banking system to seek to find an outlet for its surplus resources. In that sense, with the increased interest taken by Scheduled Banks in Government securities, the rise in prices may be said to have been inevitable. But, over and above this, there is the fact that the Reserve Bank is known to have evolved and implemented an open market policy. Some semblance of order has been restored to the list of gilt-edged securities, there is a discernible pattern as to the yields available on the existing issues, the tap prices of the Reserve Bank have from time to time been raised. I submit that it was not enough

CALCUTTA BOMBAY MADRAS NEW DELHI

that there was an increased demand for gilt-edged on the part of the banking system, the entity which was in a position to satisfy this enlarged demand had it in its power by suitable changes in the terms upon which sales would be effected to imbue greater strength to the gilt-edged market. And this is exactly what the Reserve Bank has done. But it is time that we got back to our main point, and that is that the improvement in the tenor of the gilt-edged market, brought about by the open market operations of the Reserve Bank, paved the way for a general improvement in stock exchange prices and, therefore, in the investment climate. This, then, is how the Reserve Bank was able indirectly to influence even such a thing as the investment climate. More directly, during the period from about the time the First Plan ended and until about a year ago, when there was an acute monetary stringency, industrial production in the private sector would have suffered if, owing to this tightness in the money market, credit had become unavailable for prosecuting schemes of expansion or financing additional stocks that a higher level of output would imply. It is in this context that the purchases of gilt-edged made by the Reserve Bank from Scheduled Banks during this period of monetary stringency assume a significance in the sense that industrial production in the private sector would to that degree be unhampered. Indeed, this is the sense in which the Reserve Bank as a central banking institution is expected so to fashion its credit policy as to ensure that, in a growth economy, increased production is not affected. Mr Iengar has been stressing time and again that one aspect of the functions of the Reserve Bank would be to ensure that the process of development did not, for the reason that credit was unavailable, lose its momentum. If, by purchase of securities from Scheduled Banks, the Reserve Bank correspondingly increased the resources with the banking system, there was even greater help to come. In November 1956, when it was known that the ensuing busy season would present great rigours, the Reserve Bank indicated that it would freely extend loans to banks against usance bills. At that time, credit lines for a total of Rs 150 crores were approved. As against a figure of Rs 18.87 crores at the end of 1952-53, Scheduled Bank borrowings from the Reserve Bank rose sharply to Rs 103.16 crores as at the end of 1956-57. These are the two ways in which the availability of credit for productive purposes has been vouchsafed directly by the Reserve Bank.

★ And now, what has been the performance of the private sector and what the prospect before it? As far as the prospect is concerned, Mr Iengar has this to say:

"In the clouds of controversy that sometimes arise over isolated issues, it is not often realised that the range and scope of

private enterprise in India are in fact immense. Thus the entire field of agriculture and small scale industry and the overwhelming proportion of the distributive services are in the hands of private enterprise. In the field of large scale industry, it is true that Government are enlarging the scope of their own enterprise. But if one leaves out enterprises which the private sector is not in a position to undertake either because the finances required are beyond its resources or that the enterprises themselves are not likely to be profitable for several years, the number of enterprises undertaken by the State is in fact small, though they are of basic importance to the country's economy and provide the foundation on which the private sector can build."

★ Why do we have this ceaseless carping about an encroachment by Government upon spheres which allegedly were sacrosanct to the private sector? Let us for the moment take up the broader question of development of the private sector and Government's attitude thereto. Over and above the help rendered by the Reserve Bank, the Government themselves significantly have helped in enabling the private sector to carry through its expansion programmes. The Industrial Finance Corporation and the State Financial Corporations, between them, had, as at the end of November 1958, extended loans for an amount exceeding Rs 40 crores. The steel companies in the private sector have secured special advances from Government—carrying no interest and with no fixed date of repayment. The Refinance Corporation has been set up with the Government's blessings. A number of tax concessions are available which are intended to foster the setting up of new industrial enterprises. The Life Insurance Corporation has from time to time purchased from stock exchanges with a view to stabilising share prices. The LIC has, though not significantly as yet, acted as under-writers. From the foreign exchange loans negotiated with friendly foreign Governments, a portion has been set apart for utilisation by the private sector. The NIDC has assisted the jute, cotton and shipping industries. Does all this indicate that Government are antipathetic to the private sector? Quite to the contrary, I submit that there is an awareness on the part of Government of the role that the private sector will have necessarily to play in India's development, if our planned endeavours are to be successful.

★ If such is the prospect, we can have the confidence that the private sector, for its part, will not fail in the discharge of the important role and responsibility that have been allotted to it. Indeed, part of our foreign exchange difficulties, which we have lately experienced, stems from the accelerated pace at which the private

sector did set about completing its quota of development in terms of the Second Plan. Mr Iengar has stressed this aspect of the private sector's performance. The Reserve Bank Governor has pointed out that gross fixed capital formation in the private sector has risen from less than 6 per cent in 1951 to 16.5 per cent in 1957. If, really, the fiscal policy of Government was such as to leave no room for incentive, we would not have had such development as has manifestly taken place in the private sector in the first three years of the Second Plan. Mr Iengar remarks that, by the end of the third year of the Second Plan, the private sector "would have achieved the investment targets set out at the beginning of the Plan". And so, if new investment in the private sector seems to lag, relative to capital disbursements in the public sector, in the last two years of the Plan, it would be because the private sector, having already completed its programmes of development, must now take pause, for consolidation. This brings me to an interesting point. If the private sector has already put through its programmes of expansion, then, automatically, the last two years of the Plan should witness a greatly increased level of output in the private sector. It is this fact which should stand out, rather than the pause in new investments by the private sector.

★ I shall hark back, if I may, to one point. And that is, the so called encroachment by the public sector has largely been confined to the areas of the industrial economy wherein, in any case, the much-vaunted free enterprise, whether for lack of capital or for the fact that the ventures would be unprofitable for some years to come, would not have been in a position to do much. In this view, what the public sector has done is merely to have taken in hand tasks which might properly have been allocated to the private sector, but which the private sector was unable to go ahead with. In this sense, if Government had not chosen to make good this failing of the private sector, the progress of the private sector would have been adversely affected. For, what Government are turning out, or seek to turn out, are the primary products upon which the private sector can build. If the public sector projects produce an extra 3 million tons of ingot steel, the enlarged output of this basic commodity can be utilised only if the private sector sets up the fabricating and ancillary industries. In this light, the activities of the public and private sectors can be seen to be complementary. There is no encroachment, but a co-operative endeavour at accomplishing the most progress in the shortest possible time. And, in any case, if the private sector can confidently set about increasing production, it is not least because Government disbursements are creating new consumers. It is Government that release the buying

power which can be met by the increased products of the private sector.

★ And now, a word in conclusion about Mr Iengar. What Mr Iengar has been trying to do is to underscore the new dimensions of central banking. This preoccupation with the growth process of the economy makes India the "venue" of yet another experiment in the sphere of monetary policy. I don't know whether the reader realises that, ever since the end of the First World War, India has served as a guinea pig on which could be tried out innovations in international accounting procedure. When, for example, the Hilton-Young Commission had concluded their deliberations, and though the Reserve Bank had not been set up at the time, one of the recommendations was to the effect that the proposed central banking institution should have what then was a radical function to perform. This was around the time when the Gold Standard, which had collapsed during the war, was being replaced by the Gold Bullion Standard. It was decided that the monetary authorities in India would undertake to buy and sell, not bullion, but sterling at the lower and higher points respectively. Then, a little later, the sterling-rupee rate that was sought to be foisted upon India raised a great controversy; and I remember the tumultuous debates in Delhi at that time.

★ All this is by way of suggesting that it is entirely logical that, at the present day, India should again be pioneering what I may call a new branch of central banking. And what Mr Iengar has done, I repeat, is to cause an awareness of this enlarged scope and responsibility of the Reserve Bank. Side by side with the increase in the Reserve Bank's functions, there has occurred an enlargement of Mr Iengar's own stature. If the free world is keenly following the course of the experiment whereby India through democratic means is trying to industrialise its economy, central banking authorities the world over will be, I suggest, as fascinated by the role that the Reserve Bank is playing under Mr Iengar's inspired direction.

★ Are the oil companies making mouth-watering profits? Yes, if you take the absolute figure; but, if you look to the return on capital employed—and that, after all, is the only correct way of going about such an assessment—such an impression will be found to be false. A Burmah-Shell brochure analyses the distribution of the company's gross receipts during 1957. This shows that, apart from the FOB value of oil, the largest item is Government—accounting for 28.84 per cent by way of duties and taxes. After all expenses were met, the earnings after taxes worked out to 2.28 per cent of the gross trading receipts of Rs 131.68 crores; and this represented a return of 4.75 per cent on the total capital employed.

EAVESDROPPER

GATEWAY GOSSIP

IT IS strange that most of our major industries should find themselves burdened with mounting stocks when Government spokesmen are telling the people that if they want to better their lot they must all cooperate to increase production in the factories and the elds. While it is true that in the case of the jute industry the situation is governed largely by extraneous factors as it is principally an export industry, the same argument cannot hold good in the case of cotton textiles. The cotton textile industry is not so much dependent on export markets as the jute industry. It has a large internal market and the point to be noted is that instead of increasing its sales to the domestic market as anticipated, it has lost ground here also with the result that it has been left with a heavy accumulation of unsold stocks. The crisis in the cotton textile industry has been traced among other factors to the imposition of heavy excise duties by the Government. The inhibiting effect of the heavy excise duty has been at long last realised by Government who have now substantially reduced the duty. It is however to be noted that even after three successive reductions in the excise duty, the industry is still finding it difficult to dispose of its unsold stocks. In recent months another industry has joined the ranks of those whose production has run much above demand.

The new entrant is the cement industry, though as yet the situation may not be said to have assumed serious proportions. But with the coming into commission of new cement factories that are in the process of construction the situation, it is feared, may become serious enough to require the taking of remedial measures not excluding curtailment of production. It is significant to note that at the beginning of the Second Plan cement production in the country was some 2 million tons short of demand. The shortfall has been sought to be made up from imports and today the position has radically changed. Not only imports have been discontinued but Government have programmed to export about 1 lakh tons of cement during the current year. It will be evident that our planners have anticipated much higher demand for cement than is now witnessed in the country; for under the Second Plan the target for cement production has been finally fixed at 13 million tons with the installed capacity of the industry rising to 16 million tons by 1960-61. But it would appear that the target is not likely to be reached. In their "Appraisal and Prospects of the Second Five Year Plan", the Planning Commission have estimated that on the basis of schemes in progress a capacity of only 9.3

Problems of Cement Industry

million tons can be reached by the end of the plan period. They however note that with assistance from the US Economic Development Fund a capacity of about 11 million tons could be achieved by taking up fresh schemes. The Commission have further stated that there are two main difficulties confronting the programme of expansion in the industry apart from exchange. The first pertains to transport facilities. The Railway Plan provides for movement of only 9 million tons of cement. In this regard it may be mentioned that it is apprehended that there will be a shortfall in the achievement of target for carrying capacity of the railways. The second refers to the availability of coal for the cement industry. The target of coal production under the Second Plan is 60 million tons and this will allow provision of coal supplies to the cement industry adequate for the production of 10 million tons. Any additional allocation of coal for the cement industry, say the Commission, can only be made at the expense of reducing the quota for other consumers. In the opinion of the Commission, however, production of 10-11 million tons of cement by the end of the Second Plan may be more or less sufficient for the country's requirements. The reason why they think that this lower level of output would suffice is that offtake of cement has been slowed down by the cumulative effect of factors such as increase in price, shortage of steel and slackening of constructional activity due to monetary difficulties.

Referring to the drop in demand for cement since last August Mr Dharamsey M. Khatau, Chairman of the Associated Cement Companies Ltd told the annual general meeting of the company last Thursday that the difficulties of the industry in regard to disposal of production has arisen due to defective planning on the part of Government. The lack of careful estimates in official planning as applied to the industry is brought out by the number of changes made in the target of production for the industry. Originally the target was placed at 10 million tons in 1954. The next year it was raised to 12.5 million tons and then finally to 16 million tons. The industry's plea for fixing the target at 8 million tons made after a careful assessment of the market conditions has not found favour with the authorities. Mr Khatau traces the present imbalance between production and demand in the cement industry to four principal reasons. Firstly, excessive capacity has been licensed both in the form of new factories and expansion of old ones. Secondly, demand has not broadened as anticipated. This is true of industries in both the sectors. Thirdly, the

licensing of expansions at the wrong places has also resulted in accumulation of stocks. Fourthly, the shortage of reinforcement steel has slowed down the offtake of cement. Production on the other hand will continue to rise as more units are in the process of construction. It is estimated that a capacity of 9.3 million tons is likely to be achieved in 1960-61 on the basis of schemes in progress. Though Mr Khatau thinks that the present decline in offtake is temporary, he is of the view that additional production of one million tons or so that will annually accrue will still remain to be accounted for.

It is not unreasonable to expect Government to show the way out of the present difficulty especially when they are largely responsible for bringing about the situation now obtaining in the cement industry. But the remedy suggested does not reveal that the problem has received the attention it deserves at the hands of the authorities. For the set formula that is sought to be applied is that if there is more demand, increase production somehow and if the demand is slack, cut down production. "In fact", says Mr Khatau, "whereas at one time the Government of India was continually pressing us to expand production capacity even more rapidly than we thought either practical or prudent, it has been recently suggesting that we should curtail production. But the stand we have taken is that in the best interests of the country such a desperate remedy should not be resorted to until all other measures have first been tried to correct the imbalance between supply and demand".

The industry in its turn has suggested a four-pronged attack on the problem before thinking of curtailment of production. The steps indicated are (1) diversion of large quantities of cement to road-building (2) rapid promotion of cement exports (3) suspension of further work on licences for the expansion of existing factories and for the establishment of new factories in those cases where no substantial financial commitments had yet been made and (4) reduction in price by reducing the excise duty back to Rs 5 per ton.

If the cement industry is to be enabled to continue unbroken its growth, it is essential that it is not burdened by unsold stocks. It is in this view that the suggestion of the industry to effect a substantial reduction in the excise duty deserves the active consideration of Government. The sharp increase in excise duty from Rs 5 to Rs 24 was decided upon with a view to curtail consumption at a time when indigenous production was lagging behind demand. That position no longer obtains because output of

cement in the country has now outstripped demand. The aim now should, therefore, be to see that production is absorbed as quickly as it is made available. In other words the appropriate thing to do is to stimulate demand. In this connection Government have their experience in regard to the cotton textile industry. The successive reductions in the excise duty on cotton cloth have been made with a view to stimulate demand. There is no reason why a similar step should not be taken with regard to cement also. It is no argument to say that the cement situation is not yet as serious as the textile situation. There is every indication that if no remedial steps are taken the cement situation will show further deterioration.

NOTICE

STATE BANK OF INDIA,
Calcutta,
the 22nd January 1959.

The Fourth Annual General Meeting of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Friday, the 27th February 1959, at 4 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1958 and the Auditors' Report on the Balance Sheet and Accounts.

P. C. Bhattacharyya,
CHAIRMAN.

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY LIMITED

NOTICE is hereby given that an Interim Dividend on the shares of the above Company of 5%, for the year ended 31st December, 1958, was declared by the Board of Directors on 28th January, 1959, payable on or after 20th February, 1959, to those Members whose names are registered in the Register of Members of the Company on the 20th February, 1959. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

The Register of Members of the Company will be closed from 11th February, 1959 to 20th February, 1959, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON.

Secretary,
Managing Agents.
21, Netaji Subhas Road,
Calcutta.
28th January, 1959.

BOMBAY REVIEW

GATEWAY NOTES

Industrial Relations

It is being increasingly recognised in our country that if our programme of rapid industrialisation to yield the desired result, there must be a full utilisation of the additional production facilities that are being created. Of the several factors that contribute toward obtaining the optimum production in industry, labour occupies an important position. It follows, therefore, that our programme of industrialisation should ensure the full cooperation of labour.

It cannot be maintained that industrial relations in our country are as they should be. The fact that man-hours lost are still quite considerable underlines the need for concerted action on the part of management and labour. Concerned to improve industrial relations, it is true that various steps have been initiated toward the achievement of this objective. It would appear that a durable formula is yet to be evolved.

Speaking at the conference of Industrial and Welfare Officers in Bombay last week Mr Sri Prakasa, Governor of Bombay, has indicated the correct approach to the problem. It will be too simple an explanation to trace all the unrest among factory workers to wages and amenities. The emoluments received by the industrial workers bear a close relationship to the disputes between managements and workers but a careful examination will reveal that the main troubles stem from the fact that the factory worker does not have an abiding interest in his work. The aim of good industrial relations will be the possible of achievement only when the factory worker is made to feel that his interests are inextricably connected with those of the factory. The experience of the State Government in the running of the Sholapur Mill has clearly demonstrated the truth of this statement. It is evident that once workers realise that the enterprise which they are working is run not merely for bringing profit to the owners but also for assuring the continued prosperity of the workers, the chances of conflicts will be greatly reduced. As Mr Sri Prakasa has pointed out, whether it is a question of achieving a rapid industrialisation of the country or the continued functioning of the private sector, much depends on the way in which enterprises are run. Managements should realise that they have equal responsibilities to the workers and the employers.

The example of the domestic workers cited by the Governor serves to illustrate the point quite clearly. The absence of conflict in this sphere is directly traceable to the close contact that exists between the worker and his employer. While such personal touch

may not be possible in industry, it is all the same necessary for managements to take active interest in the welfare of the workers. In this regard it is also to be remembered that social and political changes that are taking place in the country have radically altered old ideas about employee-employer relationship. It is now generally recognised all over the world that the main emphasis in industrial relations should be on human values.

Panchayats

The directive issued by the Bombay State Government to Community Project Administration to give priority to the setting-up of village panchayats in development areas is clear indication of the recognition of the need for covering all the villages in the State with panchayats as quickly as practicable if the development plans have to yield early results. For in the new scheme evolved for the rehabilitation of the rural population, Panchayats along with cooperatives are to play a major role. The village cooperatives among other activities are to devote attention on measures to utilise to the fullest extent possible, available irrigation facilities, application of improved agricultural techniques and the adoption of such practices as dry farming and contour bunding. It is expected that by the end of the Third Plan all rural families will be brought within the cooperative fold. The movement has made commendable headway in the Bombay State where nearly 30 per cent of the rural population has already been brought under the movement. Under the Second Plan, the movement has received considerable impetus and its extension to a number of spheres is envisaged. The first and foremost objective will of course be the supply of credit to the rural population. In this connection it may be noted that the Reserve Bank of India is taking active interest in the problem of rural credit. The Bank has set up a National Agricultural Credit (Long Operations) Fund and a National Credit (Stabilisation) Fund and has so far contributed Rs. 20 crores and Rs. 2 crores respectively to these funds. As the Rural Credit Survey Committee has pointed out, the supply of credit alone will not help the agriculturist to solve his problems. So the movement is being extended to the related fields such as storage and warehousing, processing and marketing. In their search for a solution of the problem of land reform Government have come to place the emphasis on cooperative farming.

The development of cooperation alone will not, however, ensure the all-round development of the rural areas. The work can be effectively handled only by the panchayats. With the rapid expansion of the cooperative movement and the active steps taken by the State Government to set up panchayats in all the villages it may be expected that in the near future the rural areas of the State will have been provided with the prerequisites for rapid development.

GATEWAY MARKETS

Non-Ferrous Metals React

PRICES of Non-Ferrous Metals have generally developed an easier tendency during the past few days, mainly due to reports that the State Trading Corporation may release fresh stocks to the trade and small-scale industries by the end of the month. Copper Scrap is quoted at Rs 206; Zinc at Rs 93; Lead at Rs 87 and Tin at Rs 151 (per quarter).

Scheduled industries, however, complain that they have not yet been issued enough import licences for non-ferrous metals for the period ending March, 1959. They are reported to have almost exhausted the "ad hoc" quotas, issued to them recently. Meanwhile, reports from Delhi indicate that the Government of India are considering a proposal to hand over the distribution of non-ferrous metals to trade associations and wholesale traders. The State Trading Corporation has already approached these associations for the purpose.

While official sources have categorically stated that imports of sufficient raw materials to maintain the tempo of industrial production will be conceded, rollers in the scheduled group, who principally manufacture industrial sheets for Plan industries, are reported to be facing a serious situation. It is said that, in as much as the quantum of foreign exchange for copper and zinc in the new licensing period should have been fixed, the delay in the issue of further licences for scheduled industries may be to ensure supplies for small industries which are to be supplied from canalised imports.

But, recent reports suggest that some non-scheduled industries have claimed exaggerated consumption figures for Copper. And this has probably confused the distribution policy and even prejudiced, to some extent, the allocation of the metal for the scheduled sector. This means that the authorities will have to devise some fool proof method to assess the actual needs of the non-scheduled sector before making allocations.

Copper and Zinc imports into India have been steadily rising during the past few years. Against 30,000 tons of copper imported in 1956, arrivals in 1957 and 1958 were around 43,400 tons and 49,000 tons respectively. Likewise, Zinc imports also have been larger with arrivals in 1958 mentioned at about 60,000 tons against 35,500 tons and 47,900 tons in 1956 and 1957 respectively. It is, therefore, strange that the major industries should be suffering from the scarcity of these metals despite larger imports.

Indian Finance

Mercury

Of late, Mercury prices have been developing a sagging tendency due to the pressure of arrivals. Following the import policy for 1958 October to March 1959 period, about 150 flasks have already been imported out of the quota of about 450 flasks. It is also reported that Pondicherry interests have made some deliveries of the actual by effecting sales at higher levels. As a result, the supply position has eased and is expected to ease further in the coming weeks.

The rate per flask, which had shot up at one time to Rs 4,200 against the import parity price of Rs 1,150, is now quoted around Rs 2,700.

Oils & Oilseeds

A steady trend in prices was noticed on the Bombay Oilseeds Exchange. Apprehensions about lower crop of castor and buying by vanaspati interests in the ready groundnut section were the factors responsible for the firmness of the market, although profit-taking erased some of the extreme gains at the close.

In the Groundnut section, spot situation was tight. With upcountry offerings drying up, Vanaspati producers had to buy at higher prices. Bold quality was quoted at Rs 35.25 and Groundnut Oil ready at Rs 18.50.

More in limelight than groundnut was Castor. Though no export business was done in oil, prospects of exports have brightened up due to a rise in the US rate. Moreover, shippers have also taken heart in the rising prices of castorseed in British East Africa, which may make buying Indian oil cheaper to Britain than milling imported African seeds. In the ready section, the rate was quoted at Rs 29.75 and Castor Oil, commercial quality, at Rs 15.25.

The market for Linseed was quietly steady with the ready rate quoting Rs 35.50 and Linseed Oil at Rs 17.75.

Gold & Silver

Prices on the Bombay Bullion Exchange remained generally firm despite profit-taking at higher levels. Expectations, that spot demand would increase with the progress of the season and that the import of Tibetan coins would slow down, were stimulants to the Silver section. Ready rates moved between Rs 194.56 and Rs 194.62.

The Gold section displayed remarkable strength and prices scaled a new peak since 1951. Spot demand from Madras and other centres continued to be well maintained. There was a general feeling that the tempo would quicken with the progress of the busy season. Spot rates moved between Rs 118.06 and Rs 118.19, while Sovereign remained firm at Rs 74.

January 31, 1959

WORLD OF COTTON

A HALT was cried to the rising trend in Cotton noticed till the end of last week. Jharilla March delivery, after touching a high of Rs 667.75, receded gradually towards the close to Rs 658 on lack of support. Leading bulls from Ahmedabad and Akola preferred to liquidate their holdings and sold about 50,000 bales. Increasing arrivals of the new crop in Vidarbha and Khandesh also added the easy sentiment in the market.

The spot market, however, reflected active conditions, as spinner demand for domestic staple styles was excellent. There is a general feeling that arrivals are likely to pick up in another week. Nearly 30 lakh bales will be marketed between February and April. Since several varieties are almost at around the ceiling, the trade cannot be expected to show much enthusiasm in financing the crop. Mills, too, will not like to build large stocks when prices offer little scope for further appreciation. It is because of these considerations that the market will not find it easy to absorb arrivals in the coming weeks.

There were no developments on the export front. Shippers showed some interest in old crop Kala Gin and Bengal old and new crops.

In the foreign cotton section, demand was subdued, mainly be-

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/GM/HD/59 for supply of 1,214 Nos. Industrial light fitting RLM dispersive type porcelain enamel finish complete with porcelain lamp holder and tapped 3" E.T. suitable for 300 Watt B.C. lamp 18" dia. Earnest money is Rs 1000/-. Tenders will be opened on 14-2-59 at 3 P.M.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy of tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing the earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S171 GENERAL MANAGER

Rising Trend Halted

cause most mills had bought fully against the import quotas allocated to them. There are indications that the proposal to import cotton under the "export incentive scheme" will be delayed for some time and mills will be issued import quotas for foreign growths on the basis of their consumption.

The quantity reserved under the above scheme is, at present, estimated at 1.45 lakh bales made up of 27,500 bales of cotton 1 3/16" and above; 48,000 bales of US upland cotton under the PL/480 and 70,000 bales of cotton stapling 1 1/16" and above. But, the response to the scheme is, it is learnt, not very satisfactory. Some mills have found the scheme very cumbersome, while others are unable to produce the necessary evidence of their past exports of cloth, as they themselves were never direct sellers of cloth in overseas markets.

Meanwhile, business on the cotton import front has come to a standstill. The existing import quotas have been already exhausted. With the result, fresh business cannot be put through. Some enquiries are reported for East African varieties, while buying interest in Egyptian growths has been limited on account of higher prices. A section of the trade, however, expects that India and Egypt will soon enter into some agreement by which Egypt will be able to offer larger discounts for its cotton to Indian textile mills.

Imports of foreign cotton in Bombay, for the first four and a half months of the season, i.e. till the 15th January 1959, have amounted to 76,472 bales against 100,455 bales for the corresponding period of last year. Country-wise imports were as follows (figures in bales):—

	1958-59	1957-58
American	4,195	31,124
Sudan	16,709	22,759
Egyptian	19,467	20,531
East African	35,596	26,041
Other sorts	505	Nil
Total	76,472	100,455

NEW YORK COTTON MARKET

Conditions on the New York Cotton futures market remained barely steady. After extending their recent declines in early dealings, near-by deliveries developed a rallying tendency. The recovery was attributed mainly to technical considerations following recent declines. Certified cotton stocks saw further increase to 83,871 bales, while sales totalled 115,000 bales. Middling Spot was quoted at 35.55 cents per lb.

LIVERPOOL COTTON MARKET:

On the Liverpool cotton futures market, both the contracts opened five points higher on some trade

covering in the near position with the distant mixed contract deliveries supported by commission house bidding. In the Sudan contract, inactive conditions persisted and the close was quiet.

CLOTH AND PIECEGOODS:

Fears, that India's exports of cotton piecegoods during 1958 will not exceed even 600 million yards, have proved correct with the figures now available. Total exports amounted to 543.70 million yards valued at Rs 36.79 crores as compared with the exports of 796.39 million yards valued at Rs 54.61 crores in 1957.

BOMBAY REVIEW

Incidentally, it may be mentioned that the performance, in the past year, was the worst since the establishment of the Cotton Textile Exports Council.

But, it is encouraging to note that India's sale of cotton textiles to Burma have increased appreciably in the last few weeks. There are indications that more sales under the PL/480 agreement will be completed before the expiry of next month, although shipments can be completed by the end of August next. The prices obtained by India, in these transactions, are reported to be encouraging.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the members of the Company will be held at the Registered Office of the Company, 12, Mission Row, Calcutta, on Tuesday, the 24th day of February, 1959, at 3 p.m. to consider and, if thought fit, to pass, with or without modification, the following resolutions namely:—

As a Special Resolution:

1. That the authorised capital of the Company be increased to Rs. 16,00,00,000/- by the creation of 20,00,000 further Ordinary shares of Rs. 10/- each.

As a Special Resolution:

2. That the Articles of Association of the Company be altered in manner following:

Article 5(1) shall be deleted and the following substituted therefor—

"5(1) The capital of the Company is Rs. 16,00,00,000/- divided into 1,30,00,000 Ordinary Shares of Rs. 10/- each and 3,00,000 Five per cent Cumulative Preference Shares of Rs. 100/- each".

As an Ordinary Resolution:

3. That it is desirable to capitalise the sum of Rs. 2,07,34,830/- out of the amount standing to the credit of the Share Premium Account as at the 31st March, 1958, and that such sum be capitalised accordingly and that such sum be applied in paying up in full at par 20,73,483 Ordinary Shares of Rs. 10/- each to be allotted and distributed as fully paid bonus shares (hereinafter referred to as "Bonus Shares") to and amongst the holders of Ordinary Shares in the Company whose names appeared on the Company's Register of Members on the 22nd January, 1959, in the proportion of one Bonus Share for every five Ordinary Shares of Rs. 10/- each held on that date and that the Bonus Shares shall rank in all respects pari passu with the existing Ordinary Shares of Rs. 10/- each except that the Bonus Shares shall

not rank for dividends for any period ending on or before the 31st March, 1959.

4. That the Chairman of this Meeting be and he is hereby authorised on behalf of the holders of the existing Ordinary Shares of the Company on the said 22nd day of January, 1959, to enter into an Agreement with the Company in the form submitted to this meeting and that such Agreement be and is hereby approved.

5. That the said 20,73,483 Bonus Shares be and they are hereby allotted and credited as fully paid up in pursuance of and subject to the provisions of the abovementioned Agreement.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta,
28th January, 1959.

NOTE: (1) A MEMBER WHO IS ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE ON HIS BEHALF AND A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

(2) The Share Transfer Books and Register of Members were closed from the 12th to the 22nd January, 1959, both days inclusive.

(3) Definitive Certificates for Bonus Shares along with cheques in payment for fractional entitlements will be posted to the registered addresses of shareholders who are entitled or to their mandatories promptly after the resolutions are passed at the Meeting.

N.B. Explanatory Statement as required by Section 173 of the Companies Act, 1956, has been sent to all Shareholders.

MEMBERS of the Indian Science Congress now in session in the Capital were not entirely on a busman's holiday. It is true that, at the innumerable sectional meetings, papers were read and discussed, though a good many more were taken as read, for lack of time. Elsewhere, too, it was probably mostly "shop" that was talked. But, despite avowals to the contrary, these annual sessions are more in the nature of a jamboree rather than anything else and this is as it should be. The occasion has its formal aspects, but in so far as serious pursuit of science is concerned, the annual session serves at best a formal pooling of information, which would take place in any case through the pages of the learned journals. So, it is not excited scientists running shouting "eureka! eureka!" that one is likely to encounter here, nor even puzzled frowns cogitating over the mysteries of the universe. After a year of strenuous and (one hopes) successful slogging away, they are "getting away" from it all for a while. And since most of us are slaves of our habits, we do tend to talk, even when we relax, of our particular specialities. It is also likely that they may drift toward discussion of allied or even alien disciplines—whose votaries are also likely to be about the place. An atomic physicist may have barge in on a discussion of his old love, molecular physics, or even drop in on the social anthropological crowd. There is, then, he "politics" of the Congress, which may conceivably occupy a good deal of the time, if not of the minds, of the delegates. Again, here are the sights to be done, and the pleasures of the metropolis to be savoured, not to mention the official engagements to fulfil.

Only the very churlish will rudge the visitors this holiday from their daily tasks which must, necessarily, take a good deal out of them. But if any delegate had hoped for a complete holiday from serious thinking, he must have been disappointed. Though he could have skipped discussions and seminars, he could hardly have ailed to be stirred by the penetrating and closely reasoned presidential address of Dr Lakshmanawami Mudaliar, as also by Mr Nehru's thoughtful preliminary remarks. Scientists are supposed to be averse to generalities and that s (sometimes ingeniously and sometimes disingenuously) advanced as a reason for their shirking moral and political issues. How hollow such pretensions to neutrality sound has been evident for some time now, but none who listened to Mr Nehru and Mr Mudaliar could have failed to be struck by this thought once again. Referring to the "two faces of science, the face of the creator and the face of the destroyer", Mr Nehru

said that the time has come for mankind to make up its mind about which of the two faces it should worship. Linking up scientific achievements with the problem of power, Mr Nehru asked scientists to have a lively awareness of the social and moral consequences of their work. For the first time in human history, science has unleashed powers that can either usher in the golden age or destroy us all completely. This must put an enormous strain on the consciences of the inestimable men who laid bare these mysteries. Oppenheimer is an example of a man whose conscience was harrowed and whose political and moral sense was deeply troubled by the consequences of perfecting a weapon of destruction like the hydrogen bomb. There must be innumerable others who fight such battles almost daily.

Fortunately, there is the other and brighter side to the picture. He should indeed be a dead soul who is not stirred by the steady conquest of space that has taken place in the course of last year. Forgetting for the moment competitive and envious stances, the Russian achievement in successfully launching a rocket to circle round the moon, is an achievement of extraordinary significance. It has, to be sure, its sinister aspects, but, then, lesser follies than missile sites in the moon can put an end to the human race and such follies are a more immediate danger. On a less spectacular scale, there is much beneficence flowing from the quiet endeavours in a million laboratories, some of which Mr Mudaliar listed with justifiable pride. There can, therefore, be no question that scientific research must be encouraged and the resources of mankind should be harnessed to the betterment of human lot by the application of the discoveries of science. But having said that, the familiar question of utility of scientific endeavour in an immediate practical sense arises. There can be no manner of doubt that research of a fundamental nature with no immediate practical ends in view has been responsible for the enormous strides that knowledge has made through the centuries. Mr Mudaliar quotes J. J. Thomson's famous dictum: "Research in applied science leads to reforms: research in pure science leads to revolutions". Mr Mudaliar also argues persuasively how some of the greatest practical benefactors of mankind were people who were engaged in "aimless" research. He quotes the telling conversation between Gladstone and Faraday. When Faraday demonstrated the principles of electro-magnetism, Gladstone asked with a naive strange in so great a man: "After all, what use is it?" Faraday replied in the only language that the Great Man under-

stood. He said: "Why, sir, there is every probability that you will soon be able to tax it". How many entrepreneurs in electricity undertakings have since then sourly recalled the grim accuracy of this piece of clairvoyance on the part of Faraday!

There is perhaps no need at this time of day to labour the point. The quantum and atomic physicists set out to produce neither an atom bomb nor substitute for conventional sources of energy. They were simply bothered by a nagging curiosity about the "how" of things—a prying inquisitiveness that has been both man's blessing and doom. In course of time, they did wrest the secret of at least one of the most obscure of nature's mysteries, and once the heart of the mystery was laid bare, then we had utilitarian science taking over.

Then there is the unpredictability of the source from which illumination may come. Though, as organised today, research is not so much a matter of individual inspiration as a collective project, it is still true that truth is often stumbled upon than discovered according to any set plan. Mr Mudaliar gives a rather interesting list of people whom we would have conventionally considered as the most unlikely sources of scientific wisdom, but who nevertheless made decisive discoveries. "Leonardo da Vinci was an artist. Sir William Herschell was a band leader, Laovoisier a tax collector, Priestley, a clergyman, Marie Curie, a political exile, Joule, a brewer, Einstein a patent office clerk, Faraday, a book binder, Halley, a gourmet and Newton a recluse, and our own Ramanujam, a clerk in the Port Trust".

"Indian science" has problems which are simpler and harder than "world science". We are, for instance, spared the moral and political agonies of some of the scientists elsewhere, where a sensitive individual has often to fight against his natural impulses of exploring truth to its utmost limit for fear of misuse of the results of his explorations. This freedom from moral qualms is only a partially satisfactory predicament. The same can be rendered in much less flattering and much less felicitous terms. The fact that we are spared these moral problems is itself a measure of our general awkwardness in scientific inquiry. We have, to be sure, scientists of the highest calibre in this country, but, by and large, the general level of scientific work in this country is still a long way behind what obtains in the advanced countries in this world. This is of a piece with the rest of our underdevelopment, and some redress of this imbalance has taken place since independence. This is so at least in the matter of provision of facilities for work. The string of national laboratories

and the atomic energy commission, not to mention increased grants to universities and technological institutes, are all part of a pattern that shows a deeper and more continuous concern with the advancement of science. Indeed, as our Prime Minister is never tired of repeating, science is, if possible, a more urgent requisite for underdeveloped countries than for the relatively advanced. Thus, apart from the contextual appositeness, Mr Julian Huxley's recent complaint of "too much science" is legitimate in the case of advanced countries, whereas it is apt to be misleading as a slogan for us. In a sense, we cannot have too much science, both in its tangible form of concrete results and in its intangible form of the spirit of inquiry.

But the urgency of science in our lives is more easily avowed than put into practice. The familiar dilemma of choice between technology and pure science is more agonising in our case than in the case of relatively prosperous nations. The constant cross purposes between long term needs and short term urgencies that bedevil so much of our lives are nowhere more noticeable than in our dilemmas over the relative importance of technology and pure science. It is even more harrowingly evident in the relative allocations between science and other urgencies. Complaints are common, especially from spokesmen of science—the other day, Mr Mahalanobis gave trenchant expression to them—that not enough is being done for education and by extension to scientific studies. Those in charge of the nation's housekeeping can only woefully agree, but add, quite truthfully, that the demands on the slender resources are so many and so insistent that they cannot find more funds for science. Much can be done perhaps even with existing funds by better coordination and a proper charting of the directions in which energies are to be expended. There is a general impression that many of the national laboratories are no more than mere show pieces. It is conceivable that such an impression is erroneous and is the result of the layman's impatience with anything but the most tangible measures. Our problem is still to create a sufficient body of men and women who will find a true vocation in science. This is an educational problem in essence, but the economic implications cannot be overlooked. As in much else in our lives, contradictions abound. With such a lot to be done even in a narrow technological sense, there is a distressingly large amount of unemployment among the technically skilled. Here, again, is work cut out for bodies like the Science Congress, in their less austere academic moments.

NORTH INDIAN NOTES

Export Promotion

The Federation of Indian Chamber of Commerce and Industry has in a note on the export trade of the country, drawn attention to the adverse trend that had set in, in the export trade and has urged the Government to take proper action to arrest the trend.

Though export promotion figures prominently in the trade policy of the Government, the results that had attended the steps taken by the Government are far from flattering. Exports have tended to reveal fluctuations, and even in 1958, when there was feverish thinking by the Government on the question of export promotion, the trend in exports is expected to reveal a shortfall as compared to the previous year.

Against the value of total exports at about Rs 600 crores during 1957, exports during the first 11 months of 1958 have been valued at Rs 533.6 crores only. The decline in exports was of a steep order for the first six months, the monthly average for the first six months being only about Rs 43 crores against an average of Rs 55 crores for the period July to November.

Among individual articles, cotton piecegoods have been the most hit by the decline in its exports, growing competition and lack of wide-width looms, being the factors behind decline in exports. Manganes ore has also witnessed a fall in its exports mainly for reasons of lack of demand and fiscal burdens imposed by the Government. Tea and Jute are other important export goods, which are faced with uncertain prospects, in view of emergence of keen competition from new countries and new products in the case of the latter. At least in regard to tea it can be said that unless some concessions are given by reduction of the present fiscal levies, the competitive position of the Indian tea in foreign markets could never be safe.

The Federation has in the note, urged special consideration to exploiting more fully existing markets for the traditional goods exported from the country, since according to them, even a slight percentage increase in the exports to the existing markets would bring large sums in terms of foreign exchange. While emphasising the importance of keeping the f.o.b. cost of exports as low as possible by all possible means, the Federation has also underlined the need for first hand contact with prospective buyers, in the export market. The Chamber has therefore urged frequent visits on the part of businessmen for exploratory work.

Orissa's Second Plan

The outlay for the fourth year of the Second Plan for Orissa has,

after discussions of the representatives of the State Government with the Central Ministries and the Planning Commission, been fixed at about Rs 19.32 crores. Against this the actual expenditure on the Plan in the course of the third year of the Plan was Rs 16.31 crores.

The original allotment for Orissa under the Second Plan for the whole Plan period was about Rs 99.97 crores. Against this the State is estimated to have spent, in the course of the first three years, about Rs 51.53 crores which works out to about 52 per cent of the total provision. Central allocation during the first two years of the Plan period was about Rs 26.6 crores which works out to more than 50 per cent of the total expenditure incurred in the first three years. With the allocation for the fourth year being fixed at about Rs 19.32 crores, the total expenditure in the first four years would add up to about Rs 70 crores leaving a balance of about Rs 30 crores to be incurred in the last year of the Plan if the originally targeted provision were to be fulfilled. In view of the downward revision of the Plan outlay from Rs 4,800 crores to Rs 4,500 crores, which has affected the Plan outlay of the States also, it is to be doubted whether any individual State would be able to implement its Plan in its original size.

The major head of expenditure for the State under the Second Plan is irrigation and power, the most important of the scheme being the Hirakud dam and power project. Out of the allocation of Rs 19.32 crores for the fourth year, irrigation and power get the highest priority with about Rs 8.20 crores. Among the schemes for which provision has been made are the Hirakud Stage 1 and 2, Delta Irrigation Project, Salandi Project, Salki Project, Machkund Hydro-electric Project, Duduma Transmission Scheme, Hirakud Power Utilisation Scheme and Small Town and Rural Electrification.

Agriculture and Community Development get the next highest share with about Rs 4.93 crores. Development of an agricultural College is one of the important schemes contemplated in this field. Other schemes are establishment of experimental seed farms, construction of seed godowns, and establishment of veterinary dispensaries.

A provision of Rs 3.99 crores has been made for improvement of social services. Expansion of elementary education, improvement in the pay scales of primary school teachers, improvement of housing and medical facilities for the backward classes are the schemes included under this head.

In the field of industry and mining, the important schemes are the starting of co-operative sugar factories, establishment of industrial estates and pilot projects for small-scale industries. The provision for industrial development comes to Rs 0.89 crores. Besides transport and communications get Rs 0.74 crores.

NORTH INDIAN MARKETS

Decline in Sugar Production

SUGAR production in India has totalled only 4.75 lakh tons during November and December—the first two months of the 1958-59 season—as compared with as much as 4.93 lakh tons in the corresponding period of the previous year. The production, during December alone, totalled 3.55 lakh tons as against 3.58 lakh tons in the corresponding month a year ago. State-wise production, in the current season from the start to 22nd November 1958, were as follows (figures in tons):—

State	Production
Uttar Pradesh	1,54,535
Bihar	38,807
West Bengal	843
Punjab	9,478
Rajasthan	771
Madhya Pradesh	922
Madras	3,905
Kerala	6,119
Bombay	73,373
Mysore	38,741
Andhra	20,687

But, the offtake of sugar from factories is higher at 3.06 lakh tons as against 2.95 lakh tons in the corresponding period of last season. The total closing stock of sugar with the factories, as on the 31st December 1958, was 5.01 lakh tons against 6.27 lakhs on the corresponding date of 1957.

In general, the sugar industry, particularly in Northern India, is now facing a critical situation. On the one hand, there is a politically-inspired movement for higher cane prices in Uttar Pradesh in spite of all the arguments about the inadequacy of the present price. The second and the more immediate problem is the tendency to divert cane supply from the mills to new small-scale units springing up for the production of khandsari, as these units now enjoy an advantage in that they are exempted from all taxes. Khandsari manufacture has nearly trebled and there is no sign that it will stop, since the extraction rate in this process is as low as 7 per cent. The growth of these mushroom units is, therefore, expected to lead to a larger loss of the raw material to the mills.

The industry's plea is that the Government should not allow matters to drift. These khandsari units should not be permitted to come up in the areas reserved for the mills. It is also urged that the controlled ex-factory price of sugar should include a sufficient margin for a fair rate of profit and that the units, which have an uneconomic working season due to inadequate cane supplies, should be shifted to other areas and that cane development must be assisted with the funds collected as cess by the State Governments.

Meanwhile, the Government have released a further quantity of 1.65 lakh tons for free sale. In the case

of the factories situated in Uttar Pradesh, North Bihar and the Punjab, the sales are to be effected at prices not higher than the ex-factory price fixed by the Government. For obvious reasons, conditions in the sugar markets have turned quiet. Following rates (per maund) are quoted in the Hapur market:—Old Deoband (C29) Rs 35; New Saharanpur (D29) Rs 37; Mansoorpur (D29) Rs 37; Rohana (D29) Rs 37; Shamli (D29) Rs 36.75 and Shamli (D29) Rs 36.

The market for Khandsari rules quiet, as fresh production is now hampered due to inclement weather. Producers are, it is reported, not able to obtain adequate supplies. Dry superior are quoted at Rs 30 to Rs 35, per maund according to quality.

It is reported that the total world sugar crop is expected to increase by over 3 million tons to 50.6 million tons for the current season, while the Cuban crop is expected to be up by 400,000 tons to 6 million tons. The situation of potential over-supply has considerably lessened the effect of political tension in Cuba on world sugar prices.

★

Gur

Gur markets have been ruling steady. In the Hapur market, the rate has advanced by Re 1 per maund due to a decline in the arrivals, which averaged only 2,250 maunds per day. Stockists are the main buyers. Arrivals, from the beginning of the season, have totalled about 4 lakh maunds, the corresponding figure for the last year being 2.85 lakh maunds. Stocks are estimated at 29,000 maunds. Gur Pansera quality is quoted at Rs 15.87 to Rs 16.12 per maund.

★

Foodgrains

Divergent trends were noticed in the Hapur Foodgrains market. Wheat eased fractionally; Coarse grains remained unchanged and Jowar prices tended to rise. Wheat prices, after touching the peak level of the season at Rs 27.30 to Rs 30 per maund, declined to Rs 28.50 at the close, thanks to better arrivals from outside. Gram prices continued to advance and touched a new high due to paucity of stocks and firmer advices from Delhi and the Punjab. The markets for Barley and Bejher were, however, quiet and trading was limited due to poor demand. Standing crops are reported to have improved, thanks to timely winter rains. Stocks are small and new grains will not be available before March-end. Maize continued to attract consumer demand. As the position was comfortable following fresh arrivals, Peas ruled quiet. Bajra showed a declining trend due to less seasonal demand, while Jowar price tended to go up following poor stocks. Pulses were devoid of any notable activity.

In the Delhi grains market, wheat and Gram prices moved up further following reports of likely ban on wheat exports from the Punjab temporarily. The rise was also due to some damage to the standing crops. Other coarse grains improved by about half a rupee per maund.

MADRAS REVIEW

THE existence of parasitical middle men in the chain of agricultural marketing, eating into the profits of the primary producers, who are, as a result, left hardly even with a pittance, is a long recognised defect of the marketing system for agricultural produce in the country. If agricultural production is devoid of incentive, being merely a hand-to-mouth occupation for the farmer, it is as much the result of the defective marketing structure as of other causes such as low unit of cultivation, lack of credit facilities, etc. The importance of organised and regulated marketing recognised in principle and accepted in the policy of the Government is yet to be reflected in an active policy designed to cover the entire country with regulated markets for all the important agricultural goods. Only some States including Andhra Pradesh, Bombay, Madras, Madhya Pradesh, Mysore, Orissa, and Punjab, have passed legislative enactments for the setting up of regulated markets. Even in these States, the range of articles traded in the regulated markets is limited to a few items.

The important need for hastening legislation in the other States that have so far kept out of such activities, was stressed by His Highness Sri Jayachamaraja Wadiyar, Governor of Mysore, while inaugurating the Seminar on Regulated Market held under the auspices of the Ministry of Food and Agriculture, Government of India, at Mysore last week. Why progress in the passing of Regulated Markets Act should be so uneven when the benefits of such markets have been, beyond doubt, vindicated remains unknown. In the regulated markets that now function in certain States, the price fluctuations for the agricultural goods dealt in

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. GM-13/PD/60-CS/GB8/58 for supply of 2000 Nos. T. W. Tables for clerks.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (PD section) on remittance of Rs. 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier, by local firms. Earnest Money against the tender is Rs. 2000/-. Closing date of the tender is 24.2.59 at 15/00 hours. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest Money deposit receipt with the Tender.

GENERAL MANAGER

S175

Regulated Markets

there, have become a thing of the past. A substantial reduction in the marketing charges varying from 29 per cent to more than 50 per cent is another benefit that the Regulated markets have conferred on the primary producers. The extent of gain to the primary producer as a result of bringing his produce to the regulated markets, is estimated at between 3 to 5 per cent.

The Mysore Governor, has, in his address, drawn attention to the initial difficulties experienced in popularising regulated markets among the primary producers. The opposition from the traders is based on their vested interest in perpetuating the status quo in marketing arrangement the replacement of which by regulated markets would dispense with their need in the marketing functions. But, inertia of the primary producers for whose direct benefit the scheme is conceived and is being executed could be the least propitious factor for the success of regulated markets in the country. The fundamental need to win over the primary producers who should constitute the backbone of the regulated markets is therefore great. In this connection the Mysore Governor has referred to the delay involved in the regulated markets for the primary producers in getting prompt payments for the produce they market there. Considering that such cash payment was one of the advantages which the producers were used to in the old wholesale markets, it is necessary to see whether some interim credit arrangement could not be made for the benefit of the cultivator who would otherwise be inclined to prefer marketing his goods in the old wholesale markets.

As in other fields, where progress has been slow because of delayed action, progress in the setting up of regulated markets in the country has not been spectacular because of inadequate resources to support and sustain a greater measure of progress. Out of a total number of 1,800 wholesale markets in the whole of the country, about 1,300 remain uncovered by provision for regulation according to Governmental acts. It has only been recently, after the initiative taken by the Government and the Planning Commission, that the tempo has been stepped up. Unless the States which have so far not passed regulated markets act fall in line with the other States, a large area would remain outside the scope of regulated markets.

The lack of enthusiasm on the part of the primary producers to join hands with market committees in developing regulated markets, is reflected in the continuing predominance of traders in the market committees set up in certain areas. Referring to this undesirable tendency, Mr Mall Mariappa, Minister for Co-operation in the Mysore Cabinet, who presided over the

conference, pointed out that this was the result of the lack of education and market-consciousness on the part of the producers that they should be so led by the traders even when the producers form a majority in the market committees. The market committees have therefore, a great responsibility in educating the producers and evoking greater enthusiasm in the working of the market committees.

The proper growth of the market committee itself is hindered by lack of adequate resources to support schemes for construction of market yards, and other facilities which would hold out inducements to the producers to bring their produce to the regulated markets. Since according to Mr Mariappa, himself, no help could be expected from either the Central or State Governments, it is necessary that ways and means are found to make the marketing committees self-supporting. The levy of a market cess on an ad valorem basis as obtaining at present in the erstwhile Hyderabad area has been suggested by Mr Mariappa, as a possible way of meeting the financial needs of the market committees. Agreement on a uniform basis of levy for each State would prevent inter-State differences or difficulties. It is necessary that proposals for making the market committees self-supporting, are finalised without delay if development of regulated markets is to spread.

Mr Mariappa also referred to yet another serious defect in the present trend towards marketing reform namely to treat the various aspects of marketing functions in a disjointed manner. In the present system where, in both the Centre and the States, the departments dealing with various aspects of marketing function in watertight compartments, proper co-ordination between the activities of the various departments could not be achieved without conscious efforts towards it.

Above all, such co-ordination is necessary in the development of regulated markets in the various States, where so far it has grown in an isolated manner. An all-India Federation at the Central level, and State Federations at the State level are the suggestions made by Mr Mariappa, for achieving such co-ordinated and uniform growth of regulated markets throughout the country.

Cooperative marketing held out as a panacea for the present evils of disorganised marketing, has also been slow to grow. Here, as in other fields, the tendency has been to look toward the Government to do everything and this explains for the slow pace of the movement. However with the various steps taken by the Government such as setting up warehouses, construction of godowns, and extension of credit facilities it is expected that co-operative marketing would get the required impetus for greater measure of progress.

THE PENINSULA

S. E. RLY TENDERS

Sealed tenders are invited for (I) Tender No. CON/COS/6/P&M/59 for supply of (a) 3 Nos. MG 14 type or similar Motor Driven Double ended tool grinder with wheels 14" x 5" x 2 1/2" thickness as per specn. to be obtained in the tender schedule. (b) 1 No. "Herbert India" or similar 12" x 2" x 2" hole combined tool grinder generally as illustrated and described in the Makers leaflet No. 31D-Gr.C as per specification to be obtained in the tender schedule. Earnest money is Rs 280/-. Tenders will be opened on 11-2-59 at 12 noon.

(II) Tender No. CON/COS/7/B/59 for supply of 1 No. 4 1/2" dia. Pressure filter capacity 1200 GPH with Test Pressure upto 100 lbs. per sq. inch complete with Chlorinator. Earnest money is Rs 280/-. Tenders will be opened on 13-2-59 at 12 noon.

(III) Tender No. CON/COS/8/P&M/513/B/59 for supply of 2 sets Pump capacity 20,000 GPH with suitable diesel engine as per specification to be obtained in the tender schedule. Earnest money is Rs 500/-. Tenders will be opened on 13-2-59 at 12 noon.

(IV) Tender No. CON/COS/9/F/59 for supply of 2000 Nos. lead in Bend (G.I.) for 3" pipe to CEE's drawing No. Y1300 IRS Specification W3 (current). Earnest money is Rs 340/-. Tenders will be opened on 18-2-59 at 12 noon.

(V) Tender No. CON/COS/10/P&M/596-597/C/59 for supply of Lincoln or similar shield Arc etc. as per specification to be obtained in the tender schedule. Earnest money is Rs 560/-. Tenders will be opened on 19-2-59 at 12 noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs 1000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S172

SOUTH INDIAN NOTES

Vaigai Reservoir Project

The Vaigai Reservoir Project located about forty-five miles from the Madurai City, was inaugurated last week, by Mr K. Kamaraj Nadar, Chief Minister of Madras. The project was conceived with the object of storing the surplus waters of the Periyar river and to impound as much as possible the flood flows of Vaigai that pass down the river and get wasted into the sea.

The most interesting fact about the project is that it has been executed much ahead of schedule sanction for the execution of the reservoir being given only in November 1954 and actual work on the project being started in June 1955. A saving of about Rs 40 lakhs on the construction cost is another achievement that deserves special mention. This speaks volumes for the care and vigilance that has been bestowed in preparing the design work for the project as well as in the implementation of the project itself. The emphasis on utilisation of manpower rather than on machinery is yet another interesting feature of the project.

Referring to this, Mr J. G. Abraham, Chief Engineer, P.W.D. (General) Madras, pointed out that the project has so far obtained 20 lakhs of unskilled labour man-days, with a total disbursement of about Rs 50 lakhs on labour alone. In view of the heavy unemployment in the country, this policy with emphasis on maximum employment potential deserves to be followed in the execution of other projects in the country also.

The project which is estimated to cost about Rs 2.5 crores, is expected to benefit a new area of about 20,000 acres, in addition to stabilising the supplies to the existing ayacut under the Periyar delta and the various channels taking off from the Vaigai river.

Detailing the history of the project, Mr Abraham, referred to the steady progress maintained in the execution of the project. The main dam, which has a total length of about 11,875 feet and involving about 5 million cubic feet of masonry and 51 million cubic feet of earth has been successfully completed. The fabricating of shuttlers of the spillway gates is, also, according to him, proceeding apace and they are expected to be erected in position shortly. The work of excavating a new canal system for irrigating lands in Tirumangalam taluk and the work of improvements to the existing Periyar Canal system, are also expected to be completed shortly. The capacity of the reservoir is estimated at about 6,800 million cubic feet with a catchment area of 870 square miles, while the total

discharging capacity of the spillway and the river sluices is of the order of 75,300 cusecs which is more than the expected maximum flood flow.

Coffee Industry

A difficult period ahead has been predicted for the coffee industry by Mr K. Srinivasan, Chairman of the Coffee Board, in the course of his address to the Board at its meeting at Bangalore last week. The industry throughout the world is confronted with a situation, where, consumption is increasing at a pace lower than the increase in production. Accumulation of stocks with all the problems that this creates, is thus inevitable. Already accumulation has been going on at a high rate, present stocks being estimated at about six to nine months needs. Restriction of production seems therefore to be the only alternative to avoiding the slump that threatens to overtake the industry.

These signs are by no means propitious for the growth of the indigenous coffee industry. The industry operates on a high cost basis with low per acre returns. An increase in production, unless it is the result of improvement in the per acre yield, is not likely to benefit the industry in any way. Already production for 1958-59 is expected to be at a higher level than the previous season, being estimated at 44,810 tons consisting of 27,895 tons of Arabica, and 16,915 tons of Robusta. In such circumstances, the importance of propaganda to step up sales of coffee in the home market cannot be too strongly emphasised. This is equally true of the foreign markets where competition from other countries even more seriously threatens to undermine the place of Indian coffee.

Mr Srinivasan has also drawn attention to the other problems which impede the progress of the coffee industry. Among these, the Governmental levies constitute perhaps the most burdensome. When the prospects for the industry in the foreign markets, are far from being bright, it appears only proper that the problems of the industry are appreciated by the Government and concessions in taxes granted which would help boost the sale of Indian coffee abroad.

Reducing the cost of production is another line that has to be seriously taken up by the plantation owners. Considering the present low yield per acre and the resulting high cost, there is immense scope for reducing cost of production by adopting intensive practices. The quality of coffee has also to be improved in the interests of furthering the prospects for the industry in the foreign markets. Mr Srinivasan in this connection referred to the Committee which has been created to find ways and means of producing quality coffee in the country. Another committee has been set up for studying the cost of curing coffee.

SOUTH INDIAN MARKETS

Export Prospects For Cashewnuts

EXPORT prospects for Cashewnuts have brightened as a result of Russia's entry into the Indian market. Prices have gone up by about 3 cents per pound to 46 cents during the past few days. It may be added here that the maximum price, recorded last year, was 50 cents.

America still continues to be the main buyer of cashewnuts, her purchases from India, during 1958, being estimated at 10 lakh packages. Russia took about 2.5 lakh packages and the balance was shared by the UK, Australia and the European countries. Total shipments, in 1958, are estimated at 15 lakh packages.

Although the industry has secured the necessary import licences for African raw material, prices of raw cashewnuts have gone up by Rs 50 to Rs 650 per ton on reports of a cut in production in Africa this year. Russia's purchases are likely to increase in the coming months. With the result, shippers are expected to fetch higher prices this year.

Again, India accounts for about 94 per cent of the total cashewnut imports into the USA. The Cashew and Pepper Export Promotion Council has advised the Indian exporters to take advantage of higher indigenous production of cashewnut to enable them to export more to the USA.

In this connection, the Council has suggested superior packing, grading and standardisation of quantities as possible methods of improving the trade. The price factor also, it adds, will have an important bearing on the exports of cashewnuts, as the quantity consumed in the USA depends on its price compared with other units.

Groundnuts

Conditions in the Madras Groundnut market remained steady. Local small crushers and Southern mills were operating for decent quantities. Arrivals in the South Arcot district centres were reported to be declining, except in Virdhachalam. The rate for the new crop has improved to Rs 175 from Rs 168 per candy.

In the Groundnut Oil section, operators were mainly guided by Bombay, as buyers were hesitating due to the violent fluctuations in prices and there was no parity with Calcutta either. The rate, after touching a high of Rs 334, declined at one time to Rs 325, to improve again towards the close to Rs 327 per candy.

In view of the difficult conditions facing the oil-crushing industry and the limited availability of oil-seeds, representations have been made to the Central Government to reduce the excise duty on vegetable oils, refund the full duty on exports, effect changes in the exemption slab so as to check evasion

and linking export quota releases in oil and cake with the excise duty payment of each mill.

Hides and Skins

In the Madras Tanned Hides market, conditions were quiet. Arrivals of Cow hides continued to be as usual; but clearances were rather slow and prices were about 3 nP per pound easier. Arrivals of Buff hides were fair and there was good clearance at steady levels. There was no change in the Calf section and shippers were reported to be buying up the arrivals briskly at steady prices.

On the export front, export trade was still difficult, the only call being for lower selections. Some sales were, however, reported in combinations of runs, fourths and fifths with a large percentage of fifths and business was reported done in 8/8 1/2 lbs on the basis of 45/41 1/2/38 1/2 respectively. Prices of inferior fifths Cow hides were still unworkable for UK business. In the Calf section, Buff Calf was very quiet, while the demand for Cow Calf was patchy and limited to odd selections.

In the Tanned Skins section, arrivals of both goat and skins were moderate, while offtake was slow on account of the London auctions in progress.

In the export section, fresh business was more or less absent. This was mainly due to the fact that Madras asking prices were unworkable for foreign buyers. Rates moved between 15sh 9d and 16sh for 5 1/2/6 lbs runs; 14sh 9d and 15sh 3d for 8/9 lbs runs and 14sh and 14sh 9d for 11 1/2 lbs runs.

In Sheep skins, there was a moderate call for light weights for UK; buyers were not willing to advance their limits to Madras asking prices.

Bangalore Silk

There has been no marked change in the prevailing rates for Filatures in the Bangalore Silk market, during the week ended 22-1-1959, the demand offtake position remaining well-balanced.

Among Charka Silks, Superfine and 3rd Qualities, prices rose up to a Rupee over the week to quote Rs 30.00 to Rs 34.00 and Rs 22.50 to Rs 21.50, respectively. On the other hand, the price of 1st Quality Charka Silk declined by Rs 2.00 over the week to quote Rs 27.00 to Rs 29.50, while 2nd Quality was quoted at Rs 26.00 to Rs 27.00, as against Rs 27.00 to Rs 28.00. Cottage Basin Raw Silk declined by 50 nP to quote Rs 34.50 to Rs 37.00. Shortage in cocoon supply noticed last week continued this week also.

Prices for Reeling Cocoons for Channaptna and Sidlaghatta indicated a rise while the price of Mugur declined a little. The price range for Channaptna was between Rs 1.75 and Rs 2.25 while that for Sidlaghatta area between Rs 2.10 and Rs 2.50.

Mysore Seed Cocoons ruled steady while Foreign Seed Cocoons declined by Rs 2.00 a lb quoting Rs 4.00 to Rs 10.00, as against Rs 4.00 to Rs 12.00.

The prices of Silk waste varieties remained unchanged.

Initial Weakness: Subsequent Recovery

Watch-Dog Writes:

ACTIVITY in stock markets has generally been restricted during the week under report. Although equities suffered a setback under the lead of Indian Irons early in the week on reports of labour trouble at Burnpur, they showed a marked recovery towards the close following the subsequent news of a considerable improvement in the situation. However, with only four weeks left for the Central Budget, there is a general apathy to increase commitments.

Equities on the Calcutta Stock Exchange, after displaying a nervous trend, staged a marked recovery towards the close; but the undertone remained hesitant.

The Bombay Stock Exchange finished the week on a mixed note; but with the declines in prices predominating.

Trading on the Madras Stock Exchange was dull and featureless.

Conditions on the London Stock Exchange were unsettled, being influenced by various factors.

Price movements on Wall Street were irregular.

Calcutta

Friday Evening.

THE local Stock Exchange staged a fresh retreat during the early stages of the week with prices marked down on a wide front under the lead of Indian Irons. This sudden spell of weakness was mainly attributed to reports of labour trouble at Burnpur, resulting the sealing off the blast furnaces of the Indian Iron & Steel Company. Thanks to the subsequent news of a considerable improvement in the situation and of putting the blast furnaces into operation, equities displayed a marked recovery, although higher levels could not be retained till the close due to profit-taking.

Moreover, operators were inclined to be rather cautious in their commitments and, with hardly four weeks left for the Union Budget, the tendency to book profits became more pronounced. There was, however, a general belief that there would be no increase in tax burden. This belief was based on the fact that any increase in taxation might upset the climate for getting foreign assistance, especially when the second meeting of the five Western countries and the World Bank is scheduled to be held in March.

The Glitched market was dull and the volume of business was

small. Institutional enquiry was conspicuous by its absence, due probably to the continued stringency in the short-term money market. There were sellers in evidence in most of the counters with buyers reserved. 3 per cent 1986 Conversion Loan opened lower at Rs 73.95 and, after improving at one time to Rs 75, receded towards the close to Rs 74.15.

In sympathy, Bank shares turned quiet with Punjab National moving narrowly between Rs 23.50 and Rs 23.62.

Lower advices from the Jute goods market and rumours of the possibility of the minimum prices fixed by the IJMA being removed, had an adverse effect on the Jute section where most of the scrips met with realising pressure at the recent high levels. Anglo-India were marked down to Rs 217.50 from Rs 225 quoted in the previous week; Birlas to Rs 19.31 from Rs 20.12; Ganges to Rs 72 from Rs 77.50; Howrah to Rs 20.06 from Rs 20.56; India to Rs 15.50 from Rs 16.25; Kamarhaty to Rs 173 from Rs 181 and Kinnison to Rs 185.50 from Rs 195. The only two exceptions were National and Nuddea having sustained support upto Rs 26.50 and Rs 59.50 from Rs 26 and Rs 59 respectively.

Thanks to a few purchases made by the LIC Investment Committee, Coal shares fared better, although buying support was selective. Bengal were nearly maintained at Rs 285, while East Indian were taken upto Rs 23.62 from Rs 22.62; Equitable upto Rs 30 from Rs 28.75; New Beerbhoom upto Rs 20.37 from Rs 19.87 and South Karanpura upto Rs 12.87 from Rs 12.31. Burrakur moved irregularly between Rs 17.25 and Rs 17.75 on speculative activity, to finish at Rs 17.69.

The improved conditions in the cloth market were fully reflected in a hardening tendency in Textile scrips. Elgins changed hands at Rs 11.50 to Rs 11.75 against Rs 11.62 in the previous week; Cownpore at Rs 4.19 to Rs 4.31 against Rs 4.31 and Jayshree at Rs 8.25 to Rs 8.37 against Rs 8.18. Kesoram were, however, a shade quieter at Rs 11.56 against Rs 11.87 with New Victoria closing better at Rs 1.25 against Rs 1.19.

Although the volume of business was disappointing, Tea shares ruled fairly steady, thanks to the absence of selling pressure. The improvement in sentiment was mainly influenced by the belief that the supplies might not be as excessive as was originally feared in view of the reported increase in consumption. Baghmari were enquired upto Rs 19 from Rs 18.56; Bishnauth upto Rs 18.75 from Rs 18.50; Dhela-khat upto Rs 22.19 from Rs 22; Hasimara upto Rs 20.87 from Rs 20.25; Jayshree upto Rs 12.37 from Rs 12; Methoni upto Rs 20.37 from Rs 19.87 and New Samanbagh upto Rs 20 from Rs 19.75.

The slight setback in the prices of Sugar shares, that was noticed in the previous week, became more pronounced during the week under review. This was mainly due to lower earnings reported so far by some companies, fears of production

being affected by the growing competition from khandsari units and the fears of imposition of agricultural income-tax by the State Governments in their bid to improve their resources position. The only two firm spots were Raza/Buland and SKG, having sustained support upto Rs 12.87 and Rs 10.06 respectively. Carew were offered at Rs 8.37 to Rs 8.87 against Rs 8.62.

Engineering shares, after ruling initially weak, staged a marked recovery towards the close. For reasons mentioned earlier, Indian Irons were pushed down to a fresh lower level of Rs 25.60 from the week-end level of Rs 25.86. Some bear-covering and the emergence of bull support, however, caused the scrip to recover gradually to Rs 26.24 at the close. In sympathy, TEXMACO were marked down at one time to Rs 20.60 from Rs 20.75, to recover at the close to Rs 21.05. G. K. Williams moved between Rs 37.50 and Rs 38.12 and Jessop between Rs 24.69 and Rs 25.19. Britannia were a steady feature at Rs 11 with Marshalls improving to Rs 5.81 from Rs 5.69.

Miscellaneous shares moved with the general trend of the market. Orient Paper recovered at one time to Rs 30.35 from a low of Rs 29.59 (Rs 30.30); Indian Cable to Rs 29.75 from Rs 28.62 (Rs 29.69); India Steamship to Rs 14 from Rs 13.81 (Rs 13.94); Indian Aluminium to Rs 17.37 from Rs 16.44 (Rs 17.25); Hindustan Motor to Rs 7.37 from Rs 7.12 (Rs 7.23) and Rohtas to Rs 19.12 from Rs 18.94 (Rs 19.06). Figures shown within brackets were the week's closing rates. Indian Oxygen changed hands at Rs 23.25 to Rs 23.56; Sirpur Paper at Rs 13.37 to Rs 13.56; Clive Row at Rs 11.44 to Rs 11.62 and Dunlop at Rs 29.44 to Rs 29.75. Indian Copper were a narrow market, moving between Rs 3.54 and Rs 3.60 and closing at Rs 3.57. BIC developed a hardening tendency to Rs 3.90 from Rs 3.69.

Bombay

EQUITIES on the Bombay Stock Exchange, after opening lower, advanced fairly although higher levels were not retained till the close. This was mainly due to profit-taking, as operators were inclined to be rather cautious as a preparatory step before the Central Budget. On the other hand, the speculative elements seemed to have diverted their attention to the commodity markets where the wider fluctuations offered enough scope for speculative enterprise.

Again, some of the operators appeared to have been preoccupied with the corporate results of the textile industry for year just ended, which is not expected to be satisfactory due to lower output. Above all, the reports that the LIC Investment Committee had not accepted offers from brokers in Bombay subdued sentiment.

Steels.—Steel shares failed to make much headway due to realising pressure at bulges on reports of demand for higher wages by the TISCO workers. Tata Ordinary, after touching a low of Rs 173.50, improved to Rs 175.50 at the close.

Textiles.—Shares in this section were selectively supported on reports of improved cloth offtake. Bombay Dyeing changed hands at Rs 56.30 to Rs 56.70; Finlay at Rs 260.50 to Rs 261 and Gokak at Rs 130.50 to Rs 132. Kohinoor were a steady feature at Rs 240 and so also Swar at Rs 350 and New Great at Rs 219. Central India were, however, on offer at Rs 89 against Rs 91 and Century at Rs 434.50 against Rs 437.

Miscellaneous.—Stray and selective support kept some of the scrips in this section in request. National Rayons received good attention upto Rs 245.50 on rumours that stocks were being cleared very enthusiastically. Bombay Burnah were a steady feature at Rs 464.50, while Tata Locomotives moved upto Rs 163.7 on good investment enquiry. Scindia Steam turned rather quiet at Rs 21.40 against Rs 21.52 on lack of support. Premier Construction changed hands at Rs 236.50 to Rs 239. ACC rule steady, hovering narrowly around Rs 154.75. Belapur Sugar firme upto Rs 263 from Rs 261.

Madras

TRADING on the Madras Stock Exchange was dull and featureless. Lack of incentive and a tendency to lighten commitments led to a small decline in prices.

Textiles.—Activity in this section continued to be small and the buying enquiry was confined to only a few scrips. Travancore Rayons were in demand upto Rs 17, while Adoni continued to be in demand at the market rate. However, Maduras receded further to Rs 25.45 on lack of support.

Plantings.—Prices showed a mixed trend. A general decline in the prices of Coffee shares was again noticed this week due to the anxious period ahead of the industry. A gloomy picture drawn by the Chairman of the Coffee Board was also contributory factor. Consolidated Coffees were marked down further to Rs 19.75, while Coffee Lands remained flat. Oucherlonys were offered at Rs 4.60 with Chandramala having sellers at the market rate.

Tea shares, however, showed steady trend due to sporadic buying support. Buying support was visible for Periakaramalais upto Rs 4.03; declined at the close to Rs 3.95 on profit-taking. There was some demand for Nonsuch, being done Rs 24.25.

In Rubber shares, Cochin Malabs were absorbed around Rs 5.41, while TRTs improved to Rs 7.20 from Rs 6.80. Rajagiris were, however, offered at Rs 16.90 and Thirumbadis Rs 1.73.

Miscellaneous.—Shares in this section came in for selective enquiry. Aluminium Industries remain steady at Rs 18.15, while Texton noted sellers at the market rate. Parry's Confectionery, Rallis, And Cements and Spencer Ordinaries 10 n p each, due to modest profit-taking. Among Sugars, Decc were maintained at Rs 9.85 with E.I.D.s. remaining firm at Rs 30.40.

BANK PROFITS

ANDHRA BANK LIMITED.
The net profit earned by the Andhra Bank Limited for the year ended 1958 (Subject to Audit) amounted to Rs. 7,98,224/-.

Including a sum of Rs. 1,909/- brought forward from the previous year's account and after deducting the amount of the Ad-Interim dividend at the rate of 5% p.a., free of Income-tax paid for the half-year ended 30-6-1958, which absorbed Rs. 1,02,800/-, the net profit available for final appropriation towards taxes, reserves and final dividend, etc., is Rs. 6,97,333/-.

CANARA BANK LIMITED.

For the year ended 31st December, 1958, the Canara Bank Ltd. has made an audited profit of Rs. 14.45 lakhs, which includes Rs. 44,767-06 p. brought forward from the previous year's profits. After making the necessary provision for contingencies and after transferring Rs. 5 lakhs to Statutory Reserves, the profits available for distribution are Rs. 9.45 lakhs. Out of this amount, Rs. 3.91 lakhs are set apart for Income-tax; Rs. 51,625/- for payment of dividend on 5% Preference Shares, Rs. 2.55 lakhs for payment of dividend at 10% to Equity Shareholders and Rs. 2.10 lakhs as bonus to Staff, leaving a balance of Rs. 37,383-69 p. to be carried forward. The Paid-up Capital stands higher at Rs. 49.8 lakhs and Statutory Reserve at Rs. 45 lakhs. The deposits have increased by Rs. 5.92 Crores. Rs. 23.76 Crores and Advances by about Rs. 2.14 Crores. Investments stood at Rs. 10.07 Crores being almost double the previous year's figure.

IMPROVEMENT IN POSITION

In the case of steel products also, 1959 should see a progressive improvement in the position. In the first half of the year, increased production in Burnpur and Jamshedpur will go some way in increasing supplies of the kind of steel required for ordinary construction. This will be achieved mainly by the supply of billets to re-rollers. But it is only after the rolling mills in Rourkela and Bhilai go into production that the supply position of railway materials and plates and sheets for industries will begin to improve.

The organisation of construction of three large steel projects, all at the same time, has been a very difficult task. These difficulties have naturally been greatest in the earlier stages. In Bhilai, the entire plant and equipment is supplied from the Soviet Union, but the entire responsibility for organising construction in India has been that of the Project. Incoming equipment had also to be moved from the port of Vizag which in the initial stages was not quite ready to receive and handle such large quantities. In the case of Rourkela, plant and equipment from abroad are being supplied by a large number of firms—in fact over fifty. For building foundations and other civil engineering works for various sections of the plant, a number of contractors have had to be engaged. For most of them, the work was new and of an unusually high magnitude. The co-ordination of work has, therefore, presented special problems. In both places, large townships and ore mines have to be constructed simultaneously. But with experience and more intense effort, most of these problems have been successfully sorted out, and generally speaking the organisation is ready to cope with the peak of construction of 1959.

TRAINING OF PERSONNEL

The recruitment and training of personnel required for the construction as well as operation of the plants has been an even more difficult task. Had a large iron and steel industry been in existence, it would have been possible to draw experienced men from those industries. But the scope for doing so has been extremely limited as both the major steel plants in India are themselves engaged on massive schemes of expansion as part of the core of the Plan. This has also limited the use of these plants as training ground for new workers. Reliance has had to be placed, therefore, mainly on young engineers with no experience. Large numbers of them are being trained in the Soviet Union, Germany, the U. K., the U.S.A., Canada and Australia.

Apart from this, large numbers of skilled operatives and workers are being trained in over 50 industrial establishments in India besides the three iron and steel works. About a thousand people have completed their training and new batches will take their place. With the commissioning of several departments in Rourkela and Bhilai, large numbers of workers can hereafter be trained on the spot.

SCHOOL OF EXPERIENCE

Construction of this magnitude at high pressure has been a great school of experience. In the process of working on a tight time-schedule, under great pressure and with very limited resources of trained and experienced manpower at all levels, such valuable experience has been gained.

The steel plants themselves will be the training ground of future operatives and technicians. A large construction organisation with practical experience of the special problems of constructing steel plants would have been established. This organisation will have at its demand a considerable amount of construction equipment. There is already a nucleus of designing organisation which can be progressively strengthened by the deployment of those with this aptitude from among those who have gained actual experience of construction and erection.

These factors, together with the growth and strengthening of supporting industries like steel fabrication and refractories and with the setting up of a heavy machine building plant at Ranchi, should enable the country to face the tasks of the Third Five-Year Plan not only with confidence but with much greater reliance on internal resources in men, material and equipment."

INDIGENOUS MANUFACTURE OF ESSENTIAL INDUSTRIAL MATERIAL

According to a study made by the Ministry of Commerce and Industry of the prospects for indigenous manufacture of tungsten carbide, a material widely used in the metallurgical engineering and mining industries, there is good scope for establishing the industry in the country.

During the last few years, this material has been increasingly used in metal cutting in all branches of engineering industries, in mining operations, involving hard formations, and in wire drawing and steel rope making where tungsten carbide dies have replaced to a considerable extent diamond dies. It has a number of other essential uses also.

At present almost the entire requirements of tungsten carbide tips and tools are being imported. A factory in Calcutta has started manufacturing—although from imported powder—tungsten carbide tips for rockdrills. It has also plans to manufacture coal cutter picks. Another firm in Bombay proposes to manufacture carbide tips in metal working tools.

The combined capacity of these two firms is, however, still below the estimated demand which is expected to rise considerably in the coming years.

A medium-sized plant for an output of 30—40 tons, on two-shift basis, would perhaps be considered appropriate. A factory of this size, when in full production, would have an annual output of about Rs. 1.5 crores. This may go up further when the factory works on three-shift basis. The capital cost of such a project is estimated at Rs. 2 crores, roughly

half of this representing the working capital.

OFFER OF TECHNICAL ADVICE

The Development Wing of the Ministry of Commerce and Industry would be willing to render advice to any private entrepreneur who is interested in this scheme.

Possibilities of foreign investment, to the extent of at least meeting the cost of the imported plant and equipment, would have to be explored by the entrepreneur. Foreign collaboration may also be advantageous considering the complexity of the techniques involved in the manufacture of carbide tools.

Countries which are specialised in this manufacture are Sweden, the United Kingdom, Germany and Japan among others.

A distinct advantage which an Indian entrepreneur will have is that the principal raw materials for the manufacture of tungsten carbide are indigenously available. Wolframite, of about 60 to 65 per cent purity in the concentrated form, is available in India. Titanium, another raw material containing tungsten carbide, is also believed to be available.

PROGRESS OF ISI DURING 1957-58.

The Certification Marks Scheme of the Indian Standards Institution, which seeks to ensure supply of quality goods to consumers, made appreciable progress during 1957-58, according to the Annual Report of the Institution, just released.

The number of licences granted under the scheme during the year, the third year of its operation, was nearly three times the figure for the previous year.

The Institution has been authorised to issue licences under the ISI Certification Marks Act of 1952 to manufacturers for stamping their products with the ISI Standard Mark. This Mark certifies that the goods conform to the relevant Indian standards and conveys to the consumer a sort of a third party guarantee of the quality of goods. This promotes not only consumer satisfaction, but also export trade.

Seventy-five licences were issued during the year as against 26 in the previous year. The articles covered by the licences included oil of turpentine, gun rosin, plywood panel tea chests, rectified spirit grade B, denatured spirit, naphthalene, pruning knives, copper sulphate technical, BHC technical, and three-phase induction motors for industrial use.

Enquiries received by the Institution show that there is a general desire on the part of manufacturers to have control over the quality of the production and that they are anxious to get licences for use of the ISI Certification Mark. In all 140 firms made enquiries about the Mark and many ultimately sent their applications for the grant of licences.

One hundred and seventy-one Indian standards formulated by ISI were formally adopted by different Government purchasing organisations during the year as basis for placing orders. With this, the total number of Indian standards adopted by these

organisations rose to 838, nearly 96 per cent of the total available standards.

The report records the growing appreciation of the role of standards in the development of industry and trade. During the year, 160 new and revised standards were published thus bringing the total number of these standards to 1079. The Institution also received 198 proposals for formulating new standards.

In regard to the introduction of the metric system in the country, the Institution continued to serve as a clearing house for information and published a number of standards for industry and commerce for the smooth change-over to the metric system. The Institution had also chalked out a programme for revising published standards in terms of the metric system and for preparing standards in future on the new basis.

During the year, the third Indian Standards Conversion was held in Madras. This Convention dealt with many important subjects particularly these relating to food and agriculture.

Another branch office of the Institution was opened in May 1957 in Madras. This was in addition to the two other offices at Bombay and Calcutta.

The Institution continued its activities during the year in international organisations like the International Organisation for Standardisation and the International Electro-technical Commission in the formulation of international recommendations, exchange of technical information and advancement of the standards movement.

The membership of the Institution, which consists of Government departments, manufacturing and trading organisations and technologists, expanded considerably during the year. The total membership rose to 1510 from 1347 in the previous year.

The sale of standards brought a record income of Rs. 4.5 lakhs thus reflecting the increase in the awareness of the role of Indian standards in the country.

TAXATION OF CONCEALED INCOME ORDINANCE ISSUED.

The President has promulgated an Ordinance to-day amending the Indian Income-tax Act in order to meet certain difficulties arising from certain judgments of some High Courts and the Supreme Court.

Section 34 of the Act as it stood prior to 1956 permitted re-assessment of concealed incomes within a period of 8 years, from the assessment year to which the concealed income related. This time limit was removed by an amendment in 1956 which empowered the Income-tax Department to re-open assessments in cases of concealment for any back year without limitation of time, provided that the Department could not reopen any assessment falling beyond 8 years unless the concealed income was Rs. 1 lakh or more. However, it has been held by some High Courts that the amended section could not be applied to assessments which had become more than eight years old by 1st April, 1956, in the absence of express provision to that effect. This ordin-

INDUSTRIAL INFORMATION

PLANS READY FOR PRODUCTION OF IRON

In two weeks' time, the steel projects at Rourkela and Bhilai will be ready for the production of iron. This will mark a significant step in our industrial history. The President of India will inaugurate this important step by opening the Rourkela plant on February 3, 1959 and the Bhilai plant the next day.

This was stated by Sardar Swaran Singh, Minister for Steel, Mines and Fuel, Government of India, at a press conference, in New Delhi on January 17.

Production of iron in a blast furnace is a continuous process. Once it is commissioned, production will go on everyday throughout the twenty-four hours. Every day, 1,700 tons of iron ore, 1,000 tons of coke and about 500 tons of limestone will be charged into the furnace. A battery of coke

ovens which has already been commissioned in both Rourkela and Bhilai will be daily converting 1,600 tons of coal into 1,000 tons of coke. The blast of hot air needed to smelt iron in the furnace will be provided by blowers through three giant stoves each about 130 ft. high. The power plants are already tuned up to raise steam and generate power.

Commissioning a blast furnace, put in that simple way, may appear a small matter, said the Minister and added: "But, in reality a number of plants—many of them larger than other large factories—and a complex network of inter-connecting services have to work in unison to produce iron in the blast furnace. The blast furnace complex, therefore, consists of coal and ore handling system, coke ovens, a by-products plant, a power plant, blowers, a gas cleaning plant and provision and distribution of power, gas and water. Thousands of people have been engaged during the last few months to bring all these sections into readiness in a co-ordinated manner. The tempo of construction and erection of plant has been steadily increasing. In Rourkela about 59,000 people are at work and in Bhilai even more—64,000 people are at work.

The commissioning of the blast furnace—significant as it is—is only a first step. To complete the steel works, two more blast furnaces with all their supporting ancillaries, the steel melting shop where the iron will be converted into steel ingots, and the rolling mills where the ingots will be shaped into salable steel products, will all have to be commissioned. A great deal of work has already been done. The bulk of the plant and equipment, which has to come from abroad, has already arrived at site or in India. All blast furnace, coke oven and melting shop foundations have been completed.

The erection of plant is also going on apace. Steel production is, therefore, expected to start both in Rourkela and Bhilai in the middle of the year and the first rolling mills should begin to turn out salable steel before the end of the year. The year 1959 will, therefore, see not only the peak of construction work, but also considerable production going along side by side.

PRODUCTION FROM PLANTS

When all the departments of the steel plant are in commission, Rourkela will produce 200,000 tons of plates, 470,000 tons of hot and cold

rolled sheets of various gauges and 50,000 tons of tinplate, besides about 50,000 tons of foundry iron. The by-products plant will deal with 130 tons of tar per day and produce benzol, creosote, naphthalene and other products. In addition, a fertilizer plant is being put up to use the surplus nitrogen from the oxygen plant. This will produce 580,000 tons of nitro-limestone. The fertilizer plant will, therefore, be as big as Sindri. In Bhilai, the production will be 200,000 tons of rails and sleeper bars, 160,000 tons of heavy structurals and 260,000 tons of medium structurals, besides 150,000 tons of billets for re-rolling industry and 300,000 tons of iron for the foundry industry. The by-products plant in Bhilai will deal with 130 tons of tar per day and produce the same coal tar products as in Rourkela.

The products of Rourkela and Bhilai will go a long way towards removing the steel shortage from which the country has been suffering from a long time. Supplies of pig-iron have already improved after the commissioning of the new blast furnaces in Burnpur and Jamshedpur. The position will further improve with the commissioning of the blast furnace in Rourkela and Bhilai.

ance is intended to make it clear that the provision applies to such cases also. A new provision (Section 49EE) has also been introduced, entitling the Government to retain the moneys already paid by assesses on concealed incomes disclosed by them voluntarily for adjustment against the liability that may be raised by issuing notices under Section 34.

The provisions are necessary in order to deal with cases in which proceedings leading to settlements of tax and penalty on admitted concealed incomes by assesses whose cases were referred to the Income-tax Investigation Commission were invalidated by a recent judgment of the Supreme Court.

Ministry of Finance (Department of Revenue).

New Delhi, Pansa 27, 1830 January 17, 1959.

The following is the text of the President's Ordinance No. 1 of 1959: An Ordinance further to amend the Indian Income-tax Act, 1922.

Whereas Parliament is not in session and the President is satisfied that circumstances exist which render it necessary for him to take immediate action;

Now, therefore, in exercise of the powers conferred by Clause (1) of Article 123 of the Constitution, the President is pleased to promulgate the following Ordinance:—

1. This Ordinance may be called the Indian Income-tax (Amendment) Ordinance, 1959.

2. During the period of operation of this Ordinance, the Indian Income-tax Act, 1922 (hereinafter referred to as the principal Act), shall have effect subject to the amendments specified in Section 3 and 4.

3. In Section 34 of the principal Act, after Sub-section (3), the following sub-section shall be inserted, namely:—

“(4) A notice under Clause (a) of Sub-section (1) may be issued at any time notwithstanding that at the time of the notice the period of eight years specified in that sub-section before its amendment by Clause (a) of Section 18 of the Finance Act, 1956, had expired in respect of the year to which the notice relates”.

4. After Section 49E of the principal Act, the following section shall be inserted, namely:—

“49EE (1) Where in pursuance of any settlement relating to the assessment, re-assessment or case of any person made or purported to have been made before the commencement of the Indian Income-tax (Amendment) Ordinance, 1959, whether under this Act or otherwise, any sum of money or any security for the payment of any sum of money has been paid or furnished by him, whether on his own behalf or on behalf of any other person, no claim for the refund of any sum so paid or of the return of any security so furnished shall be entertained on the ground that the settlement is invalid in any of the following cases, namely:—

(a) in any case where a notice under Section 34 in respect of the income, profits or gains

relating to the settlement aforesaid has been issued before the commencement of the Indian Income-tax (Amendment) Ordinance, 1959; or

(b) in any other case, for a period of two years from such commencement; and accordingly no application, suit or other legal proceeding shall lie for the refund of any such sum of money or the return of any such security—

(i) pending the completion of the assessment, re-assessment or settlement in pursuance of the notice referred to in Clause (a); or

(ii) during the period of two years referred to in Clause (b); or

(iii) pending the completion of the assessment, re-assessment or settlement in pursuance of any notice under Section 34 which may be issued during the period of two years referred to in Clause (b).

(2) The Income-tax Officer, Appellate Assistant Commissioner or the Commissioner, as the case may be may set off the amount referred to in Sub-section (1) or the amount of the security referred to in that sub-section which may be realised for the purpose against the tax, interest, penalty or any other sum which may become payable by reason of any assessment, re-assessment or settlement made in pursuance of the notice referred to in Clause (a) of that sub-section or in pursuance of any such notice which may be issued within the period of two years referred to in Clause (b) of that sub-section.

(3) In computing the period of limitation prescribed for any legal proceeding in relation to any such sum or security aforesaid, the time during which any such proceeding cannot be instituted by reason of the provisions contained in Sub-section (1) shall be excluded.

5. No notice issued under Clause (a) of Sub-section (1) of Section 34 of the principal Act at any time before the commencement of this Ordinance and no assessment, re-assessment or settlement made or other proceeding taken in consequence of such notice shall be called in question by any court, tribunal or other authority merely on the ground that at the time the notice was issued or at the time the assessment or re-assessment was made, the time within which such notice should have been issued or the assessment or re-assessment should have been made under that section as in force before its amendment by Clause (a) of Section 18 of the Finance Act, 1956, had expired.

FOREIGN TRADE OF INDIA IN NOVEMBER 1958

The provisional figures of foreign trade of India by all routes (i.e.) sea, air and land, on private and Government accounts during November 1958, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:—

Merchandise, excluding transit trade of Pakistan and other overland foreign countries viz., Nepal, Tibet, Sikkim and Bhutan: Exports Rs 49.24 crores, re-exports Rs 33

lakhs, imports Rs 68.65 crores; total trade Rs 118.22 crores.

Treasure: Exports (including re-exports) of currency notes Rs 1.53 crores, gold nil, current coins (excluding gold coins) negligible. Imports of currency notes Rs 3.61 crores, gold Rs 4 lakhs, current coins (excluding gold coins) negligible.

Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs 19.12 crores.

HIGHER PRIORITY FOR RAIL MOVEMENT OF EXPORT GOODS

The Government of India have further relaxed the conditions for movement of goods by rail to the ports for export under higher priority in order to help exports.

The movement of all export goods to ports other than programmed movement of traffic, such as iron ore, manganese ore, etc. has so far been permitted under item 'D' of the Preferential Traffic Schedule, on the consignor supplying to the Station Master of the despatching Station a certificate from the shipping agents that space has been reserved.

Cotton textiles will hereafter be moved under priority 'D' without the production of the shipping agents' certificate if the outer coverings of the bales containing textiles offered for booking bear the mark "For Export Only". This will be subject to verification of particulars to be given at the time of registration with the Station Master concerned for priority movement.

Molasses, power alcohol and raw tobacco will also be moved to ports for exports under the higher priority without the production of the shipping agents' certificate, on the basis of quarterly programmes accepted by the Ministry of Commerce and Industry, (Directorate of Export Promotion), in consultation with the Ministry of Railways.

HEALTH CONDITIONS IN INDIA

Births and deaths registered in towns with a population of 30,000 and over during November, 1958, were of the order of 32 and 12 per thousand of population respectively as against 33 and 13 in October.

According to available reports, the country remained free from Plague.

The incidence of smallpox in December was, as usual, higher than that in November but was considerably lower than that during December, 1957. Mild incidence of cholera was reported from some parts of the country.

Based on preliminary data for the last week of December, mild incidence of cholera was reported from the districts of Godavari East, Guntur, Nellore, Godavari West and Krishna in Andhra Pradesh Kamrup district in Assam; Chingletpur district in Madras State and Madras city. The situation has improved in the Ganjam district of Oris-

sa, where considerable incidence was reported during the middle of December, 1958. Mild incidence was reported from Lucknow district of Uttar Pradesh and Calcutta city.

Smallpox: There has been improvement in the situation in the Jhunjhunu district in Rajasthan and Madras city, where epidemic conditions and heavy incidence respectively were reported during the third week of December. Heavy incidence was reported from the Sikar district in Rajasthan, mild incidence from the Alwar and Kota districts of Rajasthan, and considerable incidence from the Kalandi and Koraput districts of Orissa. Mild incidence was also reported from the Baudh, Cuttack, Dhenkanal, Ganjam and Sundergarh districts in Orissa; Anantapur, Chittoor, Godavari East, Guntur, Krishna, Godavari West and Visakhapatnam in Andhra Pradesh; Sorath, Ahmednagar, Nasik, West Khandesh, Yeotmal, Ameli, Kalra, East Khandesh, Poona, Satara-North and Satara South in Bombay State; Trichur and Alleppey districts in Kerala; Coimbatore, Salem and Tiruchirappalli in Madras State; the districts of Kolar, Mysore, Bijapur and Dharwar in Mysore; Rohtak district in Punjab; Agra, Azamgarh, Fatehpur, Ballia, Bijnore, Muzaffarnagar, Saharanpur, Jhansi, Faizabad and Shahjahanpur in Uttar Pradesh; Bankura, Birbhum, Burdwan Hooghly, Calcutta, 24-Paraganas and Malda districts in West Bengal.

Gastro-enteritis in Uttar Pradesh has further declined and during the third week of December, 62 cases and 25 deaths were reported from nine districts of the State. Three attacks from Kysanser Forest disease were reported from the Shimoga district of Mysore State during the fortnight ended December 20, 1958.

Coal tar solvent NAPHTHA LIGHT GRADE 2

The Indian Standards Institution has published an Indian standard specification for coal tar solvent naphtha, light grade 2 (IS: 1272-1958).

The standard prescribes the requirements and methods of test for the material commercially known as coal tar solvent naphtha, light, grade 2. A good proportion of the indigenous production of coal tar solvent naphtha, light, falls to meet the requirements of (IS: 213-1956) coal tar solvent naphtha, light, grade 1, but is nevertheless, of use in some industries.

In view of this, the Institution has sponsored the formulation of the standard. It is, however, expected that the entire indigenous production will improve in quality in the course of the next five years when this standard and also the standard (IS: 213-1956) may require review and revision.

This specification is one of a series of Indian standards on materials produced by the carbonization of coal.

Copies of the standard, published in English, are available from the offices of the Indian Standards Institution, at New Delhi, Bombay, Calcutta and Madras.

INVESTOR'S SUPPLEMENT

Stock Market Closes Steady in January

Though the stock market ruled rather dull during most of the first half of the month, conditions tended to be steady in later dealings. The earlier listlessness was largely due to the apprehensions caused by the reference to ceiling on profits in the private sector in the draft resolutions of the Congress Working Committee drawn up for discussion at the annual session of the Congress in Nagpur. It was generally believed at that time that since the position would not be clarified before the annual conference of the Congress Party the market would continue to display a subdued trend. But thanks to the helpful explanation given by Prime Minister Nehru on the question of ceiling on urban income, the market was able to stage a rally without having to wait for the Congress Session. Referring to the demand in certain quarters of the Congress Party itself for a ceiling on urban income on the lines of those which had been proposed in regard to landholdings, Mr. Nehru had pointed out that a ceiling on incomes at the present juncture would retard the industrial progress of the country. Explaining the point further he had made it clear that a ceiling on landholdings was not the same as ceiling on incomes. For the landholder was free to increase his income from his land by more efficient farming methods. If would, therefore, be wrong to say that since income from land was sought to be controlled, it would only be proper to impose a ceiling on urban income.

Largely because of this clarification the discussions at the Nagpur Congress, though there had been no dearth of discouraging elements in them, did not cause much disturbance in the cause much disturbance in the stock market. Even so all market-men were not equally enthusiastic about extending their commitments, as there was a lurking doubt that the coming Central Budget might bear the impress of some of the discouraging ideas which found expression at the Congress Session. There are also other strong reasons for the general tendency to await the budget. After the two important statements of the Finance Minister, one in Bombay and the other in the course of his address at the Associated Chambers of Commerce in Calcutta, it has become clear that there will not be any reduction in taxation. The question that remains to be settled is whether there will be an increase in taxation. In trying to answer this, one has the Planning Commission's recommendation for a fresh tax effort on the part of both the Central and State Governments for filling the gap in internal resources. Government spokesmen have also been declaring quite frequently that in a growing economy greater and greater efforts are inevitable. On the other side, there are the factors such as the

admittedly high level of taxation on the corporate sector, the difficulties experienced by the private sector to mop up adequate resources for its expansion programme and in some cases even for day to day expenditure, etc. From the point of view of private enterprise it would appear that relief atleast in certain directions seems to be urgently needed if the sector is to continue to keep up its good record during the rest of the current plan period.

From the trend of the market during the past month it is to be inferred that both operators and investors are far from pessimistic about the outlook for equities. But at the same time it is also evident that marketmen are not prepared to ignore completely the

they have been able to expand their activities as well as embark on new lines of production. Investors have also noted the statement of the US Trade Mission to India to the effect that US entrepreneurs find conditions in our country quite favourable for investment. The fact that Government spokesmen have indicated that the next plan will have to be much bigger than the current one also indicates that industrial activity in the country in coming years will show a marked increase. All these factors which are capable of keeping equity prices at quite satisfactory levels.

It may also be remembered that the present stability in the stock market has partly been brought about by the support forthcoming

about the much needed stability to the market toward the close of last year. There have been some notable changes in the method of equity purchases by the corporation. One of the alterations is the decision to hold the meetings of the investment committee of the LIC outside Bombay city also. The committee was scheduled to meet in Calcutta on the afternoon of the 22nd instant and since it was the first time the committee would be meeting in Calcutta the event was considered to be important by operators. Moreover there were rumours that after the meeting it would be known whether there was any basis for the rumour that the LIC would buy Indian Iron shares. The expectations with regard to the market leader were however belied as the Investment Committee gave no indication of its interest in the scrip. Those who expected the scrip to figure prominently in the LIC list of purchases were sorely disappointed and consequently the rate was pushed down.

The last week of the month began rather badly for the market as Indian Irons were found to be under pressure on the opening day of the week. This was due to the reports of the sealing of the blast furnaces at the works of Indian Iron and Steel Company. It was learnt that because of the non-operation of a few men the work all along the line had been delayed for about a week culminating in the management's decision to seal the blast furnaces. With the unsealing of the furnaces the very next day sentiment once again became constructive and the scrip briskly moved up to record a sizable gain over the previous level.

Sectionwise, coals and teas have recorded a broadening of interest. In the case of coals, the immediate incentive seems to have been provided by the LIC which had made some purchases in the coal section. Apart from this, it would appear that operators and investors are now somewhat inclined to extend commitments in coal shares presumably because of the great importance that will be attached to coal production in the country under successive five year plans. It may be recalled that the target for coal production under the Third Plan has been tentatively fixed at 90 million tons. While it is true that the public sector will receive more attention in coal production, it is inconceivable that Government can long ignore the fact that the private sector collieries are in a position to undertake big tasks. However, the fact, that the question of an equitable selling price for coal still remains unsettled as nothing has been heard about the report of the coal prices Committee, has prevented any widespread activity in the section.

After a considerable time marked by dull trading, the tea section has found some support during the month.

adverse effects that will accrue to the private sector in the event of an increase in taxation. Among the stabilising influences that are now at work in the investment situation must be mentioned the considerably strengthened state of our economy due to the implementation of a programme of rapid industrialisation. Moreover the Governor of the Reserve Bank has proved that investment in the private sector is quite ahead of the schedule envisaged in the Second Plan. The import restrictions have been a blessing in disguise for indigenous industries as

from the Life Insurance Corporation. It is now clear that the LIC continue to occupy the position as the largest buyer of equities. By the same token it is generally expected that LIC cannot afford to be a silent spectator when speculation tends to distort price levels either way.

The investment policy of the LIC has therefore considerable influence over the stock market. In recent weeks the Corporation has evinced keen interest in equities and it may be remembered that this support from the LIC has been of much assistance in bringing

(a) After writing back Rs 60,000 from provision for Taxation.

(b) After transferring Rs 1,08,000 from Dividend Equalisation Reserve and Rs 10,038 from Provision for taxation.

(c) After transferring Rs 3,50,000 from General Reserve.

(d) After transferring Rs 125,000 from Reserve.

(e) After transferring Rs 50,000 from Building and Machinery Reserve.

(f) After transferring Rs 25,000 from Revenue Reserve; Rs 72,597 from Depreciation Reserve and Rs 46,794 from Building and Machinery Reserve.

(g) After transferring Rs 25,000 from Revenue Reserve; Rs 121,000 from Building and Machinery Reserve.

(h) After transferring Rs 77,795 from Building and Machinery Reserve.

(i) After writing back Rs 2,75,000 from provision for taxation.

(j) After transferring Rs 55,000 from Revenue Reserve; Rs 96,181 from Depreciation Reserve and Rs 23,386 from Building and Machinery Reserve.

(k) The Indian Estates of The Patrakola Tea Co., Ltd. were transferred to this company at book value as on 1-12-1954.

(l) After transferring Rs 30,000 from Revenue Reserve; Rs 71,888 from Building and Machinery Reserve; Rs 27,445 from Replanting Reserve and Rs 10,000 from provision for taxation.

(m) After writing back Rs 20,000 from excess provision for taxation.

(n) After transferring Rs 298,782 from Building and Machinery Reserve.

(p) After transferring Rs 68,450 from General Reserve and Rs 50,000 from Tax provision.

(q) After transferring Rs 40,000 from Building and Machinery Reserve.

(r) After transferring Rs 1,00,000 from Revenue Reserve and Rs 1,20,000 from Building and Machinery Reserve.

(s) After transferring Rs 55,223 from Building and Machinery Reserve and Rs 18,000 from provision for taxation.

(t) After transferring Rs 298,782 from Building and Machinery Reserve.

(u) After transferring Rs 40,000 from Taxation Reserve.

(v) After transferring Rs 40,000 from Taxation Reserve.

FOR THE INVESTOR

No Budgetitis yet Investment Gossip:

THE stock market has continued to
rule steady during the past week
but it is evident from the small
volume of business passing that
marketmen are taking note of the
fact that only three weeks remain
for the Central Budget proposals to
be known.

As has been pointed out in this
column last week conditions may
tend to be somewhat irregular
beginning from next week till
Budget Day as with the commence-
ment of the Budget session of the
Lok Sabha from Monday next
there will be indications and rum-
ours about the shape of things
to come in the Budget for opera-
tors to work upon.

But it is not as though market
gossip has not given some rough
shape to the prevailing ideas about
the Budget. The feeling is gain-
ing ground that the Budget will be
a realistic one in the sense that it
will not disclose any sizable addi-
tion to direct taxation. Such an
expectation has primarily stemmed
from the belief that Authority will
not have failed to notice the inhi-
bitory effect of the already high
level of taxation on the working of
the private sector. In this regard
it is pointed out that there is also
the additional need to show to the
outside world that the scope for
investment in our country is not
unduly restricted by taxation.

In view of the need for filling
the gap in internal resources Gov-
ernment have perforce to devise
ways and means for raising addi-
tional revenue. In this view the
emphasis may have to be on in-
direct taxation. But even here the
prospects do not seem to be quite
bright. The principle that com-
modities that have a good demand
can bear a stiff excise levy has not
worked well.

Personally speaking I think that
the steady tone of the market has

its origin in the fact that there are
people who have the overall eco-
nomic situation in the country in
view. For I find that quite a
number of marketmen have been
very much impressed by the recent
assessment of the nation's economy
by the Governor of the Reserve
Bank. The facts and figures quoted
by him show that the Private
sector has taken rapid strides in
the first three years of the current
plan. The effect of the additional
investments will be reflected in in-
creased production of the private
sector in the coming years.

Investment Notes:

HOPES, that were entertained that
the jute industry would be able to
make reasonable profits in view of
the low level of prices prevailing
for the raw commodity last year,
are now being fulfilled, to a certain
extent, by the interim dividend
announcements made by a few
mills in Bird-Hellers group for
the year ended 31st March, 1959.
Auckland has recommended a di-
vidend of Rs 5 per share; Kinnison
Rs 5; Standard Rs 2.50 and Union
Rs 5. It may be added that the
total dividends paid for the pre-
vious year were Rs 5; Rs 5; Rs 5
and Rs 15 respectively. From the
size of the interim dividends now
recommended, it is very clear that
the profits must be substantially
higher than those of 1958 and there
is every possibility of sizable final
dividends being declared. How-
ever, the working results of Law-
rence and Northbrook, in the same
group, may not be as satisfactory
as other mills and this may prob-
ably be the reason that these two
companies have not recommended
any interim dividends except on the
Preference shares.

According to the figures released
by the Indian Iron & Steel Com-
pany, production of saleable Steel
has declined by 4,999 tons to 45,698
tons in January from 50,697 tons in
December 1958. Production com-
prises semis 16,814 tons and finish-
ed steel 28,884 tons. Pig Iron pro-
duction has also recorded a sharp
decline of 18,692 tons to 73,728 tons
as compared to 92,630 tons. Des-
patches of saleable steel are 49,646
tons against 49,772 tons.

The total approximate produc-
tion of iron and steel at the Steel
Works at Jamshedpur, during the
month of January, was 97,700 tons
of Pig Iron; 96,200 tons of Steel In-
gots; 34,000 tons of Semis and
55,700 tons of Finished Steel.
WIMCO's new paper mill in Cal-
cutta has been commissioned into
production. The mill will supply
WIMCO's requirements of wrapping
paper completely. There will also
be a surplus, which will be sold in
the market. The capital expendi-
ture incurred on buildings and
plant and machinery is stated to
be Rs 73 lakhs. The plant has an
annual capacity of 6,000 tons.

Orissa Cements were a firm fea-
ture around Rs 13 as against Rs
11.76 quoted a month ago. The
sustained support for the shares
is derived from the optimism en-
tertained with regard to the work-
ing results for last year and the
future outlook for the company.
Bowreah Cotton Mills are issuing

Debtenture capital for Rs 20 lakhs
in order to reduce its liabilities due
to bankers and the managing
agents. These debentures carry
interest at 6½ per cent and repaya-
ble, at par, in 1968-73 on giving
three months' notice.

Following the resignation of the
managing agency by Bird & Com-
pany, the Assam Saw & Timber
Company Limited has now become
a director-controlled company with
effect from 1st February. The
company has proposed to issue
right shares worth about Rs 5 lakhs
in shares of Rs 3 each, at par, in
the near future. The proceeds of
the issue are likely to be used for
importing some up-to-date machi-
nery and equipments.

It is learnt that the long-drawn
negotiations between the State
Bank of India and the Bombay
Stock Exchange has ended on a
happy note. It has been decided
to admit the State Bank shares on
the cash list on the Bombay Stock
Exchange with immediate effect.

Fears of a probable cut in divi-
dend by Voltas are now set at rest
by the directors' decision to main-
tain the dividend at Rs 9 per share
for the year ended 31st August, 1958.

Pandyan Bank Limited has pro-
posed to raise the paid-up capital
by Rs 5 lakhs and the necessary
sanction has been obtained from
the Controller of Capital Issues.
Meanwhile, the bank has raised
the dividend from 7½ to 10 per cent
for 1958.

Investment Briefs:

Among Banks, Punjab National
has maintained the dividend at 20
per cent and the Indian Overseas
Bank, Madras, at 10 per cent, both
for 1958.

In Bombay, Modi Spinning &
Weaving Company has maintained
the dividend at 60 nP per share for
the year ended 30th April, 1958.

In Madras, Rane (Madras) Limi-
ter has reduced the dividend from
10 to 6 per cent for the year ended
31st March, 1958.

New Central Jute Results

Balance-Sheet Reviews:

THE New Central Jute Mills Com-
pany Limited has presented the re-
ports and accounts for the fifteen
months ended 31st March, 1958.
Sales for the period are higher at
Rs 15.96 crores against Rs 7.21
crores for the full year 1956. But,
the net profit, after providing for
Depreciation and Taxation, amounts
to only Rs 13.39 lakhs against as
much as Rs 24.75 lakhs, mainly
due to higher outgoing on interest
on moneys invested in Sahu
Chemicals projects under erection.

After transferring a sum of Rs
15.71 lakhs from General Reserve
No. 1, the directors have provided
a sum of Rs 13.39 lakhs for Depre-
ciation; Rs 4.25 lakhs for Taxation;
Rs 1.20 lakhs for Development
Rebate Reserve and Rs 15.51 lakhs
for General Reserve No. 2. A divi-
dend of Rs 1.50 per share has been
recommended on the Ordinary
shares.

In this connection, it would be
recalled that the company issued
4,27,500 Ordinary shares of Rs 10
each, at par, against cash to the
existing shareholders and were fully
subscribed. The same carry the
right to dividend from the results
of the current financial year.

The directors have, in their re-
port, stated that the installation
of the Sahu Chemicals plant has
not been completed due to delay
in the receipt of machinery. Trials
are expected to commence in
about three months' time. Towards
the close of the year, the com-
pany's jute mill at Ghosuri was
closed down. The loom-hours are
being utilised at the company's
other two mills at Budge-Budge.
This will effect economies in pro-
duction costs.

Ashoka Cement

The working of the Ashoka
Cement Limited, during the year
ended 31st March 1958, has resulted
in a net profit of Rs 51,971 as
against Rs 12,928 in the previous
year, while sales are substantially
higher at Rs 98.79 lakhs against
only Rs 15.27 lakhs. The directors
have provided a sum of Rs 21,936
(nil) for Depreciation and Rs 23,620
(nil) for Development Rebate Re-
serve. In the light of better work-
ing results, the directors have de-
clared an interim dividend of 30 nP
per share.

According to the directors' re-
port, the company has installed a
steel furnace for the manufacture
of steel castings and grinding

balls required in the cement industry. Due to delay in receipt of Clinker Conveyor and other auxiliary equipments required for proper working, Kilm and cement mill could not run continuously. However, production, during recent months, has been higher and there should be an improvement in production further.

£ Rs

Angelo Brothers

The difficult conditions generally experienced by the shellac industry are fully reflected in the working results of Angelo Brothers Limited for the year ended 31st August, 1958. Sales have declined to Rs 1.78 crores from Rs 2.48 crores, while the net profit, after providing for Depreciation and Taxation, amounts to only Rs 3.37 lakhs against as much as Rs 5.65 lakhs in the previous year. Apart from providing a sum of Rs 8,484 for Development Rebate Reserve, the Taxation provision is reduced to Rs 6.85 lakhs from Rs 10.25 lakhs and the Depreciation amount to Rs 1.05 lakhs from Rs 1.09 lakhs. The dividend is reduced to 15 from 18 per cent.

The directors have, in their report, stated that, despite stiffer competition from synthetic resins, there is every reason to feel confident that the company is fitter to survive profitably than any other unit in the industry and trade.

£ Rs

Eastern Investments

Eastern Investments Limited has maintained the dividend at 9 per cent on the Ordinary shares despite a rise in the net profit from Rs 5.32 lakhs to Rs 8.06 lakhs for the year 1958. The item "Dividends and Interest on Investments" is shown higher at Rs 15.20 lakhs against Rs 12.80 lakhs. Taxation provision is raised to Rs 7.34 lakhs from Rs 6.53 lakhs and General Reserve to Rs 1.87 from Rs 70,824.

£ Rs

Raneegunge Coal

The Raneegunge Coal Association has been able to effect a large increase in output, for the year ended 31st March 1958, to 453,767 tons from 431,402 tons in the previous year. Despatches have not, however, recorded a corresponding increase due to pilot capacity not having been increased and kept in line with increased production. Even so, the net profit, before providing for Depreciation and Taxation, is higher at Rs 15.58 lakhs against Rs 13.70 lakhs. The amount set aside to Depreciation is Rs 4.81 lakhs against Rs 4.60 lakhs and Taxation Rs 5.50 lakhs against Rs 1.80 lakhs. The transfer to Machinery Replacements and Development Rebate Reserve is Rs 1.43 lakhs against nil. The dividend is raised to 10 from 7½ per cent.

£ Rs

Changdeo Sugar

Shree Changdeo Sugar Mills Limited has earned a lower level of profits for the year ended 30th September 1958 on account of a smaller percentage of recovery, higher working expenses and the loss sustained on exports. The net profit, before providing for Depre-

ciation and Taxation, amounts to only Rs 18.04 lakhs as against as much as Rs 24.98 lakhs in the previous year. The loss sustained on exports was Rs 1.48 lakhs, while the percentage of recovery was lower at 10.64 against 11.03.

The amount provided for Depreciation is Rs 3.33 lakhs (Rs 8.44 lakhs) and Taxation Rs 8.60 lakhs (Rs 10.18 lakhs). It is pointed out, however, that the latest provision under this head is more than the normal burden, because of the carry forward liability on account of the issue of bonus shares in 1956-57. After transferring a sum of Rs 34,420 from the General Reserve, the dividend is maintained at Rs 2.25 per share.

£ Rs

Zandu Pharmaceuticals

The Chairman of the Zandu Pharmaceutical Works Limited has stated that, due to the difficulties experienced in importing raw materials because of the present foreign exchange situation, there may be a slight fall in the company's profits during the current year.

So far as 1957-58 was concerned, both production and sales had gone up considerably. Total sales rose from Rs 54.76 lakhs to Rs 68.69 lakhs. A dividend of 7 per cent has been declared on the Ordinary shares for the year ended 31st March, 1958.

£ Rs

South India Viscose

According to the report of the directors of the South India Viscose Limited for the period ended 15th October, 1958, shares of the nominal value of Rs 1.68 crores have till now been allotted. This amount does not include the shares agreed to be taken by the Italian collaborators and their friends. Though they have agreed to subscribe for shares of the nominal amount of Rs 85 lakhs, they have since signified their intention to take further shares of the nominal value of Rs 35 lakhs, forming part of the present issue of Rs 3½ crores. The necessary consent of the Government of India for the issue of such further shares to the Italians has been applied for.

Steps have been taken for the purchase of land at Mettupalayam for the location of the factory. The survey of the site has been completed. The first team of Italian technicians is expected to arrive at Coimbatore at the beginning of February.

The Steel Age Begins

WITH the commissioning of the blast furnaces early this week at Rourkela and Bhilai, a new era in India's planning endeavours may be said to have started. But what exactly is the significance of this first stage being achieved in the implementation of the Government's steel projects? First of all, it marks the entry of Government into spheres of enterprise which, it had one time been thought, were the preserve of the private sector. But it is no longer true that the cognoscenti among our industrial leaders believe that, in the broad division of responsibilities as laid down in the revised industrial policy, there is any encroachment by the State into fields of activity which were within the competence of the private sector. It is becoming increasingly clear that the industrial efforts of Government are being restricted to enterprises which constitute a basic necessity for Indian development, but which are beyond the ability of private enterprise to finance or undertake. In this sense, there is nothing revolutionary in these, the first signs of the Government projects producing steel.

In the second place, and this we feel to be of much greater significance, there is now the first glimmer of hope of a basic raw material, which so long was in inadequate supply in this country, being produced indigenously in sufficient quantities. Imports of steel had, in the first two years of the Second Plan, cost this country dear in terms of foreign exchange. The difficult foreign exchange situation, in turn, compelled Government to reduce imports of steel to a level which meant that industries depending on steel began to feel the pinch. As a result, aside from the fact that the low level of indigenous output of steel left us no recourse than to utilise our scarce foreign exchange resources in imports thereof, the later reduced level of purchases of steel abroad has some times even seriously affected the measured progress of industrial development. Thus, the week's functions at Rourkela and Bhilai meant that, in the not distant future, the Indian reliance on imports for adequate steel supplies will come to an end, and also that our foreign exchanges reserves need not be drawn upon for securing the necessary quantities of steel for Indian industry.

In the third place, we have the distinct possibility that, when maximum production is attained in the two private sector and three public sector steel plants, the then indigenous availability will be such as may well be in excess of the estimated demand at the time as currently calculated. Again, this is a factor of substantive importance to the process of industrialisation. For, it will mean that the fabricating and ancillary industries, which in any case form a logical and necessary part of industrialisation as such, will not need to be delayed for lack of the raw material. True enough, thoughts have in the past been entertained of the prospect of having a marketable surplus of steel for export. But, having regard to the recent bout of recessionary trends in the industrialised countries, and bearing in mind the fact that the American steel industry is still working well below capacity, there is a growing awareness here of the difficulties that may be experienced by

India in achieving any worthwhile success in an export effort in respect of this commodity. On the one hand, as a result of the recessionary trends, the world prices of steel have dropped perceptibly. On the other hand, the cost of setting up the three Government steel plants has been quite heavy. It is a moot question whether Indian produced steel in, say, 1960 will continue to have any such reputation as being the cheapest in the world. It is also a moot question whether the price of Indian steel at the time will be such as can compete with the steel manufactured by other countries. We, therefore, believe that more emphasis should be placed on the opening up of a new vista for industrial production than on the prospect of earning foreign exchange from steel as a consequence of the higher steel production now in sight.

In the fourth place, it is fitting that Rourkela and Bhilai should have been the result of the friendly cooperation and assistance of foreign Governments. President Rajendra Prasad has, in this context, paid a high tribute to Germany and, in so doing has suggested that gnanan, or the gifting of knowledge, confers a blessing on the donor. This is appositely where tribute needs to be paid to the generosity and eagerness to help of friendly foreign Governments.

This is also the juncture at which we may begin to consider what the target for steel production in terms of the Third Plan should be. We need hardly say that a target of 15 million tons can now be ruled out of question, both because we would be unable to raise the resources and because such a level of indigenous production will not be necessary for the country at the time. We are no opponents of ambitious planning, and Indian Finance has long been a lone voice protesting the need for the kind of plan that the Second Plan has been. But it is not being ambitious to think in terms of 15 million tons as the target for the Third Plan, at least not on the basis of the assessment that can be made of industrial potential, etc., at this point in distance of time. It is the character of the Third Plan which, may we submit, should have an all important influence on the objective that is to be set for the steel industry. If, as seems possible, stress is to be equally laid on machine building industry and on dealing with the back-log in unemployment, a figure of 15 million tons for steel becomes both unnecessary and impracticable. During the Second Plan, the steel target had to be kept at a higher figure, so that the demand generated or already experienced could be satisfied and, secondly, so that a break through could be achieved in the rate of increase in steel production. To our way of thinking, it is unlikely that consumption will rise to 15 million tons by the end of the Third Plan. Already, it is clear that a high target set by Government for one of the basic industries, cement, has proved, as far as the Second Plan is concerned, somewhat of an over-estimate, in relation at least to calculations of consumption. We suggest that, similarly, 15 million tons will be found to prove too high a figure for the Third Plan. Moreover, the heavy or machine making industries with which the Third Plan should, in

Indian Finance

Established 1928

February 7, 1959

"The Wise Man in His Attitude towards the World has neither Prejudices nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

our view, preoccupy itself will facilitate the building of steel plants indigenously during, say, the Fourth Plan. Thus, by rejecting an ambitious target for steel, we could save foreign expenditure in respect of plant and equipment to be imported which, during the Fourth Plan, arising from the implementation of the Third Plan, could be avoided. Similarly, the known anxiety of the authorities to tackle the problem of unemployment in a more orderly and coordinated way during the Third Plan, strikes out any necessity for a target of 15 million tons at the end of the Third Plan.

We believe that emphasis during the Third Plan, in the matter of steel, should be on the expansion of the units that will be existing then rather than on the setting up of further new steel plants. We appear already to be committed to undertaking a steel project at Bokaro, but wisdom would dictate that, beyond this enterprise, a suggested objective of 10 million tons of ingot steel should be achieved by expansion of the three steel plants in the Government sector. For our part, we would much prefer it if the responsibility for augmenting output of steel is also partly shared by the private sector plants, but, in the present circumstances, we are extremely reluctant to advance any such suggestion. For one thing, it would be unfair to the companies and their shareholders. In particular, the shareholders in Indian Irons have, as a result of Government policy, suffered a dividend freeze; and we have pointed out often that all entities, except the investor alone, have been allowed to share in the greater prosperity of the company. But, as it is, both companies have considerable liabilities to meet, and, mainly from the standpoint of the shareholders, it may be a desirable thing if the Third Plan period were one in which the companies were able to consolidate their position by repayment of a substantial part of their liabilities. This, of course, should be facilitated by the provision of a special element in the retention prices payable to the two private steel producers, such an arrangement being already explicitly agreed to by Government. It is for such reasons, and also partly because the scope for expansion at Jamshedpur is extremely limited, though some measure of expansion may be possible at the Indian Iron Works, that we have suggested development of steel in the Third Plan as being strictly the responsibility of the public sector. As for our view that, except for Bokaro, new steel production must come from an expansion of the existing units, we may point out here that the three public sector plants should easily be able to double their existing capacities by the end of the Third Plan. Just as the expansion programmes of the private sector in steel during the Second Plan have cost far less than the three steel plants set up in the public sector, so, in the Third Plan, an additional provision of 3 million tons from the three steel plants should not be too costly.

It is, however, high time that Government clarified their thinking of the place of the private steel plants in the overall economy. True, so far, except for an obstinate refusal to permit the companies to declare higher dividends, Government have tried their best to be

helpful. Special advances have been given to both companies, and the loans secured from the World Bank have been guaranteed by the Indian Government. But all this is not enough. It must be made clear that the shareholders' enterprises that the two private steel plants are, will continue to be so. This means that there should be the beginning of a thaw in what is now a frigid attitude on the part of the Government to dividends. Over the long term, as Government's planned endeavours create greater prosperity within the country, it should, we suggest, be Government's intention and objective slowly to release subscribers' capital to the general public in each of the Government steel projects. This is because we believe that it will be undesirable for a government that is busy, politically and otherwise, in setting up a welfare state to dissipate its energies in business management of industrial enterprises. But these are comments which are very much by the way.

For our final remarks, we have reserved what may be called a discussion of steel price prospects. We have been hearing conflicting views as regards the cost at which the Government steel plants will be able to produce their steel. At the one extreme, due to the fact that the Government steel plants start out their career with the most modern equipment and with no problem of a possession of redundant labour, it is reasoned that the steel produced should be inexpensive. At the other extreme, a very high capital cost incurred in setting up the new projects is stated to insinuate that, with a high level of depreciation and Development Rebate charges, Government steel will be costly. We have as yet no clear idea of what exactly the position is likely to be. But one thing that we are certain of is that the retention prices allowed to the private sector steel plants will necessarily go up, because

provision has to be made for the two companies to meet their commitments. In this sense, unless some formula is evolved, so that Government produced steel is not costly, the pressure on steel selling prices as such may go upward. This will be detrimental both to the cause of Indian exports, if at all we strive to sell steel in the export market, and to industrial production since a basic raw material will tend to be more costly. As such, it will be desirable for Government to allow some arrears of depreciation and Development Rebate to mount up, in the initial years, so that the charge in respect thereof will not cause steel prices to be high. In any case, if, by the time the target for the Second Plan is achieved, the selling prices of steel continue to remain at their present levels or increase further, it will be an admission by Government of a failure in this sphere. For, the whole rigmarole of retention prices and selling prices and steel equalisation fund was evolved because imports of steel had to be subsidised. If, after we have put a stop to imports, the selling prices continue to be high or increase further, it will mean that all we have achieved is to have substituted high cost Indian steel for a subsidy that was meted out to imported steel. What is also of paramount importance is that development of ancillary and fabricating industries must receive an impetus if a satisfactory measure of new enterprises is to be started during the Third Plan period. There can be no better impetus, we suggest, than lower steel prices.

Thus, with the commissioning of the blast furnaces at Bhilai and Rourkela, India's industrial era may be said truly to have begun. How we progress now, and whether further development is smooth and unhampered, will depend not a little on Government's attitude to steel in the future.

The Fiftieth State to Come?

By JOHN KERIGAN

WHILE jubilant Alaskans are busily arranging the affairs of their new state, several thousand miles away some half a million people on eight tropical islands are engaged in a campaign that has made them the cynosure of all eyes in the United States.

The islands, of course, are Hawaii, and the campaign expresses the depth of its people's wish to exchange territorial status for statehood. Not some time in the indefinite future, not next year, but now.

To that end the mainland—as the United States is referred to by the Hawaiians—is being bombarded with films, letters and lectures, together with pamphlets giving wide publicity to statehood endorsements by President Eisenhower, Vice-President Nixon, former President Truman, the Department of State, the Department of Defense, the Labor Union Federation AFL-CIO, and numerous prominent private citizens.

Naturally enough, now that Alaska has been admitted as the 49th State of the Union, Congress here in Washington cannot—and indeed does not want to—remain immune to such enthusiasm.

In the Senate, a substantial majority is known to favor passage of a statehood bill for Hawaii, and this week the house committee on interior and insular affairs dispensed with the usual subcommittee preliminaries and gave Hawaii priority over other pending business.

At the committee hearings, U.S. Secretary of Interior Seaton urged speedy congressional approval of Hawaii as the fiftieth state, because of overwhelming popular sentiment for admission and Hawaii's ability to carry the financial burdens of statehood.

All this is taken as a prelude to congressional approval, even though, as always, there is also

some opposition. For while there is a natural inclination to link the Alaskan and the Hawaiian cases, the dissimilarities between the two are rather striking.

Alaska at least shares the same continental landmass with the United States. Hawaii, a sprawling group of islands, is some 2,300 miles (3,680 kilometers), would be the fourth smallest state, exceeding in area only Delaware, Rhode Island and Connecticut.

Economically, too, Alaska and Hawaii differ sharply. While Hawaii has its vast sugar and pineapple industries—not to mention its popular tourist trade—they cannot compare with the Arctic State's wealth of natural resources.

And, last but not least, while Alaska has anything but a homogeneous population, Hawaii's populace differs from that of every other state, by origin as well as composition.

Among the territory's population of 575,771 are close to 185,000 persons—or 35 per cent—of Japanese descent, over 90,000 Polynesian-Hawaiians or part-Hawaiians, 61,000 Filipinos, 30,000 Chinese, and 81,000 Whites—all living together in racial harmony.

In view of this preponderance of non-whites, statehood proponents feel that admission of Hawaii would be of great significance and they point also to some other differences between Alaska and Hawaii: not only is the territory's population twice that of Alaska's, its economy, though less diversified, is more highly developed and its political system more mature. The islands have, in fact, had a constitutional government—almost indistinguishable from state legislatures on the mainland—for over 60 years, and thereby have been able to prepare themselves for statehood

Indian Finance

since 1900, when they acquired territorial status.

Of course, whether Hawaii will attain statehood in this session of Congress remains to be seen. Popular as well as official sentiment appears to be all for it. And, since the addition of Hawaii to the union appears to be only a question of time, many ask today, in the words of a popular advertisement, "eventually—why not now?"

Role of Electrical Manufacturers

ENGINEERING is basic to Indian development; and the electrical industries may be said to be the keystone of the engineering industries. It has happened that the leeway to be made good has been rather large, but, as Mr K. J. Cleetus pointed out last week at the eleventh annual general meeting of the Indian Electrical Manufacturers Association, the progress that has been charted out in the last ten years is spectacular. Unfortunately, if Mr Cleetus could in this wise suggest that the electrical manufacturers had participated fully in the development to our credit in the last decade, his is a somewhat gloomy assessment of prospects. However, Mr Cleetus has ended on the hopeful note that, if two preconditions are fulfilled, there is no reason why Indian plans for development should be retarded by the lack of the requisite components or parts from the electrical engineering industries.

As to the achievements, there is firstly the fact that, "within the space of 10 years the installed electric power capacity of the country has been doubled." Secondly, a recent development, the manufacture of bare aluminium and steel cored aluminium conductors, has encountered so much demand, that the original target laid down for the end of the Second Plan has been revised upward subsequently by 50 per cent. Thirdly, the manufacture of electric motors and power transformers has gone up from a monthly average in 1948 of 5,000 horsepower to 64,000 horsepower in July 1958, and from a monthly average of 7,000 KVA in 1948 to nearly 102,000 KVA in 1957. The monthly average capacity of storage batteries has trebled in the period. All these are achievements that constitute, in Mr Cleetus' words, a "remarkable all-round progress."

But then, for the future, there are chiefly the difficulties being encountered that have to be solved. The electric supply industry, for example, is finding it difficult to raise capital because of the low return that is all that is permitted as the standard rate of return. In the case of ACSR and all-aluminium conductors, it is the "prohibitive" duty that impedes progress. Serious difficulties are also being experienced, says Mr Cleetus, with regard to raw materials. He feels that priority should be given to helping out the electrical manufacturers, since the products will save foreign exchange and since—what is more important—industrial development generally will have to wait upon the output of the electric manufacturers.

We fully agree with Mr Cleetus that the authorities and the manufacturers have each a duty to perform; and these are the two requests with which Mr Cleetus has ended his speech. On the one hand, he asks that "the obstacles and impediments that now lie across our path of progress and development should be removed quickly." On the other hand, he has appealed to members "to adhere strictly to standards, to ensure quality in production and guard jealously the reputation of our industry". It is then that the electrical manufacturers will be able to contribute to and participate in India's great adventure of industrialisation.

EDITORIAL NOTES

Governor's Address

The Governor's address to the Joint Session of the West Bengal Legislature gives an impression of satisfaction with the food situation in the State which the residents of Calcutta at any rate will find it difficult to share. For some weeks rice at controlled prices had been getting scarce in the open market. And while the Governor was drawing attention to the improvement in food position by comparing prices in the middle of January and a year ago, rice at controlled prices had virtually disappeared from the market. Newspapers have featured this event as prominently as the Governor's address. Even when some sort of rice was available at controlled prices, the dealers with tongue in their cheek, were offering the coarsest type of rice, with liberal admixture of foreign matter as "fine" and "superfine". Various reasons have been advanced for the sudden shortage of rice by the legislators whose adjournment motions on the subject were disallowed by the Speaker. According to the Food Minister, Mr P. C. Sen, there is a concerted move on the part of the big wholesalers, some millers as well as large producers to force the Government to enhance the price of paddy and rice. One would have expected that Government would have armed themselves to meet this contingency before fixing maximum prices. In any case, the

public which is being victimised would like to know what is the Government's answer to this blatant challenge to its authority. It will not be enough to ask the consumers to draw their supplies only from fair price shops. If that had been a practicable alternative, the antisocial elements listed by the Food Minister would not have dared to thumb their noses at the Food Department. Food is not a commodity on which it will be practicable to organize consumer resistance, especially when the stuff supplied by the fair price shops is inadequate in quantity and often deplorable in quality. While rice at controlled price has disappeared from the market, there seems to be no dearth of the commodity for transactions below the counter, at prices considerably above those fixed by Government. The Governor has made a reference to the Anti-Profiteering Ordinance which has been replaced by an Act. If the Government is not able to take effective action to stop profiteering in foodgrains, it will be difficult to conceive how they will fare in organizing cooperative farming in terms of the resolution of the Nagpur Congress.

C.D. in the South

The account of the experiences of a party of newsmen who were conducted round the Community Development blocks in the Deep South sound more encouraging than some earlier reviews of Community Project activities. What he has seen has led the Special Correspondent of the Hindu to the balanced conclusion that the programme holds promise of a better life in the rural areas, but its impact on the people varied from place to place depending upon their response to its various activities. The report draws attention to several interesting features. The agriculturist, who till recently was criticized in lofty terms by city bred experts for failure to use chemical fertilisers, is now being exhorted by Community Project authorities to refrain his ardour for scientific cultivation. The cultivators are taking with avidity to the use of chemical fertilisers—they have learnt these yield good results. But this is proving extremely inconvenient, as fertilisers are in short supply.

Another interesting feature is the development of cooperative medical centres and the growing demand for schools, dispensaries and roads, which bids fair to out-turn the available resources. Red tape also plays its part in strangling popular enthusiasm. The inhabitants of a village were anxious to build a medical centre, but it could not be done as there was a dispensary run by a local body two miles away. The minimum distance according to rules is three miles. While the facts brought to light are extremely creditable to the Government of Madras, where the Chief Minister has taken the portfolio of Community Development under his personal care, they

do not answer the insistent question about the future of the Community Development activity. Is the movement self-propelled, and will it go under its own steam once Government direction and financial assistance is withdrawn as it inevitably must be at some stage or other? The answer will depend on the success in developing new lines of production and economic activities in general. But these still remain in the stage of training of Gram Sevaks and artisans. In this connexion, it is not also possible to derive much satisfaction from the generous donations by local philanthropists which have made progress possible in many places. Not that we are wanting in appreciation of the public spirit animating the generous patrons, but it dims the view of the future. Most of these philanthropists in the rural areas belong to the category of the bigger landholders, a class marked out for liquidation under the latest scheme of land reforms. With all their patriotism and public spirit, we cannot expect these philanthropists to continue to display the same enthusiasm for Community Development in the future.

Prelude to 1960

The Budget submitted to the United States Congress, by President Eisenhower, last month, has set the stage for a long-range controversy between the Administration and the large Democratic majority which controls Congress, over the principles of public spending. The President stands for a balanced budget and restraint on public expenditure at home and abroad. He has identified inflation as public enemy number one, to be kept out at all costs. The Democrats are not impressed. They hold that public service should keep pace with private expansion. Senate Democratic leader Lyndon B. Johnson described the budget as a 'propaganda budget', prepared to create a political issue for 1960, the year of the presidential election. Democrats also consider that provision made for national security is inadequate and that shrinkage of Federal spending would tend to repress the economy. They stand for a positive policy of public spending even if it leads to deficits, for they argue that expansionary forces released would increase revenues to the level at which it would balance the budget.

The President has estimated revenue at \$ 77.1 billion, against \$ 68 billion for 1959, and expenditure at \$ 77 billion, \$ 3.9 billion less than for the current fiscal year. Improvement in national economy is expected to contribute \$ 8.5 billion of additional revenue, the remainder being made up by a rise in tax on motor fuel, from 3 cents to a gallon to 4½ cents, and an increase of \$ 350 million in postal rates. The President has also held out hopes of tax relief. "With balance in our finances in 1960, we can look forward to tax reduction in reasonably foreseeable future."

While the controversy rages over the philosophy of the budget, it is clear that the parties are taking up positions for the election of 1960. Democrats have seized the initiative by tabling legislation on labour, housing and civil rights, which may provoke the President's veto, giving them a tactical advantage in an appeal to the voters.

Congress President

The unanimous election of Srimati Indira Gandhi as Congress President is another instance of the marvellous knack of the national organization to get round awkward corners. For some time Mr Dhebar had been anxious to be relieved of the responsibility of the position which he had carried since the Avadi Congress. All were agreed that it would not be fair to Mr Dhebar to expect him to carry the burden any longer, especially after the AICC had adopted a resolution limiting the terms of incumbents of Congress office. But the problem was to find a successor. There was no obvious candidate in sight. For some time the Congress High Command toyed with the idea of elevating a Congressman from South India to the high office. Fortunately they gave up this proposal, which would have imported regional considerations in the choice of a personality who should be able to stand as the representative of all parts of the country. Moreover, the manner in which the proposal was publicised, as a stop gap arrangement, pending selection of a pucca president in 1960, by special correspondents in contact with the High Command, was not calculated to make any South Indian politician enthusiastic about accepting the responsibility. For, while the presidency of the Congress has ceased to be the unique position of honour and prestige it was in the past, its responsibilities have become more onerous. It will be the task of the Congress President to streamline the organization in time for the election in another two years. Acceptability to the bulk of Congressmen in all parts of the country, more than experience of administration or political manoeuvre, is necessary to ensure competence for the task. Srimati Indira Gandhi is uniquely fitted to hold the position at the present juncture, on her own record of public service which began in her childhood and has continued without break ever since—a fact which would have been more obvious if she had not been overshadowed by her great father. Her relationship to the Prime Minister of the Country has led to a lot of oblique comment and the question has been raised whether the Prime Minister has exercised correct judgment in refraining to veto the nomination. But anyone free from jaundiced vision will be ready to admit that her tenure as President of the Congress will mark the beginning of new life for the national organization.

Giltedged and the Budget

IN the Budget for 1958-59, there was, for the first time in some years, a recognition of the improved tone of and outlook for giltedged. Events proved that the Budget anticipation of somewhat improved realisations from market loans was, if anything, still an under-estimate. Giltedged has had a triumphant year, but, then, there was an acute pressure generated upon the banking system for such large recourse to new investments in Government securities since, at a time when the Deposits of banks rose sharply, Advances tended to be static. Normally, this highly satisfactory performance of giltedged during the current fiscal year should have caused speculation about a greater responsibility being allotted to this avenue of resources in the next Budget. But we wonder whether Mr Desai will in this wise choose to rely increasingly upon market loans as a means of balancing, to the extent he can, his first Budget. For, there has lately been some little change in the state of the giltedged market. Our anxiety is that this recent lukewarmness may have more of an influence upon the Finance Minister than the earlier robust health of the giltedged section.

We suggest that it should be possible for the Finance Minister to pinpoint attention, as it were, upon the state of giltedged. We suggest, moreover, that Mr Desai should be in a position to look to market loans for making up such gap in resources as may exist, and thus avoid any new taxation.

It will also devolve upon Mr Desai to make clear his attitude to deficit financing. In the current financial year, deficit financing incurred is so far at a pace such as to suggest that the quantum may be smaller than budgeted for. But it will be up to Mr Desai, in his economic review of the current year, to decide whether any further scope exists for created money. He is sure to be in possession of facts and figures—supplied by the Reserve Bank—to prove the extent of inter-connection between the level of prices and deficit financing.

The 1959-60 Budget, therefore, should have as its main features, not new taxation, but an increased emphasis on both market loans and deficit financing.

Sharp Rise in Bank Deposits

For the first time in several weeks, according to the returns of the Reserve Bank for January 30, Balances Held Abroad show a fair sized drop.

There seems to be a slight deceleration in the tempo of the busy season. Active Note circulation is higher only by Rs 0.56 crores at Rs 1624.43 crores; and Rupee Coin has actually returned from circulation for Rs 0.28 crores. As a result, Reserve Bank's Cash in the till is marked down from

Rs 12.99 crores to Rs 12.70 crores. In the Banking Department, it is to be noted that the Reserve Balances of member banks have improved by Rs 7.57 crores to Rs 75.74 crores. This is mainly on account of the State Bank. While the Deposits of the Central Government have been marked up by Rs 2.59 crores at Rs 57.82 crores, there is no sign of deficit financing, since Investments are more or less unchanged at Rs 268.71 crores against Rs 268.35 crores. On the other hand, the Balances of State Governments have declined sharply by Rs 13.44 crores to Rs 28.56 crores notwithstanding an increase of Rs 3.00 crores to Rs 26.94 crores in Ways and Means borrowings from the Reserve Bank. This, of course, indicates that the net expenditures of the State Governments during the week were heavy, and it is possible that some payment was made to the Central Government. Balances Held Abroad have been marked down by Rs 6.60 crores at Rs 26.75 crores.

Though the Reserve Balances of Scheduled Banks have improved, it is to be noted that the Other Loans and Advances of the Reserve Bank have also been marked up by Rs 9.16 crores to Rs 93.86 crores; and, as we shall shortly see, a moiety of this increase in the Other Loans and Advances of the Reserve Bank is traceable to the State Bank.

We have, thus, a set of conflicting figures. On the one hand, the slight increase in note circulation testifies to some feebleness in the busy season pressure. On the other hand, the return of rupee coin from circulation disavows the continued existence of the busy season. Then, the substantial rise in the Reserve Balances of Scheduled Banks is a contra-seasonal phenomenon; but the sharp rise in Other Loans and Advances of the Reserve Bank would suggest that the busy season pressure continues to be experienced by Scheduled Banks.

According to the return of the State Bank for January 30, Deposits are practically unchanged at Rs 473.26 crores against Rs 473.83 crores. The total of Advances has inched up by Rs 1.83 crores to Rs 180.76 crores. Presumably with a view to enlarging the size of its cash balances, the State Bank has increased its borrowings by nearly Rs 5 crores to Rs 15.00 crores. In the result, Cash in Hand and with the Reserve Bank is marked higher by Rs 5.15 crores at Rs 28.04 crores.

As foreseen in this column last week, the return of Scheduled Banks for January 23 discloses a substantial rise of Rs 14.17 crores to Rs 1628.00 crores in Deposit Liabilities. This was only partly due to the State Bank, and again, only part of the rise is in respect of borrowings. At the same time, the pressure on Advances is still upward, with a rise of Rs 4.01 crores to Rs 909.04 crores. Nevertheless, the improved level of Deposits has enabled the Scheduled Banks to reduce their indebtedness to the Reserve Bank by Rs 11.30 crores

Indian Finance

to Rs 29.96 crores. There is a small rise in the Investment portfolio and, in the end result, Cash Balances are slightly higher at Rs 160.44 crores against Rs 160.15 crores.

Bank Profits

The net profit of the Punjab National Bank Limited for 1958, subject to audit, has been well maintained at Rs 106.64 lakhs as compared with Rs 111.11 lakhs in 1957. The provision for Income-tax is substantially lower at Rs 33.50 lakhs against Rs 50 lakhs. So, too, the transfer to Reserve Fund is lower by Rs 5½ lakhs at Rs 17 lakhs. On the other hand, bonus to staff absorbs very much more at Rs 30.75 lakhs against Rs 18 lakhs. The dividend proposed, and including the ad interim paid during last year, is such as to make the total distribution 20 per cent per annum. The carry forward is Rs 4.91 lakhs against Rs 4.52 lakhs brought in.

The net profit of the Indian Overseas Bank Limited shows a decline from Rs 22.50 lakhs to Rs 28.60 lakhs. The provision for taxation has been reduced by Rs 3.50 lakhs to Rs 12.50 lakhs. The transfer to Reserve is also lower at Rs 6.00 lakhs against Rs 7.32 lakhs. The provision for bonus to staff has again been increased from Rs 3.75 lakhs to Rs 4.50 lakhs. The dividend proposed is again at 10 per cent. The carry forward, at Rs 2.03 lakhs, is somewhat lower than the amount brought in of Rs 2.32 lakhs.

Mercantile Bank Limited has received the following telegram from its London Office:

"Second interim dividend 6½ per cent less tax payable 14th March Board recommend no further dividend payable for 1958".

Government Securities

Government Promissory Notes of the following loans (Central and State Government) interest on which falls due for payment during the months of March and April 1959 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from the 16th February and 16th March 1959 respectively.

Interest falling due in March 1959: 2½ per cent 1976, 3 per cent Con. 1946, 4 per cent 1960-70, 2½ per cent Madras 1961, 2½ per cent UP 1961, 3 per cent Madras 1960, 3 per cent MP 1964, 3 per cent UP 1960, 3 per cent UP 1961-66, 3½ per cent Bombay State Dev. 1962, 3½ per cent Madras 1962, 3½ per cent MP 1962, 3½ per cent UP 1962, 3½ per cent West Bengal 1962, 4 per cent Andhra 1967, 4 per cent Bihar 1967, 4 per cent Bombay 1967, 4 per cent Hyderabad 1967, 4 per cent Madras 1967, 4 per cent MP 1967, 4 per cent Mysore 1967, 4 per cent Saurashtra 1967, 4 per cent UP 1967, 4 per cent West Bengal 1967, 4 per cent Andhra 1968, 4 per cent Bihar 1968, 4 per cent Hyderabad 1968, 4 per cent Ma-

February 7, 1959

dras 1968, 4 per cent MB 1968, 4 per cent MP 1968, 4 per cent Orissa 1968, 4 per cent Punjab 1968, 4 per cent Rajasthan 1968, 4 per cent Saurashtra 1968, 4 per cent Trav-Cochin 1968, 4 per cent UP 1968, 4 per cent West Bengal 1963, 4 per cent Bombay 1970, 4½ per cent Bombay 1969, 4½ per cent Mysore 1969.

Interest falling due in April 1959: 3 per cent 1966-68, 3 per cent 1970-75, 3 per cent Mysore 1956-61, 3½ per cent NP Loan 1964, 4 per cent Hyderabad State Dev. 1963.

Holders of the loans are advised to lodge their securities well in advance of the due dates to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loan may be extended to five clear working days.

The Economic Cold War

By
Paul Einzig

MR KHRUSCHEV's speech, foreshadowing a spectacular expansion of production in the USSR during the next seven years, has given much food for thought on this side of the Iron Curtain. Optimists interpret his ambitious plans as an indication that he does not intend to embark on world conquest by force of arms. For it is pointed out any increase in military expenditure would gravely compromise the prospects of raising the standard of living and the production of capital goods. Therefore, the optimists argue, we may expect a period of peace and quiet while the Soviet Union is engaged in the execution of Mr Khrushchev's plan in the economic sphere.

Unfortunately, some of us remember a speech made by Hitler shortly before the war, in which he sought to ridicule the idea that he intended to embark on a war, pointing out that it would play havoc with his grandiose building plans in Berlin and elsewhere. So it would be a mistake if we allowed ourselves to be lulled into a false feeling of security by Mr Khrushchev's plans of economic expansion. But even if we assumed that he would avoid seizing additional territories while engaged in the seven years' plan, there would be no cause for optimism. For if the Soviet Union were to carry through the ambitious plans of expansion it would become a most formidable opponent in the economic sphere.

Already there have been indications during the last year or two that the Kremlin intends to fight the cold war with economic weapons. Various materials were dumped on the world market at unreasonably low prices, in order to aggravate the difficulties caused by last year's fall in raw material prices. But when Moscow found that such operations tended to antagonise the uncommitted raw material producing countries there

was a change of policy. The Soviet Government agreed to limit its exports of tin, for instance.

Even so, last year's experience gave a foretaste of things to come. When the industries of Soviet Union have expanded sufficiently to satisfy the most urgent requirements of the Communist Bloc, the surplus will be dumped on the world market, in order to embarrass the western countries. The sooner Russia has succeeded in expanding her industries the sooner will the free countries have to face such attacks on their prosperity and economic stability.

The recent attempt of Mr Mikoyan to persuade the United States Government to grant long-term loans to the Soviet Union was doomed to failure. It was indeed an impertinent insult on the intelligence of American statesmen for him to imagine for a moment that he could possibly succeed. He should have tried to persuade the businessmen who gave him such a friendly reception to translate their friendly feelings into the practical form of long-term loans. He would have received an answer fully as emphatically negative as that given in official American quarters.

Businessmen naturally showed hospitality to a distinguished foreign visitor. On the basis of their attitude Mr Mikoyan reported back to Moscow that in the United States everybody except the Administration is friendly towards the USSR. In this respect, too, history repeated itself. Herr Ribbentrop sent somewhat similar reports to Hitler on the basis of his contact with the British "upper ten" during the late 'thirties, misleading his chief into believing that his world-conquering plans would not encounter resistance on the part of Britain.

It is difficult to understand why a highly intelligent man, such as Mr Mikoyan undoubtedly is, should have expected the United States to assist actively the Soviet Union in its plans of world conquest by economic means. Possibly he may have derived hope from the experience of 1939 when Mr Chamberlain offered Hitler a gigantic loan in an eleventh-hour attempt to dissuade him from embarking on war. The timing of the request following closely on the ultimatum over Berlin seems to indicate that the demand about Berlin must have been put forward mainly in order to induce the United States and the other free countries to appease Russia in the same way as Mr Chamberlain attempted to appease Hitler—through the offer of large financial facilities.

Had the idea of the £1,000 million loan made to Germany on the eve of the war become reality it would have greatly strengthened Hitler and he would have been able to embark on a war a little later with considerably increased power. Fortunately the American statesmen avoided falling into the trap.

The Soviet Government grants long-term credits to other countries in order to secure influence in their economies. It was indeed absurd that Mr Mikoyan should try to obtain long-term facilities from the United States. Had his demand been satisfied the Soviet

Government would have been in a much better position to offer financial aid to countries where it wishes to strengthen its position at the expense of the United States.

Why should the United States or any other free country assist the Soviet Union in its efforts to strengthen its position in uncommitted countries? Even without such assistance, the strength of the Soviet Union in the economic sphere, and its power for mischief is bound to increase during the next few years. The free countries would be foolish if they tried to assist it towards its goal. They should devote all their available resources towards strengthening the free world in the coming race for economic supremacy, instead of weakening themselves by granting assistance to their enemies.

Whatever trade there is with the Communist bloc it must be on a strictly cash basis. Indeed it is the experience of British firms dealing with the Soviet Union that they take unwarranted risks unless the whole amount involved in the contract is secured in advance by means of confirmed credits with a British bank. Otherwise the Soviet authorities are in a position to cancel the contract, and the firms concerned are bound to incur heavy losses.

Unfortunately the free world is gravely handicapped in the race for economic supremacy, because of the unwarranted wage demands. From time to time expansion has to be reversed in order to check the inflationary effect of excessive wage increases. Also as a result of excessive equalitarianism in the democratic countries too large a proportion of the productive capacity is used for the purpose of satisfying the ever-increasing consumption, and there is not enough left for the production of capital equipment. In the Soviet Union, on the other hand, the standard of living has been kept down in order to be able to expand producing capacity. Our only hope to win the race is to persuade the workers of the free world to moderate their demands, so as to leave enough resources for capital equipment, and to obviate the necessity of checking expansion in order to stop inflation. Prices Decline Further

PRICES in the heavy goods section have registered a sharp decline during the past week. This weakness of sackings is attributed to the persistent rumour that mills may decide to remove the self imposed restrictions regarding the minimum selling prices for jute goods. It may be recalled that the IJMA mills had announced on February 26 last year that they would not sell goods below Rs 39.50 for Hessian 40" x 10 oz and Rs 100 for B Twills. The decision was reiterated again in August and December. Though the fixation of minimum prices had the desired effect of checking the continuous fall in rates noticeable in the early part of last year, the improvement in sentiment could not be maintained for any length of time. The situation threatened to get out of control especially when it was known that the 1958-59 jute crop would be a bumper one. The fact that the IJMA mills have found it necessary to reiterate their February decision as regards minimum prices twice during the period August-December 1958 is a clear indication of the difficulties involved in keeping to the minimum price levels. It is also to be noted that in the past eleven months or so during which the minimum prices have been in force the market rates for jute goods have not shown any close relationship to the IJMA price minima. It is true that by and large hessian prices have generally been above the marginal level. As for sacking goods they have been much below the margin most of the time.

The question of minimum prices seems to have again come to the fore now and there is a persistent rumour that the IJMA may decide to withdraw the voluntary restriction imposed on mills. Such expectations have presumably stemmed from the various reports current in the market place. In this connection it may be recalled that the East India Jute and Hessian Exchange Association have pointed out last month while dealing with the urgent need for restoring stability to the jute industry and trade, that a lasting solution can be obtained only when there is concerted action on the part of all concerned in the Indian World of Jute. The Association has drawn attention to the fact that Indian jute goods are selling in overseas markets below the IJMA minima. This has constituted one of the serious handicaps in the direction of curbing speculation in the jute markets. The EIJHE has, therefore, suggested that the IJMA

should take tighter measures to ensure that sales do not occur below the minima fixed. There is a consensus in the trade also that the minima atleast as far as sackings are concerned are untenable in the present context of a high level of unsold stocks of this category of goods with the Indian industry. It cannot be maintained also that the low level of prices of sacking goods has been brought about entirely by speculative elements.

From the continued depressed price levels in the sacking section it is evident that efforts at maintaining the minimum price levels have proved ineffective. Marketmen have not failed to note that sizable business is being concluded at well below the minimum prices and they have naturally come to the only conclusion that the removal of restrictions is imminent. Rumours about the possibility of the IJMA mills rescinding their decision about minimum prices also partly based on the unsatisfactory position of the industry as regards its stock of sacking goods. For some considerable time now stocks of heavy goods have been increasing and indications are they will again show further rise

The IJMA have taken two important decisions late this week. They have decided to seal a further 1½ per cent looms with a provision for sealing another 1 per cent. The other decision is to withdraw their recommendation to member mills as regards minimum selling prices for jute goods. The market reacted to the news with a sharp fall in the prices of heavy goods. B Twills Ready declined to Rs 89.35 on Thursday.

as at the end of January. In this regard rumour had it last week that mills were considering a proposal to seal a portion of their sacking looms with a view to reduce production.

The jute goods market opened on Thursday on an easier note on rumours that the restriction regarding minimum prices for jute goods would be removed. As against previous closing of Rs 93.20 B Twills closed the day sharply lower at Rs 92. On subsequent days the downtrend gathered further momentum and by close of Saturday stood at Rs 91. After remaining unchanged at that level for some time the rate showed some slight improvement. Toward close bear covering pushed up the price to Rs 91.40. The undertone however in this section remained weak throughout the week presumably due to the expectation that the price minima would be removed. Hessian has been comparatively steady. Hessian 40" x 10 oz fluctuated with narrow limits to be finally placed on Wednesday at Rs 40.30 as against last Thursday's closing rate of Rs 40.50.

The raw jute market displayed a quiet trend sentiment having been adversely affected by rumours about sealing of a portion of sacking looms and the removal of restrictions on the prices for jute goods.

Selective Demand for Export Teas

IN the Export Sale held in Calcutta this week, there was a good but not very general demand for the 66,370 packages of tea offered. "Teas for price", plain BPs and PFs and medium PFs were a strong feature and generally sold at about last rates, the smaller Fannings being often dearer. Medium BPs were sometimes easier. Orthodox BOPs were generally easier apart from those with bright liquors which were sold well. Lower-priced OFs met with a somewhat better enquiry and often showed a dearer tendency; but the Tippiest sorts were unwanted and Tippy BOPs also received less support and were sold at easier rates.

CTC types were well supported, but at prices which were about 4 to 6 nP per pound easier for the poorer fibrous sorts and about 10 nP easier for the better liquoring kinds, some of which were withdrawn. Those with bright liquors were sold well. Legg-cut teas were again sold readily although prices were irregular and sometimes 2 to 6 nP easier. Whole Leaf grades received a fair enquiry, the stylish kinds being often dearer. Darjeelings met with a fair demand, but at irregular and generally easier rates. Following rates were quoted:—Clean Black Pekoe Rs 2.00 to Rs 2.04; Plain BP Rs 1.62 to Rs 1.66; Plain Fannings Rs 1.74 to Rs 1.80; Medium BP Rs 1.60 to Rs 1.62; Medium Fannings Rs 1.74 to Rs 1.78; Best Assam CTC BP Rs 2.25 (nominal) and Best Assam CTC Fannings Rs 2.30 (nominal).

In the Internal Sale, offerings consisted of 21,065 packages of Dusts and 3,004 packages of Leaf grades. There was a good demand for Dusts at generally easier rates. Grainy orthodox descriptions declined by some 2 to 4 nP per pound; but the small and powdery types in this category remained about steady. Legg-cut teas were sold readily, but at slightly lower rates than last week. The very few Darjeeling teas, on offer, were dearer.

The demand for CTC grades was rather more limited with the poorer and medium sorts quoting generally 5 to 10 nP easier and sometimes more. The best sorts of this manufacture were irregular and generally easier except for the smaller types which ruled fully firm to dearer. Following rates were quoted: Medium Dooars Dust Rs 1.72 to Rs 1.76; Medium Assam Grainy Dust Rs 1.72 to Rs 1.74; Medium Assam CTC Dust Rs 1.90

to Rs 2.05 and Best Assam CTC Dust Rs 2.40 to Rs 2.85 (nominal). There was a good demand for Leaf grades, which were sold at generally firm to dearer rates.

In the Export Quota section, business was reported done at 2½ nP per pound. The Government of India have announced the export allotment of tea for 1958-59 at 494.50 million pounds. This represents 67 per cent of the crop basis for the year, which is estimated at 738.10 million pounds. The Tea Board has already allotted export quota at 65 per cent basis to all estates. Arrangements are being made by the Board to allot the balance quota at the rate of 2 per cent of the crop basis to all estates as early as possible.

In the Sale No. "B" held in Cochin, offerings were 580,000 pounds. There was a strong general demand and prices generally advanced except for Nilgiris, which were irregular. Good Mediums met with keen competition and were sold readily at 5 to 10 nP per pound above last rates, while Medium and Low Medium teas from Travancore were a strong feature, the better sorts advancing by 10 to 20 nP and the lesser kinds by 5 nP per pound. Wynaad descriptions followed the general upward trend of the market. Plain sorts were absorbed readily at about 5 nP above last rates, while milled and residual kinds were fully firm. Black grainy Dusts were dearer.

With a view to regaining markets that Ceylon has lost to India, producers and others concerned with the tea industry have urged the Ceylon Government to introduce a revised export duty, which is not as burdensome as now and which is based in relation to prices and the capacity to pay. The Ceylon Government have, therefore, decided to introduce a new scheme of export duty consisting of two parts:—(1) a fixed duty of 35 cents per lb on all teas collected at the point of export and (2) an ad valorem duty collected at the auctions of teas, which fetch over Rs 1.85 per lb, the duty to be 50 per cent of the prices realised in excess of Rs 1.85 per pound, subject to an upper limit of 70 cents.

All teas exported should be sold either at the Colombo or the London auctions and no private sales will be allowed. The duty on teas from plantations owned by the English and Scottish Co-operative Wholesale Society will be at a flat rate or on some equitable system.

Tea stocks in London, as on the 23rd January, were 166.02 million pounds as compared to 159.89 million pounds in the previous week. Total quantity to be landed on the same date was 33.55 million pounds. Deliveries during the week totalled 10.44 million pounds. Total afloat was 28.75 million pounds including 20.52 million pounds from Calcutta; 1.53 million pounds from Chittagong; 743,980 pounds from Cochin; 4.61 million pounds from Ceylon and 1.34 million pounds from other Ports.

Indian Finance

February 7, 1959

Foreign Trade in October

India had a favourable balance with 33 of the 65 principal countries with which it had trade dealings during October, 1958.

With the U.K. it had a surplus of Rs 5,33,88,000, with Australia of Rs 1,21,73,000, with the USSR of Rs 1,58,76,000 and with Pakistan of Rs 14,98,000.

Among the countries with which it had an adverse balance were the USA (Rs 1,84,92,000), Canada (Rs 87,55,000), Japan (Rs 1,11,19,000) and China (Rs 45,51,000).

The following is the break-up of India's foreign trade (merchandise) for October in principal commodities and with principal countries, according to information available with the Department of Commercial Intelligence and Statistics, Calcutta:—

EXPORTS.

Principal Articles	Value in Rs
Fish: salted, dried or smoked, but not further prepared ...	43,58,075
Fish: Crustacea and molluscs: fresh, chilled, frozen, salted, dried or simply cooked ...	18,09,802
Edible nuts (including fresh coconuts), other than nuts chiefly used for the extracting of oil ...	2,44,17,116
Cane sugar, refined ...	54,50,812
Coffee not roasted ...	35,18,965
Tea ...	16,54,13,381
Spices, pepper and pimento, whether unground, ground or otherwise prepared ...	34,56,346
Spices, except pepper and pimento, whether unground, ground or otherwise prepared ...	50,10,273
Oilseed cake and meal and other vegetable oil residues ...	70,15,091
Tobacco manufactured for human consumption (smoking, chewing, snuff) ...	12,67,698
Tobacco unmanufactured (including scrap tobacco and tobacco stems) ...	18,84,882
Goat skins and kid skins, undressed ...	36,26,440
Sawlogs and veneer logs—non-conifer (hardwood) ...	7,36,175
Sheep's and Lamb's wool, greasy or back washed	64,43,201
Horse hair and other coarse hair ...	7,59,017
Raw cotton, other than linters ...	1,36,80,252
Cotton mill waste, Devilled cotton waste, and cotton shoddy not further manufactured ...	62,73,365
Hemp and hemp tow and waste (cannabis sativa and cotularia juncea) ...	2,80,468

Principal Articles	Value in Rs
Waste materials from textile fabrics including rags	1,82,272
Mica, uncut or unmanufactured, in sheets or blocks, films and splittings, scrap mica, unground or ground ...	80,77,083
Iron ore and concentrates (except pyrites not roasted) ...	99,47,278
Iron and steel scrap ...	21,48,134
Manganese ore and concentrates ...	75,95,760
Bones, ivory, horns, hoofs, claws and similar products ...	14,11,031
Plants and parts of plants for use in dyeing and tanning whether ground or not ...	7,06,915
Natural gums, resins, ans lacs ...	59,13,565
Coal (anthracite bituminous, sub-bituminous lignite) ...	48,14,254
Mineral jelly and waxes (including petrolatum)	8,45,038
Linseed oil (crude, refined or purified) ...	7,95,569
Cottonseed oil (crude refined or purified) ...	...
Castor oil (crude, refined or purified) ...	25,36,786
Hydrogenated oils and fats	8,76,980
Essential vegetable oils ...	24,70,331
Leather ...	1,58,30,414
Cotton yarn and thread, grey (unbleached) not mercerized ...	56,42,724
Cotton yarn and thread, bleached, dyed (coloured) or mercerized ...	21,67,456
Cotton fabrics, grey (unbleached) ...	1,86,36,133
Cotton fabrics, other than grey (bleached, dyed, mercerized, printed, or otherwise finished) ...	2,47,12,333
Fabrics of Jute	4,66,45,682
Ribbons (other than of silk and of synthetic fibres) trimmings tapes and bindings of all fibres except elastic ...	5,10,738
Cordage, cables, ropes, twines, and manufactures thereof (fishing nets, rope makers' wares)	9,46,362
Bags and sacks for packing, new or used ...	3,81,79,288
Blankets, travelling rugs and coverlets of all materials ...	13,36,596
Bed-linen, table-linen, toilet-linen, and kitchen-linen	22,61,928
Carpets, carpeting, floor rugs, mats, matting and tapestries of wool and fine hair, excluding artware ...	37,24,868
Carpets, carpeting, floor rugs, mats, matting and tapestries of textile fibres, other than wool and fine hair ...	10,71,012
Bricks, tiles, pipes and other products of brick-earth or of ordinary baked clay ...	1,91,466
Manufactures of mica (built-up mica products, and articles made from sheet mica and built-up mica) ...	5,25,735

Principal Articles	Value in Rs
Jewellery of gold, silver and platinum group metals, and goldsmiths' and silversmiths' wares including set gems (except watch cases) other than artware ...	5,46,034
Footwear, wholly or mainly of leather (not including slippers and house footwear) ...	8,31,858
IMPORTS.	
Milk and cream (including butter milk, skim and whey) ...	1,12,987
Fish: fresh, chilled or frozen ...	18,97,946
Wheat and spelt (including meslin unmilled) ...	5,58,36,436
Rice not in the husk, including polished and broken rice ...	1,69,22,458
Edible nuts (including fresh coconuts), other than nuts chiefly used for the extracting of oil	75,90,030
Dried fruits, including artificially, dehydrated ...	78,51,697
Beet sugar and cane sugar, refined ...	...
Spices, except pepper and pimento, whether unground, or otherwise prepared ...	6,75,207
Tobacco unmanufactured (including scrap tobacco and tobacco stems) ...	3,05,942
Copra ...	1,19,42,799
Natural rubber and similar natural gums ...	35,82,184
Raw silk (not thrown) in hanks or in skeins ...	7,34,993
Wool or fine hair carded or combed, including tops ...	56,60,726
Raw cotton other than linters ...	1,97,74,205
Jute (including jute cuttings and waste) ...	26,88,613
Synthetic fibres in staple lengths suitable for spinning and waste ...	80,292
Fertilizers—Natural phosphate, ground or unground ...	79,474
Sulphur ...	12,37,565
Asbestos, crude, washed or ground ...	20,12,501
Non-ferrous metal scrap ...	7,04,663
Natural gums, resins, balsam and lacs ...	7,12,142
Motor spirit (gasoline and other light oils for similar uses) including gasoline blending agents ...	15,22,267
Lamp oil and white spirit (kerosene and illuminating oil) ...	87,76,114
Gas oil, diesel oil and other fuel oils ...	2,11,75,380
Lubricating oils and greases including mixtures with animal and vegetable lubricants ...	44,44,833
Coconut (copra) oil ...	3,03,612
Sodium hydroxide (Caustic soda) ...	97,91,810
Sodium Carbonate (Soda ash) ...	8,71,484
Coal tar dye stuffs and natural indigo (including artificial colour lakes) ...	80,10,961
Vitamins and vitamin preparations ...	25,72,334

Principal Articles	Value in Rs
Penicillin, streptomycin, tyrocidine and other antibiotics ...	17,28,224
Explosives—Propellant powders, prepared explosives and hunting or sporting ammunition ...	22,47,333

N.B.—The merchandise imports figures are exclusive of the value of certain consignment of Government stores awaiting adjustments.

that is certain", he added, "is that new capital (it is a shy beast) will not come to places where old capital is having a rough time or even being sent back with a flea in its ear." In this connection it is interesting to note that in May last year the Government of Ceylon was reported to be considering legislation to restrict foreign investment in local industries. The Industries Minister was credited with the view that certain domestic industries were being threatened with closure by unrestricted foreign investments. The House of Representatives in April last year also accepted a private member's motion calling for nationalisation of the country's big tea estates many of which are British-owned. Foreign investments were however, promised a respite from nationalisation for ten years, on the eve of the Finance Minister's trip to the U.S.A. in May last year to negotiate a loan of Rs 400 million.

Rubber interests in Ceylon have called for an upward revision of floor price of rubber to 25d per lb in the talks now due for the fixation of prices under the rice-rubber barter agreement with China. The five-year agreement concluded last year provided for annual exchange of 200,000 tons of Chinese rice for 30,000 tons of Ceylonese rubber. The agreement also provided for Chinese aid to the value of Rs 15 million in kind to help rehabilitate the rubber industry. The Low Country Products Association have represented that the price fixed should allow a margin over and above the rehabilitation assistance of Rs 15 million. Without this margin, they point out, it will not be possible for the average estate owner to meet the difference between the Government subsidy on replanted rubber and the actual total cost of replanting. The Association's memorandum also points out that, in the event of the world price for the day being higher than the floor price, China should be made to pay the world price.

In a bid to retain the Iraqi market for tea which is worth Rs 80 million to Ceylon, the Government proposed to cut the import duty on dates from Rs 5.50 to Rs 1 a cwt., so as to increase consumption of dates in the Island. But the move is likely to prove infructuous in view of reports that Iraqi date merchants have put up the price of dates by 15 per cent. on reports of the Ceylon's tax reduction proposal which will virtually offset the duty cut.

The agitation in the Southern districts of Madras over the reduction of beedi imports by Ceylon suggests that the interests concerned have not cared to consider the consequence which directly flow from the Indo-Ceylon Trade agreement which was presented to the House of representatives as long ago as July last year provided for a phased reduction of imports of Jaffna tobacco into India and Indian beedis into Ceylon. The Agreement which

will be in force till August, 1961, provided for annual import into India of Jaffna Tobacco diminishing in quantity from 1500 candies in 1957-58 to 770 candies in 1960-61. The agreement also provided that import of Indian beedis should be reduced from two million pounds in 1957-58 to slightly over one million pounds in 1960-61. It appears that the beedi manufacturers in South India woke up to the consequences of the agreement only after the Government of Ceylon had taken action under the agreement which they were fully entitled to do. If they were not consulted when the agreement was concluded they may have ground for grievance against the Government of India, but they have no justification for complaint against Ceylon.

Effective from January 16 the provisions of the Industrial Products Act has been made applicable to all textiles except nylons, pure silk and wollen materials. Under the Act all imports of foreign textiles, other than the materials specified, are obliged to purchase one yard of locally made textile for every five yards purchased. The Minister for Justice told the Senate on January 13 that there was a glut of locally made cloth and the system of quota restriction on imports was therefore necessary. The accumulated stocks amount to 2.2 million yards of mill-made cloth and 6.4 million yards of handloom goods. Importers have been informed by the Ministry of Commerce and Trade that 27.6 million yards of local textiles including the stock pile and estimated production of 19 million yards during the current year should have to be lifted during the year. Government have also fixed the prices for local textiles. A number of organisations representing the importers, including the Indian Mercantile Chamber, have represented to the Government the hardships caused by the order and put forward a new ratio of imported to locally made textiles for consideration of Government, which they claimed will be fair to all concerned.

US Notes

BEHIND the public debate that has now begun on President Eisenhower's budget and on his anti-inflationary legislative proposals lie several major issues of economic and political philosophy on which economists both inside and outside of government have been divided for years.

One issue involves, for example, whether creeping inflation must inevitably turn into runaway inflation, followed by severe business setbacks.

Many economists agree with the President on the likely consequences of failing to stop inflation. But a number of them say there is no evidence that creeping inflation will turn into runaway inflation.

Another major issue is the idea expressed by the President in his

economic report last week that private spending is inherently more valuable to continued economic growth than government spending, except for a few functions (such as defence) which only the government can perform.

Closely associated with this idea is the President's conviction that taxes are too high. The President and his economic advisers believe the proper kind of selective tax reductions can greatly spur the rate of economic growth, mainly by stimulating business investment in new productive facilities.

In effect, all these questions—as the distinguished columnist Walter Lippmann has pointed out—arise from different theories about the rate at which the productive capacity of the American economy can and should grow, without letting inflation get out of hand.

Specifically, it is, as Lippmann sees it, whether a high rate of annual growth can be achieved without inflating wages, costs and prices faster than productivity increases, with one school of thought leaning to about a three per cent yearly increase in the annual rate of economic growth, the other to a rate of about five per cent.

The historical background to this problem is extraordinarily interesting. During the past 75 years the average annual rate of economic growth in the United States has been 3 per cent compounded. During World War II, when the United States engaged in all-out production for defence, the economy achieved an annual growth rate of about 9 per cent. During the post-war period of 1947-1953 the rate was nearly five per cent. During the past six years it has been about two per cent.

In the light of such wide variations, a number of economists began to look into the question on what annual growth rate could actually and soundly be achieved.

In February, March and April last year, three economic studies were published by the committee for economic development, the National Planning Association, and the Rockefeller Brothers Fund, respectively. All three suggested, as the Rockefeller report phrased it, that "a growth rate of 5 per cent is possible if we realize fully our impressive opportunities for economic expansion."

Since then, the target of a 5 per cent annual rate of economic growth has been more widely adopted: for example, by the AFL-CIO Labour Union leaders by Harvard economists John Kenneth Galbraith and Arthur Schlesinger and former President Truman's Chief Economic Adviser, Leon Keyserling, in their recommendations to the Democratic Party's Advisory Council, and by members of Congress in both political parties who favour legislation calling for higher spending than the administration proposes.

The debate advances to a more formal and scholarly position this week when the Joint Congressional Economic Committee begins formal hearings on the President's economic report.

This committee was created under the Employment Act of 1946 and is directed to review the Pre-

sident's economic report each year and make its own report to the Congress on or before March 1.

Top officials of the executive branch will appear at the hearing to explain the economic assumptions and reasons underlying the President's budget and anti-inflation proposals and to justify his major economic recommendations.

Following their testimony, the committee plans to invite top experts from outside the government from universities, business, labour agricultural, and research organizations, to give their views on this fundamental economic question.

From all appearances, the American people are going to be well acquainted with economic issues, that transcend specific bills before this momentous, if not historic, debate reaches its climax—when Congress takes final action on the appropriations for the coming fiscal year.

A COMPREHENSIVE reply to Soviet charges that U.S. trade policy is covered by "cold war" thinking has been laid down in the last few days in a series of official U. S. statements.

The most recent of these was the Secretary's comment at his press conference on January 27 in which he pointed out the political motivations in Soviet trade offers designed, as the Secretary said, not to end the "cold war" but to give the Soviets "a very considerable advantage" in prosecuting it.

The same point was brought out in the speech at Detroit on Monday (January 26) by Robert Murphy, Deputy Under Secretary. Mr Murphy emphasized that the Soviets are seeking capital equipment as a means of pressing their recently announced seven-year plan.

But the most thorough and direct exposition of US policy in respect to Soviet economic objectives was provided in the major speech made Tuesday (January 27) by C. Douglas Dillon, Under Secretary for Economic Affairs, at New Orleans.

Not only did Mr Dillon discuss what he termed the "realities of Soviet foreign economic policies"; he also laid bare the facts about "what actually occurred during Mr Mikoyan's talks on trade with United States officials." Mr Dillon spoke with authority for he was, as he himself pointed out, "the only US official with whom Mr Mikoyan discussed trade problems in details."

The Under Secretary made a number of points which, observers believe, deserve emphasis:

1. So long as Soviet policies menace the United States and other free world countries with which US security is linked, we cannot be expected to provide the USSR with the sinews of war. Nevertheless, the list of goods embargoed for export to the Soviet bloc has been significantly reduced.

2. Only about 10 per cent of all US products moving in international commerce are embargoed for export to the Soviet Union.

3. So long as the Soviet Union remains in default to the US on past debts, it cannot expect to obtain long-term credits in this country. Short-term commercial credits, however are freely available.

WORLD OVERSEAS

Ceylon

THE Ceylon House of Representatives, on January 8, passed the controversial Constitutional Amendment Bill by 70 votes to 7. The Bill was opposed by the Federal Party representing the Tamil areas and by Mr C. Suntheralingam, an independent. One of the provisions in the Bill of interest to India is the proposal to abolish separate electoral lists and representation for Ceylonese citizens of Indian origin. Prime Minister Bandaranaike in his winding up speech explained to the House that India was least likely to be offended by the proposal. Separate electorates for Indian citizens were not provided at the instance of India. On

the contrary, Mr Nehru was prevailed upon to accept it by the Ceylon Delegation which went for talks to New Delhi in January, 1954. The abolition of separate electoral lists was welcomed by all sections of the House excepting the Federal Party and the independent Tamil member who opposed it on the ground that it violated the Indo-Ceylon Pact of 1954.

Apart from abolition of separate electorates, the Bill also seeks to re-delimit constituencies on the basis of total population and this ran into more general opposition. The Bill allocates one seat for every 75,000 of total population including the Stateless persons of Indian origin. Communist and Trotskyist members pointed out that this provision would mean in practice that the 1.1 million Stateless plantation workers would be taken into account for allocation of seats to different areas, without deriving any benefit themselves. Another result would be weightage for Kandyan areas where the plantation workers reside, to the disadvantage of the Northern and Eastern provinces. Mr C. Suntheralingam prophesied that the elec-

tions under the new delimitation would result in a new House composed of 79 per cent Sinhalese and 21 per cent minority members. Mr Vanniasingam, who put forward the Federal Party's point of view, made an unsuccessful bid to refer back the Bill to the Select Committee to report on what changes should be made to prevent double weightage for majority representation by excluding Indians from the vote and counting their number to give representation to the majority. During the debate a Sinhalese member made the remarkable suggestion that, before citizens registered under the Indian and Pakistani Act were allowed to vote, they should all be required to pass an examination in Sinhalese.

New Year, contrary to fond expectations, has not brought any improvement in employer-employee relations. The month has been marked by a number of disputes in different stages of development, affecting bank workers, postal employees, port workers, estate labour and others. The labour trouble in estates has led to violence leading to strong handed action by the police. The

oil-workers' strike, which disorganised kerosine and petrol supplies in the Island towards the end of last month was, however, called off on January 2. Statistics of industrial unrest during the first nine months of 1958 published in the Labour Gazette indicate that last year's record in the matter of labour disputes will equal, if not surpass, the figures for 1957, the worst year since 1939. There were 304 strikes in 1957 resulting in loss of 808,493 man-days.

Chronic industrial unrest, on the top of uncertain economic and fiscal policies, is exerting an adverse influence on the climate for foreign investment. An audience of Rotarians was told by Mr A. F. Morley, the U.K. High Commissioner, that since 1955, there had been a net withdrawal of £5 million of U.K. investment in Ceylon. This cannot be put down to shortage of capital in the U.K. for investment overseas, for Mr Morley also pointed out that, during 1957, the level of private U.K. investment abroad was £280 millions and for the past several years had been at an average level of £200 millions per year. "The one thing

4. A broad range of peaceful goods is freely available through normal trade channels to the Soviet Union—just as these goods are available to our partners in the free world.

In sum, as Mr Dillon emphasized, "the only thing the Soviet Union needs to do if it really wishes to expand its trade with us, is, quite simply, to begin trading."

Britain

Gross fixed investment in the United Kingdom was one per cent. higher at constant prices in the third quarter of 1958 than a year earlier, an increase in the private sector more than offsetting the fall in public investment, according to an article published in *Economic Trends* on January 27 in London.

The value of all goods and services produced in the United Kingdom in the third quarter—or the gross domestic product—was three per cent. higher in value but one per cent. lower at constant prices. Allowing for seasonal variations, the gross domestic product at constant prices fell slightly during the first half of 1958, but the fall appears to have been halted in the third quarter.

Stocks and work in progress increased at a rather faster rate in the third quarter than in the the previous quarter.

Wages and salaries were two per cent. higher than in the third quarter of 1957 but, allowing for seasonal variations, there was only a fractional increase in aggregate wages and salaries in the first three quarters of 1958. Personal savings in the third quarter were at about the same level as a year earlier.

The British Government's reflationary measures to counter unemployment have led to additional expenditure under several heads—for instance, hospital building works, roads, and financial aid to industry under the Distribution of Industry Act—and details of this expenditure are set forth in the spring Civil & Revenue Supplementary Estimates, 1958-59, published in London on February 2.

One element in the supplementaries represents the British Government's overseas development aid programme. An additional £12,800,000 is required for the colonial services. Of this £5,500,000 is to provide a loan to British Guiana, £5,000,000 of which is to be issued in the current financial year.

An extra £6,600,000 is required for the Foreign Office grants and services vote. Nearly £2,700,000 of this is for advances during the current year of the United Kingdom loan (totalling £3,600,000) to Turkey under the Organization for European Economic Co-operation aid agreement signed in November 1958.

Direct spending on the reflationary programme accounts for £14,500,000. This includes expenditure on road schemes, public buildings, hospitals, housing and development areas. The extra spending allowed for social services reaches £43,100,000.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA.

(REVISED SERIES).

Review for the week ended Pansa 27, 1880 (January 17, 1959).

THE official wholesale price index (with the year ended March 1953 as 100) advanced by 0.6 per cent to 112.6 during the week ended January 17, 1959 as compared with 111.9 (revised) for the earlier week. The index was higher by 1.3 and 6.4 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago.

Higher prices of Cashewnuts at Mangalore (new crop) (+36%) Milk at Calcutta (+20%), Rice at Karnal (+20%), at Nagpur (+10%) and at Imphal (+5%), Onions at Calcutta (+10%), Arhar and Tea for internal consumption (+7% each), Barley at Jaipur and Mung at Hissar (+6% each), Gram, Urad, Mustard oil, Turmeric at Calcutta and Black Pepper (+5% each), Masur and Groundnut oil (+4% each) and Wheat, Jowar, Maize and Coconut oil (+1% each), raised the index for 'Food Articles' by 0.7 per cent to 114.5 as against 113.7 (revised) for the previous week. The prices of Oranges (—22%), Milk at Bombay (—12%), Onions at Delhi (—10%), Rice at Raipur (—8%), at Sambalpur (—7%), at Marcarra (—6%) and at Jayanagar and Kumbakonam: (—5% each), Daida-Vanaspati (—7%), Mung at Bombay and Gur at Muzaffarnagar (—5% each), Eggs (—4%), Potatoes (—3%) and Bajra, Ragi, Coffee and Salt (—1% each), however, moved down.

The index for 'Tobacco' rose by 3.1 per cent to 104.5 due to an increase in the prices of Tobacco raw (+4%).

The index for the 'Fuel, Power, Light and Lubricants' group remained stationary at its previous week's level of 114.8.

'Industrial Raw Materials' advanced by 1.3 per cent to 114.6 as compared with 113.1 (revised) for the earlier week as a result of an increase in the prices of Gingelly seed at Jhansi (+13%), Groundnuts (+7%), Cottonseed (+3%), Castorseed (+2%) and Cotton raw, Silk raw, Rapeseed, Copra and Lac (+1% each) although the prices of Bamboos (—7%) and Jute raw (—1%) showed declines.

The prices of Zinc ingots at Bombay (—6%), Lead (—2%) and Cotton yarn and Tin (—1% each) moved down while those of Rayon yarn and Brass (+1% each) showed advances and the index for 'Intermediate Products' stood at 110.7 as against 110.8 for the previous week.

The index for 'Finished Products' worked out to 108.1 as compared with 108.0 for the earlier week. The prices of Quinine Sulphate in Bombay (—5%), Jute manufactures and General Chemicals (—1% each), Handloom cloth (+2%) and Oil cakes (+1%) showed variations.

(Base: 1952-53=100).

INDUSTRIAL DISPUTES DURING NOVEMBER, 1958

There were 94 fresh industrial disputes during November, 1958, bringing the total number of disputes current at any time during the month to 128 including 12 lock-outs. In the previous month, there were 92 fresh disputes in 121 disputes current.

During November, time-loss due to industrial disputes decreased by 87,585 man-days. The average duration of disputes current at any time during the month was 5.2 days as against 7.6 days in the preceding month.

One hundred disputes terminated during November. Of these, 66 lasted not more than 5 days each and 10 lasted more than 30 days each.

During the month, time-loss increased in "Agriculture and Allied Activities" to 31,868, in "Construction" to 13,310, in "Electricity, Gas, Water and Sanitary Services" to 11,871 and in "Services" group to 808 man days.

West Bengal recorded the highest time-loss (54,207), followed by Madras (24,267), Rajasthan (19,934), Assam (16,720) and Kerala (16,317). Compared to the previous month, time-loss increased in Assam, Punjab and Uttar Pradesh, and decreased in other States.

For the manufacturing industry group, the index of industrial unrest (base 1951=100) for November was 24 as compared with 44 in the preceding month.

SUPPLY OF TIN PLATES AND STEEL SHEETS TO EXPORTERS OF TINNED PRODUCTS

A revised scheme for the supply of tin plates and steel sheets to exporters of certain commodities exported in containers of steel and tin has been brought into force. The scheme, which is devised as an Export Promotion measure, envisages the supply of tin plates and steel sheets both against future and past exports.

The scheme will apply to the ex-

ports of the following products for the purpose of supply of tin plates: vanaspati fruit products, biscuits, confectionary, tinned fish, paints, varnish and enamels, essential oils, drugs and pharmaceuticals including medicinal castor oil and fish oil, toilet articles like face powder, tooth-paste, hair oil, etc., cardamom seeds, curry powder, sweetmeats, roasted and ground coffee and fresh coffee, instant coffee, tinned tea, dyestuffs and allied products, chemicals and chemical products (including boot polish), pearl barley, rolled oats barley and oat products and cashew kernels.

Except for instant coffee, the supply will be both in respect of past and future exports.

For supply of steel sheets, the exports of the following commodities will qualify under the scheme: paints, varnish and enamels, chemicals and chemical products, vegetable edible oils, dyestuffs and allied products and medicinal castor oil in drums.

Exporters, who desire to have quotas in advance of exports, will have to give undertakings regarding export and execute bonds for fulfilment of the guaranteed exports.

The scheme has been brought into force from January 1, 1959. For quotas against past exports it will be applicable to exports made during the last quarter of 1958 and subsequent quarters. For certain items the quota allotment will be 100 per cent while for others the allotment will be 13½ per cent.

Authorities who can sponsor applications for quotas under the scheme have also been designated. The Secretary, Export Committee of the Development Council for Processed Food, New Delhi, will be the sponsoring authority for quota applications for the export of biscuits, confectionary and tinned fish; the Directorate of Vanaspati, Ministry of Food & Agriculture, New Delhi, for vanaspati; the Senior Marketing Development Officer (Fruit Products), Ministry of Food and Agriculture, Nagpur for fruit products; the Assistant Development Officer (Paints), Development Wing of the Ministry of Commerce and Industry, New Delhi, for paints, varnish and enamels; the Deputy Development Officer (Drugs), Development Wing, for essential oils, drugs and pharmaceuticals, medicinal castor oil and fish oil.

The Deputy Development Officer (Soaps and Oils), Development Wing for toilet articles and vegetable edible oils; the Joint Chief Controller of Imports and Exports, Madras for cardamom seeds and curry powder; the Coffee Board, Bangalore for different varieties of coffee; the Tea Board, Calcutta, for tinned tea; the Deputy Development Officer (Dyes), Development Wing for dyestuffs and allied products; the Deputy Development Officer (Miscellaneous Chemicals), Development Wing, for chemicals and chemical products; the Deputy Development Officer (Food) Development Wing, for barley and oat products and the Joint Chief Controllers of Imports and Exports, Bombay, Calcutta and Madras for sweetmeats other than confectionary in their respective areas.

ZEST has apparently deserted the Budget astrologers, of whom we used to have a rather large crowd in the old days. Now, apparently, everybody's withers are unstrung even by the direst of predictions, and nothing can cheer either. So, the astrologer is out of business and the stock market is deprived of even a semblance of a reason for its erratic behaviour. Indeed, with such incessant chatter about the Plan and its resources—or their lack—and with formal discussion on various platforms of the ways of finding them—or of excuses for not finding them—it would be difficult to say anything new on the subject on the eve of the Budget. Moreover, for most folks, curiously, Budget is another word for taxes, and he would indeed be an ingenious man who would be able to think up new taxes. The irrepressible Mr Kaldor, it is true, has come out with an idea of tax on birth. But his particular suggestion is so blatantly discriminatory against a particular section of the people that one wonders whether he has had of a thing called the Indian Constitution. It is exceedingly unlikely that his idea is likely to commend itself even to a hard pressed Finance Minister. Since new taxes are not predictable, the only field of speculation is that of tax reliefs. Of this, too, alas, there is such a dim prospect that no one has the heart to talk about the subject.

And yet, the situation is not entirely without its points of interest from the speculative point of view. For one thing, this will be Mr Morarji Desai's first Budget. The last was presented by Mr Nehru after Mr T. T. Krishnamachari left the cabinet on the eve of the Budget. Shortly thereafter, Mr Morarji Desai took over the Finance portfolio and his principal preoccupation in the last ten months or so has been with foreign exchange. Except for his somewhat stray extempore utterances, we have nothing very much to go by for making up our minds about the kind of Budget he will confront us with. Though there is not much room for manoeuvre in the matter of readjustments in an annual Budget under a planned set-up, still, Mr Desai's known (or guessed at) predilections are such as to encourage some small mercies for what is conventionally referred to as the "private sector". Indeed, there has been some industrious manufacture of rumours of differences of opinion in the cabinet, and such differences have been alleged in the context of the pace of socialism that is attempted. Some days ago, the Deputy Development Officer (Dyes), Development Wing for dyestuffs and allied products; the Deputy Development Officer (Miscellaneous Chemicals), Development Wing, for chemicals and chemical products; the Deputy Development Officer (Food) Development Wing, for barley and oat products and the Joint Chief Controllers of Imports and Exports, Bombay, Calcutta and Madras for sweetmeats other than confectionary in their respective areas.

And yet, the situation is not entirely without its points of interest from the speculative point of view. For one thing, this will be Mr Morarji Desai's first Budget. The last was presented by Mr Nehru after Mr T. T. Krishnamachari left the cabinet on the eve of the Budget. he (Mr Nehru) knew of his resignation, since he himself did not seem to have asked to be relieved of his office! These rumours, arising as they do on the eve of the Budget and relating as they do to the Finance Minister, may be plainly engineered by interested parties. In any case, any extravagant hopes about relaxation of the rigours of taxation based on Mr Desai's alleged prior affiliations and temperament are sure to be proved misplaced. After all, though Mr Krishnamachari was latterly praised for his resolute socialism by the conventional left, he was, when he took over Finance, considered (even by the left that later praised him extravagantly) a "friend of the private sector". And yet, we now find the odd spectacle of those very people who were after TTK's blood over the LIC affair speaking nostalgically of his stewardship of finance and even eating some of their wilder accusations against him. These very people are now spreading the theory that Mr Desai is so far out of love with the Government's socialism that he may want to wreck it. They point to his well-known and forcibly expressed opposition to Communism as indicative of his real loyalties.

If the so called private sector adopted the same logic and came to but similar comforting conclusions, it may eventually find that it has been too hasty in clutching at illusory straws. After all, it has had its lessons from Mr Krishnamachari's finance minister-ship. The truth is that the compulsions that inexorably push Finance Ministers into budgets of the sort they have been framing in recent years, are such as to make nonsense of any doctrinaire stances they may have taken in the past. They are the compulsions of economic facts and the stage of our development. Short of undoing a number of things we have been doing in the last ten years, it would be impossible for any one, however ingenious and resourceful, to frame a Budget different in essentials. Supposing one were to persuade Mr J. R. D. Tata to become the Finance Minister today, he cannot but frame a Budget more or less like the earlier ones. He can, to be sure, make a change here and a change there; but the essential frame work of the Budget will remain. And this would not be merely the result of

gress and the Praja Socialist party may provide the two party structure, with uncommitted radicals (of the British Liberal kind) and conservatives (Rajaji brand) providing the necessary democratic gadflies.

Getting back to the Budget, it seems to me that, with the implementation of the integrated tax system, any innovation in taxation is for the present impossible. One of the theoretical claims made on behalf of this system was greater efficiency in the collection of the older taxes: in extravagant moments, it used to be claimed that the collection of evaded tax was made possible by the more extensive data now available should make possible the reduction of existing levels of taxation. This is at the moment a rather forlorn hope, but it is necessary to evaluate, in however tentative fashion, the actual gain in the matter of locating tax evasion in these new levies. I do not know whether the Direct Taxation Inquiry Commission will be able to arrive at any firm conclusions on this matter. My own feeling is that the areas of impact of the various levies do not always coincide, with the result that extensive evasion in the middle regions will still be possible. Theoretically, unless a man is liable for all the taxes, viz., on income, expenditure and wealth. Though this is not matter directly relating to the Budget of this year, it would be worth the Finance Ministry's while to examine the question in so-

detail, for, obviously, the more there is collection of evaded taxes, the less will be the need for fresh burdens, this year or the next.

While on this subject of evasion, I must make another suggestion. The Supreme Court recently decided unconstitutional the acts of the Income-Tax Investigation Commission, even when they were acquiesced in by the parties concerned. This has dealt the final blow to a body of which so much was expected. The Government have again tried to salvage something out of the wreckage by further amending the Income Tax Act. It is almost certain that these amendments will give rise to fresh constitutional litigation and uncertainties. It seems to me worthwhile even now to consider the idea of creating a permanent set up like the old investigation commission, but immune from constitutional assaults. This is the only way to bring to light evaded income and to let the honest tax payer have a break in the form of reduced taxes. It is ironical that the most intransigent and the most blatant of tax dodgers should get away with it on account, of all things, of constitutional guarantees. The Courts themselves are helpless in the matter, since the legislature does not give effect to its social policies in less self defeating ways.

In the field of indirect taxation, too, there is hardly anything left for Mr Desai to tax. And even if he were tempted to do anything, he should bear in mind the pretty widespread distress among the poor owing to the pressure of prices on commodities of daily use. In short, I do not anticipate any new taxes at all. On the other hand, some concessions—especially in corporate taxation—would give much needed incentive to industry. The inequity of tax on bonus shares could be softened by reducing its rate. Perhaps it is too much to expect that Wealth Tax on companies would be abandoned after withstanding all the pressure that was brought against it. And Mr Morarji Desai may not want to do anything about the general untidiness of the present tax structure. He will, doubtless, take shelter under the fact that the Tyagi Committee is still at work and he cannot do anything till it makes its recommendations.

But a Budget is not all taxes. It includes proposals for borrowing, and I, for one, am anticipating with some keenness what Mr Morarji Desai has in store for us. Unfortunately, in the last ten months, he has not given any indication of his views on the subject. The conscientious person that he is, he may not have wanted to speak on the subject until he has got the hang of it. We shall shortly know what lessons he has learnt from the significant developments in the money market in the last year and a half and about which I have spoken often enough in these pages. The carrot, I have said often, is a

better bait than the stick and there is plenty of evidence that conditions for loans are more propitious than ever before. As far as I am concerned, this part of the Budget is sure to offer more interesting material for study than any other.

As regards the foreign exchange position for the next year, the Budget is not likely to contain anything that we have not already learnt. The Plan's foreign exchange is already taken care of, thanks to the good offices of the World Bank and friendly foreign countries. With the Second Plan's foreign exchange component drastically pruned, and imports so tightly regulated, there is hardly any likelihood of our running into any serious difficulty in the next year.

In the customary survey of the economy of the current year, Mr Morarji Desai is sure to emphasise the fact that this was not merely a year of crises, but also a year that successfully resolved them by determined effort. This fact needs to be underscored, if only for the need for rectifying the imbalance created by the underscoring of the fact of the crises.

And what else is there about Mr Morarji Desai's Budget to come at the end of the month? I have, as the reader can clearly see, been extremely reluctant about making any particular predictions, though I have thrown out the vague suggestion that some relief in the Bonus Tax is called for. Then, we may resign ourselves to a variety of changes in excise duties, and paper may be a commodity in which the change is upward. Direct tax reliefs are unlikely; and, in the field of corporate taxation, the wealth tax on companies has presumably come to stay. If the scope for prediction is this year limited, it is also partly because the reliefs that had been hoped for have most of them already materialised. Thus, for example, in regard to Section 23A companies, the range of corrective reliefs obtained is considerable. Then suitable reductions in the excise duties on cotton textiles and tea were given effect to during the course of the current fiscal year. The one specific relief that is being talked about, and which may materialise, is a reduction in the excise duty on cement—which is a commodity that is becoming increasingly difficult to sell. In brief, the Budget will contain little by way of surprises.

The surprise will therefore be if, contrary to what I say—"realistic" expectations, the Budget does prove in fact to contain a measure of tax concessions. But then, it is always possible that Government suddenly realise that, at the present moment, initiative in the private sector is being curbed due to lack of incentive. So, I would wish that—as distinct from the "Tax" Budgets that we have been having for some years—we had this year a "Reliefs" Budget. But that may be to hope for too much.

BAVESDROPPER

GATEWAY GOSSIP

CONSIDERING the fact that the Government have had to give a highest priority to the problems arising out of reorganisation, the progress achieved so far in the State under the current five year plan must be said to be quite satisfactory. For it is expected that nearly Rs 175 crores out of the State's Second Plan provision of Rs 228 crores will be expended by the end of the third year of the plan. Addressing the joint session of the State Legislative Assembly on Monday Governor Sri Prakasa pointed out that as the tempo of developmental activities both in the economic and social spheres have now gathered considerable momentum, it may be confidently expected that the Plan of the new Bombay State will be implemented in full. The reasons for the Governor's optimistic appraisal of the progress of the State's Second Five Year Plan are not far to seek. In the first place Government are in a position to devote much more attention than has been found possible in the first two years of the plan to developmental activities in as much as the initial difficulties of integration have been nearly got over. The past year has seen the completion of the major work relating to the integration of services, unification of laws and other problems that arose out of the integration of the State. The shifting of the emphasis to the tasks of the Second Plan is already evident in the brisk progress of development expenditure during the past year. It is expected that an expenditure to the tune of Rs 78 crores will be incurred on the various Plan schemes during the financial year 1958-59. It would appear, therefore, that the State is well on the way toward making up the time lost during the first two years of the plan due to its preoccupation with Reorganisation problems.

It may be doubted that with only two years to go and with 50 per cent of the plan provision remaining to be expended it will be over-optimistic to expect to reach the targets set for the State under the Second Plan. This line of reasoning overlooks the fact that the tempo of activities relating to the Second Plan projects has been very much quickened during the third year of the plan. And as Mr Sri Prakasa has told the members of the Legislative Assembly, "the Government are keen to implement the Plan in full and with this end in view, the size of the development programme is being stepped up from year to year".

The commendable headway made by the State in development activities is borne out by the results that are already discernible in several directions. The fact that the agricultural season this year has been good may be expected to go a long way toward bestowing the requisite attention on other aspects of life affecting the community. But this is not to say that Govern-

ment can afford to slacken their efforts towards reaching the goal of self-sufficiency in food. It is, therefore, gratifying to note that Government are concentrating on increasing the food output by various practical measures such as the extension of irrigation facilities. An additional area of 1,38,000 acres has been brought under irrigation through major and medium works since the launching of the First Five Year Plan. It is, however, to be remembered that Bombay's record in the matter of utilising the irrigation facilities is not quite satisfactory. It may be expected that the practical measures referred to by the Governor will give the highest priority to this aspect.

The progress recorded by the State in regard to fostering of the cooperative movement and in the formation of village panchayats should go a long way toward the speedy rehabilitation of the rural population. The total number of cooperative societies in the State is now nearly 32,000 with a membership of over 50 lakhs and a working capital of over Rs 251 crores. A significant development in this field seems to be in the offing as the Government expect that it will be possible for them to establish a single apex cooperative bank by the amalgamation of the Saurashtra, Vidarbha and Bombay State Cooperative Banks. A programme to set up multipurpose cooperative societies in every village or group of villages with a population of 1,000 is being worked out. The ultimate aim of Government is representation for every family in the village cooperatives.

It may now be confidently expected that by the end of the Second Plan, the State will have achieved the objective of covering all villages by panchayats. So far 60 per cent of the villages and 75 per cent of the rural population are covered by village panchayats. It may be recalled that an important landmark in the establishment of panchayats has been made in the State last year when the State Legislature passed a unified bill for the administration of village panchayats throughout the State. The bill provides for the enlargement of various functions that village panchayats can undertake for social and economic development of the people, uniform financial assistance from Government to village panchayats and powers for them to raise their revenue. Under this bill the panchayats have also been given additional judicial powers.

It is evident that the success of the two sets of programmes is largely due to the keen interest evinced in them by the people themselves. Mr Sri Prakasa has revealed that there is great enthusiasm among the people of the State, especially of the rural population to share the burden and enjoy the benefits of rural advancement.

Progress of Bombay

People are increasingly participating in the constructive work and they are keen to expand the cooperative movement. The significance of the village panchayats is now well recognised and as a consequence the responsibilities involved in local administration as represented by panchayats and other forms are being taken up enthusiastically. At present the total number of developmental blocks in the State is 320 covering almost half the rural population of the State. Fifty-four new developmental blocks are proposed to be started as pre-extension blocks during the year 1959-60. The planning and execution of the programme has become more systematic and realistic. The formation of an informal consultative committee with some members of the legislature is expected to assist further in the extension of the programme and in securing more intensive public participation.

It is, however, to be noted that the assessment of the prospects of a successful implementation of the plan projects is not based solely on the strength of the keen interest evinced by the people of the State in constructive work. While known physical resources are quite adequate to sustain continued development, the state has considerable untapped resources consequent to the inclusion of Vidarbha and Saurashtra. The recent oil find in Cambay may herald a new era of industrialisation for the State. In this regard Mr Sri Prakasa has pointed out

that Bombay is "singularly fortunate in having adequate resources, both physical and financial, for its allround development". Already the State has made rapid strides in industrialisation. It occupies a preeminent position in the textile industry accounting for more than 52 per cent and 68 per cent of the entire country's yarn and cloth production respectively. A very high proportion of the dyestuff industry and oil refinery industry is located in the State. Other industries in which it has a sizable share are vanashpati, soap, radio, and electrical industries. It also accounts for 11 per cent of bicycle, 10 per cent of sugar and 16 per cent of cement industries. Mr Prakasa has indicated in his address that there is a proposal to establish a pig iron plant in the Chanda district. Thus prospects of establishing heavy industries have also improved. An index of the industrial development of the State is the high proportion of its urban population. The State has 28.3 per cent of its population in urban areas as against 17.4 per cent for the whole country. It is to be noted that in the old State the proportion was still higher at 31 per cent. It is evident from the decline in the percentage of urban population that though the areas that have been included in the new State have brought valuable additional resources, they are comparatively less industrially developed than the areas in the old State.

Housing

With a huge backlog in the provision of minimum standards of accommodation coupled with a progressive increase in population, the problem of housing has assumed tremendous proportions in our country. It has been estimated that by 1961 about 8.9 million additional houses will be required to meet the housing needs of the people. As against this requirement, it is expected that the programmes for building dwellings as envisaged in the Second Plan will give only an additional 3 million houses, taking both the private and public sectors. It will be clear, therefore, that even if all the schemes are implemented according to schedule, there will be a huge deficit in housing facilities in the country at the end of the current plan. In this regard it may be noted that the need for active Government assistance in tackling the housing problem has long been recognised. The First Plan had made a provision of Rs 38.4 crores for housing and such provision has been increased to Rs 120 crores under the Second Plan. According to the Planning Commission's appraisal of the Second Plan, the total outlay over the first three years is about Rs 40 crores. The revised allocation will be Rs 100 crores or Rs 20 crores less than the original allocation. It also seems likely that the allocation will be further cut and the Commission have put the figure at Rs 84 crores on the basis of a total plan allotment of Rs 4500 crores.

While it is true that without substantial assistance from Government the housing problem cannot be satisfactorily solved, it cannot be maintained that there is no other alternative but to endure the shortage till such time as Government are in a position to allot the required funds for all the housing programmes that may be submitted to them. There are many ways in which private enterprise can help reduce the housing shortage. While laying the foundation stone of the staff quarters for the employees of the Life Insurance Corporation, in Bombay early this week, Mr S. G. Kazi, Minister for Civil Supplies and Housing, Government of Bombay, has referred to the prospects of an easing in the situation regarding supplies of essential building materials. Cement is now easily available in the country and Mr Kazi has revealed that "we have been given to understand by the Central Government that with effect from the last quarter of this year, more steel is expected to be released for housing". With an easier supply position in regard to building materials such as cement and steel, it may become possible for private enterprise to evince greater interest than hitherto in housing projects. The Rs 12 crore housing programme under

which the Life Insurance Corporation is to provide housing for its employees all over the country can be emulated by other large scale employers also.

The magnitude of the housing problem in the city of Bombay can be gauged from the fact that there has been a 150 per cent increase in population during the last 25 years while the increase in dwellings during the period has been to tune of only 35 per cent. Mr Kazi has pointed out that the existing accommodation in the city is just enough for about 28 lakhs of people while the present population of Greater Bombay is about 43 lakhs. There is thus a shortage of about 3 lakh tenements.

*

Export Incentives

Speaking at the annual general meeting of the All India Exporters' Association in Bombay this week, Mr Nityananda Kanungo, Union Minister for Commerce, has pointed out that indications are that our exports during the current year will show a sizable increase over the previous year. There had been a number of inhibitory forces at work during the past year and perhaps the most powerful of them was the recession in the world trade. It would appear that this restraining factor has begun to lose its influence as the recession is yielding place to brisk conditions in most parts of the world. Moreover, export promotion has come to receive special emphasis in the country in view of the acute shortage of foreign exchange and the resultant accumulation of foreign loans. It is increasingly being recognised that in order to maintain the tempo of our economic development, it is incumbent on us to devise ways and means of augmenting our foreign exchange resources. For our requirements of foreign exchange will continue to remain considerable for several years to come as we have in the first place to repay the loans already contracted and secondly we have perforce to undertake a good number of projects still which will need foreign exchange.

It is gratifying to find, therefore, that Government are also keenly aware of the urgent need for promoting our exports. In the past one, two years several export promotion councils have been established and exporters are getting a number of incentives for expanding their business with overseas countries. Mr Kanungo has rightly pointed out that while exporters should get all the help they need from Government, the most important point to be remembered in export promotion is that our products should be competitive. This can be achieved only if we succeed in reducing the cost of production of our products. But one will find that here again one finds oneself looking to the Government for help. For Government's labour policy to mention only one factor that prominently enters into the cost of production in industry is such as to allow little room for any kind of adjustment.

GATEWAY MARKETS

Margins Imposed on Oilseeds

IN a bid to curb excessive speculative activity in Oilseeds, the authorities of the Bombay Oilseeds Exchange imposed a higher margin on Groundnut futures and fresh margin on Cottonseed. Soon after the announcement, prices sobered down. It will be too early to say, however, whether these higher margins will have any lasting effect.

In the case of Groundnuts, the margin proposed is Rs 45 per candy if prices go beyond Rs 185 and the margin will be Rs 92.75 in the delivery months of February and May. For Cottonseeds, if prices exceed Rs 135, a margin of Rs 15 per candy will be imposed. For groundnuts, there is already a margin of Rs 25 per candy if prices go beyond Rs 175; but operators preferred to pay the margin and still push up prices.

It is understood that the new margins became operative from the 31st January. The Exchange authorities were discussing the procedure with the Forward Markets Commission for collection of margins. This is said to be made difficult by the fact that most "bulls" are outside the Bombay State—in Uttar Pradesh and the Punjab—and time will have to be given to the Bombay brokers to collect the margin amount from their clients.

While the FMC's action has been welcomed by a section of the trade, it is pointed that this may provide only a palliative and not a permanent cure for the unhealthy rise in prices. For, there is a strange situation in the market at present in that the prices at this time of the year had never ruled so high. Not only this, reports from producing centres suggest that there is a hardly any more godown space for stocking the large arrivals of the new crops despite the understandable inclination on the part of the growers to withhold their stocks in expectation of higher prices. The impact of increased arrivals is bound to be felt on the prices in the coming weeks.

Meanwhile, Groundnut ready Bold was quoted at Rs 35.62 and Groundnut Oil at Rs 18.75. In the Castorseed section prices showed a hardening tendency on reports of the rise in prices in the UK following bad weather in Brazil. Castor ready was quoted at Rs 30.75 and Castor Oil, commercial quality, at Rs 15.62. In the Linseed section, ready was quoted at Rs 34 and Linseed Oil at Rs 17.50.

*

Gold & Silver

Price movements on the Bombay Bullion Exchange were confined to a narrow range. In the Silver section, arrivals amounted to as much as 20 bars against an offtake of only 14 bars. Unrefined metal

receipts totalled 22 bars. Spot changed hands at Rs 195.31 to Rs 195.94.

The consumption of silver in the United States, in 1959, is expected to exceed the 1958 figure. According to Messrs. Handy & Harman, 1959 will see the price more frequently above the Treasury buying price for domestic silver than in the recent past.

Although Gold receded mildly early in the week on reports of increased arrivals, there was a partial rally towards the close on reports of seizure of contraband supply. Spot rates changed hands at Rs 117.78 to Rs 118.09, while Sovereign ruled firm at Rs 74.50. Arrivals were heavy at 4,000 tolas against an offtake of 2,000 tolas, while unrefined metal receipts amounted to 3,500 tolas.

*

Yarn

Barring some improvement in Staple-Fibre yarn, conditions in the local Yarn market were easy during the past week due to restricted offtake. In fact, prices of Art Silk Yarn were depressed due to selling pressure from indigenous manufacturers against contracts entered into earlier. Added to this, there was the impact of the arrivals of foreign yarn against export promotion licences issued earlier.

Listless conditions continued to prevail on the Cotton Yarn front. Demand from the handloom weavers was less active due to a setback in offtake of cloth. Despite the continued firmness in raw cotton prices, Cotton yarns remained depressed. In fact, prices would have gone down further, but for the fact that the hosiery season is expected to start very soon.

*

Non-Ferrous Metals

After ruling weak earlier, prices of Non-Ferrous Metals steadied up towards the close due to scanty releases of copper and zinc by the State Trading Corporation. Weakness was, however, in evidence in brass sheets following restricted offtake of utensils.

A steadier tone was noticed in the Copper section in spite of the weakness in zinc, as releases of copper by the STC were not appreciable. Scrap ready was quoted at Rs 218 per cwt, while Zinc remained quite at Rs 96 per cwt. Due to the absence of demand, Lead was weak at Rs 84 per cwt. Some dealers even offered this metal at as low as Rs 82. Tin remained practically unchanged at Rs 152 per quarter.

The near-term trend of Zinc is considered steady as there are promises of increased demand. Many new uses for metal are being found. But the trend in Lead is far from certain, as there is so far little indication that the increased supply will be matched by a proportionate improvement in demand. As the statistical position in copper has improved considerably, the longer-term outlook appears to be steady. Tin prices may not change much for the time being, as the decision of Russia to export only 13,500 tons during the current year may help stabilise prices of this metal.

WORLD OF COTTON

THE Cotton market in Bombay remained buoyant with the spot and forward sections presenting a firm front during the week under review. The firmer trend in prices was attributed to heavy purchases by the North Indian speculators. Reports from Delhi indicated that a handful of operators were busy tightening their grip on cotton, oilseeds and grains, as they expected a further rise in prices in the coming months. Lower estimate of the overall cotton crop in the country and reports of a deterioration in quality of some growths also aided the bullish sentiment in the market. With spinners buying quality cottons and fresh support for futures from Delhi operators, Jharilla March contract advanced steadily to finish the week at Rs 675.50 against Rs 668.50 in the previous week.

Naturally, the Spot section witnessed cheerful conditions and spinners showed increasing interest in qualities like Vijay, Bhavarati, CO2, Jola and Porbunder CO2 varieties. Mills in South India also evinced good interest in popular growths. Above all, latest developments on the export front were also a contributory factor. In this connection, it may be mentioned that China's refusal to grant export licences for cotton to the UK in spite of firm commitments has so far not resulted in better UK enquiries for our cotton. Leading exporters are, however, of the opinion that Lancashire cannot hold off for long. Accord-

ing to them, export business in medium staple varieties should pick up in due course.

Again, the President of the East Cotton Association and the Cotton Buyers' Association, Bombay, will, it is learnt, lead a six-member delegation of cotton exporters to countries like Japan, Hong Kong, the Continent and the USA with a view to renewing the contract with the foreign buyers and also to finding out ways and means of promoting exports of Indian cotton. The delegation is expected to leave by the third week of March. This is the first delegation of its kind from India to visit foreign countries to explore the possibilities of promoting exports of surplus cotton.

In these circumstances, export houses are disinclined to quote lower than 20d per lb in reply to offers around 18.5d. As a result, prices of Jharilla, Dholleras, Mathia and Oomra Deshi have improved by about Rs 10 per candy in the past few days.

Demand for foreign growths was, however, subdued since most spinners were reported to have already covered import quotas allocated to them. Only a small business was reported in top Karnak for prompt shipment and top crop Gezira S. Grades for March/April delivery. Mills did not show much interest in East African and American cottons.

Speculation is now rife about the prospects of Egyptian cotton imports this year. The delegation from that country is busy explor-

Prices Forge Ahead

ing cotton markets in Bombay and Ahmedabad for the sale of Egyptian varieties; but the response has, so far, been poor as equivalent varieties from the Sudan are cheaper by about Rs 250 per candy. Rumours are current that Egypt is inclined to offer higher discounts to Indian mills with a view to increasing the competitive capacity of her cotton in the Indian market. The discounts at present are 15 per cent.

There are, however, reports that the Egyptian delegation has succeeded in its mission. For, it is understood, that a fresh licence to import 15,000 (Egyptian) bales of cotton will shortly be issued by the Government of India. This, more or less, represents Egypt's adverse trade balance position with us, which is about two million Egyptian pounds. In appreciation of this gesture by India, Egypt is believed to have agreed to give a further discount of 15 per cent, thereby raising it to 30 per cent. Even with this further discount, Egyptian prices are still out of parity with those of Sudan.

But the recent reduction in Gezira reserve prices has made Egyptian growths even more unattractive. It is, therefore, felt that the only way to induce Indian mills to buy more Egyptian cotton is to make it considerably cheaper or to buy more goods from India under a special payments agreement.

Meanwhile, textile interests feel that India should buy a large part of her raw cotton requirements from the Sudan with a view to retaining her cloth exports to that country. They are perturbed at the prospects of the Sudan and Great Britain entering into a trade agreement and fear that India will gradually lose the Sudanese market for textiles in favour of the UK if proper measures are not taken in time.

*

STATISTICS

Exports by rail, from 1st September 1958 to the 29th January 1959, were 85,438 bales. Estimated mill consumption in Bombay, during the same period, was 507,997 bales as against 550,497 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exports, dealers and mills in Bombay, on the 29th January 1959, was 434,290 bales as against 515,184 bales on the corresponding date of last year.

*

CLOTH AND PIECEGOODS

The production of mill cloth in December last year was almost the same, at 435 million yards, as in December, 1957, and only 40 million yards lower than in December, 1956. Total cloth output, during 1958, amounted to about 4,923 million yards which is the lowest for the past five years, the

BOMBAY REVIEW

respect figures for 1957, 1956, 1955 and 1954 being 5,317; 5,282, 5,094 and 5,025 million yards respectively.

The production of yarn also, in December 1958, was about the same as in December 1957 and 1956. In fact, it was about a million or so pounds higher. Together with the December 1958 output of 154 million pounds, the aggregate yarn production, during last year, was 1,683 million pounds, which is lower than that for the previous year of 1,773 million pounds; but it is higher than for any other year prior to 1957.

S. E. RLY TENDERS

Sealed tenders are invited for (1) Tender No. CON[COS] 11/139/F2/59 for supply of 20 Nos. Lifting Barrier—Winch to IRS Drg. No. SA-8132 (Advantage). Earnest Money is Rs. 240/-. Tenders will be opened on 23-2-59 at 12 Noon.

(II) Tender No. CON[COS] 12/P&M/B/59 for supply of (a) 3 Nos. 'Mecol' JLT 47 Type or similar Lifting Trucks capacity 7 to 8 Cwts. (b) 100 Nos. Pallets for the same. Earnest Money is Rs. 220/-. Tenders will be opened on 24-2-59 at 12 Noon.

(III) Tender No. CON[COS] 13/B/58 for supply of 32 Nos. 12" dia. Cast Steel 7 Spoke Wheels rough casting 2½" tread mounted on solid M.S. Axle 1½" dia with Machined inside Journals 3½" long x 1½" dia for 5'-6" gauge as per I.R.S. Specification No. M2, Class A, grade-1 & COS, S. E. Rly. Drg. No. 6/SE/58. Earnest Money is Rs. 220/-. Tenders will be opened on 25-2-59 at 12 Noon.

Tender forms are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms or on production of cash receipts from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipts for depositing earnest money as stated above with this Rly's Chief Cashier without which the tenders are liable to be rejected. Approved contractors having a permanent deposit of Rs. 1,000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax clearance certificate with the tender.

DELHI REVIEW

WITH the inauguration of the first blast furnaces in Rourkela and Bhilai by the President this week, the first fruits of the public sectors in the Second Plan will come into being. It will be some time before these fruits are available for public enjoyment. Present estimates are that Bhilai and Rourkela will have the first rolling mills in commission before the end of this year, and steel in saleable forms will issue forth from them. Already the supply position of pig iron has improved with the functioning of the new blast furnaces at Burnpur and Jamshedpur, and increase in the production of finished steel in these two places will ease considerably the supply position of steel products even in the first half of the year. The year 1959 will, therefore, see the realisation of some of the core projects of the Second Plan.

Whether planning in India at the moment is too fatally obsessed with steel is a matter of opinion. But even those who think that will not fail to be impressed by the prospect of steady supply of steel products from the plants already planned and executed. Bhilai and Rourkela—the latter especially—came under heavy parliamentary fire in recent months for delays and rise in their cost. In the event, however, the delay was only by a few weeks, and there is hardly any example of a million-ton capacity steel plant whose erection has strictly conformed to the scheduled time table. And when it is realised that the difficulties at one stage in Rourkela seemed pretty formidable, it is nothing short of a miracle that the delay has been so insignificant.

A steel plant is a vast complex of coordinated mechanism and its erection requires simultaneous progress on various fronts. As is well known, steel is an alloy of iron, carbon and slight quantities of metals like manganese, silicon etc. Iron ore has to be freed from the impurities found in it and the requisite quantity of carbon and other elements have to be added. The freeing of the impurities can best be done by coke fire. Limestone is added for removing impurities like sulphur and phosphorus and earth, all of which emerge at the end of the fiery ordeal as "slag". An integral steel plant thus consists of four main sections: coke ovens to convert charcoal into coke; blast furnaces to smelt iron ore to iron; steel melting plant to alloy iron with carbon and other metals to form steel; and, finally, rolling mills for giving the desired shape to the steel ingots. A whole series of ancillary productive apparatus is also necessary. This includes a power plant for electricity, a blower plant for sending in air at a high velocity into the blast

furnaces, structural and machine shops for repair and maintenance of plant and a host of other things too numerous to mention.

This is just the skeleton apparatus of a steel producing unit and does not take note of the countless number of other tasks connected with the transport of ore and provision of quarters for workers and other amenities of a township. These things have to grow simultaneously and the technical and practical problems of coordination involved in such undertakings are formidable and varied. Though, of course, it is possible to learn from experience and, indeed, Hindustan Steel has certainly benefited by the lessons of Bhilai and Rourkela, problems are not always of the same nature even when they arise out of similar situations. For instance, in Bhilai, supplies of equipments were, for some time, too fast for the rate of construction at the site. On the other hand, at Rourkela, in 1957, there was the opposite difficulty of supplies of equipment from abroad being delayed with the result that construction had to await the arrival of the plants. When feverish attempts at rectification of this position succeeded, they succeeded in an awkward way. For now the opposite situation of large amount of equipment on the spot was created, with the result there was delay in erection. Further, coordination is not merely between supplies of equipment and their erection, but between the various sections of the whole complex themselves. There were transport bottlenecks, and Vishakhapatnam port was for some time cluttered with Russian equipment intended for Bhilai. Then there was the difficult question of trained personnel for the job. As in much of our efforts, each project was at once an undertaking in itself and a training ground for further such efforts. Most of the engineers and operatives and workers on the job were completely new to their job and had to obtain the specialised training for the job even during the period of erection. This led to further upsets in schedules and created fresh problems of coordination and, of course, increase in the cost. To the credit of the private sector in the steel industry, it must be said that they cooperated readily in the matter of giving preliminary training to engineers before they left for Germany or Russia for further training in their special jobs.

But, by the end of 1958, the worst period of Hindustan Steel's teething troubles was over. The experience gained will have no immediate use, for, Durgapur is a "package deal" and the British consortium are handling all the technical problems themselves. But when the steel plants at Bokaro and other places come into being,

Rourkela and Bhilai

all the lessons now learnt will have been digested and we shall also have by then a compact corps of trained personnel and everything will be comparative plain sailing. People who complain of the increase in outlay of these two projects will have to bear in mind that a true costing of the projects will have to take into account the "experience value" of errors and the permanent accretion to knowledge of methods and organisation by the "mistakes and miscalculations" of these projects. They will then find that quite a large amount of expenditure at Bhilai and Rourkela is in the nature of "capital" and only a portion thereof is really chargeable to the two projects themselves.

One of the fruits of the two public sector steel projects has been the emergence of a training programme. For each of these plants, it has been estimated that an average of 670 engineers and 6300 skilled workers will be required. The training programme has been drawn up in such a way that there is no "over-readiness" either. Thus, the training is so phased that the completion of the training is timed with the commissioning of that part of the plant for which they are being trained. Out of a total number of 683 planned to be trained in the USSR, 221 have already been there and returned after training and about thirty more are there at the moment. The rest of the training programme is anticipated to go through without any hitch. For Rourkela, the training is to be in West Germany and the US. For the training of the operatives and skilled workers, the cooperation of the two steel plants in the private sector and over 50 engineering firms has been sought and obtained. About 1,800 operatives will be trained at Jamshedpur and Burnpur in four years and about 1,600 skilled workers will be taken care of by the engineering firms at a time. By the time all the three new steel plants in the public sector go into full production about 13,000 skilled workers will be available for them. This part of the efforts is no less important than the actual erection activities of the projects.

The completion and commissioning of the blast furnaces are, however, only the beginning. Two more blast furnaces and the melting shops and rolling mills have to be made ready. Work on these is going on apace. The bulk of the plant and equipment has already arrived and the foundations for the other blast furnaces have already been completed. Erection is also going on and, as stated earlier, the production of finished steel products is expected to com-

mence by the end of this year. When all the departments are at work, Rourkela is expected to produce 200,000 tons of plate, 470,000 tons of hot and cold rolled sheets of various gauges, 50,000 tons of tinplate, and about 50,000 tons of foundry iron. The by-products plant will deal with 130 tons of tar per day and produce creosote, naphthalene and other products. In addition, a fertiliser plant is being put up to use the surplus nitrogen from the oxygen plant. This is to produce 580,000 tons of nitro-limestone—thus having a capacity as big as Sindri. Bhilai, on the other hand, will produce 200,000 tons of rail and sleeper bars, 160,000 tons of heavy structural, 260,000 tons of medium structural, 150,000 tons of billet for re-rolling and 300,000 tons of foundry iron. As at Rourkela, the by-product plant will make use of 130 tons of tar per day.

By the end of the Second Plan period, the target of six million tons of steel (ingots) will have been fully realised and the output of 4.5 million tons of saleable steel will have commenced. Already, plans for additional steel plants are afoot. Interest in the production of steel in small units has been roused by reported performances of our neighbour China. How far this would be feasible in our country is still to be investigated and an official delegation for studying these production methods was recently promised by the Minister for Steel. Meantime, experience gained in Bhilai and Rourkela has been valuable. It is reported that the plant and equipment required for the Third Plan steel projects can be manufactured in India itself. If this proves feasible, the steel age in India can be said to have arrived and one of the fundamental purposes of the Second Plan would have been fulfilled.

If the steel age has begun, inferentially, the industrial age is not far off; but essentially, there must be the growth of what may be called the steel-using industries, for, it is such that will ensure the spread of prosperity within an industrial framework. But there has been little sign so far of any worth while activity in respect of the ancillary industries. The obsession is, as I have already pointed out, with steel; and it would be folly if this obsession were to make us think in terms of too high a steel production target for the Third Plan. Rather should there be a planned effort to utilise the steel that has been brought into production during the Second Plan. It is therefore that I have sought to emphasise that there must be no sense of compulsion about the steel target for the Third Plan.

OLYMPUS

NORTH INDIAN NOTES

Export Promotion

The disappointing achievement of the Government's export promotion drive during 1958 now a matter only too widely known, is borne out by the lower level of exports during 1958 against exports in 1957. The improvement that has been noticed in the payments gap of the country would seem to reflect not so much the improvement in the exports as the effect of the drastic cut imposed on imports into the country during the year. Whatever might have been the factors behind the poor performance on the export front, the need for intensifying the export promotion drive having been more than amply demonstrated, it is upto the Government and the business community to address themselves more earnestly to this question.

Compulsorily asking the manufacturers to export part of their production is indicated as the next probable step which the Government intend taking, by Mr Lal Bahadur Shastri, while inaugurating the Federation of Chambers of Commerce and Industry on trade promotion, at Calcutta. Notwithstanding the urgency and imperativeness of the need for export promotion to think in terms of compulsion on the business community in stimulating exports, is, at the least, to simplify the problem which export promotion poses to the business community and to overlook the multifarious difficulties, which it has to encounter.

An increase in production of the articles meant for export is an essential condition for the success of even compulsory exports. This raises many other problems particularly regarding the availability of raw materials, and in so far such raw materials may have to be obtained from external sources, increase in imports might become necessary and this increase might neutralise the increase in exports that is aimed at. Compulsory exports might have also untoward effects on the internal prices of the goods exported.

Technological Training

A glaring discrepancy between the demand for and supply of technical personnel, is one of the current features of the national economy. Recognition that a high rate of development could not be sustained without availability of proper technical personnel for various development projects has not been enough to assure adequacy of technical personnel. The Government's efforts have evidently been unequal to the magnitude of the task of ensuring proper and expeditious development of technical institutions. An idea of the growing tempo of demand for technical personnel could be had from the fact that even after doubling the number of graduates

and diploma holders as at present envisaged at the end of the Second Plan, shortage of personnel is not expected to be completely wiped out. The need therefore to tap newer sources for getting larger number of technical personnel was stressed by Dr C. D. Deshmukh, Chairman of the University Grants Commission, while addressing the fourth annual convocation of the Indian Institute of Technology at Kharagpur.

There is naturally a limit to which the resources of the Government could be stretched in expanding facilities for technical education. The Government have already programmes for large-scale investment for technical education which envisage expansion of facilities with the object of having at the end of the Plan period, a total number of 84 degree institutions, and 160 polytechnics admitting approximately 11,000 students in degree courses, and 20,500 students in diploma courses annually. In view of the fact that technical personnel is in growing demand not only for projects in the public sector but also for the industries in the private sector, it is but proper that the private sector should also be made to share in the efforts to provide facilities, for technical education. In this connection Dr Deshmukh pointed to the great part played by industries in Europe and the USA in the development of technological education. It is however to be regretted that in this country this has been so far treated as something removed from the legitimate field of the industries.

Rope Industry's Problems

The main difficulty of the rope industry in our country is that it has to depend largely on imports for its raw materials. Its requirements of sisal and aloë fibres are about 10,000 tons per year, out of which only 4,000 tons of aloë fibre are available from indigenous sources. For the balance of about 6,000 tons the industry depends on imports. But due to the stringent import policy of Government the manufacturers are finding it difficult to obtain their supplies in time and in adequate quantities. Speaking at the recent annual general meeting of the Indian Rope Manufacturers Association, Mr K. L. Jalan has pointed out that with a helpful import policy, the industry may well be enabled to occupy its rightful place in the economy of the country. In advancing the claims of the industry Mr Jalan, however, does not ask for any special concession. For, he points out that as the total foreign exchange that will have to be spent on imports of the fibres required by the industry will be in the neighbourhood of only Rs 50 lakhs and as the saving that will be effected by the restrictive import policy as applied to fibre imports will be about Rs 12.5 lakhs, it should not be difficult for the Government to allow the industry to obtain its fibre requirements in full.

Government may also do well to take note of the fact that by

NORTH INDIAN MARKETS

Sugar Dilemma

ALTHOUGH crushing in Uttar Pradesh is in full swing and the cane supply supply is reported to be adequate, sugar production in the country is tending to decline. The supplies of cane to the factories is being threatened again, as strike has been announced from the 5th February if cane price is not increased.

Prices of Cuban sugar have continued to fall, although it is not clear yet how much damage has been done to the sugar industry during the recent civil war. The new Government is beginning to function quickly and emergency measures are reported to have been taken to help the industry. Crop estimates from Cuba appears to be up in any case, by about 400,000 tons (to a total of 6 million tons) over last year; and this forecast together with estimates from other producers have a steadying effect on prices. The world crop in 1959 is expected to be up by over 3 million tons to 50.6 million tons, while the European beet crop should be up by 2 million tons to 18 million tons.

The International Sugar Agreement, which came into force on January 1, is also expected to help steady prices. Although the agreement covers only supplies coming into the free market, it now covers a number of exporters previously excluded.

Meanwhile, the industry and the Government are still talking of exporting the commodity, while world sugar prices have lately fallen sharply to around the floor fixed under the International Sugar Agreement. There is, therefore, a growing feeling that, regardless of the foreign exchange shortage, India's sugar plans may be shelved for the time being.

Again, it is felt that export plans can be postponed unless determined action is taken on three points. First, more and better cane has to be grown. Secondly, mills have to be urged to greater modernisation, efficiency and economy in their production methods. Finally, the consumer needs to be treated more fairly.

Naturally, conditions in sugar markets have remained quiet,

enabling the rope industry to get its fibre requirements in adequate quantities and in time, they will also be aiding an important industry to increase its production. The rope industry is now producing all types of ropes and cordages required by the country. The combined capacity of the production of the members of the Indian Rope Manufacturers Association of rope and cordages of Manila, Sisal and Aloë etc is over 15,000 tons a year and it is estimated that they have a capacity to produce a further 10,000 tons.

thanks to better supplies following a further release for free sale. In the Hapur market, following rates (per maund) are quoted:—Saharanpur (D29) Rs 37.75; Rohana (D28) Rs 37; Shamli (D29) Rs 36.75; Deoband (B29) Rs 37.12 and Iqbalpur (B29) Rs 37.12.

After a prolonged spell of monotonous conditions, the Kanpur market experienced a welcome revival of steady feeling in the wake of fresh buying. Barring Uttar Pradesh, traders from almost all the consuming mandies remained active buyers, as their stock position was far from satisfactory. Though spot offtake remained poor, prices displayed a rising tendency, as stocks with the trade did not exceed 15,000 bags and a major portion of those comprised of damaged sugar.

Khandsari

Production of Khandsari is now hampered by rains and continued cloudy weather. It is reported that crushers, producing khandsari, are purchasing cane upto Rs 1.57 per maund as against Rs 1.31 fixed by the Government for purchases by the mills at outside gate stations. The rates are moving between Rs 30 and Rs 34.25 per maund, according to quality.

Gur

The Gur market in Hapur continued to display a steadier tendency with prices showing a rise of about Re 1 per maund, as arrivals from rural areas declined due to rains. Stockists were also purchasers in the market. With the result, stocks swelled to 35,000 maunds. Gur Pansera quality moved between Rs 16.75 and Rs 17.00 per maund.

In the Muzaffarnagar market, prices improved as arrivals there were hampered by rains. Chakku was quoted at Rs 18.12 and Pansera at Rs 16.62 to Rs 16.87 per maund.

Conditions in the Delhi market remained, however, quiet due to poor buying interest.

Foodgrains

Quiet conditions were witnessed in the Hapur Foodgrains market due to better supply position following arrivals of wheat from East Uttar Pradesh and increased daily sales through fair-price shops. Timely winter rains over a wide area has very much brightened the prospects of "rabi" crops.

Wheat prices have registered a fall of about 50 nP per maund, while the market for Rice rules quietly steady. Gram prices have touched an all-time high due to paucity of stocks and firm Punjab advices. The Maize market remains almost unchanged despite brisk consumer demand, as the stock position is fairly good. Jowar prices have recorded small gains over the week. Pulses are dearer due to poor stocks with the trade. Arhar has touched a new high level as stocks are concentrated in one hand. Urad and Moong have displayed a hardening tendency following good demand.

MADRAS REVIEW

THERE has, of late, been a surfeit of science in official discussions, and press reports alike. It was the Science Congress session held last month at New Delhi, that struck the first signal of this wave. From New Delhi, science travelled to Bangalore, to receive a re-emphasis of its importance in the development of the country. The occasion was the celebration of the Golden Jubilee of the Indian Institute of Science at Bangalore. As the foremost institution of its kind and also as one of the oldest ones, the growth and development of the Institute of Science, would reflect, in a large measure, the story of Indian science especially in the first half of this century. And a major part of what little has been done in this country in the scientific field would be reckoned as the contribution of this Institute. The Golden Jubilee celebrations of such an institution therefore mark an important event in the annals of Indian science. The importance of the occasion was equalled by the presence of so many distinguished personages belonging to this country as well as coming from abroad, the most felicitous aspect being the presence of His Royal Highness the Duke of Edinburgh, as the representative of British Science. The presence of the Mysore Governor, who was the erstwhile Maharaja of the State, fitted in with the munificence the Maharaja's family had displayed in the development of the Institute. The spacious ground at

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/COS/14/P&M/B/59 for supply of 4 Nos. Machine rail cutting portable power operated "Racine" make or similar. Tenders will be opened on 5-3-59 at 12 noon.

Tender forms are obtainable from the office of the under-mentioned (Construction Section), Garden Reach, Calcutta-23 on payment of Rs. 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of Cash Receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing earnest money of Rs. 400/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1,000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Institute of Science

present occupied by the Institute was itself a donation from the then Maharaja of Mysore. President Rajendra Prasad, in his capacity as Visitor of the Institute, inaugurated the jubilee celebrations. His presence was symbolic of the growing participation of the State in the development of science in the country.

The occasion evoked eloquent tributes from all the speakers who included, President Rajendra Prasad, His Royal Highness the Duke of Edinburgh, His Highness Maharaja Sri Jayachamaraja Wadiyar, Governor of Mysore, and Dr S. Baghavantham, the Director of the institute, to the liberality and scientific vision of the late J. N. Tata, who conceived the project and brought it into being at great personal cost. In those days when Governmental thinking was not oriented towards the development of science, J. N. Tata represented the pioneering force in the development of scientific education in the country. Though there has been subsequent Government participation in the development of the Institute, the Institute is a monument to the munificence and scientific vision of the late J. N. Tata. The association of the Tata family since continued by his sons, has been the sustaining factor in the growth of the institute to its present dimensions. This happy alliance of interest of the Government of India, the Government of Mysore, and the Tata family, holds perhaps the best promise for the future progress of the Institute.

The great strides the Institute has made since its beginning, is reflected not only in the increase in the number of staff and students, or in the increase in the expenditure that has to be incurred for its maintenance, but also in the conferment of the status of a University to the Institute by the Government of India, with right to confer its own degrees and set up its own standards in teaching and research. However, the important role the Institute has been playing in scientific research has been acknowledged and anticipated long back and as Mr J. R. D. Tata, recalled in the course of his presidential address, the Institute used at one time to be described as the Indian University of Research. What, however, the Institute has gained by Governmental recognition of its position and status, is a new source of patronage from the University Grants Commission, which body according to the University Act, is to look after the needs of Universities and other Institutions of learning and research having the Status of a University. This carries the seeds of better fruits that the Institute might be able to give to the country in the future.

The jubilee celebration besides marking an important landmark in the growth of the Institute, has,

also served to highlight the significance of science for the economic and technological progress of the country. A higher rate of development is everywhere linked with the growth of science and it is for the potentialities of economic growth that science is mainly valued everywhere. The importance attached to science in this country also springs from similar motives. The spectacular achievements made by Soviet Russia in the scientific field and the stress laid in that country on scientific and technical education from early stages in the schools to which Dr Baghavantham referred, are highly significant.

The speeches of both Mr J. R. D. Tata and Dr Baghavantham, have revealed facts about the working of the Institute which hold the best hopes of the progress the country could make in all branches of science. It is a unique feature of the Institute that it is predominantly concerned with teaching and research and besides, provides facilities for advanced instruction and conduct of original investigation in all branches of knowledge. The danger of over-specialisation, is, according to Dr Baghavantham, sought to be countered by the provision of humanistic subjects of study.

Mr J. R. D. Tata has referred to the absence of parochial tendencies in either the recruitment of staff or in the admission of students who are drawn from all parts of the country. Not many educational institutions in the country could point to such a principle in their working, admission of students on caste and communal considerations being a too familiar feature in the running of most of the educational institutions of the country.

Another noteworthy feature of the working of the Institute to which Mr Tata referred is the contact and cooperation the Institute has maintained with other research and educational institutions within the country and abroad. It is even more pertinent, that the Institute has made it a principle to keep constant contact with industry. Considering the low level of industrial development of the country and the disregard of research problems by industries, it is only right that industrial problems should provide the immediately practical content of research for any institution which has as its aim the furthering of the technological and economic progress of the country.

In spite of the great material advancement which scientific and technological inventions have made possible, the progress of science in some of its aspects, has come to be viewed with increasing concern and alarm, because of its association in the last decade with manufacturing means of human destruction. In this connection, the Duke of Edinburgh referred to the crisis

created by science and of the need to solve the crisis by a proper choice. Referring to the great inventions that had paved the way for the manufacture of destructive weapons, the Duke said that it was like giving children sticks of dynamite to play with and then lighting the fuse. As the Duke has pointed out, it would be futile to blame scientists for this or for scientists to disclaim responsibility. What however is to be recognised is that science has with or without the scientists intending it, become the handmaiden of politics. Whether, in the event, science could save humanity, would depend on the choice the latter could make in regard to the uses to which science is to be put. The Duke therefore called for the need to link scientific attitude with humane and courageous thought, while President Rajendra Prasad, stressed the need for sustaining spiritual values which in the one-sided pursuit of science might otherwise be left to languish.

It might be trite to point out that so far as India is concerned, there is nothing to fear from the emphasis that is now sought to be given to the encouragement of science. The whole policy of the Government is too well-known everywhere as one of preserving world peace and understanding. By emphasising the role of science and technology in the development of the under-developed areas, where the poverty and misery of the population provide an explosive element to world peace, science is, in fact, being harnessed to promote and sustain closer co-operation and better understanding between the nations of the world.

There is another factor in the situation which should also merit attention in this context. It is not to be overlooked that the future progress of science in the country, is, in view of the great leeway the country has to make in the scientific realm, to a very great extent, pre-determined. The main pre-occupation of the country for some years ahead, would be to build science on the foundations laid in the other countries of the world.

The working of the Institute, as explained by both Mr J. R. D. Tata and Dr Baghavantham, and which both of them claimed was intended to develop scientific talent in its many-sidedness instead of turning out of mere specialists, is symbolic of the approach of the country towards the development of science. However the need to take rapid strides in industrial development and also to assist other aspects of development and welfare, underscores the importance of science in its applied aspect. But this has not prevented equal attention being paid to the, fundamental aspect of science, divorced from considerations of material returns.

THE PENINSULA

SOUTH INDIAN NOTES

Exports

One of the few items to record an increase in exports, tobacco is estimated to have registered a record export in 1958. While exports of tobacco in the previous years had ranged between Rs 12 to 13 crores, export in 1958 is expected to be of the order of Rs 15 crores. This naturally reflects a great improvement from the slump conditions that prevailed in 1956 when the marketing problem was highlighted with huge accumulation of stocks including 4,000 bales of high grade tobacco. The improvement in the exports is a tribute to the efficiency of the work done by the Tobacco Export Promotion Council which was set up in 1956, since it was the intensive export promotion drive launched by the Tobacco Export Promotion Council that had brought about the improvement in the exports of tobacco in the country. In this connection Mr K Rangaswami, Joint Chief Controller of Imports and Exports and Chairman of the Tobacco Export Promotion Council, recalled the valuable work done by the Council in exploring markets in China, and USSR for medium and low grade tobacco.

Part of the increase in exports Mr Rangaswami attributed to the good crop of flue-cured tobacco in Andhra Pradesh. The record export of tobacco effected in 1958 raises questions about the need to take measures to preserve exports at that level and even stimulate it at higher levels. The visit of the German expert who is making an on the spot study of the different varieties of the grades of tobacco should provide the stimulus for growing tobacco with reference to their suitability for export.

Cashew kernels is another item to have shared in the upward trend in exports. Against 30,862 tons of cashew kernels valued at Rs 13 crores exported in 1956, the country exported over 36,000 tons valued at Rs 15 crores during 1957-58 the new markets being Czechoslovakia, West Germany, Yugoslavia, and Peru.

Export Promotion has assumed immediate significance for pepper since export of this is reported to have declined in 1957-58 in comparison with exports in 1956-57. The fall in exports is estimated to be of the order of about 1000 tons the fall in value of exports being about Rs 6.0 million. In this connection Mr Rangaswami has suggested the intensification of the quality promotion drive as the main plank of the scheme for raising exports.

Such quality promotion schemes are also being prepared for the leather industry which is another chief foreign exchange earner for the South. An intensive study of the potentialities of the foreign markets is the another step contemplated by the export promotion Council to be part of the export promotion drive for these articles.

Progress of Madras

Broadcasting from the Madras Station of the All-India Radio, on the occasion of the Republic Day, Mr Bishnuram Medhi, Governor of Madras, on the progress the State had made in implementing social and economic programmes initiated under the First and Second Five Year Plans.

This progress is particularly marked in the sphere of education, in which the State could be said to have made advances far ahead of the other States in the country. In this connection, Mr Medhi made special mention of the phased programme that has been set in motion, for the introduction of free and compulsory education to pupils upto the age of 14. Under this scheme, primary education up to five years of schooling would become compulsory in all parts of the State by 1965, while from the next academic year, primary education, is designed to be completely free.

In this remarkable progress that has been made in the educational sphere public cooperation was a material factor. With a view to attracting all school going children to the schools, the scheme of free mid-day meals, is being introduced, the scheme being supported by the State Government which has provided a sum of Rs 20 lakhs during last year towards this. Such mid-day meals are now provided for over 3 lakhs of children covering more than 8,000 elementary schools.

The school improvement project depending mainly on the voluntary cooperation and contribution of the public is another scheme that has been launched in the State and the public response by way of contribution is also claimed to be admirable. The number of schools that has been started with public cooperation is claimed to be about 1,800.

Another field in which rapid progress is reported to have been recorded is agricultural cooperation. The loans granted for agricultural purposes through cooperatives is placed at Rs 20 crores. The beginning that has been made in providing all the agricultural credit needs of the farmers through cooperatives is another achievement. This bears testimony to the concern evinced by the Government for improving agricultural production especially foodgrains production. It is worthy of note that the efforts taken to increase foodgrain production have been amply rewarded and the State is reported to have achieved self sufficiency in foodgrain production.

Madras State is also abreast of other States in the harnessing of rivers for irrigation and power generation. Progress in this field has been such that the State is now considered to have reached almost the point of exhaustion in regard of the scope for further development of hydro potential.

With the headway made in power generation, it has been possible for the State Government to lift the cut on the consumption of power by industries. Even more remarkable has been the success of the rural electrification programme of the Government.

SOUTH INDIAN MARKETS

Coffee Outlook

UNCERTAINTY continues to hang over the Coffee industry. Bumper crops in almost all producing countries continue to swell the surplus. Brazil alone is holding a stock of unsold coffee to the tune of nearly a million tons. Although the Latin American producers have agreed to restrict exports in 1959 with the object of checking further declines in coffee prices which have almost reached bottom, it will not be a final solution to the problem, as over-production will continue to inflate stocks in those countries.

As for India, there is every indication that production will increase and planters hold the view that, with the next few years, the coffee industry will hit the 60,000 tons-mark. Consumption in India is, at present, less than 30,000 tons and unless the home market is expanded substantially, India will have to rely more on the foreign market. India might be faced with the task of doubling her exports within the next few years. It is very doubtful whether she can do this in view of the fact that the world market is already more than adequately supplied from other producing countries and that they have better business ties with the major consuming countries of the world.

In this connection, the Chairman of the Coffee Board has stated that the industry can hope to survive the challenge in an adverse world market only by enforcing economy in production expenditure, improving quality and raising the per acre yield on the one hand, and by expanding consumption at home through intensive promotional activities and lower prices which will act as an incentive on the other hand. Referring to the reported moves of the Bombay and other State Governments to establish coffee in their States, the Chairman feels that it can be perhaps wise to go slow in this matter of extension of coffee areas where it was already established.

Pepper

Despite lower advices from New York Pepper prices have been ruling firm in the Bombay and Alleppey markets with the rate being pushed up to Rs 700 per candy for the superior Palai variety. Expectation of a further cut in freight rates to the United States and speculative support based on optimism that the USA will start more active buying soon have pushed up prices. Smaller arrivals at all terminal markets have also helped the sentiment, while outside speculators are reported to be paying more attention to pepper as they think that the present prices are low.

But, the rise in prices is too steep and the absence of any encouraging foreign advice may reduce off-take and prices may suffer a setback if speculators do not continue to support the market despite un-

encouraging factors. The future of the market depends upon the buying policy of New York dealers, for most of the sales made to Russia and the East European countries stand covered.

Ginger

Ginger prices have also recorded a smart rise during the past few days, thanks to increased domestic and export demand. In the Alleppey market, the rate is quoted at as high as Rs 550 per candy. The main contributory factor is the fact that America, which had bought last year at around 12 to 13 cents a pound, is now an active buyer at around 15½ cents.

Arrivals are reported to be poor and this season's crop is mentioned to be about 4,000 tons lower at 12,000 tons against about 16,000 tons in the previous season. Domestic demand has also been picking up due to large consumption. Aden is also reported to have bought moderate quantities. There is a general feeling that, if the present trend in foreign demand continues, exports this season should be considerably better.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were about the same as in the previous week; but clearances were slow. The Calf section showed no change.

On the export front, trading was confined to lower selections of 9/8½ lbs and 10/12 lbs and business was reported in fifths at 38½ d and 34d respectively, depending on the quality. In the Calf section, there was some enquiry for premium quality Buff Calf at 2d to 3d decline.

In the Tanned Skins section, there was a fair clearance of sheep skins at unchanged levels.

In the export section, business was irregular and mostly confined to cheaper lines of goat and selected top quality marks.

The market for Raw Hides and Raw Skins ruled steady. Tanners feel that the free export of raw goat skins will affect adversely the tanning industry in South India.

Bangalore Silk

There has been no change in the prevailing high rates in the Bangalore Silk market during the week ended 29-1-1959. In general, owing to contraction in production of cocoons, prices of both flature and charka silk, particularly the finer varieties, tended to quote high.

Kollegal, T. Narasipur and Kaha-kapura (which are principal centres for flature silk) quoted a rupee higher as compared to the previous week. There was a corresponding rise in prices in respect of finer varieties of Charka Silk.

Reflecting scarcity of cocoons, the prices of reeling cocoons, of Channapatna, Sidlaghatta and Mugur areas continued to be quoted at around the high levels noticed in the previous week.

The prices quoted for Silk waste varieties were nominal since there was not much movement of silk waste in the market.

The Associated Cement Companies Limited

Impressive Record of Progressive Performance

Government's Taxation Policy on Corporate Finance

Expansion Programme & New Venture

Chairman Shri Dharamsey M. Khatau's Address

PRODUCTION AND PROFITS

Speaking at the 22nd Annual General Meeting of the Associated Cement Companies, Ltd., the Chairman, Shri Dharamsey M. Khatau, said: "The year under review has been one of increased production and despatches, the latter having increased by 2.57 lakh tons. Nevertheless, we have ended the year with considerable diminution in the profits available for distribution mainly due to the aggregate burden of taxation and the mandatory Development Rebate Reserve."

"It is beyond one's comprehension," the Chairman continued, "that a basic industry which has such an impressive record of progressive performance, which has contributed so much to the country's economic progress and in which the public from all classes has invested so much with such confidence, should be expected to operate under the burden of such exactions. The result is a ridiculous position, in which everybody, with the sole exception of the shareholder, seems to come out on the right side, at any rate in monetary terms. But that is not by any means the end of this dismal story. The final net result of the last year's working of your Company affords ample proof of the serious effect of taxation policy on Corporate Finance. For, apart from depreciation, the net 'plough back' of profits after a whole year's working on a vast scale is only about Rs. 6 lakhs! And it is from this paltry sum that your Company is expected to meet not merely the cost of replacements and renewals at steadily rising prices but also the needs of an expanding business!"

TARIFF COMMISSION

"It is in this context," the Chairman stated, "that the recommendations of the Tariff Commission have to be examined. Your Company had high hopes that the Commission would be alive to the realities of rising costs and increasing taxation and would recommend a fair price, such as would cover all costs and leave a fair margin of net profit after tax. Unfortunately, our hopes have been belied and the only substantive outcome has been the award of a totally inadequate increase of Rs. 3.50 per ton in the ex-Works price of our cement. And even here, the Commission's recommendation that this price increase

should be retro-active from 1st January 1958 was rejected by Government without assigning any cogent reasons save that it would involve 'administrative and financial complications'."

While commending the concept of 'fair return' on 'capital employed' accepted by the Tariff Commission as a welcome departure from past practice, Shri Khatau remarked, "the substance of this 'fair return' on capital employed was taken away by the incomprehensible proposition that such return was intended to cover not merely taxation and dividend, but also such charges as the annual bonus to employees and the commission contractually payable to Managing Agents which were manifestly items of overhead costs. Moreover, while it can be accepted that any reserve that may be voluntarily created by a company out of its profits, (and which can be drawn upon by the Company at any time), should be ignored in fixing the 'return' to be allowed, such cannot obviously be the case with the mandatory reserve which is statutorily required to be made at 75% of the Development Rebate. But the price structure as now determined and which is to remain in force up to July 1961 totally ignores these considerations, with the result that your Company will have to provide for all these charges besides taxation and dividend out of the 12% return on capital employed that has been allowed to it in the price of cement."

"Your Company, therefore, submitted a representation to Government that items of cost such as Stockists' Commission, Bonus to Employees, Managing Agents' Remuneration etc. and the charge for 75% of the Development Rebate should be allowed as legitimate and necessary elements of 'overheads' in computing costs and that the price of our cement ex-Works should be refixed accordingly. We also requested Government to allow the price increase with retrospective effect from 1st January 1958 as recommended by the Tariff Commission, in view of the considerable loss of profits suffered by the Company since the time the industry's case was referred to the Tariff Commission in 1957. I regret to have to report that our proposals have not found favour with Government and the representation has been wholly negated."

EXPANSION

Shri Khatau reported that the various expansion projects of the ACC were proceeding satisfactorily. The dry-process plant at Mancheri, which went into operation recently, though slightly higher in initial capital cost, would economise in coal consumption. The extensions to the Sindri and Chaibasa Works had been completed and those of the Kymore and Shahabad Works were proceeding satisfactorily. The Chairman also announced that the Company would manufacture Blast Furnace Portland Cement at Chaibasa by utilising the slag obtained under agreement from the TISCO Works at Jamshedpur.

FINANCE FOR EXPANSION PROJECTS

Speaking about the enormous capital outlay involved in financing the Company's expansion and modernisation projects, Shri Khatau stated: "As the internal resources of the Company were diminishing and as the funds which had been already raised through borrowing against Debentures for Rs. 4 crores issued in 1954-55 and by the offer of equity capital were inadequate to meet these requirements, your Board has now made arrangements for obtaining further advances to the maximum limit of Rs. 5 crores on Cash Credit Accounts from the Company's Bankers against the security of 6% First mortgage Debentures of a like amount ranking *pari passu* in all respects with the earlier Debentures. The proceeds will be utilised partly for financing the immediate needs of our modernisation and expansion programme and partly for investment in the heavy engineering project set up in collaboration with Messrs Vickers Ltd. and Messrs Babcock & Wilcox Ltd., of U.K."

ACC-VICKERS-BABCOCK LTD

The Chairman announced that a new Company under the name of ACC-VICKERS-BABCOCK LTD. had been formed and registered as a Public Company, with its headquarters in Bombay. The first Board Meeting of the new Company was held on the 20th of January. "The Authorised Capital of the Company is Rs. 10 crores, of which about Rs. 5.4 crores will be subscribed and fully paid up over a period of some three years. Your Company's share of this will

be 49.8% while the two Overseas Shareholding Companies will take up 24.9% each. The balance of 0.4% will be held equally by the four firms who are the principal shareholders in the Cement Agencies (Private) Ltd.

"The Works of the new Company will be located at Durgapur, West Bengal. It will manufacture cement-making machinery, general machinery, pumps, water tube boiler plants and accessories and pressure vessels. Production is expected to commence in 1962 and the Works will attain its target of full manufacturing capacity by 1965." The project is expected to save a substantial amount of foreign exchange and in course of time perhaps earn foreign exchange through export of machinery items.

"This project constitutes an important step in the diversification of your Company's activities. The returns will be slow, because it may take as long as seven years before any dividends begin to come in; but when they do, they will be sure though not spectacular. In itself the project will be one of major significance in the national economy."

The Chairman expressed his thanks to the Government of India for their continued encouragement and guidance and to the Government of West Bengal for their assistance in acquiring land and other facilities at Durgapur.

CENTRAL WORKSHOPS

Referring to the ACC's Central Workshops, the Chairman reported that their surplus capacity was being utilised to meet the requirements of outside parties and said that these Workshops would be operated integrally with the Works of ACC-VICKERS-BABCOCK LTD.

DEMAND FOR CEMENT

Shri Khatau then referred to the sharp drop in the demand for cement since August last and remarked: "Any further deterioration in the situation would compel us to curtail production. In fact, whereas at one time the Government of India were continually pressing us to expand production capacity even more rapidly than we thought either practical or prudent, they have been recently suggesting that we should curtail production. But the stand we have

February 7, 1959

taken is that in the best interests of the country such a desperate remedy should not be resorted to until all other measures have first been tried to correct the imbalance between supply and demand."

The Chairman narrated how the cement target under the Second Five-Year Plan was raised again and again—starting with 10 million tons in 1954 to 12.5 million tons in 1955 and then to 15 million tons or so in 1956. This was contrary to the industry's considered advice, based on a careful assessment of the market conditions then prevailing, that the target should be pitched at 8 million tons. Referring to this unrealistic target of 15 million tons, Shri Khatau remarked: "In cement, as in most other basic industries, 'physical planning' based on 'plan frame' held the field, in total disregard of all such relevant considerations as the availability of transport or resources (whether internal or external), or the relationship between over-rapid investment, deficit finance, costs and prices, or between demand and supply at any given level of costs and prices, etc."

Shri Khatau then listed (a) the licensing of excessive capacities for new factories and for the extensions to old factories, based on fanciful targets; (b) the rapid pace of such expansion, which is running quite out of step with, and far ahead of, the demand for cement both for Government requirements and for private and industrial consumption; (c) the licensing of expansions at the wrong places and (d) shortage of re-inforcement steel, as the main causes of the serious imbalance between supply and demand and warned that "this imbalance will intensify as more and more production becomes effective every year between now and 1960-61."

Coming to the immediate causes of the sudden drop in demand, he hoped that the falling off in Government demands was temporary and that the off-take would soon pick up again and that as regards private and industrial demands the position would also improve gradually over the next year or so. He expressed some concern over the one million tons or so of additional cement capacity which would come into production in the meantime.

"In these difficult circumstances, and following upon the deliberations at a Conference of Cement Producers convened by the Government of India in October last, we joined with other Producers in submitting a Memorandum to Government suggesting certain specific remedial measures. Among the more important of the suggestions so made were: (1) The diversion of large quantities of cement to road building, (2) Rapid promotion of Cement Exports, (3) Suspending of work on licences for the further work on existing factories and expansion of existing factories and for the establishment of new factories in those cases where no substantial financial commitments had yet been made, (4) Reduction

in price by reducing the Excise Duty back to Rs. 5/- per ton."

Regarding cement prices Shri Khatau observed that while the Excise Duty on cement was raised from Rs. 5 per ton in 1954 to the incredible figure of Rs. 24 per ton in 1958, "the price of cement remained steady at an average of Rs. 90/- to Rs. 91/- per ton packed (f.o.r. destination) until the middle of 1956 when, with the advent of State Trading in Cement, it was pushed up to Rs. 102.50 per ton. In May 1957, the price of packed cement was raised again to Rs. 117.50 per ton (f.o.r. destination), at which level it stands today."

TAX BURDEN ON CEMENT INDUSTRY

Referring to the tax burden which cement has to carry apart from Excise Duty, Shri Khatau observed: "The other indirect tax burdens included in the price of cement—at any rate for ACC cement—account for an aggregate average of Rs. 2.23 per ton (based on 1957-58 figures) for Royalties, Duties, Sales Taxes, Municipal Taxes, etc. This does not include the incidence of direct taxes such as Income-Tax, Corporation Tax, etc., because it may be objected that, being taxes on profits, they do not enter into the make-up of the price of cement. This is, of course, totally wrong, because in the case of commodities such as cement where the price is controlled and fixed by Government from time to time, not only the net profit element but also the direct taxes do enter as a specific load in the final make-up of the price so fixed. In the case of ACC cement, the incidence of this load was Rs. 5.52 per ton based on 1957-58 figures."

"The total tax-loading (including Excise Duty) in the price of unbagged ACC cement is therefore as much as Rs. 31.75 per ton ex-Works as against the present ex-Works selling price of Rs. 82/- per ton (inclusive of Excise Duty). It is against this background that the suggestion to cut back the Excise Duty to Rs. 5/- per ton must be considered because there is, I submit ample justification for this proposal in the facts I have just outlined. It should also not be overlooked that Excise Duty was increased in 1957 and 1958 with the specific purpose of inhibiting demand when cement was in short supply. This purpose it has served admirably; but today, when there is urgent need to stimulate demand and increase sales, the high Excise Duty is acting as a serious deterrent."

"As I have said earlier it would be quite wrong to attempt to resolve the present surplus situation by recourse to desperate measures such as curtailing production until all other remedies have first been tried. The various measures to which I have referred in this connection are designed, on the one hand, to increase the off-take in such directions as accelerated programmes for building cement roads

and exporting cement to the near markets and, on the other, to stimulate demand by a substantial, necessary and fully justifiable reduction in price by reducing the load of Excise Duty."

LABOUR-MANAGEMENT RELATIONS

Turning to labour-management relations, the Chairman stated: "Except at the two Collieries our relations with employees at our various Works continued to be harmonious. I would like to congratulate our employees and trade union officials at the various factories on their growing sense of realism, maturity and increased awareness of their responsibilities in our common and joint endeavour."

"We have reached three-year agreements with the workers' unions at Katni, Kistna, Dwarka, Lakheri and the new Works at Mancheri. These bring the total number of Works covered by such agreements to eleven. Though it is too early to evaluate the results of these settlements, it is evident that they have been beneficial both to workers and management, by fostering goodwill and mutual trust, and ensuring smooth working, better emoluments and minimum loss of production time through industrial strife."

WAGE BOARD FOR THE INDUSTRY

Referring to the Central Wage Board for the Cement Industry constituted by the Government of India, the Chairman observed: "The responsibility lies squarely on employers as well as on labour to put all relevant facts before the Wage Board and to assist the Board in arriving at correct conclusions. An even heavier responsibility lies on the Board itself to make recommendations, after a thorough study, which will be found acceptable to labour as well as to employers."

SHARES FOR EMPLOYEES

Shri Khatau announced that the 12,202 shares of the new issue which had been offered to permanent employees as they had remained unapplied for by shareholders, had been fully subscribed for by the employees.

BONUS

The Chairman expressed regret that due to the substantial reduction in net profits, the Directors were compelled not only to reduce the net appropriations to Reserves and to lower the dividend to 8.5 per cent, but also to scale down the bonus to employees to one-fifth (instead of one-fourth) of their annual basic salaries. The Chairman concluded by recording the Company's warm appreciation of the unremitting hard work and unstinted co-operation of all the Company's employees.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting which will be sent separately to shareholders on request.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. CON/GM/3P&M/C/59 for supply of (a) 4 Nos. "Murex" or similar single operator Diesel Engine driven Arc Welding Set with Generator 9 K.W., 15-300 Amp. 30 to 70 volts, continuous rating 210 Amps., complete with welder's accessories for each set and (b) 4 Nos. Track work grinder to suit the above arc-welding set, each grinder complete with six spare wheels and all accessories. Tenders will be opened on 4-3-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing earnest money of Rs. 1,000/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Approved contractors having a permanent deposit of Rs. 1,000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Selected Scrips Fare Well

Watch-Dog Writes:

STOCK markets have generally presented quite a steady appearance during the week under review. Although trading has been of comparatively smaller dimensions, the underlying tendency is well maintained despite Budget uncertainties.

Apart from Teas and a few other selected scrips which fared well on improved demands, the Calcutta Stock Exchange disclosed no special feature during the past week's trading.

Dealings on the Bombay Stock Exchange were thin and slow and practically without feature.

On the Madras Stock Exchange, selective buying was noticed in Plantings and a modest recovery in a few other shares.

Wall Street closed very steady with a majority of mostly fractional gains.

Calcutta

Friday Evening.

ALTHOUGH activity was still restricted, steadier conditions prevailed on the local Stock Exchange last week when selected scrips encountered good support at enhanced levels. This was mainly due to the belief entertained by some operators that there would be no significant increase in taxation in the forthcoming Budget. Their belief was based on the fact that, if the Budget was unrealistic, the results of the meeting of the creditor countries, scheduled to be held in the middle of March, might not be quite favourable to India. It was, however, evident that the burden of taxation was going to be increased; but the main question was, how much and in what form—

SOUTH EASTERN RAILWAY

CANCELLATION OF TENDER NOTICE

Tender notice for tender No. PB18/COS/414 & 415; A/E/A/158 for supply of (1) 2 Nos. of Axle crank Driving LP (built up type) M class as per Con. Engineer's Drg. No. 4321 and (2) 13 Nos. of Axle straight Tender Steel Rough GS, H, HS, HSM Classes as per item 24 of CME's Drg. No. 7737A which is due to be opened on 16.2.59 at 12 noon published in this paper recently, is hereby cancelled.

CONTROLLER OF STORES
S180

whether direct or indirect. There are now three weeks left for the Central Budget and, as such, rumours may start flowing after a week.

Although business in the Giltedged market continued to be restricted, a fairly steady tone was maintained, thanks to sustained demand for State Loans. With short-term money conditions tight, banks were virtually out of the market. 3 per cent 1986 Loan opened at Rs 74 and, after touching a low of Rs 73.70 and a high of Rs 74.50, finished the week at Rs 74.25.

Bank shares were quietly steady with Punjab National changing hands at Rs 23.56 to 23.75 following the maintenance of the dividend despite lower profits.

Sentiment in the Jute section, remained rather depressed with prices developing a slightly reactionary tendency. The main contributory factor were the panic conditions prevailing in the jute goods market following the LJMA's decision to withdraw the minimum prices fixed in February last and the sealing of a further 1½ per cent looms. Even the announcement of satisfactory interim dividends by a few mills in the Bird-Hellers group had no effect on the section. Alliance were on offer at as low as Rs 118 against Rs 124; Anglo-India at Rs 216 against Rs 217.50; Fort Gloster at Rs 250 against Rs 258; India at Rs 15.06 against Rs 15.50; New Central at Rs 13.25 against Rs 13.56 and Union at Rs 221 against Rs 235. The only firm feature was National, having sustained speculative support upto Rs 26.75 from Rs 26.50.

Coal shares, however, presented a firm front with a few selected ones changing hands at enhanced levels on reports of a few purchases made by the LIC at the recent meeting. Most prominent were East Indian having buyers upto Rs 24.12 from Rs 23.62; Central India upto Rs 7.53 from Rs 7.37 and Western Bengal upto Rs 6.06 from Rs 5.84. Equitable remained very steady at Rs 30.37, while Bengal were marked back to Rs 284 from Rs 286 on lack of fresh support. Burrakur moved rather erratically between Rs 17.50 and Rs 17.87, to finish the week at Rs 17.75.

The slight improved conditions prevailing in the cloth market were reflected in the Textiles section, where Elgins forged ahead to Rs 12.12 from Rs 11.75 and Kesoram to Rs 12.03 from Rs 11.37. Jayshree changed hands at Rs 8.36, to Rs 8.62 and New Victoria at Rs 1.19 to Rs 1.28.

The Tea section, behaved better with a number of shares coming in for good demand at improved levels on reports that the companies of those gardens situated in Assam and Doorga had done well last year. The general belief that tea supplies might not be as excessive as was originally feared was another contributory factor. Most prominent scrips were Brooke Bond having hardened to Rs 16.75 from Rs 16; Bishnauth to Rs 19.25 from Rs 18.62; Bormah Jan to Rs 17.25 from Rs 15.75; Dhelakhhat to Rs 23.50 from Rs 22.12; Eastern Cachar to Rs 4.06 from Rs 3.81; Hasimara to Rs 21.12 from Rs 20.87;

Sungma to Rs 16.56 from Rs 15.87 and Hoograjuli to Rs 29.75 from Rs 28.75. Methoni had buyers at Rs 20.12 to Rs 20.37.

Sugar shares were generally neglected and prices developed a reactionary tendency due to some selling pressure on fears that production might be affected by the growing competition from Khandasari units. There were also fears of agricultural income-tax being imposed by the State Governments in the forthcoming budgets. Raza-Buland were marked down to Rs 11.94 from Rs 12.94; Carew to Rs 8.75 from Rs 9.00; Darbhanga to Rs 19.62 from Rs 19.94; Dyer Meakin to Rs 14.19 from Rs 15.06 and Cawnore to Rs 10.50 from Rs 11.00. The only exception to the general trend was SKG, which met with a steady demand upto Rs 10.06 from Rs 9.87.

In the Engineering section, price movements were influenced by the speculative activity in Indian Irons. After starting steady at Rs 26.22, Indian Irons moved rather irregularly between Rs 26.02 and Rs 26.26 on alter-week at Rs 26.20. TEXMACO closed better at Rs 21.20 after touching a low of Rs 20.80 from Rs 21.15. G. K. Williams changed hands at Rs 37.25 to Rs 37.31 against Rs 38.12 in the previous week; Britannia at Rs 10.69 to Rs 11 against Rs 11; Indian Galvanizing at Rs 16 to Rs 16.12 against Rs 16.62; Marshalls at Rs 5.62 to Rs 5.75 against Rs 5.69 and Kumardhubi at Rs 8.75 to Rs 8.81 against Rs 8.69.

Miscellaneous issues moved with the general trend of the market although a few shares emerged with minor gains on balance. Orient Paper changed hands at Rs 30.30 to Rs 31.75 (Rs 31.75). Titagur at Rs 42 to Rs 42.12 (Rs 42.12); Sipur at Rs 13.31 to Rs 13.94 (Rs 13.94); Indian Cable at Rs 29.19 to Rs 29.75 (Rs 29.31); Indian Aluminium at Rs 17 to Rs 17.31 (Rs 17.00); Dunlop Rubber at Rs 29.69 to Rs 30.12 (Rs 29.94); Rohtas at Rs 18.27 to Rs 19 (Rs 18.62); Rallis at Rs 49.37 to Rs 52 (Rs 49.37); Hindustan Motor at Rs 7.42 to Rs 7.65 (Rs 7.50); Indian Oxygen at Rs 23.62 to Rs 24.06 (Rs 23.62); Indian Steamship at Rs 13.87 to Rs 14.19 (Rs 14.12); Indian Copper at Rs 3.55 to Rs 3.61 (Rs 3.57); Phillips at Rs 16.69 to Rs 16.94 (Rs 16.81) and Aluminium Corporation at Rs 10.81 to Rs 11.12 (Rs 10.81). Figures shown within brackets were the week's closing rates.

The slight improved conditions prevailing in the cloth market were reflected in the Textiles section, where Elgins forged ahead to Rs 12.12 from Rs 11.75 and Kesoram to Rs 12.03 from Rs 11.37. Jayshree changed hands at Rs 8.36, to Rs 8.62 and New Victoria at Rs 1.19 to Rs 1.28.

Bombay

DULL but steady conditions prevailed in the Bombay Stock Exchange during the past week. Apart from occasional interest in some selected shares the list has remained generally inactive as operators have been reluctant to extend commitments in view of the proximity of the Central Budget.

In the Steel section, Tata Steel closed almost unchanged on balance at Rs 175.50. Indian Irons closed at Rs 26.20 as against previous week's rate of Rs 175.25.

In the Textile section, Bombay Dyeing was steadier at Rs 57.10. Central after earlier steadiness closed unchanged on balance at Rs 89.

Century met with support and advanced to close at Rs 437.50.

Among Miscellaneous shares BIC met with speculative interest and improved to Rs 4.26. BB Petrol was another small priced share which met with support to move upto Rs 1.80. Hindustan Motors was wanted upto Rs 7.64. In later dealings ACC came in for some enquiry to close at Rs 155.

★

Madras

BUSINESS on the Madras Stock Exchange was mainly confined to select Plantings and Industrials. Other sections remained mostly dull.

TEXTILES: There was practically no interest in this section and prices showed only small variations. Travancore Rayons met with some offerings at Rs 16.87 to Rs 16.90 and Buckingham at Rs 174. Maduras were quoted around Rs 25.25.

PLANTINGS: The rather gloomy outlook reported by the Chairman of the Coffee Board was responsible for some selling pressure in Coffee shares. Ochterlony's were on offer at as low as Rs 4.90 against Rs 5.10, while Consolidated Coffees dropped down to Rs 19.60 from Rs 20.60 and Coffee Lands to Rs 21 from Rs 22.75. Pullangodes were quoted at Rs 1.60.

There was not much support for Tea shares. Nilgiris met with business at Rs 7.25 and Coorgs at Rs 5.00. There was small buying support for Nonsuch, which improved to Rs 24.55 at the close.

In the Rubber section, there was fair absorption of Cochin Malabars upto Rs 5.53. Rajendras met with business at Rs 12.50; Kailas at Rs 4.63 and Kalpettas at Rs 11.62.

MISCELLANEOUS: Business in this section was small. With the non-availability of steel and over-production of cement, Cement shares were dull and easy. Dalmias were on offer at Rs 9.75 and Indias (Rs 5) at Rs 5.25. Chemical shares came in for modest enquiry, FACTS changing hands upto Rs 7.35 and Mettur Chemicals upto Rs 11.95 cd. In the Sugar section, Deccans closed lower at Rs 9.62 with sellers at this level, while Cauverys noted enquiries at the market rate. Among others, Aluminium Industries continued to be quiet at Rs 18.20. Vanguard Fire was bid higher at Rs 6.25 with Radio and Electricals quoting Rs 5.70.

★

New York

ANOTHER rally developed on Wall Street under good leadership and improved activity, favourable business news being cited as the reason for the uptrend in prices. These included some increased dividends, proposed stock-splits, encouraging earnings, gains in steel activity and the continued firm undertone in copper prices.

A leading advisory service has however, urged a policy of restraint in making new commitments. It said that, while individual stock might still be found attractive for purchase, the greater number are clearly not bargain-prices. It recommended the maintenance of reasonable cash reserves "as protection against possible further technical corrections".

At Rourkela the first GHH Blast Furnace
goes into action!

...another specialised job by Larsen & Toubro Limited

At Rourkela Steel Plant, which will contribute 1,000,000 tons of steel to the country's annual output, the first of three GHH Blast Furnaces has just been started.

Among the many organisations working round the clock at Rourkela are Larsen & Toubro Limited, with a team of 1400 working to complete, within twenty-four months, the erection of 3 Blast Furnaces, the Rolling Mill Buildings, and a 'Pig' Casting Machine, involving a total of 63,000 tons of steel work.

Specialised services: Heavy construction and erection work of this type is yet another L & T specialised engineering service... proof of the ability of Larsen & Toubro Limited to meet the engineering demands of India's growing heavy industries. Other important jobs include the erection of 10,000 ton Grain Silos at Hapur, the extension of Madras Harbour, and the Water Supply and Treatment Plant at Nangal.

Leading engineering firms: Larsen & Toubro Limited have for many years been one of the leading engineering firms in India, and one of the largest suppliers of heavy earth-moving equipment, drilling and mining machinery, and chemical and industrial installations. Manufacturing activities comprise the production of modern dairy and refrigeration plants, chemical plants, and electrical switchgear and motor starters. The wide scope of Larsen & Toubro Limited's activities; their highly-specialised engineers and technicians; and their belief in service first and foremost...enable them to contribute vitally to the country's progress.

FOR THE INVESTOR

Misinterpretation

Investment Gossip:

THEY said in Bombay, and they repeated it in Calcutta as the week ended, that share prices ought to be depressed. The action taken by the Forward Markets Commission in the Gateway city was thought to justify a barrage of unloading.

Life is complicated enough, but the fraternity in the stock exchanges apparently believes that confusion adds to joie de vivre. This alone will explain the fantastic interpretation of the indication that the quantum by which imported steel was being subsidised would be reduced.

And this "interpretation" was one more reason why, as the week drew to its close, there was a shakeout in Dalal Street and Lyons Range.

Steel subsidy to be reduced? As night follows the day, our masier logicians on Lyons Range said, the profit made by the private steel companies would be eaten into.

What a misconception, and what grand lack of knowledge! The profit earned by Indian Iron and Tata Iron depends upon the retention prices that are paid to them. The subsidy that is paid for imported steel is met from the Steel Equalisation Fund. The Steel Equalisation Fund is built up by the balance between the statutory selling prices of steel and the retention prices paid to the private steel companies. The extent of subsidy depends upon the disparity between the selling prices in India and the cost of the imported steel. That, in a nut-shell, is the low-down on the gamut of steel prices in this country.

So: it transpires that the subsidy will be less. Why? The news report that hinted at this development pointed out that foreign steel was costing less. What could be more logical than that, as a result, the disparity stood reduced?

What I cannot understand is why all this should have a bearish connotation. Take a slightly longer-term peek into the future, and you will realise why, instead, we can sum up the prospects as being positively cheerful. Indian steel production is on the rise. The magnitude of steel imports needed to balance internal availability with demand is gradually becoming smaller. Consequently, the sum of money required for subsidising imports will dwindle shortly into nothing, as India becomes self-sufficient in steel production. At that stage, there can be no justification for the continued existence of a Steel Equalisation Fund. The selling prices of steel should come down. The raw material would then be costing very much less for the steel-using industries, and their margins of profit should be going up.

A bearish prospect for steel? Rubbish.

Investment Notes:

INDIAN Oxygen has been ruling firm at Rs 24.06. The company has recommended a dividend of Re 1 per share for the year ended 30th September, 1958. This is the first dividend, which has been announced since the company was converted into a public limited company last year, on the 15th January, 1958.

Guest, Keen, Williams Limited has announced an interim dividend of 80 nP per Ordinary share in respect of 53 weeks ended 3rd January 1959, payable on or after the 28th February. It is learnt that the company has not yet received the Government sanction for the issue of bonus shares.

The list for subscription to the share capital of Ruby Rubber Works (Madras) Limited has been closed with the issue having been oversubscribed.

On the Madras Stock Exchange, Rubber shares have been in good demand on expectation of an increase in the statutory price of raw rubber in the near future. The question will come up for discussion at the meeting of the Rubber Board at Kottayam on the 15th February when the representatives of the plantation industry are expected to press for a minimum rise of Rs 20 per 100 pounds.

selling price for sugar fixed by the Government of India are fully reflected in the working results of the Bharat Sugar Mills Limited. Sales have declined to Rs 64.07 lakhs from Rs 73.32 lakhs, while the net profit, after providing for Depreciation and Taxation, amounts to only Rs 1,20,829 against Rs 2,47,449 in the previous year. Apart from providing a sum of Rs 7,400 for Development Rebate, the Taxation provision is raised to Rs 2.10 lakhs from Rs 1.60 lakhs. The Depreciation amount is, however, reduced to Rs 48,600 from Rs 94,400. After transferring Rs 50,000 from the Dividend Equalisation Reserve, the directors have been able to recommend a dividend of Re 1 per share against Rs 1.50. The quantity of cane crushed is lower at 15.97 lakh maunds against 22.57 lakh maunds, although the recovery percentage is better at 10.29 against 9.63.

£ R\$

New India Sugar

Although the quantity of cane crushed is lower at 36.98 lakh maunds against 51.54 lakh maunds, the recovery percentage in the case of the New India Sugar Mills Limited is higher at 10.09 against 9.17; and this has enabled the company to earn a net profit of as much as Rs 4,64,883 against Rs 3,15,119 in the previous year. Sales are shown at Rs 1.48 crores against Rs 1.47 crores. The directors have, after providing Rs 1.98 lakhs (Rs 4.59 lakhs) for Depreciation; Rs 7.30 lakhs (Rs 7.10 lakhs) for Taxation; Rs 11,789 (nil) for Development Rebate; Rs 2.50 lakhs (nil) for Ge-

neral Reserve and Rs 25,000 (nil) for Contingency Reserve, maintained the Ordinary dividend at Rs 2.50 per share.

£ R\$

Upper Ganges Sugar

The Upper Ganges Sugar Mills Limited has reported a net profit of only Rs 8,26,330 against Rs 10,38,509 in the previous year, although sales are higher at Rs 3.75 crores against Rs 3.59 crores. Apart from providing a sum of Rs 2.75 lakhs for Development Rebate and Rs 25,000 for Contingency Reserve, the Taxation provision is raised to Rs 19.50 lakhs from Rs 18.50 lakhs. The Depreciation amount is reduced to Rs 8.90 lakhs from Rs 12.54 lakhs. No provision is made for General Reserve against Rs 3.60 lakhs. The Ordinary dividend is, however, maintained at Rs 5 per share. The quantity of cane crushed is substantially lower at 95.47 lakh maunds against 108.33 lakh maunds and the recovery percentage is 10.14 against 10.38. The lower recovery is attributable to sugarcane having been affected by red rot disease.

2.60 lakhs) for Depreciation; Rs 1.07 lakhs (nil) for Wealth Tax; Rs 20,000 (nil) for Development Rebate and Rs 25,000 (nil) for General Reserve. The Ordinary dividend is maintained at 2½ per cent.

According to the directors' report, it is decided to strengthen the competitive position of the company by fully modernising the mills up to the spinning stage with the latest equipment.

ER\$

West Coast Paper

West Coast Paper Mills have been making fast progress in the construction of the new large-sized unit in Dandell. It is expected that all the departments of this huge project will be ready for commissioning in the next month. Trial operations on one paper machine were conducted in November last with imported pulp and the various products have been well received in the market.

The capital outlay has, however, increased considerably because of the higher prices for constructional material due to heavier taxes and higher cost of plant and machinery. The additional finance required has been located with a further loan of Rs 50 lakhs from the Industrial Finance Corporation and accommodation from the company's bankers.

As on June 30, 1958, total expenditure on block amounted to Rs 3.39 crores against a paid-up capital of Rs 1.60 crores. A loan of Rs 1 crore has already been obtained from the IFC. Unsecured loans amounted to Rs 1.53 crores, while the current liabilities for machinery supplied, etc., were Rs 1.13 crores.

ER\$

Bhulanbararee Coal

The Bhulanbararee Coal Company has reported a loss, after providing for Depreciation, of only Rs 1.52 lakhs for 1957 as against a loss of as much as Rs 3.05 lakhs in the previous year. The amount set aside for Depreciation is higher at Rs 60,283 against Rs 45,601. Raisings have risen to 149,149 tons from 135,587 tons, while despatches are lower at 142,453 tons against 147,078 tons. The dividend is again passed over.

ER\$

Premier Automobiles

The Premier Automobiles Limited has reported a substantial decline in earnings for the year ended 30th June, 1958 due to the strike which lasted for 2½ months at the factory and the increase in the cost of production. The profit has come down to Rs 50.49 lakhs from Rs 82.80 lakhs and this has induced the directors to prune the dividend from Rs 6 to Rs 4 per share.

For obvious reasons, sales have declined to Rs 14.47 crores from Rs 18.08 crores. The directors have provided Rs 24.61 lakhs (Rs 22.71 lakhs) for Depreciation;

Rs 8.00 lakhs (nil) for Development Rebate and Rs 7.66 lakhs (Rs 17.01 lakhs) for Taxation. No provisions are made for Contingency Reserve and Dividend Equalisation Reserve against Rs 10 and Rs 5 lakhs previously. The carryover to next year is lower at Rs 4.78 lakhs against Rs 6.31 lakhs.

The directors state that, due to import restrictions, big cars will not be available for some time to come, although the company will be selling spare parts for those already on the roads. The company will have, therefore, to rely for the present on the sales of trucks and Flat cars for its turnover. The potential in respect of the former will, however, suffer, to a certain extent, as a result of the decision of the Government to manufacture trucks for the Defence Ministry at the Ordnance factories.

ER\$

Bombay Potteries

The Bombay Potteries and Tiles Limited has earned a report of Rs 2.32 lakhs for the year ended 30th September 1958 against Rs 2.33 lakhs in the previous year after raising the provision for Taxation from Rs 2.68 lakhs to Rs 4 lakhs. Sales have gone up from Rs 19.12 lakhs to Rs 22.42 lakhs.

The directors have proposed a dividend of Rs 10 per share consisting of Rs 9 and a jubilee dividend of one rupee as against Rs 9 paid in the previous year. As there is a heavy demand for the goods manufactured by the company, the directors are seriously considering the expansion of the factory.

ER\$

Rallis India

Rallis India Limited has made a net profit of as much as Rs 18.73 lakhs for the year ended 31st August 1958 as against Rs 1.91 lakhs in the previous year. This improvement in earnings, coming after a number of lean years, is to be welcomed. The amount set aside to Depreciation is Rs 5.18 lakhs and Taxation Rs 1.75 lakhs. The balance carried forward is lower at Rs 32.48 lakhs against Rs 44.13 lakhs. No dividends are paid, either on the Ordinary or Preference shares.

The President's Address

IN his opening address to Parliament, President Rajendra Prasad was in a position to take a much more hopeful stance than was the case at this time last year. The Budget session is always an eventful one, but the fear twelve months ago was that the stresses and strains being experienced in the economy at the time would have an oppressing impact on all constructive activity. Fortunately, we have been able to weather a critical period, and while the rest of the Second Plan may not be plain sailing, it is nevertheless clear that the Indian ship of state has not been becalmed in the doldrums. This is due, as the President pointed out, to the measures taken by Government in pursuance of their concern that "our temporary difficulties should not lead us in the direction of retarding development and progress". The magnitude of the change in prospects all along the range of the economy is impressively large, and the President has made a detailed assessment in this regard. Foremost among the difficulties that threatened seriously to jeopardise our planning endeavours was the acute scarcity of foreign exchange resources. The Indian attempts at securing foreign assistance were successful, and President Prasad acknowledges our gratitude at the generosity without strings of our foreign friends. His insistence that the further assistance being negotiated will be on the same basis is, we may suppose, an answer to the criticism that our independent foreign policy may be ham-strung.

After enumerating the measures taken by Government to arrest the alarming upward trend in foodgrain prices last year, the President has emphasised that "self-sufficiency in food alone can provide a satisfactory solution". A statement of policy, confirming as it were the ideas mooted out at the Congress session held early this year, was Mr Prasad's indication that "Government will seek to promote agrarian reforms, co-operation and devolution of functions to village units." Where prospects were bleak last year, subsequent kindly weather holds out the promise of bumper crops, and, with Government's intention of building up considerable reserve stocks, it is to be hoped that we shall not in the future be as harrowingly dependent on imports for achieving a balance between indigenous availability and needs.

On the industrial front, both the public and private sectors have shown progress. Cotton textiles have been singled out as one of the few industries which suffered a regress. Elsewhere, the additional output of existing industries and the number of new industries beginning to produce are of satisfyingly large proportions. In particular, the steel famine is in sight of ending, and the foreign exchange savings that this will enable will be one of the important gains for the economy in 1959. Similarly, the output of coal has been going up, and further steps taken to implement the lignite project at Neyveli.

Great importance is apparently being attached to the future of oil in the Indian economy. President Prasad has spoken at length about the search instituted, the promising results and the intention to institute

an intensive programme of drilling. There is no knowing at the moment whether India in fact will turn out to be a country which is a significant producer of oil. But the preliminary investigations, and the discovery at Cambay, both augur well, and there is reasonable evidence to suggest that, while India may not exactly be oil-rich, its output can be significant relative to the total Indian needs.

The labour situation, too, is not disturbing. A Code of Discipline has been ratified by all Central Organisations of Employers and Workers, and the chances of bilateral action, at least in terms of the Code, have been minimised. The Employees' State Insurance Act, which already covers 1.4 million workers, is to be extended to fresh lists of industries. Then, says President Prasad, "a beginning has been made in workers' participation in management and Joint Councils have been set up in several industrial undertakings, both in the public and private sectors." We may state here that part at least of the unrest in the labour situation has been due to the oscillations in foodgrains prices; and, in this sense, if Government achieve their objective of

Indian Finance

Established 1928

February 14, 1959

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

building up fair-sized reserve stocks, an element of price stability in this sphere should be able to moderate labour demands or agitation.

Apart from a reference to the improvement in the Naga situation and a reaffirmation of the Indian policy of non-alignment in the international sphere, President Prasad gave an indication of the legislative business with which the current session of Parliament will be pre-occupying itself. Mainly, of course, it is the Budgets that will be important, but interesting fare in the form of an amending bill to the Companies Act and in respect of Estate Duty, as well as a bill consequent upon the Ordinance issued last year in regard to the Income-tax Act, will also be provided.

India's Parliamentarians have an especial responsibility, in the sense that legislative activity for an infant country has to proceed side by side with a determined attempt to ameliorate the conditions of the masses through democratic processes. It now remains to be seen in what magnitude the Parliament will respond to the President's call for unity of ultimate purpose and a high sense of public duty.

Tea Propaganda At Home and Abroad

By A. S. DHOLAKIA

THERE has been for sometime past discussion going on here and in Delhi as to how improvements could be made in respect of tea propaganda at home and abroad. Suggestions were invited, one understands, even from persons like Sir Percival Griffiths but what happened afterwards one does not know. The present writer takes this opportunity to stress the following points in the hope that they are helpful to the industry and trade.

INTERNAL MARKET PROPAGANDA

The technical lines to be followed here in India must be such as would give optimum results. There is no need to copy the lines of publicity followed in the USA or the UK. In India, the field is comparatively open as there are no competitive beverages. A certain amount of press campaign is necessary here, but that is only to keep tea before the reading public which is very much limited in India but an important section in so far as the investors in tea come from this section. It will also help information on the economics of tea being available to the trade. The direct effect of such press publicity on consumption is as yet unassessed.

The conditions in India are such that the best way of interesting the people generally will be to publicise the commodity by presenting it "bodily" to the people. It may be recollected that the first promotional body, the Tea Cess Committee, took tea to the people letting people find if they liked it. The Committee's promotional efforts did strike roots, but, in later times, emphasis shifted to exports; and, except for two packing firms, the trade failed to follow up. The present propaganda by the Tea Board omits or neglects this follow-up because it works unilaterally without taking the trade into confidence or inviting the trade's co-operation. Of course, some of the

packers do their own publicity, but they push individual blends and their publicity does not tie up with the Board's.

The way in which tea can be carried to the people is to divide the internal market into a sufficient number of areas and in each area the trade and the Board should jointly work through the social medium available, and continue the work until the tea habit is developed sufficiently in that area. Then the area may be left to the trade. The areas may be taken districtwise rather than on the big zonal system with which the Board works at present. For, people in an area are to be acquainted with tea as a beverage and not simply to be allowed to see a circulating van and hear the name of the beverage. The work should be on as intimate levels as possible and where tea is once publicized, it must stay there. That implies persistence and continuity.

In this connection, it may be suggested that the expensive Tea Centres in the premier cities like Bombay or Madras only reduplicate propaganda and publicity. For, in each such city there are already numerous tea shops and restaurants which could be utilised for publicity purpose at less cost. There is no sense in having such centres with their luxurious trappings and exotic climate when thousands of tea shops and restaurants and hotels are selling indifferent tea in indifferent conditions. A substantial portion of the expenditures incurred on these or to be incurred in projected Centres could be utilised to better advantage in non-urban areas in the way mentioned above.

Obviously, two things are necessary for increasing internal consumption: first, the production of tea must be increased, as the quantity now produced is not sufficient for both internal promotion and exports; and secondly, the tea that is to be introduced to the people must be of certain standard quality. It is true

--	---

that people here do not have discriminating palates. Probably, this is true of even such consumer countries as the UK and the USA. Tastes are different among different groups and the way in which tea is made for consumption is not the same everywhere. This appears to discount quality as an important factor in the consumption of tea. People will not like to be dictated to in matters of taste. That may make introduction of lemon tea or iced tea or such novel preparations a waste of money and energy. Nonetheless, quality is such that it makes itself felt in all kinds of preparation. May be it is the thickness of the liquor or the colour or simply aroma. But the eventual correlation of quality and liking for tea cannot be underrated. But it is here that the current propaganda seems to be helpless. One must have seen the poor tea that is served on the railways trains and the railway stalls, and in other public places, even in the exhibition stalls set up by the Tea Board. It is really a shame to have to offer the public such tea, and make them accept it as the national beverage.

This is a point of primary importance: to start a promotional campaign one must start with sufficient quantity and quality, standardised into blends at several convenient prices. But the marketing do not allow this. The large shipments of tea directly consigned to the UK auctions and private contracts leave very little of quality tea here, and whatever is left is sold at very high prices. One effect of such consignments has been to exaggerate the differences in the price levels at Calcutta and London in favour of the latter. Another is that the home market is liable to be glutted with plain teas every now and then. These cannot but produce their effect on the character of the supply of tea to the consumers at home.

To any intelligent public, this would seem to be the vital weakness in the propaganda carried on at present. There is undoubtedly some noise made about tea, but no amount of noise will make poor tea popular, whatever the form of preparation. And as human likes and dislikes are nearly equal everywhere, it is this issue of sufficient quality that matters in external promotion for which the auction in Calcutta and Cochin should supply the right kind of tea. One is aware that, for some countries outside like Egypt and Iran, only the Calcutta auctions offer special qualities and grades. This may be extended to other important countries. And for this a system of quality control on the direct shipments seems to be unavoidable.

As for the organisational details to implement the new propaganda lines, these can be settled by a joint Committee or Council of the industry, the trade and the Tea Board or the Government.

EXTERNAL PROMOTION

After the vacuum created by India's withdrawal from the ITMEB in 1952, external propaganda has been haphazard so far India is concerned in most countries. Some countries have been left altogether to Ceylon or Indonesia, which have been utilising the Tea Bureaus for pushing the tea produced by them. India has lost almost permanently South Africa on political grounds. It is true that in some countries, e.g., Canada, USA, West Germany, etc., some promotional work is being carried out in co-operation with the tea trade of these countries, but then all propaganda is for tea and not for tea of any particular country. But where no such organisation exists, Ceylon and Indonesia publicizes their own product. In the external markets generally Ceylon carries on double propaganda, one controlled by the propaganda Board at Colombo and another through the reorganised Tea Bureaus.

Obviously, the propaganda at such high pressure demands sufficient supply of quality tea and that is why there is quality control in Ceylon. If one follows the market price movements in Colombo auctions for the last few years, one will find that generally the price level in Colombo is lower than that in London for teas of all grades and qualities. Besides, there are ceaseless efforts made by the Ceylon tea industry to improve quality or to prepare tea to suit particular consumer markets abroad.

It seems that disproportionate costs and efforts are being spent by the Councils in North America and West Germany. This is as much unreasonable as the vacuum left unfilled in countries like the UK and Iraq and neighbouring countries. The first question that one has to face in external propaganda is one that concerns the real effective values or returns to the pressure campaigns and such effects should be felt in five years' time. For all the fluctuations in the USA imports of tea, the net gains are still doubtful. So the point raised may have to be gone into carefully once again. So it is in Canada and West Germany. As for the countries in which Indian tea has no—or very little—propaganda, market research seems to be overdue now. This can be done preliminarily by a joint Committee of the Indian tea trade and the Tea Board.

It may be that in all such countries the local tea trade is as yet unorganised and small

Fundamental Changes in US National Life

By THOMAS J. MARSHALL

It used to be a traditional view that fundamental changes in a nation's life come mostly unnoticed on silent foot.

This week, such views of a slower-paced era than ours seemed to be headed for oblivion. Both the National Legislature and the White House vied for leadership in dropping into the Congressional hopper a whole series of bills which would obviously cause major changes in the nation's life, reforming old institutions and creating new ones to fit the rapid advances, scientific and otherwise.

Consider the fruits of a ten day span:

A presidential proposal to make maintenance of a stable dollar as much a governmental responsibility as is now maintaining maximum conditions of employment and production;

A proposal to overhaul the costly (several thousand millions a year) farm subsidy programme;

A proposal to prescribe public disclosure of labour union finances—a device mainly directed against those union bosses who, though few in number, endanger labour's reputation.

From Congress itself came:

A proposal for making Hawaii the 50th State of the Union;

A proposal for expanding airports to meet the demands of the rapidly unfolding jet age in civilian transportation;

A Labour Reform Bill much along the lines of the presidential plan;

A bill to advance Negro equality in civil rights matters, soon to be matched and amplified by proposals from the Attorney General.

This is an impressive list. What is more, most of the bills are given a good to excellent chance of becoming law before the current Congressional session ends.

And if proof were needed that some of these "reforms and advance" bills actually promised real and fundamental changes in national life, that proof was embedded in a new appreciation of the meaning of civil rights legislation put before the law-makers.

No better psychological moment could have been chosen by Senate Majority Leader

Johnson (from the Southern State of Texas) for seeking to bridge that wide emotional gap that exists between school segregationists and integrationists.

For this week, Virginia's Governor Almond finally admitted defeat of his state's "massive resistance" to racially mixed schools. Indeed, the Governor, a lawyer of repute and long considered the south's main protagonist in fighting racial desegregation by strictly legal means beyond. Not only did he advise Virginians to adjust to limited integration. He openly refused to follow Arkansas Governor Faubus' example, instead asked the state legislature for greater police powers to prevent violence.

This does not mean, of course, total acceptance of school integration. Both the Governor and the legislature are now seeking new means to hold desegregation to a minimum.

But there is a change of atmosphere, a break of principle and a willingness—however involuntary—to adjust to reality. That at least is now the official state policy in Virginia and it is far more akin to compliance with the US Supreme Court's demand to integrate "with all deliberate speed" than was Virginia's now dead "massive resistance."

In the national legislature itself, bills covering the whole spectrum of pros and cons on integration have been introduced, in this situation, Senator Johnson's plan to interject federal conciliation began to look like a most appropriate device. Conciliation has obviously no place where total resistance reigns but it can go a long way toward making a start with integration where resistance, for whatever reason, is less than total.

And with some areas in the south—such as the state of North Carolina and various communities in other southern states—following a course of less-than-total resistance, with court litigation elsewhere likely to lead to the same result as in Virginia, federally-sponsored conciliation might indeed be the sword to cut the gordian knot of the integration problem.

Handloom Week

The Handloom Week is currently being celebrated to the accompaniment of glamorous publicity. While those who have organized the celebrations have no doubt very good reasons for the programme drawn up, there is the risk that the solid achievement of the industry might be missed in the glamour. For, in fact, the Handlooms in our country have a very substantial record of achievement to their credit. It has belied the fears of those who thought that the plan targets of handloom production were too high to be reached, and proved that, given half a chance, the Handlooms can deliver the goods. Against that must be set the fact that the progress of the industry in recent times has been sustained by subsidies financed by differential taxation of mill production. And it is obvious that this cannot continue indefinitely. Are necessary steps being taken to enable the Handloom industry to survive in competition with mill products by increasing its productive efficiency? Unless this is done the assistance that is now being extended to Handlooms will only aggravate the problems in the future.

The organization of production also raises controversial issues on which it is not easy to arrive at a clear-cut decision. Should the industry concentrate on production of utility articles for the home market, or develop new styles and fabrics with a view to selling in the foreign market? While the traditional pattern of demand in the home market argues for concentration on utility articles, it is felt that the market for this type of product is slowly but, none the less, shrinking. The dhoti is being slowly replaced by pants and half-pants, even in the country-side, though the sari has not yet yielded ground to the skirt. Handlooms have one great advantage in the great flexibility of design possible in manufacture. The future can be secured by exploiting this feature. With the economic development of the country, the market for the type of goods which attract foreign customers may be expected to expand and maintain the level of employment in the handloom industry.

Plea for Incentives

With the Budget only three weeks ahead, it is not surprising that the president's address to the Third Quarterly meeting of the Indian Chamber of Commerce last week was weighed down by the burden of taxes. Mr. Jalan, however, has taken the opportunity to relate the question of taxation to the problem of raising adequate resources for the Third Plan. While the needs of the country dictate a plan of large size, it is clear that actual implementation will be limited by the resources in sight. Mr. Jalan has naturally stressed the disincentive to save and invest created by the tax structure which has led in turn to reduction of productive activity. The performance of the private sector, which has almost completed its investment target under the Second Plan in the first three years, does not suggest that the admittedly high level of taxation has inhibited investment. But it can be argued that the full impact of the integrated system of taxes began to be felt only last year. In this connexion Mr. Jalan has made the relevant point that taxation has now reached the stage of diminishing returns. The fact that yield of direct taxes has not increased in proportion to the tax burden will appear to support this claim.

The rates and variety of taxes are not the only aspects of the tax structure which inhibit initiative and enterprise in the field of industry. The burden of taxes is made more onerous by the avoidable hardships caused to tax payers in the process of assessment and collection. It is hopefully expected that the scope for improvement in this respect will be clearly indicated by the Tyagi Committee, which will be submitting its report in September. Mr. Jalan has entered a strong plea for a policy of taxation designed to maximise the incentives to saving and investment and referred, in this connexion, to the growth of industrial production in the United States and West Germany. It will be realistic to concede that there are many important factors other than

tax policies which account for the phenomenal growth of industrial production in the USA and West Germany. In this connexion it is also relevant to add that spokesmen of industry will be more effective if they concentrate on specific aspects of tax reform and also take the precaution of calculating the impact on national finances of carrying out the suggestions put forward by them.

Size for Strength

The presidential address of Mr. G. Ramanujam to the Tenth Annual Session of the INTUC has stressed the urgency of increasing the strength of the organization so that it could continue to remain the largest organization of Indian Labour entitled to represent it in international conferences. This claim, in recent months, has come up against strong challenge. The establishment of Communist rule in Kerala has been followed by an upsurge in the membership of the All India Trade Union Congress. The claim has been made, though it has not been admitted, that AITUC has overtaken the INTUC in membership. As competition becomes keener for the right to speak for Labour, there is growing need for an independent body, analogous to the Election Commission, to supervise election to representative bodies.

Mr. Ramanujam claimed that with its constructive and positive approach, backed by superior organization and technique in the trade union field, the INTUC could play an important role in safeguarding not only the workers' legitimate interests, but also the democratic set-up in the country. The success of the organization in this respect will naturally depend on its capacity to speak for the majority of Indian workers. Mr. Ramanujam has indicated the fields where the INTUC is strong and has also suggested that the organization should reach out to new fields of activity among workers in the public sector, co-operative institutions, white collared labour, handloom weavers and other sections.

Doubts have been expressed in the past whether the close affiliation of the INTUC with the ruling party, in people's minds if not as an organizational fact, has been a source of strength. But the present danger appears to be a tendency to lean too far back in the other direction. There is no need to entertain fears of discrimination between the public and private sectors, after the categorical assurance given by the Union Labour Minister at the recent conference of State Transport undertakings. An assurance from the spokesmen of labour, or at least from the INTUC, that the competition for the soul of Indian Labour will not be allowed to aggravate the threats to industrial peace, will be doubly welcome at the present juncture when the public sector is showing

its paces in a big way at Bhilai and Rourkela.

Import of Chemicals

An official press release has spotlighted the remarkable increase in the output of the Chemical Industries in the last three years as well as the schemes of expansion which presage another big spurt in the remaining two years of the Plan period. While the rate of progress that has been registered is certainly encouraging, manufacture of chemicals has not reached the stage, either in quantity or in variety, when the country could do without a substantial volume of imports. As Mr. D. P. Kajarja told the annual meeting of the Indian Chemical Merchants' Association, India continues to import about Rs 29 crores worth of chemicals every year. While, on the one hand, restriction of imports has become necessary on account of shortage of foreign exchange, many of the chemicals that are imported are essential requirements of industry. Detailed and expert knowledge of the requirements of industry will be necessary for the operation of controls in order to minimise hardship and ensure that the attempt to save foreign exchange does not stifle industrial activity. The system of issuing actual users' licences will not completely meet the requirements of the situation. A wide variety of chemicals are required by industries, and many of them in small quantities. Quite apart from the fact that many firms engaged in the import trade will be forced to close down, with resulting unemployment, if they are denied licences to import chemicals for which they hold quota certificates, there is a strong case for channeling imports or distribution of imported chemicals through regular trade channels. This will help to avoid the time and trouble involved, both for industries as well as for the licensing authorities, in processing Actual Users' applications with all the attendant formalities of red tape. While such an arrangement will help relieve the immediate hardship, with the growth of indigenous manufacture, those engaged in the distribution of imported chemicals will have to turn their attention increasingly to the handling of local products. This they should be enabled to do. It is satisfactory to note that the State Trading Corporation has entrusted the distribution of certain chemicals through the Chemical Importers & Distributors Private Limited, an organization sponsored by the Association. It is to be hoped that the performance of this company will result in its being entrusted with the distribution of other chemicals imported by the S.T.C., besides interesting manufacturers to utilise its services. In this connexion Mr. Kajarja gave expression to his feeling that the policy of distribution of chemicals was tending to oust established traders from the field.

WORLD OF FINANCE

Counterpart Funds & the State Bank

AN UNUSUAL phenomenon that has been recorded in the latest return of the State Bank of India is the disinvestment in gilt-edged for an amount exceeding Rs 10 crores. While this may relate to no more than the need experienced by the bank to "liquefy" its resources, in order to meet the greatly enlarged demand for Advances during the period, there may be another explanation, and this is an aspect of the matter that is, to the student of the money market, both interesting and intriguing. We refer here to the fact that the State Bank is involved in a number of special transactions, about which the public information available is rather scanty. These are matters affecting, firstly, the accrual of special Deposits with the State Bank on account of the making over of counterpart funds to the care of the US Embassy and, secondly, the disposal of such Deposits. While there has from time to time, and over the past many months occurred an increase in the Deposit Liabilities of the State Bank, which could be traced to the accretion of counterpart funds, there has not so far been—at any rate, until, we suspect, the last week—any transaction of the second category

that we have mentioned. (Here, too, some qualification is needed, but, of this, later).

The special transactions began with the delivery in India of commodities received from America under Public Law 480 Agreements. Presumably, as soon as an American ship touched port with such cargoes, the Central Government were committed to "pay" for the consignment, in the sense of making over to the US Embassy the amount involved. At a later stage, as such stocks were released either to State Governments or, in the case of raw cotton, to mills, the balances of the Central Government were "recouped" to a corresponding degree. But, by terms of the Agreements, the gathering counterpart funds were to be relented to India, though there were small specific and mutually agreed allocations. One such allocation was for the uses of the American Embassy. Another provided that the equivalent of \$ 55 million (or Rs 26 crores) be utilised for assistance to the private sector. The balance, as to part in grant and the rest in loan, was to be at the disposal of the Indian Government. However, it is known that, until some months ago, no capital amount lying to the credit of the counterpart funds had been disbursed; all that had been drawn, to defray part of the expenses of the US Embassy was the accrued interest. In the second place, the allocation of Rs 26 crores, later agreed to be lent to the Refinance Corporation for assisting the private sector, was "firm", but provision in this regard is being made, as far as can be seen, by the Central Government in the Budget; the last Explanatory Memorandum explicitly provided Rs 21 crores for the Refinance

Corporation. Both these, however, are relatively "minor" uses, the "main" utilisation being grant and relend to the Indian Government. The questions that we have to address ourselves to are, why is it that no amount has so far been apparently drawn in this respect? and how will such eventual drawings be reflected in the position of the State Bank?

We gather that negotiations have been conducted for some time now as to the "projects" which would be eligible for such assistance, and also that the procedure in this regard will be to "categorise" each loan that is made. In other words, a number of agreements will probably be concluded before the whole of the amount is disbursed. Unfortunately, and it does not matter where the blame lies, the negotiations have tended to be protracted, and hence the delay in the actual disbursement. Meantime, the special Deposits have continued to be in the State Bank. Only rough figures are possible, but the total so far may exceed Rs 150 crores, with another like amount likely to accrue between April and June this year. Then, from the standpoint of the State Bank, this avenue of resources has, owing to the money market conditions prevailing during the whole of 1958, proved to be somewhat of an embarrassment. Though the trend in Advances was upward until March 1958, the contraction thereafter was steady and considerable, and it was not until the closing weeks of the year that the level of the Advances was placed higher than the corresponding figure for the previous year. Moreover, the State Bank had to be prepared for the withdrawal of the Deposits on short notice. As such, with the Deposits on a "time" basis, it became necessary for the State Bank to "hedge" its high-cost Deposits—because they could not be utilised for an expansion in Advances. Thus it was that the investments in gilt-edged of the State Bank rose in 1958 by a figure that just fell short of the rise in Deposits. (We may add here that, in the process, the State Bank has been presented with a windfall profit, representing roughly one half of the difference between the interest it derived on its new gilt-edged holdings and the interest it had to pay out on the special Deposits).

In such a situation, the special Deposits with the State Bank became to be in the nature of a "contra" item with the investments in gilt-edged figuring for like amount on the asset side of the balance sheet. As such, though the cash ratio appears to be low, in relation to Deposits net of such accounts, the cash ratio is not unduly low. Lately, with the 1958-59 busy season showing signs of perking up, the State Bank has had considerable recourse to borrowings from the Reserve Bank. An assumption that could be made at the time was that the "contra" nature of the counterpart funds was being left unaltered, with the State Bank choosing to replenish resources by

borrowings for meeting any increase in the demand for accommodation. But it is surely a matter of time before the counterpart funds are drawn upon, since negotiations in respect thereof should by now have reached a decisive stage. We have here to concern ourselves with the manner in which allocations will be made, the impact of such allocations on the return of the State Bank and prospective changes in the gilt-edged portfolio of the State Bank.

There are some banking circles who believe that, on allocation, Deposits will be drawn down from the State Bank and transferred to some other commercial bank or banks. We are not sure whether such a procedure will be adopted, but we would like to take this opportunity of suggesting that, in view of the recent expansionary trend in Advances, it would considerably benefit the banking system if such Deposits were re-distributed among other Scheduled Banks. But, even if this "transfer" does not take place, there is not likely to be any more than a temporary decline in the Deposits of the banking system as such. On allocation, the amount involved may be paid out by the US Embassy to the Central Government, in which case the balances of the Central Government with the Reserve Bank would rise. Thereupon, the Central Government might choose to institute reverse ad hocs, if their balances were above the traditional "minimum" of Rs 50 crores. But the present understanding seems to be that it will be specific projects which will benefit from the allocations. In that sense, since the organisations or institutions or even private limited companies which have been entrusted with the task of running the projects will have bank accounts of their own, it seems possible that the relending will not necessarily always be reflected in the position of the Central Government vis-à-vis the Reserve Bank. Of course, the projects themselves will be expending the money which they have acquired from the counterpart funds. But, then, such disbursements in turn will very likely return to the banking system. However, if the money is utilised for imports, there would be contraction of Deposits for a corresponding amount. But, in view of the current foreign exchange situation, it seems unlikely that the counterpart funds will be used in projects which are foreign exchange based.

Aside from direct allocations to entities which have bank accounts of their own, on the conclusion of negotiations, the US Embassy would presumably turn over to the Central Government all other agreed amounts. This, as we have seen, will not necessarily result in an increase in the Central Government's balances, but might be offset by a corresponding amount of reverse ad hocs instituted. But then there would soon be a stage when the Central Government themselves will disburse the money

February 14, 1959

received from the counterpart funds and, at that stage, much in the manner that Scheduled Banks. Deposits show a considerable rise in the first week of April owing to the heavy Central Government expenditures in the last week of March, it is to be anticipated that the Deposits of Scheduled Banks will again benefit.

There is one observation which we need to make at this juncture. While we are not sure what the procedure is, it may be that the Central Government will be recompensed for expenditures incurred by them against projects or utilisations mutually agreed upon. In that case, the drawal on the State Bank would occur after disbursements in respect thereof have already been completed by the Central Government. Hence, it may be that the time lag as between the receipt of allocations from US Embassy authorities and a reflection of such disbursements in the Deposits of Scheduled Banks will not, in fact, exist.

Once drawings are made upon the State Bank, it does not matter whether a transfer takes place to another bank or whether the new owner of Deposits continues to place them with the State Bank or whether the amount is turned over to the Central Government. In all three cases, the State Bank will in the first instance experience a decline in its Time Liabilities. In the first and third cases, there will be a physical decline in Deposits, and the State Bank would of necessity have to disinvest in gilt-edged for like amount. The Reserve Bank would naturally repurchase securities from the State Bank. (In such a situation, since gilt-edged prices have been rising steadily, the State Bank stands to realise a profit on sales of investments, and this would be another windfall profit). In the second case, the Deposits would be shorn of their special character and hence the State Bank would be under no compulsion to have a hedge in gilt-edged, and so disinvestment for like amount is again likely. Thus, we suggest that, every time a drawing is made upon special Deposits, and unless there is a countervailing further fresh accrual of special Deposits, there would be a corresponding degree of disinvestment in gilt-edged by the State Bank.

So long as the special Deposits have remained with the State Bank, the velocity of these Deposits has been nil. Once they are shorn of their special character, and since they would be expended by the entities receiving the allocations and since such disbursements would be returning to the banking system, a new dimension in velocity of Deposits might be created at that stage. Thus, far from the banking system experiencing a kind of "loss" as a result of drawals made on counterpart funds, we believe that there would be added life and zest to banking activity.

We may draw this article to a titillating conclusion. Although there has been considerable delay

in the allocation of monies lying to the credit of counterpart funds, we may note that, in effect, the Central Government have been getting immediate benefit in respect of such accruals. This is because the State Bank has automatically invested, as a contra item, its fresh receipts of Deposits in gilt-edged securities. Whether such purchases of gilt-edged were from the Reserve Bank or whether they were at new loan time, the Central Government have directly or indirectly been getting an immediate credit thereagainst. So, the delay has not mattered much from the point of view of the Government's Ways and Means position, though the so-called "approved" projects may have been delayed.

Steep Expansion in Active Notes

The latest returns of the Reserve Bank need to be studied in conjunction with the statutory statement of the State Bank for the same week in order that certain important conclusions may be drawn. These conclusions relate to the theme of the leading article in this section, which is the extent and manner of repercussions flowing from the reverse process being instituted in regard to US counterpart funds. Until lately, the transactions which were discernible in the returns of the State Bank were limited to accretions of counterpart funds and their "disposal" or "utilisation" by the State Bank. It seems possible, as the assessment which follows will show, that, during the week ended February 6, payments are being made from counterpart funds. The noteworthy changes in the returns of the two institutions are:

- (1) The State Bank's investments in Government and other trustee securities has declined unusually by the considerable amount of Rs 10.03 crores to Rs 266.09 crores.
- (2) The Deposits of the State Bank are marked higher by Rs 3.39 crores at Rs 476.65 crores.
- (3) The Reserve Bank's holdings of Rupee Securities, in the Issue and Banking Departments combined, have risen by Rs 20 crores.
- (4) The Balances of the Central Government are lower by Rs 7.38 crores at Rs 50.44 crores.

It is a legitimate conclusion to be drawn that the State Bank's disinvestment in gilt-edged is not due to its need to replenish its resources. For, in previous weeks, when the State Bank felt the pressure of the busy season, and when it became necessary to augment resources in order to meet the expanding demand for Advances, the State Bank had recurrent and considerable recourse to Reserve Bank credit. It would thus appear that the disinvestment has taken place because a like amount

has been drawn from the State Bank in respect of special Deposits, and it is to be presumed that this money has been made over to the Central Government. Consequently, it was possible for the State Bank to reduce its contra investment by an amount of Rs 10 crores. If, in fact, the amount of Rs 10 crores has been drawn from special Deposits, as a result thereof, the State Bank's Deposits should have declined by Rs 10 crores. In fact, it can be seen that, during the week, they have risen by Rs 3 crores odd. This would suggest that the gross rise in the Deposits of the State Bank was of the order of Rs 13 crores, this being offset by the drawing down of Rs 10 crores under special Deposits.

If Rs 10 crores of investments were sold to the Reserve Bank, the Reserve Bank's holdings of Rupee Securities would have been marked higher by Rs 10 crores. We have seen that, in fact, the rise is of the order of Rs 20 crores. We are to presume that the balance of increase relates to deficit financing incurred during the week. Then, the drawing on special Deposits with the State Bank would indicate that the US Embassy has turned over to the Central Government an equivalent amount. But, in fact, the Central Government's balances have declined by Rs 7 crores odd; there has been deficit financing for around Rs 10 crores; and the Central Government will have received Rs 10 crores from the special Deposits. The three together would indicate that the Central Government's net disbursements have been heavy—being in the environs of Rs 27 crores during the week. But this would be entirely possible, both because of beginning of the month disbursements and because of the approach of the fiscal year-end.

Summing up, it is not difficult to see the connection between the decline in the investments of the State Bank, the rise in the Reserve Bank's holdings of Rupee Securities and the credit therefor being received by the Central Government and being utilised by the Central Government to defray their beginning of the month disbursements and end of fiscal year payments.

The impact of the busy season as well as of month early disbursements is clearly to be seen in the Reserve Bank and State Bank returns for February 6. Active Note circulation has risen steeply by Rs 33.66 crores to Rs 1658.69 crores. Rupee Coin went out into circulation for Rs 2.73 crores. Currency has been expanded against Rupee Securities for Rs 35 crores, of which, presumably, Rs 15 crores is by transfer from the Banking Department, Rs 10 crores as a result of purchase from the State Bank and Rs 10 crores consequent upon the sale of ad hoc Treasury Bills in favour of the Reserve Bank by the Central Government. In the end result, the Reserve Bank's cash in the till is marked down by 1.40 crores at Rs 11.30 crores.

We have already seen that the impact of month early disburse-

ments and end of fiscal year payments has been heavy as far as the Central Government are concerned, with their balances declining by Rs 7.38 crores to Rs 50.44 crores in spite of presumed credits for Rs 20 crores from other sources. The State Governments have also had to bear the brunt of beginning of the month and fiscal year-end disbursements, with their deposits declining by Rs 6.76 crores to Rs 21.79 crores. The Reserve Balances of member banks also bear the reflection of busy season demand and month early disbursements, with the relative figure declining by Rs 7.80 crores to Rs 67.95 crores. On the other hand, the Other Loans and Advances of the Reserve Bank, in being lower by Rs 3.55 crores at Rs 90.31 crores, would suggest that the busy season pressure on the Scheduled Banks has not been too great. But we must remember that the State Bank alone was able, due to other causes which we shall be taking note of, to reduce its borrowings from the Reserve Bank by Rs 9 crores. It would thus appear that the other Scheduled Banks have increased their indebtedness to the Reserve Bank by over Rs 5 crores.

The last point that may be noted in the Reserve Bank returns is that, for the second successive week, Balances Held Abroad have declined, though the fall is a nominal one of Rs 0.74 crores to Rs 26.01 crores.

The return of the State Bank for February 6 shows that gross Deposits must, for reasons already adduced, have gone up by over Rs 13 crores. At the same time, the State Bank has experienced busy season and beginning of the month pressure for funds, such that Advances have risen by Rs 10.09 crores to Rs 190.86 crores. The improvement in Deposits and disinvestment in gilt-edged have enabled the increase in Advances to be met. It was still possible for the State Bank to reduce borrowings by Rs 9 crores though, in the process, Cash in Hand and with the Reserve Bank declined by Rs 4.76 crores to Rs 23.28 crores.

According to the return of Scheduled Banks for January 30, the busy season is proceeding apace, with Advances rising sharply by Rs 11.30 crores to Rs 920.34 crores. Nevertheless, the trend in Deposits is satisfactory, with a rise of Rs 1.96 crores to Rs 1629.96 crores being registered during the week. The Scheduled Banks increased their borrowings from the Reserve Bank by nearly Rs 10 crores to Rs 39.56 crores from Rs 29.96 crores. Investments are higher by a crore odd at Rs 635.27 crores. Cash Balances have been marked up by Rs 10.45 crores to Rs 170.89 crores. In conclusion, we may state that the next return of the Scheduled Banks will probably register both an increase in Deposits and a decline in Investments; and, lastly, we may state that, unusually, balances with banks other than the Reserve Bank have moved up sharply by Rs 8.45 crores to Rs 21.95 crores.

The Indian Bank Limited

H. O. First Line Beach, Madras-1

In consonance with its policy of inculcating the banking habit amongst the community, the Bank has been opening a number of branches in the recent past.

There are now no fewer than 112 branches of the Bank functioning not only in India but also in Ceylon and Malaya.

In addition, the 23 Local offices of the Bank serve the entire Madras City and Suburbs.

Foreign Exchange Facilities Also Available.

London Agents:
Westminster Bank Limited.
New York Agents:
First National City Bank of
New York.

D. P. PARTHASARATHY
Secretary.

The Radcliffe Committee's Report

By
Paul Einzig

THE Governor of the Bank of England, Mr Cobbold, was recently re-appointed, but he allowed it to be understood that he may not want to continue to serve the entire term of five years. This gesture was generally interpreted as foreshadowing the possibility of his resignation in case of the advent of a Socialist Government. Having regard to the hostile attitude of the Labour Party towards the Bank of England on the occasion of the Bank Rate Inquiry in 1957, it might indeed be difficult to imagine friendly collaboration between Mr Cobbold and Mr Harold Wilson who will be Chancellor of the Exchequer in the next Labour Government. For this reason alone, it is conceivable that Mr Cobbold considered it advisable to reserve the right to resign before his new term of office comes to an end.

There may be, however, another weighty reason—the anticipation of certain unfavourable recommendations by the Radcliffe Committee whose report on the currency system is now expected to be issued towards the middle of this year. Several witnesses who gave evidence before it came away with the distinct impression that certain key members of the Committee are decidedly critical of the Bank of England and intend to recommend some drastic changes. This was indicated by the way

they questioned these witnesses. And even though the members who disapprove of the Bank of England may constitute a minority, they include some highly dynamic personalities. As it usually happens on such committees that they are influenced by a small number of dynamic members, it seems reasonable to expect that the report will contain recommendations that will displease the Bank of England.

Foremost among such recommendations of the existing system under which the majority of the directors of the Bank of England are part-time directors whose main interest lies outside the Bank. Until comparatively recently all directors were merchant-bankers, but during the last thirty years or so a number of senior officials of the Bank were made full-time directors, and part-time directors now include representatives of other economic interests in addition to merchant banks. But even now the merchant banking element continues to be represented to an extent that, as critics argue, is entirely out of proportion to the relative importance of merchant banks in the national economy.

The Radcliffe Committee is not likely to confine itself, however, to recommending merely an increase in the proportion of industrialists and others on the board of the Bank at the expense of merchant bankers. It is credited with the intention of advocating the abolition of the system of part-time directors altogether. Its report is expected to suggest that only full-time directors should be appointed in future.

A change of this kind would be fully in accordance with the wishes of the Labour Party. The attempt to work up the Bank Rate leak affair into a major scandal was made with the object of discrediting the system of part-time directors by conveying a suspicion that such directors are in the habit of making use of the inside information for their personal gain. A thorough investigation of all transactions that preceded the Bank Rate change of September 1957, carried out by a court of inquiry presided by a senior judge (the present Lord Chief Justice) completely cleared the part-time directors of all such charges. Even so, Socialists profess to be convinced that it is wrong to retain part-time directors.

Whether or not the Radcliffe Committee will recommend the abolition of the system, it is safe to assume that the next Labour Government will take an early opportunity to lay down the rule that henceforth all directors of the Bank of England must be full-time directors with no outside interests. There is a strong feeling among leading Socialists that so long as the present system continues the Bank of England is not really nationalised but is still under the control of private interests. In reality, all major decisions of policy are taken by the Government. Even though the Governor and other high officials are able at times to influence those decisions by their advice to the Chancellor of the Exchequer, their position in this respect does not differ from that of senior Government officials who have direct access to their Minister.

Evidence given during the Bank Rate Inquiry showed that the Governor is in the habit of consulting regularly the part-time directors as well as the full-time directors about Bank Rate changes under consideration. But the decision whether to recommend a change to the Chancellor of the Exchequer rests with him, and in any case the Chancellor is at liberty to disregard his advice. The same is true about other important policy decisions. It seems, therefore, that the Socialists grossly exaggerate the alleged influence of part-time directors on the monetary policy of the country.

The only way in which these directors are in a position to influence the Governor and, through him, the Chancellor is by providing information about developments that are liable to influence policy decisions. Thanks to part-time directors, a constant stream of information concerning the position in banking, industry commerce &c reaches the Bank, and it goes a long way towards enabling the Governor to judge the situation and prospects correctly. If the part-time directors are removed the Bank of England will find itself largely isolated from the realities of economic life. No matter how able the full-time directors are, their lack of direct contact with practical business outside the windowless walls of the Bank of England is bound to place them at a disadvantage. Even if some of the full-time directors were former

Indian Finance

bankers and businessmen, the practical experience they gained before their appointment would be a wasting asset they would gradually lose touch with the ever-changing situation.

Under the present system the Bank of England acts as a high-class clearing house for top-level business appointments. Whenever some important firm gets into difficulties the Bank of England advises them and suggest the reinforcement of these boards of directors. By such means it was possible during the post war period to save many important firms. The informal contact between the part-time directors and the Governor on the one hand, and between the Governor and the Chancellor on the other, is a great advantage and it would be a great pity to terminate it.

The Radcliffe Committee is surely familiar with this line of argument. But some of its members at any rate are inclined to take a political view and to recommend a change that is bound to be carried out in any case by the next Labour Government. The Conservative Government may not implement, however, the recommendation. For one thing, it is a mistake for a Conservative Government to try to be more Socialistic than a Labour Government. In doing so it would only force the next Labour Government to go even further in its measures against the present organisation of the Bank of England than it would really wish to go. By going away with part-time directors a Labour Government would satisfy many of its Left-wing supporters. But if this change is made by a Conservative Government then the Labour Government will have to do something more drastic to show its Left-wing supporters that it is more radical than its predecessor.

One thing that a Labour Chancellor of the Exchequer will possibly do in such circumstances is to place the hidden reserves of the Bank of England under Treasury control. When the Bank was nationalised in 1945 Socialists with inside knowledge were very pleased with the compulsory acquisition of the privately-owned stock at a price which did not even pay for the hidden reserves. But those reserves have been left in the possession of the Bank, so that the Governor is in a position to assist it without any publicity a private bank that gets into difficulties. He may consult the Chancellor of the Exchequer informally, but the transaction can be effected without any public discussion.

On the other hand, if the Government should assume control of the Bank's hidden reserves any assistance would have to go through Parliament, and the inevitable publicity attached to it might do incalculable harm to the banking system. It would be, therefore, a grave mistake for a Conservative Government to steal the thunder of the next Labour Government by doing away with part-time directors. In doing so it would only induce the next Labour Government to do something much more harmful and radical.

Rise in Gunny Stocks

PRICES in the jute goods market have declined sharply during the past week due to the cumulative effect of a number of adverse factors. The latest inhibitory influence has come in the shape of the figures relating to stocks of jute goods with IJMA mills at the end of January. Though the news of a rise in stocks is no surprise to marketmen, the fact that the increase has been shared by all sections has evidently not been conducive to enthusiasm. Total stocks show a rise of 4,000 tons over the previous month with hessian showing an increase of 1,000 tons, sackings 2,800 tons and other varieties 200 tons. At the corresponding date of last year stocks were placed at 96,600 tons comprising 29,700 tons hessian 53,700 tons sackings and 12,200 tons other varieties. The position as regards hessian is still quite satisfactory notwithstanding the rise in stocks which by no means may be said to be large enough to cause concern. What should cause anxiety is the rising trend in stocks of heavy goods. At 83,000 tons sackings stocks are near two month's production of this category of goods. Mills cannot afford to continue to hold such huge stocks as unsold stocks mean unproductive capital.

The reactionary tendency, however, has begun to characterise trading almost from the beginning of the week under review following the IJMA announcements regarding sealing of a further quota of looms and the minimum prices for jute goods. It was announced on Thursday evening that the IJMA decided to seal 1½ per cent of its total looms with effect from March 1, 1959 with a provision for sealing another 1 per cent as and when deemed necessary.

The second decision relates to the voluntary agreement among member mills of the IJMA not to sell jute goods below certain fixed levels. The Association have now removed this restriction so that mills are once again free to sell goods at any price they may want. This is not to say that the agreement had been strictly observed while it was in force. For one of the reasons for the withdrawal of the agreement would appear to be its widespread violation.

As has been pointed out last week, the agreement has been found to be untenable partly because the minima fixed have become unrealistic in view of the drop in the price of raw jute and partly due to the lack of support for the price minima move from a section of marketmen, from the very beginning.

The announcement of the withdrawal of price minima agreement

by the IJMA was accompanied by the news that the East India Jute and Hessian Exchange had also decided that with effect from February 13, the additional margin deposits payable by sellers on outstanding sales at close of each day would be withdrawn. It may be recalled that in order to check the declining trend in the price of raw jute, the Association imposed additional margin on sales below a particular level on December 20, 1958. With the withdrawal of the additional margin sellers will have to pay only a margin of Rs 1.50 per hundred yards for sales below Rs 39.50 for hessian contract, Rs 3 per 100 bags for sales below Rs 95 for sacking bags contract and Rs 2.25 per maund for sales below Rs 22.50 for raw jute contract.

In view of the fact that already mills are transferring steadily a portion of the sacking loomage for the production of hessian, it may be taken for granted that the portion that will be sealed from March 1 will be chosen from mills' sacking loomage. It is, however, clear that such an almost insignificant cut in sacking production cannot be expected to make much of a difference to the stock position of this category of goods which has at the end of January shown a further deterioration compared with the previous month. It would appear that the IJMA may have to exercise the option of sealing a further one per cent of the total looms soon enough.

Following the announcement of the two important decisions of the IJMA relating to sealing of a further quota of looms and the voluntary agreement on minimum selling prices for jute goods, the jute goods market developed an easy trend toward close on Thursday. The fall in sacking rates was steep as it was believed that both the decisions were quite unfavourable for sacking. The withdrawal of minimum prices would encourage further selling pressure in sacking as operators would not have to worry about the minimum price level. Secondly it was generally believed that the sealing of 1½ per cent of the total looms would make little difference to the heavy stocks of sackings with the industry. By close on Thursday B Twills was pushed down to Rs 89.35. Hessian, however, was steady as the demand for ready delivery goods in this section continued to be quite good. Hessian 40" x 10 oz. was finally placed at Rs 40.20. The steadiness of hessian proved to be shortlived as on Friday it went down to Rs 39.85 while B Twills remained unchanged at the previous level. In Saturday's trading prices seemed to stabilise at the lower levels and B Twills even recorded some fractional gain to close at Rs 89.55. With the publication of the stock figures from the beginning of the week, the downward trend resumed and Monday rates were marked down all along the line as follows: Hessian February Rs 39.40 and B Twill Rs 88.75.

The raw jute market has ruled steady in marked contrast to the goods section. Perhaps the fact that the IJMA's recommendation to member mills to keep stock of jute sufficient for four months' consumption

Strong Demand for Export Teas

THERE has been a strong demand for export teas during the past two weeks. Buyers are keener to bid for supplies and prices, except for some unattractive types, are dearer. In view of the larger number of packages coming on offer each week, it remains to be seen whether the market can maintain its buoyancy.

Some trade quarters, in London, have suggested that buyers, especially at today's values, are taking up more tea as a safeguard against a possible interruption in supplies. It is also felt that the relaxation in credit restrictions has encouraged a certain amount of re-stocking. Demand, however, will have to be maintained at a very good level indeed if all the tea available is to be absorbed.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 9,062 chests of Leaf grades and 2,208 chests of Dusts. There was a fair general demand for Leaf grades, although less widespread than of late. The better liquoring Broken were a strong feature and advanced by 2 to 4 annas per pound, while leg-cut types were fully firm and may be quoted at Rs 2/12. The remainder were somewhat irregular with prices generally moving in buyer's favour. Op was quoted at Rs 2/9/6 and BP at Rs 2/9/6 per pound. There was a strong general demand for Dusts at higher rates, the popular varieties being the strong feature. Plain Sylhet Dust was quoted at Rs 2/10. The next sale will be held on the 25th February.

In the auction held at Mining Lane, offerings were 27,534 packages, including 21,254 packages from Northern India and 936 packages from Pakistan. An easier tendency was obvious from the quiet opening. Dooars were often unsold, having failed to reach brokers' valuation. The Medium and Plain teas were also slow of sale at slightly lower prices. The recent strong demand for good colour Assam grades was still evident and these were the strongest feature of the market. Rates remained unchanged.

Tea stocks in London, as on the 30th January, were 165.73 million pounds as compared to 162.99 million pounds in the previous week. The total amount to be landed on the same date was 32.71 million pounds. Total afloat was 32.10 million pounds including 20.85 million pounds from Calcutta; 1.58 million pounds from Chittagong; 1.95 million pounds from Coochin; 6.33 million pounds from Colombo and 1.39 million pounds from other Ports.

IMPACT OF CHANGING TECHNIQUES ON PRODUCTIVITY

By JOHN WALTON

The pattern of industry in Europe, and the changing techniques of productivity there, vitally concerned Britain as a nation and trade unionists in particular because of their interest in maintaining jobs. So said Lewis Wright to a recent conference of British trade unionists who were to spend the day discussing productivity in Britain and Europe. Mr Wright, chairman of the production committee of Britain's Trades Union Congress (TUC), was opening the way for four other speakers, three of whom had travelled to London from across the Channel.

This conference was yet another recognition of the deep interest that British trade unionists take in European affairs—an interest heightened by the creation of the Common Market and the discussions about the possibility of a wider trading association in Europe which would bring in Britain.

During the past two years, the TUC has kept an active watch on moves aimed at closer economic working. In London, there have been regular meetings between the Government and representatives of the TUC; in Europe, TUC representatives have been present, with union delegates from other countries. At meetings held under the European Regional Organization of the International Confederation of Free Trade Unions (ICFTU).

A few days before the TUC's productivity conference in mid-January, representatives of French trade unions had been in London for talks. The French trade union leaders had been invited by the TUC to put their views on the latest developments which have already brought about the Common Market but not, as yet, any wider economic association with other European countries. Also present at this meeting was a representative of the ICFTU European Regional Organization.

The talks revealed that both British and French trade unionists were anxious to achieve, through wider economic co-operation, the same aims of full employment and high standards of wages and conditions of work. Both believed that the establishment of such co-operation would be a progressive move, provided it helped to achieve these ends.

Stress was put on these same points in the discussions during the TUC's productivity conference.

at which 100 representatives of affiliated unions were present. The first speaker, Dr Alexander King, deputy director of the European Productivity Agency, said that the significance of the Common Market was much greater than many in Britain realized. He told the conference that it represented not only a rational and important step in economic and commercial policy, but the first move towards eventual political integration.

Dr King also spoke of European confidence in the long-term advantages of the Common Market and the expectation of longer production runs for the more complex products of the chemical, electrical, and engineering industries. On the importance of research, he warned that "future economic battles are more likely to be lost and won in the research laboratories, including those of the universities, than on the production floor or the market place".

Two other speakers—a British expert on management and a representative of the West German trade unions—dealt with techniques which had helped to raise efficiency in European industry. Mr H. Ingham, the management expert, pointed out the value to workpeople and to employers of inter-firm comparisons, a technique in wide use in Europe to help firms find out whether, and in what respects, their performance is inferior to that of others in their industry. Inter-firm comparisons, he said, were important to trade unionists since the relative inefficiency of high-cost producers prejudiced workers' earnings, conditions, and security in employment.

From the representative of the German trade unionists, Dr H. Buttner, came an appraisal of the value of new techniques in rescuing German industry from its run-down state immediately after the war. But, he said, however much German trade unionists were ready to co-operate, they demanded adequate safeguards for their members based on early consultation.

The final speech, from Mr Robert Cottave, head of the trade union section of the European Productivity Agency, reminded delegates of the scale of the European traffic in trade unionists looking for new industrial ideas. In the last two or three years, under EPA schemes alone more than 250 British trade unionists have visited different countries in Western Europe, which, in turn, have sent 350 trade unionists to Britain.

If the meeting with representatives of the French trade unions and the discussion conference on European productivity are particularly relevant to current events, it is in place to point out that for some time now the TUC has been represented on a number of bodies dealing with the economic and social affairs of Europe. Apart from the ICFTU and its regional organization for Europe, TUC representatives sit on the Advisory Board to the European Productivity Agency, on the Joint Trade Union Advisory Committee to the Organization for European Economic Co-operation

(OECE) and, as observers, on bodies connected with the European Coal & Steel Community.

As a historical footnote, it is worth recalling that contacts between British and Continental trade unionists go back about a century—to before the formation of the International Workingmen's Association in 1864, and the TUC in 1868.

US Notes

ENOUGH time has elapsed since Soviet First Deputy Premier Anastas Mikoyan's departure on January 20 from his tour of the United States to obtain a representative sampling of government and business reaction to the rather unusual ways in which he tried to promote US-USSR foreign trade.

In business circles one finds little excitement. The reaction is aptly set forth in an editorial in *Business Week* magazine titled "The Salesman Who Couldn't Sell." The editorial gives this evaluation:

"There is little in Mikoyan's American journey to suggest that a new chapter is opening in US-Soviet relations. But perhaps Mikoyan was convinced, as he frequently said he was, that American businessmen are not warmongers.

"And perhaps he sensed something of the economic and social vitality of this country. If he carried these impressions back to Moscow, it may have been worthwhile listening to his version of the Soviet line and even putting up with his effrontery."

The official government reaction to Mikoyan's foreign trade promotion efforts was, in turn, summed up by the State Department's Economic Affairs Chief, Under-Secretary of State C. Douglas Dillon.

In a speech in New-Orleans last Tuesday, Mr Dillon explained that the Soviet campaign really began with Soviet Premier Khrushchev's letter to President Eisenhower last June.

In that letter, Khrushchev proposed a significant expansion of US Soviet trade, claiming the expansion could amount to "several thousand millions of dollars over the next several years."

President Eisenhower at that time replied that the United States favoured an increase in peaceful trade and that the State Department was prepared to discuss the matter further.

It should be recalled here that Moscow has long used trade as a means to reach economic self-sufficiency and to promote its industrializations. During the early 1930's, at the very beginning of its industrialization drive, Soviet Russia concentrated on the import of heavy machinery and equipment which incorporated the latest technological advances made in other countries.

Imports of consumer goods were virtually eliminated in favour of basic industrial goods. These imports enabled the Soviet Union to

launch new industries at levels of development which other countries achieved only after years of work and costly research.

Now the pattern of the 1930's is apparently to be repeated. For, as Mr Dillon put it, "there is good reason to believe (the Soviets) renewed interest in purchasing from the west stems from the new seven-year plan which is now being unveiled.....

"This plan has been heralded by Soviet leaders as a major step toward accomplishment of their announced goal of overtaking and surpassing the United States—a goal we would consider a welcome challenge if the Soviet people, rather than communist world ambitions, were its primary intended beneficiaries."

Another rather startling point cropped up in Mikoyan's promotion talks. In his letter to President Eisenhower, Khrushchev had pointed to the need for long term credits from the United States. "This suggestion," Mr Dillon now reveals "was presented to me as an absolute precondition to increased trade during my talks with Mikoyan."

Mr Dillon firmly rejected the idea of extending any new credits to the USSR. For the Soviet Union is the only major country which is in default on a settlement of its World War II lend-lease accounts.

The Soviet Union owes the United States \$2,600 million for civilian type goods, an account which the United States proposed to settle for \$800 million on a long-term, low-interest basis. In 1951 Russia had offered only \$300 million. There have been no lend-lease talks since then. Mikoyan is understood to have shown no interest in resuming talks about this settlement.

Most favoured nation treatment which the USSR wants would, of course, require Congressional approval, and such approval would obviously have to await a definite improvement in the international political climate.

But perhaps the most fundamental fact to be considered is that the economies of the United States and the USSR at present do not offer much of a foundation for expanded trade. The United States is obtaining most of what it needs in the way of raw and semi-finished materials—and these are the main export goods of the USSR—from friendly nations which are its traditional suppliers.

Manufactured goods produced in the USSR have thus far been offered only sparingly outside the communist bloc, and then mainly in politically-motivated trade with selected target countries in the newly-developing areas of the world.

As for actual US-Soviet foreign trade, the figures have been almost trifling, but USSR has done much better than the United States. For example, imports from the USSR to the United States in the first 10 months of 1958 were \$18.2 million while US exports to the USSR in the January-November period last year were only \$1.7 million.

MAULANA AZAD'S book, "India Wins Freedom", has acquired within a month of its publication a kind of notoriety that would have deeply hurt his fastidious spirit. What might have exasperated him even more is the political innocence of much of the comment it has evoked. It is really embarrassing to find sophisticated scribes writing as though they could not have thought of things unless somebody put it all down in a book for them. Thus, the fact of the Congress of pre-independent days being a loose agglomerate of widely divergent persuasions united only by a desire to get rid of the British is fished out with pained surprise from the Maulana's book. This shows that they have not bothered to keep track of even officially public news. And as for temperamental differences among the leaders of the Congress, these were not even a matter of inference, since they have been avowed in a variety of contexts. Even the central fact of the book—that Maulana Azad was entirely opposed to partition and that it embittered the end of his life—was not unknown. I shall presently deal with certain things that the Maulana's book makes public for the first time, but to imagine or to imply that the Maulana has brought out for inspection skeletons discreetly hidden behind "official histories" is nothing but political ghoulishness.

★

In some ways, the history of this book is rather unusual. It was not written by Azad himself either in English or in Urdu. It is an English rendering (revised by Maulana Azad) by Mr Humayun Kabir of what Maulana Azad told him in Urdu. Mr Kabir himself has indicated the literary hazards of a procedure which involves a rendering by one of what another said in a different language. In particular, "the difference in the genius of Urdu and English makes the task of interpreting Maulana Azad's thoughts still more difficult". I do not know Urdu, but I do know enough about my own language and English to know that Mr Kabir is absolutely right. Take a trivial difficulty that arises out of what used to be called "poetic diction". In Tamil, the word for "umbrella" has associations of majesty and imperial grandeur. Trying to render a Tamil poem in English the other day, I got stuck because "umbrella" in English is evocative of wet afternoons, bowler hats and bus queues. And if a man was as fussy precise as Maulana Azad—he resolutely refused to employ English on public and formal occasions, though his mastery of it was considerable—the verbal nuances do mean a lot. Even if the Maulana was dealing only with definite political terms and attitudes, the difficulties would have been for-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

midable enough. But when he is exploring intangibles like motives and temperaments, the dangers of linguistic infidelity to ideas are almost insuperable. Take, for instance, what I consider to be a serious lapse in taste in so fastidious a man, his references to Lady Mountbatten's "influence" on Mr Nehru. My objection may not be well taken since "influence" is precisely the kind of word whose overtones are untranslatable, and I am sure that whatever was the Urdu word that the Maulana used, it could but imperfectly be rendered as "influence".

★

There is another unusual thing about the publication of this book. Some thirty pages of the "complete text" of the book are put away in the custody of the National Archives for publication later. These pages are stated to deal with "incidents and reflections mainly of a personal character". I dare say Maulana Azad had excellent reasons for this somewhat intriguing decision. In any case, it is nobody's business but his. (I was scandalised to read reports of a move in Parliament for demanding the immediate publication of this portion. Things must have come to a pretty pass when a man cannot write anything without some busybody demanding its publication). But the absence of the thirty odd pages makes it somewhat difficult to deal with the published portions, since unpublished portions dealing with the personal "incidents" may throw further light on some of the judgments now made possible.

★

I have often commented on the resemblance between the Indian National Congress and the British Labour party, especially between their leaderships. Both accommodated a wide variety of temperaments and backgrounds united by a recognisable common purpose. This correspondence apparently extends even to the sparking off, by retrospective memories, of controversies about stresses inter se among leadership, which, by the way, constitutes another point of similarity. The last ten years have seen the publication of memoirs in one form or the other by Attlee, Bevin, Morrison, Dalton and Bevan, not to speak of those books that seek to set right distortions of history as made by Ramsay MacDonald. All these books contain

A similar garrulousness of personal explanation has been noticeable in Indian politics, though breaking into print is a comparatively new feature. Mr Nehru's recent book, "A Bunch of Old Letters", contains some controversial Indian politics of the thirties and early forties. It is not unlikely that some doughty champion of Sardar Patel will shortly come out with the Sardar's version of the events. He will be able to place in perspective the Sardar's desire to stick to the "Home Portfolio" and not hand it over to the Muslim League. Such self-denial on the Sardar's part may or may not have made a difference to the attitude of the Muslim League. (The Maulana, on the whole, underestimates, in my opinion, the extent of the League's intransigence). In retrospect, it also seems a bad mistake to have handed over Finance to Liaquat Ali. But none who knew the true nature of the communalism in the country then and of the effectiveness of the Muslim League, as compared to that of the Hindu communal organisations, could have considered Patel's reluctance to hand the Home Department over to the Muslim League an act of cursed self-importance. I may be wrong, but it seems to me that, of all the Congress leaders, Sardar Patel was the only one who was not completely taken by surprise by the communal riots of 1946 and 1947. This may or may not be due to his being similarly inclined in the opposite direction.

★

In any case, no climactic significance can be attached to his insistence on having the Home Department under him. A rather interesting parallel from British Labour politics occurs readily—Attlee's preference of Bevin to Dalton at the Foreign Office in the first post-war Labour Ministry.

(The recent publication of the biography of King George VI has set off a controversy about the degree of the King's responsibility in that choice). Incidentally, if I remember right, Lord Attlee's reason for sending Bevin to the Foreign Office was that otherwise he and Morrison "will be quarrelling all the time"! In some respects, the Maulana was not unlike Dalton and the sources of Patel's personality were every much the same as those of Bevin. But, though the point is arguable, I do not think that Dalton at the Foreign Office would have made any serious difference to the course that Britain's post-war policy took, for much the same reasons that the Sardar's giving up the Home Portfolio would not have prevented partition. In both cases, the compulsion behind the events was more powerful than the personalities of individuals. The failure to see this truth is what makes Maulana Azad's central thesis about the way partition came about invalid.

But let us salute greatness when we see it. The Maulana's steady and unwavering opposition to partition, even after it had become a fact, sets him apart even in a galaxy of not inconsiderable men. The fact that he was a Muslim makes his opposition to the idea a permanent testimony to man's unconquerable mind. There is something awesome in the irony of fate that decreed that the last days of the greatest Indian Muslim of recent times should have been embittered by a fact that his coreligionists brought about by nothing more potent than shrill unreason. But what hurt the Maulana most was the fact that those of his comrades, who had seemed to oppose the idea as passionately as he did, but at much less risk of personal odium, —the things that Mr Jinnah said about Maulana Azad shall never be forgiven him—gave in without any apparent ill effects on their personalities. There can be no doubt that the loneliness of the Maulana's last days was the isolation of a great and broken spirit.

Some day, a hundred years from now perhaps, an Indian Hardy will produce an Indian Dynasts on the events that led to partition. One of the most striking characters in that drama would be the Maulana of the last days—a Euripidean figure of brooding despair. But one cannot escape the feeling that like the heroes of great tragedies, he had but an imperfect understanding of the forces that inflicted the personal tragedy on him.

It is here that what Mr Nehru said last week becomes relevant. Since the Maulana considers Mr Nehru as much too preoccupied with generalities and too little with personalities, it is inevitable that Mr Nehru should hold the opposite opinion about the Maulana. But about the forces that brought about partition, there can hardly be any doubt that Pandit Nehru is right and the Maulana wrong. At least one of the two incidents relating to Pandit Nehru

to which Maulana Azad attaches historic significance seems to me to be entirely trivial. Does the Maulana seriously believe that Mr Jinnah would have rested content with anything less than partition? and that, but for Pandit Nehru's press conference in Bombay in 1946, he would have worked the Cabinet Mission's proposals? If so, his is a very naive reading of Mr Jinnah's character.

As for the other incident, it is more difficult to say anything conclusive. This relates to Pandit Nehru's alleged lapse in not letting the Muslim Leaguers join the UP Cabinet in 1937. It is perhaps arguable that the Muslim League had not become so powerful in 1937 and it would have been possible then to have scotched the very idea of partition with greater understanding of Muslim feelings. It is difficult either to deny or to affirm this reading. Some of the very Muslim leaders whose cooperation was, according to Azad, spurned in 1937, were wobbling in their loyalty later. Some tried to make the best of both the worlds after partition. But Maulana Azad can legitimately argue that this was really the consequence of the earlier lapse. And who knows the seeming equivocations after partition may have really been the outward signs of a genuine inner conflict. I, for one, refuse to be cynical about conflict of loyalties in such harrowing circumstances.

One not entirely unfair comment seems permissible. Mr Nehru revealed at the Press conference last week that he learnt for the first time from Azad's book about these two "costly errors". Now, could not the Maulana, had he thought them of such momentous importance at the time they occurred, have apprised Mr Nehru of his views so that Mr Nehru could have done something about them? This comment is particularly relevant about Mr Nehru's alleged "gaffe" at the Bombay press conference. Surely, the Maulana knew Mr Nehru well enough and cared about the future of the country deeply enough to tell Mr Nehru that, in his opinion, Mr Nehru had jeopardised the whole future of the country by his statement. If he had done that, one of two things could have happened. Mr Nehru would have explained that he really meant to go to the Constituent Assembly unfettered—if that was what he meant. In that case, it would have been a mere difference of opinion between Mr Nehru and Maulana Azad. Or, alternatively, Mr Nehru would have agreed with him and given such assurances to Mr Jinnah that Azad says he needed.

The truth is that the partition of India was, as Mr Nehru put it, the result of historical forces. To imagine that it could have been averted if Lord Mountbatten had been less handsome is to repeat a proposition as unverifiable as Pascal's similar correlation of the shape of Cleopatra's nose with the history of mankind.

EAVESDROPPER

GATEWAY GOSSIP

AN eloquent testimony to the vital role played by the handloom industry in the country's economy is the allocation to this sector of as much as 1000 million yards out of a total increase of 1700 million yards of cloth production envisaged during the period of the Second Five Year Plan. It is not in the least surprising that this industry is receiving special attention at the hands of the powers—that—in our country in the last one decade or so. The handloom is an ancient industry whose products once set the fashion in far off climes, and what is more important from the point of view of a national Government is that it is the only means of livelihood for a sizable portion of the population. In a resurgent India which is impatient to join the ranks of other industrially advanced nations of the world, the existence of a large handloom industry whose means of production are crude from modern technical standards has certainly constituted a ticklish problem. But for a nation which has set before it the goal of the good of the common people a solution which is consistent with large scale industrialisation has not proved difficult to arrive at. The handloom industry is to continue and it will be the responsibility of Government to ensure that it becomes efficient by absorbing as many of the technical improvements as possible without losing its essential characteristics.

With the abiding interest of the State in its continued well-being, the handloom industry has been able to take big strides in the past few years. From an annual output of 1,200 million yards of cloth in 1953, production in this sector has amounted to 1,780 million yards in 1958. But considering the fact that an additional production of 700 million yards still remains to be attained in a little over two years, the pace of progress so far may not appear quite satisfactory. Nevertheless the record of achievement of the handloom sector in the first three years of the current plan period must be deemed to be good in view of the serious difficulties that it has had to cope with during this period. From the annual rate of about 100 million yards of additional output attained last year it would appear that the setback in 1957 has turned out to be a temporary phase and that the tempo of progress can be quickened in coming years provided no powerful inhibitory influences come into play.

This growing strength is largely due to the continuation of the preferential treatment accorded to it by Government. The main problem of the handloom sector is one of withstanding the competition from mill made cloth. If today its products are able to secure large sales it is because the hand-

Handloom Industry

loom cess and excise duty levied on mill made cloth and the rebate allowed on purchases of handloom cloth, coupled with the restrictions applied on the organised sector with regard to the production of certain varieties of cloth have placed them on an equal footing with mill made cloth if not in a more advantageous position. Side by side with the measures undertaken with a view to neutralising the advantages of the mill sector as far as practicable, it has been the endeavour of Government to assist the handloom sector to increase its efficiency so that the period of the preferential treatment can be shortened. It may be said that the creation of the Handloom Cess Fund in 1953 marked the beginning of the new policy toward handloom sector. The establishment of the All India Handloom Board followed suit. This Board is to act as an agency to promote the development of the handloom industry and to administer the fund. It has been recognised from the very outset of the inauguration of the new aid programme for the industry that if its position is to remain secure in the future also it should become efficient in the sense of its products being in a position to compete with mill products. It is here that the industry has thrown up a difficult problem. For it is an industry which is made up of thousands of small units which individually are in no position to invest the capital required for modernisation. But improvements are vital for its very existence. The solution has been found in cooperation which can bring the industry all the strength it requires for embarking on development projects. The financial assistance under the handloom aid programme has been channelled through the agency of cooperatives of handloom weavers. Since the programme started the number of handlooms in the cooperatives has almost doubled. As against 6,82,083 handlooms in the cooperative fold at the end of September 1953, there were 11,98,746 looms in the cooperative sector by the end of June 1958. This number represents about 40 per cent of the total number of active looms in the country. The number of handloom cooperatives in the country is 9,600. In the 5 financial years, 1953-54 to 1957-58, over Rs 22.28 crores were sanctioned by the Government of India as grants and loan for the development of the industry. The grants are utilised for the supply of improved equipment and accessories, training of weavers, opening of dye houses, pattern-making factories and sales depots and payment of rebate on sales of handloom cloth. The loans are used for financing the share capital and working capital of weavers' cooperative societies, industrial

cooperatives and apex societies as well as for common service facilities. It is expected that the Reserve Bank of India will hereafter meet most of the requirements of the industry for working capital and consequently more funds will be available from the handloom cess fund as grants for improvement of production techniques.

The sharp decline in exports of handloom cloth in recent years has made the industry virtually dependent on the home market. Handloom cloth exports which amounted to 57 million yards in 1954 have amounted to only 21 million yards in the first seven months of 1958. This is largely because our traditional importing countries have begun to impose restrictions on the entry of handloom cloth with a view to protect their own home industries. Ever in regard to the internal market it is clear that the handloom is sustained by the sheltered position it enjoys by the preferential treatment from Government. The handloom week which has now become a regular annual feature may be expected to go a long way in focussing the attention of the public on the importance of maintaining the handloom industry in good health. The fact that the industry is giving gainful employment to nearly 20 million people

will always exert a powerful influence on our policy makers. But it is equally clear that the industry can continue to occupy an important place in the country's economy only if its products are able to meet the changing needs of the consumer.

There is every reason to believe that the industry will soon achieve the essential prerequisites for its continued growth. The handloom has the great advantage of being in a position to produce a wide variety of goods to suit the pockets of both the rich and the poor. As Mr Y. B. Chavan, Chief Minister of Bombay, has pointed out in his speech on the occasion of the inauguration of the Handloom Week in Bombay, the industry has to concentrate on the production of the types of goods in which the mechanised textile industries will not be able to compete. This will apply equally to exports also. It has been found that Indian handloom specialities have found favour with consumers in highly developed countries such as the USA, UK, Canada and West Germany. Apart from the various steps taken by Government to popularise our handloom products in foreign countries, there is now a separate section in the State Trading Corporation to deal with export of handloom products.

BUILT TO CARRY MORE PASSENGERS

LEYLAND COMET THE BIG CHASSIS FOR THE BIG JOB

The LEYLAND COMET is the longest wheel-base passenger chassis made in India. Its large body space accommodates at least six more passengers in every trip than any other make. Its low fuel consumption and easy

maintenance have made it the ideal passenger transport vehicle everywhere. No wonder LEYLAND is the first choice in passenger transport in over 50 countries around the world.

Bombay State Financial Corpn.

During the debate in the State Legislative Council on the working of the Bombay State Financial Corporation, it has been pointed out that the Corporation has failed to keep to the objective of giving assistance to small and medium scale industries in view. The major portion of the available funds it has been alleged, has gone to large industrial enterprises. It is clear that the critics have ignored the fact that State Financial Corporations are guided by the arrangements arrived at the Conference of State Financial Corporations in August 1954 by which a clear-cut demarcation between the scope of the various financial agencies which provide industrial finance has been effected. This arrangement has laid down that the Industrial Finance Corporation of India should entertain loans for amounts in excess of Rs 10 lakhs and the State Financial Corporations should entertain loans for amounts upto Rs 10 lakhs. The demarcation line between the State Finance Corporations and the State Governments has also been similarly well defined. The State Financial Corporations' minimum limits for loans have been fixed between Rs 10,000 and Rs 75,000 while loans for smaller amounts are being dealt with departmentally by the State Governments. It is, therefore, wrong to say that the State Financial Corporations are rendering assistance to large-scale units. There are a lower and an upper limits for the amounts that can be given by the State Corporations. For their requirements of loan finance, larger industrial units approach the Industrial Finance Corporation.

Mr Jivraj Mehta has effectively countered the criticism that the Bombay State Financial Corporation is moving slowly by pointing out that this Corporation has made the largest allocation of funds as compared with other State Financial Corporations in the country. This is also borne out by the fact that its resources already stand very much depleted. The Bombay State Financial Corporation has made a profit of Rs 8,28,887.96 for 1957-58. During the year it sanctioned 25 applications involving a sum of Rs 53.30 lakhs, out of a total of 84 considered. Though Mr Mehta has expressed himself against the augmenting of the resources of the Corporation by means of raising the share capital, it is gratifying to note that he has not only admitted the need for larger resources but has given the assurance that Government would help the Corporation by issuing debentures for any additional sum that may be required.

Role of Exports

The fact that our export earnings have recorded a sizable decline in the first eight months of last year as compared with those during the corresponding period of the previous year is a clear indication that strenuous efforts should continue to be made if our export earnings are to help relieve the present stringency in foreign exchange to any appreciable extent. While it is gratifying to hear that since last October the trend has become more hopeful, more definite indications are necessary before one can advance the hope that the position during the current year will show considerable improvement. It is, however, to be noted that the various measures for export promotion taken by Government in recent months such as concession in export and excise duties, removal of restrictions from two hundred items of export, drawbacks of duty, etc., will begin to yield good results in the shape of increased exports during the current year. But in as much as these measures can only pave the way for larger exports, it is incumbent on all concerned in the country to concentrate attention on the fundamental factors involved in a successful export promotion effort.

Apart from the availability of suitable goods there are some essential prerequisites if we have to attain the desired results in our endeavour to maximise exports. In the first place the quality of the goods which we place in overseas markets should be comparable in quality with similar products in the field. The second requirement is that the price we quote for our articles must be reasonable. Unless these two prerequisites are satisfied it will be idle to expect good results. It would appear that we have still a long way to go toward fulfilling these two basic requirements.

Mr N. H. Kotak, President of the All India Exporters Association, therefore, has done well to draw pointed attention to these in his address to the recent annual general meeting of the Association. He has pointed out that our prices for most of our traditional and new items are reported to be higher than those of similar items of other countries. As regards the quality of our products also there are frequent complaints from overseas consumers. It is true that in order to overcome these defects we as a nation should be export-minded but export consciousness does not come overnight. As Mr Kotak has pointed out there is a fairly wide-spread notion in the country that increased exports mean reduced supply for the domestic consumers. There is need for telling the people at large that exports now occupy a vital place in the economic development of the country. Mr Kotak's suggestion for the establishment of permanent exhibitions of Indian goods at major centres in the country deserves the active attention of Government because such exhibitions may go a long way in stimulating the interest of foreign travellers in our products.

GATEWAY MARKETS

Reaction to FMC Warning

COMMODITY values have generally fallen by two to three per cent as a sequel to the warning given by the Forward Markets Commission to speculators in various markets. Oilseeds have lost about Rs 2 per candy, the fall being more pronounced in castor and groundnut. While it is generally admitted that the current rise in prices is partly speculative, revised crop ideas also contributed, in varying measures, to the price rise. Meanwhile, traders fear that the Government of India may resort to the extreme measures of closing down some of the futures markets, in case prices move up further.

The FMC has directed the Bombay Oilseeds and Oils Exchange to impose a special margin on outstanding "long" positions in transferable specific delivery contracts in Groundnuts. The rate of margin, which is applicable for February/March 1953 and April/May 1959 deliveries will be at the rate of Rs 3 per cwt when the price rises above Rs 33 per cwt. When the price is above Rs 35, the margin will be at the rate of Rs 5 and when it is above Rs 37.10, the rate will be Rs 9.

The directive further states that, if the price remains above Rs 37.10, during the delivery period, the special margin will be at the rate of Rs 18.50. This step is taken to check the growing diversion of speculative trading from hedge contracts to transferable specific delivery contracts. The prices of delivery contracts has been consistently rising during the last two months. For obvious reasons, sentiment in the groundnut section remained with the Bold quality quoting lower at Rs 35.25 and Groundnut Oil at Rs 18.44. Dealers and vanaspathi manufacturers have naturally preferred to wait in anticipation of lower rates.

In the Castorseed section, prices moved down in sympathy with the ready rate quoting down to Rs 31.75 and Castor Oil, commercial quality, to Rs 15.62. Though the new crop has started moving in Hyderabad, its effect is as yet unfelt.

The Linseed section ruled, however, quietly steady. The ready rate was quoted at Rs 32.75 and Linseed Oil at Rs 17.00.

In the Cottonseed section, operators supported the market to a level that would just escape the margin regulations.

Exports of various oils and oilcake, during January, were as follows as compared to those of the preceding month and the corres-

Indian Finance

ponding month of last year (figures in tons):—

OILS	Jan'y	Decr	Jan
Groundnut	1959	1958	195
Linseed	490	49	10
Castor	74	1354	275
Seasame	1377	1873	70
Kardi	68	32	..
	29	..	1

OILCAKES

	Ex-		
Groundnut peller	8736	6521	175
Groundnut traction	11744	6798	451
Linseed	494	390	143
Cottonseed	3206	388	..
Mowra	49	Nil	17
Niger	28	Nil	20
Kardi	100	95	..

Gold & Silver

Operators on the Bombay Bullion Exchange, too, took a cautious line pending clearer indications of the measures proposed by the Government to curb the rise in prices. There was heavy liquidation and prices developed an easier tendency. In the Gold section, spot rates moved between Rs 115.19 and Rs 116.19, while Sovereign eased off to Rs 73.75 from Rs 74.25. Silver arrivals were heavy at 25 bars, while the offtake was only 18 bars. Spot rates moved between Rs 192.62 and Rs 193.87.

Yarn

Conditions in the Bombay Yarn market remained dull, as operators were not inclined to extend commitments. While Art Silk yarn prices remained depressed due to substantial stocks with the dealers and increasing deliveries from the indigenous manufacturers, Cotton Yarn continued to be friendless. In contrast, however, the Staple-Fibre Yarn section ruled firm on hopes that the seasonal demand would emerge shortly.

Non-Ferrous Metals

Prices in the Bombay Non-Ferrous Metal market showed a mixed trend. Copper Scrap was firm at Rs 210 per cwt, while Zinc as taken upto Rs 94 per cwt on reports of a Government tender for 1,500 tons, due in the third week of this month. The Lead market was featureless, with the rate hovering idly around Rs 80 per cwt. Although Singapore advices were strong, the local Tin market failed to respond mainly due to the failure of the bulls to take delivery. The rate was quoted at Rs 150 per quarter.

Mercury

The bullish fervour in the market has carried Mercury prices to still higher levels this week and the metal has gained another Rs 400 to touch Rs 3,300 per flask of 75 pounds. The sudden spurt in the price is attributed to the revival of demand from all over the country. Buyers, who kept away from the market in the past on the hope that the STC would bring down the prices, have found that it has not been able to release to the actual consumers more than 100 jars. The current floating stocks, in Bombay, are estimated at 60 jars.

February 14, 1959

WORLD OF COTTON

THE Cotton and Textile Consultative Board, which met in Bombay last week, is reported to have formulated a series of decisions vitally affecting the industry as a whole. It is learnt that the Government of India are likely to accept the recommendations of the Board. A formal announcement in this behalf may be made in the next few days.

It appears that the import target will be raised to 6 lakhs bales for the 1958-59 season. Imports of about 3.2 lakhs bales have already been permitted and the Government are soon expected to announce additional quotas for long-staple growths from the sterling areas. The proposal to import cotton under the export incentive scheme for cotton textiles has not found favour with the Board. This suggests that import licences for 45 lakh bales, reserved at present under the export incentive scheme, will be issued to the mills on the basis of their consumption.

An attempt will also be made to enter into special payments arrangement with the Sudan, Egypt and other suppliers of cotton for the purpose of cheaper imports of cotton. Reports are current that Egypt has agreed to raise its discount for cotton by 12.50 per cent to 27.50 per cent to Indian textile mills. A section of the trade, however, points out that Sudanese cotton prices have meanwhile declined further.

As far as exports are concerned, the Board seems to have decided to drop the export incentive scheme, suggested by the trade some time ago, and instead authorised the cotton exporters delegation, which is expected to visit Japan and the Continental countries to negotiate special payments agreement with the respective governments. Shippers are, however, confused by the undue delay in the Government's announcement of an export incentive scheme for cotton. Rumours are current that, instead of an export incentive scheme, the Government is trying to enter into special payment arrangements with Japan, France and other buyers of cotton with a view to enabling them to pay for Indian short-staple varieties in their own currencies.

FUTURES MARKET:

The imposition of special margin on transferable specific delivery contracts in groundnut on Saturday last followed by a general warning by the FMC to the traders reduced a salutary effect on the revailing price trends in the futures markets. Prices, after ruling initially firm, declined towards the close under heavy bull liquidation and selling by spot houses. Rumours of an early release of export quota were also a contributory factor. Jharilla March contract, after touching a high of

Outlook for Imports and Exports

Rs 688.50, receded towards the close to Rs 673.50.

The new contract May, after making a promising start at Rs 676, declined to Rs 669 at the close.

SPOT MARKET:

In the spot market, the trend of prices was quietly steady. Some mills and spot houses were reported to have made purchases of quality cotton. Although the prices of popular varieties remained mostly unchanged, the difference between spot and forward rates narrowed down by about Rs 15 to Rs 45 per candy.

CROP OUTLOOK:

The cotton situation, this season and in the immediate future, does not appear to be favourable and this is reflected in the markedly reduced prices in many markets, according to the International Cot-

ton Advisory Committee, Washington. While production is expected to show a sizable increase this season, consumption is likely to be lower in many countries. On the basis of the present estimates, production is expected to be roughly equal to disappearance and the liquidation of surplus stocks is likely to be halted.

As far as conditions in India are concerned, the acreage is almost stabilised at around 20 million acres in recent years and there is no reason to expect any significant deviation from this figure during the current season. Trade sources estimate the total production at 51.50 lakh bales, which is almost in line with the output in the previous year. With the carryover of 11.36 lakh bales with the mills and 9.09 lakh bales with the trade, the total supply of cotton, during the current season at 71.95 lakh bales,

can be said to be fairly comfortable. As against this, the estimated mill consumption, during the period, is likely to be around 46 lakh bales.

CLOTH AND PIECEGOODS:

Trading conditions in the cloth market have continued to be of a restricted nature and hopes of revival of brisk activity have yet to materialise. According to the trade, the continued financial stringency will appear to be the major factor for this state of affairs. The slow movement of cotton, despite a bumper crop this season, is said to be acting as a brake to the substantial offtake of cloth.

There has been no appreciable change on the export front. Export enquiries have been few and reports suggest growing competition from China and Japan. Very little business is reported done for various destinations.

STILL
GROWING
AT SIXTY

The Dunlop factory at Ambattur was declared open on February 12, 1959

Sixty years ago, when Dunlop brought the first pneumatic tyres to India, only the venturesome rode on bicycles and the automobile was an object of wonder and awe. Some years later, it could still be said that "it needed as much courage to travel in a bus as to run it!"

Courage and enterprise have worked many wonders in these sixty years, not least being the progress of road transport. The new factory at Ambattur, Dunlop's second in India, is a tribute to those who have raised the bicycle and the motor vehicle to their present stature.

The Dunlop Rubber Co. (India) Ltd.

DELHI REVIEW

Mr Nehru's Press Conference

THE monthly press conference of the Prime Minister held last Saturday provided all the thrills that were anticipated. Though there was nothing that could be played up sensationally, Mr Nehru did not shirk any of the controversial issues that were brought up for comment. And of these, the recent past had provided at least two: one was the resignation, under curious circumstances, of Mr M. O. Mathai, his Special Assistant until the other day. The second was Maulana Azad's book giving his version of the events that led to the partition of the country, which was recently published by Orient Longmans.

Mr Nehru dealt with all the questions with complete candour and there was no trace of embarrassment or irritation in his discussion of Maulana Azad's criticism of his role in the politics of the period immediately before independence. I have not yet read the Maulana's book, but it has been extensively commented upon in the press. Any inferences of unavowed hostility between the two men would be wholly misconceived, since the book is dedicated to Jawaharlal and Mr Nehru revealed at the press conference that he had read the book in manuscript and would not hear of the suggestion that the book be suitably edited. Mr Nehru apparently believed that the Maulana should be allowed to state his views freely. According to Mr Nehru, he was aware that the Maulana had disliked the partition of the country, but two incidents which the Maulana has singled out for criticising Mr Nehru were never discussed with him by Azad during his lifetime. These two events have been invested by the Maulana with climacteric significance. One relates to events in the UP in 1937 when the Congress Ministry was first formed under the Government of India Act of 1935. The other was something that Mr Nehru said in 1946 at a press conference in Bombay immediately after the acceptance by the League and the Congress of the Cabinet Mission's proposals. According to Azad, this was a costly mistake. Mr Nehru is stated to have said at the press conference that the Congress would enter the proposed Constituent Assembly "completely unfettered by agreements and free to meet all the situations as they arise." This, according to Azad, enabled Mr Jinnah, who had "reconciled himself" to the Cabinet Mission's proposals, to demand a ripping open of the whole question.

In fairness to Mr Nehru, it seems rather curious that the Maulana should have kept his own counsel about these two matters for all these years. At least on the second, the Maulana could have apprised Mr Nehru, immediately

after the alleged "gaffe", of his (Maulana's) views so that Mr Nehru could have clarified issues. It is difficult to say how momentous particular utterances may turn out to be in retrospect, but Mr Nehru's version of the events certainly supplies the much needed corrective to what the Maulana has to say. About 1937, Mr Nehru does not recollect the precise turn of events, but he feels that the general attitude of the Muslim League was so radically different from that of the Congress that the chances of a workable cooperation between the two were remote; though, of course, it is not entirely fair to compare the two, the experience of the interim Government at the Centre in 1946—when as Mr Nehru pointed out, the Muslim League objected to even the setting up of a Planning Commission—shows that Mr Nehru may be the more correct of the two.

About 1946 events, Mr Nehru says that it is difficult to recall precisely the events of those days. But the Muslim League was so persistently frustrating any efforts at harmony, that Mr Nehru felt obliged to go to the Viceroy and tell him that "he had had enough of it". "An overwhelming sense of conflict and disruption and pulls in different directions by the Muslim League" was the predominant emotion of those who were in government. Whether forces of history would not have brought about the changes that ultimately overtook the country despite what an individual said or did not say at a press conference is a moot question. In so far as it is at all answerable, the answer is unlikely to lend support to Azad's implied views on the momentousness of individual acts. Mr Nehru himself puts this matter more modestly when he says: "Maulana Saheb may be completely right in thinking that I acted wrongly. I would only say that sometimes Maulana Saheb thinks too much in individual terms and not in terms of historical forces at work. Individuals make a difference and have made a difference but sometimes individuals are only symbols of forces at work".

On the Maulana's statement that Lord and Lady Mountbatten had influenced him (Mr Nehru) to accept partition, Mr Nehru is equally candid. Obviously, since the idea of partition was mooted by Lord Mountbatten when he found the interim government going to bits, and Lady Mountbatten was very much there during the period, everyone who did accept partition was influenced by them. This is the kind of statement that it is neither possible to affirm nor deny.

As regards the Mathai episode, Mr Nehru was equally frank. Certainly, there were curious features about his resignation, and the

letter he wrote to Mr Nehru was an extremely crude document. If Mr Mathai has political ambitions—as is not unlikely—he should learn to express himself less exhibitionistically. After all, Mr Mathai is not the first man who has fancied himself—with or without reason—as scandalously malign. But a factual refutation—if he considered it difficult to ignore insinuation—would have been sufficient and indeed have been more effective. As it happens, he has landed himself in difficulties by needlessly saying things about Parliament's "ever-mounting tendency to attack public servants without caring to verify facts". Considering that Parliament has left him severely alone, it was entirely gratuitous on his part to drag it in. It is not at all surprising that the opposition, which has its own scores to settle with him, has successfully made a privilege issue of this reference. Mr Mathai is clearly a very immature young man and has a lot to learn. Otherwise, he would not have simultaneously provided those whom he attacked with such ready weapons for being used against him. He may have been carried away with his own conviction of an ill used person, but politics needs tougher skins, and idealism that is not fortified by common sense may expose itself in its flanks. And bad rhetoric is a poor equipment for a politically ambitious person.

Moreover, from what Mr Nehru said at the press conference—at which he admitted an error of judgment in letting Mr Mathai release the letter to the press and that too through the Press Information Bureau—Mr Mathai has not exactly been the paragon of virtue he has painted himself in his letter. Mr Nehru referred to his behaving foolishly "by throwing his weight about"—a fact that many observers feel is an understatement. Apparently, Mr Mathai's undoubtedly important and crucial position needed on the part of the incumbent both tact and considerable social savoir faire and poise. Mr Mathai's letter alone proves that he possesses none of these qualities. It is not unlikely, therefore, that he threw his weight about. Suggestions of his "influencing Mr Nehru" are ridiculous, and the suggestion that we owe Bhilai to Mr Mathai is fantastic. On all the questions on which Mr Mathai felt strongly—his financial transactions and so forth—he is apparently on unexceptionable grounds. But on the real things that count, he has shown himself wanting.

Having said all this, it is necessary to refer to the essential triviality of the Parliament's preoccupation with this matter. Apart from the fact that the opposition, which is peeved at Mr Mathai's references to it, is wanting to

harass Mr Mathai, one can find no legitimate reason for making a privilege issue of his references to Parliament. They were, as Mr Nehru conceded readily, "improper", but if Parliament is going to make a privilege issue of every criticism of its activities, we shall have no end to it. Good humour, sense of proportion and basic seriousness are qualities one has a right to expect from a "club" which we are maintaining at such enormous cost to the nation. If Parliament is going to waste its time on trivialities like this, we shall only too tragically be justifying the criticism of parliamentary democracy as an expensive farce. Already, there is an impression that Parliament is taking a too self-important view of its own privileges, and such a view may make the Parliament think that it is more important than the people. This is a danger that the Parliament will do well to beware of. It is true, this particular privilege motion is the Communists' retort courteous to the PSP privilege motion against Mr Namboodiripad. As Raja Mahendra Pratap said, both the privilege motions should be dropped. Democracy needs robustness. No breach of privilege can bring Parliament so effectively into contempt as the impression that it consists of pompous thin-skinned who are too much taken up with their own self-importance.

NORTH INDIAN NOTES

Bihar Budget

First of the State budgets to be presented, the Bihar budget for 1959-60 presented to the State Assembly by the Chief Minister, Dr S. K. Sinha, showed a deficit of Rs 2.04 crores. Revenue receipts for the budget year, 1959-60 are placed at Rs 71.87 lakhs, while revenue expenditure is placed at Rs 66.33 lakhs. The surplus to the tune of Rs 55.4 lakhs in the revenue budget is however wiped out by the deficit of the order of Rs 738 lakhs in the capital budget, capital receipts and expenditure being placed at Rs 50.78 lakhs, and Rs 58.36 lakhs respectively.

The budget is necessarily oriented towards implementing the schemes forming part of the State's Second Plan, and provide a sum of 24.69 lakhs for schemes connected with the Second Plan, while non-Plan schemes account for Rs 79.15 lakhs of the expenditure for the budget year.

Education with a share of Rs 11.51 lakhs figures as the major head of expenditure for the budget year, while medical and public health, account for another Rs 781 lakhs. Irrigation gets Rs 781 lakhs and agriculture Rs 483 lakhs, while industries and supplies account for Rs 264 lakhs. In view of the greater allocations made towards education and public health, the budget could legitimately be called more a welfare budget than a development budget.

In view of the urgency of funds for implementing the Second Plan and in view of the known instruction of the Planning Commission to the State Governments to tap more resources by means of fresh taxation, it would have been expected that the State's Budget would have some new tax proposals. However, Dr S. K. Sinha, has chosen not to impose any new taxes in the new budget. Anticipations of additional revenue by enforcement of some measures, that have been already passed would seem to have obviated the need for the imposition of additional taxes. The Bihar Primary Education (Amendment) Act under which an education cess was to be levied, the new law on sales tax which envisages a multi-point levy, the Bill for imposing a betterment levy that was introduced in the last Assembly are the measures awaiting enforcement for additional revenue in the budget year.

Collection of the arrears of the water-rate payment, stepping up of the small savings campaign, a special loan collection drive are the other schemes that the State's Chief Minister has in view for adding to the revenue resources of the State. Dr Sinha also indicated that other measures would have been taken in the course of the year for wiping out the deficit in the Consolidated Fund.

Chemical Industry

An appreciable increase in the production of some of the important basic chemicals was one of the encouraging features of industrial production in the first three years of the Second Five year Plan. The output of sulphuric acid, a basic chemical, rose from 1,65,215 tons in 1956 to 2,27,000 tons in 1958, while the production of yet another basic chemical, namely caustic soda, increased from 39,416 tons in 1956 to 55,400 tons in 1958. Similarly production of superphosphate which is being increasingly used by the farmers has recorded an increase from 81,170 tons in 1956 to about 1,81,000 tons in 1958. Production of soda ash has also steadily expanded and has, in 1958, reached the figure of 86,200 tons.

This admirable record of production in the chemical industry is according to present estimates of the new capacities that would be added for the production of these items, going to be bettered in the remaining two years of the Plan, so that by the end of the Second Plan period, the chemical industry would emerge as one of the major industries of the country in point of total investment and value of manufactures.

Plans are under way for increasing the production of sulphuric acid to 5.5 lakh tons which would be about double the present production of this chemical. This increase is expected to be achieved by the implementation of 12 schemes for which the foreign exchange required for the import of machinery has already been secured. There are also other proposals for increasing the capacity for sulphuric acid further. A rise in production of caustic soda, from the present level of 55,400 tons to 1,40,000 tons by the end of 1961 is also planned. The erection of new units as well as expansion of existing units by means of which this increase in production is envisaged to be achieved is reported to be progressing well. One new unit in the Madras State, with a capacity for producing 80 tons of caustic soda per day, is expected to start production during this year. In view of the continuously growing demand for caustic soda in the country it is considered doubtful whether even the increase in production that is now envisaged would bring self-sufficiency in caustic soda.

Self-sufficiency in soda ash has been set for achievement by the end of the Second Plan and this would involve a trebling of the present production. Schemes for achieving this involve the setting up of new units as well as the expansion of existing ones. It is to be pointed out that two new units in this field are expected to start production this year while one of the existing units would double its capacity next year.

The biggest increase in production is however planned in regard to nitrogenous fertilizers. Production is expected to reach the figure of 4 lakh tons by 1961 against present figure at 80,000 tons.

NORTH INDIAN MARKETS

Firmness in Sugar Prices

SUGAR markets in various centres have continued to rule firm, being induced by expectations that the Government of India might raise sugarcane prices for the growers in North India in the very near future. How far these hopes will be fulfilled remains to be seen. But, rumours have started floating that the price may be raised by As 3 per maund. This means, that the price for factory gate delivery may go upto Re 1.62 and for out-stations to Rs 1.50 per maund.

Whether the Government will think it wise to change the prices during the mid-season may seem doubtful, as the Government have already said "no" to the producers in Uttar Pradesh. However, certain quarters are inclined to think that, in view of the fancy prices of gur, foodgrains and pulses, the Government may submit to the agitation and a decision may be taken in the next few days.

Anyway, sentiment in the sugar markets has been leading towards the bullish side. It is also influenced by another factor, that is, the prospects of a decline in production. The agitation on the part of the cane-growers and the threat of stoppage of cane supplies have led to fears that production, during the current season may be substantially lower than in 1957-58. The statistical figures available upto 7th January reveal that production, during the current season, is only 5.74 lakh tons as against 5.91 lakh tons last season. Consumption, on the other hand, is rising, being 3.52 lakh tons against 3.30 lakh tons. The closing stock on the same date is much lower at 5.54 lakh tons against 6.91 lakh tons on the 7th January, 1958.

The supply and the stock position of sugar for the week ended 7th January, 1959 are as follows (figures in tons):—

	1958-59	1957-58
Opening stock on 1-1-59	5,00,924	6,28,251
Production	98,658	97,074
Despatches	46,023	34,053
Closing stock on 7-1-59	5,53,559	6,91,272
Total production upto 7-1-59	5,73,820	5,91,118
Total despatches upto 7-1-50	3,52,432	3,30,184

State-wise production in the current season upto the 7th January 1959 is as follows:—Uttar Pradesh 2,68,152; Bihar 75,784; Assam 123; West Bengal 2,205; Punjab 17,806; Rajasthan 1,440; Madhya Pradesh 5,217; Orissa 252; Madras 9,007; Kerala 6,056; Bombay 1,06,913; Mysore 46,369; Andhra 33,596. Total 5,73,820.

Meanwhile, prices of sugar in the Hapur market have been ruling steady, as saleable stocks with the

factories are reported to be small in the face of renewed buying enquiry from the consuming areas. Following rates (per maund) are quoted:—Deoband (C29) Rs 35.25; New Shamli (D29) Rs 36.75; Mansoorpur (C29) Rs 37.25 and Bijnore (D29) Rs 36.75.

Gur

In the Hapur market, Gur prices have touched a new high of the season on good stockists' support coupled with restricted arrivals. Stocks were estimated at 40,000 maunds. Gur Panseera quality is quoted Rs 17.75 to Rs 18.12 per maund.

The four Exchanges—the Punjab Exchange, the Uttar Bharat Exchange, the Vishnu Exchange and the Chamber of Colours and Chemicals—have jointly submitted a memorandum to the Food and Agriculture Minister urging that the ban on hedging in Gur will be unjust since genuine forward trade is conducting futures trading with self-imposed restraint having fixed the ceiling as the most appropriate and reasonable rates. This memorandum is necessitated due to the rumours that the Government was considering a ban on trading in gur futures.

Foodgrains

Quiet conditions are witnessed in the Hapur Foodgrains market. Wheat and Gram prices are almost unchanged, while the prices of Coarse grains have sought lower levels. The market for Pulses has continued to rule firm due to poor stocks. Rice prices rule steady with fine quality rising due to restricted supplies. Gram stocks are reported to be poor and fresh arrivals from the Punjab—the main source of supply—have been stopped due to high prices. Maize is attracting consumer demand; but prices have eased fractionally due to comfortable stocks and fresh outside arrivals.

Following reports of restricting buying interest shown by local as well as outside buyers at higher levels, the rising tendency in the prices of foodgrains in the Delhi grains market cried a halt and values went down slightly.

Shellac

Conditions in the Calcutta Shellac market remained steady with Pure TN quality quoting Rs 68 per maund. Though overseas demand has not shown much improvement, prices are well maintained on the report that the lac crop in Thailand—the only other source of supply in the world—has not come up to expectations this year also.

Production of lac in India is also reported to be below normal in some cases. The Kusmi crop in 1958 was estimated at 27,000 maunds as compared to about 41,000 maunds in the previous year and a normal yield of 78,000 maunds. The Katki crop, too, is below the normal, at 252,000 maunds last year.

On the export front, the position is not satisfactory. Shipments totalled only 28,625 packages in January as against 26,268 packages in December, 1958.

MADRAS REVIEW

THE budget session of the Madras Legislature was inaugurated by Mr Bishnuram Medhi, Governor of Madras, when he addressed the joint session of the State Legislature last week. While interest would chiefly centre around the budget that would be presented by the State's Finance Minister, there are also other matters of vital importance with which the assembly would concern itself.

The trend of the discussion has already begun to reveal itself in the debate that followed the Governor's address. Agriculture and especially foodgrain production and prices have set the dominant note of the discussion. Most of the members expressed concern at the turn foodgrain prices had taken in the State, which in the context of the increase in production that had been registered in the current year, would seem to be rather baffling. But in the rice and paddy procurement order recently passed by the Government, the Government would seem to have the answer to the problem posed by pockets of scarcity and high prices.

The budget session has begun with the promise of better deal for the State NGOs who constitute by virtue of the disparity of pay as between the Central Government employees and State Government servant the most aggrieved class. The Governor has in the course of his address announced the decision

Governor's Address

of the Government to constitute a Commission with the retired Chief Secretary to the Government as the Chairman to scrutinise the present structure of the diverse scales of pay, dearness allowance and other compensatory concessions and retiring benefits to public servants in the State sector, and to recommend a rational structure for the future. Until the submission of the report by the proposed commission and its consideration by the Government, an interim relief of Rs 5 per month has been announced to all the non-gazetted employees.

The Governor's address was mainly devoted to a critical appraisal of the progress made by the State to-date in the social, economic and other fields and to an indication of the lines of policy for the coming financial year. The substance of this speech as was only to be expected, was that the Madras State, had, consequent on the efforts made by the Government taken, rapid strides in the direction of a welfare State proof of which would be furnished by achievements in the field of foodgrain production, in the total expenditure incurred on the Second Plan, headway made in the exploration of the irrigation and power potential and progress made in the extension of educational facilities. These are achievements of a tall order of which any State could legitimately feel proud. While all of these are matters of common know-

ledge, it is not generally known to what an extent the Madras State has improved upon the performance of the other State in the country in point of expenditure on the Second Plan schemes. Out of a total targeted expenditure of Rs 152 crores on the Second Plan, the State, in the course of the first three years, incurred an expenditure of about Rs 90 crores which works out to about 60 per cent of the total expenditure. Against this proportion, all the other 10 unions 'puqqu' are saying the States having yet to reach a proportion of 50 per cent of their targeted plan outlay. Mr Medhi, reflected the care and attention bestowed in implementing the Second Plan schemes, when he expressed the hope that they would not only achieve the target set in the Plan, in time, but would even exceed it. A techno-economic survey of the State under the auspices of the National Council of Applied Economic Research is being initiated to correctly appraise the resources of the State with reference to development under the Third Five Year Plan.

The Governor also affirmed the intention of the Government to bring in early legislation imposing ceiling on land holdings as envisaged in the Nagpur resolution on agrarian policy of the Congress. Though a measure of this type is yet to be brought to the legislature, opinion in the legislature, has already shown itself to be far from unanimous in favour of such a step. However, much of the opposition to this step, springs from the concern at the fate of agricultural and foodgrain production when ceilings would be imposed. Even co-operative farming following the introduction of ceilings would not enthuse members about the need for ceilings since the present time and conditions are not considered propitious for the fruitful implementation of schemes for joint farming. It is not the politically uncommitted alone that share this opposition to ceilings and co-operative farming, and even some Congress members have voiced their opinions to the same effect in the course of the discussion on the Governor's speech.

The reaction of the members to the Governor's speech and the nature of their subsequent contribution to the discussion are matters that are predetermined by the political line a member has to be. Only achievements of an exceptional kind evoke deviations from the rigidity of the party line of approach to the conduct of affairs by the Government.

It is indeed the misfortune of a person who goes to the Madras State as its Governor, that he is not able to please every section of public opinion by his presence in the Legislature. The Dravida Munnetra Kazhagam, which is one of the opposition parties in the Legislature, and which in its politics is communally oriented, has sought to dramatise its opposition to the off-

THE PENINSULA

ce of Governorship by abstaining from the Legislature when the Governor came to inaugurate it. It is indeed ridiculous that they should seek to explain their opposition in terms of the appointment of people other than South Indians as Governors for the State. But the fact that in this show, the Kazhakam has practically no supporters from other parties in the opposition would reflect the state of public opinion on this issue. In the methods of expressing such disapproval the Kazhakam recognises degrees of unseemliness, and its leaders explain, they preferred to abstain rather than stage a walk out.

It was not difficult for the members of the opposition who generally tend to look lightly at the brighter side of things, to pick up points from the Governor's speech for criticism of the Government's policy on the floor of the Legislature. Much of the criticism was of a negative sort and related to failure to implement specific schemes of policy, and had very little to do with the basic policy as such. Related to the aspirations of the people, much of the progress that has been made in various fields, look rather insignificant and puny. And the presence of so many unsolved problems impinging on the limited resources of the Government give voice to the opposition that would continue to hold a sense of its own better worth, whatever be the difficulties that are encountered in tackling the problems.

It is a sad thought that while the Legislature will have serious matters to preoccupy itself with its attention would come to be distracted by a campaign that is now being hatched by a party called "We Tamils" for burning the map of India. Questioned in the Legislative Assembly, Mr C. Subramaniam, Minister for Education and Finance in the Madras Cabinet, has assured that proper steps would be taken in time to hand the situation when it might arise. Public opinion in the State would be outraged by such a happenit and it is to be hoped that the alone, would prevent such a vengeful campaign from being launched by its sponsors.

SOUTH INDIAN NOTES

The review of the working of the Companies Act, 1956 in the Southern Region for the quarter ending 31-12-1958, reveals that during the period, 55 companies with an authorised capital of Rs 158.23 lakhs have been registered in the Southern region, comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore. With 32 new registrations, Madras accounted for more than half of the total, while Kerala accounted for about 12, new registrations in Andhra Pradesh and Mysore being 5 and 6 respectively. It is also pertinent to note that out of these, only 3 were public limited companies, their authorised capital being put at Rs 27.50 lakhs.

Industry-wise, transport services with a share of 12 companies, figure as the group with the largest share. It is also significant that all of these companies belonging to the transport group, were formed in Madras, one being a public limited company. Agriculture and allied activities account for a total of 8 companies while processing and manufacture (Food stuffs, textiles, leather, and products thereof) account for another 4. The total investment by way of increase of paid-up capital of companies during the period is put at Rs 563.98 lakhs and is made up of Rs 377 lakhs accounted for by the Neyveli Lignite Corporation

Private Ltd, which is a Government of India undertaking.

The number of companies that went into liquidation during the same period is placed at 44, the total paid-up capital of these companies being Rs 28.93 lakhs. Another 79 companies with a paid-up capital of 15.54 crores have been, during the period, declared defunct. These included two non-profit making associations and one Banking Company.

The report further points out that during this period, 44 prosecutions were launched in the Region against companies and their officers mostly for not holding the annual general meetings and for not filing the Annual Returns and Balance Sheets as required by law. This reflects better administration and stricter enforcement of the Companies Law in the region. In this connection, the review claims that 111 cases have been disposed of during the period resulting in conviction of the accused in 79 cases and acquittal in 32.

Road Transport

The neglect of road transport under both the First and the Second Five Year Plans is one of the criticisms that is generally levelled against the transport plan of the Government and naturally finds expression at every conferen-

New Companies

ce on road transport. It was only recently that the Indian Roads Congress which met at Hyderabad stressed the importance of an adequate system of road transport and drew out a plan for the expeditious development of road transport after the Second Plan.

The importance of road transport and the need to take positive measures for rapid development of road transport were again emphasised at the 11th All-India Conference of Road Transport Operators held at Bangalore. As was to be expected the erstwhile policy of the Government which had involved proportionately greater emphasis on the development of railways than roads was taken up for criticism. Rajkumari Amrit Kaur, President of the All-India Motor Unions' Congress expressed the feeling that under the road transport policy of the Government, road transport had been cramped in such a way that it had been unable to play its full part in the economy of the country. A reorientation of the transport policy of the Government with proper emphasis on the development of road transport is considered of importance to be taken up without delay. Rajkumari Amrit Kaur also pointed to certain steps taken by the Government for the encouragement of road transport, such as the

amendment of the Motor Vehicles Act, the setting up of an Inter-State Transport Commission, the setting up of the Masani Committee and the constitution of another all-India Advisory body. This as pointed out by her, would seem to indicate the growing realisation by the Government of the importance of road transport.

However, this would seem to be true only of the Central Government. The affairs at the States level continue to be far from being encouraging for the development of the road transport. High levels of taxation and uneconomic limitations on the laden weight of vehicles have tended to discourage road transport to the maximum. Mr S. K. Patil, Union Minister for Transport and Communications himself admitted the restrictive effects of the present systems of State taxation on road transport. Lack of uniformity in taxation on road transport as between different States is yet another element in the present road transport policy and has been responsible for much confusion in inter-State trade and transport.

The fact that the issue of nationalisation of goods transport has for the time being been shelved is one which should make the private operators shed their diffidence and make better efforts to develop road transport.

MADRAS REVIEW

THE bullish fervour in Pepper markets has continued unabated and prices have climbed up further. In the Cochin market, the rate is quoted higher at Rs 110 per maund against Rs 95 in the previous week. The flare-up is mainly due to reports of renewed buying interest shown by Russia and other East European countries. As a matter of fact, it is officially announced that the first consignment of Indian pepper, contracted for Russia on State Trading Corporation account, was shipped to Odessa Port from Cochin towards the end of last week. Moreover, the USA is reported to be buying Lampung and Singapore pepper at prices ranging from 22 to 23 cents per pound when Malabar is nominally quoted at 24 cents.

The Singapore market, after remaining steady at Str \$71 for a

Bullish Fervour in Pepper

long time, improved to Str \$74 under pressure of buying by America and Europe, who are forced to action by the continuous rise in the prices of Malabar pepper. In the New York market, values have continued to rule firm with a moderate increase in grinder offtake and Malabar pepper is quoted at a higher level of 25 cents per pound. In the London market, White Sarawak is quoted at 33½d per pound and Black Sarawak at 19½d.

Some of the reasons for the present rise in the market are:—(1) reduction in freight to the USA with chances of further downward revision in the near future; (2) the statement made by the Kerala's and other commodities; and (5) chances of improvement in inland consumption, as prices of pepper are comparatively cheaper than Chief Minister that he will try to

negotiate to sell pepper and coir goods in exchange for machinery; (3) downward revision in the estimate of the present crop of Malabar black pepper; (4) speculative buying along with other spices those of allied spices like chillies and and cloves.

Naturally, the increase in foreign demand is reflected in the export performance, to some extent, during the month of December; but it is considered likely that January shipments might turn out to be still higher. Exports of black pepper from Indian Ports, during December, amounted to 34,412 cwts as against only 19,699 cwts in November and 25,035 cwts in December, 1957. Out of the exports in December, Bombay accounted for 5,300 cwts; Alleppey 6,933 cwts and Cochin 21,877 cwts. Total exports for the two months (November

SOUTH INDIAN MARKETS

and December 1958) were 54,111 cwts as against 35,696 cwts in the previous year, thus showing an increase of 18,415 cwts. Exports of black and white pepper, from Singapore in 1958, totalled 26,930 tons against 25,349 tons in 1957.

Groundnut

The general undertone in the Madras Groundnut market was one of firmness last week when the rate was quoted at Rs 170 per candy for the bold quality. Arrivals were about 175 tons per day. In view of the wide disparity in price levels between groundnut and oil, crushers were hesitant to operate for any appreciable quantity.

In the Groundnut Oil section, Calcutta interests took up decent quantities for ready and nearby positions. The rate for the ready position was quoted at Rs 327 per candy.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were unchanged and there was a fair clearance at steady levels. Arrivals of Buff hides were normal and were readily cleared at steady prices. There was no change in the arrivals of Cow Calf and Buff Calf.

On the export front, only small business was reported done in common qualities at 38½ and in 10/12 lbs fifths at 34d. In light weights, buyers were expecting a decline in prices; but the holding-back tendency among buyers did not affect local prices. Locally, there was good demand for inferior fifths. In the Calf section, business in Cow Calf continued to be patchy and selective.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate and there was a fair clearance. Prices were generally unchanged.

On the export front, business has yet to be develop to normal working levels. However, some business was reported done in goat skins 11/12 lbs fifths at 11sh 3d.

The market for Raw Hides ruled steady with small declines in prices in a few centres. However, the market for Raw Skins remained steady in all centres.

Bangalore Silk

The prevailing high rates in the Bangalore Silk market continued during the week ended 5-2-1959. Prices of both Filature and Char-ka Silk tended to quote high, owing to contraction in production of cocoons. The supply of raw silk was reported to have improved slightly since the previous week while demand has not shown any change for the better. As a result, all the varieties of Filature silk maintained their previous week's levels throughout the period under review.

STOCK EXCHANGES

Cautious Trading: Setback at Close

Watch-Dog Writes:

LISTLESS conditions have prevailed in stock markets during the week under review with price fluctuations confined to a narrow range. Sentiment is influenced by the usual pre-Budget uncertainties and operators are not at all inclined to extend their commitments. The closing tone was, however, weak due to heavy selling pressure on reports of a likely reduction in the subsidy on imported steel.

Lethargic conditions prevailed on the Calcutta Stock Exchange and, in the absence of any incen-

tive, price movements were insignificant in a diminishing turnover.

The Bombay Stock Exchange witnessed another dull session last week and dealings remained slow.

Price trends on the Madras Stock Exchange were indecisive and mixed.

Rather unsettled conditions were witnessed on the London Stock Exchange.

Wall Street closed easy with a fairly broadfront of losses, ranging mostly to two dollars.

Calcutta

Friday Evening.

IN tune with the usual pattern of trading at this time of the year, price movements on the local Stock Exchange were confined to a narrow range last week. Although Budget uncertainties played their part in restraining business, some of the issues moved up on selective interest. Major tax concessions in the budget were considered unlikely in view of the large resources needed to implement the Second Plan. But, it was believed that new levies, if any, might not be on the whole harsh. The underlying tendency, therefore, remained very steady.

The tendency in the Gilt-edged market remained the same as in the previous week. Demand was again concentrated on State Loans, while the Central Government issues remained quiet. 3 per cent 1986 Conversion Loan opened lower at Rs 73.50 and, after improving at one time to Rs 74.10, receded again at the close to Rs 73.75.

In sympathy, Bank shares ruled quiet with Punjab National moving narrowly between Rs 23.50 and Rs 23.62 and Bank of Baroda "B" between Rs 56 and Rs 62. Bank of Bikaner were quoted at Rs 26.37.

Jute shares came in for restricted business, as operators wanted to study the impact of the removal of minimum prices and the sealing off of further looms, before they would rush in once again. Howrah touched at one time a low of Rs 18.87 from Rs 20.50; New Central 13.37 from Rs 13.44 and Union Rs 217 from Rs 220, to finish the week at Rs 18.94; Rs 13.37 and Rs 217.50 respectively. National were on offer at as low as Rs 26.25 against Rs 26.50; Kamarhatty at Rs 163 against Rs 170 and Lawrence at Rs 110 against Rs 118. The only steady future was Alliance, having sustained support upto Rs 118.

Coal shares ruled quiet with prices slightly marked back from the recent high levels due to lack of fresh support. Bengal were quoted at Rs 282 against Rs 284; East Indian at Rs 23.63 against Rs 24.12 and South Karanpura at Rs 12.31 against Rs 12.56. The only two steady features were Central India and Western Bengal, moving narrowly around Rs 7.50 and Rs 6.06 respectively. Burrakur fluctuated erratically between Rs 17.50 and Rs 17.62 on alternate buying and selling, to finish at Rs 17.50.

Textile scrips showed a halting trend due to lack of support at higher levels. The outlook for tex-

tiles was considered to be bleak despite the Government's efforts to resuscitate the industry by export incentives. Jayshree changed hands at Rs 8.31 to Rs 8.37; Elgins at Rs 12.19 to Rs 12.31 and Kesoram at Rs 12.06 to Rs 12.31. Bowreah were, however, on offer at Rs 90 against Rs 105 with Ne Victoria easing off to Rs 1.19 from Rs 1.25.

A relieving feature of the week's trading was a broadening of enquiry for Tea shares and the recovery in prices, that was noticed in the previous week, was carried a stage further on reports that the companies of those gardens situated in Assam and Dooars had done well in 1958. Brooke Bond were taken upto Rs 17.81 from Rs 17.12; Grob "B" upto Rs 14.62 from Rs 14.50; Hasimara upto Rs 21.50 from Rs 21; Jutlibari upto Rs 18.87 from Rs 18.69; Rydak upto Rs 27.12 from Rs 26.87; Sungma upto Rs 17.37 from Rs 16.25 and Tezapore upto Rs 15.25 from Rs 14.81.

Except Carew which met with some special interest upto Rs 8.62 from Rs 8.50. Sugar shares were generally neglected. This was mainly due to fears that production, during the current season, might be affected following the stoppage of cane-crushing at some mills in East Uttar Pradesh as a result of strike. Dyer Meakin were on offer at Rs 14 against Rs 14.19.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian irons which, in turn, were subjected to settlement adjustments till the middle of the week. Against the week-end closing of Rs 26.07, Indian Irons opened steady at Rs 26.10 and, after fluctuating narrowly between Rs 26.05 and Rs 26.12 till Wednesday, receded at the close to Rs 25.77 on selling pressure. The settlement rate was fixed at Rs 26.08 against the last settlement of Rs 26.02.

Among other Engineering scrips, TEXMACO touched a high of Rs 21 and a low of Rs 20.65, to close finally at Rs 20.65. G. K. Williams remained steady at Rs 37.12 following the announcement of an interim dividend of 80 nP per share, while Indian Galvanizing and Marshalls turned quiet at Rs 15.75 and Rs 5.69 against Rs 16 and Rs 5.75 respectively. Britannia were better at Rs 11 against Rs 10.94.

Although Miscellaneous issues moved with the general trend of the market, dealings were very prominent in Paper shares on the belief that the Tariff Commission might recommend a more realistic price for the commodity. Orient were at one time taken upto Rs 31.65 from a low of Rs 31.35 (Rs 31.10); Titagur upto Rs 42.75 from Rs 42.25 (Rs 42.75); Sirpur upto Rs 13.75 from Rs 13.69 (Rs 13.62) and Shree Gopal upto Rs 15.62 from Rs 15.56 (Rs 15.62).

Trading in other scrips remained generally quiet with price movements confined to a narrow range. Indian Cable changed hands at Rs 29.19 to Rs 29.40 (Rs 28.8); Indian Aluminium at Rs 16.75 to Rs 17 (Rs 16.81); Rohtas at Rs 18.94 (Rs 18.82); Hindustan Lever at Rs 27.37 to Rs 27.75 (Rs 27.75);

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED.

(Incorporated in England).

LIABILITY OF MEMBERS LIMITED.

DIVIDEND.

The following Interim Dividend has been declared payable on the 18th March, 1959:—

On the Preference Shares at 5% for each of the years ended 31st March, 1957 and 31st March, 1958 (Ten Shillings per share) less U.K. Income Tax of eight shillings and six pence in the £ Sterling.

Payment of the Dividend declared will be made only to those Members whose names are registered in the Books of the Company on the 4th March, 1959 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The preference Share Transfer Books will be closed from the 19th February, 1959, to 4th March, 1959 both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Agents.

4, Clive Row,
Calcutta, 5th February, 1959.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. PA-GM-130-Gb1 of 58 for supply of Chain Iron Ordinary 4½" o/s × 2½" o/s × 8½" × 17 ft. long each as per I.R.S. Specification No. H3-53. Proof load—4½ tons. Test load—T. 11—Cwt. 10. Test certificate required. Quantity required—31 Ton—8 Cwt. —2 Qrs. Closing date of the tender is 6-3-59 at 3 P.M.

Tender forms are obtainable from the office of the Controller of Stores (PA Section), S.E.Rly., Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms. Earnest money against the tender is Rs 700/-.

Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the earnest money deposit receipt with the tender.

MORE PIPES

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

Figures shown within brackets were the week's closing rates.

★

Bombay

CONDITIONS continued to be dull in the stock market in view of the proximity of the Central Budget. Though it is believed that the Budget will be a realistic one the general tendency is to await the proposals before extending commitments. Sentiment was rather depressed when the market opened on Monday presumably due to the easier tone in the commodity markets. In later dealings however there were indications of the emergence of support at the lower levels. But for occasional interest in a few shares the market was almost unchanged on Tuesday with price movements confined to narrow groove. In the next two days trading was more or less on a similar pattern with values showing an initial recovery and finishing lower around previous levels.

In the steel section Tata Steel opened at Rs 174.00 but finished the opening day better at Rs 174.50. The next day the scrip moved within a narrow groove to close against at Rs 174.50. Wednesday found the scrip still fluctuating narrowly to close once again unchanged on balance at Rs 174.50. During Thursday's trading the scrip however lost some ground to be finally placed at Rs 174.25. Indian Irons moved from Rs 26.05 to Rs 26.10 by close on Monday. By Wednesday it was back at Rs 26.05 but closed on Thursday slightly better at Rs 26.10.

Among textiles Bombay Dyeing opened the week at Rs 56.00 after maintaining a steady front in the next two days closed at Rs 56.90. Century met with some enquiry and closed at Rs 438.00 as against its previous week's closing of Rs 436.50. Central could not maintain earlier gains and closed unchanged on balance at Rs 89.50. Swadeshi was a steady spot at Rs 208.00.

In the Miscellaneous section National Rayon was wanted up to Rs 244 before closing at Rs 243.25. There was some speculative support for ACC which as a consequence moved up to Rs 155.50 to close at Rs 155.00. Bombay Burmah was steadier at Rs 467.00. Belapur Sugar was under some pressure in earlier dealings but recovered to close at Rs 265.50.

★

Madras

A quietly steady tone prevailed on the Madras Stock Exchange. Selective buying was noticed in the planting section, while Textile scrips remained dull.

TEXTILES This section accounted only for small turnover in the absence of any incentive. Travancore Rayons came in for some en-

quiry upto Rs 16.90, while Colmbatore Cottons met with selling enquiry at Rs 130. Maduras had sellers at the market rate and so also Cauvery Spinnings.

PLANTINGS In this section, there was greater activity in Rubber shares due to anticipations of a rise in the price of the raw commodity. Valkundams met with good demand at the market rate, while Cochin Malabars were taken upto Rs 5.85. Thirumbadis changed hands at Rs 1.75 to Rs 1.77 cd., with Kalpettas marked at Rs 11.70. Midlands showed further improvement to Rs 11.25 due to sustained enquiry.

In respect of Tea shares, there was some covering by jobbers. Periakaramalais met with good enquiry upto Rs 3.94, while United Nilgiris were on offer at Rs 16.80. Nonsuch were done at Rs 24.85; Neelamalais at Rs 4.65 and Halleyburlas at Rs 16.60.

Among Coffee shares, Blue Mountains were done slightly lower at Rs 3.21, while Consolidated Coffees and Coffee Lands moved irregularly lower. Bababudins were, however, marked upto Rs 13.50 on better enquiry.

MISCELLANEOUS In this section, Aluminium Industries accounted for the usual turnover and the rate continued to remain firm at Rs 18.35. FACTS met with some demand at the market rate, while Rallis turned quiet at Rs 49 following the passing over of the dividends, both on the Ordinary and preference shares. Ashok Leylands met with buyers at Rs 6.10 with Metturr Chemicals being absorbed at steady rates. Bruton Engineering were quoted at Rs 4.65 and Radio & Electricals at Rs 5.70.

★

London

RATHER unsettled conditions prevailed on the London Stock Exchange, as buyers were reluctant to open new commitments. Industrial were generally lower with many of the leaders showing small losses. Rubber shares were, however, in demand, while Tin shares went ahead on consideration of the recent rise in the price of the metal.

Gilt-edged securities ruled easier and there was no recovery despite a fall in the Treasury Bill rate to around 3 per cent. Foreign Bonds provided a number of bright spots. Greek issues forged ahead on hopes of a settlement to the Cyprus question.

★

New York

FOR the fourth time, Wall Street moved low in dealings last week and selling was mainly in the form of profit-taking. Although selling pressure tended to slacken at times, buyers showed no particular disposition to be attracted by the more favourable yields obtainable. Featuring the resilient side was Lorillard, aided by record profits and a proposed stock-split. Anaconda Copper was quoted at \$67½; General Motors at \$46½ and US Steel Common at \$90½.

INDUSTRIAL INFORMATION

INDEX NUMBER OF WHOLESALE PRICES IN INDIA (REVISED SERIES)

REVIEW FOR THE WEEK ENDED MAGHA 4, 1880 (JANUARY 24, 1959).

The official wholesale price index (with the year ended March, 1953 as 100) rose by 0.6 per cent to 113.1 during the week ended January 24, 1959 as compared with 112.4 (revised) for the previous week. The index was higher by 2.1 and 7.1 per cent respectively when compared with the corresponding weeks of the previous month and of a year ago.

The index for 'Food Articles' advanced by 0.9 per cent to 115.1 as Index Number of Wholesale Prices by (Base: 1952-53=100)

RUBBER PRODUCTS AND RAW MATERIALS

The Indian Standards Institution has issued, for eliciting comments, four draft Indian standard specifications pertaining to rubber products and their raw materials.

The first draft standard prescribes the requirements and methods of sampling and test for Barytes, intended for use in rubber industry.

Barytes is widely used in the rubber industry as a filler. Rubber manufacturers, since a long time, have been experiencing difficulty in procuring suitable quality of raw materials for want of any national standards. This standard has been formulated with a view to facilitating and assuring a supply of a standard quality of barytes to the rubber industry.

compared with 114.1 (revised) for the previous week due to a rise in the prices of Cat-fish at Bombay (+19%), Potatoes at Delhi (+11%) and at Farrukhabad (+9%), Gur at Muzaffarnagar (+11%), Turmeric at Calcutta (+9%), Rice at Maracra (+8%) and at Gaya and Chiplun (+5% each), Gram and Black Pepper (+8% each), Betelnuts at Calcutta (+7%), Bajra at Agra and Chillies at Madras (+6% each), Arhar at Delhi (+5%), Wheat, Jowar, Masur and Groundnut oil (+3% each), Urad and Gingelly oil (+2% each) and Mung, Cashew-nuts, Mustard oil and Tea for exports (+1% each). The prices of Rice at Saharanpur (—23%), at Cuttack (—6%) and at Imphal (—5%), Potatoes at Kanpur (—11%), Oranges at Madras (—6%), Milk (—4%), Tea for Internal Consumption (—3%) and Maize and Coffee (—1% each), however, showed declines.

The index for 'Tobacco' stood unchanged at the previous week's level of 104.5.

RUBBER PRODUCTS AND RAW MATERIALS

The Indian Standards Institution has issued, for eliciting comments, four draft Indian standard specifications pertaining to rubber products and their raw materials.

The first draft standard prescribes the requirements and methods of sampling and test for Barytes, intended for use in rubber industry.

Barytes is widely used in the rubber industry as a filler. Rubber manufacturers, since a long time, have been experiencing difficulty in procuring suitable quality of raw materials for want of any national standards. This standard has been formulated with a view to facilitating and assuring a supply of a standard quality of barytes to the rubber industry.

Two other standards are for natural red oxides of iron and whitening for rubber industry. They prescribe the requirements and the methods of sampling and test for natural red oxides of iron and whitening intended for use in the rubber industry.

The fourth draft standard, which is for latex foam products, prescribes general requirements and methods of test for those cellular rubber products, known as latex foam rubbers, manufactured from liquid latex rubber either natural, reclaimed or synthetic, alone or in combination, suitably compounded.

Comments on the draft standards may be sent before April 4, 1959 to the Indian Standards Institution, New Delhi.

Men and Oil... 5

The Refinery Engineer

Crude oil from the earth is a mixture of hydrocarbons (compounds of carbon and hydrogen) which may be gases, liquids, or solids at ordinary temperatures. Refining separates and re-assembles the various useful "fractions" in the crude oil and purifies them to the required degree.

The construction and maintenance of the plant in which these processes are carried out are in the hands of Refinery Engineers. Highly skilled key men, they are responsible for the efficient working of all the heat exchangers, pumps, compressors, refrigeration machinery and other equipment needed in a modern refinery. And when components of the refinery are shut down for overhaul it is the Refinery Engineer who has to examine the units and repair

parts weakened by corrosion, heat, pressure and friction so that breakdowns will not dislocate the operation of the complex plant.

This is a job which calls for a high degree of training, wide engineering knowledge, experience and initiative. The Assam Oil Company places great trust in its Refinery Engineers, many of whom are Indians — all working in an industry of great importance to the nation.

FOR THE INVESTOR

Budget Hopes

Investment Gossip:

As we swing into the last week before the Budget for 1959-60, the anticipations of stock exchanges have been keyed up to high excitement. While it is true that, during January and February this year, we have had very much less by way of conjecture about the Budget, it has suddenly begun to dawn upon the market men that prospects are not so bleak.

The conspicuous lack of new tax measures in the State Budgets so far announced; the failure of Mr Jagjivan Ram to seek new revenues either from an increase in freight rates or from a hike in passenger fares; the excellent record of 1958-59 in the matter of market borrowings; the partial success that has greeted the attempt to hold the price line; the greatly improved agricultural crops of the current season; the virtual underwriting of our foreign exchange heads for the Second Plan by friendly foreign Governments; the bringing into balance at long last of exports and imports—all these are hopeful signs that Mr Morarji Desai's brief-case will contain, next Saturday, a Budget that will not seek any significant new money from taxes.

Of course, some excise duties may be raised, and some new ones imposed. But it is now taken for granted that Government will have little choice in the matter of augmenting revenues from excises.

The one rumour that is steadily making the rounds is that some adjustments may be made in regard to the tax on Bonus issues. Gossip, of the investment kind, has it that the capitalisation from share premium account—which has so far been exempt—may not be brought into the net; but, at the same time, the rate of the Bonus tax is likely to be reduced.

It is to be fervently hoped that the Finance Minister will see his way clear to giving some marginal reliefs. It may also be that he will consider his Budget to be export-biased; and concessions with a view to enlarged exports are well on the cards.

One more week, thus, to wait.

ER

Investment Notes:

The Board of Hindustan Lever Limited announce the results for the year to 31st December, 1958. Net profit for the year is Rs 129 lakhs after providing Rs 178 lakhs for taxation at current rates. Net profit for 1957 was Rs 100 lakhs after pro-

viding Rs 123 lakhs for taxation. The Board resolved to recommend a dividend of one rupee and fifty paise per share, free of income-tax, for the year to 31st December, 1958.

The Bababuddin Coffee & Produce Company, Madras, has proposed to issue bonus shares in the ratio of one for one, subject to the sanction of the Controller of Capital Issues.

Athimattam Rubber Company will issue 1,500—7½ per cent tax-free first Mortgage Debentures of Rs 100 each. This issue is first offered to the existing shareholders pro-rata to their holdings. Whatever is remaining thereafter will be offered to the public for subscription.

ER

Jaipur Udyog Earns More

Balance-Sheet Reviews:

THE Jaipur Udyog Limited has produced satisfactory results for the year ended 31st March, 1958. Sales of cement have increased to Rs 3.51 crores from Rs 1.24 crores. After providing interest charges at Rs 19.20 lakhs against Rs 7.58 lakhs and providing Rs 1.22 lakhs for managing agents' commission against Rs 47,647, the gross profit for the year amounts to Rs 56.96 lakhs against Rs 40.82 lakhs. Out of this, the directors have provided for Depreciation Rs 35 lakhs against Rs 20 lakhs and Rs 40,000 for Development Reserve. Thus, the net profit comes to Rs 21.56 lakhs, to which is added Rs 21.36 lakhs brought forward from the previous year, making a total of Rs 42.93 lakhs.

Out of the above amount, the directors paid an interim dividend on the Ordinary shares at Rs 2 per share, representing 12½ per cent for the year ended March 1957 and 7½ per cent for the year ended March, 1958. Out of the balance of Rs 10.68 lakhs, the directors have recommended a final dividend 50 p per share on the Ordinary shares and Rs 3 per Preference share, leaving a balance of Rs 93,276 to be carried forward. Provision for Wealth Tax of Rs 2.55 lakhs for the years 1956-57 and 1957-58 has been made from the General Reserve.

The directors have, in their report, pointed out that production has increased on full utilisation of the capacity of the second cement kiln with the availability of additional supply of power from August 1957 and commissioning into operation of the third cement kiln in November 1957. Installation of the fourth cement plant of 750 tons per day capacity has since been completed. This raises the annual installed capacity of the company's cement works to 8 lakh tons of cement.

They add that the company had to curtail production during the year following the slackening of demand for cement in the country. The position, according to them, is

likely to improve in the months to come and they express the view that reduction in the tax burden on the commodity, which is more than 40 per cent of the ex-works price of naked cement, might help the manufacturers' efforts to improve the offtake.

The subscribed capital of the company, as on the 31st March 1958, is Rs 2.25 crores. It may be noted that 5 lakhs Ordinary shares of Rs 10 each were issued at par against cash to the existing shareholders during the current year and they are entitled to dividend from the results of the current financial year. Reserves and surplus are only Rs 2.78 lakhs.

Fixed Capital expenditure, during the year, was incurred to the tune of Rs 2 crores, raising the gross block to Rs 6.72 crores. Depreciation written off to 31st March 1958 amounted to 1.24 crores, leaving a net block of Rs 5.48 crores. Current assets are valued at Rs 1.48 crores.

ER

Alkali & Chemical Corpn.

DESPITE lower earnings, the Alkali & Chemical Corporation of India Limited has maintained the dividend at 8 per cent for the year ended 30th September, 1958. The profit for the year amounts to Rs 36.63 lakhs as against Rs 33.28 lakhs in the previous year, after providing Rs 11.98 lakhs (Rs 12.18 lakhs) for Depreciation.

Sales have gone up from Rs 2.25 crores to Rs 2.63 crores. The provision for Taxation is raised to Rs

21 lakhs from Rs 16.30 lakhs, while the amount provided for Wealth Tax is reduced to Rs 1.35 lakhs from Rs 2.00 lakhs. A sum of Rs 75,000 is transferred to Development Rebate Reserve against nil. Allocations to General Reserve, Dividend Equalisation Reserve and Reserve for Deferred Income-Tax Liability, which amounted to Rs 2 lakhs; Rs 6.20 lakhs and Rs 5.64 lakhs respectively in the previous year, have been skipped.

According to the directors' report, there was again a record output of Chlorine and Caustic Soda. The production and sale of Hydrochloric Acid were higher than in the previous year. There was a substantial increase in the production of the company's Paints. The Polythene plant is expected to go into production in the second quarter of this year. Approval to extend the capacity of the chlorine and caustic soda plant has been received from the Government and the construction work has started.

ER

Kumergode Estates

The Kumergode Estates Limited has reported a net profit of only Rs 2.52 lakhs for the year ended 31st October 1958 as against Rs 2.71 lakhs in the previous year. The provision for Depreciation is Rs 29,587 (Rs 21,176) and Taxation Rs 63,500 (Rs 67,873). The transfer to General Reserve is lower at Rs 50,000 against Rs 1.00 lakh. There was an allocation of Rs 30,000 to the Debenture Redemption Reserve on the former occasion. This is not now necessary.

A dividend of 20 per cent will be paid on the increased capital of Rs 4 lakhs against 25 per cent on the old capital of Rs 2 lakhs. It would be recalled that the capital was increased, during the year under reference, by the issue of bonus shares for Rs 2 lakhs.

£ R\$
Kelvin Jute

The fair trading conditions, that prevailed last year, were fully reflected in the working results of the Kelvin Jute Company Limited for the year ended 31st March, 1958. Sales have risen to Rs 1.81 crores from Rs 1.58 crores, while the net profit, after providing for Depreciation and Taxation amounts to as much as 5,65,788 against only Rs 2,48,578 in the previous year. Apart from providing Rs 1.00 lakh for General Reserve and Rs 1.00 lakh for Development Rebate Reserve, the Depreciation amount is raised to Rs 5.10 lakhs from Rs 3.58 lakhs and Taxation provision to Rs 6.25 lakhs from Rs 1.60 lakhs. The provision for Wealth Tax is, however, reduced to Rs 42,000 from Rs 80,000. Even after these increased allocations, the directors have found it possible to raise the Ordinary dividend to 12½ from 9 9/11 per cent.

£ R\$
Waverley Jute

Despite a decline in sales from Rs 74.99 lakhs to Rs 15.44 lakhs, the Waverley Jute Mills Company Limited has reported a net profit of Rs 3,46,395 for the same year as against a loss of Rs 4.26 lakhs incurred in the previous year. This is mainly due to the fact that, although the mill was closed down on the 17th June 1957, the working loom-hours have been sold to other mills within the McLeod group, which has enabled the company to show a profit. Apart from providing Rs 21,000 for Taxation, the Depreciation amount is reduced to Rs 1.25 lakhs from Rs 1.37 lakhs. After transferring a sum of Rs 1.15 lakhs from General Reserve, the directors have recommended the dividend only on the Preference shares for the 11 months ended 31st 31st May, 1957.

£ R\$
Central Hydraulic Press

The Central Hydraulic Press Company Limited has, however, reduced the dividend from Rs 10 to Rs 6 per share for the same year. The net profit, after providing for Taxation of Rs 58,000 (Rs 78,000), is only 18,624 as against Rs 59,129 in the previous year. The directors have, after transferring Rs 1.22 lakhs from various Reserves, written off Rs 1.51 lakhs against loss on investments and recommended the dividend as stated above.

In view of the relatively small amount of net income which is available for distribution after charging all expenses and providing for taxes, the directors have decided to wind up the assets of the company and distribute the same to its members. An extraor-

inary general meeting, in this connection, will be held shortly.

£ R\$
Calcutta Hydraulic Press

The Calcutta Hydraulic Press Company Limited has reported a net profit of Rs 35,753 for the year ended 30th June, 1958 against Rs 44,838 in the previous year. A sum of Rs 122 (Rs 1,946) is provided for Depreciation and Rs 79,000 (Rs 13,500) for Taxation. Despite lower profits, the directors have recommended a dividend of Rs 5 per share against Rs 3.

The directors have, in their report, stated that, in the best interests of the company, that the company be wound up and its assets distributed to its members. An extraordinary General meeting, in this connection, will be shortly held.

£ R\$
Cauvery Sugar

The Cauvery Sugars & Chemicals Limited has shown a loss of Rs 5.46 lakhs for the year ended 30th June 1958 as against Rs 1.51 lakhs in the previous year, after providing for Depreciation Rs 22,942 (Rs 5,887). Apart from the fact that there was no production, the loss was increased by the reduction in the rents payable by Kullitalai Cane Farms Private Limited on land owned by the company and leased to the former. The loss on account of this revision was Rs 1.1 lakhs.

A net sum of Rs 1.86 lakhs is still due on rental account, after taking credit for the value of cane delivered to the factory during the inaugural crushing season. It has been agreed that a sum of Rs 2.98 lakhs under this head will be payable by Kullitalai Cane Farms directly to the lessors concerned. For the time being, the sum of Rs 1.86 lakhs, due to the company, has been treated as debt considered doubtful.

The company has commenced crushing of cane, after the necessary tests had been carried out, with effect from 30th July 1958. Fixed assets are shown in the balance-sheet, as on the 30th June 1958, at Rs 81.47 lakhs. Subsequently, various items amounting to Rs 69.69 lakhs have been transferred to their respective block accounts.

The Railway Budget

MR JAGJIVAN RAM'S Railway Budget for 1959-60 is one of the most heartening official assessments of Government's performance that we have seen in recent years. In regard to every phase of railway activity, the Minister has been in a position to report encouraging and considerable progress. His Budget differs substantially from the annual reports of recent years in that, for the first time since the Second Plan began, the speech is not overpoweringly affected by a bald statement of difficulties. This is not to say that problems have not been faced, but rather to indicate that the difficulties that cropped up have been adequately dealt with. One problem alone remains, but this too has its facet of an encouraging implication for the national economy. We refer here to the fact that the Minister has hinted at the competition offered by road transport in respect of what we might term as better paying loads. It is understood that, in this respect, the Railways have been underquoted. Indeed, just prior to the Railway Budget, there were apprehensions that, as a result of the consequent diminution of railway earnings, some increase in freights was to be expected. In the event, we have mercifully been spared any increase in either passenger fares or in freights. But, surely, there would have been occasion for surprise if, in fact, Mr Jagjivan Ram had thought fit to secure an augmentation of railway revenues; that the status quo has been maintained is certainly justified by the state of the national economy.

The trouble has been that 1958-59 has been, in a very real sense, a hump period of the Second Plan. Revenues have generally been slack. Industrial production, which had shown a marked increase ever since the beginning of planned endeavours, slackened perceptibly. The anticipated increase in railway tonnage carried did not materialise. But none of this comes as a shock to us; prudent planning would have anticipated such a course of events during 1958-59. After all, the bulk of fresh investment in the private sector was, as Mr H. V. R. Iengar, the Governor of the Reserve Bank, recently pointed out, completed by the middle of the Second Plan period; and additional production would ensue only after a time-lag. In the same way, the projects in the public sector have yet to start delivering, and it is only after output begins that any discernible increase in the carriage of freight by the railways can be expected. It is in this sense that the Railway Minister anticipates that, during the next Budget year, the pace of increase in railway freights postulated by the original Second Plan papers can be expected to materialise. What is of little consequence, in this view, is whether or not the current financial year has witnessed a satisfactory expansion in the utilisation of railway services; and what is much the more important is whether the Railways have succeeded in their attempt to create the extra capacity that will inevitably be drawn upon during the last two years of the Second Plan; and the record in this respect of the Railways is encouraging.

Except that there has occurred a decline in the freight traffic, progress has been charted

in every other respect on the Railways. Mr Ram's assertion that the demand for wagons was generally slack is to be interpreted rather as indicating that, for the first time since the planned endeavours began, the availability of wagons was greater than the demand for them. The indigenous production of locomotives and of wagons and of coaches has touched new records. The supply position in regard to so-called "critical material" has finally eased. The tempo of expenditure on the Railway plan has been maintained. The negotiations for obtaining foreign exchange against the Railway projects have largely been successful. During the year, the Railways were able to announce advantageous rates of freights for nine commodities in respect of exports, and studies are being made about the feasibility of further incentives being provided for exports. The peak of constructional activity took place during the current fiscal year. Work on the Assam link has proceeded apace. Attempts have been made, and successfully at that, to reduce the foreign exchange element in the Railway projects. In most cases, says the Railway Minister, "imports have been eliminated". The production of signalling equipment, to which the Minister made a different reference last year, has now greatly reduced the difficulty of indigenous availability. The output of steam locomotives has risen from 249 to 268, and that of wagons from 17,731 to 17,900. The Railway workshops have increased their capacity in respect of the maintenance of the much larger quantum of rolling stock. Locomotives have been subjected to vigorous tests, and research is being carried on about the utilisation of ash. A cheap anti-corrosive paint for steel has been patented, as also other patents for new materials and equipment developed by the research centre. A number of new trains has been introduced, and an equally significant number of services has been extended. New suburban services have been introduced, and the seat mile capacity is expected to increase significantly by the end of the Second Plan. The question of passenger amenities, and also that of facilities to employees, has received the attention of the authorities.

The progress that has been made as a result of the implementation of the huge development

West Bengal Budget

DR B. C. ROY'S budget speech has underlined the performance so far in implementing the Second Five Year Plan as well as the prospects for the remaining two years—a topic on which there was room for anxiety, in view of the attention devoted in the recent past to the growing gap between resources and targets. Dr Roy's categorical assurance that "in West Bengal, the question of pruning the Plan or of dropping some of the schemes does not arise", will, therefore, be received with considerable satisfaction by the general public in the State who had good reason to apprehend that pruning of the plan schemes might react adversely on the employment situation which is bad enough as it is.

The fulfilment of the plan targets will, however, call for a considerable step-up in the levels of outlay as compared with the previous years. Expenditure on plan projects amounted to Rs 22.13 crores in 1956-57, the first year of the Plan and to Rs 25.40 crores in the Second year. The budgeted outlay for the current year which is the third year of the plan was Rs 29.71 crores. This has been increased to Rs 34.06 crores in the Revised Estimates. The budget for 1959-60 provides for expenditure of Rs 37.7 crores on the State Plan leaving a balance of Rs 38.41 crores for the last year.

The State Plan has come up against many difficulties in the course of its implementation. The uncertainty regarding the quantum of Central assistance and the progressive reduction of the amount have added considerably to the State's share of the financial burden. When the Second Plan was drawn up, the State's share was fixed at Rs 64.4 crores out of a total outlay of Rs 153.7 crores, the balance to be met by the Centre in the form of loans and grant. It now appears that the Central contribution for the entire Plan period is not likely to exceed Rs 76.95 crores out of the increased outlay of Rs 157.7 crores including Rs 4 crores on account of transferred territories. During the first three years the State Government had already provided Rs 35.79 crores and, according to the original pattern of financing of plan projects, would have to provide only about Rs 28.61 crores in the remaining two years. But, as the contribution from the Centre has been reduced, the Government of West Bengal will have to provide an additional Rs 17 crores to reach the total target. This additional amount of Rs 17 crores which the Government has been asked to provide is the State's share in filling the gap of Rs 400 crores between available resources and the overall outlay of Rs 4800 crores on the Second Five Year Plan.

The Budget presented by Dr B. C. Roy does not, however, envisage any increase in the rates of existing taxes or imposition of new taxes. The taxes already imposed have shown a remarkable degree of resilience, so that the potential yield from additional taxes, originally fixed at Rs 14 crores, has now been estimated by the Planning Commission at Rs 53 crores. While Dr Roy has not added to the tax burden, the increased yield has not enabled him to do anything to reduce the tax burden. The tea trade in particular has been agitating for the abolition of the entry tax to supplement the reliefs afforded by the Centre. But with a revenue deficit of Rs 3.62 crores in the budget for the coming year, and additional income earmarked for plan expenditure, the prospects of tax reliefs are not very bright.

The Revised Estimates for the current year show revenue receipts at Rs 81.58 crores, an increase of 12.72 crores over the budgeted figure of Rs 68.86 crores. Expenditure, on revenue account, has increased to a lesser extent, from Rs 72.69 crores in the budget to

Rs 80.77 crores in the Revised Estimates, so that the revenue deficit of Rs 3.82 crores anticipated in the budget has been turned into a surplus of Rs 81 lakhs. Including the deficit of Rs 1.50 crores outside the revenue account, the current year is expected to close with an overall deficit of Rs 68.5 lakhs, as compared with the budget figure of Rs 1.76 crores.

For the year 1959-60, Dr Roy has budgeted for expenditure of Rs 82.67 crores on revenue account against receipts of Rs 79.04 crores, leaving a deficit of Rs 3.63 crores. A surplus of Rs 4.10 crores outside the revenue account turns this deficit into an overall surplus of Rs 47.75 lakhs. Including the opening balance of Rs 2.28 crores, the year is expected to close with a balance of Rs 2.76 crores. The budget also includes provision for a loan of Rs 7 crores to be floated during the coming year, which will be utilised to finance development schemes under the Second Plan.

Apart from the increase in the State's share of the total outlay on plan projects, there has been a reduction in the amount of Central assistance in the shape of grants and a corresponding increase in the State's contribution to the revenue expenditure on plan schemes. The State's contribution out of revenue on account of Plan schemes originally fixed at Rs 8.1 crores has now increased to 17.6 crores. The contribution from revenue for the plan during the budget year will be Rs 7.2 crores. Together with grant of five crores from the Centre, total resources on revenue account fall short of the expenditure on plan projects by Rs 3.63 crores, which is also the figure of the budget deficit on revenue account. While the State has grievances against the Finance Commission, even the reliefs recommended by that body have not been made available. Dr Roy has drawn attention to the fact that payment of grants at the level envisaged by the Finance Commission would have reduced the deficit to Rs 88 lakhs and the budget would have been balanced if the Central Government had adopted the Commission's recommendation regarding lowering of interest charges on Central loans.

Another source of difficulty is the expansion of DVC projects which tends to encroach on the resources available for other schemes in the State Plan. The State's share of the

total outlay on DVC, was originally fixed at Rs 15.6 crores. Out of this, the State has already provided Rs 14.46 crores in the first three years. With the sum of Rs 2.80 crores provided in the budget, the total outlay for the first four years will be Rs 17.26 crores. It is clear that any further increase will be at the expense of State schemes and there is justification for the demand that finances for the necessary expansion of the DVC should be found outside the State Plan.

As regards the implementation of the projects included in the State Plans, Dr B. C. Roy has drawn attention to the encouraging fact that the rephrasing of the All India Plan, which was divided into Part A and Part B, has not led to any pruning of the State Plan. He also indicated that resources for completing the targeted levels of outlay are in sight, provided, the amount of Central assistance which has now been scaled down to Rs 34 crores is forthcoming. He has also revealed that, in discussions with the Planning Commission, it has been pointed out that, if any savings were effected in the allocation for schemes included in the Plan, it would be open to the State Government to include in the Plan other developmental schemes within the overall ceiling of Rs 157.7 crores.

One of the most heartening features of planned development in the State is the substantial increase in irrigation facilities. While the area of the State is limited, provision of irrigation which enables cultivation of two crops where only one crop is grown at present, would in effect double the area under cultivation. The DVC provided irrigation to an additional 1.34 lakh acres during the last KHARIF season. By 1959-60 the DVC and the Mayurakshi project are expected to provide irrigation for 10.25 lakh acres. With the progressive implementation of the big irrigation projects, water will also be available for raising RABI crops. Satisfactory progress has also been recorded in other spheres of agricultural development. Out of 100 seed farms programmed for establishment during the Second Five Year Plan, 94 have already been set up. The strengthening of the agricultural base is essential for stabilising the economy of the State for industrial expansion. In this respect the progress already achieved in extending irrigation and the new schemes taken up augur well for the formulation of an adequate Third Five Year Plan for West Bengal.

Decision—Making and Productivity

By M. SUR

IT IS commonly assumed that the growth of large-scale industry automatically involves an increase in the costs of administration in proportion to labour costs and an expansion and elaboration of managerial control. Whether this is necessarily so is one of the questions which Seymour Melman set out to answer in his study* of the organisation and management policy of the Standard Motor Company at Coventry, England. The other question he set himself to consider was whether any alternative to the unilateral control of production by management is feasible in these days of rapidly changing technology, and whether bilateral decision-making can be effective.

The company chosen for this study holds an interesting position in the British automobile industry, for it has refused to keep to the industry line of standardised wages and has by a contract with the trade union confederation representing the various unions of its 12,000 workers introduced wages which on the average are 62 per cent higher than elsewhere in the industry, has reduced the categories of

wage-earners for the purpose of simplicity, and has introduced an incentive bonus scheme which enables production workers to earn between 90 and 105 per cent of base rates in bonus. It was the deliberate policy of the company to pay high wages, and in doing so it has quarrelled with the rest of the industry and has withdrawn from the employers' association. In spite of its high labour costs, however, it has managed to maintain and even improve its competitive position in the industry. How has this been done, and has it lessons for other large-scale industries?

Mr Melman has divided his book into a study of the decision-making processes into which the trade union enters, the decision-making organisation of management, and the effects of what he calls bilateral decision-making on productivity. High wage costs have naturally required the management to introduce intensive mechanisation in order to maintain their position in a competitive market, and the whole policy of the company is

* 'Decision-Making and Productivity' Seymour Melman, Basil Blackwell, Oxford.

strongly "production-oriented" in the author's words. The production equipment of the firm is subjected to sustained scrutiny and the management organisation includes a special machinery purchasing executive whose duty it is to investigate alternative methods with an eye to economy.

Management policy has concentrated on two areas: the extension of market control and control over its own internal organisation. It does not accept the common assumption that the enlargement of administration is a natural concomitant of large-scale industry. It regards the cost of its own management organisation with an eye to minimization of expense in much the same way as the regulation of production outlay. Its explicit policy is that its organization must serve production.

A comparison of the ratio of administrative costs to labour costs in the Standard Motor Co. with that of the automobile industry as a whole is most revealing. It has been found that in all countries where decision-making rests with management the proportion of administrative to production employees has been rising steadily in recent years. This is true of the motor vehicle industry as a whole in the UK, but it is not true of the Standard Motor Co. Whereas the ratio of administration to production personnel in the industry as a whole had risen from 15.6 in 1939 to 22.2 in 1954, in the Standard Motor Co. it had decreased from 16.5 in 1939 to 15.0 in 1955, although there had been an increase from 389 production workers in 1939 to 8,825 in 1953. Increased output per unit has been achieved without any relative increase in the number of supervisory staff; in fact, the number has been reduced in this period, and this has been achieved by organisation of the workshops into gangs and relying on the disciplining effect of the workers' own organisation at the production level, to maintain cooperative effort within the limits of the gang system.

Gains in productivity, says Mr Melman, are frequently swallowed up by more man-hours in the office, and in England in the last decade administrative costs have risen more rapidly than the growth of productivity, but this growth in cost of management can be reversed by a reduction in the scope and intensity of certain aspects of management decision-making. His contention, supported by his study at Coventry is that unilateral rule by management can be replaced by a form of bilateral decision-making and still ensure a growth in industrial productivity. This bilateral decision-making consists of formal and informal trade union agreements, and constant consultation and negotiation with shop stewards.

The contract made with the trade union confederation in 1951 laid down a 5-day week of 42½ hours, and fixed overtime rates; guaranteed weekly minimum rates for male and female employees and young workers. For normal rates of pay it fixed ten categories of base rates, and a bonus scheme operated on a gang principle. For this purpose each works divided into gangs as large as possible. The output of the whole gang is measured and a unit of output is given a time value called 'bonus time'. The sum of the output is the total bonus time produced. The total bonus time produced is measured as a per cent of actual hours worked by members of the gang. The resulting ratio is applied to the basic wage of each worker and gives the production bonus to be paid.

The result of this system of production and payment is that in Standard workshops the average hourly earning of production workers in 1955 was 89.8 pence whereas in the motor industry as a whole it was 55.6 pence. Working through the means of large gangs contrary to the teaching of modern indus-

trial psychologists who see in the small, intimate group the best unit from the point of view of team spirit, but in Standard it has worked because it has made the workers production conscious. Since it is in the interest of the whole gang to maintain production to secure a high bonus, when there is any breakdown it is the workers themselves who are keen to effect a repair with the minimum loss of time, and all work together to get production restored to normal. The gang system, moreover, has facilitated group control over work performance and has served as "a device to help workers absorb obsolescence of occupations that occur when production methods are dramatically changed." The gang system has also afforded "a group bargaining strength focussed on the total production process rather than a particular worker performance."

It is interesting to study the aspects of decision-making which are bilateral. The management employ workers on a proportional basis from among the various unions with which it has contracts, and they consult the shop stewards on engagement of additional labour and termination. The effect of lay-offs has been minimized by joint consultation and the spreading of the work, but there is no formal agreement on lay-off procedure. Work

Export Incentives for Mill-made Cloth

By K. P. SINGHANIA

INDIA has been exporting her cloth on a large scale to her traditional markets of the countries of the Indian Ocean as also to Australia, the UK, and Canada. The framers of the first Five year Plan had laid down 1,000 million yards as the target for export of Indian cloth every year. This figure was exceeded in 1950 when the export amounted to 1072 million yards. In 1954, the export was to the tune of 804 million yards. Thereafter, however, there has been a gradual fall in the export of cloth from India as will be seen from the following figures:—

1955	..	..	692 million yards
1956	..	..	683 " "
1957	..	..	839 " "
1958 (Jany. to Oct.)	..	..	492 " "

The reasons for this shrinkage in our export trade have been the competition from Japan and Hongkong and emergence of new exporters like China and Pakistan. What with rising costs of manufacture owing to higher incidence of labour cost, higher prices of raw materials and stores and several restrictive measures adopted by many countries who have been normally importing cloth from India, the Indian textile mills have been finding it difficult to sell their products at remunerative prices in the overseas markets. The result has been the gradual fall in the export of cloth, month by month, the year 1958 showing the lowest figure of export during the last nine years.

The reduction in exports of cloth resulted in accumulation of cloth in the internal markets, and with the mills, and to remedy this situation, the Government of India thought of devising ways and means, so that the export of cotton cloth can be stepped up. However, in spite of all the measures taken by Government such as the establishment of the Cotton Textiles Export Promotion Council with branches at all important trade centres in the overseas markets, sending of trade delegations, holding of exhibitions showing the variety and types of Indian cloth available for exports, standardisation of contract forms, pre-inspection of goods, survey and arbitration machinery, the cotton cloth exports have been dwindling. Not only is this having a deleterious effect on the internal economy of the

time, shift operation and overtime and holidays come within the process of worker decision-making. Deployment is arranged on a seniority basis, which removes decisions on transfer from arbitrary action. The gang system has led to a relaxation of traditional craft lines of job definition, and the grouping of occupations into new broad wage categories has been by agreement. Work load is a matter for constant negotiation with shop stewards. A network of formal agreements and informal negotiation thus limit the decision-making function of the management, but it is interesting to note that at no time has there been any talk of "worker control" among the Standard workers, and a distinction is made between decision-making and the execution of decisions. The system of negotiation and consultation has changed the behaviour of the workers, and has in many cases eliminated the need for foremen. In one plant, for instance, 3,000 workers work as a single gang without a foreman.

This study bears out the contention made in a recent study and referred to in an earlier article that association of workers in decisions in those areas that closely affect the workers represents the participation in management that workers really want rather than control of management functions.

country, but also on our foreign exchange earnings, as export of cotton cloth has been one of our major foreign exchange earners. It is out of the foreign exchange earned by the export of cloth that several important items of daily consumption like long-staple raw cotton, dyes and chemicals, machinery and spares required by the 400 and odd textile mills in India are being imported. Since the price factor in the overseas markets has been against the Indian Mills, they are finding it difficult to compete with Japan, Hongkong, China and Pakistan. Obviously, it is a case, where the textile mills who are exporting cloth and earning vital foreign exchange should be given sufficient incentive, so that they will be in a position to export larger quantities of cloth and maintain the foreign exchange earnings for meeting the outlay on raw cotton, dyes and chemicals and machinery.

The Textile Enquiry Committee appointed by the Government of India deliberated, among other things, on this important aspect of cotton cloth export promotion and recommended incentives to the exporting mills in the form of grant of import licences for dyes and chemicals, as also for raw cotton, and plant and machinery and spare parts.

It was originally laid down that the import of coal-tar dyes and chemicals will be granted to the exporting mills on the basis of 4 per cent and 6 per cent of their exports of grey and processed cloths respectively. It has, however, been announced that this basis has now been modified by Government to a flat 3 per cent on all exports of cloth to destinations other than America and Europe. In the case of exports to America and Europe, the value of import licence would be based on 5 per cent of the amount of cloth exported.

It is understood that this over-all reduction in the quantum of value of import licences has been made to accommodate the Exporting 10 per cent margin of profit. The equivalent varieties of Indian cotton are priced anywhere from 50 per cent to 60 per cent higher than the imported cotton. As a result of this, the fine and superfine mills will have a further advantage in that they will be assured of foreign cotton at considerably lower prices, namely, today's import level of prices plus 10 per cent. They will not be required to make any exports of their cloth and will not, there-

fore, be required to purchase Indian cotton and pay today's high prices.

Whereas, the prices of East African cottons like Jinja, Busoga and BP-52 range between Rs 1,000 to Rs 1,100 per candy, the prices of top quality Indian Co-2, the staple length of which is less than the East African varieties, are as high as Rs 1,600 to Rs 1,675 per candy. It is a well-known fact that our medium and coarse mills are passing through a crisis today owing to uneconomic working. Their costs of raw material, stores, dyes and chemicals are very high. They have also to pay a high wage bill, whereas the realisation of their cloth is so low that they cannot make both ends meet. The average cost of Indian cotton used in mixing, out of which 24s warp can be spun, is Rs 975 per candy. The realisation of cloth made out of this mixing is about Rs 2-12-0 per lb. As against this, the imported varieties of East African cotton, the average price of which is Rs 1050 per candy, can spin 40s warp and the realisation of cloth made out of this cotton is about Rs 4-4-0 per lb. It will be seen that the consumers of Indian cotton are at a distinct disadvantage as compared to the consumers of foreign cotton. The consumers of Indian cotton who happen to be the medium and coarse mills are also the main exporters of cloth and earners of valuable foreign exchange. On the other hand, the consumers of foreign cotton who are the fine and superfine mills get their raw materials at comparatively much lower prices and their realisation for cloth is much higher. It is for this reason and for the marked shift in the consumption patterns of the Indian consumer that the fine and superfine units in the industry are doing well. They had, however, not been exporting their cloth and, therefore, had not been earning any foreign exchange. All the same, they are to be supplied with imported cotton which is purchased out of the earnings of the coarse and medium mills!

In regard to the import of plant, machinery and spare parts, the licences will be granted to the exporting mills on the basis of the value of their exports in excess of 75 per cent of the average of their past performance in the three basic years. Import will be allowed only of specified textile machinery for modernisation and/or rehabilitation.

Thus the incentive given under the mill-made Cotton Cloth Export Promotion Scheme is not at all adequate for the exporting mills. Having paid high prices for Indian cotton and realising low prices for the cloth made therefrom, both in the local market as also in export, their position has become precarious. This is amply proved by the fact that there is a tendency towards curtailment of production. Many mills have closed their third shift and several others have curtailed their production even in the first and second shifts. Whereas in 1956 and 1957, the production of Indian Mill-made cloth was of the order of 5306 million yards and 5317 million yards respectively, the production in the year 1958 will hardly be 4920 million yards, showing a drop of over 400 million yards. In spite of this, the stock position with the mills is at a high figure of 5,80,000 bales. January to April are the best months for the off-take of cotton cloth from the mills; but this year the demand from up-country centres is not encouraging at all. This shows that the Indian consumer is not in a position to purchase his requirements of cloth due to the existing prices of foodgrains which are going up every day in spite of a bumper crop we had this season. Whatever purchasing power he has, is utilised in the purchase of foodgrains leaving very little with which he could buy his requirements of cloth.

It is, therefore, imperative that the Indian cloth should be exported on a larger scale. In other words, the export of Indian cloth must be stepped up by giving adequate incen-

tives to the Mills. There are only a few mills who may be able to export a substantial portion of their production, but the majority of them with average capacity and equipment will not be able to export goods worth more than Rs 3 to Rs 4 lakhs per month. Thus, at best, a unit of 1000 to 1200 looms can hope to export cloth worth Rs 50 lakhs only a year. On this basis, the export incentives of 3 per cent of import licences for dyes and chemicals, as also the half-hearted import entitlements for foreign cotton, will not at all be sufficient. After having paid higher prices for Indian cotton, the exporting mills will be out of pocket even after taking into account the incentives given.

It is reported that the incentives in the form of foreign cotton entitlement is likely to be taken away and the imported cotton distributed on the basis of past consumption only. If this is true, this clearly means that the fine and superfine mills who have been consuming imported cotton in the past will continue to get this cotton at a very cheap price and will secure all the advantages without having to export any cloth.

Thus these mills will benefit out of the foreign exchange earnings of the medium and coarse who will be at a double disadvantage in that they will have to buy Indian cotton at high prices and export cloth at low prices, the gap between their cost of production and the actual export prices realised not being met by the so-called incentives given to them.

The general criticism that is levelled against coarse and medium mills is that these have not changed their patterns of production and it is for this reason that they are suffering now, as there is a marked preference of the Indian consumer for fine fancy processed goods. At the same time, these mills are being denied the essential raw material in the form of imported cotton without which fine fancy goods cannot be produced.

In fairness to the exporting mills, their total import entitlement of foreign cotton should be allowed to be retained by them for their own use. If they do not have the equipment to use this cotton, then they should be allowed to sell it at the open market rate. This will be a real incentive in that the exporting mills will be able to reduce their prices to the overseas buyer and make larger efforts in stepping up exports. The scheme of linking up import entitlement with export performance in the basic years has no valid basis. This means putting premium on newcomers. Those mills who exported without any expectation of a future reward are being put to a disadvantage in that their import entitlement will be lower if they had exported larger quantities in the basic years. Import entitlement should be based on current performance only without taking the past exports into account. It is only when the exporting mill has no equipment to process the foreign cotton that such a mill may be allowed to sell the same in the open market at current prices.

It is understood that from the current quarter there is likely to be a change in the method of grant of import entitlement to exporting mills. Instead of linking the value of import licences with the exports in the basic years, this will be fixed at 70 per cent of the current exports, as in the case of dyes and chemicals. Out of the import entitlement thus granted, only 10 per cent will be allowed to be utilised by the exporting mills. The remaining 90 per cent will have to be surrendered for disposal to fine and superfine mills at a margin of 10 per cent. It is feared that this modification is not going to work in the interest of the coarse and medium mills who are the traditional exporters of Indian cloth.

It is reiterated that unless the exporting mills are allowed to retain for themselves the entire import entitlement for their own use

if they have the necessary equipment, or are allowed to dispose of their surplus in the open market, the purchase of giving incentive will be defeated. It is sincerely hoped that Government will give their earnest consideration to the issues involved, so that the decline in cloth exports is arrested and once again India recaptures her place in the international markets.

Export-Import Bank of Washington

THE US government's principal foreign lending agency, the Export-Import Bank of Washington, has just concluded its 25th year with a record of more than \$10,000 million authorized in credits for economic development in the free world. Of this amount, \$151,900,000 was loaned to India under terms of agreements announced in 1958. The Government of India received \$150,000,000 and a private textile company \$1,900,000.

In sharp contrast with the massive scope of the Bank's international financing activity is its relative obscurity. Other than government officials, economists or foreign trade executives few people either here or abroad know much about the Export-Import Bank—probably because it habitually operates with a small staff and without any fanfare.

For example, not many people realize that the Export-Import Bank has loaned more money than the widely known World Bank not only has the Export-Import Bank in the aggregate loaned more money during its existence than the World Bank has, but it also made more new loan commitments last year than the World Bank did.

Incidentally, the Export-Import Bank also "makes" more money (from nominal interest charges) than the World Bank does although neither is intended to be a money-earning institution.

These are surprising statements, but the facts fully bear them out, as the following comparisons show:

Total loan commitment: Export-Import Bank \$10,000 million; World Bank \$4,250 million.

Total disbursements: Export-Import Bank \$6,600 million; World Bank \$3,100 million.

New loan commitments in calendar year 1958: Export-Import Bank, 1,010 million World Bank \$770 million.

Net "profit" for fiscal year 1958: Export-Import Bank, \$69 million; World Bank, \$4 million.

Just what does the Export-Import Bank now entering upon its second quarter century do?

Although its primary objective is to promote the export and import trade of the United States, it helps economic development abroad by furnishing credits for the purchase of badly needed US capital goods and services which ordinarily could not be obtained without such credits. It does not finance purchase of so-called "soft" or consumer goods.

The financing help is given both to US and foreign private companies and to foreign governments. The interest rates charged are low but financial assistance is not extended by the Bank if capital is believed to be obtainable from private sources on reasonable terms.

These foreign lending activities of the Bank have proved to be mutually beneficial to the Bank and to other countries. The loans have promoted overseas trade by developing the economies, increasing employment and raising income levels of other countries. As a result, better markets have been developed for US goods or better sources of imports required by the United States have been provided.

EDITORIAL NOTES

Mr Dulles is Ailing

THERE will be sympathy for Mr John Foster Dulles having his second bout with cancer. But, inevitably, the prospect of Mr Dulles laying down office as Secretary of State is likely in many countries, and perhaps even in the United States, to be welcomed. If there is no official indication that Mr Dulles might resign, the medical reports testify to a state of health which might compel a long convalescence; and, with talks on the reunification of Germany possessing all the attributes of urgency, America will be able to ill afford a Secretary of state who functions from the hospital bed. Already, there is a good deal of speculation as to who Mr Dulles's successor might be, though, presumably, the American administration will not take a decision until it is clear beyond all doubt, after the radium treatment therapy starts, that the ailing Mr Dulles's recovery will be prolonged. The two names that have come to the fore are those of Mr Christian Herter and Mr Douglas Dillon. Mr Herter is the senior, but his handicap is that he is not blessed with good health: he suffers from arthritis, and the US Secretary of State's responsibilities are so vast as will certainly need a man in office to be in sound health. It may be, therefore, that Mr Dillon's accession to the office of Secretary of State is imminent.

But we must not fall into the danger of believing that a new Secretary of State will necessarily mean a change in US foreign policy. It may be conceded here that, for all that the conduct of his policy by Mr Dulles has been irksome, there has been a philosophy behind it and an objective before it. Neither philosophy nor objective is likely to be given up. If there is to be a perceptible and positive rethinking of US foreign policy, it will not be before there is a change in Government. In this sense, to the extent that the Democrats are generally thought to be certain to capture the presidency in 1960, the tenure of the new Secretary of State will probably be less than two years.

One suggestion that has been made by Mr Emmanuel Celler, a Democratic Congressman, deserves serious consideration by President Eisenhower. Mr Celler thought that the best man for the job of Secretary of State in America today is Mr Adlai Stevenson. Unfortunately, Mr Stevenson is a Democrat—the Democratic candidate who opposed Mr Eisenhower in the last two presidential elections. As far as we know, it has not before happened in American political history that so important an administrative appointment is given to an adherent of the opposition political party. But, the challenges that have been thrown out today and the great strides that have been made in bipartisanship in the sphere of foreign policy should both be reasons why Mr Eisenhower should not find it impossible to take the unprecedented step of inviting Mr Stevenson to accept office as Secretary of State. As Mr Celler pointed out, this would be an example of "real bipartisanship policy". For our part, we would welcome any development which makes available to international politics the astute brain of Mr Stevenson.

Fresh Start in Nepal

The Constitution announced by King Mahendra of Nepal on Basant Panchami day promises a fresh start for democracy in the mountain kingdom. The earlier experiment ten years ago was not a notable success, probably because the ground had not been prepared for the transition from feudalism to representative Government. The parties claiming to speak for the people succumbed too easily to the infantile ailments of democracy and disintegrated into personal factions. The new Constitution, which will come into force on a date to be announced by the King, provides for a bicameral legislature, a cabinet system of government, an independent judiciary under a Supreme Court with wide powers and a Public Service Commission.

The executive power is vested in His Majesty who will ordinarily exercise it in consultation with the cabinet. The Prime Minister will be appointed by the King and will be a person who must command a majority in the Pratinidhi Sabha (Lower House) consisting of 109 elected members. The Prime Minister will recommend

the names of members of the cabinet. The Pratinidhi Sabha will have wider powers than the Maha Sabha (Upper House) except in matters relating to the amendment of the Constitution. The Upper House will consist of 36 members, of whom 18 will be elected by the Lower House and 18 nominated by the King. Amendments to the Constitution must have two-thirds majority of both Houses and will be subject to the Royal Veto. The Constitution also provides for a State Council similar to the Privy Council in England, consisting of Ministers, former Ministers and others nominated by the King. One of its principal functions will be to make provision for regency when the ruling king happens to be a minor or is otherwise unable to carry out his duties.

The new Constitution bears testimony to the young monarch's earnest desire to foster the welfare of his subjects through democratic processes and institutions. Those capable of taking an objective view of the current situation in Nepal and the neighbouring countries will not quarrel with the emergency powers in the hands of the King, which are necessary to avert a breakdown or to deal with unusual situations. In any case the people will have an opportunity to express their views in the elections which began this week.
